

## Ambient 24 Hr SO<sub>2</sub> Values: Model vs. Monitor

## Model Overprediction

- DEQ has an SO<sub>2</sub> monitor located at 517 North St. Asaph St. in Alexandria.
- AERMOD was used to identify highest predicted 24 hour impact days at the monitor location, using three years of actual meteorological data.
- Predicted AERMOD values exceeded actual monitored SO<sub>2</sub> values in every case, by an average of 5.84 times the monitored value.

<b>Top 25 Concentrations Days</b>	<b>SO2 Monitored Concentrations (ug/m3)</b>	<b>24-hr Highest SO2 Concentration using CEM Hourly Emissions</b>	
3/16/02	74	114 3 boilers operating	1.54
7/6/02	18	153 5 boilers operating	8.50
8/7/02	30	228 5 boilers operating	7.60
9/1/02	45	96 2 boilers operating	2.13
10/30/02	20	142 5 boilers operating	7.10
2/17/03	45	282 5 boilers operating	6.27
