Electricity Delivery and
Energy Reliability

Attn: Brinn Mills et al

We, John and Lottie Brodeur live in Colebrook, N.H. and are
opposed to the Northern Pass Project.

Our reasons of opposition are:

- ① Recreation is the major industry here. The high towers and transmission lines destroy the pristine and natural beauty of this area.
- ② With recreation destroyed, along with land values and these land values being the only asset that many residents have here Northern Pass will effectively destroy lives.
- ③ Northern Pass is determined to put N.H.'s bio-mass plants out of business thus destroying jobs and livelihoods of many people.
- ④ The treatment by Northern Pass and people who speak for them to residents has not only been shameful but lies.
- ⑤ The White Mountain National Forest belongs to all of America and should continue to be protected from private enterprises.
- ⑥ The present Northern Pass proposed route follows Interstate 93 and destroys the beauty of N.H. thus destroying the economic value of N.H.
- ⑦ The number of jobs promised by Northern Pass is vastly inflated. The tax money promised will be fought in the courts within 2 years.

If more electricity becomes essential in the far future, lines can be buried with minor changes to the environment.

Please consider that we the residents of Coos County and all of N.H. are worth more than corporate greed.

Sincerely,

Lottie Brodeur
John R. Brodeur
