General Comment

I recommend under no circumstance we give a permit to export fossil fuels do as to better save the planet and its inhabitants from fossil fuel production and consumption damages.

The only people who deny fossil fuel production and consumption caused climate change are either ignorant, corrupt or some combination.

The heating of Europe that has killed hundreds is caused by fossil fuels. The western wildfires increased frequency and intensity is caused by fossil fuels.

The damages caused by producing and consuming fossil fuels is in the trillions of dollars, Producing and burning fossil fuels is killing us and bankrupting us
