# SAMPLE DELIVERY GROUP

# 12D166

**NBZ – Data Package Amendment**
**SDG 12D146, SDG 12D166, SDG DX169, SDG DX170**
**6-17-13**

During the database check, an inconsistency in sample identification was discovered that needed to be corrected. They are listed below:

- Two samples for SL-160-NBZ-SS-0.0-0.5 were taken on the same day at the same location.
- One sample was re-assigned as a field duplicate called DUP-10-NBZ-QC-041612.
- The field duplicate sample DUP-10-NBZ-QC-041612 was added to the dt_sample table and the methods in SDG 12D166 and DX170 were assigned to it.

All changes have been documented and verified by the field personnel and data group.

## General Sample Comments

State of California Lab Certification No. 2501
The temperature of the temperature blank bottle(s) upon receipt at the lab was 8.6C using a Hg thermometer. The sample bottles were then measured using an IR thermometer and were recorded at 10.2-11.5 C.

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

**NBZ – Data Package Amendment**
**SDG 12D166, SDG DE311, SDG DX170**
**6-17-13**

During the database check, an inconsistency in sample identification was discovered that needed to be corrected. They are listed below:

- Methods (NDMA, Formaldehyde, Terphenyls, and Dioxins) from sample SL-083-NBZ-SB-0.0-0.5 were moved to SL-083-NBZ-SS-0.0-0.5.
- Sample SL-083-NBZ-SB-0.0-0.5 was removed.

All changes have been documented and verified by the field personnel and data group.

# Appendix C
# Data Usability Assessment Report
**(On CD)**

# Appendix C
# Data Usability Assessment Report

The purposes of this data usability and assessment report (DUAR) are to 1) summarize the data validation performed on the data sets for the Historic Site Assessment (HSA) Northern Buffer Zone (NBZ) samples collected, and 2) determine whether the sample results meet the Data Quality Objectives (DQOs) outlined in the *Master Work Plan/Field Sampling and Analysis Plan Co-Located Chemical Sampling at Area IV, Santa Susana Field Laboratory, Ventura County, California* (CDM Federal Programs Corporation [CDM] 2011).

## C.1 Usability Summary

For this data usability assessment, 61 data sets were reviewed. A data set consists of 20 or fewer samples grouped together by analytical method for analyses depending on the time and date of when the samples were received by the laboratory. A data set is called a sample delivery group, or SDG. The analyses performed are discussed in Section 2.5 of the NBZ Technical Memorandum (TM).

Samples were collected and analyzed in accordance with the WP/FSAP (CDM 2011a) and associated sampling documents as discussed in the NBZ TM. Deviations were encountered during the field investigation for the NBZ sampling activities and are discussed in detail in Section 2.7 of the NBZ TM.

The validated data for the NBZ samples are usable as reported, with the exception of the rejected data. Eight benzidine results and two hexachlorocyclopentadiene results were rejected for NBZ samples. For all NBZ data, 0.03 percent of the results were rejected. These rejected data do not impact project objectives and goals. Specific details are provided in the validation reports in this Appendix and below in Section C.8.

## C.2 Data Validation Procedures

Data were validated by the independent data validation firm Laboratory Data Consultants, Inc. All data validation was conducted in accordance with *U.S. Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (EPA 2004), *EPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (EPA 2008), and *EPA Contract Laboratory Program National Functional Guidelines for Chlorinated Dioxin/Furan Data Review* (EPA 2005).

The data validation strategy employed was to validate 10 percent of the data according to EPA Level IV protocols (all QC parameters and raw data) and the remaining 90 percent according to EPA Level III (all QC parameters except calibrations and raw data) protocols. The Level IV determination also included reviewing 10 percent for each laboratory and each method. In order to achieve this,

the validators choose the appropriate samples in each SDG. Hence, not all samples in some of the SDGs were Level IV validated but a mixture of Level IV and Level III.

Table C-1 shows all SDGs that include the NBZ samples and which SDGs were validated as Level III or Level IV. Some SDGs contain samples from other subareas but all samples in an SDG were validated together. An index of samples associated with each SDG is presented at the beginning of Appendix C.

In order to evaluate the quality of the laboratory and the validation firm, CDM Smith chemists reviewed 10 percent or greater of the NBZ sample SDGs. The SDGs reviewed are chosen based on methods and level of validation performed by the validation firm. The purpose of the review was to identify any quality control issues with the laboratory not identified by the validation firm or any discrepancies in validation procedures by the validation firm. No additional qualifiers were applied to the data based on CDM Smith's review.

## C.3 Quality Assurance Objectives

Quality assurance (QA) objectives for measurement data are expressed in terms of precision, accuracy, representativeness, comparability, completeness, and sensitivity (PARCCS). The QA objectives provide a mechanism for evaluating and measuring data quality.

A review of the collected data is necessary to determine if data quality objectives established in the WP/FSAP (CDM 2011) have been met. The following data measurement tasks were evaluated:

- Specification and adherence to analytical method and reporting detection limit requirements
- Identification of the appropriate laboratory analytical QC requirements and verification that QC requirements were met
- Verification that measurement performance criteria (representativeness and completeness) for the data were met
- Verification that field procedures were followed, deviations were documented, and determination of impact on data quality as a result of these deviations

The data validation review determines if the collected data are of sufficient quality (except for the rejected results) to support their intended use.

## C.4 Summary of Field and Laboratory QA Activities

CDM Smith completed sampling activities in the NBZ in accordance with the approved WP/FSAP (CDM 2011) and addendums. A total of 224 soil samples were collected and analyzed from the locations described in Table 2.1 in the NBZ TM. Table 2-2 in the NBZ TM provides a summary of the samples collected and the

laboratory analyses requested for the NBZ. An index of samples associated with each SDG is shown at the beginning of the data validation reports presented in this appendix. The WP/FSAP (CDM 2011) defined the procedures to be followed and the data quality requirements for the field sampling events.

## C.5 Field Quality QA/QC

Field QC samples, such as matrix spike/matrix spike duplicates (MS/MSDs) and field duplicates, were to be collected at a frequency of 1 per 20 samples (5 percent) for MS/MSDs and field duplicates. A total of 10 field duplicate/MS/MSD samples were collected equating to approximately five percent for the whole program. On an individual method basis, the five percent goal was approximately met for all analyses except formaldehyde, glycols, NDMA, confirmation analyses (Method 6850) for perchlorate, terphenyls and GRO samples. For VOCs and 1,4-dioxane, field duplicates and MS/MSDs were inadvertently not collected. These methods are not considered highly critical for program decisions and the slightly lower than five percent goal does not adversely affect the quality of the data. MS/MSD and field duplicate samples met the frequency requirements detailed in the WP/FSAP (CDM 2011a) except for the methods listed above.

Fourteen equipment rinsate blank samples were collected for the NBZ. The equipment rinsate blank results are presented in Table C-2.

No field blanks were collected during sampling for the NBZ. The field blanks associated with the ASTM International decontamination water used during NBZ sampling have been applied to the NBZ samples accordingly. The results for these samples are presented in Table C-3.

Eighteen trip blank samples were shipped with the NBZ samples. The results for these samples are presented in Table C-4. Data qualifications based on blank detections are discussed in Section C.7 and in the Appendix C validation reports.

Temperature blanks were to be included with each shipment of samples. Based on validation results, all temperature blanks for the NBZ met criteria.

The number of field QC samples collected satisfies the minimum requirements for the NBZ sampling program except as noted previously. Field QA/QC objectives were attained through the use of appropriate sampling techniques and collection of the required number and frequency of QC samples.

## C.6 Laboratory Quality QA/QC

Analytical QA/QC was assessed by laboratory QC checks, method blanks, sample custody tracking, sample preservation, adherence to holding times, laboratory control samples (LCSs), MSs, calibration recoveries, surrogates, tuning criteria, second column confirmations, internal standards, serial dilutions, laboratory duplicates, and

interference check standards. The majority of the laboratory QC sample criteria met project requirements as indicated in the data validation reports in this appendix with the appropriate qualifiers applied. Ten individual analyte results for samples from NBZ (0.03 percent of all anlaytes) were rejected. These are discussed in detail in this Appendix and the individual data validation reports.

# C.7 Data Quality Indicators

This section summarizes the validation performed. Individual SDG validation reports with specific sample detail are provided in this appendix.

Achievement of the DQOs was determined in part by the use of data quality indicators (DQIs) as described in the WP/FSAP (CDM 2011). These DQIs for measurement data are expressed in terms of PARCCS. The DQIs provide a mechanism for ongoing control to evaluate and measure data quality throughout the project. These criteria are defined in the sections below.

## C.7.1 Precision

Precision is a quantitative term that estimates the reproducibility of a set of replicate measurements under a given set of conditions. It is defined as a measurement of mutual agreement between measurements of the same property and is expressed in terms of relative percent difference (RPD) between duplicate determinations.

RPD is calculated as follows:

$$\text{RPD} = \text{absolute value } [(C1-C2)/\{(C1+C2)/2)\}] \times 100\%$$

Where:

C1 = concentration of primary sample
C2 = concentration of duplicate sample

Field and analytical precision were determined from the review of the field duplicate results. The sample results were compared by calculating their RPDs. The field duplicate samples were collected in the same manner as the original samples but were collected in separate, individual containers, given separate sample identifiers, and treated as individual samples by the laboratory.

Laboratory duplicate RPD control limits are presented in the WP/FSAP (CDM 2011) or are laboratory specific. For laboratory duplicates, if one or both of the sample results were less than two times the RL, a control limit of the absolute difference equal to the RL value was used for comparison.

The field duplicate RPD criterion is 50 percent. Field duplicates for this project were validated using the following: If one result is non-detect and the other result is above the RL, the RPD result is shown as 200 percent and the field duplicate sample and parent sample results are qualified as estimated "J" or "UJ." If the field duplicate RPD

was above the 50 percent criterion (and both sample results were above the RL), the field duplicate and parent sample results for that analyte were qualified as estimated "J."

Qualifiers were applied to applicable sample analyte results during the validation process based on laboratory and field duplicate precision results. Details are discussed in the laboratory validation reports in this appendix. Table C-5 shows the field duplicate pairs and RPD results for the NBZ. RPD results outside of criteria are highlighted.

The following individual analyte results were qualified as estimated "J/UJ" based on precision criteria for the NBZ samples:

- Thirty-two metal analyte results were qualified as estimated based on laboratory precision criteria
- Fifty-seven PCB/PCT analyte results were qualified as estimated based on laboratory precision criteria
- Thirty-six SVOC anlayte results were qualified as estimated based on laboratory precision criteria
- Fourteen pesticide results, three PCB/PCT results, 18 SVOC results were qualified as estimated based on second column %D confirmation
- Sixty-four dioxin results; one fluoride/nitrate result; 11 metal results; six TPH EFH results; 16 pesticide results; six PCB/PCT results; and 52 SVOC SIM results were qualified based on field duplicate criteria

There is no discernable pattern or reason for the laboratory and field sample RPD exceedances identified. No field sampling issues were identified from the RPD results that were outside of criteria and the exceedances are reasonable for this type of sampling activity. Sample results that have been qualified as estimated "J/UJ" due to precision criteria are usable for project decisions with a degree of caution.

## C.7.2 Accuracy

Accuracy is the degree of agreement between a measurement and the accepted reference or true value and is a measure of the bias in a system. Accuracy of the data was assessed by comparing LCS recovery, MS recovery, calibration recovery, Inductively Coupled Plasma (ICP) interferences, and by performing serial dilution checks during metals analyses. Accuracy is expressed as percent recovery (%R), which is calculated by:

$$\textbf{Percent Recovery} = \frac{\textbf{(Total Analyte Found – Analyte Originally Present)}}{\textbf{Analyte Added}} \times 100$$

Analytical accuracy for the entire data collection activity is difficult to assess because several sources of error exist. Errors can be introduced by any of the following:

- Sampling procedure
- Field contamination
- Sample preservation and handling
- Sample matrix
- Sample preparation
- Analytical techniques

Accuracy is maintained to the extent possible by adhering to the EPA method and approved field and analytical standard operating procedures.

Qualifiers were applied to applicable sample analyte results during the validation process based on laboratory accuracy results and are discussed in detail in the laboratory validation reports in Appendix C.

The following individual analyte results were qualified as nondetect “U” or nondetect estimated “UJ" based on accuracy criteria for the NBZ samples:

- Thirty-one pesticide results; 23 PCB/PCT results; 27 herbicide results; and one VOC result were qualified as estimated based on calibration criteria

- One dioxin result; two NDMA results; 413 metal analyte results; one TPH-EFH result; one pesticide result; five herbicide results; 21 SVOC results; and two SVOC SIM results were qualified as estimated based on MS percent recovery criteria

- One terphenyl/alcohol result and 12 SVOC results were qualified for LCS percent recovery criteria

- Four pesticide results and five PCB/PCT results were qualified as estimated based on surrogate recovery criteria

Sample preservation, handling, and holding times are additional measures of accuracy of the data. All sample preservation, holding times and handling criteria were met.

Sample results that have been qualified as estimated "J/UJ" due to accuracy criteria are usable for project decisions.

## C.7.3 Blank Contamination

Field blanks (e.g., equipment and trip) and laboratory method blanks are analyzed to identify possible sources of contamination. Contamination of a sample can be introduced by field sample collection methods, sample handling, preparation, and/or analysis. The laboratory validation reports in this appendix and summarized below discuss the results qualified based on field and laboratory blank contamination.

The following individual analyte results were qualified as nondetect "U" based on blank contamination for the NBZ samples:

- One nitrate result was qualified as nondetect due to field blank contamination criteria
- One thousand, seven hundred and seventeen dioxin results (47%) and one formaldehyde result were qualified as non-detect due to blank contamination criteria

For the dioxins, the MDLs for this analysis are very low, reported in nanogram per kilogram (ng/kg) or parts per trillion, resulting in numerous results qualified as estimated "J." Many of these estimated values have been subsequently qualified as nondetect "U" because the compound was detected in related laboratory blanks. In the laboratory blanks, low level detections of dioxin analytes are somewhat inevitable because of the nature and universal extent of the compounds. The dioxin levels found in the blanks were well below site-related action levels. Therefore, the resulting qualification of associated sample results as not detected or "U" qualified data do not falsely diminish identification of site-related contaminants.

Tables C-2 through C-4 provide a summary of chemicals observed in the equipment, field and trip blank samples. Most of the equipment blanks, field blanks and trip blanks detected compounds were below the RLs but above the MDLs. Compounds detected above the RL in equipment and trip blanks are highlighted yellow in the associated tables.

ASTM International Type II water is not typically certified "clean" to the low RLs established for the low level methods used for NBZ sampling. CDM Smith will continue to monitor ASTM International Type II water field blanks for detected concentrations of analytes throughout the sampling program.

A review of the equipment blanks for the NBZ sampling was also performed. In general, a variety of analytes were detected above their respective RLs. All Phase 3 equipment blanks will continue to be monitored in order to determine if these low level detections are consistent, thus indicating a possible deficiency in decontamination procedures and/or source water impacts that need to be addressed and corrected. No qualification of sample results was required during the validation process regarding equipment blank contamination. To date, chemical detections in equipment blank samples appear to be random occurrences.

Trip blank results are presented in Table C-4. All the trip blank samples had detections of GRO. The trip blank samples are received from the laboratory in coolers with the empty sample jars and are returned to the laboratory with the collected samples all the while unopened in the field. The laboratory was requested to review these anomalous results and the chromatograms for these samples. EMAX noted that the detects were the results of one or more discrete peaks that eluted in the range of

GROs (from C5 to C12). Those discrete peaks were included in the integration of the samples resulting in GRO detection above the MRL. However, EMAX reported that there was no gasoline pattern shown in these trip blanks. CDM Smith will test a vial of each set (lot) of trip blank samples received from a laboratory prior to their use to confirm the quality of the water supplied or receive proper documentation from the laboratory of the quality of the trip blank water. This will help determine if future GRO detections above the MRL can be attributed to contamination in the shipping process (in the cooler) or if the detections of individual GRO compounds are isolated in the laboratory. Future reporting rules for GRO in trip blanks will require the identification of clearly identified GRO patterns by the laboratory. All sample results were nondetect for GRO for the NBZ samples except for three soil samples.

## C.7.4 Representativeness, Comparability, and Sensitivity

Representativeness, comparability, and sensitivity are achieved by using EPA-approved sampling procedures and analytical methodologies. By following the procedures described in the WP/FSAP (CDM 2011) for this sampling event and future sampling events, sample analysis should yield results representative of environmental conditions at the time of sampling. Similarly, reasonable comparability of analytical results for this and future sampling events can be achieved if approved EPA analytical methods and standardized reporting units are employed.

### C.7.4.1 Representativeness

Representativeness is a qualitative term that expresses the degree to which the sample data accurately and precisely represent the environmental conditions corresponding to the location and depth interval of sample collection. Requirements and procedures for sample collection are designed to maximize sample representativeness.

Representativeness also can be monitored by reviewing field documentation and/or by performing field audits. For this report, a detailed review was performed on the COC forms, field data collection forms, laboratory sample confirmation logs, and data validation packages. Laboratory QA/QC requirements were included in the WP/FSAP (CDM 2011) and laboratory statements of work (SOWs) to ensure that the laboratory analytical results were representative of true field conditions.

Field sampling accuracy was attained through strict adherence to the approved WP/FSAP (CDM 2011) and by using approved standard operating procedures for field data collection. Based on this, the data should represent as near as possible the actual field conditions at the time of sampling.

Representativeness has been achieved by the performed field work and laboratory analyses. The analytical data generated, that have not been rejected, are viewed to be a representative characterization of the project area.

### C.7.4.2 Comparability

Comparability is a qualitative term that expresses the confidence with which a data set can be compared with another. Strict adherence to standard sample collection

procedures, analytical detection limits, and analytical methods assures that data from like samples and sample conditions are comparable. This comparability is independent of laboratory personnel, data reviewers, or sampling personnel. Comparability criteria are met for the project if, based on data review, the sample collection and analytical procedures are determined to have been followed, or defined to show that variations did not affect the values reported.

To ensure comparability of data generated for the site, standard sample collection procedures and Department of Toxic Substances Control (DTSC)-approved analytical methods were utilized by CDM Smith. The sample analyses were performed by LLI and EMAX. Utilizing such procedures and methods enables the current data to be comparable with previous and future data sets generated with similar methods.

### C.7.4.3 Sensitivity

Sensitivity is related to the ability to compare analytical results with project-specific levels of interest, such as risk-based screening levels or action levels. Analytical detection limits for the various sample analytes should be below the level of interest to allow an effective comparison.

***Detection Limits***

Each analytical method used during the sampling events was selected because it had potential to achieve RLs established for this project. RLs were established for each analyte in consultation with the laboratory to achieve analytical results at or below regulatory comparison criteria.

The method detection limit (MDL) is defined as the concentration of an analyte that produces a signal with a 99 percent confidence that the concentration is above that of a blank but that that concentration cannot be accurately quantified. A blank is a sample that does not contain measurable concentrations of the analyte of concern. Tested by statistical performance, calibration samples, and LCSs, MDLs represent the best fundamental measurement of instrument sensitivity and the basis for establishing RLs.

The laboratory RL is typically about 3 to 5 times higher than the MDL and is a laboratory-specific number. The actual sample RL is variable based on the sample matrix, moisture content, and other sample-specific factors. When a sample has to be diluted before analysis, either because of matrix problems or to bring the instrument response within the linear dynamic range, the RL is raised by a factor corresponding to the dilution factor.

In reporting environmental sample results, laboratories follow protocols that help ensure that the result reported is at the lowest level and is defensible, taking into account the ability of the instrument to differentiate a signal generated by the analyte from the background instrument noise, imprecision added to the detection capabilities of the analyte due to the sample processing manipulations (MDLs) and

sample matrix affects, and adjustments made to the detection limits based on difficulties encountered in analyzing the sample (dilution factors, etc.).

The result for an analyte is flagged with a "U" if that analyte was not detected, or qualified with a "J" flag if blank or other QC results fall outside the appropriate tolerance limits. If an analyte is present at a concentration between the MDL and the RL, the analytical result is flagged with a "J," indicating an estimated quantity. Qualifying the result as an estimated concentration reflects increased uncertainty in the reported value.

The following analyses and individual analyte sample results were qualified as estimated "J" due to the sample results being reported as detected below the RL for the NBZ samples:

- Method 1613B (Dioxins)
  - One thousand four hundred and eighty-seven individual analyte results
- Method 300 (Fluoride/Nitrate)
  - Sixty-eight individual analyte results
- Methods 6010B/6020 (Metals)
  - Three hundred and ninety-eight individual analyte results
- Method 7471A (Mercury)
  - Five individual analyte results
- Method 8015B (TPH EFH)
  - One hundred and twelve individual analyte results
- Method 8081A (Pesticides)
  - Fifty-seven individual analyte result
- Method 8082 (PCB/PCTs)
  - Nineteen individual analyte results
- Method 8260B (VOCs)
  - One individual analyte result
- Method 8270C (SVOCs)
  - One individual analyte result
- Method 8270C SIM (SVOCs)
  - Four hundred and eighty individual analyte results
- Method 8315A (Formaldehyde)
  - Three individual analyte results
- Method 9014 (Cyanide)

- Eight individual analyte results

As discussed in Section C.7.3, the MDLs for the dioxins are calculated for each sample and are very low resulting in numerous results qualified as estimated "J" values because they are below the RL as indicated above. The qualification of the dioxins results as estimated "J" based on RL criteria does not falsely diminish identification of site-related contaminants.

In summary, for all methods analyzed for NBZ samples, results for some of the analytes were qualified as estimated due to RL criteria failure for dioxins, fluoride/nitrate, metals, mercury, EFH, pesticides, PCB/PCTs , one VOC, one SVOC, SVOC SIM, formaldehyde, and cyanide results. For the data validated in this TM, RLs for a majority of the sample results were low enough to compare to the RLs stated in the WP/FSAP (CDM 2011). RLs above those stated in the WP/FSAP (CDM 2011) will be evaluated on a case by case basis to see if resampling is required.

The RLs for this project are lower than "normal" environmental data analyses for most classes of compounds. Some analytical laboratory methods were modified in order to achieve the lowest practicable RLs in an attempt to comply with the AOC. All modified analyses have undergone studies evaluating the effect of the modifications on precision and accuracy. An independent study evaluating the precision and accuracy of the modified herbicide method has been completed. Review of the herbicide results indicate that the method modifications did not achieve precision and accuracy goals at this lower reporting limit for herbicides, pesticides and PCB/PCTs. Nondetect RLs for these data have been adjusted accordingly. These results are still considered usable for project decisions.

## C.8 Review of Selected Validation Reports

CDM Smith performed a review of 10 percent of the validation reports identified in Table C-1. This review involved comparing the validation report results against the laboratory data packages as well as the validation guidance documents. All validation report results that were reviewed were verified against the laboratory data packages and determined that validation documents were followed as required.

## C.9 Data Completeness

Completeness of the data collection program is defined as the percentage of samples planned for collection as listed in the WP/FSAP (CDM 2011) versus the actual number of samples collected during the field program (see equation A).

Completeness for acceptable data is defined as the percentage of acceptable data obtained judged to be valid versus the total quantity of data generated (see equation B). Acceptable data include both data that pass all the QC criteria (unqualified data) and data that may not pass all the QC criteria but had appropriate corrective actions taken (qualified but usable data).

A. $$\%\text{Completeness} = C_x \frac{100}{n}$$

Where:

C = actual number of samples collected
n = total number of samples planned

B. $$\%\text{Completeness} = V_x \frac{100}{n'}$$

Where:

V = number of measurements judged valid
n' = total number of measurements made

The overall completeness goal, as defined in the WP/FSAP (CDM 2011), for this sampling event is 90 percent for each analytical test for all project data.

A total of 224 NBZ soil samples including the field duplicates were collected and analyzed. As discussed in Section 2.8 of the TM, a total of 196 locations were sampled in the NBZ. A total of three locations were not sampled due to proximity to the Golden Eagle nest (SL-093 and SL-098) and one location for shallow refusal (SL-041). Nine locations were relocated due to close proximity to a Golden Eagle Nest. Thirty-eight shallow refusals were encountered during the sampling. Of the 38 shallow refusals, 37 of these locations were sampled as surface only and one location only was not sampled for either surface or subsurface. The number of subsurface samples to be collected at each location was not pre-determined because the total depth of each boring varies depending on the local geology. The completeness goal for the actual number of samples collected compared to the number of samples planned is considered acceptable as a sample was collected from each location (depending on shallow refusal).

The completeness goal for acceptable data was 99.9 percent of the number of measurements judged to be valid versus the total number of measurements made for all NBZ samples analyzed. Table C-6, Completeness Calculation Summary, shows a summary of the results that were estimated or rejected.

The following NBZ individual analyte results were rejected per analyses:

- Method 8270C
  - Ten out of 10,700 SVOC results (0.09 percent)

The completeness goals for both the locations sampled and the number of measurements judged to be valid were met.

Sampling deviations from procedures described in the WP/FSAP (CDM 2011) are discussed in Section 2.8 of the TM. Deviations did not impact DQOs for this sampling

event. The data reported and not rejected are suitable for their intended use for characterization of Area IV of SSFL. The DQIs identified in the WP/FSAP (CDM 2011) met appropriate criteria. The achievement of the completeness goals for the data indicates a sufficient amount of usable data has been generated for project decisions.

## C.10 Assessment of Data Usability and Reconciliation with WP/FSAP Goals

Over 99 percent of the data validated for the NBZ, and reported in this TM, are suitable for their intended use for site characterization. Rejected sample results are not suitable for project use. The rejected analyte results do not impact achievement of the overall project objectives. The RLs reported generally met the expected limits proposed by the analytical laboratory in their subcontract agreement with CDM Smith. Some RLs were adjusted for herbicides, pesticides, and PCB/PCT results. These adjusted RLs and other RLs above project goals will be evaluated to see if resampling would be required.

Sample results that were qualified as estimated are usable for project decisions. Numerous dioxin results were qualified as estimated and/or non-detect due to the low detection limits. This data is considered usable.

Field duplicate precision also met criteria a majority of the time. RPDs were outside criteria predominantly when the sample results were close to the RL and/or below the project required action limits. Decisions based on results close to the RL should be made with a degree of caution. The achievement of the completeness goals for number of samples collected, and the number of sample results acceptable for use provides sufficient quality data to support project decisions.

ug/L - microgram per liter
mg/L - milligram per liter
ng/L - nanogram per liter
pg/L - picogram per liter
U - Compound not detected above the reporting limit
(a) Some SVOC results had two values - one for SVOC and one for SVOC SIM. The validators used the value with the lowest detection limit for validation purposes.

ug/L - microgram per liter
mg/L - milligram per liter
ng/L - nanogram per liter
pg/L - picogram per liter
U - Compound not detected above the reporting limit
(a) Some SVOC results had two values - one for SVOC and one for SVOC SIM. The validators used the value with the lowest detection limit for validation purposes.

ug/L - microgram per liter
mg/L - milligram per liter
ng/L - nanogram per liter
pg/L - picogram per liter
U - Compound not detected above the reporting limit
(a) Some SVOC results had two values - one for SVOC and one for SVOC SIM. The validators used the value with the lowest detection limit for validation purposes.

ug/L - microgram per liter
mg/L - milligram per liter
ng/L - nanogram per liter
pg/L - picogram per liter
U - Compound not detected above the reporting limit
(a) Some SVOC results had two values - one for SVOC and one for SVOC SIM. The validators used the value with the lowest detection limit for validation purposes.

ug/L - microgram per liter
mg/L - milligram per liter
ng/L - nanogram per liter
pg/L - picogram per liter
U - Compound not detected above the reporting limit
(a) Some SVOC results had two values - one for SVOC and one for SVOC SIM. The validators used the value with the lowest detection limit for validation purposes.

ug/L - microgram per liter
mg/L - milligram per liter
ng/L - nanogram per liter
pg/L - picogram per liter
U - Compound not detected above the reporting limit
(a) Some SVOC results had two values - one for SVOC and one for SVOC SIM. The validators used the value with the lowest detection limit for validation purposes.

ug/kg - microgram per kilogram
mg/kg - milligram per kilogram
ng/g - nanogram per kilogram
FD - field duplicate sample
N - normal sample
RPD - relative percent difference
SO - soil
-- - RPD not calculated when both field duplicate and normal samples were
200* - When one result is nondetect a 200% RPD is given and sample results are qualified as estimated "J" or "UJ" in the field duplicate samples only
Limit - 50% - If RPD is above 50% detected field duplicate results only were estimated "J"

ug/kg - microgram per kilogram
mg/kg - milligram per kilogram
ng/g - nanogram per kilogram
FD - field duplicate sample
N - normal sample
RPD - relative percent difference
SO - soil
-- - RPD not calculated when both field duplicate and normal samples were
200* - When one result is nondetect a 200% RPD is given and sample results are qualified as estimated "J" or "UJ" in the field duplicate samples only
Limit - 50% - If RPD is above 50% detected field duplicate results only were estimated "J"

ug/kg - microgram per kilogram
mg/kg - milligram per kilogram
ng/g - nanogram per kilogram
FD - field duplicate sample
N - normal sample
RPD - relative percent difference
SO - soil
-- - RPD not calculated when both field duplicate and normal samples were
200* - When one result is nondetect a 200% RPD is given and sample results are qualified as estimated "J" or "UJ" in the field duplicate samples only
Limit - 50% - If RPD is above 50% detected field duplicate results only were estimated "J"

ng/g - nanogram per kilogram
FD - field duplicate sample
N - normal sample
RPD - relative percent difference
SO - soil
-- - RPD not calculated when both field duplicate and normal samples were
200* - When one result is nondetect a 200% RPD is given and sample results are qualified as estimated "J" or "UJ" in the field duplicate samples only
Limit - 50% - If RPD is above 50% detected field duplicate results only were estimated "J"

**Table C-5 - NBZ Field Duplicate Results**

ug/kg - microgram per kilogram
mg/kg - milligram per kilogram
ng/g - nanogram per kilogram
FD - field duplicate sample
N - normal sample
RPD - relative percent difference
SO - soil
-- - RPD not calculated when both field duplicate and normal samples were
200* - When one result is nondetect a 200% RPD is given and sample results are qualified as estimated "J" or "UJ" in the field duplicate samples only
Limit - 50% - If RPD is above 50% detected field duplicate results only were estimated "J"

**Table C-6 Summary of Data Completeness Following Data Validation – NBZ**

| Analyte | Number of Analyte Detections Without Qualifiers | Number of Estimated Results | Number of Rejected Results | Number of Nondetect Results | Number of Estimated Nondetect Results | Total Analytes Detect and Nondetect | Percent of Analyte Results Judged Valid Versus Total Analyte Results Collected |
|---|---|---|---|---|---|---|---|
| Dioxins | 276 | 1,502 | | 1,840 | 20 | 3,638 | 100 |
| NDMA | 3 | | | 108 | 2 | 113 | 100 |

☆ No validation quals applied. SLL 3/18/13

Hello Cherie,

Yes, we can add an "S" as a qualifier to the affected data. (cw96-14 and -15 only)
- 8270C, 8270SIM and 8082

Thanks, Cherie.

Hello Ye: Do you think you folks could add a qualifier in your lab qualifier column - like an "S" for example? This would help us identify these sampled affected below?

Please let us know.

Thanks

Cherie Zakowski

Subject: RE: NBZ Sampling

Ye, based on Pam's response I think the only option is to proceed and discuss this in the case narrative. In addition to the case narrative and additional note/flag should be appended to the affected results that will serve to immediately alert the data users/reviewers of this situation so we can flag/qualify the results appropriately. I think Cherie can direct you to the appropriate note or qualifier for this exercise.

Thanks for the immediate notification, this type of feedback is invaluable. Please continue to inform us on all issues (calibrations, MS, LCS, holding times issues) so we can make decisions on re-analysis in a timely manner.

Subject: RE: NBZ Sampling

Hi Todd,

We received the first batch of samples yesterday. Attached please find the COCs. Two out of 15 samples had sleeves collected for SVOCs/SIM and PCBs. We understand that the sleeves should not be disturbed or homogenized for these 3 analyses when specifically requested to perform on sleeves samples. I regret to notify you that the lab overlooked this requirement stated in the project set-up and inadvertently homogenized the sleeves this morning.

Would it be possible that Pam can go back and recollect the sleeves for these two samples or could we proceed with extraction/analysis on the homogenized sleeves samples and discuss it in our case narratives?

I apologize for the inconvenience. Please let me know if you have any questions. Thanks.

Subject: NBZ Sampling

We started collocated sampling in the NBZ today. We collected 2 surface sample and 6 subsurface samples. Subsurface samples were collected with the DPT rig and HGL predicts having enough accessible locations for the remainder of the week.

Please see attached COCs

Thanks and welcome back everyone!

Pam

March 8, 2013

SUBJECT: Santa Susana Field Laboratory, Data Validation

Dear Mrs. Zakowski,

Enclosed is the final validation report for the fractions listed below. This SDG was received on September 24, 2012. Note this LDC job was previously on hold at client request.

**LDC project# 28468:**

| SDG # | Fraction |
|---|---|
| 12C106 | Semivolatiles (EPA SW 846 Method 8270C)<br>Semivolatiles (EPA SW 846 Method 8270C-SIM)<br>Chlorinated Pesticides (EPA SW 846 Method 8081A)<br>PCBs (EPA SW 846 Method 8082)<br>Metals (EPA SW 846 Method 6020A/7471A)<br>Herbicides (EPA 846 Method 8151A)<br>Perchlorate (EPA SW 846 Method 6850)<br>TPH-G (EPA SW 846 Method 8015B)<br>TPH-E (EPA SW 846 Method 8015B)<br>Glycols (EPA SW 846 Method 8015B)<br>Alcohols (EPA SW 846 Method 8015B)<br>Explosives (EPA SW 846 Method 8330A)<br>Nitrogen & PETN (EPA SW 846 Method 8332)<br>Wet Chemistry (EPA SW 846 Method 7199 and 9014 and EPA Method 300.0 and 314.0) |

The following deliverables are submitted under this report:

- Attachment I Sample ID Cross Reference and Data Review Level
- Attachment II Overall Data Qualification Summary
- Enclosure I Level III ADR Outliers (including manual review outliers)

The data validation was performed in accordance to the Quality Assurance Project Plan for Santa Susana Field Laboratory, RCRA Facility Investigation, Surficial Media Operable Unit (March 2009, Revision 4), USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008) and for Inorganic Data Review (January 2010). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience. The following items were evaluated during the review::

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Initial Calibration (Level IV only)
- Continuing Calibration (Level IV only)
- Blanks
- Surrogates
- Matrix Spike/Matrix Spike Duplicates
- Laboratory Duplicates
- Laboratory Control Samples
- Internal Standards (Level IV only)
- ICP Serial Dilution (Manual Review)
- Detection and Quantitation Limits
- Field QC Samples

Please feel free to contact us if you have any questions.

Sincerely,

Andrew Kong
Project Manager/Chemist

**Sampling date:** 3/15/12 Soil factor applied 50x
**Field blank type:** (circle one) Field Blank / Rinsate / Other: Associated Samples: 1-4

| Analyte | Blank ID | Sample Identification | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | EB-NBZ-SS-031512 | Action Limit | No Qualifiers | | | | | | | | | | |
| Al | 0.0277 | 6.925 | | | | | | | | | | | |
| Cu | 0.00115 | 0.2875 | | | | | | | | | | | |

CIRCLED RESULTS WERE NOT QUALIFIED. ALL RESULTS NOT CIRCLED WERE QUALIFIED BY THE FOLLOWING STATEMENT:
Samples with analyte concentrations within five times the associated field blank concentration are listed above, these sample results were qualified as not detected, "U".

# VALIDATION COMPLETENESS WORKSHEET
ADR

Date: 8-28-12
Page: 1 of 1
Reviewer: AR
2nd Reviewer: V

**METHOD:** Metals (EPA SW 846 Method ~~6010B~~/6020A/~~7000~~ 7471A/7470A)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

| | Validation Area | | Comments |
|---|---|---|---|
| I. | Technical holding times | — | Sampling dates: 3/15/12 |
| II. | ICP/MS Tune | — | |
| III. | Calibration | — | |
| IV. | Blanks | A | |
| V. | ICP Interference Check Sample (ICS) Analysis | — | |
| VI. | Matrix Spike Analysis | N | MS/D (Soil 6020 from 12C156) |
| VII. | Duplicate Sample Analysis | N | |
| VIII. | Laboratory Control Samples (LCS) | N | LCS/D |
| IX. | Internal Standard (ICP-MS) | N | |
| X. | Furnace Atomic Absorption QC | N | |
| XI. | ICP Serial Dilution | A | |
| XII. | Sample Result Verification | N | |
| XIII. | Overall Assessment of Data | N | |
| XIV. | Field Duplicates | — | |
| XV | Field Blanks | SW | EB = 1,2 |

Note: A = Acceptable; N = Not provided/applicable; SW = See worksheet; ND = No compounds detected; R = Rinsate; FB = Field blank; D = Duplicate; TB = Trip blank; EB = Equipment blank

Validated Samples: soil/water

# VALIDATION FINDINGS WORKSHEET
## Field Blanks

Reviewer: [signature]
2nd Reviewer: [signature]

**METHOD:** Trace Metals (EPA SW846 6010B/7000)

**Blank units:** mg/L **Associated sample units:** mg/Kg
**Sampling date:** 3/15/12 Soil factor applied 50x
**Field blank type:** (circle one) Field Blank / Rinsate / Other: _____ Associated Samples: 7-9

| Analyte | Blank ID | Sample Identification | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | EB-NBZ-SB-031512 | Action Limit | No Qualifiers | | | | | | | | | | |
| Al | 0.0225 | 5.625 | | | | | | | | | | | |
| Cu | 0.000785 | 0.19625 | | | | | | | | | | | |

**Sampling date:** 3/15/12 Soil factor applied 50x
**Field blank type:** (circle one) Field Blank / Rinsate / Other: _____ Associated Samples: 3-6

| Analyte | Blank ID | Sample Identification | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | EB-NBZ-SS-031512 | Action Limit | No Qualifiers | | | | | | | | | | |
| Al | 0.0277 | 6.925 | | | | | | | | | | | |
| Cu | 0.00115 | 0.2875 | | | | | | | | | | | |

CIRCLED RESULTS WERE NOT QUALIFIED. ALL RESULTS NOT CIRCLED WERE QUALIFIED BY THE FOLLOWING STATEMENT:
Samples with analyte concentrations within five times the associated field blank concentration are listed above, these sample results were qualified as not detected, "U".

# VALIDATION FINDINGS WORKSHEET
## Field Blanks

Reviewer: AL
2nd Reviewer: IA

**METHOD:** Trace Metals (EPA SW846 6010B/7000)

**Blank units:** mg/L **Associated sample units:** mg/Kg
**Sampling date:** 3/15/12 Soil factor applied 50x
**Field blank type:** (circle one) Field Blank / Rinsate / Other: Associated Samples: All

| Analyte | Blank ID | Sample Identification | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | EB-NBZ-SB-031512 | Action Limit | No Qualifiers | | | | | | | | | | |
| Al | 0.0225 | 5.625 | | | | | | | | | | | |
| Cu | 0.000785 | 0.19625 | | | | | | | | | | | |

CIRCLED RESULTS WERE NOT QUALIFIED. ALL RESULTS NOT CIRCLED WERE QUALIFIED BY THE FOLLOWING STATEMENT:
Samples with analyte concentrations within five times the associated field blank concentration are listed above, these sample results were qualified as not detected, "U".

# VALIDATION COMPLETENESS WORKSHEET
ADR

Date: 8-29-12
Page: 1 of 1
Reviewer: CL
2nd Reviewer: W

**METHOD:** Metals (EPA SW 846 Method ~~6010B~~/6020A/~~7000~~ 7471A/7470A)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

| | Validation Area | | Comments |
|---|---|---|---|
| I. | Technical holding times | — | Sampling dates: 3/21/12 |
| II. | ICP/MS Tune | — | |
| III. | Calibration | — | |
| IV. | Blanks | A | |
| V. | ICP Interference Check Sample (ICS) Analysis | — | |
| VI. | Matrix Spike Analysis | N | MS/D (Al, Fe, Mn, Ti >4X) |
| VII. | Duplicate Sample Analysis | N | |
| VIII. | Laboratory Control Samples (LCS) | N | LCS/D |
| IX. | Internal Standard (ICP-MS) | N | |
| X. | Furnace Atomic Absorption QC | N | |
| XI. | ICP Serial Dilution | A | |
| XII. | Sample Result Verification | N | |
| XIII. | Overall Assessment of Data | N | |
| XIV. | Field Duplicates | — | |
| XV | Field Blanks | SW | EB=1, EB-NBZ-SB032212 (12C229) |

Note: A = Acceptable; N = Not provided/applicable; SW = See worksheet; ND = No compounds detected; R = Rinsate; FB = Field blank; D = Duplicate; TB = Trip blank; EB = Equipment blank

Validated Samples: soil/water

# VALIDATION FINDINGS WORKSHEET
## Field Blanks

Reviewer: CL
2nd Reviewer: lw

**METHOD:** Trace Metals (EPA SW846 6010B/7000)

**Blank units:** mg/L **Associated sample units:** mg/Kg
**Sampling date:** 3/22/12 Soil factor applied 50x
**Field blank type:** (circle one) Field Blank / Rinsate / Other: Associated Samples: 2-6

| Analyte | Blank ID | Sample Identification | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | EB-NBZ-SB-032212 (SDG: 12C229) | Action Limit | No Qualifiers | | | | | | | | | | |
| Al | 0.0458 | 11.45 | | | | | | | | | | | |
| Ca | 0.0365 | 9.125 | | | | | | | | | | | |
| Cr | 0.000820 | 0.205 | | | | | | | | | | | |
| Cu | 0.00155 | 0.3875 | | | | | | | | | | | |
| Fe | 0.0177 | 4.425 | | | | | | | | | | | |
| Pb | 0.000121 | 0.03025 | | | | | | | | | | | |
| Mn | 0.000213 | 0.05325 | | | | | | | | | | | |
| Na | 0.0505 | 12.625 | | | | | | | | | | | |

CIRCLED RESULTS WERE NOT QUALIFIED. ALL RESULTS NOT CIRCLED WERE QUALIFIED BY THE FOLLOWING STATEMENT:
Samples with analyte concentrations within five times the associated field blank concentration are listed above, these sample results were qualified as not detected, "U".

LDC #: 28255G4 **VALIDATION COMPLETENESS WORKSHEET** Date: 8/29/12
SDG #: 12C229 ADR Page: 1 of 1
Laboratory: EMAX Laboratories, Inc. Reviewer: CL
2nd Reviewer: ✓

**METHOD:** Metals (EPA SW 846 Method ~~6010B~~/6020A/~~7000~~ 7470A/7471A)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

| | Validation Area | | Comments |
|---|---|---|---|
| I. | Technical holding times | A | Sampling dates: 3/22/12 |
| II. | ICP/MS Tune | — | |
| III. | Calibration | — | |
| IV. | Blanks | A | |
| V. | ICP Interference Check Sample (ICS) Analysis | — | |
| VI. | Matrix Spike Analysis | N | MS/D (from SDG: 12C254) |
| VII. | Duplicate Sample Analysis | N | |
| VIII. | Laboratory Control Samples (LCS) | N | LCS/D |
| IX. | Internal Standard (ICP-MS) | N | |
| X. | Furnace Atomic Absorption QC | N | |
| XI. | ICP Serial Dilution | A | |
| XII. | Sample Result Verification | N | |
| XIII. | Overall Assessment of Data | N | |
| XIV. | Field Duplicates | — | |
| XV | Field Blanks | SW | FB=1, EB-NBZ-SS-032212 (12C229) |

Note: A = Acceptable; N = Not provided/applicable; SW = See worksheet; ND = No compounds detected; R = Rinsate; FB = Field blank; D = Duplicate; TB = Trip blank; EB = Equipment blank

Validated Samples: Soil/water

| | EB-NBZ-SB-032212 (SDG: 12C229) | Action Limit | No Qualifiers | | | | | | | | | | |
| Al | 0.0458 | 11.45 | | | | | | | | | | | |
| Ca | 0.0365 | 9.125 | | | | | | | | | | | |
| Cr | 0.000820 | 0.205 | | | | | | | | | | | |
| Cu | 0.00155 | 0.3875 | | | | | | | | | | | |
| Fe | 0.0177 | 4.425 | | | | | | | | | | | |
| Pb | 0.000121 | 0.03025 | | | | | | | | | | | |
| Mn | 0.000213 | 0.05325 | | | | | | | | | | | |
| Na | 0.0505 | 12.625 | | | | | | | | | | | |

CIRCLED RESULTS WERE NOT QUALIFIED. ALL RESULTS NOT CIRCLED WERE QUALIFIED BY THE FOLLOWING STATEMENT:
Samples with analyte concentrations within five times the associated field blank concentration are listed above, these sample results were qualified as not detected, "U".

## Introduction

This data review covers 9 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270C for Semivolatiles.

This review follows the Quality Assurance Project Plan for Santa Susana Field Laboratory (SSFL), RCRA Facility Investigation, Surficial Media Operable Unit (March 2009, Revision 4) and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

## II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals. All ion abundance requirements were met.

## III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds all coefficients of determination ($r^2$) were greater than or equal to 0.990 .

Average relative response factors (RRF) for all compounds were within method and validation criteria.

## IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for calibration check compounds (CCCs) and 25.0% for all other compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 25.0% for all compounds.

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

## V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

Samples EB-NBZ-SB-040412 and EB-NBZ-SS-040412 (both from SDG 12D031) were identified as equipment blanks. No semivolatile contaminants were found.

## VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

| Spike ID (Associated Samples) | Compound | MS (%R) (Limits) | MSD (%R) (Limits) | RPD (Limits) | Flag | A or P |
|---|---|---|---|---|---|---|
| SL-057-NBZ-SS-0.0-0.5MS/MSD (SL-057-NBZ-SS-0.0-0.5) | Benzidine | 0 (10-150) | 0 (10-150) | - | J (all detects) R (all non-detects) | A |

## VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

## IX. Regional Quality Assurance and Quality Control

Not applicable.

## X. Internal Standards

All internal standard areas and retention times were within QC limits.

## XI. Target Compound Identifications

All target compound identifications were within validation criteria.

## XII. Compound Quantitation and RLs

All compound quantitation and RLs were within validation criteria.

All compounds reported below the RL were qualified as follows:

| Sample | Finding | Flag | A or P |
|---|---|---|---|
| All samples in SDG 12C254 | All compounds reported below the RL. | J (all detects) | A |

## XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

## XIV. System Performance

The system performance was acceptable.

## XV. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

## XVI. Field Duplicates

Samples SL-057-NBZ-SS-0.0-0.5 and DUP-02-NBZ-QC-032312 were identified as field duplicates. No semivolatiles were detected in any of the samples.

## Initial Calibration Calculation Verification

Reviewer: FT
2nd Reviewer: A

**METHOD:** GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

$A_x$ = Area of compound,
$C_x$ = Concentration of compound,
S = Standard deviation of the RRFs,

$A_{is}$ = Area of associated internal standard
$C_{is}$ = Concentration of internal standard
X = Mean of the RRFs

| # | Standard ID | Calibration Date | Compound (Reference Internal Standard) | Reported RRF (25 std) | Recalculated RRF (25 std) | Reported Average RRF (initial) | Recalculated Average RRF (initial) | Reported %RSD | Recalculated %RSD |
|---|---|---|---|---|---|---|---|---|---|
| 1 | SVE4A25 | 1/25/12 | Phenol (1st internal standard) | 1.328 | 1.328 | 1.300 | 1.300 | 1.82 | 1.82 |

## Matrix Spike/Matrix Spike Duplicates Results Verification

Reviewer: FT
2nd Reviewer: [signature]

**METHOD:** GC/MS BNA (EPA SW 846 Method 8270)

The percent recoveries (%R) and Relative Percent Difference (RPD) of the matrix spike and matrix spike duplicate were recalculated for the compounds identified below using the following calculation:

% Recovery = 100 * (SSC - SC)/SA  Where: SSC = Spiked sample concentration; SA = Spike added; SC = Sample concentation

RPD = I MSC - MSC I * 2/(MSC + MSDC)  MSC = Matrix spike concentration  MSDC = Matrix spike duplicate concentration

MS/MSD samples: 8 + 9

| Compound | Spike Added (ug/Kg) | | Sample Concentration (ug/Kg) | Spiked Sample Concentration (ug/Kg) | | Matrix Spike Percent Recovery | | Matrix Spike Duplicate Percent Recovery | | MS/MSD RPD | |

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

$A_x$ = Area of the characteristic ion (EICP) for the compound to be measured

$A_{is}$ = Area of the characteristic ion (EICP) for the specific internal standard

$I_s$ = Amount of internal standard added in nanograms (ng)

$V_o$ = Volume or weight of sample extract in milliliters (ml) or grams (g).

$V_i$ = Volume of extract injected in microliters (ul)

$V_t$ = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example: 1/30

Sample I.D. #2, Anthracene

Conc. = $\frac{(99524)(40)(1)(1000)}{(98359)(1.13)*(3)(0.955)}$

= 122 ug/Kg

## Introduction

This data review covers 9 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM) for Semivolatiles.

This review follows the Quality Assurance Project Plan for Santa Susana Field Laboratory (SSFL), RCRA Facility Investigation, Surficial Media Operable Unit (March 2009, Revision 4) and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

## II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals. All ion abundance requirements were met.

## III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination ($r^2$) were greater than or equal to 0.990 .

Average relative response factors (RRF) for all compounds were within method and validation criteria.

## IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for calibration check compounds (CCCs) and 25.0% for all other compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 25.0% for all compounds.

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

## V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

No field blanks were identified in this SDG.

## VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

## VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

## IX. Regional Quality Assurance and Quality Control

Not applicable.

## X. Internal Standards

All internal standard areas and retention times were within QC limits.

## XI. Target Compound Identifications

All target compound identifications were within validation criteria.

## XII. Compound Quantitation and RLs

All compound quantitation and RLs were within validation criteria.

All compounds reported below the RL were qualified as follows:

| Sample | Finding | Flag | A or P |
|---|---|---|---|
| All samples in SDG 12C254 | All compounds reported below the RL. | J (all detects) | A |

## XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

## XIV. System Performance

The system performance was acceptable.

## XV. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

## XVI. Field Duplicates

Samples SL-057-NBZ-SS-0.0-0.5 and DUP-02-NBZ-QC-032312 were identified as field duplicates. No semivolatiles were detected in any of the samples with the following exceptions:

| Compound | Concentration (ug/Kg) | | RPD (Limits) | Flags | A or P |

**METHOD:** GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

$A_x$ = Area of compound,
$C_x$ = Concentration of compound,
S = Standard deviation of the RRFs,

$A_{is}$ = Area of associated internal standard
$C_{is}$ = Concentration of internal standard
X = Mean of the RRFs

| # | Standard ID | Calibration Date | Compound (Reference Internal Standard) | Reported RRF ( 10 std) | Recalculated RRF ( 10 std) | Reported Average RRF (initial) | Recalculated Average RRF (initial) | Reported %RSD | Recalculated %RSD |

**METHOD:** GC/MS BNA (EPA SW 846 Method 8270C)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
$A_x$ = Area of compound, $A_{is}$ = Area of associated internal standard
$C_x$ = Concentration of compound, $C_{is}$ = Concentration of internal standard

**METHOD:** GC/MS BNA (EPA SW 846 Method 8270)

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

$A_x$ = Area of the characteristic ion (EICP) for the compound to be measured

$A_{is}$ = Area of the characteristic ion (EICP) for the specific internal standard

$I_s$ = Amount of internal standard added in nanograms (ng)

$V_o$ = Volume or weight of sample extract in milliliters (ml) or grams (g).

$V_i$ = Volume of extract injected in microliters (ul)

$V_t$ = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. #1, Naphthalene

Conc. = $\frac{(2097)(40)(1)(1000)}{(345914)(3.773)(30)(0.882)}$

= 2.4 ug/kg

## Introduction

This data review covers 5 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8081A for Chlorinated Pesticides.

This review follows the Quality Assurance Project Plan for Santa Susana Field Laboratory (SSFL), RCRA Facility Investigation, Surficial Media Operable Unit (March 2009, Revision 4) and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.
