Presented to

## **The Office of Science's Research Support Building and Infrastructure Modernization Project**

The Research Support Building (RSB) project team successfully delivered 132,000 square feet of new and renovated space, offering modernized, sustainable work space for 30 percent of the SLAC National Accelerator Laboratory staff. The \$97 million project features: (1) Office Support Building, which is used for industrial fabrication and collocating the Facilities and Operations staff; (2) Administrative Support Building, which created a modern, progressive work environment for four of the laboratory's support divisions; and (3) the Research Support Building, which collocated the DOE Site Office as well as several other key programs. All three buildings received a Leadership in Energy and Environmental Design Gold certification. The success of the RSB project is credited to the experienced and dedicated project management team, effective strategic planning, and robust risk management.
