REQUEST NUMBER: 10-1512

# LOS ALAMOS
**NATIONAL LABORATORY**

ATTN: Valerie Davis

General Engineering Laboratories, Inc., Charleston, SC.

2040 Savage Rd

Charleston, SC 29407

These Samples are on:

LANL Request Number: 10-1512

Per Agreement Number: 126310011

Project Cost Code: MR3A05529E00

Please analyse the enclosed samples according to the schedule indicated:

**SHIP DATE: 2/1/2010**

**TURNAROUND/REPORT DUE: 3/3/2010**

**TURNAROUND REQ'D: 30 Days**

**RAD SCREENING: Yes, Below Background**

**LAB REQUEST COMMENTS:**

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. The soil MS/MSD %R calculations were performed incorrectly. The parent sample result was < the MDL and, thus, a result of 0 µg/kg should have been used to calculate the %Rs. The laboratory subtracted the parent sample concentration. The %Rs were within the acceptance limits when calculated correctly. No sample results were qualified as a result.
2. It should be noted that the aqueous MS and MSD parent sample was from another LANL RN and the raw data for the parent sample was not included in the package. No sample data were qualified as a result.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. In the ICV and CCVs associated with all samples except RE15-10-7964 and -7970, the %Ds were >20% with a positive bias for HMX. The associated results in samples -7965 and -7967 were detects and, thus, were qualified J,HE7c. All other associated sample results were NDs and, thus, were not qualified.
2. The LCS %Rs were > the laboratory's UAL for 2,4-diamino-6-nitrotoluene and 2,6-diamino-4-nitrotoluene. The associated sample results were NDs and, thus, were not qualified.
3. The MS %R was > the laboratory's UAL for 2,6-diamino-4-nitrotoluene. The associated sample results were NDs and, thus, were not qualified.
4. The sample result of HMX in sample -7965 exceeded the calibration range in the original analysis. The original HMX analysis was not reported but was reported by itself at a higher dilution. No sample data were qualified as a result.

| Yes | No | N/A | | Assign Qualifier Listed Below If Criterion = Yes | |
|---|---|---|---|---|---|
| (Check One) | | | | Non-detected Analyte | Detected Analyte |
| ☐ | ☒ | ☐ | 11. Required surrogate information is missing. Data may not be acceptable for use. Contact the SMO or external laboratory for information. | R, HE3d | R, HE3d |
| ☐ | ☒ | ☐ | 12. The sample result is ≤5 times the concentration of the related analyte in the method blank. | U, HE4 | N/A |
| ☐ | ☒ | ☐ | 13. The affected analytes are considered estimated and biased high because this analyte was identified in the method blank but was >5x. | N/A | J, HE4a |
| ☐ | ☐ | ☒ | 14. The sample result is ≤5 times the concentration of the related analyte in the trip blank, rinsate blank, and/or equipment blank. | U, HE4d | N/A |
| ☐ | ☒ | ☐ | 15. Required method blank information is missing. Data may not be acceptable for use. Contact the SMO or external laboratory for information. | R, HE4e | R, HE4e |
| ☐ | ☒ | ☐ | 16. The absence of sample carry-over must be determined and verified. | N/A | R, N, HE4f |
| ☐ | ☒ | ☐ | 17. The affected results were not analyzed with a valid 5-point calibration curve and/or a standard at the reporting limit. | UJ, HE7 | J, HE7 |
| ☐ | ☒ | ☐ | 18. The affected analytes were analyzed with an initial calibration curve that exceeded the %RSD criteria and/or the associated multipoint calibration correlation coefficient is less < 0.99. | UJ, R, HE7a | J, HE7a |
| ☐ | ☒ | ☐ | 19. The affected analytes were analyzed with a RRF of <0.05 in the initial calibration and/or CCV. | UJ, R, HE7b | J, HE7b |
| ☒ | ☐ | ☐ | 20. The ICV and/or CCV were recovered outside the method limits. | UJ, R, HE7c | J, HE7c |
| ☐ | ☒ | ☐ | 21. The ICV and/or CCV were not analyzed at the appropriate method frequency. | UJ, R, HE7d | J, HE7d |
| ☐ | ☒ | ☐ | 22. Required calibration information is missing or samples were analyzed on an expired calibration. Contact the SMO or external laboratory for information. | R, HE7f | R, HE7f |

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. In the soil MBs, K, Pb, and Zn were detected. The results for Pb in samples RE15-10-7892, -7963, -7964, -7976, and -7978 were detects >5X but ≤50X the MB concentrations and, thus, were qualified J,I4a. All other associated sample results were detects >50X the MB concentrations and, thus, were not qualified based on professional judgment.
2. In the aqueous ICB and/or CCBs, Tl was detected. The associated sample result was an ND and, thus, was not qualified. In the soil ICB and/or CCBs, K and Pb were detected. The associated sample results were detects >5X the greatest blank concentrations and, thus, were not qualified.
3. In the FR blanks (sample -8084 from this RN and -8083 from RN 10-1514) associated with all field samples, K, Mn, Na, and U were detected. The results for Na in field samples -7965, -7967, -7973, -7975, and -7977 and U in field sample -7880 were detects ≤5X the FR blank concentration and, thus, were qualified U,I4d. All other associated field sample results were detects >5X the FR blank concentration and, thus, were not qualified.
4. There were >10 samples between the bracketing CCVs associated with the analysis of all soil samples except -7880, -7891, -7892, and -7967 for As, Be, Ni, Se, and Tl. The associated sample results for Se and the results for Tl in samples -7968, -7970, and -7976 were ND and, thus were qualified UJ,I7d. All other associated sample results were detects and, thus, were qualified J,I7d.
5. The soil MS %R was < the laboratory's LAL but ≥10% for Pb. The associated sample results were detects and, thus, were qualified J-,I6a. The soil MS %Rs were > the laboratory's UAL for Al, K, Na, and U. The results for Na in samples -7965, -7967, -7973, -7975, and -7977 and U in sample -7880 were qualified ND and, thus, were qualified UJ,I6b. All other associated sample results were detects and, thus, were qualified J+,I6b. The soil MS %Rs were <10% for Fe and < the laboratory's LAL but ≥10% for Mn. However, the associated parent sample results were >4X

Los Alamos NATIONAL LABORATORY EST. 1943

the spike concentrations and, thus, no sample results were qualified, based on professional judgment.

6. The duplicate RPDs were >35% for Co and Cr, and both the duplicate and parent sample results were ≥5X the PQL. The associated sample results were detects and, thus, were qualified J,I10a.
7. It should be noted that the aqueous matrix QC parent samples were from other LANL RNs. No sample results were qualified as a result.

# DATA VALIDATION COVER SHEET

**5120-1**

**Data Validation Cover Sheet**

Records Use only

Los Alamos NATIONAL LABORATORY EST. 1943

**Section I.**

REQUEST NUMBER: 10-1512 VALIDATION DATE: 3/17/10 LAB CODE: GEL

CONTRACT LABORATORY NAME: GEL Laboratories LLC

VALIDATOR: Larry Fukui ORGANIZATION: Analytical Quality Associates, Inc.

ANALYTICAL SUITE (CHECK ALL THAT APPLY):

- ☐ TPH-GRO
- ☐ TPH-DRO
- ☒ GENERAL CHEMISTRY
- ☐ HIGH EXPLOSIVES
- ☐ METALS
- ☐ RADIOCHEMISTRY
- ☐ DIOXIN FURANS
- ☐ PCB CONGENERS
- ☐ LCMSMS HIGH EXPLOSIVES
- ☐ LCMSMS PERCHLORATES
- ☐ ORGANOCHLORINE PESTICIDES/POLYCHLORINATED BIPHENYLS
- ☐ OTHER (DESCRIBE): Total CN

**Section II. Completeness Check**

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. It should be noted that the aqueous and soil matrix QC analysis for total CN were performed on parent samples from other LANL RNs. No sample data were qualified as a result.

Re: LANL ER Project
Work Orders: 245969 245975
SDG: 10-1512

Dear Ms. Valdez:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the following analytical results for the sample(s) we received on February 02, 2010, and analyzed for Explosives by LCMSMS, GC Semivolatile PCB, General Chemistry, Metals and Perchlorates by LCMSMS. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4485.

Sincerely,

Valerie Davis

# Case Narrative

**Case Narrative for**
**Los Alamos National Laboratory (72733-001-09)**
**LANL ER Project**
**Workorder #: 245969 and 245975**
**SDG # : 10-1512**

**February 04, 2010**

**Laboratory Identification:**

GEL Laboratories LLC
2040 Savage Road
Charleston, South Carolina 29407
(843) 556-8171

**Summary**

**Sample receipt** The samples arrived at GEL Laboratories LLC, Charleston, South Carolina on February 02, 2010 for analysis. The samples were prepared/analyzed within the required holding time. Shipping container temperatures were checked, documented, and within specifications. The samples were screened according to GEL Standard Operating Procedure. The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C).

**Sample Identification** The laboratory received the following samples:

| Laboratory ID | Client ID |
|---|---|
| 245969001 | RE15-10-7880 |
| 245969002 | RE15-10-7891 |
| 245969003 | RE15-10-7892 |
| 245969004 | RE15-10-7967 |

| 245969015 | RE15-10-7977 |
| 245975001 | RE15-10-8084 |

**Case Narrative**

Sample analyses were conducted using methodology as outlined in GEL Laboratories, LLC (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are contained in the analytical case narratives in the enclosed data package.

**Data Package** The enclosed data package contains the following sections: Case Narrative, Chain of Custody, Cooler Receipt Checklist, Data Package Qualifier Definitions and data from the following fractions: Explosives by LCMSMS, GC Semivolatile PCB, General Chemistry, Metals and Perchlorates by LCMSMS.

I certify that this data report is in compliance with the terms and conditions of the subcontract and task order, both technically and for completeness, for other than the conditions detailed in the attached case narrative.

# Data Review Qualifier Flag Definition Sheet

## Data Review Qualifier Definitions

| Qualifier | Explanation |
|---|---|
| * | A quality control analyte recovery is outside of specified acceptance criteria |
| ** | Analyte is a surrogate compound |
| < | Result is less than value reported |
| > | Result is greater than value reported |
| ^ | RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL |
| A | The TIC is a suspected aldol-condensation product |
| B | Target analyte was detected in the associated blank |
| B | Metals-Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL |
| BD | Results are either below the MDC or tracer recovery is low |
| C | Analyte has been confirmed by GC/MS analysis |
| D | Results are reported from a diluted aliquot of the sample |
| d | 5-day BOD-The 2:1 depletion requirement was not met for this sample |
| E | Organics-Concentration of the target analyte exceeds the instrument calibration range |
| E | Metals-%difference of sample and SD is >10%. Sample concentration must meet flagging criteria |
| H | Analytical holding time was exceeded |
| h | Preparation or preservation holding time was exceeded |
| J | Value is estimated |
| N | Metals-The Matrix spike sample recovery is not within specified control limits |
| N | Organics-Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor |
| N/A | Spike recovery limits do not apply. Sample concentration exceeds spike concentration by 4X or more |
| ND | Analyte concentration is not detected above the reporting limit |
| UI | Gamma Spectroscopy-Uncertain identification |
| X | Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier |
| Y | QC Samples were not spiked with this compound |
| Z | Paint Filter Test-Particulates passed through the filter, however no free liquids were observed. |

# LC/MS/MS PERCHLORATE ANALYSIS

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Perchlorate by LC/MSMS**
**Los Alamos National Laboratory (LANL)**
**SDG 10-1512**

**Method/Analysis Information**

| | |
|---|---|
| **Procedure:** | **Definitive Low Level Perchlorate Analysis Utilizing Liquid Chromatography/Mass Spectrometry/Mass Spectrometry (LC/MS/MS) by EPA Method 6850 Modified (6850M)** |
| Analytical Method: | SW846 6850 Modified |
| Prep Method: | SW846 6850 Modified |
| Analytical Batch Number: | 950060 |
| Prep Batch Number: | 950059 |

**Sample Analysis**

| Sample ID | Client ID |
|---|---|
| 245969001 | RE15-10-7880 |
| 245969002 | RE15-10-7891 |
| 245969003 | RE15-10-7892 |
| 245969004 | RE15-10-7967 |

|---|---|
| 245969015 | RE15-10-7977 |
| 1202035645 | Interference Check Sample (ICS) |
| 1202035641 | Method Blank (MB) |
| 1202035642 | Laboratory Control Sample (LCS) |
| 1202035643 | 245969001(RE15-10-7880) Matrix Spike (MS) |
| 1202035644 | 245969001(RE15-10-7880) Matrix Spike Duplicate (MSD) |

The samples in this SDG were analyzed on a "dry weight" basis.

## Preparation/Analytical Method Verification

**SOP Reference**
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-067 REV# 6.

## Calibration Information

**Initial Calibration**
All initial calibration requirements have been met for this SDG. Due to software constraints, all Initial Calibration Blanks must be designated as IPB001.

**CCV Requirements**
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

**CCB Requirements**
All continuing calibration blanks (CCB) bracketing the analyses associated with this batch were within acceptance criteria.

**CCV Requirements**
All continuing calibration checks (CCV) requirements were met by all bracketing CCV standards.

**Low Level Standard (CRI) Requirements**
All low level calibration verification (CRI) requirements were met by all bracketing CRI standards.

## Quality Control (QC) Information

**Method Blank (MB) Statement**
The MB(s) analyzed with this SDG met the acceptance criteria.

**Interference Check Sample (ICS)**
The interference check sample (ICS) met all recovery acceptance criteria.

**Laboratory Control Sample (LCS) Recovery**
The LCS spike recoveries met the acceptance limits.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**QC Sample Designation**
Sample 245969001 (RE15-10-7880) was chosen for matrix spike and matrix spike duplicate analysis.

**Matrix Spike (MS) Recovery Statement**
The MS recoveries were within the established acceptance limits.

**Matrix Spike Duplicate (MSD) Recovery Statement**
The MSD recoveries were within the established acceptance limits.

**MS/MSD Relative Percent Difference (RPD) Statement**
The RPD(s) between the MS and MSD met the acceptance limits.

**Retention Time Standard Area Acceptance**
The retention time standard areas were within the required acceptance criteria for all samples and QC.

**Retention Time**
During the analysis of Perchlorate by LC/MS/MS, retention time shifts are commonly observed. These retention time shifts, which are caused by fouling of the column by the sample matrices, are problematic when the retention time is used as one of the criterion for confirmation. To overcome this problem, a known amount of O(18) labeled Perchlorate was added to each sample as a retention time standard. The presence of Perchlorate was confirmed by the relative retention time (RRT) of the Perchlorate peak and the O(18) standard. A RRT window of 0.98 to 1.02, as required by Method 332.0, has been used. In addition to the isotopic ratio, the presence of Perchlorate in the samples associated with this data package have been confirmed using the relative retention criteria stated above, not the absolute retention time.

**Technical Information**

**Holding Time Specifications**
All samples in this SDG in this analytical batch met the specified holding time. GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

**Preparation/Analytical Method Verification**
All procedures were performed as stated in the SOP.

**Sample Dilutions**
The samples in this SDG did not require dilutions.

**Sample Re-extraction/Re-analysis**
Re-extractions or re-analyses were not required in this SDG except for dilutions.

**Miscellaneous Information**

**Data Exception (DER) Documentation**
Data exception reports (DERs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. A data exception report (DER) was not generated for this SDG.

**Manual Integrations**
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Method Comments**
The samples in this SDG were not originally analyzed using EPA Method 314.0.

**Additional Comments**
The Perchlorate Isotope Ratio on the Form I may differ slightly from the ratio on the corresponding raw data due to rounding rules and/or significant figures or due to software limitations when there are manual integrations, dilutions or other factors. The ratio value of the Form I is the correct value.

The retention time marker, Perchlorate-O (18), is added to all samples, instrument blanks, and standards prior to injection. It is used to verify the retention time of Perchlorate and Perchlorate-101 and to insure an accurate injection occurred. Due to various anions affecting the recovery of Perchlorate-O (18) and not Perchlorate and Perchlorate-101, the calibration curves of Perchlorate and Perchlorate-101 are not internally corrected for using Perchlorate-O (18). They are external calibrations.

**Perchlorate Isotope Ratio**
The Perchlorate isotope ratio met acceptance criteria for all samples and QC samples. Please see the isotope ratio criteria in the Miscellaneous Section.

**System Configuration**

The laboratory utilizes a Waters LC 2795 liquid chromatography instrument for perchlorate analysis. It is coupled with either a Micromass Quattro Micro Mass Spectrometer/ Mass Spectrometer, or a Micromass Quattro Ultima Mass Spectrometer/ Mass Spectrometer. Each being designated as LCMSMS #1, and LCMSMS #2, respectively. It is fitted with an electrospray probe that is operated in the negative electrospray ionization mode for perchlorate analysis. The laboratory may also utilize an Agilent 1100 liquid chromatography instrument for perchlorate analysis. It is coupled with an Applied Biosystems 4000 Mass Spectrometer/ Mass Spectrometer, designated as LCMSMS #3 or LCMSMS #4. It is also fitted with an electrospray probe that is operated in the negative electrospray ionization mode for perchlorate analysis.

**Chromatographic Columns**

Chromatographic separation of perchlorate is accomplished through analysis on the following anion column:

Dionex: IonPac AG-16 2 x 50 mm.

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

**Review Validation:**

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

**The following data validator verified the information presented in this case narrative:**

**Reviewer:** Deborah Maier **Date:** 02/25/10

Nairb.ref

;Positive ion monoisotopic and average masses from solution
;of NaI/RbI (2.0/0.05ug/ul) in 50/20 2-propanol/H2O.
;Most useful general purpose calibrant for all low
;MW applications, including MS/MS work.
;At high resolution, readily covers from m/z 50-2000.
;At reduced resolution, can be used to over m/z 3000.
;NOT RECOMMENDED FOR PROTEIN WORK. USE MYO, MYOTRP or TRP.

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

**Injection Volume (uL):** 20

**%Solids:** 100

| CAS No. | Analyte^ | MDL | RL | Conc* | Units | Q | Dilution Factor | Date Analyzed | GEL File ID |
|---|---|---|---|---|---|---|---|---|---|
| 14797-73-0 | Perchlorate | .5 | 2 | 0.500 | ug/kg | U | 1 | 22-FEB-10 04:55 | per0221104a |
| | Perchlorate Isotope Ratio | | | | | | 1 | 22-FEB-10 04:55 | per0221104a |
| 14797-73-0 | Perchlorate-101 | .5 | 2 | 0.500 | ug/kg | U | 1 | 22-FEB-10 04:55 | per0221104a |
| | Perchlorate-O(18) | | | 4.91 | ug/kg | | 1 | 22-FEB-10 04:55 | per0221104a |

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

## Isotope Ratio Criteria

Isotope Ratio $_{35}Cl/_{37}CL$

2.31-3.85

## Tune Criteria

The tuning solution is introduced directly into the mass spectrometer using the ESI interface in the positive ion mode. The mass range scanned is 20 to 1100 amu using at least six scans. The observed mass for the target compound in the daily calibration standards must be within 0.2 amu of the expected value. If it is greater than 0.2 amu, then a mass calibration is performed and the instrument is re-calibrated.

# LC/MS/MS PERCHLORATE ANALYSIS

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Perchlorate by LC/MSMS**
**Los Alamos National Laboratory (LANL)**
**SDG 10-1512-1**

## Method/Analysis Information

| | |
|---|---|
| **Procedure:** | **Definitive Low Level Perchlorate Analysis Utilizing Liquid Chromatography/Mass Spectrometry/Mass Spectrometry (LC/MS/MS) by EPA Method 6850 Modified (6850M)** |
| Analytical Method: | SW846 6850 Modified |
| Prep Method: | SW846 6850 Modified |
| Analytical Batch Number: | 950028 |
| Prep Batch Number: | 950027 |

## Sample Analysis

| Sample ID | Client ID |
|---|---|
| 245975001 | RE15-10-8084 |
| 1202035573 | Interference Check Sample (ICS) |
| 1202035565 | Method Blank (MB) |
| 1202035566 | Laboratory Control Sample (LCS) |
| 1202035571 | 245911001(RE16-10-1400) Matrix Spike (MS) |
| 1202035572 | 245911001(RE16-10-1400) Matrix Spike Duplicate (MSD) |

The samples in this SDG were analyzed on an "as received" basis.

## Preparation/Analytical Method Verification

**SOP Reference**
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-067 REV# 6.

## Calibration Information

**Initial Calibration**
All initial calibration requirements have been met for this SDG. Due to software constraints, all Initial Calibration Blanks must be designated as IPB001.

**CCV Requirements**
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

**CCB Requirements**
All continuing calibration blanks (CCB) bracketing the analyses associated with this batch were within acceptance criteria.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**CCV Requirements**
All continuing calibration checks (CCV) requirements were met by all bracketing CCV standards.

**Low Level Standard (CRI) Requirements**
All low level calibration verification (CRI) requirements were met by all bracketing CRI standards.

**Quality Control (QC) Information**

**Method Blank (MB) Statement**
The MB(s) analyzed with this SDG met the acceptance criteria.

**Interference Check Sample (ICS)**
The interference check sample (ICS) met all recovery acceptance criteria.

**Laboratory Control Sample (LCS) Recovery**
The LCS spike recoveries met the acceptance limits.

**QC Sample Designation**
Client sample 245911001 (RE16-10-1400) from SDG 10-1487-1 was chosen for matrix spike and matrix spike duplicate analysis. Please see the raw data in the Miscellaneous Section.

**Matrix Spike (MS) Recovery Statement**
The MS recoveries were within the established acceptance limits.

**Matrix Spike Duplicate (MSD) Recovery Statement**
The MSD recoveries were within the established acceptance limits.

**MS/MSD Relative Percent Difference (RPD) Statement**
The RPD(s) between the MS and MSD met the acceptance limits.

**Retention Time Standard Area Acceptance**
The retention time standard areas were within the required acceptance criteria for all samples and QC.

**Retention Time**
During the analysis of Perchlorate by LC/MS/MS, retention time shifts are commonly observed. These retention time shifts, which are caused by fouling of the column by the sample matrices, are problematic when the retention time is used as one of the criterion for confirmation. To overcome this problem, a known amount of O(18) labeled Perchlorate was added to each sample as a retention time standard. The presence of Perchlorate was confirmed by the relative retention time (RRT) of the Perchlorate peak and the O(18) standard. A RRT window of 0.98 to 1.02, as required by Method 332.0, has been used. In addition to the isotopic ratio, the presence of Perchlorate in the samples associated with this data package have been confirmed using the relative retention criteria stated above, not the absolute retention time.

**Technical Information**

**Holding Time Specifications**
All samples in this SDG in this analytical batch met the specified holding time. GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

**Preparation/Analytical Method Verification**
All procedures were performed as stated in the SOP.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Sample Dilutions**
The samples in this SDG did not require dilutions.

**Sample Re-extraction/Re-analysis**
Re-extractions or re-analyses were not required in this SDG except for dilutions.

**Miscellaneous Information**

**Data Exception (DER) Documentation**
Data exception reports (DERs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. A data exception report (DER) was not generated for this SDG.

**Manual Integrations**
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations.

**Method Comments**
The sample in this SDG was not originally analyzed using EPA Method 314.0.

**Additional Comments**
The Perchlorate Isotope Ratio on the Form I may differ slightly from the ratio on the corresponding raw data due to rounding rules and/or significant figures or due to software limitations when there are manual integrations, dilutions or other factors. The ratio value of the Form I is the correct value.

The retention time marker, Perchlorate-O (18), is added to all samples, instrument blanks, and standards prior to injection. It is used to verify the retention time of Perchlorate and Perchlorate-101 and to insure an accurate injection occurred. Due to various anions affecting the recovery of Perchlorate-O (18) and not Perchlorate and Perchlorate-101, the calibration curves of Perchlorate and Perchlorate-101 are not internally corrected for using Perchlorate-O (18). They are external calibrations.

**Perchlorate Isotope Ratio**
The Perchlorate isotope ratio met acceptance criteria for all samples and QC samples. Please see the isotope ratio criteria in the Miscellaneous Section.

**System Configuration**

The laboratory utilizes a Waters LC 2795 liquid chromatography instrument for perchlorate analysis. It is coupled with either a Micromass Quattro Micro Mass Spectrometer/ Mass Spectrometer, or a Micromass Quattro Ultima Mass Spectrometer/ Mass Spectrometer. Each being designated as LCMSMS #1, and LCMSMS #2, respectively. It is fitted with an electrospray probe that is operated in the negative electrospray ionization mode for perchlorate analysis. The laboratory may also utilize an Agilent 1100 liquid chromatography instrument for perchlorate analysis. It is coupled with an Applied Biosystems 4000 Mass Spectrometer/ Mass Spectrometer, designated as LCMSMS #3 or LCMSMS #4. It is also fitted with an electrospray probe that is operated in the negative electrospray ionization mode for perchlorate analysis.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Chromatographic Columns**

Chromatographic separation of perchlorate is accomplished through analysis on the following anion column:

Dionex: IonPac AG-16 2 x 50 mm.

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

**Review Validation:**

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

**The following data validator verified the information presented in this case narrative:**

**Reviewer:** Herbert K Mauer **Date:** 02/11/10

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

# QUALITY CONTROL SUMMARY

## Perchlorate Laboratory Control Sample

**Lab Name:** General Engineering Laboratories

**Lab Code:** GEL

**GEL Job No. (SDG):** 10–1512–1

**Extract Batch Code:** 950027

**Date Filtered:** 07–FEB–10

**Matrix:** WASTE WATER

**Sample ID:** 1202035566

| Analyte^ | True | Found | Units | %Rec | Q | Control Limits |
|---|---|---|---|---|---|---|
| Perchlorate | 0.200 | .196 | ug/L | 98.0 | | 85 – 115 |
| Perchlorate Isotope Ratio | | 3.01 | | | | – |
| Perchlorate–101 | 0.200 | .207 | ug/L | 103 | | 85 – 115 |
| Perchlorate–O(18) | | .483 | ug/L | | | – |

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate–101 peak area. The Perchlorate–101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

Form 5a

## Perchlorate Interference Check Sample

**Lab Name:** General Engineering Laboratories

**Lab Code:** GEL

**GEL Job No. (SDG):** 10–1512–1

**Extract Batch Code:** 950027

**Date Filtered:** 07–FEB–10

**Matrix:** WATER

**Sample ID:** 1202035573

| Analyte^ | True | Found | Units | %Rec | Q | Control Limits |
|---|---|---|---|---|---|---|
| Perchlorate | 0.200 | .211 | ug/L | 105 | | 70 – 130 |
| Perchlorate Isotope Ratio | | 3.12 | | | | |
| Perchlorate–101 | 0.200 | .214 | ug/L | 107 | | 70 – 130 |
| Perchlorate–O(18) | | .488 | ug/L | | | |

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate–101 peak area. The Perchlorate–101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

Nairb.ref

;Positive ion monoisotopic and average masses from solution
;of NaI/RbI (2.0/0.05ug/ul) in 50/20 2-propanol/H2O.
;Most useful general purpose calibrant for all low
;MW applications, including MS/MS work.
;At high resolution, readily covers from m/z 50-2000.
;At reduced resolution, can be used to over m/z 3000.
;NOT RECOMMENDED FOR PROTEIN WORK. USE MYO, MYOTRP or TRP.

| 14797-73-0 | Perchlorate | .05 | .2 | 0.050 | ug/L | U | 1 | 08-FEB-10 21:00 | per0208066a |
| | Perchlorate Isotope Ratio | | | | | | 1 | 08-FEB-10 21:00 | per0208066a |
| 14797-73-0 | Perchlorate-101 | .05 | .2 | 0.050 | ug/L | U | 1 | 08-FEB-10 21:00 | per0208066a |
| | Perchlorate-O(18) | | | 0.480 | ug/L | | 1 | 08-FEB-10 21:00 | per0208066a |

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

## Perchlorate Analysis Data Sheet

**Lab Name:** GEL Laboratories LLC

**Lab Code:** GEL

**Instrument:** LCMSMS

**Method:** EPA 6850 Modified

**Matrix:** WASTE WATER

**Extraction Batch ID:** 950027

**Extraction Type:** Filter/DAI

**Sample Volume/Weight:** 10.0 mL

**Concentrated Extract Volume:** 10.0

**Client Sample No.**
MB

**Date Received:** 07-FEB-10

**GEL Job No (SDG):** 10-1512-1

**GEL Sample ID:** 1202035565

**Date Filtered:** 07-FEB-10

**Injection Volume (uL):** 20

**%Solids:**

| CAS No. | Analyte^ | MDL | RL | Conc* | Units | Q | Dilution Factor | Date Analyzed | GEL File ID |
|---|---|---|---|---|---|---|---|---|---|
| 14797-73-0 | Perchlorate | .05 | .2 | 0.050 | ug/L | U | 1 | 08-FEB-10 19:15 | per0208050a |
| | Perchlorate Isotope Ratio | | | | | | 1 | 08-FEB-10 19:15 | per0208050a |
| 14797-73-0 | Perchlorate-101 | .05 | .2 | 0.050 | ug/L | U | 1 | 08-FEB-10 19:15 | per0208050a |
| | Perchlorate-O(18) | | | 0.457 | ug/L | | 1 | 08-FEB-10 19:15 | per0208050a |

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

## Isotope Ratio Criteria

Isotope Ratio $_{35}Cl/_{37}CL$

2.31-3.85

## Tune Criteria

The tuning solution is introduced directly into the mass spectrometer using the ESI interface in the positive ion mode. The mass range scanned is 20 to 1100 amu using at least six scans. The observed mass for the target compound in the daily calibration standards must be within 0.2 amu of the expected value. If it is greater than 0.2 amu, then a mass calibration is performed and the instrument is re-calibrated.

**Preparation/Analytical Method Verification**

**SOP Reference**
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-056 REV# 12.

**Primary Analyte Analysis**

**Calibration Information**

**Initial Calibration**
All initial calibration requirements for this analysis have been met for this SDG.

**Calibration Verification Standard Requirements**
All associated calibration verification standard(s) (ICV or CCV) for this analysis met the acceptance criteria.

**Calibration Blank Requirements**
All initial or continuing calibration blanks (ICB or CCB) bracketing the analyses associated with this batch for this analysis were within acceptance criteria. Due to software limitations, the CCBs and/or the ICBs may have a concentration for target analytes in the Found column. These values should be zero.

**CRI Requirements**
All low level calibration verification (CRI) requirements for this analysis were met by all bracketing CRI standards and may be based off the grand mean average percent recovery of all target analytes.

**Quality Control (QC) Information**

**Method Blank (MB) Statement**
The MB(s) analyzed with this SDG for this analysis met the acceptance criteria.

**Surrogate Recoveries**
All the surrogate recoveries were within the established acceptance criteria in this SDG in this analytical batch for this analysis.

**Laboratory Control Sample (LCS) Recovery**
The LCS spike recoveries were within the established acceptance limits.

PROPRIETORY INFORMATION - No unauthorized reproduction without written permission from GEL.

**QC Sample Designation**
Sample 245969001 (RE15-10-7880) was chosen for matrix spike and matrix spike duplicate analysis.

**Matrix Spike (MS) Recovery Statement**
The MS spike recoveries were within the established acceptance limits.

**Matrix Spike Duplicate (MSD) Recovery Statement**
The MSD spike recoveries were within the established acceptance limits.

**MS/MSD Relative Percent Difference (RPD) Statement**
The RPD(s) between the MS and MSD met the acceptance limits.

**Internal Standard (ISTD) Acceptance**
Sample 245969011 (RE15-10-7964) failed ISTD acceptance criteria. It was re-analyzed and confirmed the failure. Please see the Form 8 in the data package for the exact recoveries. The re-analysis data are reported. The confirmation raw data are in the Miscellaneous Section. Please see data exception report 798580.

**Technical Information**

**Holding Time Specifications**
All samples in this SDG in this analytical batch met the specified holding time. GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

**Preparation/Analytical Method Verification**
All procedures were performed as stated in the SOP.

**Sample Dilutions**
According to the GEL SOP for Method 8321A, all sample and QC extracts are diluted 1:1 v/v with HPLC grade water. Sample 245969007 (RE15-10-7965) was further diluted to bring the over range concentration within the calibration range. The final dilution in each case takes the 1:1 v/v dilution into account.

**Sample Re-extraction/Re-analysis**
Sample 245969011 (RE15-10-7964) failed ISTD acceptance criteria. It was re-analyzed and confirmed the failure. Please see the Form 8 in the data package for the exact recoveries. The re-analysis data are reported. The confirmation raw data are in the Miscellaneous Section. Please see data exception report 798580.

Sample 245969010 (RE15-10-7970) failed ISTD acceptance criteria. It was re-analyzed and passed acceptance criteria. The re-analysis is passed and is reported.

**Secondary Analyte Analysis**

**Calibration Information**

**Initial Calibration**
All initial calibration requirements for this analysis have been met for this SDG.

**Calibration Verification Standard Requirements**
All associated calibration verification standard(s) (ICV or CCV) for this analysis met the acceptance criteria.

PROPRIETORY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Calibration Blank Requirements**
All initial or continuing calibration blanks (ICB or CCB) bracketing the analyses associated with this batch for this analysis were within acceptance criteria. Due to software limitations, the CCBs and/or the ICBs may have a concentration for target analytes in the Found column. These values should be zero.

**CRI Requirements**
All low level calibration verification (CRI) requirements for this analysis were met by all bracketing CRI standards and may be based off the grand mean average percent recovery of all target analytes.

**Quality Control (QC) Information**

**Method Blank (MB) Statement**
The MB(s) analyzed with this SDG for this analysis met the acceptance criteria.

**Surrogate Recoveries**
All the surrogate recoveries were within the established acceptance criteria in this SDG in this analytical batch for this analysis.

**Laboratory Control Sample (LCS) Recovery**
The LCS recovered 2,4-Diamino-6-nitrotoluene at 117% with recovery limits of 52-114% and recovered 2,6-Diamino-4-nitrotoluene at 148% with recovery limits of 64-122%. Since there were no target analytes detected that exhibited a high bias in the associated samples, the data are reported. Please see data exception report 798580.

**QC Sample Designation**
Sample 245969001 (RE15-10-7880) was chosen for matrix spike and matrix spike duplicate analysis. Please see the raw data in the Miscellaneous Section.

**Matrix Spike (MS) Recovery Statement**
The MS recovered 2,6-Diamino-4-nitrotoluene at 144%. The recovery limits are 55-130%. Since there were no target analytes detected that exhibited a high bias in the associated samples, the data are reported. Please see data exception report 798580.

**Matrix Spike Duplicate (MSD) Recovery Statement**
The MSD recovered 2,6-Diamino-4-nitrotoluene at 130.4%. The recovery limits are 55-130%. Since there were no target analytes detected that exhibited a high bias in the associated samples, the data are reported. Please see data exception report 798580.

**MS/MSD Relative Percent Difference (RPD) Statement**
The RPD(s) between the MS and MSD met the acceptance limits.

**Internal Standard (ISTD) Acceptance**
The internal standards were not added to the Secondary analyte extracts.

**Technical Information**

**Holding Time Specifications**
All samples in this SDG in this analytical batch met the specified holding time. GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

PROPRIETORY INFORMATION - No unauthorized reproduction without written permission from GEL.

**Preparation/Analytical Method Verification**
All procedures were performed as stated in the SOP.

**Sample Dilutions**
According to the GEL SOP for Method 8321A, all sample and QC extracts are diluted 1:1 v/v with HPLC grade water. The samples in this SDG in this analytical batch for this analysis did not require any additional dilutions.

**Sample Re-extraction/Re-analysis**
Re-extractions or re-analyses were not required in this SDG in this analytical batch for this analysis except for dilutions.

**Miscellaneous Information**

**Data Exception (DER) Documentation**
Data exception report 798580 was generated fort his SDG.

The LCS recovered 2,4-Diamino-6-nitrotoluene at 117% with recovery limits of 52-114% and recovered 2,6-Diamino-4-nitrotoluene at 148% with recovery limits of 64-122%. Since there were no target analytes detected that exhibited a high bias in the associated samples, the data are reported.

The MS recovered 2,6-Diamino-4-nitrotoluene at 144%. The recovery limits are 55-130%. The MSD recovered 2,6-Diamino-4-nitrotoluene at 130.4%. The recovery limits are 55-130%. Since there were no target analytes detected that exhibited a high bias in the associated samples, the data are reported. Please see data exception report 798580.

Sample 245969011 (RE15-10-7964) failed ISTD acceptance criteria. It was re-analyzed and confirmed the failure. Please see the Form 8 in the data package for the exact recoveries. The re-analysis data are reported. The confirmation raw data are in the Miscellaneous Section.

**Manual Integrations**
Some initial calibration standards, continuing calibration standards, and/or samples required manual integrations due to software limitations.

**Flagging Convention**
The samples were not originally analyzed using SW-846 Method 8330.

**Additional Comments**
Due to software limitations, all initial calibration blanks must be designated as XIB001 in order for the forms to be correct.

Due to software limitations in the secondary analyte analysis, false positives and analytes detected below the MDL cannot be deleted from the raw data.

Due to software limitations, file extensions such as DL, RE, etc. may not appear on the generated forms and/or raw data.

PROPRIETORY INFORMATION - No unauthorized reproduction without written permission from GEL.

**System Configuration**

The laboratory utilizes a Waters LC 2795 liquid chromatography instrument for primary analyte analysis. It is coupled with either a Micromass Quattro Micro Mass Spectrometer/ Mass Spectrometer, or a Micromass Quattro Ultima Mass Spectrometer/ Mass Spectrometer. Each being designated as LCMSMS #1, and LCMSMS #2, respectively. It is fitted with an APCI (Atmospheric Pressure chemical Ionization) probe that is operated in the negative ionization mode for the primary analyte analysis. The laboratory also utilizes an Agilent 1100 liquid chromatography instrument for either primary or secondary analyte analysis. It is coupled with a Applied Biosystems 4000 Mass Spectrometer/ Mass Spectrometer, designated as either LCMSMS #3 or LCMSMS #4. It is fitted with a APCI (Atmospheric Pressure chemical Ionization) probe that is operated in the negative ionization mode for both the primary and secondary analyte analysis.

**Chromatographic Columns**

The detection of the primary analyte nitroaromatic and nitramines is accomplished through analysis on the following reversed phase column:

Phenomenex: Ultracarb 5u ODS (20), 250 x 4.60 mm ID.

The detection of the secondary analytes is accomplished through analysis on the following reversed phase column:

YMC: J'sphere ODS-H80, 150 x 4.6mm I.D.

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

**Review Validation:**

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

**The following data validator verified the information presented in this case narrative:**

**Reviewer:** Heather M Mann **Date:** 03/05/10

Nairb.ref

;Positive ion monoisotopic and average masses from solution
;of NaI/Rbi (2.0/0.05ug/ul) in 50/20 2-propanol/H2O.
;Most useful general purpose calibrant for all low
;MW applications, including MS/MS work.
;At high resolution, readily covers from m/z 50-2000.
;At reduced resolution, can be used to over m/z 3000.
;NOT RECOMMENDED FOR PROTEIN WORK. USE MYO, MYOTRP or TRP.

Other

Failed Recovery for MSD/PSD

Failed Recovery for LCS/LCSD

Failed Recovery for MS/PS

| Specification and Requirements Exception Description: | DER Disposition: |
|---|---|
| 1. The Laboratory Control Sample (1202032102) did not meet spike recovery limits for 2,4-Diamino-6-nitrotoluene at 117% with recovery limits of 52-114% and 2,6-Diamino-4-nitrotoluene at 148% with recovery limits of 64-122%.<br><br>2. The Matrix Spike (1202032103) did not meet spike recovery limits for 2,6-Diamino-4-nitrotoluene at 144%. The recovery limits are 55-130%.<br><br>3. The Matrix Spike Duplicate (1202032104) did not meet spike recovery limits for 2,6-Diamino-4-nitrotoluene at 130.4%. The recovery limits are 55-130%. | 1., 2. & 3. Since there were no target analytes detected that exhibited a high bias in the associated samples, the data are reported with the appropriate DER. The discrepancies are noted in the case narrative. |
| 4. The internal standard responses were outside of the acceptance criteria in the following sample: 245969011. Please see the Form 8 in the data package for the exact recoveries. | 4. The sample was re-analyzed and similar recoveries were observed. The re-analysis data are reported with the appropriate DER. The discrepancy is noted in the case narrative. The confirmation raw data are located in the Miscellaneous Section of the data package. |

# GC SEMIVOLATILE PCB ANALYSIS

**PCB Case Narrative**
**Los Alamos National Laboratory (LANL)**
**SDG 10-1512**

## Method/Analysis Information

| | |
|---|---|
| **Procedure:** | **Analysis of Polychlorinated Biphenyls by ECD** |
| Analytical Method: | SW846 8082 |
| Prep Method: | SW846 3550B |
| Analytical Batch Number: | 949033, 950898 |
| Prep Batch Number: | 949031, 950897 |

## Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8082:

| Sample ID | Client ID |
|---|---|
| 245969002 | RE15-10-7891 |
| 245969003 | RE15-10-7892 |
| 1202033246 | Method Blank (MB) (Batch 949033) |
| 1202033247 | Laboratory Control Sample (LCS) (Batch 949033) |
| 245969001 | RE15-10-7880 |
| 1202037813 | Method Blank (MB) (Batch 950898) |
| 1202037814 | Laboratory Control Sample (LCS) (Batch 950898) |
| 1202037815 | 245969001(RE15-10-7880) Matrix Spike (MS) (Batch 950898) |
| 1202037816 | 245969001(RE15-10-7880) Matrix Spike Duplicate (MSD) (Batch 950898) |

The samples in this SDG were analyzed on a "dry weight" basis.

## Preparation/Analytical Method Verification

### SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-040 REV# 14.

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 23.0.

## Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the Target processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the Target software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

Due to software limitations, the Calibration Summary Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package.

### Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG).

The linear equation used in Target and indicated on the initial calibration summary form is not a conventional linear equation (slope intercept formula) and does not match the equation found in SW-846 method 8000B. The x and y axes are inversed in Target, so that the instrument response is treated as the independent variable (x) and the concentration ratio is treated as the dependent variable (y). The equation used in Target to calculate sample results is adjusted to account for the linear equation inversion and reciprocal slope. The adjusted calculation has been independently verified to produce valid results.

**Continuing Calibration Verification (CCV) Requirements**
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

One or more of the five quantified peaks did not meet the acceptance criteria in Aroclor-1254 and Aroclor-1268 standards analyzed for this SDG; however the average concentration of the five peaks met the acceptance criteria.

## Quality Control (QC) Information

**Method Blank (MB) Statement**
The MB(s) analyzed with this SDG met the acceptance criteria.

**Surrogate Recoveries**
All surrogate recoveries were within the established acceptance criteria for this SDG.

**Laboratory Control Sample (LCS) Recovery**
The LCS spike recoveries met the acceptance limits.

**QC Sample Designation**
Sample 245969001(RE15-10-7880) was selected for the matrix spike and matrix spike duplicate analysis in both batches 949033 and 950898. However the MS and MSD in batch 949033 were not reportable. The MS and MSD results in batch 950898 were reported in this data package.

**Matrix Spike (MS) Recovery Statement**
The MS recoveries for this SDG were within the established acceptance limits.

**Matrix Spike Duplicate (MSD) Recovery Statement**
The MSD recoveries for this SDG were within the established acceptance limits.

**MS/MSD Relative Percent Difference (RPD) Statement**
The RPD between the MS and MSD met the acceptance limits.

## Technical Information

**Holding Time Specifications**
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

**Preparation/Analytical Method Verification**
All procedures were performed as stated in the SOP. All sample extracts were cleaned using alumina. Additionally, copper was added to all sample extracts to remove sulfur.

**Sample Dilutions**
The samples in this SDG did not require dilutions.

**Sample Re-extraction/Re-analysis**
Sample 245969001(RE15-10-7880) was re-extracted and re-analyzed. The second analysis was reported.

## Miscellaneous Information

**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

**Data Exception (DER) Documentation**
Data exception report (DER) is for documentation of any procedural anomalies that may deviate from referenced SOP or contractual document. A DER was not required for this SDG.

**Manual Integration**
Certain standards and samples may have required manual integration to correctly position the baseline as set in the calibration standard injections. If manual integration was performed, copies of all manual integration peak profiles are included in the raw data section of this PCB fraction.

**Additional Comments**
The additional comments field is used to address special issues associated with each analysis, clarify method/contractual issues pertaining to the analysis, and to list any report documents generated as a result of sample analysis or review. The following additional comments were required:

The higher results from either column have been chosen and reported in the data package for the client samples, MB and LCS. The data reported for the MS and MSD are from the same analytical column as the parent sample.

The data reported on the form I and III may differ slightly from the data reported on the form X. This is due to software limitations in rounding differences between the forms.

Aroclors quantitated on the raw data report by the Target data system do not necessarily represent positive Aroclor identification. In order for positive identification to be made, the Aroclor must match in pattern and retention time; as well as quantitate relatively close between the primary and confirmation columns, as specified in SW846 method 8000. When these conditions are not met, the Aroclor is reported as a non-detect on the data report. These situations will be noted on the raw data as DMP, representing does not match pattern, or DNC does not confirm.

Due to software limitation, the Form VIIs will display the results either in the % difference or % drift depending on the type of the calibration curve. If the curve of all analytes is generated using an average response factor (RF), the Form VII will display results using the %difference calculation (RF). If the curve of one or more analytes is generated using a linear curve, the Form VII will display results using the % drift calculation (by concentration) for all analytes.

**System Configuration**

The Semi-Volatiles-PCB analysis was performed on the following instrument configuration:

| Instrument ID | Instrument | System Configuration | Column ID | Column Description |
|---|---|---|---|---|
| ECD1A.I_1 | HP Gas Chromatograph | HP6890 Series ECD | Rtx-CLP I | 30m x 0.25mm, 0.25um (Rtx-CLPesticide) |
| ECD1A.I_2 | HP Gas Chromatograph | HP6890 Series ECD | Rtx-CLP II | 30m x 0.25mm, 0.20um (Rtx-CLPesticideII) |

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

**Review Validation**

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

GEL ORGANIC RUN LOG INSTRUMENT ID: ECD1

DATE: 01/29/2010 METHOD: ECD1-F-8082-121409.m OPERATOR:YS1 REVIEWED BY:_____
DATE:_____

HARDWARE CONFIGURATION & METHOD SUMMARY: No. 1 on pg. 1

SOLVENT LOT DA699
ALUMINA LOT 1240553-A
COPPER LOT 236547-A

Calibration & QC Information
Initial Calibration Dates: See Calibration History and Standard Logbook.
Initial Calibration Std ID's: See Calibration History and Standard Logbook.
GEL SOP GL-OA-E-040 Polychlorinated Biphenyl: EPA 8082
Chromatogram Abbreviation Legend: AB-Assign Baseline, AP-Assign Peak,
DNC-Do Not Call, DMP-Doesn't Match Pattern, NC-Not Confirmed, RT-Retention Time,
BF-Before, AF-After.

Sequence Number: /chem/ecd1a.i/012810a.b Injection Volume: 0.5 ul

The samples in this SDG were analyzed on a "dry weight" basis.

**Method/Analysis Information**

| | |
|---|---|
| **Analytical Batch:** | 948756, 948759 and 950565 |
| **Prep Batch :** | 948754, 948758 and 950563 |
| **Standard Operating Procedures:** | GL-MA-E-013 REV# 20, GL-MA-E-009 REV# 19, GL-MA-E-014 REV# 21 and GL-MA-E-010 REV# 23 |
| **Analytical Method:** | SW846 3050B/6010B, SW846 3050B/6020 and SW846 7471A |
| **Prep Method :** | SW846 3050B and SW846 7471A Prep |

**Preparation/Analytical Method Verification**

The SOP stated above has been prepared based on technical research and testing conducted by GEL Laboratories, LLC. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

## System Configuration

The Metals analysis-ICP was performed on a P E 5300 Optima radial/axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium or scandium internal standard. Operating conditions for the ICP are set at a power level of 1500 watts. The instrument has a peristaltic pump flow rate of 1.4L/min, argon gas flows of 15 L/min and 0.2 L/min for the torch and auxiliary gases, and a flow setting of 0.65L/min for the nebulizer.

The Metals analysis - ICPMS was performed on a Perkin Elmer ELAN 9000 inductively coupled plasma mass spectrometer (ICP-MS). The instrument is equipped with a cross-flow nebulizer, quadrupole mass spectrometer, and dual mode electron multiplier detector. Internal standards of scandium, germanium, indium, tantalum, and/or lutetium were utilized to cover the mass spectrum. Operating conditions are set at 1400W power and combined argon pressures of 360+/-7 kPa for the plasma and auxiliary gases, and 0.85 L/min carrier gas flow, and an initial lens voltage of 5.2.

The Metals analysis-Mercury was performed on a Perkin-Elmer Flow Injection Mercury System (FIMS-100) automated mercury analyzer. The instrument consists of a cold vapor atomic absorption spectrometer set to detect mercury at a wavelength of 253.7 nm. Sample introduction through the flow injection system is performed via a peristaltic pump at 9 mL/min and nitrogen carrier gas rate of 80 mL/min.

## Calibration Information

**Instrument Calibration**
All initial calibration requirements have been met for this sample delivery group (SDG).

**CRDL Requirements**
All CRDL standard(s) met the referenced advisory control limits with the exception of uranium, which recovered outside of the advisory limits of 70-130%.

**ICSA/ICSAB Statement**
All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

**Continuing Calibration Blank (CCB) Requirements**
All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria.

**Continuing Calibration Verification (CCV) Requirements**
All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

## Quality Control (QC) Information

**Method Blank (MB) Statement**
The MBs analyzed with this SDG met the acceptance criteria.

**Laboratory Control Sample (LCS) Recovery**
The laboratory control sample (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest, with the exception of antimony. Per the DOE-AL statement of work, page forty, silver and antimony are exempt from the re-digestion requirement for LCS failures.

**Quality Control (QC) Sample Statement**
The following sample was selected as the quality control (QC) sample for this SDG: 245969001 (RE15-10-7880).

**Matrix Spike (MS) Recovery Statement**
The percent recoveries (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS met the recommended quality control acceptance criteria for percent recoveries for all applicable analytes with the exceptions of aluminum, lead, potassium, sodium and uranium, as indicated by the "N" qualifiers.

**Matrix Spike Duplicate (MSD) Recovery Statement**
The percent recovery (%R) obtained from the MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MSD met the recommended quality control acceptance criteria for percent recoveries for all applicable analytes with the exceptions of aluminum, lead, potassium and sodium, as indicated by the "N" qualifiers.

**MS/MSD Relative Percent Difference (RPD) Statement**
The relative percent difference (RPD) obtained from the designated matrix spike duplicate (MSD) is evaluated based on acceptance criteria of 20%. The RPD between qualifying elements results in the MS and MSD were within the acceptance limits of 20% with the exception of uranium, as indicated by the "*" qualifier.

**Duplicate Relative Percent Difference (RPD) Statement**
The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is 5X the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the contract required detection limit (RL), a control of +/-RL is used to evaluate the DUP results. All applicable analytes met these requirements with the exceptions of chromium, cobalt and uranium, as indicated by the "*" qualifiers.

**Serial Dilution % Difference Statement**
The serial dilution is used to assess matrix suppression or enhancement. Raw element concentrations that are 25X the IDL/MDL for CVAA, 50X the IDL/MDL for ICP, and 100X the IDL/MDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria of less than 10% difference (%D) with the exception of lead, as indicated by the "E" qualifier.

## Technical Information

**Holding Time Specifications**
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

**Sample Dilutions**
Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in solid samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. The samples 245969002 (RE15-10-7891), 245969004 (RE15-10-7967), 245969006 (RE15-10-7968), 245969007 (RE15-10-7965) and 245969008 (RE15-10-7975) required dilutions for uranium in order to bring over range concentrations within the linear calibration range of the instrument. The samples in this SDG were diluted the standard 2x for solids on the ICPMS.

**Preparation Information**
The samples in this SDG were prepared exactly according to the cited SOP.

## Miscellaneous Information

**Electronic Packaging Comment**
This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

**Data Exception (DER) Documentation**
Data exception reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. The following DERs were generated for this SDG: 796063 and 797331. A copy of each DER is included in the Miscellaneous Data section of this package.

**Additional Comments**
Additional comments were not required for this SDG.

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

**Review Validation:**

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

**The following data validator verified the information presented in this case narrative:**

**Reviewer:** Kristen Parson **Date:** 3/1/10

# METALS
## -11-
## Interelement Correction Factors

Lab Code: GEL
Contract: LANL01004
Instrument: OPTIMA3
Interelement Correction Factors (apparent ppb analyte/ppm interferent)

GEL Job No: 10-1512
Effective Dates: 01-FEB-10

| Parmname | Wavelength | Tin | Titanium | Uranium | Vanadium | Zinc |
|---|---|---|---|---|---|---|
