Frequently Asked Questions

ONE**NNSAccess – Secure Access Made Simple!**

What is ONE**NNSAccess?**

OneNNSAccess (ONA) is a webpage where Department of Energy (DOE)/ National Nuclear Security Administration (NNSA) Federal staff and contractors can register online ahead of their planned visits to one of the participating labs, plants, and sites (LPS).

Why ONA?

The previous NNSA visitor access system, which required repetitive site-specific badge enrollment, impeded productivity and did not align with the Homeland Security Presidential Directive (HSPD-12) goal for consistent physical and logical access control. ONA addresses this by standardizing access control for all DOE/NNSA Federal staff and contractors with an HSPD-12 badge, providing a streamlined online registration for inter-site collaboration.

Which LPS are available through ONA?

There are nine sites currently on the ONA splash page: John A. Gordon Albuquerque Complex (ABQ), Kansas City National Security Campus (KCNSC), Lawrence Livermore National Laboratory, Los Alamos National Laboratory, Nevada National Security Sites, Pantex Plant, Sandia National Laboratories, Savannah River Site, and Y-12 National Security Complex.

When was ONA made available?

The ONA website went live on December 31, 2025 on its previous location via the Kansas City Wiki. In early September 2026, it was moved to Energy.gov/NNSA/onennsaccess.

Is ONA available at headquarters?

ONA is currently not available at Headquarters/offices in the DC area due to DOE physical and logical access controls.

What are the benefits of using ONA?

ONA eliminates paperwork and unnecessary stops at badge offices, streamlines the visitor's registration process by having LPS online forms available in one place, and provides secure access until their HSPD-12 badge expires.

Is training available?

There is a user guide which has individual one-pagers for each location. See Access Support section on the landing page for further details.
