Notes:

<sup>(1)</sup> The required weight for an individual armor unit (for 2.3-foot design wave) is 72 pounds on a 3:1 slope and 22 pounds on a 10:1 slope (Hudson Formula, U.S. Army Corps of Engineers, 1977. "Shore Protection Manual").

bcy = bank cubic yards

lcy = loose cubic yards

ls = lump sum

sf = square feet

sy = square yard

**Table E-12. Soil Alternatives - Shoreline Protection Cost Detail** *(continued)*

Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Notes (continued):

Shoreline Protection Quantities (Rock Revetment):

|                                |           |           |                                                                   |
|--------------------------------|-----------|-----------|-------------------------------------------------------------------|
| Length of Protection           | 2,400 ft  | 2,400 ft  | total length for rock revetment                                   |
| Width of Protection (average)  | 48 ft     | 48 ft     | 48' wide strip                                                    |
| Volume of excavation (average) | 4.4 cy/lf | 10,560 cy | 4.4 cy/lf @ 2.5'depth                                             |
| Crushed gravel backfill        | 0.4 cy/lf | 1,056 cy  | 3" thick                                                          |
| Geotextile fabric              | 6.4 sy/lf | 15,360 sy | 5' additional each end for anchorage                              |
| Riprap (2 layers, 72 # units)  | 2.9 cy/lf | 6,960 cy  | 165 pcf rock weight, 38% voids, 1.6' layer thickness              |
| Sand                           | 2.2 cy/lf | 5,280 cy  | 0.65' layer thickness plus fill voids in rock layer (38% of 1.6') |
| Disposal quantity              | 5.9 T/lf  | 14,256 T  | assume 100 pcf = 1.35 t/cy                                        |

Overburden Removal Quantities:

|                                |           |           |                                                                 |
|--------------------------------|-----------|-----------|-----------------------------------------------------------------|
| Length of Protection           | 3,360 ft  | 3,360 ft  | assumes 70% of shoreline protection requires overburden removal |
| Volume of excavation (average) | 3.0 cy/lf | 10,080 cy | (to achieve design slope; 3:1 in existing narrow/steep areas;   |
| Disposal quantity (average)    | 4.1 T/lf  | 13,608 T  | 10:1 in gradually sloped/wide areas)                            |

Shoreline Protection Quantities (Natural Materials with Underlying Rock Armor):

|                                |            |           |                                                                  |
|--------------------------------|------------|-----------|------------------------------------------------------------------|
| Length of Protection           | 2,400 ft   | 2,400 ft  | total length for hybrid stabilization                            |
| Width of Protection (average)  | 90 ft      | 90 ft     | 90' wide strip                                                   |
| Volume of excavation (average) | 8.3 cy/lf  | 19,920 cy | 4.4 cy/lf @ 2.5'depth                                            |
| Crushed gravel backfill        | 0.8 cy/lf  | 1,992 cy  | 3" thick                                                         |
| Geotextile fabric              | 11.1 sy/lf | 26,640 sy | 5' additional each end for anchorage                             |
| Riprap (2 layers, 22 # units)  | 3.5 cy/lf  | 8,400 cy  | 165 pcf rock weight, 38% voids, 1.05' layer thickness            |
| Sand                           | 5.3 cy/lf  | 12,720 cy | 1.2' layer thickness plus fill voids in rock layer (38% of 1.6') |
| Disposal quantity              | 11.2 T/lf  | 26,892 T  | assume 100 pcf = 1.35 t/cy                                       |

|    |                       |         |                                                                                                                                                                 |
|----|-----------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|

Notes:

<sup>(1)</sup> Confirmation soil samples will be collected from both the sidewalls and bottom of each excavation with the following frequency:

Two sidewall samples (one shallow and one deep) will be collected on each sidewall for every 15 feet of excavation perimeter.

Bottom samples will be collected every 225 square feet, or at least one per excavation.

<sup>(2)</sup> Alternative S-3 includes excavation of Tier 1 locations (with COCs at concentrations greater than 10 times the remedial goals) and TPH locations (exceeding the TPH source criterion)

<sup>(3)</sup> Excavations are adjacent buildings and are not uniform in shape in order to protect building footprint.

Notes:

<sup>(1)</sup> Confirmation soil samples will be collected from both the sidewalls and bottom of each excavation with the following frequency:

Two sidewall samples (one shallow and one deep) will be collected on each sidewall for every 15 feet of excavation perimeter.

Bottom samples will be collected every 225 square feet, or at least one per excavation.

<sup>(2)</sup> Alternative S-4 includes excavation of Tier 1 and Tier 2 locations (with COCs at concentrations greater than 5 times the remedial goals) and TPH locations (exceeding the TPH source criterion)

<sup>(3)</sup> Excavations are adjacent buildings and are not uniform in shape in order to protect building footprint.

General Assumptions:  
Pilot study required to determine radius of influence for selection of appropriate sparge and extraction and sparging well spacing  
Sparge well spacing assumed to be approximately 50 feet  
Assumed 16 sparge and 32 extraction wells required

|    |                       |         |                                                                                                                                                                   |

Notes:

<sup>(1)</sup> Appended tables summarize backup calculations for all cost estimates provided

<sup>(2)</sup> Period of analysis assumes the base year is 2010

<sup>(3)</sup> Total cost includes a 20 percent contingency factor

<sup>(4)</sup> Based on a 2.7% discount factor for projects with a 30 year (or greater) duration, as specified for Federal facility sites in Appendix C of Office of Management and Budget Circular A-94 (effective December 2008) at [http://www.whitehouse.gov/omb/circulars/a094/a94\\_appx-c.html](http://www.whitehouse.gov/omb/circulars/a094/a94_appx-c.html)

GW-1: No Action (Retained [as required by the NCP] to provide a baseline for comparison to other alternatives)

GW-2: Institutional Controls and Long-Term Groundwater Monitoring

GW-3A: In-Situ Bioremediation, Monitored Natural Attenuation, and Institutional Controls

GW-3B: In-Situ Bioremediation, Zero Valent Iron Reduction, Monitored Natural Attenuation, and Institutional Controls

GW-4: Groundwater Containment, Air Sparging, In-Situ Bioremediation, Monitored Natural Attenuation, and Institutional Controls

|                                               | Total Design Cost                                                                    |                                            |          |              | \$ 68,035  |                                                                                                              |

General Assumptions:  
On-site mixing pad/staging area will be used.  
Slurry wall will be comprised of a 90% soil / 10% bentonite mixture  
Import soil will be used to construct slurry wall

Notes:

<sup>(1)</sup> Appended tables summarize backup calculations for all cost estimates provided

<sup>(2)</sup> Period of analysis assumes the base year is 2010

<sup>(3)</sup> Total cost includes a 20 percent contingency factor

<sup>(4)</sup> Based on a 2.7% discount factor for projects with a 30 year (or greater) duration, as specified for Federal facility sites in Appendix C of Office of Management and Budget Circular A-94 (effective December 2008) at [http://www.whitehouse.gov/omb/circulars/a094/a94\\_appx-c.html](http://www.whitehouse.gov/omb/circulars/a094/a94_appx-c.html)

GW-1: No Action (Retained [as required by the NCP] to provide a baseline for comparison to other alternatives)

GW-2: Institutional Controls and Long-Term Groundwater Monitoring

GW-3A: In-Situ Bioremediation, Monitored Natural Attenuation, and Institutional Controls

GW-3B: In-Situ Bioremediation, Zero Valent Iron Reduction, Monitored Natural Attenuation, and Institutional Controls

GW-4: Groundwater Containment, Air Sparging, In-Situ Bioremediation, Monitored Natural Attenuation, and Institutional Controls

General Assumptions:  
Pilot study required to determine radius of influence for selection of appropriate sparge and extraction and sparging well spacing  
Sparge well spacing assumed to be approximately 50 feet  
Assumed 16 sparge and 32 extraction wells required

General Assumptions:  
On-site mixing pad/staging area will be used.  
Slurry wall will be comprised of a 90% soil / 10% bentonite mixture  
Import soil will be used to construct slurry wall

Notes:

1. Cost estimates for ERH implementation provided by Current Environmental Services, LLC. And Thermal Remediation Services, Inc. - January, 2009. Assumes that work will be phased to optimize NAPL extraction, control capital costs, and control energy costs.

2. Does not include cost to perform steaming as a polishing step (one year duration)

3. Does include cost to perform steaming as a polishing step (additional 6 month duration)

General Assumptions:  
Work will be performed in Level D PPE  
Excavation dewatering will be implemented as needed using a skid-mounted pump through dewatering points  
Water from decontamination and dewatering activities will require treatment and discharge to a sanitary sewer line, or to the San Francisco Bay under NPDES permit  
Dewatering and treatment volume estimates provided in worksheet "DEWATER"  
Stripped landfill cap can be used as fill material  
Finish grade will slope evenly from north to south; backfill volume estimated by proposed grading plan, and includes a 20% contingency and a 20% fluff factor to account for compaction and consolidation  
Assumed soil density of 1.4 ton/cy

| TOTAL COST PER CY OF SOIL EXCAVATED =                               |                             |      |            | \$ 262        |                                                                                                                                                                                    |

General Assumptions:  
Work will be performed in Level D PPE  
Excavation dewatering will be implemented as needed using a skid-mounted pump through dewatering points  
Water from decontamination and dewatering activities will require treatment and discharge to a sanitary sewer line, or to the San Francisco Bay under NPDES permit  
Dewatering and treatment volume estimates provided in worksheet "DEWATER"  
Stripped landfill cap can be used as fill material  
Finish grade will slope evenly from north to south; backfill volume estimated by proposed grading plan, and includes a 20% contingency and a 20% fluff factor to account for compaction and consolidation  
Assumed soil density of 1.4 ton/cy

Notes:

<sup>(1)</sup> Appended tables summarize backup calculations for all cost estimates provided

<sup>(2)</sup> Period of analysis assumes the base year is 2010

<sup>(3)</sup> Total cost includes a 20 percent contingency factor

<sup>(4)</sup> Based on a 2.7% discount factor for projects with a 30 year (or greater) duration, as specified for federal facility sites in Appendix C of Office of Management and Budget Circular A-94 (effective December 2008) at [http://www.whitehouse.gov/omb/circulars/a094/a94\\_appx-c.html](http://www.whitehouse.gov/omb/circulars/a094/a94_appx-c.html)

**Notes:**

In the Final FS Report for Parcel E, a 2-foot thick soil cover was assumed at Redevelopment Blocks EOS-1 through EOS-5 for soil alternatives S-2 through S-4. Since these Redevelopment Blocks encompass all of IR-02 and IR-03, no additional soil cover costs are presented in the Radiological Addendum to avoid duplication. Radiological Alternative R-3 includes a 3-foot soil cover to offer additional protection from residual radioactivity; therefore, the soil cover costs for IR-02 and IR-03 reflect the costs of construction an additional foot of soil cover (from 2 feet to 3 feet). These costs are limited to IR-02 and IR-03, rather than all of Redevelopment Blocks EOS-1 through EOS-5.

## Section 5. Detailed and Comparative Analysis of Remedial Alternatives

This section provides a detailed analysis of each remedial alternative developed in [Section 4](#), followed by comparative analysis. This information will be used to help select a final remedy for Parcel E. The alternatives developed in [Section 4](#) are evaluated using criteria based on statutory requirements of CERCLA as amended by the Superfund Amendments and Reauthorization Act, Section 121; the NCP; and “Guidance for Conducting Remedial Investigations and Feasibility Studies Under CERCLA” (EPA, 1988).

The NCP specifies nine criteria to be used in the detailed analysis. The first two criteria are threshold criteria that must be satisfied in order for a remedy to be eligible for selection; the next five criteria are balancing criteria used to evaluate the comparative advantages and disadvantages of the remedial alternatives; and the final two criteria are modifying criteria generally considered after regulatory agency and public comments are received on the Proposed Plan. The nine criteria are listed below.

1. **Overall Protection of Human Health and the Environment:** This criterion describes how each alternative, as a whole, protects human health and the environment and indicates how each hazardous substance source is to be eliminated, reduced, or controlled.
2. **Compliance with ARARs:** This criterion evaluates each alternative’s compliance with ARARs, or, if an ARAR waiver is required, how the waiver is justified. ARARs consider location-specific, chemical-specific, and cleanup action-specific concerns.
3. **Long-Term Effectiveness and Permanence:** This criterion evaluates the effectiveness of each alternative in protecting human health and the environment after the response action is complete. Factors considered include magnitude of residual risks and adequacy and reliability of release controls.
4. **Reduction of Toxicity, Mobility, or Volume through Treatment:** This criterion evaluates the anticipated capability of each alternative’s specific treatment technology to reduce the toxicity, mobility, or volume of hazardous substances.
5. **Short-Term Effectiveness:** This criterion addresses the effectiveness of each alternative in protecting human health and the environment during the construction and implementation phase. Factors considered include:
  - Exposure of the community during implementation
  - Exposure of the workers during construction

- Effects to the environment (as supported by the green and sustainable remediation [GSR] analysis in [Appendix F](#))
  - Time required to meet the RAOs
6. **Implementability:** This criterion addresses the technical and administrative feasibility of implementing an alternative and the availability of the required services and materials during its implementation. Factors considered include:
- Ability to construct the technology
  - Reliability of the technology
  - Monitoring considerations
  - Availability of equipment and specialists
7. **Cost:** This criterion evaluates the capital and O&M costs for each alternative. Capital and O&M cost estimates are order-of-magnitude-level estimates and have an expected accuracy of minus 30 to plus 50 percent ([EPA, 2000b](#)). [Table 5-1](#) summarizes the capital cost for each alternative.
8. **Community Acceptance:** This criterion evaluates issues and concerns the public may have regarding each alternative. This criterion will be assessed following receipt of public comments on the FS Report and the Proposed Plan.
9. **State Acceptance:** This criterion evaluates technical and administrative issues and concerns the state regulatory agencies may have about each alternative. This criterion will be assessed following receipt of regulatory agency comments on the FS Report and the Proposed Plan.

In the following sections, each remedial alternative is compared with the two threshold and five balancing NCP criteria, and subsequently compared with the other alternatives to assess their relative performance with respect to the NCP criteria. Comparison with the two modifying criteria of community and state acceptance will be included in the Proposed Plan; further discussion of these criteria is not included in this FS Report. Section 5.1 provides a detailed analysis of each soil remedial alternative, and [Section 5.2](#) provides a comparative analysis of the soil remedial alternatives. [Section 5.3](#) presents a detailed analysis of each groundwater remedial alternative, and [Section 5.4](#) provides a comparative analysis of the groundwater remedial alternatives. [Section 5.5](#) presents a detailed analysis of each NAPL remedial alternative, and [Section 5.6](#) provides a comparative analysis of the NAPL remedial alternatives.

### 5.1. DETAILED ANALYSIS OF SOIL ALTERNATIVES

This section compares each soil alternative with the two threshold and five balancing NCP evaluation criteria. [Table 5-1](#) summarizes the costs for each alternative, and [Table 5-2](#) summarizes each alternative's rating under the seven NCP evaluation criteria. The ranking categories used in [Table 5-2](#) and in the discussion of the alternatives are (1) protective or not protective, and meets ARARs or does not meet ARARs, for the two threshold criteria; and (2) excellent, very good, good, poor, and not acceptable for the five balancing criteria.

|    |                             |               |                                                                                                                               |

**Table 4-8. Actions to be Addressed in Remedial Design for Parcel E**  
Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

| Alternatives                 | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| S-2, S-3, and S-4            | Evaluate the extent of maintenance, upgrades, or repairs to the existing covers.                                                                                                                                                                                                                                                                                                                                                                                          |
| S-2, S-3, and S-4            | Develop cover performance standards and finalize cover design to address potential exposure to radionuclides and COCs in soil. Specifically, include plans for a performance standard for completion near the seawalls, as well as inspection, maintenance, and identification of problems. The RD would address (1) drainage to prevent erosion and standing water, (2) maintenance, and (3) methods for completion of the cover near the shoreline protection features. |
| S-2, S-3, and S-4            | Present engineering design details for geotechnical stabilization measures (such as a geosynthetic reinforcement material) to ensure stability of the shoreline protection and refine conceptual design as necessary.                                                                                                                                                                                                                                                     |
| S-2, S-3, and S-4            | Evaluate if additional characterization of potential subsurface methane at oil reclamation ponds (IR-03) and disposal trenches (IR-12) is warranted.                                                                                                                                                                                                                                                                                                                      |
| S-2, S-3, and S-4            | Prepare detailed excavation and sampling plans for removal of buried fuel lines (IR-47) and steam lines (IR-45).                                                                                                                                                                                                                                                                                                                                                          |
| S-3 and S-4                  | Perform pre-excavation characterization of hot spots and exceedances and further refine preliminary excavation details for soil excavation.                                                                                                                                                                                                                                                                                                                               |
| S-3 and S-4                  | Develop post-excavation confirmation sampling procedures, including specific DQOs to facilitate proper implementation.                                                                                                                                                                                                                                                                                                                                                    |
| S-4                          | Prepare specific DQOs and perform additional investigations to further define the areas requiring removal by SVE.                                                                                                                                                                                                                                                                                                                                                         |
| S-4                          | Refine the spacing of the SVE wells and the operational characteristics of SVE system through field testing and an SVE pilot-scale study.                                                                                                                                                                                                                                                                                                                                 |
| GW-2, GW-3A, GW-3B, and GW-4 | Develop groundwater monitoring parameters to evaluate effectiveness of the remedial alternative.                                                                                                                                                                                                                                                                                                                                                                          |
| GW-2, GW-3A, GW-3B, and GW-4 | Further refine the approach for long-term groundwater monitoring, including wells to be monitored, chemicals to be analyzed for, laboratory analytical methods, sample collection procedures, and quality control requirements. The analysis in the RD would include data evaluated for this FS Report and newer data (including data from newly installed wells).                                                                                                        |
| GW-3A, GW-3B and GW-4        | Refine the implementation approaches, develop optimization strategies, and develop remediation endpoints for ISB.                                                                                                                                                                                                                                                                                                                                                         |
| GW-3A, GW-3B and GW-4        | Conduct source zone characterization to refine the extent of the contaminated areas requiring remediation under the ISB alternatives.                                                                                                                                                                                                                                                                                                                                     |

**Table 4-8. Actions to be Addressed in Remedial Design for Parcel E (continued)**  
Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

| Alternatives                       | Action                                                                                                                                                                                                                                                                                                                         |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GW-3A, GW-3B, GW-4, and N-2        | Develop contingency plan for issues encountered during installation of the slurry wall, such as performing pre-design studies to identify subsurface obstacles and planning for potential realignment of the wall if large obstacles are encountered.                                                                          |
| GW-3A, GW-3B and GW-4              | Evaluate alternatives for oxygen delivery under ISB alternatives to maximize the efficiency of aerobic bioremediation.                                                                                                                                                                                                         |
| GW-3A, GW-3B and GW-4              | Evaluate the benefit of a dedicated permeability enhancement event (injection of a substrate under pressure to fracture the formation and enhance permeability) under the ISB alternatives.                                                                                                                                    |
| GW-3A, GW-3B and GW-4              | Evaluate the need for special substrates, such as substrates with sulfur-containing compounds, to immobilize metals under the ISB alternatives.                                                                                                                                                                                |
| GW-3B                              | Define the parameters for final planning and costing of ZVI.                                                                                                                                                                                                                                                                   |
| GW-4                               | Refine the spacing of the AS wells and the operational characteristics of SVE/AS system through field testing and an SVE/AS pilot-scale study.                                                                                                                                                                                 |
| N-2, N-3, N-4A, N-4B, N-5, and N-6 | Perform additional characterization of NAPL at IR-03 and refine the area targeted by the NAPL alternatives. Characterization is needed to refine the nature and extent of NAPL at IR-03 and to better understand the site conditions (such as the presence of large subsurface debris) to properly implement each alternative. |
| N-3, N-4A, N-4B, and N-5           | Adjust the source removal approaches within and beyond IR-03 and develop optimization strategies to allow for appropriate adjustments based on site conditions.                                                                                                                                                                |
| N-3, N-4A, N-4B, and N-5           | Conduct bench-scale and field-scale testing to select specific thermal enhancement technology.                                                                                                                                                                                                                                 |
| N-6                                | Prepare detailed excavation plans for removal of NAPL and associated soil.                                                                                                                                                                                                                                                     |

Notes:

## 2.0 SCREENING-LEVEL PROBLEM FORMULATION AND ECOLOGICAL EFFECTS CHARACTERIZATION (STEP 1)

The SLERA described in steps 1 and 2 of EPA's eight-step process results in a list of "preliminary contaminants of concern for the baseline risk assessment" (EPA 1997, page 2-1). This section describes the screening methods used to identify COPECs in shoreline sediment based on comparison with toxicological benchmarks for particular groups of ecological receptors and ambient concentrations of chemicals.

### 2.1 GENERAL APPROACH TO SCREENING-LEVEL EVALUATION

All chemicals detected in sediment samples from the Parcels E and E-2 shoreline were screened to identify COPECs, except for essential mineral nutrients such as sodium, chloride, potassium, phosphorus, magnesium, and calcium. A toxicity-based approach was used to identify site-related chemicals that may pose risks to sensitive ecological receptors in the intertidal zone, including benthic invertebrates, birds, and mammals. Inorganic and organic chemicals were screened against toxicity benchmarks for each ecological receptor, as recommended by EPA (1997).

Sediment samples were evaluated in two spatial groups.

1. *Surface* shoreline samples: 0 to 0.5 feet below ground surface (bgs)
2. *Subsurface* shoreline samples: 2.0 to 2.5 feet bgs

The process and rationale for identifying COPECs are similar for all areas and ecological receptors. COPECs for benthic invertebrates were identified as those chemicals with concentrations exceeding the effects range-median (ER-M) values (see Section 3.0). In the evaluation of birds and mammals, chemicals were screened using food chain modeling against toxicity reference values (TRV) (see Section 4.0). In the risk characterization step, COPECs were refined by comparing Hunters Point ambient levels (HPAL) (PRC Environmental Management, Inc. 1995) and ambient sediment concentrations of selected chemicals in San Francisco Bay (see Section 5.0).

The site-specific data set used in this SLERA included (1) laboratory chemical analysis of sediment samples and (2) ecological surveys. Table G-1 summarizes the sediment samples collected from all locations along the Parcels E and E-2 shoreline. Sediment samples were analyzed for metals, PCBs, pesticides, semivolatile organic compounds, volatile organic compounds, total petroleum hydrocarbons, dioxins and furans, and organotins. Additionally, the evaluation of risk to birds and mammals used the following data.

- Wildlife surveys in Parcel E
- Bioaccumulation factors (BAF) derived from prey tissue collected in Parcels E, E-2, and F
- Protective soil concentrations for wildlife based on food chain modeling done in the terrestrial areas of Parcels E and E-2
- San Francisco Bay ambient sediment data

Early in the ecological investigation, rapid assessment of sediment samples was conducted using x-ray fluorescence and immunoassay techniques, as discussed in the SAP ([Tetra Tech 2002a](#)). However, results of these field measurements were not always corroborated by standard laboratory results. [Appendix F](#) of this technical memorandum describes the comparability of field screening results with laboratory analytical results. For some purposes, both types of data were combined; however, only laboratory data were evaluated in the SLERA.

For purposes of the SLERA, the entire shoreline of Parcels E and E-2 was considered intertidal habitat and the solid medium was defined as sediment. The rationale for choosing sampling locations and analytical methods is provided in the main text of this technical memorandum and in [Appendix F](#). Complete analytical data are provided in [Appendix A](#).

[Tables G-2 and G-3](#) present descriptive statistics for chemicals analyzed in surface and subsurface sediment samples, respectively. Values in the tables were calculated using a distribution-dependent formula, following the approach illustrated on [Figure G-1](#). For samples with at least 85 percent detected data, one-half the reporting limit was substituted for censored data (such as nondetected data qualified as “U”). Unbiased estimates of the mean and standard deviations were calculated using equations 13.3 and 13.5 in [Gilbert \(1987\)](#) for samples confirmed or assumed to follow a lognormal distribution. The 95 percent upper confidence limit (UCL<sub>95</sub>) for lognormal distributions was calculated using Land’s method, as discussed in [Gilbert \(1987\)](#) and [EPA \(1992c\)](#).

For samples with more than 15 percent censored data, population parameters were calculated using stochastic modeling, following the “bounding” approach described in [EPA \(2002\)](#) and illustrated on [Figure G-2](#). This approach treats each censored datum as a random, uniform variable that can assume any value between zero and its respective reporting limit. Monte Carlo simulation is used to develop a distribution of the range of possible estimates for a UCL based on the selection of a particular mathematical form for the UCL. Random surrogate values between zero and the reporting limit are used for individual censored measurements in each calculation (default is 2,000 calculations) of the UCL. As a result, the distribution reflects the entire range of possible values that could be calculated for the UCL. Because substitution of random surrogate values is made for each censored measurement, this technique reflects the uncertainty contributed by varying levels of censored data, and is appropriate for samples with either single or multiple censoring limits. The maximum estimated value (from the distribution of all 2,000 estimates of the UCL<sub>95</sub>) was used as a plausible upper bound for the

UCL<sub>95</sub> of the mean. The mean and standard deviation were calculated based on the median values of the means and standard deviations used to calculate the 2,000 estimates of the UCL<sub>95</sub>.

The median (50th percentile) and 95th percentile were calculated for all samples, regardless of detection frequency based on nonparametric assumptions (that is, based strictly on a rank ordering of the combined detected and censored measurements). Exposure point concentrations (EPC) were estimated as the lesser of the maximum detected concentration and the UCL<sub>95</sub> for each chemical.

## **2.2 FATE AND TRANSPORT PATHWAYS**

The primary sources of contaminants in sediment along the Parcels E and E-2 shoreline are described in [Section 1.3](#) of the technical memorandum. [Appendix F](#) describes the potential pathways for contaminant mobilization and transport from the Parcels E and E-2 shoreline to the offshore areas (Parcel F). Chemicals associated with sediment in Parcels E and E-2 are transported to the bay when the sediment is suspended in water moving over the land. Metals present beneath the soil surface in Parcels E and E-2 are effectively immobile because they are not transported overland as dry particulate materials. Groundwater in contact with contaminated soils at depth in Parcels E and E-2 is unlikely to contribute to metals contamination in offshore sediments (see [Appendix F](#) for details).

Water from San Francisco Bay daily inundates the shoreline of Parcels E and E-2. The amount of sediment carried on incoming tides varies with tidal height, storm energy, and other dynamic factors. Most areas of the shoreline are accreting sediment, as described in [Appendix F](#). Total concentrations of chemicals in sediment at the shoreline reflect both regional ambient and site-specific components. The transport pathways and processes and the potential for migration of chemicals from the Parcels E and E-2 shoreline are discussed in greater detail in the Parcel F validation study ([Battelle, Entrix, and Neptune and Company 2002](#)). The relevance of the potential exchange of sediment between the Parcels E and E-2 shoreline, and San Francisco Bay is discussed in [Section 5.0](#) of this appendix for identifying site-related risk.

## **2.3 IDENTIFICATION OF COMPLETE EXPOSURE PATHWAYS AND GENERIC ASSESSMENT ENDPOINTS**

At the screening level, exposure pathways were assumed to be complete to all ecological receptors that potentially occur in the shoreline area of Parcels E and E-2. EPA defines an assessment endpoint as an “explicit expression of an environmental value to be protected” ([EPA 1997](#)). Site-specific factors for Parcels E and E-2 influenced the selection of endpoints, including the occurrence, ecological significance, life and natural history characteristics, and potential toxicological susceptibility of receptors; the known and potential contaminants present and their mechanisms of toxicity; and the spatial and temporal patterns of potential exposure. Measurement endpoints are considered to be primary lines of evidence that have a direct relationship to the assessment endpoints defined for each receptor group.

### **2.3.1 Benthic Invertebrates**

Benthic invertebrates may be exposed to chemicals in sediment and surface water across all areas of the shoreline at this site. [Section 3.0](#) summarizes the evaluation of risk to benthic invertebrates in the intertidal zone of Parcels E and E-2. Benthic invertebrates are exposed to sediment in all shoreline subareas. The shoreline is affected by daily and annual tidal cycles, during which water quality has an unknown effect on ecological receptors. The assessment endpoint for benthic invertebrates is maintenance of sufficient rates of survival, growth, and reproduction to sustain populations of benthic invertebrates. The measurement endpoint for benthic invertebrates is exposure concentrations of chemicals in their home sediment.

The risk question addressed for benthic invertebrates was as follows: Do exposure concentrations of chemicals in sediments exceed the ER-M?

### **2.3.2 Birds and Mammals**

Various birds and mammals forage in the intertidal habitat that characterizes the Parcels E and E-2 shoreline. [Section 4.0](#) summarizes the evaluation of risk to birds and mammals using food chain modeling of ingested sediment and prey.

In food chain modeling, for each of the trophic or feeding guilds selected as assessment endpoints, representative or surrogate species were identified based on information available from bird and mammal surveys and natural history assessments conducted along the Parcels E and E-2 shoreline. The endpoints are sufficient rates of survival, growth, and reproduction to sustain populations of species representing the following trophic guilds.

- Diving ducks (represented by the surf scoter)
- Carnivorous shorebirds (represented by the willet)
- Raptors (represented by the red-tailed hawk)
- Omnivorous mammals (represented by the house mouse)

The measurement endpoints are daily ingested chemical doses and hazard quotients (HQ) calculated for each species using food chain modeling. Dose calculations incorporate several types of data, including (1) chemical concentrations in sediment, (2) estimated prey tissue concentrations based on biotransfer factors from terrestrial areas of Parcels E and E-2, (3) ecological field studies, and (4) natural history of selected receptors.

The risk question addressed for each endpoint was as follows: Do typical site-specific ingested doses of chemical concentrations exceed effects levels defined by the high TRVs?

## Executive Summary

*An executive summary gives a brief snapshot of what the full document contains. If you have limited time to read a document, especially a long technical document, try focusing on the executive summary first.*

An important part of the Department of the Navy's environmental cleanup program at former Hunters Point Shipyard (**HPS**) includes informing and involving the community in cleanup discussions. This Community Involvement Plan (**CIP**) presents the Navy's plans to inform and involve the community in the environmental cleanup program moving forward based on feedback obtained from the HPS community about past communication and community involvement program activities. The activities presented in the CIP for HPS go beyond the minimum requirements for community involvement set forth in the National Oil and Hazardous Substances Pollution Contingency Plan (known as the National Contingency Plan, or **NCP**). The CIP adheres to the applicable regulatory guidance from the Navy and United States Environmental Protection Agency (**U.S. EPA**). The CIP is also a resource for general information on the Navy's cleanup and whom to contact for further information.

From 1994 through 2009, the primary means of community involvement was the Navy's Restoration Advisory Board (**RAB**). Although the RAB was dissolved in December 2009 because it was no longer fulfilling its purpose, the Navy continues to involve the community in the details of the HPS environmental cleanup program. The Navy believes this CIP presents communication and community involvement program activities that will meet the specific needs and desires of the HPS community.

## *Executive Summary (continued)*

### *Overview of Community Interviews and Feedback*

During the summer of 2010, the Navy interviewed 73 members of the HPS community, defined as ZIP codes 94107, 94124, and 94134. Historically, these ZIP codes have been used to define the HPS community for the purpose of local contracting and community involvement efforts, such as establishing a mailing list. These three ZIP codes were used to define the HPS community because they comprise the majority of District 10 in the City and County of San Francisco and are served by one Supervisor. In addition, the Navy is attempting to reach out to as many people impacted by environmental conditions as possible, and these three ZIP codes are nearest to the shipyard.

The Navy went to significant lengths to ensure the most comprehensive survey practicable. The interviews focused on gathering feedback about the community's cleanup interests and concerns, as well as communication needs and preferences to help design this CIP to be more effective for the HPS community. The following six recurring themes surfaced during the interviews:

- Theme 1.** The Navy's communication with the HPS community about the environmental cleanup program has not been effective.
- Theme 2.** General information about the Navy's environmental cleanup program at HPS is lacking.
- Theme 3.** The HPS community is diverse, resulting in varied concerns, communication preferences, and needs.
- Theme 4.** The difference between the Navy's HPS environmental cleanup program and the San Francisco Redevelopment Agency's (**SFRA's**) redevelopment of HPS has not been made clear.
- Theme 5.** Health is a primary concern for most segments of the community.
- Theme 6.** Coordinating with established community members to conduct involvement may be a good way to reach all sectors of the community.

### *Overview of the Navy's Community Involvement Program Actions and Activities*

Prior to developing a plan of action, the Navy considered the themes in the community feedback, reviewed applicable Navy and U.S. EPA guidance for community involvement, and evaluated what works well for other similar environmental cleanup programs. The Navy has developed a plan of action to ensure the success of the CIP for the HPS community. The Navy's objectives in its community involvement activities include the following:

- Work with the community to communicate information in a way that is transparent and in a way that the community wants to receive it
- Get information out early, and make sure it is easy to understand and translated as needed
- Respond to the community's concerns, ideas, and information and show how they are used in making decisions about the environmental cleanup

## *Executive Summary (continued)*

The Navy will track action items at meetings and respond to questions and comments. Frequently asked questions (**FAQs**) and responses will be posted on the Navy's Web site and brought to meetings as a handout, if appropriate. If written formal comments are received on any document, the Navy will respond to those comments in writing and include the responses in the next version of the document that also contains the applicable revisions.

Some of the actions and activities in this updated CIP for improving community involvement in the HPS cleanup include:

- Preparing short fact sheets with general information, such as the status of cleanup, and distributing them on the Internet, in the mail, and by having community members give them to their neighbors
- Conducting regularly scheduled community meetings
- Giving presentations at small group meetings (such as tenant associations and churches)
- Working with established community members to spread information and invite community members to participate in the HPS environmental cleanup discussions (referred to as "grassroots outreach")
- Participating in local radio shows, including multi-lingual shows, and answering questions from call-in listeners
- Providing tours of HPS for those who are curious about what the property currently looks like and to see any ongoing environmental cleanup work
- Using a Web site and social media outlets such as Facebook to reach people who are online regularly and prefer electronic communication
- Publishing a calendar of community involvement program activities so community members can plan ahead to participate
- Providing a telephone hotline with a recorded update of activities, and also allow callers to leave a message

The Navy will seek feedback during community involvement events about whether community members are getting the engagement they need. The goals for each activity will be evaluated on a yearly basis by the Navy's Community Involvement Manager to ensure that they are being met. The Navy will also distribute a survey to the mailing list to evaluate the community involvement program every two years. The findings of this survey will be documented in a memorandum that will be included in the Administrative Record for HPS. The survey and documentation will comply with 32 Code of Federal Regulations (**CFR**) 202.10. The Navy will periodically review this CIP and update it accordingly.

### ***Overview of the Navy's Environmental Cleanup Program at HPS and Opportunities for Public Involvement***

A general understanding of the Navy's environmental cleanup program is helpful to the HPS community when providing input on the cleanup. To help the HPS community understand the Navy's cleanup process, this CIP includes a chapter that discusses the historical operations at HPS that resulted in contamination. The Navy is actively conducting environmental investigations and cleanup at HPS to

## *Executive Summary (continued)*

protect human health and the environment and to prepare the property to be transferred to the SFRA. The shipyard is divided into parcels that are in various stages of environmental investigation and cleanup. The cleanup status at these parcels is often discussed during meetings and presented in technical reports.

### *Overview of Environmental Cleanup Roles and Responsibilities*

The Navy is responsible for the environmental cleanup at HPS; however, government agencies oversee the regulations for the cleanup process. These agencies are collectively referred to as “the regulatory agencies,” and are important resources for the HPS community. The responsibility of the regulatory agencies is to review the Navy’s plans and work at HPS to make sure regulations are followed. The primary regulatory agencies actively involved at HPS include the following:

- U.S. EPA
- California Environmental Protection Agency, Department of Toxic Substances Control (**DTSC**)
- San Francisco Bay Regional Water Quality Control Board (**Water Board**)

In addition, the SFRA is responsible for redeveloping HPS. The San Francisco Department of Public Health (**SFDPH**) is another agency providing input to the Navy’s cleanup of HPS.

The HPS community plays an active role in the Navy’s environmental cleanup program by providing input to the regulatory agencies and the Navy on cleanup alternatives and selection of remedies. When it comes to concerns and interests related to the current or future redevelopment of the property, the community is responsible for communicating directly with the SFRA.

## Chapter 1: Introduction

The Department of the Navy and United States Environmental Protection Agency (**U.S. EPA**) recognize that Americans have the right to be involved in government decisions that affect their lives. Public involvement in the cleanup process results in a better outcome and a more robust cleanup. In addition to meeting the minimum requirements for community involvement set forth in the National Oil and Hazardous Substances Pollution Contingency Plan (known as the National Contingency Plan, or **NCP**), the primary purpose of this Hunters Point Shipyard (**HPS**) Community Involvement Plan (**CIP**) includes the following:

- Summarize concerns found through the community interview process
- Outline the actions that the Navy will use to achieve the community involvement program
- Incorporate community issues and concerns more effectively into cleanup decisions
- Serve as a resource for general information on the HPS environmental cleanup and provide guidance on where to obtain more information

“Environmental justice” is the fair treatment and meaningful involvement of all people in the development, implementation, and enforcement of environmental laws, regulations, and policies. Race, economic status and social status should not be barriers to becoming involved. The Navy is mindful of the diverse community representing numerous racial, economic and social groups that immediately surrounds HPS and takes steps to reach and engage all segments of the community. Demographic information for the HPS community is provided in [Appendix D](#).

At HPS, the Navy has incorporated the principles of environmental justice into the planning and preparation of this Community

Involvement Plan. The Navy is addressing environmental justice through its outreach efforts, public participation process, and by providing access to information in a variety of ways. This includes providing information, as needed, in other languages.

Community members are encouraged to be involved in the cleanup process by providing feedback and information on an ongoing basis. The Navy acknowledges that community members, especially long-time residents, have knowledge about HPS activities which may assist the cleanup activities.

From 1994 until 2009, the Navy maintained a Restoration Advisory Board (**RAB**) at HPS. The purpose of the RAB was to (1) provide an expanded opportunity for community involvement in the environmental cleanup process, (2) act as a forum for the discussion and exchange of information about the environmental cleanup program, and (3) provide RAB members an opportunity to review progress and participate in discussions about the environmental cleanup with the cleanup decision makers. At one time, the RAB was a main component of the Navy’s community involvement program. On a voluntary basis, RAB members contributed their time and energy to improving the Navy’s environmental cleanup program at HPS.

In December 2009, the Navy, in consultation with the government agencies responsible for overseeing the cleanup process at HPS (which include the U.S. EPA, the California Department of Toxic Substances Control [**DTSC**], and the San Francisco Bay Regional Water Quality Control Board [**Water Board**], referred to in this CIP as “the regulatory agencies”) determined that the RAB was no longer fulfilling its purpose, and the RAB was dissolved (for more information on the

## Chapter 1: Introduction (continued)

dissolution of the RAB, see [Appendix E](#)). The Navy Installation Commander is required by the RAB Rule to assess community interest every 24 months to determine (1) if the cause for dissolution has been resolved, and (2) if there is community interest in reestablishing a RAB per the RAB Rule Handbook (2007). This new CIP meets this initial requirement in assessing community interest (for a list of community involvement program actions since the RAB was dissolved, see [Appendix E](#)).

The Navy is committed to keeping the community engaged in the environmental cleanup program at HPS. Part of that commitment includes preparing this CIP to plan the path forward for community involvement at HPS. This CIP presents communication and community involvement program activities to meet the specific needs of the HPS community.

The Navy will seek feedback during community involvement events about whether community members are getting the engagement they need. The goals for each activity will be evaluated on a yearly basis by the Navy's Community Involvement Manager to ensure that they are being met. The Navy will also distribute a survey to the HPS community involvement program mailing list to evaluate the program every two years. The findings of this survey will be documented in a memorandum that is included in the Administrative Record for HPS. The survey and documentation will comply with 32 CFR 202.10. The Navy will periodically review this CIP and update it accordingly.

[/Kf-LjÚŠN0H](#) of this document describes the issues and concerns identified during the community interview process that the Navy conducted in 2010. [/Kf-LjÚŠN0o](#) outlines the Navy's plans for the community involvement program, including

specific activities to be conducted. [!LjÚŠyŘÄ0D](#) provides a list and some details about the regulations and guidance for conducting community involvement.

[!LjÚŠyŘÄ0I](#) provides a list of media useful to reach the HPS community, as well as locations for holding meetings and posting flyers about involvement activities. [!LjÚŠyŘÄ0L](#) defines the acronyms and abbreviations used in this document. [!LjÚŠyŘÄ0W](#) provides the Navy's responses to the regulatory agency and public comments received on the draft version of this document. When applicable, the response also provides information on how this CIP was revised to incorporate the comment.

## Chapter 2: Community Interviews and Feedback

Community interviews help the Navy to better understand the community's issues and concerns. The Navy went to significant lengths to gather interview candidates for this CIP, mailed postcards to residents, and contacted interested stakeholders to ensure that they had the most comprehensive interview list practicable.

The Navy conducted 73 interviews in 2010 with people who live in, work in, or serve the HPS community—defined as ZIP codes 94107, 94124, and 94134. [Appendix C](#) includes a breakdown of the interviewees by ZIP code.

Historically, these ZIP codes have been used to define the HPS community for the purpose of local contracting and community involvement efforts such as establishing a mailing list. These three ZIP codes were used to define the HPS community because they comprise the majority of District 10 in the City and County of San Francisco and are served by one Supervisor. In addition, the Navy is attempting to reach out to as many people impacted by environmental conditions as possible, and these three ZIP codes are nearest to the shipyard.

Interviewees were asked approximately 29 questions from a questionnaire that was created in advance with input from the regulatory agencies. The interviews were conducted in a discussion format. Each interviewee was encouraged to discuss his or her interests, concerns, and ideas, and some questions were occasionally unanswered as a result. A Navy representative and a contractor responsible for taking notes were present at each interview. At least one and up to four regulatory agency representatives were also present during all but one of the 73 interviews. For a list of all of the organizations interviewed and the full list of questions, see [Appendix C](#).

**The community wants the cleanup to be completed in a way that protects the current community and all future users and neighbors of HPS.** The Navy and regulators share this goal with the community and are committed to involving the community in the cleanup process. The team will work with the community to ensure that the cleanup results are protective for current and future inhabitants and neighbors. The following six themes summarize the community concerns and opinions about public participation in the cleanup process that were revealed in the

### Overview of Interviewees

*73 interviews conducted from June 15 to September 9, 2010:*

*10 interviews by phone*

*63 interviews in person*

*Average time interviewees have lived or worked in the HPS community area:*

*20 years*

*Self-described knowledge of the cleanup program:*

*A little bit: 37*

*A lot: 26*

*Nothing/No response: 10*

*35 interviewees had attended Navy events or provided input to the Navy on the cleanup program.*

### Categories of Interviewees:

*Civic Groups/Clubs and Organizations: 34*

*Local Residents: 31*

*Environmental Groups/  
Activists: 15*

*Former RAB Members: 12*

*Local Business: 11*

*Educators/Childcare: 6*

*Media: 3*

*Health Providers: 2*

*Elected Official: 1*

*(Some interviewees represented multiple categories; therefore, total is greater than 73.)*

## Chapter 2: Community Interviews and Feedback (continued)

interviews. The Navy's plan to address these themes is discussed in [Chapter 3](#) –Community Involvement Actions and Activities.

- Theme 1. The Navy's communication with the HPS community about the environmental cleanup program has not been effective.** The majority of interviewees said they think the Navy's communication has not been effective; many people said they do not know what is going on at HPS.
- Theme 2. General information about the Navy's environmental cleanup program at HPS is lacking.** Most interviewees said they would like general information about the cleanup at HPS but do not know where to find it. General information includes an overview of the program, the responsibilities of the people working on the cleanup, a timeline, and the status of work.
- Theme 3. The HPS community is diverse, resulting in varied concerns, communication preferences, and needs.** No single involvement method exists to communicate with all of the stakeholders in the HPS community. Various segments of the community include those who:
- a. Have Internet access, and those who do not
  - b. Do not speak English
  - c. Want general information, and those who want technical details
  - d. Live right next to the Base, and those who live in the outlying community
  - e. Prefer discussions and two-way information, and those who just want an update
- Theme 4. The difference between the Navy's HPS environmental cleanup program and the San Francisco Redevelopment Agency's (SFRA's) redevelopment of HPS has not been made clear.** Many interviewees did not know that the Navy is still doing work on HPS; others thought the Navy is conducting the current redevelopment on a transferred parcel (known as Parcel A), when in fact it is the SFRA that now owns and controls development of Parcel A. In addition, confusion exists about the Navy's role in the selection of the SFRA's master developer.
- Theme 5. Health is a primary concern for most segments of the community.** Interviewees were concerned that contamination at HPS is affecting their health, and they noted high rates of cancer and asthma in the area. Interviewees were also concerned that contamination at HPS will have negative health effects in the future, especially for people who will live on former HPS property.
- Theme 6. Coordinating with established community members to conduct involvement activities may be a good way to reach all sectors of the community.** Some interviewees felt that the HPS community distrusts the Navy. It was suggested that the Navy work more closely with members from various sectors of the community who can relay information about the cleanup directly to their neighborhoods. This communication method was identified as the best way to inform members of every part of the community.

## Chapter 2: Community Interviews and Feedback (continued)

The following subsections present a summary of the questions asked of the interviewees. Each interviewee was encouraged to discuss his or her interests, concerns, and ideas; some questions were occasionally unanswered as a result.

### *Effectiveness of the Navy's Communication*

Interviewees were asked if they think the Navy's communication about the environmental cleanup program has been effective. The following chart presents the percentages of interviewees responses. The chart confirms that most interviewees felt the Navy did not effectively communicate with the public in the past.

## Chapter 2: Community Interviews and Feedback (continued)

### *Confidence in the Navy, Regulatory Agencies, and the City of San Francisco*

Interviewees were asked if they have confidence in the Navy's ability to conduct the environmental cleanup at HPS. They were also asked if they have confidence in U.S. EPA, DTSC, the Water Board, and the City of San Francisco to oversee the Navy's environmental cleanup (to understand more about these agencies and their responsibilities in the HPS cleanup, see [Chapter 5](#)). The following graphic represents the results.

**Note:**

\*"Cleanup agencies" includes the regulatory agencies responsible for oversight of the cleanup. See [Chapter 5](#) for more information about the cleanup agencies.

The "Undecided" category includes responses such as "somewhat" and "depends," as well as the response that an interviewee was not familiar enough with a particular agency to have an opinion. "Number Who Did Not Respond" indicates the number of interviewees who declined to answer that question.

## Chapter 2: Community Interviews and Feedback (continued)

### Interests and Concerns

Interviewees were asked an open-ended question about whether they have concerns or interests related to the base and the cleanup program, and what all of their concerns and interests might be. The following table represents concerns, listed in order of how frequently they were cited.

| Interests and Concerns Listed by Frequency of Response                                                    | Number of Responses |
|-----------------------------------------------------------------------------------------------------------|---------------------|
| Health                                                                                                    | 54                  |
| Redevelopment*                                                                                            | 49                  |
| Quality or completeness of cleanup                                                                        | 43                  |
| Jobs/economics                                                                                            | 35                  |
| Air quality/dust                                                                                          | 30                  |
| Schedule and general status of the cleanup                                                                | 28                  |
| Parcel E2 landfill                                                                                        | 19                  |
| Lack of information going to the community                                                                | 15                  |
| Navy responsibility in the future                                                                         | <5                  |
| Shipyard history, having a museum about shipyard history and cleanup                                      | <5                  |
| Politics related to cleanup                                                                               | <5                  |
| Protection of the bay and wildlife                                                                        | <5                  |
| Distrust for the Navy                                                                                     | <5                  |
| Budget for cleanup                                                                                        | <5                  |
| Yosemite Slough                                                                                           | <5                  |
| Concern that there is no RAB                                                                              | <5                  |
| Confusion about cleanup versus redevelopment                                                              | <5                  |
| Shoreline access                                                                                          | <5                  |
| <b>Note:</b>                                                                                              |                     |
| * Although the question was about environmental cleanup, many people voiced concerns about redevelopment. |                     |

### Community Rating of Navy Communication Methods

A list of nine communication methods the Navy has used in the past was provided during the interview. Interviewees were asked to give their opinions about whether any of these past methods would be useful in the future. People were also asked for other ideas that were not included on the list provided.

## Chapter 2: Community Interviews and Feedback (continued)

The following chart represents the preferences for established communication methods. The table describes each method and includes some of the reasons people said that a particular method may or may not be effective.

**Note:** Interviewees were asked to give their opinions about whether any of the nine communication methods the Navy has used in the past would be useful in the future. Some interviewees noted multiple methods in their answer.

### *Description of the Navy's Standard Involvement Activities and Interviewees' Concerns*

| Communication Method | Description                                                                                                                                                                                                               | Pros and Cons Noted by Interviewees                                                                                                                                             |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Fact Sheets       | One- or two-page mailers typically focused on one topic or site. Hardcopies are distributed via the mail, handed out, and placed at businesses. Electronic copies are distributed by posting on a Web site and e-mailing. | Pro: Easy to read; reaches people with and without e-mail.<br>Con: People do not have time to read them; they are too technical.                                                |
| 2. Bus Tour of Site  | Navy staff discusses activities at sites while community members see the sites in person. Typically, the Navy provides the bus; a map or other handout also may be provided.                                              | Pro: People who have never been on the site get to see it; may be more interesting than just a meeting.<br>Con: There is nothing to see; it is dangerous to be at the shipyard. |

## Chapter 2: Community Interviews and Feedback (continued)

### *Description of the Navy's Standard Involvement Activities and Interviewees' Concerns*

| Communication Method                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Pros and Cons Noted by Interviewees                                                                                                                                                                                                                                                                   |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. Public Meeting                          | An at-large, community-wide meeting advertised to the greater community and held at a large venue. Examples include the current Navy community technical meetings, the former RAB, and Proposed Plan meetings (formal public meetings held per the NCP to obtain public comments on a proposed remedy).                                                                                                                                                               | Pro: Many people are informed at once.<br>Con: Many members of the community feel intimidated at a large, centralized meeting. It was stated that it is difficult to have individual questions addressed; there is no single venue where everyone in the community feels comfortable.                 |
| 4. E-mail                                  | An e-mail message is sent to everyone who has submitted an e-mail address for the Navy's list. E-mail can include an announcement, an attached fact sheet or newsletter, or a link to a Web site containing more information.                                                                                                                                                                                                                                         | Pro: Quick delivery, inexpensive, good way to reach people who check e-mail often.<br>Con: Not everyone has access to e-mail.                                                                                                                                                                         |
| 5. Organization or Community Group Meeting | The Navy has been added to the agenda of an already-established meeting and presents an update on the environmental cleanup program. Attendees can then ask questions about specific interests. Groups have included or could include homeowners or tenant associations, churches, business groups, parent-teacher associations, and related organizations. Meetings were not open to the public unless the established group meeting was already open to the public. | Pro: Target information for just the interests of that group, more likely to get attendance when combined with a meeting people already attend.<br>Con: Different groups may get different or conflicting messages; may reach fewer people or require too great of an effort on the part of the Navy. |
| 6. Newsletters                             | Four- to eight-page packet usually on general topics related to cleanup, providing overviews and language that is not overly technical. Hardcopies are distributed via the mail, handed out, and placed at businesses. Electronic copies are distributed by posting on a Web site and e-mailing.                                                                                                                                                                      | Pro: Familiarize people with various aspects of cleanup, does not need overly technical language.<br>Con: They are too long; people do not have time to read them.                                                                                                                                    |

## Chapter 2: Community Interviews and Feedback (continued)

### *Description of the Navy's Standard Involvement Activities and Interviewees' Concerns*

| Communication Method                 | Description                                                                                                                                                                                                       | Pros and Cons Noted by Interviewees                                                                                                                                                                                                                                                                    |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Hardcopy Flyers and Announcements | One-page or smaller, meant to announce an upcoming meeting or document for review and provide contact information. They are usually handed out at community meetings, posted in businesses, mailed, and e-mailed. | Pro: Short, easy to produce quickly to announce meetings in a timely manner. Can be posted in community.<br>Con: May be ignored unless someone from the community discusses the content with whoever receives the flyer.                                                                               |
| 8. Navy's Web Site                   | A public Web site that the community can access to review various information about the environmental cleanup program.                                                                                            | Pro: Convenient for Web-savvy community members, people can seek out various information and documents without having to keep track of hardcopy information.<br>Con: Navy's Web site is not up-to-date; not everyone has access; easier to talk to a person.                                           |
| 9. Open House                        | Multiple poster board stations set up with staff at each location to allow people to drop in any time during open hours and ask questions about topics of interest to them.                                       | Pro: Informal setting makes some people feel more comfortable; people can stay long enough to ask their questions and then leave without having to attend a long meeting.<br>Con: Not everyone hears the same information; there is no single venue where everyone in the community feels comfortable. |

### *Additional Community-Suggested Communication Methods*

Interviewees provided many different suggestions for different communication methods, not all of which will end up as part of the Navy's program. Some of the common suggestions provided by interviewees are listed as follows (a complete table of all suggestions made by interviewees is provided in [Appendix C](#)):

- Work with churches to share information
- Reestablish the RAB or a similar advisory board
- Give cleanup information on radio talk shows that allow listeners to call in and ask questions
- Collaborate with established community members to convey cleanup information
- Attend established community events and host a booth
- Create social media pages for HPS (Facebook and Twitter)

## *Chapter 2: Community Interviews and Feedback (continued)*

- Hold a community forum or town hall-type of meeting
- Distribute a calendar of Navy involvement events
- Use food or free school supplies as incentive for community members to attend meetings or take information handouts
- Use a public relations firm to engage the community with well-crafted messages and graphics

The interviews were successful with gathering feedback about the community's cleanup interests and concerns, as well as communication needs and preferences. The information obtained during the interviews was used to help design this CIP to be more effective for the HPS community, as discussed in the following chapter.

## *Chapter 2: Community Interviews and Feedback (continued)*

This page intentionally left blank.

## *Chapter 3: Community Involvement—Actions and Activities*

**The most important part of this CIP identifies the Navy's community involvement program actions and activities.** The Navy used numerous resources to prepare the community involvement program actions, including community interview feedback, community census information, Navy and regulatory agency community involvement guidance, and CIPs from various environmental cleanup sites, including Fort Ord, McClellan Air Force Base, and Iron King Mine Site. The Navy considered what works well for other similar environmental cleanup programs; however, the Navy has developed a plan of action to specifically address the needs of the HPS community. The Navy's objectives in conducting activities include the following:

- Work with the community to communicate information in a way that is transparent and how the community wants to receive it
- Get information out early, make sure it is easy to understand, and translated as needed
- Share how community input is used in the cleanup process
- Respond to and show how community's concerns, ideas, and information is used in making decisions about the environmental cleanup

### *Community Involvement Program Actions and Activities*

The following community involvement program activities are designed to meet the communication needs, concerns, and preferences of the various HPS stakeholders in the HPS community. The actions are designed to link with Community Themes 1 through 6 found on Page 8. It is important to also note that the Navy will have to balance its resources and staff to appropriately plan and implement any of these activities.

Feedback from the HPS community on the Navy's environmental cleanup program will be considered and used by the Navy and regulatory agencies. The Navy will track action items at meetings and respond to questions and comments. Frequently asked questions (**FAQs**) and responses will be posted on the Navy's Web site and brought to meetings as a handout, if applicable. If written formal comments are received on any document, the Navy will respond to those comments in writing and include the responses in the next version of the document that also contains the applicable revisions.

## Chapter 3: Community Involvement—Actions and Activities (continued)

### Linking Interview Feedback Themes With Community Involvement Program Actions

#### **THEME 1: THE NAVY'S COMMUNICATION WITH THE HPS COMMUNITY ABOUT THE ENVIRONMENTAL CLEANUP PROGRAM HAS NOT BEEN EFFECTIVE.**

*The goal for these actions is to make the Navy's communication with the community more effective. This goal will be measured based on feedback from the community and the regulatory agencies.*

##### **Actions to address this theme:**

##### **1. Distribute this CIP**

- Draft CIP was made available for public comment on March 8, 2011. Comments received on the Draft CIP and the Navy's responses are included in [Appendix J](#).
- Final copy will be on the Navy's Web site, in the information repositories, and available on request. It will include how the Navy addressed comments received during the public comment period.

##### **2. Prepare a Calendar of Outreach Events**

- The event calendar will be created annually and distributed in December for the next year.
- It will be prominently displayed on the Navy's Web site.
- The calendar will be designed to show forethought and commitment to activities and to help the public plan community involvement program activities into their schedules.
- The calendar is intended for wide distribution by mail and e-mail; distribution at community meetings, the Web site, and social media outlets (Facebook); and posted in select neighborhood locations, including churches.
- At meetings, an updated calendar of events and documents to be released will be distributed for the next 3 months.

##### **3. Prepare Topic-Specific Fact Sheets**

- Prepare and distribute fact sheets on specific topics as requested by the community, including topics to address the top interests and concerns noted during the interviews, found on [Page 11](#).

##### **4. Use a Community Involvement Manager**

- The Navy will designate a full-time Navy contractor to be the Community Involvement Manager and assist the Base Realignment and Closure (BRAC) Environmental Coordinator with the implementation of this CIP.
- The Community Involvement Manager will be the main contact for the HPS community, making it easier to communicate with the Navy.
- The Community Involvement Manager will work with the regulatory agencies to gather feedback to assess the success of this updated involvement program. This could include feedback forms, a community survey every two years, and anecdotal feedback.

## Chapter 3: Community Involvement—Actions and Activities (continued)

### Linking Interview Feedback Themes With Community Involvement Program Actions

#### THEME 2: GENERAL INFORMATION ABOUT THE NAVY'S ENVIRONMENTAL CLEANUP PROGRAM AT HPS IS LACKING.

*The goal for these actions is to make general information about HPS more available to the community. This goal will be measured by obtaining feedback from the community and the regulatory agencies.*

##### Actions to address this theme:

##### **1. Prepare a General Fact Sheet**

- The fact sheet will include HPS history, basic overview of cleanup activities and timeline, how human health is evaluated and addressed, agency roles and responsibilities, FAQs, contact information, and repository locations.
- The fact sheet will be updated annually.
- The fact sheet will be distributed at community meetings, posted on Web site and social media outlets (Facebook), and posted in select neighborhood locations (community centers, churches, and local businesses).
- The fact sheet will be translated into Chinese (Cantonese) and Spanish (other languages to be considered based on need). Based on information provided by the Chinese-American community, Cantonese is the primary Chinese dialect spoken in San Francisco.

##### **2. Hold Regularly Scheduled Community Meetings**

- Meetings will be held bimonthly (every other month), or more frequently if deemed appropriate; possibly in various locations so people that live in different parts of the community can attend.
- Meeting will be facilitated and the agenda will consist of Navy presentations, regulatory agency update, discussion of action items from previous meetings, and public question-and-answer period. The Navy will solicit community input for future agenda items at each meeting.
- Meetings will have a facilitator, summary notes sent to the e-mail list and placed on the Web site, and a translation provided, if needed.
- The meeting will be an opportunity for two-way communication between the Navy, regulatory agencies, and the community.

##### **3. Prepare Progress Reports**

- Progress reports will be created quarterly, and will be distributed via mail and e-mail, at community meetings, posted on the Web site and social media outlets (Facebook), posted in select neighborhood locations, and handed out by established community members.
- The reports will be about two pages long, with an update on recent activities and future public comment opportunities.
- The reports will be translated into Chinese (Cantonese) and Spanish (other languages to be considered based on need). Based on information provided by the Chinese-American community, Cantonese is the primary Chinese dialect spoken in San Francisco.

## Chapter 3: Community Involvement—Actions and Activities (continued)

### Linking Interview Feedback Themes With Community Involvement Program Actions

#### THEME 3: THE HPS COMMUNITY IS DIVERSE, RESULTING IN VARIED CONCERNS, COMMUNICATION PREFERENCES, AND NEEDS.

*The goal for these actions is to communicate with broader segments of the community, include those with and without computer access, those who do not speak English, those who prefer meetings, and those who prefer written materials. This goal will be measured by obtaining feedback from the community and the regulatory agencies.*

##### Actions to address this theme:

##### 1. Participate in Local Radio Shows – multi-lingual

- Give a presentation and/or answer questions during call-in shows; translation will be provided as necessary

##### 2. Provide a Telephone Hotline

- A recorded message will provide an update of monthly HPS activities such as meeting times and locations. Additional information on specific cleanup actions may also be provided, if timely.
- Callers will be able to hear the message in English Spanish, or Cantonese
- Callers will also be able to leave a message if they have a specific question and their call will be returned.

##### 3. Create a New Web Site

- Community members specifically said the current Web site is difficult to use.
- New Web site will be enhanced for better usability and functionality. The current Web site cannot be enhanced because of Department of Defense restrictions, so a new Web site must be created.
- The Web site will be updated at least monthly (i.e., when technical documents are released, notices of upcoming community involvement opportunities, etc.).
- The Web site will have a searchable FAQ of cleanup and site information.

##### 4. Maintain a Social Media (Facebook) Page

- Intended to give quick access to information, and will direct viewers to the new Web site. Those who follow the page will be able to send questions and comments to the Navy.
- Regularly updated with information on cleanup activities, cleanup photos, and meeting notices.
- Noted as a good way to reach the younger segments of the community.

##### 5. Update Mailing and Email Lists

- An updated mailing list to reach the full community will be purchased.
- Anyone can sign up at meetings or on the Web site to be added.
- The mailing list will be updated after each mailing with any returns; addresses for elected officials and businesses will be checked annually.
- An email distribution list will be maintained and updated similar to the mailing list.

##### 6. Print Newspaper Editorial

- In interview feedback, use of a newspaper was suggested as a good way to reach the Chinese-American segments of the community, specifically using Sing Tao Daily newspaper.
- For required public notices, hardcopy newspapers that were highly recommended include the following: *San Francisco Examiner*, *Sing Tao Daily*, *The Potrero View*, and *Visitacion Valley Grapevine* (Note: this newspaper is not currently being published; however, it may be used if publishing resumes)

## Chapter 3: Community Involvement—Actions and Activities (continued)

### Linking Interview Feedback Themes With Community Involvement Program Actions

#### **THEME 4: THE DIFFERENCE BETWEEN THE NAVY'S HPS ENVIRONMENTAL CLEANUP PROGRAM AND THE SFRA'S REDEVELOPMENT OF HPS HAS NOT BEEN MADE CLEAR.**

*The goal for these actions is to explain the transfer process and clarify who community members can talk with about cleanup concerns versus redevelopment concerns.*

##### **Actions to address this theme:**

##### **1. Hold Bus Tours**

- Bus tours will be held for the larger community by advanced registration twice a year. Tours will show participants the environmental cleanup progress, provide an understanding of what belongs to the Navy and what belongs to SFRA, and provide an opportunity for dialogue.
- Tours will be advertised through the active community members, on the Web site, and at meetings, as well as posted on the calendar.

##### **2. Distribute Topic-specific Fact Sheets**

- Created bimonthly, these fact sheets will focus on one specific technical topic. The topic of the fact sheet will coincide with the community meetings.
- Technical fact sheets will not be mailed to the full mailing list. They will be distributed at community meetings, posted on the Web site, e-mailed, and made available at the information repository and by request.
- The fact sheet will be translated into Chinese (Cantonese) and Spanish (other languages to be considered based on need). Based on information provided by the Chinese-American community, Cantonese is the primary Chinese dialect spoken in San Francisco.

#### **THEME 5: HEALTH IS A PRIMARY CONCERN FOR MOST SEGMENTS OF THE COMMUNITY.**

*The goal for these actions is to provide the community with the resources to have their health concerns addressed. It is also to communicate the ways the environmental cleanup is intended to be protective of human health.*

##### **Actions to address this theme:**

##### **1. Provide Health Contact Information in this CIP**

- This CIP includes information regarding how health is addressed during a cleanup, a summary of the common health concerns, how the Navy protects the workers and community during active cleanup work, and health officials to contact for more information and assistance. See [Appendix A](#), Health-Related Information, Resources and Contacts.

##### **2. Use HPS Project Web site**

- Include health information in FAQ

##### **3. Hold Regularly Scheduled Community Meetings**

- The Navy will provide time, as needed, in meeting agendas for presentations by professional health organizations such as the Asthma Task Force for asthma education.

##### **4. Distribute Topic-specific Fact Sheets**

- Include health information in a general fact sheet that will be posted on the Web site and available at Navy events.

## Chapter 3: Community Involvement—Actions and Activities (continued)

### Linking Interview Feedback Themes With Community Involvement Program Actions

#### **THEME 6: COORDINATING WITH ESTABLISHED COMMUNITY MEMBERS TO CONDUCT INVOLVEMENT MAY BE A GOOD WAY TO REACH ALL SECTORS OF THE COMMUNITY.**

*The goal for these actions is to use community expertise and work together to communicate with the HPS community.*

##### **Actions to address this theme:**

##### **1. Use Grassroots Outreach**

- Activities will include having residents in the HPS community and community members hand out flyers, post meeting notices on community bulletin boards and at businesses, help improve the site mailing list, and share community feedback with the Navy and regulatory agencies.
- Grassroots outreach will be timed to coincide with distribution of flyers, fact sheets, or quarterly progress reports and/or the community meetings.

##### **2. Navy Presentations at Established Community-Organized Meetings**

- As invited, the Navy and regulators will give the “General Environmental Presentation” or other updates at an established group’s meetings. Advertisements for the meeting and the agenda would be the responsibility of the community group.
- Presentation will consist of general information with time for questions and answers and will focus on the interests of the specific group addressed.
- The presentation will be intended to reach specific audiences that can then disseminate information through expanded group. Groups could include Parent-Teacher Associations, tenants’ associations, Board of Supervisors, and business associations.
- Regular updates could be given to the San Francisco Citizens Advisory Committee (CAC) and the Project Area Committee (PAC) meetings.
- To be more transparent, the Navy will develop a FAQs list that will be updated after each meeting and shared as a handout at each event, in newsletters and on the Web site.

Note: Many actions address more than one theme. See the following table for a complete listing of all themes that an action is designed to address.

The purpose of these activities is to inform the community and engage them in cleanup decisions. The Navy will also distribute a survey to the mailing list to evaluate the program every two years. The findings of this survey will be documented in a memorandum that is included in the Administrative Record for HPS. The survey and documentation will comply with 32 CFR 202.10. The Navy will periodically review this CIP and update it accordingly. The goals for the activities will be evaluated on a yearly basis by the Navy’s Community Involvement Manager to ensure that they are being met.

Chapter 3: Community Involvement—Actions and Activities (continued)

Table of Navy’s Updated Community Involvement Actions and Activities

| Actions and Activities                                                                                                                                                                                                                                                | Delivered By                                                                   | Interview Theme Addressed            |                                                                                                 |                                                                                                 |                                                                                                                                  |                                         |                                                                                                                                                  |

Chapter 4: Navy’s Cleanup Program at Hunters Point Shipyard

To help the community understand the cleanup process at HPS better, this chapter discusses historical operations at HPS that resulted in contamination, presents a timeline of these past activities, and describes the current status of the Navy’s environmental cleanup program at HPS. Maps of HPS and its various parcels are also provided. The Navy will take requests for presentations about documents and cleanup actions. Providing these presentations will educate the community about topics of their interest, and will help the community to comment on the related documents.

HPS Timeline

HPS is located in southeastern San Francisco on a peninsula that extends east into the San Francisco Bay. The timeline to the right and paragraphs that follow provide an overview of the history of HPS since the mid-1800s.

From the mid-1800s until 1938, HPS was used as a commercial dry dock. In 1939, the Navy purchased the property. From 1945 to 1974, the Navy was one of the largest employers of the HPS community. HPS was mostly used as a repair facility for Navy ships and submarines, and was partially occupied by the Naval Radiological Defense Laboratory (NRDL) from 1948 to 1969. In 1974, the Navy ceased shipyard operations at HPS.

From 1976 until 1986, Triple A Machine Shop, Inc. leased 98 percent of HPS. Triple A Machine Shop was a private ship repair company that used the facility to repair commercial and naval vessels. It also subleased portions of the property to various other businesses for warehousing distribution centers and light industry.

HPS entered the BRAC Program in 1988 (which is the Navy’s program for cleaning up and transferring Navy properties that are no longer needed). The 934 acres at HPS were subsequently divided into parcels (see map on [Page 30](#)) as a way to organize the environmental investigation and cleanup. In 1989, HPS was evaluated by U.S. EPA and placed on its National Priorities List (NPL) based on the presence of hazardous materials from past Navy and private operations at the shipyard. NPL sites, also known as Superfund sites, are sites with hazardous contamination that are prioritized for long-term environmental study and cleanup supervised by U.S. EPA.

In 2004, environmental cleanup on one of the parcels, known as Parcel A, met all the necessary cleanup requirements for residential use and was successfully transferred to the San Francisco Redevelopment Agency. Since the transfer was completed, the SFRA has been responsible for redevelopment of Parcel A.

More information on the current status of other individual parcels and of the overall status of the environmental cleanup program at HPS begins on the following page.

USS Providence at HPS,  
June 24, 1965

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Status of the Environmental Cleanup at HPS

The parcels at HPS are in various stages of environmental cleanup. During community interviews, several interviewees asked why HPS is being cleaned up in various stages instead of cleaning up the entire shipyard and then transferring it all at once. The HPS property, some of which is offshore (underwater), has various types and levels of contamination at various locations. The Navy has taken this large cleanup project and divided it into smaller, more manageable tasks. This helps the Navy set priorities and focus on cleanup of sites when timing, regulatory approval, and funding are available to move forward. The Navy is working to prepare land for transfer as soon as possible to allow the SFRA to reuse the property for the benefit of the community (land is ready for transfer when it has been through the required environmental studies and cleanup activities, and has been approved by the Navy and the regulatory agencies as suitable for transfer). By completing the cleanup in stages, the Navy can transfer parts of HPS sooner than waiting for all areas to be done.

The environmental investigation and cleanup underway at HPS on the remaining parcels is grouped into the following three programs:

1. Residual Fuels Program: Focuses on spills and leaks of fuels (diesel and gasoline) and motor oil from former fuel distribution lines and storage tanks.
2. Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)<sup>1</sup> Program-regulated Chemicals: The chemicals regulated under CERCLA include solvents, pesticides, metals (such as mercury and lead), and other chemicals listed on the table on the following page.
3. Radiological Program: Addresses a variety of low-level residual radiological (meaning radioactive) materials, including areas that contain buried World War II-era luminescent (glow-in-the-dark) dials and buttons, sewer and storm drain lines from buildings used for radiological research or maintenance, and these buildings themselves.

A site is placed in a particular environmental cleanup program based on the contaminants found at that location. Following is a table of some common contaminants and uses found at HPS. For more health-related information about these contaminants, go to [www.atsdr.cdc.gov/toxfaqs/index.asp](http://www.atsdr.cdc.gov/toxfaqs/index.asp) or call 1-800-CDC-INFO (232-4636). The link and number are the contacts for the Agency for Toxic Substances and Disease Registry (**ATSDR**), which is a federal government public health agency. Additional information on contaminants is also available from the U.S. EPA at [www.epa.gov/wastes/topics.htm](http://www.epa.gov/wastes/topics.htm).

---

<sup>1</sup> See the diagram in [Appendix G](#) for an explanation of how the CERCLA process, which is also known as the Superfund process, works.

*Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)**Common Contaminants in Soil and Groundwater at HPS*

| Contaminant                             | Description                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Metals                                  | Includes arsenic, chromium, copper, lead, manganese, zinc, and others. These metals can occur naturally in the soil and rock at HPS. Metals are also often present because of the ships that were repaired or cleaned at HPS.                                                                                                                           |
| Pesticides                              | Chemicals designed to kill pests (rodents, insects, or unwanted plants). They may have been sprayed to control pests or weeds on the site.                                                                                                                                                                                                              |
| Polychlorinated Biphenyls (PCBs)        | A liquid used to cool or lubricate in electrical equipment because it does not burn easily and is a good insulator. The manufacture of PCBs was stopped in the U.S. in 1977 because of evidence they build up in the environment and can cause harmful health effects. Electrical equipment (such as transformers) used before 1977 may have used PCBs. |
| Polycyclic Aromatic Hydrocarbons (PAHs) | Chemicals that are formed when items are burned, such as oil, gasoline, garbage, wood, or coal. Tar and asphalt also contain PAHs.                                                                                                                                                                                                                      |
| Radionuclides                           | A radioactive element, human-made or from natural sources, including radium, cesium, and strontium. Often occurring naturally in the soil in some areas, at HPS they may be present from paint that contained radionuclides so it would glow.                                                                                                           |
| Semi-volatile Organic Compounds (SVOCs) | Organic chemicals that do not evaporate as easily as VOCs (see below) and become liquid or solid at low temperatures. Kerosene is an example of an SVOC.                                                                                                                                                                                                |
| Total Petroleum Hydrocarbons (TPH)      | TPH is a mixture of chemicals, but they are all made mainly from hydrogen and carbon, called hydrocarbons. These chemicals originally come from crude oil and can be found in gasoline, kerosene, fuel oil, mineral oil, and asphalt.                                                                                                                   |
| Volatile Organic Compounds (VOCs)       | Organic chemicals that easily evaporate into the air and are often easy to smell. Common VOCs are paint thinners and automotive gasoline.                                                                                                                                                                                                               |

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

Following is a map of the region, followed by a map of the entire HPS showing its various parcel boundaries. The following pages provide an overview of the historical use, contamination, and current environmental investigations at each parcel.

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel A

|                                                              |                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Residential housing                                                                                                                                                                                                                                                                                                    |
| <b>Contaminants at the site</b>                              | Low levels of residual fuels                                                                                                                                                                                                                                                                                           |
| <b>Status of the cleanup</b>                                 | The Navy completed the cleanup to residential standards and transferred the property to the SFRA in December 2004.                                                                                                                                                                                                     |
| <b>Next steps at this site</b>                               | <i>Parcel A is no longer Navy property.</i><br>The SFRA is working with developers selected by the SFRA to build housing, create parks, and have commercial uses at the former Parcel A location. The redevelopment must comply with standard City and State of California construction and dust control requirements. |

Location of Former Parcel A. For a detailed satellite view, see [Page 30](#).

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel B

|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Shipping, repair, and maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Contaminants at the site</b>                              | Metals, VOCs, SVOC, pesticides, PCBs, and radionuclides                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Status of the cleanup</b>                                 | <p>The Navy has completed the investigations and chosen the cleanup remedy with public input and agency concurrence. The remedy includes removing soil contamination and disposing off-site, placing cover material (e.g., clean soil or asphalt) over specified areas, cleaning up the groundwater plumes, and placing restrictions called land use controls. The land use controls make sure the remedy remains protective of human health and the environment.</p> <p>Over the years, the Navy has removed tens of thousands of cubic yards of contaminated soil and hauled that soil off HPS for disposal at landfill sites. The Navy built a protective wall along the shoreline to hold sediment in place and a protective soil cover has also been placed over a portion of the Parcel. The storm and sewer lines that had the potential to be contaminated with low levels of radiation have been removed and sent off site for disposal. Buildings have also been surveyed and any radiological contamination has been removed.</p> |
| <b>Next steps at this site</b>                               | Most of Parcel B is proposed for early transfer to the SFRA in 2011 and SFRA will complete the cleanup. The Navy is completing the cleanup of a smaller portion of Parcel B (IR 07/18) and transferring this portion to SFRA in 2011. The proposed reuse includes educational/cultural use, mixed use (residential and industrial), open space, and research and development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel D-1

|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Shipbuilding, repair, and maintenance and radiological research                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Contaminants at the site</b>                              | Metals, PAHs, VOCs, and radionuclides                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Status of the cleanup</b>                                 | <p>The Navy has completed the investigations and chosen the cleanup remedy with public input and agency concurrence. The remedy includes removing soil contamination and disposing offsite, placing cover material over the entire parcel, cleaning up the groundwater plumes and placing land use controls. The land use controls make sure the remedy remains protective of human health and the environment.</p> <p>The Navy removed the soil contamination and disposed of it offsite and has treated the contaminated groundwater. The Navy is finalizing the remedial design and is in the process of removing storm and sewer lines that have the potential to be contaminated with low levels of radiation. The Navy is also cleaning up the piers from potential low level radiation.</p> |
| <b>Next steps at this site</b>                               | The Navy anticipates the transfer of Parcel D-1 to SFRA in 2012. The proposed reuse includes mixed use (residential and industrial) and industrial.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel D-2

|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Radiological laboratory and former underground storage tank                                                                                                                                                                                                                                                                                                                                                            |
| <b>Contaminants at the site</b>                              | Radionuclides                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Status of the cleanup</b>                                 | The Navy has completed the investigations and with public input and agency concurrence determined that no further action is necessary. Portions of the combined storm and sanitary sewers were removed between 2006 and 2009. After final review of the status of the cleanup, the Navy and agencies concluded that there are no unacceptable risks from hazardous substances or radiological material in this parcel. |
| <b>Next steps at this site</b>                               | The Navy anticipates the transfer of Parcel D-2 to SFRA in 2011. The proposed reuse includes residential along with research and development.                                                                                                                                                                                                                                                                          |

Location of Former Parcel D-2. For a detailed satellite view, see [Page 30](#).

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel E

|                                                              |                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Ship repair and industrial operations                                                                                                                                                                                                                                                                      |
| <b>Contaminants at the site</b>                              | Metals, VOCs, PCBs, TPH, pesticides, and radionuclides                                                                                                                                                                                                                                                     |
| <b>Status of the cleanup</b>                                 | The Navy has completed the investigations and is in the process of completing the feasibility study. The feasibility study evaluates remedies specific to Parcel E. The Navy is also treating the groundwater in specific locations on Parcel E while performing studies on groundwater treatment methods. |
| <b>Next steps at this site</b>                               | The Navy will choose the cleanup remedy with agency concurrence and input from the public. The Navy anticipates the transfer of Parcel E to SFRA in 2014. The proposed reuse includes research and development and open space.                                                                             |

Location of Former Parcel E. For a detailed satellite view, see [Page 30](#).

|                                                              |                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Landfill for HPS industrial operations and construction activities                                                                                                                                                                                                                                                                         |
| <b>Contaminants at the site</b>                              | Metals, VOCs, PCBs, TPH, pesticides, and radionuclides                                                                                                                                                                                                                                                                                     |
| <b>Status of the cleanup</b>                                 | The remedial investigation and feasibility study is being finalized. The remedial investigation evaluates the contamination and potential risk to human health and the environment. The feasibility study evaluates remedies specific to Parcel E-2. The Navy is also currently removing contaminated soil and debris along the shoreline. |
| <b>Next steps at this site</b>                               | The Navy will choose the cleanup remedy with agency concurrence and input from the public. The Navy anticipates the transfer of Parcel E-2 to SFRA in 2017. The proposed reuse includes research and development and open space.                                                                                                           |

Location of Former Parcel E-2. For a detailed satellite view, see [Page 30](#).

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel F

|                                                              |                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Historical industrial operations (offshore areas)                                                                                                                                                                                                                                               |
| <b>Contaminants at the site</b>                              | Metals, PCBs, and radionuclides                                                                                                                                                                                                                                                                 |
| <b>Status of the cleanup</b>                                 | The investigation and feasibility study have been completed to address chemical contamination in the sediment. An investigation for evaluating the potential for low-level radiation in Parcel F is being conducted. Piers that pose a navigational hazard are in the process of being removed. |
| <b>Next steps at this site</b>                               | Once the radiological evaluation is completed, the Navy will choose the cleanup remedy with agencies' concurrence and input from the public. The Navy anticipates the transfer of Parcel F to SFRA in 2017.                                                                                     |

Location of Former Parcel F. For a detailed satellite view, see [Page 30](#).

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Parcel G

|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Historical use<br/>(possible source of contamination)</b> | Shipbuilding, repair, and maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Contaminants at the site</b>                              | Metals, PAHs, VOCs, and radionuclides                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Status of the cleanup</b>                                 | <p>The Navy has completed the investigations and has chosen the remedy with public input and agency concurrence. The remedy consists of removing soil contamination and taking the soil off HPS for disposal at landfill sites, placing cover material over specified areas, monitoring the groundwater, and placing restrictions called land use controls. The land use controls make sure the remedy remains protective of human health and the environment.</p> <p>The storm and sewer lines that had the potential to be contaminated with low levels of radiation have been removed and sent offsite for disposal. Buildings have also been surveyed and any radiological contamination has been removed.</p> |
| <b>Next steps at this site</b>                               | Parcel G is proposed for early transfer to the SFRA in 2011 and SFRA will complete the cleanup. The proposed reuse includes education/cultural, industrial and mixed use (residential and industrial) and open space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Historical use<br/>(possible source of contamination)</b> | Storm sewer and sanitary sewer                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Contaminants at the site</b>                              | Metals, VOCs, and radionuclides                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Status of the cleanup</b>                                 | The Navy has completed the investigations and has chosen the remedy with public input and agency concurrence. The remedy consists of placing a cover over the entire parcel and groundwater monitoring to evaluate natural reduction of the contaminants in the groundwater. Land use controls are also included to make sure the remedy remains protective of human health and the environment. The Navy is finalizing the remedial design and radiological remediation is complete. |
| <b>Next steps at this site</b>                               | The Navy anticipates the transfer of Parcel UC-2 to SFRA in 2011. The proposed reuse includes mixed use (residential and industrial) and industrial.                                                                                                                                                                                                                                                                                                                                  |

Location of Former Parcel UC-2. For a detailed satellite view, see [Page 30](#).

## Chapter 4: Navy's Cleanup Program at Hunters Point Shipyard (continued)

### Opportunities for Public Involvement at HPS

In order to manage the multi-year environmental cleanup for the parcels at HPS, the Navy created a schedule of activities that includes the environmental investigations, remediation, and the delivery of technical documents. Below is the estimated schedule of activities and technical documents for each parcel. Opportunities for community involvement throughout these investigations will be announced through community meetings, fact sheets, public notices, and/or the Navy's Web site. Note that some documents have a required formal public review period during which the public can provide comments and input on the document, as per NCP requirements. Others are not required by the NCP to have a public comment period, but the Navy will provide that opportunity upon request.

#### *Schedule of Reports for Cleanup Activities at Each Parcel*

| <b>Parcel G</b>                               |             |                                                      |
| Draft Removal Action Completion Report        | Spring 2011 | Available upon request for public review and comment |

#### Notes:

- <sup>a</sup> Name of Report: A description of typical CERCLA reports is provided in [Appendix G](#).
- <sup>b</sup> Vapor Intrusion: When chemicals in soil or groundwater move into indoor air in buildings.
- <sup>c</sup> Bioremediation: Removing contamination by having microorganisms (such as bacteria) consume it. *In situ* means treating the contaminated material in place at the site, while *ex situ* means the contaminated material is removed and treated elsewhere.
- <sup>d</sup> Shipshielding: A former practice at the shipyard where the Navy tried various ways to shield ships from radiation.

## Chapter 5: Cleanup Roles and Responsibilities

The environmental cleanup of HPS is a complex process involving several key state and federal agencies. The state and federal regulatory agencies provide oversight to make sure the Navy's cleanup complies with existing laws and regulations (for more information on the laws and regulations, see [Appendix G](#)). This section describes the roles and responsibilities of the Navy, the regulatory agencies, and the key stakeholders involved with the environmental cleanup at HPS. To contact the Navy or any of the regulatory agencies for more information, see the contact list in [Appendix B](#).

### Roles and Responsibilities of the Navy

#### Navy

- Lead federal agency
- Responsible for environmental cleanup
- Primary decision maker

The Navy is the lead federal agency responsible for the environmental cleanup and community involvement program at HPS and is therefore the primary decision maker. The regulatory agencies oversee all key decisions about cleanup and community involvement to ensure that the activities are meeting cleanup laws and regulations.

The Navy's environmental cleanup program at HPS is ongoing. The Navy's ultimate goal of the HPS environmental cleanup program is to make property available for reuse by the San Francisco Redevelopment Authority. Once the Navy has completed cleanup at a parcel and the regulatory agencies have decided that cleanup meets the requirements to protect human health and the environment, the Navy can transfer the land to another landowner, such as the SFRA. The Navy's cleanup program is implemented in accordance with the SFRA's redevelopment plan for HPS. That plan designates the type of reuse planned – areas of residential, commercial, or recreational use – and the cleanup levels meet that reuse plan.

***Once land transfer is complete, the Navy is no longer in control of activities on that property. Redevelopment of transferred land, including hiring a land developer, is the responsibility of the new landowner, the SFRA.***

For example, in 2004, the Navy transferred Parcel A to SFRA. After the land was transferred, the Navy was no longer in control of activities on that property. Redevelopment of transferred land, including hiring a land developer, is then the responsibility of the new landowner; for Parcel A, it is the responsibility of the SFRA.

Sometimes property can be transferred prior to the completion of all environmental cleanup activities. As part of the Early Transfer process the Navy will prepare a Finding of Suitability for Early Transfer (FOSET), which will first be reviewed by U.S. EPA and the state regulators, and then made available to

## *Chapter 5: Cleanup Roles and Responsibilities (continued)*

the public for a 30-day comment period. The purpose of the FOSET is to present the Navy and regulatory agency findings that a parcel is environmentally suitable for transfer prior to completing all remedial action, pursuant to the deferral provisions of CERCLA Section 120(h)(3)(C) (for a graphic of the CERCLA process with early transfer, see [Appendix G](#)).

The FOSET will do the following:

- 1) Describe the remedial actions taken by the Navy, including excavation of “hotspots” of contamination and the treatment of the groundwater
- 2) Document regulatory approval of the Navy's completion of the excavation of all radiation associated with storm and sanitary sewer lines
- 3) Document the “free release” of all buildings where radiological contamination was identified, or which were suspected of having radiological contamination (Note: the Navy must meet the requirements of free release prior to issuing the FOSET as it is a condition of transfer)
- 4) Describe the proposed transfer and the mechanisms to ensure that the remaining elements of the remedial action are properly conducted
- 5) Describe the Administrative Order on Consent (**AOC**) under which U.S. EPA and the State of California will oversee the remaining remediation
- 6) Describe the restrictions which will be established to assure protection of human health and the environment during and after the redevelopment

After the public has commented on the FOSET, the Navy will revise the FOSET in response to comments received before formally presenting it to U.S. EPA and the State as part of the package officially requesting approval of the Early Transfer. The Early Transfer package is called the Covenant Deferral Request (**CDR**). The CDR must be approved by U.S. EPA and by the Governor of the State of California before title to the property can be transferred to the SFRA. See [Page 52](#) for an explanation of the SFRA's responsibilities.

## Chapter 5: Cleanup Roles and Responsibilities (continued)

### Roles and Responsibilities of the Regulatory Agencies

#### BRAC Cleanup Team (BCT)

- Composed of the Navy and members from the regulatory agencies
- Responsible for reviewing specific cleanup activities
- Oversees the Federal Facility Agreement (FFA) for HPS
- Can recommend additional actions for cleanup

Several regulatory agencies provide oversight of the Navy's environmental cleanup at HPS. In 1988, HPS entered the BRAC Program, which designated HPS for environmental cleanup and closure. The BCT is made up of Navy staff and several regulatory agencies. The BCT oversees specific environmental cleanup program activities and the environmental closeout process at HPS, which includes meeting legal requirements and regulations designed to protect human health and the environment. In addition to overseeing the environmental cleanup, the BCT ensures that the cleanup meets the legal requirements for public participation.

The primary regulatory agencies (and members of the BCT) actively involved at HPS, as well as their primary responsibilities, are as follows:

- U.S. EPA is the lead regulator agency and provides federal oversight for the environmental cleanup at HPS.
- DTSC is the lead state agency and provides oversight for the environmental cleanup at HPS.
- The Water Board supports DTSC and provides oversight for cleanup activities that affect water and the petroleum program.

The BCT signed a legal document, called the FFA, with the Navy that provides the enforcement mechanisms to do the following:

1. Ensure that the Navy has thoroughly investigated environmental impacts from past and current site activities.
2. Ensure that the Navy takes appropriate response action (such as cleanup activities) needed to protect public health, welfare, and the environment.
3. Ensure that the response actions comply with applicable laws and regulations.
4. Set up a framework and schedule for response actions.
5. Facilitate cooperation, exchange of information, and participation between the Navy and the regulatory agencies.

## Chapter 5: Cleanup Roles and Responsibilities (continued)

Other agencies are involved in the environmental cleanup process when cleanup affects resources they regulate. Those agencies include the California Department of Public Health, the California Department of Fish and Game, the U.S. Fish and Wildlife Service, the San Francisco Department of Public Health (SFDPH), and the San Francisco Bay Conservation and Development Commission.

### Roles and Responsibilities of the San Francisco Redevelopment Agency

#### San Francisco Redevelopment Agency (SFRA)

- Becomes landowner once cleanup is complete
- Is responsible for redevelopment

The San Francisco Redevelopment Agency, or its successors, is primarily responsible for redeveloping HPS. In 1997, after an extensive multi-year community planning effort, the SFRA adopted the Hunters Point Shipyard Redevelopment Plan. An amendment to the plan was adopted in August 2010.

According to the SFRA Web site, the City selected Lennar/Bayview Hunters Point (BVHP) Partners (now known as “HPS Development Co., LP”) as the master developer for HPS in March of 1999 ([www.sfredevelopment.org/index.aspx?page=57](http://www.sfredevelopment.org/index.aspx?page=57)).

Once a parcel meets the cleanup requirements, or an agreement for Early Transfer has been reached, it is transferred from the Navy to the SFRA (refer to the Navy’s responsibilities on [Pages 49-50](#) for more details about Early Transfer). After the piece of property has been transferred, the SFRA is fully responsible for redevelopment of the site, including selecting a developer and deciding how the land will be developed.

### Roles and Responsibilities of the City and County of San Francisco

#### City and County of San Francisco

- Provides input during cleanup as needed

SFDPH is one of the agencies providing input to the Navy’s environmental cleanup of HPS. The City is also able to provide input during the cleanup process if it determines that the cleanup activities will be detrimental to the property or in violation of City laws and codes. The City has several mechanisms in place that will require anyone who disturbs soil or other ground cover at HPS to comply with

## Chapter 5: Cleanup Roles and Responsibilities (continued)

requirements in the San Francisco Municipal Codes, specifically Health, Building and Public Works Codes. The City also will regulate the construction of new development through its Subdivision Code, which will require construction of public improvements in conjunction with subdivision of land for private development. The City and the SFRA have a formal process to confirm that the improvements were constructed as required by the permits. The City also has a process in its Building Code to confirm that structures are constructed to code. Permitted activities involving the disturbance of soil require the permit applicant to go through a special process set out under Article 31 of the Health Code. The Applicant is required to obtain approval of various plans under Article 31 from SFDPH to assure that environmental restrictions and conditions are appropriately taken into account during the permitted activities. Once the Applicant receives approval of the required plans and meets all other permit requirements the Applicant will receive approval for the building, grading or other permit and can begin grading or construction.

### Roles and Responsibilities of the Community

#### HPS Community

- Active participant in HPS cleanup process
- Provides input regarding human health and environmental concerns
- Provides input into preparation and revision of the CIP

One of the ways the HPS community plays an active role in the Navy's environmental cleanup program is by providing input to the BCT on cleanup alternatives and selection of the remedy. The community fulfills these roles by doing the following:

- Reviewing documents
- Providing comments
- Participating in meetings and other community involvement program activities
- Providing advice and solutions that can be incorporated into the cleanup process and decisions

In addition to any interested stakeholders being involved in the cleanup process through the various community involvement activities, U.S. EPA also offers a Technical Assistance Grant (**TAG**) Program. The U.S. EPA TAG Program awards one grant per site to an eligible citizen group that lives near a Superfund site. This group contracts with an independent technical advisor to help the community interpret and comment on site-related information. In August 2009, a 3-year, \$50,000 TAG was awarded to the India Basin Neighborhood Association (**IBNA**). IBNA recently contracted with Arc Ecology, Inc. as its technical advisor. The TAG grant administrator is Alex Lantsberg who can be contacted at (415) 938-6170. The U.S. EPA TAG project officer is Jackie Lane at (415) 972-3236 or e-mail [lane.jackie@epa.gov](mailto:lane.jackie@epa.gov).

## *Chapter 5: Cleanup Roles and Responsibilities (continued)*

The Navy's community involvement program activities, designed to engage the community, are described in [Chapter 3](#) of this document. The Navy plans to involve the IBNA and its technical advisor under the TAG Program in the cleanup process in the following ways:

- Technical advisors, as directed by IBNA, participate at Navy cleanup meetings with the regulators.
- The Navy will respond to technical advisor comments on Navy documents.
- The Navy will provide time on community meeting agendas for TAG updates and to make announcements. Technical advisor presentations can be arranged for when needed.

When it comes to concerns and interests related to the current or future redevelopment of property, the community can communicate directly with the SFRA. The City has set up several methods for doing this, including the Citizens Advisory Committee (CAC), which is made up of community members selected by the mayor to provide input to the redevelopment process, and the Project Area Committee (PAC), a community-based organization providing recommendations to SFRA. For contact information, see [Appendix B](#).

### **Conclusion**

The Navy is committed to providing information and listening to community concerns about the environmental cleanup plans and activities at HPS. Community review comments are incorporated into HPS cleanup-related documents and have had an impact on cleanup activities, such as looking into alternate technologies, increasing air monitoring, adjusting work hours, and varying truck routes.

This CIP is a resource for enabling the Navy to engage with the community better, as well as a tool for the community to use to get information on the environmental cleanup program and get involved in the process. The CIP contains resources for the community, including more detailed information listed in the appendices that follow. Every two years, the Navy will evaluate its community involvement program, and the need for a RAB, including distributing a survey to the community, to ensure that the actions that are implemented continue to meet the needs of the HPS community.

## Appendix A: Health-Related Information, Resources, and Contacts

### Health Resources

Most of the people interviewed for this Community Involvement Plan (**CIP**)—at least 54 of 73—were concerned about health issues. They mentioned concerns for health of former workers, former and current residents who live near the site, and future residents who will live on the site. Many interviewees mentioned high rates of asthma and cancer in the Hunters Point Shipyard (**HPS**) community and their concern that the shipyard may affect these rates. A number of those interviewed have health problems and are curious whether the site caused or contributed to their compromised health.

The Department of the Navy recognizes that health is primary concern for the Bayview community and wants to help address this issue as best it can in this document. The Superfund Law driving the cleanup at HPS does not address health of individuals; but rather, it focuses narrowly on cleaning up contamination to levels that are no longer a threat to human health or the environment. Assistance for individual health concerns is provided through public health agencies and organizations whose missions are health-based. Nevertheless, to better assist the community, the Navy and regulators compiled pertinent health resource information that includes contact name, roles, and mission focus (see table below beginning on [page A-3](#)). Other ways the Navy protects present and future public health are described below.

### Health in the Environmental Cleanup Decision-Making Process

According to the U.S. EPA Superfund Law, the Navy is required to consider a number of factors when selecting environmental cleanup program actions to ensure the protection of human health and environment from the effects of contamination at the site. One of those factors is conducting a risk assessment to analyze contamination data from the site and develop a scientific estimate of the level of risk for people who might be exposed to these substances (present exposure and future land use). The risk assessment determines if these levels pose an unacceptable risk that could affect a person's health as defined by regulatory standards and requirements. This information is used to determine the types of environmental cleanup program actions that will reduce that risk. Conservative safety margins are built into this analysis; therefore, people will not necessarily become sick even if they are exposed to materials at higher dose levels than those estimated by the risk assessment. The most vulnerable people (e.g., children and the elderly) are carefully considered to make sure all members of the public will be protected.

### Dust Control at the Site

Interviewees also stated they are concerned specifically about dust control. The Navy has an approved Dust Control Plan in place to ensure the safety of workers and the HPS Community. Dust control is important to prevent people being exposed to dust that may contain contaminants of concern. Dust issues are addressed through the following methods:

- (1) To prevent dust, work sites and roadways are sprayed with water.
- (2) Stockpiles of soil are coated with a substance that works like glue to control windblown dust.

## Appendix A: Health-Related Information, Resources, and Contacts (continued)

- (3) Trucks carrying soil are covered before leaving the shipyard.
- (4) A 15 mile per hour speed limit is required for all vehicles on site, and a 5 mile per hour speed limit is required in work areas.
- (5) Air monitoring is done at HPS on a continuous basis during normal business hours and dust levels are monitored in real time—if dust is detected above approved concentrations, operations are immediately shut down and mitigation measures, such as spraying water, are promptly used.

### *Air Monitoring and Air Quality at the Site*

The Navy will continue to monitor air quality (both dust and contaminant levels) during the cleanup process. Should additional health information about air quality issues at HPS become available, the Navy will compile another fact sheet and be prepared to make presentations to the local community about this issue.

You can review air quality data for HPS on the Navy's Web site:

- Go to [www.bracpmo.navy.mil](http://www.bracpmo.navy.mil)
- Click on the Installations Map (on the right)
- Click on the state of California (on the map)
- Click on the label "NSY Hunters Point" (on the map). Now you are on the HPS specific Web page.
- Scroll down to "Air Monitoring Data". Click the "Air Monitoring Data" to expand the list. From there you can click on the link to view air data for various time periods.

***Local and federal agencies can answer your questions or give information about health or environmental conditions. See the following table for contacts related to health and asthma specifically, air quality, and health resources in the area.***

## Appendix A: Health – Related Information, Resources, and Contacts (continued)

### Health Contacts/Resources:

## Appendix B: Navy, Federal, State, and Local Government Contacts (continued)

### Online Information

The Navy's Hunters Point Shipyard (HPS) Web site:

[www.bracpmo.navy.mil/basepage.aspx?baseid=45&state=California&name=hps](http://www.bracpmo.navy.mil/basepage.aspx?baseid=45&state=California&name=hps)

The following information is available on this Web site:

- A brief history of HPS and the environmental restoration program
- Updated information on the status of the environmental restoration program
- Access to Navy reference documents and links to related cleanup Web sites
- Fact sheets and quarterly newsletters regarding various topics for the environmental restoration program at HPS
- Recently published documents that are currently available for public review

**Note:** This is not the new HPS Web site that the Navy will create to involve the community, as discussed in the Actions and Activities section (Chapter 3). A new improved Web site will be created as part of the implementation of this CIP.

### Administrative Record Locations

The Administrative Record contains all documents considered or relied on during the process of making environmental cleanup decisions. Due to the large volume of documents required for the Administrative Record and space issues associated with the local Information Repositories, the Bayview/Anna E. Waden Branch Library and the San Francisco Main Public Library only contain the Administrative Records indexes and other pertinent documents for public view (see Pages H-13 and H-14 for addresses). The Bayview/Anna E. Waden Branch Library was closed in April 2011; however, a temporary location for the Information Repository has been established at the HPS Site Trailer, located across the street from the security entrance to the Shipyard.

The complete Administrative Record for HPS is maintained at the Naval Facilities Engineering Command offices in San Diego, California. Copies of documents located at the Information Repository are available for review by appointment only by contacting the Administrative Record Administrator:

**Diane Silva, NAVFAC SWDIV Code EV33**

NBSD Bldg 3519  
2965 Mole Road  
San Diego, CA 92136  
Phone: (619) 556-1280  
[diane.silva@navy.mil](mailto:diane.silva@navy.mil)

Administrative hours are 8:00 a.m. to 5:00 p.m., Monday through Friday. Documents may not be removed from the facility; however, they may be photocopied.

In addition, the U.S. EPA's Administrative Record is located at:

**U.S. EPA Superfund Records Center**

95 Hawthorne Street San Francisco, CA 94105  
Phone: (410) 536-2000  
(hours 8:00 a.m. to 5:00 p.m.)

## *Appendix C: Community Interview Process and Summary*

### **Interview Process**

Conducting community interviews is a key part of preparing an updated Community Involvement Plan (CIP). The Department of the Navy began the interview process by compiling a large list of Hunters Point Shipyard (HPS) community stakeholders, who were contacted and invited to be interviewed. The Navy also hosted a community meeting in February 2010 to discuss a new CIP. During the meeting, the Navy received comments from the community on a proposed table of contents for the CIP and the interview questionnaire. Approximately 35 community members attended the meeting to discuss the CIP.

The Navy mailed a postcard to reach interested stakeholders, inviting all members of the community to participate in the interview process. The postcard was mailed on June 14, 2010, to more than 2,200 people within the HPS community. Those who responded were added to the list of potential interviews. The list also contained the following:

- Existing Navy and United States Environmental Protection Agency (U.S. EPA) distribution lists
- Web research conducted to locate appropriate groups
- Suggestions from other interviewees (each interviewee was asked who else they thought should be interviewed)

In total, from June 15 through September 9, 2010, the Navy conducted 73 interviews with people who live in, work in, or serve the HPS community—defined as ZIP codes 94107, 94124, and 94134 (see map in [Appendix D](#)). The Navy conducted 40 interviews for the previous HPS CIP, prepared in 2004. The Navy went to significant lengths in 2010 to ensure the most comprehensive survey practicable. Ten of the interviews were conducted via telephone and the rest were conducted in person. Although 73 people were interviewed, not every interviewee responded to every question. In addition, more than one response was offered for some questions; therefore, answers summarized in the following list do not always total 73 responses.

A Navy representative and a contractor who took notes were present at each interview. In all but one of the 73 interviews, at least one but as many as four regulatory agency representatives were also present.

Categories of stakeholders interviewed, and the number from each group is listed as follows:

- |                                                        |                                         |
|--------------------------------------------------------|-----------------------------------------|
| • Civic Groups/ Clubs and Organizations – 34           | • Local Businesses – 11                 |
| • Local Residents – 31                                 | • Education and Childcare Providers – 6 |
| • Environmental Groups/Activists – 15                  | • Media – 3                             |
| • Former Restoration Advisory Board (RAB) Members – 12 | • Elected Officials – 1                 |
|                                                        | • Health Care Providers – 2             |

Many interviewees represented more than one of the abovementioned groups; therefore, the total representation is greater than 73 individuals interviewed.

### Appendix C: Community Interview Process and Summary (continued)

The Navy tried to interview stakeholders from all segments of the community. The following chart represents the breakdown of the 73 interviewees that work or reside in the 94124, 94107, and 94134 ZIP code areas.

For *Other ZIP code* designation, the physical address is outside of the 3 HPS community ZIP codes. However, the organizations service the 3 HPS ZIP codes. Of these, 7 are civic organizations, 5 are environmental organizations, 4 are media, and 3 are government or elected officials.

The table on the following page lists all of the affiliations of those interviewed, as noted by the interviewee. Some interviewees requested that their organization not be listed specifically by name. Note that most interviewees had numerous affiliations, so the total is more than 73.

**Interview Questionnaire and Responses**

Interviewees were asked approximately 29 questions that were created in advance with input from the regulatory agencies and community. The interviews were conducted in a discussion format. Each interviewee was encouraged to discuss his or her interests, concerns, and ideas during the interview, and so some questions were not answered. The interviewees were not handed the questionnaire to fill out; instead, questions were read by the interviewers and a contractor took notes to capture responses. Following are the questions that were asked.

\*\*\*\*\*

**HUNTERS POINT SHIPYARD COMMUNITY INVOLVEMENT PLAN (CIP)****INTERVIEW QUESTIONNAIRE****Background of Interviewee**

1. Do you work or live in the 94124, 94134, 94107, or in the Bayview Hunters Point area?
  - a. If yes, how long?
2. Do you belong to a community organization or group?
  - a. If so, which one(s)?
3. Have you given input or attended Navy/community outreach events for the environmental program at Hunters Point Shipyard?

**General Knowledge about Hunters Point Shipyard**

4. How much would you say you know about the Hunters Point Shipyard Environmental Restoration Program:
  - a. Nothing; a little bit, a lot

**Appendix C: Community Interview Process and Summary (continued)**

5. If you know a little bit or a lot, how did you get most of the information you know about Hunters Point Shipyard?
6. Do you have any interests or concerns regarding the base and the cleanup program?
  - a. If yes what are they?

**Your Information Needs and Resources**

7. Are you on the Navy's E-mail or mailing list?
  - a. Would you like to be?
8. Do you get Navy newsletters and/or fact sheets?
9. What topics are you most interested in receiving information and updates from the Navy about?
10. The Navy has provided information in various ways.
  - a. Have you gotten information by any of these means?
  - b. How do you like to receive information?

Choose all that apply or add your own:

| Outreach Method:                                                                                                      | Yes<br>I have received<br>info this way | Yes<br>I would like to receive<br>info this way |
|-----------------------------------------------------------------------------------------------------------------------|-----------------------------------------|-------------------------------------------------|
| Newsletters (4–8 pages on general topics)                                                                             |                                         |                                                 |
| Fact Sheets (2–4 pages on one specific topic or site)                                                                 |                                         |                                                 |

| Bus Tour                                                                                                              |                                         |                                                 |
| Other                                                                                                                 |                                         |                                                 |

11. Do you prefer to receive items (such as fact sheets) by E-mail or hardcopy mail?
12. What is the best way for the Navy to provide information about environmental activities at Hunters Point Shipyard? (Something from the list above, or another idea)
  - a. How often should it be provided?
13. Have you contacted elected officials, the Navy, regulatory agencies, or community groups about the cleanup activities at Hunters Point Shipyard?
  - a. If so, what information were you trying to get?
  - b. What kind of response did you receive and was it helpful?
14. If you wanted to contact the Navy about an environmental cleanup question you have, would you know who to contact and how to reach them?
  - a. What is your preferred method for contacting the Navy? (E-mail/phone/in-person)

*Appendix C: Community Interview Process and Summary (continued)*

15. Are there local civic or service clubs that the Navy should contact to provide information to or speak with?
16. What newspaper(s) do you prefer to read for local information and/or news about Hunters Point Shipyard?
17. What websites do you look at for local information and/or news about Hunters Point Shipyard?

**The Community**

18. What do you think are the issues and concerns of the community, related to environmental cleanup?
19. Do you think the community has the information they need, or know where to get it?
  - a. If not, how can the Navy make information available to the community?
20. Are there other organizations providing answers to questions or providing information about Hunters Point Shipyard?

**Feedback**

21. How effective has the Navy's communication about the cleanup program been? (very effective/somewhat effective/not effective)
22. Do you have confidence in the Navy to adequately cleanup Hunters Point Shipyard?
  - a. Why or Why not?
  - b. If not, how can the Navy gain your confidence?
23. Do you have confidence in the U.S. Environmental Protection Agency (federal agency) to provide effective oversight of the cleanup activities?
  - a. Why or Why not?
  - b. If not, how can they gain your confidence?
24. Do you have confidence in the State of California Department of Toxic Substances Control (California EPA) to provide effective oversight of the cleanup activities?
  - a. Why or Why not?
  - b. If not, how could they gain your confidence?
25. Do you have confidence in the State of California San Francisco Bay Regional Water Quality Control Board to provide effective oversight of the cleanup activities?
  - a. Why or Why not?
  - b. If not, how could they gain your confidence?
26. Do you have confidence in the City of San Francisco to provide effective oversight of the cleanup activities?
  - a. Why or Why not?
  - b. If not, how could they gain your confidence?

**Thank You and Wrap up**

27. Is there anything you would like to add about how the Navy can improve their environmental cleanup program and related community outreach?
28. Who else should we contact for an interview?

## Appendix C: Community Interview Process and Summary (continued)

29. May we identify you as an interview respondent with the understanding that your name will be kept separate from your answers and comments?

\*\*\*\*

---

### Interview Summary

Overall, interviewees felt the Navy's communication about the environmental cleanup has not been effective. See [Chapter 2](#), Community Interviews and Feedback, for additional summary information.

### Selected Interviewee Statements

To protect privacy, names and specific affiliations of the participants in the interviews are not published. Some selected statements, intended to show the general tone and variety of responses given during the interviews, are presented in the following subsections. They are not direct quotes, but instead represent a synopsis written during the interview. The category of the interviewee making the statement is included after the statement.

#### Health

- “If you are doing outreach to the community, they have to know that you care about their health. You will have to address health concerns.” —Local Resident, Church Representative, Education Provider
- “My grandkids have had headaches and nosebleeds, their mother died at 28 of cancer. I have concerns about the health of everyone in Hunters Point. Asthma is also a problem.” —Local Resident, Environmental Activist
- “People attribute health problems in the community with the shipyard. There are numerous problem sites in areas like Brownfields, but everyone points to the shipyard. It's complex, and hard to say what the Navy is responsible for. You need to clarify that for the community.” —Former RAB Member, Education Provider

#### Quality or Completeness of Cleanup

- “As a resident and environmental engineer, I want to make sure it is cleaned to best possible standards. I want the property cleaned so future use is not constrained too much. Have the land available for the best possible use beyond what is defined by the redevelopment authority.” —Former RAB Member, Local Business Owner
- “I'm concerned with how thoroughly it is cleaned. Parcel E-2 is the most crucial; I am interested in how it is cleaned and then developed and re-used.” —Former RAB Member, Local Resident
- “Did the Navy really clean it and how would the people in this community know? We have to take your word for it.” —Local Resident, Local Business Owner

## *Appendix C: Community Interview Process and Summary (continued)*

### Redevelopment

- “I’m concerned about property being transferred to a developer because they aren’t having a vested interest in the cleanup of contamination.” —Media
- “If the Navy had done better outreach to the community overall to explain the cleanup, people would be more comfortable with the idea of redevelopment.”  
— Civic Organizations/Group or Club

### Jobs/Economics

- “You may be doing a good job on paper, but I do not see efforts of the Navy to use local businesses and incorporate local contractors more in the cleanup. Have the right people in place to get contractors from the community who do not undermine the program. There are people who can make local contracting programs work, you need to engage them. There are good, strong companies in this area who will do a good job.” —Resident, Local Business

### Meetings and Getting Out Information

- “I like public meetings, but it depends on the atmosphere of the meeting. The last meeting I went to was so angry and confrontational that I haven’t been back.” —Shipyard Artist
- “Promote positive information; talk about all the milestones (minor and major) to the community.” —Education Provider
- “Sometimes the information that is provided is too technical and just not sufficient.” —Former RAB Member, Resident, Local Business
- “Figure out some way to have scheduled, uninterrupted presentations, followed by questions and answers. Then have a detailed technical meeting at a later date that is smaller, gets more into the ‘nitty gritty.’” —Former RAB Member, Local Business, Environmentalist
- “I only hear that the Navy is dragging their feet. I don’t hear directly from the Navy.” —Local Union Representative
- “To reach people, talk to people who already have a connection to those you are trying to reach.” —Local Business
- “Recreate the RAB; that is what the people want in the community. They value dialogue. A new format for the RAB is structured presentation, questions and answers, dialogue. Take dialogue when it is given. Need to reformat the RAB so information can get out there. Make sure people chosen for new RAB have open minds and can work within a new structure. This will build confidence in the community and get the Navy to the finish line faster.” —Environmental Activist
- “After the RAB dissolved, there were less newsletters and fact sheets coming out. The meetings are stacked with who’s running the meeting. The community could not really discuss what was happening. I got tired of the meetings. Whoever runs the meeting, they need to have the respect of the community.” —Media, Resident
- “Establish some kind of group, even if it’s just five people from the community. Does not have to be a RAB. I would be on that group. Have some meetings just with the group, then a larger

## Appendix C: Community Interview Process and Summary (continued)

group meeting. Have the group of five rotate, be in the group for awhile, and then get five new people.” —Resident, Local Business

- “Informality equals unaccountability. Keep a structure for and records of each meeting. The community should be able to say we do or don't like something or have certain concerns and have that be recorded. It's good to have one big meeting for a decision-making meeting specifically. Do not do that in smaller meetings.” —Environmental Activist

### General

- “This feedback from us will go into a report and never be addressed or considered again. We are real people who have been affected. We want action, to hold you accountable, and if we feel you are doing good, then we can advocate for you.” —Resident, Education Provider
- “The shipyard should be thoroughly cleaned. I don't want people getting sick in the future. In the World War II era, people didn't know the consequences of dumping stuff, but now we know. Families will be living out there, so it needs to be clean. San Francisco needs this to be redeveloped; it's no good to have that empty hole out there. It will be a brand new destination for tourists and will boost the economy.” —Civic Organizations/Group or Club
- “The community has a significant level of distrust of all agencies with the cleanup. It will take time to manage trust. There is general paranoia of government agencies and also bad experience with the HPS project.”  
—Resident, Civic Organizations/Group or Club
- “What is the status of the cleanup now? What is the current schedule?”  
—Numerous Interviewees

### Suggested Communication Methods from Interviewees

Interviewees were presented with a list of several communication methods that the Navy has used in the past to reach out to the community. The feedback on those methods is presented in [Chapter 2](#). Interviewees were also encouraged to suggest communication methods that they thought would be successful in informing and involving the community in the environmental cleanup program at HPS. The following table lists all of the methods that were suggested and notes with more details about the method.

## Appendix C: Community Interview Process and Summary (continued)

### Interviewee Feedback on Suggested Communication Methods

| Method                                                                                                | Interviewees' Critiques of Method                                                                                                                |
|-------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|

|                                                                                    | Bayview Childcare Association (meets quarterly)                                                                                                                                                                                                                                                                               |
|                                                                                    | Parent-Teacher Association                                                                                                                                                                                                                                                                                                    |
|                                                                                    | Block or neighborhood groups                                                                                                                                                                                                                                                                                                  |
|                                                                                    | West Point Residents Council                                                                                                                                                                                                                                                                                                  |
|                                                                                    | Bayview Merchants Association                                                                                                                                                                                                                                                                                                 |
|                                                                                    | Misc. groups within the China Town area of San Francisco to reach Chinese community; meeting size small to promote dialogue                                                                                                                                                                                                   |

## Appendix C: Community Interview Process and Summary (continued)

### Interviewee Feedback on Suggested Communication Methods

| Method                       | Interviewees' Critiques of Method                                                                                                                            |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hold a Public Meeting</b> | Open house-style includes poster board stations                                                                                                              |
|                              | Different meetings for different stakeholder groups                                                                                                          |
|                              | Bring facilitator to help keep meeting on track                                                                                                              |
|                              | Limit public comment time period                                                                                                                             |
|                              | Community Mapping Meeting—document community thoughts/issues by writing them on a map                                                                        |
|                              | Town hall meetings                                                                                                                                           |
|                              | Community forums                                                                                                                                             |
| <b>Create Advisory Board</b> | “Bring back the RAB!”                                                                                                                                        |
|                              | Have advisory board with technical experts from local colleges, such as University of California, Berkeley; University of San Francisco; San Francisco State |
|                              | Have small board made of community leaders with 1-year membership rotations                                                                                  |
| <b>Use Internet</b>          | Facebook and/or Twitter; Good outreach for Samoan community                                                                                                  |
|                              | Several U.S. EPA cleanup sites have Facebook and Twitter                                                                                                     |
|                              | Hire public relations firm to assist with messaging and monitoring posts                                                                                     |
|                              | Advertise meetings via Web site and e-mail                                                                                                                   |
|                              | Post work notices and traffic impacts that community should be aware of                                                                                      |
|                              | Live question-and-answer sessions                                                                                                                            |
|                              | Create online information repository with all current documents                                                                                              |
|                              | Current Web site too difficult to use with layers of links to access information; create more user-friendly platform                                         |
| <b>Use Radio</b>             | Commercials on popular stations to announce upcoming meetings                                                                                                |
|                              | Air on popular Chinese-American station (1450 AM)                                                                                                            |
|                              | Air on 30-minute radio show on KALX Radio (University of California, Berkeley) and KZSU (Stanford)                                                           |

## Appendix C: Community Interview Process and Summary (continued)

### Interviewee Feedback on Suggested Communication Methods

| Method                                 | Interviewees' Critiques of Method                                                                                                                                    |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Use Media Publications                 | Ensure that correct information getting to media                                                                                                                     |
|                                        | Newspapers do not have a lot of readership                                                                                                                           |
|                                        | Use San Francisco Examiner, San Francisco Bayview, The Potrero View, and Visitacion Valley Grapevine                                                                 |
| Use Telephone                          | Make local hotline number available and advertise (Note: local number currently available)                                                                           |
|                                        | Use phone bank to invite community to meetings                                                                                                                       |
|                                        | Text message announcements or meeting invites (Note: majority of community members have text capabilities)                                                           |
| Provide Audio Recordings               | Record executive summaries of technical documents and put on CDs for information repositories                                                                        |
| Create a DVD                           | Create DVDs with information about HPS environmental cleanup program                                                                                                 |
|                                        | Incentivize barber shops and beauty salons to show DVDs by purchasing televisions and DVD players and paying store for each showing                                  |
| Use Incentives to Increase Involvement | Give away backpacks with school supplies and HPS environmental cleanup information inside                                                                            |
|                                        | Provide food at any public event ( <b>Note: Navy rules do not allow taxpayer funds to be used to provide food or beverage service at public meetings or events</b> ) |
| Host Job Fair                          | Host a fair to help identify jobs                                                                                                                                    |
| Involve High-profile Scientists        | To help refute those who are "making a big deal about toxics that are not a big deal"                                                                                |
| Hire Public Relations Firm             | Use to manage Facebook                                                                                                                                               |
|                                        | Use to make "cool" factsheets and flyers                                                                                                                             |
|                                        | Use to train Navy on how to get their message out                                                                                                                    |

## Appendix C: Community Interview Process and Summary (continued)

### Postcard Mailed to Community Requesting Participation in the CIP Interview Process

#### Be a Voice of Your Community – Please Take Part!

We hope you will take part in a Community Involvement Plan interview with the Navy. The purpose of the interviews is to talk to various community members and groups to find out what people are interested in or concerned about when it comes to the environmental cleanup at Hunters Point. The Navy will use the feedback from the interviews to determine how to best involve you in the cleanup decision-making process. To be part of an interview, you DO NOT need to know a lot about Hunters Point Shipyard. **The Navy wants to talk to local residents, business owners, activists, and other interested parties. We are scheduling interviews this summer in-person or via telephone.**

If you would like to be interviewed, please provide your contact information and availability to:

Ms. Carolyn Hunter,  
Tetra Tech Community Involvement Manager  
carolyn.hunter@tetrattech.com, (510) 302-6297

About the Community Involvement Plan: Based on the feedback in the interviews, the Navy will outline how they will inform and involve the community in environmental cleanup decisions at Hunters Point. The document will provide background information about Hunters Point; a list of all environmental sites and their status; demographic information about the local community; a list of past community involvement activities; applicable regulatory requirements; and contact information for the cleanup team. This document will be made available to the public.

## Appendix D: Community Background

The Department of the Navy defines the Hunters Point Shipyard (**HPS**) community as ZIP codes 94107, 94124, and 94134. In 1939, the Navy purchased the HPS property. From 1945 to 1974, the Navy was one of the largest employers of the HPS community. At its peak employment level during the last months of World War II, the shipyard employed over 17,000 civilians. When the shipyard closed in the late 1970s, thousands of people lost their jobs.

Following is information on the population, race, ages, education, average income, employment, and housing for the HPS community. All of the demographic information presented was provided by the Nielsen Company, 2010, unless otherwise noted.

This information helped the Navy know more about the community when planning the involvement program. Age breakdown (see [PageD-3](#)) indicated that the Navy could reach the community through schools as well as senior centers. Furthermore, the Navy may choose to use youth-friendly involvement methods such as texting, along with retirement age-friendly daytime meetings.

The census information also indicates there is a high unemployment level, which reinforces concerns that jobs and economic impacts of the environmental cleanup are a top interest for the community. The Navy is addressing this concern by using local vendors, holding job fairs, and creating a fact sheet to direct people to potential hiring opportunities related to the cleanup.

| Population by ZIP Code | 94107  | 94124  | 94134  |
|------------------------|--------|--------|--------|
| Population             | 24,014 | 34,557 | 41,732 |

## Appendix D: Community Background (continued)

**Note:**

\* The U.S. Census Bureau considers the Hispanic/Latino designation an ethnicity, not a race. The population self-identified as “Hispanic/Latino” is also represented within the categories in the “Race” demographic. In the HPS community, 17.1% defined themselves as Hispanic/Latino.

HPS Community is defined as three ZIP codes: 94107, 94124 and 94134.

| Race By ZIP Code                 | 94107 | 94124 | 94134 |
|----------------------------------|-------|-------|-------|
| Asian                            | 19.1% | 29.2% | 55.5% |
| White                            | 60.1% | 11.0% | 16.4% |
| Black/African American           | 11.5% | 38.0% | 9.7%  |
| Native Hawaiian/Pacific Islander | 0.6%  | 3.2%  | 1.5%  |
| Native American/Alaska Native    | 0.5%  | 0.45% | 0.3%  |
| Some Other Race                  | 3.5%  | 13.6% | 12.0% |
| Two or More Races                | 4.7%  | 4.6%  | 4.6%  |
| <b>Ethnicity*</b>                |       |       |       |
| Hispanic/Latino                  | 8.5%  | 22.2% | 20.7% |

## Appendix D: Community Background (continued)

| Age Groups by ZIP Code | 94107      | 94124      | 94134      |
|------------------------|------------|------------|------------|
| 0 to 4 years           | 4.3%       | 9.6%       | 8.2%       |
| 5 to 17 years          | 8.5%       | 18.6%      | 15.0%      |
| 18 to 24 years         | 4.7%       | 11.6%      | 9.8%       |
| 25 to 34 years         | 16.3%      | 11.0%      | 10.7%      |
| 35 to 44 years         | 24.2%      | 15.6%      | 17.3%      |
| 45 to 54 years         | 15.7%      | 13.0%      | 13.6%      |
| 55 to 64 years         | 11.1%      | 9.8%       | 11.1%      |
| 65 + years             | 15.2%      | 10.8%      | 14.3%      |
| Average age            | 42.8 years | 34.9 years | 38.4 years |

## Appendix D: Community Background (continued)

**Note:** Education level for population age 25 and older. Associates Degrees and Bachelor's Degrees: Typically 2 to 4 year degrees. Masters, Doctoral, and Professional Degrees: Graduate academic or professional degree programs composed of advanced studies. Includes but is not limited to MS, MA, PhD, EdD, DPH, MD, DDS, DSW, DO, JD, and ThD.

HPS Community is defined as three ZIP codes: 94107, 94124 and 94134.

| Education by ZIP Code                              | 94107 | 94124 | 94134 |
|----------------------------------------------------|-------|-------|-------|
| No High School Degree                              | 10.8% | 31.6% | 31.4% |
| High School Graduate/GED                           | 11.2% | 26.3% | 23.7% |
| Some College (No Degree)                           | 11.6% | 20.4% | 16.2% |
| Associates/Bachelors Degree (2- to 4-year degrees) | 38.9% | 16.0% | 22.2% |
| Masters/Doctorate/Professional Degree              | 27.5% | 5.7%  | 6.5%  |

## Appendix D: Community Background (continued)

### Map of the Hunters Point Shipyard Community

*Appendix D: Community Background (continued)*

This page intentionally left blank.

## *Appendix E: Former Restoration Advisory Board*

This appendix includes information on the Department of the Navy's former Restoration Advisory Board (**RAB**) at Hunters Point Shipyard (**HPS**). The HPS RAB was formed in 1994 and dissolved in 2009. The purpose of the RAB was to review and comment on environmental documents and to provide the Navy and regulatory agencies with input from the community on the environmental cleanup program. The Navy would like to take this opportunity again to acknowledge that service on the RAB was a voluntary effort on the part of community members and to thank those who participated and donated their time. Over the 15 years the RAB existed, there was helpful community input and productive dialogue between the Navy and regulatory agencies and the community. However, in 2009, it was determined that the RAB was no longer fulfilling its objective. This Community Involvement Plan (**CIP**) is a key step in the Navy's goal to explore other means to promote two-way communication with the HPS community.

A letter of intent to dissolve the RAB was issued on May 22, 2009, encouraging public comments on the letter (see [Page E-9](#)). The Navy HPS team began discussions with Navy management and the regulatory agencies to dissolve the RAB based on several factors, including the following:

- During RAB meetings, discussions turned into verbal arguments and focus was directed to items not within the scope of or related to the RAB. This resulted in many presentations and discussions about environmental cleanup not being completed.
- Some RAB members and community members who attended meetings confidentially stated they felt the meetings had a volatile tone that made them feel unwelcome and in some cases unsafe.
- The RAB did not provide comments on any Navy environmental documents.
- The RAB was not serving as a liaison between the Navy/regulatory agencies and the community, as it was designed to do.

On December 23, 2009, the Navy officially dissolved the RAB. The letter dissolving the RAB is presented on [Page E-15](#). Per the Department of Defense RAB Rule Handbook, Chapter 7, the Navy will continue to evaluate community interest in a RAB at least every 24 months after the board was dissolved.

Following is additional information, including graphs, presenting the attendance trends at RAB meetings until the last RAB meeting held in January 2009. In addition, information is presented on attendance at technical meetings the Navy has held subsequent to the last RAB meeting in order to continue communication with the HPS community.

Data for [Graphs 1 and 2](#) were compiled from the sign-in sheets for RAB meetings from 2006 (when the last CIP update was finalized) through the last meeting in 2009. In addition, the post-RAB meeting sign-in sheets from 2009 through 2010 were also compiled. Once the data was compiled all "paid" attendees including Navy, regulatory agency, City of San Francisco, and contractor employees were identified and removed from the data set. The resulting graphs represent community member attendees at the meetings. The graphs included RAB members (not eliminated by the previously listed categories) as community members.

Data for [Graphs 3 through 6](#) was compiled from sign-in sheets for RAB meetings from 2005 through 2008. The data set evaluated only included community RAB members.

## *Appendix E: Former Restoration Advisory Board (continued)*

### **Graph 1: Meeting Attendance over Time, 2006 through 2011**

[Graph 1](#) shows community members in attendance at meetings from 2006 through 2011. Meeting attendance in 2006 was relatively low until December 2006, when a large increase occurred. The trend for number of community members in attendance during 2007 was greater than 2006 and trended downward except in August 2007 when the meeting attendance was greatest. 2008 saw some increases and decreases in attendance throughout the year, with the final RAB meeting in January 2009 having a larger attendance than any meeting in 2008. Since the RAB was dissolved, meeting attendance in 2009 and 2010 has continued to be variable with an upward trend since the low during the July 2010 meeting. A few reasons that might have contributed to the variance in attendance during 2009 included the lack of regularly scheduled meetings and the variability in meeting locations.

One item that was not tracked during the meetings was the number of participants present at the end of the meetings. General observations from Navy contractors in attendance at the latter RAB meetings indicate that some participants left during the meetings. Furthermore, during three RAB meetings in September 2007, December 2008, and January 2009, the planned presentations were not given or finished due to disruptions during the meetings. Some individuals provided feedback to the Navy that they did not feel comfortable coming to future meetings because of the aggressive environment during these meetings.

### **Graph 2: Percentage of New and Existing Community Members at Meetings in 2009 through 2011**

[Graph 2](#) shows the percentage of community members who attended post-RAB meetings who had not been involved prior to the last RAB in January 2009. The graph indicates 64% of the meeting participants in 2009 through 2011 had not attended a prior RAB meeting. The post-RAB meetings appear to be reaching out to new members of the HPS community.

### **Graph 3: Percentage of RAB Members in Attendance from 2005 through 2008**

The number of community RAB members varied by month; therefore, the percentage of RAB members in attendance during RAB meetings is shown on [Graph 3](#).

### **Graph 4: Percentage of RAB Members in Attendance by Month from 2005 through 2008**

[Graph 4](#) shows the percentage of community RAB members by month during 2005 through 2008. No specific trends were observed in the graphs, but some decreases in July and September were observed.

### **Graph 5: RAB Members in Attendance from 2005 through 2008**

[Graph 5](#) indicates the actual number of community RAB members who attended RAB meetings from 2005 through 2008. In general, more RAB members were present in 2007 and 2008 than 2005 and 2006.

### **Graph 6: Number of New and Resigning RAB Members from 2005 through 2009**

[Graph 6](#) represents the number of new and resigning community RAB members during 2005 through 2009. The most people resigned in 2008 with four RAB members leaving. The most new community RAB members joined in during 2007 and 2009, when nine and seven new members joined, respectively.

MAY 22 2009

Dear Hunters Point Naval Shipyard RAB Community Co-Chair and RAB Members:

This letter serves as the Navy's notice of intent to dissolve the Hunters Point Naval Shipyard (HPS) Restoration Advisory Board (RAB) as provided by 32 Code of Federal Regulations (CFR) Part 202. My office has consulted with the Environmental Protection Agency, as well as State, and local government representatives about this proposal. The purpose of a RAB is to ensure community involvement in the environmental cleanup process whereby an open discussion and exchange of information occurs. The Navy fully supports the need for open, meaningful dialogue with the diverse Bayview Hunters Point Community regarding our environmental cleanup actions and decisions. However, the RAB is not fulfilling this objective. Therefore, we will be exploring other means to accomplish this important goal. As the Navy follows the RAB dissolution process (enclosed), my staff will be working with you, the greater Bayview Hunters Point Community, and our regulatory partners to find alternative means to meet these community involvement goals and requirements. I specifically request your ideas for an effective community involvement program which will reach a broad community audience and encourage effective two-way communication between the community and Navy regarding environmental cleanup issues at HPS.

My review of input from the RAB over the last 24 months regarding Navy environmental cleanup matters leads me to conclude that the HPS RAB should be dissolved. To continue holding meetings will not fulfill the RAB's purpose or mission. This conclusion is based on the following:

1. RAB meetings do not provide the diverse Bayview Hunters Point Community's input to the Navy's environmental cleanup program.
  - The Navy has issued over 80 documents for review over the last 24 months and only 3 have received formal written comments from RAB members.
  - The Navy has issued four different Proposed Plan/Record of Decision documents over the past year without receiving any formal written comment from RAB members.
  - RAB meetings are used to discuss non-Navy issues such as redevelopment actions. In fact, RAB members recently voted to stop all work on HPS due to concerns about work on an adjacent City-owned parcel.
  - RAB meetings are used to discuss contracting issues rather than the cleanup program. RAB members recently passed a resolution to pursue a civil grand jury investigation into economic issues at HPS.

While the Navy agrees that redevelopment and contracting issues are important to the community, they are outside the scope of the RAB and there are other appropriate forums for these topics. The Navy has repeated this point to the RAB without a change in RAB performance.

2. The RAB atmosphere is not productive to effective public discourse.

- Rules of order are often not followed during meetings; interruptions are common; and meeting facilitators are not respected.
- A number of RAB Community members have complained about the hostile tone of RAB meetings and decline to attend because of the unwillingness of other RAB members to listen to contrasting points of view and/or inability of the RAB to focus on environmental cleanup issues.
- At the January 22, 2009 RAB meeting, RAB members voted to request replacement of the City's representative, which is not an appropriate RAB function.
- At a February 18, 2009 "emergency meeting" RAB members voted to request replacement of the Navy RAB Co-Chair, which is not an appropriate RAB function.

As a consequence, valuable information from Navy and other state and Federal agency representatives has not been effectively presented. Instead of fostering discussion on the effectiveness of proposed Navy cleanup actions, RAB discussions focus on matters unrelated to the Navy's clean-up efforts.

3. Navy attempts to work with the Community to improve the RAB process have failed.

- Over the past 24 months, the Navy RAB Co-Chair and others have attempted to refocus RAB meetings with the help of a professional facilitator.
- The Navy RAB Co-Chair has had discussions outside of RAB meetings with RAB members to try to refocus the RAB on the environmental program.

These attempts have been unsuccessful in changing the atmosphere or inducing input on the environmental restoration program.

Though I believe the RAB should be dissolved, I remain fully committed to seeking community involvement and input for ongoing and future HPS cleanup actions. While we work through this RAB dissolution process, I will post information such as fact sheets and presentations on the Hunter's Point website ([www.bracpmo.navy.mil](http://www.bracpmo.navy.mil)), as well as provide informational mailings to elicit community member comments and questions.

Ser BPMOW.DG/0317  
MAY 22 2009

As stated earlier, the Navy fully supports the need for open, meaningful dialogue with the diverse Bayview Hunters Point Community regarding our environmental cleanup actions and decisions. Should the RAB be dissolved, the revised community involvement program may include community environmental forums, including using internet-based technology to more easily reach a diverse audience; expanded Monthly Progress Reports and facts sheets; and hosting technical discussions and tours of cleanup sites on HPS for interested community members. I solicit your comments on this letter of intent, as well as your ideas regarding more productive community involvement alternatives between the Bayview Hunters Point Community and the Navy. I request you provide your ideas and comments to HPS Base Closure Manager, Mr. Douglas Gilkey, at the address on the letterhead no later than 30 June 2009. Please feel free to contact Mr. Gilkey at (619)-532-0949 if you have any questions about this notice or the dissolution process.

During the interim period between my publishing of this intent letter and a final decision as to the RAB's dissolution, further meetings of the RAB are suspended.

I thank each of you for the effort you have made as a member of the HPS RAB. The Navy places a high priority on obtaining meaningful and timely input from the community in the course of its environmental cleanup activities and hope you will continue to participate in the HPS environmental restoration program in the future. Thank you for your contributions.

Sincerely,

  
LAURA DUCHNAK  
Director, BRAC PMO West

Encl: (1) 32 C.F.R Part 202.10

(b) *RAB dissolution*—(1) *Requirements for RAB dissolution*. An Installation Commander may recommend dissolution of a RAB when a RAB is no longer fulfilling the intended purpose of advising and providing community input to an Installation Commander and decision makers on environmental restoration projects as described in §202.1(b).

(2) *Dissolution procedures*. If the Installation Commander is considering dissolving the RAB, the Installation Commander shall:

(i) Consult with EPA, state, tribal and local government representatives, as appropriate, regarding dissolving the RAB.

(ii) Notify the RAB community co-chair and members in writing of the intent to dissolve the RAB and the reasons for doing so and provide the RAB members 30 days to respond in writing. The Installation Commander shall consider RAB member responses, and in consultation with EPA, state, tribal and local government representatives, as appropriate, determine the appropriate actions.

(iii) Notify the public of the proposal to dissolve the RAB and provide a 30-day public comment period on the proposal, if the Installation Commander decides to proceed with dissolution. At the conclusion of the public comment period, the Installation Commander will review the public comments, consult with EPA, state, tribal and local government representatives, as appropriate, and, if the Installation Commander still believes dissolution is appropriate, render a recommendation to that effect.

(iv) Send the recommendation, responsiveness summary, and all supporting documentation via the chain-of-command to the Military Component's Environmental Deputy Assistant Secretary (or equivalent) for approval or disapproval. The Military Component's Environmental Deputy Assistant Secretary (or equivalent) shall notify the Office of the Deputy Under Secretary of Defense (Installations & Environment) (or equivalent) of the decision to approve or disapprove the request to dissolve the RAB and the rationale for that decision.

(v) Document the recommendation, responsiveness summary, and the rationale for dissolution in a memorandum for inclusion in the Administrative Record, notify the public of the decision through written notice to the RAB members and through publication of a notice in a local newspaper of general circulation and describe other ongoing public involvement opportunities that are available, once the Military Component's Environmental Deputy Assistant Secretary (or equivalent) makes a final decision.

(c) *Reestablishing an adjourned or dissolved RAB.* An Installation Commander may reestablish an adjourned or dissolved RAB if there is sufficient and sustained community interest in doing so, and there are environmental restoration activities still ongoing at the installation or that may start up again. Where a RAB is adjourned or dissolved and environmental restoration activities continue, the Installation Commander should reassess community interest at least every 24 months. When all environmental restoration decisions have been made and required remedies are in place and are properly operating at an installation, reassessment of the community interest for reestablishing the RAB is not necessary. When additional environmental restoration decisions have to be made resulting from subsequent actions, such as long-term management and five-year reviews, the installation will reassess community interest for reestablishing the RAB. Where the reassessment finds sufficient and sustained community interest at previously adjourned or dissolved RABs, the Installation Commander should reestablish a RAB. Where the reassessment does not find sufficient and sustained community interest in reestablishing the RAB, the Installation Commander shall document in a memorandum for the record the procedures followed in the reassessment and the findings of the reassessment. This document shall be included in the Administrative Record for the installation. If there is interest in reestablishment at a previously dissolved RAB, but the Installation Commander determines that the same conditions exist that required the original dissolution, he or she will request, through the chain-of-command to the Military Component's Deputy Assistant Secretary, an exception to reestablishing the RAB. If those conditions no longer exist at a previously dissolved RAB, and there is sufficient and sustained interest in reestablishment, the Installation Commander should recommend to the Deputy Assistant Secretary that the RAB be reestablished. The Deputy Assistant Secretary will take the Installation Commander's recommendation under advisement and may approve that RAB for reestablishment.

(d) *Public comment.* If the Installation Commander intends to recommend dissolution of a RAB or reestablish a dissolved RAB, the Installation Commander shall notify the public of the proposal to dissolve or reestablish the RAB and provide a 30-day public comment period on the proposal. At the conclusion of the public comment period, the Installation Commander shall review public comments; consult with EPA and state, tribal, or local government representatives, as appropriate; prepare a responsiveness summary; and render a recommendation. The recommendation, responsiveness summary, and all supporting documentation should be sent via the chain-of-command to the Military Component's Environmental Deputy Assistant Secretary (or equivalent) for approval or disapproval. The Installation Commander shall notify the public of the decision.

**DEPARTMENT OF THE NAVY**  
OFFICE OF THE ASSISTANT SECRETARY

1000 NAVY PENTAGON  
WASHINGTON DC 20350-1000

DEC 23 2009

**MEMORANDUM TO MS. LAURA DUCHNAK, DIRECTOR,  
BASE REALIGNMENT AND CLOSURE (BRAC) PROGRAM**

**SUBJECT: Hunters Point Restoration Advisory Board (RAB)**

I received your December 22, 2009 memorandum (Attachment 1) submitted pursuant to the Code of Federal Regulations (CFR) at Title 32, Section 202.10(b) along with the supporting materials, wherein you recommend the dissolution of the Hunters Point Shipyard (HPS) Restoration Advisory Board (RAB). In accordance with Title 32, I considered your recommendation and the content of the administrative record in reaching my decision. I also reviewed the process you undertook to make the public aware of your intentions, as well as attempts made by your staff to resolve issues affecting the RAB's effectiveness. Based on review of that information, I have determined the HPS RAB is unable to fulfill its intended purpose of advising Navy's Environmental Restoration program managers and decision makers, and I therefore approve your request to dissolve the HPS RAB.

The Department of the Navy (DON) establishes RABs to provide stakeholder involvement in the environmental restoration process at Department of Defense (DoD) installations. The RAB is an opportunity for parties who may be affected by environmental restoration activities to review program progress, and participate in a dialogue where they provide comment and advice to environmental restoration program managers and decision makers. I have reviewed documents within the administrative record. I paid particular attention to the minutes of various RAB meetings (Attch. 2, 13, 14 and 20). The meeting minutes revealed a RAB that at times was productive but more often was unproductive. While members of the RAB listened and provided insightful comments at one point, the next moment conversations devolved into acrimony and accusation on issues which had little or nothing to do with HPS environmental restoration. The meeting of January 2009 is a prime example of this inconsistency (Attch. 20). The RAB Community Co-Chair notes in Attachment 22 that the RAB is an advisory board for environmental clean-up decisions; however, in that same note, he demands initiation of a grand jury investigation on economic matters and immediate removal from the RAB of a San Francisco City regulator. Email by current and former members of the RAB was also telling of the wide dichotomy of views within the RAB regarding its continued value (Attach. 30, 34, 35, 37, 39, 40, 41 and 61). Reasonable steps were taken to resolve issues affecting the RAB's effectiveness, as seen by regular use of a meeting facilitator and numerous attempts by Navy personnel to work with RAB members on issues that are outside the RAB's purview (Attch. 62). Nevertheless, it appears clear to me that irresolvable internal issues prevent the HPS RAB from fulfilling its

intended purpose of advising the environmental restoration program managers and decision makers.

Since February 2009, you have taken numerous steps to seek out and implement enhanced community involvement in other forums and through internet technologies. While several actions have shown promise, others may not have been completely successful (Attch.6). I encourage you to continue to provide information to the public, seek their input on the environmental restoration program implementation, and continue to explore other opportunities for meaningful dialogue with the local community. I am directing you to monitor and reassess community interest in the RAB process at least every 24 months. If your reassessment finds sufficient and sustained community interest for reestablishing the HPS RAB, you should reestablish a RAB. However, if the same conditions occurring at the time of this RAB's dissolution still exist, you should notify this office through your chain of command and request an exception to reestablishment.

A large, stylized handwritten signature in black ink, appearing to read 'R. Mach, Jr.', is positioned above the typed name.

Richard G. Mach, Jr., P.E.

Acting Deputy Assistant Secretary of the Navy  
(Environment)

## Appendix G: Regulations and Guidance for Community Involvement

The Department of the Navy's Installation Restoration Program is conducted in accordance with federal and state requirements, and its purpose is twofold—(1) to identify, investigate, and clean up or control releases of hazardous substances, and (2) to reduce the risk to human health and the environment. The Navy is the lead federal agency for the Installation Restoration Program at Hunters Point Shipyard (**HPS**). The figure on [Page G-2](#) presents the major phases of the Comprehensive Environmental Response, Compensation, and Liability Act (**CERCLA**) process.

Federal and state environmental statutes and amendments require community involvement for hazardous waste sites, and guidance documents have been created to address these requirements. The United States Environmental Protection Agency (**U.S. EPA**) community involvement documents can be found at [www.epa.gov/superfund/community/involvement.htm](http://www.epa.gov/superfund/community/involvement.htm). The Department of Defense documents can be found at [https://portal.navfac.navy.mil/portal/page/portal/NAVFAC/NAVFAC\\_WW\\_PP/NAVFAC\\_NFESC\\_PP/ENVIRONMENTAL/ERB/COMINV](https://portal.navfac.navy.mil/portal/page/portal/NAVFAC/NAVFAC_WW_PP/NAVFAC_NFESC_PP/ENVIRONMENTAL/ERB/COMINV). The Navy's Community Involvement Plan (**CIP**) at HPS meets these requirements. The following state and federal environmental statutes and amendments require community involvement program activities for hazardous waste sites:

- Comprehensive Environmental Response, Compensation, and Liability Act (**CERCLA**) (Title 42, *United States Code*, Section 9601, and following sections), also known as Superfund
- Superfund Amendments and Reauthorization Act of 1986, which amended CERCLA
- Community Environmental Response Facilitation Act of 1992, which also amended CERCLA
- California Health and Safety Code, Division 20
- Title 22, California Code of Regulations, Division 4.5
- *California Public Resources Code*, Section 21000 and the sections that follow Section 21000 in the *Public Resource Code*

The guidelines for conducting community involvement, including preparing a CIP, are set forth in the following:

- "Superfund Community Involvement Handbook" (U.S. EPA, 2005)
- "Superfund Community Involvement Toolkit" (U.S. EPA, 2005)
- "Navy/Marine Corps Installation Restoration Manual" (Naval Facilities Engineering Command, 1997)
- "Department of Defense/EPA Restoration Advisory Board (**RAB**) Implementation Guidelines" (Department of Defense, 1994)
- "State of California Environmental Protection Agency Department of Toxic Substances Control (**DTSC**) Public Participation Manual" (DTSC, 2001)

In addition, the National Oil and Hazardous Substances Pollution Contingency Plan, also called the National Contingency Plan (NCP), contains the federal government's requirements for responding to

## Appendix G: Regulations and Guidance for Community Involvement (continued)

hazardous substance releases. The Navy meets all NCP requirements for public involvement. In addition, the Navy's Installation Restoration Program, described below, exceeds the NCP requirements for public involvement. The relevant text from the NCP (40 CFR 300.430) has been provided below beginning on [page G-7](#).

### Installation Restoration Program

The Department of Defense developed the Installation Restoration Program in 1981 to comply with CERCLA and other federal and state requirements at military facilities.

CERCLA requires that a remedial action or removal action process be selected specifically for each Installation Restoration Program site. A removal action is an environmental response that reduces threats to human health and the environment, such as fencing a site or excavating and removing contaminated soil. A removal action may be an interim action or may be the final cleanup for the site. A remedial action is the long-term final cleanup of a site, such as a groundwater treatment system or a landfill cap.

A remedial action or removal action is selected by evaluating the advantages and disadvantages of each alternative to clean up a site and selecting the one that best protects human health and the environment in a cost-effective manner. Illustrated in the following graphic and discussed on the following pages are the stages of each phase of CERCLA, including associated community involvement program activities.

*Appendix G: Regulations and Guidance for Community Involvement (continued)***Remedial Action Process**

The CERCLA remedial action process, as defined in Title 42 USC Section 9601 and the following sections, specifies the phases to thoroughly evaluate the nature and extent of contamination and to identify and evaluate cleanup alternatives. The various phases of the cleanup process are described below.

**Discovery and Notification** – Discovery occurs when a hazardous waste site is discovered or a release of hazardous materials into the environment is noticed. The installation Commanding Officer is responsible for notifying the U.S. EPA and state regulatory agencies of the hazardous waste site.

**Preliminary Assessment** – A preliminary assessment is conducted to evaluate whether current or past waste management practices have resulted in a release of hazardous substances. The preliminary assessment is completed through record searches and visual inspections of the area. This stage results in a list of potential areas of concern that warrant further investigation.

**Site Inspection** – The site inspection usually requires sampling and analysis of soil, surface water, groundwater, or any combination of the three. Based on the data that result, the site will be (1) slated for no action, (2) recommended for a removal action, or (3) investigated further in the remedial investigation phase. If the area will be investigated further, an Information Repository is established.

**Remedial Investigation** – The remedial investigation involves a comprehensive study of site soils, surface water, and groundwater to evaluate the lateral and vertical extent of contamination. Risks to human health and the environment are also assessed. Based on the estimated risk posed, the site could be (1) recommended for a removal action, (2) recommended for no action, or (3) entered into the next phase, the feasibility study.

**Feasibility Study** – The feasibility study uses the data collected during the remedial investigation to develop and evaluate cleanup alternatives. Cleanup alternatives are evaluated based on a variety of criteria, including technical feasibility, cost-effectiveness, and community acceptance.

**Proposed Plan** – The Proposed Plan is a fact sheet that is developed to describe cleanup alternatives and explain why the preferred alternative was chosen. *This is the key point at which community members are highly encouraged to provide comments.* The Navy considers all comments received on the Proposed Plan before a final decision is made. The Navy provides a reply to all significant comments in a responsiveness summary in the Record of Decision.

**Record of Decision** – The selected cleanup alternative is documented in the Record of Decision. The notice of availability of the Record of Decision is *publicized in a local newspaper of general circulation.*

**Remedial Design** – The design for the cleanup alternatives is prepared and a fact sheet is distributed before the Navy begins a remedial action (or cleanup). *The need for updating the CIP will also be assessed at this time.*

**Remedial Action** – The cleanup alternative is carried out and the *public is kept informed.* At a minimum, the community will have a point of contact who can be contacted to ask questions or raise concerns.

*Appendix G: Regulations and Guidance for Community Involvement (continued)*

**Post-Project Activities** – Post-project activities may include long-term monitoring. Long-term monitoring occurs at sites where hazardous substances, pollutants, or contaminants remain after the remedial action has been completed. Long-term monitoring is also used to confirm that previous site remediation continues to be effective. Every five years the Navy will conduct a review of cleanup where waste is left in place to ensure the remedy remains protective of human health and the environment.

**Site Closeout** – Site closeout occurs when all necessary remedial action activities are complete and the Navy and regulatory agencies agree no further action is appropriate at the site. Site closeout can also occur during the remedial action process.

### Removal Action Process

In some cases, the Navy may conduct a removal action of hazardous substances from a site. The removal action can be implemented at any time during the remedial action process. These removal actions are carried out in accordance with federal and state requirements. The Navy can conduct a removal action if there is an immediate or perceived threat to public health or the environment. Any one or more of the following criteria must be met to implement a removal action:

- An imminent threat to human health or the environment exists
- The source of the contamination can be removed quickly and effectively
- Access to contamination can be limited
- A removal action is the fastest way of remediating the site

The U.S. EPA has defined three types of removal actions—emergency, time-critical, and non-time-critical removals. These removal actions types and corresponding documentation are detailed as follows:

- **Emergency Removal Actions:** Emergency removal actions occur when cleanup must begin within 2 weeks after the lead agency concludes that a removal action is necessary.
- **Time-Critical Removal Actions:** Time-critical removal actions occur when cleanup can be initiated within 6 months after the lead agency concludes that a removal action is necessary.
- **Non-Time-Critical Removal Actions:** Non-time-critical removal actions occur when cleanup need not begin within 6 months after the lead agency concludes that a removal action is necessary. Non-time-critical removal actions require preparation of an Engineering Evaluation/Cost Analysis and an Action Memorandum.
- **Engineering Evaluation/Cost Analysis:** An Engineering Evaluation/Cost Analysis is the first step in the non-time-critical removal action process. The Engineering Evaluation/Cost Analysis document evaluates alternatives for cleanup and states the Navy's preferred cleanup alternative.
- **Action Memorandum:** The final decision about the removal action selected is documented in the Action Memorandum. The draft Action Memorandum is normally announced with the Engineering Evaluation/Cost Analysis in a public notice.

*Appendix G: Regulations and Guidance for Community Involvement (continued)*

*CERCLA Process with Early Transfer*

*Appendix G: Regulations and Guidance for Community Involvement (continued)**Pertinent Passages from the National Contingency Plan (40 CFR 300.430)*

The relevant NCP text from the Code of Federal Regulations pertaining to the requirements for community involvement has been provided on the following pages.

requirements of 29 CFR 1910.120 concerning use of an incident command system.

(b) In a response action taken by a responsible party, the responsible party must assure that an occupational safety and health program consistent with 29 CFR 1910.120 is made available for the protection of workers at the response site.

(c) In a response taken under the NCP by a lead agency, an occupational safety and health program should be made available for the protection of workers at the response site, consistent with, and to the extent required by, 29 CFR 1910.120. Contracts relating to a response action under the NCP should contain assurances that the contractor at the response site will comply with this program and with any applicable provisions of the Occupational Safety and Health Act of 1970 (29 U.S.C. 651 et seq.) (OSH Act) and state laws with plans approved under section 18 of the OSH Act.

(d) When a state, or political subdivision of a state, without an OSHA-approved state plan is the lead agency for response, the state or political subdivision must comply with standards in 40 CFR part 311, promulgated by EPA pursuant to section 126(f) of SARA.

(e) Requirements, standards, and regulations of the OSH Act and of state OSH laws not directly referenced in paragraphs (a) through (d) of this section, must be complied with where applicable. Federal OSH Act requirements include, among other things, Construction Standards (29 CFR part 1926), General Industry Standards (29 CFR part 1910), and the general duty requirement of section 5(a)(1) of the OSH Act (29 U.S.C. 654(a)(1)). No action by the lead agency with respect to response activities under the NCP constitutes an exercise of statutory authority within the meaning of section 4(b)(1) of the OSH Act. All governmental agencies and private employers are directly responsible for the health and safety of their own employees.

**§ 300.155 Public information and community relations.**

(a) When an incident occurs, it is imperative to give the public prompt, accurate information on the nature of

the incident and the actions underway to mitigate the damage. OSCs/RPMs and community relations personnel should ensure that all appropriate public and private interests are kept informed and that their concerns are considered throughout a response. They should coordinate with available public affairs/community relations resources to carry out this responsibility by establishing, as appropriate, a Joint Information Center bringing together resources from federal and state agencies and the responsible party.

(b) An on-scene news office may be established to coordinate media relations and to issue official federal information on an incident. Whenever possible, it will be headed by a representative of the lead agency. The OSC/RPM determines the location of the on-scene news office, but every effort should be made to locate it near the scene of the incident. If a participating agency believes public interest warrants the issuance of statements and an on-scene news office has not been established, the affected agency should recommend its establishment. All federal news releases or statements by participating agencies should be cleared through the OSC/RPM. Information dissemination relating to natural resource damage assessment activities shall be coordinated through the lead administrative trustee. The designated lead administrative trustee may assist the OSC/RPM by disseminating information on issues relating to damage assessment activities. Following termination of removal activity, information dissemination on damage assessment activities shall be through the lead administrative trustee.

(c) The community relations requirements specified in §§ 300.415, 300.430, and 300.435 apply to removal, remedial, and enforcement actions and are intended to promote active communication between communities affected by discharges or releases and the lead agency responsible for response actions. Community Relations Plans (CRPs) are required by EPA for certain response actions. The OSC/RPM should ensure coordination with such plans which may be in effect at the scene of a discharge or release or which may need to be developed during follow-up activities.

## § 300.415

## 40 CFR Ch. I (7–1–03 Edition)

federal environmental or state environmental or facility siting laws. Waivers described in § 300.430(f)(1)(ii)(C) may be used for removal actions. Other federal and state advisories, criteria, or guidance may, as appropriate, be considered in formulating the removal action (see § 300.400(g)(3)). In determining whether compliance with ARARs is practicable, the lead agency may consider appropriate factors, including:

- (1) The urgency of the situation; and
- (2) The scope of the removal action to be conducted.

(k) Removal actions pursuant to section 106 or 122 of CERCLA are not subject to the following requirements of this section:

(1) Section 300.415(a)(2) requirement to locate responsible parties and have them undertake the response;

(2) Section 300.415(b)(2)(vii) requirement to consider the availability of other appropriate federal or state response and enforcement mechanisms to respond to the release;

(3) Section 300.415(b)(5) requirement to terminate response after \$2 million has been obligated or 12 months have elapsed from the date of the initial response; and

(4) Section 300.415(g) requirement to assure an orderly transition from removal to remedial action.

(l) To the extent practicable, provision for post-removal site control following a CERCLA Fund-financed removal action at both NPL and non-NPL sites is encouraged to be made prior to the initiation of the removal action. Such post-removal site control includes actions necessary to ensure the effectiveness and integrity of the removal action after the completion of the on-site removal action or after the \$2 million or 12-month statutory limits are reached for sites that do not meet the exemption criteria in paragraph (b)(5) of this section. Post-removal site control may be conducted by:

(1) The affected state or political subdivision thereof or local units of government for any removal;

(2) Potentially responsible parties; or

(3) EPA's remedial program for some federal-lead Fund-financed responses at NPL sites.

(m) OSCs/RPMs conducting removal actions shall submit OSC reports to the RRT as required by § 300.165.

(n) *Community relations in removal actions.* (1) In the case of all CERCLA removal actions taken pursuant to § 300.415 or CERCLA enforcement actions to compel removal response, a spokesperson shall be designated by the lead agency. The spokesperson shall inform the community of actions taken, respond to inquiries, and provide information concerning the release. All news releases or statements made by participating agencies shall be coordinated with the OSC/RPM. The spokesperson shall notify, at a minimum, immediately affected citizens, state and local officials, and, when appropriate, civil defense or emergency management agencies.

(2) For CERCLA actions where, based on the site evaluation, the lead agency determines that a removal is appropriate, and that less than six months exists before on-site removal activity must begin, the lead agency shall:

(i) Publish a notice of availability of the administrative record file established pursuant to § 300.820 in a major local newspaper of general circulation within 60 days of initiation of on-site removal activity;

(ii) Provide a public comment period, as appropriate, of not less than 30 days from the time the administrative record file is made available for public inspection, pursuant to § 300.820(b)(2); and

(iii) Prepare a written response to significant comments pursuant to § 300.820(b)(3).

(3) For CERCLA removal actions where on-site action is expected to extend beyond 120 days from the initiation of on-site removal activities, the lead agency shall by the end of the 120-day period:

(i) Conduct interviews with local officials, community residents, public interest groups, or other interested or affected parties, as appropriate, to solicit their concerns, information needs, and how or when citizens would like to be involved in the Superfund process;

(ii) Prepare a formal community relations plan (CRP) based on the community interviews and other relevant information, specifying the community

relations activities that the lead agency expects to undertake during the response; and

(iii) Establish at least one local information repository at or near the location of the response action. The information repository should contain items made available for public information. Further, an administrative record file established pursuant to subpart I for all removal actions shall be available for public inspection in at least one of the repositories. The lead agency shall inform the public of the establishment of the information repository and provide notice of availability of the administrative record file for public review. All items in the repository shall be available for public inspection and copying.

(4) Where, based on the site evaluation, the lead agency determines that a CERCLA removal action is appropriate and that a planning period of at least six months exists prior to initiation of the on-site removal activities, the lead agency shall at a minimum:

(i) Comply with the requirements set forth in paragraphs (n)(3)(i), (ii), and (iii) of this section, prior to the completion of the EE/CA, or its equivalent, except that the information repository and the administrative record file will be established no later than when the EE/CA approval memorandum is signed;

(ii) Publish a notice of availability and brief description of the EE/CA in a major local newspaper of general circulation pursuant to § 300.820;

(iii) Provide a reasonable opportunity, not less than 30 calendar days, for submission of written and oral comments after completion of the EE/CA pursuant to § 300.820(a). Upon timely request, the lead agency will extend the public comment period by a minimum of 15 days; and

(iv) Prepare a written response to significant comments pursuant to § 300.820(a).

[59 FR 47448, Sept. 15, 1994]

#### § 300.420 Remedial site evaluation.

(a) *General.* The purpose of this section is to describe the methods, procedures, and criteria the lead agency shall use to collect data, as required, and evaluate releases of hazardous sub-

stances, pollutants, or contaminants. The evaluation may consist of two steps: a remedial preliminary assessment (PA) and a remedial site inspection (SI).

(b) *Remedial preliminary assessment.* (1) The lead agency shall perform a remedial PA on all sites in CERCLIS as defined in § 300.5 to:

(i) Eliminate from further consideration those sites that pose no threat to public health or the environment;

(ii) Determine if there is any potential need for removal action;

(iii) Set priorities for site inspections; and

(iv) Gather existing data to facilitate later evaluation of the release pursuant to the Hazard Ranking System (HRS) if warranted.

(2) A remedial PA shall consist of a review of existing information about a release such as information on the pathways of exposure, exposure targets, and source and nature of release. A remedial PA shall also include an off-site reconnaissance as appropriate. A remedial PA may include an on-site reconnaissance where appropriate.

(3) If the remedial PA indicates that a removal action may be warranted, the lead agency shall initiate removal evaluation pursuant to § 300.410.

(4) In performing a remedial PA, the lead agency may complete the EPA Preliminary Assessment form, available from EPA regional offices, or its equivalent, and shall prepare a PA report, which shall include:

(i) A description of the release;

(ii) A description of the probable nature of the release; and

(iii) A recommendation on whether further action is warranted, which lead agency should conduct further action, and whether an SI or removal action or both should be undertaken.

(5) Any person may petition the lead federal agency (EPA or the appropriate federal agency in the case of a release or suspected release from a federal facility), to perform a PA of a release when such person is, or may be, affected by a release of a hazardous substance, pollutant, or contaminant. Such petitions shall be addressed to the EPA Regional Administrator for

that conforms with 29 CFR 1910.120 (1)(1) and (1)(2).

(7) If natural resources are or may be injured by the release, ensure that state and federal trustees of the affected natural resources have been notified in order that the trustees may initiate appropriate actions, including those identified in subpart G of this part. The lead agency shall seek to coordinate necessary assessments, evaluations, investigations, and planning with such state and federal trustees.

(8) Develop sampling and analysis plans that shall provide a process for obtaining data of sufficient quality and quantity to satisfy data needs. Sampling and analysis plans shall be reviewed and approved by EPA. The sampling and analysis plans shall consist of two parts:

(i) The field sampling plan, which describes the number, type, and location of samples and the type of analyses; and

(ii) The quality assurance project plan, which describes policy, organization, and functional activities and the data quality objectives and measures necessary to achieve adequate data for use in selecting the appropriate remedy.

(9) Initiate the identification of potential federal and state ARARs and, as appropriate, other criteria, advisories, or guidance to be considered.

(c) *Community relations.* (1) The community relations requirements described in this section apply to all remedial activities undertaken pursuant to CERCLA section 104 and to section 106 or section 122 consent orders or decrees, or section 106 administrative orders.

(2) The lead agency shall provide for the conduct of the following community relations activities, to the extent practicable, prior to commencing field work for the remedial investigation:

(i) Conducting interviews with local officials, community residents, public interest groups, or other interested or affected parties, as appropriate, to solicit their concerns and information needs, and to learn how and when citizens would like to be involved in the Superfund process.

(ii) Preparing a formal community relations plan (CRP), based on the community interviews and other relevant information, specifying the community relations activities that the lead agency expects to undertake during the remedial response. The purpose of the CRP is to:

(A) Ensure the public appropriate opportunities for involvement in a wide variety of site-related decisions, including site analysis and characterization, alternatives analysis, and selection of remedy;

(B) Determine, based on community interviews, appropriate activities to ensure such public involvement, and

(C) Provide appropriate opportunities for the community to learn about the site.

(iii) Establishing at least one local information repository at or near the location of the response action. Each information repository should contain a copy of items made available to the public, including information that describes the technical assistance grants application process. The lead agency shall inform interested parties of the establishment of the information repository.

(iv) Informing the community of the availability of technical assistance grants.

(3) For PRP actions, the lead agency shall plan and implement the community relations program at a site. PRPs may participate in aspects of the community relations program at the discretion of and with oversight by the lead agency.

(4) The lead agency may conduct technical discussions involving PRPs and the public. These technical discussions may be held separately from, but contemporaneously with, the negotiations/settlement discussions.

(5) In addition, the following provisions specifically apply to enforcement actions:

(i) Lead agencies entering into an enforcement agreement with de minimis parties under CERCLA section 122(g) or cost recovery settlements under section 122(h) shall publish a notice of the proposed agreement in the FEDERAL REGISTER at least 30 days before the agreement becomes final, as required

by section 122(i). The notice must identify the name of the facility and the parties to the proposed agreement and must allow an opportunity for comment and consideration of comments; and

(ii) Where the enforcement agreement is embodied in a consent decree, public notice and opportunity for public comment shall be provided in accordance with 28 CFR 50.7.

(d) *Remedial investigation.* (1) The purpose of the remedial investigation (RI) is to collect data necessary to adequately characterize the site for the purpose of developing and evaluating effective remedial alternatives. To characterize the site, the lead agency shall, as appropriate, conduct field investigations, including treatability studies, and conduct a baseline risk assessment. The RI provides information to assess the risks to human health and the environment and to support the development, evaluation, and selection of appropriate response alternatives. Site characterization may be conducted in one or more phases to focus sampling efforts and increase the efficiency of the investigation. Because estimates of actual or potential exposures and associated impacts on human and environmental receptors may be refined throughout the phases of the RI as new information is obtained, site characterization activities should be fully integrated with the development and evaluation of alternatives in the feasibility study. Bench- or pilot-scale treatability studies shall be conducted, when appropriate and practicable, to provide additional data for the detailed analysis and to support engineering design of remedial alternatives.

(2) The lead agency shall characterize the nature of and threat posed by the hazardous substances and hazardous materials and gather data necessary to assess the extent to which the release poses a threat to human health or the environment or to support the analysis and design of potential response actions by conducting, as appropriate, field investigations to assess the following factors:

(i) Physical characteristics of the site, including important surface features, soils, geology, hydrogeology, meteorology, and ecology;

(ii) Characteristics or classifications of air, surface water, and ground water;

(iii) The general characteristics of the waste, including quantities, state, concentration, toxicity, propensity to bioaccumulate, persistence, and mobility;

(iv) The extent to which the source can be adequately identified and characterized;

(v) Actual and potential exposure pathways through environmental media;

(vi) Actual and potential exposure routes, for example, inhalation and ingestion; and

(vii) Other factors, such as sensitive populations, that pertain to the characterization of the site or support the analysis of potential remedial action alternatives.

(3) The lead and support agency shall identify their respective potential ARARs related to the location of and contaminants at the site in a timely manner. The lead and support agencies may also, as appropriate, identify other pertinent advisories, criteria, or guidance in a timely manner (see § 300.400(g)(3)).

(4) Using the data developed under paragraphs (d)(1) and (2) of this section, the lead agency shall conduct a site-specific baseline risk assessment to characterize the current and potential threats to human health and the environment that may be posed by contaminants migrating to ground water or surface water, releasing to air, leaching through soil, remaining in the soil, and bioaccumulating in the food chain. The results of the baseline risk assessment will help establish acceptable exposure levels for use in developing remedial alternatives in the FS, as described in paragraph (e) of this section.

(e) *Feasibility study.* (1) The primary objective of the feasibility study (FS) is to ensure that appropriate remedial alternatives are developed and evaluated such that relevant information concerning the remedial action options can be presented to a decision-maker and an appropriate remedy selected. The lead agency may develop a feasibility study to address a specific site problem or the entire site. The development and evaluation of alternatives

(8) The lead agency shall notify the support agency of the alternatives that will be evaluated in detail to facilitate the identification of ARARs and, as appropriate, pertinent advisories, criteria, or guidance to be considered.

(9) *Detailed analysis of alternatives.* (i) A detailed analysis shall be conducted on the limited number of alternatives that represent viable approaches to remedial action after evaluation in the screening stage. The lead and support agencies must identify their ARARs related to specific actions in a timely manner and no later than the early stages of the comparative analysis. The lead and support agencies may also, as appropriate, identify other pertinent advisories, criteria, or guidance in a timely manner.

(ii) The detailed analysis consists of an assessment of individual alternatives against each of nine evaluation criteria and a comparative analysis that focuses upon the relative performance of each alternative against those criteria.

(iii) *Nine criteria for evaluation.* The analysis of alternatives under review shall reflect the scope and complexity of site problems and alternatives being evaluated and consider the relative significance of the factors within each criteria. The nine evaluation criteria are as follows:

(A) *Overall protection of human health and the environment.* Alternatives shall be assessed to determine whether they can adequately protect human health and the environment, in both the short- and long-term, from unacceptable risks posed by hazardous substances, pollutants, or contaminants present at the site by eliminating, reducing, or controlling exposures to levels established during development of remediation goals consistent with § 300.430(e)(2)(i). Overall protection of human health and the environment draws on the assessments of other evaluation criteria, especially long-term effectiveness and permanence, short-term effectiveness, and compliance with ARARs.

(B) *Compliance with ARARs.* The alternatives shall be assessed to determine whether they attain applicable or relevant and appropriate requirements under federal environmental laws and

state environmental or facility siting laws or provide grounds for invoking one of the waivers under paragraph (f)(1)(ii)(C) of this section.

(C) *Long-term effectiveness and permanence.* Alternatives shall be assessed for the long-term effectiveness and permanence they afford, along with the degree of certainty that the alternative will prove successful. Factors that shall be considered, as appropriate, include the following:

(1) Magnitude of residual risk remaining from untreated waste or treatment residuals remaining at the conclusion of the remedial activities. The characteristics of the residuals should be considered to the degree that they remain hazardous, taking into account their volume, toxicity, mobility, and propensity to bioaccumulate.

(2) Adequacy and reliability of controls such as containment systems and institutional controls that are necessary to manage treatment residuals and untreated waste. This factor addresses in particular the uncertainties associated with land disposal for providing long-term protection from residuals; the assessment of the potential need to replace technical components of the alternative, such as a cap, a slurry wall, or a treatment system; and the potential exposure pathways and risks posed should the remedial action need replacement.

(D) *Reduction of toxicity, mobility, or volume through treatment.* The degree to which alternatives employ recycling or treatment that reduces toxicity, mobility, or volume shall be assessed, including how treatment is used to address the principal threats posed by the site. Factors that shall be considered, as appropriate, include the following:

(1) The treatment or recycling processes the alternatives employ and materials they will treat;

(2) The amount of hazardous substances, pollutants, or contaminants that will be destroyed, treated, or recycled;

(3) The degree of expected reduction in toxicity, mobility, or volume of the waste due to treatment or recycling and the specification of which reduction(s) are occurring;

(4) The degree to which the treatment is irreversible;

(5) The type and quantity of residuals that will remain following treatment, considering the persistence, toxicity, mobility, and propensity to bioaccumulate of such hazardous substances and their constituents; and

(6) The degree to which treatment reduces the inherent hazards posed by principal threats at the site.

(E) *Short-term effectiveness.* The short-term impacts of alternatives shall be assessed considering the following:

(1) Short-term risks that might be posed to the community during implementation of an alternative;

(2) Potential impacts on workers during remedial action and the effectiveness and reliability of protective measures;

(3) Potential environmental impacts of the remedial action and the effectiveness and reliability of mitigative measures during implementation; and

(4) Time until protection is achieved.

(F) *Implementability.* The ease or difficulty of implementing the alternatives shall be assessed by considering the following types of factors as appropriate:

(1) Technical feasibility, including technical difficulties and unknowns associated with the construction and operation of a technology, the reliability of the technology, ease of undertaking additional remedial actions, and the ability to monitor the effectiveness of the remedy.

(2) Administrative feasibility, including activities needed to coordinate with other offices and agencies and the ability and time required to obtain any necessary approvals and permits from other agencies (for off-site actions);

(3) Availability of services and materials, including the availability of adequate off-site treatment, storage capacity, and disposal capacity and services; the availability of necessary equipment and specialists, and provisions to ensure any necessary additional resources; the availability of services and materials; and availability of prospective technologies.

(G) *Cost.* The types of costs that shall be assessed include the following:

(1) Capital costs, including both direct and indirect costs;

(2) Annual operation and maintenance costs; and

(3) Net present value of capital and O&M costs.

(H) *State acceptance.* Assessment of state concerns may not be completed until comments on the RI/FS are received but may be discussed, to the extent possible, in the proposed plan issued for public comment. The state concerns that shall be assessed include the following:

(1) The state's position and key concerns related to the preferred alternative and other alternatives; and

(2) State comments on ARARs or the proposed use of waivers.

(I) *Community acceptance.* This assessment includes determining which components of the alternatives interested persons in the community support, have reservations about, or oppose. This assessment may not be completed until comments on the proposed plan are received.

(f) *Selection of remedy*—(1) Remedies selected shall reflect the scope and purpose of the actions being undertaken and how the action relates to long-term, comprehensive response at the site.

(i) The criteria noted in paragraph (e)(9)(iii) of this section are used to select a remedy. These criteria are categorized into three groups.

(A) *Threshold criteria.* Overall protection of human health and the environment and compliance with ARARs (unless a specific ARAR is waived) are threshold requirements that each alternative must meet in order to be eligible for selection.

(B) *Primary balancing criteria.* The five primary balancing criteria are long-term effectiveness and permanence; reduction of toxicity, mobility, or volume through treatment; short-term effectiveness; implementability; and cost.111(C) *Modifying criteria.* State and community acceptance are modifying criteria that shall be considered in remedy selection.

(ii) The selection of a remedial action is a two-step process and shall proceed in accordance with § 300.515(e). First, the lead agency, in conjunction with the support agency, identifies a preferred alternative and presents it to the public in a proposed plan, for review and comment. Second, the lead

## § 300.430

## 40 CFR Ch. I (7–1–03 Edition)

agency shall review the public comments and consult with the state (or support agency) in order to determine if the alternative remains the most appropriate remedial action for the site or site problem. The lead agency, as specified in §300.515(e), makes the final remedy selection decision, which shall be documented in the ROD. Each remedial alternative selected as a Superfund remedy will employ the criteria as indicated in paragraph (f)(1)(i) of this section to make the following determination:

(A) Each remedial action selected shall be protective of human health and the environment.

(B) On-site remedial actions selected in a ROD must attain those ARARs that are identified at the time of ROD signature or provide grounds for invoking a waiver under §300.430(f)(1)(ii)(C).

(1) Requirements that are promulgated or modified after ROD signature must be attained (or waived) only when determined to be applicable or relevant and appropriate and necessary to ensure that the remedy is protective of human health and the environment.

(2) Components of the remedy not described in the ROD must attain (or waive) requirements that are identified as applicable or relevant and appropriate at the time the amendment to the ROD or the explanation of significant difference describing the component is signed.

(C) An alternative that does not meet an ARAR under federal environmental or state environmental or facility siting laws may be selected under the following circumstances:

(1) The alternative is an interim measure and will become part of a total remedial action that will attain the applicable or relevant and appropriate federal or state requirement;

(2) Compliance with the requirement will result in greater risk to human health and the environment than other alternatives;

(3) Compliance with the requirement is technically impracticable from an engineering perspective;

(4) The alternative will attain a standard of performance that is equivalent to that required under the otherwise applicable standard, requirement,

or limitation through use of another method or approach;

(5) With respect to a state requirement, the state has not consistently applied, or demonstrated the intention to consistently apply, the promulgated requirement in similar circumstances at other remedial actions within the state; or

(6) For Fund-financed response actions only, an alternative that attains the ARAR will not provide a balance between the need for protection of human health and the environment at the site and the availability of Fund monies to respond to other sites that may present a threat to human health and the environment.

(D) Each remedial action selected shall be cost-effective, provided that it first satisfies the threshold criteria set forth in §300.430(f)(1)(ii)(A) and (B). Cost-effectiveness is determined by evaluating the following three of the five balancing criteria noted in §300.430(f)(1)(i)(B) to determine overall effectiveness: long-term effectiveness and permanence, reduction of toxicity, mobility, or volume through treatment, and short-term effectiveness. Overall effectiveness is then compared to cost to ensure that the remedy is cost-effective. A remedy shall be cost-effective if its costs are proportional to its overall effectiveness.

(E) Each remedial action shall utilize permanent solutions and alternative treatment technologies or resource recovery technologies to the maximum extent practicable. This requirement shall be fulfilled by selecting the alternative that satisfies paragraph (f)(1)(ii)(A) and (B) of this section and provides the best balance of trade-offs among alternatives in terms of the five primary balancing criteria noted in paragraph (f)(1)(i)(B) of this section. The balancing shall emphasize long-term effectiveness and reduction of toxicity, mobility, or volume through treatment. The balancing shall also consider the preference for treatment as a principal element and the bias against off-site land disposal of untreated waste. In making the determination under this paragraph, the modifying criteria of state acceptance and community acceptance described

in paragraph (f)(1)(i)(C) of this section shall also be considered.

(2) *The proposed plan.* In the first step in the remedy selection process, the lead agency shall identify the alternative that best meets the requirements in § 300.430(f)(1), above, and shall present that alternative to the public in a proposed plan. The lead agency, in conjunction with the support agency and consistent with § 300.515(e), shall prepare a proposed plan that briefly describes the remedial alternatives analyzed by the lead agency, proposes a preferred remedial action alternative, and summarizes the information relied upon to select the preferred alternative. The selection of remedy process for an operable unit may be initiated at any time during the remedial action process. The purpose of the proposed plan is to supplement the RI/FS and provide the public with a reasonable opportunity to comment on the preferred alternative for remedial action, as well as alternative plans under consideration, and to participate in the selection of remedial action at a site. At a minimum, the proposed plan shall:

(i) Provide a brief summary description of the remedial alternatives evaluated in the detailed analysis established under paragraph (e)(9) of this section;

(ii) Identify and provide a discussion of the rationale that supports the preferred alternative;

(iii) Provide a summary of any formal comments received from the support agency; and

(iv) Provide a summary explanation of any proposed waiver identified under paragraph (f)(1)(ii)(C) of this section from an ARAR.

(3) *Community relations to support the selection of remedy.* (i) The lead agency, after preparation of the proposed plan and review by the support agency, shall conduct the following activities:

(A) Publish a notice of availability and brief analysis of the proposed plan in a major local newspaper of general circulation;

(B) Make the proposed plan and supporting analysis and information available in the administrative record required under subpart I of this part;

(C) Provide a reasonable opportunity, not less than 30 calendar days, for sub-

mission of written and oral comments on the proposed plan and the supporting analysis and information located in the information repository, including the RI/FS. Upon timely request, the lead agency will extend the public comment period by a minimum of 30 additional days;

(D) Provide the opportunity for a public meeting to be held during the public comment period at or near the site at issue regarding the proposed plan and the supporting analysis and information;

(E) Keep a transcript of the public meeting held during the public comment period pursuant to CERCLA section 117(a) and make such transcript available to the public; and

(F) Prepare a written summary of significant comments, criticisms, and new relevant information submitted during the public comment period and the lead agency response to each issue. This responsiveness summary shall be made available with the record of decision.

(ii) After publication of the proposed plan and prior to adoption of the selected remedy in the record of decision, if new information is made available that significantly changes the basic features of the remedy with respect to scope, performance, or cost, such that the remedy significantly differs from the original proposal in the proposed plan and the supporting analysis and information, the lead agency shall:

(A) Include a discussion in the record of decision of the significant changes and reasons for such changes, if the lead agency determines such changes could be reasonably anticipated by the public based on the alternatives and other information available in the proposed plan or the supporting analysis and information in the administrative record; or

(B) Seek additional public comment on a revised proposed plan, when the lead agency determines the change could not have been reasonably anticipated by the public based on the information available in the proposed plan or the supporting analysis and information in the administrative record. The lead agency shall, prior to adoption of the selected remedy in the ROD, issue a revised proposed plan, which

shall include a discussion of the significant changes and the reasons for such changes, in accordance with the public participation requirements described in paragraph (f)(3)(i) of this section.

(4) *Final remedy selection.* (i) In the second and final step in the remedy selection process, the lead agency shall reassess its initial determination that the preferred alternative provides the best balance of trade-offs, now factoring in any new information or points of view expressed by the state (or support agency) and community during the public comment period. The lead agency shall consider state (or support agency) and community comments regarding the lead agency's evaluation of alternatives with respect to the other criteria. These comments may prompt the lead agency to modify aspects of the preferred alternative or decide that another alternative provides a more appropriate balance. The lead agency, as specified in § 300.515(e), shall make the final remedy selection decision and document that decision in the ROD.

(ii) If a remedial action is selected that results in hazardous substances, pollutants, or contaminants remaining at the site above levels that allow for unlimited use and unrestricted exposure, the lead agency shall review such action no less often than every five years after initiation of the selected remedial action.

(iii) The process for selection of a remedial action at a federal facility on the NPL, pursuant to CERCLA section 120, shall entail:

(A) Joint selection of remedial action by the head of the relevant department, agency, or instrumentality and EPA; or

(B) If mutual agreement on the remedy is not reached, selection of the remedy is made by EPA.

(5) *Documenting the decision.* (i) To support the selection of a remedial action, all facts, analyses of facts, and site-specific policy determinations considered in the course of carrying out activities in this section shall be documented, as appropriate, in a record of decision, in a level of detail appropriate to the site situation, for inclusion in the administrative record required under subpart I of this part.

Documentation shall explain how the evaluation criteria in paragraph (e)(9)(iii) of this section were used to select the remedy.

(ii) The ROD shall describe the following statutory requirements as they relate to the scope and objectives of the action:

(A) How the selected remedy is protective of human health and the environment, explaining how the remedy eliminates, reduces, or controls exposures to human and environmental receptors;

(B) The federal and state requirements that are applicable or relevant and appropriate to the site that the remedy will attain;

(C) The applicable or relevant and appropriate requirements of other federal and state laws that the remedy will not meet, the waiver invoked, and the justification for invoking the waiver;

(D) How the remedy is cost-effective, i.e., explaining how the remedy provides overall effectiveness proportional to its costs;

(E) How the remedy utilizes permanent solutions and alternative treatment technologies or resource recovery technologies to the maximum extent practicable; and

(F) Whether the preference for remedies employing treatment which permanently and significantly reduces the toxicity, mobility, or volume of the hazardous substances, pollutants, or contaminants as a principal element is or is not satisfied by the selected remedy. If this preference is not satisfied, the record of decision must explain why a remedial action involving such reductions in toxicity, mobility, or volume was not selected.

(iii) The ROD also shall:

(A) Indicate, as appropriate, the remediation goals, discussed in paragraph (e)(2)(i) of this section, that the remedy is expected to achieve. Performance shall be measured at appropriate locations in the ground water, surface water, soils, air, and other affected environmental media. Measurement relating to the performance of the treatment processes and the engineering controls may also be identified, as appropriate;

(B) Discuss significant changes and the response to comments described in paragraph (f)(3)(i)(F) of this section;

(C) Describe whether hazardous substances, pollutants, or contaminants will remain at the site such that a review of the remedial action under paragraph (f)(4)(ii) of this section no less often than every five years shall be required; and

(D) When appropriate, provide a commitment for further analysis and selection of long-term response measures within an appropriate time-frame.

(6) **Community relations when the record of decision is signed.** After the ROD is signed, the lead agency shall:

(i) Publish a notice of the availability of the ROD in a major local newspaper of general circulation; and

(ii) Make the record of decision available for public inspection and copying at or near the facility at issue prior to the commencement of any remedial action.

**§ 300.435 Remedial design/remedial action, operation and maintenance.**

(a) *General.* The remedial design/remedial action (RD/RA) stage includes the development of the actual design of the selected remedy and implementation of the remedy through construction. A period of operation and maintenance may follow the RA activities.

(b) *RD/RA activities.* (1) All RD/RA activities shall be in conformance with the remedy selected and set forth in the ROD or other decision document for that site. Those portions of RD/RA sampling and analysis plans describing the QA/QC requirements for chemical and analytical testing and sampling procedures of samples taken for the purpose of determining whether clean-up action levels specified in the ROD are achieved, generally will be consistent with the requirements of § 300.430(b)(8).

(2) During the course of the RD/RA, the lead agency shall be responsible for ensuring that all federal and state requirements that are identified in the ROD as applicable or relevant and appropriate requirements for the action are met. If waivers from any ARARs are involved, the lead agency shall be responsible for ensuring that the conditions of the waivers are met.

(c) *Community relations.* (1) Prior to the initiation of RD, the lead agency shall review the CRP to determine whether it should be revised to describe further public involvement activities during RD/RA that are not already addressed or provided for in the CRP.

(2) After the adoption of the ROD, if the remedial action or enforcement action taken, or the settlement or consent decree entered into, differs significantly from the remedy selected in the ROD with respect to scope, performance, or cost, the lead agency shall consult with the support agency, as appropriate, and shall either:

(i) Publish an explanation of significant differences when the differences in the remedial or enforcement action, settlement, or consent decree significantly change but do not fundamentally alter the remedy selected in the ROD with respect to scope, performance, or cost. To issue an explanation of significant differences, the lead agency shall:

(A) Make the explanation of significant differences and supporting information available to the public in the administrative record established under § 300.815 and the information repository; and

(B) Publish a notice that briefly summarizes the explanation of significant differences, including the reasons for such differences, in a major local newspaper of general circulation; or

(ii) Propose an amendment to the ROD if the differences in the remedial or enforcement action, settlement, or consent decree fundamentally alter the basic features of the selected remedy with respect to scope, performance, or cost. To amend the ROD, the lead agency, in conjunction with the support agency, as provided in § 300.515(e), shall:

(A) Issue a notice of availability and brief description of the proposed amendment to the ROD in a major local newspaper of general circulation;

(B) Make the proposed amendment to the ROD and information supporting the decision available for public comment;

(C) Provide a reasonable opportunity, not less than 30 calendar days, for submission of written or oral comments on the amendment to the ROD. Upon

timely request, the lead agency will extend the public comment period by a minimum of 30 additional days;

(D) Provide the opportunity for a public meeting to be held during the public comment period at or near the facility at issue;

(E) Keep a transcript of comments received at the public meeting held during the public comment period;

(F) Include in the amended ROD a brief explanation of the amendment and the response to each of the significant comments, criticisms, and new relevant information submitted during the public comment period;

(G) Publish a notice of the availability of the amended ROD in a major local newspaper of general circulation; and

(H) Make the amended ROD and supporting information available to the public in the administrative record and information repository prior to the commencement of the remedial action affected by the amendment.

(3) After the completion of the final engineering design, the lead agency shall issue a fact sheet and provide, as appropriate, a public briefing prior to the initiation of the remedial action.

(d) *Contractor conflict of interest.* (1) For Fund-financed RD/RA and O&M activities, the lead agency shall:

(i) Include appropriate language in the solicitation requiring potential prime contractors to submit information on their status, as well as the status of their subcontractors, parent companies, and affiliates, as potentially responsible parties at the site.

(ii) Require potential prime contractors to certify that, to the best of their knowledge, they and their potential subcontractors, parent companies, and affiliates have disclosed all information described in § 300.435(d)(1)(i) or that no such information exists, and that any such information discovered after submission of their bid or proposal or contract award will be disclosed immediately.

(2) Prior to contract award, the lead agency shall evaluate the information provided by the potential prime contractors and:

(i) Determine whether they have conflicts of interest that could significantly impact the performance of the

contract or the liability of potential prime contractors or subcontractors.

(ii) If a potential prime contractor or subcontractor has a conflict of interest that cannot be avoided or otherwise resolved, and using that potential prime contractor or subcontractor to conduct RD/RA or O&M work under a Fund-financed action would not be in the best interests of the state or federal government, an offeror or bidder contemplating use of that prime contractor or subcontractor may be declared non-responsible or ineligible for award in accordance with appropriate acquisition regulations, and the contract may be awarded to the next eligible offeror or bidder.

(e) *Recontracting.* (1) If a Fund-financed contract must be terminated because additional work outside the scope of the contract is needed, EPA is authorized to take appropriate steps to continue interim RAs as necessary to reduce risks to public health and the environment. Appropriate steps may include extending an existing contract for a federal-lead RA or amending a cooperative agreement for a state-lead RA. Until the lead agency can reopen the bidding process and recontract to complete the RA, EPA may take such appropriate steps as described above to cover interim work to reduce such risks, where:

(i) Additional work is found to be needed as a result of such unforeseen situations as newly discovered sources, types, or quantities of hazardous substances at a facility; and

(ii) Performance of the complete RA requires the lead agency to rebid the contract because the existing contract does not encompass this newly discovered work.

(2) The cost of such interim actions shall not exceed \$2 million.

(f) *Operation and maintenance.* (1) Operation and maintenance (O&M) measures are initiated after the remedy has achieved the remedial action objectives and remediation goals in the ROD, and is determined to be operational and functional, except for ground- or surface-water restoration actions covered under § 300.435(f)(4). A state must provide its assurance to assume responsibility for O&M, including, where appropriate, requirements for maintaining

Appendix H: News Media, Potential Event Locations, and Other Contacts

This table provides a list of potential media contacts that may be useful in reaching the Hunters Point Shipyard community. The contacts were compiled based on community interviews, input from other community members during community meetings, local research, and grassroots efforts.

Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)

The table below provides contact information for organizations and venues located in or providing services to the Hunters Point Shipyard community. The Navy contacted these organizations and venues to determine whether they could help support the Navy’s community involvement actions. If an “X” is present in the column, the organization responded positively to that action. For example, some organizations indicated the Navy could come to one of their regularly scheduled meetings and provide a brief update or presentation. Other venues are included because they have space to hold a Navy meeting or places where Navy flyers could be posted. Other organizations indicated that the Navy could inform them about the Navy’s opportunities for community involvement and the organization would pass the Navy’s information along to its members.

*Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)***Community Mailing List**

The Hunters Point Shipyard (**HPS**) community mailing list is used to distribute information and updates via e-mail and hardcopies to the HPS community and other interested parties in the City of San Francisco. The e-mail list contains more than 500 members and the hardcopy mailing list has more than 3,000 addresses, including local residents; community organizations; local, state, and federal regulatory agencies; news media; elected officials; business associations; and other interested parties. Individuals on the list will receive fact sheets, meeting notifications, and other important information.

To create and maintain the mailing list, the Department of the Navy adds the following:

- Anyone who makes a telephone or e-mail request for HPS information
- Community Involvement Plan (**CIP**) interviewees
- Meeting attendees
- Local elected officials (updated annually)
- Anyone who asks to be added

The Navy also updates the list with mailing or e-mail returns, as required to update addresses or remove people from the lists. The mailing list will continue to be updated to ensure that the Navy is reaching all interested and concerned parties. If you want to be added to the Navy's e-mail or hardcopy mailing list, please contact Keith Forman at (415) 308-1458, (619) 532-0913, or [keith.s.forman@navy.mil](mailto:keith.s.forman@navy.mil).

**Key Mailing List Contacts**

The key contacts list is a subset of the community mailing list and includes Navy representatives, regulatory agency representatives, elected officials, and other government agencies for the area and state. Those individuals and organizations on the list will receive fact sheets, news releases, meeting notices, and other important information.

**Information Repository Locations**

The Information Repository contains the Administrative Record index plus site-related documents such as technical reports, sampling data, fact sheets, newsletters, and public meeting transcripts. The Information Repository is available at the following locations:

**San Francisco Main Public Library**

*Science, Technical, and Government Documents Room*

100 Larkin Street

San Francisco, CA 94102

(415) 557-4400

<http://sfpl.org/index.php?pg=0100000101>

**Hours:**

Mondays: 10:00 a.m. to 6:00 p.m.

Tuesdays, Wednesdays, and Thursdays: 9:00 a.m. to 8:00 p.m.

Fridays: 12:00 p.m. to 6:00 p.m.

*Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)*

Saturdays: 10:00 a.m. to 6:00 p.m.

Sundays: 12:00 p.m. to 5:00 p.m.

**Bayview/Anna E. Waden Branch Library**

5075 Third Street

San Francisco, CA 94124

(415) 355-5757

<http://sfpl.org/index.php?pg=0100000401>

**Hours:**

Mondays and Tuesdays: 10:00 a.m. to 6:00 p.m.

Wednesdays: 1:00 p.m. to 8:00 p.m.

Thursdays: 10:00 a.m. to 8:00 p.m.

Fridays: 1:00 p.m. to 6:00 p.m.

Saturdays: 10:00 a.m. to 6:00 p.m.

Sundays: 1:00 p.m. to 5:00 p.m.

\* The Bayview/Anna E. Waden Branch Library is scheduled for renovations in April 2011. While the library is closed, the Navy will have relocated the Information Repository to a temporary location at:

Hunters Point Shipyard Site Trailer (Located across the street from the security entrance to the Shipyard)

690 Hudson Avenue

San Francisco, CA 94124

**Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)**

The table below provides contact information for local and State of California government officials; however, these entities are not directly involved in the HPS cleanup.

## Appendix J: Responses to Comments on the Draft CIP

Comments from:

Jackie Lane, U.S. Environmental Protection Agency (U.S. EPA) Region 9, April 11, 2011

| Comment Number | Section/<br>Page                                                        | Comment                                                                                                                                                                                                                                                                        | Response                                                                                                                                                                                                                                                                                            |
|----------------|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.             | <b>Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS</b> | The Navy may want to use "Available upon request" for informal review and "Formal Public Comment Needed" for required public comment documents.                                                                                                                                | The text has been revised to "Available upon request for public review and comment" and "Formal public review and comment required."                                                                                                                                                                |
| 2.             | <b>Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS</b> | Delete reference to draft CIP and final CIP at the beginning of this section. The public will not get an opportunity to review the final CIP again and they have already reviewed the draft final.                                                                             | The two Community Involvement Plan (CIP) documents have been removed from the table and the schedule for other documents has been updated.                                                                                                                                                          |
| 3.             | <b>Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS</b> | Delete the second "Removal" word in the title "Draft Action Memorandum – Shipshielding Time Critical Removal Action."                                                                                                                                                          | The text has been revised as requested.                                                                                                                                                                                                                                                             |
| 4.             | <b>Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS</b> | Delete double entries of the draft and final document titles in the same section under "Removal Action Reports for Parcel E-2."                                                                                                                                                | The table was reviewed; however, no double entries were found. Several draft and final versions of the same document are listed, as is the case throughout this table.                                                                                                                              |
| 5.             | <b>Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS</b> | You may want to add a glossary to this section so people will understand what the report means as it concerns the cleanup. For example, what is "Shipshielding?" The average citizen does not know most of the terms used or those expressed in the titles of these documents. | The table has been revised to include footnotes to define terms not commonly used and to refer readers to Appendix G for a glossary of the types of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) documents.                                                       |
| 6.             | <b>Chapter 5, pg 51 Cleanup Roles and Responsibilities</b>              | Paragraph 2, sentence 2: spell out CAC and PAC and what these groups do or support.<br>I could not find the contact reference for the groups in Appendix B as reference here.                                                                                                  | The acronyms Community Advisory Council (CAC) and Project Area Committee (PAC) are now spelled out and defined in Chapter 5. CAC and PAC are now listed in Appendix B, under Websites for Additional Information. In the table in Appendix B, a description of what these groups do has been added. |
| 7.             | <b>Appendix A</b>                                                       | Page A-1, move paragraph 4 to end of page A-2.                                                                                                                                                                                                                                 | The text has been revised as requested.                                                                                                                                                                                                                                                             |
| 8.             | <b>Appendix A</b>                                                       | "Dust Control at the Site" section: add a sentence that says why this action is important in protecting health                                                                                                                                                                 | A sentence has been added explaining why controlling dust is important for health. Text was also added to explain some of the actions the Navy implements to control dust.                                                                                                                          |

|----------------|----------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.             | <b>General</b>                                                                         | When discussing the redevelopment, please change the references from City of San Francisco to “the San Francisco Redevelopment Agency” or “the San Francisco Redevelopment Agency or its successor agency”. | The text has been modified to “the San Francisco Redevelopment Agency” or SFRA where appropriate.                                                                                                                                               |
| 2.             | <b>Executive Summary, page 2, third paragraph, first sentence</b>                      | Please replace with “In addition, the San Francisco Redevelopment Agency, or its successor agency, is responsible for redeveloping HPS.”                                                                    | Redevelopment is not discussed in this section; therefore, the sentence was not replaced. The CIP has been reviewed and revised in all sections where redevelopment is discussed, to clarify that the SFRA is responsible for redeveloping HPS. |
| 3.             | <b>Executive Summary, page 2, fourth paragraph, last sentence:</b>                     | Please replace “the City” with “the San Francisco Redevelopment Agency”                                                                                                                                     | The text has been revised as requested.                                                                                                                                                                                                         |
| 4.             | <b>Chapter 3: Community Involvement-Actions and Activities, page 16, ninth bullet:</b> | Please reword first line to state “The Navy will designate a Navy contractor to be the Community Involvement Manager...”.                                                                                   | The text has been revised as requested.                                                                                                                                                                                                         |
| 5.             | <b>Chapter 3, Theme 1, bullet 7:</b>                                                   | “At meetings, an updated calendar of events and...”                                                                                                                                                         | The text has been revised as requested.                                                                                                                                                                                                         |
| 6.             | <b>Chapter 3, Community Involvement-Actions and Activities, page 18, Theme 4:</b>      | Please change title reference from “City of San Francisco Redevelopment” to “San Francisco Redevelopment Agency Redevelopment” and please change any references in text to correspond.                      | The text has been revised as requested.                                                                                                                                                                                                         |
| 7.             | <b>Chapter 4, Navy’s Cleanup Program, page 23, sixth paragraph:</b>                    | Please change references about Parcel A transfer and redevelopment from the City of San Francisco to the San Francisco Redevelopment Agency.                                                                | The text has been revised as requested.                                                                                                                                                                                                         |
| 8.             | <b>Chapter 4, Navy’s Cleanup Program, page 28, Shipyard Map:</b>                       | Please change legend for red-dashed line to “Former Parcel A, currently SFRA property”                                                                                                                      | The map has been revised as requested.                                                                                                                                                                                                          |

## Appendix J: Responses to Comments on the Draft CIP (continued)

| 9.             | <b>Chapter 4, Navy's Cleanup Program, page 29, Parcel A table, next steps, 1st sentence:</b>                                                 | Please change to: "The San Francisco Redevelopment Agency is working with developers, selected by the SFRA, to build..."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The text has been revised as requested.                                                                                                                                                                    |
| 10.            | <b>Chapter 4, Parcel G, Status of Cleanup, second sentence, page 37:</b>                                                                     | It currently reads "areas specified areas" – it should be "specified areas".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The text has been revised as requested.                                                                                                                                                                    |
| 11.            | <b>Chapter 4, Opportunities for Public Involvement at HPS:</b>                                                                               | Shouldn't the Parcel B and Parcel G Findings of Suitability for Early Transfer and the FOSTs for other parcels be listed here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Finding of Suitability to Transfer (FOST) and Finding of Suitability for Early Transfer (FOSET) are transfer documents rather than cleanup documents; therefore, they have not been added to the list.     |
| 12.            | <b>Chapter 5: Cleanup Roles and Responsibilities, page 47:</b>                                                                               | When referring to the transfer of land, please change all references when referring to transfer from the City of San Francisco to the San Francisco Redevelopment Agency or SFRA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The text has been revised as requested.                                                                                                                                                                    |
| 13.            | <b>Chapter 5: Cleanup Roles and Responsibilities, Roles and Responsibilities of the City and County of San Francisco, starts on page 49:</b> | <p>You need to delete the second and third bullets in the blue box and all paragraphs except the last one which begins: "SFDPH is one..."</p> <p>You need to insert a new heading in front of this City and County of SF heading and titled it "Roles and Responsibilities of the San Francisco Redevelopment Agency or its successors" and then insert the second and third bullets from the blue box (i.e. becomes landowner... and is responsible for redevelopment). You also need to change the first two sentences to "The San Francisco Redevelopment Agency, or its successors, is primary responsible for redeveloping HPS. In 1997, after an extensive multi-year community planning effort, the SFRA adopted the Hunters Point Shipyard Redevelopment Plan." In the third paragraph, please change the references from the City to the SFRA. Delete the third paragraph from this section – it will be retained in CCSF roles – see Comment #13.</p> | The text has been revised as requested. The only exception is that the "or its successors" language was not include in the "Roles and Responsibilities of the San Francisco Redevelopment Agency" heading. |

|----------------|--------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 14.            | <b>Chapter 5: Cleanup Roles and Responsibilities, page 50:</b>                 | Please consider adding the following "The City has several mechanisms in place that will require anyone who disturbs soil or other ground cover at HPS to comply with requirements in the San Francisco Municipal Codes, specifically Health, Building and Public Works Codes. The City also will regulate the construction of new development through its Subdivision Code, which will require construction of public improvements in conjunction with subdivision of land for private development. The City and the San Francisco Redevelopment Agency have a formal process to confirm that the improvements were constructed as required by the permits. The City also has a process in its Building Code to confirm that structures are constructed to code. Permitted activities involving the disturbance of soil require the permit applicant to go through a special process set out under Article 31 of the Health Code. The Applicant is required to obtain approval of various plans under Article 31 from SFDPH to assure that environmental restrictions and conditions are appropriately taken into account during the permitted activities. Once the Applicant receives approval of the required plans and meets all other permit requirements the Applicant will receive approval for the building, grading or other permit and can begin grading or construction." | The text has been revised as requested.                                                 |
| 15.            | <b>Chapter 5: Cleanup Roles and Responsibilities, page 51, last paragraph:</b> | In last sentence, change "The City" to "The San Francisco Redevelopment Agency".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The text has been revised as requested, using the acronym SFRA throughout the document. |

| 1.             | <b>Executive Summary</b> | The Executive Summary starts right in with acronyms so please make them easier to find than in a distant Appendix. Perhaps right inside the front cover of the report? | Although most technical documents include an acronym list in the front, this document is designed to be more reader-friendly. The acronym list has been kept in the appendices with its own tab because it is easy to flip to in the hard copy and it is linked in the electronic file.<br><br>Acronyms are defined as they are used, so the reader will not have to refer to the acronym list for the definitions in the Executive Summary. |

## Appendix J: Responses to Comments on the Draft CIP (continued)

|----------------|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.             | General          | <ul style="list-style-type: none"> <li>This is a Community Involvement Plan, not a how-to on preparing a Community Development Plan. I recommend rearranging the sections so the plan's emphasis is on now and going forward, not so much demonstrating that the voice of the community has been heard in preparing the plan. The users of the plan are primarily going to want to know how to use it, secondarily how it came to be. Specifically: put Section 5.0 Cleanup Roles and Responsibilities right after the Introduction. Then put Section 4 on the cleanup program history and status, followed by Section 3 Community Involvement. After that can be the section documenting how the plan was arrived at and the References section and appendices. This arrangement is more logical because it introduces the plan and its purposes, it describes the process and regulatory responsibilities of the agencies, it describes the existing conditions that require a cleanup and community involvement, and then it presents the plan for give and take between the community and the Navy. Community members who wish to participate can then do so and can read the next section about how the plan was produced, if they want to, and can use the resources presented in the appendices. A statement about how thoroughly the community was involved in the preparation of the CIP is important to include, but it should not be the main focus of the CIP.</li> <li>The Executive Summary and Introduction should be edited to have a consistent arrangement of topics with the new arrangement of sections.</li> </ul> | The table of contents and outline for this document were developed in coordination with the U.S. Environmental Protection Agency (U.S. EPA) and are based on existing CIP examples provided by U.S. EPA. To avoid confusing the public by moving significant text in the final round, this request was not incorporated. |
| 3.             | Pie Charts       | Quantitative information should be displayed in bar charts or other ways but not pie charts in the view of experts on presenting data. Please use graphics other than pie charts wherever possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Most qualitative information has been revised to be presented in bar charts.                                                                                                                                                                                                                                             |
| 4.             | General          | Why does translating into Chinese equal translating into Cantonese and not Mandarin? Please provide a little explanation for this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Based on information provided by the Chinese-American community, Cantonese is the primary Chinese dialect spoken in San Francisco. The Navy may provide other translations in the future if a specific need is identified.                                                                                               |

## Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

|----------------|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 5.             | <b>Chapter 4 page 40</b>         | Two “time” per year should be “times” per year.                                                                                                                                                                                                                | The text has been revised as requested.                                                                                                    |
| 6.             | <b>Chapter 5 page 49</b>         | Change “DTSC that is” to “DTSC is”.                                                                                                                                                                                                                            | The text has been revised as requested.                                                                                                    |
| 7.             | <b>Chapter 5 page 49</b>         | Change “The City and County of San Francisco are” to “The city of San Francisco is”                                                                                                                                                                            | The text has been alternately revised to address City and County of San Francisco comments on the CIP.                                     |
| 8.             | <b>Chapter 5 pages 49 and 50</b> | Rearrange the paragraphs at the bottom of page 49 and the top of page 50 so they are in the logical order: 1. SFDPH is one... 2. Once a parcel meets... 3. The city of San Francisco... 4. According to the SFRA website (also change the W to w in “website”) | The text has been revised to address City and County of San Francisco comments on the CIP.                                                 |
| 9.             | <b>Appendix A page A-1</b>       | Change “See the following table...” and label the three separate kinds of content as Table A-1, Table A-2, and Table A-3. Change the one table to three with individual titles.                                                                                | The table has not been revised into three tables. It is relatively short, and to break it up would mean one table would have only one row. |
| 10.            | <b>Appendix A page A-1</b>       | Change “if air quality is recorded at above approved” to “if dust is detected above approved” or some other factually and grammatically correct statement.                                                                                                     | The text has been revised as requested.                                                                                                    |
| 11.            | <b>Appendix A page A-3</b>       | Explain here or previously why Cantonese translations and not Mandarin or other Chinese dialects. What is the basis for providing Spanish and Cantonese? Will the Navy provide other translations if requested?                                                | See response to comment number 4.                                                                                                          |
| 12.            | <b>Appendix A page A-4</b>       | Under Broader Health Concern for Bay Area Air Quality Management District insert, “Outdoor Air Quality”. The mandate of BAAQMD is outdoor air.                                                                                                                 | The text has been revised as requested.                                                                                                    |
| 13.            | <b>Appendix A page A-4</b>       | In the box for Federal Agencies Details include the 2008(?) review by ATSDR of the asbestos monitoring at the shipyard and Parcel A. There was a report, a workshop at the CAC, and a variety of correspondence.                                               | The text has been revised as requested.                                                                                                    |

## Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

**Michael F. McGowan, Ph.D, Arc Ecology, March 14, 2011**

| Comment Number | Section/ Page                             | Comment                                                                                                                                                                                                                                                               | Response                                                                                                                                                                                                                                           |
|----------------|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.            | <b>Appendix A, pages A-4 and A-5</b>      | Federal and local agencies are included, but what about state agencies?                                                                                                                                                                                               | In general, the local agencies will provide more specific information than the state agencies. However, the document has been revised to include the California Department of Public Health, with a link to their San Francisco-specific programs. |
| 15.            | <b>Appendix B, page B-2</b>               | Change the street address of Arc Ecology to 1331 Evans Avenue. ZIP code remains 94124                                                                                                                                                                                 | The text has been revised as requested.                                                                                                                                                                                                            |
| 16.            | <b>Appendix B, page B-2</b>               | The email address for James Haas is not clear. Is there an underline between his first and last names, or?                                                                                                                                                            | An underscore is present between his first and last names. The text was revised to include a bolded underscore in his email address for clarity.                                                                                                   |
| 17.            | <b>Appendix B, page B-3</b>               | The website for U.S. EPA is formatted differently from all the rest                                                                                                                                                                                                   | The text has been revised to include a hyperlink, which also formats the website consistently.                                                                                                                                                     |
| 18.            | <b>Appendix C, page C-14</b>              | In the Use Radio box the entry should be edited to show that the University of California radio station is kalx, not Calx, Stanford's radio station is kzsx, and I don't think Lawrence Livermore Lab has a broadcast radio station. Please correct this information. | The text has been revised as requested, with radio station call letters capitalized.                                                                                                                                                               |
| 19.            | <b>Appendix C, page C-15</b>              | Do Navy rules prohibit food or beverages or just paying to have them at the meeting? Please clarify.                                                                                                                                                                  | The text has been revised to clarify the prohibition on using taxpayer funds to provide food and beverages during meetings.                                                                                                                        |
| 20.            | <b>Appendix C, page C-15</b>              | Please change the spelling "faire" to "fair" throughout the document.                                                                                                                                                                                                 | The text has been revised as requested.                                                                                                                                                                                                            |
| 21.            | <b>Appendix D, page D-2</b>               | Please change the format of the data in the table to 1 decimal place for all entries to facilitate comparisons.                                                                                                                                                       | The text has been revised as requested.                                                                                                                                                                                                            |
| 22.            | <b>Appendix D, page D-3, D-4, and D-6</b> | One decimal place in all data, please.                                                                                                                                                                                                                                | The text has been revised as requested.                                                                                                                                                                                                            |
| 23.            | <b>Appendix E, page E-1</b>               | Data "were", not "was".                                                                                                                                                                                                                                               | The text was revised as appropriate.                                                                                                                                                                                                               |
| 24.            | <b>Appendix E, page E-8</b>               | The 3-D bars do not help view the data and obscure the numbers above the bars. Please use 2-D bars for clarity.                                                                                                                                                       | Graph 6 has been revised as requested.                                                                                                                                                                                                             |

## Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

**Michael F. McGowan, Ph.D, Arc Ecology, March 14, 2011**

| Comment Number | Section/ Page                | Comment                                                                                                                                            | Response                                |
|----------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| 25.            | <b>Appendix H, page H-3</b>  | Please include information for Arc Ecology in this table. Contact Saul Bloom about Arc's ability to host a meeting and other entries in the table. | The text has been revised as requested. |
| 26.            | <b>Appendix H, pages H-3</b> | Clarify "Attend Its Meeting" in column heading. Does this mean "Navy willing to Attend Organization's Meeting"?                                    | The text has been revised as requested. |

Comments from:

**Marlene Tran, spokesperson for Visitacion Valley Asian Alliance, during HPS Community Meeting, March 23, 2011**

| Comment Number | Section/ Page                                         | Comment                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                |
|----------------|-------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.             | <b>Proposed Outreach: Dedicated Call-in line</b>      | For those who speak Cantonese, Spanish, or other languages, please have a dedicated phone number someone can call, get cleanup updates in their language and leave a message. This option is especially important for those people who lack internet access. | A dedicated call-in line has been added to the list of planned activities.                                                                                                                                              |
| 2.             | <b>Pie Charts</b>                                     | In the Draft CIP, the legends on the pie charts are too small. Please enlarge them so they can be read more easily.                                                                                                                                          | The charts have been modified as requested.                                                                                                                                                                             |
| 3.             | <b>Proposed Outreach: Translated materials</b>        | Make sure there is transparency in the Navy's program by sending translated information to the ethnic media.                                                                                                                                                 | The CIP includes sending translated materials to ethnic media. Chapter 3 was revised to include radio show presentations and call-in shows and other information that will be provided to the media in other languages. |
| 4.             | <b>Section 5.0 Cleanup Roles and Responsibilities</b> | The community needs clearer definitions of the roles of each party (Navy, regulatory agencies, city, Redevelopment agency). It's very unclear who is involved in the cleanup and what their role is.                                                         | Please refer to Chapter 5 of the CIP, which has been updated to clarify the roles of all the responsible parties.                                                                                                       |

## Appendix J: Responses to Comments on the Draft CIP (continued)

Jaron Browne, community member, during HPS Community Meeting, March 23, 2011

| Comment Number | Section/<br>Page                                    | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.             | <b>Proposed Outreach:<br/>Two-way communication</b> | <p>The Navy should have an elected body that provides input &amp; two-way communication. All the CIP activities are one-way communication.</p> <p>RAB was a body that was recorded &amp; could make recommendations, that is missing from the plan for new activities.</p> <p>The fundamental concern that POWER has with the CIP is that all of the action and activities are geared toward one-way communication from the Navy to community. The CIP lacks formal mechanisms for the community opinions and concerns to be recorded. The CIP absolutely must include a democratically elected community body that can vote and make formal decisions. Even if this body does not have power over the Navy's decisions – it would make a record of the community's democratic decision.</p> | <p>The need for a Restoration Advisory Board (RAB) or another such elected body will be reevaluated at least every 2 years.</p> <p>The current plan includes activities for two-way communication, such as:</p> <ul style="list-style-type: none"> <li>• Community meetings with question and answer (Q&amp;A) and break-out sessions</li> <li>• Radio call-in shows</li> <li>• Bus tours</li> <li>• Dedicated call-in line</li> <li>• Presentations at established group meetings</li> <li>• Use of a Community Involvement Manager</li> </ul> <p>In addition, community opinions and concerns are recorded by:</p> <ul style="list-style-type: none"> <li>• Writing community comments at meetings and reading them aloud to the group</li> <li>• Providing meeting summaries on the website</li> <li>• Saving radio shows as podcasts</li> <li>• Issuing formal responses to comments on documents</li> </ul> |

## Appendix J: Responses to Comments on the Draft CIP (continued)

**Mishwa Lee, community member, during HPS Community Meeting, March 23, 2011**

| Comment Number | Section/ Page                                                     | Comment                                                                                                                                                                     | Response                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.             | <b>Proposed Outreach: Meeting with local groups/organizations</b> | Instead of community coming to you, go to them. Meet with their church groups, etc.<br>Find out what they know already, and then give them more information.                | The CIP includes plans for meeting with several community groups during the group's regular meetings (see Chapter 3). In addition, see the updated list of recent outreach activities in Appendix F.                                                                                                                                                                                                                           |
| 2.             | <b>Dissolution of the RAB</b>                                     | Does the Navy have the legal right to dissolve the RAB Board? Why is the Navy trying to appear to involve the community, when the Navy didn't abide by the community input? | Yes, the Navy has the legal right to dissolve the RAB. Please see Chapter 1 and Appendix E for more explanation on that process. The Navy strictly followed standing requirements in the <i>Restoration Advisory Board Rule Handbook</i> . Just because the Navy does not fully incorporate community input that does not mean the requirement for community acceptance is being ignored. Please see Chapter 1 and Appendix E. |

|----------------|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.             | <b>Generalized Theme</b> | <p>By seeking to avoid creating another RAB the Navy has made decisions that could negatively impact meaningful public participation in the Navy Hunters Point Shipyard remedial program.</p> <ol style="list-style-type: none"> <li>1. The CIP has redefined community involvement as information, outreach, and education;</li> <li>2. The CIP fails to grasp important community involvement issues. Substituting outreach and education for engagement is the wrong strategy;</li> <li>3. The CIP has deemphasized dialogue and the creation of a process for developing an ongoing informed community analysis of the process of cleanup.</li> </ol> | <p>The CIP uses information gathered from the Hunters Point Shipyard (HPS) community to design a program that, in addition to meeting regulatory requirements for public involvement, meets the needs of the various sectors of the community through varied means of communication.</p> <ol style="list-style-type: none"> <li>1. Community involvement has not been redefined as only information, outreach, and education. Throughout the CIP, the desire to engage and involve the community in the cleanup process is described.</li> <li>2. For the community to provide input on the proposed cleanup actions during the formal public comment periods, it is necessary to provide opportunities to solicit input and to educate the HPS community. Activities in the CIP are designed to engage the HPS community in the cleanup process in ways community members have expressed are most suitable.</li> <li>3. The Navy has increased the variety of activities in the CIP allowing for dialogue/two-way communication, including: <ul style="list-style-type: none"> <li>• participating in multi-lingual radio call-in shows</li> <li>• holding community meetings that include formal question and answer sessions in addition to smaller break-out sessions where community members can talk one on one with the Navy and regulatory agencies' representatives</li> <li>• scheduling bus tours</li> <li>• giving presentations at established group meetings</li> <li>• using a local Community Involvement Manager</li> <li>• maintaining a multi-lingual hotline where people can leave messages and have the call returned.</li> </ul> </li> </ol> |

## Appendix J: Responses to Comments on the Draft CIP (continued)

|----------------|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.             | <b>Generalized Theme</b> | <p>The text of the CIP demonstrates an ongoing resistance to seat this program in the context of its regulatory requirements and guidance directions.</p> <ol style="list-style-type: none"> <li>1. In a number of the comments to follow we will raise ongoing concern with regard to the clear avoidance by the authors of the CIP to acknowledge or quote from regulatory requirement and guidance directions governing public participation;</li> <li>2. Furthermore the CIP has failed to list or otherwise acknowledge several guidances, orders, and an expression of community preference that would replace the general sense of the Navy's conferring of opportunity with meeting legal requirements.</li> </ol> | <ol style="list-style-type: none"> <li>1. The CIP has been modified to clearly identify the community involvement activities and opportunities for public comment that are specifically required per the National Contingency Plan (NCP). The CIP is intended to provide opportunities for public involvement above and beyond the required activities conducted at the project-level as part of the CERCLA process.</li> <li>2. Appendix G provides a list of the guidance documents pertaining to community involvement. An excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.</li> </ol> |
| 4.             | <b>Chapter 1</b>         | <p>The first paragraph of Chapter 1 makes it appear as though the Navy and U.S. EPA were acknowledging conceptual rights and therefore conferring an opportunity to the public to participate. Public engagement is a regulatory responsibility not a conferred opportunity. The CIP should acknowledge the Navy's regulatory requirement to seek public engagement up front in the introduction.</p>                                                                                                                                                                                                                                                                                                                      | <p>The introductory paragraph is a positive statement describing the right of the community to be involved and the value of involvement. In addition, this is standard language found in other U.S. EPA-led Community Involvement documents, such as the Iron King Mine CIP. It has now been noted in Chapter 1 that there are regulatory requirements for public participation. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.</p>                                                                                                                                     |
| 5.             | <b>Chapter 1</b>         | <p>Chapter 1 reference to Appendix G Regulations and Guidance appears as six words in its final paragraph which presents a guide to the entire document. The contents of Appendix G are mentioned without listing its letter designation or explaining the importance to understanding how public participation is governed. Appendix G is located in a part of the document members of the public might not read if its importance is not underscored in the introduction.</p>                                                                                                                                                                                                                                            | <p>The final paragraph of Chapter 1 has been expanded to include a more detailed description of all appendices, including Appendix G. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.</p>                                                                                                                                                                                                                                                                                                                                                                                |

| 6.             | <b>Chapter 1</b> | Given that the focus of the CIP is public participation, it would be appropriate for some of the space in Chapter 1 to be devoted to a discussion of the regulatory requirements and departmental guidances for public participation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | See response to comment 3. The last paragraph of Chapter 1 has been updated to include a more thorough description of what is included in each appendix, including Appendix G. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 7.             | <b>Chapter 2</b> | Chapter 2 "Community Interviews and Feedback" provides useful information and is well organized however: <ul style="list-style-type: none"> <li>a) the resistance to specifying regulatory and guidance requirements within the text of the CIP analysis calls into question whether the information being fed back within the CIP was subjected to an institutional bias;</li> <li>b) the failure to provide a statistical analysis of interviewee feedback on each of the survey questions reinforces the concern about institutional bias when reviewing the summary of respondent themes;</li> <li>c) the underlying resistance to creating another RAB further undermines confidence in the interpretation of respondent data.</li> </ul> | <ul style="list-style-type: none"> <li>a) The purpose of Chapter 2 is to summarize the community interview purpose, process, and feedback. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.</li> <li>b) Interviews were planned and conducted using the U.S. EPA's <i>Superfund Community Involvement Handbook</i> as guidance, referenced in Chapter 6. Interviews were not conducted with the intent of producing a statistical survey evaluation. Questions were open-ended and interviews were conversational to promote open communication, resulting in qualitative responses. A strictly statistical analysis of the feedback is not possible. Responses were quantified where possible, and themes in the feedback were identified after all of the responses were gathered.</li> <li>c) Please see response to comment number 1.</li> </ul> |

|----------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8.             | <b>Chapter 2</b> | <p>The CIP fails to acknowledge the National Contingency Plan and the invocation of its Community Acceptance Criteria. The Navy summarizes its understanding of the cleanup objectives of the community in paragraph 5 of Page 7 in Chapter 2 as follows:</p> <p><i>“The community wants the cleanup to be completed in a way that protects the current community and all future users and neighbors of HPS. The Navy and regulators share this goal with the community and are committed to involving the community in the cleanup process.”</i></p> <p>While we appreciate this expression of the Navy's understanding, the community adopted a clear Community Acceptance Criteria for cleanup with the passage of Proposition P in 2000. Proposition P sought to establish the National Contingency Plan's (NCP) 9<sup>th</sup> Criterion on Community Acceptance. The NCP establishes nine criterions for a cleanup program. 87% of the electorate in San Francisco and 93% in the greater Bayview Hunters Point community voted for this criterion. While the 9<sup>th</sup> criterion is modifying and not mandatory, the criterion has nevertheless been established and the Navy must acknowledge its existence. There is no exemption within the NCP enabling an agency to simply ignore an NCP criterion or the existing establishment of a Community Acceptance criterion. This comment is related to the concern expressed in Comment III. The Navy should make specific reference to Proposition P here.</p> | <p>The NCP requirements have been added to Appendix G. The ninth NCP criterion is community acceptance of a specific remedy during the Proposed Plan.</p> <p>Chapter 2 of the CIP states a general understanding that all community members want a cleanup that protects the current community and future users of the site, regardless of providing specific comments on a remedy.</p> <p>Proposition P is better categorized as a recommendation on what level voters want HPS cleaned to. The Navy's cleanup is directly tied to the San Francisco Redevelopment Agency's redevelopment plan. The cleanup recommendation in Proposition P does not match the SFRA redevelopment plan.</p> <p>Though the Navy does not always follow all recommendations from the community that does not mean the requirement for community acceptance is being ignored. The Navy will continue to adhere to the NCP requirements to solicit public comment on each proposed plan for HPS.</p> |

| 9.             | Chapter 2        | <p>The Navy's resistance to the establishment of a new RAB has implications for the response reported in the portion of the respondent theme table presented on Page 12 as Public Meetings:</p> <p>Pro "<i>Many people are informed at once.</i>" &amp; Cons.... "<i>Many members of the community feel intimidated at a large, centralized meeting. It was stated that it is difficult to have individual questions addressed; there is no single venue where everyone in the community feels comfortable.</i>"</p> <p>Under existing regulation and guidance RABs and or other committees and meetings are one of many methods to be used when reaching out to a community. The above argument was incorporated into the Navy letters and memos discussing its rationale for disbanding the RAB and its appearance here seems to reinforce the impression that the Navy continues to be unwilling to consider creating a new RAB. The bias in this response is further emphasized by the fact that these conclusions are not fully representative of the range of results available through a meeting oriented process and specifically a RAB. The fact that such processes and bodies can result in the development of a group of community representatives conversant in the issues associated with the Shipyard's cleanup and capable of providing the Navy with useful guidance based upon knowledge and experience is completely ignored.</p> | <p>The column header for the last column of the table has been adjusted to read "Pros and Cons Noted by Interviewees." The pros and cons listed for each of the nine historical outreach methods were identified by the community during the interviews, not by the Navy. The Navy does not feel the response is biased.</p> <p>The Navy letters and memoranda included in Appendix E were written prior to and separately from this draft CIP. The Navy does not feel it was biased. The Navy is required to reevaluate the need for a RAB every 2 years, and will continue to do so.</p> |

|----------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.            | <b>Chapter 2,<br/>page 11</b> | <p>The table on Page 11 presents themes raised and by how many interviewees however there are problems with the presentation.</p> <p>a. It does not correspond to the questions asked in the survey which leads to questions with regard to how the responses were interpreted and presented by the Navy;</p> <p>b. The lack of correspondence of the findings presented in the Table to the actual questions presented in the survey creates questions about how the survey data is being interpreted;</p> <p>c. For example there was no question on the Navy's survey form regarding whether an interviewee had an opinion on the status of the RAB, nevertheless the table on Page 11 indicates that less than 5 individuals raised the lack of a RAB as a concern. Table gives the appearance that the RAB issue was surveyed. The problem the table creates is that we can't tell whether the size of the response is a function of a lack of interest or lack of a question in the survey;</p> <p>It would have been more useful for the Navy to have been presented with a matrix providing a summary and numerical scoring of the community responses to the specific survey questions. This way it would have been easier to know how many respondents felt a particular way about the issue raised and there would be less question about the potential for Navy bias in interpreting the data.</p> | <p>As noted in the response to comment number 7, the interview format included many open ended questions. Responses in the table on page 11 were in response to the open-ended question: <i>Do you have any interests or concerns regarding the base and the cleanup program? If yes, what are they?</i></p> <p>This question offered the interviewees an opportunity to raise any concern or interest they have, not to review a list that the Navy would have had to develop.</p> <p>The introductory sentence to the table on page 11 has been revised to read: <i>Interviewees were asked an open-ended question about whether they have concerns or interests related to the base and the cleanup program, and what all of their concerns and interests might be.</i></p> <p>After feedback was received, it was reviewed for themes developed after feedback was received.</p> |

|----------------|-------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.            | <b>Chapter 3<br/>Community<br/>Involvement<br/>Actions and<br/>Activities</b> | Chapter 3 Community Involvement Actions and Activities is the portion of the CIP wherein the Navy changes the emphasis of past CIPs from public participation and engagement to information, outreach and education. While we have no objection to the activities discussed, it is the overall effect that we are concerned about. It is our view that the proposed plan substitutes superficial involvement to the type of detailed engagement consistent with CIPs including RAB and other committees wherein the focus is developing a group of advisors capable of contextualizing their reviews based on prior experience and providing the Navy with informed opinions with regard to the management of the IR program. | <p>Engage is a synonym for involve. The activities outlined in the draft CIP are designed to get information to the broader community and involve them in the cleanup. Feedback received during interviews is that many people are lacking basic information about the cleanup. The Navy seeks to inform and educate the community about the cleanup in order to involve and engage the community in discussions about cleanup decisions during formal public comments periods as well as during informal community involvement activities.</p> <p>No single activity fits the needs of all HPS community members. The plan has included activities for those who want minor updates all the way to those who wish to read and comment on technical documents and contact the Navy or regulatory agencies directly.</p> <p>In the past, the reach of the RAB was relatively narrow, and it was the primary means of involvement. By relying heavily on the RAB as the primary means of involvement, the Navy was unable to engage members of the community who were unable to attend regular meetings, or who had a negative experience at the RAB and were unwilling to attend another meeting. The new plan offers numerous and diverse ways of involving the public, including the use of radio and newspapers as well as other media. Holding regular meetings continues to be an activity in the CIP.</p> |

| 12.            | <b>Chapter 3<br/>Opening<br/>Statement</b> | <p>The reference to Fort Ord and McClellan Air Force Base emphasizes that the overriding theme of the new CIP is life without a RAB. Both Fort Ord and McClellan Air Force Base had RABs that were shuttered after the local Base commander determined that the committees were no longer meeting their objectives. Both Fort Ord and McClellan's RAB dissolutions were subject to extended litigation. In the case of Fort Ord, the litigation there led directly to the promulgation of the RAB rule of 2007. In the case of McClellan Air Force base the concerns that drove the disagreement – that the site was more radiologically contaminated than the Air Force was willing to admit – was later verified by subsequent remedial research. In both instances the RABs became fractious however records show that the dysfunctionality of both RABs were as much the responsibility of the local base and environmental commands and regulators as they were RAB members. Many members of the respective communities were unhappy with the disbanding of the RABs and the replacement CIPs. As such reference herein is discomforting. Community engagement at both sites has been dramatically curtailed and the benefit to the ongoing cleanup is debatable. Iron Mountain on the other hand is a private site on the NPL in Arizona. There is no military involvement. Nor are there any BRAC conditions on the Site. The analogy to the Hunters Point Shipyard therefore may be more tenuous than not and more likely close to a brownfield. As to public participation specifically, there is a community coalition playing a prominent role in providing feedback to the U.S. EPA, this model is not likely to be applicable to the greater Bayview Community owing to the wide diversity of opinion here.</p> | <p>The CIPs for Fort Ord and McClellan Air Force Base were reviewed as resources because they are both sites in California that are on the National Priorities List, and because these sites do not have a RAB. It is noted that the Navy's plan in this CIP is not a copy of any other outreach program, but was designed to meet the needs of the HPS community.</p> <p>The Iron King Mine CIP was provided by U.S. EPA as an example of a CIP with a format that is user-friendly and a model for other plans. There was no intention to draw a parallel between the cleanup programs at Iron King Mine and HPS.</p> <p>The text in the second sentence has been modified to remove any implication that the Iron King Mine site is in California.</p> |

|----------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.            | <b>Chapter 3</b> | Theme Two – Hold Regularly Scheduled Meetings. We question whether having the bi-monthly meetings without a commitment to the close coordination involved in a RAB or RAB like entity will result in a different outcome than was the case with the previous RAB. It seems more likely that without addressing the causes of the dysfunctionality experienced with the prior RAB the Navy process will be unsuccessful. We also wonder whether bi-monthly meetings are insufficient to keep up with the schedule presented in the CIP. | Although the CIP identifies bi-monthly meetings, the Navy is currently holding monthly or even twice monthly meetings to reach different segments of the community. The CIP has been revised to acknowledge that the Navy may hold meetings more frequently when appropriate. Various meeting formats are being used to foster more participation and engagement, including sending agendas ahead of time, having small break-out sessions for people to speak directly with the Navy and regulatory agencies, and holding meetings in various locations and on different days and times.                                                                                                                                                                                            |
| 14.            | <b>Chapter 4</b> | Chapter 4, The Navy's Cleanup Program at the Hunters Point Shipyard provides a useful and excellent summary of the Shipyard program, however: it is not relevant within the context of a description of a community involvement plan. The material presented in Chapter 4 should have been placed in an Appendix, and the space devoted to a greater explanation of the regulatory requirements of the Navy CIP.                                                                                                                       | The CIP was prepared using guidance from U.S. EPA's Superfund Community Involvement Handbook, and with collaboration from U.S. EPA.<br><br>Based on feedback gathered in the interviews, the community requested more general information about the Navy's cleanup program. Placing the site cleanup summary in the main text of the CIP provides the reader with the context for the community involvement activities described in the CIP.<br><br>Additional feedback gathered in the interviews indicated a need for more information about the roles and responsibilities of the regulatory agencies, along with the Navy and other entities involved in the cleanup. Information to address this concern has also been included in the main text of the document, in Chapter 5. |
| 15.            | <b>Chapter 4</b> | Ordinarily we would be very appreciative of such a well thought out and clear summary of the Navy's cleanup activities. We were particularly pleased to see the schedule of documents, however this is not a document focused on the cleanup itself but rather how the Navy will engage the public in cleanup decision making.                                                                                                                                                                                                         | The CIP was prepared using guidance from U.S. EPA's Superfund Community Involvement Handbook and with collaboration from U.S. EPA. It is a standard format for a CIP to present an overview of the installation and information about the status of the cleanup. Chapter 4 may educate readers who are not inclined to read more technical documents, and it also provides context for the types of cleanup projects about which they may review and submit comments.                                                                                                                                                                                                                                                                                                                |

Comments from:

**India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011**

| Comment Number | Section/<br>Page              | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.            | <b>Chapter 4,<br/>Page 23</b> | The historical presentation presented on Page 23 is also interesting although highly abbreviated and of questionable utility. It would have been more useful, if the Navy was of a mind to present a relevant history, it could have provided an overview of the evolution of public participation in cleanup decision making and the crafting of the Navy CIP process. These points would include a review of the public participation components of regulations including NEPA, the NCP, 1986 SARA, as well as a summary of the key point from the Federal Facilities Environmental Dialogue Committee report, a review of the Clinton/ Perry Executive Order on RABs and the Clinton Executive Order on Environmental Justice, the Bush Administration RAB rule and other related issues. | The CIP is not intended to be a primer about regulations and guidance pertaining to public involvement. This document is specific to HPS, and as such provides basic information about the shipyard, including a general timeline. Please see the response to comment number 3.                                                                                                                                                                                                                                                                                      |
| 17.            | <b>Chapter 4</b>              | As indicated above, we appreciate the presentation of the document schedule, however the table includes references <u>to informal and formal comment periods without defining the difference between the two</u> . This distinction is of the utmost importance and represents a significant failing in the goal of the CIP to inform the public. <u>The formal comment periods associated with the Proposed Plans are the only time during the CERCLA review process when the Administrative Record is open to public comment because an action is being contemplated. As such not providing a description of the difference and its import anywhere in this document represents a significant omission.</u>                                                                                | An introduction has been added to the table to explain the difference between the informal and formal comment periods. In addition, Appendix G has been revised to highlight in red the opportunities for required public comment on page G3 and G4 and in the CERCLA graphic on page G-5.<br><br>Please note that one distinction between the NCP requirements and the Department of Defense (DoD) Installation Restoration program is that the DoD provides significant additional opportunities for formal comment, which are added to the administrative record. |

## Appendix J: Responses to Comments on the Draft CIP (continued)

|----------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.            | <b>Chapter 5</b>  | <p>Chapter 5 Cleanup Roles and Responsibilities/ Responsibilities of the City and County of San Francisco fails to cite existing critical agreements between the City and the Navy;</p> <p>The City's capacity to accept Navy property for transfer is conditioned upon the meeting of the criteria agreed upon within the Conveyance Agreement of 2004. A clear City role in this process is determining whether Conveyance Agreement criteria have been met. This agreement is not cited.</p> <p>Proposition P is City policy and cited within the Conveyance Agreement, yet it is also not cited in the CIP. It is also the 9th criteria for cleanup established by the citizens of San Francisco in accordance with the National Contingency Plan which governs the Shipyard cleanup. While the 9th criterion of the NCP is a modifying criterion the Navy nevertheless must address conformance with Prop P when finalizing a cleanup plan.</p> | <p>The nine evaluation criteria listed in the NCP, 40 Code of Federal Regulations (CFR) 300.430(e)(9)(iii) are used to evaluate cleanup alternatives for a given site or project. Community acceptance is the ninth criterion and is gauged based on community comments provided on the Proposed Plan document. The Navy is required to provide the Proposed Plan and a minimum 30-day public comment period and address public comments in the Record of Decision. The Navy will continue to meet these requirements.</p> <p>The text in Chapter 5 has been modified to cite the 2004 conveyance agreement between the Navy and SFRA. The Navy will meet those conveyance agreements.</p> <p>However, Proposition P is not the guiding authority for the Navy's cleanup. Proposition P is a recommendation to the Navy to clean up to certain standards, but is not enforceable policy.</p> <p>In 2011, the SFRA issued new redevelopment plan. This document helps guides the Navy on the cleanup levels based on future reuse.</p> |
| 19.            | <b>Appendix C</b> | <p>This Appendix is somewhat confusing. On Page C2 the graphic pie chart caption states that the Navy team conducted 73 interviews and that these many of those interviewed had multiple affiliations which is why the list beginning on Page C3 had 151 affiliations listed. It is unclear however whether individuals with multiple affiliations are representative of the views of each of the organizations they belong to. As such the value of presenting the list is unclear. Is the list intended to show organizational interest or the potential for information resonance in the community? The use of the list is therefore troubling because the CIP does nothing to document either interest or resonance. This being the case it raises we believe a justifiable concern that the list merely serves to inflate the reach of the survey.</p>                                                                                          | <p>Individuals self-identified the organizations they belong to and were asked if the document could note that they were interviewed as a member of that organization before the organization's name was included in the document. Interviewees were not asked to state that they represent the views and opinions of any group in any formal manner. In addition, responses are kept separate from interviewees' names.</p> <p>The goal was to talk with a wide variety of individuals who have varied experiences, interests, and needs. The listing of organizations is an indication of the wide variety of people interviewed.</p>                                                                                                                                                                                                                                                                                                                                                                                               |

|----------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.            | <b>Appendix C</b> | <p>If affiliation was a driver in the selection of individuals surveyed we are curious about the selection of entities interviewed. Of the 151 affiliations listed, perhaps as many as 58% would appear to be organizationally disinterested in the details or issues associated with the Shipyard's cleanup. With no disrespect intended the interest of The National Rifle Association, the Good Samaritan Family Resource Center, and Friends of McClaren Park in the subject is unclear as is the interest of 84 other organizations of the 151 entities listed. Of the remaining 42% of organizations and entities it seems likely that no more than perhaps half have had any experience with the HPS cleanup. Including duplicated affiliations by different names (Arc Ecology and Community Window for example), 26% or just 40 entities might possess more than a cursory opinion about the cleanup sufficient to provide an informed view of the engagement process.</p> <p>While we recognize that such external views are very useful, we frankly question the balance because of its potential for view shopping. In the past, instances of view shopping lead the Navy to the mistaken notion that residents of Bayview Hunters Point would accept the lowest standard of cleanup if it would hasten the creation of jobs. This view was shown to be in error when 93% of the voting residents of the district voted for Proposition P.</p> | <p>As noted above, people self-identified the groups they belong to. Often, individuals were asked for an interview because of one or two of their affiliations, and then during the interview they identified additional affiliations they wished to have included on the list.</p> <p>The purpose of interviews was not just to talk to people who have already had experience with the HPS cleanup, but also to reach local community members and groups who may want information and were underserved in the past.</p> <p>The list of potential interviewees was reviewed by the regulatory agencies. According to the U.S. EPA Superfund Community Involvement Handbook, listed as a reference in Chapter 6, most CIPs rely on 15 to 25 interviews. The 2004 HPS CIP included 40 interviews, and this CIP includes 73 interviews. The interviews for this document represent a diverse sampling and an enormous effort. The Navy believes it far exceeded previous efforts on this base and other bases in which to form a richer more complete picture of the HPS community.</p> |
| 21.            | <b>Appendix D</b> | <p>Appendix D reinforces the concerns expressed in VII by clearly demonstrating why Bayview Hunters Point is an environmental justice community but never referring to it as such,</p> <p>1. Neither the phrase nor reference to the Executive Order on Environmental Justice appears in the text of the CIP; 2. The failure to include reference to EJ guidances calls into question whether the Navy intends to incorporate this concern into its deliberations over cleanup and public participation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>A description of environmental justice (EJ) has been added to the introduction.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Appendix J: Responses to Comments on the Draft CIP (continued)

| 22.            | <b>Appendix E</b> | This Appendix recounts the reasons why the RAB was discontinued. While it was the opinion of the author of this memo that the RAB Guidance gave the Navy sufficient authority to dissolve the HPS RAB, it was nevertheless difficult to observe so little self examination on the part of the Navy for its role in creating the situation.                                                                                                                                                                                                                                                                                                     | The Navy is focused on the current cleanup and creating an inclusive ongoing community involvement program moving forward.<br><br>The Navy continues to believe the arguments for dissolving the RAB are appropriately captured in the letter of December 23, 2011, in Appendix E.                                                                                                                                                                                                                                                                                                                        |
| 23.            | <b>Appendix E</b> | The issues of employment, mistrust, insulting and raucous behavior, and the inability of contractors and Navy personnel to complete entire presentations have been part and parcel of the culture of this body since it was created. Misbehavior was endemic to this RAB from the very beginning and frequently encouraged by Navy personnel and contractors. If the minutes of the HPS RAB beginning in 1994 were scrutinized against the criteria utilized for its dissolution in 2009, the RAB would have been disestablished in 1995. In truth, the RAB has only had brief periods of geniality breaking up its overall fractious history. | The Navy seeks to have a community involvement program moving forward that allows for the two-way exchange of information in a manner that is safe, welcoming, and inclusive of the diverse HPS community.<br><br>The Navy disagrees that misbehavior at RAB meetings was ever encouraged by Navy personnel or contractors. The Navy also believes that the level of discord and ineffectiveness of the RAB did vary from year to year; however, what is important is that the end-state of the RAB in the 2008/2009 time period was, despite Navy efforts, an ineffective community involvement vehicle. |
| 24.            | <b>Appendix E</b> | The reason for this situation was insufficient up front training of RAB members starting in 1994. It was unrealistic on the part of the Navy to presume that individuals residing in a community with long term socio economic, environmental and equality disadvantages to immediately give over their trust to an entity whose actions in 1974 helped drive the community into poverty.                                                                                                                                                                                                                                                      | The Navy disagrees with the assumptions listed in this comment regarding reasons that the RAB was ineffective. The Navy has never stated that a goal of the RAB is for community members to "give over their trust" to the Navy.                                                                                                                                                                                                                                                                                                                                                                          |

|----------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.            | <b>Appendix E</b> | Another contributing factor was that the Navy failed to take advantage of City-based efforts to assist the RAB's management. In 1995, the Hunters Point Shipyard Citizens Advisory Committee created its Environment and Reuse Subcommittee to address matters the Navy considered outside of the scope of the HPS RAB. These issues include questions regarding cleanup employment and contracting and non CERCLA environmental concerns. The Navy BEC at the time, Michael McClellan, and the Western Division Commander were informed that the Subcommittee was being created to in part take the pressure off the RAB by providing an alternative forum for these views. The Navy was invited to participate. Had the Navy partnered with the Subcommittee as was proposed, the RAB might not have been burdened by these questions over the past sixteen years. | The Navy disagrees with the idea that if it had invested more time in the CAC subcommittee that the RAB would have been more effective.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 26.            | <b>Appendix E</b> | It was also unrealistic for the Navy to assume that a community with long-term socio-economic, environmental and equality disadvantages would not see environmental remedial activity as a source of employment and be frustrated by the Navy's segmentation of its hiring, contracting and remedial activities. However valid the Navy's process from its own point of view, the Navy mission centered viewpoint was as destructive to the goals of that mission as counter insurgency methods were to our national campaigns prior to the Petraeus doctrine of engagement.                                                                                                                                                                                                                                                                                         | The Navy disagrees with the assumption stated in this comment.<br><br>Page 11 of the CIP indicates that during interviews jobs were identified as a primary concern for the community. The Navy will continue to provide information for obtaining jobs through the City's CityBuild Information Line. A handout has been prepared in multiple languages that describes the use of local vendors in the Navy's cleanup. Additionally, a vendor sign-up sheet is provided at each meeting in English, Chinese, and Spanish for any community member who wants to provide contact information. |

|----------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27.            | <b>Appendix E</b> | By viewing external sources of expertise as competitors or agent provocateurs rather than individuals lending their expertise to help the Navy through its cleanup effort, the Navy failed to build the necessary external technical support mechanism in the RAB that would have brought the non environmental professional members of the Board along when there was agreement on remedial strategies. The use of local academic technical expertise would have over the long term built a strong community/ Navy team working on mutual goals around the remedial program each gaining understanding and concessions from the other. | The Navy disagrees with the assumptions contained within this comment. The Navy has historically reached out to a number of individuals, not only to try to increase RAB membership, but also to provide more opportunities for involvement.                                                                                                                                                                                                                                                                                                     |
| 28.            | <b>Appendix E</b> | The lack of internal introspective analysis regarding the Navy's role in the failure of the RAB significantly undermines the credibility of the analysis presented in Appendix E.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The Navy disagrees with this statement. The Navy believes reasons articulated in the letter dated December 23, 2009, accurately reflect the Navy's decision to dissolve the RAB.<br><br>No further "internal introspective analysis" would have added value to this document.                                                                                                                                                                                                                                                                    |
| 29.            | <b>Appendix G</b> | Appendix G should have been Chapter 1 or 2 of the CIP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The format for this CIP is not uncommon and was developed in cooperation with U.S. EPA. Chapter 1 provides a reader-friendly introduction to the document, and Chapter 2 delves into the feedback received during interviews, which is the cornerstone for the plan outlined in Chapter 3.<br><br>Regulations can be confusing and the information can be overwhelming to the non-technical reader. General information has been provided, with references for those who wish to review the detailed guidance. See response to comment number 3. |

## Appendix J: Responses to Comments on the Draft CIP (continued)

| Comment Number | Section/<br>Page               | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                              |
|----------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.            | <b>Appendix G,<br/>Page G1</b> | <p>The statement appearing in the second paragraph of Appendix G:</p> <p>“Federal and state environmental statutes and amendments require community involvement for hazardous waste sites...”</p> <p>should have been the first paragraph of a chapter devoted to explaining these requirements. Such a chapter should appear as either the 1st or 2nd chapter of the CIP to provide the reader with a context for the requirements and expectations of Congress and successive federal and state administrations for the conduct of public engagement activities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Please see response to comment number 29.                                                                                                                                                                                                             |
| 31.            | <b>Appendix G</b>              | <p>The first paragraph of Appendix G should have been the second paragraph of the chapter described above in VII.1</p> <p><i>“The Department of the Navy’s Installation Restoration Program is conducted in accordance with federal and state requirements, and its purpose is twofold---(1) to identify, investigate, and clean up or control the releases of hazardous substances and (2) to reduce the risk to human health and the environment. The Navy is the lead federal agency for the Installation Restoration Program at Hunters Point Shipyard (HPS). The figure on Page G---2 presents the major phases of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) process.”</i> Appendix G, Page G1</p> <p>To this the Navy should add: CERCLA includes guidance with regard to the provision of public involvement activities found in 42 USC, Section 9601 and following; The Navy could then present a summary of the relevant CERCLA and SARA provisions or cite that the relevant sections of those laws are presented in a new Appendix G.</p> | The format for this CIP is not uncommon and was developed in cooperation with U.S. EPA. A thorough explanation of regulations is provided in Appendix G, and an additional chapter specific to regulations is not deemed necessary for this document. |

## Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

**India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011**

| Comment Number | Section/ Page                              | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Response                                                                                                                                                                                                                        |
|----------------|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.            | <b>Appendix G</b>                          | <p>Although the CIP provides Appendix G which contains a good overview of the regulations governing public participation, this section is not cited elsewhere in the document and the relevant sections of the regs are not quoted.</p> <p>The Navy goes into significant detail about matters regarding the cleanup that are not specific to the issue of public participation (these issues such as those presented in Chapter 4) however it fails to provide equal description to matters of specific relevance to the CIP and public participation such as providing the public participation requirements in each regulation, guidance and other directives in whole or summarized anywhere in the document;</p> | A more thorough description of Appendix G has been added to Chapter 1. Please see response to comment number 3.                                                                                                                 |
| 33.            | <b>Appendix G</b>                          | This comment corresponds with and expands upon Comment [32]. The Navy has couched the CIP in such a ways as to de-emphasize its regulatory requirement to conduct a community involvement process. This clear trend within the document is worrisome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The Navy disagrees that the CIP in any way deemphasizes regulatory requirements to conduct community involvement. In fact, the Navy is proposing a program that far exceeds any minimum requirements for community involvement. |
| 34.            | <b>General observation/ recommendation</b> | While there are genuinely many useful concepts in the CIP, the document is undermined by its unstated but obvious antipathy to the full acknowledgement of the requirements of regulation and guidance. The document would be far richer, more informative, and useful if the rules and guidances were fully presented and discussed.                                                                                                                                                                                                                                                                                                                                                                                 | Please see response to comment number 16.                                                                                                                                                                                       |
| 35.            | <b>General observation/ recommendation</b> | The Navy should acknowledge its own role in the dysfunctionality of the RAB. We refer the Navy to the comments provided on Appendix E [above].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The Navy disagrees with the accuracy and relevance of this comment. Furthermore, the CIP is not meant to focus on the past but to provide a path forward for the future.                                                        |

## Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

**India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011**

| Comment Number | Section/<br>Page                               | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Response                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------|------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 36.            | <b>General observation/<br/>recommendation</b> | The Navy should reconsider creating a new RAB. RABs can play important and useful roles if utilized well and organized appropriately. Particular care must be given to balancing community representation with technical expertise from non military academic and environmental sources because doing so will ultimately serve to educate the full membership of the Board and help it make better recommendations in a more professional collegial environment. | Navy acknowledges that RABs on most Base Realignment and Closure (BRAC) bases do play important and useful roles. However the circumstances described in this comment capture an ideal situation that did not exist at HPS.<br><br>Although a RAB or other advisory board is not currently part of the planned community involvement activities, as noted in Appendix E, the need for a RAB will be assessed at least every 2 years, as required. |

# FACT SHEET

## Hunters Point Naval Shipyard

### Summary of the Proposed Plan for Parcels E and UC-3

February 2013

This fact sheet provides a summary of the Proposed Plan for Parcels E and UC-3 on the Hunters Point Naval Shipyard (HPNS), included in this mailing. The Proposed Plan and other information on Parcels E and UC-3 may be viewed on the Internet by visiting the Navy's website at [www.bracpmo.navy.mil](http://www.bracpmo.navy.mil) (detailed instructions on Page 4).

#### How to comment on the Proposed Plan

The Navy is requesting public comment on the Proposed Plan in writing, addressed to Keith Forman, no later than March 15, 2013 (contact information on Page 4). Comments can also be submitted in person at a 6:00 pm public meeting on February 28, 2013, in the Alex L. Pitcher, Jr. Conference Room at the Southeast Community Facility Commission, located at 1800 Oakdale Avenue in San Francisco, California.

#### Hunters Point Naval Shipyard History

HPNS is located in the southeastern portion of the City of San Francisco and is adjacent to San Francisco Bay. Though HPNS is now closed, when active, it had many uses, including as a commercial dry dock from 1869 until it was purchased by the United States Navy in 1939. From 1945 until 1974, HPNS was used for shipbuilding, repair, and maintenance of Naval ships. It was also the site of the Naval Radiological Defense Laboratory (NRDL), which operated from 1948 through 1969. The former Shipyard was closed in 1974 and remained vacant until 1976, when Triple A Machine Shop, Inc. (Triple A) began a lease of the property that continued until 1986. In the years since Triple A left the former Shipyard, several buildings have been leased by artists and others. Since 1991, the Navy has conducted hundreds of studies, excavations, and groundwater treatment actions in an effort to clean up the Shipyard. This fact sheet focuses on the proposed remedy of two parts of the Shipyard, known as Parcel E and Parcel UC-3 (Figure 1).

#### History of Parcel E

Parcel E is a 128-acre area in the southwestern portion of HPNS and includes a former industrial support area, consisting of supply and public works facilities. Parcel E also includes shoreline areas historically used to store and dispose of industrial waste and construction debris.

NRDL used several Parcel E buildings during the 1950s and 1960s for radiological testing. While leasing the property, Triple A allegedly disposed of hazardous wastes at various locations at HPNS, including the possible transport of waste oil within Parcel E using below-ground fuel and steam lines. Since 1984, the Navy has performed many environmental investigations at Parcel E and has collected thousands of soil and groundwater samples to identify where cleanup needs to occur. In addition, the Navy has performed several early cleanup actions to minimize potential exposure to hazardous chemicals. Although there was no immediate risk to the public, the Navy decided to take early action to address areas on Parcel E that contained the most considerable contamination.

#### History of Parcel UC-3

Parcel UC-3 was formerly part of Parcel E; however, it is now designated as a separate parcel for the proposed remedy selection. Parcel UC-3 is made up of 11 acres in the western portion of HPNS, directly north of Parcel E. It includes Crisp Avenue and a railroad right-of-way, which were used to transport materials and equipment to and from the former Shipyard. The railroad right-of-way is about 30 feet wide and extends about 3,200 feet west from the end of Crisp Avenue (near the intersection of Palou Avenue and Griffith Street). The chemical contamination at Parcel UC-3 likely resulted from miscellaneous spills while the Navy operated and maintained the railroad.

Figure 1: Location of Parcels E and UC-3

## Contaminants on Parcels E and UC-3

The chemicals found in soil and groundwater at Parcel E include metals (such as lead and zinc), chlorinated solvents, pesticides, polychlorinated biphenyls (PCBs), and petroleum-related compounds. In addition, radioactive chemicals were found in soil at several locations in Parcel E, but radioactive chemicals were not found in groundwater at levels that could impact people or wildlife in San Francisco Bay.

The chemicals found in soil and groundwater at Parcel UC-3 include metals (such as copper and lead), chlorinated solvents, and petroleum-related compounds.

## Site Risks

"Risk" is the likelihood or probability that a hazardous chemical, when released to the environment, will cause effects (such as cancer or other illnesses) on exposed humans or wildlife. The Navy evaluated the risk to humans and wildlife from exposure to contaminated soil, shoreline sediment, and groundwater. Results from tests in Parcels E and UC-3 determined that there may be some risk if people are directly exposed to contaminated soil, shoreline sediment, or groundwater. The Navy's proposed remedy for these areas will create permanent results that will protect people and the environment. The Navy's proposal allows the property to be developed by the City of San Francisco for multiple uses, including residential, industrial, and recreational (open space).

## Proposed Remedy for Parcels E and UC-3

The Proposed Plan for Parcels E and UC-3 outlines several cleanup remedies. The Navy, in consultation with EPA, California Department of Toxic Substances Control, and the San Francisco Bay Regional Water Quality Control Board, evaluated the remedies using criteria specified by federal regulations. Community acceptance will also be evaluated based on comments received from the public during the comment period for this Proposed Plan. The Navy has carefully studied Parcels E and UC-3 and believes the proposed remedy provides the best way to protect public health and the environment. The proposed remedy for Parcel E is shown on Figures 2 and 3, and the proposed remedy for Parcel UC-3 is

Figure 2: Parcel E Proposed Remedy for Soil

Figure 3: Parcel E Proposed Remedy for Groundwater

Figure 4: Parcel UC-3 Proposed Remedy for Soil and Groundwater

\*Areas with groundwater contamination are identified as groundwater plumes.

shown on Figure 4. The proposed remedy for Parcel UC-3 includes only a few of the components of the proposed remedy for Parcel E, as noted below.

### **Soil and Shoreline Sediment**

- Remove and dispose of contaminated soil in selected areas of Parcels E and UC-3
- Clean and close buried steam and fuel lines
- Install soil and asphalt covers as appropriate across all of Parcel E and parts of Parcel UC-3
- Place rock and sand on Parcel E's shoreline and slopes to prevent erosion
- Install a system (in Building 406) to remove and treat contaminated soil gas and vapors
- Use technologies to remove or treat the oil source at the Former Oily Waste Ponds
- Monitor to ensure that chemicals in soil gas are not present at concentrations greater than those considered safe for humans

### **Groundwater**

- Install groundwater treatment systems in selected areas of Parcels E and UC-3
- Install below-ground barriers and protective liners to limit groundwater access to the bay
- Perform long-term monitoring to track the cleanup progress in both Parcels E and UC-3

### **Residual Radiological Contamination**

- Scan the entire area for radioactivity
- Remove and dispose of residual radiologically contaminated soil
- Install a soil cover to limit future exposure to contaminated soil

The proposed remedy will protect human health and the environment. When the Navy designs the remedy, the design will also take into account future sea-level rise, extreme weather conditions, and earthquakes.

## **Maintaining Parcels E and UC-3 after Cleanup Actions**

After performing the actions described above, regular inspections will be performed to make sure the cleanup actions are working properly. Maintenance activities and Institutional Controls (ICs) will ensure that the public and the environment are protected from any possible exposure to contamination.

## **Estimated Cost**

The combined estimated cost of the proposed remedy at Parcels E and UC-3 is \$105.5 million.

## **Community Involvement**

### **Public Comment Period**

The Proposed Plan for Parcels E and UC-3 was released to the public on February 12, 2013. You are invited to comment on the Proposed Plan for Parcels E and UC-3 at a Public Meeting on February 28, 2013, at the Southeast Community Facility Commission Building in the Alex L. Pitcher, Jr. Room, located at 1800 Oakdale Avenue, San Francisco, California. Written comments will also be accepted no later than March 15, 2013. Comments should be addressed to Keith Forman, as listed on Page 4 of this fact sheet.

To comply with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Navy considers all comments before selecting a final remedy (see Figure 5). Once the final decision is made, the chosen remedy must be approved by federal and state regulatory agencies, after which it will be described in a document called a Record of Decision (ROD). The ROD will include a summary of comments received and the Navy's responses, including how the comment may have influenced aspects of the final decision.

Figure 5: Parcels E and UC-3 CERCLA Process

## How to comment on the Proposed Plan for Parcels E and UC-3

**1. Provide written comments no later than March 15, 2013 by one of the following methods:**

**Email:** keith.s.forman@navy.mil

**Fax:** (619) 532-0995

**Mail: Keith Forman**

Base Environmental Coordinator

Navy Base Realignment and Closure

1455 Frazee Road, Suite 900

San Diego, CA 92108-4310

**2. Attend the public meeting and provide verbal or written comments:**

February 28, 2013

6:00 p.m. to 8:00 p.m.

Southeast Community Facility Commission Building

Alex L. Pitcher, Jr. Room

1800 Oakdale Avenue

San Francisco, California

### For general information on Hunters Point Naval Shipyard, contact:

**Matt Robinson**

Community Involvement Manager

HPNS Community Outreach

P.O. Box 885474

San Francisco, CA 94188-5474

Office Telephone: (415) 295-4645

HPNS Information Line: (415) 295-4742

Email: info@sfhpnns.com

### Where can I get more information about the Parcels E and UC-3 cleanup at Hunters Point Naval Shipyard?

Navy documents and reference materials about Hunters Point Naval Shipyard are available to the public at the City of San Francisco Main Library and the Hunters Point Naval Shipyard Site Trailer. The downtown San Francisco library contains a nearly complete record of all documents related to the investigation and cleanup actions under way at Hunters Point Naval Shipyard. Information is also available on the Navy's Hunters Point Naval Shipyard website: [www.bracpmo.navy.mil](http://www.bracpmo.navy.mil).

Click "Prior BRAC" at the bottom of the page, click on "Prior BRAC Installations" drop-down menu and select "Former NSY Hunters Point," and then click on "View/Hide All Documents" and select "Parcels E and UC-3".

### Information is also available at:

**City of San Francisco Main Library**

100 Larkin Street, 5th Floor

Government Information Ctr.

San Francisco, CA 94102

(415) 557-4400

**Hunters Point Naval Shipyard Site Trailer**

(near HPNS security entrance)

690 Hudson Avenue

San Francisco, CA 94124

**Hours of Operation:**

Monday: 10:00 a.m. to 6:00 p.m.

Tuesday through Thursday: 9:00 a.m. to 8:00 p.m.

Friday: 12:00 p.m. to 6:00 p.m.

Saturday: 10:00 a.m. to 6:00 p.m.

Sunday: 12:00 p.m. to 5:00 p.m.

**Hours of Operation:**

Monday - Friday: 8:00 a.m. to 5:00 p.m.

*While the Main Library contains a nearly complete record of all documents related to cleanup at HPNS, the site trailer has a more limited set of current documents.*

The complete Administrative Record for Hunters Point Naval Shipyard is maintained at the Naval Facilities Engineering Command (NAVFAC) offices in San Diego, California. Because of the volume of documents required for the Administrative Record, all documents may not be in the local Information Repository.

**Administrative Record  
Naval Facilities Engineering Command**

c/o Diane Silva

Code EVR-FISC Bldg. 1, 3rd Floor

NAVFAC Southwest

Phone: (619) 532-3676 / Fax: (619) 532-3546

Email: [diane.silva@navy.mil](mailto:diane.silva@navy.mil)

Administrative hours are 8:00 a.m. to 5:00 p.m. Monday through Friday. Documents may not be removed from the facility; however, they may be photocopied. An appointment is required. A copy of the complete Administrative Record index and documents are available at the Information Repository located at the San Francisco Main Public Library.

---oOo---

1       SAN FRANCISCO, CALIFORNIA, THURSDAY, FEBRUARY 28, 2013

2                               6:18 P.M.

3                               ---oOo---

4               MR. MATT ROBINSON:   Good evening.   We're about

5       to get started this evening.   Take your seats, get the

6       meeting underway.

7               All right.   Thank you very much.   If you

8       haven't yet, please sign in the back and grab some of

9       the handouts that we have for you.

10              I'd like to thank you for attending tonight's

11      meeting on the plan -- Proposed Plan for Parcel E and

12      UC-3 at the Hunters Point Naval Shipyard.

13              Now, before we can get started, the Navy would

14      like to take a moment, if we could, to express our

15      condolences to Mrs. Espanola Jackson and her family over

16      the recent loss of the death of her daughter.

17              Mrs. Jackson, the Navy and its staff would like

18      to offer their condolences to you and your family at

19      this time.

20              ESPANOLA JACKSON:   Dr. Espanola Jackson.

21              MR. ROBINSON:   So sorry.   I'm sorry, ma'am.

22              Dr. Jackson and her family.

23              DR. JACKSON:   Thank you.

24              MR. ROBINSON:   Thank you.

25              DR. JACKSON:   I accept.

1 MR. ROBINSON: Okay.

2 So tonight, folks, this is a very formal  
3 meeting, unlike our previous ones with our community  
4 meetings. We have a court reporter tonight that will be  
5 present, and everything you say will be transcribed as  
6 part of the Record of Decision for tonight's meeting.

7 We also, if we can, want to introduce really  
8 quickly for you some of the regulators who are working  
9 with the Navy as -- on this project. I would like to  
10 introduce first Craig Cooper from the U.S. EPA and Ryan  
11 Miya from the Department of Toxic Substances Control and  
12 Tina Low from the State Water Board.

13 Now, the purpose of tonight's meeting, as I  
14 said, is to go over the Proposed Plan for Parcel E and  
15 C -- UC-3. We also are going to accept public comments  
16 on this proposal.

17 Now, the Navy -- go over to tonight's agenda.  
18 Tonight we will be hearing from Keith Forman talking  
19 about the parcel plan, the Proposed Plan. After his  
20 presentation, we will take a break, and then we will  
21 have the regulators that I just introduced come up and  
22 give their perspectives on this Proposed Plan.

23 Then afterwards we will be answering clarifying  
24 questions to the presentation. This will be the only  
25 time that the Navy will be able to respond, and it will

1 be to your questions about the presentation that  
2 Mr. Forman will be giving tonight.

3 After we have the clarifying questions, then we  
4 will also have the -- all of you can come up and give  
5 public comment on the Proposed Plan.

6 As -- I want to go over a couple of issues.  
7 For the clarifying questions, the Navy will be only able  
8 to respond tonight to those questions; and for this  
9 portion, we ask that everyone will line up at the  
10 microphone and limit to yourself to one question at a  
11 time. We want to make sure everybody has a chance to  
12 ask a question.

13 After everyone has had a chance to ask a  
14 question, then you will be able to come up for a second  
15 question if you'd like.

16 After the question period ends, we're going to  
17 hold this for about 15 minutes, and then we will go into  
18 our formal comment portion.

19 The introduction for the formal comment  
20 portion, this format the Navy will not be able to  
21 respond. We will just take your questions from --  
22 through our court reporter. If you don't have any  
23 questions at the time, you will also be able to write  
24 down your questions and submit them at a later date.

25 Now, when we have this portion, please, again,

1 line up at the microphone and limit to yourself to your  
2 statement to three minutes. At -- During this time, I  
3 will give you then a two-minute and a one-minute warning  
4 and then 30 seconds.

5 And then after you have asked your questions,  
6 we ask that you have a seat and let everyone who wants  
7 to ask a question be able to ask a question. After that  
8 has been done, you will be able to come up again and ask  
9 a second question.

10 Our general meeting format rules, of course, we  
11 also would like you to respect each other, and please  
12 hold your questions till the end of the presentation.  
13 We will ask that you speak one at a time so our court  
14 reporter can get what you are saying.

15 And then there will be time for everyone to  
16 make comments, either spoken or written. Of course,  
17 like I said, there will be a three-minute time limit  
18 during your first round of questions. And then the  
19 speaker, like I said, will be able to ask a second  
20 question afterwards.

21 And also, we have handouts back there, as I  
22 said before. Please grab a handful, help you follow  
23 what's going on as well as give you some light reading  
24 for tonight.

25 So what are we going to talk about tonight?

1 Sorry. The outline for tonight, basically we are going  
2 to discuss the location and history of both parcels.

3 And then we'll also discuss the early cleanup  
4 actions that the Navy has performed to this point and  
5 how the Navy has worked with the regulatory agencies to  
6 develop and evaluate different options, options that  
7 we're calling the remedial alternatives as part of the  
8 cleanup effort.

9 We will also conclude by describing the  
10 preferred alternatives which are proposed to be the  
11 final set of cleanup actions for Parcel E and UC-3.

12 After the presentation, there will be a time to  
13 ask questions, as I've said before, to clarify what you  
14 don't understand and also to ho- -- ask that you hold  
15 your questions till the end.

16 Now I'm going to turn it over to Keith Forman  
17 who will be giving you his presentation on this Proposed  
18 Plan.

19 PRESENTATION

20 BY KEITH FORMAN:

21 All right. Good evening, everybody. Thank you  
22 for coming tonight. We have got a lot to go over.

23 This -- this area, Parcel E and Parcel Utility  
24 Corridor 3, comprise a large part of -- of the base,  
25 Parcel E being 128 acres and Utility Corridor 3 being

1 about 11.

2 Thanks. Okay.

3 I'm going to be just referring to make sure --  
4 I want to make sure that I tackle this right going over  
5 some of these pages.

6 Okay. So Utility Cor- -- oops. Excuse me.

7 Utility Corridor 3 is here [indicating] and  
8 extends out from Crisp Road, if you know the base, out  
9 to about Carrolls [sic] Avenue and Ingalls.

10 And then this is Parcel E [indicating], major  
11 portion of the base here. And there's a lot that went  
12 on in the history of this portion of the base; and we'll  
13 talk a little bit about that today.

14 Okay. Let's start off with the history of  
15 Parcel E. Parcel E was used as an industrial support  
16 area. There was a lot that went on here from the late  
17 1940s until the base closed in 1974.

18 There's one building in particular,  
19 Building 406, which was a warehouse. That's a special  
20 site in Parcel E that we need to tackle using a  
21 different kind of technology, and we'll go into that  
22 tonight.

23 There -- The contamination there is in two  
24 places. It's deep under the building in the groundwater  
25 in a very limited area but it's there in the

1 groundwater. And also there's some chemicals that are  
2 in the soil column between the bottom of the groundwater  
3 and the surface.

4           There's also a very special site called the  
5 former oily waste ponds. This is where the Navy used to  
6 intentionally pump its old bilge fuels off of the ships  
7 into giant ponds, and then they would use chemicals to  
8 reclaim the fuel and reuse it in the fleet.

9           This was the Na- -- The Navy started this sort  
10 of recycling practice back in the 1940s. They were a  
11 little ahead of their time at that point. But the end  
12 result was that there are oily waste ponds left there  
13 that have contaminants that are perched on the shoreline  
14 that the Navy must address.

15           And then there's some shorelines themselves  
16 where construction and industrial debris were disposed.  
17 And as I'll show you in a few slides, we'd already taken  
18 some actions on those. But this area was composed of  
19 fill and fill material. And in addition to that, during  
20 Navy activities, this was a site where much debris was  
21 disposed of.

22           And then last, but not least, there were  
23 buildings here used, a quite a number of them, by the  
24 Naval Radiological Defense Laboratory. And the special  
25 thing about this command, this was a tenant command to

1 the shipyard.

2 As many of you know, the main mission of the  
3 shipyard was to repair and maintain the pacific fleet  
4 ships. That was its main mission.

5 But it did a have small command that o- -- that  
6 operated from 1948 to 1969 that dealt with radioisotopes  
7 on the base and various aspects of those, including  
8 research and development and things like that. There's  
9 definitely buildings that were used by this command; and  
10 because of that, the Navy has to address -- address  
11 that.

12 Utility Corridor 3. Again, this is Crisp  
13 Avenue, Crisp Avenue [indicating] heading off of the  
14 base towards Palou, and then the remainder of this  
15 corridor, which is about 30 feet wide and about  
16 3200 feet long, and it's where the railroad used to go.

17 It was the Navy's -- The federal property was  
18 to support the Navy's clearances to operate a railroad,  
19 which they did, and you can still to this day see the  
20 railroad tracks coming down through here.

21 That property, along with the rest of the base,  
22 ultimately will be transferred to the City of San  
23 Francisco. In order to do that, of course, we have to  
24 look at the parcel, gather samples; and where there's  
25 contamination that needs cleanup or any other solutions,

1 the Navy has to do that before it can transfer this  
2 section [indicating] of the base or any section of the  
3 base over to the City of San Francisco.

4 So this parcel -- we call it UC-3, Utility  
5 Corridor 3 -- consists of Crisp Road and, again, the  
6 railroad right-of-way. And there is chemical  
7 contamination that likely resulted from the railroad  
8 operations, and that's to be expected.

9 One of the tools we use -- When we're  
10 determining the sites and where to go down and sample  
11 groundwater and where to take soil samples and where to  
12 do our investigations to get all this data to determine  
13 how to clean up and where to clean up, one of the tools  
14 we use are aerial photographs.

15 And this aerial photograph here I -- I've  
16 included this in the presentation from 1969 because it  
17 gives you a great snapshot of some of the activities  
18 that were going on in the parcel. Again, this  
19 [indicating] is Parcel E, big parcel; and this  
20 [indicating] is Crisp Road, Utility Corridor 3. It  
21 hangs out about 3200 feet. We call it pigtail of the  
22 base.

23 So Building 406 that I talked about that used  
24 to be a warehouse, it had chlorinated solvents. That's  
25 a fancy term for just a bunch of chemicals that are --

1     that have carbon and organic compounds were stored  
2     there.

3             And when over the years you have a warehouse  
4     that stores chemicals in drums, what happens over the  
5     years? Eventually there are some spills, and indeed  
6     that's what happened here in this warehouse. And we've  
7     been able to document where the spills are, and now  
8     we're going to tell you tonight what the Navy's proposal  
9     is to clean up those spills.

10            And then we have buildings formerly used by  
11     this Navy Radiological Defense Laboratory in this area  
12     [indicating] of the base and over in this area  
13     [indicating] of the base. They also operated in general  
14     areas here and here [indicating].

15            In addition to that, the oily waste ponds I  
16     talked about where the Navy tried to reclaim fuel oil,  
17     those operations were done here [indicating].

18            And then we completed a number of years ago --  
19     you may know -- you may remember this. I gave a  
20     presentation a number of years ago with Laurie Lowman  
21     from the Navy's RASO office.

22            This was the radium dial disposal area, and  
23     this is where a lot of these low-level radiological  
24     markers and night lights that used radium paint and deck  
25     markers on ships that used radium paint and dials in

1 cockpits of aircraft and on bridges of ships, they were  
2 all dumped in this area. And the Navy did major  
3 excavation and did an inventory of everything they  
4 found. There were -- Over 3200 commodities were  
5 removed during that dig.

6 Then in addition to that, there's quite a  
7 spider web of steam lines and fuel lines, sewer lines,  
8 and storm drain lines throughout the parcel; and that's  
9 part of the cleanup operation that I'll talk about.

10 So before we get to tonight, it's only fair  
11 that we go back a little ways and say that the Navy's  
12 already done a lot of cleanup on Parcel E and on UC-3,  
13 Utility Corridor 3. And I just wanted to go over and  
14 give the Navy a little credit for some of the cleanup  
15 that's already been done.

16 All this cleanup contributes to the overall  
17 proposed cleanup options or solutions that we want to  
18 talk to you tonight about.

19 So here are some of the numbers that I just  
20 wanted to show you here. We have removed and screened  
21 over 60,000 cubic yards of soil debris with potential  
22 radiological contamination from the two shoreline  
23 areas. So we have completed that.

24 Where we did find radiological contamination I  
25 can tell you; and if you've listened to me before, it's

1 at extremely low levels. But we have extremely  
2 stringent cleanup standards on Hunters Point Shipyard,  
3 and it still had to be dug out and carted off.

4 We have also installed a protective liner on  
5 the former oily waste ponds that I talked about; and we  
6 put in a barrier, a 900-foot-long barrier, of corrugated  
7 steel around the outer perimeter to separate the oily  
8 waste ponds from San Francisco Bay. I believe we did  
9 that in 1997.

10 In addition to that, we have removed and  
11 cleaned up 8 underground storage tanks that contained  
12 chemicals and fuel and 12 aboveground storage tanks that  
13 did as well.

14 And then we did major removal and cleanup of  
15 rad contamination throughout Parcel E and completely  
16 throughout Utility Corridor 3.

17 But despite all of the efforts that the Navy  
18 did, we still have a lot more to do. So I just want you  
19 to take in mind this: Sometimes people -- it's easy to  
20 forget everything that the Navy's done in about the last  
21 near, oh, about 20 years now of cleanup, investigations  
22 and cleanup, on Parcel E and UC-3. We've done quite a  
23 bit. We just have a lot more to do.

24 Okay. So to date, what have we done on the  
25 radiological cleanup? This is Site 2, this large area

1 [indicating]. We haven't really tackled much of this  
2 yet other than we did a major dig in this area  
3 [indicating]; and that was as we've shown you earlier  
4 presentations on maps labeled the "radium dial disposal  
5 area."

6 We have also done a cleanup here [indicating].  
7 That was a metal debris reef that had a lot of metal  
8 pushed off onto the shoreline. It had some radium dials  
9 that we found there too that were actually part of  
10 molten metal that was there that was left on the  
11 shoreline. And that molten metal, it was basically  
12 extra metal from the shipyard's foundry.

13 When they would actually create metal parts for  
14 ships, they would actually pour molten metal into molds  
15 and create parts when they needed to when they couldn't  
16 order them from the supply system. And they did this  
17 often. And over the years, you have spill and extra  
18 metal, and this extra metal is basically scrap; and they  
19 put it in this area.

20 The Navy has cleaned up this area, and when we  
21 can on our bus tours we always come by here because it's  
22 a nice beautiful sandy beach now that's been restored by  
23 the Navy, and we did that about now seven years ago.

24 Okay. And there's also buildings and a --  
25 large areas that the Navy's investigating and cleaning

1 up. This [indicating] is called the triangle area for  
2 obvious reasons here.

3 The Navy Radiological Defense Laboratory did a  
4 lot of research in this area, and this is also where  
5 some of the animal pens were when they did research with  
6 animals and things. So we did very, very thorough  
7 sampling and presented the data to the regulators and  
8 have since then identified where the low-level  
9 radioactivity is, and we have dug it up and removed it.

10 We went into buildings here also and basically  
11 inspected them, took samples, located if there was any  
12 contamination. And there -- if there was any  
13 contamination, we removed it. And we are, I'd like to  
14 say, about 80 percent done with all of our low-level  
15 radiological removals that we need to do on this  
16 parcel.

17 In addition to this, just like every other  
18 parcel at Hunters Point, if there were sanitary sewer  
19 lines or storm drain lines that carried the storm water  
20 from rains, we have investigated them; and by  
21 investigating them, we've had to dig them out and remove  
22 them.

23 So the Navy is leaving this base without  
24 permanent storm drains and sewer lines anymore because  
25 we investigated them; and to do that, we had to dig in

1 and remove them -- very expensive process -- in order to  
2 test them to see if there was any rad there.

3 If there was rad there, it's appropriately  
4 disposed of off of the base. But even if there isn't  
5 rad there in many cases, we've -- we had to test it and  
6 dispose of it for other reasons, for other metals and  
7 such that were in the soil.

8 I'd like to just remind you of where we're at.  
9 We're at the Proposed Plan stage. The Proposed Plan  
10 stage when the federal law was written was one of the  
11 most important steps in the process, and that's because  
12 this is the principal time that the public can comment  
13 on the Navy's proposed cleanup options that we're  
14 talking to you tonight about.

15 How do you do this? You can read the handouts  
16 that were at the back table. You can also go to our Web  
17 site and read the Proposed Plan, or you can just listen  
18 to me and read the Fact Sheet about the Proposed Plan.  
19 But in any event, tonight is your night to come to the  
20 microphone and to make your official comments.

21 And these comments become part of the official  
22 record with Christine here. That's why it's important  
23 when you do so is to speak clearly, state your name so  
24 that she can identify you in your comment and so that  
25 your comment can be recorded for all time in the

1 records.

2 Also, when you do that, that puts an obligation  
3 on the Navy because the Navy must respond to all of  
4 those comments. And when we do respond to all of them,  
5 we put them in the Record of Decision, which is the next  
6 step in the process.

7 But right now we are in the middle of the  
8 comment period here, and this public meeting is  
9 virtually in the middle of this comment period.

10 Okay. So let's now go to some of the remedial  
11 cleanup alternatives. Fancy words again. To remediate  
12 is just to take care of something, right? But let's  
13 just call this cleanup options for tonight.

14 There's various choices, various alternatives,  
15 that environmental cleanup professionals have when they  
16 tackle a site. So what we have done in our Proposed  
17 Plan that you'll see, there's different areas on these  
18 two parcels where we laid out what the options are, and  
19 I'm about to go over these options with you.

20 And then the Navy selected what they think is  
21 the best option. And that's what you can comment on  
22 tonight, and that's what you can talk to the regulators  
23 about as well.

24 And again, this is a Proposed Plan. We don't  
25 actually get to the decision process until the next step

1 in the Record of Decision.

2 Okay. So the Navy has these cleanup options,  
3 and they involve different kinds of things to clean up.  
4 In this parcel, it's going to be regular soil, which of  
5 course is what the base, the land part of the base, is  
6 made of, and then soil along the shoreline, sand and  
7 such like that. We call that sediment, but really it's  
8 the kind of stuff that you're used to seeing on  
9 shorelines.

10 And then there's groundwater. Groundwater is  
11 not something you see. It's below the surface of the  
12 land. And it's across the base at varying depths.  
13 Anywhere from about 5 feet to 15 feet or so you'll find  
14 groundwater.

15 Much of this base, as you know, was created by  
16 the Navy as it expanded the base out into the bay over  
17 the decades. So much of it is fill material, and that  
18 greatly influences what we are seeing in the  
19 groundwater, where it flows and how it flows and so  
20 forth.

21 But we do have some problems in the  
22 groundwater, and the Navy is going to tell you tonight  
23 what we propose to do about it.

24 Then there's this special case, oily waste  
25 ponds that I showed you, where the Navy used to recycle

1     their fuel oil for ships and try and use it again and  
2     mix it up. And that was basically -- that is also known  
3     as Site 3, for those of you who have studied the base.  
4     And we have a whole set of choices there that we are  
5     going to go over.

6             And then again the radiological contamination  
7     at Parcel E. We're going to talk to you -- much of it  
8     is done, that's true, but the Navy's still required to  
9     go through the options and present to you and to the  
10    regulators what we feel is the best option to go  
11    forward.

12            Okay. So the Navy doesn't do any of this in a  
13    vacuum. We work very closely with a lot of different  
14    regulators, including the United States EPA and  
15    California's version of EPA, and their branch that we  
16    most deal with is DTSC. Dr. Ryan Miya is here tonight  
17    for Cal/EPA DTSC, and Tina Low is here for the Water  
18    Board.

19            And again, we deal a lot with San Francisco Bay  
20    and the shoreline, and we deal a lot with groundwater.  
21    And the Water Board, of course, is the guardians of San  
22    Francisco Bay and are the water -- both groundwater and  
23    surface water experts.

24            Okay. And when we go through some of these  
25    alternatives, I really want to spend most of my time on

1     what the Navy thought was the best alternative and not  
2     just go through all of them. But again, these were  
3     evaluated from a range from not taking any more action  
4     at all or any action at all to extensive cleanup  
5     action.

6             So as in anything when you're looking at  
7     choices you make in your own life on anything, there's a  
8     spectrum of things you do. There -- and there's -- and  
9     this -- this range of options is what -- is what you'll  
10    see.

11            Okay. So let's look at some choices for the  
12    soil and the shoreline sediment. Again, we have to  
13    evaluate. When you see this, don't be alarmed by seeing  
14    "No Action." The law requires us to examine the  
15    no-action alternative. It is rarely picked at any site  
16    when you're examining sites, and it's not picked  
17    anywhere at Hunters Point. We always have some actions  
18    that come out of our CERCLA process and our documents.

19            We have an option that says cover and protect  
20    the shoreline and then and removing and disposal of some  
21    locations of contamination, which we call Tier 1, and  
22    I'll explain that a little bit later, and then removing  
23    and disposal of Tier 2, which is a different type of  
24    contamination in its intensity, and then also doing some  
25    special cleanup in the soil beneath Building 406, which

1 is that warehouse I talked about where the chemicals  
2 were stored.

3 Okay. So we have split up -- when we looked at  
4 all the data and we spread this out with the regulators  
5 and we poured over it and gathered more data, and  
6 leading up to this night tonight over the years we have  
7 done different rounds of gathering of groundwater data  
8 but in this case soil data.

9 And when we saw that, it was -- it -- and you  
10 map it out, there's some data that falls into sort of  
11 greater than 10 times the remediation goal, which is  
12 basically a cleanup goal. It's a screening tool of a  
13 certain level to clean up to.

14 We -- we tend to use cleanup goals, screening  
15 cleanup goals, to start looking at things. We get those  
16 from Region 9, U.S. EPA, and then we also look at  
17 California EPA because sometimes California EPA modifies  
18 some of the screening goals presented by the federal  
19 EPA.

20 And Tier 2 is greater than five times. So  
21 basically if you've got, say, a metal in the soil that's  
22 at elevated levels, it can exceed a goal, and then the  
23 Navy has to decide what option to take. But some of  
24 them exceed five times the goals, and some of them  
25 exceed ten times the goals.

1           That can influence what you do in a particular  
2           location. It depends what depth that contaminant might  
3           be at, and it depends again on what the level of the  
4           contaminant is. And that's basically the concept I want  
5           to get across to you.

6           In addition to that, there's different types of  
7           contaminants that really fall into the fuel oil and  
8           gasoline type of category.

9           Now, as you know, on a shipyard -- on many Navy  
10          bases, but particularly on a shipyard, there's many,  
11          many little spills of oil and gasoline over the decades  
12          of ship operations. And Hunters Point's no exception to  
13          that. There's a lot of places where we have spills of  
14          petroleum. We have to tackle them even though they have  
15          a slightly different set of rules.

16          The Water Board tends to be the lead on a lot  
17          of these petroleum sites, but really it's also part of  
18          the program as well.

19          In this case in Parcel E, we have petroleum  
20          that's co-located with metals and volatile organic  
21          compounds and things like that. And when that is the  
22          situation, as it is in some places here, then we tackle  
23          both at the same time.

24          So part of what we're proposing tonight is we  
25          are going to remove a lot of different contaminated soil

1 at a lot of different locations. The thought is that we  
2 will remove the most significant sources of  
3 contamination and significantly reduce the risk to  
4 humans and wildlife.

5 The remaining contamination, it will be lower  
6 level; and although it will be over large surface areas,  
7 which make it very difficult to get rid of all of it  
8 down to these goals, there's other ways to tackle the  
9 lower-level stuff.

10 And you'll see that, again, no surprise, I  
11 think we have been very successful at proposing  
12 parcelwide soil covers or at least barriers in some  
13 places to separate any use, any future use, of that land  
14 and the low-level remaining metals or contaminants that  
15 might be left in the soil.

16 So the Navy's making a clear distinction in  
17 between those low-level things and higher-level things  
18 where it looks like in most cases removal is going to be  
19 the proposed alternative.

20 So here on this map -- again, this is Parcel E  
21 that we're concentrating on now -- the pink areas have  
22 the higher elevated contaminants. And for purposes of  
23 this discussion, it doesn't really matter what they  
24 are. They could be copper, lead, or manganese. It  
25 could be PCBs or PAHs, which is another family of

1 chemicals, or it could be any other kind of organic  
2 compounds that were used as cleaning solvents and things  
3 like that that just happened to spill in the soil.

4 So these pink areas are future excavation  
5 areas.

6 In addition to that, we have smaller areas that  
7 are Tier 2. Remember, Tier 2 is less intensity, less  
8 elevated levels of these very same chemicals. And these  
9 are the areas [indicating] that they are located in.  
10 And you can see, they're fairly widely distributed over  
11 the parcel.

12 And again, I really have to emphasize, when it  
13 comes to these, these are the remaining areas. The  
14 Navy's done a lot of work since about 1994 and removed a  
15 lot of soil.

16 Now, you also have -- can you see in this inset  
17 [indicating]? This is this 30-foot-wide, 3200-foot-long  
18 railroad track that goes out here on the base; and you  
19 can see there's some excavation areas we are proposing  
20 there. Those have chemicals that are related to  
21 railroad operations that you'd expect to see that  
22 were -- that kind of collected along the railroad  
23 tracks, and we're proposing to go out there and clean  
24 those up as well.

25 Okay. Now, we also have something called

1 groundwater, which is located beneath the surface,  
2 right?

3 And how does contamination get to groundwater  
4 beneath the surface? If you have sumps or tanks or if  
5 you have anything else that spilled over time, it can  
6 drill its way down from the surface to the belowground  
7 surface. And eventually, depending upon where you are  
8 on the base, right -- 5 feet down, 7 feet down, 8 feet  
9 down, 10 feet down -- it will reach groundwater.

10 And when it does, a lot of chemicals, when they  
11 do drill down and reach groundwater, will then hit the  
12 groundwater and become soluble in the groundwater.  
13 They'll become part intermixed with the groundwater and  
14 spread.

15 Now, as they spread, their concentration level  
16 may go down, but the area that's impacted by that  
17 chemical, the area that in these cases needs to be  
18 cleaned up, that area increases. So though that  
19 concentration level goes down, there's still a very  
20 large area to deal with.

21 Okay. So here's again some of the options.  
22 Again, we have to consider no action.

23 Long-term monitoring means that when you --  
24 many of you that have been on the bus tour have seen a  
25 lot of the groundwater-monitoring wells. They have the

1 little yellow posts that protect them -- some of them  
2 do; others don't -- that are really all of over the  
3 base. There's hundreds of them.

4 And we use these wells. And at certain  
5 frequencies, either every 3 months or every 6 months or  
6 every 12 months, depending upon what's there, we go out  
7 and we actually monitor what's in the groundwater. We  
8 have tubes that go down into the groundwater, and we can  
9 actually take samples, take them to a sophisticated lab,  
10 and find out what's in the groundwater.

11 And that's a big part of our program. We have  
12 a whole network of these wells across the base to tell  
13 us what our groundwater looks like.

14 One of the options is -- and sometimes this is  
15 the right thing to do -- is you're at certain levels of  
16 contaminants where if you monitor them and they are not  
17 very mobile, they are not active and going anywhere,  
18 then maybe that's the right thing to do.

19 In other cases, it's not. So we have other  
20 options, like long-term monitoring plus groundwater  
21 containment and active treatment; and we'll discuss both  
22 of these different approaches in the next few slides.

23 So for this parcel, we considered this and  
24 this, and then we added on this [indicating]. And then  
25 for Groundwater Alternative 4, we added on a completely

1 different technology for the groundwater that has  
2 contamination under Building 406, which again is the  
3 warehouse where they stored the chemicals on the base.

4           Okay. So this, again, is a map to help you,  
5 and I'm hoping we can talk about this later, and you can  
6 look at our nice blowups that Mr. Bielskis has provided  
7 us tonight of the parcel here. I'm hoping when I show  
8 you a map of Parcel E it means a little something to you  
9 about where you are at on the base and where these  
10 things are relative to each other.

11           So Building 406 is right here. This is  
12 Parcel G, by the way, which, as you know, is this  
13 rectangular parcel that was originally part of a  
14 proposal for a potential 49er stadium back a few years  
15 ago. We've done extensive cleanup there. But  
16 Building 406 is just on the other side of that, and  
17 here's the groundwater plume here.

18           We also have some metals and PCB groundwater  
19 plumes very close to the shore. And then we have the  
20 oily waste ponds, which are very thick, thick mix, a  
21 thick soup of petroleum products and PCBs and some  
22 metals. They are also perched along the shoreline.

23           Now, in this Proposed Plan, we are -- we're  
24 putting these groundwater plumes into two different  
25 categories, and we'd like to hear your opinion on this.

1           We are -- we are saying that the gr- -- the  
2 groundwater plumes that are closer to the shore, because  
3 of what's in them and how they are not very mobile, can  
4 be treated a little differently than the inland plumes  
5 here.

6           These have chlorinated solvents in them, which  
7 are basically like cleaning fluid type spills that are  
8 in the groundwater here [indicating] and here  
9 [indicating] and here [indicating]; and this is, of  
10 course, in Utility Corridor 3, Crisp -- this is Crisp  
11 Avenue and then again Building 406, these plumes.

12           And we are going to propose here that these  
13 plumes are treated a little bit differently than these  
14 [indicating]. And this [indicating], of course, will be  
15 in its own category.

16           Okay. So for the oily waste ponds, again, no  
17 action and then containment. Containment is currently  
18 the option that has been used out there.

19           We do have a soil cover over it currently, and  
20 we do have a belowground barrier there, although that  
21 belowground barrier -- we've looked at it, and it's not  
22 of a high enough quality durability to be a part of a  
23 permanent remedy. And then couple that with some  
24 long-term monitoring, which again involves what?  
25 Groundwater-monitoring wells, going out there and

1 monitoring and seeing if this stuff is moving at all.

2           At the oily waste ponds, the good news is, this  
3 is very thick mix of petroleum products that are like  
4 sludge oil that you see sometimes in your car at the  
5 very bottom of the oil pan. It looks a lot like that  
6 when you bring it up. It's very thick, what they call  
7 viscous material. It's like a very, very thick  
8 milkshake, and it doesn't go anywhere. It's not very  
9 mobile. That's the good news about it. And it's been  
10 sitting there for decades.

11           So another -- I'm sorry. Another alternative  
12 here is removing and treating the contaminated oil and  
13 then doing some active groundwater treatment and then  
14 removing all of the contaminated soil above the  
15 groundwater, which would be an extraordinarily large  
16 project, and then removal of all contaminated oil  
17 followed by long-term monitoring.

18           Those are our different choices, our different  
19 cleanup options.

20           All right. And then finally -- so we've done  
21 soil, and then we have done the sediment near the  
22 shoreline, the sandy parts. And then we've just talked  
23 about the groundwater plumes, right, the contamination  
24 that's in the groundwater, and then the special case of  
25 the oily waste ponds because it's special.

1           And now finally, the final thing that we had a  
2    slate of choices on is rad, is the radiological  
3    contamination. Again, this is low-level radiological  
4    contamination; but the Navy is obligated to inspect  
5    these places, sample them, test them, look at it, look  
6    at what's there, and then clean up what they find.

7           So one option is to clean up the contamination  
8    not already addressed by the early cleanup actions, and  
9    that would consist of doing a lot on the shoreline areas  
10   in the storm drain and sewer lines, but that would also  
11   consist of removing and disposing of contamination in  
12   Site 2 and Site 3 and then constructing a 2-foot soil  
13   cover.

14          And then the alternative is a lot like the  
15   second alternative, only we examined -- would it make  
16   sense to construct an even thicker soil cover of these  
17   two sites? Would it really be worth it, or is it  
18   protective enough to construct 2-foot-thick cover?

19          Okay. So for all of these things, if you can  
20   stay with me on this -- I know there's a lot of  
21   different things here: There's soil; there's sediment;  
22   there's groundwater; there's those oily waste ponds; and  
23   there's the radiological contamination, the rad. For  
24   all of those, we have to select them based on criteria,  
25   common criteria to use. And these fall in different

1 categories. There's nine of them.

2 And when you look at your Fact Sheet or you  
3 look at the whole Proposed Plan that you can find at the  
4 back table -- I won't go into great detail of that  
5 because you'll see a lot of charts where you can  
6 visually look at the comparison of the different choices  
7 for each of these things against these common criteria.

8 But I will tell you this: They fall into three  
9 different categories.

10 And the threshold criteria, without getting too  
11 into it, is stuff you've got to do -- you've got to do  
12 in order to be in compliance with the law. There's no  
13 choice about it.

14 And so anything that the Navy selects and that  
15 the regulators would ever bless or approve would have to  
16 meet this criteria, no matter what. It would have to be  
17 complying with all the regulations and laws of the land,  
18 both the State of California regulations and the federal  
19 regulations and the regional regulations and so forth.

20 And then there's other criteria that are called  
21 balancing criteria. That's where you weigh the pros and  
22 the cons of things, how long will the remedy last, how  
23 easy is it to actually put the remedy in; in the short  
24 term how good is it of protecting people and the long  
25 term how good is it protecting people, things like

1     that.

2             And then the modifying criteria include you  
3     'cause Criteria 8 and 9 include the acceptance of the  
4     State of California. Even though this is a federal site  
5     where the remedy is ultimately selected by the U.S.  
6     Navy, which is federal, and the U.S. EPA, which is  
7     federal, critical parts of this must be approved by and  
8     are part of the criteria are for the State of  
9     California.

10            And so state regulators play a good role in  
11     this. We have to measure and tell the public our  
12     selections have gathered what level of acceptance from  
13     these state agencies.

14            In addition to that, community acceptance has  
15     to be considered. So before we make a decision, which  
16     is our next step, right, after this Proposed Plan,  
17     after -- before we make a decision, we have to tell the  
18     world that we evaluated and gauge what is the level of  
19     acceptance in the community based on the proposals that  
20     you're hearing tonight. And so that's a part of it, a  
21     part of the process.

22            Okay. And again, these are just the specific  
23     criteria -- you can see them in your Fact Sheet again --  
24     that talk about the things I was talking about: how  
25     long term protective it is, how short term protective it

1 is.

2           How much it cost is an element that you have to  
3 consider and, again, certainly something that the Navy  
4 never ignores because you do need to consider that these  
5 are taxpayer dollars and taxpayer-funded cleanups. And  
6 so you need to be wise with how you spend taxpayer  
7 dollars.

8           State acceptance and again community  
9 acceptance, which we are here tonight to gather.

10          Okay. So what we select. Let's go through  
11 what the Navy is proposing to you and to the regulators  
12 and to the world. All right.

13          We selected S-4, which is excavation and  
14 off-site disposal of the Tier 1 and the Tier 2 soil  
15 locations. So anywhere we gather data and there's  
16 contaminants that are ten times and five times the  
17 screening goals provided us by the U.S. EPA and  
18 sometimes modified by the State of California we are  
19 proposing to excavate and dump -- and take off site.

20          We're also proposing to put on a cover. In  
21 some parts of the parcel, the cover will be asphalt or  
22 concrete. It would be hardscape. In other parts of the  
23 parcel, it will be soil with vegetation on it, that  
24 vegetation to prevent erosion in the future.

25          Also followed by doing some soil vapor

1 extraction. The soil vapor extraction would be in that  
2 warehouse I was telling you about, Building 406, for the  
3 contamination not that's in the groundwater but the  
4 contamination that's between the bottom of the warehouse  
5 and the top of the groundwater, all the soil you have to  
6 get to to get to the groundwater. That's what we're  
7 planning on doing there.

8 And then putting in something called  
9 institutional controls and shoreline protection.  
10 Institutional controls is a very large word, which just  
11 means restricting the use of the future land so that it  
12 can be protective and restricting the activities that  
13 can go on that land where the proposals are still  
14 protective of human health and the environment.

15 So it's all gauged on of the Navy proposing,  
16 and we proposed institutional controls virtually  
17 everywhere on this base, including these two parcels.

18 That these controls, these land-use controls  
19 and activity restrictions, would ensure that what goes  
20 on as the land is developed over the years is compatible  
21 with whatever cleanup option we choose and then put into  
22 place.

23 Now, another part of that -- I won't dwell on  
24 that because we've talked about this. Many of you that  
25 I know, we've talked about this at length over the

1 years.

2 Another element to this is: The Navy not only  
3 can't make these selections in a vacuum without  
4 consulting the regulators, but we also have to consult  
5 the City of San Francisco. The Congress has required us  
6 to do that. Under the base realignment and closure  
7 protocols, we have to do that.

8 So anything we select must be compatible with  
9 what the City of San Francisco wants to do after the  
10 property is transferred to them and it's developed. So  
11 we have to keep that in mind.

12 And these play a key role, these controls --  
13 These land-use controls and activity restrictions play a  
14 key role in ensuring that what we put in place is  
15 protective but at the same time it's compatible with  
16 what the future vision of the City of San Francisco is  
17 for that particular location.

18 Okay. And this includes shoreline protection.  
19 Shoreline protection can include a lot of things,  
20 including putting the rocks, the riprap, along the  
21 shoreline and putting rock armor on the shoreline and  
22 putting sand over it, things like that.

23 Okay. So let's look at what we selected for  
24 the groundwater, and we picked -- it's in blue --  
25 Groundwater Option 3: groundwater containment, some in

1 situ treatment -- another fancy word I'll explain in a  
2 minute -- and then some monitoring and again some  
3 restrictions on the property about what you can do.

4 When you're dealing with groundwater in the  
5 city and county of San Francisco, there's always going  
6 to be these kind of restrictions, really, because  
7 there's already county ordinances in place that say you  
8 shouldn't be putting groundwater wells, you know, here  
9 within the city and county of San Francisco and using it  
10 for drinking water and so forth.

11 But we'll have -- we'll have controls like that  
12 to make sure that the groundwater isn't used for that  
13 purpose. It really isn't meant for this purpose on this  
14 base, and we want to make sure that it isn't used for  
15 that purpose.

16 So, well, let's go back and talk a little bit  
17 about this still. Do you remember I was talking about  
18 those plumes that were on the base? What the Navy is  
19 proposing is that we do containment for those portions  
20 of the groundwater -- we call them plumes -- where  
21 there's metals and there's PCBs and there's heavy  
22 material that don't move much.

23 Those up-against-the-shoreline plumes we feel  
24 that we can effectively put -- put in belowground  
25 barriers and aboveground covers and put in sentinel

1 wells, guardian wells, and monitor those. And we  
2 believe that the -- those chemicals will best be left in  
3 place and will remain in place and not threaten the  
4 bay.

5 They are perched -- They are near the  
6 shoreline, as I showed you on an earlier map, and that's  
7 one of -- one of the primary goals of this is they are  
8 not -- these aren't posing any risk to human beings.  
9 They are belowground surface in the groundwater.  
10 They've been there for a long time.

11 But they are -- ultimately -- the question that  
12 the Navy has to ask is -- could pose a threat to the bay  
13 if that groundwater eventually moves into the bay and  
14 carries the contaminants with it. In this case, we  
15 don't believe that's the case. It hasn't been the case  
16 over the decades since these contaminants have been  
17 there, and that's going to be our proposal.

18 Now, in stark contrast to that, the many more  
19 plumes that are inland that I showed you we are going to  
20 do active treatment on.

21 And that active treatment falls into two basic  
22 camps. We are either going to zap it with iron, an iron  
23 compound, that we talked about and have used across the  
24 base that breaks down the chemicals. Either that, or  
25 we're going to provide nutrients to the bacteria under

1 ground that will then eat the contamination. We have  
2 done that pretty extensively on this base too.

3 So we're using proven methods over the years in  
4 different parts of the base. We're bringing those to  
5 Parcel E and saying, those groundwater contaminants in  
6 these plumes that are inland, we are going to use  
7 basically one of those two types of technologies to  
8 clean up the plume, and that's what we mean by "active  
9 cleanup."

10 Okay. And another key goal that I have to show  
11 you here is monitored natural attenuation. Sometimes  
12 that's not -- That's again another big fancy phrase.  
13 What does that really mean? That means professionally  
14 managing and professionally monitoring these plumes,  
15 whether they are inshore or on the shoreline.

16 And what does that mean? That means using  
17 groundwater-monitoring wells and at regular intervals  
18 going out and checking on these just to make sure they  
19 are still where we think they are and that the remedy is  
20 in place and that everything is protected. And that's a  
21 key element of our selection here, our -- of selecting  
22 this option.

23 Okay. Now, again, the oily waste ponds that I  
24 talked about where the Navy did fuel reclamation back in  
25 the day and let these -- this thick sludgy material

1 behind. It's very deep, and it doesn't move much at all  
2 except it sinks a little because it's so darn heavy over  
3 time, but it hasn't even done that much of that. But it  
4 is down at fairly lar- -- fairly deep levels, and it's  
5 been sitting there on the shoreline.

6 Now, remember, the Navy's already taken some  
7 significant actions there. We put a nice flat soil  
8 cover on top. We did some limited digging of anything  
9 that was perched on the shoreline back in 1997, and then  
10 we put in a sheet-pile wall barrier.

11 What we're recommending that we do is we are  
12 going to do more excavation. That's called source  
13 removal, in other words, going to that goopy stuff and  
14 digging it up. We're going to do some of that.

15 And we are also going to use different  
16 technologies to treat some of the groundwater there.  
17 And then we're also going to build a much better  
18 belowground barrier than we built in 1997 that we think  
19 is going to be more long-term protective.

20 So we're going to do all of these things at the  
21 oily waste ponds, and we're going to continue to  
22 professionally manage and monitor it and put some  
23 restrictions there.

24 Okay. And finally, what's our final category?  
25 All the radioactivity, the low-level radioactivity, the

1 residual radioactivity that's on the base, what are we  
2 going to do there?

3 Well, we are going to survey, remove, and  
4 dispose of all of it with the exception of in these  
5 large areas that are considered rad impacted, Site 2 and  
6 Site 3, where we are going to put a 2-foot-thick soil  
7 cover over it. We are going to do surveys on the  
8 surface. We are going to remove anything that we find  
9 that's left if there is anything left, and then we're  
10 going to put a soil cover over these areas.

11 Part of the reason for that is, these areas are  
12 different than going into a building or going into a  
13 sanitary sewer system or examining a pit that has some  
14 low-level radium in it or anything. These are very  
15 large sites. And everything that we knew to remove we  
16 have removed. So we don't -- we aren't knowingly  
17 leaving any low-level rad there.

18 But these are large sites that are fill  
19 material that go down very deep, and it's nearly  
20 impossible -- I would like to say "impossible," but it's  
21 not good to just use that word -- nearly impossible in  
22 order to prove a negative that there's nothing there.

23 But what do we know? We know that the Navy's  
24 gone there and did a huge dig-and-haul back a few years  
25 ago. We know that we removed over 3200 items that were

1 in the area. We know that we have removed other items,  
2 because we did a survey of the shoreline; and wherever  
3 we found anomalies, hits, we did removals.

4 So what we're planning on doing in these large  
5 areas, again, is to do another survey of the surface,  
6 take out anything that's there if there is anything left  
7 there. I'm not sure we'll find anything left. But if  
8 we do, we will remove it and then put on a 2-foot-thick  
9 soil cover.

10 Part of the discussion here is, is 2 feet -- in  
11 this condition is 2 feet thick protective, or do you  
12 really need 3 feet thick?

13 And after analyzing it and evaluating it, we  
14 believe 2-foot-thick cover is certainly robust enough to  
15 take care of any remaining concerns after we do a  
16 surface survey.

17 And that surface survey will not only be the  
18 surface. It will go down 12 inches, okay, a foot. And  
19 anything we find there we will remove. So we'll be able  
20 to certify to everybody that that 12 inches is clean.  
21 And then we're going to put another 2 feet on top of  
22 that, which adds up to 3 feet.

23 Okay. So here's just a map that shows you some  
24 of the really -- our selected choices for soil and  
25 sediment. And you can see that -- remember I said when

1 we do a parcel-like cover, parts of it are going to be  
2 asphalt cover or building footprints? That is all  
3 hardscape: concrete, asphalt, things like that.

4 This will be a soil cover. So it will be  
5 softer. When -- and this cover's [indicating] put in  
6 place.

7 Okay. And this is basically what we're  
8 proposing, these lines here [indicating]. That's  
9 basically the dividing line between the two.

10 Now, when we transfer this to the City over the  
11 years, can this change? Sure it can. This is a  
12 hardscape remedy. This is soft scape, soil with  
13 vegetation. But both are considered valid choices.

14 So as the years go on, the City can -- with  
15 approval from the regulators, they will be able to make  
16 other choices as to the type of cover there. Okay.

17 This is -- I just want to show you some of  
18 what this looks like. This might be familiar to you.  
19 This is a soil cover that we put on on Site 7 and 18.

20 When you go down to the very end of Innes and  
21 you enter the base and you have to make a hard left and  
22 enter the base, that is the site that you see that's  
23 now -- has a fence around it and in the spring at least  
24 beautiful wildflowers. And that has a soil cover on it,  
25 and we planted -- we hydroseeded these flowers and took

1 care of them as measure to prevent erosion and to  
2 minimize dust because of the root balls from each of  
3 these -- all this vegetation holds the soil in place.

4 We've done that at the base. You can go and  
5 see it anytime just by going down to the end of Innes  
6 again and looking down on it. It's the field that's  
7 across the street from the Morgan Heights condos.

8 And here's just another picture of us  
9 constructing it. Before it looked like this  
10 [indicating], it looked like this [indicating]. We put  
11 down -- We surveyed the surface, made sure it was  
12 clean. We added clean soil on top of that, and we also  
13 put in a nice demarcation layer.

14 Okay. So we are talking about up around the  
15 shoreline. Rock revetment is one alternative. On  
16 Parcel E, we have 2400 feet of shoreline. So what the  
17 Navy, what the regulators, and with your input is going  
18 to decide in the future out of that 2400 feet, where  
19 does it really demand something more robust like this  
20 rock revetment, and where is it more appropriate to put  
21 in sand with underlying rock armor?

22 "Underlying rock armor" is just a fancy term  
23 that -- it's basically rocks that look a lot like this.  
24 Sometimes they look -- they are a little smaller, and  
25 they're just covered over by sand.

1           So we're going to have to -- one of the  
2   decision thi- -- points in the future is going to be out  
3   of that 2400 long [sic] shoreline, where is it  
4   appropriate to do this [indicating] versus where is it  
5   appropriate to do that [indicating]?

6           Okay. And here's a little drawing. Again, I  
7   don't want to overly complicate things. But when you --  
8   when you have a building -- a warehouse like  
9   Building 406, this i- -- let's pretend this [indicating]  
10   is like a big warehouse instead of a nice little  
11   house -- part of what we do is here's the surface.  
12   Here's the soil underneath the surface that you can dig  
13   into; and if you dig down far enough, you hit the water,  
14   the water table.

15           So at Building 406, we have contaminants,  
16   chlorinated contaminants. They were cleaning compounds  
17   and things, solvents that are in the groundwater. But  
18   we also have some contaminants that are in the soil  
19   column.

20           So what we're proposing at Building 406 at the  
21   warehouse is -- we've done a lot to clean up the  
22   contamination in the groundwater. We are now going to  
23   go after the contamination in the soil column. And we  
24   do this by something called soil vapor extraction. It's  
25   a system we put in.

1           We are also using it at another part of the  
2 base on Parcel B where we're doing the same kind of  
3 thing when we have something that is a volatile chemical  
4 that we have found in the soil column beneath the  
5 ground.

6           Okay. And so again, we want to do containment,  
7 robust containment, and monitoring in this -- in this  
8 area, these plumes. Excuse me. Obviously, the oily  
9 waste ponds is its own category in thi- -- on these  
10 plumes. And we want to do active treatment here and  
11 here and here [indicating].

12           Okay. And this is just a drawing, kind of a  
13 cross section of what active groundwater treatment can  
14 look like. We do two different types on this base  
15 typically. There's all different types. But the two  
16 that we found really effective: We inject iron into the  
17 groundwater, and what that iron does is very quickly  
18 break up the contaminants into chemical compounds that  
19 aren't as toxic.

20           And we also inject nutrients into the ground  
21 when we know that there's bacteria in there that lives  
22 and thrives, lives and thrives. And what that does is  
23 it increases the population of the bacteria, and the  
24 bacteria naturally eats the contaminants.

25           When it eats the contaminant, it then lets go

1 of the contaminants and breaks them down. So you can  
2 use these with chemicals that are kind of complex  
3 molecules, and the bacteria will break them down once  
4 they eat them, digest them, and excrete them.

5 So we have done both on the base, and both work  
6 depending upon what the contaminant is and where it's  
7 located.

8 Now, what about containment for some of those  
9 plumes that are near the shoreline? This [indicating]  
10 is the wall, the belowground barrier. In addition to  
11 that, you have shoreline protection that I've shown you,  
12 and then you also have a soil cover.

13 That is a typical -- This is a typical design  
14 [indicating] for containing contaminants that are in  
15 this area near the groundwater level. So -- and now the  
16 exact details of what we do in those locations will be  
17 worked out at a later time when we do the design.

18 So we're -- again, we're at the process where  
19 we're showing you what we're -- we are proposing to do,  
20 in the next step will make a decision on what we are  
21 going to do. And then once we all make a decision on  
22 what we are going to do, then we have to provide the  
23 details of the design on what specifics we're going to  
24 do. And so that comes down a little later.

25 Now, let's quickly go to Utility Corridor 3.

1 It's very thin, as I said. I mean, it consists of this  
2 bit of land here [indicating], Crisp Avenue, and then it  
3 heads out in 30 foot wide, 3200 feet long down to about  
4 Ingalls, I believe, and Carroll Avenue. It's got some  
5 contamination too. Railroad tracks run through here.

6 If you ever hike it, it's very hard to hike it  
7 because over the years people have extended their  
8 property onto it. They put up fences. They've stored  
9 things on the land. The Navy hasn't used it for  
10 decades. So that's going to be one of the challenges  
11 when we go out.

12 Certain areas we have done samplings, and we do  
13 know that there's areas where we need to excavate; in  
14 other words, go there, find the chemicals that were  
15 probably releases associated with railroads, dig them  
16 up, and dispose of them. And that's what we're going to  
17 do there.

18 Now, there is some contamination in the  
19 groundwater here [indicating], some of what's left.  
20 That's already been treated to some degree.

21 Let me see. Oh, okay.

22 I want -- and in addition to that, this  
23 [indicating] was rad impacted, this whole Crisp Avenue.  
24 It was rad impacted because it had a sanitary sewer  
25 system combined with the storm drain system that went

1 down beneath the ground surface.

2 So what we had a company do is they had to  
3 investigate that and dig it all up. And you might  
4 recall, in the last two years, that's exactly what was  
5 done. And he had to dig, I believe, as deep as 27 feet  
6 down below the ground surface to get everything out.

7 Now, there -- it turned out that there wasn't  
8 much contamination there, extraordinarily low levels.  
9 But now we have documented that, and it's not there  
10 anymore. And we have actually gotten from the State of  
11 California free release of this site. So we have  
12 already earned that free-release certification from  
13 them. So we've done everything we need to do when it  
14 comes to that on this parcel.

15 Okay. And just to recap, why did we -- why did  
16 the Navy propose these? Well, they have to meet certain  
17 standards: protecting human health and the environment,  
18 people and wildlife, from exposure to contamination that  
19 pose unacceptable risk. That's really the bedrock  
20 foundation of what we have to do. No matter what  
21 proposal we intend to select, it has to meet that  
22 criteria.

23 In this case, we feel the removing -- on  
24 Parcel E the removing and disposing of contaminants that  
25 poses the greatest risk to people, anything that's

1 spread out over a large area that can be covered up  
2 with -- that can be under a cover to prevent exposure in  
3 the future to it in those areas we are proposing that.  
4 We are treating groundwater that propose -- that poses  
5 the greatest risk.

6 But we are also installing -- we're basically  
7 following containment for those areas of contamination  
8 that we feel we can properly contain so that they don't  
9 migrate into San Francisco Bay, but they are also not  
10 bothering anybody else.

11 And each of our proposals also includes  
12 long-term monitoring and maintenance.

13 Okay. And again, this is another couple of  
14 reasons why we believe that our proposed solution works  
15 and that it's protective and that it's really the best  
16 choice when you weigh all the pros and cons.

17 And basically it comes down to this: The  
18 remaining contamination that we are not going to  
19 excavate is going to be low-level contamination that  
20 consist of chemicals that don't move around.

21 And if you can contain a chemical and it's  
22 beneath the ground surface and you don't have any  
23 exposure to it, you don't have any risk to it because  
24 with no exposure to it, there isn't any risk to it as  
25 long as it's properly covered and that cover's

1 maintained.

2           Okay. And again, the bottom-line standards we  
3 use is protective of people and wildlife; "human health  
4 and the environment" is the phrase you often hear. It's  
5 consistent with all the laws and regulations and  
6 national policies, but it's also consistent with the  
7 City and County of San Francisco's anticipated reuse and  
8 redevelopment of the property.

9           Much of the fringes of Parcel E are going to be  
10 open space, and everything we proposed for those areas  
11 along the bay is compatible with this; and we've worked  
12 pretty closely with the City to make sure that all the  
13 other alternatives are compatible with the City's reuse  
14 and redevelopment as well.

15           Okay. Some of the next steps I believe Matt is  
16 going to handle.

17           MR. ROBINSON: All right. Thank you.

18           MR. FORMAN: Sure.

19           MR. ROBINSON: All right. So the next steps  
20 for this process, the public comments are due by  
21 March 15th. So even if you have comments you want to  
22 say today, you still have time to write them down, and  
23 you can E-mail them or mail them or fax them. We will  
24 give you the information for that a little bit later.

25           This will then go for the Record of Decision.

1 The RODs will be included with the responses from your  
2 public comments, and the RODs will also identify the  
3 final remedy for Parcels E and UC-3. And there will be  
4 two separate RODs that will be prepared: one for  
5 Parcel E and one for Parcel UC-3.

6 Now, then, there will be a design and build of  
7 the final remedies for Parcel E and Parcel UC-3, the  
8 remedial design and remedial action as it's known.

9 And so I said earlier, you can write down your  
10 comments tonight, or you can tell us to them verbally.  
11 And your comments, again, will be a part of the Record  
12 of Decision. You can mail them or E-mail them or send  
13 your faxes to Keith Forman, and here is the address.  
14 There's -- Also if you have your information in your  
15 Proposed Plan, you can look up information. It is there  
16 as well. Again, March 15th is the deadline.

17 Also, in terms of who also is working on this  
18 project, earlier I introduced Craig Cooper, Dr. Ryan  
19 Miya, and Miss Tina Low. They are the regulators who  
20 are working to oversee the Navy -- Navy's effort on this  
21 project.

22 And also, if you want to get more information,  
23 we have repositories at the San Francisco Main Library  
24 as well as the office trailer at the Hunters Point Naval  
25 Shipyard. You can stop by and look at the Prosed Plan

1 when it's there as well as the other pieces of  
2 information that the Navy has on the entire project.

3 You can also look at the Proposed Plan which  
4 will be on the Navy's BRAC Web site at this E-mail  
5 address, bracpmo.navy.mil.

6 So now we're going to take a quick break, a  
7 ten-minute break, allow our court recorder to take a  
8 break; and we'll come back at 7:35. If you want to also  
9 talk with the regulators during this break, please feel  
10 free to do so. Thank you.

11 *(Whereupon, a recess is taken from*  
12 *7:26 p.m. to 7:40 p.m.)*

13 MR. ROBINSON: We'll get back to our meeting.

14 Coming up will be the regulators from the U.S.  
15 EPA, the State Water Board, and the California  
16 Department of Tox- -- Substan- -- Toxic Su- -- Ryan  
17 Miya.

18 DR. MIYA: Toxic --

19 MR. ROBINSON: Department of --

20 DR. MIYA: I can say it. I can say it.

21 MR. ROBINSON: Yes, please do.

22 Cal/EPA we like to call it.

23 Okay. Did you want to . . . ? Yeah. Sorry.

24 Come on up, Craig and Tina.

25 We will have our regulators and their

1 perspective, and then after that we will then go to our  
2 clarifying questions of the presentations.

3 So now I'm going to turn it over to Ryan Miya.

4 DTSC'S PERSPECTIVE

5 BY DR. MIYA:

6 Hi. I'm Ryan Miya with the State Department of  
7 Toxic Substances Control. It's a mouthful. DTSC.

8 And I don't want to take up a lot of time, but  
9 I just wanted to give sort of the regulatory perspective  
10 a little bit on the remedies that were proposed. The  
11 main reason that we're here is to hear public comments.  
12 So I don't want to take of up much of your time, but  
13 just some additional information that I think would be  
14 useful.

15 So I'm going to break it down by just going  
16 through the -- some of the -- the general categories,  
17 the first with the soil and the sediment proposed  
18 excavations.

19 You know, each of those -- those squares up  
20 there, those -- it was actually over a hundred little  
21 squares there. And just emphasizing that each of those  
22 squares were generated because of sampling that was  
23 done, and not just one sample, but sometimes four or  
24 five around them to get the size of those boxes correct;  
25 and they are correct based on the information that we

1 know now.

2 But we're still going to make the Navy do  
3 confirmation samples at the bottom of those holes to --  
4 to have testing at the bottom of the holes to make sure  
5 that they have gotten everything there.

6 So that's just preliminarily what the areas  
7 are, but they're very likely to expand a little bit more  
8 once when we actually get out there and get some data,  
9 but they are not going to be done with those areas until  
10 they have demonstrated that they've gotten it all.

11 And then also with the shoreline remedies, I  
12 wanted to emphasize that I think early on we've also  
13 been stating that because it's such a large area and  
14 Keith mentioned that it's about 2400 feet long, the  
15 remedies for some of these areas are actually going to  
16 be very ecologically friendly. They are going to be  
17 really pretty and more aesthetically pleasing than the  
18 rock revetments that you've seen the Navy install.

19 There's definitely going to be portions of  
20 those rock revetments that are still there in the areas  
21 that are maybe steeper, you know, and -- so it needs to  
22 be steep because it's -- kind of stabilizes that. You  
23 don't slide into the ocean.

24 But emphasizing that this is a large -- a  
25 large -- a large portion of the parcel is actually

1 bordering the -- the Yosemite Slough there and the bay.  
2 And so our hope is to try to get as much of that remedy  
3 be more ecologically friendly so birds and other animals  
4 will find it more pleasing than -- than just the rocks  
5 there.

6 And then also he touched on the -- that oily  
7 waste pond area, and that really is going to be a  
8 challenge. It's something we're going to be keeping our  
9 eye on very closely, because it's a -- it's a pretty  
10 large area.

11 And the way I like to look at it is it's really  
12 like molasses stuff and to -- and it's really deep  
13 too. So -- and it's right next to the bay.

14 So I know he -- Keith did a really good job of  
15 summarizing each of these things, but I just wanted to  
16 sort of point out particular areas that we're taking a  
17 close look at and highlighting some slightly different  
18 things than what he did.

19 With respect to the groundwater treatment,  
20 he al- -- Keith also stated that, yeah, these are in  
21 fact technologies that have been used elsewhere  
22 successfully on the base, and so it makes sense to  
23 continue using them. But even in those situations, we  
24 still have and are going to require monitoring to make  
25 sure that it's working at that particular spot in

1 Parcel E and UC-3.

2 And as with any of these technologies, there's  
3 going to be monitoring to make sure that not only  
4 that -- that what they are proposing to do and how they  
5 implement it is actually working, but that in the future  
6 if something happens and it maybe goes sideways a little  
7 bit, we will have information to indicate that we maybe  
8 need to do something more, but the idea being that even  
9 after they have implemented it, we're still going to be  
10 there and making sure that it's not -- it's not going  
11 sideways.

12 And then with respect to the radiological  
13 remediation that was proposed, I think there was a  
14 figure where a portion of the Parcel E was for the most  
15 part completed. But actually, we as a regulatory  
16 community are still in the process of reviewing the  
17 documentation for it and also analyzing confirmation  
18 samples.

19 So while the majority of the field work in  
20 those areas is done, it's still -- we haven't signed off  
21 on it yet, and we're still in process of closing that  
22 out. And this is just with respect to the radiological  
23 program.

24 But UC-3, as Keith mentioned, they did -- we  
25 did get to radiological free release. And so that's --

1 now they can focus on the chemical components moving  
2 forward.

3 And then ultimately one of the main things that  
4 I want to say is that we have been involved up to this  
5 point and we are still going to be involved as they do  
6 the implementation. And then after they implement it  
7 and they leave and the transferee gets the property,  
8 regulators are still going to be involved. So we are  
9 not going anywhere.

10 And even though -- it will always be -- State  
11 of California DTSC will still have ongoing requirements  
12 of monitoring as well as inspections; and like if  
13 something happens in the future, we're going to be  
14 there. And so just to emphasize that. And even though  
15 we are in -- right now in part of a larger process, no  
16 matter what happens, we are still going to -- still  
17 going to be there.

18 So thank you for your time. Appreciate it.

19 MR. ROBINSON: All right. Next up is Tina Low  
20 from the Water Quality Control Board.

21 WATER BOARD'S PERSPECTIVE

22 BY TINA LOW:

23 Hi, everyone. I'm Tina Low. I'm a remedial  
24 project manager in the groundwater cleanup division at  
25 the San Francisco Bay Regional Water Quality Control

1 Board, "Water Board" for short.

2 So I wanted to just make four brief points  
3 tonight. And the first is that in looking at the ways  
4 that are available to protect people and the environment  
5 from the risk on the site, they were going to treatment,  
6 removal, containment, monitoring. And what really makes  
7 sense about the Proposed Plan is that it contains a  
8 sound suite of all these different ways of dealing with  
9 the risk.

10 The second point that I want to make is, being  
11 the Water Board, we look at water quality in terms of  
12 groundwater and impacts to aquatic life in the bay. So  
13 that's the lens in which we review the Navy's work.

14 And with respect to the proposed remedies,  
15 particularly with the groundwater alternatives, there's  
16 a good dose of removal and treatment. And that's  
17 usually our preference when we are talking about risk.  
18 There is containment and monitoring, which is also very  
19 appropriate for the site.

20 And the treatment alternatives that are -- The  
21 treatment technologies for groundwater, the in situ  
22 treatments being the in situ, bio, and the ZVI, those  
23 are proven technologies that have been successful at  
24 similar sites.

25 But the last point that I want to make is that

1 while these are proven technologies that have worked at  
2 other sites, we don't just rely on these past case  
3 histories to know that or to make sure that it would  
4 work on this site.

5 So while the Proposed Plan has an approach,  
6 there are other steps along the way to make sure that  
7 these ideas will be designed and implemented and  
8 monitored appropriately to make sure that it is in fact  
9 protective.

10 So right now we're at the Proposed Plan stage.  
11 There are other studies along the way that are  
12 concurrently happening to test out a lot of these  
13 technologies on the site.

14 And along the way there's also the Record of  
15 Decision and the Remedial Design, and these are also  
16 points where the regulators review the works to make  
17 sure that what is proposed is indeed going to be  
18 designed, implemented, and ultimately protective.

19 So that's the last of my points.

20 MR. ROBINSON: The next up is Craig Cooper from  
21 the U.S. EPA.

22 U.S. EPA'S PERSPECTIVE

23 BY CRAIG COOPER:

24 Hello, everybody. My name is Craig Cooper. I  
25 work for the federal EPA.

1           And Ryan and Tina and I really coordinate a  
2     lot. We want you to know that we have been, you know,  
3     monitoring the Navy's cleanup work here for many years,  
4     and we are going to continue to do so, as Ryan said.

5           With respect to the proposed cleanup plan for  
6     Parcel E and UC-3, EPA generally supports the direction  
7     the Navy's going. If we didn't support it, this meeting  
8     wouldn't be happening. We'd be in negotiations,  
9     hammering out, you know, our comments.

10          So at this point, we've reached a point where  
11     we're in general agreement with the direction that the  
12     Navy's going.

13          We want to hear what the community has to say  
14     about these cleanup recommendations.

15          And I we will a say this, though, that why we  
16     recommend support for these cleanups is that the  
17     Superfund law that EPA is watching the Navy implement,  
18     it talks about that for the high-concentration  
19     contaminants, you do active treatment. And that's what  
20     Keith was talking about.

21          Yes, covers are a remedy, and I've heard people  
22     from the community say, Oh, covers; they're just  
23     covering it up.

24          The heart of these cleanups, where it's safe we  
25     do active treatment. And I think that cannot -- you

1 know, that is really important. We're going to dig it  
2 up and haul it away, or we're going to find ways to  
3 neutralize the contamination in place.

4 And that is -- that's where you -- that's, I  
5 think, the most important thing about my job is to  
6 really encourage the Navy to undertake active treatment  
7 so then we can get rid of as much of the  
8 high-concentration contamination as possible.

9 And then the covers are the last element for  
10 the lower concentration stuff to make sure that people  
11 are safe.

12 So now we want to hear and now I think it's  
13 time to turn it over for community input. We're really  
14 interested on everything you have to say, both positive  
15 and negative, criticisms, questions, comments. We're  
16 all going to stay here. I'll be here after the meeting  
17 as well if you have questions for me.

18 Thank you.

19 MR. ROBINSON: Thank you, Craig.

20 Okay. Now, folks, it's your turn. What we are  
21 going to ask is -- This is the clarifying questions  
22 portion of the presentation; and because this is going  
23 on to be on the Record of Decision, we are asking that  
24 you all form a line at that microphone so that our court  
25 reporter can capture your statements.

1           So first before we get started, I want to let  
2   you know, we want you to please, as I say, get in line,  
3   and everybody has a chance to ask one question. And  
4   then we'll open it up -- after everyone has had a chance  
5   to ask the first question, open up for a second round of  
6   questions.

7           And then after the question period ends, the  
8   rest of the meeting will be dedicated to the formal  
9   comments portion of the Proposed Plan.

10          So now before we turn it over to you, we ask  
11   that you also state your name and spell it for our court  
12   reporter because we want to make sure that we get your  
13   name as well as your comment correct.

14          So please go ahead with your first question.

15          LINDA RICHARDSON: Linda Richardson, L-i-n-d-a,  
16   R-i-c-h-a-r-d-s-o-n. I am a long-time resident of  
17   Bayview-Hunters Point, and I've attended all the  
18   community presentations and most of the site tours.

19          My question to you, Mr. Forman -- and again,  
20   thank you for a detailed presentation. For the  
21   long-time obligations, I believe that you be  
22   transferring some of the long-time obligations like the  
23   monitoring and maintenance. You indicated in some of  
24   the med alerts you will be having -- let me rephrase my  
25   question.

1 MR. FORMAN: Sure.

2 MS. RICHARDSON: You indicated that for areas  
3 that will have containment, active treatment, that will  
4 also be long-time -- long-term monitoring and  
5 maintenance.

6 MR. FORMAN: Yes.

7 MS. RICHARDSON: Yeah, monitoring and  
8 maintenance.

9 MR. FORMAN: And maintenance, right.

10 MS. RICHARDSON: And so for those long-term  
11 obligations that you're going to be transferring, I  
12 believe, to our city government, is the Navy going to be  
13 providing funds and resources to enable the receiving  
14 agency -- in this case, the City and County of San  
15 Francisco -- to be able to have the capacity and the  
16 resources to be able to carry out those long-term  
17 obligations?

18 And I think I represented to Mr. Miya from the  
19 DTSC was alluding to this earlier. So could you please,  
20 sir, answer those questions.

21 MR. FORMAN: Yes. Excellent -- excellent  
22 question.

23 So the question was concerning these -- the  
24 long-term monitoring costs money, and the long-term  
25 operations for the site costs money. In CERCLA when you

1 have continuing costs like that, that is still an  
2 obligation of the Navy. For the dollar amount, that is  
3 a required negotiation to occur between the City of San  
4 Francisco and the Department of the Navy.

5 So if you look at the BRAC program as a whole,  
6 right, for DoD across the country, what typically  
7 happens is that a local reuse authority like the City of  
8 San Francisco and a DoD agency like the Navy get  
9 together and negotiate a certain dollar amount, and they  
10 base it on -- on, obviously, the site and estimated  
11 cost. But there is a negotiation process. So that will  
12 occur.

13 And then, not always, but often across the  
14 country, a lump sum is involved that's either paid up  
15 front or in a number -- a predetermined number of years  
16 to help support that.

17 But yes, that will go on, and it does need to  
18 be paid for, and it is a legal obligation of the Navy  
19 because the CERCLA liability does not go away for the  
20 Navy in this case either pre or post transfer.

21 MS. RICHARDSON: Thank you, sir.

22 MR. FORMAN: Sure.

23 RAYMOND TOMPKINS: Could you get me Slide 31  
24 and 33. Okay, you could stay -- 33.

25 MR. ROBINSON: Three?

1 DR. TOMPKINS: And could I have 31 first,  
2 please. I'm sorry.

3 MR. ROBINSON: That's good.

4 DR. TOMPKINS: That's --

5 MR. ROBINSON: What you want.

6 DR. TOMPKINS: Okay.

7 MR. FORMAN: Okay.

8 DR. TOMPKINS: Sorry I don't have a pointer, so  
9 I --

10 MR. FORMAN: Okay.

11 DR. TOMPKINS: In previous documents we  
12 submitted to the Navy --

13 How do I get the red dot?

14 I didn't do it. It wasn't me.

15 How do I get the red dot up there so I can show  
16 you what I'm talking about? I'll walk up.

17 MR. ROBINSON: The top one?

18 DR. TOMPKINS: Top one?

19 MR. FORMAN: Yeah, the top one.

20 DR. TOMPKINS: Keith, when we submitted -- and  
21 Dr. Palmer, Dr. White, and Dr. Grist submitted our  
22 documents on E-2, which was referred to as a Superfund,  
23 now, see, E-2 is over here, and that's not the  
24 Superfund. Where is the Superfund site located? I  
25 thought it was in this region [indicating] --

1 MR. FORMAN: Okay.

2 DR. TOMPKINS: -- of the landfill. And I want  
3 clarity on that, because then I have another --

4 MR. FORMAN: Right.

5 DR. TOMPKINS: Once -- 'cause I'm confused on  
6 the document. I don't --

7 MR. FORMAN: Got it.

8 DR. TOMPKINS: -- understand it.

9 MR. FORMAN: Okay. Thank you for asking one  
10 question at a time so you don't -- so I don't get  
11 confused. That's good.

12 DR. TOMPKINS: I need a clarity on that.

13 MR. FORMAN: Sure.

14 DR. TOMPKINS: Then I have a question.

15 MR. FORMAN: This is a great question because  
16 there's a lot of confusion even amongst people who do  
17 this for a living sometimes.

18 The defi- -- The legal definition of the  
19 National Priorities List site, NPL site, okay, which  
20 is the slang for the Superfund site, so it's okay to say  
21 that; the legal definition of the Superfund site is the  
22 entire site, all the shipyard. Every one of the  
23 446 land acres and 490-something acres of San Francisco  
24 Bay is -- comprises one site. It's all a Superfund  
25 site, an NPL site.

1 DR. TOMPKINS: Keith, when we submitted --

2 MR. FORMAN: Yes.

3 DR. TOMPKINS: -- in our comments during that  
4 period in two oh seven -- 2007, it was --

5 MR. FORMAN: Okay.

6 DR. TOMPKINS: -- for this area, the Superfund  
7 site, and it was though designated as E-2 that time; and  
8 that "E," that -- now E-2 is referred to over on this  
9 side that you already did the cleanup and not the  
10 Superfund.

11 So if somebody would look at the old documents  
12 and then look at our comments just doing on your  
13 current --

14 MR. FORMAN: Okay.

15 DR. TOMPKINS: -- coding, this would cause --

16 MR. FORMAN: Okay.

17 DR. TOMPKINS: -- confusion, and everybody  
18 think we're crazy.

19 MR. FORMAN: Okay. Okay.

20 DR. TOMPKINS: I need that clarity in terms of  
21 would you go back then and change the records --

22 MR. FORMAN: Right.

23 DR. TOMPKINS: -- to reflect the new labeling  
24 that you have so that --

25 MR. FORMAN: Well --

1 DR. TOMPKINS: -- people could follow the --

2 MR. FORMAN: Yeah.

3 DR. TOMPKINS: -- what we're talking about?

4 MR. FORMAN: Yeah. Okay. So thank you,  
5 Dr. Tompkins. I think I can provide some clarity to  
6 that.

7 It is true -- and this can be confusing, and I  
8 think in our information repository, you have to look at  
9 all the documents as part of a continuum of documents  
10 over time.

11 It's absolutely true what you said,  
12 Dr. Tompkins. We have changed parcels and subparcelized  
13 over time. This [indicating] used to be all of "E."  
14 And then we -- I think wisely everybody said Split off  
15 E-2 from "E," and that was predominantly the landfill  
16 area and the Panhandle area. And this [indicating]  
17 remained "E."

18 DR. TOMPKINS: Then at one point, two oh seven  
19 [sic], it was E-2, because we wrote our comments in a  
20 letter submitted to you --

21 MR. FORMAN: Okay.

22 DR. TOMPKINS: -- about E-2 --

23 MR. FORMAN: Okay.

24 DR. TOMPKINS: -- which was a Superfund.

25 MR. FORMAN: Yes.

1 DR. TOMPKINS: So if you please go back and  
2 have it reflected in the record when people review what  
3 actually is currently labeled what is a Superfund and  
4 that our comments will correctly relate it to the  
5 Superfund and not what you have labeled as "E-2" because  
6 it's --

7 MR. FORMAN: Okay.

8 DR. TOMPKINS: -- two different pieces --

9 MR. FORMAN: But --

10 DR. TOMPKINS: -- of land.

11 MR. FORMAN: But -- Right, it's two  
12 different -- if I may clarify. Thank you. If I may  
13 clarify, it's two different parcels, Parcels E-2 and  
14 Parcel E.

15 Parcels are an administrative way of the Navy  
16 breaking up a big site so that it's workable and so  
17 that -- in our case, we have a team. We have a team of  
18 five project managers, and a lot of them get their own  
19 parcel and get to work it.

20 But this is purely administrative. If you talk  
21 to a regulator -- Mr. Cooper, Dr. Miya, Ms. Low -- it is  
22 one site. Hunters Point Shipyard is a National  
23 Priorities List site, period. It's one site. And  
24 however we change the lines of the parcels or create new  
25 parcels to make it easier to work, to them it's all one

1 site. It's all under the Superfund. It's all a CERCLA  
2 site, no matter what. So that's the good thing.

3 But I do agree with you, and let me just ponder  
4 that, because over time it does get confusing.

5 We've created, for instance, Parcel G out of  
6 what used to be Parcel D, and there is no "D" anymore.  
7 There's "G" and there's D-1 and D-2. So it does get  
8 very confusing.

9 We've tried with fact sheets and things over  
10 the years to try and put that out. But I do agree with  
11 you that it's confusing.

12 And let me ponder that about ways to make a --  
13 maybe make it a little less confusing as the years go on  
14 because you're right, from when I came on the program  
15 2002 to 2007, like you're saying to now it's 2013, it  
16 has changed. I agree with you. The contours of the  
17 parcels have changed, and the labeling of the parcels  
18 have changed. I do agree.

19 But rest assured, it's all part of one CERCLA  
20 site, and that CERCLA site's on the National Priorities  
21 List, and it's all Superfund.

22 DR. TOMPKINS: Okay.

23 MR. FORMAN: Okay.

24 MR. ROBINSON: Next question.

25 DR. TOMPKINS: Hold on. I was standing in

1 line.

2 MR. FORMAN: Okay.

3 FRANCISCO DA COSTA: I was listening to you  
4 very carefully on the charac- -- characteristics that  
5 you were describing.

6 MR. FORMAN: Okay.

7 MR. DA COSTA: And nowhere did you mention the  
8 address impacts that a company like Triple A did on the  
9 Navy sites.

10 MR. FORMAN: Okay.

11 MR. DA COSTA: And --

12 MR. FORMAN: Do you want me to do that now?

13 MR. DA COSTA: No, no.

14 MR. FORMAN: Oh.

15 MR. DA COSTA: No, no.

16 And the other thing is, linked to that, we need  
17 to know the exact type of work IT [sic] did, the exact  
18 type of work Tetra Tech did, the exact type of work Shaw  
19 did. And we don't find a document like that.

20 So you can come here and say so many times of  
21 this was removed, that was removed, whatever was  
22 removed. We want to know really, as you were trying to  
23 explain partially, about what really is adversely  
24 impacting the community and what exactly was done by all  
25 the companies that tried to do some abatement and

1 mitigation. We don't have a report.

2 MR. FORMAN: Well, okay. Thank you for that.  
3 Okay. Let me just summarize that.

4 When a company -- We have different  
5 companies. We happen to have -- ERRG here is one of  
6 our companies. We have Tetra Tech. We have Shaw, as  
7 you mentioned. We have ITSI. We have different  
8 companies.

9 The way the Navy thinks about it and, quite  
10 frankly, because the companies work for the Navy, the  
11 way the regulators would think about it is: It's the  
12 Navy. It's the Navy's problem, and it's the Navy's  
13 company that's doing it.

14 When these Navy companies produce documents,  
15 they're Navy documents. They do -- and it is good.  
16 They do have the company labels on each of their  
17 documents; that's true. But they also have the Navy  
18 logos and the Navy labels. And rest assured, it's all  
19 100 percent accountable to the Navy, not to any  
20 company.

21 Now, having said that, when we did these early  
22 actions -- I think you touched on a good point. I talk  
23 about all these early actions that I already wanted to  
24 give us credit for that we've done, even though we  
25 haven't really done the final permanent remedy yet.

1 Every time we've done one of those early actions, we're  
2 required, we're forced, to document that.

3 And that's -- it's documented in -- in  
4 reports. Each of these actions that we did early that  
5 we have already done is documented in something called a  
6 Removal -- Removal Completion Report. Wait a minute.

7 MR. COOPER: Close enough.

8 MR. FORMAN: I'm tired.

9 Pardon? Yeah.

10 No. I'm sorry. A Removal Action Completion  
11 Report. Sorry. I'm getting tired. An R.A.C.R., a  
12 RACR, a Removal Action Completion Report.

13 So each one of these actions that we did, like  
14 the action here [indicating] and the action here  
15 [indicating] and when we dug out things here  
16 [indicating] and when we dug out things here at the  
17 metal debris reef; and when we did this action in 1997,  
18 those were all removal actions. And each one of those  
19 is documented in a Removal Action Completion Report.

20 And I can show you those in -- In the  
21 information repository, I believe, on Third Street used  
22 to have a complete set of them. And each one of those  
23 has its binder. And if you go to that binder, you'll  
24 know which company did them for the Navy. It's still  
25 the Navy, but you'll see the company logo.

1                   But I -- rest assured, every one of those  
2                   actions requires that completion report. Okay.

3                   MR. ROBINSON: Next question.

4                   JOHN NJOROGGE: Hi. My name is John Mburu  
5                   Njoroge; that's J-o-h-n, M-b-u-r-u, N-j-o-r-o-g-e. I  
6                   often make comments at the San Francisco Board of  
7                   Supervisors.

8                   I came here today to find out more about the  
9                   naval shipyard and how you're going to be using it.  
10                  This is not Camp Pendleton. I have studied some  
11                  admiralty and maritime law.

12                  My question is when -- at what point the Bible  
13                  comes in. We've heard of Keith Meinhold and Zoe  
14                  Dunning. They were employees of the Navy or the -- of  
15                  the Marines. And then when they came on land and sought  
16                  work, they were having -- they had problems finding  
17                  employment here. I just wanted to comment -- you to  
18                  comment on that while I read this section from James in  
19                  the Bible.

20                  Look here, you rich men, now is the time  
21                  to cry and groan with anguished grief because  
22                  of all the terrible troubles ahead of you.

23                  Your wealth is even now rotting away, and  
24                  your fine clothes are becoming mere moth-eaten  
25                  rags.

1 MR. ROBINSON: Sorry, sorry.

2 THE COURT REPORTER: I have to see this person.

3 MR. ROBINSON: Sorry. Sorry.

4 Sir, I'm sorry. Did you have a question? This  
5 is time for questions.

6 MR. NJOROGGE: Oh. I wanted to read a section  
7 of the -- of James from the Bible just to encourage the  
8 use and the utility of the Bible, especially when you're  
9 making contracts.

10 MR. ROBINSON: Well, right now we're not doing  
11 the statement portion. This is -- If you have a  
12 question of the presentation, go ahead and do that, and  
13 then afterward we're doing statements. But this is just  
14 for questions on --

15 MR. NJOROGGE: Oh.

16 MR. ROBINSON: -- if you have a question that  
17 needs to be, you know, answered by Keith Forman.

18 MR. NJOROGGE: My question was employment  
19 contracts.

20 MR. ROBINSON: Okay. And what's that question  
21 again? Do you have a . . . ?

22 MR. NJOROGGE: Yeah. When it comes to question  
23 of employment contracts, people like Zoe Dunning and  
24 Keith Meinhold when they came off the seas and they  
25 landed on shore and were seeking employment, they had

1 problems somehow finding employment.

2 And I just wanted to -- for you to comment on  
3 where the marine -- or the naval employee comes onshore  
4 and then finds a problem seeking employment, even though  
5 they're still seeking employment, you know, with the  
6 same organization.

7 MR. ROBINSON: We didn't discuss employment on  
8 this proposal. We are just talking about what was going  
9 on with each -- "E" and Parcel UC-3. So we really  
10 didn't discuss any employment.

11 MR. NJORGE: Oh. On the remediation issues  
12 and covers and soil erosion, that sorts of things where  
13 people would have to come in onto -- onto the land, I  
14 thought -- I just wondered whether you would be  
15 seeking -- what sort of employment, what sort of  
16 employment issues would be coming up at that point, and  
17 when in fact does the Bible help and assist in that, in  
18 that sort of employment drive?

19 MR. FORMAN: Okay. We have -- Every December  
20 we do a year-end review presentation which shows the  
21 community different aspects of our program and the  
22 impact it has on local employment and the supplies that  
23 our contractors buy and so forth.

24 I -- The 2012 year-end review is posted to our  
25 Web site, and I can show you that after -- after the

1 meeting if you want to go there and look at it, at the  
2 statistics. But that shows you the impact that we  
3 have.

4 But we take it very seriously to try and employ  
5 local workers in the -- particularly those folks that  
6 live in the three ZIP Codes adjoining the base. And we  
7 take -- and over the years have taken that very  
8 seriously.

9 We also really encourage our primary  
10 contractors to use subcontractors that are in the area  
11 and that have their subcontractors buy supplies from the  
12 immediate neighborhood surrounding the base. And I  
13 think we do -- we do a fine job of that.

14 MR. ROBINSON: Next. Any other first-time  
15 questions? No?

16 Then Dr. Tompkins.

17 DR. TOMPKINS: I'm James Brown; it's Part B and  
18 Part C too. Can I borrow --?

19 MR. FORMAN: Sure. Questions or -- or comments  
20 now?

21 MR. ROBINSON: Questions.

22 DR. TOMPKINS: Questions. I keep on tabs.

23 MR. FORMAN: No problem.

24 DR. TOMPKINS: Okay. Here -- and could you  
25 flip to --

1 MR. FORMAN: Put your --

2 DR. TOMPKINS: First could you show me on the  
3 diagram that you have --

4 MR. FORMAN: Which one?

5 DR. TOMPKINS: -- the parcel --  
6 This one here.

7 MR. FORMAN: Okay.

8 DR. TOMPKINS: Where is the Superfund site that  
9 got it classified that has the landfill, the deep  
10 landfill, that when we were -- used to meet at the  
11 police station, and we had -- some of the old surviving  
12 black workers gave testimony. We had a stenographer  
13 taking record --

14 I don't know if you were there or not.

15 -- that they dumped the animals and many other  
16 things that were dumped there.

17 So where on this map, so I could better get an  
18 appreciation in the audience, of the solvent, the  
19 plumes? Are they underneath the landfill that got this  
20 classified as a Superfund site?

21 MR. FORMAN: Okay.

22 DR. TOMPKINS: Clarity.

23 MR. FORMAN: Okay.

24 DR. TOMPKINS: But at the specific site where  
25 they had it.

1 MR. FORMAN: Yes. Okay. Many things are  
2 running through my mind. That's -- that's quite a  
3 question.

4 Okay. When it became a Superfund site, it had  
5 to go through something with the EPA called the Hazard  
6 Ranking System, the HRS. The Hazard Ranking System is  
7 actually -- this is an interesting thing about Superfund  
8 sites. It's actually addition.

9 So there's two ways to become -- There's two  
10 kind of obvious ways to become a Superfund site. One,  
11 you can either have one site that's really, really bad;  
12 it gets a really high score for toxicity. Or -- and  
13 this is the case of Hunters Point -- you don't have a  
14 site that's really, really high in toxicity, but you  
15 have -- it's an additive function; you have many sites.

16 So when they did the hazard ranking score in  
17 the late 1980s, they actually totaled up seven different  
18 sites that had been identified, and that score  
19 exceeded a -- there's an arbitrary scale. It's --  
20 exceeded, I believe, 28.5 on the scale. And when that  
21 function exceeds 28.5, it automatically kicks it to a  
22 S- -- what you're calling a Superfund site.

23 So in this case, it was seven original sites  
24 that were identified that added together created a score  
25 that made Hunters Point a Superfund site.

1 Now, one of the sites that was added in was  
2 Site No. 1, which is the landfill, you're right.

3 DR. TOMPKINS: Okay.

4 MR. FORMAN: That's just one of the sites.

5 DR. TOMPKINS: But my question is --

6 MR. FORMAN: Yes.

7 DR. TOMPKINS: -- the landfill that you've just  
8 discussed --

9 MR. FORMAN: Yes.

10 DR. TOMPKINS: -- is that where you had the  
11 plumes? And that is where I'm leading to then --

12 MR. FORMAN: Okay. The landfill is --

13 DR. TOMPKINS: -- ground.

14 MR. FORMAN: The landfill is here, sir. The  
15 landfill's here.

16 DR. TOMPKINS: It's not to the right but there.

17 MR. FORMAN: No, it is not to the right.

18 DR. TOMPKINS: Okay. That's what I'm trying to  
19 get to --

20 MR. FORMAN: Oh, okay. So this is --

21 DR. TOMPKINS: -- realize, you know --

22 MR. FORMAN: Yes, sir. This is "E"  
23 [indicating].

24 DR. TOMPKINS: -- my geography correct.

25 MR. FORMAN: This is "E" [indicating]. This is

1 E-2 [indicating]. The relative contours of the landfill  
2 are, like, here [indicating].

3 DR. TOMPKINS: Good. Where I look at the land  
4 cap to smother out the fire is then on E-2 and not on  
5 this part here, correct?

6 MR. FORMAN: Correct, correct.

7 DR. TOMPKINS: Okay. So the ground plume is  
8 adjacent --

9 MR. FORMAN: The what?

10 DR. TOMPKINS: -- or partially --

11 MR. FORMAN: I'm sorry. The ground --

12 DR. TOMPKINS: The plume --

13 MR. FORMAN: -- water plume?

14 DR. TOMPKINS: IR --

15 Yes, for solvent plume --

16 MR. FORMAN: Okay.

17 DR. TOMPKINS: -- it is partially on E-2? Am I  
18 correct?

19 MR. FORMAN: Oh, yes, yes, yeah -- I mean,  
20 you're saying this, the Site 12 plume?

21 DR. TOMPKINS: Right.

22 MR. FORMAN: Yeah. Now, that's a Site 12  
23 plume, yes. It is partially on -- well, it's  
24 partially --

25 DR. TOMPKINS: Is it your --?

1 MR. FORMAN: -- on there, yeah.

2 DR. TOMPKINS: Is it your theory that the  
3 Superfund site is contributing to the pollution, the  
4 under groundwater plume and the pollution?

5 MR. FORMAN: No.

6 DR. TOMPKINS: Where --? What's the source,  
7 then, for that one?

8 MR. FORMAN: For the Site 12 --?

9 DR. TOMPKINS: Yes, sir.

10 MR. FORMAN: Let me defer to Mr. Bielskis here.  
11 Do you know off the top, is Site 12 groundwater  
12 plume -- what are -- what the actual source?

13 MR. DOUG BIELSKIS: There were soil and  
14 groundwater samples collected outside of the landfill to  
15 the east of the landfill but before the Parcel E/E-2  
16 boundary.

17 MR. FORMAN: Yeah.

18 MR. BIELSKIS: And there was actually some  
19 recent excavation work that the Navy performed.

20 DR. TOMPKINS: When you said "east,"  
21 Mr. Forman --

22 MR. BIELSKIS: Sorry.

23 DR. TOMPKINS: -- was pointing to the --

24 MR. FORMAN: Well, this is east.

25 DR. TOMPKINS: -- to the left.

1 MR. FORMAN: Well, this is --

2 DR. TOMPKINS: Is that east? So I'm trying to

3 get an idea.

4 MR. FORMAN: This is -- this is the eastern --

5 MR. BIELSKIS: West.

6 MR. FORMAN: -- portion of the E-2.

7 MR. BIELSKIS: West.

8 DR. TOMPKINS: Isn't that western?

9 MR. BIELSKIS: West.

10 MR. FORMAN: No.

11 MR. BIELSKIS: Yes.

12 DR. TOMPKINS: Where you're pointing is west,

13 Keith.

14 MR. FORMAN: Right there.

15 DR. TOMPKINS: East would be going towards the

16 docks --

17 MR. FORMAN: Okay.

18 DR. TOMPKINS: -- I think. Correct?

19 MR. FORMAN: This is north; this is we- --

20 well, okay.

21 MR. BIELSKIS: Correct.

22 MR. FORMAN: Yes.

23 MR. BIELSKIS: So between the landfill -- here,

24 easier if I point.

25 DR. TOMPKINS: Please.

1 MR. BIELSKIS: So the landfill is here  
2 [indicating]. There were soil samples and groundwater  
3 samples collected in this area.

4 The Navy also performed some recent excavation  
5 work over the last two years that helped determine that  
6 the source of the contamination was right in this area  
7 where I'm pointing [indicating], and it is outside of  
8 the landfill --

9 MR. FORMAN: That's --

10 MR. BIELSKIS: -- the basis of Mr. Forman's  
11 statement.

12 MR. FORMAN: Right.

13 DR. TOMPKINS: Okay.

14 MR. FORMAN: Thank you.

15 DR. TOMPKINS: Then may I see Slide -- Thank  
16 you for clarity on that. May I please see Slide 33, see  
17 the pointer again. Thank you.

18 I have somewhat of concern for the regulators  
19 in dealing with presumptions that your presentation was  
20 presented to us and that all of you run on the same  
21 presumption of the stability of the pollution of the  
22 oil, shall we say -- I don't know the viscosity of it  
23 but that it happens to be thick and that the chance of  
24 migration.

25 I submit to you, when I had the TAG grant some

1 years ago under the Bush administration, of course we --  
2 I sat down with EPA, and they couldn't discuss it with  
3 us in terms of that because global warming was not a  
4 reality. It's -- became the politics of science in a  
5 denial.

6 Now that we've finally grown past that and that  
7 we do deal with the rise of the bay and that the bay  
8 will rise in the future, given that 1 pound -- 1 gallon  
9 of fresh water weighs 6.5 pounds and supposedly will  
10 rise 10 feet -- and I forget what the weight is for salt  
11 water and of the bay -- with the additional pressure of  
12 additional water coming up above the current level,  
13 would that not affect the viscosity of the solution in  
14 the oil?

15 And what are the plans there to deal with  
16 prevention of pollution and contamination of the land?  
17 And because it would become soggy, wet, and et cetera,  
18 and leaching into the bay.

19 DR. MIYA: Great question, Dr. Tompkins. I  
20 appreciate that.

21 Remember how I was saying that --? First of  
22 all, remember how I was saying that -- that we were  
23 initially hoping to have a lot of the -- the covers  
24 along the shoreline be sort of more ecologically  
25 friendly? In this particular location, because of the

1 proximity of the oil to the bay, it's not going to be  
2 that.

3 It's going to be that riprap, that  
4 rocky-looking thing, for the purposes of exactly what  
5 you're talking about, the stability.

6 And in -- during the design process, one of the  
7 things that we've now been mandated to do, actually, is  
8 actually to as a part of the consideration for the  
9 design look into exactly what you're talking about with  
10 respect to sea level rise for that very reason.

11 And what we don't want to have happen is  
12 exactly what you're talking about. We don't want to  
13 have the sea rise go above that riprap wall and spill  
14 out over into where the contamination is because, yeah,  
15 there's a lot of different things that could happen  
16 there. One of them is exactly what you're talking  
17 about: It could be mobilized, and it could cause  
18 problems there.

19 But I think what I want to say is that we are  
20 mandated now, all of our -- us as regulators, to have  
21 that as a part of the consideration for the design to  
22 ensure that this riprap is going to be high enough. And  
23 in general, the remedies implemented along the bay  
24 throughout are rigorous enough to account for the  
25 potential for sea-level rise.

1           And so, just like you said, it's been a  
2     learning process for all of us in terms of, first of  
3     all, maybe not suggesting that it didn't -- it's not  
4     going to happen, but now being open to it and then now  
5     essentially planning for it, the possibility of it  
6     occurring.

7           And so there will be as a part of the design  
8     considerations to ensure that the -- the shoreline  
9     revetment at this location [indicating] and the remedy  
10    as a whole will be rigorous enough to account for that  
11    possibility.

12           DR. TOMPKINS: For the long-term effect,  
13    wouldn't it be cost effective to the taxpayer that it be  
14    removed rather than these half measures? And then you  
15    add up your multiple cost because the maintenance of the  
16    half-life span for the polonium, the radioactive  
17    material, is 1,600 years. So it's multiple cost.

18           Wouldn't it be long-term benefit to remove it  
19    rather than --?

20           DR. MIYA: So -- so what -- so what might  
21    happen, actually -- and we're still in the process of  
22    figuring exactly. There may be -- and we're still --  
23    it's still -- we're still in discussions, really, about  
24    this.

25           But there may be some that's closer to the bay

1 that is removed because of that possibility. There --  
 2 But it may als- -- and -- or it may also be treated  
 3 with -- by -- and removing it --

4 DR. TOMPKINS: Bacteria?

5 DR. MIYA: Yeah, with different methods. But  
 6 it's a combination of all these different things that  
 7 are going to be used at this location. And if in fact  
 8 the calculations that are done suggest that maybe a  
 9 particular portion of that contamination closer to the  
 10 bay is more susceptible or more likely to be migrating  
 11 or leaching, then we might actually have them take it  
 12 away at that point.

13 But yeah, I mean, it's -- right now the way  
 14 that it's written is -- is in a way that will allow us  
 15 to -- still flexible enough to do things like that,  
 16 to --

17 Yeah.

18 MR. COOPER: Can I jump in here?

19 I'd like to -- Dr. Tompkins, I think you're  
 20 right. We -- For -- We're talking about the oily  
 21 waste ponds, right?

22 DR. TOMPKINS: Mmhmm.

23 MR. COOPER: And we don't assume that thick  
 24 molasses waste oil down there is 100 percent stagnant.  
 25 We think that there are components of it that can move

1 very slowly; and that's why, you know, the Navy -- we've  
2 encouraged the Navy -- and the Navy stepped up -- to  
3 take some -- they're going to do some active treatment  
4 to remove the components of that waste oil that can  
5 move.

6 And that's what we really want to go after, and  
7 that's what Ryan was alluding to.

8 We're looking at three different technologies  
9 on how to do that. One, you know, is just simple  
10 digging and get the hot spots out. But we're also  
11 looking at what's called in situ thermal extraction.  
12 We'll heat up that waste oil a little bit and then get  
13 it to move into a -- an extraction well and pump it  
14 out.

15 And we're going to be trying out that  
16 technology. The Navy's hired some contractors. We're  
17 going to be trying out that technology later this year.  
18 That's a very exciting technology. It's pretty  
19 complicated.

20 I've actually got someone from EPA's Office of  
21 Research and Development to help me give oversight and  
22 comments to the Navy's cleanup, and we'll have check-ins  
23 with the -- with the community about how successful this  
24 in situ -- that means just in place -- will warm --  
25 thermal extraction, will warm it up, and then hopefully

1 we'll get it to move into a well where we can pump it  
2 out.

3 Right now we can't pump it out. It's so thick;  
4 it won't come out normally. So . . .

5 DR. TOMPKINS: Okay.

6 DR. MIYA: But also just again emphasizing that  
7 this shoreline revetment is constructed -- will be  
8 constructed in this way, a more rigorous way, because of  
9 this proximity to here, as well as the design for it  
10 will be accounting for potential sea-level rise and  
11 things like that.

12 DR. TOMPKINS: Basically would be solid cement  
13 wall then?

14 DR. MIYA: I mean, it's going to be -- it's  
15 going to be rigorous because of its proximity to the bay  
16 and -- yeah. So, I mean, it's -- it is part of the  
17 consideration.

18 DR. TOMPKINS: Can we go back, please, to  
19 Slide 31, Mr. Forman? Oh, thank -- oops.

20 DR. MIYA: Okay.

21 DR. TOMPKINS: All right.

22 No one else? Okay. I'm on a roll. Hey, I  
23 give three-hour lectures, used to.

24 On this piece here previously in your  
25 presentation that when you put in the wall -- and I

1 thought you were pointing in this area -- or wherever  
2 it's at --

3 MR. FORMAN: The wall will be between the site  
4 and the bay.

5 DR. TOMPKINS: No, no, not that wall.

6 MR. FORMAN: Oh.

7 DR. TOMPKINS: But in previous remediation work  
8 that you did when you put the corrugated steel --

9 MR. COOPER: The sheet-pile wall.

10 DR. TOMPKINS: Sheet -- The steel?

11 MR. FORMAN: Sorry. The sheet-pile wall went  
12 like that [indicating].

13 DR. TOMPKINS: Okay. I remember going back a  
14 ways, and we made comments in the first review;  
15 Dr. Palmer, Dr. Grist, and myself made comments that the  
16 Navy ran into some chlorine containers that they used in  
17 welding, and it was under pressure and that they moved  
18 the wall where they were placing the Sheetrock rather  
19 than remove the containers and left it.

20 We have a strong objection, as we put in our  
21 first letter, to leaving that because you're leaving a  
22 time -- you're leaving a ticking time bomb in that as we  
23 know, everything will rust in water. In time it will  
24 decay. That gas is under pressure. Chlorine is the  
25 basic element of mustard gas.

1                   And that if my great grandchildren are there --  
2           I'm -- will be gone and in the dirt, but they may --

3                   MR. FORMAN:   That happened --

4                   DR. TOMPKINS:   -- inhale it or whomever may be  
5           victim to this gas release because of just plain factors  
6           of nature.   Wouldn't it be wiser and safer to remove  
7           that from the area?

8                   Also, in the documents you presented us with,  
9           Mr. Forman, I didn't see any reference to U.S.  
10          Geological reports in their -- in their involvement and  
11          analysis of this, because I'm concerned about -- and for  
12          your discu- -- for your discussion and for your  
13          consideration, in the previous map that the U.S.  
14          Geological Department put out, all of this was in a red  
15          zone on the shoreline of the base, meaning it's  
16          susceptible to liquefaction.

17                   That's a very valenic equation as we were  
18          talking about on Slide 33.   What would happen, when the  
19          earth shakes, that would then create mobility for not  
20          only for oil, but what's in the landfill as well.

21                   I also have concerns of we talked about in  
22          previous -- and I'll put it in for a comment on going on  
23          record and then also in writing -- that there were no  
24          parallel holes drilled for soil samples -- confirmation  
25          samples back in '96, '94 when the Navy first started

1 doing some drilling before you came on board and that  
2 they did one per acre. There were 23.

3 And then after the 2000 fire, there were no  
4 holes drilled to see what are the chemical changes; and  
5 that given the possibility, there was no one -- I asked  
6 EPA, but I didn't get a response about the creation of  
7 dioxin in the underground fire that occurred for  
8 3 1/2 months, again, before you arrived. What are the  
9 new compounds? What are the risk, the solubility of the  
10 dioxin that may be there?

11 None of these things have been addressed as  
12 you're asking the Navy to go further, hit the bottom. I  
13 think would be prudent -- I'm asking for consideration  
14 that the holes that were drilled back in the '90s be  
15 done for analysis so that you reduce the risk to the  
16 population.

17 DR. MIYA: You're talking about Parcel E-2?

18 DR. TOMPKINS: E-2, exactly, in that -- and  
19 that "E" itself, that the containers, that the chlorine  
20 gas be removed because of corrosion and decay. It may  
21 not happen in a hundred years in our lifetime, but  
22 long-term process it should be considered in terms of  
23 removal and not be a hot spot that can be handled.

24 MR. FORMAN: Okay.

25 DR. TOMPKINS: But I think -- 'cause we asked

1 for ground x-rays to then hunt down these possible where  
2 these places that wasn't addressed, and I'm asking again  
3 in the process now --

4 MR. FORMAN: Dr. Tompkins, it's my --

5 DR. TOMPKINS: -- and remove it.

6 MR. FORMAN: My only objection is we are still  
7 at clarifying questions. So it's not -- that really  
8 sounded more like a comment or request, but not a  
9 question.

10 DR. TOMPKINS: Request, then -- well, the other  
11 part, in your presentation, in the previous -- not this  
12 one but in previous but you alluded to here in your  
13 document on radiation and your radi- -- scans that you  
14 did --

15 MR. FORMAN: Okay.

16 DR. TOMPKINS: -- please clarify for me,  
17 because, as I understand it, that the cover from 2005  
18 was presented to us to smother the fire out, and that's  
19 referred and that's what you scanned. But we are not  
20 going back to the original dirt and what's the  
21 contamination level before the cap. So what you're  
22 scanning is really the work that the Navy did.

23 And you plan to put another foot of dirt on top  
24 of that?

25 MR. FORMAN: Yeah, the -- okay. So,

1 Dr. Tompkin- --

2 DR. TOMPKINS: It's so clean, but that's the  
3 Navy's --

4 MR. FORMAN: Okay.

5 DR. TOMPKINS: -- clean soil they brought in --

6 MR. FORMAN: Yes, sir.

7 DR. TOMPKINS: -- up clean.

8 MR. FORMAN: Yes, sir. But that's --

9 DR. TOMPKINS: And that's why it's baseline.

10 MR. FORMAN: That's really a topic for another  
11 day.

12 MR. ROBINSON: E-2, is it?

13 MR. FORMAN: Yeah.

14 We're talking about the landfill cover. And  
15 we -- much of the work that you were alluding to we have  
16 discussed and we have proposed, but we haven't done it  
17 yet. So it's not -- it's not work that has been done  
18 yet.

19 DR. TOMPKINS: Oh.

20 MR. FORMAN: We still have -- okay. We still  
21 have work to do on the landfill. But that's in  
22 Parcel E-2, and that's a little different than here.

23 Here what we're proposing on these large  
24 expanses for Site 2, for instance, which runs here,  
25 okay, we are going to have to -- we're most likely going

1 to have to do a surface scan. And that instrumentation  
2 in the surface scan will tell us and will therefore  
3 certify the cleanliness of, if you want to call it that,  
4 the top 12 inches.

5 In addition to that, if you put 2 feet of clean  
6 fill on top of 12 inches of certified nonrad soil, as we  
7 did at 7 and 18, then you have 3 feet.

8 DR. TOMPKINS: Okay.

9 MR. FORMAN: Okay.

10 DR. TOMPKINS: But you do understand what  
11 Dr. Sudeep and I were talking about in the previous -- I  
12 had to leave -- when you presented your radiological  
13 scan on E-2 since we're talk -- it's all "E," since you  
14 clarified that for me --

15 MR. FORMAN: Okay.

16 DR. TOMPKINS: -- but this is more  
17 contaminated, that basically we're just examining the  
18 cap and not the underlying --

19 MR. FORMAN: Okay. Well, that's the -- that's  
20 a topic for another day.

21 MR. ROBINSON: That's the E-2.

22 MR. FORMAN: Parcel E-2. And that initial  
23 survey that was done back in the day, there's going to  
24 be another survey that's done. And in fact, a lot's  
25 going to happen on the Parcel E-2 cap and what might

1 have to be removed and put back in place to do a final  
2 rad survey on the surface on that.

3 DR. TOMPKINS: Will that be --?

4 MR. FORMAN: But that, again, is -- that's  
5 Parcel E-2, and that's -- we will talk --

6 DR. TOMPKINS: For consideration --

7 MR. FORMAN: We will talk about that later on  
8 in 2013.

9 DR. TOMPKINS: Okay.

10 MR. FORMAN: In fact, we're going to talk  
11 about --

12 DR. TOMPKINS: For samples --

13 MR. FORMAN: -- in --

14 In a future community meeting here in 2013,  
15 we'll talk about the remedial design for E-2.

16 MR. COOPER: Great.

17 DR. TOMPKINS: Okay.

18 MR. FORMAN: Okay.

19 DR. TOMPKINS: But -- oh. In one of your  
20 points -- and then I'll shut up. My luck just did --  
21 went on.

22 That when you ask for community input and  
23 concern as part of it that for the record for the  
24 regulators -- some of you guys weren't here -- but back  
25 when Mr. Bloom was part of the team that's set up,

1 Prop P, that 86.5 percent of the residents of San  
2 Francisco want to clean up to residential level.

3 And my concern later as well, are we still  
4 keeping that point to the sixth power in terms of the  
5 level of clean of contaminations? Is that still  
6 employed as it also applies to radiation and the  
7 chemicals, or has it been a variance in that?

8 DR. MIYA: There's been -- yeah. So this is  
9 Ryan Miya from the DTSC State of California.

10 There has been cleanup levels that have been  
11 established for specific radionuclides of concern  
12 because based on sort of past uses in each area, there's  
13 different -- different types of radionuclides were  
14 there. And those numbers, they are -- they're still in  
15 that range of -- the risk range of the 10 to the minus  
16 4, 10 to the minus 6.

17 But it -- they have -- they've already been  
18 established and vetted with the State of California and  
19 established and carried forward and then therefore also  
20 used just as they've used elsewhere on the base to  
21 clear -- or I shouldn't say clear.

22 I should just say there's a recommendation that  
23 comes forward at the end of the process with the  
24 rad-impacted locations to state that the State of  
25 California recommends that from the radiological

1 perspective, there's -- the property can be used for  
2 unrestricted purposes.

3 DR. TOMPKINS: Okay.

4 DR. MIYA: And it's those numbers that we carry  
5 forward to the end of the process and ensure that it's  
6 cleaned up. That's the -- and it is consistent with  
7 what you're talking about.

8 DR. TOMPKINS: So the clarity is that it's  
9 equivalent to the 10 to the 6 power --

10 DR. MIYA: Yes, it's in the --

11 DR. TOMPKINS: -- in that --

12 DR. MIYA: -- in risk range.

13 DR. TOMPKINS: -- radiological and chemical --

14 DR. MIYA: It's the sa- --

15 DR. TOMPKINS: -- equivalent?

16 DR. MIYA: Yeah, there's -- and --

17 DR. TOMPKINS: Okay.

18 DR. MIYA: And it's -- and I'll just say also  
19 that for the rad stuff, it's like very close to  
20 background levels that we're cleaning --

21 DR. TOMPKINS: Thank you.

22 DR. MIYA: -- up to. Thank you.

23 DR. TOMPKINS: That one's for the record.

24 MR. ROBINSON: All rightie. Now before that I  
25 want to check with Christine, you want to take a little

1 break? Are your fingers okay?

2 THE COURT REPORTER: How much longer are we  
3 going?

4 MR. ROBINSON: Let's --  
5 Take a five-minute break?

6 MR. FORMAN: Yeah.

7 MR. ROBINSON: Yeah.

8 We'll just take a five-minute break, and then  
9 we'll start and finish it with your chance to give  
10 statements on the Proposed Plan. So we'll be back in  
11 five minutes.

12 *(Whereupon, a recess is taken from*  
13 *8:32 p.m. to 8:38 p.m.)*

14 MR. ROBINSON: Okay, everybody. So let's head  
15 into the homestretch now and take our seats again.

16 MR. FORMAN: Yes, sir.

17 MR. ROBINSON: All right. Now we're going into  
18 our spoken comments portion of the Proposed Plan. This  
19 format will be the same as clarifying questions except  
20 for the fact that the Navy will not speak at this  
21 portion.

22 Please get in line at the microphone. Limit to  
23 yourself for one time -- for one comment at a time.

24 Please begin each comment by stating your name and, if  
25 necessary, spelling it for our court reporter to make

1 | sure we get it proper.

2                   And you will have three minutes to give your  
3       comments. I will give you a two-minute, one-minute, and  
4       30-second warning to let you know when your time is  
5       running down.

6           The Navy will not respond to any comments  
7   tonight, but your comments will be recorded, and your  
8   comments and the Navy's responses will be in the Record  
9   of Decision.

```
10         After time is up, please sit down.  And then
11         once everybody has had a chance to make one comment,
12         you'll be allowed to get up for a second round of
13         comments.
```

```
14         So let's get started, please.  State your name
15 for the record, and go ahead and give your comment.
```

| 16 | COMMENT |
|----|---------|
|----|---------|

17 BY SAUL BLOOM:

18                   Yes. My name is Saul Bloom. I'm the executive  
19       director of Arc Ecology, and we are the current  
20       community technical advisor through the EPA Technical  
21       Assistance Grant.

22 I have four comments, the first of which I'll  
23 make right now, which is that we are formally requesting  
24 that the Navy, regulators, extend the public comment  
25 period for the Proposed Plan to March 31.

1 Thank you.

2 COMMENT

3 BY RAYMOND TOMPKINS:

4 Hi. I don't really need to spell my name, do  
5 I --

6 THE COURT REPORTER: No.

7 DR. TOMPKINS: -- after all these years? Okay.  
8 Dr. Tompkins, for the record.

9 My concern on that in terms of the comment is  
10 that, as I've stated in the letter previously when we  
11 reviewed E-2 and to the regulators as well for  
12 consideration in that matter, that I believe the  
13 presumptive remedy is incorrect being utilized here for  
14 the remediation work on this particular site of "E."

15 Given the definition and the supporting  
16 evidence that I looked at and reviewed, I do not -- for  
17 the volume, according to RASO and Dr. Lowmax [sic],  
18 Laurie Lowmax, who gave a report to the RAB in that her  
19 projection of the total volume of soil what was impacted  
20 at the E-2 site that it was 23 acres; in some areas it  
21 goes to 36 feet deep, and the soil volume is 20 percent  
22 of the total volume.

23 I do not see that as municipal waste and that  
24 the remedy is inappropriate being used there. I don't  
25 see radiation coming out of people's sinks.

1           I think also for consideration on this -- on  
2   this issue of presumptive remedy, given the type of  
3   radiation from the radium dials -- and I'm an old baby  
4   boomer, and they used to make kids watches with the glow  
5   stuff on it and that as a child, yes, it crumbled in my  
6   hand. It came off real quick, and that we know the  
7   second product is radon gas. Great radon gas as being a  
8   gas means that it's mobile. The possibility of this,  
9   especially with land use and rise being in the area,  
10   this could migrate.

11           And then the third product is polonium, which  
12   has a life span -- half-life span of 1,600 years being  
13   radioactive. That's a long time for the government to  
14   be dealing with that.

15           Again, I do not feel that this -- and also  
16   under the section that talked about being close to  
17   tides -- thank you -- that given all these variables and  
18   limitations, that we're scoting -- scooting very close  
19   to the edge in terms of what the law and it's up to  
20   interpretation.

21           I think for human safety, a more rigid and  
22   vigorous approach should be used in the analysis and  
23   approach in terms of solving this problem.

24           Thank you.

25           MR. FORMAN: Thank you, Dr. Tompkins.

FURTHER COMMENT

BY SAUL BLOOM:

Saul Bloom, Arc Ecology, second comment.

In 2009 the Regional Water Control Board entered into an order with -- amendment with the San Francisco Airport in which it established a research program that Arc Ecology is involved in engineering to establish a wetlands on the property in -- on Parcel E midway from the point in between the two zones that the Proposed Plan calls for riprapping or at least doing some additional shore armoring.

We look forward to seeing more detail within the final Proposed Plan and the ROD that indicates how the Navy is contemplating making this area accessible for doing that kind of wetlands restoration activity on that site.

So that is something that we'll be going into in further detail in our formal written comments, but I wanted to raise that issue as an oral comment right now for you to consider.

And that final point on that is that my understanding, according -- based on the settlement of litigation between the City and the Sierra Club and the Audubon Society with regard to the Environmental Impact Report for the site, that is now the preferred

1 alternative use for -- that wetlands is now the  
2 preferred alternative use consistent with the  
3 redevelopment plan for this particular site.

4 So thank you.

5 MR. FORMAN: Thank you, Mr. Bloom.

6 DR. TOMPKINS: Anybody else?

7 COMMENT

8 BY JOHN NJOROGGE:

9 Hi. I'm intending to make some comments about  
10 CEQA and the environmental impact of this project as  
11 well as the impact it has on other people here in the  
12 Bay Area who are churchgoers and people struggling in  
13 this community basically.

14 THE COURT REPORTER: Please speak into the  
15 microphone.

16 MR. NJOROGGE: Sure.

17 THE COURT REPORTER: And restate your name,  
18 please.

19 MR. NJOROGGE: John, last name N-j-o-r-o-g-e.

20 From James, Chapter 5:

21 Look here, you rich men, now is the time  
22 to cry and groan with anguished grief because  
23 of all the terrible troubles ahead of you.

24 Your wealth is even now rotting away, and  
25 your fine clothes are becoming mere moth-eaten

1           rags. The value of your gold and silver is  
2           dropping fast, yet it will stand as evidence  
3           against you, and eat your flesh like fire.  
4           That is what you have stored up for yourselves  
5           to receive on that coming day of judgment.

6           For listen! Hear the cries of the field  
7           workers whom you have cheated of their pay.  
8           Their cries have reached the ears of the Lord  
9           of Hosts.

10          You have spent your years here on earth  
11          having fun, satisfying your every whim, and  
12          now your fat hearts are ready for the  
13          slaughter. You have condemned and killed good  
14          men who had no power to defend themselves  
15          against you.

16          Now as for you, dear brothers who are  
17          waiting for the Lord's return, be patient,  
18          like a farmer who waits until the autumn for  
19          his precious harvest to ripen. Yes, be  
20          patient. And take courage, for the coming of  
21          the Lord is near.

22          Don't grumble about each other,  
23          brothers. You are yourselves above criticism  
24          [sic]. For see! The great Judge is coming.  
25          He is almost here (let Him do whatever

1                   criticizing must be done).

2                   MR. FORMAN: Thank you, sir.

3                                   FURTHER COMMENT

4 BY SAUL BLOOM:

5                   Saul Bloom, Arc Ecology, Comment No. 3.

6                   With regard to liquefaction and community  
7 acceptance with regard to the ultimate remedy of the  
8 site, we would encourage the Navy to -- in its  
9 presentation about the engineering for site  
10 stabilization and that sort of thing to talk about the  
11 impacts of failure in more detail, not just because we  
12 are concerned about necessarily failure, but because we  
13 think that in co- -- in discussing the impacts of  
14 failure with regard to health risk and that sort of  
15 thing will help clarify for the community the relative  
16 risk of failure for these remedies.

17                   People become confused. When people talk about  
18 the site fissuring; when people talk about any of these  
19 institutional controls failing, oftentimes we don't talk  
20 enough about is what is in fact the ramification of such  
21 a failure. And in many cases, what we are finding is  
22 that the ramifications of these failures are far less  
23 than what people are concerned about.

24                   As a result, articulating these assessments  
25 will be much more helpful to the community in terms of

1 understanding why a particular remedy is selected and  
2 how that remedy will be engineered and what -- the  
3 ramifications of that remedy's failure. I think those  
4 are going to be very, very helpful in terms of  
5 translating these decisions back to the community.

6 MR. FORMAN: Thank you, sir.

7 FURTHER COMMENT

8 BY RAYMOND TOMPKINS:

9 I have to concur with Mr. --

10 Oh. Dr. Raymond Tompkins.

11 I have to concur with Mr. Bloom's statement  
12 100 percent.

13 As I was talking to -- and then I was told I  
14 can't discuss that. But in this point, confirmation,  
15 confirmation, confirmation. My criticism was: In the  
16 presenting of this evening, there was a lot of  
17 assumptions without confirmation, in my view.

18 And that in the future studies for those holes,  
19 those -- in 2000 -- no -- 1996, I believe, in '93 when  
20 those bores were done, I would like to see confirmation  
21 for a couple of reasons. Synergistic effect.

22 After the fire, what other harmful products can  
23 be possibility in that how is that brought up in your  
24 plan to address that and to then put the limitation?  
25 Because one of the issues when -- as Mr. Bloom just

1 talked about, when the systems or whatever we create --  
2 we're human beings. There's always a possibility of  
3 failure. Then what are the protections safeguard?

4 And would the Navy pay for damages from this  
5 failure of the site to the community as it affects their  
6 impact in health or property under, for example, a  
7 serious earthquake? I haven't heard or -- in our  
8 discussions or presented publicly how will this hold up  
9 under an earthquake?

10 Since Japan had a 9, the earth is changing.  
11 We've had historically a 8.2. We had the echoing effect  
12 of the Cypress Freeway, although it was a 7 because of  
13 the rever- -- re- -- I'm not a geologist, but the  
14 wavelength being not -- what do they call it? --  
15 increase because of the bouncing to and forth. This  
16 property is susceptible to this under certain  
17 conditions. How is that going to be addressed, and how  
18 are the safeguards going to be placed over there?

19 I haven't seen it or any of the public  
20 presentations. You may have it on record, but we  
21 haven't heard about it, since it's no longer a RAB or  
22 technically to talk about it.

23 Could you please in future discuss that to the  
24 public and the Navy's responsibility and liability of  
25 these. Unfortunately, the times we live in drastic

1 situations, and how would that be respond that would  
2 hold down confusion under serious situation?

3 Thank you.

4 MR. FORMAN: Thank you.

5 FURTHER COMMENT

6 BY SAUL BLOOM:

7 Saul Bloom, Arc Ecology, fourth and final  
8 comment with regard to Proposition P. I would be remiss  
9 if I did not mention Proposition P.

10 Again, my recommendation to the Navy with  
11 regard -- and to the regulators with regard to the  
12 discussion of Proposition P is to acknowledge  
13 Proposition P for what it is, which is the community's  
14 concern about the quality of the cleanup at the site.

15 And in terms of presentation of why specific  
16 remedies and health risks are selected, I would highly  
17 recommend that the discussion take place in light of  
18 Prop P as a reference point getting what the  
19 difficulties are, meeting the criteria of what the  
20 relative benefits would be.

21 That way, again, as with the liquefaction  
22 question, the community would be better able to  
23 understand why a particular remedial decision is  
24 selected versus the sense that most people get, which is  
25 that Prop P is just simply not a topic for discussion

1 among the regulators and the Navy, which I don't believe  
2 is in fact the case.

3 I understand that everybody is trying hard to  
4 figure out how to address the community's selectio- --  
5 cleanup criterion. And I think the best way to do that,  
6 as a friendly suggestion, would be to talk about it  
7 effect -- positively and say: It's a recognized concern  
8 of the community. Here's why we are doing what we are  
9 doing relative to that. And I think that will go a long  
10 way to address people's concerns about the selection of  
11 remedies for the site.

12 Thank you very much.

13 MR. FORMAN: Thank you, sir.

14 MR. ROBINSON: I guess there are no other  
15 questions. So this will conclude our meeting for  
16 tonight. Thank you very much for coming.

17 And we still have until March 15th to put in  
18 your written comments in to the Navy of the Parcel E and  
19 UC-3. Thank you again and good night.

20 *(Off record at 8:52 p.m., 2/28/13.)*

| 1.          | I have four comments, the first of which I'll make right now, which is that we are formally requesting that the Navy, regulators, extend the public comment period for the Proposed Plan to March 31.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | After consulting with the HPNS <sup>1</sup> regulators, the Navy extended the public comment deadline from March 15, 2013, to April 1, 2013.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2.          | <p>In 2009, the Regional Water Control Board entered into an order with — amendment with the San Francisco Airport in which it established a research program that Arc Ecology is involved in engineering to establish a wetlands on the property in — on Parcel E midway from the point in between the two zones that the Proposed Plan calls for riprapping or at least doing some additional shore armoring.</p> <p>We look forward to seeing more detail within the final Proposed Plan and the ROD that indicates how the Navy is contemplating making this area accessible for doing that kind of wetlands restoration activity on that site.</p> <p>So, that is something that we'll be going into in further detail in our formal written comments, but I wanted to raise that issue as an oral comment right now for you to consider.</p> <p>And that final point on that is that my understanding, according — based on the settlement of litigation between the City and the Sierra Club and the Audubon Society with regard to the Environmental Impact Report for the site, that is now the preferred alternative use for — that wetlands is now the preferred alternative use consistent with the redevelopment plan for this particular site.</p> | <p>During preparation of the FS Report for Parcel E (<a href="#">ERRG, 2012</a>), the Navy previously responded to Arc Ecology comments regarding the compatibility of the CERCLA remedial alternatives with the CCSF's future redevelopment plans (as guided by the 2010 HPNS Redevelopment Plan [<a href="#">SFRA, 2010b</a>]). The previous responses are briefly summarized in the following paragraphs.</p> <p>The CCSF's EIR (<a href="#">SFRA, 2010a</a>) was prepared pursuant to CEQA, and was the subject of litigation between the CCSF and Sierra Club/Audubon Society. The court-approved settlement agreement between the CCSF and Sierra Club/Audubon Society identified design concepts (including constructed wetlands for stormwater management) for portions of Parcel E that were to be implemented by the CCSF's developer (i.e., Lennar Corporation). CEQA does not apply to the Navy's cleanup decisions under CERCLA, and there is no legal requirement for the Navy to conform to CEQA. Nonetheless, the Navy reviewed the CCSF's EIR and determined that the remedial alternatives presented in the FS Report (which formed the basis of the selected remedy in this ROD) are compatible with the future reuses identified in the 2010 HPNS Redevelopment Plan.</p> <p>The Navy evaluated an appropriate range of shoreline protection technologies and process options in Appendix D of the FS Report. This evaluation concluded that the most viable shoreline protection options for the Parcel E shoreline are armoring (rock revetment) and hybrid stabilization using natural shoreline materials with underlying rock armor. Section 4.2.2.3 of the FS Report identifies a conceptual design for implementing these two options along different sections of the Parcel E shoreline. The conceptual designs presented in the FS Report will be further refined in the RD and will not conflict with CCSF's plans to construct stormwater management systems (including constructed wetlands).</p> |

3. With regard to liquefaction and community acceptance with regard to the ultimate remedy of the site, we would encourage the Navy to — in its presentation about the engineering for site stabilization and that sort of thing to talk about the impacts of failure in more detail, not just because we are concerned about necessarily failure, but because we think that in co— — in discussing the impacts of failure with regard to health risk and that sort of thing will help clarify for the community the relative risk of failure for these remedies.
- People become confused. When people talk about the site fissuring; when people talk about any of these institutional controls failing, often times we don't talk enough about what is in fact the ramification of such a failure. And in many cases, what we are finding is that the ramifications of these failures are far less than what people are concerned about.
- As a result, articulating these assessments will be much more helpful to the community in terms of understanding why a particular remedy is selected and how that remedy will be engineered and what — the ramifications of that remedy's failure. I think those are going to be very, very helpful in terms of translating these decisions back to the community.

The Navy will describe the potential risks associated with liquefaction in the RD and will further evaluate this very important part of the design, including consulting with other technical experts, to make sure that the final cover is built to withstand the appropriate design earthquake and comply with numerous other regulatory requirements.

Specifically, the Navy will perform, as part of the RD, a comprehensive static and seismic slope stability evaluation for the covers at Parcel E to ensure that the proposed design can, consistent with the requirements of Title 22 Cal. Code Regs. § 66264.310(a)(5), accommodate the inertial forces generated by the maximum credible earthquake while maintaining the integrity of the cover system. Also, in accordance with the requirements of Title 22 Cal. Code Regs. § 66264.310(b)(1) and (b)(5), the Navy will maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events throughout the post-closure period (which will extend for as long as necessary to protect human health and the environment).

4. I would be remiss if I did not mention Proposition P.
- Again, my recommendation to the Navy with regard — and to the regulators with regard to the discussion of Proposition P is to acknowledge Proposition P for what it is, which is the community's concern about the quality of the cleanup at the site.
- And in terms of presentation of why specific remedies and health risks are selected, I would highly recommend that the discussion take place in light of Prop P as a reference point getting what the difficulties are, meeting the criteria of what the relative benefits would be.
- That way, again, as with the liquefaction question, the community would be better able to understand why a particular remedial decision is selected versus the sense that most people get, which is that Prop P is just simply not a topic for discussion among the regulators and the Navy, which I don't believe is in fact the case.
- I understand that everybody is trying hard to figure out how to address the community's selection — cleanup criterion. And I think the best way to do that, as a friendly suggestion, would be to talk about it effect — positively and say: It's a recognized concern of the community. Here's why we are doing what we are doing relative to that. And I think that will go a long way to address people's concerns about the selection of remedies for the site.
- As described on page 18 of the Proposed Plan, the community acceptance criterion is one of two modifying criteria and has been evaluated based on comments provided in the course of the CERCLA remedy selection process, including those received on the Proposed Plan, and other community input, including Proposition P. Consistent with the NCP [Title 40 CFR § 300.430(e) and (f)], the Navy's evaluation of the community acceptance criterion is documented in this ROD, which includes the subject responsiveness summary. The Navy notes that several engaged residents who live in close proximity to HPNS have agreed with the preferred alternatives published in the Proposed Plan, and their agreement documents community acceptance.
- Proposition P was adopted by the CCSF Board of Supervisors in Resolution 634-01 in August 2001. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible. The Navy, in its FS Report that was concurred upon by the other Federal Facility Agreement signatories, has determined that the selected remedies are the most feasible and effective.
- The Navy also notes that Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E.

|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | <p>My concern on that in terms of the comment is that, as I've stated in the letter previously when we reviewed E-2 and to the regulators as well for consideration in that matter, that I believe the presumptive remedy is incorrect being utilized here for the remediation work on this particular site of "E."</p> <p>Given the definition and the supporting evidence that I looked at and reviewed, I do not — for the volume, according to RASO and Dr. Lowmax [sic], Laurie Lowmax, who gave a report to the RAB in that her projection of the total volume of soil what was impacted at the E-2 site that it was 23 acres; in some areas it goes to 36 feet deep, and the soil volume is 20 percent of the total volume. I do not see that as municipal waste and that the remedy is inappropriate being used there. I don't see radiation coming out of people's sinks.</p> <p>I think also for consideration on this — on this issue of presumptive remedy, given the type of radiation from the radium dials — and I'm an old baby boomer, and they used to make kids watches with the glow stuff on it and that as a child, yes, it crumbled in my hand. It came off real quick, and that we know the second product is radon gas. Great radon gas as being a gas means that it's mobile. The possibility of this, especially with land use and rise being in the area, this could migrate.</p> <p>And then the third product is polonium, which has a life span — half—life span of 1,600 years being radioactive. That's a long time for the government to be dealing with that.</p> <p>Again, I do not feel that this — and also under the section that talked about being close to tides — thank you — that given all these variables and limitations, that we're scoting — scoting very close to the edge in terms of what the law and it's up to interpretation. I think for human safety, a more rigid and vigorous approach should be used in the analysis and approach in terms of solving this problem.</p> | <p>The Navy wishes to clarify that it has not relied upon the containment presumption in developing or evaluating the remedial alternatives for Parcel E. Further, the Navy wishes to clarify that Parcel E is distinct from the adjoining Parcel E-2. Parcel E is one of six parcels (Parcels A through F) originally designated for environmental restoration. In September 2004, the Navy divided Parcel E into two parcels (Parcels E and E-2) to facilitate closure of the Parcel E-2 Landfill and its adjacent areas. Parcel E-2 was the subject of a separate evaluation process, performed in accordance with CERCLA<sup>2</sup> and the NCP, that culminated with a signed ROD in November 2012. This ROD addresses Parcel E and is unrelated to the Parcel E-2 Landfill referred to in this comment.</p> |

2. I have to concur with Mr. Bloom's statement 100 percent.
- As I was talking to — and then I was told I can't discuss that. But in this point, confirmation, confirmation, confirmation. My criticism was: In the presenting of this evening, there was a lot of assumptions without confirmation, in my view.
- And that in the future studies for those holes, those — in 2000 — no — 1996, I believe, in '93 when those bores were done, I would like to see confirmation for a couple of reasons. Synergistic effect.
- After the fire, what other harmful products can be possibility in that how is that brought up in your plan to address that and to then put the limitation? Because one of the issues when — as Mr. Bloom just talked about, when the systems or whatever we create — we're human beings. There's always a possibility of failure. Then what are the protections safeguard?
- And would the Navy pay for damages from this failure of the site to the community as it affects their impact in health or property under, for example, a serious earthquake? I haven't heard or — in our discussions or presented publicly how will this hold up under an earthquake?
- Since Japan had a 9, the earth is changing. We've had historically a 8.2. We had the echoing effect of the Cypress Freeway, although it was a 7 because of the rever— — re— — I'm not a geologist, but the wavelength being not — what do they call it? — increase because of the bouncing to and forth. This property is susceptible to this under certain conditions. How is that going to be addressed, and how are the safeguards going to be placed over there?
- I haven't seen it or any of the public presentations. You may have it on record, but we haven't heard about it, since it's no longer a RAB or technically to talk about it.
- Could you please in future discuss that to the public and the Navy's responsibility and liability of these. Unfortunately, the times we live in drastic situations, and how would that be respond that would hold down confusion under serious situation?
- 

As stated in the response to comment 3 from Mr. Bloom, the Navy will perform, as part of the RD, a comprehensive static and seismic slope stability evaluation for the covers at Parcel E to ensure that the proposed design can, consistent with the requirements of Title 22 Cal. Code Regs. § 66264.310(a)(5), accommodate the inertial forces generated by the maximum credible earthquake while maintaining the integrity of the cover system. Also, in accordance with the requirements of Title 22 Cal. Code Regs. § 66264.310(b)(1) and (b)(5), the Navy will maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events throughout the post-closure period (which will extend for as long as necessary to protect human health and the environment).

| 1.          | <p>Hi. I'm intending to make some comments about CEQA and the environmental impact of this project as well as the impact it has on other people here in the Bay Area who are churchgoers and people struggling in this community basically.</p> <p>From James, Chapter 5:</p> <p>Look here, you rich men, now is the time to cry and groan with anguished grief because of all the terrible troubles ahead of you.</p> <p>Your wealth is even now rotting away, and your fine clothes are becoming mere moth-eaten rags. The value of your gold and silver is dropping fast, yet it will stand as evidence against you, and eat your flesh like fire. That is what you have stored up for yourselves to receive on that coming day of judgment.</p> <p>For listen! Hear the cries of the field workers whom you have cheated of their pay. Their cries have reached the ears of the Lord of Hosts.</p> <p>You have spent your years here on earth having fun, satisfying your every whim, and now your fat hearts are ready for the slaughter. You have condemned and killed good men who had no power to defend themselves against you.</p> <p>Now as for you, dear brothers who are waiting for the Lord's return, be patient, like a farmer who waits until the autumn for his precious harvest to ripen. Yes, be patient. And take courage, for the coming of the Lord is near.</p> <p>Don't grumble about each other, brothers. You are yourselves above criticism [sic]. For see! The great Judge is coming. He is almost here (let Him do whatever criticizing must be done).</p> | <p>The Navy wishes to clarify that the cleanup decision being made for Parcel E is following a process established by CERCLA<sup>3</sup> and the NCP. CEQA does not apply to the Navy's cleanup decisions under CERCLA, and there is no legal requirement for the Navy to conform to CEQA.</p> <p>The Navy has worked with EPA, DTSC, and the Water Board to perform the environmental cleanup work at HPNS in a manner that achieves the environmental justice goals (consistent with Executive Order 12898) of fully protective cleanup actions, fair and equal treatment, and meaningful involvement for all people in the Bayview-Hunters Point community. Our efforts to satisfy these goals include:</p> <ul style="list-style-type: none"> <li>▪ Substantial regulatory review and oversight of all Navy cleanup activities. The EPA, DTSC, Water Board, CCSF, California Department of Public Health, Bay Area Air Quality Management District, and San Francisco Bay Conservation and Development Commission all have dedicated significant additional staff to HPNS to ensure that the Navy's cleanup work is performed in a way that is protective of the Bayview-Hunters Point community and complies with federal and state laws and regulations.</li> <li>▪ Substantial financial commitment from the Navy to HPNS cleanup. The Navy has spent approximately \$716 million over the past 20 years on the HPNS cleanup program, and these expenditures have made HPNS one of the nation's largest BRAC cleanup programs. The Navy's cleanup efforts to date have successfully removed, treated, or contained a significant volume of contamination that would otherwise pose an unacceptable risk to site workers and future occupants.</li> <li>▪ Meaningful community engagement under the Navy's Updated CIP. The Navy updated their CIP in 2011 (and will update the CIP again in summer 2013) to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (<a href="#">Navy, 2011</a>).</li> </ul> |

|-----------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.<br><i>(cont.)</i> <i>(see above)</i> |         | <ul style="list-style-type: none"> <li>▪ Employment. The Navy works closely with their existing contractors to emphasize the importance of hiring community members to assist in the cleanup program, and works with interested stakeholders (such as the CCSF) to promote job training programs. These efforts have proven successful based on recent estimates—from 2009 to 2011 over 1,000 community members have been employed under Navy contracts (on either full-time, part-time, or temporary basis) to assist in the cleanup program. In addition, the Navy and their contractors have identified a large network of local businesses to assist in the cleanup program, such as those providing document production services, supplying building materials and consumables (drinking water and ice), renting heavy equipment, and transporting soil and rock. These efforts have proven successful based on recent estimates of over \$11 million worth of goods and services from local businesses.</li> <li>▪ Commitment to protective cleanup actions. Most importantly, the Navy, EPA, and the State of California regulatory agencies are committed to fully protective cleanup actions at Parcel E and throughout HPNS. The selected remedies for Parcel E will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</li> </ul> |

| 1.          | <p>My name is Andrea Tacdol. I am a mother of two living on Van Dyke Avenue in the Bayview, less than a mile from Parcels E and UC-3 of the Hunters Point Naval Shipyard. One of my biggest concerns is that my family already lives beside an industrial zone where trucks are coming and going on our residential street. Residents of our community and neighborhood are feeling the impacts of the air pollution and excess noise.</p> <p>I believe that the Proposed Plan for clean-up for all parcels must include a requirement that trucks coming and going to the Naval Shipyard do NOT go through residential streets. Not only do the trucks inundate our community with even more diesel pollution that is a major cause of asthma and linked to cancer, but the trucks will also be carrying toxic waste. As you remove and dispose of contaminated soil, remove the oil source at the Former Oily Waste Ponds, remove radiologically contaminated soil, please assure us that the trucks are safely carrying the materials out of our community without chance of spillage and avoiding residential streets.</p> <p>The shipyard must have an agreement with the trucking companies to utilize the SF MTA's advised truck routes. There should be a community hotline to call when we see large trucks passing through our neighborhood and the city should find a way to enforce these rules and address violations quickly. Ultimately, we'd like to see the city move beyond having these truck routes as only advisory.</p> | <p>The Navy and their contractors have established strict protocols for all offsite hauling from HPNS cleanup activities. These protocols have been implemented on numerous past cleanup actions at HPNS and serve to minimize the impact of offsite hauling on the local community. Similar protocols would be implemented for the final cleanup at Parcel E. The procedures for offsite hauling, which are detailed in plans that are subject to regulatory agency review and approval, are summarized below.</p> <p><b>Dust Control:</b> Dust control is a top priority on all HPNS cleanup projects. All trucks are covered (tarped) and their exterior areas (most notably the fenders and tires) are cleaned prior to leaving the cleanup site. While driving on paved roads within HPNS property, all trucks adhere to a speed limit of 15 miles per hour. In addition, water is applied to the onsite roads during hauling operations. These onsite actions serve to minimize dust emissions once the trucks leave HPNS property.</p> <p><b>Additional Controls for Contaminated Waste:</b> All contaminated material is properly characterized prior to offsite disposal, and all offsite disposal is performed in accordance with pertinent federal and state requirements. For example, the U.S. Department of Transportation Hazardous Material Transportation regulations require the proper packaging, labeling, and tracking of hazardous wastes while being transported to a licensed disposal facility.</p> <p><b>Truck Hauling Route:</b> The Navy has a qualification process for all truck drivers to ensure that they are properly licensed, and that they fully understand and will adhere to the HPNS protocols for offsite hauling. This qualification process includes a requirement to follow a prescribed hauling route from the HPNS main gate to either Highway 101 or Interstate 280:</p> <ul style="list-style-type: none"> <li>▪ Trucks exit the HPNS main gate and turn right on Innes Avenue.</li> <li>▪ Trucks bear right at the fenced vacant lot as Innes Avenue becomes Hunters Point Boulevard (which again changes to Evans Avenue at the former Pacific Gas &amp; Electric power plant).</li> <li>▪ Trucks follow Evans Avenue across Third Street to Cesar Chavez.</li> </ul> <p>The qualification process, which would be implemented for the final cleanup at Parcel E, includes obtaining each truck driver's signature acknowledging their understanding and acceptance of all protocols for offsite hauling.</p> |

| 1.                 | I write in support of the Navy's proposed plan for cleanup of HPNS Parcels E and UC-3. The February 2013 written proposal provides detailed explanations of cleanup alternatives and adequately considers the cost-to-benefit impacts of each alternative. I agree with the Navy's proposed solutions and hope the cleanup proceeds expeditiously. | Thank you for your comment. |

| 1.                 | After having read and considered the alternatives, I support the conclusion on page 18 of the pamphlet "Hunters Point Naval Shipyard – Parcels E and UC-3." I have been a resident of the neighborhood outside the shipyard for more than twenty years, have had the opportunity on occasion to tour the shipyard, and thought no clean-up would ever occur. I would rather see the remediation, even if not to the ultimate degree, than nothing done. So please move on with the process right away. Do what's most expedient and will both clean and contain the toxic elements and which can be paid for. Thanks for the opportunity to be heard. Keep me informed with your mailings. | Thank you for your comment. |

| 1.          | <p>POWER and Greenaction are submitting the following comments on the Proposed Plan for Parcels E and UC3, with support and consultation from environmental scientist Wilma Subra. There are two core areas of concern where we differ with the Navy's recommendations in the Proposed Plan:</p> <ul style="list-style-type: none"> <li>First, in relation to remediation of residual radiological contamination in the proposed plan, we strongly urge the Navy to use the 3-foot thick soil cover that was proposed in remedy R-3, rather than the 2-foot soil cover.</li> <li>Second, in relation to the former oily waste ponds, we strongly urge the Navy to pursue Alternative O-6, because of how much information is still needed to understand the level of contamination. Alternative O-6 is the most comprehensive remedy for minimizing risk for the community.</li> </ul> | Please refer to the responses to comments 2 and 3 below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2.          | <p><b>Residual Radiological Contamination</b></p> <p>The preferred alternative R-2 is an appropriate remedy. However, R-3 proposes a 3-foot thick soil cover versus a 2-foot thick soil cover proposed in R-2 and would be more protective. The R-3, 3-foot thick soil cover would provide an added depth of cover material. However, the Navy states the 2-foot thick soil cover is easier to carry out. <b><i>We strongly urge that the Navy adhere to the precautionary principle and apply the 3-foot cover in order to best protect the health of residents.</i></b></p>                                                                                                                                                                                                                                                                                                          | <p>As described on pages 17 and 18 of the Proposed Plan (and illustrated in Table 15), Alternatives R-2 and R-3 are both protective of human health and the environment and are equally effective in the long-term. The Navy reached this conclusion based on an evaluation performed in the Radiological Addendum to the FS Report for Parcel E (<a href="#">ERRG and RSRS, 2012</a>). The Navy's evaluation, which was reviewed and accepted by the EPA, DTSC, and Water Board, includes risk modeling that demonstrates the 2-foot-thick soil cover, combined with institutional controls and long-term inspection and maintenance, would prevent unacceptable exposure to people. The information presented in the Proposed Plan, as supported by the Radiological Addendum to the FS Report, demonstrates that the 3-foot-thick cover is not more effective but would be more difficult to carry out. Accordingly, the Navy has selected Alternative R-2 to address residual radiological contamination at Parcel E because it complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria specified in the NCP. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative for residual radiological contamination at Parcel E.</p> |

| 2.<br>(cont.) | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>The State of California, through DTSC and the Water Board, and several engaged residents who live in close proximity to HPNS have agreed with the preferred alternative published in the Proposed Plan. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the “community acceptance” criteria of the NCP. The preferred alternative will remove significant amounts of radiological contamination, safely contain the remaining contamination, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>The Navy wishes to clarify that the precautionary principle, incorporated as a policy statement in Chapter 1 of the San Francisco Environment Code, is a local governmental policy and is not a federal or state statute or promulgated regulation. Therefore, the precautionary principle is not a CERCLA federal or state ARAR for purposes of the CERCLA remedy selection for Parcel E. In addition, the precautionary principle policy statement, as reflected in Chapter 1 of the San Francisco Environment Code, contains no substantive provisions that would pertain to evaluation and selection of a CERCLA remedial action. The Navy believes that the nine NCP evaluation criteria, which were used to evaluate each remedial alternative for Parcel E, adequately capture the elements described in the CCSF’s policy statement.</p> |
| 3.            | <p><b>Former Oily Waste Ponds</b></p> <p>The Navy’s preferred alternative for the former oily waste ponds consist of O-4. The remedy consists of removal of contaminated oil or in-situ treatment, a soil cover, liner and below ground barrier and active groundwater treatment. This alternative leaves much information to be determined before the actual remedy is selected. Alternative O-5 consists of removal of all contaminated oil above the groundwater. Alternative O-6 consists of the removal of all contaminated oil above and below the groundwater. <b><i>We strongly urge the Navy to pursue Alternative O-6 because it will result in the removal of all the contaminated oil. The contaminated oil in the former oily waste ponds is a principal threat waste in Parcel E.</i></b></p> | <p>As described on page 18 of the Proposed Plan, the Navy’s evaluation identified major differences between Alternative O-6 and Alternatives O-2, O-3, and O-4 relative to short-term effectiveness, implementability, and cost. In comparison with Alternatives O-2, O-3, and O-4, Alternative O-6 presents more short-term risks (for example, increased risk of accidents for site workers), would be more difficult to carry out, and would cost more. The ratings for Alternative O-6 were based on several factors, the most significant being the deep excavation (potentially up to 35 feet) required to completely remove the contaminated oil. Alternatives O-2, O-3, and O-4 present fewer short-term risks, would be easier to carry out, and would cost significantly less in comparison with Alternative O-6.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Comment No.               | Comment | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.<br>(cont.) (see above) |         | <p>Alternative O-2 would be the easiest and least expensive because it involves only containment, while Alternatives O-3 and O-4 balance ease of implementation and cost because they would involve removing or treating the contaminated oil without major excavations.</p> <p>Accordingly, the Navy has selected Alternative O-4 to address the contaminated oil source at Parcel E because it complies with the two threshold criteria and provides the best balance of tradeoffs with respect to the five balancing criteria specified in the NCP. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative for residual radiological contamination at Parcel E. The State of California, through DTSC and the Water Board, and several engaged residents who live in close proximity to HPNS have agreed with the preferred alternative published in the Proposed Plan. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will either remove or treat the contaminated oil source and will safely contain the residual contamination in a manner that prevents unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>Although the complex site conditions at the Former Oily Waste Ponds result in some uncertainty regarding the effectiveness and implementability of certain remediation technologies, the Navy, with the support of EPA, DTSC, and the Water Board, believes that there is adequate information to select a remedy for the contaminated oil source. Further, the Navy believes that Alternative O-4 incorporates a broad range of removal and treatment technologies that could be used in combination to cost-effectively achieve the RAOs. As described on page 26 of the Proposed Plan, the Navy will perform additional studies to select the best combination of technologies to remove or treat the contaminated oil source at the Former Oily Waste Ponds. The Navy has begun developing the approach for these additional studies in consultation with EPA, DTSC, and the Water Board. A field study is planned for later in 2013 and is expected to help refine the cleanup approach at the Former Oily Waste Ponds in support of the RD.</p> |

|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| 4.                 | <p>In review of the soil and shoreline sediment and groundwater contamination, we are aligned with the preferred alternatives recommended by the Navy.</p> <p><b>Soil and Shoreline Sediment</b></p> <p>Alternative S-4 is the most robust and protective of the alternatives proposed for contaminants in soil and shoreline sediments. Alternative S-4 is the only alternative that will result in excavation and off site disposal of contaminated soil from Tier 2 and Total Petroleum Hydrocarbon locations. Tier 2 locations contain chemicals at concentrations greater than five times the preliminary remedial goal. Total petroleum hydrocarbons locations exceed the preliminary remedial goal. Alternative S-4 is the only alternative that will address VOC contamination associated with the building 406 TCE plume using soil vapor extraction.</p> | Thank you for your comment.                              |
| 5.                 | <p><b>Groundwater Contamination</b></p> <p>Alternative GW-3 and GW-4 are the most protective alternatives proposed for groundwater contamination. The two alternatives consist of active groundwater treatment for VOC plumes under parcels E and UC-3. Alternative GW-3 consists of either biological nutrients or zero valent iron treatment while alternative GW-4 consists of air sparging for the building 406 TCE plume. The Navy selected GW-3 as the preferred alternative remedy. That alternative, as well as GW-4, will treat the groundwater contaminants appropriately.</p>                                                                                                                                                                                                                                                                           | Thank you for your comment.                              |
| 6.                 | <p>We urge the Navy to reconsider the preferred plans for the residual radiological contamination and select a 3-foot soil cover, and select alternative O-6 the former oily waste ponds based on the need to minimize risk and provide the highest level of protection of the health of residents in the community.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Please refer to the responses to comments 2 and 3 above. |

| <b>Safe Drinking Water Act (42 USC, ch. 6A, § 300[f] through 300[j]-26)<sup>c</sup></b>               |                     |                                    |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| National primary drinking water standards are health-based standards for public water systems (MCLs). | Public water system | 40 CFR § 141.61(a) and § 141.62(b) | Relevant and appropriate | The Navy considers the B-aquifer a Class II aquifer under federal criteria and a potential source of drinking water based on an evaluation of site-specific factors. The Navy has identified MCLs for three COCs (PCE, TCE, and arsenic) as chemical-specific ARARs for the B-aquifer under the following scenarios: (1) containment of in-place waste at Parcel E IR-02 and IR-03, for which federal MCLs are ARARs for groundwater in the B-aquifer downgradient of the POC; and (2) clean closure of contaminated groundwater plumes outside of Parcel E IR-02 and IR-03, for which federal MCLs are ARARs for groundwater in the B-aquifer throughout the contaminated plumes. The Navy and the Water Board have determined that the A-aquifer is not a potential source of drinking water; therefore, drinking water standards (MCLs) are not ARARs for the A-aquifer. |
| MCLGs pertain to known or anticipated adverse health effects (also known as recommended MCLs).        | Public water system | 40 CFR § 141.51(b)                 | Relevant and appropriate | The Navy considers the B-aquifer a Class II aquifer under federal criteria and a potential source of drinking water based on an evaluation of site-specific factors. The Navy has identified the non-zero MCLG for thallium as a chemical-specific ARAR for the B-aquifer under the following scenarios: (1) containment of in-place waste at Parcel E IR-02 and IR-03, for which federal MCLGs are ARARs for groundwater in the B-aquifer downgradient of the POC; and (2) clean closure of contaminated groundwater plumes outside of Parcel E IR-02 and IR-03, for which federal MCLGs are ARARs for groundwater in the B-aquifer throughout the contaminated plumes. The Navy and the Water Board have determined that the A-aquifer is not a potential source of drinking water; therefore, drinking water standards (MCLGs) are not ARARs for the A-aquifer.          |

| <b>Resource Conservation and Recovery Act (42 USC, ch. 82, §§ 6901 through 6991[i])<sup>c</sup></b>                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                      |                                                                   |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Groundwater protection standards. Owners and operators of RCRA treatment, storage, or disposal facilities must comply with conditions in these sections that are designed to ensure that hazardous chemicals entering groundwater from a regulated unit do not exceed concentration limits for chemicals of concern set forth under Cal. Code Regs. tit. 22, § 66264.94 in the uppermost aquifer underlying the waste management area of concern at the POC. | A regulated unit that receives or has received hazardous waste before July 26, 1982, or regulated units that ceased receiving hazardous waste prior to July 26, 1982, where chemicals in or derived from waste may pose a threat to human health or the environment. | Cal. Code Regs, tit. 22, § 66264.94 (a)(1), (a)(3), (c), (d), (e) | Relevant and appropriate | There is no RCRA-regulated unit at Parcel E; therefore, these standards are not applicable. These standards are relevant and appropriate for the A-aquifer for clean closure of contaminated groundwater plumes outside of Parcel E IR-02 and IR-03, for which concentration limits based on unacceptable risk from the vapor intrusion pathway, pursuant to Cal. Code Regs. tit. 22, §§ 66264.94, are ARARs for groundwater in the A-aquifer throughout the contaminated plumes. Actions and decisions to address the indoor inhalation of vapors will be based on soil gas data and the soil gas action levels. Soil gas action levels are calculated based on a cumulative excess cancer risk level of 10 <sup>-6</sup> using the accepted methodology for risk assessments at HPNS. Preliminary soil gas action levels have been developed for HPNS but will be refined using data from future soil gas surveys following active treatment (to be performed at contaminated groundwater plumes outside of Parcel E IR-02 and IR-03). |

| <b>Clean Water Act of 1977, as Amended (33 USC, ch. 26, §§ 1313–1314)<sup>c</sup></b>                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                      |                                                                   |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Surface water quality standards                                                                                                                                                                                                                                                                                                                                                                                                                              | Discharges to waters of the United States                                                                                                                                                                                                                            | 40 CFR § 131.38                                                   | Applicable               | These standards, known as the CTR, are applicable surface water ARARs. The Navy has identified the CTR as ARARs for HPNS Parcel E because groundwater discharges to San Francisco Bay. The Navy will meet these ARARs for chemicals that do not have a promulgated standard in Table 3-3 of the Basin Plan at the interface of the A-aquifer and the bay. The Navy has identified MCLs as ARARs for the B-aquifer, which will be protective of the discharge of B-aquifer groundwater to the bay. Therefore, these are not ARARs for the interface of the B-aquifer and the bay.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| This requirement defines RCRA hazardous waste. Solid wastes are characterized as toxic based on the TCLP results if the wastes exceed the TCLP maximum concentrations.                                                                                                                                                                                                                                                                                                                                                                                   | Waste                                                                                                       | Cal. Code Regs, tit. 22, §§ 66261.21, 66261.22(a)(1), 66261.23, 66261.24(a)(1), and 66261.100 | Applicable                              | These regulations are ARARs for all waste generated by the Navy in implementing Alternatives S-4, GW-3, O-4, and R-2. The Navy will determine if the waste is RCRA hazardous at the time it is generated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Toxic Substances Control Act (15 USC, ch. 53, §§ 2601–2692)<sup>c</sup></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                             |                                                                                               |                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Regulates storage and disposal of PCB remediation waste. There are three options: (a) self-implementing onsite cleanup and disposal; (b) performance-based disposal using existing approved disposal technologies; and (c) risk-based disposal.                                                                                                                                                                                                                                                                                                          | Soils, debris, sludge, or dredged materials contaminated with PCBs at concentrations greater than 50 mg/kg. | 40 CFR § 761.61(c)                                                                            | Applicable and relevant and appropriate | The risk-based disposal option at § 761.61(c) is an applicable requirement for soil containing PCB concentrations equal to or greater than 50 mg/kg. The risk-based disposal option is a relevant and appropriate requirement for soil containing PCB concentrations less than 50 mg/kg.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Uranium Mill Tailings Radiation Control Act (42 USC, ch. 88, § 192.02, 192.12(a,b), and 192.42)<sup>c</sup></b>                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                             |                                                                                               |                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Standards for cleanup of land and buildings contaminated with radium-226, radium-228, and thorium from inactive uranium processing sites.<br>As a result of residual radioactive materials from any designated processing site:<br>(a) The concentration of radium-226 in land averaged over any area of 100 square meters shall not exceed the background level by more than:<br>(1) 5 pCi/g, averaged over the first 15 cm of soil below the surface, and<br>(2) 15 pCi/g, averaged over 15-cm-thick layers of soil more than 15 cm below the surface. | UMTRCA sites                                                                                                | 40 CFR §§ 192.12(a) and 192.32(b)(2)                                                          | Relevant and appropriate                | Not applicable because Parcel E is not an UMTRCA site, but is relevant and appropriate for sites with soil contaminated with radioactive waste.<br>The surface and subsurface concentration of 5 pCi/g is relevant and appropriate for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03. These areas, following remediation of ROCs exceeding the RGs (specifically, radium-226 exceeding 1 pCi/g above background), will not require land use restrictions regarding exposure to radioactivity. The RG for radium-226 is based on the CERCLA risk criterion, which is consistent with an agreement with EPA (see Table 8 of this ROD), rather than the standards established by UMTRCA.<br>Not an ARAR for radiologically impacted areas (IR-02 and IR-03) that will be transferred with engineering and institutional controls for radioactive chemicals. |

| <b>Uranium Mill Tailings Radiation Control Act (42 USC, ch. 88, § 192.02, 192.12(a,b), and 192.42)<sup>c</sup> (continued)</b>                                                                                                                                                                                                                                                                                                |                            |                                       |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| In any occupied or habitable building, the objective of the remedial action shall be, and reasonable effort shall be made to achieve, an annual average (or equivalent) radon decay product concentration (including background) not to exceed 0.02 WL. In any case, the radon decay product concentration (including background) shall not exceed 0.03 WL. Provisions applicable to radon-222 shall also apply to radon-220. | UMTRCA sites               | 40 CFR § 192.12(b)(1) and § 192.41(b) | Relevant and appropriate | Not applicable because Parcel E is not an UMTRCA site. Relevant and appropriate because the alternatives will result in excavation of material with radiological contamination that may produce this level of dose.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Concentration limits for cleanup of gamma radiation in buildings at inactive uranium processing sites designated for remedial action.<br><br>In any occupied or habitable building, the level of gamma radiation shall not exceed the background level by more than 20 microroentgens per hour.                                                                                                                               | UMTRCA sites               | 40 CFR § 192.12(b)(2)                 | Relevant and appropriate | Not applicable because Parcel E is not an UMTRCA site. Relevant and appropriate because the alternatives will result in excavation of material with radiological contamination that may produce this level of dose.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Radiological Criteria for License Termination</b>                                                                                                                                                                                                                                                                                                                                                                          |                            |                                       |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| A site will be considered acceptable for unrestricted use if residual radioactivity that is distinguishable from background radiation results in a TEDE to an average member of the critical group that does not exceed 25 mrem/yr, including that from groundwater sources of drinking water, and that the residual radioactivity has been reduced to ALARA.                                                                 | Existing NRC-licensed site | 10 CFR § 20.1402                      | Relevant and appropriate | Not applicable because Parcel E is not an NRC-licensed site. This ARAR is relevant and appropriate for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03. These areas, following remediation of ROCs exceeding the RGs (see Table 8 of this ROD), will not require land use restrictions regarding exposure to radioactivity. EPA does not believe this NRC regulation is protective of human health and the environment, and believes the RGs are more protective.<br><br>Not an ARAR for radiologically impacted areas (IR-02 and IR-03) that will be transferred with engineering and institutional controls for radioactive chemicals. |

| <b>Radiological Criteria for License Termination (continued)</b>                                                                                                                                                                                                                                                                                                                              |                                                                                                                    |                                  |                          |                                                                                                                                                                                                                                                                                  |
| Requires that the TEDE to individual members of public not exceed 0.1 rem from licensed operation, construction, operation, and decommissioning of commercial reactors and fuel cycle facilities; possession, use, processing, exporting, and certain aspects of transporting nuclear materials and waste; and siting, design, construction, operations, and closure of waste disposal sites. | Existing NRC-licensed site                                                                                         | 10 CFR § 20.1301                 | Relevant and appropriate | Not applicable because Parcel E is not an NRC-licensed site. Relevant and appropriate because remedial alternative R-2 leaves potential radiological contamination at IR-02 and IR-03.                                                                                           |
| Performance objectives for the land disposal of LLRW. Concentrations of radioactive material that may be released to the general environment must not result in an annual dose exceeding 25 mrem to the body or any organ of a member of the general public.                                                                                                                                  | Existing NRC-licensed LLRW disposal site                                                                           | 10 CFR § 61.41                   | Relevant and appropriate | Not applicable because Parcel E is not an NRC-licensed site. Relevant and appropriate for radiologically impacted areas (IR-02 and IR-03) that will be transferred with engineering and institutional controls for radioactive chemicals.                                        |
| <b>Air</b>                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                    |                                  |                          |                                                                                                                                                                                                                                                                                  |
| <b>NESHAPs under CAA that Apply to Radionuclides</b>                                                                                                                                                                                                                                                                                                                                          |                                                                                                                    |                                  |                          |                                                                                                                                                                                                                                                                                  |
| Emissions of radionuclides to ambient air from DOE facilities shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 10 mrem/yr.                                                                                                                                                                                     | Facility owned or operated by the DOE that emits any radionuclide other than radon-222 and radon-220 into the air. | 40 CFR pt. 61, subpt. H, § 61.92 | Relevant and appropriate | Not applicable because Parcel E is not a DOE site, but may be relevant and appropriate if there is the potential for airborne emissions of radionuclides other than radon. Only an ARAR until cleanup action is completed. Not an ARAR for residual contamination after cleanup. |

| Emissions of radionuclides, including iodine, to ambient air from a facility regulated under this subpart shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 10 mrem/yr. Emissions of iodine to ambient air from a facility regulated under this subpart shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 3 mrem/yr. | Facilities owned or operated by any federal agency other than the DOE and not licensed by the NRC. | 40 CFR pt. 61 subpt. I, § 61.102 | Applicable         | The requirements are applicable because fugitive dust may be generated during implementation of the remedial action at Parcel E. Exposure to the public from remedial action operations at Parcel E is not likely to exceed 10 mrem/y because of the following reasons:<br><ol style="list-style-type: none"><li>1. the concentrations of any radionuclide in dust are relatively low as previously measured in air samples, and</li><li>2. the concentration of any radionuclide in dust will be reduced by use of engineering controls such as wetting of soil.</li></ol> |

## Notes:

a = Many chemical-specific ARARs also contain action-specific requirements; these ARARs are not repeated in the action-specific ARAR tables.

b = Only the substantive provisions of the requirements cited in this table are ARARs.

c = Statutes and policies and their citations are provided as headings to identify general categories of ARARs for the convenience of the reader; listing the statutes and policies does not indicate that the Navy accepts the entire statutes or policies as ARARs; specific ARARs are addressed in the table below each general heading; only pertinent substantive requirements of the specific citations are considered ARARs.

ALARA = as low as reasonable achievable

ARARs = applicable or relevant and appropriate requirements

CAA = Clean Air Act

Cal. Code Regs. = California Code of Regulations

CFR = Code of Federal Regulations

ch. = Chapter

cm = centimeter

COCs = chemicals of concern

CTR = California Toxics Rule

DOE = U.S. Department of Energy

EPA = U.S. Environmental Protection Agency

HPNS = Hunters Point Naval Shipyard

IR = Installation Restoration

LLRW = low-level radioactive waste

MCLs = maximum contaminant levels

MCLGs = maximum contaminant level goals

mg/kg = milligrams per kilogram

mrem = millirem

mrem/y = millirems per year

Navy = Department of the Navy

NESHAPs = National Emissions Standards for Hazardous Air Pollutants

NRC = U.S. Nuclear Regulatory Commission

PCB = polychlorinated biphenyls

PCE = tetrachloroethene

pCi/g = picocuries per gram

POC = point of compliance

pt. = part

RCRA = Resource Conservation and Recovery Act

RGs = remediation goals

ROCs = radionuclides of concern

subpt. = subpart

TCE = trichloroethene

TCLP = toxicity characteristic leaching procedure

TEDE = total effective dose equivalent

tit. = title

UMTRCA = Uranium Mill Tailings Radiation Control Act

USC = United States Code

Water Board = San Francisco Regional Water Quality Control Board

WL = working level

§ = Section

| Authorizes SWRCB and Water Board to establish, in water quality control plans, beneficial uses and numerical and narrative standards to protect both surface water and groundwater quality.                                                                                                                                                                                                                                        | Waters of the state | California Water Code, div. 7, §§ 13241, 13243, 13263(a), 13269, and 13360                                                                                                        | Applicable         | The Navy accepts the substantive provisions of these sections of the California Water Code as enabling legislation, as implemented through the beneficial uses, WQOs, waste discharge requirement, and promulgated policies of the San Francisco Basin Plan as ARARs.                                                                                                                                                                                                                                |
| Describes the water basins in the San Francisco Region, establishes beneficial uses of groundwater and surface water, and establishes WQOs, including narrative and numerical standards.                                                                                                                                                                                                                                           | Waters of the state | Comprehensive Water Quality Control Plan for the San Francisco Region (Basin Plan) Chapters 2 and 3 (California Water Code § 13240), except the MUN designation for the A-aquifer | Applicable         | The substantive groundwater provisions of Chapters 2 and 3 of the Basin Plan, except the MUN designation, are ARARs. According to the Basin Plan, which incorporates SWRCB Resolution 88-63, A-aquifer groundwater at Parcel E is not a potential drinking water source. The only beneficial use of A-aquifer groundwater is freshwater replenishment of San Francisco Bay. B-aquifer groundwater has a moderate potential for use as a drinking water source.                                       |
| Designates all groundwater and surface waters of the state as drinking water, except where total dissolved solids are greater than 3,000 ppm, the well yield is less than 200 gpd from a single well, the water is a geothermal resource or in a water conveyance facility, or the water cannot reasonably be treated for domestic use using either best management practices or best economically achievable treatment practices. | Waters of the state | SWRCB Resolution 88-63                                                                                                                                                            | Applicable         | The Navy has evaluated the groundwater characteristics in the A-aquifer and B-aquifer at Parcel E against the criteria listed in SWRCB Resolution 88-63. The Navy has determined that groundwater in the A-aquifer is not a potential source of drinking water and groundwater in the B-aquifer has a moderate potential for use as a drinking water source. The Water Board has concurred with the Navy's determination that groundwater in the A-aquifer is not a potential drinking water source. |

| Establishes the policy that high quality waters of the state “shall be maintained to the maximum extent possible” consistent with the “maximum benefit to the people of the State.” It provides that whenever the existing quality of water is better than that required by applicable water quality policies, such existing high quality water will be maintained until it has been demonstrated to the state that any change will be consistent with maximum benefit to the people of the state, will not unreasonably affect present and anticipated beneficial use of such water, and will not result in water quality less than that prescribed in the policies. It also states that any activity that produces or may produce a waste or increased volume or concentration of waste and that discharges or proposes to discharge to existing high-quality waters will be required to meet waste discharge requirements that will result in the best practicable treatment or control of the discharge. | High quality waters of the state | Statement of Policy With Respect to Maintaining High Quality of Waters in California, SWRCB Res. 68-16 | Not an ARAR        | <p>SWRCB Res. 68-16 is not a chemical-specific ARAR because it is not more stringent than the federal Cal. Code Regs. tit. 22 groundwater protection standard [Cal. Code Regs. tit. 22, § 66264.94(a)(1) and (3),(c), (d), and (e)]. SWRCB Res. 68-16 is also not an action-specific ARAR because the selected remedy does not include discharge of treated groundwater to surface water. The Navy has determined that further migration of contaminants through groundwater is not a discharge governed by the language in Res. 68-16. More specifically, the language of SWRCB Res. 68-16 indicates that it is prospective in intent, applying to new discharges in order to maintain existing high-quality waters. It is not intended to apply to restoration of waters that are already degraded.</p> <p>The state does not agree with the Navy's determination that SWRCB Res. 92-49 and 68-16 are not ARARs for this response action. SWRCB has interpreted the term “discharges” in the California Water Code to include the movement of waste from soils to groundwater and from contaminated to uncontaminated water (SWRCB 1994). However, the state agrees that the proposed action would comply with SWRCB Res. 92-49 and 68-16. The state does not intend to dispute the ROD, but reserves its rights if implementation of the provisions at Cal. Code Regs. tit. 22 is not as stringent as state implementation of the provisions at Cal. Code Regs. tit. 23. Because Cal. Code Regs. tit. 22 regulation is part of the state's authorized hazardous waste control program, it is also the state's position that Cal. Code Regs. tit. 22, § 66264.94 is a state ARAR and not a federal ARAR (<i>United States v. State of Colorado</i>, 990 F.2d 1565 [1993]).</p> |

| Describes requirements for Water Board oversight of investigation and cleanup and abatement activities resulting from discharges of hazardous substances. Water Board may decide on cleanup and abatement goals and objectives for the protection of water quality and beneficial uses of water within each region. Establishes criteria for "containment zones" where cleanup to established water quality goals is not economically or technically practicable. | Discharge of hazardous substance into waters of the state | Policies and procedures for investigation and cleanup and abatement of discharges under California Water Code § 13304, SWRCB Res. 92-49 | Not an ARAR        | SWRCB Res. 92-49 is not an ARAR because it is not more stringent than the federal Cal. Code Regs. tit. 22 monitoring requirements [Cal. Code Regs. tit. 22, § 66264.94(a)(1) and (3),(c), (d), and (e)].<br><br>The state does not agree with the Navy's determination that SWRCB Res. 92-49 and 68-16 are not ARARs for this response action. SWRCB has interpreted the term "discharges" in the California Water Code to include the movement of waste from soils to groundwater and from contaminated to uncontaminated water (SWRCB, 1994). However, the state agrees that the proposed action would comply with SWRCB Res. 92-49 and 68-16. The state does not intend to dispute the ROD, but reserves its rights if implementation of the provisions at Cal. Code Regs. tit. 22 is not as stringent as state implementation of the provisions at Cal. Code Regs. tit. 23. Because Cal. Code Regs. tit. 22 regulation is part of the state's authorized hazardous waste control program, it is also the state's position that Cal. Code Regs. tit. 22, § 66264.94 is a state ARAR and not a federal ARAR ( <i>United States v. State of Colorado</i> , 990 F.2d 1565 [1993]). |

| <b>Department of Toxic Substances Control <sup>c</sup> / State and Regional Water Quality Control Boards <sup>c</sup></b> |                                                                             |                                  |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| State MCL list.                                                                                                           | Source of drinking water                                                    | Cal. Code Regs. tit. 22, § 64444 | Relevant and appropriate | The Navy considers the B-aquifer a Class II aquifer under federal criteria and a potential source of drinking water based on an evaluation of site-specific factors. The Navy has identified State primary MCLs for select COCs (1,1-DCE, 1,2-DCE, 1,4-dichlorobenzene, and vinyl chloride) as chemical-specific ARARs for the B-aquifer because they are more stringent than the corresponding federal MCL. State primary MCLs are state ARARs for the following scenarios:<br>(1) containment of in-place waste at Parcel E IR-02 and IR-03, for which State primary MCLs are ARARs for groundwater in the B-aquifer downgradient of the POC; and (2) clean closure of contaminated groundwater plumes outside of Parcel E IR-02 and IR-03, for which State primary MCLs are ARARs for groundwater in the B-aquifer throughout the contaminated plumes. The Navy and the Water Board have determined that the A-aquifer is not a potential source of drinking water; therefore, drinking water standards (MCLs) are not ARARs for the A-aquifer. |
| <b>Surface Water</b>                                                                                                      |                                                                             |                                  |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>State Water Resources Control Board <sup>c</sup></b>                                                                   |                                                                             |                                  |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Surface water quality standards.                                                                                          | Marine water with salinities equal to or greater than 10 parts per thousand | Basin Plan Table 3-3             | Applicable               | These standards are applicable to San Francisco Bay. The Navy has identified Table 3-3 as ARARs for Parcel E because groundwater discharges to the bay. The Navy will meet these ARARs in the Bay, at a point past the interface of the A-aquifer (or surface water bodies) and the bay. The Navy has identified MCLs as ARARs for the B-aquifer, which will be protective of any discharge of B-aquifer groundwater to the permeable zones underlying the bay. Therefore, these are not ARARs for the interface of the B-aquifer and the permeable zones underlying the bay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**Attachment 4. State Chemical-Specific ARARs<sup>a</sup> (continued)**

Record of Decision for Parcel E, Hunters Point Naval Shipyard, San Francisco, California

| Requirement                                                                                                                                                  | Prerequisite                                 | Citation <sup>b</sup>                                                                                                   | ARAR Determination | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Department of Toxic Substances Control <sup>c</sup> / State Water Resources Control Board <sup>c</sup> / California Integrated Waste Management Board</b> |                                              |                                                                                                                         |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Definition of non-RCRA hazardous waste.                                                                                                                      | Waste                                        | Cal. Code Regs, tit. 22, §§ 66261.22(a)(3) and (a)(4), 66261.24(a)(2)-(a)(8), 66261.101, 66261.3(a)(2)(C) and (a)(2)(F) | Applicable         | These requirements are ARARs for all waste the Navy generates in implementing Alternatives S-4, GW-3, O-4, and R-2. The Navy will determine if the waste meets the definition of non-RCRA hazardous waste when it is generated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Definition of designated waste and nonhazardous waste.                                                                                                       | Waste                                        | Cal. Code Regs, tit. 27, §§ 20210 and 20220                                                                             | Applicable         | These requirements are ARARs for all waste the Navy generates in implementing Alternatives S-4, GW-3, O-4, and R-2. The Navy will determine if the waste meets the definition of non-RCRA hazardous waste when it is generated                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| This requirement controls release of methane.                                                                                                                | Release of methane from waste disposal sites | Cal. Code Regs, tit. 27, § 20921(a)                                                                                     | Applicable         | Provides that methane must not exceed 1.25 percent by volume in air within onsite structures, and concentrations of methane migrating from waste disposal sites at Parcel E (at IR-02, IR-03, and IR-12) must not exceed 5 percent by volume in air at the property boundary (or an alternative boundary) in accordance with Cal. Code Regs, tit. 27, § 20925.<br><br>The potential presence of subsurface methane, which was previously reported in isolated areas within IR-03 and IR-12, will be further evaluated in conjunction with the RD to determine if control measures (such as passive vents) are required to protect human health in accordance with Cal. Code Regs, tit. 27, § 20921(a). |

#### Attachment 4. State Chemical-Specific ARARs<sup>a</sup> (*continued*)

Record of Decision for Parcel E, Hunters Point Naval Shipyard, San Francisco, California

Notes:

a = The chemical-specific ARARs also contain action-specific requirements; these ARARs are not repeated in the action-specific ARAR tables.

b = Only the substantive provisions of the requirements cited in this table are ARARs.

c = Statutes and policies and their citations are provided as headings to identify general categories of ARARs for the convenience of the reader; listing the statutes and policies does not indicate that the Navy accepts the entire statutes or policies as ARARs; specific ARARs are addressed in the table below each general heading; only pertinent substantive requirements of the specific citations are considered ARARs.

ARAR = applicable or relevant and appropriate requirement

Cal. Code Regs = California Code of Regulations

COCs = chemicals of concern

DCE = dichloroethene

div. = Division

gpd = gallons per day

IR = Installation Restoration

MCL = maximum contaminant level

MUN = municipal and domestic supply

Navy = Department of the Navy

POC = point of compliance

ppm = parts per million

RCRA = Resource Conservation and Recovery Act

RD = remedial design

Res. = Resolution

ROD = Record of Decision

SWRCB = State Water Resources Control Board

tit. = title

Water Board = Regional Water Quality Control Board

WQOs = water quality objectives

§ = Section

Reference: SWRCB, 1994. "Application of State Water Board Resolution No. 68-16 to Cleanup of Contaminated Groundwater." February.

| <b>National Historic Preservation Act of 1966, as Amended (16 USC § 1470-470x-6) <sup>b</sup></b> |                                                                                                                                                                          |                                                                                            |                                                             |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Historic project owned or controlled by federal agency                                            | Action to preserve historic properties; planning of action to minimize harm to properties listed on or eligible for listing on the National Register of Historic Places. | Property included in or eligible for the National Register of Historic Places              | 16 USC § 470-470x-6<br>36 CFR Part 800<br>40 CFR § 6.301(b) | Not an ARAR              | Not an ARAR because the Parcel E response action will not impact property listed on or eligible for listing on the National Register of Historic Places. A sensitive archaeological area (potential shellmound site) has been identified in Parcel UC-3 (along Crisp Road). The substantive provisions of this regulation was identified as a potential ARAR in the FS Report because the sensitive archaeological area in Crisp Road was formerly part of Parcel E. |

#### **Attachment 4. Federal Location-Specific ARARs (*continued*)**

Record of Decision for Parcel E, Hunters Point Naval Shipyard, San Francisco, California

Notes:

a = Only the substantive provisions of the requirements cited in this table are ARARs.

b = Statutes and policies and their citations are provided as headings to identify general categories of ARARs for the convenience of the reader; listing the statutes and policies does not indicate that the Navy accepts the entire statute or policy as an ARAR; specific ARARs are addressed in the table below each general heading; only substantive requirements of the specific citations are considered ARARs.

ARAR = applicable or relevant and appropriate requirement

CFR = Code of Federal Regulations

CZMA = Coastal Zone Management Act

FS = Feasibility Study

USC = United States Code

§ = Section

| Fully protected birds                                                                            | Fully protected birds or parts thereof may not be taken or possessed at any time. The following are fully protected birds: American Peregrine Falcon, California Brown Pelican, California Black Rail, California Clapper Rail, California Condor, California Least Tern, Golden Eagle, Greater Sandhill Crane, Light-footed Clapper Rail, Southern Bald Eagle, Trumpeter Swan, White-tailed Kite, and Yuma Clapper Rail. | A fully protected species must be potentially affected.                            | California Fish & Game Code § 3511                          | Relevant and appropriate | <p>California Fish &amp; Game Code § 3511 is not applicable because the United States of America has not waived sovereign immunity in the FESA for this State of California requirement. The American peregrine falcon is present at the site and the White-tailed Kite is potentially present at the site, and these species are protected under California Fish &amp; Game Code § 3511. The substantive provisions of California Fish &amp; Game Code § 3511 meet the pertinent NCP criteria under 40 CFR § 300.400(g)(2)(viii) and are "relevant and appropriate" because the American peregrine falcon is present at the site and the White-tailed Kite is potentially present at the site, and protection of these vulnerable resources allows them to be "used" in the sense that they continue to provide their unique value to the State of California.</p> <p>The Navy accepts California Fish &amp; Game Code § 3511 as a state ARAR subject to the following conditions. The State of California, through CDFW-OSPR, concurs that this statute addresses prohibited conduct but does not provide for or prescribe affirmative measures to avoid a "taking."</p> |

Fish &amp; Game Code) <sup>b</sup> (continued)</b> |                                                                                                                                 |                                                                                                                                            |                                                     |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Fully protected birds                                                                                  | (see above)                                                                                                                     | (see above)                                                                                                                                | (see above)                                         | (see above)              | Notwithstanding the absence of specific affirmative measures in the statute, the Navy will implement reasonable measures to ensure adequate protection of ecological receptors during response action construction following issuance of a CERCLA decision document pursuant to the Navy's obligations under CERCLA to select removal or remedial actions that are protective of human health and the environment (see Section 121[b][1] of CERCLA). The Navy will coordinate with the State, through CDFW-OSPR, prior to implementation of such reasonable measures. The Navy understands that the State of California reserves the right to conduct periodic site visits during removal or remedial activities to confirm implementation of avoidance measures. |
| Waters of the State                                                                                    | Prohibits the passage of enumerated substances or materials into waters of the state deleterious to fish, plant life, or birds. | Not authorized under California Water Code § 13263 or a waiver issued pursuant to subdivision (a) of § 13269 of the California Water Code. | California Fish & Game Code § 5650(a), (b), and (c) | Relevant and appropriate | California Fish & Game Code § 5650 is not applicable because the United States of America has not waived sovereign immunity for this State of California requirement. While no direct deposition of material is expected to enter into or affect waters of the states, the substantive portions of this standard will be complied with as an ARAR. Response actions along the Parcel E shoreline will be conducted in such a way as to ensure that materials dug up will not be released into the water column.                                                                                                                                                                                                                                                   |

## Attachment 4.

### State Location-Specific ARARs (*continued*)

Record of Decision for Parcel E, Hunters Point Naval Shipyard, San Francisco, California

#### Notes:

a = Only the substantive provisions of the requirements cited in this table are ARARs.

b = Statutes and policies and their citations are provided as headings to identify general categories of ARARs for the convenience of the reader; listing the statutes and policies does not indicate that the Navy accepts the entire statute or policy as an ARAR; specific ARARs follow each general heading; only substantive requirements of the specific citations are considered ARARs.

ARAR = applicable or relevant and appropriate requirement

Bay Plan = San Francisco Bay Plan

Cal. Code Regs. = California Code of Regulations

CDFW = California Department of Fish and Wildlife

CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act

CFR = Code of Federal Regulations

FESA = Federal Endangered Species Act

Navy = Department of the Navy

NCP = National Oil and Hazardous Substances Pollution Contingency Plan

OSPR = Office of Spill Prevention and Response

tit. = Title

§ = Section

| Compaction                                                                                         | If waste is to remain in a unit, the unit shall be compacted before any portion of the final cover is installed.                                                                                                           | Landfill closure | Cal. Code Regs. tit. 22, § 66264.228(e)(1)         | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |
| Post-closure water entry                                                                           | The final cover will be designed to prevent the downward entry of water into the closed landfill throughout a period of at least 100 years.                                                                                | Landfill closure | Cal. Code Regs. tit. 22, § 66264.310(a)(1)         | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |
| Cover seismic requirements                                                                         | The final cover shall accommodate lateral and vertical shear forces generated by the maximum credible earthquake so that the integrity of the cover is maintained.                                                         | Landfill closure | Cal. Code Regs. tit. 22, § 66264.310(a)(5)         | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for covers throughout Parcel E.                                   |
| Post-closure care                                                                                  | Maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events throughout the post-closure period. | Landfill closure | Cal. Code Regs. tit. 22, § 66264.310(b)(1) and (4) | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for covers throughout Parcel E.                                   |
| Benchmark maintenance                                                                              | Protect and maintain surveyed benchmarks throughout the post-closure period.                                                                                                                                               | Landfill closure | Cal. Code Regs. tit. 22, § 66264.310(b)(5)         | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for covers throughout Parcel E.                                   |

| <b>Shoreline Construction</b>                                                      |                                                                                                                                                                                                                       |                             |                                                                                     |                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Clean Water Act, as Amended, Section 404 (Title 33 USC § 1344) <sup>b</sup></b> |                                                                                                                                                                                                                       |                             |                                                                                     |                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Perform construction in shoreline zone                                             | These sections describe specific restrictions on the discharge of dredged or fill material into waters of the United States, and require that appropriate and practicable steps be taken to minimize adverse impacts. | Waters of the United States | 40 CFR §§ 230.10; 230.70 through 230.77                                             | Applicable (for Alternative S-4)       | Compliance with 40 CFR § 230.10 is evaluated using factual determinations, per 40 CFR § 230.11, for the proposed action. Potential actions to minimize adverse impacts are identified at 40 CFR §§ 230.70 through 230.77. The shoreline construction planned for Alternative S-4 will comply with the specified discharge restrictions and will incorporate appropriate steps to minimize adverse impacts to waters of the United States. Appendix D of the FS Report evaluates the proposed shoreline construction relative to these requirements. |
| Perform construction in shoreline zone                                             | These sections identify specific information to be included in factual determinations for proposed actions involving discharge of dredged or fill material into waters of the United States.                          | Waters of the United States | 40 CFR §§ 230.11; 230.20 through 230.25; 230.31; 230.32; 230.41; 230.42; and 230.53 | Applicable (for Alternative S-4)       | Appendix D of the FS Report provides a factual determination for the shoreline construction planned for Alternative S-4.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Perform construction in shoreline zone                                             | This section identifies general requirements for compensatory mitigation to offset losses from unavoidable impacts to waters of the United States.                                                                    | Waters of the United States | 40 CFR § 230.93                                                                     | Applicable (for Alternative S-4)       | Alternative S-4 includes shoreline construction that would result in the discharge of fill material into a wetland, the loss of which would be mitigated by the Navy (on site at adjacent Parcel E-2) in accordance with the substantive provisions of 40 CFR § 230.93.                                                                                                                                                                                                                                                                             |
| Perform construction in shoreline zone                                             | This section identifies the required content for mitigation plans.                                                                                                                                                    | Waters of the United States | 40 CFR § 230.94(c)                                                                  | To Be Considered (for Alternative S-4) | Requirements are procedural and not substantive; however, these requirements will be used as TBCs in developing site-specific mitigation plans for adjacent Parcel E-2.                                                                                                                                                                                                                                                                                                                                                                             |

| Perform construction in shoreline zone                                             | These sections identify ecological performance standards and monitoring requirements for mitigation projects.                                                    | Waters of the United States | 40 CFR §§ 230.95 and 230.96 | Applicable (for Alternative S-4) | Ecological performance standards and monitoring requirements will be incorporated, as appropriate, into site-specific mitigation plans for adjacent Parcel E-2.                                                                                                                                                                                                                               |
| Perform construction in shoreline zone                                             | This section identifies the long-term management methods for compensatory mitigation projects.                                                                   | Waters of the United States | 40 CFR § 230.97             | Applicable (for Alternative S-4) | Long-term management methods will be incorporated, as appropriate, into site-specific mitigation plans for adjacent Parcel E-2.                                                                                                                                                                                                                                                               |
| Perform construction in shoreline zone                                             | This section identifies general policies for evaluating permit applications for proposed discharge of dredged or fill material into waters of the United States. | Waters of the United States | 33 CFR § 320.4              | Applicable (for Alternative S-4) | The planned shoreline construction is to be performed on site pursuant to CERCLA and, as such, the Navy is not required to obtain a permit to discharge the fill; however, the Navy will comply with the substantive provisions of general policies for evaluating permit applications. Appendix D of the FS Report evaluates the proposed shoreline construction relative to these policies. |
| Perform construction in shoreline zone                                             | These sections identify terms and conditions for the nationwide permit program, which authorizes discharges having minimal impacts.                              | Waters of the United States | 33 CFR § 330.1(e)(3)        | Applicable (for Alternative S-4) | The planned shoreline construction is to be performed on site pursuant to CERCLA and, as such, the Navy is not required to obtain a permit to discharge the fill; however, the Navy will comply with the substantive terms and conditions of Nationwide Permit 38.                                                                                                                            |

| <b>Stormwater Discharge</b>                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                     |                                                        |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Clean Water Act, as Amended (Title 33 USC, ch. 26, §§ 1251–1387) <sup>b</sup></b>               |                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                     |                                                        |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Excavation and grading activities                                                                  | Construction that disturbs at least 1 acre must use best management practices to control stormwater discharges.                                                                                                                                                                                                                                                                                                                                | Construction activities at least 1 acre in size.                                                                                                                                    | Clean Water Act § 402<br>40 CFR § 122.44(k)(2) and (4) | Applicable<br>(for Alternative S-4 and O-4)                       | Implementation of Alternatives S-4 and O-4 will disturb more than 1 acre. The Navy will implement the substantive provisions of state general stormwater discharge permit, Orders 09-09-DWQ and 10-14-DWQ (adopted pursuant to Clean Water Act § 402), to comply with the federal Clean Water Act ARARs and water quality state ARARs for discharge to surface water. The federal and state ARARs require implementing best management practices and meeting the substantive numeric effluent limit and action level requirements. Although procedural requirements do not qualify as CERCLA ARARs, the Navy shall voluntarily prepare a CERCLA storm water plan as a component of CERCLA remedial design to address the substantive provisions.                                                                                                            |
| <b>Groundwater Monitoring</b>                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                     |                                                        |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Resource Conservation and Recovery Act (Title 42 USC, ch. 82, §§ 6901-6991[i]) <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                     |                                                        |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Monitor groundwater                                                                                | The RCRA monitoring regulations apply during the post-closure care period and during any compliance period unless: (1) the regulated unit has been in compliance with the water quality protection standard for a period of 3 consecutive years; and (2) all waste, waste residues, contaminated containment system components, contaminated subsoils, and all other contaminated geologic materials are removed or decontaminated at closure. | Surface impoundment, waste pile, land treatment unit, or landfill for which constituents in or derived from waste in the unit may pose a threat to human health or the environment. | Cal. Code Regs. tit. 22, § 66264.90(c)                 | Relevant and appropriate<br>(for Alternatives GW-3, O-4, and R-2) | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the groundwater monitoring component of Alternatives GW-3, O-4, and R-2 (as they pertain to waste left in place at IR-02 and IR-03). The groundwater monitoring period for Alternatives GW-3 and O-4 will extend, consistent with Cal. Code Regs. tit. 27, § 20950(a), as long as the wastes pose a threat to water quality. The groundwater monitoring period for Alternative R-2 may be terminated after 3 consecutive years of monitoring if the results demonstrate, consistent with the findings of previous radiological investigations, that radionuclides are not present in groundwater at activity levels that are both statistically significant and pose an unacceptable risk to human health. |

| <b>Resource Conservation and Recovery Act (Title 42 USC, ch. 82, §§ 6901-6991[i]) <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                    |                                      |                                                                             |                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Monitor groundwater                                                                                | Chemicals of concern are the waste constituents, reaction products, and hazardous constituents that are reasonably expected to be in or derived from the waste contained in the regulated unit.                                                                                                                    | RCRA hazardous waste management unit | Cal. Code Regs. tit. 22, § 66264.93                                         | Relevant and appropriate (for Alternatives GW-3, O-4, and R-2) | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternatives GW-3, O-4, and R-2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Monitor groundwater                                                                                | The POC is a vertical surface, located at the hydraulically downgradient limit of the waste management area that extends through the uppermost aquifer underlying the regulated unit.                                                                                                                              | RCRA hazardous waste management unit | Cal. Code Regs. tit. 22, § 66264.95                                         | Relevant and appropriate (for Alternatives GW-3, O-4, and R-2) | The POC provisions at Cal. Code Regs. tit. 22, § 66264.95 are relevant and appropriate ARARs for the scenario involving containment of in-place waste at Parcel E IR-02 and IR-03. Waste has been identified throughout IR-02 and IR-03, and this waste is the primary source of contamination to groundwater (see Sections 4.3.9, 4.3.10, and 4.3.11 of the Revised RI Report). Based on these findings, IR-02 and IR-03 are considered a contiguous waste management unit. The Navy believes that, for plumes located within IR-02 and IR-03, contamination upgradient of the POC would be adequately contained by the remedial action to ensure compliance with the RAOs and adequately protect human health and the environment. |
| Monitor groundwater                                                                                | Owner or operator of shall establish a groundwater monitoring system for each regulated unit and include a sufficient number of monitoring points installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer that represent the quality of groundwater passing the POC. | RCRA hazardous waste management unit | Cal. Code Regs. tit. 22, § 66264.97(b)(1)(A), (b)(1)(D)(1) and (b)(1)(D)(2) | Relevant and appropriate (for Alternatives GW-3, O-4, and R-2) | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternatives GW-3, O-4, and R-2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Groundwater Monitoring (continued)</b>                                                          |                                                                       |                                      |                                                                                                                               |                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Resource Conservation and Recovery Act (Title 42 USC, ch. 82, §§ 6901-6991[i]) <sup>b</sup></b> |                                                                       |                                      |                                                                                                                               |                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Monitor groundwater                                                                                | Requirements for monitoring well construction and sampling intervals. | RCRA hazardous waste management unit | Cal. Code Regs. tit. 22, § 66264.97(b)(4), (5), (6), and (7)                                                                  | Relevant and appropriate (for Alternatives GW-3, O-4, and R-2) | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternatives GW-3, O-4, and R-2.                                                                                                                                                                                                                                                                                                                                                              |
| Monitor groundwater                                                                                | Requirements for collecting samples.                                  | RCRA hazardous waste management unit | Cal. Code Regs. tit. 22, § 66264.97(e)(6), (e)(12)(A), (e)(12)(B), (e)(13), and (e)(15)                                       | Relevant and appropriate (for Alternatives GW-3, O-4, and R-2) | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternatives GW-3, O-4, and R-2.                                                                                                                                                                                                                                                                                                                                                              |
| Monitor groundwater                                                                                | Requirements for a detection monitoring program.                      | RCRA hazardous waste management unit | Cal. Code Regs. tit. 22, § 66264.98(e)(1-5), (i), (j), (k)(1-3), (4)(A) and (D), (5), (7)(C) and (D), (n)(1), (2)(B), and (C) | Relevant and appropriate (for Alternative R-2)                 | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternative R-2, which will require continued groundwater monitoring to demonstrate, consistent with the findings of previous radiological investigations, that radionuclides are not present in groundwater at activity levels that are both statistically significant and pose an unacceptable risk to human health. No other response action is required for radionuclides in groundwater. |

| <b>Groundwater Monitoring / Excavation and Offsite Disposal / In-Situ Treatment</b>                |                                                                                                                                                                                                                                                                                                                                      |                                       |                                                    |                                                          |                                                                                                                                                                                                                                                                                            |
| <b>Resource Conservation and Recovery Act (Title 42 USC, ch. 82, §§ 6901-6991[i]) <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                      |                                       |                                                    |                                                          |                                                                                                                                                                                                                                                                                            |
| Monitor groundwater                                                                                | In conjunction with corrective action measures, the owner or operator shall establish and implement a water quality monitoring program to demonstrate the effectiveness of the corrective action program. The program shall be effective in determining compliance and in determining the success of the corrective action measures. | RCRA hazardous waste management unit. | Cal. Code Regs. tit. 22, § 66264.100(d)            | Relevant and appropriate (for Alternatives GW-3 and O-4) | These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternatives GW-3 and O-4 (which both involve response actions for non-radioactive chemicals in groundwater). |
| Onsite generation of waste                                                                         | Person who generates waste shall determine if the waste is a RCRA hazardous waste.                                                                                                                                                                                                                                                   | Generator of waste.                   | Cal. Code Regs. tit. 22, §§ 66262.10 (a), 66262.11 | Applicable (for Alternatives S-4, GW-3, O-4, and R-2)    | These regulations are applicable to any operation that generates waste. Alternatives S-4, GW-3, O-4, and R-2 will generate waste to be disposed of off site. The Navy will decide whether the waste is RCRA hazardous waste when it is generated.                                          |
| Onsite generation of waste                                                                         | Requirements for analyzing waste for determining whether waste is hazardous.                                                                                                                                                                                                                                                         | Generator of waste.                   | Cal. Code Regs. tit. 22, § 66264.13 (a) and (b)    | Applicable (for Alternatives S-4, GW-3, O-4, and R-2)    | These regulations are applicable to any operation that generates waste. Alternatives S-4, GW-3, O-4, and R-2 will generate waste to be disposed of off site. The Navy will decide whether the waste is RCRA hazardous waste when it is generated.                                          |

| <b>Resource Conservation and Recovery Act (Title 42 USC, ch. 82, §§ 6901-6991[i]) <sup>b</sup></b>      |                                                                                                                                                                                      |                                                               |                                                              |                                                                     |                                                                                                                                                                                                                                                                         |
| Stockpiling soil for offsite disposal                                                                   | Allows generators to accumulate solid remediation waste in an EPA-designated pile for storage only up to 2 years during remedial operations without triggering LDRs.                 | RCRA hazardous waste temporarily stored in piles.             | 40 CFR § 264.554(a), (d), (g), (h), (i), (j), and (k)        | Relevant and appropriate (for Alternatives S-4, GW-3, O-4, and R-2) | The Navy will temporarily stockpile soil in staging piles for offsite disposal. The Navy does not anticipate that all soil will be RCRA hazardous waste; however, the Navy has determined that these requirements are relevant and appropriate for all stockpiled soil. |
| Temporary units                                                                                         | Alternative requirements that are protective of human health or the environment may replace design, operating, or closure standards for temporary tanks and container storage areas. | Temporary units may be used and are not subject to RCRA LDRs. | Cal. Code Regs. tit. 22, §§ 66264.553 (b), (d), (e), and (f) | Applicable (for Alternatives S-4, GW-3, O-4, and R-2)               | The substantive portions are applicable for temporary onsite storage of liquid generated during excavation of saturated soil or sediments and prior to offsite disposal.                                                                                                |

| Discharge of treated groundwater to publicly owned treatment works      | Identifies prohibited discharges, categorical standards, and monitoring requirements.                                                                                                                           | Pollutants from nondomestic sources that are discharged indirectly into publicly owned treatment works.                                                                                                                                                                                                                                | 40 CFR Part 403                                                                         | Relevant and appropriate (for Alternatives GW-3 and O-4) | If onsite groundwater extracted or treated under Alternatives GW-3 or O-4 is discharged to a publicly owned sanitary sewer system, the substantive provisions of the pretreatment standards are relevant and appropriate federal ARARs.                                    |
| <b>In-Situ Treatment</b>                                                |                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                        |                                                                                         |                                                          |                                                                                                                                                                                                                                                                            |
| <b>Safe Drinking Water Act (42 USC § 300[f]-300[j]-26) <sup>b</sup></b> |                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                        |                                                                                         |                                                          |                                                                                                                                                                                                                                                                            |
| Inject biological amendment or zero-valent iron into groundwater.       | The underground injection control program prohibits injection that allows movement of contaminants into underground sources of drinking water that may result in violations of MCLs or adversely affect health. | An approved UIC program is required in states listed under SDWA Section 1422. Class I wells and Class IV wells are the relevant classifications for CERCLA sites. Class I wells are used to inject hazardous waste beneath the lowermost formation that contains an underground source of drinking water within 0.25 mile of the well. | 40 CFR § 144.12(a) excluding the reporting requirements in § 144.12(b) and 144.12(c)(1) | Applicable (for Alternatives GW-3 and O-4)               | This requirement is applicable to the Navy's injection of biological amendment or zero-valent iron into the groundwater. The Navy will use the basic information requirements contained in 40 CFR §144.83 as TBCs for complying with the requirement in 40 CFR §144.12(a). |

| <b>Resource Conservation and Recovery Act (Title 42 USC, ch. 82, §§ 6901-6991[i]) <sup>b</sup></b> |                                                                                                                                                                                                                                                              |                                       |                                            |                                                                     |                                                                                                                                                                                                                                                                                |
| Source containment                                                                                 | Continue to operate leachate collection and removal system until leachate is no longer detected (this regulation does not require the installation of a leachate collection system)                                                                          | RCRA hazardous waste management unit. | Cal. Code Regs. tit. 22, § 66264.310(b)(2) | Relevant and appropriate (for Alternatives S-4 and O-4)             | Relevant and appropriate for post-closure leachate/groundwater control at IR-02 Northwest/Central and IR-03 (if required based on groundwater monitoring results).                                                                                                             |
| <b>Radionuclides</b>                                                                               |                                                                                                                                                                                                                                                              |                                       |                                            |                                                                     |                                                                                                                                                                                                                                                                                |
| Radioactive material and waste storage and control                                                 | The licensee shall secure from unauthorized removal or access licensed materials that are stored in controlled or unrestricted areas.                                                                                                                        | Existing NRC-licensed site            | 10 CFR § 20.1801                           | Relevant and appropriate (for Alternatives S-4, GW-3, O-4, and R-2) | Not applicable because Parcel E is not an existing NRC-licensed site. The substantive provisions of this requirement are relevant and appropriate for staging excavated soil containing ROCs activities exceeding the RGs (see Table 8 of this ROD) prior to offsite disposal. |
|                                                                                                    | The licensee shall control and maintain constant surveillance of licensed material that is in a controlled or unrestricted area and that is not in storage.                                                                                                  | Existing NRC-licensed site            | 10 CFR § 20.1802                           | Relevant and appropriate (for Alternatives S-4, GW-3, O-4, and R-2) | Not applicable because Parcel E is not an existing NRC-licensed site. The substantive provisions of this requirement are relevant and appropriate for staging excavated soil containing ROCs activities exceeding the RGs (see Table 8 of this ROD) prior to offsite disposal. |
| Radioactive waste disposal                                                                         | Performance objectives for the land disposal of LLRW. Concentrations of radioactive material that may be released to the general environment must not result in an annual dose exceeding 25 mrem to the body or any organ of a member of the general public. | NRC-licensed LLRW disposal site       | 10 CFR § 61.41                             | Relevant and appropriate (for Alternatives S-4, GW-3, O-4, and R-2) | Not applicable because Parcel E is not an NRC-licensed disposal site. Relevant and appropriate for sites with radionuclides.                                                                                                                                                   |

#### **Attachment 4. Federal Action-Specific ARARs (*continued*)**

Record of Decision for Parcel E, Hunters Point Naval Shipyard, San Francisco, California

Notes:

a = Only the substantive provisions of the requirements cited in this table are ARARs.

b = Statutes and policies and their citations are provided as headings to identify general categories of ARARs for the convenience of the reader. Listing the statutes and policies does not indicate that the Navy accepts the entire statutes or policies as ARARs; specific ARARs are addressed in the table below each general heading; only substantive requirements of specific citations are considered ARARs.

ARAR = applicable or relevant and appropriate requirement

BAAQMD = Bay Area Air Quality Management District

Cal. Code Regs. = California Code of Regulations

CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act

CFR = Code of Federal Regulations

ch. = Chapter

EPA = U.S. Environmental Protection Agency

FS = feasibility study

IR = Installation Restoration

LDRs = land disposal restrictions

LLRW = low-level radioactive waste

MCLs = maximum contaminant levels

mrem = millirem

Navy = Department of the Navy

NRC = Nuclear Regulatory Commission

POC = point of compliance

RAOs = remedial action objectives

RCRA = Resource Conservation and Recovery Act

RGs = remediation goals

RI = Remedial Investigation

ROCs = radionuclides of concern

SVE = soil vapor extraction

SWDA = Safe Drinking Water Act

TBC = to be considered

tit. = Title

UIC = underground injection control

USC = United States Code

§ = Section

| <b>Containment</b>                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                  |                                              |                                                         |                                                                                            |
| <b>State Water Resources Control Board / California Department of Resources Recycling and Recovery <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                  |                                              |                                                         |                                                                                            |
| Capping permeability                                                                                                | Hydraulic conductivities will be evaluated primarily through laboratory methods and will be confirmed by appropriate field testing. Earthen materials used in containment structures will consist of a clay mixture and other suitable fine-grained soils that have specific characteristics and that, in combination, can be compacted to attain the required hydraulic conductivity when installed. | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, § 20320 (c) and (d) | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |
| Erosion control                                                                                                     | Diversion and drainage facilities will be designed, constructed, and maintained to accommodate the anticipated volume of precipitation and peak flows.                                                                                                                                                                                                                                                | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, §§ 20365(c) and (d) | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |
| Erosion control                                                                                                     | Erosion and related damage of the final cover due to drainage must be prevented throughout the post-closure maintenance period.                                                                                                                                                                                                                                                                       | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, § 21090(c)(4)       | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for covers throughout Parcel E.                                   |

| <b>Containment (continued)</b>                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                  |                                        |                                                         |                                                                                            |
| <b>State Water Resources Control Board / California Department of Resources Recycling and Recovery <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                  |                                        |                                                         |                                                                                            |
| Foundation layer                                                                                                    | Closed landfills shall be provided with not less than 2 feet of appropriate materials as a foundation layer for the final cover. The foundation layer shall be compacted to the maximum density obtainable at optimum moisture content using methods that are in accordance with accepted civil engineering practice. A lesser thickness may be allowed for units if the differential settlement of waste and ultimate land use will not affect the structural integrity of the final cover. | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, § 21090(a)(1) | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |
| Final grading                                                                                                       | The final cover of closed landfills will be designed, graded, and maintained to prevent ponding and to prevent site erosion caused by high runoff velocities. Slopes should be at least 3 percent.                                                                                                                                                                                                                                                                                           | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, § 21090(b)(1) | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |
| Erosion-resistant layer                                                                                             | The low hydraulic conductivity layer of § 21090(a)(2) shall be directly overlain by an erosion-resistant layer. Closed landfills shall be provided with an uppermost cover layer consisting of either a vegetative layer consisting of not less than 1 foot of soil capable of sustaining native or other suitable plant growth or a mechanically erosion-resistant layer.                                                                                                                   | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, § 21090(a)(3) | Relevant and appropriate (for Alternatives S-4 and O-4) | Relevant and appropriate for low-permeability covers at IR-02 Northwest/Central and IR-03. |

| <b>McAteer-Petris Act (California Government Code §§ 66600 through 66661) <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                              |                                                                                                                        |                                                       |                                                                                                                                                                                                                                                                              |
| Tidal marshes and tidal flats in the San Francisco Bay coastal zone                        | Tidal marshes and tidal flats should be conserved to the fullest possible extent. Projects harming tidal marshes and tidal flats should be allowed only for purposes providing substantial public benefits and only if there is no feasible alternative. Restoration projects should include a monitoring program with biological and physical goals and success criteria. | Activities affecting the San Francisco Bay.                                                                                                                                  | Part III of Bay Plan (Findings and Policies Concerning Tidal Marshes and Tidal Flats around the Bay, Policies 1 and 5) | Relevant and appropriate (for Alternative S-4)        | The planned shoreline protection for Parcel E would destroy onsite tidal marshes, the loss of which would be mitigated by the Navy (on site at adjacent Parcel E-2). Appendix D of the FS Report evaluates the proposed shoreline protection relative to these requirements. |

| <b>Shoreline Construction (continued)</b>                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                             |                                                                                                                  |                                                |                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>McAteer-Petris Act (California Government Code §§ 66600 through 66661) <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                             |                                                                                                                  |                                                |                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Fills in the San Francisco Bay coastal zone                                                | To prevent damage by flooding, shoreline structures should be designed to consider future rise in sea level and subsidence for the expected life of the project.                                                                                                                                                                                                                                                                                             | Activities affecting the San Francisco Bay. | Part IV of Bay Plan (Findings and Policies Concerning Safety of Fills in the Bay, Policies 4 and 5)              | Relevant and appropriate (for Alternative S-4) | Shoreline protection features will be installed to prevent erosion and protect the integrity of the remedial action. Appendix D of the FS Report evaluates the planned shoreline protection relative to these requirements.                                                                                                                                                                                     |
| Shoreline protection in the San Francisco Bay coastal zone                                 | Riprap revetments should be constructed of properly sized and placed material. Protective projects should be maintained to ensure that the shoreline will be protected from tidal erosion. Protective projects should include nonstructural methods such as marsh vegetation where feasible.                                                                                                                                                                 | Activities affecting the San Francisco Bay. | Part IV of Bay Plan (Findings and Policies Concerning Shoreline Protection around the Bay, Policies 2, 3, and 4) | Relevant and appropriate (for Alternative S-4) | Shoreline protection features will be installed to prevent erosion and protect the integrity of the remedial action. Appendix D of the FS Report evaluates the planned shoreline protection relative to these requirements.                                                                                                                                                                                     |
| Fills in the San Francisco Bay coastal zone                                                | Fills in accord with the Bay Plan should be the minimum necessary to achieve its purpose and meet one of the following criteria outlined in Bay Plan policies: (a) filling supports bay-related purposes (e.g., ports, water-related recreation, etc.); (b) filling is needed for infrastructure for which there is no other alternative (e.g., airports, roads, etc.); or (c) filling is minor and needed to improve shoreline appearance or public access. | Activities affecting the San Francisco Bay. | Part IV of Bay Plan (Findings and Policies Concerning Fills in Accord with the Bay Plan, Policy 1)               | Relevant and appropriate (for Alternative S-4) | The planned shoreline protection involve varying degrees of excavation of contaminated sediment in order to protect human health and the environment that require minor filling of onsite tidal marshes, the loss of which would be mitigated by the Navy (on site at adjacent Parcel E-2), and the bay. Appendix D of the FS Report evaluates the planned shoreline protection relative to these requirements. |

| <b>Shoreline Construction (continued)</b>                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                             |                                                                                                   |                                                |                                                                                                                                                                                                                                                                             |
| <b>McAteer-Petris Act (California Government Code §§ 66600 through 66661) <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                             |                                                                                                   |                                                |                                                                                                                                                                                                                                                                             |
| Fills in the San Francisco Bay coastal zone                                                | Minor fill to improve shoreline appearance is permissible if (1) the fill is necessary because the present appearance adversely affects the enjoyment of the bay and its shoreline; (2) it is either physically impractical or economically infeasible to improve the appearance without filling; (3) the amount of filling is the minimum necessary to improve shoreline appearance; (4) the proposed project would improve the shoreline appearance; and (5) the fill would not adversely affect enjoyment of the bay and its shoreline, and the fill will not have any adverse effect on present or future use designated in the Bay Plan. | Activities affecting the San Francisco Bay. | Cal. Code Regs. tit. 14, § 10700                                                                  | Relevant and appropriate (for Alternative S-4) | Alternative S-4 requires minor filling of onsite tidal marshes, the loss of which would be mitigated by the Navy (on site at adjacent Parcel E-2), and the bay. Appendix D of the FS Report evaluates the planned shoreline protection relative to these requirements.      |
| Fills in the San Francisco Bay coastal zone                                                | Measures to compensate for unavoidable adverse impacts to natural resources of the bay should be required. Mitigation projects should be sited as close to the impact site as practicable. The amount and type of mitigation should be based on an analysis of the probability of success of the mitigation project, the expected delay between the impact and the functioning mitigation site, and the type and quality of ecological functions of the mitigation site compared with the impacted site.                                                                                                                                      | Activities affecting the San Francisco Bay. | Part IV of Bay Plan (Findings and Policies Concerning Mitigation, Policies 1, 2, and 4 through 7) | Relevant and appropriate (for Alternative S-4) | Alternative S-4 includes shoreline construction that would result in the discharge of fill material into a wetland, the loss of which would be mitigated by the Navy (on site at adjacent Parcel E-2) in accordance with the substantive provisions of Part IV of Bay Plan. |

| <b>California Civil Code <sup>b</sup></b> |                                                                                                |                                                                          |                              |                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Land use controls                         | Provides conditions under which land use restrictions will apply to successive owners of land. | Transfer of property from the federal government to a nonfederal agency. | California Civil Code § 1471 | Relevant and appropriate (for Alternatives S-4, GW-3, O-4, and R-2) | Generally, California Civil Code § 1471 allows an owner of land to make a covenant to restrict the use of land for the benefit of a covenantee. The covenant runs with the land to bind successive owners, and the restrictions must be reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials, as defined in California Health & Safety Code § 25260. Substantive provisions are the following general narrative standard: "Each act that the owner or grantee will do or refrain from doing relates to the use of land and each act is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials, as defined in Section 25260 of the California Health & Safety Code." This narrative standard would be implemented through incorporation of restrictive covenants in the deed and Environmental Restriction and Covenant Agreement at the time of transfer. |

| <b>Institutional Controls (continued)</b>                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                  |                                              |                                                                     |                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Department of Toxic Substances Control <sup>b</sup></b>                                                          |                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                  |                                              |                                                                     |                                                                                                                                                                                                                                                                                                                                                                          |
| Land use covenants                                                                                                  | A land use covenant imposing appropriate limitations on land use shall be executed and recorded when facility closure, corrective action, remedial or removal action, or other response actions are undertaken and hazardous materials, hazardous wastes or constituents, or hazardous substances will remain at the property at levels that are not suitable for unrestricted use of the land. | Transfer of property from federal government to a nonfederal agency.                                                                                                             | Cal. Code Regs. tit. 22, § 67391.1           | Relevant and appropriate (for Alternatives S-4, GW-3, O-4, and R-2) | The Navy is evaluating ICs for soil and groundwater. These requirements are ARARs for those ICs. EPA agrees that the substantive portions of the regulations referenced are ARARs. EPA specifically considers sections (a), (d), and (e) of Cal. Code Regs. tit. 22 § 67391.1, to be ARARs for this ROD. DTSC's position is that all of the state regulation is an ARAR. |
| <b>Leachate Collection and Control</b>                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                  |                                              |                                                                     |                                                                                                                                                                                                                                                                                                                                                                          |
| <b>State Water Resources Control Board / California Department of Resources Recycling and Recovery <sup>b</sup></b> |                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                  |                                              |                                                                     |                                                                                                                                                                                                                                                                                                                                                                          |
| Leachate control                                                                                                    | During the post-closure maintenance period, the owner and operator will ensure that leachate collection and control are performed in a manner that prevents public contact and controls vectors, nuisance, and odors. (This section does not require installation of a new leachate collection system.)                                                                                         | Cal. Code Regs. tit. 27, requirements are only applicable for waste discharged after July 18, 1997 (the effective date of the consolidated regulations), unless otherwise noted. | Cal. Code Regs. tit. 27, §§ 21160(a) and (c) | Relevant and appropriate (for Alternatives S-4 and O-4)             | Relevant and appropriate for leachate control (if required based on monitoring results) at IR-02 Northwest/Central and IR-03.                                                                                                                                                                                                                                            |

Record of Decision for Parcel E, Hunters Point Naval Shipyard, San Francisco, California

Notes:

a = Only the substantive provisions of the requirements cited in this table are ARARs.

b = Statutes and policies and their citations are provided as headings to identify general categories of ARARs for the convenience of the reader. Listing the statutes and policies does not indicate that the Navy accepts the entire statutes or policies as ARARs; specific ARARs are addressed in the table below each general heading; only substantive requirements of specific citations are considered ARARs.

ARAR = applicable or relevant and appropriate requirement

Bay Plan = San Francisco Bay Plan

Cal. Code Regs. = California Code of Regulations

ch. = Chapter

div. = Division

DTSC = Department of Toxic Substances Control

EPA = U.S. Environmental Protection Agency

FS = Feasibility Study

ICs = institutional controls

IDW = investigation-derived waste

IR = Installation Restoration

Navy = Department of the Navy

ROD = Record of Decision

subch. = Subchapter

subdiv. = Subdivision

SWRCB = State Water Resources Control Board

TBC = to be considered

tit. = Title

§ = Section

| <i>General Comments</i>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1.                       | The Draft Record of Decision for Parcel E (the ROD) does not include a figure identifying all of the Installation Restoration (IR) sites within Parcel E. Figure 2 displays the IR site boundaries, but labels are only included for IR-02 and IR-03. Please either revise Figure 2 to display IR site labels for all IR sites within Parcel E or provide an additional figure to display the IR sites within Parcel E.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Figure 2 was revised to identify and label all IR sites within Parcel E. A new Figure 3 was created to identify other historical shipyard operations that were previously shown on Figure 2, including NRDL buildings and Triple A sites.                                                                                                                                                                                                                                                    |
| 2.                       | The ROD indicates that Tier 1 (locations that contain chemicals in soil at concentrations greater than 10 times the remediation goals) and Tier 2 (locations that contain chemicals in soil at concentrations greater than 5 times the remediation goals) soils will be excavated and disposed of off-site; however, soil with concentrations greater than the remediation goals but less than 5 times the remediation goals will be left in place at Parcel E, but these locations have not been identified on a figure. Figure 9 displays Tier 1 and Tier 2 locations, but does not show remaining locations where concentrations in soil are greater than the remediation goals but less than 5 times the remediation goals. Please revise Figure 9 to display locations where concentrations in soil are greater than the remediation goals but less than 5 times the remediation goals or provide an additional figure to display this information. | The subject figure (now referred to as Figure 10) was revised to include locations where chemical concentrations in soil exceeded the RGs but were not identified as Tier 1 or Tier 2 locations (because concentrations were less than five times the RGs).                                                                                                                                                                                                                                  |
| <i>Specific Comments</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1.                       | Page 1-1, 2nd paragraph. The term "facilitate closure" is used twice in this paragraph and its use does appear appropriate. Please consider editing this paragraph and decide if "facilitate closure" is appropriate in this context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The phrase "facilitate closure" was used twice in the subject paragraph to explain two separate changes made to the original Parcel E boundary. The first boundary change was made to separate IR-01/21 into Parcel E-2 to facilitate closure of the former landfill and its surrounding areas. The second boundary change was made to separate Crisp Road into Parcel UC-3 to facilitate closure of this future utility corridor. The document was not revised in response to this comment. |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1.<br>(cont.)                        | <i>(Follow-on comment received on October 28, 2013)</i><br>Response to EPA Specific Comment (SC) 1. The Navy's response does not capture the point EPA was trying to make. Our comment tried to express concern was that the term "closure" most commonly refers to formal closure under RCRA, which is not being conducted at either Parcel E-2 or Parcel E. We believe that the Navy intended to refer to "CERCLA administrative" closure which should be added in front of each time the term "closure" is used in this section. | The subject text was revised to consistently use the phrase "CERCLA administrative closure," as suggested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2.                                   | Page 1-1, 3rd paragraph. The first sentence of this paragraph states: "Parcel E has been divided into two areas to support its planned reuse. (underlines added). EPA suggests re-writing this sentence to simply say, "Parcel E consists of two planned landuse zones.". The word "divided" was used in the previous paragraph to mean the creation of new parcels.                                                                                                                                                                | The sentence was revised to read " <del>Parcel E has been divided into two areas to support its planned reuse</del> <u>includes two future land use districts: the Shipyard South Multi-Use District and Shipyard Shoreline Open Space.</u> "                                                                                                                                                                                                                                                                                                                                                               |
| 3.                                   | Page 1-4, Top Paragraph. The last sentence should read.."scheduled to be completed in 2015".                                                                                                                                                                                                                                                                                                                                                                                                                                        | The sentence was revised as suggested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 4.                                   | Page 1-4, Second Paragraph. There are minor differences between the Selected Remedy in Section 1.1, and the Selected Remedy presented in Section 2.9. EPA considers Section 2.9 to be the more complete and effective description of the selected remedy for Parcel E.                                                                                                                                                                                                                                                              | Section 1.1 was revised to ensure consistency with Section 2.9.2. Specifically, Section 1.1 was revised to discuss (1) the removal and disposal of contaminated sediment along the shoreline (prior to installation of the shoreline protection materials) and (2) the groundwater monitoring for radionuclides at IR-02 and IR-03. Please note that Section 1.1 briefly summarizes the selected remedy in a series of text bullets (covering about 2 pages), whereas Section 2.9.2 provides a comprehensive narrative description of the selected remedy in multiple paragraphs (covering about 10 pages). |
| 5.                                   | Figure 2. (a) In the Legend, the light green color is difficult to see due to smaller box size.                                                                                                                                                                                                                                                                                                                                                                                                                                     | (a) As described in the response to general comment 1, Figure 2 was revised to identify and label all IR sites within Parcel E. Accordingly, this figure no longer uses green shading to distinguish IR-02 from the other IR sites.                                                                                                                                                                                                                                                                                                                                                                         |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 5.<br>(cont.)                        | Figure 2 (continued). (b) Why are "Triple A Sites" relevant since exact operations and COCs used by Triple A are not identified? Keeping this information in the figure is fine, just curious if there is more meaning in the context of this ROD to showing these sites on this figure.                                                                                                     | (b) Triple A, a private ship repair company, occupied some sites at HPNS and allegedly disposed of hazardous wastes, including possibly discharging waste oil within Parcel E using below-ground fuel and steam lines (which will be closed under the selected remedy). Section 2.1 of the ROD includes a brief description about shipyard operations, including Triple A activities, that led to the contamination requiring cleanup; as a result, the Triple A site boundaries are shown on Figure 3 (formerly Figure 2).                                                                                                                                                                                                                                     |
| 6.                                   | Figure 3. IR Site boundaries in Figure 2 and Figure 3 do not appear to match. Are the bolding of buildings numbers in each figure of any significance?                                                                                                                                                                                                                                       | As described in the response to general comment 1, Figure 2 was revised to identify and label all IR sites within Parcel E, and a new Figure 3 was created to identify other historical shipyard operations that were previously shown on Figure 2. The radiological impacted sites shown on Figure 4 (formerly Figure 3) include only two IR site boundaries (IR-02 and IR-03), and those boundaries match the information provided on Figure 2. The bold building numbers correspond to the existing buildings at Parcel E (which are shown with a dark outline), whereas the lighter building numbers correspond to demolished buildings (which are shown with a lighter dashed outline). This information was added to the legend for both Figures 3 and 4. |
| 7.                                   | Page 2-4, top paragraph. This paragraph which presents a summary of land uses in Parcel E should end with a sentence stating that a more complete description of current and future land use is presented in Section 2.4.                                                                                                                                                                    | The following sentence was added at the end of the paragraph as suggested: <i>"Section 2.4 further describes the current and future land use of Parcel E."</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 8.                                   | Figure 4. Consider editing Figure 4 so it is clear that the buildings (shaded grey in the figure) areas do not have a different land use or reuse expectation. The reader should not be lead to believe that buildings in the future will have the same footprint as current buildings. Perhaps remove current buildings from Figure 4 since they were already presented in Figures 2 and 3. | The subject figure (now referred to as Figure 5) was revised to remove the existing features (both buildings and road edges).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 9.                                   | Footnote 8. Ending this footnote with the term ".and metals" is awkward since 3 metals are already specifically identified previously in this footnote. EPA recommends listing all ubiquitous metals by name that are common in HPNS non-engineered fill and known to have relatively high concentrations.                                                                                   | The footnote was revised as follows: <i>"The nonengineered fill materials that were derived from serpentinite bedrock contain minerals with relatively high concentrations of <u>certain metals</u>, including <u>arsenic</u>, <u>iron</u>, <u>manganese</u>, <u>mercury</u>, <u>nickel</u>, and <u>vanadium</u>-<del>metals</del>."</i>                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 9.<br>(cont.)                        | (see above)                                                                                                                                                                                                                                                                                                                                                                                                             | The revised text includes all metals identified as COCs in the HHRA for which the risk-based concentration (for the residential exposure scenario) is less than the HPAL. The comparison of HPALs to risk-based concentrations (for the residential exposure scenario) provides a basis for identifying metals that occur naturally at relatively high concentrations.                                                                                                                                                                                                      |
| 10.                                  | Figure 5. The colors designating "Extent of Intertidal Shoreline" and "Sanitary Sewer Line" are similar and different to differentiate. Consider making choosing a different color difference for one that can be easily identified.                                                                                                                                                                                    | The subject figure (now referred to as Figure 6) was revised to show the sanitary sewer lines in orange instead of purple.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 11.                                  | Table 1. The 1993 Phase II Rad Investigation, 1998-99 Phase IV Rad Investigation, and 2001 Rad investigation of Parcel E Shoreline all indicate that removal actions were "recommended". However, at some place in the table, it may be appropriate to clarify if any or all of these removal recommendations were actually carried out.                                                                                | The subject rows within Table 1 were revised to refer to the removal actions that addressed contamination identified during these investigations. These radiological removal actions are already described elsewhere in Table 1.                                                                                                                                                                                                                                                                                                                                            |
| 12.                                  | Page 2-14, Section 2.3.4. The two bullets on this page are not introduced.                                                                                                                                                                                                                                                                                                                                              | The last sentence of the paragraph will be revised to read; <i>"For evaluation purposes in the radiological addendum to the FS Report, the activity level for each ROC was compared against the corresponding release criterion to provide the following a general assessment of the distribution of ROCs in surface soil at Parcel E. The assessment results, as identified in the radiological addendum to the FS Report, are as follows:"</i>                                                                                                                            |
| 13.                                  | Page 2-23. Section 2.6. What does the term "open discharge" mean?                                                                                                                                                                                                                                                                                                                                                       | The term "open discharge" was meant to refer to the lack of any exposed and uncontrolled release of NAPL from IR-03 to San Francisco Bay. However, the subject text was deleted and replaced with text suggested by the Water Board (please see response to Water Board comment 5).                                                                                                                                                                                                                                                                                         |
| 14.                                  | Page 2-23, bottom paragraph. The last couple sentences in this paragraph state that soil gas action levels will be refined in the future using "accepted methodology" for risk assessments at HPNS. This needs further clarification by, at a minimum, explaining more about the process to be followed and stating that applicable and effective State and EPA vapor intrusion guidance will be followed at that time. | The subject text was revised as follows: <i>"These soil gas action levels will be used for an initial risk-based screening of refined using data collected during from a future soil gas survey (such as the survey following active treatment (to be performed at Building 406 and VOC groundwater plumes following active treatment). After the initial risk-based screening, areas with unacceptable risk will be further evaluated using location-specific data (i.e., physical characteristics of the soil) to assess potential exposures consistent with the most</i> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 14.<br>(cont.)                       | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <u>current State of California and EPA vapor intrusion guidance. In addition, risks and hazards at these areas will be further characterized using the accepted methodology for risk assessments at HPNS. Section 2.9.2.1 provides additional information on the future soil gas survey and potential actions that may be prompted based on the results of the risk and hazard evaluation. <del>Future soil gas action levels would account for vapors from both soil and groundwater, and would be calculated based on a cumulative excess cancer risk level of 10<sup>-6</sup> using the accepted methodology for risk assessments at HPNS.</del></u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 15.                                  | <p>Table 4.</p> <p>(a) Since risk management is presented previously in a Tier 1, Tier 2, and TPH Location (per Figure 9), should RGs in Table 4 be presented as Tier 1 (RES, REC), Tier 2 (RES, REC), and TPH?</p> <p>(b) The remediation goals (RG) for the Recreational Exposure Scenario and Construction Worker Exposure Scenario for mercury of 210 milligrams per kilogram (mg/kg) and 93 mg/kg should not be applied in IR-02 and IR-03 (reuse areas EOS-1 through EOS-4), because these areas are adjacent to the shoreline. Based on problems with mercury in groundwater at IR-26 in Parcel B, it is necessary to remediate mercury contaminated soil to the residential standard (2.28 mg/kg), except in areas protected by the underground barrier, to ensure that mercury is not discharged to San Francisco Bay above the California Toxics Rule (CTR) criterion. This RG for mercury (2.28 mg/kg) is already proposed for shoreline sediment in Table 5, so it should also be proposed for IR-02 and IR-03. Please ensure that the residential RG (or shoreline RG) for mercury is applied to IR-02 and IR-03 (reuse areas EOS-1 through EOS-4) except in areas where an underground barrier will be installed to control groundwater migration.</p> | <p>(a) A new table (referred to as Table 4) was integrated into Section 2.5.3 to identify the action levels that will be used, along with the petroleum source criterion, to identify areas requiring excavation and offsite disposal. The tables presenting the RGs (which are introduced in Section 2.7) were renumbered as Tables 5 through 8.</p> <p>(b) Based on the Navy's evaluation of mercury in groundwater at Parcel E, IR-03 is the only area where mercury may be present in groundwater at concentrations that may pose an unacceptable risk to aquatic wildlife in San Francisco Bay. Two wells at IR-03 may contain elevated mercury concentrations, but are located in an area that will be contained with a protective liner and below-ground barrier (following the removal or treatment of the NAPL source within this area) and monitored to ensure that unacceptable mercury concentrations are not discharged to San Francisco Bay. The Navy's evaluation determined that, with the exception of IR-03, mercury is not present in Parcel E groundwater at concentrations that pose an unacceptable risk to aquatic wildlife in San Francisco Bay. These determinations are based on the groundwater SLERA detailed in Appendix A (specifically, Section A3.1.5 and Figure A3-5) of the Final FS Report (ERRG, 2012). Additional information on the Navy's evaluation of potential risks at Parcel E (and the related development of RGs for soil, shoreline sediment, and groundwater) is presented on the following page.</p> |

| 15.<br>(cont.)                       | (see above)    | <ul style="list-style-type: none"> <li>Consistent with the technical approach followed during the CERCLA process at all HPNS parcels, RGs are developed for those chemicals that pose a demonstrated risk to either humans or wildlife (i.e., either COCs or COECs). COCs and COECs are determined by risk assessments that follow an evaluation process that all HPNS regulatory agencies have agreed to and approved. The results of the risk assessments for Parcel E were presented in the Revised RI Report (Barajas &amp; Associates, 2008), except for a SLERA for groundwater that was presented in the FS Report (ERRG, 2012). All HPNS regulatory agencies reviewed and finalized the Revised RI Report and FS Report in accordance with the FFA.</li> <li>The FS Report (ERRG, 2012) included a SLERA that evaluated the potential presence of mercury in groundwater at concentrations that could result in unacceptable discharge to San Francisco Bay (exceeding surface water quality criteria). The SLERA initially evaluated the presence of mercury in A-aquifer groundwater relative to a criterion of 0.6 µg/L, which is the HGAL. The SLERA identified seven A-aquifer wells, located between 75 and 1,000 feet from San Francisco Bay, from which at least one groundwater sample had mercury concentrations exceeding the HGAL; however, mercury was not reported at these wells during subsequent sampling events at concentrations exceeding the HGAL (all wells were sampled at least four times following the initial exceedance; see Figure A3-5 from the Final FS Report). Based on the low frequency of detection, the SLERA concluded that mercury was not a COEC for the following wells: IR02MW141A, IR02MW209A, IR02MWB-2, IR02MWB-3, IR03MW342A, IR08MW37A, and IR14MW09A.</li> <li>The SLERA identified three additional A-aquifer wells with samples that had mercury concentrations exceeding the HGAL, thus warranting further evaluation. Two of the wells (IR03MW226A and IR03MWO-1, both located less than 150 feet from San Francisco Bay) each contained</li> </ul> |

| 15.<br>(cont.)                       | (see above)    | <p>a single reported mercury concentration (in July 1992) that exceeded the HGAL (which was equivalent to the calculated trigger level given the close proximity of the wells to the bay). Mercury was not reported in samples collected from these wells in a follow-up sampling event in August 1992, and was also not reported in the recent sampling event for the ongoing pilot study to evaluate potential removal and treatment technologies for NAPL (this sampling event was performed after the FS Report was finalized, thus the results were not included in the SLERA). No samples were collected from the wells between 1992 and the ongoing pilot study because NAPL was present in the wells. Mercury was retained as a COPEC for wells IR03MW226A and IR03MWO-1 because the number of groundwater samples collected was insufficient to determine whether the reported mercury concentrations in July 1992 were anomalous. The third well that required further evaluation (IR05MW85A, located more than 1,300 feet from San Francisco Bay) contained numerous reported mercury concentrations that exceeded the HGAL; however, the reported mercury concentrations did not exceed the calculated trigger level (26.4 µg/L). Accordingly, mercury was not retained as a COPEC at well IR05MW85A.</p> <ul style="list-style-type: none"> <li>• Wells IR03MW226A and IR03MWO-1 are both located within the area to be contained with a protective liner and below-ground barrier (following the removal or treatment of the NAPL source within this area). As described in Section 2.9.2.3 of the ROD, groundwater quality in this area will be monitored in comparison to trigger levels to ensure the protection of aquatic wildlife in San Francisco Bay.</li> <li>• The Revised RI Report included a SLERA that evaluated the potential risk to benthic invertebrates, birds, and mammals from exposure to chemicals in shoreline sediment. This SLERA, which was distinct from the SLERA for groundwater, determined that mercury was a COEC for benthic invertebrates that inhabit the intertidal shoreline zone. Accordingly, the ROD identifies an RG for mercury in shoreline sediment</li> </ul> |

| 15.<br>(cont.)                       | (see above)    | <p>at IR-02 and IR-03 (2.28 mg/kg, which is equivalent to the HPAL). As described in Section 2.9.2.1 of the ROD, the potential risk to wildlife in the shoreline zone will be addressed by excavating contaminated sediment (to a depth of at least 2.5 feet) and backfilling with natural materials (such as sand) and large rocks.</p> <ul style="list-style-type: none"> <li>The Revised RI Report included an HHRA that evaluated the potential risk to humans from exposure to chemicals in soil. The HHRA concluded that mercury was a COC for the residential, recreational, and construction worker exposure scenarios. Accordingly, the ROD identifies RGs for mercury in soil based on the appropriate exposure scenarios, which for Redevelopment Blocks EOS-1 through EOS-4 are recreational user (93 mg/kg) and construction worker exposure (210 mg/kg). The RG for the residential exposure scenario (2.28 mg/kg, which is equivalent to the HPAL) applies to the areas planned for mixed use (Redevelopment Blocks MU-1, MU-2, and MU-3). As described in Section 2.9.2.1 of the ROD, the potential risk to humans will be addressed by excavating areas containing COCs in soil at concentrations greater than five times the RGs, and installing a durable cover to cut off potential exposure to residual contamination that remains in soil after excavation.</li> </ul> <p>Based on the information summarized on the previous pages, the Navy does not agree with EPA's request to change the RG for mercury in soil. The Navy acknowledges EPA's input on this matter, which was further explained in an additional comment received on October 28, 2013, but the Navy does not agree with EPA's assertion that conditions at IR-26 warrant development of an alternative RG for mercury for Parcel E Redevelopment Blocks EOS-1 through EOS-4. Please refer to the response to EPA's follow-on comment for further information (see page 9).</p> |

| 15.<br>(cont.)                       | <p>(Follow-on comment received on October 28, 2013)</p> <p>Response to EPA SC 15: The response partially addresses the comment. Part (b) of the comment requested that the residential remedial goal (RG) or shoreline RG for mercury be applied to sites IR-02 and IR-03, except in areas where an underground barrier will be installed to control groundwater migration. The Navy response indicates that the proposed RGs for mercury in soil should not be changed due to limited detections of mercury in groundwater. Additional information is needed to support the position that the Navy's proposed RG for mercury in soil is protective of receptors at the shoreline and San Francisco Bay. At this point, it appears that the Navy is relying on a limited number of data points from wells in the vicinity of the shoreline in which mercury was detected in 1992. However because the tidal stage of each sample is unknown (i.e., mercury may only be detected during the outgoing tide) this data may not support the current Navy position. Please revise the Parcel E ROD to include detailed information to justify use of 5 times Tier 2 Recreational soil RGs for mercury in areas along the Parcel E shoreline. If such justification cannot be provided, then a more stringent soil RG for mercury should be considered by the Navy.</p> | <p>The response to EPA specific comment 15 was revised to more thoroughly explain the basis of the Navy's prior evaluation of COPECs in groundwater at Parcel E (and the related evaluation of COCs and COECs in soil and shoreline sediment). In summary, the Navy does not agree with the statement in EPA's original comment that mercury in groundwater at IR-26 (at HPNS Parcel B) warrants consideration of an alternative soil RG for mercury at Parcel E. The Navy believes that its evaluation of groundwater data at Parcel E is adequate and consistent with the technical approach used at other HPNS parcels to ensure protection of aquatic wildlife in San Francisco Bay. Further, the Navy wishes to clarify that the site conditions at IR-26 (at HPNS Parcel B) were different from those encountered at Parcel E. Specifically, the Navy's evaluation of groundwater data at IR-26, which followed the same methodology as that used at Parcel E, identified consistent detections of mercury in groundwater at concentrations exceeding the corresponding trigger level (which was equivalent to the HGAL). As explained in the response to EPA specific comment 15, mercury was not detected consistently in Parcel E groundwater at concentrations exceeding the corresponding trigger levels (see Appendix A of the Final FS Report for further information).</p> <p>The Navy acknowledges EPA's statement regarding the potential effect that tidal mixing may have on groundwater concentrations at locations very close to the shoreline. However, the Navy wishes to clarify that the previous findings at IR-26 were based on several monitoring wells that were installed within approximately 70 feet of the bay and are likely subject to tidal mixing. In contrast, nearly all of the Parcel E wells in question, where elevated mercury concentrations were reported during a single prior sampling event, are located at least 70 feet from the bay, and would be less likely to be subject to tidal mixing (consistent with a tidal mixing study at Parcel E [Tetra Tech EM Inc., 2004]).</p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 15.<br>(cont.)                       | (see above)                                                                                                                                                                                                                                                                                                | Well IR02MWB-3 is the only well in question (with an elevated mercury concentration from a single prior sampling event) that is located closer than 70 feet from the bay; however, well IR02MWB-3 is located within the area to be contained with a protective liner and below-ground barrier (because of the presence of other chemicals in groundwater that pose a potential risk to aquatic wildlife in the bay). The Navy believes that the additional information presented in this response, and the revised response to EPA specific comment 15 is adequate to address EPA's concern. As described in the revised response to EPA specific comment 15, the Revised RI Report and FS Report include more detailed information on the potential risk attributed to mercury concentrations in soil, shoreline sediment, and groundwater at Parcel E. Pertinent information from these documents, which were finalized in accordance with the FFA, is presented in Attachment 2 of the ROD. Accordingly, the ROD was not revised to include more detailed information on the development of the RG for mercury. |
| 16.                                  | Page 2-25, Section 2.7, second to last paragraph.<br>(a) Please explain why Title 22 regulations (as opposed to EPA Pro-UCL methodology) are most applicable to make determinations of statistical significance of radiological groundwater data and duration of groundwater monitoring for radionuclides. | (a) The pertinent Title 22 regulation for groundwater detection monitoring programs [specifically, Title 22 Cal. Code Regs. § 66264.97(e)(8)] identifies a range of potentially acceptable statistical methods that can be used to evaluate the statistical significance of a release from a regulated unit (in this case, the waste to be contained in place at IR-02 and IR-03). There are two guidance documents that provide more specific information on developing a detection monitoring program (ASTM Standard D6312 and EPA guidance titled "Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities Unified Guidance," March 2009, EPA 530/R-09-007). The RD will use these guidance documents to develop the groundwater detection monitoring program for radionuclides at IR-02 and IR-03.                                                                                                                                                                                                                                                                                              |

| 16.<br>(cont.)                       | <p>(b) EPA currently understands that the Navy is selecting "Monitoring" as the final remedial action for radionuclides in groundwater under IR-02/03. In general, the ROD (in Section 2.9.2 in particular) needs to clarify the selection of this remedial action for radionuclides in groundwater. In addition, according to the ARARs Table in the ROD:</p> <p>"These requirements are applicable to RCRA hazardous waste facilities; however, the Navy has determined that they are relevant and appropriate to the monitoring component of Alternative R-2, which will require continued groundwater monitoring to demonstrate, consistent with the findings of previous radiological investigations, that radionuclides are not present in groundwater at activity levels that are both statistically significant and pose an unacceptable risk to human health. No other response action is required for radionuclides in groundwater."</p> <p>Without a determination of specific groundwater RGs for radionuclides, how does the Navy interpret the phrase "at concentrations exceeding risk-based levels"? What standards or remedial goals will the Navy use to screen its future radionuclide groundwater data for compliance with RAOs required by this ROD?</p> | <p>(b) Section 2.9.2.4 of the Draft ROD (specifically, the bottom of the first paragraph on page 2-47) discusses the required groundwater monitoring for radionuclides at IR-02 and IR-03. The groundwater detection monitoring program for radionuclides only applies to IR-02 and IR-03 because this is the only area where potential radiological contamination will be contained in place. Radiological contamination in soil at other Parcel E areas will be removed and disposed of off site. In addition, Section 2.7 describes the basis of the groundwater detection monitoring program for radionuclides as follows: <i>"The RAO for radiologically impacted media does not pertain to groundwater because, as described in Section 2.3.4, previous investigations have not identified radionuclides in groundwater at activity levels that warrant remedial action. However, the selected remedy <u>at IR-02 and IR-03</u> includes future monitoring to demonstrate, consistent with the findings of previous radiological investigations, that radionuclides are not present in groundwater at activity levels that are both statistically significant and pose an unacceptable risk to human health and the environment."</i></p> <p>Regarding the lack of RGs for radionuclides in groundwater, the Navy wishes to clarify that the objective of a groundwater detection monitoring program is to evaluate the statistical significance of a release from a regulated unit. Accordingly, it is not necessary to specify numeric criteria in support of a detection monitoring program. Further, the specification of numeric criteria for radionuclides in groundwater is constrained by the fact that no such criteria exist for the pathway of concern (discharge of groundwater to aquatic wildlife in San Francisco Bay) and that surrogate criteria (drinking water MCLs) do not correlate to a complete exposure pathway (because the potentially impacted shallow groundwater is not a potential source of drinking water). Accordingly, the ROD does not specify RGs for radionuclides in groundwater. The RD will develop specific decision criteria for the groundwater detection monitoring program for radionuclides, as described previously (in the response to the first part of this comment).</p> |

| 16.<br>(cont.)                       | <p>(Follow-on comment received on October 28, 2013)</p> <p>Response to EPA SC 16: The response partially addresses the comment. Part (b) of the response states that the objective of a groundwater detection monitoring program is to evaluate the statistical significance of a release to groundwater from a regulated unit. That response raises two concerns: 1) how will background concentrations for radiological contaminants be established, and 2) how will RGs be developed to protect the human and environmental receptors in San Francisco Bay (the Bay) from radionuclide-contaminated groundwater discharges into the Bay if radionuclides are detected in groundwater? Please revise the Parcel E ROD to explain how risk-based RGs for radionuclides in groundwater would be developed if radionuclides are detected in groundwater. In addition, the Attachment 4 of the ROD cites federal action-specific RCRA requirements applicable to RCRA detection monitoring program for hazardous waste facilities as relevant and appropriate to the monitoring component of Alternative R-2.</p> <p>Alternative R-2 requires continued groundwater monitoring to demonstrate, consistent with the findings of previous radiological investigations, that radionuclides are not present in groundwater at activity levels that are both statistically significant and pose an unacceptable risk to human health and the environment. EPA believes that the applicable guidance document to for this detection monitoring program is “STATISTICAL ANALYSIS OF GROUNDWATER MONITORING DATA AT RCRA FACILITIES UNIFIED GUIDANCE MARCH 2009; EPA 530/R-09-007”.</p> | <p>The Navy wishes to clarify the following points regarding the two additional concerns raised by EPA:</p> <ol style="list-style-type: none"> <li>1. Consistent with the 2009 EPA guidance document cited in this comment, the statistical evaluation approach does not involve establishing fixed background concentrations (that would be used as threshold comparison criteria). The guidance provides that the statistical significance of radionuclides in groundwater at IR-02 and IR-03 will be evaluated by comparing two groups of data (e.g., multiple background wells versus one downgradient well) using established statistical tests. The statistical evaluation will be performed regularly as part of the detection monitoring program.</li> <li>2. The Navy may develop risk-based groundwater RGs if radionuclides are detected at statistically significant concentrations in the future and evaluate whether or not additional remedial action is required in order to protect human and environmental receptors in San Francisco Bay. Accordingly, the ROD was not revised to describe a method for developing risk-based criteria for radionuclides in groundwater.</li> </ol> <p>The Navy agrees that the 2009 guidance document, as cited by EPA, describes the methods for establishing a detection monitoring program. The response to “part a” of EPA specific comment 16 was revised to cite this guidance document. The ROD was not revised to describe statistical methodology to be used in the detection monitoring program because the methodology is relatively complex and exceeds the level of detail that is typically included in a streamlined ROD. As described in “part a” of the response to EPA specific comment 16, the RD will use pertinent guidance documents to develop the groundwater detection monitoring program for radionuclides at IR-02 and IR-03. For informational purposes only, the following paragraphs further describe the detection monitoring program for radionuclides in groundwater at IR-02 and IR-03.</p> <p>The 2009 EPA guidance document, as well as the pertinent Title 22 regulations, distinguishes between a detection monitoring program and a</p> |

| 16. (see above)<br>(cont.)           |         | <p>compliance/assessment monitoring program. A detection monitoring program is appropriate when no or minimal releases of hazardous constituents have been identified, and it involves a statistical evaluation to identify significant changes in the groundwater when compared to background or established baseline levels. A compliance/assessment monitoring program is required when there is statistically significant evidence of a release of hazardous constituents, and it typically involves comparing groundwater data with numeric health-based standards. For radionuclides in groundwater at Parcel E, a detection monitoring program is proposed because no release has occurred that affects human health or the environment; a compliance/assessment monitoring program would be implemented if radionuclides were found in groundwater at activity levels that are statistically significant. While the Navy maintains that the RD is the most appropriate document in which to describe and detail the statistical methodology that will be used in the detection monitoring program, it offers the following information to describe one potential approach for developing a detection monitoring program (consistent with the procedures identified in the 2009 EPA guidance document):</p> <ul style="list-style-type: none"> <li>• The goal of the detection monitoring program would be to determine whether or not concentrations of chemicals in groundwater are within the statistically established PLs for that chemical (i.e., determining whether there is evidence of groundwater contamination after the remedy is in place).</li> <li>• Groundwater samples would be collected from two groups of wells: (1) wells located in a general downgradient direction from the waste limits, which would represent POC wells, and (2) wells located upgradient of the waste limits, which would represent background wells.</li> <li>• Data for each chemical from each well would be compared with statistically derived threshold values (i.e., PLs) using valid statistical methods.</li> <li>• The decision rules for the detection monitoring program would follow the three sequential steps described on the following page.</li> </ul> |

| 16.<br>(cont.)                       | (see above)    | <ul style="list-style-type: none"> <li>Data for each chemical from each well would be compared with statistically derived threshold values (i.e., PLs) using valid statistical methods.               <ol style="list-style-type: none"> <li><i>Statistical analysis using inter-well PLs.</i> POC monitoring well data would be compared with statistically derived inter-well PLs. The inter-well PL represents the maximum concentration that will be contained in the next series of measurements with a certain level of confidence from a sample of background measurements, in this case upgradient versus downgradient wells. If any chemical concentration in a POC well is greater than its specific inter-well PL, then an intra-well statistical analysis would be conducted.</li> <li><i>Statistical analysis using intra-well PLs.</i> If the POC monitoring well data exceed the inter-well PLs, then the data would be compared with statistically derived intra-well PLs. The intra-well PL represents the maximum concentration that will be contained in the next series of measurements with a certain level of confidence for a particular well. If any chemical concentration in a POC well is greater than its specific intra-well PL, then that well would be resampled before a statistically significant result is declared.</li> <li><i>Confirmation sampling and comparison with intra-well PLs.</i> The results of the confirmation sample would be compared with statistically derived intra-well PLs to determine if a statistically significant increase in concentration is declared.</li> </ol> <p>The specific statistical methods and decision rules would be established in either the RD or RAWP. The RD or RAWP would identify appropriate actions if a statistically significant increase in concentration is declared. As described previously, one potential action would involve developing a compliance/assessment monitoring program and comparing the groundwater data with numeric health-based standards. Accordingly, risk-based criteria for radionuclides in groundwater would only be established if a statistically significant increase in concentration is declared.</p> </li> </ul> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 17.                                  | <p>Section 2.9.2.1, last paragraph on this section. The description of the selected remedial action in the shoreline areas describes the installation of shoreline protection consisting of natural materials (such as sand) and large rocks to eliminate the exposure pathways to remaining contaminants in shoreline sediment (and to integrate with the durable covers at onshore areas). EPA supports this remedy. However, although shoreline sediment RGs are identified in Table 5, the selected remedial action does not include any reference to the excavation of shoreline sediments that would be needed to install the shoreline protection. The ROD does not include a description of contaminant distribution in the sediments as the basis for the decision to excavate 2.5 feet of sediment (e.g. estimated depth of shoreline sediments to be excavated and removed for the installation of the shoreline protection).</p> | <p>Section 2.9.2.1 in the Draft ROD includes a brief sentence describing the excavation and disposal of shoreline sediment (specifically, page 2-44, fourth paragraph, fourth sentence). However, the subject paragraph was revised to more clearly describe this action by beginning with the following text: <u>“In addition, contaminated sediment along the Parcel E shoreline would be excavated to a depth of at least 2.5 feet (which aligns with the exposure depth for aquatic wildlife that may inhabit the shoreline) and disposed of at an approved offsite landfill. The shoreline excavations would be backfilled with natural materials (such as sand) and large rocks to prevent exposure to remaining contaminants in shoreline sediment (and to integrate with the durable covers at onshore areas).”</u> The revised statement in Section 2.9.2.1 will also include an electronic reference to information originally presented in the SLERA for the Parcels E/E-2 shoreline.</p>                                                                                                                                                                                                                    |
| 18.                                  | <p>Section 2.9.2.2, Page 2-45, bottom paragraph. Regarding Alternative GW-3, the draft ROD states that monitoring will continue until chemical concentrations meeting remediation goals. Has the Navy identified remedial goals for all groundwater COCs? Is a remedial goal needed for PCBs in groundwater? Why isn't the requirement for groundwater monitoring for radionuclides included in the description of Alternative GW-3?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Consistent with the information presented in the Final FS Report (ERRG, 2012), the ROD establishes RGs for groundwater COCs identified in the HHRA for potentially complete exposure pathways for groundwater (i.e., construction worker exposure to A-aquifer groundwater and domestic use exposure to B-aquifer groundwater). The ROD also establishes RGs for total TPH in groundwater to ensure consistency with the distance-based criteria that were established as part of the HPNS petroleum program (the total TPH criteria address the attenuation of total TPH as A-aquifer groundwater flows to San Francisco Bay). RGs were not established for COPECs identified in the groundwater SLERA (e.g., PCBs and metals) because (1) the pertinent regulatory criteria are based on standards for aquatic wildlife in San Francisco Bay that do not apply to A-aquifer groundwater, and (2) the trigger levels developed in the SLERA (which adjust the surface water quality criteria to conservatively estimate the attenuation that occurs as groundwater flows from an inland location to San Francisco Bay) will serve as preliminary groundwater monitoring criteria that may be refined in the RD.</p> |

| 18.<br>(cont.)                       | (see above)    | <p>Section 2.9.2.2 (as well as Section 2.9.2.3) was revised to more accurately describe the monitoring approach for groundwater plumes located near San Francisco Bay as follows: <u>“Groundwater quality (as well as flow direction) <del>would</del> will be monitored at all plumes, including those the plumes behind the below-ground barrier to ensure that contamination is not discharged into San Francisco Bay at concentrations greater than the corresponding surface water quality criteria for aquatic wildlife (to comply with the groundwater RAO specified in Section 2.7). Plume-specific trigger levels will be used as groundwater monitoring criteria to evaluate the potential risk to aquatic wildlife in San Francisco Bay, but the RD may develop alternative monitoring criteria (using refined fate and transport modeling) to more rigorously assess the groundwater-to-surface water transport mechanism.”</u> The ROD includes electronic reference information (that is linked to the term “trigger levels” in Section 2.9.2.2) that describes the derivation of the trigger levels, as originally presented in the groundwater SLERA (Appendix A to the Final FS Report).</p> <p>In addition, Section 2.7 was revised to explain why RGs were not established for chemicals found in A-aquifer groundwater at concentrations that may pose a risk to aquatic wildlife: <u>“Remediation goals were not developed for COECs in groundwater because, except for total TPH, the water quality criteria referenced in the groundwater and NAPL RAOs are based on standards for aquatic wildlife in San Francisco Bay, apply to surface water at the interface of A-aquifer groundwater, and do not apply to in-situ A-aquifer groundwater at Parcel E. Plume-specific trigger levels will be used as groundwater monitoring criteria to evaluate the potential risk to aquatic wildlife in San Francisco Bay, but the RD may develop alternative monitoring criteria (using refined fate and transport modeling) to more rigorously assess the groundwater-to-surface water transport mechanism.”</u></p> <p>Groundwater monitoring for radionuclides is not discussed in Section 2.9.2.2 but is described in Section 2.9.2.4. This element of the groundwater monitoring program was discussed separately because:</p> <ul style="list-style-type: none"> <li>Section 2.9.2.2 describes the selected remedy for nonradioactive chemicals in groundwater, which was identified based on an evaluation presented in the Final FS Report (ERRG, 2012). In contrast, Section 2.9.2.4 describes</li> </ul> |

| 18.<br>(cont.)                       | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>the selected remedy for radiologically impacted media, which was identified based on an evaluation presented in the Radiological Addendum to the Final FS Report (ERRG and RSRS, 2012).</p> <ul style="list-style-type: none"> <li>Groundwater monitoring for nonradioactive chemicals and radionuclides have different technical bases. Specifically, groundwater monitoring data for nonradioactive chemicals indicate an unacceptable risk to human health and the environment that is being addressed by treatment, containment, monitoring, and institutional controls. In contrast, groundwater monitoring data for radionuclides do not indicate an unacceptable risk to human health or the environment, and the only required action is continued monitoring to demonstrate, consistent with the findings of previous radiological investigations, that radionuclides are not present in groundwater at activity levels that are both statistically significant and pose an unacceptable risk to human health.</li> </ul>                                                                                                                                                                                                                                                                                                                                  |
| 18.<br>(cont.)                       | <p>(Follow-on comment received on October 28, 2013)</p> <p>Response to EPA SC 18: The response partially addresses the comment. The response does not address the question of whether or not an RG is needed for polychlorinated biphenyls (PCBs) in groundwater. Since there is a PCB plume in Parcel E near the shoreline and one of the Remedial Action Objectives is to prevent migration and discharge of groundwater contaminated with Aroclor-1254 and Aroclor-1260 into the Bay, it appears that RGs (or plume trigger concentrations) for PCBs in groundwater are needed. Please revise the Parcel E ROD to include RGs for PCBs in groundwater or to explain why RGs for PCBs are not required and how a trigger level protective of aquatic life in sediments and the Bay will be developed.</p> | <p>The response to EPA specific comment 18 was revised to more clearly explain that the ROD establishes RGs for (1) groundwater COCs identified in the HHRA for potentially complete exposure pathways for groundwater (i.e., construction worker exposure to A-aquifer groundwater and domestic use exposure to B-aquifer groundwater), and (2) total TPH in groundwater to ensure consistency with the distance-based criteria that were established as part of the HPNS petroleum program (the total TPH criteria address the attenuation of total TPH as A-aquifer groundwater flows to San Francisco Bay). The groundwater SLERA identified PCBs as a COPEC that may pose a risk to aquatic wildlife in San Francisco Bay; however, as explained in the initial response to EPA specific comment 18, RGs were not established for COPECs identified in the groundwater SLERA because (1) the pertinent regulatory criteria are based on standards for aquatic wildlife in San Francisco Bay that do not apply to A-aquifer groundwater, and (2) the trigger levels developed in the SLERA (which adjust the surface water quality criteria to conservatively estimate the attenuation that occurs as groundwater flows from an inland location to San Francisco Bay) will serve as preliminary groundwater monitoring criteria that may be refined in the RD.</p> |

| 18.<br>(cont.)                       | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The ROD includes electronic reference information (that is linked to the term “trigger levels” in Section 2.9.2.2) that describes the derivation of the trigger levels, as originally presented in the groundwater SLERA (Appendix A to the Final FS Report).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 19.                                  | Section 2.9.2.3, Page 2-46, second para. In the third sentence please consider changing "destroyed" with "broken down into less toxic compounds".                                                                                                                                                                                                                                                                                                                          | The sentence was revised as suggested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 20.                                  | Figure 12, Page 2-48. (a) Consider shading the interior of the buildings in green zone (instead of grey) so it is clear that the restrictions cover the interior of the current buildings and that same space in the future after any building demolition is completed. (b) Please consider changing the language in the legend on the map to match what was written in the text (i.e., 'Areas requiring Institutional Controls.' rather than "Restrictions related to.")? | (a) The subject figure (now referred to as Figure 13) was revised to shade the building outlines in the appropriate color (corresponding to the type of ICs that will apply to this area. In addition, Figure 13 was revised to remove the existing road edges.<br>(b) The legend in the subject figure (now referred to as Figure 13) was revised as suggested.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 21.                                  | Page 2-50. Under General Activity Restriction, please change "Parcel E RMP" with "Shipyard-wide RMP" or just "RMP".                                                                                                                                                                                                                                                                                                                                                        | The phrase “Parcel E RMP” was changed to “RMP” as suggested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 22.                                  | Page 2-51, 3rd para. Should the first sentence be edited as follows: "If an enclosed structure is proposed within IR-02 or IR-03, the FFA signatories and CDPH..etc".                                                                                                                                                                                                                                                                                                      | The subject sentence was intended to describe the potential modification of the VOC ARIC anywhere in Parcel E, which will be subject to approval by the FFA signatories but, because it does not include restrictions related to radionuclides, will not require approval by CDPH. Accordingly, the subject paragraph was revised to read: <i>“If IR-02 or IR-03 are involved, the FFA signatories and CDPH may modify the ARIC as soil contamination areas and groundwater contaminant plumes that are producing unacceptable vapor inhalation risks are reduced over time or in response to further soil, vapor, and groundwater sampling and analysis for VOCs that establishes that areas now included in the ARIC do not pose unacceptable potential exposure risk to VOC vapors.”</i> |

| 23.                                  | Section 2.9.4, Statutory Determinations, Page 2-55: According to the last bullet point of Section 2.9.4, "five-year reviews for Parcel E will follow the ongoing schedule of five-year reviews established for other remedies in place at HPNS [Hunters Point Naval Shipyard];" however, the text does not indicate when the next five-year review is scheduled for HPNS. Please revise Section 2.9.4 to specify when the next five-year review will be completed. | The subject bullet was revised to read: <i>"Five-year reviews for Parcel E will follow the ongoing schedule of five-year reviews established for other remedies in place at HPNS (the next five-year review for HPNS will be completed in 2018)."</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 24.                                  | Attachment 4, ARARs Tables.<br>(a) ARARs Table has no reference to CDPH regulations. How is Parcel E different from E-2 which did cite CDPH regulations?<br>(b) ARARs table needs to clarify relationship between UMTRCA standards and HPS cleanup criteria. Current language suggests that 5 pico curies is the cleanup level.                                                                                                                                    | (a) The Navy wishes to clarify that the Parcel E-2 ROD did not identify CDPH regulations as ARARs, consistent with the Navy and EPA's joint evaluation provided in the Radiological Addendum to the RI/FS Report for Parcel E-2 (ERRG and RSRS, 2011). Similarly, the Navy determined that CDPH regulations are not ARARs for the remedial actions at Parcel E, first in the Radiological Addendum to the FS Report (ERRG and RSRS, 2012) and now in the ROD. Please refer to the response to CDPH comment 2 for more information regarding the evaluation of CDPH regulations (specifically Title 17 Cal. Code Regs. § 30256). The document was not revised in response to this comment.<br><br>(b) The notes in the ARARs table describe the Navy's intent to remediate ROCs that exceed the RGs identified in Table 7, consistent with the RAO identified in Section 2.7 of the Draft ROD. The specific citation referenced in this comment pertains to the radium-226 criteria at 40 CFR §§ 192.12(a) and 192.32(b)(2). The note for this ARAR was revised to clarify that the RG for radium-226 is 1 pCi/g above background. Other radiological-related ARARs in Attachment 4 identify a range of other pertinent requirements, some of which include dose-based limits, which will also inform the remediation process. The Navy understands that EPA prefers to focus the discussion on residual radiological risk and minimize reference to radiological dose criteria; however, the Navy believes that the main text of the ROD adequately describes its intent to remediate ROCs that exceed the RGs identified in Table 7, and the inclusion of various radiological-related ARARs provide additional regulatory criteria that will further inform the remediation process. |

| 24.<br>(cont.)                       | Attachment 4, ARARs Tables. (continued)                                                                                                                                                                                                                                                                                                                                                                   | Further, the Navy wishes to clarify that it is an accepted practice to identify chemical-specific ARARs that may be less stringent than risk-based RGs, when those additional ARARs inform the remediation process.                                                            |
|                                      | (c) References to DTSC authorizing statutes for LUCs should be eliminated.                                                                                                                                                                                                                                                                                                                                | (c) The requested deletion was not made because it would be inconsistent with language that was previously negotiated with DTSC and incorporated into RODs for other HPNS parcels.                                                                                             |
|                                      | (Follow-on comment received on October 28, 2013)<br>Response to EPA SC 24. EPA agrees with the Navy's response to EPA comment concerning the Uranium Mill Tailings Radiation Control Act (UMTRCA). However, we recommend that the Notes Column be supplemented with the following sentence: "The RG for radium-226 is based on the CERCLA risk criteria rather than the standards established by UMTRCA". | The subject note in the chemical-specific ARARs table was revised as follows: <u>"The RG for radium-226 is based on the CERCLA risk criterion, which is consistent with an agreement with EPA (see Table 8 of this ROD), rather than the standards established by UMTRCA."</u> |

| <i>Supplemental Comments on Record of Decision</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1.                                                 | <p>Upon reading the preview Final version of the ROD, EPA believes that the ROD requires additional editing to clarify the remedial goals for (RGs) for soil. EPA understands that only the Tier 2 goals will be the effective soil RGs throughout Parcel E. EPA further understands that Tier 2 goals comprise of 5 times residential RGs in the Mixed Used Zone and 5 times recreational RGs in the Open Space Zone. These Tier 2 goals will be applied to both identify the preliminary extent of soil contamination in remedial design documentation and these same RGs will be used to compare with Navy confirmation soil samples during the remedial action phase. Please edit the ROD so the final, effective soil RGs are clear and EPA recommends that Tier 1 goals be removed from Table 4.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Sections 2.5.3 and 2.9.2.2 of the ROD were revised to clarify that the soil areas with COC concentrations exceeding “soil action levels” (corresponding to five times the RG for each COC) will be excavated and disposed of off site. Table 4 was also revised to remove the “Tier 1 action levels” and to clearly define the new term “soil action levels” (that were previously referred to as the “Tier 2 action levels”). The Navy decided to not refer to these soil action levels as “remediation goals” because such an edit would conflict with the soil RAOs described in Section 2.7, and would be inconsistent with the terminology used in the CERCLA documentation prepared to date for Parcel E (e.g., FS Report and Proposed Plan).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2.                                                 | <p>Upon reading Navy responses to DTSC and City comments requesting clarification on the scope of soil gas surveys (see Draft-Final ROD, Section 2.9.2.1, BOTTOM OF PAGE 2-49), EPA would like to add this supplemental comment. Because soil gas surveys were not conducted in a comprehensive fashion during the Parcel E remedial investigation, EPA recommends that an appropriate parcel-wide soil gas survey be conducted by the Navy at the end of the soil, SVE, and groundwater remedial actions but prior to Navy preparation of the remedial action completion report for Parcel E. The following presents some suggested text for Section 2.9.2.1 of the ROD:</p> <p><i>“Additionally, soil gas surveys will be conducted, following a planning process performed in consultation with the regulatory agencies, in Parcel E as follows:</i></p> <ul style="list-style-type: none"> <li><i>investigate soil gas in all areas planned for mixed use. Currently the mixed use area is designated as a VOC ARIC because there are concerns about potential residual soil gas and associated risks. The soil gas survey will be conducted to verify whether soil vapors exist in the mixed used area at concentrations that may pose an unacceptable risk via vapor intrusion;</i></li> </ul> | <p>Section 2.9.2.1 was revised to incorporate portions of EPA’s suggested text regarding the future soil gas survey at Parcel E. Please refer to the revised responses to DTSC comment 5 and SFDPH specific comment 22 for the proposed text revisions. The Navy wishes to clarify that some of EPA’s suggested text would be inconsistent with the successful process by which soil gas surveys were developed for HPNS Parcels B, D-1, and G. Specifically, EPA’s recommendation that the Navy “<i>investigate soil gas in all areas planned for mixed use</i>” does not reflect the comprehensive process of evaluating the available soil, soil gas, and groundwater data (within areas planned for mixed use) to identify areas of concern that require soil gas sampling. During development of the soil gas surveys at HPNS Parcels B, D-1, and G, the Navy’s data analysis determined that there were areas where no potential soil gas concerns existed (and thus did not require soil gas sampling). The Navy anticipates that the data analysis at Parcel E may yield similar findings and wishes to avoid using prescriptive wording in the ROD (specifically the phrase “<i>investigate soil gas in all areas planned for mixed use</i>”) that could unnecessarily expand the scope of the soil gas survey. The Navy believes that the revised text regarding the future soil gas survey at Parcel E, which is consistent with information provided in the ROD for Parcel C, is adequately descriptive and that further discussion of the future soil gas survey should be</p> |

**Comments by California Department of Toxic Substances Control Remedial Project Manager (Ryan Miya), dated May August 9, 2013**

---

| <b>Comment No.</b> | <b>Comment</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Response</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.                 | Section 2.3.4 – Radionuclides in Soil, Shoreline Sediment, and Groundwater. Second bullet item. The text indicates that the radium-226 (226Ra) surface soil release criterion is 1.82 picocuries per gram (pCi/g). However, the remediation goals for radionuclides presented in Table 7 identifies the remediation goal for surface soil as 1.0 pCi/g above background, with the <sup>226</sup> Ra background level for surface soil as 0.633 pCi/g. Please correct and/or explain the apparent numeric discrepancies in the text. | The subject bullet was corrected to read: “ <i>The extent of <sup>226</sup>Ra in surface soil exceeding the release criterion (<del>1.82–1.0</del> pCi/g <u>above the background activity level</u>) was widespread.</i> ” The noted discrepancy arose because the subject text describes the evaluation results presented in the Radiological Addendum to the FS Report (ERRG and RSRS, 2012), which considered background activity levels developed in support of the Phase V Radiological Investigation. The background activity level for radium-226 during the Phase V Radiological Investigation was 0.82 pCi/g, resulting in an evaluation criterion of 1.82 pCi/g. The background activity level for radium-226 in surface soil was subsequently revised (to 0.633 pCi/g) during implementation of the basewide radiological removal action, and this information is reflected in Table 8 (formerly Table 7). |
| 2.                 | Section 2.3.2 – Nonradioactive Chemicals in Groundwater. Please consider adding a paragraph / section summarizing the information available regarding nonradioactive chemicals in soil gas given the volatilization potential that exists for groundwater VOC plumes in IR-12, IR-04, and Building 406.                                                                                                                                                                                                                             | Section 2.3.2 was revised to include the following text: “ <i><u>Following identification of the VOC plumes (Figure 8) in the RI, the Navy performed additional studies (from 2009 to 2012) at these areas to better understand the extent of contamination and to evaluate potential cleanup technologies. The additional studies identified VOCs in soil gas at concentrations that exceed risk-based screening levels. The VOCs reported in soil gas emanate from either contaminated soil or groundwater in the areas.</u></i> ” The new text will include an electronic reference to pertinent information describing the studies (i.e., text from the FS Report [ERRG, 2012] and figures from the treatability study reports [Shaw, 2011 and 2013]).                                                                                                                                                            |
| 3.                 | Section 2.5 – Summary of Site Risks. First paragraph. Since one of the listed primary contaminant transport mechanisms is volatilization from soil or groundwater to the atmosphere, please add soil gas to the list of contaminated media                                                                                                                                                                                                                                                                                          | Soil gas was added to the list of contaminated media as suggested. In addition, the second sentence in the subject paragraph was revised to clarify, consistent with the revised text in Section 2.3.2, that soil gas contamination emanates from either soil or groundwater contamination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4.                 | Section 2.7 – Remedial Action Objectives. Soil, Soil Gas, and Shoreline Sediment RAOs subsection. Last paragraph. The text states that “active treatment of soil gas would be performed at Building 406 until soil gas action levels are achieved” but does not mention how this will be achieved (soil vapor extraction) or specify what the soil gas action levels are. Please expand this section to provide general details as to how this will be achieved as well as consider adding a table to the ROD specifying the soil gas action levels to which this text is referring (new Table 8?) | <p>The subject text in Section 2.7 generally describes the actions proposed to address the soil, soil gas, and shoreline sediment RAOs, and was not intended to replace the more detailed discussion of the selected remedy in Section 2.9.2. Accordingly, Section 2.7 was not revised as suggested. However, the last paragraph describing the soil, soil gas, and shoreline sediment RAOs (within Section 2.7) was revised to provide a forward reference to Section 2.9.2: <u>“Section 2.9.2 provides further information on the actions required to satisfy the RAOs for soil, soil gas, and shoreline sediment.”</u></p> <p>In addition, as described in the response to EPA specific comment 14, Section 2.7 was revised to more specifically discuss the application of soil gas action levels as follows: <u>“Table 7 of the final soil gas memorandum lists risk-based action levels for various volatile chemicals, including SVOCs and pesticides, that may pose an unacceptable risk via indoor inhalation of vapors. These soil gas action levels will be used for an initial risk-based screening of refined using data collected from during a future soil gas survey (such as the survey following active treatment (to be performed at Building 406 and VOC groundwater plumes following active treatment). After the initial risk-based screening, areas with unacceptable risk will be further evaluated using location-specific data (i.e., physical characteristics of the soil) to assess potential exposures consistent with the most current State of California and EPA vapor intrusion guidance. In addition, risks and hazards at these areas will be further characterized using the accepted methodology for risk assessments at HPNS. Section 2.9.2.1 provides additional information on the future soil gas survey, and potential actions that may be prompted based on the results of the risk and hazard evaluation. Future soil gas action levels would account for vapors from both soil and groundwater, and would be calculated based on a cumulative excess cancer risk level of 10<sup>-6</sup> using the accepted methodology for risk assessments at HPNS.”</u></p> |

|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5.                 | Section 2.9.2 – Description of Selected Remedy. Please add that soil gas surveys will be conducted in consultation with regulatory agencies (1) in focused areas where concerns continue about residual volatile organic compounds (VOCs) in soil or where VOCs are present in groundwater, (2) at the groundwater remediation areas following completion of the remedial action for groundwater (after the areas have re-equilibrated), and (3) to evaluate the need for remedial action or the reduction or retention of an Area Requiring Institutional Control (ARIC) for VOCs. | <p>Section 2.9.2.1 was revised to add the following text regarding future the soil gas survey at Parcel E: <u>“Additionally, a soil gas survey will be conducted, following a planning process performed in consultation with the regulatory agencies, in Parcel E to:</u></p> <ul style="list-style-type: none"> <li><u>• investigate soil gas in areas planned for mixed use where concerns continue about residual VOCs in soil (at concentrations that may pose an unacceptable risk via vapor intrusion);</u></li> <li><u>• identify COCs for which risk-based numeric action levels for VOCs in soil gas would be established (based on a cumulative excess cancer risk of 1 in a million); and</u></li> <li><u>• evaluate and map the extent to which areas with potential unacceptable risk via vapor intrusion require control (as described in Section 2.9.2.5, areas with unacceptable vapor intrusion risk will be subject to institutional controls, and the potential risk will be reduced by engineering controls or other design alternatives that meet the specifications set forth in the ROD, RD reports, and LUC RD report).</u></li> </ul> <p>Please note that Sections 2.9.2.1 and 2.9.2.2 already describe future soil gas monitoring at Building 406, IR-04, and other VOC groundwater plumes at Parcel E.</p> |
| 6.                 | Figure 10 – Soil Remediation Areas. Please verify if the area located along the shoreline at the northwestern corner of Parcel E is also slated to undergo soil and shoreline sediment removal, and then incorporate the approximate area into the figure accordingly.                                                                                                                                                                                                                                                                                                              | <p>The Navy is conducting an investigation near the shoreline in the northwestern corner of Parcel E, and this investigation may identify additional Tier 1, Tier 2, and TPH locations requiring excavation and offsite disposal. The investigation is ongoing, and the results are not available for inclusion in the Final ROD. However, the following revisions were made to clarify the path forward in this area:</p> <ul style="list-style-type: none"> <li>Section 2.5.3 was revised to identify the investigation area (in the figure now referred to as Figure 10) and note that the investigation may identify additional Tier 1, Tier 2, and TPH locations.</li> <li>Section 2.9.2.1 was revised to identify the investigation area (in the figure now referred to as Figure 11) and note that the investigation may identify additional Tier 1, Tier 2, and TPH locations requiring excavation and offsite disposal.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                            |

| 6.<br>(cont.)      | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <ul style="list-style-type: none"> <li>Section 2.9.2.1 was revised to clarify that the RD will further evaluate soil concentrations at Tier 1, Tier 2, and TPH locations (using additional data collected during investigations performed in 2012 and 2013) and may refine the extent of the proposed excavations.</li> </ul> <p>In addition, as described in the response to EPA specific comment 17, Section 2.9.2.1 was revised to more clearly describe the proposed excavation of shoreline sediment throughout Parcel E: <u>“In addition, contaminated sediment along the Parcel E shoreline would be excavated to a depth of at least 2.5 feet (which aligns with the exposure depth for aquatic wildlife that may inhabit the shoreline) and disposed of at an approved offsite landfill. The shoreline excavations would be backfilled with natural materials (such as sand) and large rocks to prevent exposure to remaining contaminants in shoreline sediment (and to integrate with the durable covers at onshore areas).”</u></p>                                                                                                                                                                                                                                                                                                       |
| 7.                 | <p>Section 2.9.2.5 – Monitoring, Maintenance, and Institutional Controls.</p> <p>(a) Page 2-48, last paragraph. Please remove “and attached covenant models” from the Navy/DTSC MOA reference for clarification as it has the potential for misunderstanding that the referenced covenant models are provided as an attachment to the Draft Record of Decision.</p> <p>(b) Page 2-49, third paragraph. Please add the following underlined text as follows: “CCSF may prepare a risk management plan (RMP) to be approved by the FFA signatories that may set forth certain requirements and protocols used to conduct restricted activities <u>while under FFA signatory agencies’ oversight.</u>”</p> <p>(c) Page 2-50, General Activity Restrictions subsection. The item describing the prohibited activity of growing vegetables or fruits in native soil should be modified as followed in order to be consistent with the most recently agreed-upon Covenant to Restrict Use of Property (CRUP) language from Parcel B: “Growing vegetables, fruits, and any edible items in native soil for human consumption. Plants for human consumption may be grown if they are planted in raised beds (above the CERCLA-approved cover) containing non-native soil. Trees producing edible fruit (including trees producing edible nuts) may also be planted provided they are grown in containers with a bottom that prevents the roots from penetrating the native soil.”</p> | <p>(a) The subject sentence was revised as requested: “<i>The Navy has determined that it will rely on proprietary controls in the form of environmental restrictive covenants as provided in the ‘Memorandum of Agreement between the United States Department of the Navy and the California Department of Toxic Substances Control’ and attached covenant models (hereinafter referred to as the “Navy/DTSC MOA”).</i>”</p> <p>(b) This subject sentence was revised to read: “<i>CCSF may prepare a risk management plan (RMP) to be approved by the FFA signatories that may set forth certain requirements and protocols used to conduct restricted activities <u>that shall be overseen by the FFA signatories (and CDPH for restricted activities conducted within the radiological ARIC).</u></i>”</p> <p>(c) The subject bullet was revised as requested: “<i>Growing vegetables, <del>or</del> fruits, <u>and any edible items</u> in native soil for human consumption. <u>Plants for human consumption may be grown if they are planted in raised beds (above the CERCLA-approved cover) containing non-native soil. Trees producing edible fruit (including trees producing edible nuts) may also be planted provided they are grown in containers with a bottom that prevents the roots from penetrating the native soil.</u></i>”</p> |

| 7.<br>(cont.) | (d) Page 2-51, Activity Restrictions Related to Soil and Associated VOC Vapors or Specific Locations within Parcel E subsection, first paragraph. The text states that the ARIC for VOC vapors currently includes the entire ARIC for nonradioactive chemicals. However, the brief technical basis for not including the remaining portion of Parcel E (IR-02 and IR-03) within the ARIC for VOC vapors must also be included in the text accordingly. This also appears inconsistent with the third paragraph in this subsection regarding IR-02 and IR- 03. Please clarify.                                                               | <p>(d) The ARIC for VOC vapors is intended to include all of Parcel E, including IR-02 and IR-03. IR-02 and IR-03 is also subject to additional ICs. Specifically, IR-02 and IR-03 will be subject to activity restrictions related to radionuclides. IR-02 and IR-03 (along with the surrounding property within future open space reuse areas) will also be subject to land use restrictions regarding future open space reuse. The subject text and ARIC figure (now referred to as Figure 13) were revised for clarity as follows:</p> <ul style="list-style-type: none"> <li>• The legend of the ARIC figure was revised to identify the (1) ARIC for radionuclides and non-radioactive chemicals (i.e., the pink shaded area), and (2) ARIC for non-radioactive chemicals (i.e., the green shaded area).</li> <li>• The first paragraph in this subsection was revised to clarify that the ARIC for VOC vapors currently includes both the green and pink shaded areas on the ARIC figure.</li> <li>• The third paragraph in this subsection was revised to clarify the potential modifications to the VOC ARIC as follows : <i>“If IR-02 and IR-03 are involved, the FFA signatories, and CDPH may modify the ARIC as soil contamination areas and groundwater contaminant plumes that are producing unacceptable vapor inhalation risks are reduced over time or in response to further soil, vapor, and groundwater sampling and analysis for VOCs that establishes that areas now included in the ARIC do not pose unacceptable potential exposure risk to VOC vapors.”</i></li> </ul> |
| 8.            | Section 2.9.3 – Expected Outcomes of the Selected Remedy. Paragraph two. The text states that the classification of “radiologically impacted” may be removed if a final report of the site investigation is approved by FFA signatories and CDPH and the site is determined to require no further action. It is DTSC’s understanding that areas, buildings, and former building sites have only been removed from the “radiologically impacted” classification at HPNS to date after the CDPH provides a Radiological Unrestricted Release Recommendation (RURR) memorandum. Please add this to the description of the process accordingly. | The requested description was not added to the text because the Radiological Unrestricted Release Recommendation memorandum is procedural in nature and is not a document required by CERCLA. In addition, the subject text was deleted because the process of removing a “radiologically impacted” site designation is also procedural in nature and is not required to demonstrate completion of the CERCLA remedy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.                 | Based on the selected remedies for Parcel E ROD, EMB will only recommend unrestricted release for the areas and buildings where complete removal of radiological material and an adequate Final Status Survey report has been provided. EMB cannot recommend unrestricted release for the entire Parcel E, for example Sites 2 and 3 are considered to be restricted. For sites not suitable for unrestricted release, the potential property recipient may apply to the Radiological Health Branch (RHB) for a license or exemption. If their application is insufficient to support a license or exemption, the Navy will need to retain the property or transfer it to another federal agency. | <p>The Navy acknowledges CDPH's comment regarding radiologically impacted sites that will not be suitable for unrestricted release following remediation (i.e., IR-02 and IR-03 that will require institutional controls for radionuclides). However, as the comment may pertain to other Parcel E sites that will be suitable for unrestricted release following remediation (i.e., sites that will not require institutional controls for radionuclides), the Navy wishes to clarify several points regarding CDPH's use of the term "complete removal":</p> <ul style="list-style-type: none"> <li>• The completeness of the remediation of radiologically impacted media will be evaluated with respect to the RAOs and RGs (as identified in Section 2.7 of the ROD) as well as pertinent ARARs (as identified in Attachment 4 of the ROD).</li> <li>• As described in Section 2.9.2.4 of the ROD, the remediation of several radiologically impacted sites at Parcel E is currently being performed under an early removal action that is designed to achieve the same RAOs and RGs identified in the ROD. The remediation of several of these radiologically impacted sites (e.g., Buildings 406, 414, 500, 521, and 810) has already been completed and documented in final status survey reports, which have facilitated CDPH's subsequent recommendation for unrestricted release of these sites.</li> </ul> |
| 2.                 | CDPH continues to assert, as more fully described previously, that Title 17 California Code of Regulations Section 30256 meets the requirements of an applicable or relevant and appropriate requirement for the cleanup of Hunters Point Naval Shipyard.                                                                                                                                                                                                                                                                                                                                                                                                                                         | The Navy and EPA do not agree that Title 17 Cal. Code Regs. § 30256 satisfies promulgated criteria, specified in CERCLA and the NCP, for a state chemical-specific ARAR. The Navy presented a detailed evaluation of the subject requirement in Appendix C of the Radiological Addendum to the FS Report (ERRG and RSRS, 2012), and determined that it is not an ARAR for the Parcel E CERCLA remedy because it is not (1) substantive, (2) either "applicable" or "relevant and appropriate," or (3) more stringent than federal standards. A state law or regulation must satisfy all of these criteria to meet CERCLA and NCP requirements for state ARARs and does not qualify as a state ARAR if any one of them is not satisfied. The Navy prepared, in consultation with EPA counsel, specific input regarding Title 17 Cal. Code Regs. § 30256 that was provided in Appendices C and E of the Radiological Addendum to the FS Report (ERRG and RSRS, 2012). The document was not revised in response to this comment.                                                                                                                                                                                                                                                                                                                                                                                          |

| 3.                 | Since EMB did not comment on the document "Base wide Time Critical Removal Action Memorandum", [the Record of Decision] should include all applicable radiological information addressing all radiological impacted areas other than Site 2 and 3. The information should summarize the selected remedy, summary site risks and remedial action objectives. | <p>Section 2.3 refers to the Basewide Time-Critical Removal Action Memorandum because this document has guided the ongoing radiological removal actions at Parcel E (as supplemented by project-specific plans). The ROD includes all pertinent information on the selected remedy for radiologically impacted media. Specifically:</p> <ul style="list-style-type: none"> <li>• Section 2.1 describes the history of radiological operations at Parcel E, identifies the radiologically impacted sites, and includes an electronic reference to more specific information from the Radiological Addendum to the FS Report (ERRG and RSRS, 2012).</li> <li>• Section 2.3.4 summarizes the results of previous radiological investigations at Parcel E, and includes several electronic references to more specific information from the Radiological Addendum to the FS Report (ERRG and RSRS, 2012).</li> <li>• Section 2.5.1 describes the risk assessment findings for radiologically impacted sites, and includes electronic references to more specific information from the Radiological Addendum to the FS Report (ERRG and RSRS, 2012).</li> <li>• Section 2.7 identifies the RAOs and RGs for radiologically impacted media, which are identical to the criteria that are guiding cleanup at sites outside of IR-02 and IR-03 under the Basewide Time-Critical Removal Action (Navy, 2006).</li> <li>• Section 2.9.2.4 describes the selected remedy for radiologically impacted media, which includes (1) cleanup at sites outside of IR-02 and IR-03 that has been initiated under the Basewide Time-Critical Removal Action (Navy, 2006), and (2) cleanup at IR-02 and IR-03 that will be performed as part of the remedial action to address both radionuclides and nonradioactive chemicals.</li> </ul> |

|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.<br>(cont.)      | (see above)                                                                                                                                                                                                                                                                                                                                                                                                   | The Navy wishes to clarify that the Parcel E ROD was streamlined in accordance with the EPA guidance from September 2011 (developed in collaboration with the Navy), and is consistent with similar RODs prepared for other HPNS parcels. The streamlined ROD format summarizes key information and provides electronic references (embedded within the document) to more detailed technical information contained in the administrative record. The document was not revised in response to this comment.                                                                                                                                                       |
| 4.                 | Page 2-1, Section 1.1, Radiological Impacted Media does not include a description of what radiological sources are found and how the radiological sources impact the media etc. Include a description of how radiological sources or spills have impacted the media?                                                                                                                                          | The requested information is briefly summarized in Sections 2.1 and 2.3.4 and further detailed in the Radiological Addendum to the FS Report (ERRG and RSRS, 2012).. As described in the response to comment 3, the Parcel E ROD was streamlined in a manner that summarizes key information and provides electronic references (embedded within the document) to more detailed technical information contained in the administrative record. Attachment 2 in the ROD includes electronic references to more detailed information in the Radiological Addendum to the FS Report (ERRG and RSRS, 2012). The document was not revised in response to this comment. |
| 5.                 | Page 1-4, Section 1.1 Selected Remedy Radionuclides also referred to as "radiological impacted media" states the following activities throughout IR 02 and IR 03; include a 2 foot thick soil cover, demarcation and existing surface soil cover. These selected remedies may require a radiological license or license exemption from RHB. EMB cannot concur with unrestricted release for IR Sites 2 and 3. | The Navy understands the expectations of the State of California regarding radiological license or license exemption following property transfer. However, the ROD was not revised to specify this expectation because remediation of Parcel E under CERCLA does not involve radiological licensing because Section 121(e) of CERCLA specifically provides that no federal, state or local permits shall be required for on-site remedial actions.                                                                                                                                                                                                               |
| 6.                 | Page 1-2 and 1-3, Section 1.1 Selected Remedy, based on the following actions listed in both pages it appears that the radiological work is separate from the non-radiological work. Explain how the DON plans to coordinated radiological remediation with non-radiological soil and ground water remediation.                                                                                               | Section 2.9.2.4 describes the elements of the selected remedy for radiologically impacted media and specifically notes that (1) the remediation of radiologically impacted sites outside of IR-02 and IR-03 has been initiated under the Basewide Time-Critical Removal Action, and (2) the radiological remediation at IR-02 and IR-03 will be performed concurrent with the remediation for nonradioactive chemicals in soil and shoreline sediment. Further information on the radiological remediation at IR-02 and IR-03 will be presented in the RD and remedial action work plan. The document was not revised in response to this comment.               |

|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7.                 | Page 2-2, Figure 2, "Areas with Historical Shipyard Operations at Parcel E", show IR Site boundary include a description and identification on how the boundary was established for Parcel E. Also include what sites or buildings the DON is seeking unrestricted release and what sites are identified as restricted release. | Figure 2 was revised to identify and label all IR sites within Parcel E. Section 2.1 includes electronic references to more specific information on the IR sites and the radiologically impacted sites at Parcel E. As described in Section 2.9.2.4, the area encompassing IR-02 and IR-03 will require institutional controls for radionuclides and will therefore not be suitable for unrestricted release following remediation. All other radiologically impacted sites at Parcel E will be remediated in a manner that will not require institutional controls for radionuclides and therefore these sites will be suitable for unrestricted release following remediation. The figure provided in Section 2.9.2.5 (now referred to as Figure 13) identifies the ARIC for radionuclides (i.e., the area encompassed by IR-02 and IR-03 that will be subject to activity restrictions for radionuclides following remediation). |

| 1.                      | <p>CDFW-OSPR was not informed of, nor provided an opportunity to review the Parcel E Proposed Plan (PP) during the regulatory agency review period, nor during the public comment period. CDFW-OSPR similarly was not provided the opportunity to review the Draft Parcel E FS, and the Parcel E-2 PP during the regulatory agency review period. We again request the Navy include CDFW-OSPR on the regulatory agency document distribution list, for all future document reviews at Hunters Point Shipyard for parcels with natural resource concerns, including Preliminary Assessments, Site Inspections, Remedial Investigations, FSs, PPs, RODs, Remedial Designs, Work Plans, Restoration Plans, Operations and Maintenance Plans, and Action Completion Reports. This memorandum will serve to inform the Navy of our continuing interest in coordinating any natural resource issues, as one of the designated State natural resource Trustees.</p> | <p>The Navy has notified and extensively coordinated with CDFW in its cleanup efforts at HPNS in accordance with the NCP requirements for notice and coordination with state natural resources trustees. CDFW has been provided with the opportunity to review and comment on various documents related to the cleanup and has provided extensive commentary on the Navy's investigations, evaluation of remedial alternatives, and selection of the final remedy. The Navy has responded to all input provided by CDFW. Specific to the cleanup of Parcel E, the Navy has notified and coordinated with CDFW as follows:</p> <ul style="list-style-type: none"> <li>• The draft and draft final versions of the Revised RI Report, which presented the baseline ecological risk assessment and the associated biological surveys (that were used to inform the risk assessment), were submitted to CDFW for review and comment. The Navy responded to all CDFW comments, and the Revised RI Report was finalized in May 2008 (Barajas &amp; Associates, 2008), in accordance with Section 7.9 of the HPNS FFA (Navy, DTSC, and Water Board, 1991).</li> <li>• The draft final version of the FS Report, which developed and evaluated remedial alternatives, was submitted to CDFW for review and comment. The Navy, DTSC, and CDFW held a site visit and working meeting on May 8, 2012 to discuss and attempt to resolve CDFW's concerns related to the FS Report (as well as the ROD for Parcel E-2). The Navy subsequently responded to all CDFW comments, and the FS Report was finalized in August 2012 (ERRG, 2012), in accordance with Section 7.9 of the HPNS FFA (Navy, DTSC, and Water Board, 1991). At the time the draft version of the FS Report was published (in July 2009), the Navy was not aware of CDFW's expectation to review all CERCLA documents for Parcel E. After being made aware of this expectation, the Navy submitted the draft final version of the FS Report to CDFW for review and comment.</li> </ul> |

| 1.<br>(cont.)                       | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <ul style="list-style-type: none"> <li>The Proposed Plan, which summarized information provided in the Revised RI Report and FS Report, was submitted to CDFW during the public comment period (in February 2013). The document was sent to Mr. Charlie Huang from CDFW via US Mail on February 11, 2013. The Navy did not receive any written input from CDFW on this document. The distribution of the preliminary versions of the Proposed Plan for Parcel E was focused on representatives from the FFA signatories (EPA, DTSC, and Water Board). This approach is consistent with the manner in which proposed plans for other HPNS parcels were prepared, and reflects the fact that proposed plans do not present new technical information but rather summarize previously published information in a manner that is readily understandable to the general public.</li> <li>The draft version of the ROD, which summarizes information provided in the Revised RI Report and FS Report, was submitted to CDFW for review and comment. This document provides the responses to CDFW comments on the draft version of the ROD.</li> </ul> <p>The Navy will continue to work with CDFW and the FFA signatories (EPA, DTSC, and Water Board) to finalize the ROD for Parcel E and to develop the RD and remedial action work plan(s) (which will provide more specific information regarding implementation of the selected remedy for Parcel E).</p> |
| <i>Specific Comments</i>            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1.                                  | <b>Page 2-2, Section 2.1.</b> Please clarify the description of Parcel E acreage and be consistent throughout the ROD. For example the first complete paragraph on Page 2-2 stated " <i>Parcel E, which includes about 128 acres shoreline and lowland coast along the southwestern part of HPNS.</i> " In Attachment 2, Section 2.2.1, the second paragraph stated " <i>Parcel E includes about 139 acres of relatively flat shoreline and lowland coast along the southwestern part of HPS.</i> " | The subject statement on page 2-2 of the Draft ROD properly describes the current area of Parcel E. This area is different than the information provided in the cited reference from Attachment 2, which was excerpted from the Final FS Report (ERRG, 2012). This difference is attributed to the fact that the Navy, in February 2013, divided Parcel E into two parcels (Parcels E and UC-3) to facilitate closure of Crisp Road, which will serve as a future utility corridor, and the adjoining railroad right-of-way. This boundary change was described on page 1-1 of the Draft ROD, and was accompanied by a footnote that stated:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

Discussions within this ROD that reference documents published prior to February 2013 refer to the portion of Parcel E that excludes Parcel UC-3."</i> The document was not revised in response to this comment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2.                                   | <p><b>Page 2-6, Section 2.2 Site Characteristics.</b> The text states, <i>"No threatened or endangered species are known to inhabit Parcel E or its immediate vicinity."</i> This statement is based on biological surveys conducted in 1997, 2001, 2002, and 2004 (Barajas and Associates, 2008), nine or more years ago. The surveys for the San Francisco Redevelopment Agency's (SFRA) recent Environmental Impact Report (SFRA, 2009) were also conducted five or more years ago, in 2007 and 2008. We believe all of these surveys are outdated, because site conditions on and adjacent to HPNS have changed since these surveys were conducted (e.g., due to removal activities, Yosemite Slough Restoration). As a result, State and/or Federally-listed species may now be present in the area. We have previously requested the Navy conduct updated biological surveys according to appropriate survey guidelines at these sites, prior to beginning remedial activities (Huang et al., 2011). The Navy has responded that the previous site-specific ecological assessment are adequate and indicated that additional surveys will not be conducted for Parcel E (Engineering/Remediation Resources Group, Inc. [EERG], 2012). The Navy has not provided CDFW-OSPR with sufficient technical evidence to support their assertion that the previous biological survey results still accurately reflect the current site conditions at Parcel E.</p> <p>The Navy also previously responded to CDFW-OSPR's request for updated biological surveys that, <i>"Although the Navy is not subject to CEQA [California Environmental Quality Act], CEQA is not considered to be a CERCLA ARAR, and the Navy is in no way relying upon CEQA determinations in its decisions ... "</i> (EERG, 2012). Avoidance and minimization measures such as conducting pre-construction biological surveys or having a qualified biological monitor present to prevent impacts to special status species do not pertain specifically to CEQA. These are</p> | <p>The Navy wishes to clarify that there is no promulgated requirement mandating the frequency of biological surveys for the CERCLA remedial action at Parcel E. The past ecological assessments at Parcel E, as documented in the Revised RI Report (Barajas &amp; Associates, 2008), serve as an adequate basis for identifying potential special-status species for future remedial actions, and that the ARARs identified in the Draft ROD for Parcel E are adequate to protect biological resources that have been identified at the site. The Navy does not agree that the recent removal actions or the Yosemite Slough restoration project have changed site conditions at Parcel E in a manner that warrants performing an updated biological survey.</p> <p>The Navy also wishes to clarify that the subject text on page 2-6 of the Draft ROD is consistent with information presented in the Revised RI Report (Barajas &amp; Associates, 2008) and the FS Report (ERRG, 2012). As described in the response to general comment 1, CDFW provided comments on the Draft Final version of the FS Report for Parcel E. The Navy responded to all CDFW comments, and the document was finalized in August 2012, in accordance with Section 7.9 of the HPNS FFA (Navy, DTSC, and Water Board, 1991). Considering the previously approved work, the Navy does not believe that sufficient technical basis exists to support CDFW's request to perform an updated biological survey at Parcel E.</p> <p>As documented in the Final FS Report and Draft ROD, the Navy has previously identified two fully protected bird species (under California Fish &amp; Game Code § 3511) as potentially present at Parcel E, and will implement reasonable measures to ensure adequate protection of fully protected bird species during the remedial action. The Navy will continue to comply with the provisions of the NCP regarding notification and coordination with state natural resources trustees (i.e., CDFW).</p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2.<br>(cont.)                        | considered standard avoidance and minimization measures that have been agreed upon and implemented at various Department of Defense bases during CERCLA activities in order to prevent take and substantively comply with State and Federal natural resource regulations. Although the Navy has not accepted the State or Federal Endangered Species Acts as ARARs at HPNS, they have no authorization for any take of any listed species that may be present on site during future CERCLA activities, including incidental take. CDFW-OSPR will conduct periodic site visits during remedial activities to document any take of State and Federally protected species.                                                                                                                                                                                                | Specifically, the reasonable measures to ensure adequate protection of fully protected bird species will be developed in the RD and remedial action work plan(s), which will be submitted to CDFW for review and comment. Further, the Navy will coordinate with CDFW prior to implementation of such reasonable measures, and understands that CDFW reserves the right to conduct periodic site visits during removal or remedial activities to confirm implementation of avoidance measures. However, the Navy wishes to clarify that the ARARs identified for the Parcel E remedial action (provided in Attachment 4 of the ROD) do not identify specific avoidance and minimization measures for protecting natural resources. Therefore, the Navy believes that it is premature for to identify specific avoidance and minimization measures in the ROD. |
| 2.<br>(cont.)                        | <i>(Follow-on comment received on October 30, 2013)</i><br>Navy's response to CDFW-OSPR's original Specific Comment #2. Although the Navy responded to all CDFW comments on the Draft Final version of the Feasibility Study Report for Parcel E, and the document was finalized in August 2012 in accordance with Section 7.9 of the Hunters Point Naval Shipyard Federal Facilities Agreement, the Navy did not resolve all of CDFW-OSPR's concerns. CDFW-OSPR does not agree with the Navy's assertion that "past ecological assessments at Parcel E, as documented in the Revised RI Report (Barajas & Associates, 2008), serve as an adequate basis for identifying potential special-status species for future remedial actions" and will conduct periodic site visits during remedial activities to document any take of State and Federally protected species. | As described in the response to CDFW specific comment 2, the Navy understands that CDFW reserves the right to conduct periodic site visits during removal or remedial activities to confirm implementation of avoidance measures (that will be developed in the RD and RAWP[s]) and submitted to CDFW for review and comment prior to implementation). However, the Navy reiterates its position that the prior ecological assessments are adequate to identify potential special-status species that require avoidance measures during future remedial actions (in accordance with the ARARs identified in Attachment 4 of the ROD).                                                                                                                                                                                                                         |
| 3.                                   | <b>Page 2-15, Section 2.4.</b> The ROD states that the proposed future land use at the Shipyard Shoreline Open Space District of Parcel E includes recreational used such as wetlands. For purpose of this ROD, how will wetlands be considered for recreational use? Is public access planned for the wetlands?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The subject text on page 2-15 of the Draft ROD describes potential development activities as identified in the 2010 HPNS Redevelopment Plan (SFRA, 2010). The potential development activities at Parcel E are independent of the Navy's planned remedial action that will be performed pursuant to CERCLA. The document was not revised in response to this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 4.                                   | <p><b>Page 2-20, Section 2.5.2.3.</b> This section states that metals, polychlorinated biphenyls and total petroleum hydrocarbons may pose a potential risk to aquatic wildlife. Please revise the discussion to include chemicals of potential concern to San Francisco Bay by runoff after the removal actions and add the continuation of this work to the Selected Remedy (Section 2.9).</p> | <p>The Revised RI Report (Barajas &amp; Associates, 2008) concluded that “<i>Migration of chemicals from soil to surface water through transport of solids with overland flow is expected to be limited at most of Parcel E because of the following conditions: (1) most of the storm water runoff is currently controlled by a storm sewer system across Parcel E and in the future will be controlled by engineered drainage swales; and (2) flat surface topography throughout Parcel E inhibits transport of solids with overland flow over significant distances.</i>” Accordingly, the SLERA did not evaluate the risk posed by discharge of surface water runoff to San Francisco Bay and, as a result, this information is not described in Section 2.5.2.3 of the ROD (which focuses on the results of the SLERA for shallow groundwater discharging into San Francisco Bay). However, as described in Section 2.5.3 of the ROD, the potential direct exposure of humans to soil contamination throughout Parcel E prompted the Navy to select an approach that removes the soil areas that posed the most significant risk to humans and contains the remaining soil areas that posed a lower risk to human.</p> <p>The Revised RI Report also concluded that the transport of shallow groundwater to San Francisco Bay was a primary contaminant migration pathway. The potential risk associated with this migration pathway was further evaluated in the Final FS Report (ERRG, 2012) and the results of the risk evaluation were summarized in Section 2.5.2.3 of the ROD. As described in Sections 2.5.3 and 2.7, the results of this risk evaluation informed the selected remedy, which will address the potential risks through actions involving removal, treatment, containment, monitoring, and ICs (to satisfy the RAOs identified in Section 2.7). Once the selected remedy for Parcel E is properly implemented, as briefly described in Section 2.9.2, the Navy will continue to monitor and maintain the remedy to ensure that it is protective of aquatic wildlife in San Francisco Bay. The monitoring and maintenance activities will ensure compliance with the ARARs identified in Attachment 4 of the ROD, which include erosion control requirements for the final covers. The document was not revised in response to this comment.</p> |

| 5.                                   | Page 2-21, Section 2.5.3 Basis for Response Action. The text states, "Following cleanup of ROCs [radionuclides of concern] within 1 foot of the existing ground surface, a cover (comprising clean imported soil and geosynthetic material) and institutional controls would effectively prevent unacceptable exposures to remaining concentrations of ROCs." Please include adequate maintenance and monitoring with the cover and institutional controls, as ways to prevent unacceptable exposures to remaining ROCs.                                                                                                     | The subject text in Section 2.5.3 was revised as follows: <i>"Following cleanup of ROCs within 1 foot of the existing ground surface, a cover (comprising clean imported soil and geosynthetic material <u>that would be inspected and maintained</u>) and institutional controls would effectively prevent unacceptable exposures to remaining concentrations of ROCs."</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 6.                                   | <p><b>Page 2-24, Section 2.7. Groundwater RAOs [Remedial Action Objectives].</b> The corresponding "surface water quality criteria for aquatic wildlife" to which this RAO applies appears in Table 6, Aquatic Wildlife Exposure to A-Aquifer Groundwater</p> <p>a. Given that groundwater discharges to the bay past the interface of the A-aquifer and that there are many other contaminants of concern (COCs) for A-aquifer identified for construction workers, these COCs (and perhaps others) should also be identified for aquatic wildlife and added to the "aquatic wildlife exposure scenario" under Table 6.</p> | <p>a. The potential risk associated with the discharge of A-aquifer groundwater to San Francisco Bay was evaluated in the Final FS Report (ERRG, 2012), and the results of the risk evaluation were briefly summarized in Section 2.5.2.3 of the ROD. Consistent with the methods used in recent FS reports at other HPNS parcels, the Navy developed trigger levels as conservative comparison values for chemicals in groundwater to indicate when additional evaluation may be necessary (because of the potential for migration of chemicals in groundwater at concentrations that could pose a risk to aquatic wildlife in the bay). The development of trigger levels is briefly described in this response, and Section 2.5.2.3 of the ROD includes an electronic reference to more detailed information (from Appendix A of the Final FS Report) on the development of trigger levels. The trigger levels were developed for specific groundwater plumes by applying attenuation factors to pertinent surface water quality criteria (as identified in the Basin Plan and CTR and, for select metals, adjusted for ambient levels). The attenuation factors vary based on several parameters (most notably, width of the contaminant plume and distance to the bay) and provide a conservative estimate of the advection and dispersion that reduces chemical concentrations as groundwater moves from an inland location to the bay. The Navy developed the trigger levels for individual groundwater plumes because a direct comparison of groundwater data with surface water quality criteria was not appropriate (because they are different environmental media). The Navy established RGs for total TPH in groundwater at IR-03 to ensure consistency with the approach developed at other HPNS parcels (groundwater at IR-03 contains both TPH and CERCLA-regulated chemicals and is therefore addressed by the CERCLA remedy).</p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 6.<br>(cont.)                        | <p>b. The San Francisco Water Quality Control Board (2008) has developed water quality criteria for the protection of marine aquatic life (Table F-2b). These values should be incorporated into Table 6. For example, arsenic is listed earlier as a COC to construction workers, and the corresponding remedial goal is 39 ug/L. The Criteria Continuous Concentration for arsenic is 36 ug/L (vs. 39 ug/L) (SF Water Board, 2008; California Toxics Rule). The Final Surface Water Screening Level, which corresponds to the Marine Aquatic Habitat Goal for benzo(a)anthracene is 0.0027 ug/L. The Remediation Goal in Table 6 of 0.65 ug/L is not protective of marine aquatic life. Please rectify this table for other COCs by providing values that are protective of marine aquatic life.</p> | <p>The RGs for total TPH vary based on distance from the bay, starting with the minimum acceptable concentration for nearshore groundwater (1,400 ug/L). Section 2.7 was revised to explain why RGs were not established for chemicals found in A-aquifer groundwater at concentrations that may pose a risk to aquatic wildlife: <u>“Remediation goals were not developed for COECs in groundwater because, except for total TPH, the water quality criteria referenced in the groundwater and NAPL RAOs are based on standards for aquatic wildlife in San Francisco Bay, apply to surface water at the interface of A-aquifer groundwater, and do not apply to in-situ A-aquifer groundwater at Parcel E. Plume-specific trigger levels will be used as groundwater monitoring criteria to evaluate the potential risk to aquatic wildlife in San Francisco Bay, but the RD may develop alternative monitoring criteria (using refined fate and transport modeling) to more rigorously assess the groundwater-to-surface water transport mechanism.”</u> Please refer to the response to EPA specific comment 18 for additional information. Table 6 was not revised in response to this comment.</p> <p>b. As explained in the response to “part a” of this comment, Section 2.7 was revised to explain why RGs were not established for chemicals found in A-aquifer groundwater at concentrations that may pose a risk to aquatic wildlife. Please refer to the response to EPA specific comment 18 for additional information. Table 6 was not revised in response to this comment.</p> |
| 6.<br>(cont.)                        | <p>(Follow-on comment received on October 30, 2013)</p> <p>Navy's response to CDFW-OSPR's original Specific Comment #6(a). CDFW-OSPR reviewed the criteria that were used to derive the trigger-levels – the water quality criteria for many heavy metals are water-hardness dependent. There are equations in the California Toxics Rule (accepted as an ARAR) and the US EPA Water Quality Criteria where one can plug-in the site-specific water hardness to come up with the correct criteria that is adjusted for water hardness, because toxicity for these metals have shown to be hardness-dependent.</p>                                                                                                                                                                                      | <p>The Navy wishes to clarify that the only hardness-dependent criteria specified in the CTR pertain to select metals in fresh water. Specifically, the CTR states that: <u>“Freshwater aquatic life criteria for certain metals are expressed as a function of hardness because hardness and/or water quality characteristics that are usually correlated with hardness can reduce or increase the toxicities of some metals.”</u> The water quality criteria that apply to discharges into San Francisco Bay are saltwater criteria that are not dependent on hardness. Accordingly, the ROD was not revised in response to this comment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 6.<br>(cont.)                        | <p>The values in the trigger-table (from the 2012 Final Parcel E Feasibility Study's Appendix A - Evaluation of Migration of Chemicals in Groundwater to the Aquatic Environment) do not indicate that they will be adjusted for water-hardness or that water-hardness has any role in this. The water quality criteria uses a default of 100 CaCO<sub>3</sub> mg/L as a placeholder but it must be adjusted because without knowing the water hardness, the criteria can under-estimate or over-estimate the toxic threshold. While CDFW-OSPR acknowledges and appreciates that the Navy already states that "...the RD may develop alternative monitoring criteria (using refined fate and transport modeling) to more rigorously assess the groundwater-to-surface water transport mechanism", please revise the RTC matrix to additionally clarify that the receptor water body's specific water hardness (Bay-specific water hardness) will also be used to refine the trigger-level in the RD (or footnote it under Table 6 of the ROD for example).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>The Navy also wishes to clarify that the response to CDFW specific comment 6 was revised to better explain the derivation of the trigger levels (as presented in Appendix A of the Final FS Report [ERRG, 2012]). This additional information was developed based on verbal input provided by CDFW (during a telephone conference on October 23, 2013).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 7.                                   | <p><b>Page 2-44, Section 2.9.2.1 Removal, Treatment, and Containment of Soil and Shoreline Sediment (Alternative S-4).</b> CDFW-OSPR still disagrees that the "durable covers", consisting of a 2-foot thick soil cover or the 2-foot soil cover over geosynthetic material, will be sufficient to prevent burrowing animals from breaching the cover and exposing the remaining contaminants. The Navy to date, has not provided sufficient technical evidence to show that burrowing animals present at HPNS (i.e., gophers, ground squirrels, etc.) will be unable to breach the 2-foot thick soil cover. CDFW-OSPR also reiterates that, similar to the situation at Parcel E-2, the Navy has not provided sufficient technical evidence to support their position that biotic barriers are not necessary at Parcel E (i.e., results from research studies that have specially examined and documented that burrowing animals cannot breach geosynthetic materials) (Huang and Nakahara, 2012).</p> <p>CDFW-OSPR has previously requested details on how the Navy will ensure the cover will not be damaged by burrowing animals and how it will be maintained in perpetuity (Huang et al., 2011), in order to determine whether the remedy is and will continue to be protective of ecological receptors. The Navy is not willing to provide this information until the Remedial Design phase, after the ROD has been finalized. CDFW-OSPR again reiterates our position that we do not support the use of pesticides to control burrowing animals in order to protect "durable covers". Pesticides have the ability and</p> | <p>The Navy acknowledges this comment but wishes to clarify the following points that were previously stated in responses to CDFW's comments on the Draft Final FS Report (ERRG, 2012):</p> <ul style="list-style-type: none"> <li>• The covers will be subject to post-closure inspections, maintenance, and monitoring necessary to prevent potential unacceptable exposure to humans and comply with pertinent ARARs. The planned maintenance activities will be detailed in the O&amp;M plan (to be prepared in conjunction with the RD).</li> <li>• The covers are not required to address potential risk to ecological receptors. The Revised RI Report concluded that risk to terrestrial wildlife is not significant and does not warrant a response action based only on ecological concerns. The Revised RI Report, which included this risk management decision, was finalized in May 2008 (Barajas &amp; Associates, 2008) in accordance with Section 7.9 of the HPNS FFA (Navy, DTSC, and Water Board, 1991).</li> </ul> <p>In addition, CDFW's comments on the Draft Final FS Report, as well as CERCLA documents prepared for Parcel E-2, imply that a final cover without a biotic barrier consisting of cobbles would require significant long-term maintenance (to repair damage from burrowing animals) and suggest that a biotic barrier is a requirement for any soil cover used to properly contain contaminated material.</p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 7.<br>(cont.)                        | are known to kill non-target species. For this reason, CDFW-OSPR recommends the inclusion of biotic barriers with all soil covers. If the Navy or the Successor Agency, to which the land is transferred, use pesticides, they do so without the approval of CDFWOSPR, and will be required to conduct biological surveys which include pre-application burrow inspections to prevent impacts to non-target species. The Navy or Successor Agency will be required to document all take of target and non-target species. If take of non-target species occurs, the Navy or Successor Agency may be in violation of State and/or Federal regulations. Based on the issues outlined above, CDFW-OSPR cannot concur that the selected soil cover design will be protective of ecological receptors. This comment is for the DTSC project manager and the administrative record. | <p>Consistent with the responses to similar CDFW comments on the Parcel E-2 ROD (Navy, 2012b), the Navy continues to believe that CDFW has not presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the soil cover over time, or that a biotic barrier is a requirement for any soil cover used to properly contain contaminated material. Based on this information, the Navy does not believe that sufficient technical basis exists to support CDFW's request for changes to incorporate biotic barriers into the design of the soil covers.</p> <p>As described in the response to specific comment 2, the Navy has previously identified two fully protected bird species (under California Fish &amp; Game Code § 3511) as potentially present at Parcel E, and will implement reasonable measures to ensure adequate protection of fully protected bird species during the remedial action. The reasonable measures will be developed the RD and remedial action work plan(s), which will be submitted to CDFW for review and comment. The Navy wishes to clarify that the ARARs identified for the Parcel E remedial action (provided in Attachment 4 of the ROD) do not identify specific avoidance and minimization measures for protecting natural resources. Therefore, the Navy believes that it is premature for to identify specific avoidance and minimization measures in the ROD.</p> |
| 7.<br>(cont.)                        | <p>(Follow-on comment received on October 30, 2013)</p> <p>Navy's response to CDFW-OSPR's original Specific Comment #7. CDFW-OSPR will conduct periodic site visits during post-closure inspections, operations, maintenance, and monitoring activities to document any take of State and Federally protected species.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The Navy acknowledges this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 8.                                   | <b>Table 7.</b> CDFW-OSPR checked the remedial goals (RGs) for radionuclides in soil originally developed to be protective of human health to determine whether they are also protective of ecological receptors as well. The proposed RGs are much lower than the generic biota concentration guides in soil, where absorbed doses should not exceed 1 rad/d (10 mGy/d) in terrestrial plants and 0.1 rad/d (1 mGy/d) in animals, respectively, from exposure to radiation or radioactive material (U.S. Department of Energy, 2002).                                                                                                                                                                                                                                                                                                                                        | The Navy acknowledges this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 1.                 | <b>2.1 Site Description and History (p. 2-4):</b> The last sentence of the page refers to Figure 2 as showing the future open space areas adjoining Parcel E-2. Please correct the text to refer to Figure 4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The text was revised to refer to the correct figure (now referred to as Figure 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2.                 | <b>Figure 4 Reuse Areas:</b> Please revise the figure to clarify that the footprint of the existing buildings is included in the MU-1, MU-2, and MU-3 reuse areas. The gray shading shown for the building suggests the footprints are excluded from the Multi-Use Districts (which are shaded in purple).                                                                                                                                                                                                                                                                                                                                                                                                                             | The subject figure (now referred to as Figure 5) was revised to remove the existing features (both buildings and road edges).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3.                 | <b>2.3.1 Nonradioactive Chemicals in Soil and Shoreline Sediment (p. 2-13):</b> The bases of screening criteria used in the Remedial Investigation (RI) for chemicals in soil and shoreline sediment are not clear in this paragraph. The hyperlink (reference 10) summarizes the findings of the screening process, but does not describe the methodology. Please briefly describe the RI screening process methodology in the text of this section, or include a hyperlink reference that describes the RI screening process.                                                                                                                                                                                                        | The subject reference was revised to include Table 4-1 from the Revised RI Report (Barajas & Associates, Inc., 2008), which identifies (and describes the basis for) all screening criteria used in the RI.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 4.                 | <b>2.3.2 Nonradioactive Chemicals in Groundwater and Figure 7 Groundwater Plumes (p. 2-13):</b> Please clarify what the term “primary groundwater plumes” means. Do primary plumes refer to plumes with chemical concentrations corresponding to risks above 1 in 1,000,000? Figure 7 does not include all of the groundwater plumes described in the Remedial Investigation (Figures ES-3 through ES-5 of the RI). Why are the IR-12 nickel and IR-05 metals plumes not included in Figure 7? Please revise Figure 7 to include these plumes, or clarify in the text why they are excluded. Also, please include a discussion of the IR-39 benzene plume and state that the benzene plume will be addressed in the Petroleum Program. | <p>Section 2.3.2 was revised for clarity as follows: <i>“Figure 7 shows the primary groundwater plumes at Parcel E that required further evaluation in the FS Report (as determined by based on the risk evaluations described further in Section 2.5). An additional groundwater plume, which contained benzene, was identified in IR-39. This plume, however, is attributed to past releases from the underground storage tanks at Building 709 (former Navy exchange gas station), thus it is being addressed under the Navy’s TPH corrective action program.”</i></p> <p>In addition, Section 2.5.2.3 was revised to clarify the conclusions of the risk evaluation for the metals plumes at IR-05 and IR-12 as follows: <i>“Figure 8 identifies the groundwater plumes where these chemicals are present at concentrations exceeding the corresponding trigger levels. Two additional groundwater plumes, which contained metals, were identified at IR-05 and IR-12; however, groundwater concentrations at these plumes did not exceed the corresponding trigger levels, thus the plumes did not require further evaluation in the FS Report.”</i></p> |

| 5.                 | <p><b>2.3.3 NAPLs at IR-03 (p.2-14):</b> This section states that “past site inspections have not identified any open discharge of NAPL to San Francisco Bay.” Please clarify what is meant by “open discharge” or delete the sentence. Without clarification, this statement implies there is no discharge of NAPL to San Francisco Bay. Suggested edit: “However, NAPL appears to be a continuing source to groundwater contamination, as evidenced by elevated chemical concentrations (most notably TPH and PCBs) in groundwater that may pose a risk to aquatic life in the bay...Groundwater monitoring wells located adjacent to the bay (bayside of the sheet pile wall) contain measureable NAPL, indicating potential for NAPL to be discharging to San Francisco Bay.” Please also revise section 2.6 Principle Threat Waste accordingly.</p> | <p>The term “open discharge” was meant to refer to the lack of any exposed/uncontrolled release of NAPL from IR-03 to the San Francisco Bay. However, the subject text was deleted as requested, and the revised language is as follows: <i>“The high viscosity of NAPL limits its mobility; <del>and past site inspections have not identified any open discharge of NAPL to San Francisco Bay.</del> However, NAPL appears to be a continuing source to groundwater contamination, as evidenced by elevated chemical concentrations (most notably TPH and PCBs) in groundwater that may pose a risk to aquatic wildlife in the bay (discussed further in Section 2.5). In addition, groundwater monitoring wells located adjacent to the shoreline (bayside of the sheet-pile wall) contain measureable NAPL, indicating that NAPL could discharge to San Francisco Bay.”</i></p> <p>In addition, Section 2.6 was revised to eliminate use of the term “open discharge,” and the revised language is as follows: <i>“However, as described in Section 2.3.3, the high viscosity of NAPL at IR-03 limits its mobility, <del>and past site inspections have not identified any open discharge of NAPL to San Francisco Bay. This information which</del> suggests that containment may be used at IR-03, in combination with removal and treatment, to address the potential risk associated with the NAPL source.”</i></p> |
| 6.                 | <p><b>2.3.4 Radionuclides in Soil, Shoreline Sediment, and Groundwater (p.2-15):</b> This section states that “future monitoring will include analysis for radionuclides in groundwater to demonstrate that radionuclides are not present at activity levels that are both statistically significant and pose an unacceptable risk to human health and the environment.” How will acceptable activity levels and risks be determined? As there are no remedial goals presented for radionuclides in groundwater, what levels/concentrations will the groundwater monitoring data be compared against?</p>                                                                                                                                                                                                                                                | <p>As described in the response to EPA specific comment 16, the ROD does not specify RGs for radionuclides in groundwater for the following reasons:</p> <ul style="list-style-type: none"> <li>• The objective of a groundwater detection monitoring program is to evaluate the statistical significance of a release from a regulated unit (in this case, the waste to be contained in place at IR-02 and IR-03). Accordingly, it is not necessary to specify numeric RGs in support of a detection monitoring program.</li> <li>• The specification of numeric RGs for radionuclides in groundwater is constrained by the fact that no such criteria exist for the pathway of concern (discharge of groundwater to aquatic wildlife in San Francisco Bay) and that surrogate criteria (drinking water MCLs) do not correlate to a complete exposure pathway (because the potentially impacted shallow groundwater is not a potential source of drinking water).</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 6.<br>(cont.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | As stated in Sections 2.7 and 2.9.2.4, the groundwater data for radionuclides will be evaluated for statistical significance in accordance with the substantive provisions of Title 22 Cal. Code Regs. § 66264.98(i). This regulation refers to Title 22 Cal. Code Regs. § 66264.97(e)(8), which identifies a range of potentially acceptable statistical methods that can be used to evaluate the statistical significance of a release from a regulated unit. The RD will develop specific decision criteria for the groundwater detection monitoring program for radionuclides. The document was not revised in response to this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| (Follow-on comment received on November 12, 2013)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Response to Water Board Comment #6 (2.3.4 Radionuclides in Soil, Shoreline Sediment, and Groundwater):</b> We have reviewed EPA's comment (dated October 28, 2013) on the issue of the monitoring program for radionuclides in groundwater and concur with EPA's request to revise the ROD to explain how risk-based remediation goals (RGs) for radionuclides in groundwater would be developed if radionuclides are detected in groundwater. As currently written, the ROD's intent, in the event that the detection monitoring program detects radionuclides in groundwater, is unclear. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Please refer to the revised response to EPA specific comment 16 (including the response to the follow-on comment received on October 28, 2013).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>2.7 Remedial Action Objectives:</b> It is not clear how the remedy will achieve the RAO of "Prevent exposure of humans to VOCs in soil gas at concentrations that would pose unacceptable risk via indoor inhalation of vapors." Please outline how "future soil gas action levels" would be determined and how data from future soil gas surveys will be used to determine the soil gas action levels. This section further states that active treatment of VOC groundwater plumes would be performed to address unacceptable risk via indoor inhalation of vapors and would achieve the "remediation endpoints." So that the level of groundwater treatment provided by the remedy can be evaluated, please clarify and outline what the groundwater VOC "remediation endpoints" are or how they will be determined. | Section 2.7 was revised to explain how data from the future soil gas survey will be used to evaluate potential vapor intrusion risks. Please refer to the response to EPA specific comment 14 for the proposed text revisions.<br><br>As described in the response to DTSC comment 4, the subject text in Section 2.7 generally describes the actions proposed to address the soil, soil gas, and shoreline sediment RAOs, and was not intended to replace the more detailed discussion of the selected remedy in Section 2.9.2. However, the last paragraph describing the soil, soil gas, and shoreline sediment RAOs (within Section 2.7) was revised to provide a forward reference to Section 2.9.2: " <u>Section 2.9.2 provides further information on the actions required to satisfy the RAOs for soil, soil gas, and shoreline sediment.</u> "<br><br>The Navy wishes to clarify that the term "remediation endpoints" was intended to succinctly describe the point at which active treatment can be transitioned to MNA. Considering the Water Board's comment (and considering that the decision to end active treatment and transition to MNA will be based upon multiple factors), the ROD was revised to eliminate use of the term "remediation |

|---------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7.<br>(cont.) (see above) |         | <p>endpoints” and replace it with a more thorough description of the process by which active treatment of VOC groundwater plumes will be transitioned to MNA. The revised text is consistent with Navy policy and guidance for optimizing remedial actions (Navy, 2012a; Battelle, 2010 and 2012). Specifically, Section 2.9.2.2 was revised for clarity as follows: “<del>The injection process will be developed in the RD to achieve remediation endpoints (to be specified in the RD) that will signify the completion of the active treatment and the beginning of MNA (to ensure that natural processes are degrading the remaining VOCs).</del> and will be implemented in a manner that allows for regular optimization so that the RAOs are met in a timely, cost-effective manner while minimizing negative environmental effects (e.g., energy consumption, greenhouse gas emissions, and accident risk). The optimization process will be informed by performance monitoring data for various factors that are critical to successful in-situ treatment (e.g., changes in VOC concentrations within the groundwater plume, and geochemical conditions that are conducive to natural degradation of VOCs). Potential optimization measures may include modifying the amount or type of treatment material, or modifying the injection method to improve the distribution of the treatment chemicals. Active treatment will be performed until the technology is no longer the most cost-effective or environmentally sustainable option, at which point a recommendation will be made to transition to MNA. The recommended transition to MNA, which would be subject to approval by the FFA signatories, will need to demonstrate that natural processes are adequately degrading the remaining VOCs (to allow RAOs to be achieved in a timely manner), and that continued active treatment would be less cost-effective and environmentally sustainable (in comparison to MNA).”</p> <p>A portion of Section 2.9.2.3 (regarding active treatment of groundwater at IR-03) was revised in a similar manner as Section 2.9.2.2. In addition, Sections 2.7 and 2.9.3 were revised to clarify the basis for which active treatment will be transitioned to MNA (and to provide a cross-reference to the more detailed discussion in Section 2.9.2).</p> |

| Comment No.   | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7.<br>(cont.) | <p data-bbox="275 367 852 397"><i>(Follow-on comment received on November 12, 2013)</i></p> <p data-bbox="275 407 1108 708"><b>Response to Water Board Comment #7: (Issue: remediation endpoints).</b> The Navy's response does not completely address the comment. We understand that actions and decisions to address the indoor inhalation of vapors in a mixed use scenario will be based on soil gas data and the soil gas action levels. We also understand that VOCs in groundwater are a likely source of VOCs in soil gas, and the remedy will remove VOCs in groundwater through active treatment and monitored natural attenuation (MNA). Furthermore, until soil gas surveys demonstrate there are no unacceptable risks via indoor inhalation, Institutional Controls will be required to prevent exposure.</p> <p data-bbox="275 719 1108 1266">We requested clarification of the term <i>remediation endpoints</i> so that the ROD is clear that active treatment of groundwater VOC plumes followed by MNA is the groundwater remedy that addresses indoor inhalation. The concern is that active treatment may be discontinued prematurely (before treatment has been optimized and maximized), while unacceptable soil gas levels persist, and while groundwater concentrations and conditions are not conducive to MNA achieving RAOs in a reasonable timeframe. To address this concern, we suggest a regulatory concurrence step prior to discontinuing active treatment and transitioning to MNA. Suggested edit to Section 2.9.2.2 (Treatment and Containment of Groundwater): "The injection process will be developed in the RD to achieve remediation endpoints (to be specified in the RD) that will signify the completion of the active treatment and the beginning of MNA (to ensure that natural processes are degrading the remaining VOCs.) <u>The remediation endpoints will be developed to demonstrate that treatment has been optimized and maximized (e.g., percent reduction or other technical criteria) or that acceptable soil gas levels have been achieved. There will be a regulatory review and concurrence step prior to discontinuing active groundwater treatment.</u>"</p> | <p>The Navy agrees with the Water Board's concern regarding the proper evaluation of site conditions prior to ending active treatment of VOC groundwater plumes and transitioning to MNA. The Navy also agrees that the transition to MNA should be subject to concurrence by the FFA signatories. To address these concerns, the ROD was revised to eliminate use of the term "remediation endpoints" and replace it with a more thorough description of the process by which active treatment of VOC groundwater plumes will be transitioned to MNA. The revised text is consistent with Navy policy and guidance for optimizing remedial actions (Navy, 2012a; Battelle, 2010 and 2012), and is summarized in the revised response to Water Board comment 7.</p> |

| 8.                 | <p><b>Issue: Soil gas survey and soil gas action levels:</b> Please clarify, in all relevant sections of this ROD (2.7 Remedial Action Objectives and 2.9.2), the scope and purpose of the soil gas survey and include discussion of the soil gas survey in Section 2.9.2. The Feasibility Study (Section 3.1.1.1) states that “a focused soil gas survey is currently being implemented to identify locations where concentrations of COCs in soil gas may exceed SGALs and to evaluate the extent of the VOC area requiring institutional controls.” Has this survey been completed? Please revise relevant portions of the text to clarify that soil gas monitoring will be conducted to: 1) evaluate locations where concentrations of VOCs in soil gas (from soil or groundwater sources) may pose unacceptable risk via indoor inhalation of vapors; and 2) evaluate progress of groundwater treatment of VOC plumes towards meeting RAOs.</p> | <p>Section 2.7 was revised to explain how data from the future soil gas survey will be used to evaluate potential vapor intrusion risks. Please refer to the response to EPA specific comment 14 for the proposed text revisions.</p> <p>Section 2.9.2.1 was revised to describe the future soil gas survey at Parcel E. Please refer to the response to DTSC comment 5 for the proposed text revisions. In addition, the text in Section 2.9.2.1 describes the planned soil gas monitoring at areas of known VOC contamination as follows: <i>“Following active treatment, soil gas monitoring will be performed at Building 406, and VOC groundwater plumes requiring treatment (as described in Section 2.9.2.2), to <u>ensure that chemicals in soil gas are not present at concentrations greater than evaluate soil gas concentrations relative to risk-based action levels (as described in Section 2.7).</u>”</i></p> <p>The soil gas survey at Parcel E has not been completed, and the previous text in the Final FS Report (ERRG, 2012) (which used the term “currently”) referred to the soil gas surveys that were initiated in Parcels B, D-1, G, and UC-2 and were intended as the first phase of a multi-phase soil gas survey.</p> |
| 8.<br>(cont.)      | <p>(Follow-on comment received on November 12, 2013)</p> <p><b>Response to Water Board Comment #8 (Issue: Soil gas surveys and soil gas action levels):</b> We concur with EPA’s supplemental comment #2 (dated October 28, 2013), including the suggested text edit for Section 2.9.2.1 of the ROD.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>As described in the response to EPA supplemental comment 2 (dated October 28, 2013), Section 2.9.2.1 was revised to incorporate portions of EPA’s suggested text regarding the future soil gas survey at Parcel E. Please refer to the revised responses to DTSC comment 5 and SFDPH specific comment 22 for the proposed text revisions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 9.                 | <p><b>2.7 Remedial Action Objectives- Groundwater RAOs (p.2-24):</b></p> <p>a. Suggested edit for the sentence following the bulleted list: “The RAOs for groundwater would be satisfied through actions involving treatment, containment, monitoring, and institutional controls.”</p> <p>b. How will attainment of the 3rd bulleted RAO, “Prevent or minimize migration of arsenic, copper, lead, nickel, zinc, Aroclor-1254, Aroclor-1260, alpha-chlordane, and 4,4’-DDE to prevent discharge (into San Francisco Bay) that would result in concentrations exceeding corresponding surface water quality criteria for aquatic wildlife”, be measured or evaluated? Will the</p>                                                                                                                                                                                                                                                                   | <p>(a) The subject sentence in Section 2.7 was revised as suggested.</p> <p>(b) The subject text in Section 2.7 generally describes the actions proposed to address the groundwater RAOs, and was not intended to replace the more detailed discussion of the selected remedy in Section 2.9.2. The text in Section 2.9.2.2 was revised (as well as Section 2.9.2.3) to more accurately describe the monitoring approach for groundwater plumes located near San Francisco Bay, consistent with the approach presented in the Parcel E-2 ROD. This approach uses plume-specific trigger levels as groundwater monitoring criteria to initially evaluate the potential risk to aquatic wildlife</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 9.<br>(cont.)      | Navy, in consultation with regulatory agencies, develop monitoring criteria for groundwater and perform fate and transport modeling during the remedial design phase (consistent with the approach presented in the Parcel E-2 ROD)? Please revise the text to clarify.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | in San Francisco Bay, and may use alternative monitoring criteria (using refined fate and transport modeling) to more rigorously assess the groundwater-to-surface water transport mechanism. In addition, the last paragraph describing the groundwater RAOs (within Section 2.7) was revised to provide a forward reference to Section 2.9.2: <u>“Section 2.9.2 provides further information on the actions required to satisfy the RAOs for groundwater.”</u>                                                                                    |
| 10.                | <b>2.7 Remedial Action Objectives- RAOs for NAPL at IR-03 (Former Oily Waste Ponds) (p. 2-25):</b> Consistent with the language in the Feasibility Study, please insert a sentence after the bulleted list (at the top of page 2-25) clarifying that the COCs in soil and groundwater at IR-03 would be subject to the RAOs established for soil, soil gas, and groundwater.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The subject text was revised to include the following sentence: <u>“The COCs and COECs in soil, soil gas, shoreline sediment, and groundwater at IR-03 would be subject to the pertinent RAOs, as previously described.”</u>                                                                                                                                                                                                                                                                                                                        |
| 11.                | <b>Table 6 Remediation Goals for Groundwater:</b> Biological treatment of groundwater containing TCE will produce daughter products. Therefore, RGs for TCE daughter products ( <i>cis</i> -1,2,-DCE, <i>trans</i> -1,2,-DCE, and vinyl chloride) should be included in Table 6. The groundwater RGs should be protective of all applicable exposure scenarios.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The subject table (now referred to as Table 7) was revised to include RGs for daughter products of TCE. The groundwater RGs are focused on construction worker exposure to A-aquifer groundwater and domestic use exposure to B-aquifer groundwater. RGs are not established for vapor intrusion exposure to A-aquifer groundwater because, as discussed in Section 2.7, actions and decisions to address the indoor inhalation of vapors will be based on soil gas data and the soil gas action levels.                                            |
| 11.<br>(cont.)     | (Follow-on comment received on November 12, 2013)<br><b>Response to Water Board Comment #11 (Table 6 Remediation Goals for Groundwater):</b> We appreciate the Navy’s revision of Table 6 (now Table 7) to include groundwater RGs for TCE daughter products. In the now Table 7, the RGs for some chemicals of concern (COCs) under the Construction Worker exposure scenario differ from the RGs stated in the Feasibility Report. Please add a footnote to the table to explain the difference. In addition, under the Domestic Use exposure scenario, please list each form of dichloroethene (DCE) separately and revise the respective RGs to California MCLs (i.e., 1,1-DCE with RG of 6 ug/L, <i>cis</i> -1,2-DCE with RG of 6 ug/L, and <i>trans</i> -1,2-DCE with RG of 10 ug/L). The table currently lists “1,2-dichloroethene (total)” as a COC with a RG of 210 ug/L. | Table 7 was revised as requested. Specifically, Table 7 was revised to include a footnote explaining that select RGs for A-aquifer groundwater (based on the construction worker exposure scenario) were reduced slightly (relative to the risk-based criteria in the FS Report) to ensure consistency with the ROD for HPNS Parcel C. Table 7 was also revised to specify RGs for 1,1-dichloroethene, <i>cis</i> -1,2-dichloroethene, and <i>trans</i> -1,2-dichloroethene in the B-aquifer that are consistent with the State of California MCLs. |

| 12.                | <b>2.9.2.1 Removal, Treatment, and Containment of Soil and Shoreline Sediment (Alternative S-4):</b> We understand that Alternative S-4 entails excavation of soil where COCs are present at concentrations exceeding 5 times applicable RGs. Because RGs differ for each exposure scenario (residential, recreational, construction worker), please clarify the basis for determining Tier 1 and Tier 2 locations at each reuse area by including a table that lists each reuse area, corresponding exposure scenario, and corresponding Tier 2 action level (i.e., hot spot remediation goal). A table similar to Table 4 of the Parcel E-2 ROD would be helpful in conveying this information. Including this clarification would assist in describing the material that will be excavated and disposed of offsite as a result of this remedy. | As requested, a new table (referred to as Table 4) was added to the ROD to identify the COCs and soil action levels associated with the Tier 1 and Tier 2 locations at the open space and mixed use reuse areas. Similar to the Parcel E-2 ROD, this table is introduced within Section 2.5.3 of the ROD. |

| <i>General Comment</i>   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1.                       | We would like to point out for the record that once the engineering controls and institutional controls are properly installed and maintained, the current design of the proposed remedies will cut off pathways for a) contact with soil contaminants and b) inhalation of indoor VOC vapors, and this means that the entire property will be health-protective for all types of uses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The Navy acknowledges this comment but wishes to clarify that, as stated in Section 2.9.2.5 of the Draft ROD, areas designated for open space reuse will be subject to land use restrictions. While the Draft ROD provides flexibility to request approval (from the FFA signatories and CDPH) for alternative land uses in areas designated for open space reuse, the Navy does not believe that the noted statement that “ <i>the entire property will be health-protective for all types of uses</i> ” accurately reflects the selected remedy for Parcel E.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2.                       | <b>Figure 9, Figure 10 and Descriptions of Alternative S-4 throughout the document</b> The description of Alternative S-4 is confusing. Is the Navy planning to excavate all Tier 1 areas, defined as an already identified exceedance of greater than ten times the RG, using confirmation sampling so that the contamination in that excavation area is removed if the target COC that is being excavated exceeds five times the RG? And also excavate the Tier 2 areas, defined as an already identified exceedance of greater than five times the RG, using confirmation sampling so that the contamination in that excavation area is removed if the target COC that is being excavated exceeds five times the RG? The end result being that all Tier 1 and Tier 2 areas will have contamination removed so that the remaining contamination will be less than five times the RG? | Following removal of Tier 1 and Tier 2 locations, the remaining chemical concentrations at these locations will not exceed the soil action levels (which are defined as five times the corresponding RGs). The first sentence of Section 2.9.2.1 accurately describes the proposed approach: “ <i>Alternative S-4 includes excavation of Tier 1 and Tier 2 locations where remediation goals are exceeded (by more than five times) with offsite disposal at a permitted disposal facility.</i> ”<br>Section 2.9.2.1 was revised to further clarify the excavation approach as follows: “ <u><i>The RD will also specify the collection of soil confirmation samples <del>would be collected</del> to ensure that the Tier 1, Tier 2, and TPH locations are adequately removed, so remaining chemical concentrations at these locations do not exceed the soil action levels (corresponding to 5 times the remediation goals; see Table 4) or the petroleum source criterion (3,500 mg/kg of total TPH).</i></u> ” The revised text includes reference to a new table (referred to as Table 4) that summarizes the soil action levels and was included at the request of the Water Board. |
| <i>Specific Comments</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 3.                       | <b>Section 1.1 Selected Remedy, Soil, Soil Gas, and Shoreline Sediment, page 1-3, second bullet</b> You have used the word “eliminate” in this bullet and we think that is misleading to the reader. There are many areas of Parcel E, particularly in the Shipyard South Multi-Use District, where there will be multiple removals and re-installation of the durable cover during future redevelopment and maintenance activities and potential exposure to residual                                                                                                                                                                                                                                                                                                                                                                                                                 | The subject bullet item was revised as follows: “ <i>Install durable covers (consisting of either asphalt or soil) throughout Parcel E to <del>eliminate-prevent the exposure pathways to remaining contaminants in soil</del></i> ”. Similar revisions were made to the bullet items describing the shoreline protection (required to prevent exposure to contaminants in shoreline sediment) and the soil cover at IR-02 and IR-03 (required to prevent exposure to radionuclides in soil).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 3.<br>(cont.)                        | ubiquitous metals and other low level contaminants left below the ROD cleanup goals. And this exposure is anticipated and allowed because the residual levels will not cause a health concern during these types of activities. The handling of the soil under the durable cover in the Shipyard South Multi-Use District will not require any special soil handling requirements other than normal construction practices (e.g. minimize, monitor and control dust). The word you used in the Proposed Plan for this item was “prevent”. We think this summarizes the issue better.                                                                | The Navy wishes to clarify that future land-disturbing activities (such as excavation below the durable cover) are subject to restrictions that are detailed in Section 2.9.2.5 of the Draft ROD. While the Draft ROD provides flexibility to perform such activities, in accordance with documentation approved by the FFA signatories and CDPH, the Navy does not believe that the noted statement that “ <i>handling of the soil under the durable cover in the Shipyard South Multi-Use District will not require any special soil handling requirements other than normal construction practices</i> ” accurately reflects the selected remedy for Parcel E. |
| 4.                                   | <b>Section 2.3.2, Nonradioactive Chemicals in Groundwater, page 2-13 and Section 2.5, Summary of Site Risks, page 2-16:</b> The word atmosphere appears to be used to mean air – which could be described further as indoor or outdoor air. Would it be useful to specify so it is completely clear? The page 2-13 sentence could be reworded to state “... and volatilization of A-aquifer groundwater (in areas within VOC plumes) into <del>the atmosphere</del> outdoor and/or indoor air.” The page 2-16 sentence could be reworded to state “volatilization from soil or groundwater to <del>the atmosphere</del> outdoor and/or indoor air.” | The subject sentence was revised as follows: “ <i>Primary potential migration pathways for contaminated groundwater include migration and discharge of A-aquifer groundwater into San Francisco Bay and volatilization of A-aquifer groundwater (in areas within VOC plumes) into <u>the atmosphere-soil gas and then indoor air.</u></i> ” A similar edit was made to Section 2.5 based on input received from DTSC.                                                                                                                                                                                                                                             |
| 5.                                   | <b>Section 2.3.2, Nonradioactive Chemicals in Groundwater, last sentence and Figure 7, page 2-13:</b> It appears you are missing the IR-12 nickel plume (identified in the FS Figure 2-5) on Figure 7. Please reword the last sentence to state “Figure 7 shows the <del>primary</del> groundwater plumes at Parcel E that are associated with potential risk exposure pathways as described in Section 2.5 <del>(based on the risk evaluations)</del> .” Please also add the following, “ <i>Please note that the IR-39 benzene plume is scheduled for cleanup under the Petroleum Hydrocarbon Corrective Action Plan.</i> ”                       | Section 2.3.2 was revised to address the noted issue, which is consistent with input received from the Water Board. Please see the response to Water Board comment 4 for the specific text revisions that were made to Section 2.3.2 (as well as Section 2.5.2.3).                                                                                                                                                                                                                                                                                                                                                                                                |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 6.                                   | <b>Section 2.7, Remedial Action Objectives, page 2-23, first bullet:</b> We think the first word “prevent” should be changed to “minimize” or “prevent or minimize”. All of the activities listed are anticipated and allowed because the residual levels in the soil will not cause a health concern during the listed activities. All of the activities are anticipated to occur during normal construction and redevelopment. The handling of the soil under the durable cover will not require any special soil handling requirements other than normal construction practices (e.g. minimize, monitor and control dust). And once the work is done the durable cover will be reinstalled to once again “minimize” exposure until the next time it is removed. | Consistent with the responses to similar comments received from SFDPH on the Proposed Plan, the Navy does not agree that the requested changes are appropriate for the ROD. The Navy wishes to clarify that the requested change would be inconsistent with RAOs developed for other HPNS parcels with similar final remedies as Parcel E. Further, as described in the response to specific comment 3, the Navy does not believe that the noted statement that “ <i>handling of the soil under the durable cover will not require any special soil handling requirements other than normal construction practices</i> ” accurately reflects the selected remedy for Parcel E. The document was not revised in response to this comment. |
| 7.                                   | <b>Section 2.7, Remedial Action Objectives, page 2-23, second major bullet point:</b> The ROD does not include a table of remediation goals (RG) for soil gas – shouldn’t there be one similar to the Tables 4 through 7 of the other media (soil, groundwater, etc). Why not extract the soil gas risk-based action levels in Table 7 of the final soil gas memorandum (referenced in Section 2.7) as the ROD Remediation Goals? We appreciate that the Navy states that these action levels may be refined. Clarification about possible future refinement could be included in the text or as a footnote on this new soil gas RG table.                                                                                                                         | Section 2.7 was revised to more specifically discuss the application of soil gas action levels and to better explain how data from the future soil gas survey will be used to evaluate potential vapor intrusion risks. Please refer to the response to EPA specific comment 14 for the proposed text revisions.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 8.                                   | <b>Section 2.7, Table 6, Remediation Goals for Groundwater, page 2-29:</b> Please include a remediation goal for groundwater (or sediments, as appropriate) indicating that seeps from Parcel E to the Bay should not contain a visible sheen. This would address situations such as the current petroleum seep situation at the Parcel E-2 shoreline and clarify that visible sheens will need to be addressed regardless of whether sampling at the seeps shows an exceedance of a compound-specific ROD remediation goal.                                                                                                                                                                                                                                       | Water samples were collected at the petroleum seep along the Parcel E-2 shoreline, and results indicated total TPH concentrations exceeded 1,400 µg/L, which is the most stringent RG for groundwater. Accordingly, the Navy believes that the existing groundwater and NAPL RAOs for TPH are adequately protective of potential petroleum seeps that could be encountered along the Parcel E shoreline. The document was not revised in response to this comment.                                                                                                                                                                                                                                                                       |

| 8.<br>(cont.)                        | <p><i>(Follow-on comment received on October 29, 2013)</i></p> <p><b>Response to Specific Comment 8, Section 2.7, Table 6, Remediation Goals for Groundwater, page 2-29:</b> We disagree with this response. The Basin Plan states that “Waters shall not contain oils, greases, waxes, or other materials in concentrations that result in a visible film or coating on the surface of the water or on objects in the water, that cause nuisance, or that otherwise adversely affect beneficial uses.” Please include a remediation goal for groundwater (or sediments, as appropriate) indicating that seeps from Parcel E to the Bay should not contain a visible sheen. Oil sheens/seeps should be addressed to satisfy Water Board Basin Plan objectives and to avoid a negative community perception.</p> | <p>The Navy evaluated the substantive provisions of the Basin Plan as potential ARARs and determined that only the numeric criteria specified in Table 3-3 of the Basin Plan qualify as ARARs for Parcel E. The Navy’s evaluation of the pertinent Basin Plan requirements for Parcel E are consistent with the ARAR determinations made in the final RODs for other HPNS parcels.</p> <p>Further, the Navy’s response to SFDPH specific comment 8 noted that the visible sheen observed along the Parcel E-2 shoreline corresponded with a total TPH concentration that exceeded 1,400 µg/L, which is the most stringent RG for groundwater. The subject comment appears to imply that the narrative standard in the Basin Plan would be more stringent than the total TPH RG for groundwater, but the Navy does not believe that adequate information is available to support such an assertion. Accordingly, the Navy reiterates its belief that existing groundwater and NAPL RAOs for TPH are adequately protective of human health and the environment, and the RAOs adequately address potential petroleum seeps that could be encountered along the Parcel E shoreline.</p> <p>The ROD was not revised based on this comment.</p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 9.                                   | <p><b>Section 2.8.1, Description of Remedial Alternatives, page 2-31 and Table 8 for Radiologically Impacted Media, page 2-35:</b> Under the presentation of the cost estimates for the selected remedy, the Navy has inserted a zero dollar amount under the O&amp;M line item for the remedial alternative for radiologically impacted media. This does not seem possible – there is going to be an O&amp;M cost associated with the remedy for this area. Does the O&amp;M cost for the soil remedy (approx. \$8MM) include O&amp;M associated with the remedy for radiologically impacted media? Please either separate the radiological remedy O&amp;M costs from the soil remedy and/or craft additional language (or point out in your response to this comment where it already exists) that clearly states O&amp;M duties tied to the radiological remedy will be executed under the soil remedy. Additionally, the preparation and implementation of the RAD RMP (not yet started) could also create a set of as yet unknown duties and costs.</p> | <p>The subject table (now referred to as Table 9) was revised to include a footnote that explains why no O&amp;M costs were attributed to the remedial alternatives for radiologically impacted media: <u>“The O&amp;M activities associated with the radiological remedial alternatives are attributed to the soil cover, shoreline protection, and ICs at IR-02 and IR-03, and include inspection, landscaping maintenance, 5-year reviews, and IC implementation. However, these O&amp;M activities are also required to implement the selected remedy for soil. Therefore, consistent with information presented in the Radiological Addendum to the FS Report, the costs associated with these O&amp;M activities were evaluated in the FS Report as part of the analysis of the soil remedial alternatives.”</u> In addition, Sections 1.1 and 2.9.2.4 were revised to clarify that the O&amp;M activities specified in the selected remedy for soil will ensure the integrity of the soil cover at IR-02 and IR-03.</p> |
| 10.                                  | <p><b>Section 2.9.2.1, Removal, Treatment, and Containment of Soil and Shoreline Sediment (Alternative S-4), page 2-43, first paragraph:</b> The study of elevated concentrations of soil gas at IR-04 that is referenced to Table 1 does not appear to exist in Table 1. Please clarify.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>The subject text intended to refer to the groundwater characterization and treatability study that was performed between 2009 to 2012 at various VOC groundwater plumes and included the collection of soil and soil gas data (Shaw, 2011 and 2013). The subject text in Section 2.9.2.1 was revised for clarity as follows: <u>“As noted in <del>Table 1</del> Section 2.3.2, a recent study (completed in performed from 2009 to 2012) identified elevated concentrations of VOCs in soil and soil gas at IR-04 (near Building 810).”</u> In addition, Section 2.3.2 was revised (based on input received from DTSC) to describe the VOCs in soil gas that were reported at various groundwater plumes. Please refer to the response to DTSC comment 2 for the proposed text revisions (which will be supplemented by an electronic reference to pertinent information describing the studies).</p>                                                                                                                       |

| 11.                                  | <p><b>Section 2.9.2.1, Removal, Treatment, and Containment of Soil and Shoreline Sediment (Alternative S-4), page 2-43, first paragraph, last sentence:</b> Please describe what criteria will be used to determine whether the RD will propose to expand the excavation at the Tier 1 location at IR-04 near Building 810 (for example, if needed to meet ROD remediation goals for soil in areas outside the area currently proposed for cleanup). The soil gas contamination appears to be related to the IR-04 VOC plume shown in Figure 11. Can you please clarify?</p> | <p>As described in the response to specific comment 10, the groundwater characterization and treatability study that was performed between 2009 to 2012 identified elevated concentrations of VOCs in soil and soil gas at IR-04 (near Building 810) (Shaw, 2011 and 2013). The initial phase of work (performed in 2009) identified elevated concentrations of TCE in soil gas at one location, where TCE concentrations in the underlying groundwater were relatively low. A second phase of work was performed in 2012 to evaluate potential TCE sources in the vadose zone, and identified TCE in one soil sample (out of four samples collected in a small area, measuring about 30 feet by 30 feet, near the location with elevated TCE concentrations in soil gas) at a concentration that exceeded the RG but was less than five times the RG. The TCE concentrations in soil are not indicative of a Tier 2 location requiring excavation; therefore, the decision for future excavation will be determined based on whether the volume of TCE in vadose zone warrants removal to prevent unacceptable risk via indoor inhalation of vapors. The subject text in Section 2.9.2.1 was revised for clarity as follows: <i>“The <u>elevated VOC concentrations in soil and soil gas</u> appear to be limited to a small area that is directly adjacent to a Tier 1 location where excavation and offsite disposal is required for metals and PCBs (see Figure 10). The RD will further evaluate <u>VOCs in soil and soil gas</u> in this area and may propose expanding the excavation at this Tier 1 location to address VOCs in vadose zone soil (up to 10 feet bgs), <u>if deemed necessary to satisfy the soil gas RAO.</u>”</i></p> |
| 12.                                  | <p><b>Section 2.9.2.1, Removal, Treatment, and Containment of Soil and Shoreline Sediment (Alternative S-4), page 2-44, second paragraph:</b> Please change the sentence to read “Durable covers would be applied across all of Parcel E as physical barriers to <del>cut off</del> <u>minimize</u> potential exposure to residual...” Durable covers are allowed and anticipated to be removed from the Shipyard South Multi-Use District and some Open Space areas (designated in green on Figure 12) during and after redevelopment.</p>                                  | <p>As described in the response to specific comment 6, the Navy does not agree that the requested change (use of the term “<i>minimize</i>” instead of “<i>cut off</i>” or “<i>prevent</i>”) are appropriate for the ROD. The Navy wishes to clarify that the requested change would be inconsistent with the established RAO for soil, as well as similar RAOs developed for other HPNS parcels with similar final remedies as Parcel E. The document was not revised in response to this comment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 12.<br>(cont.)                       | The resultant exposure to the soil will not cause a health concern during the listed activities. The handling of the soil under the durable cover will not require any special soil handling requirements other than normal construction practices (e.g. minimize, monitor and control dust). And once the work is done the durable cover will be reinstalled to once again “minimize” exposure until the next time it is removed.                                                                                                                                                                                                                                                                                                                                     | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 13.                                  | <b>Section 2.9.2.1, Removal, Treatment, and Containment of Soil and Shoreline Sediment (Alternative S-4), page 2-44, second paragraph:</b> Please describe what criteria will be used to determine whether methane control measures (such as passive vents) are required to protect human health.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The potential presence of subsurface methane, and the potential need to implement control measures, will be evaluated based on the criteria identified at Title 27 Cal. Code Regs. § 20921(a). Section 2.9.2.1 was revised for clarity as follows: <i>“In addition, the cover design will also require the evaluation of subsurface methane, which was previously reported in isolated areas within IR-03 and IR-12, to determine if control measures (such as passive vents) are required to protect human health in accordance with Title 27 California Code of Regulations § 20921(a).”</i> This requirement was also added to Attachment 4 as chemical-specific ARAR.                                                                                                                                                                                             |
| 14.                                  | <b>Section 2.9.2.2, Treatment and Containment of Groundwater (Alternative GW-3), page 2-45:</b> The FS states that contaminant migration will be monitored to verify plume stability and that additional groundwater monitoring wells may be required to monitor changing flow direction. These requirements are relevant to possible changes in groundwater flow direction and lateral migration of contaminants caused by the installation of below-ground barriers. Additionally, the FS states that groundwater will be monitored for COECs and that monitoring results will be compared with trigger levels. Please reiterate these requirements in Section 2.9.2.2 and include a table of COEC trigger levels (already included in Administrative Record Index). | Section 2.9.2.2 (as well as Section 2.9.2.3) was revised to more accurately describe the monitoring approach for VOC groundwater plumes and other groundwater plumes located near San Francisco Bay. The specific changes are presented below. <ul style="list-style-type: none"> <li>A new sentence was added to the first paragraph as follows: <i>“Groundwater quality (as well as flow direction) will be monitored at the VOC groundwater plumes to evaluate the breakdown of VOCs to less toxic compounds, and soil gas will be monitored to evaluate concentrations relative to risk-based action levels (as described in Section 2.7). Groundwater monitoring will continue until chemical concentrations meet remediation goals, and soil gas monitoring will continue until chemical concentrations are less than risk-based action levels.”</i></li> </ul> |

| 14.<br>(cont.)     | (see above)                                                                                                                                                                                                     | <ul style="list-style-type: none"> <li>The end of the second paragraph was revised to state: <u>“Groundwater quality (as well as flow direction) <del>would</del> will be monitored at all plumes, including those the plumes behind the below-ground barrier to ensure that contamination is not discharged into San Francisco Bay at concentrations greater than the corresponding surface water quality criteria for aquatic wildlife (to comply with the groundwater RAO specified in Section 2.7). Plume-specific trigger levels will be used as groundwater monitoring criteria to evaluate the potential risk to aquatic wildlife in San Francisco Bay, but the RD may develop alternative monitoring criteria (using refined fate and transport modeling) to more rigorously assess the groundwater-to-surface water transport mechanism.”</u></li> </ul> <p>The Draft ROD includes two electronic references that describe the trigger levels:</p> <ul style="list-style-type: none"> <li>The reference provided in Section 2.5.2 (associated with the phrase “risks to aquatic wildlife”) describes the screening-level risk assessment for aquatic wildlife from exposure to potentially contaminated groundwater, and includes a table of trigger levels (as developed in the Final FS Report [ERRG, 2012]).</li> <li>The reference provided in Section 2.5.2.3 (associated with the phrase “trigger levels”) identifies the methodology used to calculate the trigger levels.</li> </ul> <p>As described in the FS Report (ERRG, 2012) (and in the references provided in the Draft ROD), the trigger levels can vary for each plume (and individual monitoring wells around each plume) depending on its distance from San Francisco Bay. In addition, as noted in the revised text in Section 2.9.2.2, the RD may develop alternative monitoring criteria to more rigorously assess the groundwater-to-surface water transport mechanism. Accordingly, the ROD was not revised to include a table of trigger levels.</p> |
| 15.                | <b>Section 2.9.2.2. Treatment and Containment of Groundwater (Alternative GW-3) and Figure 11, page 2-45:</b> Please identify the IR-12 nickel plume (identified in the FS Figure 2-5) for MNA (if applicable). | As described in the response to Water Board comment number 4, Section 2.5.2.3 was revised to explain that the IR-12 nickel plume did not require evaluation in the FS Report (ERRG, 2012) (and is therefore not included in the selected remedy).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 16.                                  | <b>Section 2.9.2.2, Treatment and Containment of Groundwater (Alternative GW-3), page 2-45, first paragraph:</b> Please describe what criteria will be used to determine whether ZVI will be used in addition to the biological substrate for groundwater remediation. | <p>The Navy wishes to clarify that site-specific characteristics of the Building 406 VOC plume (where additional ZVI treatment may be used to supplement the proposed in-situ bioremediation) continue to be evaluated following the ZVI injection performed in 2009. The ongoing groundwater monitoring results will be evaluated in the RD and will consider multiple factors (e.g., pre-treatment soil and groundwater conditions, fate and transport of VOCs within the vadose and saturated zones, etc.) to determine whether or not site conditions warrant more aggressive treatment to prevent unacceptable risk via indoor inhalation of vapors.</p> <p>The subject text in Section 2.9.2.2 was revised to state: <i>“The Building 406 plume may require more aggressive treatment using injected zero-valent iron (potentially mixed with biological nutrients), if determined necessary in the RD to satisfy the soil gas RAO (as described in Section 2.7).”</i> The Navy believes that the proposed text revisions are adequately descriptive and that further clarification of the evaluation methodology should be deferred to the RD.</p> |
| 17.                                  | <b>Section 2.9.2.2, Treatment and Containment of Groundwater (Alternative GW-3), page 2-45, first paragraph:</b> Please state how soil gas sampling will be used to assist in determining the completion of active treatment and beginning of MNA.                     | <p>The subject text in Section 2.9.2.2 was revised to discuss the required soil gas monitoring at the VOC groundwater plumes. The specific text revisions are provided in the response to specific comment 14.</p> <p>In addition, the Navy wishes to clarify that the text in Sections 2.7 and 2.9.2.2 specifies that remediation endpoints will be identified in the RD and will signify the completion of the active treatment and the beginning of MNA to ensure that natural processes are degrading the remaining VOCs. Further, the Navy wishes to clarify that site-specific characteristics of each VOC plume may warrant different implementation approaches for in-situ treatment, and that identifying remediation endpoints will need to consider multiple factors (e.g., pre-treatment soil and groundwater conditions, volume and type of substrate used to treat VOCs, and fate and transport of VOCs within the vadose zone). Accordingly, the Navy believes that the existing text in the ROD is adequately descriptive and that further clarification of the term “remediation endpoints” should be deferred to the RD.</p>            |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 18.                                  | <b>Section 2.9.2.3, Removal, Treatment, and Containment of NAPL at IR-03 (Alternative O-4), page 2-46, first paragraph:</b> Please describe what criteria will be used to determine whether the NAPL removal and treatment area will be increased or decreased (for example, increased to include areas outside those currently proposed if additional characterization finds more NAPL and/or concentrations above the ROD goals).                                                                                                                               | Section 2.9.2.3 was revised for clarity as follows: <u>“During development of the RD will evaluate the data from recent studies and determine the extent to which removal and treatment technologies can cost-effectively satisfy the NAPL RAOs (as described in Section 2.7). Based on this determination to be provided in the RD, the NAPL removal and treatment area may be increased or decreased based on additional characterization results, with the remaining NAPL contamination being addressed by containment, monitoring, and ICs.”</u>                                                                                                                                                                                                                                                                   |
| 19.                                  | <b>Section 2.9.2.3, Removal, Treatment, and Containment of NAPL at IR-03 (Alternative O-4), page 2-46, first paragraph, second sentence:</b> Please add at the end of this sentence “to achieve the Total TPH remedial goal”.                                                                                                                                                                                                                                                                                                                                     | The suggested revision was not made because it would be inconsistent with the NAPL RAOs identified in Section 2.7. These RAOs focus on preventing or minimizing the migration of NAPL to prevent unacceptable discharge to San Francisco Bay and do not reference the RG for total TPH in soil (as suggested by the reviewer). Section 2.9.2.3 was instead revised for clarity as follows: <u>“The Navy will perform additional studies to select the best combination of technologies to cost-effectively remove or treat the NAPL contaminant source at IR-03; as noted in Table 1, the Navy is conducting a study at IR-03, concurrent with this ROD, that will further characterize the area and test two technologies (in-situ stabilization/solidification and thermally-enhanced extraction) in the field.”</u> |
| 20.                                  | <b>Section 2.9.2.5, Activity Restrictions Relating to Soil and Associated VOC Vapors at Specific Locations within Parcel E, page 2-51 and Figure 12 page 2-48:</b> Please clarify, was the pink area on Figure 12 already sampled for soil vapor in a gridded fashion and restrictions related to VOCs removed (except at the IR-03 Oily Waste Ponds where significant work is ongoing)? Your last sentence in paragraph one implies that there is no VOC ARIC for the Figure 12 pink area “Restriction Related to Radioactive Chemicals and Other Contaminants”. | Section 2.9.2.5 was revised to address the noted issue, which is consistent with input received from DTSC. Please see the response to DTSC comment 7 (part d) for the specific text revisions that were made to Section 2.9.2.5 (as well as the subject figure, which is now referred to as Figure 13).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 21.                                  | <p><b>Section 2.9.2.5, Monitoring, Maintenance, and Institutional Controls, Land Use and Activity Restrictions, page 2-51, 3rd paragraph:</b> Assuming that the pink area on Figure 12 should have been included in the VOC ARIC, please delete the phrase at the beginning of paragraph three “If IR-02 and IR-03 are involved,” and please reword the rest of the sentence as “The FFA signatories, and CDPH for the area with restrictions related to radioactive chemicals, may modify...” This edit is necessary because demonstrating a reduction in VOC concentrations in soil gas could be conducted for any location within the VOC ARIC.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Section 2.9.2.5 was revised to address the noted issue, which is consistent with input received from DTSC. Please see the response to DTSC comment 7 (part d) for the specific text revisions that were made to Section 2.9.2.5.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 22.                                  | <p><b>Section 2.9.2.5, Activity Restrictions Relating to Soil and Associated VOC Vapors at Specific Locations within Parcel E, page 2-51</b></p> <p>You have forgotten to include a description of the gridded soil vapor sampling work that you will be performing in the future related to the VOC ARIC as designated on Figure 12. The steps that will be performed in the future need to be included in this ROD. We think the steps should be listed as: “In addition to the focused soil gas surveys that will be conducted in SVE and groundwater treatment areas (Section 2.7 and 2.9.2.2), conduct a gridded soil gas survey in the entire VOC ARIC prior to transfer for the following purposes:</p> <ul style="list-style-type: none"> <li>• To identify where the VOC ARIC would be retained or areas where the VOC ARIC can be released</li> <li>• To verify that all areas needing remedial action for soil gas were identified and treated.”</li> </ul> <p>It is important to limit the restrictions related to soil gas issues (indoor air inhalation risk) to the areas where these issues might exist. Land use restrictions are meant to be used when there is no practical and cost effective way to reduce a hazard not as a way to pass on the uncertainty and cost of protecting against a potential hazard that may not exist. The post-transfer cost of restricting all construction due to the possibility of an indoor air inhalation risk is significant. Please limit the restrictions related to this issue to the areas where it is needed.</p> | <p>Consistent with the RODs for other HPNS parcels, the subject language in Section 2.9.2.5 generally describes the activity restrictions related to soil and associated VOC vapors and is not intended to describe the future soil gas survey. As described in the response to DTSC comment 5, Section 2.9.2.1 was revised to add the following text regarding the future soil gas survey at Parcel E (in areas outside of the VOC groundwater plumes): <u>“Additionally, a soil gas survey will be conducted, following a planning process performed in consultation with the regulatory agencies, in Parcel E to:</u></p> <ul style="list-style-type: none"> <li>• <u>investigate soil gas in areas planned for mixed use where concerns continue about residual VOCs in soil (at concentrations that may pose an unacceptable risk via vapor intrusion);</u></li> <li>• <u>identify COCs for which risk-based numeric action levels for VOCs in soil gas would be established (based on a cumulative excess cancer risk of 1 in a million); and</u></li> <li>• <u>evaluate and map the extent to which areas with potential unacceptable risk via vapor intrusion require control (as described in Section 2.9.2.5, areas with unacceptable vapor intrusion risk will be subject to institutional controls, and the potential risk will be reduced by engineering controls or other design alternatives that meet the specifications set forth in the ROD, RD reports, and LUC RD report).</u></li> </ul> <p>Please note that Sections 2.9.2.1 and 2.9.2.2 already describe future soil gas monitoring at Building 406, IR-04, and other VOC groundwater plumes at</p> |

| 22.<br>(cont.)                       | <p>Please include the steps in this ROD, including collecting the necessary soil gas data and identifying the impacted areas. You have already discussed the soil gas risk based action levels in this ROD (see comment #4 above) and the possibility of refinement of these levels – thank you for that.</p> <p>You have previously made commitments to do this work in meetings and responses to comments. You have also included these concepts in previous RODs. You have already performed this work at Parcels B, D-1, G, and UC-2 and will be performing it shortly at UC-1. By the way, after many years of discussing this issue and witnessing, on other parcels, the reduction of VOC soil gas contamination (usually post groundwater treatment), we are comfortable with the Navy’s possible need to delay implementing these steps until after some or all of the following actions: a) SVE, b) groundwater treatment c) backfilling of hot spot excavations with clean fill and d) installation of remedies (e.g. durable covers etc). This comfort level presumes that the Navy does not think any new areas of soil gas contamination that might require treatment would be discovered during the gridded sampling.</p> <p>As a reminder to your previous commitments on this subject we include the following:</p> <p>Our comment #2 dated November 27, 2012 on the draft Parcel E Proposed Plan was: “Soil gas RAOs should be included in the Proposed Plan and the ROD. If the establishment of chemical-specific soil gas remediation goals is delayed until after the ROD, then the description and the cost for this evaluation and regulatory process needs to be added to the Proposed Plan and ROD. We did not find any wording on this subject in the Proposed Plan.</p> <p>It is important to limit the restrictions related to soil gas issues (indoor air inhalation risk) to the areas where these issues might exist. Land use restrictions are meant to be used when there is no practical and cost effective way to reduce a hazard not as a way to pass on the uncertainty and cost of protecting against a potential hazard that may or may not exist. The post-transfer cost of restricting all construction due to the possibility of an indoor</p> | <p>Parcel E. In addition, as described in the response to specific comments 14 and 17, Section 2.9.2.2 was revised to discuss the required soil gas monitoring at the VOC groundwater plumes. The Navy believes that the added text regarding the future soil gas survey at Parcel E, which is consistent with information provided in the ROD for Parcel C, is adequately descriptive and that further discussion of the future soil gas survey should be deferred to the RD (or appropriate planning documents for the soil gas survey). However, the Navy wishes to clarify its intent to develop the soil gas survey at Parcel E using a similar approach as used at other HPNS parcels (and to implement the soil gas survey either in conjunction with or following the remedial action). Specifically, the available soil, soil gas, and groundwater data within areas planned for mixed use would be evaluated to identify potential areas of concern (where chemical concentrations may pose an unacceptable risk via vapor intrusion). Following the data analysis, a soil gas sampling and analysis plan would be developed and implemented (following approval by the regulatory agencies) to quantify residual VOC concentrations in soil gas at the areas of concern. Similar to the approach used at other HPNS parcels, the Navy expects to establish a grid system (other HPNS parcels used 1 acre) that would correspond to the minimum sampling frequency within the areas of concern. The data from the soil gas survey would be used in a risk evaluation, as briefly described in Section 2.7 of the ROD, the results from which would be used to evaluate the extent to which areas with potential unacceptable risk via vapor intrusion require control.</p> |

| 22.<br>(cont.)                       | <p>air inhalation risk is significant. Please limit the restrictions related to this issue to the areas where it is needed by collecting the necessary soil gas data and establishing the soil gas RAO's and identifying the impacted areas."</p> <p>Your reply in your RTCs dated December 21, 2012 was:</p> <p>Page 9 of the Proposed Plan includes the following RAO for soil gas: <i>"Protect people from exposures to vapors in soil gas at concentrations greater than those considered safe for humans."</i></p> <p>This RAO corresponds to a more detailed RAO provided in Section 3.1.1.1 of the Final FS Report; the RAO in the FS Report references the Navy's current soil gas action levels and a future soil gas survey to identify the extent of the area requiring ICs for VOCs. The Navy believes this information adequately explains the approach for addressing risk from soil gas, and no further clarification is needed for the Proposed Plan.</p> <p>Our comment #1 dated October 2, 2009 on the draft Parcel E FS was:</p> <p>"Vapor Intrusion remedial goals need to be established and soil gas samples collected to analyze the vapor intrusion pathway. It is inappropriate to restrict the entire Parcel E with a blanket Institutional Control (e.g. VOC ARIC) for all of Parcel E when the Navy has 5 years before it expects to transfer Parcel E. We have been discussing this soil vapor issue with the Navy since at least 2006. Please see the attached meeting summary (Attachment A) from a meeting held in March 2007 discussing this issue for Parcel B. Part of the reasoning for the chosen remedy on Parcel B for a blanket VOC restriction was to prevent further delays in the transfer process. However assurances were given at the time that soil gas sampling and establishment of soil vapor remedial goals would be required for future parcels. The Navy stated in its July 2007 cover letter to its draft revised RI for Parcel E that it would complete a soil gas survey. Can we please meet with the regulators to discuss this issue and resolve when and how this will be done for Parcel E and other parcels?"</p> | (see above) |

| 22.<br>(cont.)                       | <p>Your reply in the RTCs dated October 2009 was:</p> <p>“The Navy regrets that the agreements made during previous meetings were not reflected in the Draft FS Report for Parcel E. The Navy plans to perform a soil gas survey at Parcel E in accordance with the clarifications made in the Final Revised RI Report and as stated during previous working meetings. The Draft Final FS Report was revised to briefly discuss the planned soil gas survey at Parcel E; specific changes will include noting the objectives of the survey and the schedule for submitting the planning documents.”</p> <p>Here is an excerpt from a meeting summary that was held on March 13, 2007 (attended by EPA, DTSC, RWQCB, Navy, SFDPH and Lennar) when we first started discussing the details of soil vapor sampling is:</p> <p>“A soil gas sampling plan would be prepared to support a soil gas sampling program throughout Parcel B. The plan would follow appropriate regulatory vapor intrusion guidance for residential land use to identify any existing hot spots, as well as areas where no soil gas concerns are present, and would be approved by all parties. The resulting sampling would be a grid type sampling plus focused sampling around known groundwater plumes and VOC hot spots identified during the vapor sampling effort. The data objectives, including action levels indicating the need for vapor mitigation measure(s), would be clearly defined up front and sampling would take place in the dry season. This plan would be developed and implemented with the intent of defining the areas of vapor concerns prior to amending the ROD. The result of this approach would be to limit soil vapor barriers in new construction to only those areas where it is shown to be necessary, with appropriate buffers, and consideration of engineering controls for utilities that traverse vapor barrier areas and could create preferential pathways for soil vapor.”</p> | (see above) |

| 25. | <b>Section 2.9.2.5 Monitoring, Maintenance and Institutional Controls, Land Use and Activity Restrictions, Page 2-50</b><br>Please correct the last item on the page, #b after the phrase "the following activities are prohibited throughout HPNS Parcel E. It should have been written:<br>b. Use of groundwater<br>It currently reads "Use of or access to groundwater". A prohibition on access to groundwater is not acceptable in an area where redevelopment activities are going to occur.<br>The Parcel B, C, D-1, G, UC-1, and UC-2 RODs all list the prohibition as only "Use of groundwater". | The subject bullet was revised to read: “ <i>Use of <del>or access to</del> groundwater.</i> ” |

| 26. | I can not find a reference in the Draft Parcel E ROD about the boundary line between the Parcel E shoreline and Parcel F. It is important to include a statement in the ROD about this boundary issue. The sentences you included on Page 2-3 of the Parcel E-2 ROD were:<br>"Contaminated sediments above msl will be addressed by the selected remedy for Parcel E-2. Contaminated sediments below msl will be addressed by the selected remedy for Parcel F, the Navy’s property offshore of HPNS."<br>Please add sentence(s) about the Parcel E/F boundary to the Parcel E ROD. | Section 2.3.1 was revised to include the following statement: “ <i>Contaminated sediments above msl will be addressed by the selected remedy for Parcel E. Contaminated sediments below msl will be addressed, as necessary, by the selected remedy for Parcel F, the Navy’s property offshore of HPNS.</i> ” |

| <i>Supplemental Comments on Record of Decision</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1.                                                 | <p><b>Section 2.7, Remedial Action Objectives, Soil, Soil Gas, and Shoreline Sediment RAOs, page 2-27, second major bullet point:</b> Prior to future soil gas surveys, soil gas action levels may need to be updated based on up-to-date toxicity data. Chronic inhalation reference concentrations and inhalation unit risk values, which were previously used to calculate soil gas action levels, may have been updated by the time that risk based screening is performed. The referenced Table 7 from the final soil gas memorandum may need to be updated in the future.</p>                                                                               | <p>The Navy conducted soil gas surveys to support the development of the soil gas action levels presented in the “Revised Final Memorandum, Approach for Developing Soil Gas Action Levels for Vapor Intrusion Exposure at Hunters Point Naval Shipyard” (ChaduxTt, 2011). The soil gas action levels presented in the aforementioned document are incorporated into the RAOs provided in Section 2.7 of the ROD. These soil gas action levels have been and will continue to be used to support the soil gas surveys in all HPNS parcels. The Navy does not believe that it is necessary to reevaluate the established soil gas action levels each time it performs an investigation, given that the soil gas action levels are used to perform an initial risk-based screening of soil gas data. In accordance with the soil gas evaluation methodology used at other HPNS parcels (and briefly described in Section 2.7 of the ROD), after the initial risk-based screening, areas with unacceptable risk are further evaluated using location-specific data (i.e., physical characteristics of the soil) to assess potential exposures consistent with the State of California and EPA vapor intrusion guidance. In addition, risks and hazards at these areas will be further characterized using the accepted methodology for risk assessments at HPNS. The risk evaluation process will consider the most current toxicity data and reference concentrations. The ROD was not revised based on this comment.</p> |
| 2.                                                 | <p><b>Section 2.9.2.1 Removal, Treatment, and Containment of Soil and Sediment (Alternative S-4), page 2-49:</b> Thank you for revising some of your wording to respond to some of our comments on these soil gas issues. Unfortunately, the proposed wording still appears to be limiting the areal extent of soil gas surveys rather than stating that you will conduct the needed surveys in the entire Shipyard South Multi-use District which is designated as a VOC ARIC. For suggested revised wording, the SFDPH agrees with the USEPA’s Supplemental Comment 2, dated October 28, 2013, regarding the scope of soil gas surveys planned at Parcel E.</p> | <p>The Navy has revised the response to SFDPH specific comment 22 to explain the general approach for performing the soil gas survey, but this additional information was not added to the text of the ROD. The Navy believes that the additional ROD text (as presented in the response to SFDPH specific comment 22) regarding the future soil gas survey at Parcel E, which is consistent with information provided in the ROD for Parcel C, is adequately descriptive and that further discussion of the future soil gas survey should be deferred to the RD (or appropriate planning documents for the soil gas survey). As described in the response to EPA supplemental comment 2, Section 2.9.2.1 was revised to incorporate portions of EPA’s suggested text regarding the future soil gas survey at Parcel E. The Navy wishes to clarify that some of EPA’s suggested text would be inconsistent with the successful process by which soil gas surveys were developed for HPNS Parcels B, D-1, and G.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

During development of the soil gas surveys at HPNS Parcels B, D-1, and G, the Navy’s data analysis determined that there were areas where no potential soil gas concerns existed (and thus did not require soil gas sampling). The Navy anticipates that the data analysis at Parcel E may yield similar findings and wishes to avoid using prescriptive wording in the ROD (specifically the phrase “investigate soil gas in all areas planned for mixed use”) that could unnecessarily expand the scope of the soil gas survey. |
| 3.                                                             | <p><b>Section 2.9.2.1 Removal, Treatment, and Containment of Soil and Sediment (Alternative S-4), Figure 11 and second paragraph on page 2-51:</b> We would like to point out for the record that the remedies for the shoreline areas designated as “sand with underlying rock armor” will be further evaluated in the Remedial Design and that alternatives such as articulated concrete mats will be considered. As you stated in your RTC, “The Navy acknowledges the potential benefits of articulating concrete mats in facilitating vegetative growth and enhancing site aesthetics and will further evaluate this product during the RD.” Your specific response in the RTCs on the draft final Feasibility Study about this issue was:</p> <p>“As stated in Section 4.2.2.3 (bottom of page 4-6), the Navy will further evaluate the shoreline protection options during the RD. Section 4.2.2.3 further states that: “Refinements to conceptual designs may be prompted by additional site information or stakeholder input, and may include changes to the alignment of or construction materials used in the shoreline protection option. However, the refined design must continue to satisfy the RAOs identified in Section 3.1.2 and provide equivalent (or improved) performance relative to effectiveness, implementability, and cost.” The Navy acknowledges the potential benefits of articulating concrete mats in facilitating vegetative growth and enhancing site aesthetics and will further</p> | The Navy acknowledges its prior statements regarding the potential refinements to the conceptual design for the shoreline protection at Parcel E.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 3.<br>(cont.)                                                  | evaluate this product during the RD. However, the Navy believes that more information is needed to verify the ability of articulating concrete mats to serve as a robust containment structure that is effective in the long-term. In the absence of such information, the Navy believes that rock armor is an appropriate and adequately conservative option to compare against the NCP criteria.”                                                                                                                        | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 4.                                                             | <b>Section 2.9.2.5 Monitoring, Maintenance and Institutional Controls, page 2-55, first full paragraph, second sentence</b> For clarity, please consider revising the sentence as follows: “In Parcel E, <del>the objectives of the ICs are to implement</del> include the land use and activity restrictions that are used to limit the exposure of future landowner(s) or user(s) of the property to hazardous substances present on the property and in groundwater. The ICs <del>and to</del> ensure the integrity...” | The requested change was not made because the existing language in Section 2.9.2.5 of the ROD has been reviewed and approved by legal counsel from the Navy, EPA, and DTSC, and is consistent with language provided in the Final FS Report for Parcel E (ERRG, 2012) and the Final ROD for Parcel E-2 (Navy, 2012b). In addition, the suggested revisions would not be consistent with the definition of ICs as provided in the Final FS Report. Specifically, ICs are defined in Section 3.3.2.1.2 of the Final FS Report as “ <i>legal and administrative mechanisms used to implement land use restrictions that are used to limit the exposure of future landowner(s) or user(s) of the property to hazardous substances present on the property, and to ensure the integrity of the remedial action.</i> ” Consistent with U.S. Department of Defense guidance (2001), the Navy will continue to use the term “institutional controls” to describe the portion of the CERCLA remedy where certain legal mechanisms will be used to enforce land use and activity restrictions. |
