A sustainable heavy-duty on-road fleet means:

- Vehicles that continue to provide functions critical for economic growth
  - Long haul freight movement
  - Services, infrastructure, delivery and people movement
- Products that provide value to owners
- Products that provide value to manufacturers
- Products that comply with all regulations
- Efficient operation using fuels that are consistent with:
  - Energy security goals
  - Climate change mitigation goals

Only selected energy pathways for Heavy-Duty are consistent with the joint objectives to reduce petroleum dependence and climate change mitigation
