FINAL
ENVIRONMENTAL IMPACT STATEMENT

SPECIAL ISOTOPE SEPARATION PROJECT

IDAHO NATIONAL ENGINEERING LABORATORY
IDAHO FALLS, IDAHO

November 1988

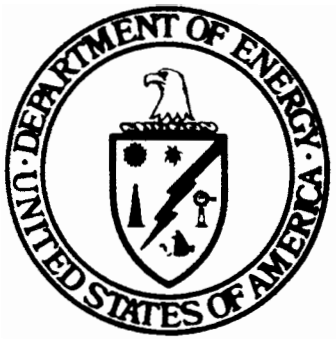

U.S. DEPARTMENT OF ENERGY

COVER SHEET

RESPONSIBLE AGENCY: U. S. Department of Energy

TITLE: Final Environmental Impact Statement, Special Isotope Separation Project, Idaho National Engineering Laboratory, Idaho Falls, Idaho

CONTACT: Additional information concerning this statement can be obtained from:

Mr. J. P. Hamric
SIS Project Manager
Idaho Operations Office
U.S. Department of Energy
785 DOE Place
Idaho Falls, ID 83402-1133
(208) 526-0306

For general information on the Department of Energy's EIS process, contact:

Office of the Assistant Secretary for Environment, Safety and Health
U.S. Department of Energy
Attention: Ms. Carol Borgstrom (EH-25)
Director, Office of NEPA Project Assistance
Room 3E-080, Forrestal Building
1000 Independence Avenue, SW
Washington, DC 20585
(202) 586-4600

ABSTRACT: The purpose of this Final Environmental Impact Statement (EIS) is to provide environmental input into a U.S. Department of Energy (DOE) decision on the proposed construction and operation of a Special Isotope Separation (SIS) Project using the Atomic Vapor Laser Isotope Separation (AVLIS) process technology and on the selection of a site for such a project. The SIS Project would provide DOE with the capability of segregating the isotopes of DOE-owned plutonium into specific isotopic concentrations. This capability is needed to provide a contingent capability in DOE's production of nuclear materials for national defense.

The alternatives considered in detail in this EIS include (1) constructing and operating the SIS Project at the Idaho National Engineering Laboratory (INEL) near Idaho Falls, Idaho; (2) constructing and operating the SIS Project at the Hanford Site near Richland, Washington; (3) constructing and operating the SIS Project at the Savannah River Plant (SRP) near Aiken, South Carolina; and (4) no action, or not constructing and operating the SIS Project.

This EIS includes discussion of the SIS facilities and processes; the environmental consequences of constructing and operating the facilities at the alternative sites; the environmental consequences of no action; and the potential environmental consequences caused by postulated accidents.

FOREWORD TO VOLUMES 3 THROUGH 6

The comment/response and comment (reproduced public input) volumes of the Special Isotope Separation (SIS) Project Final EIS have been prepared in compliance with the Council of Environmental Quality (CEQ) regulations 40 CFR 1503.4 and 1506.6. These volumes contain the reproduced public input and DOE's responses to the comments received during the public comment period on the Draft EIS.

Notice of availability of the Draft EIS for the Special Isotope Separation (SIS) Project appeared in the Federal Register on February 19, 1988. The Federal Register notice invited comment on the Draft EIS within the 60-day comment period, which ended April 21, 1988. Six public hearings were held, as follows:

Idaho Falls, Idaho	March 25 and 30, 1988
Twin Falls, Idaho	March 28 and 31, 1988
Boise, Idaho	March 26 and 29, 1988

At the beginning of the public comment period, a procedure was established to receive, document, identify, and prepare responses to public comments. Each comment (written, oral, or an exhibit) was assigned an identification number and is reproduced in Volumes 3 through 6 of the Final EIS.

The identification numbers assigned were as follows:

IXXX = Oral testimony given at the March 25 Idaho Falls hearing.
I5XX = Oral testimony given at the March 30 Idaho Falls hearing.
TXXX = Oral testimony given at the March 28 Twin Falls hearing.
T5XX = Oral testimony given at the March 31 Twin Falls hearing.
BXXX = Oral testimony given at the March 26 Boise hearing.
B2XX = Oral testimony given at the March 29 Boise hearing.
WXXX = Written testimony sent to DOE during the comment period.
EXXX = Exhibits (i.e., written testimony, letters, pictures, poems) submitted at the hearings.
XXX = Number designating order in which the testimony was received.

Note: The Moscow City Council Commission on Health and the Environment held a public hearing to obtain comment on the Draft EIS for the proposed SIS Project. The transcripts and exhibits received by DOE from this hearing have been entered into the record as written comment W284.

All letters, transcripts of oral testimony, and accompanying exhibits were photostatically reproduced and are included in Volumes 3 through 6 of the Final EIS. Specifically, Volume 3 contains transcripts of the oral testimony, Volumes 4 and 5 contain exhibits submitted during the public hearings, and Volume 6 contains written comments received by DOE. Volume 2 addresses the specific comments contained in Volumes 3 through 6 designated by a comment summary number placed in the margins next to the testimony, as applicable. This number refers to the associated Volume 2 comment summary and response. The introduction in the front of Volume 2 contains guidance for locating specific public testimony, summary comments, and the associated responses to the comments. Appendices A through E at the end of Volume 2 provide cross-references between the reproduced public input contained in Volumes 3 through 6, and the corresponding summary comments and responses comprising Volume 2.

In reviewing the unedited transcript of the oral testimony, DOE has exercised its judgement to interpret the intent of the comment when the transcription is obviously in error (e.g., RIFT is interpreted to mean WIPP on pages 310-313, Melinda Kassen's name was misspelled on pages 320-323, etc.)

EXHIBIT 1

PART 1500—PURPOSE, POLICY, AND MANDATE

Sec.
1500.1 Purpose.
1500.2 Policy.
1500.3 Mandate.
1500.4 Reducing paperwork.
1500.5 Reducing delay.
1500.6 Agency authority.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609) and E.O. 11514, Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 55990, Nov. 28, 1978, unless otherwise noted.

§ 1500.1 Purpose.

(a) The National Environmental Policy Act (NEPA) is our basic national charter for protection of the environment. It establishes policy, sets goals (section 101), and provides means (section 102) for carrying out the policy. Section 102(2) contains "action-forcing" provisions to make sure that federal agencies act according to the letter and spirit of the Act. The regulations that follow implement section 102(2). Their purpose is to tell federal agencies what they must do to comply with the procedures and achieve the goals of the Act. The President, the federal agencies, and the courts share responsibility for enforcing the Act so as to achieve the substantive requirements of section 101.

(b) NEPA procedures must insure that environmental information is available to public officials and citizens before decisions are made and before actions are taken. The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential to implementing NEPA. Most important, NEPA documents must concentrate on the issues that are truly significant to the action in question, rather than amassing needless detail.

(c) Ultimately, of course, it is not better documents but better decisions that count. NEPA's purpose is not to generate paperwork—even excellent paperwork—but to foster excellent action. The NEPA process is intended to help public officials make decisions that are based on understanding of environmental consequences, and take actions that protect, restore, and enhance the environment. These regulations provide the direction to achieve this purpose.

§ 1500.2 Policy.

Federal agencies shall to the fullest extent possible:

(a) Interpret and administer the policies, regulations, and public laws of the United States in accordance with the policies set forth in the Act and in these regulations.

(b) Implement procedures to make the NEPA process more useful to decisionmakers and the public; to reduce paperwork and the accumulation of extraneous background data; and to emphasize real environmental issues and alternatives. Environmental impact statements shall be concise, clear, and to the point, and shall be supported by evidence that agencies have made the necessary environmental analyses.

(c) Integrate the requirements of NEPA with other planning and environmental review procedures required by law or by agency practice so that all such procedures run concurrently rather than consecutively.

(d) Encourage and facilitate public involvement in decisions which affect the quality of the human environment.

(e) Use the NEPA process to identify and assess the reasonable alternatives to proposed actions that will avoid or minimize adverse effects of these actions upon the quality of the human environment.

(f) Use all practicable means, consistent with the requirements of the Act and other essential considerations of national policy, to restore and enhance the quality of the human environment and avoid or minimize any possible adverse effects of their actions upon the quality of the human environment.

§ 1500.3 Mandate.

Parts 1500 through 1508 of this title provide regulations applicable to and binding on all Federal agencies for implementing the procedural provisions

of the National Environmental Policy Act of 1969, as amended (Pub. L. 91-190, 42 U.S.C. 4321 et seq.) (NEPA or the Act) except where compliance would be inconsistent with other statutory requirements. These regulations are issued pursuant to NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 et seq.) section 309 of the Clean Air Act, as amended (42 U.S.C. 7609) and Executive Order 11514, Protection and Enhancement of Environmental Quality (March 5, 1970, as amended by Executive Order 11991, May 24, 1977). These regulations, unlike the predecessor guidelines, are not confined to sec. 102(2)(C) (environmental impact statements). The regulations apply to the whole of section 102(2). The provisions of the Act and of these regulations must be read together as a whole in order to comply with the spirit and letter of the law. It is the Council's intention that judicial review of agency compliance with these regulations not occur before an agency has filed the final environmental impact statement, or has made a final finding of no significant impact (when such a finding will result in action affecting the environment), or takes action that will result in irreparable injury. Furthermore, it is the Council's intention that any trivial violation of these regulations not give rise to any independent cause of action.

§ 1500.4 Reducing paperwork.

Agencies shall reduce excessive paperwork by:

(a) Reducing the length of environmental impact statements (§ 1502.2(c)), by means such as setting appropriate page limits (§§ 1501.7(b)(1) and 1502.7).

(b) Preparing analytic rather than encyclopedic environmental impact statements (§ 1502.2(a)).

(c) Discussing only briefly issues other than significant ones (§ 1502.2(b)).

(d) Writing environmental impact statements in plain language (§ 1502.8).

(e) Following a clear format for environmental impact statements (§ 1502.10).

(f) Emphasizing the portions of the environmental impact statement that are useful to decisionmakers and the public (§§ 1502.14 and 1502.15) and reducing emphasis on background material (§ 1502.16).

(g) Using the scoping process, not only to identify significant environmental issues deserving of study, but also to deemphasize insignificant issues, narrowing the scope of the environmental impact statement process accordingly (§ 1501.7).

(h) Summarizing the environmental impact statement (§ 1502.12) and circulating the summary instead of the entire environmental impact statement if the latter is unusually long (§ 1502.19).

(i) Using program, policy, or plan environmental impact statements and tiering from statements of broad scope to those of narrower scope, to eliminate repetitive discussions of the same issues (§§ 1502.4 and 1502.20).

(j) Incorporating by reference (§ 1502.21).

(k) Integrating NEPA requirements with other environmental review and consultation requirements (§ 1502.25).

(l) Requiring comments to be as specific as possible (§ 1503.3).

(m) Attaching and circulating only changes to the draft environmental impact statement, rather than rewriting and circulating the entire statement when changes are minor (§ 1503.4(c)).

(n) Eliminating duplication with State and local procedures, by providing for joint preparation (§ 1506.2), and with other Federal procedures, by providing that an agency may adopt appropriate environmental documents prepared by another agency (§ 1506.3).

(o) Combining environmental documents with other documents (§ 1506.4).

(p) Using categorical exclusions to define categories of actions which do not individually or cumulatively have a significant effect on the human environment and which are therefore exempt from requirements to prepare an environmental impact statement (§ 1508.4).

(q) Using a finding of no significant impact when an action not otherwise excluded will not have a significant

effect on the human environment and is therefore exempt from requirements to prepare an environmental impact statement (§ 1508.13).

[43 FR 55990, Nov. 29, 1978; 44 FR 873, Jan. 3, 1979]

§ 1500.5 Reducing delay.

Agencies shall reduce delay by:

(a) Integrating the NEPA process into early planning (§ 1501.2).

(b) Emphasizing interagency cooperation before the environmental impact statement is prepared, rather than submission of adversary comments on a completed document (§ 1501.6).

(c) Insuring the swift and fair resolution of lead agency disputes (§ 1501.5).

(d) Using the scoping process for an early identification of what are and what are not the real issues (§ 1501.7).

(e) Establishing appropriate time limits for the environmental impact statement process (§§ 1501.7(b)(2) and 1501.8).

(f) Preparing environmental impact statements early in the process (§ 1502.5).

(g) Integrating NEPA requirements with other environmental review and consultation requirements (§ 1502.25).

(h) Eliminating duplication with State and local procedures by providing for joint preparation (§ 1506.2) and with other Federal procedures by providing that an agency may adopt appropriate environmental documents prepared by another agency (§ 1506.3).

(i) Combining environmental documents with other documents (§ 1506.4).

(j) Using accelerated procedures for proposals for legislation (§ 1506.8).

(k) Using categorical exclusions to define categories of actions which do not individually or cumulatively have a significant effect on the human environment (§ 1508.4) and which are therefore exempt from requirements to prepare an environmental impact statement.

(l) Using a finding of no significant impact when an action not otherwise excluded will not have a significant effect on the human environment (§ 1508.13) and is therefore exempt from requirements to prepare an environmental impact statement.

§ 1500.6 Agency authority.

Each agency shall interpret the provisions of the Act as a supplement to its existing authority and as a mandate to view traditional policies and missions in the light of the Act's national environmental objectives. Agencies shall review their policies, procedures, and regulations accordingly and revise them as necessary to insure full compliance with the purposes and provisions of the Act. The phrase "to the fullest extent possible" in section 102 means that each agency of the Federal Government shall comply with that section unless existing law applicable to the agency's operations expressly prohibits or makes compliance impossible.

PART 1501—NEPA AND AGENCY PLANNING

Sec.

1501.1 Purpose.
1501.2 Apply NEPA early in the process.
1501.3 When to prepare an environmental assessment.
1501.4 Whether to prepare an environmental impact statement.
1501.5 Lead agencies.
1501.6 Cooperating agencies.
1501.7 Scoping.
1501.8 Time limits.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 55992, Nov. 29, 1978, unless otherwise noted.

§ 1501.1 Purpose.

The purposes of this part include:

(a) Integrating the NEPA process into early planning to insure appropriate consideration of NEPA's policies and to eliminate delay.

(b) Emphasizing cooperative consultation among agencies before the environmental impact statement is prepared rather than submission of adversary comments on a completed document.

(c) Providing for the swift and fair resolution of lead agency disputes.

(d) Identifying at an early stage the significant environmental issues deserving of study and deemphasizing insignificant issues, narrowing the scope of the environmental impact statement accordingly.

(e) Providing a mechanism for putting appropriate time limits on the environmental impact statement process.

§ 1501.2 Apply NEPA early in the process.

Agencies shall integrate the NEPA process with other planning at the earliest possible time to insure that planning and decisions reflect environmental values, to avoid delays later in the process, and to head off potential conflicts. Each agency shall:

(a) Comply with the mandate of section 102(2)(A) to "utilize a systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man's environment," as specified by § 1507.2.

(b) Identify environmental effects and values in adequate detail so they can be compared to economic and technical analyses. Environmental documents and appropriate analyses shall be circulated and reviewed at the same time as other planning documents.

(c) Study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources as provided by section 102(2)(E) of the Act.

(d) Provide for cases where actions are planned by private applicants or other non-Federal entities before Federal involvement so that:

(1) Policies or designated staff are available to advise potential applicants of studies or other information foreseeably required for later Federal action.

(2) The Federal agency consults early with appropriate State and local agencies and Indian tribes and with interested private persons and organizations when its own involvement is reasonably foreseeable.

(3) The Federal agency commences its NEPA process at the earliest possible time.

§ 1501.3 When to prepare an environmental assessment.

(a) Agencies shall prepare an environmental assessment (§ 1508.9) when necessary under the procedures adopted by individual agencies to supplement these regulations as described in § 1507.3. An assessment is not necessary if the agency has decided to prepare an environmental impact statement.

(b) Agencies may prepare an environmental assessment on any action at any time in order to assist agency planning and decisionmaking.

§ 1501.4 Whether to prepare an environmental impact statement.

In determining whether to prepare an environmental impact statement the Federal agency shall:

(a) Determine under its procedures supplementing these regulations (described in § 1507.3) whether the proposal is one which:

(1) Normally requires an environmental impact statement, or

(2) Normally does not require either an environmental impact statement or an environmental assessment (categorical exclusion).

(b) If the proposed action is not covered by paragraph (a) of this section, prepare an environmental assessment (§ 1508.9). The agency shall involve environmental agencies, applicants, and the public, to the extent practicable, in preparing assessments required by § 1508.9(a)(1).

(c) Based on the environmental assessment make its determination whether to prepare an environmental impact statement.

(d) Commence the scoping process (§ 1501.7), if the agency will prepare an environmental impact statement.

(e) Prepare a finding of no significant impact (§ 1508.13), if the agency determines on the basis of the environmental assessment not to prepare a statement.

(1) The agency shall make the finding of no significant impact available

to the affected public as specified in § 1506.6.

(2) In certain limited circumstances, which the agency may cover in its procedures under § 1507.3, the agency shall make the finding of no significant impact available for public review (including State and areawide clearinghouses) for 30 days before the agency makes its final determination whether to prepare an environmental impact statement and before the action may begin. The circumstances are:

(i) The proposed action is, or is closely similar to, one which normally requires the preparation of an environmental impact statement under the procedures adopted by the agency pursuant to § 1507.3, or

(ii) The nature of the proposed action is one without precedent.

§ 1501.5 Lead agencies.

(a) A lead agency shall supervise the preparation of an environmental impact statement if more than one Federal agency either:

(1) Proposes or is involved in the same action; or

(2) Is involved in a group of actions directly related to each other because of their functional interdependence or geographical proximity.

(b) Federal, State, or local agencies, including at least one Federal agency, may act as joint lead agencies to prepare an environmental impact statement (§ 1506.2).

(c) If an action falls within the provisions of paragraph (a) of this section the potential lead agencies shall determine by letter or memorandum which agency shall be the lead agency and which shall be cooperating agencies. The agencies shall resolve the lead agency question so as not to cause delay. If there is disagreement among the agencies, the following factors (which are listed in order of descending importance) shall determine lead agency designation:

(1) Magnitude of agency's involvement.

(2) Project approval/disapproval authority.

(3) Expertise concerning the action's environmental effects.

(4) Duration of agency's involvement.

(5) Sequence of agency's involvement.

(d) Any Federal agency, or any State or local agency or private person substantially affected by the absence of lead agency designation, may make a written request to the potential lead agencies that a lead agency be designated.

(e) If Federal agencies are unable to agree on which agency will be the lead agency or if the procedure described in paragraph (c) of this section has not resulted within 45 days in a lead agency designation, any of the agencies or persons concerned may file a request with the Council asking it to determine which Federal agency shall be the lead agency.

A copy of the request shall be transmitted to each potential lead agency. The request shall consist of:

(1) A precise description of the nature and extent of the proposed action.

(2) A detailed statement of why each potential lead agency should or should not be the lead agency under the criteria specified in paragraph (c) of this section.

(f) A response may be filed by any potential lead agency concerned within 20 days after a request is filed with the Council. The Council shall determine as soon as possible but not later than 20 days after receiving the request and all responses to it which Federal agency shall be the lead agency and which other Federal agencies shall be cooperating agencies.

[43 FR 55992, Nov. 29, 1978; 44 FR 873, Jan. 3, 1979]

§ 1501.6 Cooperating agencies.

The purpose of this section is to emphasize agency cooperation early in the NEPA process. Upon request of the lead agency, any other Federal agency which has jurisdiction by law shall be a cooperating agency. In addition any other Federal agency which has special expertise with respect to any environmental issue, which should be addressed in the statement may be a cooperating agency upon request of the lead agency. An agency may re-

quest the lead agency to designate it a cooperating agency.

(a) The lead agency shall:

(1) Request the participation of each cooperating agency in the NEPA process at the earliest possible time.

(2) Use the environmental analysis and proposals of cooperating agencies with jurisdiction by law or special expertise, to the maximum extent possible consistent with its responsibility as lead agency.

(3) Meet with a cooperating agency at the latter's request.

(b) Each cooperating agency shall:

(1) Participate in the NEPA process at the earliest possible time.

(2) Participate in the scoping process (described below in § 1501.7).

(3) Assume on request of the lead agency responsibility for developing information and preparing environmental analyses including portions of the environmental impact statement concerning which the cooperating agency has special expertise.

(4) Make available staff support at the lead agency's request to enhance the latter's interdisciplinary capability.

(5) Normally use its own funds. The lead agency shall, to the extent available funds permit, fund those major activities or analyses it requests from cooperating agencies. Potential lead agencies shall include such funding requirements in their budget requests.

(c) A cooperating agency may in response to a lead agency's request for assistance in preparing the environmental impact statement (described in paragraph (b)(3), (4), or (5) of this section) reply that other program commitments preclude any involvement or the degree of involvement requested in the action that is the subject of the environmental impact statement. A copy of this reply shall be submitted to the Council.

§ 1501.7 Scoping.

There shall be an early and open process for determining the scope of issues to be addressed and for identifying the significant issues related to a proposed action. This process shall be termed scoping. As soon as practicable after its decision to prepare an environmental impact statement and before the scoping process the lead agency shall publish a notice of intent (§ 1508.22) in the FEDERAL REGISTER except as provided in § 1507.3(e).

(a) As part of the scoping process the lead agency shall:

(1) Invite the participation of affected Federal, State, and local agencies, any affected Indian tribe, the proponent of the action, and other interested persons (including those who might not be in accord with the action on environmental grounds), unless there is a limited exception under § 1507.3(c). An agency may give notice in accordance with § 1506.6.

(2) Determine the scope (§ 1508.25) and the significant issues to be analyzed in depth in the environmental impact statement.

(3) Identify and eliminate from detailed study the issues which are not significant or which have been covered by prior environmental review (§ 1506.3), narrowing the discussion of these issues in the statement to a brief presentation of why they will not have a significant effect on the human environment or providing a reference to their coverage elsewhere.

(4) Allocate assignments for preparation of the environmental impact statement among the lead and cooperating agencies, with the lead agency retaining responsibility for the statement.

(5) Indicate any public environmental assessments and other environmental impact statements which are being or will be prepared that are related to but are not part of the scope of the impact statement under consideration.

(6) Identify other environmental review and consultation requirements so the lead and cooperating agencies may prepare other required analyses and studies concurrently with, and integrated with, the environmental impact statement as provided in § 1502.25.

(7) Indicate the relationship between the timing of the preparation of environmental analyses and the agency's tentative planning and decisionmaking schedule.

(b) As part of the scoping process the lead agency may:

(1) Set page limits on environmental documents (§ 1502.7).

(2) Set time limits (§ 1501.8).

(3) Adopt procedures under § 1507.3 to combine its environmental assessment process with its scoping process.

(4) Hold an early scoping meeting or meetings which may be integrated with any other early planning meeting the agency has. Such a scoping meeting will often be appropriate when the impacts of a particular action are confined to specific sites.

(c) An agency shall revise the determinations made under paragraphs (a) and (b) of this section if substantial changes are made later in the proposed action, or if significant new circumstances or information arise which bear on the proposal or its impacts.

§ 1501.8 Time limits.

Although the Council has decided that prescribed universal time limits for the entire NEPA process are too inflexible, Federal agencies are encouraged to set time limits appropriate to individual actions (consistent with the time intervals required by § 1508.10). When multiple agencies are involved the reference to agency below means lead agency.

(a) The agency shall set time limits if an applicant for the proposed action requests them: *Provided*, That the limits are consistent with the purposes of NEPA and other essential considerations of national policy.

(b) The agency may:

(1) Consider the following factors in determining time limits:

(i) Potential for environmental harm.

(ii) Size of the proposed action.

(iii) State of the art of analytic techniques.

(iv) Degree of public need for the proposed action, including the consequences of delay.

(v) Number of persons and agencies affected.

(vi) Degree to which relevant information is known and if not known the time required for obtaining it.

(vii) Degree to which the action is controversial.

(viii) Other time limits imposed on the agency by law, regulations, or executive order.

(2) Set overall time limits or limits for each constituent part of the NEPA process, which may include:

(i) Decision on whether to prepare an environmental impact statement (if not already decided).

(ii) Determination of the scope of the environmental impact statement.

(iii) Preparation of the draft environmental impact statement.

(iv) Review of any comments on the draft environmental impact statement from the public and agencies.

(v) Preparation of the final environmental impact statement.

(vi) Review of any comments on the final environmental impact statement.

(vii) Decision on the action based in part on the environmental impact statement.

(3) Designate a person (such as the project manager or a person in the agency's office with NEPA responsibilities) to expedite the NEPA process.

(c) State or local agencies or members of the public may request a Federal Agency to set time limits.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 55994, Nov. 29, 1978, unless otherwise noted.

§ 1502.1 Purpose.

The primary purpose of an environmental impact statement is to serve as an action-forcing device to insure that the policies and goals defined in the Act are infused into the ongoing programs and actions of the Federal Government. It shall provide full and fair discussion of significant environmental impacts and shall inform decisionmakers and the public of the reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality of the human environment. Agencies shall focus on significant environmental issues and alternatives and shall reduce paperwork and the accumulation of extraneous background data. Statements shall be concise, clear, and to the point, and shall be supported by evidence that the agency has made the necessary environmental analyses. An environmental impact statement is more than a disclosure document. It shall be used by Federal officials in conjunction with other relevant material to plan actions and make decisions.

§ 1502.2 Implementation.

To achieve the purposes set forth in § 1502.1 agencies shall prepare environmental impact statements in the following manner:

(a) Environmental impact statements shall be analytic rather than encyclopedic.

(b) Impacts shall be discussed in proportion to their significance. There shall be only brief discussion of other than significant issues. As in a finding of no significant impact, there should be only enough discussion to show why more study is not warranted.

(c) Environmental impact statements shall be kept concise and shall be no longer than absolutely necessary to comply with NEPA and with these regulations. Length should vary first with potential environmental problems and then with project size.

(d) Environmental impact statements shall state how alternatives considered in it and decisions based on it will or will not achieve the requirements of sections 101 and 102(1) of the Act and other environmental laws and policies.

(e) The range of alternatives discussed in environmental impact statements shall encompass those to be considered by the ultimate agency decisionmaker.

(f) Agencies shall not commit resources prejudicing selection of alternatives before making a final decision (§ 1506.1).

(g) Environmental impact statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made.

§ 1502.3 Statutory requirements for statements.

As required by sec. 102(2)(C) of NEPA environmental impact statements (§ 1508.11) are to be included in every recommendation or report.

On proposals (§ 1508.23).

For legislation and (§ 1508.17).

Other major Federal actions (§ 1508.18).

Significantly (§ 1508.27).

Affecting (§§ 1508.3, 1508.8).

The quality of the human environment (§ 1508.14).

§ 1502.4 Major Federal actions requiring the preparation of environmental impact statements.

(a) Agencies shall make sure the proposal which is the subject of an environmental impact statement is properly defined. Agencies shall use the criteria for scope (§ 1508.25) to determine which proposal(s) shall be the subject of a particular statement. Proposals or parts of proposals which are related to each other closely enough to be, in effect, a single course of action shall

be evaluated in a single impact statement.

(b) Environmental impact statements may be prepared, and are sometimes required, for broad Federal actions such as the adoption of new agency programs or regulations (§ 1508.18). Agencies shall prepare statements on broad actions so that they are relevant to policy and are timed to coincide with meaningful points in agency planning and decisionmaking.

(c) When preparing statements on broad actions (including proposals by more than one agency), agencies may find it useful to evaluate the proposal(s) in one of the following ways:

(1) Geographically, including actions occurring in the same general location, such as body of water, region, or metropolitan area.

(2) Generically, including actions which have relevant similarities, such as common timing, impacts, alternatives, methods of implementation, media, or subject matter.

(3) By stage of technological development including federal or federally assisted research, development or demonstration programs for new technologies which, if applied, could significantly affect the quality of the human environment. Statements shall be prepared on such programs and shall be available before the program has reached a stage of investment or commitment to implementation likely to determine subsequent development or restrict later alternatives.

(d) Agencies shall as appropriate employ scoping (§ 1501.7), tiering (§ 1502.20), and other methods listed in §§ 1500.4 and 1500.5 to relate broad and narrow actions and to avoid duplication and delay.

§ 1502.5 Timing.

An agency shall commence preparation of an environmental impact statement as close as possible to the time the agency is developing or is presented with a proposal (§ 1508.23) so that preparation can be completed in time for the final statement to be included in any recommendation or report on the proposal. The statement shall be prepared early enough so that it can serve practically as an important contribution to the decisionmaking process and will not be used to rationalize or justify decisions already made (§§ 1500.2(c), 1501.2, and 1502.2). For instance:

(a) For projects directly undertaken by Federal agencies the environmental impact statement shall be prepared at the feasibility analysis (go-no go) stage and may be supplemented at a later stage if necessary.

(b) For applications to the agency appropriate environmental assessments or statements shall be commenced no later than immediately after the application is received. Federal agencies are encouraged to begin preparation of such assessments or statements earlier, preferably jointly with applicable State or local agencies.

(c) For adjudication, the final environmental impact statement shall normally precede the final staff recommendation and that portion of the public hearing related to the impact study. In appropriate circumstances the statement may follow preliminary hearings designed to gather information for use in the statements.

(d) For informal rulemaking the draft environmental impact statement shall normally accompany the proposed rule.

§ 1502.6 Interdisciplinary preparation.

Environmental impact statements shall be prepared using an inter-disciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts (section 102(2)(A) of the Act). The disciplines of the preparers shall be appropriate to the scope and issues identified in the scoping process (§ 1501.7).

§ 1502.7 Page limits.

The text of final environmental impact statements (e.g., paragraphs (d) through (g) of § 1502.10) shall normally be less than 150 pages and for proposals of unusual scope or complexity shall normally be less than 300 pages.

§ 1502.8 Writing.

Environmental impact statements shall be written in plain language and may use appropriate graphics so that decisionmakers and the public can readily understand them. Agencies should employ writers of clear prose or editors to write, review, or edit statements, which will be based upon the analysis and supporting data from the natural and social sciences and the environmental design arts.

§ 1502.9 Draft, final, and supplemental statements.

Except for proposals for legislation as provided in § 1506.8 environmental impact statements shall be prepared in two stages and may be supplemented.

(a) Draft environmental impact statements shall be prepared in accordance with the scope decided upon in the scoping process. The lead agency shall work with the cooperating agencies and shall obtain comments as required in Part 1503 of this chapter. The draft statement must fulfill and satisfy to the fullest extent possible the requirements established for final statements in section 102(2)(C) of the Act. If a draft statement is so inadequate as to preclude meaningful analysis, the agency shall prepare and circulate a revised draft of the appropriate portion. The agency shall make every effort to disclose and discuss at appropriate points in the draft statement all major points of view on the environmental impacts of the alternatives including the proposed action.

(b) Final environmental impact statements shall respond to comments as required in Part 1503 of this chapter. The agency shall discuss at appropriate points in the final statement any responsible opposing view which was not adequately discussed in the draft statement and shall indicate the agency's response to the issues raised.

(c) Agencies:

(1) Shall prepare supplements to either draft or final environmental impact statements if:

(i) The agency makes substantial changes in the proposed action that are relevant to environmental concerns; or

(ii) There are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts.

(2) May also prepare supplements when the agency determines that the purposes of the Act will be furthered by doing so.

(3) Shall adopt procedures for introducing a supplement into its formal administrative record, if such a record exists.

(4) Shall prepare, circulate, and file a supplement to a statement in the same fashion (exclusive of scoping) as a draft and final statement unless alternative procedures are approved by the Council.

§ 1502.10 Recommended format.

Agencies shall use a format for environmental impact statements which will encourage good analysis and clear presentation of the alternatives including the proposed action. The following standard format for environmental impact statements should be followed unless the agency determines that there is a compelling reason to do otherwise:

(a) Cover sheet.

(b) Summary.

(c) Table of contents.

(d) Purpose of and need for action.

(e) Alternatives including proposed action (sections 102(2)(C)(iii) and 102(2)(E) of the Act).

(f) Affected environment.

(g) Environmental consequences (especially sections 102(2)(C)(i), (ii), (iv), and (v) of the Act).

(h) List of preparers.

(i) List of Agencies, Organizations, and persons to whom copies of the statement are sent.

(j) Index.

(k) Appendices (if any).

If a different format is used, it shall include paragraphs (a), (b), (c), (h), (i), and (j), of this section and shall include the substance of paragraphs (d), (e), (f), (g), and (k) of this section, as further described in §§ 1502.11 through 1502.18, in any appropriate format.

§ 1502.11 Cover sheet.

The cover sheet shall not exceed one page. It shall include:

(a) A list of the responsible agencies including the lead agency and any cooperating agencies.

(b) The title of the proposed action that is the subject of the statement (and if appropriate the titles of related cooperating agency actions), together with the State(s) and county(ies) (or other jurisdiction if applicable) where the action is located.

(c) The name, address, and telephone number of the person at the agency who can supply further information.

(d) A designation of the statement as a draft, final, or draft or final supplement.

(e) A one paragraph abstract of the statement.

(f) The date by which comments must be received (computed in cooperation with EPA under § 1506.10).

The information required by this section may be entered on Standard Form 424 (in items 4, 6, 7, 10, and 18).

§ 1502.12 Summary.

Each environmental impact statement shall contain a summary which adequately and accurately summarizes the statement. The summary shall stress the major conclusions, areas of controversy (including issues raised by agencies and the public), and the issues to be resolved (including the choice among alternatives). The summary will normally not exceed 15 pages.

§ 1502.13 Purpose and need.

The statement shall briefly specify the underlying purpose and need to which the agency is responding in proposing the alternatives including the proposed action.

§ 1502.14 Alternatives including the proposed action.

This section is the heart of the environmental impact statement. Based on the information and analysis presented in the sections on the Affected Environment (§ 1502.15) and the Environmental Consequences (§ 1502.16), it should present the environmental impacts of the proposal and the alternatives in comparative form, thus sharply defining the issues and providing a clear basis for choice among options by the decisionmaker and the public. In this section agencies shall:

(a) Rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives which were eliminated from detailed study, briefly discuss the reasons for their having been eliminated.

(b) Devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits.

(c) Include reasonable alternatives not within the jurisdiction of the lead agency.

(d) Include the alternative of no action.

(e) Identify the agency's preferred alternative or alternatives, if one or more exists, in the draft statement and identify such alternative in the final statement unless another law prohibits the expression of such a preference.

(f) Include appropriate mitigation measures not already included in the proposed action or alternatives.

§ 1502.15 Affected environment.

The environmental impact statement shall succinctly describe the environment of the area(s) to be affected or created by the alternatives under consideration. The descriptions shall be no longer than is necessary to understand the effects of the alternatives. Data and analyses in a statement shall be commensurate with the importance of the impact, with less important material summarized, consolidated, or simply referenced. Agencies shall avoid useless bulk in statements and shall concentrate effort and attention on important issues. Verbose descriptions of the affected environment are themselves no measure of the adequacy of an environmental impact statement.

§ 1502.16 Environmental consequences.

This section forms the scientific and analytic basis for the comparisons under § 1502.14. It shall consolidate

the discussions of those elements required by sections 102(2)(C)(i), (ii), (iv), and (v) of NEPA which are within the scope of the statement and as much of section 102(2)(C)(iii) as is necessary to support the comparisons. The discussion will include the environmental impacts of the alternatives including the proposed action, any adverse environmental effects which cannot be avoided should the proposal be implemented, the relationship between short-term uses of man's environment and the maintenance and enhancement of long-term productivity, and any irreversible or irretrievable commitments of resources which would be involved in the proposal should it be implemented. This section should not duplicate discussions in § 1502.14. It shall include discussions of:

(a) Direct effects and their significance (§ 1508.8).

(b) Indirect effects and their significance (§ 1508.8).

(c) Possible conflicts between the proposed action and the objectives of Federal, regional, State, and local (and in the case of a reservation, Indian tribe) land use plans, policies and controls for the area concerned. (See § 1506.2(d).)

(d) The environmental effects of alternatives including the proposed action. The comparisons under § 1502.14 will be based on this discussion.

(e) Energy requirements and conservation potential of various alternatives and mitigation measures.

(f) Natural or depletable resource requirements and conservation potential of various alternatives and mitigation measures.

(g) Urban quality, historic and cultural resources, and the design of the built environment, including the reuse and conservation potential of various alternatives and mitigation measures.

(h) Means to mitigate adverse environmental impacts (if not fully covered under § 1502.14(f)).

[43 FR 55994, Nov. 29, 1978; 44 FR 873, Jan. 3, 1979]

§ 1502.17 List of preparers.

The environmental impact statement shall list the names, together with their qualifications (expertise, experience, professional disciplines), of the persons who were primarily responsible for preparing the environmental impact statement or significant background papers, including basic components of the statement (§§ 1502.6 and 1502.8). Where possible the persons who are responsible for a particular analysis, including analyses in background papers, shall be identified. Normally the list will not exceed two pages.

§ 1502.18 Appendix.

If an agency prepares an appendix to an environmental impact statement the appendix shall:

(a) Consist of material prepared in connection with an environmental impact statement (as distinct from material which is not so prepared and which is incorporated by reference (§ 1502.21)).

(b) Normally consist of material which substantiates any analysis fundamental to the impact statement.

(c) Normally be analytic and relevant to the decision to be made.

(d) Be circulated with the environmental impact statement or be readily available on request.

§ 1502.19 Circulation of the environmental impact statement.

Agencies shall circulate the entire draft and final environmental impact statements except for certain appendices as provided in § 1502.18(d) and unchanged statements as provided in § 1503.4(c). However, if the statement is unusually long, the agency may circulate the summary instead, except that the entire statement shall be furnished to:

(a) Any Federal agency which has jurisdiction by law or special expertise with respect to any environmental impact involved and any appropriate Federal, State or local agency authorized to develop and enforce environmental standards.

(b) The applicant, if any.

(c) Any person, organization, or agency requesting the entire environmental impact statement.

(d) In the case of a final environmental impact statement any person, organization, or agency which submitted substantive comments on the draft.

If the agency circulates the summary and thereafter receives a timely request for the entire statement and for additional time to comment, the time for that requestor only shall be extended by at least 15 days beyond the minimum period.

§ 1502.20 Tiering.

Agencies are encouraged to tier their environmental impact statements to eliminate repetitive discussions of the same issues and to focus on the actual issues ripe for decision at each level of environmental review (§ 1508.28). Whenever a broad environmental impact statement has been prepared (such as a program or policy statement) and a subsequent statement or environmental assessment is then prepared on an action included within the entire program or policy (such as a site specific action) the subsequent statement or environmental assessment need only summarize the issues discussed in the broader statement and incorporate discussions from the broader statement by reference and shall concentrate on the issues specific to the subsequent action. The subsequent document shall state where the earlier document is available. Tiering may also be appropriate for different stages of actions. (Section 1508.28).

§ 1502.21 Incorporation by reference.

Agencies shall incorporate material into an environmental impact statement by reference when the effect will be to cut down on bulk without impeding agency and public review of the action. The incorporated material shall be cited in the statement and its content briefly described. No material may be incorporated by reference unless it is reasonably available for inspection by potentially interested persons within the time allowed for comment. Material based on proprietary data which is itself not available for review and comment shall not be incorporated by reference.

§ 1502.22 Incomplete or unavailable information.

When an agency is evaluating reasonably foreseeable significant adverse effects on the human environment in an environmental impact statement and there is incomplete or unavailable information, the agency shall always make clear that such information is lacking.

(a) If the incomplete information relevant to reasonably foreseeable significant adverse impacts is essential to a reasoned choice among alternatives and the overall costs of obtaining it are not exorbitant, the agency shall include the information in the environmental impact statement.

(b) If the information relevant to reasonably foreseeable significant adverse impacts cannot be obtained because the overall costs of obtaining it are exorbitant or the means to obtain it are not known, the agency shall include within the environmental impact statement: (1) A statement that such information is incomplete or unavailable; (2) a statement of the relevance of the incomplete or unavailable information to evaluating reasonably foreseeable significant adverse impacts on the human environment; (3) a summary of existing credible scientific evidence which is relevant to evaluating the reasonably foreseeable significant adverse impacts on the human environment, and (4) the agency's evaluation of such impacts based upon theoretical approaches or research methods generally accepted in the scientific community. For the purposes of this section, "reasonably foreseeable" includes impacts which have catastrophic consequences, even if their probability of occurrence is low, provided that the analysis of the impacts is supported by credible scientific evidence, is not based on pure conjecture, and is within the rule of reason.

(c) The amended regulation will be applicable to all environmental impact statements for which a Notice of Intent (40 CFR 1508.22) is published in the FEDERAL REGISTER on or after May 27, 1986. For environmental impact statements in progress, agencies may choose to comply with the re-

quirements of either the original or amended regulation.

[51 FR 15625, Apr. 25, 1986]

§ 1502.23 Cost-benefit analysis.

If a cost-benefit analysis relevant to the choice among environmentally different alternatives is being considered for the proposed action, it shall be incorporated by reference or appended to the statement as an aid in evaluating the environmental consequences. To assess the adequacy of compliance with section 102(2)(B) of the Act the statement shall, when a cost-benefit analysis is prepared, discuss the relationship between that analysis and any analyses of unquantified environmental impacts, values, and amenities. For purposes of complying with the Act, the weighing of the merits and drawbacks of the various alternatives need not be displayed in a monetary cost-benefit analysis and should not be when there are important qualitative considerations. In any event, an environmental impact statement should at least indicate those considerations, including factors not related to environmental quality, which are likely to be relevant and important to a decision.

§ 1502.24 Methodology and scientific accuracy.

Agencies shall insure the professional integrity, including scientific integrity, of the discussions and analyses in environmental impact statements. They shall identify any methodologies used and shall make explicit reference by footnote to the scientific and other sources relied upon for conclusions in the statement. An agency may place discussion of methodology in an appendix.

§ 1502.25 Environmental review and consultation requirements.

(a) To the fullest extent possible, agencies shall prepare draft environmental impact statements concurrently with and integrated with environmental impact analyses and related surveys and studies required by the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.), the National Historic Preservation Act of 1966 (16 U.S.C. 470 et seq.), the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.), and other environmental review laws and executive orders.

(b) The draft environmental impact statement shall list all Federal permits, licenses, and other entitlements which must be obtained in implementing the proposal. If it is uncertain whether a Federal permit, license, or other entitlement is necessary, the draft environmental impact statement shall so indicate.

PART 1503—COMMENTING

Sec.

1503.1 Inviting comments.
1503.2 Duty to comment.
1503.3 Specificity of comments.
1503.4 Response to comments.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 55997, Nov. 29, 1978, unless otherwise noted.

§ 1503.1 Inviting comments.

(a) After preparing a draft environmental impact statement and before preparing a final environmental impact statement the agency shall:

(1) Obtain the comments of any Federal agency which has jurisdiction by law or special expertise with respect to any environmental impact involved or which is authorized to develop and enforce environmental standards.

(2) Request the comments of:

(i) Appropriate State and local agencies which are authorized to develop and enforce environmental standards;

(ii) Indian tribes, when the effects may be on a reservation; and

(iii) Any agency which has requested that it receive statements on actions of the kind proposed.

Office of Management and Budget Circular A-95 (Revised), through its system of clearinghouses, provides a means of securing the views of State and local environmental agencies. The clearinghouses may be used, by mutual agreement of the lead agency and the clearinghouse, for securing

State and local reviews of the draft environmental impact statements.

(3) Request comments from the applicant, if any.

(4) Request comments from the public, affirmatively soliciting comments from those persons or organizations who may be interested or affected.

(b) An agency may request comments on a final environmental impact statement before the decision is finally made. In any case other agencies or persons may make comments before the final decision unless a different time is provided under § 1506.10.

§ 1503.2 Duty to comment.

Federal agencies with jurisdiction by law or special expertise with respect to any environmental impact involved and agencies which are authorized to develop and enforce environmental standards shall comment on statements within their jurisdiction, expertise, or authority. Agencies shall comment within the time period specified for comment in § 1506.10. A Federal agency may reply that it has no comment. If a cooperating agency is satisfied that its views are adequately reflected in the environmental impact statement, it should reply that it has no comment.

§ 1503.3 Specificity of comments.

(a) Comments on an environmental impact statement or on a proposed action shall be as specific as possible and may address either the adequacy of the statement or the merits of the alternatives discussed or both.

(b) When a commenting agency criticizes a lead agency's predictive methodology, the commenting agency should describe the alternative methodology which it prefers and why.

(c) A cooperating agency shall specify in its comments whether it needs additional information to fulfill other applicable environmental reviews or consultation requirements and what information it needs. In particular, it shall specify any additional information it needs to comment adequately on the draft statement's analysis of significant site-specific effects associated with the granting or approving by that cooperating agency of necessary Federal permits, licenses, or entitlements.

(d) When a cooperating agency with jurisdiction by law objects to or expresses reservations about the proposal on grounds of environmental impacts, the agency expressing the objection or reservation shall specify the mitigation measures it considers necessary to allow the agency to grant or approve applicable permit, license, or related requirements or concurrences.

§ 1503.4 Response to comments.

(a) An agency preparing a final environmental impact statement shall assess and consider comments both individually and collectively, and shall respond by one or more of the means listed below, stating its response in the final statement. Possible responses are to:

(1) Modify alternatives including the proposed action.

(2) Develop and evaluate alternatives not previously given serious consideration by the agency.

(3) Supplement, improve, or modify its analyses.

(4) Make factual corrections.

(5) Explain why the comments do not warrant further agency response, citing the sources, authorities, or reasons which support the agency's position and, if appropriate, indicate those circumstances which would trigger agency reappraisal or further response.

(b) All substantive comments received on the draft statement (or summaries thereof where the response has been exceptionally voluminous), should be attached to the final statement whether or not the comment is thought to merit individual discussion by the agency in the text of the statement.

(c) If changes in response to comments are minor and are confined to the responses described in paragraphs (a)(4) and (5) of this section, agencies may write them on errata sheets and attach them to the statement instead of rewriting the draft statement. In such cases only the comments, the responses, and the changes and not the final statement need be circulated (§ 1502.19). The entire document with

a new cover sheet shall be filed as the final statement (§ 1506.9).

PART 1504—PREDECISION REFERRALS TO THE COUNCIL OF PROPOSED FEDERAL ACTIONS DETERMINED TO BE ENVIRONMENTALLY UNSATISFACTORY

Sec.
1504.1 Purpose.
1504.2 Criteria for referral.
1504.3 Procedure for referrals and response.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 55998, Nov. 29, 1978, unless otherwise noted.

§ 1504.1 Purpose.

(a) This part establishes procedures for referring to the Council Federal interagency disagreements concerning proposed major Federal actions that might cause unsatisfactory environmental effects. It provides means for early resolution of such disagreements.

(b) Under section 309 of the Clean Air Act (42 U.S.C. 7609), the Administrator of the Environmental Protection Agency is directed to review and comment publicly on the environmental impacts of Federal activities, including actions for which environmental impact statements are prepared. If after this review the Administrator determines that the matter is "unsatisfactory from the standpoint of public health or welfare or environmental quality," section 309 directs that the matter be referred to the Council (hereafter "environmental referrals").

(c) Under section 102(2)(C) of the Act other Federal agencies may make similar reviews of environmental impact statements, including judgments on the acceptability of anticipated environmental impacts. These reviews must be made available to the President, the Council and the public.

§ 1504.2 Criteria for referral.

Environmental referrals should be made to the Council only after concerted, timely (as early as possible in the process), but unsuccessful attempts to resolve differences with the lead agency. In determining what environmental objections to the matter are appropriate to refer to the Council, an agency should weigh potential adverse environmental impacts, considering:

(a) Possible violation of national environmental standards or policies.

(b) Severity.

(c) Geographical scope.

(d) Duration.

(e) Importance as precedents.

(f) Availability of environmentally preferable alternatives.

§ 1504.3 Procedure for referrals and response.

(a) A Federal agency making the referral to the Council shall:

(1) Advise the lead agency at the earliest possible time that it intends to refer a matter to the Council unless a satisfactory agreement is reached.

(2) Include such advice in the referring agency's comments on the draft environmental impact statement, except when the statement does not contain adequate information to permit an assessment of the matter's environmental acceptability.

(3) Identify any essential information that is lacking and request that it be made available at the earliest possible time.

(4) Send copies of such advice to the Council.

(b) The referring agency shall deliver its referral to the Council not later than twenty-five (25) days after the final environmental impact statement has been made available to the Environmental Protection Agency, commenting agencies, and the public. Except when an extension of this period has been granted by the lead agency, the Council will not accept a referral after that date.

(c) The referral shall consist of:

(1) A copy of the letter signed by the head of the referring agency and delivered to the lead agency informing the lead agency of the referral and the reasons for it, and requesting that no action be taken to implement the matter until the Council acts upon the

referral. The letter shall include a copy of the statement referred to in (c)(2) of this section.

(2) A statement supported by factual evidence leading to the conclusion that the matter is unsatisfactory from the standpoint of public health or welfare or environmental quality. The statement shall:

(i) Identify any material facts in controversy and incorporate (by reference if appropriate) agreed upon facts,

(ii) Identify any existing environmental requirements or policies which would be violated by the matter,

(iii) Present the reasons why the referring agency believes the matter is environmentally unsatisfactory,

(iv) Contain a finding by the agency whether the issue raised is of national importance because of the threat to national environmental resources or policies or for some other reason,

(v) Review the steps taken by the referring agency to bring its concerns to the attention of the lead agency at the earliest possible time, and

(vi) Give the referring agency's recommendations as to what mitigation alternative, further study, or other course of action (including abandonment of the matter) are necessary to remedy the situation.

(d) Not later than twenty-five (25) days after the referral to the Council the lead agency may deliver a response to the Council, and the referring agency. If the lead agency requests more time and gives assurance that the matter will not go forward in the interim, the Council may grant an extension. The response shall:

(1) Address fully the issues raised in the referral.

(2) Be supported by evidence.

(3) Give the lead agency's response to the referring agency's recommendations.

(e) Interested persons (including the applicant) may deliver their views in writing to the Council. Views in support of the referral should be delivered not later than the referral. Views in support of the response shall be delivered not later than the response.

(f) Not later than twenty-five (25) days after receipt of both the referral and any response or upon being informed that there will be no response (unless the lead agency agrees to a longer time), the Council may take one or more of the following actions:

(1) Conclude that the process of referral and response has successfully resolved the problem.

(2) Initiate discussions with the agencies with the objective of mediation with referring and lead agencies.

(3) Hold public meetings or hearings to obtain additional views and information.

(4) Determine that the issue is not one of national importance and request the referring and lead agencies to pursue their decision process.

(5) Determine that the issue should be further negotiated by the referring and lead agencies and is not appropriate for Council consideration until one or more heads of agencies report to the Council that the agencies' disagreements are irreconcilable.

(6) Publish its findings and recommendations (including where appropriate a finding that the submitted evidence does not support the position of an agency).

(7) When appropriate, submit the referral and the response together with the Council's recommendation to the President for action.

(g) The Council shall take no longer than 60 days to complete the actions specified in paragraph (f)(2), (3), or (5) of this section.

(h) When the referral involves an action required by statute to be determined on the record after opportunity for agency hearing, the referral shall be conducted in a manner consistent with 5 U.S.C. 557(d) (Administrative Procedure Act).

[43 FR 55998, Nov. 29, 1978; 44 FR 873, Jan. 3, 1979]

PART 1505—NEPA AND AGENCY DECISIONMAKING

Sec.
1505.1 Agency decisionmaking procedures.
1505.2 Record of decision in cases requiring environmental impact statements.
1505.3 Implementing the decision.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C.

7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 55999, Nov. 29, 1978, unless otherwise noted.

§ 1505.1 Agency decisionmaking procedures.

Agencies shall adopt procedures (§ 1507.3) to ensure that decisions are made in accordance with the policies and purposes of the Act. Such procedures shall include but not be limited to:

(a) Implementing procedures under section 102(2) to achieve the requirements of sections 101 and 102(1).

(b) Designating the major decision points for the agency's principal programs likely to have a significant effect on the human environment and assuring that the NEPA process corresponds with them.

(c) Requiring that relevant environmental documents, comments, and responses be part of the record in formal rulemaking or adjudicatory proceedings.

(d) Requiring that relevant environmental documents, comments, and responses accompany the proposal through existing agency review processes so that agency officials use the statement in making decisions.

(e) Requiring that the alternatives considered by the decisionmaker are encompassed by the range of alternatives discussed in the relevant environmental documents and that the decisionmaker consider the alternatives described in the environmental impact statement. If another decision document accompanies the relevant environmental documents to the decisionmaker, agencies are encouraged to make available to the public before the decision is made any part of that document that relates to the comparison of alternatives.

§ 1505.2 Record of decision in cases requiring environmental impact statements.

At the time of its decision (§ 1506.10) or, if appropriate, its recommendation to Congress, each agency shall prepare a concise public record of decision. The record, which may be integrated into any other record prepared by the agency, including that required by OMB Circular A-95 (Revised), part I, sections 6(c) and (d), and part II, section 5(b)(4), shall:

(a) State what the decision was.

(b) Identify all alternatives considered by the agency in reaching its decision, specifying the alternative or alternatives which were considered to be environmentally preferable. An agency may discuss preferences among alternatives based on relevant factors including economic and technical considerations and agency statutory missions. An agency shall identify and discuss all such factors including any essential considerations of national policy which were balanced by the agency in making its decision and state how those considerations entered into its decision.

(c) State whether all practicable means to avoid or minimize environmental harm from the alternative selected have been adopted, and if not, why they were not. A monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation.

§ 1505.3 Implementing the decision.

Agencies may provide for monitoring to assure that their decisions are carried out and should do so in important cases. Mitigation (§ 1505.2(c)) and other conditions established in the environmental impact statement or during its review and committed as part of the decision shall be implemented by the lead agency or other appropriate consenting agency. The lead agency shall:

(a) Include appropriate conditions in grants, permits or other approvals.

(b) Condition funding of actions on mitigation.

(c) Upon request, inform cooperating or commenting agencies on progress in carrying out mitigation measures which they have proposed and which were adopted by the agency making the decision.

(d) Upon request, make available to the public the results of relevant monitoring.

PART 1506—OTHER REQUIREMENTS OF NEPA

Sec.

1506.1 Limitations on actions during NEPA process.
1506.2 Elimination of duplication with State and local procedures.
1506.3 Adoption.
1506.4 Combining documents.
1506.5 Agency responsibility.
1506.6 Public involvement.
1506.7 Further guidance.
1506.8 Proposals for legislation.
1506.9 Filing requirements.
1506.10 Timing of agency action.
1506.11 Emergencies.
1506.12 Effective date.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 56000, Nov. 29, 1978, unless otherwise noted.

§ 1506.1 Limitations on actions during NEPA process.

(a) Until an agency issues a record of decision as provided in § 1505.2 (except as provided in paragraph (c) of this section), no action concerning the proposal shall be taken which would:

(1) Have an adverse environmental impact; or

(2) Limit the choice of reasonable alternatives.

(b) If any agency is considering an application from a non-Federal entity, and is aware that the applicant is about to take an action within the agency's jurisdiction that would meet either of the criteria in paragraph (a) of this section, then the agency shall promptly notify the applicant that the agency will take appropriate action to insure that the objectives and procedures of NEPA are achieved.

(c) While work on a required program environmental impact statement is in progress and the action is not covered by an existing program statement, agencies shall not undertake in the interim any major Federal action covered by the program which may significantly affect the quality of the human environment unless such action:

(1) Is justified independently of the program;

(2) Is itself accompanied by an adequate environmental impact statement; and

(3) Will not prejudice the ultimate decision on the program. Interim action prejudices the ultimate decision on the program when it tends to determine subsequent development or limit alternatives.

(d) This section does not preclude development by applicants of plans or designs or performance of other work necessary to support an application for Federal, State or local permits or assistance. Nothing in this section shall preclude Rural Electrification Administration approval of minimal expenditures not affecting the environment (*e.g.*, long leadtime equipment and purchase options) made by nongovernmental entities seeking loan guarantees from the Administration.

§ 1506.2 Elimination of duplication with State and local procedures.

(a) Agencies authorized by law to cooperate with State agencies of statewide jurisdiction pursuant to section 102(2)(D) of the Act may do so.

(b) Agencies shall cooperate with State and local agencies to the fullest extent possible to reduce duplication between NEPA and State and local requirements, unless the agencies are specifically barred from doing so by some other law. Except for cases covered by paragraph (a) of this section, such cooperation shall to the fullest extent possible include:

(1) Joint planning processes.

(2) Joint environmental research and studies.

(3) Joint public hearings (except where otherwise provided by statute).

(4) Joint environmental assessments.

(c) Agencies shall cooperate with State and local agencies to the fullest extent possible to reduce duplication between NEPA and comparable State and local requirements, unless the agencies are specifically barred from doing so by some other law. Except for cases covered by paragraph (a) of this section, such cooperation shall to the fullest extent possible include joint environmental impact statements. In

such cases one or more Federal agencies and one or more State or local agencies shall be joint lead agencies. Where State laws or local ordinances have environmental impact statement requirements in addition to but not in conflict with those in NEPA, Federal agencies shall cooperate in fulfilling these requirements as well as those of Federal laws so that one document will comply with all applicable laws.

(d) To better integrate environmental impact statements into State or local planning processes, statements shall discuss any inconsistency of a proposed action with any approved State or local plan and laws (whether or not federally sanctioned). Where an inconsistency exists, the statement should describe the extent to which the agency would reconcile its proposed action with the plan or law.

§ 1506.3 Adoption.

(a) An agency may adopt a Federal draft or final environmental impact statement or portion thereof provided that the statement or portion thereof meets the standards for an adequate statement under these regulations.

(b) If the actions covered by the original environmental impact statement and the proposed action are substantially the same, the agency adopting another agency's statement is not required to recirculate it except as a final statement. Otherwise the adopting agency shall treat the statement as a draft and recirculate it (except as provided in paragraph (c) of this section).

(c) A cooperating agency may adopt without recirculating the environmental impact statement of a lead agency when, after an independent review of the statement, the cooperating agency concludes that its comments and suggestions have been satisfied.

(d) When an agency adopts a statement which is not final within the agency that prepared it, or when the action it assesses is the subject of a referral under Part 1504, or when the statement's adequacy is the subject of a judicial action which is not final, the agency shall so specify.

§ 1506.4 Combining documents.

Any environmental document in compliance with NEPA may be combined with any other agency document to reduce duplication and paperwork.

§ 1506.5 Agency responsibility.

(a) *Information.* If an agency requires an applicant to submit environmental information for possible use by the agency in preparing an environmental impact statement, then the agency should assist the applicant by outlining the types of information required. The agency shall independently evaluate the information submitted and shall be responsible for its accuracy. If the agency chooses to use the information submitted by the applicant in the environmental impact statement, either directly or by reference, then the names of the persons responsible for the independent evaluation shall be included in the list of preparers (§ 1502.17). It is the intent of this paragraph that acceptable work not be redone, but that it be verified by the agency.

(b) *Environmental assessments.* If an agency permits an applicant to prepare an environmental assessment, the agency, besides fulfilling the requirements of paragraph (a) of this section, shall make its own evaluation of the environmental issues and take responsibility for the scope and content of the environmental assessment.

(c) *Environmental impact statements.* Except as provided in §§ 1506.2 and 1506.3 any environmental impact statement prepared pursuant to the requirements of NEPA shall be prepared directly by or by a contractor selected by the lead agency or where appropriate under § 1501.6(b), a cooperating agency. It is the intent of these regulations that the contractor be chosen solely by the lead agency, or by the lead agency in cooperation with cooperating agencies, or where appropriate by a cooperating agency to avoid any conflict of interest. Contractors shall execute a disclosure statement prepared by the lead agency, or where appropriate the cooperating agency, specifying that they have no financial or other interest in the outcome of the project. If the document is prepared by contract, the responsible Federal official shall furnish guidance and participate in the preparation and shall independently evaluate the statement prior to its approval and take responsibility for its scope and contents. Nothing in this section is intended to prohibit any agency from requesting any person to submit information to it or to prohibit any person from submitting information to any agency.

§ 1506.6 Public involvement.

Agencies shall:

(a) Make diligent efforts to involve the public in preparing and implementing their NEPA procedures.

(b) Provide public notice of NEPA-related hearings, public meetings, and the availability of environmental documents so as to inform those persons and agencies who may be interested or affected.

(1) In all cases the agency shall mail notice to those who have requested it on an individual action.

(2) In the case of an action with effects of national concern notice shall include publication in the FEDERAL REGISTER and notice by mail to national organizations reasonably expected to be interested in the matter and may include listing in the *102 Monitor*. An agency engaged in rulemaking may provide notice by mail to national organizations who have requested that notice regularly be provided. Agencies shall maintain a list of such organizations.

(3) In the case of an action with effects primarily of local concern the notice may include:

(i) Notice to State and areawide clearinghouses pursuant to OMB Circular A-95 (Revised).

(ii) Notice to Indian tribes when effects may occur on reservations.

(iii) Following the affected State's public notice procedures for comparable actions.

(iv) Publication in local newspapers (in papers of general circulation rather than legal papers).

(v) Notice through other local media.

(vi) Notice to potentially interested community organizations including small business associations.

(vii) Publication in newsletters that may be expected to reach potentially interested persons.

(viii) Direct mailing to owners and occupants of nearby or affected property.

(ix) Posting of notice on and off site in the area where the action is to be located.

(c) Hold or sponsor public hearings or public meetings whenever appropriate or in accordance with statutory requirements applicable to the agency. Criteria shall include whether there is:

(1) Substantial environmental controversy concerning the proposed action or substantial interest in holding the hearing.

(2) A request for a hearing by another agency with jurisdiction over the action supported by reasons why a hearing will be helpful. If a draft environmental impact statement is to be considered at a public hearing, the agency should make the statement available to the public at least 15 days in advance (unless the purpose of the hearing is to provide information for the draft environmental impact statement).

(d) Solicit appropriate information from the public.

(e) Explain in its procedures where interested persons can get information or status reports on environmental impact statements and other elements of the NEPA process.

(f) Make environmental impact statements, the comments received, and any underlying documents available to the public pursuant to the provisions of the Freedom of Information Act (5 U.S.C. 552), without regard to the exclusion for interagency memoranda where such memoranda transmit comments of Federal agencies on the environmental impact of the proposed action. Materials to be made available to the public shall be provided to the public without charge to the extent practicable, or at a fee which is not more than the actual costs of reproducing copies required to be sent to other Federal agencies, including the Council.

§ 1506.7 Further guidance.

The Council may provide further guidance concerning NEPA and its procedures including:

(a) A handbook which the Council may supplement from time to time, which shall in plain language provide guidance and instructions concerning the application of NEPA and these regulations.

(b) Publication of the Council's Memoranda to Heads of Agencies.

(c) In conjunction with the Environmental Protection Agency and the publication of the 102 Monitor, notice of:

(1) Research activities;

(2) Meetings and conferences related to NEPA; and

(3) Successful and innovative procedures used by agencies to implement NEPA.

§ 1506.8 Proposals for legislation.

(a) The NEPA process for proposals for legislation (§ 1508.17) significantly affecting the quality of the human environment shall be integrated with the legislative process of the Congress. A legislative environmental impact statement is the detailed statement required by law to be included in a recommendation or report on a legislative proposal to Congress. A legislative environmental impact statement shall be considered part of the formal transmittal of a legislative proposal to Congress; however, it may be transmitted to Congress up to 30 days later in order to allow time for completion of an accurate statement which can serve as the basis for public and Congressional debate. The statement must be available in time for Congressional hearings and deliberations.

(b) Preparation of a legislative environmental impact statement shall conform to the requirements of these regulations except as follows:

(1) There need not be a scoping process.

(2) The legislative statement shall be prepared in the same manner as a draft statement, but shall be considered the "detailed statement" required by statute: *Provided*, That when any of the following conditions exist both the draft and final environmental impact statement on the legislative proposal shall be prepared and circulated as provided by §§ 1503.1 and 1506.10.

(i) A Congressional Committee with jurisdiction over the proposal has a rule requiring both draft and final environmental impact statements.

(ii) The proposal results from a study process required by statute (such as those required by the Wild and Scenic Rivers Act (16 U.S.C. 1271 et seq.) and the Wilderness Act (16 U.S.C. 1131 et seq.)).

(iii) Legislative approval is sought for Federal or federally assisted construction or other projects which the agency recommends be located at specific geographic locations. For proposals requiring an environmental impact statement for the acquisition of space by the General Services Administration, a draft statement shall accompany the Prospectus or the 11(b) Report of Building Project Surveys to the Congress, and a final statement shall be completed before site acquisition.

(iv) The agency decides to prepare draft and final statements.

(c) Comments on the legislative statement shall be given to the lead agency which shall forward them along with its own responses to the Congressional committees with jurisdiction.

§ 1506.9 Filing requirements.

Environmental impact statements together with comments and responses shall be filed with the Environmental Protection Agency, attention Office of Federal Activities (A-104), 401 M Street SW., Washington, D.C. 20460. Statements shall be filed with EPA no earlier than they are also transmitted to commenting agencies and made available to the public. EPA shall deliver one copy of each statement to the Council, which shall satisfy the requirement of availability to the President. EPA may issue guidelines to agencies to implement its responsibilities under this section and § 1506.10.

§ 1506.10 Timing of agency action.

(a) The Environmental Protection Agency shall publish a notice in the FEDERAL REGISTER each week of the environmental impact statements filed

during the preceding week. The minimum time periods set forth in this section shall be calculated from the date of publication of this notice.

(b) No decision on the proposed action shall be made or recorded under § 1505.2 by a Federal agency until the later of the following dates:

(1) Ninety (90) days after publication of the notice described above in paragraph (a) of this section for a draft environmental impact statement.

(2) Thirty (30) days after publication of the notice described above in paragraph (a) of this section for a final environmental impact statement.

An exception to the rules on timing may be made in the case of an agency decision which is subject to a formal internal appeal. Some agencies have a formally established appeal process which allows other agencies or the public to take appeals on a decision and make their views known, after publication of the final environmental impact statement. In such cases, where a real opportunity exists to alter the decision, the decision may be made and recorded at the same time the environmental impact statement is published. This means that the period for appeal of the decision and the 30-day period prescribed in paragraph (b)(2) of this section may run concurrently. In such cases the environmental impact statement shall explain the timing and the public's right of appeal. An agency engaged in rulemaking under the Administrative Procedure Act or other statute for the purpose of protecting the public health or safety, may waive the time period in paragraph (b)(2) of this section and publish a decision on the final rule simultaneously with publication of the notice of the availability of the final environmental impact statement as described in paragraph (a) of this section.

(c) If the final environmental impact statement is filed within ninety (90) days after a draft environmental impact statement is filed with the Environmental Protection Agency, the minimum thirty (30) day period and the minimum ninety (90) day period may run concurrently. However, subject to paragraph (d) of this section agencies shall allow not less than 45 days for comments on draft statements.

(d) The lead agency may extend prescribed periods. The Environmental Protection Agency may upon a showing by the lead agency of compelling reasons of national policy reduce the prescribed periods and may upon a showing by any other Federal agency of compelling reasons of national policy also extend prescribed periods, but only after consultation with the lead agency. (Also see § 1507.3(d).) Failure to file timely comments shall not be a sufficient reason for extending a period. If the lead agency does not concur with the extension of time, EPA may not extend it for more than 30 days. When the Environmental Protection Agency reduces or extends any period of time it shall notify the Council.

[43 FR 56000, Nov. 29, 1978; 44 FR 874, Jan. 3, 1979]

§ 1506.11 Emergencies.

Where emergency circumstances make it necessary to take an action with significant environmental impact without observing the provisions of these regulations, the Federal agency taking the action should consult with the Council about alternative arrangements. Agencies and the Council will limit such arrangements to actions necessary to control the immediate impacts of the emergency. Other actions remain subject to NEPA review.

§ 1506.12 Effective date.

The effective date of these regulations is July 30, 1979, except that for agencies that administer programs that qualify under section 102(2)(D) of the Act or under sec. 104(h) of the Housing and Community Development Act of 1974 an additional four months shall be allowed for the State or local agencies to adopt their implementing procedures.

(a) These regulations shall apply to the fullest extent practicable to ongoing activities and environmental documents begun before the effective date. These regulations do not apply to an environmental impact statement or supplement if the draft statement was filed before the effective date of these

regulations. No completed environmental documents need be redone by reasons of these regulations. Until these regulations are applicable, the Council's guidelines published in the FEDERAL REGISTER of August 1, 1973, shall continue to be applicable. In cases where these regulations are applicable the guidelines are superseded. However, nothing shall prevent an agency from proceeding under these regulations at an earlier time.

(b) NEPA shall continue to be applicable to actions begun before January 1, 1970, to the fullest extent possible.

PART 1507—AGENCY COMPLIANCE

Sec.
1507.1 Compliance.
1507.2 Agency capability to comply.
1507.3 Agency procedures.

AUTHORITY: NEPA, the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*), sec. 309 of the Clean Air Act, as amended (42 U.S.C. 7609), and E.O. 11514 (Mar. 5, 1970, as amended by E.O. 11991, May 24, 1977).

SOURCE: 43 FR 56002, Nov. 29, 1978, unless otherwise noted.

§ 1507.1 Compliance.

All agencies of the Federal Government shall comply with these regulations. It is the intent of these regulations to allow each agency flexibility in adapting its implementing procedures authorized by § 1507.3 to the requirements of other applicable laws.

§ 1507.2 Agency capability to comply.

Each agency shall be capable (in terms of personnel and other resources) of complying with the requirements enumerated below. Such compliance may include use of other's resources, but the using agency shall itself have sufficient capability to evaluate what others do for it. Agencies shall:

(a) Fulfill the requirements of section 102(2)(A) of the Act to utilize a systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on the human environment. Agencies shall designate a person to be responsible for overall review of agency NEPA compliance.

(b) Identify methods and procedures required by section 102(2)(B) to insure that presently unquantified environmental amenities and values may be given appropriate consideration.

(c) Prepare adequate environmental impact statements pursuant to section 102(2)(C) and comment on statements in the areas where the agency has jurisdiction by law or special expertise or is authorized to develop and enforce environmental standards.

(d) Study, develop, and describe alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources. This requirement of section 102(2)(E) extends to all such proposals, not just the more limited scope of section 102(2)(C)(iii) where the discussion of alternatives is confined to impact statements.

(e) Comply with the requirements of section 102(2)(H) that the agency initiate and utilize ecological information in the planning and development of resource-oriented projects.

(f) Fulfill the requirements of sections 102(2)(F), 102(2)(G), and 102(2)(I), of the Act and of Executive Order 11514, Protection and Enhancement of Environmental Quality, Sec. 2.

§ 1507.3 Agency procedures.

(a) Not later than eight months after publication of these regulations as finally adopted in the FEDERAL REGISTER, or five months after the establishment of an agency, whichever shall come later, each agency shall as necessary adopt procedures to supplement these regulations. When the agency is a department, major subunits are encouraged (with the consent of the department) to adopt their own procedures. Such procedures shall not paraphrase these regulations. They shall confine themselves to implementing procedures. Each agency shall consult with the Council while developing its procedures and before publishing them in the FEDERAL REGISTER for comment. Agencies with similar programs should consult with each other

and the Council to coordinate their procedures, especially for programs requesting similar information from applicants. The procedures shall be adopted only after an opportunity for public review and after review by the Council for conformity with the Act and these regulations. The Council shall complete its review within 30 days. Once in effect they shall be filed with the Council and made readily available to the public. Agencies are encouraged to publish explanatory guidance for these regulations and their own procedures. Agencies shall continue to review their policies and procedures and in consultation with the Council to revise them as necessary to ensure full compliance with the purposes and provisions of the Act.

(b) Agency procedures shall comply with these regulations except where compliance would be inconsistent with statutory requirements and shall include:

(1) Those procedures required by §§ 1501.2(d), 1502.9(c)(3), 1505.1, 1506.6(e), and 1508.4.

(2) Specific criteria for and identification of those typical classes of action:

(i) Which normally do require environmental impact statements.

(ii) Which normally do not require either an environmental impact statement or an environmental assessment (categorical exclusions (§ 1508.4)).

(iii) Which normally require environmental assessments but not necessarily environmental impact statements.

(c) Agency procedures may include specific criteria for providing limited exceptions to the provisions of these regulations for classified proposals. They are proposed actions which are specifically authorized under criteria established by an Executive Order or statute to be kept secret in the interest of national defense or foreign policy and are in fact properly classified pursuant to such Executive Order or statute. Environmental assessments and environmental impact statements which address classified proposals may be safeguarded and restricted from public dissemination in accordance with agencies' own regulations applicable to classified information. These documents may be organized so that classified portions can be included as annexes, in order that the unclassified portions can be made available to the public.

(d) Agency procedures may provide for periods of time other than those presented in § 1506.10 when necessary to comply with other specific statutory requirements.

(e) Agency procedures may provide that where there is a lengthy period between the agency's decision to prepare an environunental impact statement and the time of actual preparation, the notice of intent required by § 1501.7 may be published at a reasonable time in advance of preparation of the draft statement.

SOURCE: 43 FR 56003, Nov. 29, 1978, unless otherwise noted.

§ 1508.1 Terminology.

The terminology of this part shall be uniform throughout the Federal Government.

§ 1508.2 Act.

"Act" means the National Environmental Policy Act, as amended (42 U.S.C. 4321, et seq.) which is also referred to as "NEPA."

§ 1508.3 Affecting.

"Affecting" means will or may have an effect on.

§ 1508.4 Categorical exclusion.

"Categorical exclusion" means a category of actions which do not individually or cumulatively have a significant effect on the human environment and which have been found to have no such effect in procedures adopted by a Federal agency in implementation of these regulations (§ 1507.3) and for which, therefore, neither an environmental assessment nor an environmental impact statement is required. An agency may decide in its procedures or otherwise, to prepare environmental assessments for the reasons stated in § 1508.9 even though it is not required to do so. Any procedures under this section shall provide for extraordinary circumstances in which a normally excluded action may have a significant environmental effect.

§ 1508.5 Cooperating agency.

"Cooperating agency" means any Federal agency other than a lead agency which has jurisdiction by law or special expertise with respect to any environmental impact involved in a proposal (or a reasonable alternative) for legislation or other major Federal action significantly affecting the quality of the human environment. The selection and responsibilities of a cooperating agency are described in § 1501.6. A State or local agency of similar qualifications or, when the effects are on a reservation, an Indian Tribe, may by agreement with the lead agency become a cooperating agency.

§ 1508.6 Council.

"Council" means the Council on Environmental Quality established by Title II of the Act.

§ 1508.7 Cumulative impact.

"Cumulative impact" is the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.

§ 1508.8 Effects.

"Effects" include:

(a) Direct effects, which are caused by the action and occur at the same time and place.

(b) Indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems.

Effects and impacts as used in these regulations are synonymous. Effects includes ecological (such as the effects on natural resources and on the components, structures, and functioning of affected ecosystems), aesthetic, historic, cultural, economic, social, or health, whether direct, indirect, or cumulative. Effects may also include those resulting from actions which may have both beneficial and detrimental effects, even if on balance the agency believes that the effect will be beneficial.

§ 1508.9 Environmental assessment.

"Environmental assessment":

(a) Means a concise public document for which a Federal agency is responsible that serves to:

(1) Briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement or a finding of no significant impact.

(2) Aid an agency's compliance with the Act when no environmental impact statement is necessary.

(3) Facilitate preparation of a statement when one is necessary.

(b) Shall include brief discussions of the need for the proposal, of alternatives as required by section 102(2)(E), of the environmental impacts of the proposed action and alternatives, and a listing of agencies and persons consulted.

§ 1508.10 Environmental document.

"Environmental document" includes the documents specified in § 1508.9 (environmental assessment), § 1508.11 (environmental impact statement), § 1508.13 (finding of no significant impact), and § 1508.22 (notice of intent).

§ 1508.11 Environmental impact statement.

"Environmental impact statement" means a detailed written statement as required by section 102(2)(C) of the Act.

§ 1508.12 Federal agency.

"Federal agency" means all agencies of the Federal Government. It does not mean the Congress, the Judiciary, or the President, including the performance of staff functions for the President in his Executive Office. It also includes for purposes of these regulations States and units of general local government and Indian tribes assuming NEPA responsibilities under section 104(h) of the Housing and Community Development Act of 1974.

§ 1508.13 Finding of no significant impact.

"Finding of no significant impact" means a document by a Federal agency briefly presenting the reasons why an action, not otherwise excluded (§ 1508.4), will not have a significant effect on the human environment and for which an environmental impact statement therefore will not be prepared. It shall include the environmental assessment or a summary of it and shall note any other environmental documents related to it (§ 1501.7(a)(5)). If the assessment is included, the finding need not repeat any of the discussion in the assessment but may incorporate it by reference.

§ 1508.14 Human environment.

"Human environment" shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment. (See the definition of "effects" (§ 1508.8).) This means that economic or social effects are not intended by themselves to require preparation of an environmental impact statement. When an environmental impact statement is prepared and economic or social and natural or physical environmental effects are interrelated, then the environmental impact statement will discuss all of these effects on the human environment.

§ 1508.15 Jurisdiction by law.

"Jurisdiction by law" means agency authority to approve, veto, or finance all or part of the proposal.

§ 1508.16 Lead agency.

"Lead agency" means the agency or agencies preparing or having taken primary responsibility for preparing the environmental impact statement.

§ 1508.17 Legislation.

"Legislation" includes a bill or legislative proposal to Congress developed by or with the significant cooperation and support of a Federal agency, but does not include requests for appropriations. The test for significant cooperation is whether the proposal is in fact predominantly that of the agency rather than another source. Drafting does not by itself constitute significant cooperation. Proposals for legislation include requests for ratification of treaties. Only the agency which has primary responsibility for the subject matter involved will prepare a legislative environmental impact statement.

§ 1508.18 Major Federal action.

"Major Federal action" includes actions with effects that may be major and which are potentially subject to

Federal control and responsibility. Major reinforces but does not have a meaning independent of significantly (§ 1508.27). Actions include the circumstance where the responsible officials fail to act and that failure to act is reviewable by courts or administrative tribunals under the Administrative Procedure Act or other applicable law as agency action.

(a) Actions include new and continuing activities, including projects and programs entirely or partly financed, assisted, conducted, regulated, or approved by federal agencies; new or revised agency rules, regulations, plans, policies, or procedures; and legislative proposals (§§ 1506.8, 1508.17). Actions do not include funding assistance solely in the form of general revenue sharing funds, distributed under the State and Local Fiscal Assistance Act of 1972, 31 U.S.C. 1221 et seq., with no Federal agency control over the subsequent use of such funds. Actions do not include bringing judicial or administrative civil or criminal enforcement actions.

(b) Federal actions tend to fall within one of the following categories:

(1) Adoption of official policy, such as rules, regulations, and interpretations adopted pursuant to the Administrative Procedure Act, 5 U.S.C. 551 et seq.; treaties and international conventions or agreements; formal documents establishing an agency's policies which will result in or substantially alter agency programs.

(2) Adoption of formal plans, such as official documents prepared or approved by federal agencies which guide or prescribe alternative uses of federal resources, upon which future agency actions will be based.

(3) Adoption of programs, such as a group of concerted actions to implement a specific policy or plan; systematic and connected agency decisions allocating agency resources to implement a specific statutory program or executive directive.

(4) Approval of specific projects, such as construction or management activities located in a defined geographic area. Projects include actions approved by permit or other regulatory decision as well as federal and federally assisted activities.

§ 1508.19 Matter.

"Matter" includes for purposes of Part 1504:

(a) With respect to the Environmental Protection Agency, any proposed legislation, project, action or regulation as those terms are used in section 309(a) of the Clean Air Act (42 U.S.C. 7609).

(b) With respect to all other agencies, any proposed major federal action to which section 102(2)(C) of NEPA applies.

§ 1508.20 Mitigation.

"Mitigation" includes:

(a) Avoiding the impact altogether by not taking a certain action or parts of an action.

(b) Minimizing impacts by limiting the degree or magnitude of the action and its implementation.

(c) Rectifying the impact by repairing, rehabilitating, or restoring the affected environment.

(d) Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.

(e) Compensating for the impact by replacing or providing substitute resources or environments.

§ 1508.21 NEPA process.

"NEPA process" means all measures necessary for compliance with the requirements of section 2 and Title I of NEPA.

§ 1508.22 Notice of intent.

"Notice of intent" means a notice that an environmental impact statement will be prepared and considered. The notice shall briefly:

(a) Describe the proposed action and possible alternatives.

(b) Describe the agency's proposed scoping process including whether, when, and where any scoping meeting will be held.

(c) State the name and address of a person within the agency who can answer questions about the proposed action and the environmental impact statement.

§ 1508.23 Proposal.

"Proposal" exists at that stage in the development of an action when an agency subject to the Act has a goal and is actively preparing to make a decision on one or more alternative means of accomplishing that goal and the effects can be meaningfully evaluated. Preparation of an environmental impact statement on a proposal should be timed (§ 1502.5) so that the final statement may be completed in time for the statement to be included in any recommendation or report on the proposal. A proposal may exist in fact as well as by agency declaration that one exists.

§ 1508.24 Referring agency.

"Referring agency" means the federal agency which has referred any matter to the Council after a determination that the matter is unsatisfactory from the standpoint of public health or welfare or environmental quality.

§ 1508.25 Scope.

Scope consists of the range of actions, alternatives, and impacts to be considered in an environmental impact statement. The scope of an individual statement may depend on its relationships to other statements (§§ 1502.20 and 1508.28). To determine the scope of environmental impact statements, agencies shall consider 3 types of actions, 3 types of alternatives, and 3 types of impacts. They include:

(a) Actions (other than unconnected single actions) which may be:

(1) Connected actions, which means that they are closely related and therefore should be discussed in the same impact statement. Actions are connected if they:

(i) Automatically trigger other actions which may require environmental impact statements.

(ii) Cannot or will not proceed unless other actions are taken previously or simultaneously.

(iii) Are interdependent parts of a larger action and depend on the larger action for their justification.

(2) Cumulative actions, which when viewed with other proposed actions have cumulatively significant impacts and should therefore be discussed in the same impact statement.

(3) Similar actions, which when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental consequencies together, such as common timing or geography. An agency may wish to analyze these actions in the same impact statement. It should do so when the best way to assess adequately the combined impacts of similar actions or reasonable alternatives to such actions is to treat them in a single impact statement.

(b) Alternatives, which include: (1) No action alternative.

(2) Other reasonable courses of actions.

(3) Mitigation measures (not in the proposed action).

(c) Impacts, which may be: (1) Direct; (2) indirect; (3) cumulative.

§ 1508.26 Special expertise.

"Special expertise" means statutory responsibility, agency mission, or related program experience.

§ 1508.27 Significantly.

"Significantly" as used in NEPA requires considerations of both context and intensity:

(a) *Context.* This means that the significance of an action must be analyzed in several contexts such as society as a whole (human, national), the affected region, the affected interests, and the locality. Significance varies with the setting of the proposed action. For instance, in the case of a site-specific action, significance would usually depend upon the effects in the locale rather than in the world as a whole. Both short- and long-term effects are relevant.

(b) *Intensity.* This refers to the severity of impact. Responsible officials must bear in mind that more than one agency may make decisions about partial aspects of a major action. The following should be considered in evaluating intensity:

(1) Impacts that may be both beneficial and adverse. A significant effect may exist even if the Federal agency

believes that on balance the effect will be beneficial.

(2) The degree to which the proposed action affects public health or safety.

(3) Unique characteristics of the geographic area such as proximity to historic or cultural resources, park lands, prime farmlands, wetlands, wild and scenic rivers, or ecologically critical areas.

(4) The degree to which the effects on the quality of the human environment are likely to be highly controversial.

(5) The degree to which the possible effects on the human environment are highly uncertain or involve unique or unknown risks.

(6) The degree to which the action may establish a precedent for future actions with significant effects or represents a decision in principle about a future consideration.

(7) Whether the action is related to other actions with individually insignificant but cumulatively significant impacts. Significance exists if it is reasonable to anticipate a cumulatively significant impact on the environment. Significance cannot be avoided by terming an action temporary or by breaking it down into small component parts.

(8) The degree to which the action may adversely affect districts, sites, highways, structures, or objects listed in or eligible for listing in the National Register of Historic Places or may cause loss or destruction of significant scientific, cultural, or historical resources.

(9) The degree to which the action may adversely affect an endangered or threatened species or its habitat that has been determined to be critical under the Endangered Species Act of 1973.

(10) Whether the action threatens a violation of Federal, State, or local law or requirements imposed for the protection of the environment.

[43 FR 56003, Nov. 29, 1978; 44 FR 874, Jan. 3, 1979]

§ 1508.28 Tiering.

"Tiering" refers to the coverage of general matters in broader environmental impact statements (such as national program or policy statements) with subsequent narrower statements or environmental analyses (such as regional or basinwide program statements or ultimately site-specific statements) incorporating by reference the general discussions and concentrating solely on the issues specific to the statement subsequently prepared. Tiering is appropriate when the sequence of statements or analyses is:

(a) From a program, plan, or policy environmental impact statement to a program, plan, or policy statement or analysis of lesser scope or to a site-specific statement or analysis.

(b) From an environmental impact statement on a specific action at an early stage (such as need and site selection) to a supplement (which is preferred) or a subsequent statement or analysis at a later stage (such as environmental mitigation). Tiering in such cases is appropriate when it helps the lead agency to focus on the issues which are ripe for decision and exclude from consideration issues already decided or not yet ripe.

DEPARTMENT OF ENERGY

Compliance With the National Environmental Policy Act; Final Guidelines

AGENCY: Department of Energy.

ACTION: Final guidelines for compliance with the National Environmental Policy Act.

SUMMARY: The Department of Energy (DOE) hereby adopts final guidelines for implementing the procedural provisions of the National Environmental Policy Act (NEPA) as required by the Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500–1508). The guidelines published herein reflect certain revisions to the proposed guidelines, published in the Federal Register on July 18, 1979 (44 FR 42136), based upon DOE's consideration of comments and upon experience under the CEQ regulations and the proposed guidelines.

The guidelines are applicable to all organizational units of DOE, except the Federal Energy Regulatory Commission (FERC) which is an independent regulatory commission within DOE not subject to the supervision or direction of the other parts of DOE.

EFFECTIVE DATE: March 28, 1980.

FOR FURTHER INFORMATION CONTACT:

Dr. Robert J. Stern, Acting Director, NEPA Affairs Division, Office of the Assistant Secretary for Environment, Room 4G–064, Forrestal Building, 1000 Independence Avenue SW., Washington, D.C. 20585 (202) 252–4600.

Stephen H. Greenleigh, Esq., Assistant General Counsel for Environment, Room 6D–033, Forrestal Building, Washington, D.C. 20585 (202) 252–6947.

SUPPLEMENTARY INFORMATION:

I. Background

The final guidelines published herein provide the supplemental implementing procedures required by the CEQ regulations. DOE published proposed guidelines in the Federal Register on July 18, 1979 (44 FR 42136), and established August 20, 1979, as the close of the public comment period. DOE has operated under the proposed guidelines since the time of publication.

On August 8, 1979, DOE announced in the Federal Register (44 FR 45918) the establishment of Part 1021 of Chapter X of Title 10 of the Code of Federal Regulations. That rulemaking provided for DOE adoption of the CEQ regulations and the revocation of the NEPA regulations of predecessor agencies of DOE. The effective date of the rulemaking was July 30, 1979.

II. Comments Received and DOE Response

Written comments were received from the Environmental Protection Agency (EPA), the Advisory Council on Historic Preservation (ACHP), and four private organizations. DOE has carefully considered all comments received and has modified the proposed guidelines, as appropriate, to assure that the final guidelines represent sound NEPA procedures.

A. EPA Comments

The EPA suggested that DOE promulgate its procedures as regulations rather than guidelines to give the procedures greater legal authority. DOE considered issuing regulations but decided, instead, to issue guidelines. This decision was based on the advice of CEQ staff and on the belief that guidelines would ensure flexibility.

The EPA also suggested adding sections to the guidelines to provide for monitoring mitigation measures and for the filing of EIS's. DOE considered these suggestions but concluded that the CEQ regulations adequately establish the requirements for monitoring mitigation measures (40 CFR 1505.2(c)) and for filing EIS's (40 CFR 1506.9).

B. ACHP Comment

The ACHP suggested adding a section to the guidelines which would detail the manner in which DOE's National Historic Preservation Act (NHPA) responsibilities will be coordinated with its NEPA responsibilities. DOE recognizes the benefits of coordinating the requirements of other environmental statutes such as the NHPA with those of NEPA, and has supplemented the CEQ requirements contained at 40 CFR 1502.25 by adding general procedures under Paragraph C.4 for coordination with environmental review requirements of other environmental statutes. DOE believes that these general procedures, in conjunction with the ACHP's regulations, 36 CFR 800, will facilitate the coordination of NEPA and NHPA requirements.

C. Other Comments

1. *Section A—NEPA and Agency Planning.* Paragraphs 1.(c)(4) and (5) of the proposed guidelines indicated that DOE expects applicants to notify DOE of other governmental actions required for project completion and of parties interested in the proposed undertaking. One commenter asserted that DOE should have the responsibility for such activities. The purpose of these paragraphs was to provide guidance to applicants for cases where actions are planned before DOE actually receives an application. In such cases, applicants, and generally not DOE, have the information necessary to determine the applicability of other environmental requirements and to identify interested parties. These efforts by applicants early in their planning process will facilitate coordination and thereby help avoid duplication and delays. Accordingly, and with the exception of some minor format changes, DOE has not changed its advice to applicants.

The same commenter suggested that the role of an applicant who is required to file a Fuels Decision Report under the Fuel Use Act (FUA) should be specified in the NEPA Guidelines. DOE published guidelines in the Federal Register on November 5, 1979 (44 FR 63740), for the preparation of the environmental analysis chapter of a Fuels Decision Report. The role of a FUA applicant is specifically outlined by the FUA guidelines and the NEPA guidelines.

The same commenter also asserted the necessity of establishing specified time frames for the NEPA process. DOE recognizes the benefits of setting time limits for the NEPA process and has repeated for emphasis the CEQ regulations contained at 40 CFR 1501.8 by adding a requirement under applicant processes which provides that DOE establish time limits for the NEPA process when requested to do so by an applicant.

2. *Section B—NEPA and Agency Decisionmaking.* Paragraph 1(b)(2)(i) of the proposed guidelines established factors that DOE would consider in determining the necessity and appropriate timing of a NEPA document for energy technology research, development, demonstration, and commercialization programs. One commenter was concerned that the factors did not include the likelihood that the technology will prove to be commercially feasible. DOE believes that this factor is reflected in the broader factor already in the guidelines which reads "The extent to which continued investment in the new technology is likely to cause the program to reach a stage of investment or commitment to implementation likely to determine subsequent development or restrict later alternatives."

3. *Section C—Other Requirements of NEPA.* One commenter requested that future revisions to the guidelines be published in the Federal Register for comment. DOE agrees that substantive changes to the guidelines should be published for comment and has added appropriate requirements under Paragraph C.8.

4. *Section D—Typical Classes of Action.* One commenter questioned the application of NEPA to DOE's action on an exemption petition for a combustion turbine under the Fuel Use Act (FUA), on the basis that the issuance of permits under the Clean Air Act is exempted in section 7(c)(1) of the Energy Supply and Environmental Coordination Act from NEPA. That exemption from NEPA applies only to actions taken under authority of the Clean Air Act and not to actions taken by other agencies under such other authorities as FUA.

Other commenters also questioned the application of NEPA to action on an exemption petition for a peakload powerplant, on the grounds that the exemption is non-discretionary and suggested the need for categorizing FUA exemption actions in Section D of the DOE NEPA guidelines. DOE is assessing the general applicability of NEPA to specific FUA exemptions, as well as the need for categorizing FUA exemption actions in Section D. Appropriate public notice and opportunity for comment will be provided on these matters as DOE gains additional experience with FUA implementation and before DOE adoption of additional categorizations in Section D for FUA exemptions.

D. Comments Beyond Scope

One set of comments was received that is beyond the scope of the guidelines. The comments included:

(1) DOE should place energy above the environment in assessing planned departmental actions.

(2) DOE's policy should include requiring substantiation and objective documentation of any EPA study which would potentially affect energy supplies.

III. Other Revisions to the Guidelines

In addition to revisions made in response to comments, DOE has also revised the guidelines as a result of experience under the CEQ regulations and DOE's proposed guidelines.

A. Format, Wording and Paragraph Arrangement

Several minor changes were made to improve continuity and clarity and to facilitate referencing specific sections of the guidelines.

B. Section A—NEPA and Agency Planning

Paragraph A.4. (d) was added to establish an adequate notice period with respect to scoping meetings.

C. Section B—NEPA and Agency Decisionmaking

Under project level decisionmaking, DOE has added Paragraph B.3. (c)(2) to provide for major system acquisition projects involving the competitive procurement of a site and/or process. The competitive procurement process has confidentiality requirements established pursuant to 18 U.S.C. 1905 which prohibits DOE from disclosing business, confidential or trade secret information. Accordingly, DOE has established, pursuant to the provisions of 40 CFR 1507.3(b), special procedures to provide for compliance with NEPA to the fullest extent possible. The environmental impact analysis required by the special procedures will ensure consideration of environmental factors in selection decisions between competing sites and/or processes. If selected sites and/or processes are likely to have significant effects on the quality of the human environment, the special procedures provide that DOE will prepare an EIS before making a go/no-go decision.

Upon publication, DOE will operate under the special procedures on an interim basis. However, because these procedures represent a substantive revision to the previously proposed guidelines, DOE affirmatively solicits public comments on them and will make appropriate modifications before final adoption of Paragraph B.3. (c)(2). Interested persons are invited to submit written comments with respect to these procedures to Dr. Robert J. Stern, Acting Director, NEPA Affairs Division, Office of the Assistant Secretary for Environment, Room 4G-064, Forrestal Building, 1000 Independence Avenue, SW, Washington, D.C. 20585. To ensure consideration, comments should be received by DOE no later than 30 days after publication of the special procedures in the Federal Register.

D. Section D—Typical Classes of Action

Two minor changes, both involving rate increases, have been made in this section. The addition of rate increases exceeding the rate of inflation as a typical class of action normally requiring an EA and generally applicable to all of DOE is the logical counterpart to the categorical exclusion for rate increases not exceeding the rate of inflation. Since this addition is applicable to all of DOE, the rate increase typical class of action for Power Marketing Administrations has been deleted.

Issued in Washington, D.C., March 25, 1980.

Ruth C. Clusen,

Assistant Secretary for Environment.

DOE NEPA GUIDELINES

Section A—NEPA and Agency Planning

Paragraph A.1 DOE Process [40 CFR 1501.2].
Paragraph A.2 Applicant Processes [40 CFR 1501.2(d)].
Paragraph A.3 Whether to Prepare an Environmental Impact Statement [40 CFR 1501.4, 1507.3(b)(2), and 1508.4].
Paragraph A.4 Scoping [40 CFR 1501.7].

Section B—NEPA and Agency Decisionmaking

Paragraph B.1 DOE Decisionmaking [40 CFR 1505.1].
Paragraph B.2 General Procedures.
Paragraph B.3 Specific Procedures.

Section C—Other Requirements of NEPA

Paragraph C.1 Access to NEPA Documents [40 CFR 1507.3(c)].
Paragraph C.2 Supplemental Statements [40 CFR 1502.9(c)].
Paragraph C.3 Revisions of Time Periods [40 CFR 1507.3(d)].
Paragraph C.4 Coordination With Other Environmental Laws [40 CFR 1502.25].
Paragraph C.5 Status of NEPA Actions [40 CFR 1506.6(e)].
Paragraph C.6 Oversight of Agency NEPA Activities [40 CFR 1507.2(a)].
Paragraph C.7 Compliance.
Paragraph C.8 Revisions to the Guidelines.

Section D—Typical Classes of Action

DOE NEPA Guidelines

Purpose

The purpose of these guidelines is to provide procedures which the Department of Energy (DOE) will apply to implement the Council on Environmental Quality (CEQ) regulations for compliance with the National Environmental Policy Act (NEPA). The CEQ regulations are codified at 40 CFR Parts 1500–1508. The guidelines are issued pursuant to and are to be used only in conjunction with the CEQ regulations.

The guidelines are intended for use by all persons acting on behalf of DOE in carrying out certain provisions of the CEQ regulations. They are not intended, however, to create or enlarge any procedural or substantive rights against DOE. Any deviation from the guidelines must be soundly based and must have the advance approval of the Deputy Secretary of DOE.

Section A—NEPA and Agency Planning

1. *DOE Process.* The CEQ regulations [40 CFR 1501.2] require that:

Agencies shall integrate the NEPA process with other planning at the earliest possible time to insure that planning and decisions reflect environmental values, to avoid delays

later in the process, and to head off potential conflicts.

To implement this requirement DOE will:

(a) Review preliminary internal program planning documents, regulatory agenda, draft legislation, budgetary materials and other developing DOE proposals, to ensure the proper integration of the NEPA process;

(b) Incorporate into its early planning processes a careful consideration of: (i) the potential environmental consequences of its proposed actions, and (ii) appropriate alternative courses of action;

(c) At the earliest possible time, in accordance with paragraph A.3 herein, determine whether an environmental assessment (EA) or an environmental impact statement (EIS) is required.

2. *Applicant Processes.* With respect to applicant processes, the CEQ regulations (40 CFR 1501.2(d)) require agencies to:

(1) Provide for cases where actions are planned by private applicants or other non-federal entities before Federal involvement so that:

(i) Policies or designated staff are available to advise potential applicants of studies or other information foreseeably required for later Federal action.

(ii) The Federal agency consults early with appropriate State and local agencies and Indian tribes and with interested private persons and organizations when its own involvement is reasonably foreseeable.

(iii) The Federal agency commences its NEPA process at the earliest possible time.

To implement this requirement:

(a) Applicants for a DOE lease, permit, license, certificate, financial assistance, allocation, exemption or similar action are expected to:

(1) Consult with DOE as early as possible in their planning processes to obtain guidance with respect to the appropriate level and scope of any studies or environmental information which DOE may require to be submitted as part of or in support of their application;

(2) Conduct studies which are deemed necessary and appropriate by DOE to determine the impact of the proposed action on the quality of the human environment;

(3) Consult with appropriate Federal, regional, State and local agencies and other potentially interested parties during the preliminary planning stages of the proposed action to ensure that environmental factors including permitting requirements are identified;

(4) Submit applications for all required Federal, regional, State and local permits or approvals as early as possible;

(5) Notify DOE as early as possible of other Federal, regional, State, local and Indian tribe actions required for project completion in order that DOE may coordinate the Federal environmental review, and fulfill the requirements of 40 CFR 1508.2, regarding elimination of duplication with State and local procedures, as appropriate;

(6) Notify DOE of private persons and organizations interested in the proposed undertaking, in order that DOE can consult, as appropriate, with these parties in accordance with 40 CFR 1501.2(d)(2);

(7) Notify DOE if, prior to completion of the DOE environmental review and decisionmaking process, the applicant plans or is about to take an action in furtherance of an undertaking within DOE's jurisdiction which may meet either of the criteria set forth at 40 CFR 1508.18(a).

(b) Upon receipt of an application, or earlier if possible, DOE will:

(1) Initiate and coordinate any requisite environmental analyses in accordance with the requirements set forth at 40 CFR 1508.5.

(2) Determine, in accordance with paragraph A.3 herein, whether an EA or an EIS is required; and

(3) Establish time limits for the NEPA Process when requested to do so by an applicant.

(c) For major categories of DOE actions involving a large number of applicants, DOE may prepare generic guidelines describing the level and scope of environmental information expected from the applicant and will make such guidelines available to applicants upon request.

(d) For DOE programs that frequently involve another agency or agencies in related decisions subject to NEPA, DOE will cooperate with the other agencies in developing environmental information and in determining whether to prepare an EA or an EIS. Where appropriate and acceptable to the other agencies, DOE will develop or cooperate in the development of interagency agreements to facilitate coordination and to reduce delay and duplication.

3. *Whether to Prepare an Environmental Impact Statement.* The CEQ regulations (40 CFR 1501.4) require the Federal agency, in determining whether to prepare an EIS, to:

(a) Determine under its procedures supplementing the as regulations (described in § 1507.3) whether the proposal is one which:

(1) Normally requires an environmental impact statement, or

(2) Normally does not require either an environmental impact statement or an environmental assessment (categorical exclusion).

(b) If the proposed action is not covered by paragraph (a) of this section, prepare an environmental assessment (§ 1508.9).

To implement this requirement and the requirements contained at 40 CFR 1507.3(b)(2):

(a) DOE has (in Section D), identified typical classes of DOE action:

"(i) Which normally do require environmental impact statements.

"(ii) Which normally do not require either an environmental impact statement or an environmental assessment [categorical exclusions (§ 1508.4)].

"(iii) Which normally require environmental assessments but not necessarily environmental impact statements."

(b) DOE will review individual proposed actions to determine the appropriate level of NEPA documentation required where:

(1) The proposed action is not encompassed within the categories of Section D,

(2) The proposed action is encompassed within the categories of Section D, but DOE believes that the categorization is not appropriate to the individual proposed action.

(3) Public comment received on or relating to a proposal included within the categories of Section D raises a substantial question regarding the categorization.

(c) DOE will, in conducting the reviews of paragraph (b) above, either:

(1) Determine that neither an EA nor an EIS is required where it is clear that the proposed action is not a major Federal action significantly affecting the quality of the human environment. (In such cases, a brief memorandum may be prepared explaining the basis for that determination);

(2) Prepare an EA where it is unclear whether an EIS is required; or

(3) Proceed directly to EIS preparation where it is clear that an EIS is required.

(d) DOE may add actions to or remove actions from the categories in Section D based on experience gained during implementation of the CEQ regulations and these guidelines.

4. *Scoping.* The CEQ regulations (40 CFR 1501.7) require:

An early and open process for determining the scope of issues to be addressed and for identifying the significant issues related to a proposed action.

To implement this requirement, DOE will:

(a) As soon as practicable after a decision to prepare an EIS, publish in the Federal Register a Notice of Intent (NOI) to prepare an EIS in accordance with 40 CFR 1501.7. However, where

DOE finds that there is a lengthy period between DOE's decision to prepare an EIS and the time of actual preparation, DOE may instead publish the NOI at a time sufficiently in advance of preparation of the draft EIS to provide reasonable opportunity for interested persons to participate in the EIS preparation process;

(b) Provide additional dissemination of the NOI in accordance with 40 CFR 1506.6;

(c) Through the NOI, invite comments and suggestions on the proposed scope of the EIS including environmental issues and alternatives for consideration in the preparation of the draft EIS and invite public participation in the NEPA process except where there is an exception for classified proposals pursuant to 40 CFR 1507.3(c) and paragraph C.1. herein. The comment period for the NOI will normally be 20 days. To the extent practicable, DOE may consider comments received after the close of the designated comment period on the NOI in preparing the draft EIS.

(d) If a scoping meeting is to be held, provide notice of the meeting in the NOI at least 15 days before the meeting.

(e) Prepare and use an EIS implementation plan to record the results of the scoping process and to provide guidance to DOE for the preparation of an EIS.

(1) The EIS implementation plan will be a brief document and will contain:

(i) Information to address the provisions of 40 CFR 1501.7(a)(2), (3), (5), (6), and (7);

(ii) A detailed outline of the EIS;

(iii) A description of the means by which the EIS will be prepared, including the nature of any contractor assistance to be used.

(2) The EIS implementation plan may also contain:

(i) Target page limits for the EIS;

(ii) Target time limits for EIS preparation;

(iii) An allocation of assignments among DOE and cooperating agencies.

(3) DOE will complete an EIS implementation plan as soon as practicable after the close of the designated comment period on the NOI or after a scoping meeting, if one is held, whichever is later.

(4) DOE may revise the implementation plan, as necessary during EIS preparation.

Section B—NEPA and Agency Decisionmaking

1. *DOE Decisionmaking.* The CEQ NEPA regulations (40 CFR 1505.1) require that agencies adopt procedures to ensure that decisions are made to accordance with the policies and purposes of NEPA.

To implement this CEQ requirement, this section designates the major decisionmaking processes for DOE's principal programs and provides procedures to assure that the NEPA process corresponds with the decisionmaking processes. These processes are designated as policy level decisionmaking, program level decisionmaking, and project level decisionmaking. The procedures consist of general procedures applicable to all DOE decisionmaking processes followed by specific procedures applicable to the individual decisionmaking processes.

The decisionmaking structure designated herein is consistent with the CEQ tiering concept (40 CFR 1502.20), which provides for focusing on the actual issues ripe for decision and eliminating repetitive discussions of the issues already decided. Accordingly, environmental documents prepared for policy level decisions will normally focus on broad issues and will provide the foundation for subsequent program and project environmental documents. Environmental documents prepared for program level decisions will normally focus on narrower issues than at the policy level and may summarize and incorporate by reference discussions contained in any relevant policy level environmental document but should not repeat the discussion of issues already decided at the policy level of decisionmaking. Similary, environmental documents prepared for project level decisions will normally focus on issues specific to the proposed project and may summarize and incorporate by reference discussions contained in any broader environmental documents but should not repeat the discussion of issues decided at higher levels of decisionmaking.

(2) *General Procedures.*

(a) The following general procedures apply to all DOE decisionmaking processes. DOE will:

(1) At the earliest possible time in the decisionmaking process: (i) identify and evaluate environmental factors and appropriate alternative courses of action, and (ii) determine in accordance with paragraph A.3 herein the appropriate level of enviromental review document required.

(2) Commence preparation of the relevant environmental document as close as possible to the time that DOE begins development of or is presented with a proposal (40 CFR 1508.23), and complete the document in advance of final decisionmaking.

(3) During the development and consideration of a proposal and the relevant environmental document, review other DOE planning and decisionmaking documents to ensure that alternatives (including the proposed action) to be considered by the decisionmaker are encompassed by the range of alternatives in the relevant environmental document.

(4) Circulate the relevant environmental document or summary thereof with the proposal and other decisionmaking documents through DOE's internal review processes to ensure that DOE officials use the environmental documents in making decisions and that the decisionmaker consider the alternatives described therein.

(5) Where an EIS is prepared, publish the record of decision (40 CFR 1505.2) in the **Federal Register** and make it available to the public as specified in 40 CFR 1506.6 except as provided in paragraph C.1. For the purposes of 40 CFR 1508.1, the record of decision will be deemed issued upon signature by the appropriate DOE official.

(6) Utilize the tiering concept in accordance with 40 CFR 1502.20 and 1508.28 to the fullest extent practicable.

3. *Specific Procedures.*

(a) *Policy level decisionmaking.* At this level of decisionmaking, DOE is deciding on broad strategies to achieve energy goals such as conservation, development of new resources and use of more abundant resources. Policy level decisions may, for example, be representated by proposals for legislation or by formal statements of national energy policy.

(1) For legislative proposals, DOE will: identify and evaluate relevant environmental issues and reasonable alternatives, and make a determination regarding the need to prepare an environmental document during the proposal formulation and early drafting stages; and, normally prepare, consider, and publish any required environmental document in connection with the submittal of a proposal to Congress, except as may be provided in 40 CFR 1506.8.

(2) For formal statements of national energy policy DOE will: initiate implementation of the applicable general procedures specified above during the analysis phase of policy development; and will prepare, consider, and publish any required environmental document in advance of policy adoption for those policies that will result in or substantially alter DOE programs.

(b) *Program level decisionmaking.* At this level of decisionmaking, DOE is deciding on a variety of approaches to implement specific policies or statutory authorities. Program level decisions are

generally represented by the advancement of an energy technology program, the issuance of program regulations, or the adoption of a program plan.

(1) For energy technology research, development, demonstration and commercialization programs, DOE will: initiate the applicable general procedures specified above concurrent with program initiation; and, if required, prepare the relevant environmental document when environmental effects can be meaningfully evaluated. When required, the relevant environmental document would normally be prepared in advance of a decision to proceed with the development phase of a research, development, demonstration, and commercialization program. Nevertheless, DOE will consider the following factors throughout the program in determining the necessity and appropriate timing of the relevant environmental document: (i) The significance of the environmental impacts of the technology, if applied, on the quality of the human environment; and (ii) The extent to which continued investment in the new technology is likely to cause the program to reach a stage of investment or commitment to implementation likely to determine subsequent development or restrict later alternatives.

(2) For programs that are implemented by regulations, DOE will initiate implementation of the applicable general procedures specified above during early regulation drafting stages. Publication of a draft EIS, if required, will normally accompany publication of the proposed regulations and will be available for public comment at any hearings held on the proposed regulations. The draft EIS need not accompany notices of inquiry or advance notices of proposed rulemaking intended to gather information during early stages of regulation development. The relevant environmental document, with comments and responses, will be included in the administrative record. In accordance with 40 CFR 1508.10.(b)(2), final rulemakings promulgated pursuant to the Administrative Procedure Act may be issued simultaneously with publication of the notice of the availability of the final EIS.

(3) For programs that are not included in paragraphs (1) and (2) and that are implemented by a formal program plan, DOE will: initiate implementation of the applicable general procedures specified above concurrent with program plan formulation; and, if required, prepare the relevant environmental document when the environmental effects of the program can be meaningfully evaluated. If an EIS is required, it will be prepared, considered, and published and the requisite record of decision issued before taking an action that would have an adverse environmental impact or limit the choice of reasonable alternatives except as provided in 40 CFR 1508.1(c).

(c) *Project level decisionmaking.* At this level of decisionmaking, DOE is deciding on specific actions to execute a program or to perform a regulatory responsibility. Project level decisions are generally represented by the approval of projects, by the approval or disapproval of applications, or by the decisions on applications rendered in adjudicatory proceedings.

(1) For projects that are undertaken directly by DOE, including projects involving the sole source procurement of a site and/or process, DOE will: initiate implementation of the applicable general procedures specified above concurrent with project concept development; and, if required, prepare, consider, and publish the relevant environmental document before making a go/no-go decision on the project. In addition, if a DOE project requires preparation of an EIS, DOE will not take an action concerning the project which would have an adverse environmental effect or which would limit the choice of reasonable alternatives until the required record of decision is issued.

(2) For major system acquisition projects involving selection of sites and/or processes by competitive procurement, DOE will:

(i) Require that environmental data and analyses be submitted as a discrete part of an offeror's proposal. [The level of detail required for environmental data and analyses will be specified by DOE for each applicable procurement action. The data will be limited to that reasonably available to offerors.]

(ii) Independently evaluate and verify the accuracy of environmental data and analyses submitted by offerors.

(iii) For proposals in the competitive range, prepare and consider before the selection of sites and/or processes an environmental impact analysis in accordance with the following:

(a) In order to comply with 18 U.S.C. 1905 which prohibits DOE from disclosing business, confidential, or trade secret information, the environmental impact analysis will be subject to the confidentiality requirements of the competitive procurement process and therefore exempt from mandatory public disclosure.

(b) The environmental impact analysis will be based on the Environmental data and analyses submitted by offerors and on supplemental information developed by DOE as necessary for a reasoned decision.

(c) The environmental impact analysis will focus on environmental issues that are pertinent to a decision on proposals in the competitive range and will include:

(1) A brief discussion of the purpose of each proposal including any site or process variations having environmental implications.

(2) For each proposal, a discussion of the salient characteristics of the proposed sites and/or processes as well as alternative sites and/or processes reasonably available to the offeror or to DOE.

(3) A brief comparative evaluation of the environmental impacts of the proposals. This evaluation will focus on significant environmental issues and clearly identify and define the comparative environmental merits of the proposals.

(4) A discussion of the environmental impacts of each proposal. This discussion will address direct and indirect effects, short-term and long-term effects, proposed mitigation measures, adverse effects which cannot be avoided, areas where important environmental information is incomplete or unavailable, unresolved environmental issues, and practicable mitigating measures not included in the proposal.

(5) To the extent known for each proposal, a list of Federal, State, and local government permits, licenses, and approvals which must be obtained in implementing the proposal.

(iv) Document the consideration given to environmental factors in a publicly-available selection statement to record that the relevant environmental consequences of reasonable alternatives have been evaluated in the selection process. The selection statement will not contain business, confidential, trade secret or other information the disclosure of which is prohibited by 18 U.S.C. 1905 or the confidentiality requirements of the competitive procurement process. The selection statement will be filed with the Environmental Protection Agency.

(v) If the selected sites and/or processes are likely to have significant effects on the quality of the human environment, phase subsequent contract work to allow publicly available EIS's to be prepared, considered and published in full conformance with the requirements of 40 CFR Parts 1500–1508 and in advance of a go/no-go decision.

(3) For projects that involve applications to DOE for financial

assistance or applications to DOE for a permit, license, exemption, allocation or similar regulatory action involving informal administrative proceedings. DOE will: apply NEPA early in the process in accordance with 40 CFR 1501.2(d) and paragraph A.2 herein; commence preparation of the relevant environmental document, if required, no later than immediately after applications are received and in accordance with the requirements set forth at 40 CFR 1506.5; and consider the relevant environmental document, if one is prepared, in decisions on the application.

(4) For actions that involve adjudicatory proceedings, excluding judicial or administrative, civil, or criminal enforcement actions, DOE will: normally prepare, consider and publish the relevant environmental document, if required, in advance of a decision, and include the document in the formal record of the proceedings. If an EIS is required, the draft EIS will normally precede preliminary staff recommendations, and publication of the final EIS will normally precede final staff recommendations and that portion of the public hearing related to the EIS. The EIS need not precede preliminary hearings designed to gather information for use in the EIS.

Section C—Other Requirements of NEPA

1. *Access to NEPA Documents.* The CEQ NEPA regulations (40 CFR 1507.3(c)) allow an agency to develop criteria for limiting public access to environmental documents which involve classified information. This section provides the DOE policy for addressing classified information as well as policy for addressing confidential information.

Classified or confidential information is exempted from mandatory public disclosure by § 552(b) of the Freedom of Information Act (FOIA) (5 U.S.C. 552), § 1004.10(b) of DOE's regulations implementing FOIA (10 CFR Part 1004), and 18 U.S.C. 1905. Public access to such information will be restricted in accordance with such regulations and applicable statutes.

All NEPA documents (as defined at 40 CFR 1508.10), the EIS implementation plan, and the record of decision are subject to the mandatory public disclosure requirements of FOIA and the DOE regulations implementing FOIA except documents which are determined, in accordance with the applicable statutes and regulations, to contain classified or confidential information. DOE will determine the treatment of documents containing classified or confidential information on a case by case basis in accordance with the requirements of DOE's FOIA regulations and the applicable statutes.

Wherever possible, the fundmental policy of full disclosure of NEPA documents will be followed. In some cases, this will mean that classified or confidential information may be excised, prepared as an appendix, or otherwise segregated to allow the release of the nonsensitive portions of a document.

2. *Supplemental Statements.* (a) If required, DOE will prepare, circulate, and file a supplement to a draft or final EIS, in accordance with 40 CFR 1502.9(c). However, where it is unclear whether an EIS supplement is required, DOE will prepare an analysis which provides sufficient information to support a DOE determination with respect to the criteria of 40 CFR 1502.9(c)(i) and (ii). Based on the analysis, DOE will determine whether to prepare an EIS supplement. Where DOE determines that an EIS supplement is not required, DOE will prepare a brief memorandum which explains the basis for that determination.

(b) When applicable, DOE will incorporate an EIS supplement or a brief memorandum and supporting analysis into any related formal administrative record prior to making a final decision on the action which is the subject of the EIS supplement or analysis.

3. *Revisions of Time Periods.* The CEQ regulations (40 CFR 1507.3(d)), allow agencies to provide for periods of time other than those presented in 40 CFR 1506.10 when necessary to comply with other specific statutory requirements.

Certain circumstances, such as statutory deadlines, may require that the periods established in 40 CFR 1506.10 for the timing of DOE NEPA actions be altered. If DOE determines that, in order to comply with specific requirements of other statutes, such revisions are necessary, a notice of the determination will be published in the Federal Register. This notice will briefly provide the reason for such alterations and contain information on the revised time periods. Related notices of substantive action, if applicable, may be published jointly with notices published pursuant to this paragraph.

4. *Coordination With Other Environmental Laws.* The CEQ regulations (40 CFR 1502.25) provide for integrating the NEPA process and other environmental requirements.

To the fullest extent possible, DOE will:

(a) Coordinate NEPA compliance with other environmental review requirements including those under: the Clean Air Act, the Clean Water Act, the Coastal Zone Management Act, the Endangered Species Act, the Fish and Wildlife Coordination Act, the Wild and Scenic Rivers Act, the National Historic Preservation Act, Section 13 of the Federal Nonnuclear Research and Development Act, the Marine Protection, Research and Sanctuaries Act, the Resource Conservation and Recovery Act, and other Acts, as deemed appropriate by DOE.

(b) Determine the applicability of other environmental requirements early in the planning process to ensure compliance and to avoid delays.

(c) In addition to the information required by 40 CFR 1502.25(b), include in draft and final EIS's plans and estimated schedules for compliance with other applicable environmental review requirements.

(d) Use the relevant NEPA document to support the fulfillment of the review and documentation requirements of other environmental statutes and regulations, and to report the status of compliance with these other environmental authorities.

5. *Status of NEPA Actions.* Individuals or organizations desiring information or status reports on elements of the NEPA process should address their inquiries to:

NEPA Affairs Division, Office of Environment, Department of Energy, 1000 Independence Avenue, S.W., Washington, D.C. 20585.

6. *Oversight of Agency NEPA Activities.* The Assistant Secretary for Environment, or his/her designee, will be responsible for overall review of DOE NEPA compliance.

7. *Compliance.* These guidelines are intended for use by all persons acting on behalf of DOE in carrying out certain provisions of the CEQ regulations. Any deviation from the guidelines must be soundly based and must have the advance approval of the Deputy Secretary of DOE.

8. *Revisions to the Guidelines.* DOE will, in accordance with 40 CFR 1507.3, review these guidelines on a continuing basis and revise them as necessary to ensure full compliance with the purposes and provisions of NEPA. Substantive changes will be published in the Federal Register and will be finally adopted only after an opportunity for public review.

Section D.—Typical Classes of Action

Normally do not require either EA's or EIS's	Normally require EA's but not necessarily EIS's	Normally require EIS's
Classes of Actions Generally Applicable to All of DOE		
Administrative procurements (e.g., general supplies)	DOE actions which promote or result in engineering development activities, i.e., detailed design, demonstrations and test of energy system prototypes.	DOE actions which are expected to result in the construction and operation of a full scale energy system project.
Contracts for personal services	DOE actions which promote energy conservation by state or local governments by energy conservation programs.	DOE actions which promote energy conservation through regulation of energy use on a nationwide basis.
Personnel actions		
Reports or recommendations on legislation or proposed legislation which have not initiated by DOE.		
Compliance actions, including investigations, conferences, hearings, notices of probable violations and remedial orders.		
Interpretations and rulings, or modification of procedures thereof.		
Promulgation of rules and regulations which are clarifying in nature, or which do not substantially change the effect of the regulations being promulgated.		
Actions with respect to the planning and implementation of emergency rationing pursuant to the International Energy Program.		
Information gathering, analysis, and dissemination		
Actions in the nature of conceptual design or feasibility studies.		
Actions involving routine maintenance of DOE-owned or operated facilities.		
Actions in the nature of energetic energy supply/demand studies which do not result in a DOE report or recommendation for legislation or other DOE proposal.		
Adjustments, exceptions, exemptions, waivers, stays or modifications or rescissions of orders issued pursuant to the Emergency Petroleum Allocation Act, as amended.		
Rate increases for products or services established by DOE, and approval of rate increases for non-DOE entities, which do not exceed the rate of inflation in the period since the last rate increase.	Rate increases for products or services established by DOE and approval of rate increases for non-DOE entities which exceed the rate of inflation in the period since the last increase.	
Actions that are substantially the same as other actions for which the environmental actions for which the environmental effects have already been assessed in a NEPA document and determined by DOE to be clearly insignificant and where such determination is currently valid.		
Classes of Actions Applicable to Licensing of Import/Export Natural Gas Pursuant to Section 3 of the Natural Gas Act		
	Approval/disapproval of a new license or an amendment to an existing license which does not involve new construction, but which requires operational changes which may or may not be significant, such as an increase in LNG throughput, change in transportation or storage operations.	Approval/disapproval of applications involving the construction of new liquid natural gas terminal, reconstruction or storage facilities or a significant expansion of an existing LNG terminal, reconstruction or storage facility. Approval/disapproval of an application involving a significant operational change, such as a major increase in the quantity of LNG imported or exported.
Classes of Actions Applicable to Property Allocation Programs		
Assignments and allocations of property to retail and wholesale outlets for commercial and residential use.	Assignments and allocations of property to gas utilities for peak shaving, SNG enrichment or supplemental gas purposes involving new construction or a substantial change in operations or potential impact on competing users of property.	
Assignments and allocations of property to gas utilities for peak shaving or SNG enrichment which do not involve new construction or a substantial change in operation and where DOE has determined that such actions will not disturb the supplies available for competing users.	New assignments and allocations of property from stock to enable operation of or increases in operation of petrochemical plants. Changes in regulatory status such as the disposal of property.	
Classes of Actions Applicable to Synthetic Natural Gas (SNG) Feasibility Allocation Programs		
Approval/disapproval of an application for supplier assignment and feedstock allocation which involves construction of SNG production at historical levels, and where DOE has determined that the requested assignment will not reasonably impose competing users due to the projected availability of supply.	Issuance of an Order which reduces SNG production below historical levels and where the probability of fuel switching or other impacts caused by the reductions is uncertain. Issuance of an Order by an existing plant which increases the SNG production above historical levels.	Approval/disapproval of an application for supplier assignment and feedstock allocation which involves the construction of a new SNG plant or a major modification at an existing plant. Issuance of an Order which significantly reduces the feedstock allocation to an existing plant in cases where the gas supply/demand outlook indicates significant fuel switching or additional hardship may occur as a result of the curtailment of SNG feedstock.

BEST AVAILABLE COPY

Section D.—*Typical Classes of Action*—*Continued*

Normally do not require either EA's or EIS's	Normally require EA's but not necessarily EIS's	Normally require EIS's
Classes of Actions Applicable to [illegible]		
Approval of DOE participation in international "synthetic" agreements for cooperation in energy R&D which do not commit the U.S. to any specific projects or activities.		
Approval of technical exchange arrangements for information, data or personnel with other countries or international organizations.		
Approval of arrangements to assist other countries in identifying and analyzing their energy resources, needs and options.		
Approval of export of small quantities of nuclear material for [illegible] in accordance with the Nuclear Non-Proliferation Act of 1978 and the "Procedures for Exports Pursuant to the Nuclear Non-Proliferation Act of 1978" (Federal Register, Part VII, June 8, 1978).		
Classes of Actions Applicable to Power Marketing Administrations (PMA)		
Minor additions to a substation, minimizing additions or changes to minimize environments that do not affect the area beyond the previously developed substation area.	Upgrading interconnection or reconductoring on existing transmission line.	Major Transmission System Additions—additions of new transmission lines, major grid augmentations and restoring sections to PMA's main transmission grid.
	Construction of new service facilities such as bay breaks and substations.	Integrating Transmission Facilities—transmission projects additions to integrating new sources of generation into PMA's main grid.
	Modifications of existing facilities (e.g., substations, storage yards) where activities extend beyond the previously developed facility area.	
	Annual vegetation management program (control).	
Classes of Actions Generally Applicable to Nuclear Waste Management Programs		
	Exploratory and site characterization activities which by virtue of resource conversion or disposal area for consideration may foreclose reasonable site alternatives.	DOE actions resulting in the site selection, construction, or expansion of major storage area or disposal of nuclear waste, and/or spent nuclear fuel.
	Land acquisition activities solely for the purposes of preserving possible candidate sites and which do not prejudice future programmatic site evaluation decisions.	
Classes of Actions Generally Applicable to DOE Implementation of Powerplant and Industrial Fuel Use Act of 1978 (FUA)		
The grant or denial of any temporary exemption for any electric powerplant or major fuel-burning installation.		
The grant or denial of any permanent exemption for any existing electric powerplant or major fuel-burning installation, other than an exemption—(1) under section 312(c), relating to cogeneration, (2) under section 312(1), relating to scheduled equipment outages; (3) under section 312(b), relating to certain State or local requirements; and (4) under section 312(g), relating to certain alternate fuel capabilities.

BILLING CODE 6450-01-M

Headquarters, 1625 K Street N.W., Washington, D.C. An additional Coordinating Subcommittee meeting has also been tentatively scheduled for Friday, September 12, 1980, also at the NPC Headquarters.

The National Petroleum Council provides technical advice and information to the Secretary of Energy on matters relating to oil and gas or the oil and gas industries. Accordingly, the Committee on Refinery Flexibility has been requested by the Secretary to undertake an analysis of the factors affecting crude oil quality and availability and the ability of the refining industry to process such crudes into marketable products. This analysis will be based on information and data to be gathered by the Oil Supply, Demand, and Logistics Task Group and the Refinery Capability Task Group, whose efforts will be coordinated by the Coordinating Subcommittee. The tentative agendas of the meetings are as follows:

Agenda for the Refinery Capability Task Group meeting, Tuesday, August 19, 1980, beginning at 9:00 a.m.:

1. Review and approve summary minutes of the July 1, 1980 meeting of the Task Group.
2. Review and discuss progress of study groups A, B, and C.
3. Discuss plans for the final phase of the Refinery Flexibility report.
4. Discuss any other matters pertinent to the overall assignment of the Task Group.

Agenda for the Coordinating Subcommittee Meeting, to be conducted on either September 5 or September 12, 1980, beginning at 10:00 a.m.:[1]

1. Review and discuss the progress of the Refinery Capability Task Group.
2. Review and discuss the progress of the Oil Supply, Demand and Logistics Task Group.
3. Review and discuss introductory materials for the overall report on refinery flexibility.
4. Discuss any other matters pertinent to the overall assignment of the Coordinating Subcommittee.

All meetings are open to the public. The Chairmen of the Task Group and the Subcommittee are empowered to conduct the meetings in a fashion that will, in their judgment, facilitate the orderly conduct of business. Any member of the public who wishes to file a written statement with either the Task Group or the Subcommittee will be permitted to do so, either before or after the meetings. Members of the public who wish to make oral statements at any of the meetings should inform Joan Walsh Cassedy, National Petroleum Council, (202) 393-6100, prior to the meeting, and provision will be made for their appearance on the respective agendas. Transcripts of the Coordinating Subcommittee meeting will be available for public review at the Freedom of Information Public Reading Room, Room SB160, Department of Energy, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C., between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued at Washington, D.C. on August 8, 1980.

Robert H. Lawton,

Acting Deputy Assistant Secretary for Resource Development and Operations.

[FR Doc. 80-24118 Filed 8-8-80; 8:45 am]

BILLING CODE 6450-01-M

[1] Note.—Interested parties should contact NPC Headquarters prior to September 5 to confirm which meeting date(s) are confirmed.

Compliance With the National Environmental Policy Act; Amendment to Guidelines

AGENCY: Department of Energy.

ACTION: Notice of proposed amendments to guidelines to provide for a categorical exclusion for certain exemptions under the Fuel Use Act.

SUMMARY: Section D of the DOE guidelines for compliance with the National Environmental Policy Act (NEPA) identifies classes of DOE action which normally do not require either an environmental impact statement or an environmental assessment. These are termed "categorical exclusions." Classification of an action as a categorical exclusion raises a rebuttable presumption that any such actions will not significantly affect the quality of the human environment. In the NEPA guidelines, it was specified that DOE might add or remove, after an opportunity for public review, actions identified as categorical exclusions based on experience gained during implementation of the guidelines.

On the basis of recent experience, DOE has determined that certain exemptions authorized under the Fuel Use Act normally are not Federal actions significantly affecting the quality of the human environment with respect to the provisions of NEPA and therefore are eligible for categorical exclusion status. The actions considered eligible for a categorical exclusion are the grant or denial of a permanent exemption to any electric powerplant or major burning installation for limited use, i.e., fuels mixture of 25 percent or less petroleum or natural gas; peakload powerplants; certain scheduled equipment outages; emergency purposes, and automatic exemptions based on cost for units operated no more than 600 hours per year. DOE proposes to add these exemptions to its list of categorical exclusions in Subpart D of its NEPA guidelines. Public comment is invited on this proposal. Pending final adoption or rejection of this proposal DOE will utilize the categorical exclusion process for these actions on an interim basis.

COMMENTS BY: September 15. 1980.

ADDRESS COMMENTS TO: Dr. Robert J. Stern, at the address listed below.

FOR FURTHER INFORMATION CONTACT:

Dr. Robert J. Stern, Acting Director, NEPA Affairs Division, Office of Environmental Compliance and Overview, Office of the Assistant Secretary for Environment, Forrestal Building, Room 4G-064, 1000 Independence Avenue SW., Washington, D.C. 20585, (202) 252-4600.

Stephen H. Greenleigh, Esq., Assistant General Counsel for Environment, Forrestal Building, Room 6D-033, 1000 Independence Ave. SW., Washington, D.C. 20585, (202) 252-6947.

SUPPLEMENTARY INFORMATION:

A. Background

On March 28, 1980 (45 FR 20695), the Department of Energy (DOE) published in the **Federal Register** final guidelines for implementing the procedural provisions of the National Environmental Policy Act (NEPA) as required by the Council on Environmental Quality (CEQ) regulations (40 CFR 1500-1508). The guidelines are applicable to all organizational units of DOE, except the Federal Energy Regulatory Commission which is not subject to the supervision or direction of the other parts of DOE.

Section D of the DOE NEPA guidelines identified typical classes of DOE action which normally do not require either an environmental impact statement or an environmental assessment. These classes of action were identified pursuant to Section 1507.3(b)(2)(ii) of the CEQ regulations referenced above and are termed "categorical exclusions." Section 1508.4 of the CEQ regulations defines a categorical exclusion as a category of actions which do not individually or cumulatively have a significant effect on the human environment and for which, therefore, neither an environmental assessment nor an environmental impact statement is required. An agency may decide in its procedures or otherwise to prepare environmental assessments even though it is not required to do so. Further, allowance must be provided by an agency for extraordinary circumstances in which a

Office of the Secretary

Defense Intelligence Agency Scientific Advisory Committee; Closed Meeting

ACTION: Notice of closed meeting.

SUMMARY: Pursuant to the provisions of Subsection (d) of section 10 of Pub. L. 92-463, as amended by section 5 of Pub. L. 94-409, notice is hereby given that a closed meeting of the DIA Scientific Advisory Committee has been scheduled as follows:

DATES: Tuesday and Wednesday, 10-11 May 1988, 9:00 a.m. to 5:00 p.m each day.

ADDRESS: The DIAC, Bolling AFB, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Lieutenant Colonel John E. Hatfield, USAF, Executive Secretary, DIA Scientific Advisory Committee, Washington, DC 20340 (202/373-4930).

SUPPLEMENTARY INFORMATION: The entire meeting is devoted to the discussion of classified information as defined in section 552b(c)(1), Title 5 of the U.S. Code and therefore will be closed to the public. The Committee will receive briefings on and discuss several current critical intelligence issues and advise the Director, DIA on related scientific and technical intelligence matters.

Linda M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

February 12, 1988.

BILLING CODE 3810-01-M

Department of the Air Force

USAF Scientific Advisory Board, Meeting

February 9, 1988.

The USAF Scientific Advisory Board Ad Hoc Committee on Hypersonic Test Facilities will meet on March 8-11, 1988, from 9:00 a.m. to 5:00 p.m. at the Office of the Scientific Advisory Board, Room 5D982, The Pentagon, Washington DC.

The purpose of this meeting is to indoctrinate the committee on the Hypersonic test facility requirements for projected hypersonic vehicles and munitions, discuss the status of current national ground test facilities, and map out a strategy to develop a roadmap to acquire or upgrade an adequate ground test capability to accomplish pre-design and design validation testing for new military and civilian production hypersonic systems.

This meeting will involve discussions of classified defense matters listed in section 552b(c) of Title 5, United States Code, specifically subparagraph (1) thereof, and accordingly will be closed to the public.

For further information, contact the Scientific Advisory Board Secretariat at (202) 697-4811.

Patsy J. Conner,

Air Force Federal Register Liaison Officer.

BILLING CODE 3910-01-M

DEPARTMENT OF ENERGY

Draft Environmental Impact Statement, Special Isotope Separation Project, Idaho National Engineering Laboratory, Idaho Falls, ID

AGENCY: Department of Energy.

ACTION: Notice of availability and schedule for public hearings.

SUMMARY: The Department of Energy (DOE) announces the availability of a draft environmental impact statement (DEIS), "Special Isotope Separation Project," (DOE/EIS-0136) analyzing the environmental consequences of site selection, construction, and operation of a Special Isotope Separation (SIS) Project using the Atomic Vapor Laser Isotope Separation (AVLIS) process technology.

Public comments are invited and three (3) public hearings will be held with respect to the draft EIS.

DATE: Written comments on the draft EIS should be addressed to the Department of Energy (address below) and should be postmarked by April 21, 1988, in order to ensure consideration in preparation of the final environmental impact statement. The public hearings are scheduled for March 9, 10, and 11, as described in this notice. Individuals desiring to make oral statements at these hearings should notify Clay Nichols at the address below by March 7, 1988, specifying preferred dates and times, so that the Department may arrange a schedule for presentations.

ADDRESS: Requests for copies of the draft EIS, written comments on the draft EIS, requests to present oral comments at the public hearings, and requests for further information should be directed to Clay Nichols, SIS Project Manager, Idaho Operations Office, U. S. Department of Energy, 785 DOE Place, Idaho Falls, ID 83402, telephone (208) 526-0306.

FOR FURTHER INFORMATION CONTACT:

1. Clay Nichols, at the address above.
2. Carol Borgstrom, Acting Director, Office of NEPA Project Assistance, U. S. Department of Energy, 1000 Independence Ave. SW., Washington, DC 20585. Telephone (202) 586-4000

SUPPLEMENTARY INFORMATION:

I. Previous Notice of Intent and Scoping

The Department of Energy published a Notice of Intent (NOI) on October 31, 1986 (51 FR 39705) regarding the preparation of a draft EIS for siting, construction, and operating a proposed SIS plant, and identified the Idaho National Engineering Laboratory, Idaho Falls, Idaho, as the preferred alternative. The Department of Energy published a Notice of Public Scoping Meetings for the proposed SIS facility on February 9, 1987 (52 FR 4048) and conducted two (2) public scoping meetings; one in Idaho Falls, Idaho, on February 24, 1987, and one in Boise, Idaho, on February 26, 1987. The period for submission of public comments on the scope of the EIS extended from October 31, 1986, until March 2, 1987.

II. Background

As the Federal agency responsible for the production of defense nuclear materials, DOE is required to both develop and maintain the capabilities necessary to meet requirements for plutonium. In accordance with the Conference Report for the FY-1986 Energy and Water Development Appropriation Act (Pub. L. 99-141) and subsequent DOE reviews, DOE is proposing to construct and operate a Special Isotope Separation (SIS) Project using the AVLIS process technology. The SIS Project is being proposed by DOE to provide redundancy in production capability, technological diversity and flexibility in DOE's production of nuclear materials for national defense.

The SIS Project would provide DOE with the capability to separate the isotopes of DOE-owned fuel-grade plutonium into specific isotopic concentrations required for national defense. The SIS Project would require the construction of several facilities that include a plutonium processing building and a laser support building. The AVLIS process that would be used during operation uses precisely tuned visible laser light to selectively ionize, or excite, specific plutonium isotopes in a vapor stream. The ionized isotopes would then be separated from the plutonium isotopes of interest. Chemical processes would also be required during operation to prepare material for AVLIS processing and to recover and (if necessary) purify AVLIS processed material.

III. Scope of the EIS

The scope of the EIS was developed using the comments received during the public scoping period and public meetings described above.

The draft EIS has been prepared by DOE in accordance with section 102(2)(C) of the National Environmental Policy Act (NEPA) of 1969, as amended. The EIS is intended to provide environmental input into a DOE decision on whether to proceed to construct and operate the proposed SIS Project, and, if the Project is to be constructed and operated, whether it should be constructed and operated at: (1) The Idaho National Engineering Laboratory (INEL) near Idaho Falls, Idaho (preferred alternative), (2) the Hanford Site near Richland, Washington, or (3) the Savannah River Plant (SRP) near Aiken, South Carolina. The draft EIS assesses the potential environmental consequences of constructing and operating the proposed SIS Project at each of the alternative sites as well as no action, or not constructing and operating the SIS Project.

The draft EIS dicusses the need for the SIS Project and also includes a description of the facilities that would be constructed and the processes that would be used during operation. The potential environmental consequences of constructing and operating the facilities that are discussed in the draft EIS include: socioeconomic and land use impacts; archeological and historical impacts; impacts associated with the radioactive nonradioactive atmospheric emissions, non radioactive liquid effluents, and solid wastes; potential consequences of facility accidents; and the potential normal and accident consequences of transporting SIS plutonium feed, product, and byproduct materials.

IV. Comment Procedures

A. Availability of the Draft EIS

Copies of the draft EIS have been distributed to Federal, State, and local agencies, organizations, and individuals known to be interested in the proposed SIS Project. Additional copies of the draft EIS may be obtained from Clay Nichols at the address given above.

Copies of the draft EIS, referenced documents and scoping meeting transcripts are available for public inspection at: Idaho National Engineering Laboratory Technical Library, SIS Public Reading Room, University Place, 1776 Science Center Drive, Idaho Falls, Idaho 83402, Telephone No. (208) 526-1144.

Copies of the draft EIS and referenced documents will also be available for public inspection at the following locations:

1. Freedom of Information Reading Room, U.S. Department of Energy, Room 1E-190, Forrestal Building, 1000 Independence Ave., SW., Washington, DC 20585, Telephone No. (202) 586-6020.
2. U.S. Department of Energy, Public Reading Room, Richland Operating Office, Richland, Washington 99352, Telephone No. (509) 376-8583.
3. U.S. Department of Energy Public Reading Room, University of South Carolina, Aiken Campus, Cregg-Graniteville Library, Aiken, South Carolina 29802, Telephone No. (803) 725-2940.

B. Written Comments

Interested parties are invited to provide comments on the draft EIS to Clay Nichols at the address given previously. Comments should be identified on the outside of the envelope with the designation "SIS Project EIS." All comments and related information should be postmarked by April 21, 1988, to ensure consideration in preparation of the final EIS. Comments postmarked after April 21, 1988, will be considered to the extent practicable.

C. Public Hearings

1. Participation Procedure

Public hearings have been scheduled on the draft EIS as follows:

Wednesday, March 9, 1988, at Owyhee Plaza Hotel, Boise, Idaho, at 2 p.m. and 7 p.m.

Thursday, March 10, 1988, at Holiday Inn, Twin Falls, Idaho, at 2 p.m. and 7 p.m.

Friday, March 11, 1988, at University Place, Idaho Falls, Idaho, at 2 p.m. and 7 p.m.

The public is invited to attend these hearings and provide comments on the draft EIS. All comments received at the hearings will be considered in the preparation of the final EIS. Individuals desiring to make an oral presentation at a hearing should notify Clay Nichols at the address above as soon as possible, stating preferred dates and times, so that the Department may arrange a schedule for the presentations. To maximize the opportunities for persons to present comments, five minutes will be allotted to individuals and ten minutes will be allotted to representatives of organizations. Persons with lengthy comments are asked to summarize them in their oral remarks and submit a full manuscript for entry into the official record. Persons who have not pre-registered to speak, may register at the hearing. Such persons will be called upon by the hearing officer to present their comments as time permits.

2. Conduct of Hearings

Each hearing will be conducted by a hearing officer selected by the Department. The Department of Energy will arrange the schedule of pre-registered presenters for each hearing. The hearings will not be judicial- or evidentiary-type hearings. There will be no cross examination of DOE representatives or persons presenting statements. Presenters' remarks will be limited to the time periods identified above. Any further procedural rules needed for the proper conduct of the hearings will be announced by the hearing officer at the start of each hearing. Transcripts of the hearings will be prepared, and the entire record of the hearings, including the transcripts, will be retained by the Department for inspection at the DOE's Freedom of Information Reading Room; the INEL Technical Library in Idaho Falls, Idaho; the Public Reading Room in Richland, Washington; and the Public Reading Room in Aiken, South Carolina (full addresses given above).

Issued in Washington, DC, this 17th day of February, 1988.

Garry W. Gibbs,

Acting Assistant Secretary, Environmental, Safety and Health.

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Draft Environmental Impact Statement; Special Isotope Separation Project, Idaho National Engineering Laboratory, Idaho Falls, ID

AGENCY: Department of Energy.

ACTION: Amended notice of public hearings.

SUMMARY: The U.S. Department of Energy (DOE) published a notice in the **Federal Register** on February 19, 1988, (53 FR 5039) announcing the availability of a Draft Environmental Impact Statement (EIS) for the "Special Isotope Separation Project" (SIS) (DOE/EIS-0136) and also the schedule for three (3) public hearings to solicit comments on the Draft EIS.

The Department has decided to reschedule the SIS public hearings in order to avoid a potential conflict with the Idaho Wilderness Bill public hearings, which were subsequently scheduled for the same week as the SIS hearings. The deadline for submitting written comments on the Draft EIS will remain on April 21, 1988.

DATES: The rescheduled SIS hearings will take place as follows:

Friday, March 25, 1988, at University Place, Idaho Falls, Idaho;

Saturday, March 26, 1988, at LeBoise Room, Boise City Council Chambers, 150 N. Capital, Boise, Idaho;

Monday, March 28, 1988, at Canyon Springs Best Western, 1357 Blue Lakes Blvd., Twin Falls, Idaho.

Two sessions, beginning at 2:00 p.m. and 7:00 p.m., will be held at each location.

SUPPLEMENTARY INFORMATION: On February 19, 1988, DOE published a notice (53 FR 5039) announcing the time and place of public hearings to be held for the purpose of soliciting public comments on the Draft EIS for the SIS Project. The hearings were scheduled for March 9, 1988, in Boise, Idaho; March 10, 1988 in Twin Falls, Idaho; and March 11, 1988, in Idaho Falls, Idaho. Two sessions were scheduled to be held on each date, commencing at 2:00 and 7:00 p.m.

Subsequent to publication of the notice, DOE became aware that the SIS hearings might conflict with other public hearings which were subsequently scheduled for the Idaho Wilderness Bill during the same week. Therefore, DOE has decided to reschedule the SIS public hearings. The public hearings will take place on March 25, 26, and 28, 1988, at the locations and times indicated above. Persons desiring to make oral presentations at the hearings should notify Clay Nichols, SIS Project Manager, at the address given below by March 18, 1988, so that DOE may arrange a schedule for the presentations. Procedures regarding the conduct of the hearing were given in the February 19, 1988, notice.

All oral and written comments postmarked by April 21, 1988, will be considered in preparing the final EIS. Comments received after the indicated period will be considered to the extent practicable. Comments should also be addressed to Clay Nichols at the address given below.

FOR FURTHER INFORMATION CONTACT:

PUBLIC HEARING NOTICE

TO OBTAIN PUBLIC INPUT ON THE U.S. DEPARTMENT OF ENERGY'S DRAFT ENVIRONMENTAL IMPACT STATEMENT TO CONSTRUCT AND OPERATE A SPECIAL ISOTOPE SEPARATION FACILITY

The Department of Energy (DOE) will hold three (3) Public Hearings on whether to construct a Special Isotope Separation (SIS) Facility at either the Idaho National Engineering Laboratory (INEL) near Idaho Falls, Idaho; Savannah River Plant (SRP) near Aiken, South Carolina; or the Hanford Site near Richland, Washington, or not to construct and operate the SIS PROJECT.

The Hearings will solicit public comment on the Draft Environmental Impact Statement (DEIS(, prepared by the DOE to evaluate any potential environmental impacts connected with the proposed action. The DOE encourages members of the public to attend one of these hearings scheduled for:

FRIDAY, MARCH 25, 1988, UNIVERSITY PLACE
1776 SCIENCE CENTER DRIVE
IDAHO FALLS, IDAHO, AT 2 P.M. AND 7 P.M.

SATURDAY, MARCH 26, 1988, CITY HALL
150 NORTH CAPITOL BLVD.
BOISE, IDAHO, AT 2 P.M. AND 7 P.M.

MONDAY, MARCH 28, 1988, BEST WESTERN CANYON SPRINGS
1357 BLUE LAKES BLVD. NORTH
TWIN FALLS, IDAHO, AT 2 P.M. AND 7 P.M.

Individuals desiring to make an oral presentation at a hearing should notify Dr. Clay Nichols, SIS Project Manager, by March 18, 1988, stating preferred dates and sessions, so that the DOE may arrange a schedule for the presentations, or individuals may register at the door. Individuals making oral presentations at the hearings may turn in a written copy of their statement for the hearing record.

To register to make an oral presentation or to receive a copy of the DEIS, contact:

DR. CLAY NICHOLS
U.S. DEPARTMENT OF ENERGY, IDAHO OPERATIONS OFFICE
785 DOE PLACE
IDAHO FALLS, ID 83402-1133
TELEPHONE (208) 526-0306

LEGAL NOTICE

NOTICE OF AVAILABILITY AND SCHEDULE FOR PUBLIC HEARINGS

The Department of Energy (DOE) announces the availability of a Draft Environmental Impact Statement (DEIS), "Special Isotope Separation Project," (DOE/EIS-0136) analyzing the environmental consequences of site selection, construction, and operation of a Special Isotope Separation (SIS) Project using the Atomic Vapor Laser Isotope Separation (AVLIS) process technology.

Public comments are invited and three (3) public hearings will be held with respect to the DEIS.

Written comments on the DEIS should be addressed to the Department of Energy (address below) and should be postmarked by April 21, 1988, in order to ensure consideration in the preparation process for the final environmental impact statement. The public hearings are scheduled for March 25, 26, and 28, as described in this notice. Individuals desiring to make oral statements at these hearings should notify Dr. Clay Nichols' office at the address below by March 18, 1988, specifying preferred dates and sessions, so that the Department may arrange a schedule for presentations, or they may register at the door.

Requests for copies of the DEIS, written comments on the DEIS, requests to present oral comments at the public hearings, and requests for further information should be directed to Dr. Clay Nichols, SIS Project Manager, Idaho Operations Office, U.S. Department of Energy, 785 DOE Place, Idaho Falls, ID 83402, telephone (208) 526-0306.

The following is a descriptive summary of the substance of the proposed action:

The DEIS has been prepared by DOE in accordance with Section 102(2)(C) of the National Environmental Policy Act (NEPA) of 1969, as amended. The EIS is intended to provide environmental input into a DOE decision on whether to proceed to construct and operate the proposed SIS Project, and, if the SIS Project is to be constructed and operated, whether it should be constructed and operated at: (1) the Idaho National Engineering Laboratory (INEL) near Idaho Falls, Idaho (preferred alternative); (2) the Hanford Site near Richland, Washington, or (3) the Savannah River Plant (SRP) near Aiken, South Carolina. The DEIS assesses the potential environmental consequences of constructing and operating the proposed SIS Project at each of the alternative sites as well as no action, or not constructing and operating the SIS project.

The DEIS discusses the need for the SIS Project and also includes a description of the facilities that would be constructed and the processes that would be used during operation. The potential environmental consequences of constructing and operating the facilities that are discussed in the DEIS include: socioeconomic and land use impacts; archeological and historical impacts; impacts associated with the radioactive and nonradioactive atmospheric emissions, nonradioactive liquid effluents, and solid wastes, potential consequences of facility accidents; and the potential normal and accident consequences of transporting SIS plutonium feed, product, and byproduct materials.

COMMENT PROCEDURES

1. Availability of the DEIS

Copies of the DEIS have been distributed to Federal, State, and local agencies, organizations, and individuals known to be interested in the proposed SIS Project. Additional copies of the DEIS may be obtained from Dr. Clay Nichols' office at the address given above.

Copies of the DEIS, referenced documents and scoping meeting transcripts are available for public inspection at:

Idaho National Engineering Laboratory
Technical Library
SIS Public Reading Room
University Place, 1776 Science Center Drive
Idaho Falls, Idaho 83402
Telephone No. (208)526-1144

Copies of the DEIS and referenced documents will also be available for public inspection at public reading rooms in Savannah River, SC, and Richland, WA, as well as at:

Freedom of Information Reading Room
U.S. Department of Energy
Room 1E-190
Forrestal Building
1000 Independence Ave., S.W.
Washington, D.C. 20585
Telephone No. (202) 586-6020

2. Written Comments

Interested parties are invited to provide comments on the DEIS to Dr. Clay Nichols at the address given previously. Comments should be identified on the outside of the envelope with the designation "Comments - SIS Project EIS." All comments and related information should be postmarked by April 21, 1988, to ensure consideration in the preparation process for the final EIS. Comments postmarked after April 21, 1988, will be considered to the extent practicable.

3. Public Hearings

Public hearings have been scheduled on the DEIS as follows:

Friday, March 25, 1988, at University Place, 1776 Science Center Drive, Idaho Falls, Idaho, at 2 p.m. and 7 p.m.

Saturday, March 26, 1988, at City Hall, 150 N. Capitol Blvd., Boise, Idaho, at 2 p.m. and 7 p.m.

Monday, March 28, 1988, at Best Western Canyon Springs, 1357 Blue Lakes Blvd. North, Twin Falls, Idaho, at 2 p.m. and 7 p.m.

The public is invited to attend these hearings and provide comments on the DEIS. All comments received at the hearings will be considered in the preparation of the final EIS. Individuals desiring to make an oral presentation at a hearing should notify Dr. Clay Nichols' office at the address above by March 18, 1988, stating preferred dates and sessions, so that the DOE may arrange a schedule for the presentations. Individuals making oral presentations at the hearings may turn in a written copy of their statement for the hearing record. To maximize the opportunities for persons to present comments, five minutes will be allotted to individuals and ten minutes will be allotted to representatives of organizations. Persons with lengthy comments are asked to summarize them in their oral remarks and submit a full manuscript for entry into the official record. Persons who have not pre-registered to speak, may register at the hearings. Such persons will be called upon by the hearing officer to present their comments as time permits.

PUBLIC HEARING NOTICE

TO OBTAIN PUBLIC INPUT ON THE U.S. DEPARTMENT OF ENERGY'S DRAFT ENVIRONMENTAL IMPACT STATEMENT TO CONSTRUCT AND OPERATE A SPECIAL ISOTOPE SEPARATION FACILITY

The Department of Energy (DOE) will hold three (3) Public Hearings on whether to construct a Special Isotope Separation (SIS) Facility at either the Idaho National Engineering Laboratory (INEL) near Idaho Falls, Idaho; Savannah River Plant (SRP) near Aiken, South Carolina; or the Hanford Site near Richland, Washington.

The Hearings will solicit public comment on the Draft Environmental Impact Statement (DEIS), prepared by the DOE to evaluate any potential environmental impacts connected with the proposed action. The DOE encourages members of the public to attend one of these hearings scheduled for:

Friday, March 25, 1988, University Place
1776 Science Center Drive
Idaho Falls, Idaho, at 2 p.m. and 7 p.m.

Saturday, March 26, 1988, City Hall
150 North Capitol Blvd.
Boise, Idaho, at 2 p.m. and 7 p.m.

Monday, March 28, 1988, Best Western Canyon Springs
1357 Blue Lakes Blvd. North
Twin Falls, Idaho, at 2 p.m. and 7 p.m.

Individuals desiring to make an oral presentation at a hearing should notify Dr. Clay Nichols, SIS Project Manager, by March 18, 1988, stating preferred dates and sessions, so that the DOE may arrange a schedule for the presentations, or individuals may register at the door. Individuals making oral presentations at the hearings may turn in a written copy of their statement for the hearing record.

To register to make an oral presentation or to receive a copy of the DEIS, contact:

Idaho Falls, ID 83402-1133
Telephone (208) 526-0306

SPECIAL ISOTOPE SEPARATION PROJECT (SIS)
DRAFT ENVIRONMENTAL IMPACT STATEMENT

Hearing Procedures and Order of Speaking

GUIDELINES FOR CONDUCT OF DEIS HEARINGS

1. The Hearings Officer will open each hearing session with preliminary remarks and a statement of guidelines for conduct of the hearing. The Hearings Officer will make other announcements or changes throughout the proceedings as he deems necessary.

2. Comments will be received from elected or appointed officials, representatives of national, state and local organizations, and individuals who have pre-registered to speak (in that order). To the extent scheduling allows, individuals who did not pre-register, including those signing up to speak at the door of each hearing session, will be accommodated after all pre-registered people have had an opportunity to speak.

3. Reserved seats for elected/appointed officials and organizational representatives will be provided in the front of each hearing location. These speakers will be individually called to present their statements. They may retain their assigned seats for the duration of the hearing.

4. The Hearings Officer will call pairs of pre-registered individuals to the podium to make their presentations after all elected/appointed officials and organizational representatives

have made their statements. The second person in each pair will "stand-by" and be prepared to make his or her remarks after the first person has concluded.

5. All speakers are encouraged to put their statements in writing. WRITTEN AND ORAL STATEMENTS RECEIVE THE SAME WEIGHT AND CONSIDERATION. In the interest of fairness to the numerous speakers, the Department urges all participants to cooperate in the economical use of time by making their comments as concisely as possible. Written comments may be submitted to the Hearings Officer, or mailed by April 21, 1988, to Clay Nichols, SIS Project Manager, Idaho Operations Offices, 785 DOE Place, Idaho Falls, Idaho 83402.

6. Speaker Decorum: Combining of speaking times will not be permitted. Oral presentations supported by written materials, charts or similar types of visual aids are permissible if the materials are (a) easily made a part of the official public record, (b) necessary to understanding the speaker's comments, (c) presented in an orderly and nondisruptive fashion, and (d) within the speaker's total time allotment. The Department is not making any presentations at the hearings, and audio/visual aid equipment will not be provided.

7. Questions must be submitted in writing at the time of the hearing on forms available at the door. The Department will

respond in writing to all questions. The written questions and answers will be made a part of the permanent public record of these proceedings.

ORDER OF SPEAKERS AND ESTIMATED TIMES FOR PRESENTATIONS

1. A list of all speakers and the order in which their presentations will be heard has been prepared and will be posted for all of the hearing locations on the doors or close to the doors of each location on Thursday, March 24. In addition, copies of the list will be provided to the representatives of all organizations and to other interested parties upon request. Copies of the speakers' list may be obtained at the following locations:

Boise - Lindsay, Hart, Neil & Weigler
350 North 9th Street, Suite 400

Idaho Falls - Clay Nichols
785 DOE Place

Twin Falls - City Hall
321 2nd Avenue East

2. Pre-registered individuals and organizations will be allowed to comment at only one location. Those individuals and organizations who registered to comment at more than one location and did not indicate a preferred location have been assigned to the location with the fewest registered speakers.

3. The estimated speaking times indicated on the speaker list are ROUGH ESTIMATES OF SPEAKING TIME SLOTS, and do not represent a guarantee that a particular speaker will speak at the time indicated. It has been the Department's past experience with these hearings that many people do not use their full allotment of time and, accordingly, the estimated schedule anticipates some compression. The unpredictability of all speakers being present, and the numbers who will limit their remarks or present written statements in lieu of oral statements makes any guarantee of an exact time slot impossible. The Department encourages all speakers to limit their remarks in the interests of time, and in an effort to ensure as many people as possible are accommodated. In no event should the maximum of 10 minutes per elected/appointed official or organizational representative, and 5 minutes for individuals, be exceeded, including any preparation time.

March 24, 1988

Dr. Clay Nichols
SIS Project Manager
Idaho Operations Office
U.S. Department of Energy
785 DOE Place
Idaho Falls, Idaho 83402

Dear Dr. Nichols:

As requested, attached is a summary of the Department of Energy - Idaho Operations Office (DOE-ID) outreach efforts to provide information to the public on the proposed Special Isotope Separation (SIS) Project. These efforts include public notices, press releases, press briefings, response to media and public inquiry, and general project informational overviews to enhance public awareness and understanding. In addition, informational drives were undertaken to maximize distribution, public availability, and awareness of the SIS Draft Environmental Impact Statement (DEIS).

In order to promote general readership, the DOE-ID additionally made available the summary (S) section of the DEIS under separate cover (DOE/EIS-0136-EXEC.SUMM). This "Executive Summary" contained a statement that it "... is not intended to preclude review of the complete Draft Environmental Impact Statement" and was well received.

In my judgment, the DOE-ID has made every effort to promptly respond to all informational inquiries on the SIS project pursuant to the spirit and intent of the National Environmental Policy Act (NEPA) process.

Yours truly,

Jan Hagens, Senior Engineer
Westinghouse Idaho Nuclear Company, Inc.

03/24/87 Idaho Falls

Press Releases

Numerous press releases have been issued by the Department, beginning with the announcement of the INEL as the preferred alternative on August 13, 1986. In addition there have been numerous press interviews with DOE and WINCO personnel on the SIS Project.

Public Comment Period (Scoping)

The period for submitting written comments to the Department opened with the Federal Register Notice of Intent published on October 31, 1986, and was extended with the Federal Register Notice of February 9, 1987 through March 2, 1987. This represented a 4-month public comment period.

Press, TV, Radio Interviews - 2 stations - 03/12/87 - 1 press 03/13/87.

Scoping Hearings

The department held scoping hearing to receive public testimony concerning the proposed action in Idaho Falls on 02/24/87 and Boise on 02/26/87.

Public Comment Period (DEIS)

The period for submitting written comments on the DEIS to the Department opened with the Federal Register Notice of 02/19/88 and extends through 04/21/88. Initial DEIS mailing took place 2/11/88.

OFFICE OF THE GOVERNOR
STATE CAPITOL
BOISE

CECIL D. ANDRUS
GOVERNOR

Prepared Remarks of

Cecil D. Andrus

Governor of Idaho

before the

HEARINGS ON THE DRAFT EIS FOR THE SPECIAL ISOTOPE SEPARATION

PROJECT

UNIVERSITY PLACE AUDITORIUM

IDAHO FALLS, IDAHO

MARCH 25, 1988

2:00 P.M. (MST)

--1--

Thank you, Mr. Eiguren, members of the hearing panel, ladies and gentlemen.

My name is Cecil Andrus, I'm the Governor of Idaho, and appreciate the opportunity to comment on the Draft Environmental Impact Statement for the Department of Energy's proposed Special Isotope Separation, or "SIS" Project.

Just as the draft EIS is preliminary, so are my conclusions and comments about the project. The complexity of the technology involved in the SIS requires all of us to analyze the project carefully. We all have more analysis to undertake concerning this project. That is what this hearing process is all about. I encourage the public dialogue that i taking place. I believe it is healthy for our state.

1.1

Let me begin by saying that, while I am eager for the environmental impact statement process to work, I have been o record for some time as a supporter of the SIS project.

I do have some questions, however. My concerns fall int two categories: the health and safety of Idaho workers and residents, and the cleanliness of the natural environment in which we live. In other words, I look forward to the economi boost the project represents, but I am not interested--and I don't think any Idahoan is--in a project that will pose a health or environmental threat.

6.1.2

Before I discuss in detail my views of several aspects o the project, let me say that I do not see it as my role to engage in the national policy debate over whether we need more

--2--

weapon-grade plutonium, or the moral issues associated with nuclear weapons and warfare.

All of us, I am confident, seek a nuclear weapons free world. But, until that is possible--soon I hope--we must maintain a nuclear deterrent as part of our national defense.

3.4

But, ultimately, the policy questions about defense and weapons systems, while of critical concern to each of us, are properly decided by Congress and the President of the United States. Those are national issues, not state issues.

At the state level, my concerns as an elected official must focus on the health and safety of Idaho's citizens and the cleanliness of our air, water and soil. With that distinction in mind, let me address some of the questions presented by the Draft EIS concerning health, safety and the environment.

Our state agencies are reviewing the draft EIS, and they will address some questions about the project in more detail. A panel of agency directors will present preliminary oral testimony at the hearing in Boise Saturday, and agencies will submit more detailed written comments before the April 21 deadline. Generally, our observations fall into the following categories:

5.19.6

1. The state of Idaho must have assurances that it will be a full partner in on-site and off-site monitoring of environmental and health impacts when the project is built.

This involves the maximum possible public disclosure and cooperation with state and local agencies within the limitations of legitimate national security restrictions.

5.7.24 2. The state of Idaho must have federal assistance in emergency planning, training and disaster response. The SIS project will increase state responsibility for health and safety, and we must have technical and financial assistance from the Department of Energy in meeting these responsibilities.

3. The SIS project is of such magnitude and importance that the Department of Energy must consider working with a

3.2.31 state-established, permanent oversight commission, which will enable the state to be a full partner in managing the potential health and environmental consequences of the project.

4. The state of Idaho needs assurances that the SIS project will not transform the INEL site into a "de-facto" nuclear waste dump. As Governor in 1971 the Department of Energy assured me that buried wastes at INEL would be

5.30.2.5 removed. Those wastes are still there. I understand the reasons for that situation, and I know that a permanent waste disposal solution is being developed.

I also understand that there will be a normal flow of fuel-grade plutonium into the SIS facility, and an outflow of

5.30.1.14 weapon-grade plutonium product and by-product wastes.

But we are not interested in a project that develops into a permanent waste storage facility. Permanent waste storage at that site is unacceptable to me, and I am convinced it is unacceptable to most Idahoans. 5.30.2.5

I am confident the Department of Energy can address these concerns and the more specific questions that our state agencies will raise. I know the DOE has the capacity to answer our questions.

Once assured that our workers and residents will be safe, and our environment will not be fouled, I want construction started and operation begun in due course, because the SIS project is a crucial opportunity for the economy of eastern Idaho, and for all this state. 3.2.2

During the five-year construction phase, we will welcome the hundreds of construction and support jobs, and the millions of dollars the payrolls and supply expenditures will pump into our economy. When the project is operational, we will welcome the more than 400 on-site jobs and the more than 600 indirect jobs created in the region. But, perhaps most important, we look forward to expanding the INEL facility as a "high-tech" magnet for growth and development of technologically-based industry in optics, lasers, and electronics. This is the kind of diversification our economy needs. I am convinced we must broaden our economic base beyond our traditional resource industries to enable us to compete with other states and throughout the world in the high 5.27.7.16 5.27.9.2 5.27.6.1

technology arena. These are the reasons I support the SIS project.

Thank you for offering me this opportunity to speak. I look forward to working with the Department of Energy in to establishing a full partnership in the management of the project's impacts, both real and potential. If Congress decides to fund construction of an SIS, and if DOE wants it in Idaho, we can cooperate in a way that allows our national interest to be served while Idaho's economy prospers safely and cleanly.

Thank you.

Exhibit #6

HONORABLE RICHARD H. STALLINGS

Statement

Department of Energy Hearing

Idaho Falls, Idaho

March 25, 1988

SPECIAL ISOTOPE SEPARATION PROJECT

Idaho National Engineering Laboratory

Statement of

Honorable Richard H. Stallings

Department of Energy Hearing

Special Isotope Separation Project

OPENING COMMENTS

Governor Andrus, Mr. Ofte, elected officials, community leaders, and all interested Idahoans. I appreciate the opportunity to testify today on an issue of vital importance to the State of Idaho and the Idaho National Engineering Laboratory - the proposed Special Isotope Separation Project.

During the past year, I have heard from or met with many individuals and groups who are interested in this project and its potential impact on our state.

Throughout the debate on this issue, I have tried to promote a fair and open process. A candid discussion of the project and thoughtful review of the Draft Environmental Impact Statement are in the public interest.

At this time, I also would like to compliment INEL officials for their efforts in responding to tough questions and important concerns that have been raised about the SIS project.

As a member of the House Science, Space, and Technology Committee, I appreciate the opportunity to work closely with INEL officials on issues, such as SIS, which will benefit Idaho.

PROJECT IS NEEDED AND SAFE

After carefully reviewing the Environmental Impact Statement and considering public comments, I feel the SIS facility is both needed and safe. 1.1

Furthermore, I believe the majority of Idaho citizens support the project. It is cost-effective and will provided needed flexibility in our country's plutonium production capability.

4.7.2

I would like to take a few minutes to talk about several important issues that have been raised about this project.

ECONOMIC BENEFITS TO IDAHO

37 6.4.1

The Idaho National Engineering Laboratory is one our state's finest resources and should continue to play an important role in our economic well-being.

Promoting this growth and stability at the INEL is one of my top priorities. This $937 million project has a tremendous potential to enhance our state's economic development and could

5.27.6.1

create exciting, new opportunities in laser technology.

The SIS project would create new jobs and improve the region's economy. For instance, it is estimated that the project will require about 400 construction workers and create 750 permanent jobs in the area when it goes into production in the mid 1990s.

The project's annual operating cost is estimated at $54 million - a figure that would have significant impact on Idaho's economy.

LASER TECHNOLOGY SPIN-OFFS

A significant spin-off of the SIS laser complex will be an opportunity for development of small businesses to supply equipment initially used in construction and then consumed during the regular operation of the laser facility.

5.27.12.8

Equipment and other hardware that could be provided by small companies or generate regional business opportunities include laser tubes, optics, high temperature furnaces, robotic systems, and other materials that are essential to the operation of the laser system.

The project truly could put Idaho at the leading edge of laser technology. At the completion of the seven to eight year SIS mission, there are several potential jobs that could be performed by the facility.

5.28.6

These potential missions could include any of the following:

1) Reduction of radiation exposure to personnel associated with handling weapons by removing certain isotopes from weapons grade plutonium as weapons are recycled;

2) Processing the driver fuel from a new production reactor; and

3) Refinement of the uranium product from the Idaho Chemical Processing Plant. The fuel presently processed at ICPP contains uranium isotopes that are undesirable. The SIS facility could be used to remove those isotopes.

ENVIRONMENTAL IMPACTS

However, we must not look solely at the economic impacts of the project. What are the potential effects on air quality and the Snake River aquifer? What about public safety? Waste management and transportation?

As an elected public official, I have a responsibility to make sure the SIS facility is safe and does not threaten our state's environmental quality.

After discussing these issues with many people and a careful review of the EIS, I am convinced that there are no significant public health risks, environmental impacts, transportation problems, or safety concerns associated with the project.

6.1.2

While I share everyone's concern that public safety and environmental protection cannot be compromised, I believe the INEL has a long history of safe and responsible management of their nuclear facilities.

3.2.7

I have great confidence that they will be able to construct and operate the facility in a safe and environmentally acceptable manner.

THE NATION'S PLUTONIUM NEEDS

4.10.2

Let me mention briefly the issue of our nation's need for plutonium. A discussion about our nation's nuclear weapons production policy has become part of the public debate.

There have been important questions raised about our future demand for more plutonium to meet our defense-related needs.

It is important to point out that both the production capacity of the SIS project and the need for weapons-grade plutonium are classified. The Draft EIS does not address either issue.

The nation's requirements for plutonium and other special nuclear materials are determined jointly by the Department of Defense and the Department of Energy and are based upon four factors.

First, the present supply of uncommitted material. Second, the forecasts for new weapons to be built. Third, weapons to be retired from service. Fourth, material to be produced by the production reactors.

These requirements are documented in the Nuclear Stockpile Memorandum which is classified. The Stockpile Memorandum is forwarded for the President's approval by way of the National Security Council.

The funding required to supply the required material, plus the funding for any new facilities, is provided by the Congress. The Energy Department is responsible for the construction and operation of the facilities necessary to meet the material requirements.

The current stockpile requirements provide the flexibility in the short term to permit the shutdown of the "N" Reactor at Hanford. The "N" Reactor shutdown, the reduced power limitations of the production reactors at Savannah River, and the inability to predict the plutonium needs in the mid-1990s make the SIS facility very important to our nation's defense-related needs.

4.5

INEL MISSION

The INEL has long been a defense-related site, starting in the 1940s with the Navy ballistics testing program. The Naval Reactor Facility has been a training ground for nuclear navy personnel.

In addition, the Chemical Processing Plant's mission is to recover uranium from government-owned reactors cores. The Radioactive Waste Management Complex is storing transuranic waste from weapons production process.

3.3.1

During the 1950s, the site's defense-related funding was approximately 80 percent. During the 1960s, it was about 65 percent.

In the 1970s, defense-related projects were only about 40 percent. During this time, INEL was more involved in alternative energy programs because of the national oil embargo crisis.

Finally, during the 1980s, many of the alternative energy programs have been reduced as the federal government redirects its priorities. Currently, the defense-related programs continue at about 55 percent of the funds at INEL.

A NEED FOR BALANCE

While I recognize the important role that INEL plays in defense-related programs, I also believe that the laboratory must maintain a diverse and balanced mix of research and development activities.

Its primary mission should not become defense-oriented. That is why I have worked hard to promote several non-defense projects including the Superconducting Super Collider and a cancer treatment program called the Boron Neutron Capture Therapy.

3.3.3

CLOSING COMMENTS

5.27.6.1 In closing, the proposed SIS project offers Idaho an important economic development opportunity and will benefit many local communities. I believe the project is safe, needed, and cost-effective.

It also offers exciting new opportunities in laser technology

5.27.9.2 spin-offs. Finally, I believe there is strong public support to build it in Idaho.

Once again, I appreciate the opportunity to be here today and look forward to hearing from many of today's witnesses.

41

Exhibit 7

PROCLAMATION

RESOLUTION

WHEREAS, the Department of Energy has designated the INEL as the preferred site for construction of the SIS Project, and

3.2.7

WHEREAS, the INEL has been a good neighbor and a principal economic foundation in Eastern Idaho for nearly 40 years, and

WHEREAS, the INEL is preeminent as a scientific laboratory facility serving the priorities of this nation, and

3.3.1

WHEREAS, the INEL has long and effectively served in both matters of the advancement of science, as well as the national defense, and

WHEREAS, the Department of Energy has concluded that the SIS Project would have very small environmental consequences from its construction and normal operation at the INEL,

6.1.1

NOW, THEREFORE, BE IT RESOLVED, that the Mayor and Council of Idaho Falls hereby strongly reaffirms its long standing support for construction and operation of the SIS Project at the INEL and urges the Department of Energy and Congress of the United States to go forward with funding and construction of the Project, forthwith.

1.1

E003

Exhibit 8

SPECIAL ISOTOPE SEPARATION PROJECT

TESTIMONY OF CLYDE A. BURTENSHAW
CHAIRMAN OF THE BOARD OF BONNEVILLE COUNTY COMMISSIONERS

March 25, 1988

1.1 Over a year ago, in our letter of February 25, 1987, to the local SIS Project Manager, the Board of Bonneville County Commissioners unanimously confirmed our support, and strongly recommended that the Special Isotope Separation Plant be located at the INEL. We reaffirm that strong support here today!

In order to stand before you, and state that the Commissioners of Bonneville County are in full support of the SIS project in Eastern Idaho; we must take into consideration the views of all the people that we represent. Any balance sheet divides the debits and the credits; then strikes a balance. Doing this establishes a clear picture of the actual situation and our stand.

5.27.6.1 First I would like to stress the preamble to our Constitution: "We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution of the United States of America." In noting this, I emphasize: insuring domestic tranquility, providing for the common defense, and promoting the general welfare.

5.27.15.1 The value of SIS's regional and state economic impact has been clearly established. During the peak construction there will be 440 jobs created. And this doesn't even take into consideration all of the supporting jobs.

Supporting technology will greatly enhance activity at Eastern Idaho VoTech School, Idaho State University and their departments, the Idaho Innovation Center here in Idaho Falls, and other incubator programs throughout the State.

5.27.12.8 A wide spectrum of SIS support facilities will range from food service to robotics and computer programs. New industry will be spawned right here in our State.

The laser technology that will be used will put Eastern Idaho on the leading edge of technical development for the whole Nation.

Finally -- and of paramount importance -- we feel that utmost consideration should be given to the underlying reason for this project which is to contribute to this Nation's national security.

5.27.9.2 Therefore, we three Commissioners of Bonneville County-- Clifford V. Long, A. Wylie Snarr, and I -- wish to go on record again today as being in full support of the SIS Project for Eastern Idaho and the Department of Energy.

42

BOARD OF COMMISSIONERS

LYDE A. BURTENSHAW, Chairman, District #3
WYLIE SNARR, District #1
LIFFORD V. LONG, District #2

605 NORTH CAPITAL AVENUE
IDAHO FALLS, IDAHO 83402
PHONE 208—529-1360

February 25, 1987

Mr. Carl Gertz, SIS Project Manager
Department of Energy
Idaho Operations Office
785 DOE Place
Idaho Falls, Idaho 83402

Dear Mr. Gertz:

1.1 This is to confirm our support and strong recommendation that the Special Isotope Separation plant be located at the Idaho National Engineering Laboratory.

2.1.1 We feel that the scope of the Environmental Impact Statement of the Department of Energy is both accurate and adequate and that the INEL has the qualified technical personnel, experience, facilities, and safety record to implement the SIS Project and to carry it to successful fruition. We also know that our five counties surrounding the INEL have the infrastructure to assist and support the project. We will assume that the EIS document will confirm our position.

5.24.23 Further, we feel that formal consideration should be given to the underlying reason for this project which is to contribute to this nation's national security.

5.27.11.1 Sincerely,

Clyde A. Burtenshaw

Clyde A. Burtenshaw, Chairman
Board of County Commissioners

Review of
The Economic Implications
of the
The Draft Environmental Impact Statement
on the
Special Isotope Separation Project
[DOE/EIS-0136]

William J. Weida
Professor of Economics
The Colorado College

March 15, 1988

Introduction:

My name is William J. Weida. I am employed as a Professor of Economics and Business by The Colorado College where I specialize in defense economics and econometric modelling. I am appearing here today as a consultant to the National Resources Defense Council as a member of its SIS Technical Review Board.

I was born and raised in Idaho Falls, Idaho. I received a BS in engineering from the U.S. Air Force Academy, an MBA from UCLA and a Doctorate in Econometrics and Operations Research from the University of Colorado. I was a member of the Economics Department at the U.S. Air Force Academy for 11 years, the last two of which I was chair of that department. I was an economist in the Office of the Secretary of Defense for three years, and retired from the Air Force as a Colonel in 1985.

While serving in the Air Force, I developed a method of modelling research and development costs that I successfully applied to a variety of projects ranging from the B-1 bomber to nuclear warheads. This model provided the first forecast of overruns on the B-I bomber, and it is now used to forecast and monitor development costs for laser projects associated with the SDI. I also served as the director of the in-house team that reviewed the Environmental Impact Statement for the racetrack deployment of the MX missile in Utah. I have authored two books on defense economic issues: The Political Economy of National Defense (with Dr.Frank Gertcher), Westview Press, 1986, and Paying for Weapons: The Politics and Economics of Offsets, Frost and Sullivan, 1987.

NRDC requested a review of the economic issues raised by the Draft Environmental Impact Statement for the SIS. My statement will focus on the economic impact of the SIS on the proposed Idaho location and on the nation as a whole.

Summary:

The Draft Environmental Impact St tement (DEIS) for the Special Isotope Separation project has major faults and omissions in its treatment of the socioeconomic effects associated with the SIS:

5.27.6.14 The DEIS incorporates assumptions that underestimate, by approximately five years, the time to required to develop technologies needed to operate the SIS. As a result, SIS construction will be delayed, costs for the plant will be increased, annual construction employment will be reduced, and hiring of operating personnel will be postponed. 5.22.1

The demand for weapon-grade plutonium cited by the DEIS is neither derived from a market mechanism nor is it subject to impartial review. It is highly probable that the SIS would provide weapon-grade plutonium for which there is no valid requirement. 4.15.1

The DEIS document rejects a major source of weapon-grade plutonium -- recycled plutonium from old weapons -- not because recycling won't meet the demand for weapon-grade plutonium, but because it is "not a replacement for the SIS mission of maintaining the capability of isotopically modifying fuel-grade plutonium to meet weapon-grade specifications."[1] To the extent that a demand for weapon-grade plutonium, if it does exist, could be satisfied from recycling or any other source, the construction of the SIS and the production of any weapon-grade plutonium is a waste of federal funds and U.S. national resources. 4.10.5

The DEIS cites the possible need to rapidly increase weapon-grade plutonium production as a justification for building the SIS. To the extent this is possible with SIS, there is no requirement for this capability. According to Department of Defense studies, the U.S. defense industrial base is incapable of rapidly manufacturing additional delivery systems (i.e., missiles) to carry the new w rheads constructed from the increased supply of plutonium. 5.2.15 4.8.1

Aside from a passing reference to "overcrowding of selected schools", the DEIS makes no attempt to determine any socioeconomic costs that may accompany the SIS. The failure to include either externalities or direct costs is not consistent with other sections of the DEIS that mention both known problems at the INEL and anticipated problems with the SIS that may impose costs on the inhabitants of the region. 5.27.1.8

Specific short and long term regional employment figures cited by the DEIS are overly optimistic. The DEIS does not take into account the many factors that could act to depress direct employment from SIS construction. 5.27.1.5

1 Draft Environmental Impact Statement -- Special Isotope Separation Project, DOE/EIS-0136, U.S. Department of Energy, Idaho Operations Office, February, 1988, p. 2-70.

Detailed Review:

This review will evaluate the Draft Environmental Impact Statement (DEIS) for the Special Isotope Separation project (SIS) in two steps:

It will first focus on the major structural factors and socioeconomic assumptions in the DEIS. Often, these structural factors and assumptions are not explicitly stated, but they are critical to any discussion of the SIS because they predetermine the outcome of any analysis.

After the major factors and assumptions have been highlighted and evaluated, the review will consider the regional socioeconomic effects that flow from construction and operation of the SIS project.

Because the DOE has directed the DEIS prim rily at the Idaho National Engineering Laboratory (INEL) location, this review will reflect that choice. It should be recognized, however, that the major factors and assumptions discussed in this paper would apply to any of the sites chosen.

Major Factors And Assumptions Concerning Budget Projections And The Decision To Use Concurrent Development On The SIS.

The DOE FY1989 OMB Budget Request (Appendix 1) shows that the SIS project is a concurrent development project.[2] This means that the operating plant is being planned and constructed at the s me time that the processes necessary to make the plant function are being developed. Concurrent development brings so many unknowns into a project, and it is so likely to increase project costs, that it is normally avoided in government contracts. The tendency of concurrent development to increase costs is shown by comparing Appendix 1 with Appendix 1A, a FY1989 SIS Budget Request made by the DOE one year later, in 1988.[3] In this one year period, total project costs for the SIS incre sed by $87 million or 9.35% The cost increases that accompany concurrent development re so likely to force cancellation of a project that the Department of Defense has had an unwritten policy for the last fifteen ye rs of not allowing concurrent development on new weapons.[4] 5.27.6.14

2 "Construction Project Data Sheets", FY 1989 OMB Budget Request -- Atomic Energy Defense Activities, U.S. Department of Energy, Washington, D.C., May, 1987.

3 "Construction Project Data Sheets", FY 1989 OMB Budget Request -- Atomic Energy Defense Activities, U.S. Department of Energy, Washington, D.C., February, 1988, p.325.

4 For example, in 1984 and 1985 the U.S. Department of Defense actively opposed Israeli plans to employ concurrent development on the LAVI fighter. Research and development for this fighter was being financed by the U.S., and DoD officials feared that concurrent development would lead to large cost overruns on the project. These fears were realized in 1987 when cost overruns forced cancellation of the LAVI project.

In the case of the SIS, concurrent development introduces such uncertainty into the construction process that the socioeconomic impact of the project cannot be determined without first estimating how long it will take to develop the plutonium AVLIS process.[5] In fact, the relationship between the progress of the SIS project and both the uranium and plutonium AVLIS research and development projects is so critical that Construction Project Sheets for the SIS describe

5.27.6.14

> the SIS supporting development activities necessary to provide full scale, demonstration-tested laser, separator, and support process equipment design and verification information required for construction of plant equipment. SIS development budget projections assume continued funding for the uranium AVLIS development work.[6]

If the SIS program experiences excessive delays due to problems with AVLIS technology, annual employment during the construction phase of the project will be substantially reduced.

Using AVLIS technology to process plutonium incorporates a great deal of expense and uncertainty. In hearings on the FY1985 DOE budget, DOE stated that

5.28.2

> The SIS process has the highest cost (in total dollars and in dollars per gram of additional plutonium) of the various methods of increasing productivity. The SIS process also requires the most lead time and is the most technologically uncertain.[7]

And in hearings for the FY1988 DOE budget, DOE could only tell the House Appropriations Subcommittee on Energy and Water Development that, concerning the SIS, "during FY1988 final design will be continued..."[8]

45

[5] Both uranium and plutonium Atomic-Vapor Laser Isotope Separation (AVLIS) Projects are based on the use of copper-vapor lasers to generate light frequencies that will photoionize selected atoms of uranium or plutonium, thus allowing these isotopes to be extracted by an electric field. However, while the uranium AVLIS project has been subjected to extensive operational testing, the plutonium project has very important differences and difficulties associated with its development and operation. These differences require both the use and modification of the uranium AVLIS technology and large amounts of new development to make the plutonium process operational. Although there has been some co-mingling of funds between the two projects, the differences between the two are so significant that while the success of the uranium project is important to the plutonium project, full development of the uranium project in no way assures a similar outcome for the plutonium project. The status and rationale of both programs are explained at length in "Laser Isotope Separation of Uranium" and "Laser Isotope Separation of Plutonium", Energy and Technology Review, UCRL-52000-87-7, July, 1987, pp. 34-37.

[6] "Construction Project Data Sheets", May, 1987, Section 13, A, 2, c.

[7] House Appropriations Committee, FY1985 Hearings for the FY1985 Energy and Water Development Appropriations, Part 4, p.431.

[8] House Appropriations Committee, FY1985 Hearings for the FY1988 Energy and Water Development Appropriations, Part 4, p.262.

Much of the information that has been used to demonstrate the feasibility of the SIS has been associated with the uranium AVLIS project, not the plutonium AVLIS technology required for the SIS. In a July, 1987, publication Lawrence Livermore National Laboratory (LLNL) stated that although "the plutonium process is nearly identical in terms of physical principles to the uranium AVLIS process...separate hardware is quite different...[and] the plutonium and uranium processes [have] vastly different mission requirements and differences in material properties."[9] LLNL went on to state that additional laser wavelengths are needed for plutonium, total tunable visible laser power is significantly less, and additional plutonium processing is required to support the operation of the separators.[10]

5.28.8

The high degree of uncertainty associated with the SIS project is also documented in the DEIS. On pages S-3, 1-1, 2-12, 2-15, and 2-37, there are statements such as "Based on preliminary designs..." [p. S-3], "(AVLIS) technique, which is under development..." [p. 1-1], "During definitive design, modifications could be made..." [p. 2-12], etc., all of which indicate that the actual construction schedule of the SIS project is not known at this point in time.[11] This uncertainty is very important because the AVLIS project was started in 1975 and is scheduled to be completed in FY 1990 (Appendix 1).

For these reasons, socioeconomic impacts on the region cannot be evaluated without first developing a probable schedule for completion of the critical plutonium AVLIS technology. For the purpose of this review, a schedule has been developed using a laser-based project costing methodology to derive a likely development schedule for the AVLIS. The results of this model have then been used to evaluate the likely socioeconomic impact of the SIS project.

5.27.6.14

Projected Plutonium AVLIS Development
(Based On DOE FY1989 Budget Requests)

Appendix 2 presents a general development curve for laser-based projects. This cumulative expenditure curve shows how budget outlays for past laser-based projects have occurred over time. Both the time to complete the projects and the total budget outlays for the projects have been converted to percentages so that projects with varying lengths and budgets can be combined to yield a general curve. Similar "growth" curves are used to forecast costs of research and development of aircraft, ships, avionics, missiles and most other high technology projects.[12] In each

[9] Energy and Technology Review, p. 36.

[10] Ibid., pp. 36, 37.

[11] Draft Environmental Impact Statement -- Special Isotope Separation Project, pp. S-3,1-1,2-12,2-15,2-37.

[12] For example, after developing the methodology, this author used it to make the first forecast of overruns in the B-1 bomber project, and to evaluate development costs for the B-1 simulator, the F-16 fighter, the avionics and gun on the A-10 attack aircraft, and various nuclear warheads, as well as the likely monthly expenditure rate in all U.S. Air Force budget categories. Later applications of the model have been made in computer software development and in laser research and development.

case, a general curve shows how the budget outlays in a normal project are expected to occur.

Appendix 3 shows the general laser-based project curve relabeled to reflect the total budget ($332 million) and the total time (192 months) specified by DOE for the plutonium AVLIS research and development program. Based on past experience with laser-based projects, this curve indicates that at Point A, the 144 month point (end of FY 1986), one would expect about $260 million of the plutonium AVLIS budget to be expended. The project had actually spent only $115 million by the end of FY1986 (see Appendix 1). Similarly, at Point B, the end of FY1987, past experience would lead us to expect a total expenditure of about $300 million. The plutonium AVLIS project had only spent $165 million at this point. Thus, the actual expenditure rate of the plutonium AVLIS project is so different from the expected rate for a laser-based research and development project of the duration specified by DOE that one can only conclude that the schedule for completion of the project is in error.

5.8.20

The likelihood that DOE has underestimated the research and development time required for the plutonium AVLIS project is further demonstrated by using the actual expenditures of the AVLIS program in the general laser-based model to calculate a revised program completion time. Appendix 4 and its attachments give a schedule for the plutonium AVLIS program based on the project schedule generated from observed expenditure rates for the project. This model is accurate enough to project, within $1.5 million, the total expenditures of $165 million that were actually made by the AVLIS project at the end of FY1987 (Appendix 1 and 1A), and it shows that the observed plutonium AVLIS expenditure rate is associated with a research and development program of about 252 months or 21 years. The 21-year point for the project would occur in FY1995. Thus, the plutonium AVLIS project is expected to take as much as five years longer to complete than DOE estimates.

5.8.20

The fact that there has been some co-mingling of funds between the uranium and plutonium AVLIS projects, and the fact that the plutonium project is based to some extent on the success of the uranium AVLIS project, make the data from these two programs difficult to disentangle.[13] However, even if the effort to develop the plutonium AVLIS project is viewed as the culmination of joint uranium-plutonium AVLIS research and development, one would expect an expenditure rate similar to the general curve used in this review.

5.27.6.14

A comparison of appendices I and IA provides further evidence of the forecast delay in completion of plutonium AVLIS research and development. Recall that the general laser-based curve indicates that the plutonium AVLIS project cannot be completed as fast as specified in the DOE budget request and, as a result, the program will have to be extended. This implies that the heavy R&D expenditures budgeted in FY1988 and FY1989 (Appendix 1) will not occur and will begin to slip into following years. Note that even with an increased SIS R&D budget, the revised FY1989 budget in Appendix 1A shows that expenditures in

[13] Conversation with Dick Stearn, Lawrence Livermore National Laboratory, March 4, 1988.

FY1988 and FY1989 are declining, and that they are now being accumulated in FY1990. As soon as delays in the plutonium AVLIS program are formally acknowledged by DOE, these accumulated expenditures will be distributed in FY1991 and further into the future.

With a completion date as late as FY1995, the critical plutonium AVLIS processes necessary to operate the SIS facility may not be fully developed until after the entire SIS project is scheduled to be completed. The decision to build the SIS as a concurrent development project makes this delay likely to cause extensions of the SIS construction project. These extensions would result in depressed annual employment from construction of the SIS, and substantially delayed operation of the SIS facility, assuming that the technology can be successfully deployed at all.

5.27.6.14

Major Factors And Assumptions Concerning The Relationship Between Socioeconomic Impact and Spending For The SIS.

The ability of the SIS to create jobs during construction of the facility is directly linked to the rate at which funds are spent on the project. Similarly, according to the DEIS, the "hiring of operating personnel would commence with the construction of the SIS."[14] Thus, levels of both construction and operating employment are linked to the construction schedule for the SIS. Flowing from these sources of employment are further jobs in the local community and increases in the state and regional tax bases.

5.27.6.14

As the previous section demonstrates, the state of AVLIS development will not support the SIS construction rates planned by DOE. As a result, it is likely that all employment and tax-base statistics presented in the DEIS are overstated -- particularly for those periods in which SIS construction is directly dependent on AVLIS technology. Since these statistics form the basis for the political effort to sell the SIS project to the people of Idaho, the region should be very hesitant to make any commitment to the project until more realistic expenditure and operating data are presented by DOE.

5.27.6.12

It is also important to reiterate that the stated purpose of the SIS is neither to provide new jobs for the region around the INEL, nor to provide technology transfer to businesses and individuals in either the region or the nation, nor to help the INEL maintain a constant 10,500 person employment base for the region. If these tasks are important, they could all be funded directly with far less expense than will be incurred by building the SIS.

5.27.7.17

INEL's mission is defined by DOE. In the past, the INEL has had more non-weapon related projects than other DOE facilities, but unless the people of Idaho demand otherwise, its future will be increasingly tied to DOE's largest source of funding -- the development of nuclear weapons. For fiscal 1986, about $8 billion of the $12.5 billion DOE budget was devoted to nuclear weapon research, development

3.3.1

[14] Draft Environmental Impact Statement -- Special Isotope Separation Project, pp. 2-50.

and production.[15] This is 64% of the DOE budget, and it makes DOE dependent on and accountable to the Department of Defense (DoD). As the SIS demonstrates, DOE's mission is determined by DoD objectives. These objectives create the demand for weapon-grade plutonium to which DOE must respond.

Major Factors And Assumptions Concerning The Demand For And Economic 'Worth' Of Plutonium.

The Demand for Weapon-grade plutonium

A critical assumption that underlies the DEIS is that a real demand for plutonium exists. The need for weapon-grade plutonium is discussed on pages 1-2 and 1-3 of the DEIS, and is used as a rationale for the construction of the SIS.[16] Since no market mechanism exists to determine an accurate demand for weapon-grade plutonium, demand is derived from classified DoD requirements. Thus, as the DEIS notes, the requirement for the SIS can be traced to a single source: the Nuclear Weapons Stockpile Memorandum (NWSM).[17] The NWSM is developed annually by the Departments of Defense and Energy using guidance from the Joint Chiefs of Staff. This document outlines all warhead production and retirement schedules, and special nuclear material requirements. As such, it defines the DoD demand for nuclear warheads.[18]

4.10.5

Senator Mark O. Hatfield has noted in a recent report that the Nuclear Weapons Stockpile Memorandum has no Congressional input and is only a "DoD wish list" that bears little relationship to reality. Over the last six years, the NWSM has consistently overstated the number of warheads to be produced -- sometimes by a factor of 2. In addition, the NWSM does not take into account likely Congressional budget reductions that will further reduce the number of warheads to be produced. Thus, Senator Hatfield notes that the "annual stockpile documents may be useful in setting goals for warhead production...[but] they have little value as justification for specific future requirements."[19] In other words, the NWSM is not a good reflection of true warhead requirements.

4.10.1

In the context of federal government budgeting, it is not unusual that the NWSM -- a document meant to justify budget requests -- attempts to anticipate budget cuts by overstating requirements. However, in this case the overstated requirements are translated by law (the Atomic Energy Act of 1954) into a demand for weapon-grade

15 "Report Urges that Pentagon Pay for Its Nuclear Warheads", New York Times, July 17, 1975, p. 17.

19 Ibid., pp. 4,5.

plutonium that DOE must meet. This demand is neither derived from a market mechanism nor subject to impartial review. As a result, it is highly probable, given past requests for plutonium contained in the NWSM, that the SIS is being constructed to provide weapon-grade plutonium that is not required.

The 'Worth' of Plutonium

DOE has stated that "The SIS will clean up material worth 3 to 4 times the SIS investment. It will save $2 to $3 billion by making useful an otherwise wasted inventory of plutonium."[20] Since there is no market for weapon-grade plutonium, it technically has no value or worth. Instead, weapon-grade plutonium only has costs associated with its production, and the method of obtaining this plutonium should have the lowest possible costs if U.S. resources are to be used efficiently. However, it appears that the lowest cost option for obtaining weapon grade plutonium has been rejected by DOE.

4.4.6

If weapon-grade plutonium is produced to meet a need that does not exist, all costs associated with its production are pure economic losses to the United States. Such a situation could arise from a 'false demand' that may arise from the NWSM or from a failure to account for all sources of weapon-grade plutonium when trying to address a genuine demand. For example, in attempting to justify the need for the SIS, the DEIS document rejects a major source of weapon-grade plutonium -- recycled plutonium from old weapons -- not because recycling won't meet the demand for weapon-grade plutonium, but because it is "not a replacement for the SIS mission of maintaining the capability of isotopically modifying fuel-grade plutonium to meet weapon-grade specifications."[21] To the extent that the demand for weapon-grade plutonium, if it does exist, could be satisfied from recycling, the construction of the SIS and the production of any weapon-grade plutonium is a waste of federal funds and U.S. national resources.

4.8.1

Major Factors And Assumptions Concerning The Requirement For The SIS Plant To Provide Surge Capability In Case Of A Breakout.

Both the DEIS and other INEL publications cite the need for a SIS process that could provide rapid increases in weapon-grade plutonium production.[22] The capability to surge in weapon-grade plutonium production is viewed by DOE as part of a potential response to a Soviet 'breakout'[23] that increased the need for nuclear

20 SIS at INEL, documents from an undated briefing presented by the DOE, Slide 14.

21 Draft Environmental Impact Statement -- Special Isotope Separation Project, p. 2-70.

22 Draft Environmental Impact Statement -- Special Isotope Separation Project, p. S-1,1-3 and SIS at INEL, Slide 2.

23 A breakout refers to actions on the part of the Soviets to abrogate the 1972 anti-ballistic missile treaty and field a widespread anti-missile system. The U.S. response to such a breakout would be to build a large number of new missiles to overwhelm the Soviet system.

weapons. However, this requirement disappears when one realizes that the U.S. defense industrial base is incapable of surging to provide the delivery systems (i.e., missiles, aircraft, submarines, etc.) to carry the warheads to the Soviet Union. Thus, even if the DOE was successful in increasing the production of weapon-grade plutonium, it could only be stored after production because of a shortage in delivery systems. Evidence of the inability of the U.S. to surge in delivery vehicles abounds:

A House Armed Services Committee special panel concluded in 1980 that a surge was not possible due, among other things, to deficiencies in the subcontractor level and severe shortages of skilled manpower.[24]

In 1982, a bipartisan group of defense experts at the Conference on Improving National Security by Strengthening the Defense Industrial Base confirmed that the ability of the Defense Industrial Base to surge was almost non-existent.[25]

In 1985, the Air Force Blueprint for Tomorrow found that "the aerospace base cannot surge....., no surge plan exists, [and that the] subcontractor base is the critical element."[26] The study also found that even the lesser goal of mobilization was unobtainable, concluding that "accelerated production and initial sustainability are severely limited, subcontractor base capability and responsiveness are critical elements, no comprehensive plan for industrial mobilization exists, [and] availability and training of skilled personnel is critical..."[27]

In addition, a recent report prepared for the Air Force by Benjamin Lambeth and Kevin Lewis of RAND Corporation states that the economic and technical constraints now facing the Soviet Union make any breakout highly unlikely.[28] All of these factors make a U.S. surge in delivery vehicle production so unlikely that it makes no sense to build an SIS facility to respond to requirements in this area.

48

4.1

Regional Factors Concerning The Externalities And Direct Costs Associated With Plutonium Production.

A socioeconomic analysis must consider both costs and benefits before deciding if a program is worthwhile. For the last two decades it has been common

24 Conference on Improving National Security by Strengthening the Defense Industrial Base, Harvard University, May 10-12, 1982.

25 Ibid.

26 Blueprint for Tomorrow (Executive Brochure), U.S. Air Force, Aeronautical Systems Division, Wright-Patterson AFB, Ohio, 1985, p.46.

27 Ibid., p.48.

28 Lambeth, Benjamin, and Lewis, Kevin, Likely Soviet Responses to the SDI, RAND Corporation, 1988.

practice to consider among the costs of a project the externalities -- those side effects associated with a project that fall on persons other than those responsible for the project. In the case of the SIS, externalities represent costs that could arise from radioactive pollution, crowding, ground water contamination, and other factors.

5.27.1.8

Externalities must be considered in a socioeconomic analysis whether or not the occurrences leading to such costs are probable, or the resulting costs are significant, because only by considering all costs can a resident of a region make a fully informed decision regarding a proposed project. This is important, because the costs arising from externalities will be levied on the inhabitants of the region surrounding the facility and not on the operators of the facility.

Aside from a passing reference to "overcrowding of selected schools"[29], the DEIS makes no attempt to determine any socioeconomic costs that may accompany the SIS. (See pages 4-2 and 4-3 for representative examples of the analysis done in the DEIS.) The failure to include either externalities or direct costs is not consistent with other sections of the DEIS that mention both known problems at the INEL and anticipated problems with the SIS that may levy costs on the inhabitants of the region. For example:

5.27.11.6

> "During operation of the SIS facilities, accidents could occur that would result in atmospheric emissions of radioactivity." (DEIS, p.s-4)

5.27.1.4

> "The calculated maximum individual dose for locating the SIS project at the INEL is slightly higher than...either the SRP or the Hanford site, because of differences in the distance from the SIS project to the nearest site boundary and meteorological dispersion..." (DEIS, p.2-82)

> "...large earthquakes do occur in the adjacent seismic belts..." (DEIS, p. 3-8)

> "...there is a potential for resumption of volcanic activities..." (DEIS, p. 3-11)

> "...recent INEL monitoring of ground water [has] detected carbon tetrachloride in samples of ground water...at the Radioactive Waste Management Complex (RWMC)" (DEIS, p. 3-16)

> "...core samples at the RWMC have detected the presence of plutonium at depths of 33 meters (110 feet) and 70 meters (230 feet)." (DEIS, p. 3-16)

> "During SIS operations, small quantities of radioactive material would be released to the atmosphere from the Plutonium Processing Building (PPB) stack." (DEIS, p.4-12)

No matter how one views the likelihood of any or all of the above points, it is clear that a decision to build a plant like the SIS has the potential to create very real

29 Draft Environmental Impact Statement -- Special Isotope Separation Project, p. S-16.

costs for the residents of the surrounding region. The DEIS has made no attempt to evaluate these costs.

6.2 It is not difficult to get a general idea of the potential costs that might accompany a project like the SIS. Plutonium is one of the most hazardous elements known. Emissions from the SIS, accidents that occur while plutonium is being transported to or from the SIS, or accidents at the INEL are all likely to have adverse effects on the region around the plant whether or not they result in radioactivity that exceeds the environmental standards applied by DOE. For example, consider the following scenarios:

5.27.2 A radioactive release of the kind referred to on page 4-12 of the DEIS occurs. Even though the DOE assures everyone that the radiation is harmless, accounts of the incident are carried in the local and national press -- a likely event because of the national attention that is given to all nuclear weapon plants.[30] The bad publicity results in a decrease of just 1% in the sales of agricultural goods from Jefferson, Bonneville and Bingham counties -- the three counties around the INEL. In 1984, the value of income from farming in each county was $16.3 million (Bonneville), $11.3 million (Jefferson), $39.3 million (Bingham), or a total of $66.9 million.[31] A 1% loss of income due to national publicity about a radioactive release at the SIS would cost citizens of this three-county region $669,000. The heavy financial losses incurred by farmers (many of whom had no radioactive fallout on their crops) in Northern European and Scandinavian countries after the Chernobyl accident indicate that such a scenario is a real possibility.

49

A small accident of the type mentioned on page S-4 of the DEIS results in a release of radiation that is carried by the prevailing winds (alluded to on page 2-82 of the DEIS) to Bonneville County. Although DOE provides assurances that there is no problem, publicity surrounding the event is responsible for lowering real estate values in Idaho Falls by just 1%. In 1987, the value of real estate in Idaho Falls was $1,097,987,869.[32] The direct cost of the incident to the citizens of Idaho Falls is $10,979,878. On a per capita basis, this loss would cost every person in Idaho Falls about $250. Later, indirect costs would lower the tax base of the city and of Bonneville County. Similar effects have occurred around the DOE-operated Rocky Flats Plant in Colorado where a plutonium fire occurred in 1969. In 1985, a federal court determined that three parcels of land downwind from the Rocky Flats site had been rendered unsuitable for development because of possible plutonium contamination resulting from the fire. DOE was forced to pay the owners of the land $8 million. Broomfield, Colorado, and the county in which the land was located each contributed another $1.8 million to the settlement. Even though plans

5.27.3.4

[30] It should be noted that the possibility of this kind of publicity is new to the INEL. Past accidents and incidents at the INEL site have received little publicity because the projects were not of a sensitive nature.

31 Personal Income by Major Source and Earning by Major Industry, U.S. Department of Commerce, Bureau of Economic Analysis, April, 1986.

32 Bonneville County Assessor, Idaho Falls, Idaho, 1987.

by the city and county call for making the land into a park, the value of real estate around the Rocky Flats Plant has been depressed.[33]

While these potential costs are not mentioned in the DEIS, they are regarded as very real by those in the private sector who may be liable for the results of such occurrences. For example, in October, 1987, the DuPont Company announced that it would not renew its contract to operate the Savannah River Plant in South Carolina. The company stated that there had been talk in Congress about making nuclear contractors bear a greater share of potential liability in the event of an accident, and DuPont didn't want to risk its assets.[34]

Regional Factors Concerning The Employment Effects Of The SIS, The Use Of Multipliers In The INEL Region And In The State Of Idaho

The employment multiplier for the Southeast Idaho region affected by the INEL has been calculated by the Idaho State University Center for Business Research and Services to be 2.36.[35] This means that each direct job created at the SIS will, in turn, create another 1.36 jobs in the region, yielding a total of 2.36 jobs that are added to the economic base. Thus, in evaluating the employment impact of the SIS on the region, the critical question is how many direct jobs the SIS will create.

5.27.1.5

During the construction phase, the number of direct jobs created by the SIS could vary substantially from the levels implied by the DEIS[36] because the number of construction jobs created will be a function of two factors: the amount of money that is spent and the time over which the money is spent (given a constant expenditure, the longer the program, the lower the annual employment). The first section of this review has provided evidence that the AVLIS project is likely to take up to five years longer to develop than anticipated by DOE. This will stretch out the construction phase of the SIS, resulting in lower annual construction spending. Each million dollars of reduced spending will depress annual employment during SIS construction by approximately 38 jobs.[37] In addition, this delay will postpone the creation of the operations jobs connected with the SIS project.

5.27.6.14

In addition, the number of direct jobs created by the SIS will be further depressed to the extent that money allocated to the project is spent outside of Idaho.

37 Regional Multipliers – RIMS II, U.S. Department of Commerce, Bureau of Economic Analysis, May, 1986, p. 84.

5.27.9.3

For example, Jan Hager, a contractor for the SIS, has stated that the "SIS will....require millions of dollars worth of high technology equipment, much of which will have to be purchased out of state."[38] And Lamar Trego, of Westinghouse Idaho Nuclear, felt that Idaho could only "provide as much as $20 million of the project's special equipment needs."[39] Further, much of the limited technical equipment provided by Idaho will come from areas of the state outside of the region directly associated with the INEL. All told, these effects will further reduce the direct employment associated with the construction of the SIS, and they will have the added effect of shifting SIS-related jobs to areas that will not bear the costs associated with having the SIS as a neighbor.

5.27.9.5

A number of indirect jobs related to the SIS are supposed to be derived from the technology that would be transferred from the SIS to business in the local region. The INEL has even loaned an individual to the State of Idaho to "aid efforts to attract out-of-state high technology business."[40] Unfortunately, technology is completely portable, and there is little for reason for any company to incur the costs associated with a move or expansion just to locate closer to the origin of the technology. The Stevenson-Wydler Technological Innovations Act of 1980 mandates the transfer of technology from government to private hands, but it does not permit constraints on the location in the United States where that technology is used. In addition, the SIS technology is being developed at Lawrence Livermore National Laboratory and it will simply be exported to the INEL. If, for any reason, location was a factor in technology transfer, that transfer will occur in California.

The concept of job creation through technology transfer is not likely to be successful for a number of reasons. First, there are few significant applications in the region around the INEL due to a basic lack of industry. Second, within Idaho the most likely areas of technology application are around Boise where the residents will not have to bear the externalities of living next to the SIS. And third, anyone who wants the technology released by the SIS can get it without coming to the state and without having to locate in the vicinity of the SIS.

5.27.7.4

In sum, the employment possibilities associated with the SIS that are listed in the DEIS appear to be extremely optimistic. The DEIS does not take into account the many factors that could act to depress direct employment from SIS construction, and it does not provide any evidence that building the SIS would induce any company to move its operations to Idaho. The total employment at the INEL is currently 10,100. This employment will remain flat for the next 10 years if the SIS is built, and

38 Jan Hager, a contractor for the SIS speaking in: Brugger, Brad, "SIS Would Open New World For Technology Transfer", Idaho State Journal, Pocatello, Idaho, January 13, 1988.

39 Lamar Trego, Westinghouse Idaho Nuclear Co., in: Fields, Dave, "Proposed center could lure SIS spinoffs to area," The Idaho Falls Post Register, Dec 10, 1987.

40 DOE press release, December 4, 1987.

will rise only slightly if the New Production Reactor (NPR) is constructed.[41] The INEL has stated that

> "Completion of research programs such as the Loss of Fluid Test (LOFT) program and Power Burst Facility (PBF) require new major projects such as SIS to maintain INEL employment at the predicted 10,500 average level through fiscal year 1990."[42]

5.27.6.3

It appears that this quote embodies the major rationale for having the SIS at the INEL. However, the purpose of INEL projects is not to keep employment at 'projected' levels in Idaho, and the INEL will assume a declining role in the Idaho work force as the state grows. The fact that Idaho's economy is based on a number of sectors (mining, agriculture and timber) that are depressed at this time makes the mediocre employment figures from the SIS look much better than they are. Not only does the SIS do nothing to address the fundamental problems in the Idaho economy, it is not even located in the area where most of the problems occur. In fact, if even one of the potential problems that could accompany the SIS actually occurs, the SIS has the potential to worsen problems that already exist in attracting new industry to the region.

5.27.5.3

"SUPPORT OUR SITE"

SUPPORT OUR SIT PETITION

TO

HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Superconductor Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

Now that I have your attention and a prepaid envelope; I would like to convey a message to Senators McClure & Symms —

I am not in favor of locking up any more land for wilderness so a very vocal few can walk to & into it.

I live on 640 acres of which 30 acres is tillable & the rest Hillside pasture & will never have roads or houses & as such could be used for the nature lovers to Hike until their boots fall off. Also Bordering our land is BLM Land - Steep timbered Hillside that will allways be wild & unspoiled & available to anyone to walk on -

I am OF an age (71) where it I can drive & look, & may be able to see the country. So instead of locking up country, build some roads —

I'm also interested in mining & too much OF the available country has been declared OFF limits to mining & that — according to Idaho history - was what settled the State when we didn't have public hearings & vocal few people trying to slant public opinions

Sincerely
Rupert House

PS.
I would like some indication that you have read this!

"SUPPORT OUR SITE"

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Superconductor Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

TO
HONORABL JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

Gentlemen; This soverign citizen born in 1912 in a Republic who was not born a taxpayer has stopped all contributions to all Republic & Democrat organizations. Either Nor as long as Idaho's Honorable George Hansen's assests are limited. When you can blow Georgia's Honorable Lawrence Patton McDonald out of the air & it is better business before, When you can single out one man in over 500 and jail him & two pro-american's that supported the U.S. Constitution) then this soverign citizen does not want any part.

HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Superconductor Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Superconducting Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

"SUPPORT OUR SITE"

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Superconductor Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

SUPPORT OUR SITE PETITION
TO
HONORABLE JOHN S. HERRINGTON
UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

UNITED STATES SECRETARY OF ENERGY

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the Nation.

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

to
HONORABLE JOHN S. HERRINGTON
United States Secretary of Energy

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

5.27.12.4

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

1.1

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

to
HONORABLE JOHN S. HERRINGTON
United States Secretary of Energy

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic,and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory,including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC),and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

HONORABLE JOHN S. HERRINGTON
United States Secretary of Energy

We, the undersigned citizens of the State of Idaho, reaffirm our support of the Idaho National Engineering Laboratory, recognizing its work and its staff as a cultural, economic, and scientific asset to the entire State and region.

We recognize that the INEL is a national asset, and as such we support the future of the Laboratory, including the Special Isotope Separation (SIS) project, the Boron-Neutron Capture Therapy (BNCT) program, the Supercollider Super Conductor (SSC), and any other program which may be assigned to the Idaho National Engineering Laboratory in the national interest, thus enabling the United States to apply unique Idaho resources for the good of the nation.

IDAHO FALLS
chamber of commerce

242 N. EASTERN AVE. P. O. BOX 498 IDAHO FALLS, IDAHO 83405 (208) 523-1010

March 25, 1988 - TESTIMONY FOR ENVIRONMENTAL IMPACT STATEMENT
UNIVERSITY PLACE
IDAHO FALLS, IDAHO

My name is Ira Koplow. I am the Executive Director of the Greater Idaho Falls Chamber of Commerce. I have lived in Idaho nearly fifteen years.

I have confidence in the way that the Idaho National Engineering Laboratory does business. They have been a very good neighbor to Southeastern Idaho and a good neighbor to all of Idaho. 3.2.2

After listening to Congressmen Stallings, Senator Steve Symms and Senator James McClure recently at special Chamber forums discussing the need for this project, I believe that there is a genuine need for this "Redundancy in production capacity, technology diversity and flexibility in the Department of Energy nuclear materials production complex" as the Environmetal Impact Statement states. 4.7.1

I have read the Environmental Impact Statement on the Special Isotope Separator and I believe that the environment, health and safety impacts at the Idaho National Engineering Laboratory will be very minimal and non-threatening. 6.1.1

I believe these minimal and non-threatening environmental consequences will be equal or less than projected for the other two alternative sites.

The impact that the Special Isotope Separator Project will have is very positive economically. 5.27.6.1

We already have in place a stable work force that is well trained and available to provide the project needs. 5.27.11.3

The Environmental Impact Statement states that a large in-migrating construction work force for the project is not expected, due to availability of construction workers in the surrounding Idaho National Engineering Laboratory region.

About 440 direct personnel will be needed for construction.

Studies at Idaho State University indicate that this project will maintain 750 permanent jobs at the Special Isotope Separation Project. 5.27.7.9

This in turn will generate an additional 1,050 supportive jobs in the communities of Southeastern Idaho, which will result in a total of 1,800 permanent jobs that Idaho needs and appreciates.

I'm optimistic that this will give many large and small businesses in the state an opportunity to supply materials and manufacture products for the 5.27.12.8

Special Isotope Separation.

6.1.2

The Environmental Impact Statement states that all atmospheric emissions, liquid and solid wastes, will be handled in accordance with applicable environmental requirements...I believe it will be.

I have had the opportunity to listen to several knowledgable people discussing the Special Isotope Separation Project in detail at Chamber Forums. These people have presented the facts on Special Isotope Separation. I believe this to be a very clean project for Idaho.

I have had the opportunity to work with management at the Department of Energy on Chamber sponsored Special Isotope Separation Educational Seminars. These people are very conscientious about their work, their involvement in this community and the future direction Idaho is taking.

5.24.23

I believe them when they say that safety is utmost in mind. They have an excellent and proven safety record to stand on.

The following is the Resolution passed by the Greater Idaho Falls Chamber of Commerce on March 8, 1988

RESOLUTION

WHEREAS, the Department of Energy has designated the Idaho National Engineering Laboratory as the preferred site for construction of the Special Isotope Separation project; and,

WHEREAS, the Idaho National Engineering Laboratory has been a good neighbor and a principal economic foundation in eastern Idaho for nearly 40 years; and, 5.27.12.4

WHEREAS, the Idaho National Engineering Laboratory is preeminent as a scientific laboratory facility serving the priorities of this nation; and, 3.3.1

WHEREAS, the Idaho National Engineering Laboratory has long and effectively served in both matters of the advancement of science, as well as the national defense; and,

WHEREAS, the Department of Energy has concluded that the Special Isotope Separator project would have very small environmental consequences from its construction and normal operation at the Idaho National Engineering Laboratory; 6.1.2

NOW, THEREFORE, BE IT RESOLVED, that the Greater Idaho Falls Chamber of Commerce hereby strongly reaffirms its long standing support for construction and operation of the Special Isotope Separator project at the Idaho National Engineering Laboratory and urges the Department of Energy and the Congress of the United States to go forward with funding and construction of the project, forthwith. 1.1

Respectfully Submitted,

Ira Koplow, Executive Director
Greater Idaho Falls Chamber of Commerce

March 21, 1988

Summary

The Department of Energy's Draft Environmental Impact Statement (DEIS) for the Special Isotope Separation (SIS) project has several major omissions and flaws. These include:

- The Energy Department's justification of the need for the SIS project is vague and unduly dismisses several important non-reactor sources of plutonium that could significantly reduce or eliminate the need for the SIS project. These include recycling plutonium from retired warheads and recovering plutonium from the large backlog of plutonium scrap. 4.4.6
- The DEIS ignores completely other reasonable non-reactor alternatives to the SIS project. More realistic projections of future plutonium requirements, a more rational schedule for nuclear weapon deployments and retirements, and more efficient plutonium processing techniques would make it possible for the United States to forego almost all future plutonium production, let alone the construction of the SIS project. 4.4.4
- If the START agreement is negotiated and ratified, the warheads retired under this treaty would contain 2 to 3 times more weapon-grade plutonium than is currently scheduled to be produced in the SIS facility. 4.3
- The DEIS unduly emphasizes and distorts the importance of developing the SIS plant as a reactor-independent source of weapon-grade plutonium. The Energy Department will have at its disposal several reactors that could produce more plutonium than the SIS facility. 4.4.5
- The Energy Department has not identified the source of plutonium to provide for a "timely response to potential increases in approved needs for weapon-grade plutonium in the period commencing in the mid-1990s." The department's justification of the SIS plant implies that the plutonium in commercial spent fuel might be a future source of plutonium for this facility. Such an option is currently prohibited by law. Reversing this law would have disastrous consequences on U.S. nonproliferation policy. 5.26.2
- A new public awareness of the social and environmental costs of nuclear arms production has coincided with political changes that raise the prospect of radical reductions in nuclear weapons. These developments have prompted many to suggest that now is an opportune time for the United States and the Soviet Union to negotiate an end to the production of plutonium -- and highly enriched uranium -- for nuclear weapons. The successful negotiation of such an arms control agreement would most likely end the SIS project in Idaho. 4.14

235

5.26.1

Background

The proposed Special Isotope Separation (SIS) facility in Idaho will process plutonium that has been produced in nuclear reactors and separated in chemical separations plants. The SIS plant will use lasers to remove undesired plutonium isotopes, thereby increasing the concentration of plutonium 239, the preferred isotope for weapons design.

Isotope separation would allow the Energy Department to purify for use in weapons the already existing stocks of fuel-grade plutonium, much of which is currently located at the civilian breeder research and development facilities. But only plutonium from Department of Energy military and research reactors may be legally used for weapons, and the Energy Department has stated that the SIS plant will exhaust its available stock of fuel-grade plutonium in 7 to 8 years.

The amount of fuel-grade plutonium that will be available for processing in the SIS plant is unclear. Currently, the Energy Department has a stockpile of roughly 14,000 kilograms of fuel-grade plutonium.[1] Through fiscal year 1995, up to 2,000 kilograms of this fuel-grade plutonium will be blended with super-grade plutonium produced in the Savannah River reactors in order to produce weapon-grade plutonium for weapons.[2]

[1] Thomas B. Cochran, personal communication, March 1988.

[2] This estimate assumes that two Savannah River reactors will operate at full power for four years between now and 1995 and produce about 3,600 kilograms of super-grade plutonium (see Table 1).

5.26.1

About 4,000 kilograms of the remaining fuel-grade plutonium were supplied by the British under a military agreement in exchange for highly enriched uranium and tritium for their nuclear weapons program. The British government, however, has repeatedly sought assurances that this plutonium, which was produced in their civilian power reactors, would be used only in civilian programs.[3]

Another 3,000 kilograms has been fabricated into fuel elements for the Fast Flux Test Facility (FFTF) at Hanford, Washington.[4] The Energy Department recently cancelled construction of the Process Facility Modification Project at Hanford which would have separated the plutonium in the FFTF spent fuel. It is currently studying ways of recovering this plutonium.

Assuming that the British plutonium will not be used in weapons and that blending will continue at the Savannah River Plant, the Energy Department will have about 5,000 to 8,000 kilograms of fuel-grade plutonium for processing at the proposed SIS project.

[4] Ibid.

Specific Issues Involving the Need for the SIS Project

I. The DEIS unreasonably dismisses or ignores non-reactor alternatives to the SIS Project.

A major justification of the need for the SIS project in the draft environmental impact statement is that it will provide: "redundancy in production capability and technological diversity with respect to the current dependence of weapon-grade plutonium production on reactor availability." [DEIS, p. 1-2]." The Energy Department, however, dismisses or ignores important alternatives to this project that do not depend on the existing production reactors. (This section is based primarily on the attached article, "A Case Against Producing Nuclear Material")

5.2.3

Weapon-grade plutonium from retired warheads. For at least the last decade, most plutonuim for new warheads has come from retired warheads. This situation can be expected to continue during the period the SIS plant operates.

5.2.15

In fact, according to one knowledgeable government source, Energy Department projections for weapon-grade plutonium requirements for new warheads indicate that the United States will be "awash" in plutonium at the end of the 1990s because of a flood of warhead retirements. One likely source of plutonium is the remaining deployed inventory of roughly 2,500 W-68 Poseidon missile warheads, most of which are slated for retirement by the mid-1990s as the submarines carrying them reach the end of their

4.2.1

expected 30-year lifetimes. Assuming each warhead contains about 3 to 4 kilograms of plutonium, these warheads would account for 7,500 to 10,000 kilograms of plutonium. This amount is comparable to the entire amount of plutonium that will be processed in the SIS facility.

Scrap Recovery. Almost 10,000 kilograms of weapon-grade plutonium are contained in a backlog of manufacturing scrap or "residue" which has been generated during the recycling and fabrication of warhead components and in other production processes. According to several knowledgeable government sources, about half of this plutonium is immediately recoverable.

4.4.7

Recovering plutonium from scrap is considerably less expensive than producing weapon-grade plutonium in reactors, or in the SIS plant. But according to Admiral Sylvester R. Foley, the recently retired Energy Department Assistant Secretary for Defense Programs, the department's operating scrap recovery facilities, located at Rocky Flats, Los Alamos, Hanford, and Savannah River, are "barely able to keep current with the residues being generated. There is little or no capacity left to attack the residue backlog."[5] A facility to recover plutonium from scrap was completed in 1981 at Rocky Flats, near Denver

4.4.2

[5] "Energy and Water Development Appropriations for 1988," Hearings before the Subcommittee on Energy and Water Development, Committee on Appropriations, Part 6, House of Representatives, 100th Congress, 1st Session (Washington, D.C.: USGPO, 1987), p. 1

Colorado, but has never operated because of severe design, materials, and mechanical problems.[6] The Energy Department, however, has recently decided to fix this facility and plans to commence operations in fiscal year 1997. The department is also accelerating scrap recovery operations at its other existing facilities.

4.4.7

Stockpile projections vs. actual deployments. Some significant fraction of the Energy Department's plutonium requirement will never materialize because its estimates of the number of warheads it will build are usually inflated. According to Senator Mark Hatfield, the ranking minority member of the appropriations subcommittee that oversees nuclear materials production, over the last six years the U.S. government "has always overstated the number of warheads to be produced -- sometimes by a factor of two."[7]

4.10.1

Over the course of the last five years, Congress has cut back the MX missile program from about 2,000 to 500 warheads; the advanced W-88 warhead for the Trident II missile has been cut from 4,800 to an estimated 3,000 warheads;[8] and thousands of nuclear artillery shells, Pershing II warheads, enhanced radiation artillery shells, low-altitude ABM warheads, and naval air defense warheads have been cancelled or deferred. Future nuclear warheads now slated for development, such as a new submarine launched anti-submarine rocket (subroc), a new nuclear depth charge bomb, and a new bomber-launched short range attack missile (SRAM II), can also be expected to suffer similar cuts.

Some warheads, which were cancelled by Congress, remain in Energy Department projections with the apparent expectation that Congress will reverse itself. For example, the Energy Department assumes that Congress will eventually approve an extra 500 warheads for 50 additional MX missiles even though Congress has prohibited their manufacture.

Energy Department warhead projections contain "wish lists and contingencies." Congressional hearings have identified some new types of nuclear weapons -- such as air- and missile-delivered earth penetrators and microwave weapons designed to attack mobile missiles -- that are currently on the Pentagon's wish list for the 1990s.[9] Some of these warheads will never be fully developed, and those that are may be built in smaller numbers than planned.

4.9.1

There are signs, however, that the Energy Department is

[6] "Nuclear Materials: Alternatives for Relocating Rocky Flats Plant's Plutonium Operations," GAO/RCED-87-93, April 1987, p. 8.

[7] Senator Mark Hatfield, "The Plutonium Cushion, Report on U.S. Defense Plutonium Needs and the Hanford N Reactor," United States Senate, October 1987.

[8] Robert S. Norris, "Counterforce at Sea: The Trident II Missile," Arms Control Today, September 1985. Norris estimates that each Trident submarine would carry 18 missiles each with 8 W88 warheads and 6 missiles each with 12 W76 warheads. The estimate in the text of the total number of W88s assumes the construction of 20 Trident submarines.

[9] Robert S. Norris and William M. Arkin, "Nuclear Notebook," Bulletin of the Atomic Scientists, October 1987.

beginning to change this practice. The department's assistant secretary for nuclear materials, John L. Meinhardt, admits:

> "For years there were a lot of potentially future devices [sic] projected to be needed in the outyears ... Those were contained within the stockpile [memorandum] a few years back. They are not contained in the current stockpile requirement."[10]

More realistic projections could demonstrate that the weapon-grade plutonium scheduled for production in the SIS plant will not be necessary.

4.4.4

Warhead deployment and retirement schedules. In addition to incorporating more realistic estimates of future warhead production, the official "requirement" for additional nuclear weapons material can be further reduced by accelerating the retirement of older weapons on a schedule that will permit larger amounts of recycled material to coincide with new weapons production.

Through faster retirements of obsolete weapons and a more measured pace for the deployment of new nuclear weapons, the Energy Department could drastically reduce or eliminate its need to produce new plutonium. Ultimately, much of the demand for fresh plutonium can be traced to an inability or unwillingness to synchronize the schedules for new deployments and retirements in such a way as to minimize the need for new plutonium. Rational management of the stockpile appears to take a backseat to

[10] "Energy and Water Development Appropriations for 1988," pps. 1009-10.

military targeting "requirements" and arbitrary deadlines for deploying new weapons.

More efficient processing. At any given moment, an estimated 5,000 to 10,000 kilograms of weapon-grade plutonium are contained in the DOE transportation, storage, processing, warhead fabrication and dismantlement, and reactor production system, commonly called the "pipeline". Reducing the total quantity of plutonium in the pipeline would lower the requirements for the production of plutonium. A large fraction of this plutonium is located in inefficient warhead production facilities at Rocky Flats. For example, plutonium oxide scrap is generated during plutonium machining and foundry operations, and, for a relatively small cost, the DOE could reduce the production of plutonium oxide scrap by about 50 percent.[11]

4.4.3

Future arms control agreements. The pending INF Treaty would result in additional plutonium savings. This Treaty would require the dismantlement of all U.S. and Soviet land-based intermediate and shorter-range missiles. In addition, the West German government has agreed to destroy its 72 Pershing 1a missiles. Including the U.S.-controlled warheads on the Pershing 1a missiles, the Energy Department could dismantle 500 warheads,

4.3

[11] "Energy and Water Development Appropriations for 1988," Part 6, p. 812.

containing roughly 1,500 kilograms of plutonium.[12] The plutonium in these retired warheads can substitute for the plutonium it would have been necessary to produce for new warheads.

In the event the United States and the Soviet Union agree to reduce the number of strategic weapons by 50 percent in a START agreement, the roughly 5,000 U.S. nuclear warheads which would be withdrawn under this agreement would contain on the order of about 15,000 kilograms of plutonium, or almost fifteen percent of the 100,000 kilograms of plutonium in the U.S. nuclear arsenal.[13] If as expected this agreement allows the parties to reuse the fissile material from dismantled warheads in new weapons, the United States and the Soviet Union would be deprived of any plausible justification for producing additional plutonium.

According to Richard Wagner, assistant to the secretary of defense for atomic energy from 1981 to 1986, if such an agreement is achieved:

> "the United States will undoubtedly stop production of fissile material [plutonium and highly enriched uranium] for weapons. ... Ample plutonium exists to cover a breakdown of such an arms control regime, since if that were to happen, a buildup of forces back to something like current force levels would take long enough so that production of any additional plutonium that might be needed could probably be provided in time."[14]

II. The DEIS unduly emphasizes and distorts the importance of developing the SIS plant as a reactor-independent source of weapon-grade plutonium. 4.4.5

The Energy Department will have at its disposal several reactors that could produce plutonium. The Energy Department's emphasis on justifying the SIS project as a reactor-independent source of plutonium for weapons conveys the false impression that all the reactors that might produce plutonium for weapons could fail simultaneously. Such a possibility is exceedingly remote.

The department plans to resume full-power operation at the Savannah River reactors. This means that the Energy Department will continue producing weapon-grade plutonium by blending fuel-grade plutonium with super-grade plutonium from these reactors. If these reactors continue to operate after 1995, blending would most likely continue. 5.2.10

The Energy Department might also use new higher productivity

[12] "Nuclear Notebook," Bulletin of the Atomic Scientists, June 1987. According to this source, the United States has about 300 ground-launched cruise missile warheads, 120 Pershing II missile warheads, and about 100 Pershing Ia warheads. Our estimates assume that each warhead contains an average of 3 kilograms of plutonium.

[13] Estimates of the size of the U.S. plutonium inventory are contained in Frank von Hippel, David Albright, and Barbara Levi, "Quantities of Fissile Materials in US and Soviet Nuclear Weapons Arsenals," (Princeton, N.J.: Princeton University Center of Energy and Environmental Studies Report No. 168, 1986), and Thomas B. Cochran, William M. Arkin, Robert S. Norris, and Milton M. Hoenig, Nuclear Weapons Databook, vol. 2: U.S. Nuclear Warhead Production (Cambridge, Mass: Ballinger, 1987). We assume that each warhead dismantled under such an agreement would contain an average of about 3 kilograms of plutonium.

[14] Richard L. Wagner, Jr., "A Case for Producing Nuclear Material," Bulletin of the Atomic Scientists, January/February 1988.

cores in the Savannah River reactors that will increase their plutonium production by 10 to 25 percent.[15] If this type of core were used in two of the Savannah River reactors for 10 years, these reactors would produce an additional 900 to 2,200 kilograms of plutonium.

Although the N Reactor at Hanford has been placed on "cold standby," the Energy Department plans to continue retrofitting it with new safety equipment. In an emergency, the N reactor could be restarted. Assuming it can operate for another 5 years, it can produce about 3,000 kilograms of weapon-grade plutonium.

5.2.14

As a longer-term alternative, the United States might decide to build a new production reactor. Although it would be primarily for tritium production, it could also produce plutonium.

Table 1 summarizes these various sources of weapon-grade plutonium as well as other sources, and compares them to the amount that could be produced at the SIS facility in Idaho during its first several years of operation. This table shows that the United States has multiple reactor and non-reactor sources of weapon-grade plutonium.

III. The Energy Department has not identified the sources of plutonium to provide for a "timely response to potential increases in approved needs for weapon-grade plutonium in the period commencing in the mid-1990s." (DEIS, p. 1-2)

[15] "Plutonium Cushion," op. cit.

The DEIS omits any discussion of what would be the source of plutonium that would be used to increase significantly the annual throughput of the SIS facility. The DEIS only discusses plutonium from Energy Department military and research reactors.

4.8.2

The DEIS does not consider the use of plutonium in commercial spent fuel, which already contains more than 100,000 kilograms of plutonium. Although purifying this plutonium for weapons is prohibited by the 1982 Hart-Simpson-Mitchell amendment, the Energy Department's justification of the SIS plant implies that the plutonium in commercial spent fuel might be a future source of plutonium for this facility.

5.26.2

In order to use this plutonium, the Energy Department would have to seek to overturn the Hart-Simpson-Mitchell amendment. Such a step would have disastrous consequences on U.S. nonproliferation policy. It would undermine several decades of U.S. efforts aimed at maintaining a clear distinction between military and civilian nuclear programs. The world would view a U.S. move to effectively turn its commercial nuclear power plants into atomic bomb factories as a new and troubling dimension of a continuing superpower nuclear arms race. Such action would surely call into question the commitment of the United States in the Non-Proliferation Treaty to seek to end and reverse the nuclear arms race.

3.5.2

IV. Successful negotiation of an arms control agreement to end

the production of plutonium and highly enriched uranium for weapons would most likely end the SIS project in Idaho.

3.2.1 The safety and environmental problems with the Energy Department's nuclear weapon materials production complex have once again raised the question of the social costs and risks of nuclear arms production. At the same time, political changes in the Soviet Union and public disenchantment in NATO countries as well as the United States with the current heavy reliance on nuclear weapons to deter nonnuclear aggression, have raised the prospect of radical reductions in nuclear weapons. These

4.14 developments have prompted many to suggest that it is an opportune time to end the production of plutonium and weapon-grade uranium ("fissile" materials) for weapons.

A variety of distinguished arms control analysts, nuclear scientists, military and intelligence experts, leading scientific groups, and citizens' organizations have called on the President and the Congress:

- o to declare an immediate two year moratorium on the further production of plutonium for nuclear weapons and

3.4

- o to challenge the Soviet Union to negotiate a bilateral, verifiable cutoff of the production of plutonium -- as well as highly enriched uranium -- for nuclear weapons.

(See attached letter "Plutonium Challenge").

Several members of Congress are now evaluating a related approach. They are considering legislation to cut off funds for U.S. plutonium production for weapons once the Soviet Union

verifiably halts its production activities.

Although the Reagan Administration appears opposed to an agreement to end the production of plutonium and highly enriched uranium for weapons, a new administration might decide to negotiate this matter with the Soviet Union. If these negotiations were successful, the SIS project would be unnecessary and almost certainly cancelled. Given the potential of the SIS facility to increase rapidly the amount of plutonium that could be used in weapons, the Soviet Union would undoubtedly regard it as dangerous.

3.4

Conclusion

The DEIS for the SIS project has not adequately established the need for this facility. In fact, the Energy Department appears unable or unwilling to estimate accurately its future needs for plutonium, and it continues to emphasize the development of new production facilities rather than relying on its ample existing inventory of weapon-grade plutonium.

4.1

4.10.1

At a time when both President Reagan and General Secretary Gorbachev are trying to end the nuclear arms race and reduce the number of nuclear weapons in the world, the SIS project represents a new commitment to several more decades of that arms race. The SIS project was first planned as part of the Reagan Administration's massive nuclear weapons buildup. Since that buildup is now essentially over, and plutonium requirements have been substantially reduced, the SIS project should be terminated.

3.4

DRAFT

Table 1 Existing and Future Sources of Plutonium for Nuclear Weapons (Through 2003)[a]

Source	Amount of Weapon-Grade Plutonium (kilograms)
EXISTING WEAPON-GRADE PLUTONIUM INVENTORY	
In Existing Warheads as of 1988	~80,000
Plutonium in scrap backlog	10,000
Pipeline	5,000-10,000
Total	95,000-100,000
EXISTING SOURCES OF NEW WEAPON-GRADE PLUTONIUM	
SRP Reactors (1990 through 2003)	
With blending	19,000[b]
Without blending	12,600[c]
POTENTIAL SOURCES OF WEAPON-GRADE PLUTONIUM	
Plutonium in existing warheads retired under Arms Control Agreements	
INF Treaty	1,500
Start Agreement	15,000
High productivity Savannah River cores (1993-2003)	~900-2,250
SIS Facility (1995 through 2003)[d]	5,000-8,000
NPR (1998 through 2003)[e]	0-3,000
EMERGENCY SOURCES (Excluding the Idaho SIS facility)	
N Reactor (five years of operation left)	3,000
Livermore SIS facility	?
Commercial LWRs (weapon-grade plutonium production, no SIS)	~400 kg wgp/GWe-yr

Comments for Table 1

a. The table represents lists sources of weapon-grade plutonium through 2003, the date when the SIS plant is projected to use up its feedstock of fuel-grade plutonium.

b. This estimate is derived by assuming that the Savannah River reactors return to full-power by the end of FY 1989, and two reactors are subsequently dedicated to plutonium production. Each of these reactors is estimated to produce about 450 kilograms of super-grade plutonium per year. From the beginning of FY 1990 through FY 2003, two reactors could produce 12,600 kilograms of super-grade plutonium. Blending with 6,300 kilograms of fuel-grade plutonium (an average of 12% plutonium 240) results in almost 19,000 kilograms of weapon-grade plutonium.

c. Same assumptions as in footnote b, but each reactor is assumed to produce about 450 kilograms of weapon-grade plutonium a year.

d. See text. I assume that the SIS facility will start operating at design throughput in 1996, and that the plutonium contains about 12 percent plutonium 240.

e. I assume that a new production reactor could produce about 500 kilograms of weapon-grade plutonium a year.

A case against producing nuclear material

Whether more fissile materials should be produced depends on arms reductions, kinds of weapons, rates of deployment and retirement, and efficiency in the production process. The authors believe a cutoff agreement makes sense.

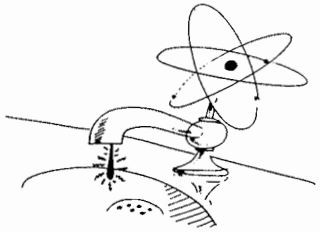

by David Albright and Christopher Paine

THE UNITED STATES is on the verge of spending billions of dollars to rebuild its aging nuclear weapon material production facilities. But a new public awareness of the social and environmental costs of nuclear arms production has coincided with political changes that raise the prospect of radical reductions in nuclear weapons. These developments have prompted many to suggest that now is an opportune time to end the production of plutonium and highly enriched uranium—"fissile" materials—for weapons.

Whether weapons are cut back or not, analysis of the unclassified record of nuclear material production suggests that a combination of more efficient production practices and better coordination of weapons retirements with new deployments could dramatically reduce or even eliminate the need to produce additional fissile materials for weapons. Codifying these reduced requirements in a verifiable, bilateral agreement to end such production would be a valuable measure to insure long-term restraint in the arms race. For these reasons the U.S. Department of Energy's plans to expand and improve production facilities deserve intense scrutiny.

These plans would extend production capacity for fissile material well into the next century:

- Energy Department officials told Congress last spring that they want to restart the N reactor at Hanford and to resume full-power operation at two of the Savannah River reactors in order to meet the projected weapons production schedule. In the past, each of these three reactors has produced an average of about 500 kilograms of plutonium a year. The Savannah River product is "super" grade and is blended with fuel-grade plutonium to produce the intermediate weapon-grade plutonium. This procedure yields an avetage of about 2,000 kilograms of weapon-grade plutonium per year.
- The agency is trying to persuade Congress to fund the construction of one or two new production reactors to be located at Hanford, Savannah River, or Idaho Falls. One reactor would be dedicated to tritium production, with the second providing backup tritium capacity as well as a reserve capacity to produce plutonium. Each reactor could take ten years to build and would cost $3–10 billion dollars.
- A special isotope separation facility is planned for construction at the Idaho National Engineering Laboratory in Idaho Falls, to begin operation in 1995. This plant will use lasers to remove undesired plutonium isotopes, increasing the concentration of plutonium 239, the preferred isotope for weapons. According to the Energy Department, the facility will "meet excursions in demand and will serve as a contingency against unanticipated shutdowns of the reactor production facilities."[1]

Tom Hachman, ©Inc. United States

Isotope separation will allow the Energy Department to purify for use in weapons the stocks of fuel-grade plutonium generated in its civilian breeder-reactor research and development program. But only plutonium from Energy Department military and research reactors may legally be used for weapons, and the isotope separation plant would run through the available stock of less than 10,000 kilograms in seven or eight years. Commercial spent fuel, on the other hand, already contains more than 100,000 kilograms of plutonium, but using this for weapons is prohibited by a 1982 law intended to reinforce U.S. nonproliferation policy. Energy Department officials can only speculate about "possible future missions" to "clean up" plutonium for weapons. A recent briefing document states enigmatically: "Who knows what the Nation's needs will be in the year 2001."[2]

- A facility at the Y-12 plant in Oak Ridge, Tennessee, is being rebuilt to convert highly enriched uranium gas into metal for weapons. The department hopes that the facility, which stopped operation in 1964, will resume production in 1990. The uranium would be enriched in gaseous-diffusion enrichment plants in Ohio and Kentucky.

David Albright is senior staff scientist at the Federation of American Scientists in Washington, D.C. Christopher Paine has been a congressional staff consultant on arms control and defense policy and is working on a book about Congress and defense issues.

BEFORE MOVING ANY closer to resuming full-scale fissile materials production or to major investments in the production complex, Congress and the next administration must carefully analyze the need for more material. In the midst of the strategic missile buildup of the 1960s, such an assessment by the Johnson administration led the United States to reduce plutonium output by over 75 percent between 1963 and 1971, and to end highly enriched uranium production for weapons in 1964.

Arms control agreements could have a dramatic effect on the need for fissile material. If, for example, the United States and the Soviet Union agreed to reduce their strategic forces by half, some 5,000 U.S. weapons containing an estimated 15–20 thousand kilograms of plutonium would be withdrawn. This represents almost one-fourth of the estimated 100,000 kilograms of plutonium in the U.S. arsenal. The weapons would also contain a similar fraction of the estimated 500,000 kilograms of highly enriched uranium in the U.S. stockpile.

Almost all analysts agree that an accord which allowed the parties to reuse fissile material from dismantled warheads in new weapons would eliminate any justificaron for producing additional plutonium or highly enriched uranium for weapons. Unlike those elements, which in practical terms last forever, tritium decays at a rate of 5.5 percent a year, so it would continue to be produced unless warheads were retired rapidly enough to allow others to be replenished. [See "A Little Tritium Goes a Long Way."]

On the other hand, a reductions agreement could also prohibit the recycling of fissile materials from weapons dismantled under the agreement. For example, during negotiations for a treaty banning intermediate-range nuclear weapons, the Soviet Union proposed, and the United States rejected, the destruction of warheads. If a recycling prohibition were agreed upon, it would most likely go hand-in-hand with an agreement to cease further production of plutonium and weapon-grade uranium. New production is significantly more expensive than recycling material from older warheads; and neither side is likely to stop recycling the fissile material in warheads scrapped under a major reductions agreement unless there is also a ban on producing fissile material. A production cutoff agreement would also increase confidence in compliance with reductions, by insuring that material from dismantled warheads was not being replaced by newly produced material.

A restriction on both the production and recycling of fissile material, however, could focus the attention of the military establishments on their lack of precise estimates of each other's stockpiles. Each side might also become suspicious of the other's abilities to design weapons that use less fissile material. These fears could be alleviated by collateral restrictions on nuclear testing, MIRV missile flight testing, and the deployment of delivery systems that could carry either conventional or nuclear weapons.

EVEN WITHOUT DEEP cuts in weapons, additional production of fissile materials may not be needed in the future. How one assesses the need for additional production depends on what kinds of weapons are envisioned, how fast new weapons are deployed and old ones are retired, and whether fissile materials can be handled more efficiently in the production process.

Kinds of weapons. Nuclear weapons policy makers in the Pentagon, the Energy Department, and Congress view new higher-yield and more accurate weapons as essential to the ability of the U.S. nuclear forces to attack "the targets the Soviets value most"—hardened missile silos, command posts, and shelters for the political leadership. This "warfighting" approach to nuclear deterrence in turn depends on cultivating a belief that nuclear weapons can be used in controlled ways to limit escalation in a conflict.

The sophisticated weapons required in the current doctrine are designed to deliver maximum destructive power with minimum bulk and weight. These weapons require more plutonium and perhaps highly enriched uranium per weapon than do less exacting designs. Since the 1960s the average amount of plutonium per warhead has approximately doubled, from about two kilograms to four.[3] F. Charles Gilbert, then an Energy Department official, told the House Armed Services Committee in 1981 that the trend toward increased plutonium use per weapon would "continue through 1990." The department's assistant secretary for nuclear materials, John L. Meinhardt, reports that there has been a "switch from predominantly uranium weapons, as in the early days

of the nuclear program, to plutonium-based weapons."[4]

With plutonium replacing uranium, it is not clear why the Energy Department is planning to resume production of highly enriched uranium for weapons. One possible explanation is that many of the Trident II and MX warheads could require large amounts of weapon-grade uranium.[5] In the case of the MX, the weapon-grade uranium may be substituted for depleted uranium components to increase the explosive yield.[6] Another source suggests that weapon-grade uranium is being substituted for fusion fuel (lithium deuteride) to reduce the volume of new warheads.[7] Or the purpose may be to rebuild reserves of the material, which is also used to fuel the Savannah River reactors.

Stockpile projections vs. actual deployments. Over the past six years the Reagan administration, according to an October 1987 report by Sen. Mark Hatfield on plutonium production, "has always overstated the number of warheads to be produced — sometimes by a factor of two." The Oregon Republican is the ranking minority member of the appropriations subcommittee that oversees nuclear materials production.

The Energy Department keeps in its projections some of the warheads canceled by Congress, hoping the legislators will change their minds.

In the last five years, Congress has cut back the MX missile program from about 2,000 to 500 warheads; the advanced W-88 warhead for the Trident II missile has been cut from 4,800 to about 3,000; and thousands of nuclear artillery shells, Pershing II warheads, enhanced-radiation (neutron) artillery shells, low-altitude antiballistic missile warheads, and naval air defense warheads have been canceled or deferred. Future warheads now on the drawing boards or in development can be expected to suffer similar curs.

But the Energy Department retains in its projections some of the warheads canceled by Congress, apparently in the hope that the legislators will change their minds. For example, the agency is planning for an extra 500 warheads for 50 additional MX missiles even though Congress has prohibited their manufacture. In addition, previous projections have allowed for new types of weapons on the Pentagon's wish list that may never come to be. There are signs, however, that this practice is changing. Meinhardt admits that in the past "there were a lot of potentially future devices projected to be needed in the outyears." But he claims that those weapons are not contained in the current stockpile requirement.[8]

Prompt retirements. According to Hatfield's report, for at least the past decade most of the plutonium and all of the highly enriched uranium for new weapons has been obtained from retired weapons. But the Pentagon resists accelerating the retirement of older weapons on a schedule that will permit larger amounts of recycled material to be available for new weapons production.

In calling for increased production, the Energy Department is evidently disregarding its own projections which indicate, according to one source, that the United States will be "awash" in plutonium at the end of the 1990s because of a flood of retirements. Likely sources of plutonium and uranium include:

- some 2,500 W-68 Poseidon missile warheads, most of which are slated for dismantling by the mid-1990s as the submarines carrying them reach the end of their expected 30-year lifetime. Assuming each warhead contains about three or four kilograms of plutonium, these warheads would account for 7,500–10,000 kilograms of plutonium.
- the accelerated retirement of older artillery shells. According to a congressional source, 15 percent of the weapon-grade uranium in the arsenal is contained in the 1950s-era W33 shells. The Defense Department, however, insists on retaining most of the W33s because the limit of 92.5 that Congress placed in 1984 on the production of new nuclear artillery shells "will not meet NATO or worldwide requirements."[9]
- medium-range missiles. Under the pending INF agreement the United States would be required to dismantle up to 500 warheads, including the U.S.-controlled warheads on the 72 Pershing Ia missiles that the West German government has agreed to destroy. These warheads are estimated to contain 1,500–2,000 kilograms of plutonium and perhaps 7,500–10,000 kilograms of highly enriched uranium.

Much of the demand for new production of plutonium and highly enriched uranium can be traced to an inability or unwillingness to synchronize deployment and retirement schedules to minimize the need for new materials. Rational management of the stockpile seems to be taking a back seat to meeting arbitrary military targeting requirements and deadlines for deploying new weapons.

Scrap recovery and more efficient processing. According to several knowledgeable government sources, years of warhead production have left the Energy Department with a backlog of almost 10,000 kilograms of plutonium in scrap, about half of which is immediately recoverable. Recovering plutonium from scrap is usually less expensive than producing plutonium in reactors. But Adm. Sylvester R. Foley, the department's recently retired assistant secretary for defense programs, says scrap recovery facilities at Rocky Flats, Los Alamos, Hanford, and Savannah River are "barely able to keep current with the residues being generated. There is little or no capacity left to attack the residue backlog."[10]

A facility to recover plutonium from scrap was completed in 1981 at Rocky Flats but has never operated because of severe design, materials, and mechanical problems. As of last spring the Energy Department had not decided what to do about this facility, although it is considering expanding its scrap recovery capability.

At any given moment several thousand kilograms of plutonium are tied up in the Energy Department pipeline: the transportation, storage, processing, warhead fabrication, and reactor production system. A large fraction of this plutonium is located in inefficient weapons production facilities at Rocky Flats. For example, for a relatively small cost the agency could reduce by half the generation of plutonium oxide scrap from plutonium machining and foundry operations.[11]

MORE RAPID RETIREMENT of older weapons, accelerated scrap recovery, more efficient processing techniques, and a more modest pace for new deployments would make it possible for the United States to halt plutonium production for the foreseeable future. With an inventory of about 600,000 kilograms of fissile material, the United States could safely defer decisions on rebuilding U.S. fissile material production facilities, including the special isotope separation plant. These decisions should at a minimum await the outcome of arms reduction negotiations, which could eliminate the need for any further production.

As a hedge against the breakdown of an agreement to substantially reduce strategic nuclear arms, the production reactors and plutonium separation facilities could be kept on "cold standby." Because the few years that would be needed to restart materials production corresponds to the time needed to produce a significant quantity of delivery vehicles, the effect on national security would be inconsequential.

The nation should also debate the need for new generations of nuclear war-fighting weaponry that require larger amounts of fissile material. Despite the military's ostensible requirements for such weapons, the fact remains that neither the United States nor the Soviet Union can strike first with nuclear weapons without risking unacceptable damage to its own population and industry. While additional production of plutonium and weapon-grade uranium is not likely to increase the deterrent effect of U.S. nuclear forces, it will impose significant economic, environmental, and political costs, including whatever risks attend the failure to limit proliferation of nuclear weapons materials.

Although unilateral restraint is feasible, a negotiated cutoff agreement would provide the greatest assurance of mutual restraint in the long run. Even without deep cuts in nuclear arsenals, a cutoff would be a useful arms control measure. It would place a cap on the size of nuclear weapons inventories and would begin to impose constraints on the freedom of nuclear establishments to design and manufacture nuclear weapons. Equally important, the ban would strengthen international barriers to the spread of nuclear weapons. Finally, it could result in savings of tens of billions of dollars over the next decade. These funds could be devoted to more civilized purposes, including cleansing the environment of abuses accumulated from four decades of nuclear weapons production. □

announces an intensive
Summer Institute for College and University Faculty

REGIONAL CONFLICT AND GLOBAL SECURITY:
THE NUCLEAR DIMENSION

Madison, Wisconsin
June 17–24, 1988

Applicants accepted for participation will be provided with lodging and most meals, and will be reimbursed for mileage or round-trip economy-class airfare. For full information and application procedures, address inquiries to: Center for International Cooperation and Security Studies, c/o the Office for International Studies and Programs, UW–Madison, 1410 Van Hise Hall, Madison, WI 53706; telephone (608) 262-0270.

Application Deadline: March 1, 1988

Notification of Acceptance: March 22, 1988

PLUTONIUM CHALLENGE

A Challenge To Halt the Production of Plutonium for Nuclear Weapons

NOVEMBER 5, 1987

THE PLUTONIUM CHALLENGE:
AN OPEN LETTER TO
THE PRESIDENT AND THE
CONGRESS OF THE UNITED STATES

We want to alert you to a historic opportunity and to urge you to take a bold initiative for world security with substantial economic and environmental benefits for our nation.

THE UNITED STATES SHOULD DECLARE AN IMMEDIATE TWO-YEAR MORATORIUM ON THE FURTHER PRODUCTION OF PLUTONIUM FOR NUCLEAR WEAPONS AND CHALLENGE THE SOVIET UNION TO NEGOTIATE A BILATERAL, VERIFIABLE CUTOFF OF THE PRODUCTION OF PLUTONIUM -- AS WELL AS HIGHLY-ENRICHED URANIUM -- FOR NUCLEAR WEAPONS.

We are at a major turning point in the four-decade-long history of the production of nuclear warheads in our nation. Since 1945, the United States has manufactured some 60,000 warheads, of which some 25,000 are now in our arsenal. We have produced some 200,000 lbs. of plutonium and, prior to 1964, some one million lbs. of highly enriched uranium (HEU) - the key ingredients in all nuclear explosives, also known as "fissile materials". Our nuclear weapons material production reactors at the Hanford Reservation in Washington and the Savannah River Plant in South Carolina are now all over 20 years old and dangerously outmoded. The Chernobyl disaster in April 1986 focussed public attention upon the safety of these facilities. Today these reactors are limping along, producing only some 1000 lbs. of plutonium each year. Their continued operations are under very serious question.

The Department of Energy (DOE) is formulating plans to spend tens of billions of dollars on new production reactors and a laser plutonium processing facility which would be in operation well into the 21st century. At the same time, however, the DOE is reluctant to take on an equally expensive task of cleaning up and disposing of the vast amounts of radioactive and chemical wastes it has already produced over the last four decades.

These DOE plans to increase production of plutonium run counter to the vision articulated by President Reagan and General Secretary Gorbachev at the Reykjavik Summit of a world of much reduced nuclear weapons arsenals. Both nations already have more than enough plutonium and HEU to maintain their combined current stockpiles of over 50,000 nuclear warheads - stockpiles sufficient to destroy one another's societies many times over and to threaten human well-being everywhere on our planet.

The United States risks nothing and has much to gain from our proposal of a two-year plutonium pause. We have not produced any HEU for nuclear weapons since 1964 and, by halting plutonium production for two years, we would be forgoing the equivalent of only some 1% of our current plutonium stockpile. In any event, almost all of the plutonium for new warheads is being obtained through retirement of old warheads and recycling.

Such a pause would provide a chance for our nation to stop and consider carefully the need for a new multibillion dollar investment in our nuclear weapons materials production complex. This review also would include an assessment of the future needs for: (1) tritium, which is used to increase the yields of nuclear warheads and unlike plutonium decays rapidly enough so that it must be replenished; and (2) HEU for non-weapons purposes, such as submarine fuel. We also should examine alternative ways of meeting those needs and, consistent with the goal of reduced nuclear arsenals, should initiate a pilot program to demonstrate the feasibility of the verifiable removal and disposal of fissile materials from dismantled warheads.

A unilateral production cutoff would create worldwide public pressure upon the Soviets to negotiate a verifiable halt to all production of plutonium and HEU for nuclear weapons. Such a cutoff would be an important cap on the arms race. It would provide a basis for other agreements to reduce nuclear armaments.

Under a production cutoff agreement, the United States and the Soviet Union would in effect make the same commitment not to produce fissile materials for nuclear explosives as have some 130 non-nuclear-weapons countries that have joined the Nuclear Non-Proliferation Treaty. This would give new legitimacy to American and Soviet leadership in international efforts to stop the spread of nuclear weapons. Moreover, the United States would be in a far stronger position to appeal to other nations, including the Soviet Union, to reconsider plans to introduce vast quantities of plutonium into their civilian nuclear power programs.

There are good reasons to believe that the Soviets would be responsive to an American initiative. In recent years, the Soviets have indicated an interest in a cutoff. They too have aging production reactors and heightened awareness of their hazards in the wake of Chernobyl. The Soviets also have demonstrated a new openness towards the presence of American and international inspectors to monitor nuclear weapons activities.

The shutdown of production reactors could be easily verified on an interim basis by satellites which are able to detect the heat associated with an operating reactor. The United States and the Soviet Union have already opened some of their civilian nuclear reactors to international safeguards, which are already in place in over 50 nations. Verification arrangements could be developed to monitor any continued production of tritium for weapons and HEU for non-weapons purposes.

If we make major new commitments to plutonium production facilities, the nuclear arms race will be that

much more difficult to stop. As a nation, we must just say NO to more plutonium and put forward to the Soviet Union this challenge in the interest of both our countries and indeed of the entire world.

Biography of David Albright

David Albright, Senior Staff Scientist at the Federation of American Scientists, is an expert on technical and policy issues related to military nuclear materials production, nuclear non-proliferation, and nuclear power.

Albright has published articles on these subjects in the FAS Public Interest Report, the Bulletin of the Atomic Scientists, Scientific American, and Science. Research reports by Albright have been published by the Center for Energy and Environmental Studies, FAS, and the Environmental Policy Institute. He was also a guest editor of a special section of the January/February 1988 issue Bulletin of the Atomic Scientists on military nuclear materials production in the United States.

While at FAS, Albright has also served as a consultant to other groups, such as Princeton University's Program on Nuclear Policy Alternatives, Greenpeace, and the Congressional Research Service. From 1984 to 1986, he was on the research staff of the Center for Energy and Environmental Studies at Princeton University.

Before joining the staff of the Federation, Albright taught physics at George Mason University. Prior to this, he worked at the Environmental Policy Institute in Washington, D.C., where he evaluated the radiation exposures from the U.S. atmospheric nuclear weapons tests to downwind civilian populations and military participants in the tests.

Albright holds a Masters of Science in physics from Indiana University and a Masters of Science in mathematics from Wright State University.

TESTIMONY OF

THOMAS COCHRAN, PH.D.

AND

DAN W. REICHER, ESQ.

TO THE

DEPARTMENT OF ENERGY

CONCERNING

THE DRAFT ENVIRONMENTAL IMPACT STATEMENT

ON THE

SPECIAL ISOTOPE SEPARATION FACILITY

March 25, 1988

Idaho Falls, Idaho

My name is Thomas B. Cochran. I am a Senior Staff Scientist with the Natural Resources Defense Council (NRDC). I hold a Ph.D in Physics from Vanderbilt University and was a member of the Department of Energy's (DOE) Energy Research Advisory Board (ERAB) from 1978-1982; DOE's Nuclear Proliferation Advisory Panel (1977-79); and the Nuclear Regulatory Commission's Advisory Panel for the Decontamination of the Three Mile Island Unit 2 (1980-1986). While on the ERAB, I was a member of a committee which reviewed DOE's Advanced Isotope Separation Program, including the Atomic Vapor Laser Isotope Separation (AVLIS) process. Consequently, I have some familiarity with the Special Isotope Separation (SIS) technology. I am also an editor and co-author of the Nuclear Weapons Databook, Volume II, "U.S. Nuclear Warhead Production," and Volume III, "U.S. Nuclear Warhead Facility Profiles," published by Ballinger Company. Therefore, I am also knowledgeable about DOE programs for providing plutonium to meet perceived nuclear weapons needs.

I am accompanied this afternoon by Dan Reicher, a senior project attorney with NRDC. Prior to joining NRDC, Mr. Reicher was an assistant attorney general for environmental protection in the Commonwealth of Massachusetts, a law clerk to a federal district court judge, a staff member of the President's Commission on the Accident at Three Mile Island, and a legal assistant in the hazardous waste section of the U.S. Department

of Justice. Mr. Reicher is a graduate of Stanford Law School and Dartmouth College.

The Natural Resources Defense Council is a national non-profit environmental organization with almost 70,000 members. NRDC has been working for the past 15 years to ensure the safety of DOE's nuclear weapons production facilities, prevent the proliferation of nuclear weapons, and halt the use of weapon-usable plutonium in civilian commerce. I am pleased to have this opportunity to present our views concerning the Draft Environmental Impact Statement (DEIS) on the SIS facility.

Summary

In our testimony last year at the scoping hearings on the DEIS, we established that there is no need to develop the proposed SIS facility. This is because there already exists an alternative technology called "blending" that is currently being used by the DOE for producing weapon-grade plutonium from the same limited stockpile of fuel-grade plutonium that would be processed through the SIS facility. As a result of our testimony DOE was forced to confirm that by the time the SIS plant would go on line in the mid-1990's, there would be at most a seven to eight year supply of fuel-grade plutonium to process through the plant because a large proportion of the stockpile would already have been converted to weapon-grade via blending. We argued that the slightly faster rate at which the remaining fuel-grade plutonium would be processed (after 1995) using SIS versus

blending did not justify the $1 billion price tag for the plant and the significant risk it would pose to human health and the environment. Following our testimony, DOE was also forced to confirm that the SIS plant would not be large enough to carry out a secondary mission, the cleanup of weapon-grade plutonium removed from existing nuclear warheads.[1]

Since our testimony last year, the case against SIS has grown even stronger for a number of reasons. As DOE Secretary Herrington admitted a few weeks ago: "We are awash in plutonium. We have more plutonium than we need."[2] This situation reflects, in part, accelerated plutonium production between 1980 and 1985, the upcoming retirement of a large number of nuclear warheads under the Intermediate Nuclear Forces (INF) Treaty with the Soviet Union, continued operation of the SRP reactors which Secretary Herrington recently stated have no known life-limiting factors, and the availability of a large inventory of plutonium scrap. Citing its decreased requirements for plutonium, the DOE recently shut down the N Reactor at the Hanford Nuclear Reservation, and placed it on "cold standby" for use in emergency situations.

The Strategic Arms Reduction Treaty (START), which President Reagan is currently negotiating with the Soviets, would make more than twice as much plutonium available for new warhead production than would be produced by the SIS plant or the preferred blending

5.2.10 5.2.1 2.2.9 4.2.1 4.4.6 4.6 4.3

alternative. We calculate that START and INF together would produce almost three times as much plutonium as SIS and at two and one-half times the rate (Table 1).

In light of this plutonium glut, DOE no longer attempts to justify the SIS facility on the basis of need. Instead, DOE Secretary Herrington has resorted to promotion of the facility as an "insurance policy." Under this view SIS would be developed in the unlikely event future plutonium supplies become inadequate, in particular due to reduction or elimination of production capacity at the SRP and the resulting curtailment of blending. However, we establish that the DOE already has seven layers of insurance policies that will provide complete coverage in the unlikely event a potential plutonium shortfall develops. These include a substantial plutonium reserve, increased processing of plutonium scrap, accelerated retirement of low-priority and obsolete warheads, restart of the renovated Hanford N Reactor, use of an SIS facility currently being developed at the Lawrence Livermore National Laboratory (LLNL), plutonium production at a new production reactor, and, in an emergency, production of reliable and effective warheads directly from fuel-grade plutonium without processing in the SIS plant. In light of the current plutonium glut and the existence of a comprehensive insurance policy to protect against any future shortfall, our conclusion remains the same as last year: there is absolutely no justification to develop the SIS facility.

5.2.14

4.4.6

4.15.1

Even assuming for the sake of argument that SIS might somehow be needed at some point in the future, the decision at hand is not whether to build SIS but whether a commitment to construct the facility should be made this year, particularly given the bright prospects for a START agreement. We conclude that, at a minimum, Congress should defer any decision to construct an SIS facility by at least one year pending the outcome of the START negotiations. DOE Undersecretary Salgado admitted recently that "a two year moratorium on plutonium production 'would not have a negative impact' on national defense."[3] A one year deferral of SIS would delay the availability of a quantity of weapon-grade plutonium equivalent to less than one percent of the U.S. plutonium stockpile. The INF agreement by itself will make available enough plutonium to compensate for a deferral of as long as three years.

2.12.3

A. The U.S. is "Awash in Plutonium"

In testimony on February 23, 1988 concerning the recent decision to place the Hanford N Reactor in standby status, DOE Secretary Herrington stated: "We're awash in plutonium. We have more than we need."[4] This plutonium glut reflects a number of factors which must be understood in analyzing the need for development of SIS. First, as a recent report from Senator Mark Hatfield, the ranking Republican on the Senate Appropriations

4.2.1

[3] Washington Post, February 28, 1988 at A4.

[4] Seattle Times, February 23, 1988 at B2.

4.9.5

committee notes: "Most plutonium for new weapons is obtained from retired weapons rather than from production at defense reactors. The most important source of plutonium is the current stockpile of weapons and the reserve inventory of plutonium which awaits use in future weapons ... Therefore, a nuclear weapons modernization and replacement program can be met largely through retirement and dismantlement of old weapons."[5] Typically, the U.S. retires about 1600 warheads per year. On average each of these warheads contains about 3.6 kilograms (8 pounds) of plutonium. Each year, then, a little less than 6000 kilograms or 6 metric tons of plutonium is made available for production of new warheads, an amount about equivalent to the entire output of the SIS plant over its seven to eight year mission. In the mid-1990's, for example, some 2500 Poseidon missile warheads will be dismantled.[6] Closer on the horizon, the Intermediate Nuclear Forces (INF) treaty that the U.S. has entered into with the Soviet Union will result in the dismantlement of warheads containing about 1.8 metric tons of plutonium, the equivalent of about one-third the total output of the SIS facility. And the Strategic Arms Reduction Treaty (START) which President Reagan is currently negotiating with the Soviets would eliminate about 4000 strategic warheads thus freeing up some 14 metric tons of

4.3

[5] "The Plutonium Cushion, Report on U.S. Defense Plutonium Needs and the Hanford N Reactor," Senator Mark O. Hatfield, October, 1987 at 5.

[6] Albright & Taylor, A Case Against Producing Nuclear Material, Bulletin of the Atomic Scientists, January, 1988 at 48.

plutonium, about two and one-half times the total production of the SIS plant. We calculate in Appendix I that taken together START and INF produce almost three times as much plutonium as SIS and at two and one-half times the rate.

4.10.1

Second, the same report indicates that the DOE has built up a substantial reserve supply of plutonium in recent years. As Senator Hatfield points out, this is the result of the fact that since about 1980 plutonium production has been tied to erroneous and inflated projections of future warhead production. These projections are made in the Nuclear Weapons Stockpile Memorandum (NWSM), a classified document developed annually by DOE and the Department of Defense. The NWSM is a "blueprint" for warhead production and retirements and is the basis for DOE's plutonium production requirements. In reality, however, the NWSM grossly overestimates the number of warheads that will actually be produced. Since plutonium production is linked to these overestimates DOE has built up a surplus of plutonium over the past six years. Senator Hatfield reported:

> The problem with using the NWSM as a blueprint or strict schedule for nuclear weapons requirements is that it never comes close to reality....Over the last six years, it has always overstated the number of warheads to be produced -- sometimes by a factor of two. The five year projection of warheads contained in the 1984 budget request and the 1983 NWSM was over estimated on average by 35% as compared to the actual warheads which were built or are now projected.[7]

[7] "The Plutonium Cushion, Report on U.S. Defense Plutonium Needs and the Hanford N Reactor," Senator Mark O. Hatfield, October,

> Overstated projections in the Nuclear Weapons Stockpile Memorandum resulted in lower demand [for plutonium] than anticipated. Increased supply and reduced demand have created a plutonium cushion. Available alternative supply options can add to the size of the plutonium cushion.[8]

Similarly, our analysis of DOE and Congressional documents show that while in 1983 DOE was projecting a 13% increase in the number of warheads in the arsenal by 1987/88, in reality there has been a 3% drop.[9] Meanwhile, between 1980 and 1985 DOE doubled plutonium production relative to the output during the Carter administration.[10] In fact, during the Reagan years FY 1982-87, while the number of warheads in the stockpile was dropping, over 10 metric tons of weapon-grade plutonium were added to the inventory.

4.4.6

Third, three reactors remain in operation at the Savannah River Plant for plutonium as well as tritium production. DOE reduced the operating power of these reactors about one year ago in response to safety concerns raised by the National Academy of Sciences. However, the Department is currently adding new safety

1987 at 5 ("Plutonium Cushion Report").

[8] Id.

[9] Hearings Before the House Armed Services Committee, FY 1988, at 129; Hearings Before the House Armed Services Committee, FY 1984, at 19.

[10] See, Nuclear Weapons Databook, Vol. 2 at 63, 67.

systems and according to Secretary Herrington plans to increase the operating power of the reactors in the near future.[11]

Secretary Herrington also recently stated that the DOE knows of no factors limiting the useful operating life of the reactors.[12] Production of supergrade plutonium may therefore continue indefinitely at the SRP. This means that blending of this material with fuel-grade plutonium from the stockpile at Hanford to produce weapon-grade plutonium can also continue. We show in Table 2 that blending will eliminate the inventory of fuel-grade plutonium sometime around the years 2006-07, even assuming the C-Reactor remains permanently shutdown and no plutonium is produced at SRP in 1989 and 1990. The DOE admitted last year that the SIS would process the same inventory of fuel-grade plutonium in seven to eight years. Assuming startup of the facility in 1995 this would mean that SIS would run through the fuel-grade plutonium in 2003 (see Table 1, which assumes blending stops when SIS begins), a mere three to four years sooner than blending.

Fourth, over the years the DOE has generated a huge inventory of weapon-grade plutonium in scrap. Some of this plutonium is recovered for further warhead production. The scrap inventory is apparently so large that, according to DOE's recently retired assistant secretary for defense programs,

4.4.7

[11] Statement of Secretary Herrington at Hearing before the Energy and Water Development Subcommittee of the House Armed Services Committee, March 10, 1988.

[12] Id.

existing scrap recovery facilities are "barely able to keep current with the residues [scrap] being generated. There is little or no capacity left to attack the residue backlog."[13]

B. The U.S. Has A More Than Adequate Plutonium Insurance Policy Without SIS

The above review indicates that the DOE cannot justify development of the SIS on need. The DEIS reflects this fact. No where does it state that the U.S. needs more plutonium and that the SIS is the best way to produce it. Instead, the DOE resorts to a justification that raises bureaucratic gobbledygook to a high art form. According to the DEIS,

> The SIS Project is needed by DOE to provide a redundancy in production capacity and technical diversity with respect to the current dependence of weapon-grade plutonium production on reactor availability and to provide a timely response to potential increases in approved needs for weapon-grade plutonium. (DEIS, p. S-1)

In Table S-1 this jargon is reduced to three key phrases:

(a) redundancy in production capacity,

(b) technological diversity

(c) flexibility in the DOE nuclear materials production complex

All of these justifications reflect the simple concern that future unknown events may affect the continued operation of the

[13] Energy and Water Development Appropriations for 1988: Hearings before the Subcommittee on Energy and Water Development, House Committee on Appropriations, 100th Cong., 1st Sess. 1009-1010 (1987).

SRP reactors or require that their capacity be devoted exclusively to tritium production. In such a situation the DOE argues we need an alternative plutonium supply. According to DOE Secretary Herrington, the SIS, then, is "really an insurance policy."[14]

What DOE fails to acknowledge, however, is that our current insurance policy is more than adequate. In fact, SIS provides no tangible benefits that do not already exist through other more readily available and cheaper alternatives. Together these alternatives provide levels of redundancy, technological diversity and flexibility which reduce SIS to a senseless waste of money.

The seven elements of the U.S. plutonium insurance policy include:

* Reserve Plutonium Supply: In recent years DOE has built up a large reserve of weapon-grade plutonium -- estimated at more than five tons -- as warhead production did not keep pace with plutonium output.

* Plutonium Scrap: More efficient processing of scrap plutonium in the future will add more plutonium to the stockpile than SIS. DOE proposes to spend $370 million over the next nine years for enhanced scrap recovery including renovation of a

4.7.1

4.7.3

4.15.5

4.4.7

recovery facility at the Rocky Flats plant in Colorado which was completed in 1981 but has never operated because of a variety of problems.

5.2.14 * N Reactor Restart: The Hanford N Reactor is currently in standby status. DOE acknowledges "the option of restarting N Reactor if future material requirements warrant such an action."[15] By the end of FY88 DOE will have spent over $100 million in upgrading the facility and expects to spend $70 million in FY90 to maintain it in cold standby status.[16] According to DOE, the reactor could be restarted in about two years. Moreover, its plutonium output, about 600-700 Kg/year during its remaining five to eight year life would be comparable to the proposed SIS plant.

4.9.5 * Accelerated Warhead Retirements: Senator Hatfield stated in his recent "Plutonium Cushion" Report that a substantial amount of additional plutonium could be made available for weapon production if the Department of Defense accelerated the retirement of obsolete warheads as Congress has urged it to do. "[B]y returning to earlier levels of retirements, we can significantly increase the amount of plutonium available for new

[15] "Pre-hearing Questions and Answers Relating to the March 3, 1988 Hearing Before the Subcommittee on Energy and Power Committee on Energy and Commerce (sic)," John S. Herrington, Secretary of Energy at question 10(d).

[16] Id. at 10(b).

weapons production and thereby become less dependent upon production from our reactors."[17] By retiring only 200 warheads out of an inventory of 23,400, we would recover the equivalent of a year's worth of plutonium produced by SIS.[18]

5.2.18 * New Production Reactor: DOE is moving ahead with development of one or possibly two new production reactors capable of producing tritium and weapon-grade plutonium. According to its recent budget submission, DOE expects to have at least one plant on line by 1999.

5.2.13 * Production at SIS Demonstration Facility: DOE is already constructing what former SIS project manager called a "plant scale size" SIS facility at Lawrence Livermore National Laboratory (LLNL).[19] Apparently, the facility at LLNL will have the laser light capacity of a half scale, or possibly full scale production plant. Once completed and tested, the DOE could maintain the SIS facility at LLNL on cold standby and could even stockpile additional separator modules to provide a capability to expand its capacity rapidly. This would provide the additional

[17] "The Plutonium Cushion, Report on U.S. Defense Plutonium Needs and the Hanford N Reactor," Senator Mark O. Hatfield, October, 1987 at 5.

[18] "The Plutonium Cushion, Report on U.S. Defense Plutonium Needs and the Hanford N Reactor," Senator Mark O. Hatfield, October, 1987 at 5.

[19] DOE Proceeding No. 86 D 148, Public Scoping Hearing, Vol. 1 at 18.

redundancy, diversity, and flexibility that is embodied in the Idaho SIS plant and at substantial cost savings. Since SIS is, according to DOE, really an insurance policy, and is therefore unlikely ever to be needed, concerns about turning LLNL into a production center should be minimal. The DEIS completely ignores this alternative.

5.2.16 * Direct Use of Fuel Grade Plutonium in Warheads: Fuel-grade plutonium could be used directly in nuclear warheads without further processing in SIS. For more than a decade strategic warheads have been designed to insure that they will not be rendered ineffective by the neutron flux of ABM warheads, or other warheads aimed at the same target (e.g., where two warheads of a MIRVed missile are aimed at the same target). Fuel-grade plutonium could be substituted for weapon-grade plutonium in modern strategic warheads with this design requirement without additional weapons testing.[20]

[20] Such warheads are designed so that their fission primary is not susceptible to pre-initiation of the nuclear chain reaction. The most straight forward way to do this -- and presumably US strategic warheads are designed in this fashion -- is to design the primary such that the chain reaction is initiated at the moment the fissile material becomes critical, and achieve the desired primary yield through deuterium-tritium boosting. The higher spontaneous fission rate of fuel-grade plutonium would not effect such a design. The only design difference would be due to the small adjustment in the ratio of plutonium to uranium in the primary due to the small increase in the critical mass of fuel grade plutonium over weapon-grade.

C. At a Minimum a Decision to Build SIS Should Be Deferred

2.12.3 We have shown that the U.S. has a more than adequate current and future plutonium supply and production capacity without construction of an SIS facility. But assuming for the sake of argument that it was determined that an SIS facility might be needed at some point in the future, the question becomes whether we should commit to construction now? Viewed from a risk-benefit perspective the inescapable answer is no. By deferring a commitment to construction of an SIS facility pending the outcome of the START negotiations, we run no national security risks and stand to benefit from substantial cost savings.

5.2.15 As we have explained, a START treaty would free up a quantity of weapon-grade plutonium more than two and one-half times as large as the entire output of the SIS plant over its entire seven to eight year mission. In such a circumstance a fiscally-constrained Congress would be hard-pressed to justify further development of SIS. Given the lack of a national security justification for early commitment, economics alone dictates that any commitment to construct SIS should await the outcome of the current START negotiations. In our view any commitment to construct an SIS facility should be deferred for at least one to three years.

2.12.3 What effect would a deferral of one or more years would have on national security? If we achieve a START agreement the answer is none. If no agreement is reached the answer is still none. Assuming the output of the SIS plant is three-quarters of

4.3

a ton annually, a one year deferral would delay the availability of a quantity of plutonium equivalent to less than one percent of the total plutonium stockpile. The plutonium made availabile as a result of INF -- which represents a windfall not considered in previous assessments of the need for SIS -- alone provides an ample cushion to defer a decision for three years. DOE Undersecretary Salgado recently admitted "that a two year moratorium on plutonium production 'would not have a negative impact' on national defense."[21] A one year deferral promises a cost saving in FY89 of several tens of millions of dollars.

Conclusion

2.12.3

There is no national security reason to develop the SIS facility. Congress should eliminate funding for construction of the plant. At a minimum, Congress should defer any commitment to construction of SIS pending the outcome of the START negotiations.

[21] Washington Post, February 28, 1988 at A4.

Appendix I: Effect of INF and START on the NEED for SIS

The current U.S. stockpile of weapon-grade plutonium is about 100 metric tons (MT).[1] About 85 percent of this material is in weapons and the remainder available for weapons. The number of warheads in the U.S. stockpile at the end of 1986 was 23,400.[2] Thus, warheads in the current stockpile contains about 3.6 kilograms (kg) of plutonium on average.[3] On average newer warheads, with high yield-to-weight and yield-to-volume can be expected to contain somewhat more plutonium than older warheads. Assuming the INF Treaty is ratified by the Senate this year, some 520 W50, W84, and W85 warheads will be withdrawn from the active inventory over the 3 year period FY 1989-91. Thus, it is reasonable to assume that 1.8 metric tons (MT) of weapon-grade plutonium will be available from this source, or 600 kilograms per year in FY 1989, 90, and 91.

4.3

Assuming the START treaty is signed in 1989 and ratified in the following year, we can anticipate a net reduction of some 4000 warheads to occur over the six year period FY 1991-96. Thus, it is reasonable to assume that an additional 14 MT of plutonium will be made available, or 2.4 MT per year during FY 1991-96.

2.12.3

[1] A metric ton equals 1000 kilograms.

[2] HASC No. 100-12, FY 1988/89 DOE, p. 48.

[3] 85,000 kilograms/23,400 weapons = ~ 3.6 kilograms.

4.3

As shown in the summary Table 1, INF and START produce two and one-half times as much plutonium as SIS and twice as fast. Thus, if a START Treaty is negotiated the SIS Project looks ridiculous. A more sensible approach is to ask whether existing contingencies permit a postponement of the commitment to the SIS project for at least one year in order to determine whether the START Treaty can be successfully negotiated. The answer is clearly yes.

Table 1

Plutonium Available from INF and START

FOOTNOTES to Table 2

a Assumes C-Reactor permanently shutdown in FY 1986. P-, K-, and L-Reactors available for tritium and supergrade plutonium (3% Pu-240) production. Reactors operating at 50% power in FY 1987-8. No plutonium production at SRP in FY 1989-90. For FY 1986-99 the number of reactors dedicated to tritium production is given in J.S. Allender and L.M. Macafee, "Economic Analysis of the Fuel Production Facility," OPST -84, -420, pp.5,24 and based on the projected tritium requirements given in the 1984 Nuclear Weapons Stockpile Memorandum. Tritium requirements after FY 1992 are reduced in proportion to the number of warheads withdrawn from the stockpile as a consequence of INF and START.

b See Nuclear Weapons Databook, Volume II, U.S. Nuclear Warhead Production, Ballinger publ. Co., 1987 (in press), p. 63.

c Assumes 6 month cooling period.

d Assumes Blending 2 parts supergrade Pu (3% Pu-200) and 1 part fuel grade Pu (12% Pu-240).

e Assumes 31 March 1983 inventory of 16.13 MT, of which some 4 MT is of British origin and unavailable for weapons, 2.9 MT is in FFTF fuel and unavailable due to cancellation of PFM at PUREX. Very little of the British origin plutonium is in FFTF fuel. See Nuclear Weapons Databook, Volume II, p. 77. Available inventory assumes SIS technology is not available.

Table 3

INVENTORY OF DOE FUEL-GRADE PLUTONIUM FOR SIS[a]

TESTIMONY - SPECIAL ISOTOPE SEPARATION PROJECT
March 25, 1988

My name is Philip A. Anderson. I am a resident of Pocatello, Idaho, having lived there for nearly 23 years. Professionally, I am a chemist. Members of the news media here today may recognize me as a Senior Scientist at the INEL, the President-elect of the Idaho Academy of Science, past Chairman of the Idaho Section of the American Nuclear Society, and a member of the Church of the Nazarene. I want to make it clear that I, speaking only for myself today and am not representing any of those organizations.

Given that national defense needs justify the construction and operation of the SIS - and I'll have to accept that by faith, since I certainly don't have access to our nation's strategic defense plans to be able to make an intelligent judgment of that by myself - the facility should be built where the cost to the taxpayers and the environmental impacts are minimized. Given the need for the SIS, which I understand is not a topic of consideration at these hearings, there are several technical and environmental aspects of the SIS that I would like to discuss.

The proposed SIS will utilize new high technology of applied atomic vapor laser isotope separation (AVLIS) techniques. As with any new technology, we can expect spinoff applications. We didn't know in advance that the space race of the sixties and seventies would give us miniature calculators, personal computers, or a myriad of new materials of construction. Similarly, it is really difficult to predict the scope of spinoffs from AVLIS techniques. Certainly, we can expect new advances in obtaining isotopically pure radioisotopes for specialized medical and manufacturing applications. Others, which are more difficult to predict, will certainly follow. Personally, I welcome the opportunity for and the presence of the development of such technology right here in Idaho. 5.27.9.1

Any industrial activity generates waste. The additional volumes of radioactive wastes that will be generated by the SIS are very small compared to those of ongoing nuclear activities already in Idaho. I spend at least 40 hours per week in the immediate vicinity of existing high-level radioactive wastes and am completely comfortable with and confident of the safety of the management of such materials here using current technology. 5.30.5.7 3.2.2

As a chemist, I have worked extensively with alpha-emitting radionuclides, including Pu-238 and less radioactive Pu-239 which is a primary product of the proposed facility. The hazards, while real and significant, simply do not begin to approach the frightening conditions often described in the sensational reports that have recently appeared in our newspapers, especially in letters to editors. 5.24.27

I am familiar with the types of containers required for the shipment of radioactive materials and am very satisfied with levels of protection they provide for credible accident conditions. Recently, after a truck crashed into an Idaho river and released some of its toxic chemical cargo, several people made irresponsible statements that 5.29.41

Exhibit 15

were reported in the news media suggesting that if the truck had been carrying plutonium, the river would have been "poisoned" for tens or hundreds thousands of years. The fact is, had that truck been carrying plutonium or other nuclear materials, the consequences of the accident would not have been significant, because the containers for carrying such materials are designed to maintain their integrity under even much more severe accident conditions. I would much prefer to have such shipments of nuclear materials pass through my neighborhood in Pocatello daily than to have other common and more dangerous shipments, such as gasoline, pass through even monthly. This confidence is based on personal experience with such materials and a first-hand knowledge of their chemical, physical and radiological behaviors. I can't help but notice that these frightening and incredible accident scenarios are proposed by people who, although intelligent and sincere, have not had first-hand experience with nuclear materials, but are simply repeating what they have heard or what they think is the nature of such materials.

5.29.41

I hope that the decision of whether or not to site the SIS in Idaho will be based on actual technical, economic, and environmental merit, and not on emotionally-based negative reports of sincere but technically inaccurate perceptions of the hazards associated with nuclear materials. If the people making the statements about the horrendous dangers of plutonium really have documentable data of such hazards, they should share them directly with the scientists and engineers of the technical community. Not only are we in the position to take corrective action, if they indeed are true, but we have a strong vested interest in our own health and safety. If the dangers are really as severe as they claim, we who work with such materials would be the first to suffer the consequences. The overwhelming conclusion, based on current scientific data and experience to date, is that nuclear materials, including plutonium, can indeed be handled and processed safely using current technology and established safety procedures. On that basis, I personally welcome the construction and operation of the SIS in southeast Idaho.

MULTIPLE USE

SAWTELLE CHAPTER
OUTDOORS UNLIMITED
P O BOX 2342
Idaho Falls, ID 83403

March 25, 1988

Ladies and Gentlemen:

I'm Kathy Bitton and I represent Outdoors Unlimited, Inc., a land user organization. We support the S.I.S. project as a good multiple use of public lands that will benefit all the people of the U.S. and the free world. We support the preferred Alternative of the INEL site for all the obvious local economic and employment benefits. 1.1 5.27.13.2

We want to address the following questions brought up by the Environmental Impact Statement in question. Do we need diversity of site and technology in our defense system? Do we need technological advances?

We feel continued support for a diversifed and strong defense needs to continue to be a major priority for all Americans. This is what the federal government was created for, our defense, not to provide every American a house or job. If we look at events that have taken place in the world the last 10-15 years the USSR continues to export communism and weapons much faster than we support freedom and freedom fighters. They have now established major military bases in Cuba, Vietnam, Libya, and Nicaragua. 75% of which were built by us and used to be a part of our defense. They now circumvent the globe and seriously compromise our ability to "help" should Eastern Europe be invaded. And, there are evidences that that may be what the Soviets have in mind. For example: 3.4

* They have stockpiled 27,000 meters of bridging equipment;

* They have introduced pipeline-laying vehicles that can lay down 50 miles of pipeline a day or nearly enough to sustain the daily military advance of 60 miles called for by the Soviet attack doctrine;

* Motor transport vehicles are kept loaded with ammunition and fuel constantly;

* More than 3 million metric tons of ammuniition have been stockpiled in the western part of the Warsaw Pact- a tactically poor place to store it if it is intended for defense rather than offense;

* Seven air assault brigades have been formed;

* They have produced massive amounts of biological and chemical weapons;

* They have meticulously planned for an overland invasion by using truck drivers who regularly make their way into Western Europe. They have been seen measuring bridges, exploring roads off their routes, photographing military installations, etc.

They also have 2.7 million Warsaw Pact Troops across Eastern Europe. The Soviets alone have 5.8 million men in arms with 9 million in the reserve system who have been on active duty within the last 5 years. At their disposal are 54,000 armored personnel carriers, 42,000 artillery tubes, 52,000 main battle tanks, hundreds of bombers, 700 reconnaissance aircraft, 2,880 fighter interceptors, 2,600 fighter-bombers and ground attack craft and 970 helicopters. In all but the last two catagories, NATO forces are outnumbered, often several times over. (Quoted from Countdown, December, 1987, which quotes an article in Policy Review, Fall 1987, written by US Representative James Courter, R., N.J., member of the Armed Services Committee.)

This adds up to the largest peacetime military buildup in recorded history. It gives them the ability to mount a suprise attack on Eastern Europe. They could have Europe leveled before we could decide if we needed a draft. This brings me to another fact we conveniently forget - Strategy vs Tactics. The USSR's bottom line strategy has always been one world government; theirs; and the tactics they use along the way may seem to be counterproductive to the unaware and decievable.

During the Reagan administration we have been rebuilding a 600 ship navy, which we'll have soon, -which is great- but the Soviets already have that many active, major warships, plus 1200 other combat ships and 300 auxiliaries. Just in their Pacific fleet, they have as many ships as we do in our entire Navy. They achieved parity with the free world years ago, what they seem to want is unquestioned superiority.

Let's not be decieved into thinking that if we roll over, stick our feet in the air and be nice to the world, it will be nice back. It won't - it'll roll over us with it's biggest tank and turn and laugh in our faces. We have now the ability, the freedom to vote on weapons systems, budgets, and defense programs ; however, if we don't stop taking advantage of the process - we'll lose it. Freedom has never been free, it demands responsibility and the willingness to be bought with lives, or it will be lost.

Do we need new technological advances? We say yes!! According to a scientific paper by Lt. Col. Thomas E. Beardon, US Army (Retired), and reported on in Countdown, 4/88, concern was expressed over events that have taken place over the last several decades that indicate the Soviets have been experimenting with technology involving electromagnetic pulse theory in the development of a new weapons system. The concept involves directing a concentrated pulse of electromagnetic waves at a specific target which would result in interfering with that target's capability to function. The use of electromagnetic theory is all around us. Motors, generators, and instrumentation all utilize electromagnetic principles for their operation. Col. Beardon suggests these incidents as being explainable using electromagntic pulse weaponry:

* Fighter pilots in Vietnam reported their planes instrument panel and all systems would unexplainably all shut down all at once.

* The South Korean commercial airline that strayed into Soviet airspace mysteriously crashed for no apparent reason.

* During the space shuttle Challenger's illfated launch, it was observed that the birds usually in the area were not around that day. Scientists state that an electromagnetic pulse would generate a high frequency signal that would cause pain in the bird's small cranium. Could electromagnetic pulses have interfered with the shuttle's control system enough to do such great damage? And put our space program at a stand still? (They are way ahead of us in the space race - but they don't vote on it, either.)

A widely held theory states that if a nuclear warhead is detonated outside the atmosphere, a large electromagnetic pulse would be created that could seriously damage or destroy all hi-tech computer launch and communication capabilities.

The Soviets have ground-based Laser technology and capability to destroy US Satellites in low-earth orbits and damage sensors on satellites orbiting at altitudes of 22,300 miles, say top military officials.

Possible scenario - a couple well placed nuclear warheads to detonate above (not in or on) our cities and stregic sites, and satallite system rendered useless - no communication capabilities, no launch capabilities - we could effectively be taken overnight without a shot being fired.

I realize that the information concerning this weapons system is sketchy and speculative, but, what if the technology for this does exist? What if the weapons themselves exist! It's reported that the concepts exist, scattered around in various physics textbooks, it's just that no one in the US has put them together in one place. Yes, we need new technology and new technological developments for our survival as a free nation.

One side note, I doubt the citizens of the Warsaw Pact vote on whether to allow new technology to happen, or whether their countries will have a certain weapons capability, or can even choose whether they'll work in the factory. If we continue to take our freedoms for granted and refuse to believe the truth and abuse the system we won't have the ability to vote on such vital issues either.

We have, in the S.I.S. Project an opportunity to use US technology that has been developed in the field of Laser processes. In the past, new technology has spawned advances from their initial conception. Ironically, the atom bomb lead the way to the development of the first nuclear reactor. Initial technological processes derived for the fabrication of weapons doesn't always continue to be used in the same manner. The US has always been a leading force in new technologies. Why stiffle our great abilities? Let us continue in our ability to generate new ideas. The S.I.S. is just one use of today's Laser technology, but, it has the potential to birth new and greater uses through its developmnet. Who knows what advacenments might be created by its use, possibly a new way of combating cancer.

5.28.9

5.28.1

5.27.9.3

3.4

As I perpared for this testimony, I read much more pertinent information that time doesn't allow relating but supported the need for a strong defense. The S.I.S. is only one little part but if we take away each little part we eventually destroy the whole.

Let's not allow ourselves to be decieved by our idealistic desir for "peace". With the military buildup and aggressions we see now during "peace time" we're only fooling ourselves if we think we can continue to be "free" to vote on such things unless we're willing to protect ourselves with a strong defense and willing to lay down our lives for our freedoms.

SPECIAL ISOTOPE SEPARATION PROJECT
SITE HEARING

March 25, 1988
Idaho Falls, Idaho

SAFETY SUPPORT

MAKES

INEL BEST FOR SIS

Pro INEL Testimony
Presented By:

John E. Christofferson

6.4.1

One of the most significant events in Idaho history was the siting of the Atomic Research and Testing Facility, currently the Idaho National Engineering Laboratory, in Idaho.

The INEL is a national laboratory dedicated to provide services to the nation. All the projects, some to a higher level than others, have impacted the national best interest. Idaho and the federal government have always been working for us.

As a native Idahoan, I care about Idaho. My mother's family helped pioneer the upper Snake River Plains, while my father's family homesteaded the Pocatello area. Four generations of John Christoffersons currently live in this great state and I'm proud that a large section of Pocatello, the Johnny Creek Area, was named after my father; while many upper valley streets and roads bear my mother's family name.

Along with being proud, I am concerned about Idaho's future and our nation's future. We want to do our part in supporting that future.

As the director of the Eastern Idaho Vocational-Technical School for the past fourteen years, I have watched the community and the INEL forge lasting bonds of support and understanding. I've watched closed doors open and

communications flourish on all levels.

The economy has been strong because of this relationship. The understanding has produced a climate that allowed for all of us to do a better job.

1.1 This hearing, at least it is my understanding, is not one to decide if a nuclear weapon is to be built, it is not to decide World War III, it is not to decide if the SIS is to be built, nor is it to second guess national policy. It is to decide the best and safest location for the SIS project. Studies supporting the feasibility of this area have been made, and it appears this area is best. No environmental impact study finds every condition perfect, but this is best. Economic impact and work force studies indicate this area is equal to or superior to the other proposed sites. The INEL is the best technical choice; the objections appear to be emotional.

5.24.23 Safety is the major consideration. It should be noted there has never
5.29.84 been an injury or personnel contamination by the transportation of radioactive substance at the INEL.

In the past 25 years there have been two fatalities at the INEL. In 1977, two construction workers were killed in a construction site cave-in. No nuclear-related deaths in the past twenty-five years at the INEL. As a matter of fact, if you consider 10,000 average yearly head count of INEL personnel and an average work year of 2,080 hours, that means the INEL has over a half billion hours of nuclear-free safety work experience (520,000,000 hours). If you consider the entire life of the INEL, the number is even greater.

There is one understatable advantage this site has over all other sites. This site has been assisting, over the past fourteen years, in developing a comprehensive group of educational programs specifically designed to make INEL the safest, most productive work force in the nuclear industry.

The majority of these programs are housed at Eastern Idaho Vocational-Technical School. Annually, over 200 safety-oriented technicians receive actual 'hands on' education at the INEL, in addition to their vigorous academic classes prior to employment at INEL. This hybrid education is unique and part of the reason INEL is the best location for the SIS. Some examples of the safety programs are:

The Nuclear Security Training Program graduates facility guards that are taught pro-active ways and means of dealing with safety and security on all appropriate levels, a program with international recognition. INEL

security has always been excellent and it is now reaching even higher levels of security at all facilities.

A Quality Assurance Program provides graduates who guarantee that construction and facility maintenance, as well as and research system construction, are at the optimum of quality. Facility safety is continuously to improving an already basically sound and safe facility. Checking, testing, rechecking, and retesting have become the INEL basic approach to facility construction and maintenance. Over the past fourteen years I could not find any injury caused by a facility failure. I believe, because of INEL's dedication to quality, and because of the highly trained technical Quality Assurance personnel trained in the cooperative Quality Assurance Program, qualified highly-skilled workers will be available for INEL employment and the SIS project.

The Process Technology Program is unique. It addresses the technical and safety aspects of complicated processes. It equips graduates to safely assume the technical support roles required in current projects at the INEL, as well as the technical support for the SIS project. The qualified, safety-oriented workforce adds an element of environmental and workforce safety not available at other proposed sites. Secondly to safety, but certainly important, is cost savings and productivity of a qualified, specifically trained workforce brings to the INEL Site for the SIS project.

Safety and security are important in all industries, but in the nuclear industry, it is extraordinary. Safety must exist in all work with radioactive material and in all work environments involving all employees, regardless of duties.

Equally important is the safety of all of us, on site or off site. Water, air, and the general quality of the environment must be assured. Heavy elements are dangerous. That's why special safety is required for such elements as lead, as well as plutonium. There are some comforting facts that should be noted when discussing handling heavy elements.

Dr. Chester "Chet" Richmond, Mr. Plutonium, Oakridge Association of Universities has researched the Plutonium Register (all persons ingesting plutonium) starting with the original 26 workers in the 1940's until today. His research clearly indicates there has never been a carcinoma (cancer) caused by the ingestion of plutonium. This is an exceptional safety record for all DOE sites; and the SIS process sited at the INEL will be the cleanest, neatest, and safest technology to be used. Plutonium can be handled safely.

5.24.27

6.1.1

To assure continued safety, a nationally acclaimed Radiation Safety Program has been developed that provides technical support in all aspects of the radiation workplace.

Sampling, monitoring, decontamination, and work-site preparation and control are only part of this comprehensive program developed and perfected over twenty years of concerned efforts.

No other site proposal has a safety program that trains radiation workers to the quality level available for the INEL and the SIS project.

A new noteworthy project is site-wide. The majority of site contractors have worked together to develop the highest level, uniform safety orientation, respiratory training program currently available anywhere. It is new, it is innovative, it is cost effective, and it is an example of proaction to bring safety to still a higher level at the INEL. All construction workers working in the SIS project at INEL will be completing this new safety program.

I believe all sites could hire and import those engineers and scientists required by the SIS. I believe most are already here at the INEL. But the backbone of any project is the 80% who are the technical support personnel.

The safety, technical expertise, productivity, and job readiness can be assured for the SIS project throughout the INEL and the educational support system; particularly with the unique working relationship that exists between the local technical school and its specific support programs of the INEL. It is our collective desire to be the highest safety, highest quality, and lowest cost facility in the industry.

When deciding a site, the best site, the basic workforce, its talents, training, and attitude is unquestionably the most important ingredient. We have the workforce here in southeast Idaho.

The SIS technology, in its current context, does produce weapons-grade plutonium; there is a current need to produce plutonium according to informed officials, hopefully in ten years from now the demand might be less.

But as the SIS technology is studied, the discriminating capability of the SIS lazer can be used for separating isotopes to such exacting parameters, who can fully imagine what undiscovered materials might be found that will improve our health, our lifestyle, our world, and our understanding of it.

The SIS is one step in the technological maturity of our world. Let's move forward with the SIS here and now at the INEL.

E019

Exhibit 19

SIS Hearing
Idaho Falls, Idaho March 25, 1988
Clark L. Collins, President & Executive Director

The BlueRibbon Coalition represents over fifty organizations in the Western United States, nineteen of which are in Idaho. While our primary concern is access for recreation on our public lands, we are very concerned also about our national defense. Recreation is of very little concern to a nation at war. We feel that having a strong nuclear deterrent, of the very latest in nuclear weapons, is the only thing that keeps us from becoming involved in another World War. We live in an imperfect world, where a weak national defense invites disaster, and could likely bring a war to our very own shores. 3.4

There is strong support in Idaho for the jobs that this project would bring. We too support it for that reason, and as a construction worker myself, I would like to counter the argument that most of the work would be done by out of state workers. We have a large, well trained, construction labor pool in Idaho, that would comprise the bulk of the work force to build this facility. Some of the workers may come from neighboring states that have shared their work with us in the past. The majority of the work, however, will likely be done by Idaho construction workers, and I am proud to be a part of that work force. 1.1 5.27.7.4 5.27.7.11

We have heard much recently from the critics of the Special Isotope Separation Project being considered for the Idaho National Engineering Laboratory. Their concern for our environment and the threat of a nuclear holocaust must certainly be considered. While we disagree with their viewpoint, we need such groups to make us aware of the possible problems with projects such as this. They make us more cautious, and have helped make our nuclear industry one of the safest in the world. We should listen to their criticism, address their concerns, and proceed with this project that is critical to our national defense. 2.10 2.7.8

It is interesting to note that the same groups seeking to lock up our natural resources in designated Wilderness are now advocating the weakening of our national defense. The Sierra Club, Idaho Conservation League, and other elitist environmental organizations have targeted this project for defeat. The Snake River Alliance is likely just a front group for their involvement, and most likely is funded by them. They would have us all return to a simpler time of foot and horse travel and conventional weapons for our national defense. I can't help but wonder where they would be if it became necessary to defend our shores with conventional weapons, as we would likely have to do, were it not for the deterrent of the most up to date nuclear weapons. 5.24.6

The advanced technology of this project will undoubtedly have other benefits in nuclear research. Much of the opposition is likely blind opposition to anything nuclear. Can you imagine trying to develop electrical energy in this country against the opposition of these same doom's day predictors. Their opposition to hydro, and nuclear power plant projects is well known. Can you imagine trying to gain approval for the high voltage electrical transmission lines that cross our nation today. They would have us trying to live by torch light without being able to cut the trees for torches. 5.27.9.1

We all need constructive criticism, and for that we thank those opposed to this project. It is good that we are not a nation of yes men that agree with everything our government does. We do need to carefully consider our impact on this planet. It is however a politically hostile world, where only the strong survive. We need the SIS for our national defense. We need the SIS for the spin off technology that will result from it. It should be built here because the INEL is the most economical and environmentally sound location for it.

Thank you.

EC19A

19a

Council

I am Roy Miller, representative of the Eastern Idaho on Industry and Energy. This organization has been active in Southeastern Idaho for a number of years. Our primary purpose is dedication to the orderly development of energy which will ensure the timely expansion of industrial and business activity. Our membership is comprised of a cross section of the population; small business people, labor union members, government employees and educators to name a few. We are continually striving for availability of employment for those persons who wish to live in this area.

5.27.7.16
5.24.23

The SIS will add to this pool of employment so vitally needed by the area in order to maintain economic stability. This growth will be within the parameters of the high level of safety and operation which the INEL has always shown.

2.5.3

We have examined the Special Isotope Separation-Environmental Impact Statement. We are firmly convinced that the report was completed by a group of very qualified and reputed people. The report objectively evaluates the impacts on the environment of using the latest laser technologies in separating desirable isotopes, including those of plutonium, at a more economical rate than presently used processes while at the same time providing technological diversity in achieving the crucial and desired product.

2.1.1

In examining the Special Isotope Separator-Environmental Impact Statement draft, we noted that particular attention was focused on national defense policy (including non-proliferation), socio-economic impacts, waste management techniques, environmental concepts including aquifer and air quality and transportation methods.

It has been shown to our satisfaction that the impacts of this SIS project during construction and subsequent operation are improvements over the status quo.

5.28.2
2.2.1

The SIS applies a safe, advanced technology which first, reduces and confines the risk of existing waste problem and second, provides an economical, long-term supply of material necessary to the integrity of the U.S. defense posture.

The Idaho National Engineering Laboratory in Southeast Idaho is uniquely qualified to implement this technology. Idaho National Engineering Laboratory scientists are experienced in careful application of new processes, development of material technologies and safeguards and, particularly, in more safely caring for wastes that may be harmful to the environment. They have many technological "firsts" -- electric power from the atom, development and training of the nuclear navy, development of advanced materials and fabrication processes, volume reduction and phase transformation of hazardous wastes, to name a few.

5.24.23

Historically, the Idaho National Engineering Laboratory has an enviable safety record and proven techniques for managing radioactive wastes.

1.1

We can only reiterate our support and urge the construction and operation of the project at the INEL.

PREPARED STATEMENT TO BE PRESENTED AT PUBLIC HEARINGS ON THE SIS PROJECT DRAFT ENVIRONMENTAL IMPACT STATEMENT

PRESENTED BY:

JON F. WALTERS
INTERNATIONAL VICE PRESIDENT
EIGHTH DISTRICT, IBEW

P.O. BOX 1216 / IDAHO FALLS, IDAHO 83405 / 208-529-6555

1.1

My name is Jon F. Walters, I live at 126 North 800 West, Blackfoot, Idaho, I am a lifetime resident of Idaho and I rise to speak in support of the SIS Project at INEL.

I have spent many years working at the INEL Site as an electrician, and member of the International Brotherhood of Electrical Workers. I am testifying today on behalf of the Labor Movement in Idaho.

5.24.23

I have had the privilege of working on many projects at various locations at INEL for approximately 15 years; locations such as EBR II, ATR, ETR, MTR, PBF, CPP, EBOR, Tan, Loft and for Westinghouse, itself at NRTS.

I have worked in radiation areas such as the hot cell area, the reactor compartments, the burial tanks, all at INEL and I am very much aware of the safety requirements and how stringent DOE is on safety, not only by the Department of Energy, but also by the operational contractors and construction contractors at the INEL Site. I am not alarmed nor am I worried about safety at the INEL.

I want to begin my remarks by repeating that I'm speaking on behalf of Idaho labor and the working people of this Country.

I was selected to speak today by Idaho labor representatives and as an elected official of the International Brotherhood of Electrical Workers in the capacity of International Vice President of the Eighth District covering the States of Colorado, Utah, Idaho, Wyoming and Montana. I am indeed obligated to speak on their behalf.

P.O. BOX 1216 / IDAHO FALLS, IDAHO 83405 / 208-529-6555

273

I do not speak as a novice as far as the Nuclear Industry is concerned, the IBEW represents the employees in 90% of the nuclear generation facilities across this Country and we in the IBEW are in total support of any and all advances in nuclear technology. The SIS represents a prime example of technology that is currently in a rapid state of advancement. In the IBEW, we have approximately 15,000 members presently working in nuclear facilities across this continent, 2,000 of these employees are women. I point this out to illustrate that we in the IBEW are knowledgeable and very much aware of the safety and the positive contributions the Nuclear Industry contributes to the Nation as a whole.

But here we are again today, back in the old standard inflamed debate on Nuclear weaponry, the question of arms proliferation and the proposition that the Nuclear Industry is an environmental disaster and a dire threat to this great Country. If we were to accept this worn and tattered theory it would put us in a position where we would be at the mercy of all the other world powers which none of us could tolerate. 4.5

As proposed, the SIS Project is needed to sustain our nuclear deterrent as an alternative source by separating production plutonium to weapons grade plutonium rather than depending on that old method of production reactors. We are not talking about making bombs at INEL and we are not talking about making plutonium. We are addressing the proposition of separating the plutonium we already have into a weapon grade of plutonium and that is all we are talking about here today. 3.4 2.2.15

The United States Congress has enacted legislation which provides funding for SIS and it will be built. Yes, it will be built somewhere because Congress believes it is needed, the question we face is whether it will be built here in Idaho or at Hanford, or in Georgia.

Now, after saying that, we can get back to the issue of today - does Idaho's economy need an industry that can offer some 750 permanent jobs and also offer to the surrounding communities, millions of dollars annually in the way of taxes and more millions in the way of commerce and in the purchase of goods? 5.27.6.1

Can we seriously consider disregarding the advantages to be gained in sustaining the working people and local businesses of the area and of this State? 6.1.2

As has been true in the past, down through all the years of American history, the developing of an industry requires a degree of calculated risk. All progress involves some risk, for example, consider the times as they were when they invented the automobile, many risks were involved and there was a lot of opposition, but progress demanded the development proceed even as here today there is opposition, all progress involves debate, risk and opposition. Those that seek to go forward must find a way to overcome the opposition. 6.2

I only wish that together we could manage to debate this issue on locating the program on the basis of problem solving rather than on the basis of problem seeking.

2.1.1 I have taken the time to examine this project closely by studying the Environmental Impact Statement which has been assembled and I have come to believe that a good job has been done in developing this document. I have found careful study and scrutiny relieves a lot of the fears and concerns the average person has in respect to SIS. I, like many others, and most working people, are environmentalists at heart although I am sure some people will say you are not environmental thinkers and therefore, you are not an environmentalist if you support a project like SIS. I steadfastly disagree with this presumption; I am personally acquainted with a very large number of working people employed at the INEL, I know that many of the working people at the INEL Site for the many various contractors and operators are indeed environmentalists in their own right and proud to be.

So, I say, we as working people have examined this project closely, we know that proper safeguards are in place and will be improved upon as the project develops and we believe that many of the problems involved have already been resolved and the other problems that everyone seems to want to debate and then debate some more, can continue into the next century until the Nations of the world agree to stop building nuclear

P.O. BOX 1216 / IDAHO FALLS, IDAHO 83402 / 208-529-6555

weapons and, as I stated before, this will come only when all of the world powers have reached a common agreement. I do truly pray it will come in this century, but until that day, we must face reality.

6.4.1 Astounding advances have been made in the pursuit of the science of nuclear energy and many have been advanced at the INEL Site right here in Southeast Idaho, and I say Idahoans should develop, support and operate the SIS Project, not only for the image of Idaho and for the jobs it will create and the economy it will bolster, but also for this Nation and its National Defense for the United States of America.

4.5 SIS is a vital project that is needed and should be developed here at the INEL Site.

Colorful rolling plains and giant pristine mountains are wonderfully pleasing to the eye but, unfortunately, they cannot feed a family, pay college tuitions, purchase a home or insure financial stability for the businesses and for the workers of the State of Idaho and I say we should all stand in unison and say **"Yes on S.I.S."** repeatedly. 1.1

We desparately need this industrial development project; lets all demonstrate our support and go forth with SIS as we have before with so many projects in the past here in Idaho by a resounding support of our National Defense, our Country and the State of Idaho, and lets convince DOE it should build SIS right here at the INEL.

P.O. BOX 1216 / IDAHO FALLS, IDAHO 83405 / 208-529-6555

E021

Exhibit

5.24.23

I am Dr. Richard Sagness, President of the Greater Pocatello Chamber of Commerce. This organization has been a leader in supporting positive economic development and a better quality of life for eastern Idaho citizens for many years.

I would like to indicate at the outset that the Greater Pocatello Chamber of Commerce is not just interested in obtaining jobs at any cost: environmental, socioeconomic, or other. We live here, we love this area, and we are certainly not interested in intentionally doing anything which will harm the area. On the other hand, projects at the INEL or in other locations which meet reasonable environmental safeguards and which provide assurances of safety to workers and residents are certainly important to the continuing welfare and development of our region and state.

275

1.1
2.5.3

The Greater Pocatello Chamber of Commerce has carefully reviewed the Draft Environmental Impact Statement for the Special Isotope Separation Project and has determined that the project is worthy of our full support. It is our opinion that the report was completed by a group of technically competent and reputable individuals. The report evaluates fairly and objectively the effects on the environment of using advanced laser technology in separating desired isotopes, primarily plutonium, in a more cost effective manner than is presently available. It is our opinion that, although this project is primarily directed at plutonium separation, future technological spin-offs hold the potential for significant positive benefits for the area.

2.1.1

5.27.9.1

It is also clear to us that vendor support and other types of support services for the project can make major contributions to the economy of the area.

6.4.1

5.27.11.3

Eastern Idaho has a strong and stable work force to support the SIS project. One of the great strengths of our area is its people and their strong work ethic. As the report indicates, there should be very adequate labor available to complete the construction phase of the project with a positive socioeconomic impact. Although

many of the technical personnel to operate the project may come from outside the area, it appears to us that the type of personnel, the aggregate number, and the manner in which they will be added will make positive assimilation without major disruption to city and county services likely. Impacts on housing and schools appear to be minimal. Using the Pocatello area as an illustration, there are currently approximately 700 single unit dwellings available at an average price of $53,000. There is a good availability of multiple unit housing with desirable two bedroom apartments beginning at $200 per month. The Pocatello public schools can accommodate several hundred additional students without major disruption to facilities or staff. Certainly Idaho State University is in a position to not only serve in a scientific and technological support role to the project, but to accommodate the higher education needs of project personnel and their families.

5.27.11.1

We are not going to go over, point by point, the various issues which have been addressed in our review of this project. This has been done very systematically and objectively in the EIS report. It is sufficient to indicate that it has been demonstrated to our satisfaction that the impacts of the SIS project during construction and subsequent operation will have a net positive effect on eastern Idaho, the state, and the region. It also appears to us that the project applies a thoroughly researched and safe advanced technology for the reduction and confinement of risks associated with an existing waste problem and provides an economical long-term supply of materials necessary to the integrity of United States defense systems. The SIS project is one which can benefit Idaho and the nation and in this sense we are pleased to provide our full support.

5.27.6.1

5.28.2

In conclusion, the Idaho National Engineering Laboratory and its employees have been an important and positive part of eastern Idaho for many years. The scientists and support personnel are competent, skilled, and experienced in the application of new technological processes, the development of materials technology and safeguards,

2.2.1

5.24.23

and in safely caring for wastes that have the potential for harm to the environment. The INEL has an excellent safety record and has proven through the test of time their capability in managing radioactive wastes. The INEL is a good neighbor and there is a high level of support and trust which exists between the people of Pocatello and eastern Idaho as it relates to the site, its personnel, and its operations.

In closing, I would only emphasize again the support of the Greater Pocatello Chamber of Commerce for the construction and operation of the Special Isotope Separation project at the Idaho National Engineering Laboratory.

Thank you for your attention and positive consideration of my remarks.

Provided in testimony on Friday, March 25, 1988 in Idaho Falls, Idaho.

Richard L. Sagness, Ph.D.

"YES on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

"YES on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

Good Work, Gentlemen,
We are all for progress,
especially in jobs and
education. Idaho has a lot
to offer.
Thanks
Lynn

"YES on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

"YES on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

"YES on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

"YES on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

"YES on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

"YES on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 18, 1988.

Dear Friends,

Please help Idaho win the $937,000,000 SIS Project. Enclosed are petitions and a short explanation of their purpose. Would you please ask your employees, family, and friends to sign them and perhaps have additional copies made for further participation on the part of their friends. All Idahoans, as well as our national defense will benefit.

A check for two dollars ($2) to defray costs of printing, mailing, and media promotion would be appreciated.

Thank you. Please make check payable to "YES ON SIS" Committee.

Very truly yours,

"YES ON SIS" COMMITTEE

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee

Please return petition by March 7, 1988

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

We welcome your testimony for the SIS at the SIS Hearings. Watch your local newspaper and listen to the radio for schedule and place.
We ask you to sign the petition only if you are 18 years of age, or older. Also, to prevent duplication, please sign only one petition.
Please return your signed petition as soon as possible to your petition coordinator, or mail to:

Dane Watkins
2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

We welcome your testimony for the SIS at the SIS Hearings. Watch your local newspaper and listen to the radio for schedule and place.

We ask you to sign the petition only if you are 18 years of age, or older. Also, to prevent duplication, please sign only one petition.

Please return your signed petition as soon as possible to your petition coordinator, or mail to:

Dane Watkins
2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.
