At the current rate of closure, it does not appear that all corrective actions will be closed prior to completion of the Direct Feed Low-Activity Waste (DFLAW) project. A recent Project Peer Review (PPR), held mid-March 2022, resulted in a recommendation that the project team consider implementing Alternative Project Control Methods as defined in DOE Order 413.3B.</p>

On February 22, 2023, PM's Director issued a memorandum stating that even though PM was unable to validate the final effectiveness of all corrective actions, PM-30 recommends closing the 2020 WRPS surveillance review and associated corrective action requests (CARs). A full validation was not possible, given the timely completion of the Tank-side Cesium Removal (TSCR) project and lacking any other capital asset projects to review at that time. PM plans to conduct a subsequent review to validate the maturity and effectiveness of the WRPS EVMS on a future DOE O 413.3B capital asset project with EVMS requirements for which WRPS, or subsequent contractor adopting the WRPS EVMS, is responsible.</p>
