

Nuclear Energy Sensor (NES) Database

November 5, 2019

Tim Downing

Drupal Portfolio Lead PNNL

NE Sensor Database

Purpose: Collect, store, and maintain nuclear power plant sensor technology information so that it can be easily accessed and queried on the web. Provide mechanisms for the user community to suggest additional sensors and needs so that the data available continues to grow.

Initial Content: ORNL/TM-2016 “Assessment of Sensor Technologies for Advanced Reactors”.

- Nuclear energy sensors
- Sensor use cases
- Sensor needs and gaps

NE Sensor Vision

Next Steps:

- Expand the dataset based on input from the user community
- Develop additional search and analytic capabilities
- Develop more advanced visualization functionality

Building a Community:

- Looking for interested subject matter experts to share their expertise:
 - Contribute content for the community
 - Moderate suggested content
 - Network with the community

NE Sensor - Home Page

Sensors for Nuclear Applications at Your Fingertips!

Welcome to the Nuclear Energy Sensors (NES) website! This website provides a searchable sensors technology database for nuclear applications. It provides information on current state of sensors development, availability, use cases, and also helps identify needs and gaps for sensor development.

SENSOR TYPE

☐ Thermocouple (7)

☐ Thermometer (5)

☐ Unknown/Not declared (4)

☐ Hygrometer (3)

☐ Ultrasonic (3)

 [Show more](#)

MEASUREMENT TYPE

☐ Temperature (15)

☐ Flow (14)

☐ Leak Detection (7)

☐ Neutron Flux (7)

☐ Moisture (6)

 [Show more](#)

REACTOR TYPE

☐ High-Temperature Reactor (HTR) (44)

☐ Sodium Fast Reactor (SFR) (23)

☐ Molten Salt Reactor (MSR) (6)

☐ MSR (1)

Sensors

Sensor Type 	Sensor Technology 	Measurement Type 	Applicable Reactor Type(s) 	Description
Laser Doppler vibrometry	Laser Doppler vibrometry	Vibration		VIEW DETAILS
Pressure Sensor	Pressure Sensor	Pressure		VIEW DETAILS
Permanent Magnet	Permanent Magnet	Flow		Pro: Rugged, Direct mV output, Nonintrusive; Cons: Heavy, Temperature dependent output, Non-linear in large sizes, Flow turbulence limits response time, Drifts with time VIEW DETAILS
Saddle Coil	Saddle Coil	Flow		Pro: Direct mV output, Nonintrusive; Cons:, Large DC power supply and meter size, Temperature dependent output, Non-magnetic pipe only, Non-linear in large sizes, Flow profile dependent, Flow turbulence limits response time VIEW DETAILS

Suggest a Sensor

Suggest a sensor to be added to this database. Please fill out as much information as possible. One of our subject matter experts may reach out to you with questions or for clarification, if necessary. Please be sure to let us know why you think this sensor should be added, as well.

Thank you.

REACTOR TYPE

☐ High-Temperature Reactor (HTR) (27)

☐ Sodium Fast Reactor (SFR) (16)

TRL

☐ 1 (2)

☐ 2 (10)

☐ 3 (6)

☐ 4 (1)

Needs & Gaps

TRL	Reactor Type	Description	
2	High-Temperature Reactor (HTR), Sodium Fast Reactor (SFR)	Conventional sensors such as fission chambers quickly burn out the harsh in-core environment; fission chambers used for reactivity and power monitoring could not be operated in the core environment, and required cooled thimbles in the radial shield	VIEW DETAILS
	High-Temperature Reactor (HTR)	Capacitive shift-type hygrometers are moderately sensitive to pressure and temperature changes, necessitating a controlled sample environment, and are generally insensitive to combustion gases	VIEW DETAILS
2	High-Temperature Reactor (HTR), Sodium Fast Reactor (SFR)	Cabling is difficult to replace and maintain in-vessel; Increased sensor density in-vessel increases need for penetrations. Accuracy - Low power (<1 mW?) reliable (Low error rates) Needed for temperature and neutron flux measurements Neutron flux ranges: Lower Limit: 10, Upper Limit: 1E13 n/cm²sec	VIEW DETAILS
