The Standard Energy Efficiency Data Platform

SEED is primarily designed to help State and local governments implement building performance reporting regulations for private and/or public buildings

In the future it could be used by large portfolio owners, energy efficiency programs, and energy efficiency service providers.

San Francisco

New York City

Washington D.C.

Austin

Philadelphia

Seattle

How the SEED Platform works

SEED enables users to *import data from multiple sources* about the same group of buildings, and *conduct analysis and reporting* of the information.

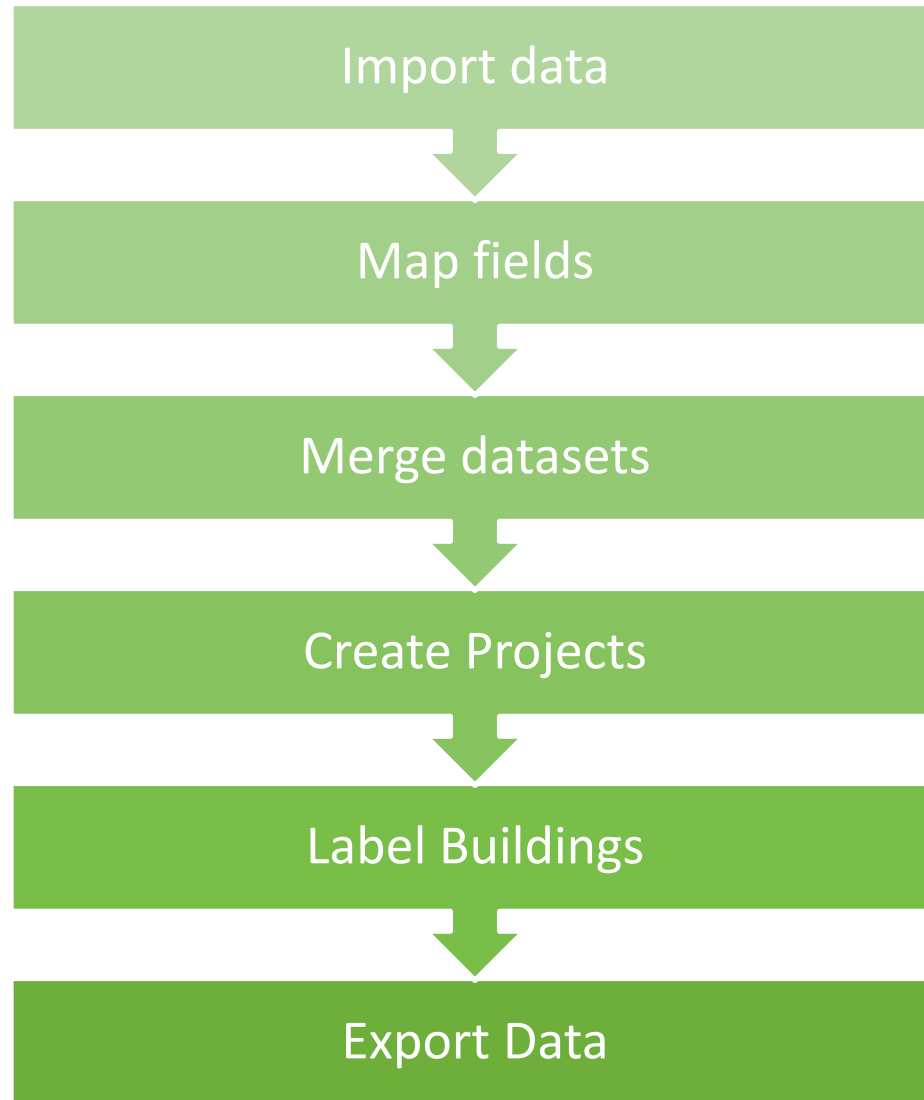

The SEED platform is a blank database; each user has their own private copy.

The SEED platform utilizes a standard data format (BEDES).

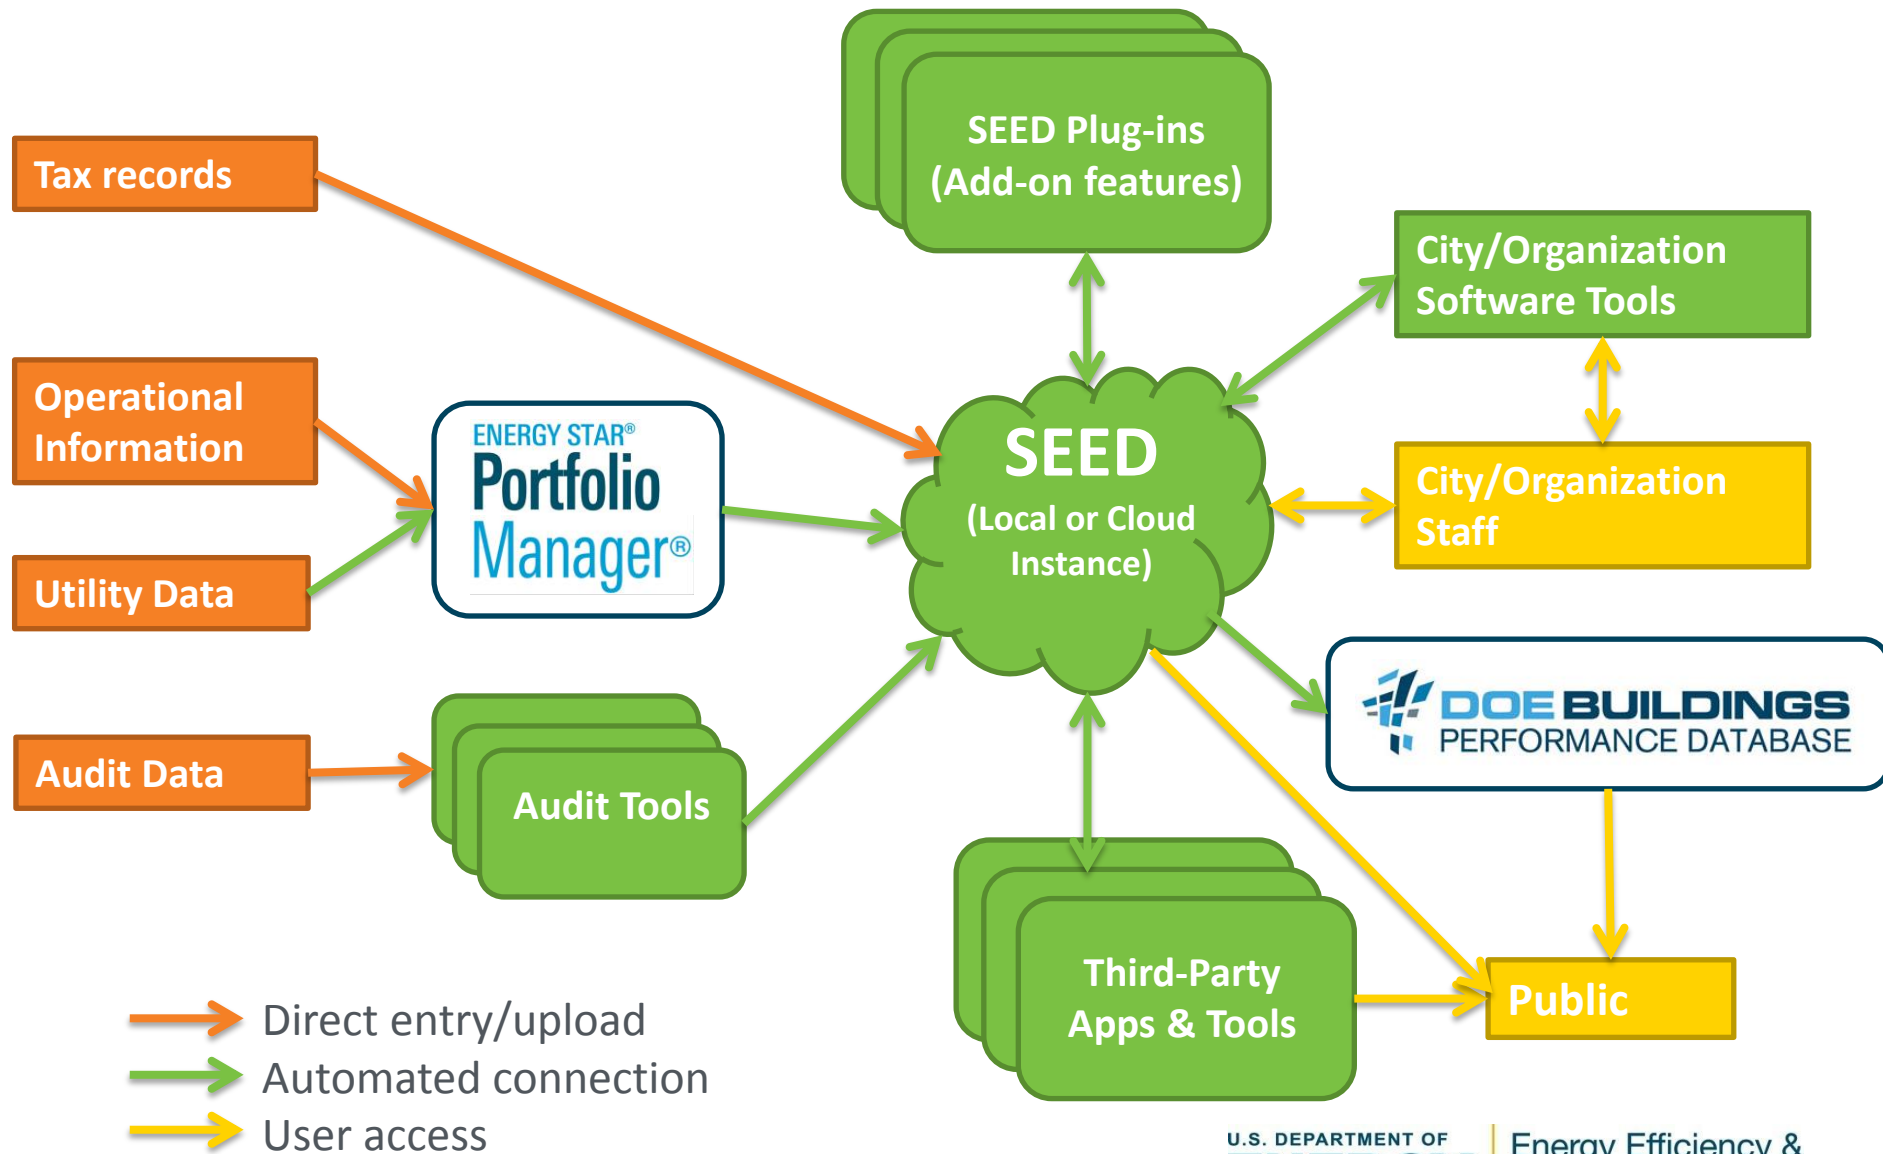

The owner of each SEED instance can choose which external parties can access their information, and what records and fields to share.

An application programming interface (API) will enable third-parties to access the data, and offer add-on tools and services, in a replicable way.

SEED V1 workflow

SEED Workflow in Action

Value of SEED

A free, open-source, web-enabled software application that helps organizations easily aggregate, clean, track, and share data on the energy performance of large groups of buildings.

- Reduces upfront cost of storing and managing data in a private, secure way
- Standard, vendor neutral, objective
- Addresses workflow management and relieves administrative burden
- Data cleansing process increases data quality and saves staff time
- Common format facilitates sharing and collaboration
- Enables development of third-party applications

But these tactical values serve a bigger goal for the market – to make data and systems interoperable

Seattle High Energy User

Address: 99999 100th St.
Year Built: 1974 Gross Floor Area: 91,000
Seattle Building ID: 99999

Compare Your Building to Others in Seattle

Your building's annual energy use per square foot or **Energy Use Intensity (EUI)** can be compared to the other 400 Seattle office buildings that reported 2012 energy performance as required by law.

Your building's 2012 EUI
91 kBtu/sf

Full report and other building type comparisons at www.seattle.gov/energybenchmarking.

$EUI = \text{Total Annual Energy Use (kBtu)} \div \text{Total Square Feet (sf)}$

Compare Your Building to Others in the U.S.

If available, your building's ENERGY STAR® score shows how its energy use compares to other U.S. buildings on a scale of 1 (least efficient) to 100 (most efficient). Buildings scoring 75 or more may be eligible to earn ENERGY STAR certification. Unlike EUI, the ENERGY STAR score takes into account the number of workers, operating hours, computers and other factors. Learn more at www.energystar.gov.

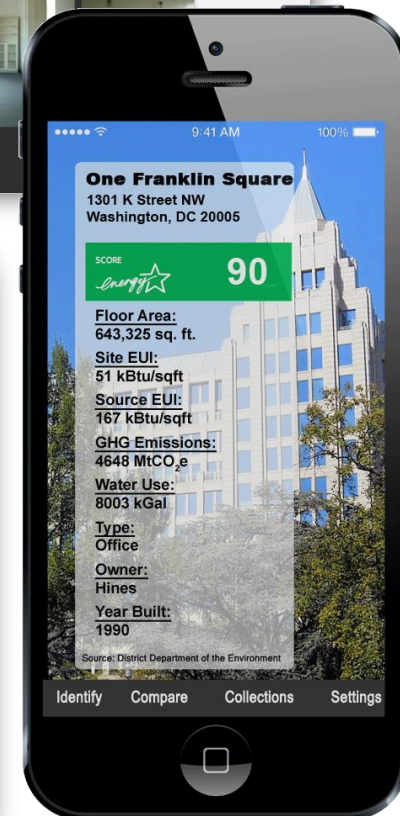

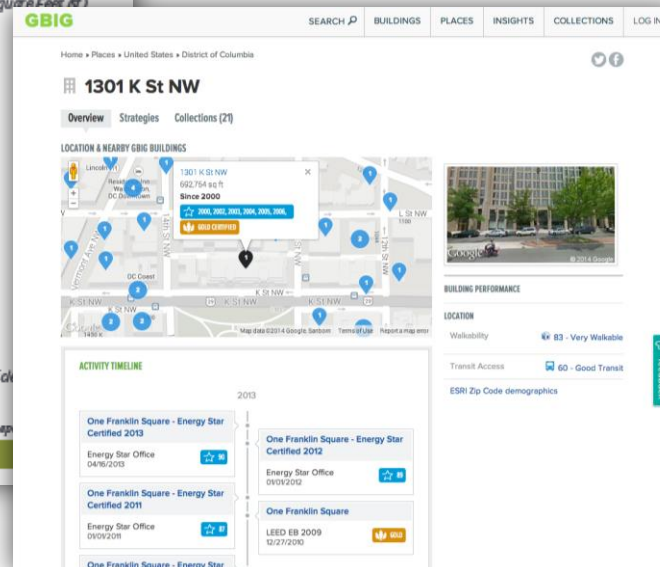

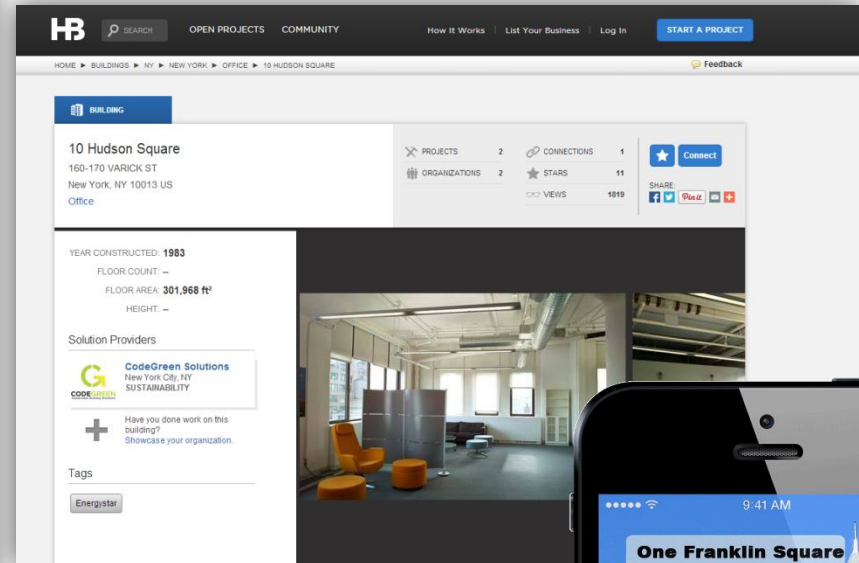

Your Building's ENERGY STAR Score: 37
Seattle Median ENERGY STAR Score for Offices: 75

A higher ENERGY STAR score indicates a more efficient building.

The information in this report is self-reported and subject to verification. The City is sending this report to the building owner and the person that reports.

www.seattle.gov/EnergyBenchmarking

Why Open Source?

- SEED was developed to support cities and others collecting whole-building energy data in using a consistent and interoperable data platform
- SEED is being developed as open source software to encourage market development of products that are flexible and meet different users' needs, providing a range of options
- “Open source” means that anyone can contribute to the open source code base and create add-on proprietary extensions. This enables the growth of a market of providers that can offer hosting and add-on functionalities that can be utilized by all SEED users
- All products that use the same code base, using the SEED brand, will remain interoperable

Quality Control Principles

- The SEED code base and brand will be closely managed to ensure high quality and interoperable software that meets the public interest
- The github site <https://github.com/SEED-platform> will be the only official version of SEED (code will be posted this month!)
- Interested parties are encouraged to contribute modifications and enhancements to the open source code base.
- Use of the SEED name will be managed as follows:
 - Products that open source core code as is, or add proprietary extensions using the API, can use the SEED name in their product.
 - Derivative works and customizations that modify the SEED code base (and do not contribute those modifications back to the project) are also encouraged, but the resulting products must say they are “based on SEED”

Management Plan

- The transition of SEED to management outside of DOE is intended to ensure the long-term viability of the project and use by the market
- DOE plans to support the creation of an Open Source Community 501c3 in the upcoming year
- This entity will provide ongoing maintenance to the code base, update it to remain compatible with key public tools, curate contributions from developers, and identify and oversee development of other new features identified by the SEED community, support users, conduct outreach, etc.
- We invite your participation as we design and form the 501c3
- DOE will continue to support SEED, and Lawrence Berkeley National Laboratory (LBNL) will provide oversight of the code, while the permanent management plan is established
