SPECIAL EDITION

NMMSS Café Featuring SAMS 7.0 Training (Version 2)

At the NMMSS Annual Users Meeting scheduled for May 21st through the 24th, 2012 at the Sheraton New Orleans Hotel in New Orleans, LA, a special NMMSS training café will be established to provide the attendees the opportunity to participate in hands-on training on using the SAMS 7.0 software. The café will consist of several stations with laptop computers supported by the NMMSS personnel to assist with the training and to answer any questions you may have regarding the software.

The café will also provide assistance to any attendee with the installation of the SAMS 7.0 software onto their laptop system. Just bring the laptop to the café during the hours of operation and a NMMSS support person will assist you with the installation.

But before the SAMS 7.0 software can be installed successfully onto your laptop system, it must meet the following minimum requirements:

1. First and foremost, you must have the appropriate administrative rights to allow software to be installed on your laptop system;

2. The minimum hardware requirements are:
   a. Processor: 1GHZ or higher
   b. RAM: 1GB or higher
   c. Microsoft mouse or compatible pointing device

3. The minimum software requirements are:
   a. OS: MS Windows XP Professional, Service Pack 2 or Higher or Windows 7
   b. MS .NET Framework 2.0
   c. MS Internet Explorer Version 6.0 or higher.

Since SAMS 7.0 is a collection of commercially available software integrated to provide the SAMS functionality, the distribution CD used for the installation contains all the required prerequisite software needed for a successful installation. So, if you are planning to attend the NMMSS Users Meeting in New Orleans and would like SAMS 7.0 installed on your laptop, bring it to the NMMSS café.
