

2009 TRAINING GUIDE

for Home Performance Professionals 2009

THIS UPDATE OF *HOME ENERGY*'S BIENNIAL "GUIDE TO TRAINING PROGRAMS FOR HOME PERFORMANCE PROFESSIONALS," published here and on our Web site, comes at an exciting time. With the renewed emphasis on energy-efficient, sustainable, healthy, and affordable homes, and with the rush of funding support for the Weatherization Assistance program (WAP) and other energy efficiency projects, we expect the list of training programs to continue to grow. Once the funding of the American Recovery and Reinvestment Act of 2009, also known as the stimulus bill, runs out, we hope that current and new legislation aimed at increasing energy security; fighting global warming; and growing a new, more energy-efficient and sustainable economy will keep the interest and funds flowing. After all, money spent on energy efficiency creates more wealth in the end, creates well-paying, long-term jobs for the economy, and makes housing more sustainable and affordable for everyone.

This time we are doing things a little differently. Instead of providing a short description of each training organization and its offerings, we have created a grid, which we hope will make it easier to find the kind of training our readers are looking for. Each listing, by state, begins with contact information for the training organization and whether the training is offered regionally or nationally. The focus for the rest of the listing is on job skills needed for work in WAP, and on education that prepares one for certification through the Building Performance Institute (BPI), the Residential Energy Services Network (RESNET), national and local green building programs, and other programs. We are also indicating whether the particular training opportunity prepares one to do infrared thermography.

Running under each two-page spread of the training guide is a key identifying the abbreviations used in the guide to represent the different training areas and desired competencies for a particular certification or program. Here are some other abbreviations that are used in the guide:

- ASHI** – American Association of Home Inspectors
- CBPCA** – California Building Performance Contractors Association
- CheckMe!** – Heat pump commissioning certification
- CREIA** – California Real Estate Inspection Association
- FABI** – Florida Association of Building Inspectors
- LEED** – U.S. Green Building Council's Leadership in Energy and Environmental Design
- NAHB** – National Association of Home Builders green building program
- NAHI** – National Association of Home Inspectors
- NYSERDA** – New York State Energy Research and Development Authority
- TAREI** – Texas Association of Real Estate Inspectors

Build your business

The network of Building Performance Institute (BPI) Affiliate training organizations is expected to at least double in 2009.

That means you get easier access to our nationally recognized certification programs.

And that helps you build your business.

How? BPI Certified Professionals are in demand now more than ever before. A growing number of Federal, State and local homeowner incentive and weatherization programs either encourage or require the work to be performed by individuals certified by BPI. And with the economic stimulus package dollars currently available, that makes your involvement with BPI an even smarter business decision.

Are you ready to go to the next level?
Contact the BPI Affiliate near you.
