

- 1. Establish the human capital and organizational foundation to create a high-performing organization.**
- 2. Implement a cyber risk-management and incident response program that ensures effective security of Federal and M&O networks, provides appropriate flexibility, and meets legal requirements and OMB expectations.**
- 3. Improve IT Services (EITS) into a best-in-class provider from both a technical and business perspective.**
- 4. Implement and institutionalize a reformed, integrated information management governance process that respects the goal to treat M&Os distinctively different than true Federal entities.**
- 5. Transition to 5-year planning and programming, using the NNSA Planning, Programming, Budgeting and Evaluation (PPBE) process as a starting point to include resource and requirements validation.**
- 6. Develop a comprehensive business management and contracting strategy to reduce the complexity and improve the agility of internal and external support contracts.**
- 7. Generate substantial savings within OCIO and across DOE through the implementation of a comprehensive enterprise IT consolidation and sustainability plan.**
- 8. Revitalize the records management program to raise general employee awareness and develop plans to effectively address program shortfalls identified by GAO, the IG and internal reviews.**
- 9. Establish a formal, sustainable Federal technology deployment program.**
- 10. Establish strong cooperative internal and partnerships with that lead to effective information sharing and a mutually supportive relationship to achieving the DOE mission and applicable Federal goals.**
