Beaver Creek-Sterling 115-kV Transmission Line Structure Relocation Morgan County, Colorado

A. Brief Description of Proposal: Western Area Power Administration (Western) proposes to modify five existing wood H-frame pole structures along the Beaver Creek-Sterling (BC-STG) 115-kV Transmission Line. The proposed work is required to accommodate road improvement projects currently underway by the Colorado Department of Transportation (CDOT). CDOT will make improvements to the US Highway 6 off-ramp which requires Western to relocate and replace structures. The proposed project is required in order to move off the new ramp incline and maintain proper clearances over the Interstate. The structures proposed for modification under this action include 0/10, 1/1, 1/2, 1/3, and 1/4. Structure 0/10 is currently a 70-foot wood H-frame structure and will be replaced with an 80-foot wood H-frame structure. Structure 1/1 will be permanently removed. Structures 1/2 and 1/3 are 85-foot wood H-frames structures and will be replaced with 110-foot wood H-frames. In addition, structure1/2 will be relocated approximately 70 feet to the southwest and structure 1/3 will be moved approximately 8 feet to the northeast. Finally, structure 1/4 will go from a 65-foot wood H-frame structure to a 75-foot wood H-frame structure. Conductor weights will need to be added to each phase at structures 0/9, 0/10, 1/2, 1/3, 1/4, and 1/6. All work will be confined to Western's right-of-way easement. Existing access roads will be used and no new roads are proposed. The project is located on private lands in Morgan County, Colorado. Work is scheduled to begin in mid-January 2014.

Construction activities proposed for BC-STG 115-kV Transmission Line structure relocation project include the removal of the existing wood H-frame structures, augering and installing new wood poles, backfilling, and adding new hardware. The equipment utilized include 4-wheel drive pickups, rubber-tired motor digger/derrick, manlift, skid-steer loader, pole trailer, and line trucks.

B. <u>Number and Title of the Categorical Exclusion Being Applied</u>: (See text in 10 CFR Part 1021, Subpart D.)

B4.13 Upgrading and Rebuilding Existing Powerlines:

Upgrading or rebuilding approximately 20 miles in length or less of existing electric powerlines, which may involve minor relocations of small segments of the powerlines.

- C. <u>Regulatory Requirements in 10 CFR 1021.410 (b)</u>: (See full text in regulation and attached checklist.)
 - 1) The proposed action fits within a class of actions listed in Appendix A or B to Subpart D.

For classes of actions listed in Appendix B, the following conditions are integral elements. To fit within a class, the proposal <u>must not</u>:

- Threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, or similar requirements of DOE or Executive Orders;
- Require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities (including incinerators), but the proposal may include categorically excluded waste storage, disposal, recovery, or treatment actions or facilities;

Beaver Creek-Sterling 115-kV Transmission Line Structure Relocation Morgan County, Colorado

- Disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that preexist in the environment such that there would be uncontrolled or unpermitted releases; and
- Have the potential to cause significant impacts on environmentally sensitive resources. An environmentally sensitive resource is typically a resource that has been identified as needing protection through Executive Order, statute, or regulation by Federal, State, or local government, or a federally recognized Indian tribe. An action may be categorically excluded if, although sensitive resources are present, the action would not have the potential to cause significant impacts on those resources (such as construction of a building with its foundation well above a sole-source aquifer or upland surface soil removal on a site that has wetlands). Environmentally sensitive resources include, but are not limited to those listed in paragraph B. (4) (see Attachment A).
- 2) There are no extraordinary circumstances related to the proposal that may affect the significance of the environmental effects of the proposal.
- 3) The proposal is not "connected" to other actions with potentially significant impacts, is not related to other proposed actions with cumulatively significant impacts, and is not precluded by 40 CFR 1506.1 or 10 CFR 1021.211.

D. Special Stipulations Pertaining to the Proposal:

If the scope of work of this project changes, Western's Environmental Division must be contacted for additional environmental review.

This Categorical Exclusion is valid for one year after the signature date. If construction has not commenced within that time, Western's Environmental Division must be contacted for an updated environmental review prior to construction.

If any used treated wood poles or cross-arms are donated, Western will obtain a signed "acknowledgment of receipt" of Western's Consumer Information Sheet for Treated Wood Poles and Cross-Arms from the person receiving the used poles and/or cross-arms.

If any cultural materials are discovered during construction, work in the area shall halt immediately, Western Regional Preservation Officer shall be contacted, and the material evaluated by an archaeologist or historian meeting the Secretary of the Interior's Professional Qualification Standards (48 FR 22716, Sept. 1983).

All equipment used will be cleaned prior to use in the area to prevent transporting of invasive plant or noxious weed seeds.

Western shall exercise care to preserve the natural landscape and shall conduct this construction operation to prevent any unnecessary destruction, scarring, or defacing of the natural surroundings in the project vicinity. Except where clearing is required for permanent works, approved construction roads, or excavation operations, vegetation shall be preserved and shall be protected from damage by Western's construction operations and equipment.

Beaver Creek-Sterling 115-kV Transmission Line Structure Relocation Morgan County, Colorado

To minimize impacts to the environment and prevent damage to access roads, operation of off-road equipment will not be permitted during periods of heavy rains, when soils are wet, or when excessive soil damage may occur due to unsuitable operating conditions. No construction or routine maintenance activities shall be performed during periods when the soil is too wet to adequately support construction equipment. If equipment creates ruts in excess of 6-inches deep, the soil shall be deemed too wet to adequately support construction equipment.

E. <u>Determination</u>: Based on my review of information provided to me and in my possession concerning the proposed action, I determined that the proposed action fits within the specified class of actions, the other regulatory requirements set forth above are met, and the proposed action is categorically excluded from requirements for an EA or an EIS.

identified as needing protection through Executive Order, statue, or regulation by Federal, State, or local government, or a federally recognized Indian tribe. An action may be categorically excluded if, although sensitive resources are present, the action would not have the potential to cause significant impacts on those resources (such as construction of a building with its foundation well above a sole-source aquifer or upland surface soil removal on a site that has wetlands). Environmentally sensitive resources include, but are not limited to:		
(i) Property (such as sites, buildings, structures, and objects) of historic, archaeological, or architectural significance designated by a Federal, State, or local government, or property determined to be eligible for listing on the National Register of Historic Places;	X	
(ii) Federally-listed threatened or endangered species or their habitat (including critical habitat) or federally-proposed or candidate species or their habitat (Endangered Species Act); state-listed or state-proposed endangered or threatened species or their habitat; Federally-protected marine mammals and Essential Fish Habitat (Marine Mammal Protection Act; Magnuson-Stevens Fishery Conservation and Management Act); and otherwise federally-protected species (such as under the Bald and Golden Eagle Protection Act or the Migratory Bird Treaty Act);	X	
(iii) Floodplains and wetlands (as defined in 10 CFR 1022.4, — Compliance with Floodplain and Wetland Environmental Review Requirements: "Definitions," or its successor);	X	
(iv) Areas having a special designation such as federally- and state-designated wilderness areas, national parks, national monuments, national natural landmarks, wild and scenic rivers, State and Federal wildlife refuges, scenic areas (such as National Scenic and Historic Trails or National Scenic Areas), and marine sanctuaries;	X	
 (v) Prime or unique farmland, or other farmland of statewide or local importance, as defined at 7 CFR 658.2(a), — Farmland Protection Policy Act: Definitions, or its successor; 	X	
(vi) Special sources of water (such as sole-source aquifers, wellhead protection areas, and other water sources that are vital in a region); and	X	
(vii) Tundra, coral reefs, or rain forests; or	X
