General Comment

Texas LNG's application is not just asking for "more time": it relies on litigation uncertainty despite acknowledging that no FERC stay or injunction prevented construction, and it asks for both a five-year commencement extension and a separate three-year post-term make-up window. DOE's 2025 rescission means we cannot rely on its old rigid 2023 construction test; we should carefully examine whether the company's evidence satisfies DOE's current, case-specific good-cause standard and whether DOE explains the length and conditions of the relief.
