General Comment

Texas LNG's projected failure to meet their export deadline of February 10,2027 is a direct result of their inability to adequately determine the lasting impacts of the project on our environment, health, and sacred cultural sites. As a result, it is ultimately Texas LNG's fault that they found it difficult to "secure the long-term financing and commercial commitments necessary to reach FID and meet its current export commencement deadline." Neighboring communities across the region should not be subjugated to the continuous destruction of sacred sites and wildlife and the impending fear of long-term health issues that will arise from the inevitable large-scale pollution the facilities will produce if they are allowed to continue. I ask that the Department of Energy says no to Texas LNG and denies their request to extend existing construction and in-service deadline.
