General Comment

I strongly oppose the clean line plains and eastern transmission line. In several studies on similar lines in California, clearly show the harmful effects of these high voltage lines to the elderly and young children, ranging from cancers to alzheimers. The proposed route of this line is too close to many homes and neighborhoods. There is a natural beauty to northwest Arkansas, that will be destroyed forever by these lines. Home owners who have worked hard for their properties will see an appreciable loss in value. The place set to receive this energy does not want it either, the same goal could be accomplished by using energy from the ocean and lastly this scheme would have never been hatched if it were not paid for by taxpayers dollars. The end result would be that many taxpayers would be forced to pay for something they do not want , that will harm their health, and devalue what they have worked so hard for their entire lives. Thank you
Rick Hudson
