RONALD A. SORRI, Complainant

v.

L&M TECHNOLOGIES INC. AND SANDIA NATIONAL LABORATORIES, Respondents.

OHA Case No. LWA-0001

FINAL DECISION AND ORDER

On December 16, 1993, the Office of Hearings and Appeals issued the Initial Agency Decision in *Sorri v. Sandia National Laboratories and L&M Technologies Inc.*, a complaint of reprisal under Part 708, title 10, Code of Federal Regulations, "DOE Contractor Employee Protection Program" (Part 708). By agreement dated June 7, 1994, the Complainant, Sandia National Laboratories, and L&M Technologies Inc. have agreed, through their counsels, to the dismissal of L&M Technologies Inc. as a party to this proceeding. As the Secretary's designee for the purpose of reviewing an Initial Agency Decision, pursuant to section 708.11, title 10, Code of Federal Regulations, I have approved the dismissal of L&M Technologies Inc. as a party to this proceeding, and hereby affirm the elements of relief ordered by the Office of Hearings and Appeals.

ORDER

For the reasons stated above, I hereby order the following:

(1) L&M Technologies Inc. is dismissed as a party to this proceeding.

(2) Sandia National Laboratories shall assume full responsibility and liability for the following awards:

a. Sandia National Laboratories shall pay to Ronald Sorri the amount of $5,517.41 in back pay and expenses, based upon the amounts set forth in the Initial Agency Decision (plus interest accrued from December 31, 1993, to the date of payment).

b. Sandia National Laboratories shall pay attorney fees, witness fees, and other costs and expenses incurred by or on behalf of Sorri, to be determined by the Office of Hearings and Appeals as reasonable in bringing this complaint under Part 708.

c. The attorney for Sorri shall submit to the Office of Hearings and Appeals a full accounting within 30 days of the issuance of this Order.

(3) The Manager, Albuquerque Operations Office, shall assure that Sandia National Laboratories implements this Order immediately.

Dated: August 25, 1994

William H. White

DAVID RAMIREZ, Complainant

v.

BROOKHAVEN NATIONAL LABORATORY, Respondent.

OHA Case No.LWA-0002, LWX-0013

FINAL DECISION AND ORDER

This is an appeal by respondent Brookhaven National Laboratory ("BNL"), of the Initial Agency Decision by an Office of Hearings and Appeals Hearing Officer who found, following two days of hearings, that complainant David Ramirez, an electrician formerly employed by a subcontractor of BNL, had established that his safety disclosures were a contributing factor in BNL's decision to lay him off on March 20, 1992. The Hearing Officer further found that BNL failed to satisfy its burden under the DOE regulations of proving "by clear and convincing evidence" that the challenged personnel action would have occurred even absent the claimant's protected activities. See 10 C.F.R. 708.9(d).

1. On appeal, BNL challenges the Hearing Officer's finding that safety disclosures were a contributing factor in BNL's decision to lay off the complainant. However, it is well established that this type of finding of fact will be overturned only if it is clearly erroneous, giving due regard to the trier of fact to judge the credibility of witnesses. *See, e.g., Amadeo v. Zant*, 486 U.S. 214, 223 (1988), quoting Federal Rule of Civil Procedure 52(a). Measured against this standard, my review of the matter discloses no basis for overturning OHA's fact-based determinations.

2. Aside from challenging OHA's factual findings, BNL asserts that the Hearing Officer erred in ruling in a Supplemental Order that the complainant's award not be decreased by the $17,700 he received in unemployment compensation. In this respect, the Hearing Officer's decision is consistent with the majority view in similar employment contexts that damage awards will not be reduced because of such payments. *See, e.g., NLRB v. Gullet Gin Co.*, 340 U.S. 361 (1951); *Gaworski v. Commercial Finance Corp.*, 17 F.3d 1104, 1112-1114 (8th Cir. 1994).

Accordingly, the Initial Agency Decision and Supplemental Order are affirmed and hereby adopted as the Final Agency Decision in this case.

MEHTA, Complainant

v.

UNIVERSITIES RESEARCH ASSOCIATION, Respondent.

OHA Case No.LWA-0003, LWZ-0023

FINAL DECISION AND ORDER

This is an appeal by respondent Universities Research Association ("URA"), from the Initial Agency Decision by the Office of Hearings and Appeals ("OHA") finding that the complainant, Dr. Naresh C. Mehta, a scientist formerly employed by URA, had established that his disclosures of mismanagement were a contributing factor in URA's December 16, 1992, decision to terminate his employment. The Initial Agency Decision also reaffirmed OHA's previous denial of URA's motion to dismiss based on lack of jurisdiction under 10 C.F.R. Part 708.

1. On appeal, URA requests reconsideration of its motion to dismiss on jurisdictional grounds. URA contends that applying DOE's "whistleblower" regulation at 10 C.F.R. Part 708 to Dr. Mehta's complaint constitutes an erroneous retroactive application of an administrative regulation, since URA's contract was not modified to include a provision requiring compliance with the regulation until March 31, 1993. OHA found that there was no retroactivity issue because the alleged acts of reprisal occurred after April 2, 1992, the effective date of the regulation, and URA's contract was subsequently modified to require compliance with the regulation. See 10 C.F.R. §708.2(a).

Based on my review of the regulatory language, I conclude that OHA's interpretation is incorrect, and that the regulation should not be interpreted as applying retroactively to complaints involving alleged acts of reprisal that stem from disclosures, participations or refusals that do not concern health or safety where such alleged acts occur after the effective date of the regulation but before the underlying contract is amended to require compliance with Part 708. Non-retroactive application is consistent with the distinction drawn in Section 708.2(a) between health or safety complaints and "other" complaints, such as those involving waste, fraud, and mismanagement, and with the different approaches that the regulation takes in defining its applicability to health or safety and "other" complaints. Non-retroactive application also is necessary to harmonize Section 708.2(a) with the broader regulatory structure. See Section 708.6(d) (time limit for filing complaint).

Retroactive application of a regulation should not be inferred in the absence of express language to such effect. *See, e.g., Landgraf v. USI Film Products*, 114 S.Ct. 1483, 1497-1501 (1994); *Bowen v. Georgetown University Hospital*, 488 U.S. 204, 208 (1988). The presumption against retroactivity is especially compelling where, as here, a contract must be modified in order to make a regulation applicable. *See Lockheed Aircraft Corp. v. United States*, 426 F.2d 322, 327-328 (Ct. Cl. 1970); McBride and Wachtel, 1 Government Contracts, §4.100[3] (1984).

Accordingly, I conclude that 10 C.F.R. Part 708 does not apply to complaints involving alleged acts of reprisal where such acts occur prior to the adoption or amendment of a contract requiring compliance with Part 708 and do not stem from health or safety disclosures, participations or refusals.

2. URA argues that the allegations raised by the complainant are not cognizable under 10 C.F.R. Part 708, since the alleged acts of reprisal and the filing of the complaint occurred prior to the effective date of URA's contract modification. My review of the record establishes that the alleged acts of reprisal occurred prior to March 31, 1993, the effective date of the amendment to URA's contract which required compliance with Part 708. Further, although URA placed the complainant on an extended leave of absence

subsequent to his termination, the last "retaliatory" act occurred when the complainant was issued the December 16, 1992, letter advising of URA's decision to proceed with his termination. Since there is no evidence of further acts of reprisal subsequent to the effective date of URA's contract modification that might support a finding of a "continuing violation," the regulation is not applicable to this complaint. *See, e.g., Delaware State College v. Ricks*, 449 U.S. 250, 256-258 (1980); *Thurman v. Sears, Roebuck & Co.*, 952 F.2d 128, 134-137 (5th Cir. 1992).

3. URA also challenges OHA's determination that the parties' agreement to attempt to resolve this complaint through mediation estopped URA from challenging the applicability of the "whistleblower" regulation. Based on my review of the agreement, I have determined that the language of the agreement cannot fairly be read as a waiver of URA's right to assert jurisdictional defenses.

4. Although my conclusions on the jurisdictional issues make it unnecessary to reach the merits of this dispute, and the merits are not relevant to my conclusions on the jurisdictional issues, some comments on the merits are appropriate both to provide guidance for subsequent decisions of OHA and to communicate to the disappointed litigant the nature of legitimate competing interests. The Initial Agency Decision dated March 17, 1994, grants reinstatement to Dr. Mehta, a scientist employed by a DOE contractor, based on a finding that his complaints that procedures governing his access to a computer should be changed constituted protected disclosures of mismanagement under the "whistleblower" regulation. The decision concludes that these complaints contributed to his dismissal despite URA's contention that the dismissal was based on Dr. Mehta's performance and the relevance of his work. However, OHA's decision does not address whether any of the particular changes in procedures for access to the computer would have materially improved the utilization of the computer for its intended purposes, and such a determination could best be made with the assistance of experts and an opinion formed on the basis of expert testimony.

This illustrates the difficult distinctions needed in order to focus the remedy on appropriate cases of retaliation for exposures of fraud, mismanagement, gross waste of funds, abuse of authority, or a substantial and specific danger to employees or public health or safety. Undeniably, there is a degree to which differences of

opinion concerning the conduct of operations might legitimately contribute to the dismissal of an employee, particularly in combination with deficiencies in other elements of an employee's performance. However, this observation should not be construed as a conclusion based on a review of the record; rather, it simply points out that the Hearing Officer's analysis in this regard is inadequate. Equating a particular type of disagreement to "mismanagement" as contemplated by the "whistleblower" regulation demands a careful balancing lest the term encompass all disagreements between a contractor and its employees. While a conclusion with respect to the merits of a particular claim of mismanagement may not be required in all cases, there must be some assessment as to whether the nature of the disagreement evidences the type of disclosure of mismanagement that the regulation was designed to protect, at the same time granting appropriate deference to traditional management prerogatives needed to conduct an organization through teamwork.

5. Finally, the Hearing Officer conducting the appeal is to be commended on the prompt decision on the complaint. This contrasts painfully with the time taken for disposition of the instant appeal. In a December 14, 1994, letter, Dr. Mehta reminded the Secretary of Energy that justice delayed can be justice denied. However, Dr. Mehta should understand that the "whistleblower" regulation is of relatively recent origin, and that DOE has a [sic] been a pioneer in attempting to establish protection for contractor employees that make specified types of disclosures. This appeal involved an important and difficult legal issue, and the issuance of this Final Decision and Order required a thorough legal analysis of this matter, which was completed within the last five weeks. For the reasons set forth above, the Initial Agency Decision is hereby reversed and the complaint is dismissed. This decision is the Final Agency Decision and Order in this case.

Deputy Secretary

FRANCIS M. O'LAUGHLIN, Complainant

v.

BOEING PETROLEUM SERVICES, INC., Respondent.

OHA Case No.LWA-0005

FINAL DECISION AND ORDER

This is an appeal by complainant Francis O'Laughlin of the Initial Agency Decision by an Office of Hearings and Appeals ("OHA") Hearing Officer who found, following two days of hearings, that the complainant had not satisfied his burden of establishing by a preponderance of the evidence that he made protected safety disclosures to respondent Boeing Petroleum Services, Inc., a contractor of the Department of Energy's Strategic Petroleum Reserve, as required by 10 C.F.R. Part 708.

On appeal, the complainant challenges the Hearing Officer's finding that he had not met his burden of showing that he had made protected health or safety disclosures. The Hearing Officer found the disclosures cited by complainant represented intangible concerns regarding a proposed reorganization of Boeing Petroleum Services rather than evidencing any substantial and specific danger

to health and safety under 10 C.F.R. 708.5(a)(1)(ii). In assessing the complainant's allegations, the Hearing Officer correctly stated the applicable legal standard set forth in 10 C.F.R. 708.5. The complainant's challenge to OHA's decision, therefore, turns on the Hearing Officer's factual determinations, which are subject to being overturned only if they can be deemed to be clearly erroneous. *See, e.g., Pullman Standard v. Swint*, 456 U.S. 273 (1982); *Amadeo v. Zant*, 486 U.S. 214, 223 (1988), quoting Federal Rule of Civil Procedure 52(a). Measured against this standard, my review of this matter discloses no basis for overturning OHA's fact-based determinations as "clearly erroneous."

For the reasons set forth above, the Initial Agency Decision is affirmed and hereby adopted as the Final Agency Decision in this case.

Deputy Secretary

HELEN GAIDINE OGLESBEE, Complainant

v.

WESTINGHOUSE HANFORD COMPANY, Respondent.

OHA Case No.LWA-0006

FINAL DECISION AND ORDER

This is an appeal by complainant Helen Gaidine Oglesbee of an Initial Agency Decision by an Office of Hearings and Appeals ("OHA") Hearing Officer. Following two days of hearings, the Hearing Officer found that the complainant had not established a claim that she suffered unlawful reprisal in response to her making of protected health and safety disclosures.

The Hearing Officer first held that the complainant had failed to meet her burden of establishing that certain of the communications she made to her employer, Westinghouse Hanford Company ("WHC"), the management and operating contractor at the Department of Energy's Hanford site in Richland, Washington, were protected health and safety disclosures. Second, in those instances in which the Hearing Officer found that protected disclosures had been made, the Hearing Officer held that WHC had shown by clear and convincing evidence that the challenged personnel action would have been taken even absent her disclosures. Finally, the Hearing Officer found that the contractor's withdrawal of certain eprimands from the complainant's personnel files had rendered her remaining claims concerning those matters moot and unredressable.

On appeal, the complainant challenges the Hearing Officer's rejection of her claims based on findings that the evidence failed to support her allegations that she made protected health or safety disclosures. The complainant similarly challenges the Hearing Officer's determination that WHC established by clear and convincing evidence that the challenged personnel actions were unrelated to protected disclosures.

It is well settled that factual findings of these types are subject to being overturned only if they can be deemed to be clearly erroneous, giving due regard to the trier of fact to judge the credibility of witnesses. *Compare, Pullman Standard v. Swint*, 456 U.S. 273 (1982), with *Amadeo v. Zant*, 486 U.S. 214, 223 (1988), quoting Federal Rule of Civil Procedure 52(a). Measured against this standard, my review of this matter discloses no basis for overturning OHA's fact-based determinations as "clearly erroneous."

With respect to the complainant's challenge to the Hearing Officer's finding of mootness regarding the letters of reprimand that were removed from the complainant's file, OHA's decision is consistent with analogous federal employment law precedents. *See*, *e.g.*, *County of Los Angeles v. Davis*, 440 U.S. 625 (1979); *Frazier v. MSPB*, 672 F.2d 150 (D.C. Cir. 1982).

For the reasons set forth above, the Initial Agency Decision is affirmed and hereby adopted as the Final Agency Decision in this case.

MARIA ELENA TORAÑO ASSOCIATES, INC.)

)

Respondent.)

FINAL AGENCY DECISION

This is a request for review by Maria Elena Torano Associates, Inc. ("META"), a DOE contractor responsible for reviewing and revising the agency's waste management programmatic environmental impact statement ("PEIS"), of the Initial Agency Decision of the Office of Hearings and Appeals ("OHA") finding that Complainant C. Lawrence Cornett established that he had made protected health and safety disclosures under 10 C.F.R. Part 708 and that these disclosures were a contributing factor in his termination and finding further that META had not demonstrated that he would have been terminated absent the disclosures. R. 5064.

On review, META's primary legal argument is that Part 708 is inapplicable because META's employees did not perform work at DOE facilities. This argument was properly rejected by OCEP and OHA. META is a covered "contractor" under Part 708 "only with respect to work performed on-site at a DOE-owned or-leased facility. * * *. [W]ork will not be considered ?on-site' when pursuant to the contract it is the only work performed within the boundaries of a * * * [DOE] facility, and it is ancillary to the primary purpose of the contract (e.g., on-site delivery of goods produced off-site)." 10 C.F.R. § 708.4.(1) META argues that the "primary" purpose of the contract was "the scoping, drafting and production of the report" and that on-site "collection of data is simply what was needed in anticipation of or as preparation for accomplishing what was the primary purpose of the contract" (META reply brief at 4). However, the hearing officer concluded that "site visits made by META employees accomplished important mission-related purposes," serving to "establish personal relationships * * * to facilitate the transfer of needed data for analysis, to discover what data was available and to bring back data from the sites," and thus are not merely ancillary to the primary purpose of the contract. R. 3297. This fact-bound conclusion is consistent with the remedial purpose and text of Part 708 and with the regulatory preambles accompanying its proposal and adoption, and therefore should be sustained.

META also suggests that Part 708's coverage for contracts other than management and operating contracts extends "only with respect to work performed on-site at a DOE-owned or-leased facility (emphasis added) and that this limitation means that the complaint must also be about the on-site work. According to META's reasoning, since Cornett's disclosures had nothing to do with establishing on-site relationships or collecting on-site data, META was not a covered "contractor" with respect to those disclosures (META reply brief at 6).

However, this argument suffers from two fundamental flaws. First, it is unlikely, in light of the remedial purpose of the provisions, that the regulatory authors would have, in effect, required a whistleblower to run the on-site gauntlet twice -- that the contractor must do more than merely ancillary on-site work and that the disclosure must be about on-site work. There is nothing in either of the logical places, the description of the Part's "scope" (§ 708.2) and of a covered "disclosure" (§ 708.5), suggesting such a double hurdle, and the regulatory preamble further undercuts META's argument. For example, the preamble summary simply states that the rules are "applicable to employees of DOE contractors and subcontractors performing work directly related to the activities of the DOE at DOE-owned or-leased sites," but says nothing about the rules being applicable only to disclosures about such work. 57 Fed. Reg. 7533 (March 3, 1992). More reasonably, therefore, we think that the "contractor," "employee," and "on-site work" definitions should be read to establish a single requirement that a contractor perform some on-site work that is not merely "ancillary" to the primary purpose of the contract.

Even if META's construction of the terms were correct, however, a second problem with META's argument is that the hearing officer concluded, as a matter of fact, that Cornett's disclosures did relate to establishing on-site relationships and collecting on-site data. According to OHA's specific finding, Cornett was discharged at least in part because management perceived his efforts to communicate with on-site personnel at Argonne and Oak Ridge as having produced bad relationships there. As is made clear in the preamble to the proposed new amendments to Part 708 (see note 1, supra), the basic purpose of Part 708 was to remove an employee's disincentive to bring to DOE's attention matters occurring at DOE site that DOE would want to correct. Cornett's disclosures, as the hearing officer found and as the example in the preamble to the proposed new rules illustrates, were of just that ilk.

META also argues that Cornett's disclosures were not covered by Part 708 because they only reflected his opinions about data already available to the public. Such an argument has no basis in the regulatory language or purpose, and the hearing officer properly rejected it. The PEIS largely constituted a collection of expert opinions about waste management, and the thrust of Cornett's disclosures was that some of the PEIS methodology would materially mislead its target audience and the public about the magnitude of waste disposal health risks. Whether Cornett was correct or not -- which is not the issue here -- his professional opinion to that effect, so long as it was both reasonable and in good faith, plainly is the sort of disclosure meant to be protected by the regulations, and was well within the regulatory description of "[a] substantial and specific danger to employees or public health or safety." 10 C.F.R. § 708.5.

META also challenges the hearing officer's factfinding on the fundamental issue of why Cornett was discharged. META acknowledges that OHA's decision may be overturned only if shown to be "clearly erroneous." META argues that OHA committed clear error by overlooking key facts (META reply brief at 11-12). However, nothing listed by META was overlooked by OHA, but rather was simply rejected.

Concerning whether Cornett would have been discharged absent his protected disclosures, OHA found META's position and the project manager's testimony unpersuasive. First, OHA found that the "evasiveness and contradictions" the hearing officer perceived in the project manager's testimony and other statements and documentary evidence in the record weighed against META's claim that Cornett's allegedly bad relationship with Argonne and Oak Ridge personnel was factor in his termination. To the extent Cornett "annoyed" such personnel, OHA found this factor to be "inextricably intertwined with his protected disclosures" and not a valid basis for his dismissal. R. 5057. It therefore was not clear error for OHA (and OCEP) to conclude that absent reprisal Cornett would not have been discharged before the end of the risk assessment aspect of the project.

The only question that determination left, and it does require some inferences from the record to answer it, was when Cornett's work would have come to an end anyway. Based on the evidence before it concerning how long others with similar skills worked on the relevant tasks, OHA concluded that Cornett's employment would have extended to December, 1995 but for the retaliatory discharge. R. 5060-62. It was not clearly erroneous for OHA to draw this conclusion from the work histories before it.

META further argues that OCEP's delay in processing Cornett's claim prejudiced META.(2) However, it makes no more sense to hold OCEP's delay against Cornett than to hold a court's delay against a plaintiff. In any case, given the number of witnesses to be interviewed and the extensiveness of the record to be reviewed, the delay does not appear unreasonable. Moreover, the prejudice claimed by META is not very compelling.

META quotes preamble language concerning time limitations for filing a claim in support of its claim of prejudice, urging that by the time OCEP's interviews were conducted, memories were no longer fresh (META request for review at 3-4). However, the purpose of claims limitations periods is to give a respondent timely notice of the claim against him. There is no question that META received timely notice of the claim against it, and, having received that notice, it could and should have protected itself by promptly investigating the facts concerning the claim.

META also complains about the delay on another basis, that a timely finding in Cornett's favor would have permitted reinstatement without much obligation for back-pay without the benefit of Cornett's services (META request for review at 3, 5). The irony of this argument is that, according to META's original position on back-pay, it should only have run until January, 1995, anyway, so that even if the regulatory timing requirements had been adhered to by OCEP, OHA's decision would not have come soon enough for reinstatement to be appropriate (see META's request for review at 3 & n.1). In any case, as Cornett points out (Complainant's brief in opposition at 11-12), if META wanted the benefit of his services, the simple solution would have been to reinstate him voluntarily.

Finally, META argues that it should be relieved of some or all responsibility for Cornett's discharge since it was just following DOE's "direct and explicit orders * * * to reduce its work force" (META reply brief at 10). Aside from the fact that the hearing officer did not fully credit the evidence that DOE had "ordered" a reduction (See R. 5058 & n. 22), it is immaterial to the question whether META terminated Cornett's employment in reprisal for protected disclosures. There is certainly no evidence whatsoever that DOE ordered a retaliatory firing.

In sum, there is no basis for overturning the Initial Agency Decision, and that decision is hereby adopted as the Final Agency Decision in this case.

Date: March 23, 1998 /s/ Elizabeth A. Moler

Deputy Secretary

(1)1/ As originally formulated in the notice of proposed rulemaking, the rule elaborated on this definition, excluding "contractors whose on-site performance is ancillary to delivery or furnishing of goods or services normally found at commercial facilities where those goods or services are not directly related to the mission of the facility -- for example, food services, vending machines, etc." 55 Fed. Reg. 9326, 9329 (March 13, 1990). Proposed changes to the rule recently published in the Federal Register would eliminate the on-site requirement and "instead cover employees of contractors performing work directly related to the operation of programs and activities at DOE-owned or-leased sites, even if the contractor is located, or the work is performed, off-site. An example would be involved in the preparation of environmental impact statements related to programs and activities on DOE-owned and-leased sites." 63 Fed. Reg. 374. (Jan. 5, 1998).

(2)2/ According to a response to a comment in the preamble to the proposed changes to Part 708, "[t]he original rule contained time frame for complaint processing that were not realistic, and therefore led to dissatisfaction with the process. One primary goal of the proposed rule is to streamline, and therefore speed up, the complaint process. The proposed rule therefore has more realistic time frames, and in some cases, processing time frames have been removed where they cannot be estimated." 63 Fed. Reg. 374, 378. Under the proposed rule, for example, if the Deputy Inspector General for Inspections does not issue a report within 240 days, the complainant may request a hearing. Id. at 384.

DANIEL HOLSINGER, Complainant

v.

K-RAY SECURITY, INC., Respondent.

OHA Case No. LWA-0005, LWA-0009

DECISION REVERSING AND REMANDING INITIAL AGENCY DECISION

This is a request for review by K-Ray Security, Inc., from the Initial Agency Decision by the Office of Hearings and Appeals ("OHA"), finding that reinstatement of Mr. Holsinger as a security guard is a necessary and appropriate action to effect full relief for a retaliatory termination made by the previous security contractor, Watkins Security Agency, Inc., ("WSA"). Based upon my review of the regulatory language, the relevant case law, and the entire record, I conclude that OHA's decision is incorrect.

Mr. Holsinger filed a complaint with the Office of Contractor Employee Protection ("OCEP") on October 7, 1994. R. 103-106. He alleged that he had made protected disclosures when he told his captain that another employee was removing items in five-gallon buckets covered with rags, and that it may have been DOE property. Mr. Holsinger also alleged that he contacted DOE's contracting officer to report the possible thefts. In addition, on August 31, 1994, complainant sent an anonymous letter to DOE reporting the alleged thefts, and alleging that WSA management had not responded to his earlier allegations. The reprisals alleged by Mr. Holsinger included a one-day suspension on September 2, 1994, his prospective rescheduling to the midnight guard shift on September 19, 1994, a three-day suspension on September 19, 1994, and another three-day suspension on September 29, 1994, which resulted in Mr. Holsinger's termination effective October 2, 1994, under WSA's "three-strike" policy. R. 855.

Two of Mr. Holsinger's suspensions were for excessive personal use of the telephone. R. 857-858. OCEP found insufficient evidence to support his reprisal claims concerning these incidents and concluded that the suspensions were justified. R. 022, 033, 858. Although OCEP expressed "concern" that the complainant's allegations of reprisal primarily involve "matters that are normally dealt with as minor workplace concerns (e.g. telephone calls, coffee drinking restrictions)," and further noted that there is "significant evidence in the record indicating that Mr. Holsinger engaged in activities that might have justified the termination of his employment" (R. 035), OCEP ultimately concluded that a reprisal for a protected act had occurred, finding that complainant's anonymous letter "contributed to the actions leading to [his] September 20, 1994 suspension * * * for failure to follow instructions." R. 034.

Mr. Holsinger's complaint sought back pay and benefits and reinstatement from WSA. R. 105. However, while his complaint was pending, K-Ray took over the security function at METC. R. 011. OCEP proposed that WSA pay Holsinger back pay and benefits and that K-Ray reinstate him based on its assessment that, absent the termination, Holsinger would have been hired automatically by K-Ray. R. 035.

Following the issuance of OCEP's investigatory report, complainant, WSA, and K-Ray all requested a hearing before OHA pursuant to 10 C.F.R. 708.9(a). Prior to the hearing, WSA and Mr. Holsinger entered a settlement agreement which satisfied the proposed requirement that WSA pay Mr. Holsinger back pay and benefits. Consequently, WSA was dismissed as a party. R. 859.

In the OHA proceedings, K-Ray did not challenge the factual findings that Mr. Holsinger had made protected disclosures, or that WSA had violated 10 C.F.R. Part 708, since "it was not in a position to either agree or disagree with the analysis, because it had no involvement nor knowledge of any such activities or actions." R. 859. Accordingly, on the basis of the OCEP investigation, OHA affirmed OCEP's finding that Mr. Holsinger's anonymous letter of August 31, 1994, constituted a protected disclosure and that a

violation of Part 708 occurred when WSA suspended Mr. Holsinger for three days on September 19, 1994, and terminated him on October 2, 1994. R. 867.

While not addressing the complainant's underlying dispute with WSA, K-Ray objected to OCEP's proposal that K-Ray be required to reinstate the complainant. K-Ray argued that such a remedy would create an unwarranted hardship on K-Ray and require it to terminate an existing employee. R. 859. However, OHA found that reinstatement of Mr. Holsinger was necessary to restore him to the position he would have occupied absent the acts of reprisal by WSA. R. 872. OHA reasoned that Mr. Holsinger would have been hired by K-Ray, since all thirteen of the other WSA security personnel were hired by K-Ray when it assumed the contract in June 1995.

Reinstatement is an equitable remedy, and we agree with OHA that reinstatement, even by a successor employer, may be ordered if the circumstances warrant it. With any equitable remedy, however, an adjudicator "must draw on the ?qualities of mercy and practicality [that] have made equity the instrument for nice adjustment and reconciliation between the public interest and private needs as well as between competing private claims.'" *Teamsters v. United States*, 431 U.S. 324, 375 (1977) [quoting *Hecht Co. v. Bowles*, 321 U.S. 321, 329-330 (1944)]. "Especially when * * * an equitable remedy threatens to impinge upon the expectations of innocent parties, the [adjudicator] must "look to the practical realities and necessities inescapably involved in reconciling competing interests," in order to determine the "special blend of what is necessary, what is fair, and what is workable.'" *Ibid. [quoting Lemon v. Kurtzman*, 411 U.S. 192, 200-201 (1973) (plurality opinion of Burger, C.J.)].

In this case, however, OHA failed to conduct a full assessment of the equities. It is undisputed that K-Ray was not the security contractor at the time the alleged retaliatory acts occurred; nor is K-Ray alleged to have committed any violation of Part 708. Instead, OHA's order requiring K-Ray to reinstate the complainant is predicated on a simple finding that "reinstatement is necessary and appropriate because it is reasonable to conclude that Holsinger would have been hired by K-Ray along with all of the other WSA security personnel at METC if he had been an employee of WSA at the time K-Ray hired its security personnel." R. 871-872.

OHA overlooked the undisputed record evidence showing the substantial hardship reinstatement would cause the contractor and innocent third parties. DOE's contracting officer testified without contradiction that under the fixed price contract complainant's reinstatement would require the discharge of one of the twelve security personnel currently on K-Ray's staff. R. 752. This testimony was confirmed by the fact that, following the resignation of one part-time guard (*i.e.*, the original thirteenth employee) after K-Ray's assumption of the contract, DOE's contracting officer advised K-Ray that, due to budget concerns, DOE would not permit the contractor to hire a replacement employee. R. 746-747. K-Ray's president provided additional uncontradicted testimony that complainant's reinstatement would require the company to lay off an existing employee. R. 759. Not only was this evidence uncontradicted in the record, but it was specifically credited by the complainant's own acknowledgment that his reinstatement would require the discharge of another employee. R. 785.

The uncontradicted record on this point is especially significant given OHA's own prior recognition that reinstatement is a "disfavored remedy" when it would "require the displacement of an innocent employee." *Boeing Petroleum Services, Inc.*, 24 DOE ¶87,501 at p. 89,007, citing *Edwards v. Department of Corrections*, 615 F. Supp. 804, 811 (M.D. Ala. 1985). In the instant case, OHA provided no explanation for the Hearing Officer's decision to disregard OHA's precedent. Nor did OHA explain on what basis it could ignore the undisputed record showing that existing employees would be adversely impacted by the complainant's reinstatement. Accordingly, I conclude that OHA's order requiring K-Ray to reinstate the complainant fails properly to consider the equities. Therefore, OHA's decision is reversed and this matter remanded with instructions to OHA to conduct a full assessment of the equities, consistent with the evidence of record.(1)

Charles B. Curtis

Deputy Secretary

(1) Because K-Ray did not address the merits of complainant's dispute with WSA, OHA's findings of reprisal were based solely on its review of the OCEP investigation. As noted, OCEP expressed "concerns" about the substance of the issues presented and the fact that the complainant's conduct may well have justified his termination. Under the circumstances, former Deputy Secretary White's caution that the whistleblower regulations must not be read to "encompass all disagreements between a contractor and its employees" seems particularly apt. *Mehta v. Universities Research Assoc.*, OHA Case No. LWA-0003, LWZ-0023 (1995), slip op. at 6. Thus, although OHA has been prevented from reviewing the merits of the underlying dispute between the complainant and WSA due to the settlement in this case, in weighing the equities of a reinstatement remedy on remand OHA should consider, in addition to the matters described above, that "there must be some assessment as to whether the nature of the disagreement evidences the type of disclosure of mismanagement that the regulation was designed to protect, * * * granting appropriate deference to traditional management prerogatives needed to conduct an organization through teamwork." *Ibid.*

HOWARD W. SPALETTA, Complainant

v.

EG&G IDAHO, INC., Respondent.

OHA Case No. LWA-0010

FINAL DECISION AND ORDER

This is an appeal by complainant Howard W. Spaletta from the Initial Agency Decision by the Office of Hearings and Appeals ("OHA") finding that the complainant, an engineer formerly employed by EG&G Idaho, Inc. (EG&G), previously the DOE's management and operating contractor at the Idaho National Engineering Laboratory (INEL), had established by a preponderance of the evidence that he suffered reprisal as a result of his protected safety disclosures, and ordering back pay and other remedial actions. However, OHA declined to grant the complainant certain further relief that he sought, and rejected his claim that his acceptance of an offer of early retirement constituted a constructive termination.

1. As a preliminary matter, the timeliness of the complainant's appeal must be addressed. 10 C.F.R. § 708.10(c)(2) provides that the Initial Agency Decision "shall become the final decision of DOE unless, within five calendar days of its receipt, a written request is filed with the Director [of the Office of Contractor Employee Protection] for review by the Secretary or designee." In the instant case, the complainant received the Initial Agency Decision by certified mail on January 12, 1995. The letter transmitting the Initial Agency Decision advised both parties of the five day appeal period.

The complainant's request for review was sent to the Director by facsimile on January 26, 1995. The request did not address the complainant's failure to submit his request for review within the time required by the regulation, and the complainant failed to respond to this issue in his reply to the respondent's brief. Absent a showing of good cause for late filing of the complainant's request for review, the request must be dismissed as untimely.

2. Notwithstanding the fact that the complainant's request for review was untimely, I have nevertheless reviewed the portions of the record relevant to the two issues raised by the complainant on appeal. The first concerns OHA's denial of the complainant's request that a November 1987 final report of EG&G's Weld Evaluation Project regarding the Tennessee Valley Authority's Watts Bar Lake Nuclear Power Plant be formally withdrawn. The Initial Agency Decision concluded that such relief was beyond the scope of the "whistleblower" regulation.

The "whistleblower" regulation provides that, based on a determination that a DOE contractor violated the prohibitions against reprisal contained in subsection 708.5, specific individual relief, including reinstatement and back pay, may be provided to the complainant. See 10 C.F.R. §§ 708.10(c) and 708.11(c). The regulation is designed to protect employees from adverse actions taken in reprisal for protected disclosures, not to provide corrective action with respect to the underlying substance of such disclosures. Therefore, the Hearing Officer correctly determined that the relief requested by the complainant was outside the scope of relief provided by the "whistleblower" regulation.

Second, the complainant challenges OHA's determination that he failed to establish that he was constructively discharged by his employer. OHA rejected this claim, finding that the complainant failed to submit this claim until relatively late in the proceeding, and then submitted no evidence in support of the claim.

The complainant's challenge to OHA's factual determination that he voluntarily accepted early retirement

should be overturned only if that determination was "clearly erroneous." See, e.g., Pullman Standard v. Swint, 456 U.S. 273 (1982); Amadeo v. Zant, 486 U.S. 214, 223 (1988), quoting Federal Rule of Civil Procedure 52(a). Measured against this standard, my review of the record shows no basis for overturning OHA's finding that the complainant was not constructively discharged from his employment with EG&G.

For the reasons set forth above, the Initial Agency Decision is hereby affirmed and adopted as the Final Agency Decision in this case. The Office of Hearings and Appeals is directed to issue a Supplemental Order specifying the amount of damages to be awarded to the complainant.

Dated: June 28, 1995

William H. White

Deputy Secretary

United States Department of Energy

Ronny J. Escamilla v. Systems Engineering & Management Associates, Inc.;

Case No. **VWA-0012**

Final Decision and Order Issued by the Deputy Secretary of Energy

Issued April 18, 1997

This is an appeal by complainant Ronny J. Escamilla from the Initial Agency Decision by the Office of Hearings and Appeals ("OHA") finding that the complainant, a computer scientist formerly employed by Systems Engineering & Management, Inc. ("SEMA"), a subcontractor of EG&G Rocky Flats, Inc., the Department of Energy ("DOE") management and operating contractor at its Rocky Flats facility, had failed to establish by a preponderance of the evidence that his employment was terminated in retaliation for alleged disclosures of waste and mismanagement. OHA found further that, while the complainant's communication to SEMA management that he had filed a complaint pursuant to 10 C.F.R. Part 708 constituted a protected disclosure, SEMA had proven, by clear and convincing evidence, that it would have terminated complainant despite such disclosure.

On appeal, the complainant challenges OHA's determination that he failed to meet his burden of establishing that he made protected disclosures of waste and mismanagement, and that such disclosures contributed to his termination. Further, the complainant asserts that he made safety disclosures to SEMA that were not considered by the OHA Hearing Officer.

1. On appeal, OHA's factual determinations are to be overturned only if they are "clearly erroneous." See, e.g., Oglesbee v. Westinghouse Hanford Company, 25 DOE ¶87,501, 89,001 (April 14, 1995); O'Laughlin v. Boeing Petroleum Services, Inc., 24 DOE ¶ 87,513, 89,064 (January 31, 1995). Measured against this standard, my review of the record shows no basis for overturning OHA's finding that the complainant's disagreements with SEMA management regarding the computer system did not rise to the level of protected disclosures of waste or mismanagement under Part 708. See Mehta v. Universities Ass'n, 24 DOE ¶ 87,514 (1995). Further, the record clearly supports OHA's determination that SEMA met its burden of establishing, by clear and convincing evidence, that it would have terminated complainant's employment based upon poor performance irrespective of his filing of a Part 708 complaint.
2. With respect to the complainant's assertion that he made safety disclosures to SEMA management that were not considered by the OHA Hearing Officer, the record well supports the Hearing Officer's decision to discredit the complainant's testimony that he raised concerns regarding the safety of the computer system with SEMA management.

For the reasons set forth above, the Initial Agency Decision is hereby affirmed and adopted as the Final Agency Decision in this case.

Barry Stutts, Complainant v. Am-Pro Protective Agency, Inc., Respondent, OHA Case No. VWA-0015

DECISION DENYING REVIEW OF INITIAL AGENCY DECISION

This is a request for review by Complainant Barry Stutts, from the Initial Agency Decision by the Office of Hearings and Appeals ("OHA"), finding that reinstatement of Mr. Stutts as a security guard is a necessary and appropriate action to effect full relief for a retaliatory termination made by the previous security contractor at Forrestal and Germantown, Am-Pro Protective Agency, Inc. Based upon my review of the regulatory language, the relevant case law, and the entire record, I conclude that this request should be denied.

In his complaint filed with the Office of Contractor Employee Protection ("OCEP"), Mr. Stutts alleged that he had made protected disclosures when he and another officer (who did not file a complaint) reported two supervisors, including his own, for not writing an incident report concerning a top secret safe Complainant and his fellow officer had found open and that Am-Pro thereafter engaged in retaliatory actions against them culminating in Stutt's discharge. Am-Pro did not dispute that Stutts made a protected disclosure, but rather urged that he and his co-worker would have been discharged in any case for other reasons. OCEP concluded that Complainant's discharge had been in reprisal for his protected disclosure, and Am-Pro requested a hearing before OHA.

After a hearing, OHA concluded, in a fact-bound analysis involving credibility assessments, that Complainant had shown that his discharge was at least partially in reprisal for his protected disclosure and that Am-Pro had not shown that Complainant would have been discharged in the absence of the disclosures. lAD at pp. 7-17. However, although OHA awarded reinstatement and back pay, it postponed decision on the amount of back pay to permit briefing on whether other earnings should be subtracted and other expenses should be added to Complainant's entitlement. ld.at 17-19.

In the meantime, Am-Pro filed a bankruptcy petition and sought relief under the automatic stay provisions of the Bankruptcy Code. Although OHA was in doubt whether the automatic stay provisions applied to forbid issuance of its decision. OHA's decision (signed on June 13, 1997) was not issued until September 30, 1997. See Memorandum of September 30, 1997, from Janet N. Freimuth to Sandra L. Schneider and lAD at 1-2. By then, Am-Pro was dissolved, the bankruptcy case was dismissed, and a new contractor was providing security services at Forrestal and Germantown. Thus, Complainant is seeking to have the relief he was awarded charged against the successor contractor. This issue was not examined by OHA. However, in light of the time that has passed since OHA's decision and in the interest of concluding this matter, I have proceeded to .review his request.

As recognized in the recent decision of Holsinger v. K-Ray Security. Inc., 26 DOE ¶ 87,506 (l996)(decision of Deputy Secretary), reinstatement is provided for by the regulations in order to remedy a violation of Part 708. 10 C.F.R. 708.10 (c) /1 expressly provides:

> The initial agency decision may include an award of reinstatement, transfer, preference, back pay, and reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses * **

See also 10 C.F.R. 708.11(c) ("Relief ordered * * * may include reinstatement"). However, it is important to remember that, unlike the Department of Labor, the Department of Energy ("DOE") has no statutory regulatory power with respect to contractor employees engaging in "whistleblowing." Rather, Part 708 is premised entirely upon the contractual relationships between DOE and its contractors.

Reinstatement is an equitable remedy, and, as with any equitable remedy, an adjudicator "must draw on the 'qualities of mercy and practicality [that] have made equity the instrument for nice adjustment and

reconciliation between the public interest and private needs as well as between competing private claims." Teamsters v. United States, 431 U.S. 324, 375 (1977) [quoting Hecht Co. v. Bowles, 321 U.S. 321, 329-330 (1944)]. "Especially when * * * an equitable remedy threatens to impinge upon the expectations of innocent parties, the [adjudicator] must 'look to the practical realities and necessities inescapably involved in reconciling competing interests,' in order to determine the 'special blend of what is necessary, what is fair, and what is workable." Ibid. [quoting Lemon v. Kurtzman, 411 U.S. 192, 200-201 (I973)(plurality opinion of Burger, C.J.)].

Based upon these principles, it was determined in Boeing Petroleum Services. Inc., 24 DOE ¶87,501 at p. 89,007 (1994), that reinstatement generally is not "an appropriate remedy under Part 708 where * * * there is a new M&O contractor that has no connection with the firm actually employing the complainant or the circumstances surrounding the discharge of the complainant, and the retention of employees by the new contractor is not directly influenced by the former contractor but merely a condition of assuming the M&O contract." Rather, the normal rule is that a wrongfully discharged contractor employee is not entitled to relief for the period after the contract under which he is employed is terminated. Id. at p. 89,006-89,007, citing Holley v. Northrop Worldwide Aircraft Services. Inc., 835 F.2d 1375 (11th Cir. 1988), and Blackburn v. Martin, 982 F.2d 125 (4th Cir. 1992). These principles were recently re-affirmed in Holsinger v. K-Ray Security. Inc., 26 DOE ¶ 87,506 (1996)(decision of Deputy Secretary).

In this case, moreover, the problem of providing relief to Stutts is compounded, since, unlike the complainants in Boeing and Holsinger above, Stutts is seeking not merely to impose the reinstatement obligation, but also the back pay obligation on the successor contractor. Although Stutts is apparently unable to collect back pay from Am-Pro in light of its bankruptcy and dissolution, that does not justify imposing the back pay liability on Am-Pro's innocent successor.

Accordingly, the request for review is denied.

T. J. Glauthier

Deputy Secretary

Issued: January 19 2000

/1 DOE recently issued an Interim Final Rule amending Part 708 which became effective April 14, 1999. 64 Fed. Reg. 12,862 (March 15, 1999). Relief available is now outlined in 10 C.F.R. 708.36 in the Interim Final Rule. 64 Fed. Reg. 12862, 12875 (March 15, 1999). The decision in this case is unaffected by the changes in the Interim Final Rule.

Thomas T. Tiller v. Wackenhut Services, Inc.; Washington, D.C. Case No. VWA-0018

Final Decision and Order Issued by the Deputy Secretary of Energy

Issued February 2, 1999

* The original of this document contains information which is subject to withholding from disclosure under 5 U.S.C. 552. Such material has been deleted from this copy and replaced with XXXXXXX's.

This is a request for review by complainant Thomas T. Tiller of an Initial Agency Decision, issued by the Office of Hearings and Appeals (OHA), denying the two reprisal complaints that he filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program. Mr. Tiller was employed by Wackenhut Services, Inc. (Wackenhut), a DOE contractor that provides paramilitary security support services at DOE's Savannah River Site in Aiken, South Carolina.

Background

In 1992, Mr. Tiller became Labor Relations Manager for Wackenhut at DOE's Savannah River Site. In that position, he served as a member of the management team that negotiated contracts with Wackenhut's guard union. In August 1993, Mr. Tiller encountered financial difficulties, and asked the local representative of the guard union for a loan of $900. The union representative's wife advanced the $900 loan to Mr. Tiller interest-free, and Mr. Tiller's wife repaid the loan two weeks later. Initial Agency Decision at 3.

Before asking for the loan, Mr. Tiller had executed a Conflict of Interest Statement for Wackenhut, in which he certified that neither he, nor any immediate family member, had engaged, directly or indirectly, in any activity which created a conflict of interest; that he had read Wackenhut's Conflict of Interest Policy; and that he would immediately disclose any situation in the future that may possibly be interpreted as involving a Conflict of Interest. Among the examples cited in the Conflict of Interest Policy as activities constituting a conflict of interest is a loan to or from any person or organization having any dealing with the Company. Initial Agency Decision at 2-3.

Senior Wackenhut managers first learned of Mr. Tiller's loan in October 1993, during contract negotiations between Wackenhut and the guard union. When two of Mr. Tiller's fellow members on the contract negotiating team confronted him about the loan on or about October 12, 1993, he confirmed that he had solicited and accepted the loan. Shortly thereafter, Wackenhut management removed Mr. Tiller from the negotiating team; orally advised him that he had compromised his position and damaged his credibility; and responded affirmatively when Mr. Tiller asked whether he could be terminated for accepting the loan. Initial Agency Decision at 3.

Mr. Tiller asked why Wackenhut would punish him so harshly, when XXXXXXXXXX- who was Wackenhut's XXXXXXXXX at the Savannah River Site -had done something worse without any apparent adverse repercussion. Specifically, Mr. Tiller alleged that XXXXXXX had accepted stolen telephone wire, and free installation of that wire in his house, from the same union representative who had loaned the $900 to Mr. Tiller. Initial Agency Decision at 3; Exhibit 9 [OHA Administrative Record (A.R.) Vol. I, at 129-54].

After Mr. Tiller's admission that he had accepted the $900 loan, some Wackenhut managers argued that his employment should be terminated, which was an action sanctioned by Wackenhut's Conflict of Interest Policy. However, one Wackenhut manager persuaded the others that Mr. Tiller should be given a second chance with another division of the company. That manager was XXXXXXXXXX., who was at that time

Wackenhut's XXXXXXXXXXXXXXXX at the Savannah River Site and XXXXXXXXXX. Initial Agency Decision at 4; Transcript (Tr.) at 192+n-94 [A.R. Vol. III, at 1198 - 1200].

Accordingly, in a memorandum dated October 25, 1993, Wackenhut informed Mr. Tiller that he was being removed from his position as Labor Relations Manager because he had violated Wackenhut's Conflict of Interest Policy; that Wackenhut would offer him placement in the position of Personnel Security Supervisor, which had a salary less than that of the position from which he was being removed; that if Mr. Tiller accepted the new position, he would retain his higher salary for a period of one year, after which it would be adjusted downward; and that if he chose to decline the company's offer of reassignment, his employment would be terminated immediately. Mr. Tiller accepted the offer in writing. Initial Agency Decision at 4.

On August 31, 1994, ten months after accepting his reassignment to his new position, Mr. Tiller filed his first reprisal complaint. He alleged that Wackenhut demoted him from Labor Relations Manager to Personnel Security Supervisor in retaliation for his disclosing that XXXXXXX had accepted stolen telephone wire and free installation of that wire from the local union representative. On April 18, 1996, Mr. Tiller filed his second reprisal complaint, in which he alleged that Wackenhut initiated several adverse personnel actions against him in retaliation for filing his first complaint.Initial Agency Decision at 5 - 6.

The Office of Inspector General (OIG) conducted an extensive investigation of Mr. Tiller's two complaints, and issued a Report of Inquiry and Proposed Disposition (Report) on September 30, 1997. A.R. Vol. I, at 3 - 61. With respect to his first complaint, the Report concluded that Mr. Tiller had proven by a preponderance of the evidence that he had made a protected disclosure concerning XXXXXXXXXX's alleged receipt of telephone wire and its installation, but that he had failed to prove that his protected disclosure was a contributing factor to his demotion. Rather, the Report found that Mr. Tiller's solicitation and acceptance of the loan from the union representative were the reasons for his demotion. With respect to his second complaint, the Report concluded that Mr. Tiller had proven by a preponderance of the evidence that he had participated in a protected activity by filing his first reprisal complaint, but that he had failed to prove that his first complaint was a contributing factor to any of the alleged adverse actions taken against him. The Report therefore recommended that his request for relief be denied. Report at 58 - 59.

After his receipt of the Report, Mr. Tiller requested a hearing before OHA, pursuant to 10 C.F.R. 708.9(a). On February 24 and 25, 1998, OHA convened a 22-hour hearing in Aiken, South Carolina, at which the testimony of 33 witnesses was presented. Mr. Tiller, who was represented by counsel, and Wackenhut each submitted pre-hearing and post-hearing briefs. On May 21, 1998, OHA issued an Initial Agency Decision in which it denied Mr. Tiller's request for relief.

Subsection 708.10(c)(1) provides, in pertinent part, as follows:

If the initial agency decision contains a determination that the complaint is without merit, it shall also include a notice stating that the decision shall become the final decision of DOE denying the complaint unless, *within five calendar days of its receipt*, a written request is filed with the Director for review by the Secretary or designee. (emphasis added)

In compliance with that subsection, the Initial Agency Decision that was issued to Mr. Tiller included the following notice:

This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, *within five days of its receipt*, a written request for review of this Decision by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments, Office of the Inspector General, Department of Energy. (emphasis added)

Initial Agency Decision at 19.

On May 26, 1998, the Acting Deputy Inspector General for Inspections mailed a copy of the Initial Agency Decision to Samuel Cruse, who is counsel for Mr. Tiller, by certified mail. Attachment 2. The return receipt indicates that Mr. Cruse received the Initial Agency Decision, but the date of delivery written on the receipt is not clearly legible. Attachment 4. However, it is clear that Mr. Cruse received the Initial Agency Decision no later than June 6, 1998, because that is the date he typed on his one-page request for review of that decision. Attachment 3. DOE received his request for review on June 15, 1998. Attachment 3. In that letter, Mr. Cruse merely stated that because he "was involved in a long hard trial and due to the short time given, the complainant was not notified of this decision in the time frame required," and asked DOE to accept his letter as his request for review. Mr. Cruse's letter contained no objections or arguments concerning the merits of the Initial Agency Decision.

Mr. Tiller himself sent DOE a separate two-page letter, dated June 14, 1998, in which he made two specific objections to the Initial Agency Decision. First, he complained that during the OIG's investigation, XXXXXXXXXX was never formally interviewed. XXXXXXXXX was a former XXXXXXXXXXXXXXXX at Wackenhut, and had been Mr. Tiller's XXXXXXX. Mr. Tiller admitted that XXXXXXXX later testified during the OHA hearing, but Mr. Tiller accused OHA of failing to consider XXXXXXXXXX's testimony that XXXXXXXXXXXX had knowledge of XXXXXXXXXXs alleged conflict of interest.

Second, Mr. Tiller accused XXXXXXXX of misrepresenting the truth when he testified that he had no notice of the Part 708 disclosure prior to the time indicated in his sworn statement. XXXXXXXX was XXXXXXXXXXXX, and had preceded XXXXXXX as Wackenhut's XXXXXXXXXXXXX at the Savannah River Site.

Mr. Tiller enclosed two documents with his letter. His first enclosure was a copy of Mr. Cruse's one-page request for review, dated June 6, 1998 and described above. His second enclosure was a copy of a five-page section, entitled "Hearing," from a post-hearing brief that Mr. Cruse had first filed on his behalf with OHA on March 12, 1998. That post-hearing brief was part of the record which OHA reviewed before issuing its Initial Agency Decision. See A.R. Vol. V, at 1750, 1754 - 58.

Analysis

Subsection 708.9(d) sets forth the parties' respective evidentiary burdens in an OHA proceeding under Part 708:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

Concerning Mr. Tiller's first complaint, OHA found in its Initial Agency Decision that Mr. Tiller had established that his allegation regarding XXXXXXXX's conduct was a protected agency disclosure. In making that finding, OHA stated that whether Mr. Tiller's beliefs were factually accurate is irrelevant for purposes of Part 708; rather, the focus is on whether Mr. Tiller had a "good faith belief" that XXXXXX's conduct violated a law, rule, or regulation. OHA noted that the suggestion of Mr. Tiller's gullibility only serves to reinforce the view that he earnestly believed the information he conveyed concerning XXXXXX. Initial Agency Decision at 7- 9.

OHA also found that Mr. Tiller had established a prima facie case that his protected disclosure on or about October 12, 1993 was a contributing factor to his demotion and reassignment on October 25, 1993, solely because, as a matter of law, the temporal proximity between his protected disclosure and his demotion and reassignment was sufficient to establish a prima facie case. OHA stated that although there is conflicting testimony as to how many Wackenhut senior officials knew of Mr. Tiller's disclosure, it is clear that at

least one of them -XXXXXXXXX - had actual knowledge of Mr. Tiller's disclosure. XXXXXXXX was the XXXXXXXX to whom Mr. Tiller made his disclosure around October 12, 1993. He was also the same manager who persuaded the others to reassign Mr. Tiller instead of firing him. Initial Agency Decision at 9; Tr. at 17 - 77, 190 - 94 [A.R. Vol. III, at 1182 - 83, 1196 - 200].

Pursuant to subsection 708.9(d), the burden then shifted to Wackenhut to prove by clear and convincing evidence that it would have demoted and reassigned Mr. Tiller absent his protected disclosure. OHA found that Wackenhut had met its burden. Immediately after Mr. Tiller admitted that he had solicited and accepted the loan from the union representative, but *before* he made his protected disclosure, a Wackenhut manager told Mr. Tiller that he could be terminated for having solicited and accepted the loan. Initial Agency Decision at 10; Report at 17. Wackenhut would have been justified in terminating him for violating the company's Conflict of Interest Policy; instead, it reassigned him to the only other position that was available at the time. OHA found that there is absolutely nothing in the record to suggest that Wackenhut reassigned Mr. Tiller in retaliation for his protected disclosure, and denied his first complaint. Initial Agency Decision at 9 - 10, 18.

Concerning Mr. Tiller's second complaint, OHA found that Mr. Tiller had demonstrated by a preponderance of the evidence that he participated in a protected activity when he filed his first complaint, and that his first complaint was a contributing factor to several adverse personnel actions against him because of "temporal proximity," but that Wackenhut had proven by clear and convincing evidence that it had independent justification for those adverse personnel actions+m-including "overwhelming evidence that Tiller's performance in the Personnel Security Program was deficient in many respects" (Initial Agency Decision at 14) - and that it would have taken those personnel actions even if Mr. Tiller had not filed his first complaint. OHA therefore denied his second complaint. Initial Agency Decision at 11 - 18.

In Mr. Tiller's letter dated June 14, 1998, which we will consider as a request for review, both of his specific objections concern an issue that OHA decided in his favor: whether Wackenhut officials - specifically, XXXXXXXX and XXXXXX- had knowledge of his protected disclosure concerning XXXXXXXXX's alleged conflict of interest. Mr. Tiller correctly noted that there was conflicting testimony on that issue. However, OHA ultimately decided the issue in Mr. Tiller's favor:

While there is conflicting testimony in the record as to how many Wackenhut senior officials knew of Tiller's protected disclosure, it is clear that at least one Wackenhut manager had actual knowledge of Tiller's disclosure. That manager is the one to whom Tiller made the disclosure around October 12, 1993, and is the same manager who persuaded others at Wackenhut to reassign Tiller instead of firing him.

Based on the foregoing, I find Tiller has established a prima facie case that his protected disclosure was a contributing factor to his demotion and reassignment.

Initial Agency Decision at 9. XXXXXXXX is the Wackenhut manager to whom OHA refers. *See* Tr. at 176 - 77, 190 - 94 [A.R. Vol. III, at 1182 - 83, 1196 - 200], *cited in* Initial Agency Decision at 3 - 4. As explained above, the reason that OHA denied Mr. Tiller's first complaint was *not* that it found that Wackenhut officials lacked knowledge of Mr. Tiller's disclosure concerning XXXXXXXXX's alleged conflict of interest, but rather that OHA found that Wackenhut had proven by clear and convincing evidence that it would have demoted and reassigned Mr. Tiller absent his disclosure, because of Mr. Tiller's own admitted conflict of interest.

Because the two specific objections in Mr. Tiller's request for review concern an issue that OHA decided in his favor, those objections do not constitute a basis for reversing OHA's Initial Agency Decision.

Mr. Tiller also made the general objection, without any reference to the record, that the entire investigation has taken over four years and that DOE has allowed Wackenhut "to utilize every effort to single out the issues which I brought to your attention." Request for review at 1. In fact, the record indicates that OHA conducted the proceedings in accordance with the applicable regulations in subsection 708.9. Pursuant to those regulations, OHA allowed Mr. Tiller and his counsel, as well as Wackenhut, the opportunity to

address the issues which the other party brought to OHA's attention.

Of the two enclosures to Mr. Tiller's request for review, the first is a copy of his counsel's request for review, which contains no objections or arguments concerning the merits of the Initial Agency Decision, and therefore does not present any basis for reversing that decision. The second enclosure is merely a re-submission of five pages from a post-hearing brief that Mr. Tiller had first submitted to OHA before it issued its Initial Agency Decision, and that OHA had already reviewed before it issued that decision. *See* Initial Agency Decision at 2, 7; A.R. Vol. V, at 1750, 1754 - 58.

Factual findings by OHA will be reversed only upon a showing that they are clearly erroneous, giving due regard to OHA as the trier of fact to judge the credibility of witnesses. *Oglesbee v. Westinghouse Hanford Co.*, 25 DOE ¶ 87,501, 89,001 (Apr. 14, 1995); *O'Laughlin v. Boeing Petroleum Services, Inc.*, 24 DOE ¶ 87,513, 89,064 (Jan. 31, 1995). Mr. Tiller has failed to present any evidence that OHA's findings on the issues he first raised in his post-hearing brief are clearly erroneous.

Finally, we note that Mr. Tiller's and Mr. Cruse's requests for review were both untimely. Subsection 708.10(c)(1) required a request for review to be filed within five calendar days of receipt of the Initial Agency Decision. Mr. Cruse, as Mr. Tiller's counsel, received the decision no later than June 6, 1998, the date he typed on his request for review. Mr. Cruse's request for review was filed on June 15, 1998; Mr. Tiller's request for review was dated June 14, 1998. Therefore, Mr. Cruse's request for review was not filed within the time required, and Mr. Tiller's request for review was not even dated within the time required for it to be filed.(1)

For the foregoing reasons, the dismissal of Mr. Tiller's two complaints is affirmed.

Ernest J. Moniz

Deputy Secretary

(1)The content of Mr. Cruse's request for review indicates that he probably received the Initial Agency Decision on some date earlier than June 6, 1998, the date he typed on his request. He admitted in his request that he had failed to notify his client, Mr. Tiller, within the time required. Because that time *i began *r to run on the date of Mr. Cruse's receipt, Mr. Cruse's admission indicates that before the date he typed on his request, he had received the decision and the required time period had passed. In that event, Mr. Cruse's request, as well as Mr. Tiller's request, would have been even more untimely. However, even if all doubts are resolved in Mr. Cruse's favor, and it is assumed that he received the decision on the latest possible date of June 6, 1998, his request and Mr. Tiller's request were still untimely, as explained above.

Fouad Abdo v. Bechtel Savannah River, Inc. (Case No. SR--94--0002)

Final Decision and Order Issued by the Deputy Secretary

Issued June 28, 1995

This is an appeal by complainant Fouad Abdo of adecision by the Office of contractor Employee Protection (OCEP) dismissing his complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Mr. Abdo filed a complaint with OCEP alleging that his employment with Bechtel Savannah River, Inc. (BSRI), a Department of Energy management and operating contractor, was terminated in retaliation for his allegations of fraud, mismanagement, gross waste of funds, and abuse of authority by his supervisors.

On appeal, Mr. Abdo takes issue with OCEP's decision dismissing his complaint for lack of jurisdiction. However, 10 C.F.R. Part 708 does not apply to complaints involving alleged acts of reprisal where such acts occur prior to the adoption or amendment of a contract requiring compliance with Part 708 and, as in the instant case, the alleged reprisal does not stem from health or safety disclosures, participation or refusals. See 10 C.F.R. Sec. 708.2(e); see also Final Decision and Order in *Mehta v. Universities Research Association* (OHA Case No. LWA--0003, March 20, 1995). The alleged acts of reprisal raised in the complaint here occurred prior to the April 6, 1994, effective date of the amendment to BSRI's contract requiring compliance with Part 708. Therefore, OCEP correctly determined that it lacked jurisdiction over the allegations raised in Mr. Abdo's complaint.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

William H. White

Deputy Secretary

Issued: June 28, 1995

Edna R. Blier v. Oak Ridge Associated Universities (Case No. OR--94--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued August 13, 1996

This is an appeal by complainant Edna R. Blier of an Initial Agency Decision by the Office of Contractor Employee Protection ("OCEP"). In the Initial Agency Decision, OCEP concluded that complainant made disclosures protected under Part 708. However, OCEP found that she had failed to establish that her complaints contributed to any alleged retaliatory action against her by the respondent and that, by a preponderance of the evidence, her disclosures did not contribute to the alleged retaliatory actions.

On appeal, OCEP's factual determinations are subject to being reversed only if they are clearly erroneous. Compare Pullman Standard v. Swint, 456 U.S. 273 (1982), with Amadeo v. Zant, 486 U.S. 214, 223 (1988), quoting Fed. R. Civ. P. 52(a). A review of the record and the materials submitted in support of the appeal confirms that complainant has failed to demonstrate that any protected disclosures resulted in prohibited reprisals being taken against her and that OCEP's contrary findings are "clearly erroneous."

Complainant appeals from OCEP's refusal to suspend her case pursuant to Section 708.6(a) after the proposed decision and order were issued and until her state EEO proceedings were concluded. However, OCEP correctly denied her request, since this regulatory provision is only applicable to duplicative "whistleblower" proceedings under state or other applicable law. See "Criteria and Procedures for DOE Contractor Employee Protection Program," 57 Fed. Reg: 7533, 7538 (Mar. 3, 1992).

Accordingly, there is no basis for overturning the Initial Agency Decision, and that decision is hereby adopted as the Final Agency Decision in this case.

Charles B. Curtis

Deputy Secretary

Issued Augsut 13, 1996

Eric T. Boettcher v. Southeastern Universities Research Association (Case No. OR--94--0002)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued February 1, 1996

This is an appeal by complainant Eric T. Boettcher from the Initial Agency Decision by the Office of Contractor Employee Protection ("OCEP") finding that the complainant, an employee of Southeastern Universities Research Association ("SURA"), the Department of Energy ("DOE") contractor at the Continuous Electron Beam Facility, had established by a preponderance of the evidence that his protected disclosures contributed to several retaliatory actions, and ordering SURA to take certain remedial actions and reimburse complainant for reasonable costs incurred in processing his complaint. However, OCEP also found that the complainant had failed to establish that certain other actions taken by SURA constituted reprisal. The complainant filed a timely request for review on July 14, 1995.

1. As a preliminary matter, this appeal does not challenge the findings and conclusions contained in the Initial Agency Decision. Instead, the appeal describes the complainant's concerns regarding the substance of his protected disclosures and his criticisms of the scope and operation of the provisions of Part 708. In his appeal, the complainant requests that his concerns be addressed and that various corrective measures be taken.

The "whistleblower" regulation provides that, based on a determination that a DOE contractor violated the prohibitions against reprisal contained in subsection 708.5, specific individual relief, including reinstatement and back pay, may be provided to the complainant. See

10 C.F.R. Secs. 708.10(c) and 708.11(c). The regulation is designed to protect employees from adverse actions taken in reprisal for protected disclosures, not to provide corrective action with respect to the underlying substance of such disclosures. Because the complainant does not appeal any of OCEP's finding and conclusions concerning his specific complaint, the relief requested by the complainant is determined to be outside the scope of relief provided by the regulation.

2. Notwithstanding the fact that the complainant's appeal seeks relief that is outside the scope of the regulation, I have reviewed his specific concerns relating to the OCEP program. In this regard, I note that several areas of concern raised by complainant's appeal have been raised previously by a public interest group, and that the Office of Contractor Employee Protection has indicated its commitment to improving the efficiency of its case-load processing.

As part of DOE's ongoing efforts to improve and more effectively administer the OCEP program, on October 17, 1994, the Department announced five new whistleblower initiatives, for which public comment was invited. See Office of Contractor Employee Protection; Availability of New Whistleblower Initiatives, 59 Fed. Reg. 59,769 (November 18, 1994). On August 4, 1995, the Secretary approved the following: (1) an enhanced Department of Energy Concerned Employees Program; (2) measures to ensure that whistleblowers are not retaliated against by misuse of the security clearance procedures; (3) limitations on the payment of contractor litigation costs in whistleblower cases; (4) enhanced use of alternative dispute resolution; and (5) a comprehensive implementation study to be conducted by an independent organization relating to the review of old cases. These new initiatives also will enhance the effectiveness of DOE's whistleblower protection program.

Complainant's appeal makes a number of suggestions concerning additional enhancements that he believes would improve the Part 708 process. While these suggestions do not provide a basis for altering the Initial Agency Decision in this case, the Department appreciates such feedback from those who have participated in the Part 708 process. As the above-described initiatives reflect, DOE is committed to making

appropriate improvements in its whistleblower protection program when warranted.

3. For the reasons set forth above, the Initial Agency Decision is hereby affirmed and adopted as the Final Agency Decision in this case.

Charles B. Curtis

Deputy Secretary

Issued February 1, 1996

Stephen Earl Bowman v. Johnson Controls World Services, Inc. and University of California (Case No. AL--94--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued June 20, 1996

This is an appeal by complainant Stephen Earl Bowman of a decision by the Office of Contractor Employee Protection (OCEP) dismissing his complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Mr. Bowman filed a complaint with OCEP alleging that he was forced to resign his position with Johnson Controls World Services, Inc., a subcontractor of the University of California, the Department of Energy's management and operating contractor at the Los Alamos National Laboratory, in retaliation for his disclosures of alleged fraudulent conduct by his supervisor.

On appeal, Mr. Bowman takes issue with OCEP's decision dismissing his complaint for lack of jurisdiction. However, 10 C.F.R. Part 708 does not apply to complaints involving alleged acts of reprisal where such acts occur prior to the adoption or amendment of a contract requiring compliance with Part 708 and, as in the instant case, the alleged reprisal does not stem from health or safety disclosures, participations or refusals. See 10 C.F.R. Sec. 708.2(a); see also Final Decision and Order in Mehta v. Universities Research Association (OHA Case No. LWA-0003, March 20, 1995). The alleged acts of reprisal raised in the complaint here occurred prior to the September 23, 1994, effective date of the amendment to the University of California's contract requiring compliance with Part 708 and amendment of its subcontracts to require such compliance. Therefore, OCEP correctly determined that it lacks jurisdiction over the allegations raised in Mr. Bowman's complaint.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

Charles B. Curtis

Deputy Secretary

Issued: June 20, 1996

Harry Calvin Burkholder v. Battelle Pacific Northwest Laboratory (Case No. RL--96--0002)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued September 9, 1998

This is a request for review by complainant Harry Calvin Burkholder of a decision by the Office of Inspector General (OIG) dismissing his reprisal complaint.

On January 22, 1996, Mr. Burkholder, a former employee of Battelle Pacific Northwest Laboratories, the Department of Energy (DOE) contractor

at the Pacific Northwest National Laboratory (PNNL), initiated a complaint with DOE's Richland Operations Office. The complaint alleged that he was removed from his position as Manager of the Waste Treatment Technology Department in January 1994 and involuntarily terminated effective July 31, 1995, in retaliation for alleged disclosures of racial and sexual discrimination, unfair labor practices, and the coverup of safety and security issues.

On March 18, 1998, OIG issued a summary dismissal of Mr. Burkholder's complaint pursuant to 10 C.F.R. Secs. 708.6(a) and 708.8(a)(4) because he filed a complaint on November 6, 1996, in the Superior Court, Benton County, Washington, in which he alleged, inter alia, that he was "terminated in violation of public policy, both as a whistleblower and as a result of testifying truthfully under oath."

Subsection 708.6(a) of the DOE Contractor Employee Protection Regulation, 10 C.F.R. Part 708, provides, in pertinent part, that:

[a]n employee who believes that he or she has been discriminated against in violation of this part, and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint with DOE. ... For purposes of this part, a complaint shall be deemed to have been pursued under State or other applicable law if the employee had, pursuant to proceedings established or mandated by State or other applicable law, at any time prior to, or concurrently with, the filing of a complaint with DOE, or at any time during the processing of a complaint filed with DOE, filed or submitted any complaint, action, grievance, or other pleading with respect to that same matter. (Emphasis supplied.)

This section provides further that the 60 day limitations period set forth in subsection 708.6(d) for filing a complaint "shall be suspended upon the filing of a complaint pursuant to State or other applicable law, and [such filing] shall not bar the employee from reinstituting or filing a complaint with DOE if the matter cannot be resolved under State or other applicable law due to a lack of jurisdiction."

Subsection 708.8(a)(4) of the regulation provides for dismissal of a complaint where it is determined that "[t]he complainant has pursued a remedy available under State or other applicable law...."

On appeal, complainant's attorney takes issue with OIG's dismissal of his complaint based on his filing of a State court complaint regarding the same facts, claiming that "[t]here remains some question concerning whether Mr. Burkholder will be able to effect the remedy requested in this administrative complaint in the underlying lawsuit against Battelle."

Whatever basis complainant's attorney had for initiating an action in state court, the fact remains that, subsequent to filing his initial complaint with OIG, the complainant filed a complaint in State court with respect to the same facts. This being the case, OIG correctly dismissed his complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4).

Therefore, this complaint is being dismissed on purely procedural grounds, based on the fact that complainant has chosen to pursue his complaint in State court. However, no judgment is being made as to the underlying merits of complainant's case. If complainant's allegations cannot be resolved in the State court proceeding he has initiated "due to a lack of jurisdiction," he may reinstitute a Part 708 complaint in accordance with the terms of subsection 708.6(d). /1

For the foregoing reasons, the dismissal of the complaint is affirmed.

Elizabeth A. Moler

Deputy Secretary

Issued September 9, 1998

/1However, we note that complainant's initial OIG complaint appears to have been untimely. 10 C.F.R. Sec. 708.6(d) provides that a complaint "must be filed within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." In this case, the complaint indicates that complainant's involuntary termination occurred on July 31, 1995, and that his OIG complaint was not filed until January 22, 1996, almost six months later. Accordingly, if complainant at some future time seeks to reinstitute his complaint in accordance with the terms of subsection 708.6(d), OIG will have to address whether the apparent untimeliness of the initial complaint precludes Part 708 relief.

We further note that the timeliness of complainant's appeal is questionable. Under 10 C.F.R. Sec. 708.8(c), a request for review must be filed within five days of receipt of OIG's decision. Here, a request for review of the March 18, 1998, decision was not mailed until April 13, 1998. In that request for review, complainant's counsel states that the March 18 OIG decision was not received by complainant until April 7. Given our disposition of this matter, it is unnecessary to examine the questions thus raised. However, this seems an apt occasion for reminding participants in the Part 708 process and their counsel of the importance of complying with the deadlines therein.

Mark R. Craven v. Computer Sciences Corp. (Case No. NV--93--0004)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 21, 1996

This is an appeal by complainant Mark R. Craven of an Initial Agency Decision by the Office of Contractor Employee Protection ("OCEP"). In the Initial Agency Decision, OCEP assumed for purposes of its analysis that complainant may have communicated concerns involving alleged health and safety issues. However, OCEP found that he had failed to establish that his complaints contributed to any alleged retaliatory action against him by the respondent. Further, OCEP found that the contractor had shown by clear and convincing evidence that it would have taken the same adverse actions against complainant irrespective of whether or not he made any protected disclosures under Part 708.

On appeal, OCEP's factual determinations are subject to being reversed only if they are clearly erroneous. Compare Pullman Standard v. Swint, 456 U.S. 273 (1982), with Amadeo v. Zant, 486 U.S. 214, 223 (1988), quoting Fed. R. Civ. P. 52(a). A review of the record and the materials submitted in support of the appeal confirms that complainant has failed to demonstrate that any protected disclosures resulted in prohibited reprisals being taken against him and that OCEP's contrary findings are "clearly erroneous." Accordingly, there is no basis for overturning the Initial Agency Decision, and that decision is hereby adopted as the Final Agency Decision in this case.

Charles B. Curtis

Deputy Secretary

Issued February 21, 1996

Kenneth B. Dobreuenaski v. Associated Universities, Inc. (Case No. CH--95--0002)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued April 18, 1997

This is a request for review by complainant Kenneth B. Dobreuenaski of a Summary Dismissal, dated September 6, 1996, by the Office of Contractor Employee Protection ("OCEP"). In the Summary Dismissal, OCEP found that Mr. Dobreuenaski's complaint, involving alleged "constructive discharge" on February 26, 1996, in reprisal for protected health and safety disclosures, was "essentially based on the same facts" as one he filed with the Wage and Hour Division of the Department of Labor on July 18, 1996. Accordingly, OCEP concluded that the complaint "must be dismissed" under 10 C.F.R. Sec. 708.6(a) (Request for Review, Attachment 1).

The complaint filed with the Labor Department was resolved against Complainant on the merits on September 13, 1996, on the basis that the actions complained of were not discriminatory or retaliatory (Request for Review, Attachment 5). According to OCEP's memorandum of September 30, 1996, Complainant "has informed OCEP that he has appealed DOL's findings, and requested an evidentiary hearing."

Section 708.6(a) deprives the OCEP of jurisdiction over a claim if the complainant pursues a remedy "under State or other applicable law * * * at any time during the processing of a complaint * * * concerning the same matter." The regulatory preamble to the final rule explains that it is

not the DOE's intention to give employees a forum in which to relitigate complaints that have been resolved after investigation and a full evidentiary hearing. Therefore, a new Sec. 708.6(a) has been added to require that in those circumstances when redress is available under State or other applicable law, the employee must make an exclusive election of remedies.

57 Fed. Reg. 7538 (Mar. 3, 1992). Thus DOE's intention not to give complainants a second forum for litigation after a resolution on the merits is clear, and OCEP was clearly correct in dismissing the complaint.

In sum, there is no basis for overturning the Summary Dismissal, and that dismissal is hereby adopted as the Final Agency Decision in this case.

Charles B. Curtis

Deputy Secretary

Issued April 18, 1997

Therese A. Quintana-Doolittle v. Westinghouse Electric Co. (Case No. AL--98--0004)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued October 4, 1999

This is a request for review by complainant Therese A. Quintana-Doolittle of a decision by the Office of Inspector General (OIG) dismissing the reprisal complaint that she filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program.

On September 16, 1998, Ms. Quintana-Doolittle filed her complaint against her employer, Westinghouse Electric Co. (Westinghouse), which is a DOE subcontractor at DOE's Los Alamos National Laboratory. In her complaint, Ms. Quintana-Doolittle alleged that her resignation from Westinghouse, after accepting a position with the Department of Health of the State of New Mexico, constituted a constructive discharge in retaliation for protected disclosures. Complaint at 19. She sought, as a remedy, the reimbursement of 83.5 hours of sick leave, lost pay, and the removal of a former co-worker from his position of authority. Id. at 20.

Ms. Quintana-Doolittle provided additional information on November 14, 1998, in response to a request from the OIG.

On December 9, 1998, the OIG issued a summary dismissal of Ms. Quintana-Doolittle's reprisal complaint, pursuant to 10 C.F.R. Sec. 708.8(a)(2), on the ground that her complaint violated the requirement in Sec. 708.6(d) that a reprisal complaint "must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." The OIG found that Ms. Quintana-Doolittle asserted in her complaint that she resigned from Westinghouse effective July 10, 1998, and her complaint was dated September 16, 1998, more than 60 days after her resignation. Her complaint was dated 68 days after her resignation.

On December 24, 1998, Ms. Quintana-Doolittle filed a request for review by the Deputy Secretary. She alleges that on September 8, 1998---the 60thday after the effective date of her resignation---she sought legal advice from a person who incorrectly told her that she had 90 days to file her complaint, and who provided her with a page from DOE's Notice of Proposed Rulemaking to amend Part 708, published on January 5, 1998, in which DOE's proposed amendments included the proposed increase from 60 days to 90 days in the time limit for filing a complaint. 63 Fed. Reg. 374, 382 (Jan. 5, 1998). Request for review at 1. She also alleges that on September 9, 1998---the 61st day after the effective date of her resignation---she spoke with a person in the DOE Albuquerque Operations Office, who suggested that she go forward with the complaint and mailed to her the form for the complaint and information about the Part 708 regulations. Id. She admits that more than 60 days passed between her departure from Westinghouse on July 10, 1998 and filing her complaint on September 16, 1998, but she states that she filed her complaint within 60 "working days" of her departure. Id.

Ms. Quintana-Doolittle's arguments in her request for review fail to demonstrate that the OIG was incorrect in determining that her complaint violated Sec. 708.6(d), and in therefore dismissing it pursuant to Sec. 708.8(a)(2).

The 60-day limitations period for filing a reprisal complaint is a requirement included within the regulation establishing the DOE Contractor Employee Protection Program, in Sec. 708.6, which contains the requirements for filing a complaint. Contrary to the legal advice that she received, the 60-day deadline was applicable at the time of her filing on September 16, 1998, because DOE's Jan. 5, 1998 Notice of Proposed Rulemaking, by its express terms, only proposed amendments to Part 708; it did not amend the

regulation. *i See, e.g.*r, 63 *i Fed. Reg. *r at 374, 375, 380. /1

Contrary to the argument in her request for review, the 60-day limitations period in Sec. 708.6(d) describes the limitations period as "within 60 days," not "within 60 working days." Indeed, Ms. Quintana-Doolittle does not even allege in her request for review that she had a good faith belief, at the time she filed her complaint, that the "60 day" limitations period referred to 60 working days. Such an interpretation would have been contrary to DOE regulations, which provide that Saturdays, Sundays, and federal legal holidays shall be excluded from the computation of time when the period of time allowed or prescribed is 7 days or less. 10 C.F.R. Secs. 205.5(a)(2), 1003.5(a)(2).

Moreover, Ms. Quintana-Doolittle has failed to show good cause for exceeding the 60-day limitations period. She admits in her request for review that she did not even seek the legal advice that she allegedly received until the final day of the 60-day limitations period, and that she did not contact the DOE Albuquerque Operations Office for advice until *i after *r the 60-day limitations period had expired. Request for review at 1.

In addition, Ms. Quintana-Doolittle has admitted that she knew before July 10, 1998---the effective date of her resignation---of the alleged discriminatory acts that are the basis of her complaint. In her complaint, she alleged that the first act of retaliation against her occurred on January 14, 1998. Complaint at 8. She next stated that she was subjected to retaliation, "Fostered and Condoned by Westinghouse," on April 22, 1998 (id. at 12), when she was transferred from her position in Human Resources to a less desirable position (id. at 13). She asserted "Retaliation confirmed" on April 29, 1998. Id.

Even if it is assumed, arguendo, that the latest date mentioned in the preceding paragraph---April 29, 1998, when Ms. Quintana-Doolittle confirmed the retaliation against her---was the date on which she first learned of the alleged discriminatory acts that are the basis of her complaint, the limitations period would have run for 140 days before she filed her reprisal complaint on September 16, 1998. That period would have exceeded both the applicable 60-day limitations period in Sec. 708.6(d), and the 90-day limitations period which was adopted in DOE's Mar. 15, 1999 interim final rule for prospective application, but which does not apply to the filing of the instant complaint, as explained above.

For the foregoing reasons, the dismissal of the complaint is affirmed.

T. J. Glauthier

Deputy Secretary

Issued October 4, 1999

/1 On March 15, 1999, DOE published an interim final rule amending Part 708, effective April 14, 1999. 64 Fed. Reg. 12862 (Mar. 15,1999). Although that amended rule includes a new provision (in Sec. 708.14) which increases the time limit for filing a complaint to 90 days, that rule also includes a new provision (in Sec. 708.8) which explicitly states that the revised procedures "apply prospectively in any complaint proceeding pending on the effective date of this part." 64 Fed. Reg. at 12871 (emphasis added). Because the revised procedures do not apply retroactively in pending proceedings, they do not apply to the time limit for filing Ms. Quintana-Doolittle's complaint, which was filed on September 16, 1998, nearly seven months before the effective date of the interim final rule.

Patsy R. Fox v. Southeastern Universities Research Association (Case No. OR--94--0007)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued August 13, 1996

This is an appeal by complainant Patsy R. Fox from a decision by the Office of Contractor Employee Protection (OCEP) dismissing her complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Ms. Fox, a former employee of Southeastern Universities Research Association (SURA), the Department of Energy (DOE) management and operating (M&O) contractor at the Continuous Electron Beam Accelerator Facility (CEBAF), filed a complaint with OCEP alleging that she was issued a negative performance appraisal and placed on probation in retaliation for a grievance she filed concerning her immediate supervisor. On appeal, the complainant takes issue with OCEP's decision dismissing her complaint for lack of jurisdiction.

The scope of the Department's regulatory authority with respect to contractor employee reprisal complaints such as Ms. Fox's is found at 10 C.F.R. Sec. 708.2(b), which provides, in pertinent part:

[t]his part is applicable to employees (defined in Sec. 708.4) of contractors (defined in Sec. 708.4) performing work on-site at DOE-owned or leased facilities ... (emphasis supplied).

The record here establishes that the complainant was not employed at a DOE owned or leased facility, and that her employment with SURA was not pursuant to DOE's M&O contract with SURA. Since the facility at which the complainant was employed is not a "DOE-owned or leased facility," the whistleblower regulation does not extend to Ms. Fox's employment with SURA.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

Charles B. Curtis

Deputy Secretary

Issued August 13, 1996

Sara Galpin v. EG&G Science Support Corporation and EG&G Technical Support Services (Case No. OR--95--0001)

Final Decision and Order Issued by the Deputy Secretary of Energy

Issued February 21, 1996

This is an appeal by complainant Sara Galpin of a decision by the Office of Contractor Employee Protection (OCEP) dismissing her complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Ms. Galpin filed a complaint with OCEP alleging that her employment pursuant to a temporary employment requisition between EG&G Technical Support Services and EG&G Science Support Corporation, a subcontractor of Universities Research Association (URA), the Department of Energy (DOE) management and operating contractor at the Superconducting Super Collider (SSC) site, was terminated effective October 21, 1994, in retaliation for disclosures of fraudulent activity.

On June 28, 1995, OCEP dismissed Ms. Galpin's complaint for lack of jurisdiction under 10 C.F.R. Part 708, noting that the regulation does not apply to complaints involving alleged acts of reprisal where such acts occur prior to the adoption or amendment of a contract requiring compliance with Part 708, and the alleged acts of reprisal do not stem from health and safety disclosures, participations, or refusals. Referring to its letter of May 24, 1995, which advised Mr. Galpin that her employment with EG&G was governed by employment letters between EG&G Technical Support Services and EG&G Science Support Corporation, OCEP noted that those letters did not include provisions making Part 708 applicable to her employment. Therefore, OCEP dismissed the complaint based on lack of jurisdiction.

On appeal, the complainant argues that the clause requiring compliance with the "whistleblower" regulation is mandatory and should be "read into the subcontracts," citing G. L. Christian and Associates v. United States, 312 F.2d 418, 160 Ct. Cl. 1, reh. denied, 320 F.2d 345, 160 Cl. Ct. 58, cert. denied, 375 U.S. 954 (1963). Under Christian, a court may insert a clause into a government contract by operation of law if that clause is required under applicable federal administrative regulations.

1. As a threshold matter, the applicability of Christian to the subject matter must be addressed. Contrary to the complainant's suggestion, Christian did not address "the application of

the required clause doctrine to subcontractors." In fact, no court has addressed specifically the application of Christian to a government subcontract where a clause required by federal regulation is not incorporated in a subcontract, and the case

law regarding application of Christian to subcontractors is inconclusive. While none of the authorities I have reviewed conclusively state that *i Christian *r is inapplicable to subcontractors as a fundamental legal precept, the authorities evince a reluctance to impose upon contractors by operation of law obligations not specifically contained in the express provisions of the subcontract. *i See Dowty Decoto v. Department of Navy*r, 883 F.2d 774 (9th Cir. 1989); *i see also United States of

America v. Interstate Landscaping Company, Inc.*r, 1994 U.S. App. LEXIS 24419, *16 (6th Cir. 1994); *i Cylinder Laboratories, Inc. v. Maecorp, Inc.*r, 1990 U.S. Dist. LEXIS 9216, *9 (W.D. Mich. 1990); *i K. L. Conwell Corporation*r, EBCA No. 399--10--87, 88--2 BCA (CCH Para. 20,712) (1988); *i Palmetto Enterprises, Inc.*r, 79--1 BCA (CCH Para. 13,736) (1979). *p0r 2. Even assuming that *i Christian *r is applicable generally to subcontractors, application of *i Christian *r to the facts presented here is problematic. *i Christian *r involved a regulatory provision that was in effect at the time that the contract at issue was executed. *i Christian*r, 320 F.2d 345, 350. *p0r The subject "whistleblower" regulation and the implementing amendment to the Department of Energy Acquisition Regulations (DEAR) do not address specifically the application of the regulation to existing subcontracts. The DEAR amendment

instructed DOE contracting officers to insert a Whistleblower Protection for Contractor Employees clause in existing M&O contracts. The clause itself required the contractor to "insert or have inserted the substance of this clause ... in subcontracts, at all tiers..." 48 C.F.R. 970.5204--59(b). *p0r In the instant case, the "whistleblower" regulation and the DEAR amendment were promulgated subsequent to execution of the first tier subcontract between URA and EG&G Science Support Corporation. Further, there was no extension or renegotiation of the subcontract during the period at issue in this complaint. *p0r Further, the complainant was a temporary employee of a DOE second tier contractor. The terms and conditions of her employment were governed by various employment letters and "Requisition for Temporary Personnel" requests between EG&G Science Support Corporation, a DOE first tier subcontractor, and EG&G Technical Support Services, a second tier contractor. The initial "Requisition for Temporary Personnel" between EG&G Science Support Corporation and EG&G Technical

Support Services authorizing the complainant's temporary employment was executed March 20, 1993, prior to the date URA's M&O contract was modified. *p0r Accordingly, since the alleged retaliatory action involved in Ms. Galpin's complaint does not involve health or safety matters, the applicable jurisdictional provision of the "whistleblower" regulation requires that the underlying procurement contract contain a clause requiring compliance with Part 708 at the time the alleged reprisal actions occur in order for the regulation to be applicable. Since the EG&G Technical Support Services second tier subcontract did not contain a clause requiring compliance with the "whistleblower" regulation at the time Ms. Galpin's employment was terminated, I conclude that OCEP lacked jurisdiction over the complaint. *p0r For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed. *sig Signature: Charles B. Curtis *nl Deputy Secretary *h1

Pamela Griffin v. Westinghouse Savannah River Company (Case No. SR--95--0005)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued June 20, 1996

This is an appeal by complainant Pamela Griffin of a decision by the Office of Contractor Employee Protection (OCEP) dismissing her complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Ms. Griffin filed a complaint with OCEP alleging that she was subjected to various discriminatory acts, culminating in the termination of her employment on March 15, 1995 by Westinghouse Savannah River Company, the Department of Energy (DOE) management and operating contractor at the Savannah River Site.

1. On appeal, Ms. Griffin requests reconsideration of OCEP's dismissal of her complaint for lack of jurisdiction due to untimeliness. Ms. Griffin's complaint was filed on November 17, 1995, more than eight months following the final alleged discriminatory act, which occurred on March 15, 1995. 10 C.F.R. 708.6(d) states that a complaint "must be filed within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later". Since Ms. Griffin's complaint was filed more than 60 days after the termination of her employment, OCEP determined correctly that it lacked jurisdiction over the allegations raised in her complaint.

2. Ms. Griffin also alleges on appeal that there is a "continuing violation" which confers jurisdiction over her complaint. In order to allege a continuing violation, the complainant must establish that further acts of reprisal occurred subsequent to her termination. See Mehta v. University Research Association (OHA Case No. 0003, March 20, 1995). In this case, however, the complainant does not allege any discriminatory actions by Westinghouse Savannah River Company in the 60 day period prior to the filing of her complaint with OCEP. Rather, Ms. Griffin's complaint itself underscores the fact that the final discrete discriminatory act occurred when she was terminated on March 15, 1995. Therefore, the complainant has failed to establish a continuing violation that would confer jurisdiction over her complaint.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

Charles B. Curtis

Deputy Secretary

Issued June 20, 1996

David K. Hackett v. Martin Marietta Energy Systems, Inc. (Case No. OR--93--0001)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued April 24, 1996

This is an appeal by complainant David K. Hackett of a decision by the Office of Contractor Employee Protection (OCEP) dismissing his complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Mr. Hackett filed a complaint with OCEP alleging that his personal service contract with Martin Marietta Energy Systems (MMES) 1/, the Department of Energy (DOE) management and operating contractor at Oak Ridge National Laboratory (ORNL), was not renewed in retaliation for his allegations of tax and labor law violations by MMES.

1. On appeal, Mr. Hackett takes issue with OCEP's decision dismissing his complaint for lack of jurisdiction. However, 10 C.F.R. Part 708 does not apply to complaints involving alleged acts of reprisal (for other than health or safety disclosures) where such acts occur prior to the adoption or amendment of a contract. requiring compliance with Part 708. See 10 C.F.R. Sec. 708.1(a); see also Final Decision and Order in Mehta v. Universities Research Association (OHA Case No. LWA-0003, March 20, 1995). The alleged acts of reprisal raised in the complaint here occurred prior to the March 31, 1993, effective date of the modification of MMES' contract requiring compliance with Part 708. Therefore, OCEP correctly determined that it lacks jurisdiction over the allegations raised in Mr. Hackett's complaint.

2. The complainant asserts further that OCEP has jurisdiction because his complaint involves health and safety issues. However, the complainant failed to timely raise such allegations before OCEP when the subject complaint was filed. OCEP's file reflects that these allegations were first raised in connection with complainant's judicial action alleging wrongful discharge, which was filed more than a year after the alleged act of reprisal. Pursuant to 10 C.F.R. Sec. 708(c) and (d), to invoke the protections of the Department's "whistleblower" regulation, a complaint must be filed within 60 days after the alleged discriminatory act occurred, and must "set[] forth specifically the nature of ... the disclosure ... giving rise to such act." Thus, complainant's health and safety allegations were not timely raised. Moreover, pursuant to 10 C.F.R. Sec. 708.8(a)(4), OCEP does not process allegations for which the complainant "has pursued a remedy available under state or other applicable law."

3. Lastly, the complainant argues on appeal that jurisdiction exists based on "continuing retaliation" in the form of "employment blackballing." However, neither the appeal nor the complaint file contain any specific allegations of retaliatory actions that occurred subsequent to the March 31, 1993, modification of MMES' contract to require compliance with Part 708. For the reasons set forth above, OCEP's decision todismiss this complaint for lack of jurisdiction is hereby affirmed.

Daniel Holsinger, Complainant, v. K-Ray Security, Inc., Respondent OHA Case Nos. VWC-0001 and VWC-0002

DECISION AFFIRMING AGENCY DECISION AS MODIFIED

Issued: January 19, 2000

This is a request for review by K-Ray Security, Inc., the current security operations contractor at DOE's Federal Energy Technology Center ("FETC"), of the Decision of the Office of Hearings and Appeals ("OHA") on remand from the Deputy Secretary adhering, after an additional evidentiary hearing and an assessment of the equities, to its earlier finding that reinstatement of Complainant Holsinger as a security guard is a necessary and appropriate action to effect full relief, even though it was the prior security contractor, Watkins Security Agency, Inc., ("WSA") that was found to have committed the act of reprisal prohibited under 10 C.F.R. *§708.5.* /1

On October 7, 1994, Mr. Holsinger filed a complaint with the Office of Contractor Employee Protection ("OCEP") alleging that he had made protected disclosures about the possible theft of government property by another member of the security force and that those disclosures led to suspensions and termination of his employment. R. 00 1-002. After an investigation, OCEP issued a report concluding that Holsinger's dismissal had been at least in part in reprisal for his protected disclosures. Mr. Holsinger's complaint sought back pay and benefits and reinstatement from WSA, but, while the complaint was pending, K-Ray took over the security function at FETC. OCEP proposed that WSA pay Holsinger back pay and benefits and that K-Ray reinstate him based on its assessment that, absent the termination, Holsinger would have been hired automatically by K-Ray .R.003.

Following the issuance of OCEP's investigatory report and recommendations, complainant, WSA, and K-Ray all requested a hearing before OHA. Prior to the hearing, WSA and Mr. Holsinger entered a settlement agreement which satisfied the proposed requirement that WSA pay Mr. Holsinger back pay and benefits. Consequently, WSA was dismissed as a party. R.003. K-Ray did not challenge the conclusions that Part 708 had been violated by WSA, but objected to OCEP's proposal that K-Ray be required to reinstate the complainant. K-Ray argued that such a remedy would create an unwarranted hardship on K-Ray and require it to terminate an existing employee. R.003-004. Agreeing with OCEP, however, OHA found that reinstatement of Mr. Holsinger was necessary to restore him to the position he would have occupied absent the acts of reprisal by WSA, since all thirteen of the other WSA security personnel were hired by K-Ray when it assumed the contract in June 1995. R.004.

K-Ray appealed OHA's decision to the Deputy Secretary. The Deputy Secretary concluded that OHA had overlooked uncontradicted testimony that reinstatement of Mr. Holsinger would require discharge of another K-Ray security officer, and that under OHA's own precedent, reinstatement is disfavored when it causes displacement of an innocent employee. Accordingly, the Deputy Secretary remanded the case for a full assessment of the equities involved in reinstatement. R. 005-007.

On remand, OHA conducted an evidentiary hearing, where the testimony of eleven witnesses was presented. Mr. Holsinger, now employed full-time as a security guard at the University of West Virginia and part-time with the police department of Kingwood, West Virginia, testified that he did not want to put anyone else out of work at K-Ray. He indicated that he would accept part- time employment on an as-needed basis up to one or two nights a week, so long as he was treated like "everyone else" in the part-time roster. R. 590-59 1, 598-599, 613,723-724. OHA accordingly analyzed K-Ray's claims of hardship against Mr. Holsinger's diminished request for relief, and determined that they were without merit. R. 724-726.

First, OHA concluded that K-Ray's position that reinstatement of Mr. Holsinger would necessarily be at

the expense of other employees was not supported by the record. Since there was no requirement in the contract about the number of employees K-Ray could use, it was clear that reinstatement merely on an as-needed basis could not require termination of another employee. R.726. The remaining question, however, was the extent to which any part-time hours given Mr. Holsinger would necessarily be at the expense of other employees. In a fact-bound analysis, OHA reviewed both the testimony and the company's work schedules for one calendar quarter. From this evidence, OHA concluded that the amount of normal re-scheduling and the hours generally available to part-time employees were sufficient to ensure that no regular hours of other part-time guards would need to be changed to accommodate Mr. Holsinger. Furthermore, OHA concluded that reasonable expectations of irregular part-time hours available to other guards would not be impaired and that, to the extent two recently hired part-time guards might sometimes get fewer hours as a result of Mr. Holsinger's availability, it should not overcome the important interest in protecting a whistleblower. R. 726-727, 729. Additionally, OHA concluded from the testimony of six other guards that there was little danger that reinstatement ofMr. Holsinger would cause morale problems. R. 727-729.

Second, OHA analyzed the extent to which reinstating Mr. Holsinger would impose unfair additional financial burdens on K-Ray. OHA concluded that the additional financial burden would most likely be minimal and, if not, would be subject to adjustment by DOE under the contract in furtherance of the goals of Part 708. R. 730-733.

Third, OHA analyzed K-Ray's claim that the burden of accommodating Mr. Holsinger's schedule would be excessive. Noting that it was premised on providing Mr. Holsinger the midnight shift regularly two nights a week, OHA determined that it would not impose that burden on K-Ray but would instead require offering him two shifts per week, but would only require utilizing Mr. Holsinger the equivalent of one shift per week. R.733-734.

Finally, in accord with the Deputy Secretary's suggestion (R. 007 n. 1) that some assessment should be made whether Mr. Holsinger's disclosures were of the kind the regulation was designed to protect, OHA concluded that Mr. Holsinger's report of possible theft of DOE property was well within the rule's scope, but that his complaint that management did not do anything about the report did not necessarily fall within the rule's protection, since it might have reflected a mere disagreement concerning the magnitude of the problem. R. 735-736. Accordingly, OHA ordered that K-Ray reinstate Mr. Holsinger as a part-time security guard on an as-needed basis, that Mr. Holsinger provide K-Ray monthly with a schedule of his available shifts, that K-Ray offer him a minimum of two shifts per week consistent with his schedule filling in for other employees on leave, and that K-Ray actually utilize him a minimum of one shift per week. R.736. K-Ray filed a timely appeal of OHA's decision on remand.

As was spelled out in the earlier decision of the Deputy Secretary in this case, reinstatement may be appropriate in order to remedy a violation of Part 708. 10 C.F.R. 708.10 (c) /2 provides:

> The initial agency decision may include an award of reinstatement, transfer, preference, back pay, and reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses *** ****.

See also 10 C.F.R. 708.11(c) ("Relief ordered *** * *** may include reinstatement").

Reinstatement is an equitable remedy, and with any equitable remedy, however, an adjudicator "must draw on the 'qualities of mercy and practicality [that] have made equity the instrument for nice adjustment and reconciliation between the public interest and private needs as well as between competing private claims'." Teamsters v. United States, 431 U.S. 324,375 (1977) [quoting Hecht Co. v. Bowles, 321 U.S. 321,329-330(1944)]. "Especially when *** * *** an equitable remedy threatens to impinge upon the expectations of innocent parties, the [adjudicator] must 'look to the practical realities and necessities inescapably involved in reconciling competing interests,' in order to determine the 'special blend of what is necessary, what is

fair, and what is workable.'" Ibid.[quoting Lemon v. Kurtzman, 411 U.S. 192,200-201 (1973)(plurality opinion of Burger, C.J.)].

As OHA noted in Boeing Petroleum Services. Inc., 24 DOE ¶87,501 at p. 89,007 (1994), reinstatement generally is not "an appropriate remedy under Part 708 where *** * *** there is a new M&O contractor that has no connection with the firm actually employing the complainant or the circumstances surrounding the discharge of the complainant, and the retention of employees by the new contractor is not directly influenced by the former contractor but merely a condition of assuming the M&O contract." Rather, the normal rule is that a wrongfully discharged contractor employee is not entitled to relief for the period after the contract under which he is employed is terminated. Id. at pp. 89,006-89,007, citing Holley v. Northrop Worldwide Aircraft Services. Inc., 835 F.2d 1375 (11th Cir. 1988), and Blackburn v. Martin, 982 F.2d 125 (4th Cir. 1992). Additionally, as the Deputy Secretary noted in the previous appeal in this case, OHA has pointed out that reinstatement is a "disfavored remedy" when it would "require the displacement of an innocent employee." Boeing Petroleum Services. Inc., 24 DOE ¶87,501 at p. 89,007, citing Edwards v. Department of Corrections, 615 F. Supp. 804, 811 (M.D. Ala. 1985).

At the hearing on remand, the issue on which the remand was ordered all but evaporated. The threat of displacement of another K-Ray employee was eliminated by Mr. Holsinger's reduced request for reinstatement merely for "as needed" shifts not to exceed two per week. K-Ray's contract administrator, Diane Lewis, testified that the part-time guards are not guaranteed any hours when they are hired. R. 676. Another of K-Ray's witnesses, Captain Munz, admitted that K-Ray's two part-time hires since K-Ray had taken over the contract had been told only that K-Ray "would probably give" them two or three days a week. R. 581-583. Accordingly, it is difficult to see how giving Mr. Holsinger one day a week would disrupt even the expectations of the other part-time guards, and OHA's conclusion that it would not do so is not clearly erroneous and should be sustained. It is well settled that OHA's factual determinations are subject to being reversed on appeal only if they are clearly erroneous. Oglesby v. Westinghouse Hanford Company, 25 DOE ¶ 87,501 (1995).

Regarding the other issues raised by K-Ray, OHA's determinations seem unexceptionable. As OHA noted, there was some testimony to the effect that reinstating Mr. Holsinger might cause morale problems among his co-workers, but the weight of the testimony seemed to the contrary, and it was not clearly erroneous for OHA to conclude that "on balance, the record as a whole does not support this view." R. 727. Concerning the expense of reinstating Mr. Holsinger, OHA correctly noted that K-Ray's claim in this respect was "based on several unsupported assumptions" (R. 730) (e.g. that every time Mr. Holsinger worked there would be a lower-paid newer employee not working overtime available), and I cannot find fault with OHA's painstaking analysis of the record. R. 730-733. Additionally, the record adduced at the hearing supports OHA's conclusion that any likely potential additional expense incurred as a result of reinstating Mr. Holsinger can be accommodated under the contract. R. 733. Finally, regarding K-Ray's alleged scheduling difficulties, Mr. Holsinger's diminished request and the relief ordered by OHA all but eliminated the issue, since relief is premised on Mr. Holsinger filling in on an as-needed basis, and the record supports OHA's conclusion that one shift a week will be available. Although OHA did not make anything of it, it seems to me to undermine K-Ray's arguments in this regard that since Mr. Holsinger was terminated, there have been five or six new part-time hires in the security force. R. 510-51 1. Mr. Holsinger has asked to be treated the same as these other part-time guards, and K- Ray's claims of hardship appear exaggerated under the present circumstances.

I am concerned at the extent to which OHA seems to have put the burden on the innocent contractor to show why it should not be required to reinstate the employee, and that this approach is not entirely consistent with the above-referenced precedent. Nevertheless, the result reached appears consistent with the Deputy Secretary's earlier decision, in accordance with law, and not clearly erroneous in its premises.

I am also concerned at the extent to which the remedy crafted by OHA, to minimize the impact on other part-time employees, intrudes into management of the contractor in a way that may be difficult to enforce. Accordingly, I conclude that OHA's decision on remand should be modified as follows. K-Ray shall

provide the relief ordered by OHA. When a position becomes available for which Mr. Holsinger is qualified and is comparable to the seniority level of his previous job with WSA, K-Ray shall offer that position to Mr. Holsinger and hire him if he accepts it. That offer will terminate K-Ray's obligation to employ Mr. Holsinger on a part-time basis as ordered by OHA.

T. J. Glauthier

Deputy Secretary

Issued: January 19, 2000

/1 DOE recently issued an Interim Final Rule amending Part 708 which became effective April 14, 1999. 64 Fed. Reg. 12,862 (March *15,* 1999). The decision in this case is unaffected by the changes in the Interim Final Rule. The numbering of the whistleblower provisions has changed, however, and this is noted in footnotes.

/2 This provision has been slightly reworded in 10 C.F.R. 708.36 in the Interim Final Rule. 64 Fed. Reg. 12862, 12875 (March 15, 1999).

Susan W. Hyer v. Battelle Pacific Northwest Laboratories (Case No. RL--98--0003)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued April 7, 1999

This is a request for review by complainant Susan W. Hyer of a decision by the Office of Inspector General (OIG) dismissing the reprisal complaint that she filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program.

On September 17, 1998, Ms. Hyer filed her complaint against her employer, Battelle Pacific Northwest Laboratories (Battelle), which is the DOE management and operating contractor at DOE's Pacific Northwest National Laboratory. In her complaint, Ms. Hyer alleged that on April 14, 1995, she had raised concerns with Battelle regarding technical problems with software and a procurement document. She further alleged that as a result of those disclosures, she was subjected to retaliatory actions and, in approximately the summer of 1995, left her employment with Battelle. She also alleged that as a result of the retaliation against her, her husband also left his employment with Battelle at approximately the same time and obtained employment elsewhere.

On October 13, 1998, the OIG issued a summary dismissal of Ms. Hyer's reprisal complaint, pursuant to 10 C.F.R. Sec. 708.8(a)(2), on the ground that her complaint violated the requirement in Sec. 708.6(d) that a reprisal complaint "must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." The OIG found that if, as she alleged, she was constructively discharged in the summer of 1995 because of her protected activity, she would have been aware of that discriminatory act at the time of its occurrence, and she therefore should have filed a reprisal complaint at that time, within 60 days after her constructive discharge in 1995, instead of delaying for approximately three years until September 1998.

5

The OIG also found that even assuming, arguendo, that Ms. Hyer's failure to file a reprisal complaint in 199 is mitigated by her alleged mistaken belief that she had an active complaint pending until she was informed otherwise by a January 30, 1998 letter from DOE's Richland Operations Office, her complaint still violated Sec. 708.6(d). Granting that assumption, she should have filed her complaint within 60 days of her receipt of the January 30, 1998 letter. Instead, she delayed until September 17, 1998, approximately seven months later.

Finally, the OIG found that the fact that Ms. Hyer's counsel, after receiving the January 30, 1998 letter, pursued settlement with Battelle until May 1998 is not a mitigating factor; and that even assuming, arguendo, that the 60-day filing limit tolled until May 1998, her complaint was still not timely filed as required by Sec. 708.6(d).

On October 27, 1998, Ms. Hyer filed a request for review by the Deputy Secretary. On November 5, 1998, Battelle submitted comments in response to the request for review. Ms. Hyer replied to Battelle's comments on November 16, 1998.

Ms. Hyer's arguments in her request for review and her November 16, 1998 reply fail to demonstrate that the OIG was incorrect in determining that her complaint violated Sec. 708.6(d), and in therefore dismissing it pursuant to Sec. 708.8(a)(2).

The 60-day limitations period for filing a reprisal complaint is a requirement included within the regulation establishing the DOE Contractor Employee Protection Program in Sec. 708.6, which contains

the requirements for filing a complaint. Ms. Hyer argues that her delay in filing her complaint for approximately three years after she left her employment in 1995 was justified by "incorrect information provided to Ms. Hyer and her counsel for over 2 1;2 years about the status of her complaint and an investigation which was not, in fact, being carried out." Request for review at 2. However, the "complaint" to which Ms. Hyer refers in the above-quoted sentence was, in fact, not a reprisal complaint filed pursuant to 10 C.F.R. Part 708, but rather an "employee concern" that Ms. Hyer submitted to the Employee Concerns Office at DOE's Richland Operations Office. DOE explained this to Ms. Hyer's counsel in a January 30, 1998 letter from Carolyn E. Reeploeg, Assistant Chief Counsel in DOE's Richland Operations Office. DOE also noted in that letter that Ms. Julie Goeckner of DOE's Richland Operations Office had advised Ms. Hyer in June 1995 that Ms. Hyer could file a complaint pursuant to Part 708:

In June 1995, Ms. Goeckner informed Ms. Hyer of her right to file under Part 708, explained the process, and the associated time frames. If Ms. Hyer had elected to file under Part 708, further processing of her complaint, including a formal investigation, would have been conducted by DOE Headquarters staff from the Office of Inspector General (OIG).

January 30, 1998 letter at 1. Yet Ms. Hyer waited for over three years after she was informed of the Part 708 time frames in June 1995 before filing her Part 708 complaint in September 1998.

Moreover, Ms. Hyer has failed to show good cause for exceeding the 60-day limitations period. Even if Ms. Hyer is given the benefit of every doubt, and it is assumed, arguendo, that all of the facts alleged by her are true and should be considered mitigating factors, her complaint still failed to satisfy the 60-day filing requirement. Indeed, her complaint would not even have satisfied the expanded time period provided for in DOE's recent amendment of Part 708.Section 708.14 increases the time limit for filing a complaint from 60 days to 90 days. 64 Fed. Reg. 12862, 12872 (March 15, 1999)

First, assuming that because of misunderstanding of DOE procedures, the limitations period should be tolled until Ms. Hyer received the January 30, 1998 letter in which DOE explained that she had not yet filed a reprisal complaint, then the limitations period would have begun to run sometime in February 1998, when she received that letter. However, she did not file her complaint until approximately seven months later, in September 1998. /1

Second, assuming that the limitations period should also be tolled because of discussions between counsel for Ms. Hyer and Battelle concerning possible settlement of their dispute, then the limitations period would have been tolled for that reason only from March 10, 1998 through May 27, 1998. Section 708.6(d) provides that in cases where the employee has attempted resolution through "internal company grievance procedures" as set forth in Part 708,

the 60-day period for filing a complaint shall be tolled during such resolution period and shall not again begin to run until the day following termination

of such dispute-resolution efforts.

In her reprisal complaint, Ms. Hyer stated that Battelle counsel proposed voluntary mediation by letter dated March 10, 1998; that by letter dated April 1, 1998, her counsel accepted that proposal; and that by letter dated May 6, 1998, Battelle counsel took the position that mediation would not be worth the investment to Battelle, and made a settlement offer that Ms. Hyer considered inadequate. Complaint at 2, and letters attached thereto. In the May 6, 1998 letter, Battelle counsel stated that his settlement offer would expire within 20 days of the date of that offer. May 6, 1998 letter at 3--4. The offer therefore expired on May 26, 1998; and the date on which the limitations period would have resumed running would have been May 27, 1998, "the day following termination of such dispute-resolution efforts" according to the terms of Sec. 708.6(d). However, Ms. Hyer did not file her reprisal complaint until September 17, 1998, which is 113 days after May27, 1998.

In addition, before the limitations period would have been tolled by the March 10, 1998 letter in which

Battelle counsel proposed mediation, the limitations period would have run from the date in February 1998 when Ms. Hyer received the January 30, 1998 letter from DOE, until March 10, 1998, or for approximately 30 days.

Therefore, granting every assumption in Ms. Hyer's favor, the limitations period would have run for approximately 143 days before she filed her reprisal complaint. That total of 143 days is the sum of the approximately 30 days before the limitations period was tolled on March 10, 1998, and the 113 days after the limitations period resumed running on May 27, 1998 until she filed her complaint on September 17, 1998. Thus, granting every assumption in her favor, her complaint nevertheless would have failed to satisfy either the 60-day filing requirement in Sec. 708.6(d), or the proposed 90-day filing requirement in DOE's Notice of Proposed Rulemaking to amend Part 708. /2

For the foregoing reasons, the dismissal of the complaint is affirmed.

T. J. Glauthier

Deputy Secretary

Issued April 7, 1999

/1 In Ms. Hyer's request for review at 1--2, her counsel incorrectly alleges that the OIG in its summary dismissal "took the position that the letter of January 30, 1998, from Ms. Reeploeg to me put Ms. Hyer and me on notice that a formal complaint should have been filed in February, 1998" and "virtually immediately after my receipt of that letter in order to be timely." On the contrary, the OIG in its summary dismissal expressly stated that "granting that assumption, the complaint should have [been] filed within 60 days of ... your receipt of the January 30, 1998 letter;" and "assuming that the time limit for filing tolled until sometime in February 1998, the complaint was untimely filed." Summary dismissal at 2. The summary dismissal thus made it clear that February 1998 was the month when the time limit for filing ceased to be tolled, i.e., when the time limit began to run; and that the complaint should have been filed within 60 days after the date in February 1998 when Ms. Hyer received the January 30, 1998 letter.

/2 In Ms. Hyer's request for review at 2, and in her November 16, 1998 reply at 1, her counsel incorrectly alleges that DOE's Notice of Proposed Rulemaking, in its proposed Sec. 708.6(e), provides for a 120-day period to file after the exhaustion of any internal grievance procedures. (Section 708.14(b) in the Interim Final Rule, which has extended the period to 150 days, 64 Fed. Reg. 12862, 12872 (March 15, 1999). That allegation is disproved by the express terms of the section in the Interim Final Rule, whose pertinent provision is the following:

The period for filing a complaint does not include time spent attempting to resolve the dispute through an internal company grievance-arbitration procedure. The time period for filing stops running on the day the internal grievance is filed and begins to run again on the earlier of :

(1) The day after such dispute resolution efforts end; or

(2) 150 days after the internal grievance was filed if a final decision on the grievance has not been issued. (emphasis added):

64 Fed. Reg. at 12872. In the Notice of the Interim Final Rule, under the heading "Summary of Changes," DOE described the above-quoted provision of the interim final rule in the following language

: [T]he interim final rule permits individuals to file a complaint under Part 708 if they have not received a response on a grievance relating to the complaint within 150 days of filing of the grievance. (emphasis added)

64 Fed. Reg. at 12864. Thus, both the plain language of the section, and DOE's summary of the changes in

that section, demonstrate that the 150-day period would apply only "where a final decision on the grievance has not been issued" within 150 days after the filing of that grievance, at which time the 90-day limitations period begins to run again so that individuals may file a reprisal complaint despite the fact that dispute resolution efforts have not terminated. Therefore, contrary to the allegation by Ms. Hyer's counsel, the 150-day period is *i not *r a new limitations period that begins to run after the exhaustion of internal grievance procedures. Indeed, the provision would apply only in cases where internal grievance procedures have *i not *r been exhausted within 150 days, unlike the instant case. In addition, Ms. Hyer's counsel fails to recognize that the above-quoted provision from the Sec. 708.14 specifies that the time period begins to run on "the earlier of" the date dispute resolution ends or 150 days after internal grievance was filed if a final decision has not been issued; therefore, in cases in which it applied, would cause the limitations period to resume running earlier, not later, than it would otherwise.

Richard P. Johnson v. Regents of the University of California (Case No. AL--98--0002)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 7, 1999

This is a request for review by complainant Richard P. Johnson of a decision by the Office of Inspector General (OIG) dismissing the reprisal complaint that he filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program

On November 13, 1997, Mr. Johnson filed his complaint against his employer, the Regents of the University of California (the University), which is the DOE management and operating contractor at DOE's Los Alamos National Laboratory (LANL) in Los Alamos, New Mexico. On August 5, 1998, Mr. Johnson submitted additional information in response to requests from the OIG.

In his complaint and in his August 5, 1998 submission, Mr. Johnson contended that the University terminated his employment on September 19, 1997, because he had disclosed that the requirement that LANL workers commute to and from work posed an unnecessary hazard to workers and was less safe than telecommuting; and because he had refused to participate in the allegedly unsafe activity of commuting to and from an office at LANL to perform work that he could do from the safety of his own home by telecommuting. In response to requests from the OIG, Mr. Johnson also submitted copies of an e-mail message dated July 22, 1997, in which his immediate supervisor provided him with advance notice that based on the end of Mr. Johnson's assignment in Richland, Washington, his employment would be terminated if he continued to insist on telecommuting instead of working full time in Los Alamos; and an e-mail message dated September 10, 1997, in which LANL management informed him that it had determined that his employment would be terminated because of his refusal to report to work at a LANL on-site office.

On August 7, 1998, the OIG issued a summary dismissal of Mr. Johnson's reprisal complaint, pursuant to 10 C.F.R. Sec. 708.8(a)(3). The OIG determined that his complaint is without merit, because his disclosure to LANL management regarding the possible dangers of commuting, and his refusal to commute, did not satisfy the criteria set forth in Sec. 708.5(a).

On August 26, 1998, Mr. Johnson filed a timely request for review by the Deputy Secretary. In his request for review, Mr. Johnson made general arguments in favor of the safety of telecommuting.

Section 708.5 of Part 708 sets forth DOE's prohibitions against reprisals for certain employee disclosures and for refusals to participate in certain activities. Specifically, subsection 708.5(a)(1) prohibits a DOE contractor from retaliating against an employee because the employee has disclosed "information that the employee in good faith believes evidences ... (ii) A substantial and specific anger to employees or public health or safety...." In addition, Subsection 708.5(a)(3) prohibits retaliation against an employee because the employee has

Refused to participate in an activity, policy, or practice when---

(i) Such participation---

...

(B) Causes the employee to have a reasonable apprehension of serious injury to the employee, other employees, or the public due to such participation, and the activity, policy, or practice causing the employee's apprehension of such injury---

(1) Is of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude there is a bona fide danger of an accident, injury, or serious impairment of health or safety resulting from participation in the activity, policy, or practice; and

(2) The employee is not required to participate in such dangerous activity, policy, or practice because of the nature of his or her employment responsibilities...."

Mr. Johnson's general arguments in his request for review in favor of the safety of telecommuting fail to demonstrate that the OIG was incorrect in determining that his complaint is without merit, and in therefore dismissing it pursuant to Sec. 708.8(a)(3). His disclosure to LANL management concerning the possible dangers of commuting was speculative and did not relate to a "substantial and specific danger to employees or public health and safety," as required by Sec. 708.5(a)(1). Moreover, his refusal to commute was not based on "a reasonable apprehension of serious injury" to himself, other employees, or the public, and a reasonable person would not conclude that commuting would result in "a bona fide danger of an accident, injury, or serious impairment of health or safety," as required by Sec. 708.5(a)(3).

For the foregoing reasons, the dismissal of the complaint is affirmed.

Ernest J. Moniz

Acting Deputy Secretary

Issued February 7, 1999

George O. Kensley v. Diamond Back Services, Inc. (Case No. AL--95--0009)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 2, 1999

This is a request for review by complainant George O. Kensley of an Initial Agency Decision, issued by the Office of Inspector General (OIG), denying his complaint of reprisal.

On October 10, 1995, Mr. Kensley filed a complaint with DOE's Albuquerque Operations Office pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program. Mr. Kensley alleged in his complaint that his employer, Diamond Back Services, Inc. (DBS), had taken retaliatory actions against him as a result of his disclosures to DBS and to Rust Geotech, Inc. (Rust) regarding possible fraud and violations of law at DBS. DBS had entered into a subcontract with Rust, which was the management and operating contractor at DOE's Grand Junction Projects Office. In his complaint and subsequent correspondence with the OIG, Mr. Kensley alleged that he was transferred from an office position to a labor crew at DBS, and that his employment at DBS was terminated, because he had reported to officials at DBS and Rust that the DBS Project Superintendent had engaged in possible illegal or fraudulent activities.

After conducting an investigation, the OIG issued a Report of Inquiry and Recommendations (Report) on Mr. Kensley's complaint on April 13, 1998. The Report found that Mr. Kensley was hired as a temporary laborer with DBS, and was subsequently assigned to administrative work in the project office while maintaining his status as a laborer. On the day after he was advised

that he was being transferred back to his laborer position, he left the job site and never returned to work. Report at 2--3. The Report noted that "resignations are presumed to be voluntary actions which are outside the scope of Part 708." Report at 5. While the presumption that a resignation is voluntary may be rebutted by evidence which shows that it was the result of duress or coercion, i.e., a constructive discharge, in this case, after reviewing the evidence, the OIG found that Mr. Kensley's employment was not terminated by DBS, and that he resigned from his employment and was not subjected to a constructive discharge. Report at 4--6. The OIG therefore recommended that his request for relief be denied. Report at 6. /1

Subsection 708.9(a) provides that within 15 days of receipt of the Report, a party may request a hearing on the complaint before the Office of Hearings and Appeals (OHA). Subsection 708.10(a) provides that if a hearing is not requested, the OIG (formerly the Director, Office of Contractor Employee Protection) shall issue an Initial Agency Decision based upon the record. The Report, which was served upon both parties, explicitly informed them of their right to request a hearing in the following language:

Pursuant to 708.9(a), either party may file a written request for a hearing on the complaint with the Office of Hearings and Appeals (OHA) within fifteen days from receipt of this recommendation. If a hearing is requested, OHA shall issue the initial agency decision. Pursuant to 708.10(a), if neither party files a request for a hearing, the Office of Assessments, Office of Inspector General, will issue the initial agency decision within 30 days.

Report at 6.

Neither party requested a hearing. Accordingly, the OIG issued an Initial Agency Decision on June 8, 1998. The Initial Agency Decision found that Mr. Kensley resigned him employment under circumstances that did not constitute a constructive discharge, and denied his request for relief

Subsection 708.10(c)(1) provides, in pertinent part, as follows:

If the initial agency decision contains a determination that the complaint is without merit, it shall also include a notice stating that the decision shall become the final decision of DOE denying the complaint unless, within five calendar days of its receipt, a written request is filed with the Director for review by the Secretary or designee. (emphasis added)

In compliance with that subsection, the Initial Agency Decision that was issued to Mr. Kensley included the following notice:

In accordance with 708.10(c)(1), either party may file a written request for a review of this decision by the Deputy Secretary, who is the Secretary's designee for these purposes, within five calendar days from receipt of this Initial Agency Decision. A request for review should be addressed to the Acting Deputy Inspector General for Inspections and a copy of the request must be served on the other party by certified mail. If a review is requested, the record will be transmitted to the Deputy Secretary. If neither party files a request for a review, the Initial Agency Decision shall become the Final Agency Decision. (emphasis added)

Initial Agency Decision at 1--2.

Mr. Kensley received the Initial Agency Decision on June 16, 1998. DOE received his request for review on July 2, 1998---16 days after his receipt of the Initial Agency Decision. Mr. Kensley did not date his one-page request for review.

In his request for review, Mr. Kensley's sole argument is that the OIG during its investigation should have contacted additional persons who would have testified in his behalf. However, after the OIG issued its Report, Mr. Kensley failed to take advantage of the opportunity provided by subsection 708.9(a) to request a hearing before OHA at which additional persons could have testified in his behalf. As explained above, the Report informed him that he could request a hearing before OHA within 15 days from his receipt of the Report, and that if a hearing were requested, OHA would issue the Initial Agency Decision. Mr. Kensley never requested such a hearing. If he had requested a hearing, it would normally have been held at or near the appropriate DOE field organization; the OHA Hearing Officer could have arranged for the issuance of subpoenas for persons to attend the hearing as witnesses on behalf of Mr. Kensley; and those witnesses would have testified under oath or affirmation and been subject to cross-examination. 10 C.F.R. 708.9(b), (e), (f). By failing to request a hearing pursuant to subsection 708.9(a) at which persons could have testified in his behalf, Mr. Kensley waived the objection that he now raises for the first time in his request for review.

Furthermore, the OIG interviewed Mr. Kensley himself during its investigation, and his own admissions during that interview support the OIG's finding that his employment was not terminated by DBS. As explained in the Report, Mr. Kensley admitted during that interview that he never received any documentation indicating that he was terminated, that he was never informed by anyone at DBS that he was terminated, and that he never made any attempt to find out from anyone at DBS whether he had been terminated. Report at 4. The Report concluded that the circumstances surrounding the cessation of his employment as reported by Mr. Kensley himself and by former DBS office manager, XXXXX---with whom Mr. Kensley spoke after he stopped working for DBS, and who was also interviewed by the OIG---establish that his employment was not terminated by DBS and that he resigned. Id. at 5.

Finally, we note that Mr. Kensley's request for review of the Initial Agency Decision was untimely. As explained above, his undated request for review was filed 16 days after his receipt of the decision, although subsection 708.10(c)(1) required it to be filed within five calendar days of receipt.

For the foregoing reasons, the dismissal of the complaint is affirmed.

Ernest J. Moniz

Acting Deputy Secretary

Issued February 2, 1999

/1 The Report emphasized that Mr. Kensley was hired as a laborer, and was at all times officially a laborer with DBS. Report at 5. Therefore, the fact that he was transferred to his official position, and was assigned to perform the tasks of his official position, did not, in and of itself, constitute a reprisal. Moreover, because he resigned from DBS on the morning that his transfer became effective, there was no opportunity for a work situation to develop that might have constituted a reprisal.

Judy Kibbe v. Lockheed Martin Energy Research Corp. (Complaint No. OR--97--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 7, 1999

This is a request for review by Complainant Judy Kibbe, a former employee of a DOE contractor, Lockheed Martin Energy Research Corporation, which manages the Oak Ridge National Laboratory, of the summary dismissal of her complaint. The Acting Deputy Inspector General dismissed her complaint on the basis that it "is frivolous or on its face without merit and there is good cause not to process the complaint." In her request for review, the Complainant reiterates her complaint that a company rule was violated when a "positive discipline" concerning her job performance was placed in her personnel file without her knowledge, that once she discovered it, she informed a vice-president of the employer of the violation, and that she was laid off less than six months later in reprisal for the disclosure. She argues that her disclosure meets the regulatory test of "evidenc[ing] unsafe, unlawful, fraudulent, or wasteful practices," and that the summary dismissal erroneously applied a different standard that the disclosure must be "of concern to DOE and the public interest."

The complainant also responds to a notice by the case analyst in the Office of Inspections that her request for review by the Deputy Secretary was untimely since it was not received within five days of the decision's receipt by counsel for Complainant. The Complainant points out that the request for review was mailed within 24 hours after her counsel received the summary dismissal and argues that to equate "filed" with actual receipt is unreasonable, not required by the language of the rule, and at odds with comparable interpretations of the Federal Rules of Civil Procedure.

As an initial matter, I must determine whether the Complainant's request for review was timely filed. 10 C.F.R. Sec. 708.10(c) provides that the initial agency decision shall become the final decision of DOE "unless, within five calendar days of its receipt, a written request is filed with the [Acting Deputy Inspector General] for review * * *." Here, the record indicates that Complainant's counsel received the summary dismissal on Monday, May 11, 1998. Complainant's request for review, dated May 12, 1998, and postmarked May 13, 1998, was received by the Acting Assistant Inspector General on Monday, May 18, 1998.

In this case, the fifth calendar day following receipt was a Saturday, and the request for review was received on the first business day following this weekend period. Under both the Federal Rules of Civil Procedure and DOE procedural rules in other contexts, the last day of a period that is a Saturday, Sunday, or legal holiday is not included in computing the deadline. See Fed. R. Civ. P. 6(a); 10 C.F.R. Secs. 205.5(a), 1003.5(a). While Part 708 is silent on this point, I believe that the ordinary rule concerning computation of the deadline should be applied in this case. Accordingly, I conclude that the request for review was timely filed. /1

Turning to the Acting Deputy Inspector General's dismissal of the subject complaint, Part 708 provides at 10 C.F.R. Sec. 708.8(a) that a complaint shall proceed to investigation unless it has been settled, is untimely, is "frivolous or on its face without merit," is being pursued under other applicable law, or "for other good cause shown * * *." The regulations explicitly protect disclosures regarding a "violation of law, rule, or regulation" and disclosures evidencing "[f]raud, mismanagement, gross waste of funds, or abuse of authority." 10 C.F.R. Sec. 708.5(a)(i), (iii). The Acting Deputy Inspector General's dismissal assumes "that the Complainant's supervisor did violate a company 'rule' by failing to follow employee notification guidance set forth in the contractor's 'Management Control Procedure' pertaining to employee discipline * * *." Dismissal at 2. However, the Acting Deputy Inspector General concluded that the disclosure related to the Complainant's "individual, personal interests, and did not involve a matter of concern to DOE and the public interest."Ibid.

In the circumstances here presented, the Acting Deputy Inspector General correctly determined that further processing of the complaint was not warranted. As former Deputy Secretary White explained, protecting disclosures of alleged ""'mismanagement' as contemplated by the 'whistleblower' regulation demands a careful balancing lest the term encompass all disagreements between a contractor and its employees." More specifically, "there must be some assessment as to whether the nature of the disagreement evidences the type of disclosure of mismanagement that the regulation was designed to protect * * *." *Mehta v. Universities Research Ass'n, 24 DOE Para. 87,514 at p. 89,065 (1995). Here, the alleged disclosure involved solely an internal personnel matter relating to counseling and discipline of the contractor employee based on her job performance and did not involve any nexus to DOE or the public. Accordingly, former Deputy Secretary White's admonition concerning the appropriate scope of Part 708 is especially apt.

Therefore, my review of the record reveals no basis for overturning the summary dismissal, and it is hereby affirmed.

Ernest J. Moniz

Acting Deputy Secretary

Issued February 7, 1999

/1 My resolution of this issue makes it unnecessary to reach the question whether the request for review should be considered timely filed if it is mailed, but not received, within the five-day limit.

Scott H. Lebow v. Coleman Research Corporation and Lockheed Martin Idaho Technologies Company (Case No. ID--95--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued September 28, 1999

This is a request for review by complainant Scott H. Lebow of a decision by the Office of Inspector General (OIG) dismissing his complaint of reprisal.

On August 18, 1995, Mr. Lebow, a former employee of Coleman Research Corporation (CRC), a subcontractor of Lockheed Martin Idaho Technologies Company (LMITCO), the Department of Energy (DOE) contractor at the Idaho National Environmental and Engineering Laboratory (INEEL), initiated a complaint pursuant to 10 C.F.R. 708 with DOE's Idaho Operations Office. The complaint alleged that he was subjected to reprisal by CRC and LMITCO in retaliation for his alleged disclosures regarding waste, fraud, abuse, or mismanagement; safety and health issues; and possible violations of laws, rules, or regulations.

On February 13, 1996, Mr. Lebow filed suit in the United States District Court for the District of Idaho, pursuant to the False Claims Act (FCA), 31 U.S.C. Sec. 3729 et seq The FCA complaint included an allegation that the complainant was retaliated against for making protected disclosures, in violation of 31 U.S.C. Sec. 3730(h). /1

On January 16, 1998, OIG issued a summary dismissal of Mr. Lebow's complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4), based on a determination that complainant's Part 708 complaint and his FCA complaint "both involve the same set of facts and allegations, and, consequently, that they constitute the 'same matter.'"

On January 30, 1998, the complainant filed a timely request for review.

At the time this complaint was filed, subsection 708.6(a) of the DOE Contractor Employee Protection Regulation, 10 C.F.R. Part 708, provided, in pertinent part, that:

[a]n employee who believes that he or she has been discriminated against in violation of this part, and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint with DOE .... For purposes of this part, a complaint shall be deemed to have been pursued under State or other applicable law if the employee had, pursuant to proceedings established or mandated by State or other applicable law, at any time prior to, or concurrently with, the filing of a complaint with DOE, *i or at any time during the processing of a complaint filed with DOE*r, filed or submitted any complaint, action, grievance, or other pleading with respect to that same matter. (Emphasis supplied.) /2

This section provided further that the 60 day limitations period set forth in subsection 708.6(d) for filing a complaint.

shall be suspended upon the filing of a complaint pursuant to State or other applicable law, and [such filing] shall not bar the employee from reinstituting or filing a complaint with DOE if the matter cannot be resolved under State or other applicable law due to a lack of jurisdiction. /3

Subsection 708.8(a)(4) of the regulation provided for dismissal of a complaint where it is determined that "[t]he complainant has pursued a remedy available under State or other applicable law ...." /4

On appeal, the complainant does not dispute the fact that he filed an FCA complaint in the District Court

regarding the same facts in his Part 708 complaint. Although complainant alleges that the dismissal of his complaint by OIG "is based on a misinterpretation and misapplication of the provisions of 10 C.F.R. Sec. 708.6(a)," complainant does not explain how subsection 708.6(a) has been "misinterpret[ed] and misappli[ed]"; rather, his argument is that, for reasons of "policy," subsection 708.6(a) /5 should not be applied at all. The undisputed fact is that, subsequent to filing his initial complaint with OIG, the complainant filed a FCA complaint in the District Court with respect to the same facts. /6 This being the case, OIG correctly dismissed his complaint pursuant to the clear mandate of 10 C.F.R. Sec. 708.8(a)(4). /7

For the reasons set forth above, OIG's summary dismissal of this complaint is hereby affirmed.

T. J. Glauthier

Deputy Secretary

Issued September 28, 1999

/1 Although the complaint was initially filed under seal, the Department of Justice declined to intervene in the lawsuit and the seal was subsequently lifted by the court.

/2 Effective April 14, 1999, DOE issued an Interim Final Rule amending Part 708. 64 Fed. Reg. 12,862 (March 15, 1999). Subsection 708.15(d) of the Interim Final Rule contains a similar provision providing for dismissal of a Part 708 complaint where a complainant subsequently files a complaint "under State or other applicable law."

/3 This tolling provision is essentially preserved in subsection 708.14 of the Interim Final Rule.

/4 An identical provision appears in subsection 708.17(c)(3) of the Interim Final Rule.

/5 A similar provision is contained in subsection 708.15(d) of the Interim Final Rule, as noted above.

/6 Information obtained from the Office of Chief Counsel, Idaho Operations Office, indicates that complainant is still actively pursuing his District Court complaint.

/7 Subsection 708.17(c)(3) of the Interim Final Rule.

Jeffrey R. Leist v. Fernald Environmental Restoration Management Corporation (Case No. OH--96--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued October 31, 1996

This is an appeal by complainant Jeffrey R. Leist from a decision by the Office of Contractor Employee Protection (OCEP) dismissing his complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Mr. Leist filed a complaint with OCEP alleging fraudulent and discriminatory labor practices in connection with a Voluntary Reduction in Force (VRIF) program of his former employer, Fernald Environmental Restoration Management Corporation (FERMCO), the Department of Energy (DOE) contractor at its Fernald facility. On appeal, Mr. Leist takes issue with OCEP's decision dismissing his complaint for lack of jurisdiction.

1. In this case, it is undisputed that the complainant voluntarily resigned his employment. The complaint focuses on the complainant's allegation that FERMCO improperly denied his application for VRIF benefits, and that FERMCO mismanaged the VRIF program. OCEP found that these assertions did not set forth a specific allegation of whistleblower reprisal.

10 C.F.R. Sec. 708.5(a) prohibits a DOE contractor from taking a discriminatory action against an employee in retaliation for the disclosure of information relative to health and safety; a violation of any law, rule, or regulation; fraud, mismanagement, gross waste of funds, or abuse of authority; and other specified matters. My review of the record reveals that the complainant's allegations regarding the administration of the VRIF program were first raised after his voluntary resignation and notification that he was not entitled to these benefits. Further, the complainant does not claim that any mismanagement of the VRIF program in general, or FERMCO's denial of VRIF benefits to him in particular, was in retaliation for any protected disclosures. Accordingly, Mr. Leist's complaint fails to raise allegations within the jurisdiction of 10 C.F.R. Part 708.

2. In his appeal letter, Mr. Leist argues that FERMCO's denial of his right to review and/or appeal of the denial of his VRIF benefits was in reprisal for having challenged the denial of his VRIF benefits. However, it should be noted that this allegation was not raised in Mr. Leist's complaint; rather, his complaint alleged that there was no established VRIF appeals process, an allegation that formed part of Mr. Leist's assertions that VRIF was managed improperly.

3. Further, a review of the record establishes that Mr. Leist's alleged appeal occurred in a meeting with the former FERMCO president on March 16, 1995 (not March 16, 1996, as the complainant's appeal letter erroneously states). Subsection 708.6(d) of the regulation provides that a complaint must be filed "within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." Since Mr. Leist's initial complaint was filed April 4, 1996, more than a year later, any possible claim of reprisal is untimely.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

Charles B. Curtis

Deputy Secretary

Issued October 31, 1996

Keith Loomis v. General Electric Company

Final Decision and Order Issued by the Deputy Secretary of Energy

Issued May 4, 1995

This is an appeal by complainant Keith Loomis from a decision by the Office of Contractor Employee Protection (OCEP) dismissing his complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Mr. Loomis filed a complaint with OCEP alleging he was terminated from employment with the General Electric Company's Machinery Apparatus Operation in Schenectady, New York, a former contractor to DOE's

Schenectady Naval Reactors Office (SNR), due to his development of cancer and in retaliation for disclosures alleging safety concerns and mismanagement. On appeal, Mr. Loomis takes issue with OCEP's decision dismissing his complaint for lack of jurisdiction.

Under 10 C.F.R. Part 708, a complaint must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the discriminatory act, whichever is later. Furthermore, with respect to allegations of reprisal relating to disclosures that do not involve health or safety matters, the regulation is applicable only to acts of reprisal occurring after April 2, 1992, the effective date of the "whistleblower" regulation. See 10 C.F.R. Secs. 708.2(a) and 708.6(d).

The alleged acts of reprisal raised in the complaint here occurred several years prior to the effective date of the regulation (April 2, 1992) and the filing of the complaint (July 25, 1994). Therefore, OCEP lacks jurisdiction over the allegations raised in Mr. Loomis's complaint.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

William H. White

Deputy Secretary

Issued: May 4, 1999

Albert Loos v. Fernald Environmental Restoration Management Corporation (Complaint No. OH--97--0001)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued March 3, 1998

This is an appeal by complainant Albert Loos of a decision by the Office of Inspector General (OIG) dismissing his complaint as untimely. On February 3, 1997, Mr. Loos, a former employee of Fernald Environmental Restoration Management Corporation (FERMCO) and Westinghouse Environmental Management Company of Ohio (WEMCO), the current and former Department of Energy (DOE) prime contractors at its Fernald, Ohio site, initiated a complaint with OIG's Office of Inspections. Mr. Loos alleged that, in retaliation for several health or safety disclosures, he was subjected to various retaliatory acts, culminating in his "forced retirement" in March 1996.

10 C.F.R. 708.6(d) requires that a complaint "must be filed within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." Since Mr. Loos's complaint was filed more than 60 days after his retirement, OIG dismissed the complaint because it was not timely filed.

On appeal, the complainant's attorney attempts to argue that the complainant's contacts with DOE and FERMCO officials shortly after his retirement equate with timely filing of his reprisal complaint with OIG. However, those contacts related to DOE's investigation of complainant's prior safety allegations. These contacts fell far short of showing even an attempt to raise a timely complaint of reprisal that might be within the scope of the Part 708 regulations.

Accordingly, because complainant did not file his OIG reprisal complaint until February 1997, almost a year after his retirement, and he has provided no justification to excuse his failure to file a timely Part 708 complaint, complainant has failed to show any basis for overturning the dismissal of his complaint as untimely. See, e.g., Jeffrey R. Leist v. Fernald Environmental Restoration Management Corporation, Case No. OH--96--0001 (October 31, 1996) (affirming dismissal of complaint filed more than a year after last alleged retaliatory action); Pamela Griffin v. Westinghouse Savannah River Company, Case No. SR--95--0005 (June 20, 1996) (affirming dismissal of complaint filed more then eight months after last alleged discriminatory action).

For the reasons set forth above, OIG's decision to dismiss this complaint is hereby affirmed.

Elizabeth A. Moler

Deputy Secretary

Issued March 3, 1998

Gilberto R. Lopez v. Los Alamos National Laboratory (Case No. AL--95--0001)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued September 15, 1995

This is an appeal by complainant Gilberto R. Lopez of a decision by the Office of Contractor Employee Protection (OCEP) dismissing his complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Mr. Lopez filed a complaint with OCEP alleging that his employment with Los Alamos National Laboratory (LANL), a Department of Energy management and operating contractor, was terminated in retaliation for his allegations of fraud, mismanagement, gross waste of funds, and abuse of authority by his supervisors.

On appeal, Mr. Lopez takes issue with OCEP's decision dismissing his complaint for lack of jurisdiction. However, 10 C.F.R. Part 708 does not apply to complaints involving alleged acts of reprisal where such acts occur prior to the adoption or amendment of a contract requiring compliance with

Part 708 and, as in the instant case, the alleged reprisal does not stem from health or safety disclosures, participation or refusals. See 10 C.F.R. Sec. 708.2(a); see also Final Decision and Order in Mehta v. Universities Research Association (OHA Case No. LWA--0003, March 20, 1995). The alleged act of reprisal raised in the complaint here occurred prior to the September 23, 1994, effective date of the amendment to LANL's contract requiring compliance with Part 708. Therefore, OCEP correctly determined that it lacked jurisdiction over the allegations raised in Mr. Lopez's complaint.

The allegations raised by Mr. Lopez's complaint nonetheless appear colorable and, in view of their seriousness, warrant further investigation. Accordingly, this complaint will be referred to the Inspector General.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed. However, this matter will be referred to the Inspector General for further investigation.

Charles B. Curtis

Deputy Secretary

Issued September 15, 1995

Mark H. McCormack v. Westinghouse Savannah River Company (Case No. SR--98--0003)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 7, 1999

This is a request for review by complainant Mark H. McCormack of a decision by the Office of Inspector General (OIG) dismissing the reprisal complaint that he filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program. Mr. McCormack filed his complaint against Westinghouse Savannah River Company (WSRC), the DOE management and operating contractor at DOE's Savannah River Site in Aiken, South Carolina. Mr. McCormack has never been an employee of WSRC. He was an employee of National Environmental Services Corporation (NESC), a DOE subcontractor at the Savannah River Site, until he resigned in March 1996.

Background

On May 21, 1998, Mr. McCormack filed his reprisal complaint. He alleged in his complaint that he became an employee of NESC in October 1995; that as a "Site Safety Officer" at NESC he reported certain safety concerns to NESC and WSRC, which both resisted his recommendations of safety controls; that he believed that the lack of safety controls and safety concerns by NESC and WSRC required that he resign; and that therefore his resignation from NESC in March 1996 constituted a constructive discharge. Complaint at 1--2.

He further alleged that in December 1997, he was not selected for a position as an "ALARA Planner" at BAT Associates, another DOE subcontractor at the Savannah River Site, because WSRC employees provided negative job references in retaliation for his earlier reporting of safety concerns when he had been an employee of NESC. Complaint at 2; e-mail message, dated "7/13/98 1:40 PM," from Mark McCormack to Jerome Yurow of OIG, at 1--2.

He also alleged that when he first learned the reasons for his rejection in January 1998, his wife, Carol McCormack, presented a written complaint to Joseph Buggy, Executive Vice President of WSRC, because she had a personal relationship with Mr. Buggy as a result of their work together on the United Way of Aiken County, South Carolina; and that Mr. Buggy rejected the complaint on March 26, 1998. Complaint at 2; e-mail message, dated "7/13/98 1:40 PM," from Mark McCormack to Jerome Yurow of OIG, at 2--3.

The relief that Mr. McCormack requests in his complaint is that DOE enter an order requiring that he be awarded the position of ALARA Planner at BAT Associates, together with back pay and reasonable attorney's fees and costs. Complaint at 3.

Thus, Mr. McCormack in his complaint has alleged two separate discriminatory actions by two separate contractors: (1) that NESC constructively discharged him in March 1996; and (2) that WSRC employees provided negative job references concerning him in December 1997. However, he requests relief for only the latter alleged action by WSRC, not the former by NESC.

Mr. McCormack's counsel, Richard E. Miley, initially sent an outline of Mr. McCormack's reprisal complaint to Michael L. Wamsted, Senior Counsel for WSRC, by letter dated May 6, 1998. By letter dated May 14, 1998, Mr. Wamsted responded that because Mr. McCormack was at no time an employee of WSRC, he cannot maintain a Part 708 action against WSRC.

On August 6, 1998, the OIG issued a summary dismissal of Mr. McCormack's reprisal complaint, pursuant to 10 C.F.R. Sec. 708.8(a)(2) and (5). The grounds for the summary dismissal are that Mr. McCormack is ineligible to file a Part 708 complaint because he is not an "employee" as defined by Secs. 708.2(b) and 708.4; and that his complaint was not timely filed as required by Sec. 708.6(d).

On August 13, 1998, Mr. McCormack filed a timely request for review. By letter dated August 26, 1998, WSRC responded to Mr. McCormack's request for review.

Analysis

Subsection 708.2(b) provides that Part 708 is applicable to employees of contractors as defined in Sec. 708.4. The latter subsection defines an "employee" as "any person(s) employed by a contractor, and any person(s) previously employed by a contractor if such prior employee's complaint alleges that employment was terminated in violation of Sec. 708.5." Subsection 708.4 also defines a "contractor" to include, among other entities, a party to a Management and Operating Contract or to subcontracts under such a contract.

Subsection 708.6(d) provides for a 60-day limitations period for filing a reprisal complaint with DOE:

A complaint filed pursuant to paragraph (a) of this section must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later. In cases where the employee has attempted resolution through internal company grievance procedures as set forth in paragraph (c) of this section, the 60-day period for filing a complaint shall be tolled during such resolution period and shall not again begin to run until the day following termination of such dispute-resolution efforts.

The OIG was correct in concluding that Mr. McCormack is not an "employee" of the respondent WSRC, as defined by Secs. 708.2(b) and 708.4, and is therefore not eligible to file his complaint. Mr. McCormack has never been employed by WSRC. He was previously employed by NESC, but he resigned from NESC in March 1996 and now alleges, in his May 1998 complaint, that his resignation from NESC constituted a constructive discharge. Pursuant to the definitions of "employee" and "contractor" in Sec. 708.4, Mr. McCormack would have been eligible to file a Part 708 complaint against his former subcontractor employer NESC if he had filed it within 60 days after his alleged constructive discharge by NESC occurred in March 1996, as required by Sec. 708.6(d). However, by failing to file a Part 708 complaint until May 1998, Mr. McCormack exceeded the 60-day limitations period by approximately two years.

Mr. McCormack contends that he is an employee within the meaning of the phrase in Sec. 708.4 which includes "any person(s) previously employed by a contractor if such prior employee's complaint alleges that employment was terminated in violation of Sec. 708.5," because he alleged in his May 1998 complaint against WSRC, which has never employed him, that he was terminated by another contractor---his former employer NESC---in violation of Sec. 708.5. Request for review at 1--4, 8--10. That argument fails for two reasons.

First, as explained supra, his allegation that he was terminated in March 1996 by NESC is barred by the limitations period in Sec. 708.6(d). Mr. McCormack has failed to show good cause for his exceeding that 60-day deadline by two full years. /1 Because that untimely allegation is barred, it cannot serve as the basis for his complying with the definition of "employee" in Sec. 708.4.

Second, even if Mr. McCormack's allegation against his former employer NESC were not time-barred, he would still not be entitled to file his separate allegation against WSRC, because WSRC has never been his employer. The alleged discriminatory actions that are the subject of Part 708 are those taken by complainants' employers or former employers, not by other contractors or subcontractors that have never been their employers. In Mr. McCormack's complaint, only the first of the two alleged discriminatory actions was taken by his former employer: his alleged constructive discharge by NESC in March 1996, for which he does not even request relief in his complaint. In contrast, the second of the two discriminatory actions alleged in his complaint was taken by a contractor that has never employed him: the negative job references allegedly provided by employees of WSRC in December 1997. That is the only alleged discriminatory action for which he seeks relief in his complaint, and Part 708 does not apply to such an alleged action by a contractor that has never employed the complainant. /2

The language of the regulations makes it clear that Part 708 applies to alleged discriminatory actions taken by employers of complainants (including their former employers under the definition in Sec. 708.4). This is consistent with the purpose of the DOE Contractor Employee Protection Program. In describing the purpose of Part 708, Sec. 708.1 states the following:

This part establishes procedures for timely and effective processing of complaints by employees of contractors performing work at sites owned or leased by the Department of Energy (DOE), concerning alleged discriminatory actions taken by their employers.... (emphasis added)

Similarly, Sec. 708.3 provides as follows:

It is the policy of DOE that employees of contractors at DOE facilities should be able to provide information to DOE, to Congress, or to their contractors concerning violations of law, danger to health and safety, or matters involving mismanagement, gross waste of funds, or abuse of authority, to participate in proceedings conducted before Congress or pursuant to this part, and to refuse to engage in illegal or dangerous activities without fear of employer reprisal. (emphasis added)

In the present case, the only alleged discriminatory action for which Mr. McCormack seeks relief---negative job references provided by employees of WSRC---was not taken by his employer or former employer, and is not an employer reprisal contrary to the provisions of Part 708.

Furthermore, the regulatory history of Part 708 confirms that the regulations only apply to discrimination and reprisals taken by complainants' employers (including their former employers). In adopting the final rule, DOE stated the following:

This rule establishes criteria and procedures for the investigation, hearing, and review of allegations from DOE contractor employees of *i employer reprisal *r resulting from (1) employee disclosure of information to the DOE, to members of Congress, or to the contractor, (2) employee participation in proceedings before Congress or pursuant to this rule, or (3) employee refusal to engage in illegal or dangerous activities, when such disclosure, participation, or refusal pertains to employer practices which the employee believes to be unsafe, to violate laws, rules, or regulations, or to involve fraud, mismanagement, waste, or abuse. (emphasis added)

57 Fed. Reg. 7533, 7533 (Mar. 3, 1992).

[E]mployees of DOE contractors are encouraged to come forward with information that in good faith they believe evidences unsafe, unlawful, fraudulent, or wasteful practices. Employees providing such

information are entitled to protection from consequent discrimination by their employers with respect to compensation, terms, conditions, or privileges of employment.

Currently, there are certain statutory proscriptions against employer reprisal. (emphases added)

Id., quoted in request for review at 8--9.

Section 708.5 lists the types of activities for which employees are to be protected from employer reprisal. (emphasis added)

Id. at 7534.

Mr. McCormack is incorrect in alleging that the Supreme Court's decision in Robinson v. Shell Oil Co., 519 U.S. 337 (1997), supports his argument that he may file a Part 708 complaint against a contractor that has never been his employer. Request for review at 3--4. In Robinson, Shell Oil Co. fired an employee who shortly thereafter filed a charge with the Equal Employment Opportunity Commission (EEOC), alleging that Shell had discharged him because of his race. While that charge was pending, the former

Shell employee applied for a job with another company, which contacted Shell for an employment reference. The former Shell employee then charged that Shell provided a negative reference in retaliation for his having filed his first EEOC charge against Shell. He filed his second charge against Shell under Sec. 704(a) of Title VII of the Civil Rights Act of 1964, which makes it unlawful "for an employer to discriminate against any of his employees or applicants for employment" who have either availed themselves of Title VII's protections or assisted others in so doing. 519 U.S. at 339--40.

The issue before the Court was whether the term "employees," as used in Sec. 704(a) of Title VII, includes former employees, such that the former Shell employee could bring suit against Shell for Shell's negative job references. After examining the language and purpose of that particular statute, the Court concluded that the term "employees" includes former employees within its coverage. 519 U.S. at 346.

A different issue is in dispute in the present case: whether a former employee of one contractor (NESC) can file a Part 708 complaint against another contractor (WSRC) that is neither his employer nor his former employer, but whose employees allegedly provided negative job references concerning him. That was not an issue in Robinson, because in that case it was the former employer Shell that allegedly provided negative job references concerning its former employee. The former Shell employee did not file a charge against a company that never employed him. That is what Mr. McCormack has done in the present case. The Supreme Court noted this distinction in the context of Title VII when it stated that the "phrase 'his employees' could include 'his' former employees, but still exclude persons who have never worked for the particular employer being charged with retaliation." 519 U.S. at 344.

Mr. McCormack also argues that DOE "should follow the Supreme Court's broad construction of the term 'employee' to include applicants, such as Complainant." Request for review at 4. However, the Supreme Court in Robinson did not construe the term "employee" in Title VII to include applicants. On the contrary, the terms of Sec. 704(a) of Title VII, as quoted supra, expressly make that section applicable to "employees or applicants for employment." Congress thus included "applicants for employment" in Sec. 704(a) as persons distinct from "employees." In contrast, Sec. 708.2(b) of Part 708 makes that part applicable to "employees," but it does not mention "applicants for employment," nor does any other provision of Part 708.

Finally, we note that even assuming arguendo that Mr. McCormack had been eligible to file a Part 708 complaint regarding the fact that he was not hired by BAT Associates in December 1997, that complaint would not have been timely filed. Pursuant to Sec. 708.6(d), his complaint would have been required to be filed within 60 days after he first learned the reasons for his rejection in January 1998. He should therefore have filed his complaint sometime before the end of March 1998. Instead, he did not file it until May 21, 1998. /3 He has alleged that his wife's correspondence with her United Way co-worker, XXXXX of WSRC, constituted an attempted resolution through the "internal company grievance procedures" of WSRC, and therefore tolled the 60-day limitations period pursuant to Sec. 708.6(d). Request for review at 4--7. However, the "internal company grievance procedures" set forth in Sec. 708.6(c) and (d) apply to the employees (including former employees) of that company, not to Mr. McCormack, who is neither an employee nor a former employee of WSRC.

The regulatory history of Part 708 confirms that the internal company grievance procedures that toll a complainant's limitations period apply to that company's own "internal" employees, not to external employees of other contractors:

The DOE believes that contractors should have the managerial discretion to deal with employee disciplinary matters as they deem appropriate, and that contractors with effective employee protection programs should have the opportunity to address and resolve complaints of reprisal internally. The DOE recognizes, however, that in certain instances company procedures are not a substitute for Federal administrative procedures. Accordingly, the DOE believes that Sec. 708.6(c) appropriately requires that internal company procedures be utilized when available, and that the rule as a whole does not excessively encroach upon the contractor's right to exercise managerial discretion.

57 Fed. Reg. at 7538.

Moreover, Mr. McCormack has failed to present any evidence that WSRC ever misled him or his wife by incorrectly stating that his wife's correspondence with XXXXX constituted an "internal company grievance procedure" that would toll the period of limitations pursuant to Sec. 708.6(d).

For the foregoing reasons, the dismissal of the complaint is affirmed.

Ernest J. Moniz

Acting Deputy Secretary

Issued February 7, 1999

/1 As the OIG correctly found in its dismissal, if Mr. McCormack had been constructively discharged by NESC in March 1996 because of his protected activity, as he alleges, he would have been aware of that discriminatory act at the time of its occurrence, and therefore the 60-day limitations period would have begun to run in March 1996. This finding is supported by the allegation in his complaint that his resignation from NESC constituted a constructive discharge because he believed that the lack of safety controls and safety concerns by NESC and WSRC required that he resign. Complaint at 2. If that belief compelled him to resign in March 1996, as he alleges, then he would have known at that time that his resignation was involuntary and a constructive discharge.

/2 For the same reason, Part 708 does not apply to the specific relief that Mr. McCormack requests---that DOE enter an order requiring that he be awarded the position of ALARA Planner at BAT Associates---because BAT Associates, like WSRC, has never employed the complainant.

/3 Although Mr. McCormack alleged, in his request for review at 5--6, that he discovered for the first time on March 26, 1998 that WSRC employees had made false statements concerning him, that allegation is contradicted by his statement in his complaint that "Complainant first learned of his rejection and the retaliatory reasons for his rejection in January of 1998" (Complaint at 2); by his wife's assertion in her letter to XXXXX of WSRC, dated January 28, 1998, that "misinformation" and "references" had kept him from consideration for the job of ALARA Planner at BAT Associates (Exhibit A to request for review, at 1, 3); and by his own statement in his request for review that "Complainant had no reason in 1996 or later to suspect that WSRC had undertaken to discriminate against him or to black-ball him until December, 1997, when he learned for the first time that WSRC managers had directed that his resume be 'pulled' from consideration because of his 1996 safety complaints" (request for review at 6 (emphasis added)).

Mr. McCormick is also incorrect in his claim that the alleged "[c]ontinuing nature of WSRC's black-listing" extends the limitations period indefinitely. Request for review at 5--6. Even if WSRC employees have not withdrawn the negative job references that he first discovered in January 1998, that would not extend the 60-day limitations period. Under the terms of Sec. 708.6(d), that period began to run when he "knew, or reasonably should have known," of the alleged negative job references, in January 1998.

Thomas McManus v. EG&G Energy Measurements, Inc. (Case No. NV--96--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued September 9, 1998

This is a request for review by complainant Thomas McManus of a decision by the Office of Inspector General (OIG) dismissing his complaint of reprisal.

On January 29, 1997, Mr. McManus, a former employee of EG&G Energy Measurements, Inc. (EG&G), the former Department of Energy (DOE) contractor at the Nevada Test Site (NTS), initiated a complaint with DOE's Nevada Operations Office. The complaint alleged that he was not hired by the successor contractor to EG&G in retaliation for his prior disclosures of waste, fraud, abuse, or mismanagement, and health and safety issues, by EG&G and Reynolds Electrical and Engineering Company (REECo), another DOE contractor.

In March 1997, OIG initiated inquiry into Mr. McManus's reprisal complaint. During the course of that review OIG learned that, on December 15, 1997, Mr. McManus filed a lawsuit in the District Court, Clark County, Nevada, against EG&G, REECo, and others, which included allegations of reprisal similar to those made in his OIG complaint. On April 15, 1998, OIG issued a Summary Dismissal of Mr. McManus's complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4) based on a determination that complainant had pursued a State court remedy involving "the same set of facts and allegations."

Subsection 708.6(a) of the DOE Contractor Employee Protection Regulation, 10 C.F.R. Part 708, provides, in pertinent part, that:

[a]n employee who believes that he or she has been discriminated against in violation of this part, and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint with DOE. ... For purposes of this part, a complaint shall be deemed to have been pursued under State or other applicable law if the employee had, pursuant to proceedings established or mandated by State or other applicable law, at any time prior to, or concurrently with, the filing of a complaint with DOE, or at any time during the processing of a complaint filed with DOE, filed or submitted any complaint, action, grievance, or other pleading with respect to that same matter. (Emphasis supplied.)

This section provides further that the 60-day limitations period set forth in subsection 708.6(d) for filing a complaint "shall be suspended upon the filing of a complaint pursuant to State or other applicable law, and [such filing] shall not bar the employee from reinstituting or filing a complaint with DOE if the matter cannot be resolved under State or other applicable law due to a lack of jurisdiction."

Subsection 708.8(a)(4) of the regulation provides for dismissal of a complaint where it is determined that "[t]he complainant has pursued a remedy available under State or other applicable law...."

On appeal, complainant's attorney takes issue with OIG's dismissal of his complaint based on his filing of a State court complaint regarding the same facts, claiming that the State court action was initiated "for the purpose of preserving any state causes statute of limitations that Mr. McManus may have had."

Whatever basis complainant's attorney had for initiating an action in state court, the fact remains that, subsequent to filing his initial complaint with OIG, the complainant filed a complaint in State court with respect to the same facts. This being the case, OIG correctly dismissed his complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4).

Therefore, this complaint is being dismissed on purely procedural grounds, based on the fact that

complainant has chosen to pursue his complaint in State court. However, no judgment is being made as to the underlying merits of complainant's case. If complainant's allegations cannot be resolved in the State court proceeding he has initiated "due to a lack of jurisdiction," he may reinstitute a Part 708 complaint in accordance with the terms of subsection 708.6(d).

For the foregoing reasons, the dismissal of the complaint is affirmed.

Elizabeth A. Moler

Deputy Secretary

Issued September 9, 1998

Neil A. Mock v. Coleman Research Corporation and Lockheed Martin Idaho Technologies Company (Case No. ID--95--0002)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued September 28, 1999

This is a request for review by complainant Neil A. Mock of a decision by the Office of Inspector General (OIG) dismissing his complaint of reprisal.

On August 18, 1995, Mr. Mock, a former employee of Coleman Research Corporation (CRC), a subcontractor of Lockheed Martin Idaho Technologies Company (LMITCO), the Department of Energy (DOE) contractor at the Idaho National Environmental and Engineering Laboratory (INEEL), initiated a complaint pursuant to 10 C.F.R. 708 with DOE's Idaho Operations Office. The complaint alleged that he was subjected to reprisal by CRC and LMITCO in retaliation for his alleged disclosures regarding waste, fraud, abuse, or mismanagement; safety and health issues; and possible violations of laws, rules, or regulations.

On February 13, 1996, Mr. Mock filed suit in the United States District Court for the District of Idaho, pursuant to the False Claims Act (FCA), 31 U.S.C. Sec. 3729 et seq. The FCA complaint included an allegation that the complainant was retaliated against for making protected disclosures, in violation of 31 U.S.C. Sec. 3730(h). /1

On January 16, 1998, OIG issued a summary dismissal of Mr. Mock's complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4), based on a determination that complainant's Part 708 complaint and his FCA complaint "both involve the same set of facts and allegations, and, consequently, that they constitute the 'same matter.'"

On January 30, 1998, the complainant filed a timely request for review.

At the time this complaint was filed, subsection 708.6(a) of the DOE Contractor Employee Protection Regulation, 10 C.F.R. Part 708, provided, in pertinent part, that:

[a]n employee who believes that he or she has been discriminated against in violation of this part, and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint with DOE .... For purposes of this part, a complaint shall be deemed to have been pursued under State or other applicable law if the employee had, pursuant to proceedings established or mandated by State or other applicable law, at any time prior to, or concurrently with, the filing of a complaint with DOE, or at any time during the processing of a complaint filed with DOE, filed or submitted any complaint, action, grievance, or other pleading with respect to that same matter. (Emphasis supplied.) /2

This section provided further that the 60 day limitations period set forth in subsection 708.6(d) for filing a complaint

shall be suspended upon the filing of a complaint pursuant to State or other applicable law, and [such filing] shall not bar the employee from reinstituting or filing a complaint with DOE if the matter cannot be resolved under State or other applicable law due to a lack of jurisdiction. /3

Subsection 708.8(a)(4) of the regulation provided for dismissal of a complaint where it is determined that "[t]he complainant has pursued a remedy available under State or other applicable law ...." /4

On appeal, the complainant does not dispute the fact that he filed an FCA complaint in the District Court

regarding the same facts in his Part 708 complaint. Although complainant alleges that the dismissal of his complaint by OIG "is based on a misinterpretation and misapplication of the provisions of 10 C.F.R. Sec. 708.6(a)," complainant does not explain how subsection 708.6(a) has been "misinterpret[ed] and misappli[ed]"; rather, his argument is that, for reasons of policy," subsection 708.6(a) /5 should not be applied at all. The undisputed fact is that, subsequent to filing his initial complaint with OIG, the complainant filed a FCA complaint in the District Court with respect to the same facts. /6 This being the case, OIG correctly dismissed his complaint pursuant to the clear mandate of 10 C.F.R. Sec. 708.8(a)(4). /7

For the reasons set forth above, OIG's summary dismissal of this complaint is hereby affirmed.

T. J. Glauthier

Deputy Secretary

Issued September 28, 1999

/1 Although the complaint was initially filed under seal, the Department of Justice declined to intervene in the lawsuit and the seal was subsequently lifted by the court.

/2 Effective April 14, 1999, DOE issued an Interim Final Rule amending Part 708. 64 Fed. Reg. 12,862 (March 15, 1999). Subsection 708.15(d) of the Interim Final Rule contains a similar provision providing for dismissal of a Part 708 complaint where a complainant subsequently files a complaint "under State or other applicable law."

/3 This tolling provision is essentially preserved in subsection 708.14 of the Interim Final Rule.

/4 An identical provision appears in subsection 708.17(c)(3) of the Interim Final Rule.

/5 A similar provision is contained in subsection 708.15(d) of the Interim Final Rule, as noted above.

/6 Information obtained from the Office of Chief Counsel, Idaho Operations Office, indicates that complainant is still actively pursuing his District Court complaint.

/7 Subsection 708.17(c)(3) of the Interim Final Rule.

Arthur F. Murfin v. EG&G Rocky Flats, Inc. (Case No.

RF--94--0002)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 7, 1999

This is a request for review by Complainant Arthur F. Murfin of the Initial Agency Decision ("IAD") of the Acting Deputy Inspector General for Inspections concluding that "a preponderance of the available evidence did not support the Complainant's allegations that his protected disclosures contributed to * * * alleged retaliatory acts, or that the actions were part of a pattern of retaliation which continued beyond the effective date of Part 708." Attach. 1 at p. 25. Mr. Murfin served as the "lock and tagout manager" for Building 460 of Respondent EG&G Rocky Flats, Inc., DOE's former M & O contractor for Rocky Flats, until he was separated in a reduction in force effective March 24, 1995.

On February 16, 1994, Mr. Murfin filed a complaint with the Office of Contractor Employee Protection ("OCEP") alleging that he had made protected disclosures starting in 1987 about the possible misuse of government funds in Respondent's Future Systems division and that those disclosures led to various adverse actions in reprisal for these disclosures. Attach. 1 at p. 3, exh. 1, 5 at p.1. Thereafter, Mr. Murfin twice expanded his complaint to include additional allegations of reprisal culminating in his discharge in a reduction in force on March 13, 1995, and in interviews he belatedly added an allegation that he had also made health and safety disclosures concerning safe oxygen levels in machining operations in 1988. /1 Exh. 2, 3, 5 at p.2, 16 at p.1.

After an extensive on-site investigation by OCEP, the Deputy Inspector General for Inspections ("DIG"), to whom OCEP's function was transfered effective October 1, 1996, issued a twenty-five-page report and proposed order. In that report, DIG analyzed Mr. Murfin's charges one by one.

1. Alleged Protected Disclosures

First, DIG concluded that a preponderance of the evidence supported Complainant's allegations that he had engaged in protected activity late in 1987 by providing information to a congressional investigation concerning wrongful fabrication of personal items at possible government expense in Respondent's "Future Systems" department. Attach. 1 at pp. 4--6, 10, 15, exh. 19--21. Second, although DIG noted the "absence of specific and detailed information regarding the content of these communications," it accepted for purposes of the analysis that early in 1988 after he was transferred out of the Future Systems department, Mr. Murfin had "raised safety concerns" concerning use of "flow meters" and oxygen levels in "machining boxes" and that he had refused to conduct machining operations with improper oxygen levels. Attach. 1 at 4, 11--12. Third, DIG found that Complainant had provided information to Respondent's General Counsel in September of 1992 in response to a discovery request concerning "prior operation" of the Future Systems department, DIG noted that it was "unclear" whether any protected disclosure was involved, but it did consider this evidence to see if the alleged retaliatory actions taken were related to his response to this request for information. Attach. 1 at pp. 9, 12, exh. 23--24. Finally, Complainant characterized his filing of the instant complaint as a protected disclosure, and DIG agreed. Attach. 1 at pp. 9, 13.

2. Alleged Acts in Reprisal for Protected Activity

DIG categorized Complainant's allegations of reprisal into six areas, which are discussed separately, as follows.

a. *Complainant's allegation that his transfer out of the Future Systems department in February, 1988, was*

retaliatory. DIG concluded that, since his transfer took place before both the alleged health and safety disclosures and the contractual adoption of Part 708, it was not subject to Part 708's coverage. Attach. 1 at p. 13. Nevertheless, DIG concluded, as part of its analysis whether a pattern of retaliation had been shown, that the evidence did not demonstrate a retaliatory motive for the transfer. Id. at pp. 4--5, 13.

b. *Complainant's allegation that he received poor performance evaluations in 1988, 1989, and 1990*. DIG concluded that these allegations are outside Part 708's scope, but in evaluating whether they might form part of a pattern o freprisal, DIG again found that a "retaliatory animus" was not shown. Id. at 5--8, 13.

c. *Complainant's charge that he was denied selection to several positions to which he applied.* While some of the selections took place before Part 708 was applicable, DIG analyzed this issue for a possible pattern of reprisal and concluded that no retaliatory motive was shown. Id.. at 14. With respect to six positions applied for in 1994 after Part 708's adoption, however, DIG noted that Mr. Murfin had offered no specific evidence of retaliatory motive, that all six vacancies ended up being cancelled, and that Mr. Murfin admitted that he did not meet the minimal educational requirements. Accordingly, DIG concluded that "a preponderance of the available evidence does not indicate that the Complainant was denied selection for any of the six positions in retaliation for his disclosures." Ibid. With respect to the other position Mr. Murfin may have applied for, it too had a "minimum educational requirement" that he did not satisfy. Id. *at 14--15.

d. Complainant's allegation that he had been denied promotions and salary increases. Complainant pointed to the unexplained insertion on August 24, 1990, in his personnel file of DOE's response (exh. 21) to Congressman Skagg's letter (exh. 20) requesting DOE to look into Mr. Murfin's allegations of reprisal as probative of a retaliatory basis for his employment history. Attach. 1 at pp. 5--8, 15. Complainant's primary argument, however, was that another employee with his same title and duties was paid more for the same job. Id. at 15. Reviewing the evidence produced by Respondent, DIG concluded that "there were substantial differences in their duties and responsibilities." DIG also noted that complainant has, since mid-1988, received salary enhancements and no evidence was presented that indicated that complainant was entitled to a specific promotion for which he was denied. Thus, the evidence did not indicate Mr. Murfin had been denied a promotion or salary increase in reprisal for protected activity. Id. at 15--17.

e. *Complainant's suggestion that he was denied appropriate training on two occasions in June, 1994, and February,1995.* Attach. 1 at pp. 17--18. Although DIG opined that "a denial of training, in itself, is not an adverse action" cognizable under Part 708, it nevertheless analyzed the evidence and concluded that the 1994 training was canceled for "valid business reasons" and that Mr. Murfin acknowledged that he was allowed to take the course later, in early 1995, further negating any possible inference of retaliatory motive. Id. at 18. With respect to the 1995 training denial, Complainant's supervisor indicated that the course was unnecessary for Complainant's job, and that Mr. Murfin "would, from time to time, schedule himself for week-long courses without informing his supervisor" and that the supervisor normally canceled those "that did not pertain to the Complainant's duties." Id. at 19. Mr. Murfin's primary argument that the cancellation was retaliatory was that the employee referenced in the paragraph above with the same job title as Complainant was allowed to take the course. Id. at 18--19. In the absence of any "specific and supporting evidence" supporting Mr. Murfin's charges, DIG accepted Respondent's explanation and concluded that the course cancellation was not in reprisal for protected disclosures. Id. at 19.

f. *Complainant's allegation that his termination in a reduction in force ("RIF") effective March 24, 1995, was the culmination of Respondent's retaliatory activities.* Despite having found no persuasive evidence in support of Mr. Murfin's other allegations of retaliation, DIG analyzed this charge in detail. Attach. 1 at pp. 19-24. DIG reviewed Respondent's policy entitled "Layoff of Salaried Employees," which provided that management should consider "demonstrated performance," "versatility and ability in applying pertinent skills and experience to the immediate and foreseeable business requirements of the organization," and, other factors being "relatively equal," the employee's length of service. Id. at 20. Complainant's second-level supervisor explained his reasons for believing that Mr. Murfin should be a RIF candidate, and, among other things, he indicated that Mr. Murfin "required more direction and more supervision than other

employees" and that the most "critical" areas of future need were "environmental and safety concerns," rather than Complainant's area of "building support." Attach. 1 at p. 20, exh. 10. Other management officials were interviewed and provided similar explanations. Attach. 1 at pp. 20--23. DIG found that it was "unable to substantiate" that Complainant's disclosures contributed in any way to his selection for the RIF and that Respondent had "provided valid business reasons" for selecting Mr. Murfin. Id. at 23--24. Accordingly, DIG concluded that Complainant's allegation that his separation in a RIF was retaliatory "was not supported by a preponderance of the available evidence." Id. at 24.

On January 3, 1997, DIG issued the report and proposed order concluding that "no claim of reprisal covered under Part 708 was supported by a preponderance of available evidence" and ordering that Complainant's claim be denied. Attach. 1 at p. 25. By letter of January 21, 1997, Mr. Murfin requested a hearing on his complaint before the Office of Hearings and Appeals. Attach. 2. By letter received on January 16, 1998, however, Mr. Murfin withdrew his request for a hearing. Attach. 3.

In a letter dated February 14, 1998, Complainant detailed his objections to the report and proposed order. Attach. 4. DIG issued the Initial Agency Decision ("IAD") adopting the report and proposed order and responding to Mr. Murfin's claims of error on February 20, 1998. Attach. 5. In particular, DIG addressed the timeliness of the Complaint and the question whether there was any reason to extend the 60-day filing deadline with respect to the allegations impacted by it, concluding that, since all the untimely allegations were investigated with reference to whether they might demonstrate a pattern of reprisal and found not to show any such pattern, there was no reason to extend the deadline. IAD at 1--2. /2 Additionally, DIG addressed Complainant's allegations of factual error, concluding that he had "not presented any argument or information warranting any alteration of the conclusions" reached. Id. at 3.

By letter of April 1, 1998, Complainant makes several arguments in support of his appeal. Attach. 8. First, Mr. Murfin renews his argument that the sixty-day limitation period should not apply. Attach. 8 at p. 1. Second, Complainant reminds us that he was advised by letter of June 27, 1994, /3 that DOE was considering setting up an alternative remedial process for complaints that were not covered by Part 708 and requests that his Complaint be so processed. Ibid. Third, Mr. Murfin indicates that he was misled in a telephone conversation with OCEP to think that old problems were covered. /4 Id. at 2. Finally, Complainant suggests that his case is "quite similar" to that of Ronald Sorri, and should have the same result. Ibid.

As the Report adopted by the IAD noted (attach. 1 at p. 3), under the regulations, the Complainant has the burden of establishing the elements of his claim by a preponderance of the evidence, including that reprisal was at least a contributing factor in the adverse employment action complained of. 10 C.F.R. Sec. 708.9(d). Despite a full investigation of allegations stretching back to 1987, OCEP and DIG were unable to find any concrete support for Complainant's suspicions that any of the claimed adverse actions were motivated by reprisal and further concluded that they were adequately explained by Respondent in terms of business needs of the company. Having withdrawn his request for a hearing at which he would have been entitled to present witnesses and other evidence in support of his claims (see 10 C.F.R. Sec. 708.9), Mr. Murfin is precluded from challenging any of the findings in the IAD. Ronald Sorri, 23 DOE ¶ 87,503 at p. 89,007 (1993). Moreover, even if Complainant had properly challenged those findings, it is well settled that the factual determinations set forth in the Initial Agency Decision are subject to being reversed on appeal only if they are clearly erroneous. Ogelsbee v. Westinghouse Hanford Company, 25 DOE ¶ 87,501 (1995).

With respect to Mr. Murfin's particular arguments on appeal, they are unavailing. Regarding the 60-day deadline, the argument is academic. As DIG pointed out, all of the Complainant's allegations were investigated, against the possibility that, even if they were outside the coverage of Part 708 or outside the 60-day limit, they might tend to show a pattern of reprisal for protected activity that was within the coverage and time limits of the regulations. However, not a single allegation of reprisal was found to be supported by evidence adequate to sustain Mr. Murfin's burden, so that the timeliness of the complaint and the allegations is simply immaterial. Similarly irrelevant, given the painstaking review already given each

of Complainant's allegations on their merits, is Complainant's request for an

alternative remedial process. Such a process would serve no useful purpose in view of DIG's review of complainant's allegations and conclusions that the available evidence was inadequate to support them. Finally, Complainant's citation to the case of Ronald Sorri, 23 DOE ¶ 87,503 (1993), is inapposite, since the fact-bound determination in that case is that Mr. Sorri's evidence adequately established a pattern of reprisal culminating in his termination within a period of less than two years. Id. at pp. 89,006--89,008. Unlike the complainant in that case, Mr. Murfin simply failed to produce evidence supporting his allegations.

In sum, DIG went to extraordinary efforts to give the Complainant the benefit of the doubt regarding his suspicions. Despite the fact that many of his allegations were plainly untimely, it investigated all of them, and properly dismissed them based on the absence of supporting evidence.

Accordingly, my review of the record reveals no basis for overturning the Initial Agency Decision, and it is hereby affirmed.

Ernest J. Moniz

Acting Deputy Secretary

Issued February 7, 1999

/1 As noted in the IAD at p. 3, Part 708 does not apply to complaints involving acts of reprisal committed before contractual adoption of Part 708 unless they "stem from health or safety disclosures, participations or refusals." Mehta v. Universities Research Assoc., OHA Case No. LWA--0003, LWZ--0023 (1995). In this case, Respondent's contract was amended to incorporate part 708 effective April 2, 1992. Attach. 1 at p. 2. However, when Complainant was interviewed on May 11, 1994, and June 20-21, 1995, he also alleged having made health and safety disclosures concerning safe oxygen levels in machining operations in 1988. Exh. 5 at p.2, 16 at p.1.

/2 Although it does not affect the reasoning of the IAD, there is an apparent typographical error in the IAD to the effect that the Complaint was filed in February, 199 3, as opposed to February, 199 4, as appears from the record. Attach. 5 at p.2.

/3 Exh. 4.

/4 See exh. 2.

Complaint of George E. Parris, Ph.D. (Complaint No. HQ97--0006)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued October 15, 1998

his is a request for review by Complainant George E. Parris, Ph.D. of a decision of the Office of Inspector General ("OIG") summarily dismissing his complaint under 10 C.F.R. Part 708. OIG determined that the complaint should be dismissed because it: (1) was outside the scope of 10 C.F.R. Part 708, since the complaint was directed at DOE, not Complainant's employer; (2) failed to allege any specific acts of reprisal covered under the regulation; and (3) was untimely filed. As explained below, I conclude that OIG correctly dismissed the subject complaint and its decision should be affirmed.

Complainant Parris is a former employee of a Department of Energy ("DOE") contractor that provided services in connection with the agency's waste management programmatic environmental impact statement ("PEIS"). In his complaint, Parris complained about DOE's decision to terminate his employer's contract. Parris further complained about negative references to him and his work on behalf of Berger Associates, in connection with the Department's processing of the Part 708 complaint of an employee of another contractor working on the PEIS. On April 24, 1997, OIG dismissed these claims finding that because "Part 708 coverage is limited to covered contractor employers and does not extend to DOE or DOE officials, the alleged acts of retaliation do not fall within the coverage of Part 708." Further, OIG's review of the complaint did not identify any alleged facts forming the basis for a reprisal complaint under Part 708. OIG explained that,

[d]ecisions within the legitimate discretion of DOE officials to reduce funding for a project * * * do not constitute acts of retaliation that are prohibited under Part 708. Part 708 primarily was intended and designed to protect against adverse personnel actions taken in reprisal for protected activities by individuals, much like the protections applied to federal employees by the U.S. Merit Systems Protection Board and U.S. Office of Special Counsel.

OIG also noted that Part 708 generally requires that reprisal complaints be filed within 60 days after the discriminatory act occurred. See 10 C.F.R. 708.6(d) (complaint "must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later"). Here, the alleged acts of reprisal occurred in 1994 but the complaint was not filed under March 21, 1997. While Parris asserted that he did not learn of the alleged acts of reprisal until he obtained possession of relevant documents after November 27, 1996, OIG found that the filing of the complaint "far exceeds the 60-day period of any cited act of reprisal (i.e. the termination of your work under the specific project)." Further, OIG stated that the complaint was filed more than 60 days after Parris learned of information regarding the Part 708 complaint of the other contractor employee cited as a basis for Parris's complaint.

While Complainant asserted that he filed an "interim" Part 708 complaint in a letter to DOE dated January 14, 1997, OIG found that "a review of that letter does not indicate any reference to your intent to file a Part 708 reprisal complaint." Finally, OIG held that the 60-day period was not tolled while Complainant considered other causes of action or possible forms of relief.

In a brief dated March 21, 1997, Complainan argues that rules applying to "DOE contractors reprising against their employees" also "would logically apply to DOE reprisal against employees of contractors," since that result is "consistent with rules against reprisals by DOE managers against DOE employees." Brief at 2--3. However, this argument ignores that Part 708 is specifically limited to covered contractor employees and nowhere extends to DOE or DOE officials. See 10 C.F.R. 708.2(b) ("[t]his part is applicable to employees (defined in Sec.708.4) of contractors (defined in Sec. 708.4) * * *"); 10 C.F.R.

708.4 (defining "contractor" as "a seller of good or services who is a party to a procurement contract").

For this reason, Complainant's citations to Department of Labor authorities /1 providing that "covered employers" may be held liable in other statutory contexts to the employees of a separate covered employer are simply inapposite since Part 708 does not apply to DOE. Further, as OIG correctly held, Part 708 was designed to protect contractor employees from adverse personnel actions and plainly does not encompass "[d]ecisions within the legitimate discretion of DOE officials to reduce or stop funding for a project, as described in [Parris's] complaint * * *." *

With respect to OIG's dismissal of his complaint on the basis of timeliness, Complainant provides no explanation for waiting until 1997 to file a complaint addressing alleged reprisal that occurred in 1994. Parris complains that OIG failed to give "any consideration to tolling of the time periods involved" but fails to provide any explanation whatsoever supporting such tolling. As OIG correctly pointed out, the fact that Complainant may have considered other causes of action or possible forums for relief is insufficient to toll the filing period.

Parris complains that the summary dismissal unfairly charges him with knowledge of the allegations concerning a separate agency Part 708 proceeding based upon OIG's finding that Parris was interviewed in that proceeding. However, the fact that Parris states that he does not recall those interviews fails to refute OIG's correct determination that they, in fact, occurred. See Record, Complaint of C. Lawrence Cornett, Case Nos. VWA--0007, VWA--0008 at 252--253, 389.

Accordingly, the record reveals no basis for overturning the summary dismissal, and that decision is hereby affirmed.

Deputy Secretary

Issued October 15, 1998

/1See *i Stephens v. NASA*r, 94--TSC--5 (A.R.B. Feb. 13, 1997); *i Freels v. Lockheed Martin Energy Systems, Inc.*r, 95--CAA--2 (A.R.B. Dec. 4, 1996).:

Donald R. Patterson v. University of Chicago (Case No. CH--96--0003)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued March 3, 1998

This is a request for review by complainant Donald R. Patterson of a decision by the Office of Inspector General (OIG) dismissing his complaint of reprisal.

On August 14, 1996, Mr. Patterson, a former employee of the University of Chicago, the Department of Energy (DOE) contractor at Argonne National Laboratory, initiated a complaint under 10 C.F.R. Part 708 with DOE's Chicago Operations Office (CH). The complaint alleged that he was terminated from his employment on July 9, 1996, in retaliation for ongoing safety disclosures dating from February 1994. Mr. Patterson's complaint was forwarded to OIG for review, and in the course of that review OIG learned that, on October 29, 1996, Mr. Patterson filed a lawsuit in the Circuit Court of Cook County, Illinois, against the University of Chicago in which he similarly alleged that he was terminated in retaliation for his alleged safety disclosures. On August 4, 1997, OIG issued a Summary Dismissal of Mr. Patterson's complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4) based on a determination that complainant had "pursued a remedy available under State or other applicable law."

Subsection 708.6(a) of the DOE Contractor Employee Protection Regulation, 10 C.F.R. Part 708, provides, in pertinent part, that:

[a]n employee who believes that he or she has been discriminated against in violation of this part, and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint with DOE. ... For purposes of this part, a complaint shall be deemed to have been pursued under State or other applicable law if the employee had, pursuant to proceedings established or mandated by State or other applicable law, at any time prior to, or concurrently with, the filing of a complaint with DOE, or at any time during the processing of a complaint filed with DOE, filed or submitted any complaint, action, grievance, or other pleading with respect to that same matter. (Emphasis supplied.)

This section provides further that the 60 days limitations period set forth in subsection 708.6(d) for filing a complaint "shall be suspended upon the filing of a complaint pursuant to State or other applicable law, and [such filing] shall not bar the employee from reinstituting or filing a complaint with DOE if the matter cannot be resolved under State or other applicable law due to a lack of jurisdiction."/1

Subsection 708.8(a)(4) of the regulation provides for dismissal of a complaint where it is determined that "[t]he complainant has pursued a remedy available under State or other applicable law. ..."

On appeal, the complainant does not take issue with OIG's dismissal of his complaint based on his filing of a State court complaint regarding the same facts, but instead alleges that OIG failed to process his complaint in a timely fashion.

Whatever the merits of complainant's allegations concerning the speed with which his complaint was processed, the fact remains that, subsequent to filing his initial complaint with DOE, the complainant filed a complaint in State court with respect to the same facts. This being the case, OIG correctly dismissed his complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4).

Elizabeth A. Moler

Deputy Secretary

Issued March 3, 1998

/1 As of this time, Mr. Patterson's state court lawsuit is still in progress.

Rudolph Reyes v. Sandia Corporation (Case No. NV--96--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued September 9, 1998

This is a request for review by complainant Rudolph Reyes of a decision by the Office of Inspector General (OIG) dismissing his complaint of reprisal.

On August 21, 1995, Mr. Reyes, an employee of GTE Customer Networks (GTE), a subcontractor of Sandia Corporation (Sandia), the Department of Energy (DOE) contractor at Sandia National Laboratories (SNL), initiated a complaint with DOE's Albuquerque Operations Office. The complaint alleged that he was reprised against by certain Sandia employees for making disclosures regarding possible, waste, fraud, abuse, or mismanagement. /1

On March 9, 1998, complainant filed a complaint in the United States District for the District of New Mexico in which he alleged, inter alia, that Sandia National Laboratories discriminated against him regarding the terms and conditions of his employment in retaliation for his alleged protected disclosures.

On April 15, 1998, OIG issued a Summary Dismissal of Mr. Reyes' reprisal complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4) because complainant's District Court complaint involved "the same set of facts and allegations." (Attachment 1.)

On April 24, 1998, complainant's attorney filed a timely request for review by the Deputy Secretary.

Subsection 708.6(a) of the DOE Contractor Employee Protection Regulation, 10 C.F.R. Part 708, provides, in pertinent part, that:

[a]n employee who believes that he or she has been discriminated against in violation of this part, and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint with DOE. ... For purposes of this part, a complaint shall be deemed to have been pursued under State or other applicable law if the employee had, pursuant to proceedings established or mandated by State or other applicable law, at any time prior to, or concurrently with, the filing of a complaint with DOE, or at any time during the processing of a complaint filed with DOE, filed or submitted any complaint, action, grievance, or other pleading with respect to that same matter. (Emphasis supplied.)

This section provides further that the 60 day limitations period set forth in subsection 708.6(d) for filing a complaint "shall be suspended upon the filing of a complaint pursuant to State or other applicable law, and [such filing] shall not bar the employee from reinstituting or filing a complaint with DOE if the matter cannot be resolved under State or other applicable law due to a lack of jurisdiction."

Subsection 708.8(a)(4) of the regulation provides for dismissal of a complaint where it is determined that "[t]he complainant has pursued a remedy available under State or other applicable law...."

On appeal, complainant's attorney does not dispute that complainant filed a District Court complaint regarding the same set of facts and allegations contained in his Part 708 complaint.

My review of the record substantiates that, subsequent to filing his initial Part 708 complaint with OIG, the complainant filed a District Court complaint regarding the same facts. This being the case, OIG correctly dismissed his complaint pursuant to 10 C.F.R. Sec. 708.8(a)(4).

Therefore, this complaint is being dismissed on purely procedural grounds, based on the fact that

complainant has chosen to pursue his complaint in District Court. However, no judgment is being made as to the underlying merits of complainant's case. If complainant's allegations cannot be resolved in the District Court proceeding he has initiated "due to a lack of jurisdiction," he may reinstitute a Part 708 complaint in accordance with the terms of subsection 708.6(d).

For the foregoing reasons, the dismissal of the complaint is affirmed.

Elizabeth A. Moler

Deputy Secretary

Issued September 9, 1998

/1 Mr. Reyes' OIG complaint also contained allegations of reprisal by his employer, GTE. However, since the contract between Sandia and GTE did not incorporate the provisions of 10 C.F.R. Part 708 and GTE would not voluntarily consent to application of the regulation, Mr. Reyes was advised previously by OIG that it did not have jurisdiction with respect to those allegations. The instant request for review focuses solely on Mr. Reyes' allegations regarding Sandia.

Linda L. Roberts v. Battelle Memorial Institute (Case No. OH--95--0001)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued June 20, 1996

This is an appeal by complainant Linda L. Robertsfrom a decision by the Office of Contractor Employee Protection (OCEP) dismissing her complaint based on lack of jurisdiction under 10 C.F.R. Part 708. Ms. Roberts filed a complaint with OCEP alleging she was terminated from her employment with Battelle Memorial Institute (Battelle), the Department of Energy contractor at the Battelle Columbus Decommission Project (BCDP), in retaliation for her disclosures of health and safety concerns, mismanagement, and abuse of authority. On appeal, Ms. Roberts takes issue with OCEP's decision dismissing her complaint for lack of jurisdiction.

The scope of the Department's regulatory authority with respect to contractor employee reprisal complaints such as Ms. Roberts's is found at 10 C.F.R. Sec. 708.2(a), which provides, in pertinent part:

[t]his part is applicable to complaints of reprisal filed after the effective date of this part that stem from disclosures, participation, or refusals involving health and safety matters, if the underlying procurement contract described in Sec. 708.4 contains a clause requiring compliance with all applicable safety and health regulations and requirements of DOE. For all other complaints, this part is applicable to acts of reprisal occurring after the effective date of this part if the underlying procurement contract described in Sec. 708.4 contains a clause requiring compliance with this part.

The definition of "contractor" contained in Sec. 708.4 extends to "[o]ther types of procurement contracts; but this part shall apply to such contracts only with respect to work performed on-site at a DOE-owned or leased facility" (Emphasis supplied.)

Since the BCDP is not a "DOE-owned or leased facility," the whistleblower regulation does not apply to the contract between DOE and Battelle. Further, the record reflects that at the time Ms. Roberts filed her complaint, the contract between DOE and Battelle did not contain a clause requiring compliance with all applicable safety and health regulations and requirements of DOE, since the NRC exercises safety and health oversight at the facility. Therefore, OCEP lacks jurisdiction over the allegations raised in Ms. Roberts's complaint.

For the reasons set forth above, OCEP's decision to dismiss this complaint for lack of jurisdiction is hereby affirmed.

Charles B. Curtis

Deputy Secretary

Steven R. Samonsky v. Westinghouse Savannah River Co. (Case No. SR--95--0001)

Final Decision and Order issued by the Deputy Secretary of Energy

Issued March 27, 1997

This is a request for review by complainant Steven R. Samonsky of a Summary Dismissal by the Office of Contractor Employee Protection ("OCEP"). In the Summary Dismissal, OCEP found that Mr. Samonsky's complaint, involving alleged retaliatory delay in processing his requests for release of rights relating to several inventions, 1/ was not within the coverage of Part 708, since the issues it raised were unrelated to adverse personnel actions or discriminatory personnel practices. Additionally, OCEP concluded that any delay had become moot, since all the requests had been processed, and there was no longer any effective relief available. Finally, OCEP also concluded that complainant's first alleged disclosure, objecting to his being required to sign an intellectual property agreement, was not sufficiently specific to be a protected disclosure of a possible violation of "law, rule, or regulation" within the meaning of Part 708, and that his second alleged disclosure, an invention proposal concerning the disposal of nuclear waste, was not timely raised in his complaint. Request for Review, Attachment 1.

OCEP's findings that Complainant's first alleged disclosure was not specific enough to qualify as a protected disclosure and that his second was not timely raised appear correct. Complainant's putative first disclosure, an employee concerns report form dated May 25, 1994 (Request for Review, Attachment 8), speaks in terms of it being unfair and possibly unethical to require Complainant to sign the intellectual property agreement and reflects his erroneous opinion that the agreement required him to give up patent rights to his own private inventions. As such, the complaint fails to allege a disclosure relating to health and safety, mismanagement, or a violation of law as required by 10 C.F.R. Sec. 708.5(a)(1). Under the circumstances, former Deputy Secretary White's caution that the whistleblower regulations must not be read to "encompass all disagreements between a contractor and its employees" seems again apt. Mehta v. Universities Research Assoc., OHA Case No. LWA-0003, LWZ--0023 (1995), slip op. at 6.

Regarding the timeliness of Complainant's second putative disclosure, an assertion that WSRC had not properly lined a nuclear waste burial pit that was made in Complainant's invention proposal titled "Monitoring Process for Contaminated Soil," Complainant's suggestion that "it should have been apparent to OCEP" from the outset that he was also complaining that the alleged retaliatory delay related to that disclosure is not supported in the record./2 Complainant's assertion in this regard is contradicted by the statement in his initial complaint that "illegally holding my personal property is the reason for my original complaint" (Request for Review, Attachment 3).

The subject complaint arose out of a dispute concerning intellectual property rights that has since been resolved. It is unnecessary to decide whether a dispute like this falls within the coverage of Part 708, since, for the foregoing reasons, there is no basis for overturning the Summary Dismissal. That dismissal is hereby adopted as the Final Agency Decision in this case.

Charles B. Curtis

Deputy Secretary

Issued March 27, 1997

1/ Complainant suggested that it was unreasonable to take any more than ten days to two weeks to process his requests, and that in no event should it have taken more than three months. Request for Review, Attachment 3. There was explanation from the contractor that the time was reasonable under the circumstances and that every effort was made to accommodate the Complainant. Id, Attachment 1 at p. 5.

OCEP made no finding regarding whether the delay was reasonable, but did note, without relying on the conclusion as a basis for its decision, that it found no evidence that the delay was retaliatory. Ibid.:

2/ Indeed, DOE's chief patent counsel in his letter of May 15, 1995, explaining that the invention was the government's property, expressed "sincere appreciation for [Complainant's] constructive efforts in attempting to solve these important DOE problems" and recommended him to the contractor "for consideration under [its] Inventors' Award Program" (Request for Review, Attachment 8, 4th page).

Matthew J. Sollender v. Battelle Pacific Northwest Laboratories (Case No. RL--98--0004)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued February 25, 1999

This is a request for review by complainant Matthew J. Sollender of a decision by the Office of Inspector General (OIG) dismissing the reprisal that he filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program.

On September 10, 1998, Mr. Sollender filed his complaint against his employer, Battelle Pacific Northwest Laboratories (Battelle), which is the DOE management and operating contractor at DOE's Pacific Northwest National Laboratory. In his complaint, Mr. Sollender alleged that his employment had been terminated on November 4, 1997, in retaliation for his raising of safety concerns.

On October 15, 1998, the OIG issued a summary dismissal of Mr. Sollender's reprisal complaint, pursuant to 10 C.F.R. Sec. 708.8(a)(2). The OIG found that he had filed his complaint more than ten months after the termination of his employment, and approximately seven months after the DOE Richland Operations Office had provided him with specific information regarding the requirements of the Part 708 process. The OIG therefore concluded that his complaint violated the requirement in Sec. 708.6(d) that a reprisal complaint "must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later."

On October 27, 1998, Mr. Sollender filed a request for review by the Deputy Secretary.

Mr. Sollender's arguments in his request for review fail to demonstrate that the OIG was incorrect in determining that his complaint violated Sec. 708.6(d), and in therefore dismissing it pursuant to Sec. 708.8(a)(2). The 60-day limitations period for filing a reprisal complaint is not merely the time "normally given in these cases," as Mr. Sollender contends in his request for review. Rather, that limitations period is a requirement included within the regulation establishing the DOE Contractor Employee Protection Program, in Sec. 708.6, which contains the requirements for filing a complaint. Mr. Sollender's filing of his complaint more than ten months after the termination of his employment would not even satisfy the expanded time period proposed in DOE's Notice of Proposed Rulemaking to amend Part 708. In that Notice, DOE proposed to amend Sec. 708.6 to increase the time limit for filing a complaint from 60 days to 90 days. 63 Fed.Reg. 374, 382 (Jan. 5, 1998).

Moreover, Mr. Sollender has failed to show good cause for his exceeding the 60-day limitations period by more than eight months. Although he asserts in his request for review that his submittal was "within the time frame supplied by DOE staff," he has failed to identify that time frame or the DOE staff who allegedly supplied him with that time frame. In fact, Mr. Sollender was informed of the Part 708 process for filing a complaint in a February 13, 1998 letter from Jennifer L. Sands, Manager of the Employee Concerns Program at DOE's Richland Operations Office:

Enclosed is the information package for filing a complaint under 10 CFR Part 708. As I discussed with you on February 12, 1998, there are time frames associated with filing a complaint under 10 CFR 708. Should you wish to pursue this matter further, this office is available to assist you in transmitting the package to the Office of Inspections, U.S. Department of Energy (DOE), Headquarters (HQ).

Yet Mr. Sollender delayed approximately seven months after that letter before he filed his complaint under Part 708, which was specifically referenced in that letter and which explicitly sets forth the 60-day limitations period in Sec. 708.6(d).

Although Mr. Sollender alleges in his request for review that his complaint "was reluctantly filed on the last date possible because of verification by DOE, WDOE, and EPA of violations covered in my report to those agencies," he has failed to identify or otherwise describe any alleged "verification" by those three agencies. Indeed, in his complaint, he did not even mention any verification by those agencies. Regardless of any such verification, if Mr. Sollender was terminated on November 4, 1997 for raising safety concerns, as he alleged in his complaint, then he would have been aware of that discriminatory act at the time of its occurrence, and therefore the 60-day limitations period would have begun to run on November 4, 1997.

For the foregoing reasons, the dismissal of the complaint is affirmed.

Ernest J. Moniz

Deputy Secretary

Issued February 25, 1999

John Burke Truher v. Stanford Linear Accelerator Center (Case Nos. SF--92--0002 and OAK--93--0001)

Final Agency Decision issued by the Deputy Secretary of Energy

Issued September 12, 1995

This is an appeal by complainant John Burke Truher of an Initial Agency Decision by the Office of Contractor Employee Protection ("OCEP"). In the Initial Agency Decision, OCEP found that, while complainant had communicated concerns involving various alleged health, safety, and management issues, he had failed to show that his complaints contributed to any alleged retaliatory action against him by the respondent.

On appeal, OCEP's factual determinations are subject to reversal only if they are "clearly erroneous." Compare, Pullman Standard v. Swint, 456 U.S. 273 (1982), with Amadeo v. Zant, 486 U.S. 214, 223 (1988), quoting Federal Rule of Civil Procedure 52(a). A review of the record and the materials submitted in support of the appeal confirms that the complainant has failed to demonstrate that any protected disclosures resulted in prohibited reprisals being taken against him and that OCEP's contrary findings are "clearly erroneous." Accordingly, there is no basis for overturning the Initial Agency Decision and that decision is hereby adopted as the Final Agency Decision in this case.

FINAL DECISION AND ORDER

This is a request for review by complainant Steven A. Wallace of a decision by the Office of Inspector General (OIG) dismissing the reprisal complaint that he filed pursuant to 10 C.F.R. Part 708, the regulation establishing the DOE Contractor Employee Protection Program.

On January 28, 1998, Mr. Wallace filed his complaint against his employer, Lockheed Martin Energy Systems, Inc. (Lockheed), which is the DOE management and operating contractor at doe's Y-12 plant in Oak Ridge, Tennessee. In his complaint, Mr. Wallace alleged that on or about May 29, 1995, he disclosed to Keith Kitzke, a member of Lockheed management, that a co-worker, Zane Bell, had suggested that Mr. Wallace hire someone to kill another co-worker, Chris Pickett. Mr. Bell made that comment after Mr. Wallace had told him of a problem that Mr. Wallace had with his working relationship with Mr. Pickett. Mr. Wallace also alleged in his complaint that negative personnel actions were taken against him as a result of that disclosure.

Mr. Wallace provided additional information by letters dated May 4 and May 8, 1998. Most of that information consists of copies of numerous interoffice memoranda and electronic mail messages that Mr. Wallace sent and received concerning his workplace disagreements of various kinds with various co-workers.

On October 1, 1998, the OIG issued a summary dismissal of Mr. Wallace's reprisal complaint. The OIG found that Lockheed management agreed with Mr. Wallace that Mr. Bell's comment was inappropriate, but management believed that Mr. Bell routinely made such comments in an inappropriate "joking" manner, and it did not regard his comment as a serious suggestion that Mr. Wallace kill someone. Mr. Bell was counseled about the comment, apologized to Mr. Wallace, and has not subsequently made such comments.

The OIG also found that after Mr. Bell made his inappropriate comment, Mr. Wallace told Lockheed management that he could no longer tolerate occupying an office next to Mr. Bell and requested that Mr. Bell be moved to another office. Instead, management offered Mr. Wallace the opportunity to move to another office. Mr. Wallace accepted that offer. He subsequently requested to move back to his old office, but his request was denied because someone else had moved into that office.

The OIG concluded that Mr. Bell's comment to Mr. Wallace was inappropriate in the workplace, and that it was appropriate for Mr. Wallace to report that comment. However, it also concluded that the comment cannot reasonably be interpreted as a serious suggestion to commit a violation of the law by hiring someone to kill a co-worker. The OIG noted that Part 708 was not intended to provide a forum for every workplace dispute, and dismissed the complaint pursuant to 10 C.F.R. §§ 708.8(a)(3) and (5).

On October 6, 1998, Mr. Wallace filed a request for review by the Deputy Secretary. On October 22, 1998, Lockheed filed a response. On January 16, 1999, Mr. Wallace submitted additional information.

Mr. Wallace's arguments in his request for review and additional submissions fail to demonstrate that the OIG was incorrect in dismissing his complaint.

Contrary to Mr. Wallace's allegations in his request for review at 3, the OIG did not conclude that Mr. Bell's comments were "excusable," or that Mr. Wallace's disclosure of those comments was "not reasonable." On the contrary, the OIG concluded that Mr. Bell's comment was inappropriate, and that Mr. Wallace's disclosure was appropriate. Summary dismissal at 3. However, the OIG also correctly concluded that Mr. Bell's comment cannot reasonably be interpreted as a serious suggestion to commit a violation of law. Id. Indeed, Mr. Wallace does not argue in his request for review that Mr. Bell's inappropriate comment was a serious suggestion that Mr. Wallace hire someone to kill Mr. Pickett. Instead, Mr. Wallace argues that "even assuming Bell's inciting comments to Mr. Wallace were said 'in jest', given the zero tolerance nature of the Contractor's policy, said comments do not carry the minor import ascribed to them by your dismissal." Id. at 2-3. However, as explained supra, the OIG did not conclude that Mr. Bell's comment was of minor import.[1]

Although Mr. Wallace alleges that the OIG was incorrect in finding that Mr. Bell was counseled and apologized to Mr. Wallace (request for review at 1-2), Mr. Wallace presents no evidence to support those allegations. Indeed, evidence submitted by Mr. Wallace himself supports both of those findings by the OIG. In his May 4, 1998 submission to the OIG, Mr. Wallace included a copy of an interoffice memorandum, dated July 29, 1996, from Lockheed Ethics Director Barbara Ashdown to Mr. Wallace, which includes the following language:

> As far as the remark made by Zane Bell to you, you told me yourself that he apologized for the comment and you thought that you had resolved this with him. In addition when I talked with Keith [Kitzke], he agreed that any remarks along those lines were wrong and he also talked with Bell. He agreed that such remarks would not be tolerated and would not occur

again.

The OIG's findings are further supported by another interoffice memorandum that Mr. Wallace included in his same submission to the OIG. That memorandum, dated August 21, 1996, was sent from Stacey Landers of Lockheed to Mr. Wallace, and transmitted a memorandum to the file from Barbara Ashdown which she had written after attending a meeting with Mr. Wallace and Mr. Kitzke and which includes the following language:

> At the time of [Bell's] remarks Kitzke went to Bell, told him the remarks were inappropriate and should stop. Bell subsequently apologized to Wallace. Both Kitzke and Wallace agree that Bell has not made these type of remarks since.

Mr. Wallace did not dispute those facts in any of the internal correspondence that he himself authored and included in his submissions to the OIG.[2]

On the contrary, Mr. Wallace admits in his request for review that Mr. Bell once approached him at work and said to him, "My religion requires me to ask you, have I offended you?"

> Mr. Wallace, knowing that Bell is Jewish, responded, "Zane, if I took your son and tattooed a number on his arm, it wouldn't be as bad as what you did to me." Bell made light of Mr. Wallace's comment and shortly thereafter invited Wallace to his son's bar mitzvah ceremony.

Request for review at 1-2. The above-quoted statement indicates that Mr. Wallace himself engaged in the same kind of inappropriate, and offensive, attempt at verbal "humor" that Mr. Bell had engaged in earlier by making the comment that Mr. Wallace disclosed to Lockheed management. However, the fact that Mr. Bell responded to Mr. Wallace's offensive comment about Mr. Bell's son in a friendly, non-confrontational manner - by inviting Mr. Wallace to attend his son's bar mitzvah - suggests that Mr. Bell was offering an apology for his own offensive comment to Mr. Wallace. In addition, it is undisputed that Mr. Bell has not subsequently made offensive comments.

In previous decisions by Deputy Secretaries of Energy, it has been held that Part 708 must be interpreted in a manner that grants "appropriate deference to traditional management prerogatives needed to conduct an organization through teamwork," and must not be read to "encompass all disagreements between a contractor and its employees." Daniel Holsinger v. K-Rav Security. Inc.., 26 DOE Par. 87,506 at 89,019 n.l (1996); Naresh C. Mehta v. Universities Research Association, 24 DOE Par. 87,514 at 89, 065 (1995). Lockheed was exercising those "traditional management prerogatives needed to conduct an organization through teamwork" when it responded to Mr. Bell's offensive comment to Mr. Wallace by telling Mr. Bell that his remarks should stop - thereby successfully putting an end to Mr. Bell's practice of making such remarks - and by allowing Mr. Wallace to move to another office. Part 708 was not intended to provide a forum for resolving every such dispute over offensive remarks exchanged between co-workers, especially where, as in the instant case, the dispute can be more effectively resolved through counseling and allowing an employee to move to a new office.

Moreover, in another decision by the Deputy Secretary of Energy, it has been held that a disclosure must be "both reasonable and in good faith" in order to be "the sort of disclosure meant to be protected by the regulations" in Part 708. C. Lawrence Comett v. Maria Elena Torano Associates. Inc.., 27 DOE ^ 87,502 at 89,017 (1998) (emphasis added). As explained above, it is not reasonable to interpret Mr. Bell's comment, however inappropriate and offensive, as a serious suggestion that Mr. Wallace commit a violation of law by hiring someone to kill Mr. Pickett, and Mr. Wallace does not argue otherwise in his request for review.[3]

Furthermore, the additional information that Mr. Wallace has submitted into the record does not support his allegation that negative personnel actions were taken against him as a result of his disclosure of Mr. Bell's comment. On the contrary, the bulk of the internal correspondence that he submitted to the OIG on May 4 and May 8, 1998, concerns workplace disputes with Lockheed management that were often of a technical nature, and had no connection to his disclosure.

For example, in his May 8, 1998 submission, he included an electronic mail message, dated "Tue, 18 Nov 1997 10:28:37," from John Kolb of Lawrence Liver-more National Laboratory (LLNL) to Bob Riepe of Lockheed, in which Mr. Kolb made numerous complaints about Mr. Wallace's working relationship with LLNL "as Y12 liaison for ESP project LL-24." Mr. Kolb wrote that "Mr. Wallace's email messages to us frequently seemed to dwell on neutron imaging and source technologies which had no tangible relevance to our project plan;" that on another issue, "Steve never got back to us concerning his findings," and that "[o]ur communications with Steve had become somewhat intermittent by the end ofFY97 when we received email from Steve telling us of his recent activities" and "[w]e did not request ANY of this and, to the best of our knowledge, these activities have absolutely nothing to do with LL-24." Mr. Kolb concluded his message with the following plea:

> We very much regret having to write a memo such as this. However, our working relationship with Y-12 on this project is not what it should be - not what it MUST be - if we are to succeed in this effort[.] As a potential testbed and eventual customer for neutron imaging technology, we believe it to be essential for us to have an effective, positive working relationship with Y-12 on this task. Thus, we'd appreciate your assistance in helping us to resolve this matter in a helpful manner.

The above-quoted complaint, which originated from outside of Lockheed, fully supports Lockheed's statement in Mr. Wallace's performance review, submitted by Mr. Wallace to the OIG on January 16, 1999, that "[rjesponsibility for the x-ray and neutron tomography tasks were transferred to another PI [principal investigator] early in the year because the LLNL partners said that the relationship with Steve had deteriorated to the point that they did not believe they could effectively work with Steve."

In summary. Part 708 was not intended to provide a forum for resolving disputes over offensive remarks of this kind exchanged between co-workers; the evidence indicates that Lockheed responded to Mr. Wallace's disclosure of Mr. Bell's remark by talking with Mr. Bell and persuading him to stop making such remarks; and there is no evidence in the record to support Mr. Wallace's allegation that negative personnel actions were taken against him as a result of his disclosure of Mr. Bell's remark.

For the foregoing reasons, the dismissal of the complaint is affirmed.

T J Glauthier Deputy
Secretary

Issued: January 19, 2000

[1] Mr. Wallace attached to his request for review a copy of Lockheed Management Control Instruction LR-501INS, entitled "Workplace Violence," approved on April 3, 1998; and a copy of an October 17, 1997 internal DOE memorandum which distributed for comment a draft of DOE Guide 340.1, entitled "Guide to Preventing Acts of Aggression, Threatening Behavior, and Violence in the Workplace." However, neither of those two documents was approved and in effect at the time that Mr. Bell made his comment and Mr. Wallace disclosed that comment in May 1995. The Lockheed Management Control Instruction was not approved until nearly three years later, on April 3, 1998. DOE Guide 340.1 was not even distributed in

draft form for comment until over two years later, on October 17, 1997, and it still has not been approved. More importantly, the OIG's dismissal of Mr. Wallace's complaint does not in any way contradict the policies against workplace violence reflected in those documents; the OIG did not conclude that Mr. Bell's comment and Mr. Wallace's disclosure were of minor or insignificant import.

[2] Copies of the two above-quoted memoranda were also included in Lockheed's October 22, 1998 response to Mr. Wallace's request for review, after Mr. Wallace originally submitted them into the record on May 4, 1998.

[3] The interim final rule amending Part 708, published on March 15, 1999 (64 Fed. Reg. 12862), explicitly requires, in § 708.5(a) of the amended rule, that employees' protected disclosures involve information that they "reasonably and in good faith believe" is true. Id. at 12863, 12871 (emphasis added). The Preamble to the interim final rule states that the "reasonableness" criterion is consistent with the Whistleblower Protection Act of 1989, Pub. L. No. 101-12, 103 Stat. 16 (1989), and many state statutes which afford protection to both public and private sector employees against retaliation for whistleblowing activities. Id. at 12863.

Section 708.8 of the amended rule provides that the "procedures in this part apply prospectively in any complaint proceeding pending on the effective date of this part." Id. at 12871. The Preamble also states the following regarding the applicability of the revised procedures to pending cases:

> We have added a new section (§ 708.8) to the interim final rule to explicitly state that the revised procedures shall apply in any complaint proceeding pending at the informal resolution stage, the investigative stage or the hearing stage on the effective date of this rule. Appeals currently pending before the Secretary's designee, the Deputy Secretary, will be decided by the Deputy Secretary (rather than be transferred to the OHA Director). It is well established in the law that an agency may apply new procedural rules in pending proceedings as long as their application does not impair the rights of, or otherwise cause injury or prejudice to, a party. [Citations omitted] DOE will apply the revised procedures to pending cases consistent with the case law.

Id. at 12865.

In the instant case, it is not necessary for DOE to decide whether to apply the explicit "reasonableness" requirement in the amended § 708.5(a). Even assuming, arguendo, that the amended provision does not apply to the instant case, it is nevertheless clear that even before the interim final rule was published, the Deputy Secretary had held that a protected disclosure must be "both reasonable and in good faith." C. Lawrence Comett v. Maria Elena Torano Associates, 27 DOE at 89,017. More importantly. Part 708 was not intended to provide a forum for resolving this kind of dispute over offensive remarks between co-workers, as explained above.

Anthony J. Wiggins, Complainant, v. Foster Wheeler Environmental Corporation, Respondent (Case No. SR099-00011)

Final Agency Decision Issued by the Deputy Secretary of Energy

Issued January 19, 2000

This is an appeal by complainant Anthony J. Wiggins from a summary dismissal of his reprisal complaint by the Office of Inspector General (OIG). Mr. Wiggins filed a complaint with OIG alleging that his October 3, 1997, termination from employment with Foster Wheeler Environmental Corporation (FWEC) was in retaliation for his protected disclosures. OIG's summary dismissal was based on the fact that complainant's initial Part 708 complaint was untimely.

In this case, the record establishes that complainant filed a Part 708 complaint more than one year after his resignation. Although complainant alleged at the time of filing his November 13, 1998, complaint that his initial Part 708 complaint was filed "on or about" November 3, 1997, OIG's investigation found no evidence that complainant filed a complaint during that time frame. With regard to complainant's allegation that his employment was terminated in retaliation for contacting the OIG hotline, OIG's investigation of the complaint disclosed that complainant did not contact the OIG hotline until approximately three weeks after his employment was terminated. Therefore, OIG noted in its summary dismissal that "it does not appear that the termination of your employment could have been the result of your communication to the hotline."

By letter dated December 17, 1998, Mr. Wiggins filed a timely request for review of OIG's dismissal determination.

The OIG dismissed the case on the basis of 10 C.F.R. § 708.6(d), which provided that a complaint must be filed "within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." /1 Here, a review of the record establishes that the complainant filed his complaint more than one year after the termination of his employment. /2 Despite complainant's assertion that he initiated his complaint "on or about" November 5, 1997, neither OIG nor SROO personnel located any record of such a complaint.

While Mr. Wiggins takes issue with OIG's determination that his complaint was untimely, he provides no support for his generalized assertion that the untimely filing of his complaint was due to "incorrect and misleading information" provided by OIG and SROO. And, while Mr. Wiggins further asserts that his attorney can attest to his filing within the 60 day time period, he has provided no documentation to support this contention. Instead, as OIG pointed out in dismissing Mr. Wiggins' complaint, neither OIG nor DOE's Savannah River Operations Office were able to corroborate the filing of such an earlier complaint. Absent documentation (such as an affidavit) from his attorney or other evidence in support of his assertion that his complaint was initiated in November 1997, complainant has failed to meet his burden of establishing timely filing of his Part 708 complaint.

Accordingly, complainant has failed to support his claim that he initiated a complaint prior to November 13, 1998, more than one year after his October 3, 1997, termination. Under these circumstances, complainant has not demonstrated any error in OIG's decision to dismiss his complaint as untimely. /3

For the reasons set forth above, OIG's summary dismissal of this complaint is hereby affirmed.

T. J. Glauthier

Deputy Secretary

Issued: January 19, 2000

/1 DOE issued an Interim Final Rule amending the whistleblower regulations, which became effective on April 14, 1999, that increases the time limit for filing a complaint from 60 to 90 days. 64 Fed. Reg. 12,862 (March 15, 1999).

/2 I thus note that Mr. Wiggins' complaint would not even have satisfied the expanded time period set forth in DOE's Interim Final Rule amending Part 708.

/3 Further, the complainant indicates that he was employed by FWEC at the Three Rivers Landfill. Since this is not a "DOE-owned or -leased facility," as defined in 10 C.F.R. *§* 708.4 (and retained in subsection 708.2 of the Interim Final Rule), it appears that complainant was not employed by a contractor subject to Part 708, which would provide an independent basis for dismissal of this complaint.

UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLUMBIA

SAFETY & ECOLOGY CORPORATION,

Petitioner,

v.

U.S. DEPARTMENT OF ENERGY, SPENCER ABRAHAM, in his official capacity as Secretary of Energy, U.S. Department of Energy, and SUE GOSSETT

Respondents.

Civil Action No. 03-0747 (JDB)

MEMORANDUM OPINION

Petitioner Safety & Ecology Corporation ("SECC") seeks judicial review of a final agency action under 5 U.S.C. § 702 of the Administrative Procedures Act ("APA"). The final agency decision, issued by the Office of Hearing and Appeals ("OHA") of the Department of Energy ("DOE"), found that SECC terminated Susan Rice Gossett ("Gossett") in retaliation for protected safety disclosures made pursuant to 10 C.F.R § 708 et seq. SECC argues that the OHA decision should be reversed because it violates statutory provisions, is arbitrary and capricious, constitutes an unwarranted exercise of discretion, is not supported by substantial evidence, and is otherwise contrary to law. Presently before this Court are cross motions for summary judgment from SECC and from respondents, DOE and Gossett. For the reasons that follow, the Court will deny petitioner's motion for summary judgment and grant respondents' motions.

BACKGROUND

A. Department of Labor Regulations

DOE's Contractor Employee Protection Program (a.k.a. "Whistleblower Program") created procedures for the investigation, hearing, and review of allegations of reprisal against DOE contractor employees. See 57 Fed. Reg. 7533 (March 3, 1992). The regulations governing the Whistleblower Program are set forth in 10 C.F.R. § 708 et seq., and apply to employees of a company that has a contract with DOE and performs work directly related to activities at a DOE-owned or leased site. See 10 C.F.R. § 708.2. An employee may file a complaint alleging retaliation as a result of:

> (a) Disclosing to a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at the DOE site, [the] employer, or any higher tier contractor, information that [the employee] reasonably believes reveals --
>
> (1) A substantial violation of a law, rule or regulation;
>
> (2) A substantial and specific danger to employees or to public health or safety; or
>
> (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority; or
>
> (b) Participating in a Congressional proceeding or an administrative proceeding conducted under this part; or
>
> (c) Subject to § 708.7 of this subpart, refusing to participate in an activity, policy, or practice if [the employee] believe[s] participation would --
>
> (1) Constitute a violation of federal health or safety law; or
>
> (2) Cause you to have a reasonable fear of serious injury to [the employee], other employees, or members of the public.

10 C.F.R. § 708.5 (collectively referred to as "protected disclosures").

If an employee believes he or she is a victim of retaliation, the employee must file a complaint. See 10 C.F.R. § 708.10. After filing a complaint, the employee then pursues the matter through an informal resolution mechanism. See 10 C.F.R. § 708.11-.20. If the matter cannot be resolved informally, the employee may request that the matter be referred to DOE's

Office of Hearing and Appeals ("OHA") for either a hearing, or a hearing preceded by an investigation. See 10 C.F.R. § 708.21(a). In the case of an investigation, OHA appoints an investigator who issues a Report of Investigation ("ROI"). See 10 C.F.R. § 708.22-23.

After the ROI is issued, a hearing is conducted by a Hearing Officer appointed by OHA. See 10 C.F.R. § 708.24. In a section 708 hearing, the parties have the right to be represented by counsel, testimony is given under oath, there is cross-examination of witnesses, the formal rules of evidence do not apply strictly but serve as guidelines, and the proceedings are transcribed by a court reporter. See 10 C.F.R. § 708.28(a). The Hearing Officer also has the power to allow discovery, issue subpoenas, rule on evidentiary objections, dismiss claims, and accept briefings. See 10 C.F.R. § 708.28(b).

In a provision central to this case, the regulations specify what the parties to the proceedings must prove:

> The employee who files a complaint has the burden of establishing by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.

After the hearing, the Hearing Officer issues an Initial Agency Decision ("IAD"), which determines findings of facts, conclusions, an order and, if a finding of retaliation is made, the appropriate relief. See 10 C.F.R. § 708.30. A dissatisfied party can appeal the Hearing Officer's IAD to the OHA Director. See 10 C.F.R. § 708.32. The OHA Director will issue a decision

based upon the record that includes findings of fact, conclusions, and an order. See 10 C.F.R. § 708.34(b)(1). The decision of the OHA Director constitutes the final agency decision, unless a party seeks Secretarial review. See 10 C.F.R. § 708.34(d).

B. Factual Background[1]

SECC is an environmental, safety, and health company that provides various support services, to include radiological control, remediation and demolition, to governmental and private business entities. Petitioner's Statement of Undisputed Material Facts ("Pet.'s Statement") ¶ 1. SECC, through a contract with Bechtel Jacobs Company, LLC, provides radiological control services for the DOE facility in Portsmouth, Ohio. Id. ¶ 2.

SECC hired Gossett as a junior radiation control technician ("RCT") at DOE's Portsmouth site in March of 1999. Id. ¶ 3. An RCT monitors radiation contamination levels at DOE sites in order to protect the workforce and the environment from exposure to ionizing radiation. Pet.'s Statement ¶ 4. Subsequently, SECC promoted Gossett to the position of senior RCT in June of 2000. Respondent DOE's Statement of Material Facts Not in Dispute ("Resp. DOE's Statement") ¶ 1.

While Gossett was employed at SECC's Portsmouth site, she made numerous protected disclosures, as defined under 10 C.F.R. § 708.5(a). Id. ¶ 2. These disclosures included an expression of concern to a Congressman and DOE Assistant Secretary, as well as several "Work

---

[1]Under Local Civil Rule 56.1, the party moving for summary judgment must attach to its motion a statement of undisputed material facts and the parties opposing the motion must respond with a statement of disputed material facts. In this case, all parties have filed a motion for summary judgment. Therefore, the Court has received statements of material facts from each party, as well as appropriate responses to those statements. This Factual Background section reflects the uncontested facts drawn from the parties' submissions.

Stop Problem Reports." Id. During the investigation following Gossett's complaint, the ROI concluded that Gossett made at least two protected disclosures, as defined under 10 C.F.R. § 708.5. Id. ¶ 3. These were a November 15, 2000, Condition Report and meeting with SECC officials concerning bulging and leaking drums and an October 19, 2000, presentation to DOE officials in Washington, DC, during which she discussed health and safety violations. Id. SECC does not contest the finding of protected disclosures. See Pet.'s Response to Resp. U.S. DOE's Statement of Material Facts Not in Dispute.

To ensure that RCTs possess the appropriate training and skill to perform their safety functions, DOE's RCT handbook requires a two-year cycle of continuing training, which includes a re-qualification examination at the conclusion of the retraining period. Resp. DOE's Statement ¶5. The re-qualification exam required by DOE consists of 100 questions, and DOE guidelines require RCTs to score an 80 to pass the exam. Id. ¶ 5.

Gossett took her first re-qualification exam on December 22, 2000. Id. ¶ 8. She failed the exam, scoring a 74. Id. On January 8, 2001, Gossett again took and failed the re-qualification exam, scoring a 73. Id. ¶ 9. Finally, on January 19, 2001, Gossett took her third re-qualification exam. Resp. DOE's Statement ¶ 7. Again Gossett failed, scoring a 74 out of 100. Id. Within hours of failing her third exam, Gossett's employment with SECC was terminated. Id. ¶ 8.

C. Procedural Background

On January 23, 2001, Gossett filed a complaint under DOE's Whistleblower Protection regulations with the DOE Oak Ridge Operations Office. Administrative Record ("R.") 7214. The complaint alleged that SECC used Gossett's failure to pass three re-qualification exams as a pretext for terminating her in retaliation for engaging in "whistleblowing activities," i.e., the

making of disclosures protected by 10 C.F.R. § 708.5. R. 7215-16.

Gossett requested that her complaint be referred to DOE's OHA for investigation and hearing. R. 7214. After the issuance of a ROI, Gossett requested and received a hearing on her complaint that was conducted from October 23-25, 2001. R. 7215. The Hearing Officer received evidence from Gossett and SECC, as well as post-hearing briefing from each party. Id. On May 8, 2002, the Hearing Officer issued an IAD. R. 7213-7232.

The IAD found that Gossett made numerous protected disclosures and that these disclosures were a contributing factor in her termination from SECC. R. 7217. The Hearing Officer noted that the close temporal proximity between Gossett's protected disclosures and her termination, coupled with a pattern of hostility from SECC towards Gossett, was sufficient to show that the protected disclosures were a contributing factor to Gossett's termination. Id. The Hearing Officer also found that SECC failed to meet its burden of showing by clear and convincing evidence that it would have terminated Gossett in the absence of her protected disclosures. R. 7219-28. In particular, because Gossett was the first employee fired under the "three-strike" policy, which required the termination of an RCT who failed a re-qualification exam three times, the Hearing Officer was not convinced that this policy was in place prior to Gossett's termination. Id.

SECC appealed the Hearing Officer's decision to the OHA Director, raising many of the same issues SECC now presents to this Court. R. 7193. OHA affirmed the IAD. R. 7200. In particular, OHA found that the temporal proximity between the protected disclosures and Gossett's termination was sufficient for the inference that the disclosures were a contributing factor to her termination. R. 7195. OHA also upheld the IAD's finding that SECC did not

establish by clear and convincing evidence that Gossett would have been terminated in the absence of her protected disclosures. R.7196-99.

The exact nature and importance of the decision by OHA is hotly contested between the parties, and this issue is highly relevant to this Court's review. The dispute over the OHA decision centers on the finding that Gossett satisfied her preponderance of the evidence burden. SECC argues that OHA found that Gossett met her burden by the use of the temporal proximity inference alone, and in doing so disregarded, as this Court should also, the IAD's finding of a pattern of hostility towards Gossett. Respondents counter that because OHA did not explicitly reject the pattern of hostility finding in the IAD, this Court should also consider IAD's finding of a pattern of hostility when evaluating SECC's challenges to the OHA decision.

Both parties concede that the OHA Director's decision is the final agency action that vests this Court with authority for judicial review, absent an appeal within 30 days to the Secretary. 10 C.F.R. § 708.34(d) ("The appeal decision issued by the OHA Director is the final agency decision unless a party files a petition for Secretarial review by the 30th day after receiving the appeal decision."). As such, this Court must treat the OHA decision as the final agency action for review, and will review only those findings and conclusions contained therein. See 5 U.S.C. § 702 ("A person suffering legal wrong because of agency action, or adversely affected or aggrieved by agency action ... is entitled to judicial review ").

In determining the findings of OHA, we turn to the text of the decision itself. Addressing whether Gossett met her burden of showing a contributing factor, OHA stated that "[o]nce the temporal proximity showing has been made, the finding of the pattern of hostility is not necessary to the overall conclusion that the complainant has made the contributing factor showing. The

conclusions in the IAD regarding the pattern of hostility are dictum in this case." [emphasis added]. R. 7195. OHA went on to say that "[t]he temporal proximity of the termination and Gossett's protected activities is ample evidence to sustain Gossett's burden of proof of contributing factor under Section 708.29." R. 7195-96. From the text of the decision, then, it is clear that the final agency decision of OHA found that Gossett had met her burden of showing a contributing factor solely through the temporal proximity inference, and it is that finding that this Court must review.

STANDARD OF REVIEW

This case is before the Court on cross-motions for summary judgment. Summary judgment is appropriate when the pleadings and the evidence demonstrate that "there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law." Fed.R.Civ.P. 56(c). In this case, however, as is true generally for judicial review of agency action, the Court's review is limited to the administrative record. See Camp v. Pitts, 411 U.S. 138, 142 (1973). Petitioner challenges a final agency action, under 5 U.S.C. § 702, which provides that "[a] person suffering legal wrong because of agency action, or adversely affected or aggrieved by agency action within the meaning of a relevant statute, is entitled to judicial review thereof." In reviewing an agency action, this Court is governed by the "arbitrary and capricious" standard set out in the APA, 5 U.S.C. § 706(2)(A). This is a highly deferential standard of review, which presumes that agency action is valid. See, e.g., Kisser v. Cisneros, 14 F.3d 615, 618 (D.C. Cir. 1994). The "scope of review under the 'arbitrary and capricious' standard is narrow and a court is not to substitute its judgment for that of the agency." Motor Vehicle Mfrs. Ass'n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co., 463 U.S. 29, 43 (1983). The Court may reverse only if the

agency's decision is not supported by substantial evidence, or the agency made a clear error in judgment. Citizens to Preserve Overton Park v. Volpe, 401 U.S. 402, 415-16 (1971). "The key to the arbitrary and capricious standard is its requirement of reasoned decision-making: we will uphold the [agency's] decision if, but only if, we can discern a reasoned path from the facts and considerations before the [agency] to the decision it reached." Neighborhood TV Co. v. FCC, 742 F.2d 629, 639 (D.C. Cir. 1984). Furthermore, courts must defer to an agency's interpretation of its own regulations unless it is plainly wrong. General Carbon Co. v. OSHRC, 860 F.2d 479, 483 (D.C. Cir. 1998).

ANALYSIS

The petitioner challenges OHA's decision that SECC terminated Gossett because of her protected disclosures. SECC raises three arguments for setting aside the OHA decision. First, SECC argues that the burden-shifting scheme utilized by DOE is improper as a matter of law under the APA. In support of this argument, SECC argues that the DOE whistleblower regulations should be governed by the APA formal adjudication procedures. Second, SECC argues that Gossett's use of the temporal proximity inference to meet her burden of proof is inconsistent with the DOE regulations. Third, SECC argues that the OHA findings were arbitrary, capricious and not supported by substantial evidence. The Court considers each SECC argument in turn and finds none compelling.

A. Burden-Shifting Scheme

SECC challenges DOE's burden-shifting scheme generally as a violation of Section 7(c) of the APA, 5 U.S.C. § 556(d). The respondents counter that the DOE whistleblower protection regulations are informal adjudications not governed by Section 7(c), which pertains only to formal

adjudications. As discussed above, the DOE regulations specify that an employee must establish by a preponderance of the evidence that her protected disclosure under 10 C.F.R. § 708.5 was a contributing factor to the adverse personnel action. See 10 C.F.R. § 708.29. Once the employee does so, the burden is shifted to the contractor to show by clear and convincing evidence that the adverse personnel action would have occurred in the absence of the protected disclosure. Id. Here, OHA found that Gossett satisfied her contributing factor requirement by establishing close temporal proximity between the protected disclosures and her termination.

In arguing that the burden-shifting scheme utilized by DOE is a violation of the APA, SECC makes two assertions -- first, that the procedure used by DOE in its whistleblower protection regulations is a formal adjudication under the APA, and second, that therefore the burden-shifting scheme used by DOE violates Section 7(c) of the APA, which states: "Except as otherwise provided by statute, the proponent of a rule or order has the burden of proof." Petitioner cites OWCP v. Greenwich Collieries, 512 U.S. 267 (1994), which struck down the Department of Labor "true doubt rule" as a violation of the APA. Under that rule, if the evidence was evenly balanced the benefit claimant would win. See Greenwich Collieries, 512 U.S. at 269. The Supreme Court found the "true doubt rule" violated Section 7(c) of the APA. Id. at 280. According to SECC, both the actual shifting of the burden and the imposition of a higher standard of proof on the contractor -- clear and convincing as compared to preponderance -- violate Section 7(c) of the APA.

Respondents never reach SECC's Section 7(c) argument because they contend that Section 7(c) does not apply to the DOE regulations. Specifically, respondents contend that the procedures for a formal adjudication, provided in 5 U.S.C §§ 554, 556-57, do not apply to the whistleblower

protection regulations. The threshold question is thus whether a proceeding under the DOE whistleblower protection regulations is a formal adjudication under the APA. DOE has never applied the procedures found in 5 U.S.C §§ 554, 556-57 to their whistleblower protection regulations. SECC contends that the statutory authority for DOE's regulations mandates application of the APA, and alternatively, that Supreme Court precedent and principles of due process require DOE to conduct a formal adjudication in the whistleblower setting. This Court concludes that the APA formal adjudication procedures do not apply to proceedings under DOE's whistleblower protection regulations, and therefore that Section 7(c) of the APA does not apply.

According to 5 U.S.C. § 554(a), the trial proceedings for a formal adjudication, set out in 5 U.S.C. §§ 556-57, are required only when an "adjudication is required by statute to be determined on the record after opportunity for agency hearing." It is not entirely clear what is necessary to trigger the formal adjudication requirements of sections 556 and 57, but the prevailing view is that there must be some statutory language directing the agency to hold a hearing on the record. See American Trucking Ass'n v. United States, 344 U.S. 298, 319-29 (1953); Western Res., Inc. v. Surface Transp. Bd., 109 F.3d 782, 793 (D.C. Cir. 1997); Chemical Waste Mgmt., Inc. v. EPA, 873 F.2d 1477, 1482 (D.C. Cir. 1989). If an agency adjudication is not governed by the formal procedural requirements of sections 556-57, the only APA procedural requirements that apply are those in section 555, which does not include the Section 7(c) burden-shifting prohibition.

An examination of the authorizing statutes for 10 C.F.R. § 708 et seq. reveals that there is no express statutory mandate for DOE to conduct a hearing on the record sufficient to trigger the formal procedures of sections 556-57. DOE regulations were issued pursuant to broad statutory authority granted by the Atomic Energy Act of 1954 (42 U.S.C. § 2201), the Energy

Reorganization Act of 1974 (42 U.S.C. § 5814, 5815), and the Department of Energy Organization Act (42 U.S.C. §§ 7251, 7254, 7255, 7256). See 57 Fed. Reg. 7533, 7535 (March 3, 1992). There is nothing in the language of these statutes that directs DOE to hold hearings on the record for whistleblower retaliation claims. SECC also points to 42 U.S.C. § 2231, a provision of the Atomic Energy Act, which requires all agency action taken pursuant to Chapter 23 (Atomic Energy) to be governed by the APA. However, that statute merely states the broad principle that "[t]he provisions of subchapter II of chapter 5, and chapter 7, of Title 5 [the APA] shall apply to all agency action taken under this chapter." 42 U.S.C. § 2231. That is a far cry from mandating DOE to conduct a hearing on the record.

Therefore, although 42 U.S.C. § 2231 refers generally to the application of the APA to agency action, it is not the specific statutory language needed to trigger the formal adjudication requirements of 5 U.S.C. §§ 556-57. Furthermore, it is not so much that the APA applies at all to DOE's whistleblower protection regulations, but rather whether the formal adjudication requirements apply.[2] SECC has failed to direct the Court to statutory language that mandates that DOE whistleblower protection proceedings be conducted through a formal adjudication.

SECC's second argument for the application of the APA formal adjudication procedures is that because OHA imposed money damages, due process requires a formal adjudication. SECC contends that due process mandates a hearing prior to any deprivation. This argument is not persuasive. As stated above, the APA formal adjudication procedures are triggered when there is specific statutory language requiring a hearing on the record. Moreover, due process does not

---

[2]SECC's claim is not that the APA applies to 10 C.F.R. § 708 proceedings, but rather that the APA formal adjudication requirements, including the burden-shifting provision of Section 7(c), apply to the DOE whistleblower protection regulations.

require the full panoply of formal trial proceedings; rather, the Mathews v. Eldridge, 424 U.S. 319, 335 (1976), test only mandates that some process be given tantamount to the interests at stake. The whistleblower protection regulations provide sufficient procedural protections, listed in 10 C.F.R. § 708.28, to comport with any constitutional requirements. Therefore, due process does not provide a basis to mandate the application of the full formal adjudication procedures of the APA in this setting.

SECC's reliance on Wong Yang Sung v. McGrath, 339 U.S. 33 (1950), to argue that any due process interest in agency proceedings triggers full formal adjudication process is misplaced. Subsequent decisions leave no doubt that the APA formal adjudication process is only triggered by a specific statutory requirement. See, e.g., PBGC v. LTV Corp., 496 U.S. 633, 653-55 (1990); Chemical Waste Mgmt., 873 F.2d at 1482. Likewise, Greenwich Collieries is of little aid to SECC because there the Supreme Court concluded that Section 7(c) applied to the adjudications involved, which were formal adjudications under the governing statute, whereas here there is not the requisite statutory language to trigger full formal adjudication, and the proceedings thus remain informal adjudications.

For these reasons, the APA procedures for formal adjudication do not apply to the DOE whistleblower protection regulations. As a result, SECC's argument that the DOE regulations violate Section 7(c) of the APA need not be reached. The burden-shifting regime incorporated by DOE in 10 C.F.R. § 708.29 does not violate the APA.

B. Temporal Proximity Inference

SECC also challenges the temporal proximity inference used by Gossett to meet her burden. Specifically, SECC argues that the decision by OHA that temporal proximity alone is

sufficient to show that a protected disclosure was a contributing factor under 10 C.F.R. § 708.29, without also establishing a retaliatory motive, is inconsistent with the language of § 708.29 and undermines the goals of the DOE regulations. Respondents counter that DOE's interpretation of its own regulations is owed deference, and that the use of a temporal proximity presumption is consistent with other statutory and regulatory whistleblower schemes.

The Supreme Court has stated that the job of the courts "is not to decide which among several competing interpretations best serves the regulatory purpose. Rather, the agency's interpretation must be given 'controlling weight unless it is plainly erroneous or inconsistent with the regulation.'" Thomas Jefferson Univ. v. Shalala, 512 U.S. 504, 512 (1994) (quoting Bowles v. Seminole Rock & Sand Co., 325 U.S. 410, 414 (1945)); see also United States v. Mead Corp., 533 U.S. 218, 227 (2001) (an agency's interpretation of its own regulation is entitled to substantial deference). Since originally promulgating the section 708 regulations, DOE has consistently permitted an employee to meet the contributing factor burden through evidence that the adverse personnel action taken against the employee occurred in close temporal proximity to the employee's protected disclosures. See Ronald A. Sorri v. Sandia Nat. Lab., LWA-0001 (June 9, 1993); Janet Westbrook, 28 DOE ¶ 87,021, Case No. VBA-0089 (2002) (holding that if the employee can show a close temporal proximity between the protected disclosures and adverse personnel action, along with actual or constructive knowledge by the employer of the disclosures, the employee can satisfy the contributing factor burden).[3] That reasonable interpretation is

[3]In its opinion in this case, OHA appears to indicate that temporal proximity, even without the terminating officials's knowledge of the employee's protected activity, is sufficient to establish a contributing factor. See R. 7195. That would be inconsistent with both DOE's past application of the temporal proximity inference and the DOE regulations themselves. Here, the terminating official's knowledge was never the issue, but if it were, then an employee would need

entitled to deference from this Court because it is not inconsistent with the language of section 708.29 or otherwise plainly wrong.

SECC argues that the temporal proximity presumption undermines the retaliatory motive concept imbedded in the regulations and undermines the regulatory goal of ensuring the safety of DOE facilities. However, this argument fails sufficiently to appreciate the purpose of the temporal proximity presumption, as well as its widespread use in other statutory and regulatory whistleblower protection schemes. The presumption is used to infer retaliation on the part of the employer. R. 7196. This is consistent with the goal of the regulations, which is to promote the safety of DOE facilities by encouraging and protecting whistleblowers. See 64 Fed. Reg. 12862 (March 15, 1999).

Moreover, the temporal proximity presumption is consistent with both the Whistleblower Protection Act of 1989, 5 U.S.C. § 1221(e)(1) ("WPA"), and Department of Labor ("DOL") regulations, 29 C.F.R. § 24.5(b)(3), authorized by the Energy Reorganization Act of 1974, 42 U.S.C. § 585. In the both the WPA statute and the DOL regulations, a temporal proximity presumption is explicitly mentioned as a method by which an employee can satisfy the burden of establishing that a disclosure was a contributing factor in the adverse personnel action. See 5 U.S.C. § 1221(e)(1); 29 C.F.R. § 24.5(b)(3). Although the details of the WPA, the DOL regulations and the DOE whistleblower protection regulations vary, they all share the same goal -- to ensure that employees and government officials are protected against retaliation as a result of "whistleblowing activities." Given the deference this Court must show to an agency's reasonable interpretation of its own regulations, as well as the legitimate justification for a temporal

---

to show both temporal proximity and knowledge to satisfy the regulatory burden.

proximity inference, also reflected in the WPA and in the DOL regulations, DOE's use of the temporal proximity presumption is not inconsistent with the language or purpose of 10 C.F.R. § 708.29.

C. OHA's Findings Are Supported by Substantial Evidence

Finally, SECC raises two challenges to the findings in the OHA decision. SECC argues that the findings (1) that Gossett satisfied her burden of establishing by a preponderance of the evidence that her protected disclosures were a contributing factor to her termination, and (2) that SECC failed to meet its burden to show by clear and convincing evidence that Gossett would have been terminated absent the disclosures should both be overturned as arbitrary and capricious and not supported by substantial evidence.

As stated above, the legal standard for judicial review of an agency action is deferential. A final agency decision will be set aside only if it is arbitrary, capricious or not supported by substantial evidence. 5 U.S.C. § 706. An agency decision is arbitrary and capricious if the agency fails to articulate a rational connection between the facts found and the decision made. See Motor Vehicle Mfrs. Ass'n, 463 U.S. at 43; Bowman Transp. v. Arkansas-Best Freight Sys., 419 U.S. 281, 285 (1974). This Court will not substitute its judgment for that of the agency so long as a rational basis for the decision has been provided. See Sloan v. Dep't of Housing and Urban Dev., 231 F.3d 10, 15 (D.C. Cir. 2000). This standard of review applies to both of the challenged OHA findings.

i. Finding that Gossett Satisfied Contributing Factor Burden

SECC first argues that Gossett failed to meet her burden of showing by a preponderance of the evidence that her disclosures were a contributing factor in her termination. On this issue,

SECC argues that the finding of a pattern of hostility in the IAD was not supported by evidence in the record. However, the OHA decision on this issue rested solely on the close temporal proximity between Gossett's protected disclosures and termination. The finding in the IAD of a pattern of hostility was not relied upon by OHA and hence is not part of this Court's review of the OHA decision regarding whether Gossett satisfied her "contributing factor" burden.

Examining OHA's finding of temporal proximity, it is uncontested that Gossett made two protected disclosures in October and November of 2000. See Resp. DOE's Statement ¶ 3. Furthermore, it is uncontested that Gossett was terminated in January 2001. OHA found that the roughly two month period between Gossett's last disclosure and her termination was sufficiently narrow to permit the application of the temporal proximity presumption. Although a period of years would strain credibility, two months is sufficiently close to permit a rational inference that the disclosures were a contributing factor in the termination. SECC presented no evidence in the record to challenge OHA's finding that two months was sufficiently close in time to support the temporal proximity inference. Therefore, this Court finds that OHA's decision that Gossett met her burden of showing that the protected disclosures were a contributing factor in her termination was not arbitrary or capricious and, moreover, was supported by evidence in the record.

ii. Finding that SECC Failed to Meet Its Burden

SECC's final challenge is that OHA incorrectly found that SECC failed to meet its burden to show by clear and convincing evidence that it would have terminated Gossett even in the absence of her disclosures. Respondents, not surprisingly, dispute this assertion, and argue that OHA's decision is supported by substantial evidence. OHA found that SECC failed to establish that its "three-strike" policy, which required an RCT to be terminated for failing three re-

qualification exams, was in existence at the time of Gossett's termination or was consistently applied. R. 7197-7199.

OHA's decision focused on the following factual determinations: (1) SECC did not have a written policy pertaining to the "three strike" rule; (2) SECC failed to present any direct evidence that RCTs were aware of the existence of the three-strike rule; and (3) SECC had never previously terminated a RCT for failing the re-qualification exam three times. See R. 7197-99. None of these factual determinations made by OHA is really challenged by SECC. See Pet. Response to Resp.'s Statements at 1, 5.

Furthermore, the hearing officer was able to hear the testimony of the SECC officials who testified to the existence of the three-strike policy. The hearing officer made certain credibility assessments with respect to these witnesses and found that their statements reflected inconsistencies as to the application and existence of the three-strike policy. R. 7221-7225. On this basis, the IAD found, and OHA agreed on appeal, that SECC failed to establish that the three-strike policy was in effect at the time of Gossett's termination. As a result, OHA concluded that SECC failed to establish by clear and convincing evidence that it would have terminated Gossett in the absence of her disclosures.

Again, this analysis is governed by the deferential arbitrary and capricious standard, and the question for this Court is whether OHA's decision is rational and supported by substantial evidence. Although it is not certain that the IAD and OHA made the correct judgment on this question, under the guidance set forth through the arbitrary and capricious standard, this Court is not to substitute its own judgment for that of the agency decisionmakers. See Motor Vehicle Mfrs. Ass'n, 463 U.S. at 43. Rather, this Court must assess whether the agency has made a

"rational connection" between the facts and its decision. See Neighborhood TV Co., 742 F.2d at 639. Therefore, applying this deferential standard, there is sufficient evidence in the record to support the decision by OHA. In particular, OHA made several factual findings, cited above, which are uncontested by SECC. The evidence in the record certainly shows a rational connection between OHA's conclusion that SECC did not establish the existence of the three-strike policy at the time of Gossett's termination and the facts highlighted by OHA. Therefore, this Court will not overturn the decision of OHA that SECC failed to meet its burden.

CONCLUSION

For the reasons stated above, this Court finds that OHA's decision that Gossett's termination from SECC was at least in part due to retaliation for her whistleblowing activities was consistent with the APA and its own regulations, and was supported by substantial evidence in the record. The Court will therefore grant respondents' motion for summary judgment and deny petitioner's corresponding motion. A separate order will be issued with this memorandum opinion.

Case No. LWA-0001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Ronald Sorri

Date of Filing: June 9, 1993

Case Number: LWA-0001

This Decision involves a whistleblower complaint filed by Ronald Sorri (Sorri) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. Sorri charged that reprisals were taken against him after he raised safety concerns with Sandia National Laboratories, DOE, and Congressman Leon Panetta. The alleged reprisals included removing him from his job as a maintenance technician in Sandia's Microelectronics Development Laboratory; giving him lowered performance ratings; reassigning him to a job as a technical writer; and finally, firing him. DOE's Office of Contractor Employee Protection (OCEP) investigated the complaint and found that the first three actions were reprisals for Sorri's disclosure of safety concerns. However, OCEP concluded that Sorri's termination did not constitute a reprisal. Neither Sandia, nor Sorri's employer, L&M Technologies, Inc., a Sandia subcontractor, requested a hearing to challenge OCEP's findings. Sorri requested a hearing before the Office of Hearings and Appeals (OHA) under ' 708.9(a), maintaining that his termination was also a reprisal for his safety disclosures. The hearing in this case was held on October 26 and 27, 1993, in Albuquerque, New Mexico.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE Contractor Employee Protection Program became effective on April 2, 1992. 57 Fed. Reg. 7533 (March 3, 1992). Its purpose is to encourage contractor employees at DOE's government-owned, contractor-operated (GOCO) facilities to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers. 10 C.F.R. Part 708.

Before Part 708 was promulgated in 1992, contractor employee protection at DOE's GOCO facilities was governed by DOE Order 5483.1A ("Occupational Safety and Health Program for DOE Contractor Employees at Government-Owned Contractor-Operated Facilities"). However, no formal procedures existed under Order 5483.1A. The new regulations were adopted to improve the process of resolving complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary or her designee.

B. Facts

The following summary (and the chronology in the Appendix to this Decision) is based primarily on the investigation conducted by OCEP. Except as specifically noted below, the facts in this case are uncontroverted. From March 1990 until March 1992, Sorri was employed as a Senior Maintenance Technician by L&M Technologies (L&M), a subcontractor to Sandia National Laboratories (Sandia). Sorri

was assigned to Sandia's Microelectronics Development Laboratory (MDL), which was engaged in the production of semiconductors. His job was to maintain the ion implanters, which are machines used in the manufacture of semiconductors. Sorri's tenure at the MDL was unremarkable until he raised a number of safety concerns to L&M and Sandia management officials.

In August 1990, Sorri verbally raised concerns to his MDL operational supervisor, Mike Nicholas, about the possible release of lethal gases that could result from overpressurized gas cylinders positioned inside the Varian 300 XP ion implanter. Sorri was uncomfortable with the gas cylinder pressures being too high, in excess of 400 pounds per square inch (psi). The gas in the cylinders was under a pressure of 800 psi. Nicholas told Sorri that industry allows for pressures over 400 psi, but agreed that after the gas in the cylinders was depleted, they would be replaced with cylinders specifically set at 400 psi. In mid-December 1990, Sorri wrote a memorandum to Nicholas in which he further detailed his concerns about the pressures in the gas cylinders. After a meeting between Sorri and several management officials representing both L&M and Sandia, an agreement was reached that new 400 psi cylinders would be ordered to replace the old cylinders.

On January 3, 1991, Sorri filed a safety complaint with the Sandia Safety Office after being told by the MDL purchasing office that the 400 psi cylinders had not yet been ordered. As a result, a meeting was held on January 18, 1991 with Sorri, Nicholas, and his L&M administrative supervisor, John Doyle, to discuss the safety concerns and to formulate a plan to resolve them. Subsequently, there were a number of meetings attended by Sorri and various L&M and Sandia management officials, including Doug Weaver, the Sandia MDL Facility Manager, Ron Jones, Sandia MDL Division Supervisor, and Fil Martinez, L&M Contract Manager, to discuss Sorri's concerns. The outcome of these meetings was an agreement that Sorri's concerns about cylinder pressure would be remedied by ordering new 400 psi cylinders to replace the old ones. On January 25, 1991, a meeting was called at Sorri's request, in which he raised fears that reprisals would be taken against him for raising safety concerns.

In February 1991, Sorri was directed to vent some gas cylinders in order to reduce the cylinder pressures. He believed that using this procedure to vent arsine gas, a toxic substance, was dangerous and that this action was contrary to the plan to resolve his safety concerns previously agreed upon during the January 1991 meetings. Therefore, on February 14, 1991, Sorri filed a formal safety complaint with the DOE. According to the uncontested findings of the OCEP investigation, L&M and Sandia immediately took several reprisals against Sorri.

The first of these reprisals occurred on February 15, 1991. After L&M and Sandia management officials learned that Sorri had filed the safety complaint, he was told to remove personal items from his desk, his employee badge was taken from him, and then he was physically escorted out of the MDL. Sorri was placed in the L&M headquarters office building, where he was directed to write up his safety concerns about the ion implant area in more detail and submit them to Fil Martinez on February 25, 1991. Sorri was later placed on administrative leave with pay for approximately five weeks and was told to stay off the L&M and Sandia premises.

The second reprisal, according to OCEP's investigation, occurred in March 1991, when Sorri was informed that he would be reassigned to work for Bill Lucy, Sandia Safety Supervisor, as a safety technician at the MDL. Sorri complained that he had no training as a safety technician and that this reassignment was a reprisal for his disclosure of safety problems. Within a few days, his old job title was restored, but he was assigned full time to writing maintenance procedures for the ion implanters. Sorri was a technician who worked with his hands, not a technical writer, and this job was difficult for him. During the next several months while Sorri had this new assignment, Nicholas and Jones complained that Sorri made errors and took too long to write the maintenance procedures.

The third reprisal found to exist by OCEP occurred when Sorri received a lowered performance evaluation for the period ending July 1, 1991. Sorri's rating was lower than his previous rating, and it was also lower than the average performance rating of other L&M employees for that period. As a result of this lower

rating, Sorri received a salary enhancement lower than the amount which he would have received had he been given a rating at a level consistent with his previous performance evaluations.

In September 1991, Harry Weaver replaced Doug Weaver (no relation) as the Sandia MDL Facility Manager. According to Harry Weaver, the primary mission of the MDL was supposed to change from production of semiconductors to research and development. He claimed that as a result of the change in focus, the MDL needed employees with a wider range of experience so that they would have more flexibility to handle different task assignments.

In January 1992, Sandia sent L&M a Request for Quotation (RFQ) for a modification to L&M's contract with Sandia. According to its terms, the RFQ made one principal change: it reduced the number of "tasking areas," i.e. job descriptions, from approximately 100 that were very specific to three that were very general. In February 1992, L&M informed its MDL employees that it had received this RFQ and requested that they submit resumes based on their current jobs for transmittal to Sandia. At the time, Sorri believed the resumes were going to be used to group technicians into the three new tasking areas. No one at L&M was told that the resumes would be used to determine who would retain their jobs at the MDL, and who would be laid off.

Whether Sorri's termination was the final act of reprisal against him is the main issue addressed in the hearing and this Decision. The facts surrounding the termination are not in dispute. Sandia evaluated the resumes submitted by the L&M employees in response to the RFQ. Harry Weaver developed the criteria which were used to score the resumes while Jones did the actual resume scoring. Out of 100 possible points in Weaver's rating scheme, the "cross training" element was the most heavily weighted, at 30 percent of the total. Weaver claims that the emphasis was placed on cross training because employees with more diverse skills were needed for the changeover from a production-oriented MDL to one which was more oriented towards research and development. Sorri received 28 points out of 100, the lowest score of all L&M employees in his tasking area, scoring zero points in the critical cross training element. After the ratings had been completed, Weaver decided that the minimum acceptable score for Sorri's task group would be 40 points. Employees who had scores below 40 were either to be fired, or conditionally retained and given additional training. Sorri was not conditionally retained or offered additional training. On March 2, 1992, Weaver wrote a memo to his superior, Paul Peercy, which stated (in an attachment) that Sorri was to be terminated. Sandia informed L&M that it had no position in the MDL for Sorri, and on March 13, 1992, Sorri was fired by L&M president Antonio Montoya.

Sorri wrote letters expressing his concerns about the reprisals taken against him to Congressman Leon Panetta on two occasions, in March and November 1991. On December 3, 1991, Sorri also made a written safety complaint to Sandia about the mid-current ion implanter. In January 1992, Sorri's November 1991 letter to Panetta was forwarded by Bruce Twining, Manager of DOE's Albuquerque Field Office, to Sandia president Al Narath, who was asked to comment on Sorri's allegations. On February 12, 1992, before the L&M resumes had even been submitted, and more than two weeks before Weaver notified his superior that Sorri would not be retained, Narath wrote to Twining that Sorri would not be returned to his job in ion implant because the MDL's "new operation mode does not call for maintenance to support production." Narath denied that Sorri had been the victim of reprisals.

C. Procedural History of the Case

On July 23, 1992, Sorri filed a complaint with the DOE Albuquerque Field Office under Part 708. After an unsuccessful attempt to reach an informal resolution, Sorri's complaint was forwarded on September 29, 1992 to OCEP to institute a formal investigation. OCEP conducted an on-site investigation of Sorri's allegations of reprisal and issued a Report of Investigation and a Proposed Disposition on April 30, 1993. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that Sorri had made protected disclosures and that removal of Sorri from his job as an ion implant maintenance technician in the MDL, his reassignment to the job of writing maintenance procedures, and his downgraded performance evaluations, were all reprisals for his protected disclosures. However, the

Proposed Disposition also concluded that Sorri's termination had not been a reprisal, but was justified by the change in mission at the MDL from production to research and development. OCEP proposed that Sorri be awarded $639.20 for salary enhancements lost as a result of his downgraded performance evaluation, plus attorney's fees.

On May 14, 1993, Sorri submitted his request for a hearing pursuant to ' 708.9 to OCEP. On June 9, 1993, OCEP transmitted that request, together with the complaint file, to the OHA. The OHA Director appointed a Hearing Officer, who promptly, on June 16, 1993, established a prehearing briefing schedule under ' 708.9(b).

On August 11, 1993, Sandia filed a Motion to Dismiss the proceeding. Sandia asserted that the requirement in ' 708.6(d) that a complaint be filed within 60 days after an alleged reprisal occurred, or within 60 days after the complainant "knew or reasonably should have known" of it, is jurisdictional in nature. According to Sandia, DOE may not accept any whistleblower complaint where that time limit is exceeded. Sandia stated that even if the 60 days were counted from the effective date of Part 708 on April 2, 1992, Sorri's complaint, filed on July 23, 1992, was still untimely. L&M filed a similar Motion to Dismiss on August 17, 1993.

On August 20, 1993, the Motions to Dismiss were denied. See Sandia National Laboratories, 23 DOE & 82,502 (1993) (Sandia). The Hearing Officer concluded that the acceptance of Sorri's complaint was a reasonable exercise of discretionary authority under Part 708 by the OCEP Director. Citing the preamble to Part 708, the decision found that there was no evidence that the policy considerations underlying the 60-day time limit had been contravened by the acceptance of Sorri's complaint. The decision also noted that neither Sandia nor L&M had even suggested that it had been prejudiced by the brief delay between Sorri's termination and the filing of his complaint under Part 708. Id. *

On September 24 and 27, 1993, two Motions for Discovery were filed by Sorri and L&M, respectively. I found that both discovery requests were reasonable and granted the Motions in a decision issued on October 15, 1993. In addition to ruling on the discovery requests, the decision established procedures for the submission of exhibits before the hearing, and set the order of witnesses. Ronald A. Sorri; L&M Technologies, Inc., 23 DOE & 84,002 (1993).

As a practical matter, a hearing before OHA under Part 708 is equivalent to an appeal from the conclusions reached by OCEP in the Report of Investigation and Proposed Disposition. This Decision addresses the two issues covered at the hearing: (1) whether Sorri's termination was a retaliatory action which would not have occurred absent his disclosure of safety concerns; and (2) the amount of attorney's fees Sorri is entitled to recover in connection with processing his complaint. By not requesting a hearing themselves, Sandia and L&M have waived their rights to challenge any other findings in the Proposed Disposition.

The Part 708 regulations do not specify what is to be included in the record for purposes of a DOE contractor employee whistleblower protection proceeding. To resolve this ambiguity, I defined the "record" in this proceeding to include OCEP's complaint file, all papers filed by the parties with the OHA, all interlocutory decisions and orders and letter rulings issued by the OHA on procedural matters, the transcript of hearing testimony, and any exhibits submitted by the parties at the hearing. Transcript of October 26-27, 1993 Hearing (hereinafter cited as "Tr."), Vol. I at 6.

II. Analysis

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under ' 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. ' 708.9(d). The parties in this case have stipulated to the fact that there were disclosures by Sorri protected

under ' 708.5. See Tr., Vol. I at 20, 21. Thus, in order to meet his burden, Sorri must prove by a preponderance of the evidence, i.e. that it is more probable than not, that his protected activity was a "contributing factor" in his termination. See McCormick on Evidence ' 339 at 439 (4th ed. 1992) ("The most acceptable meaning to be given to the expression, proof by a preponderance, seems to be proof . . . that the existence of the contested fact is more probable than its nonexistence.").

Although this is the first case to come before an OHA Hearing Officer under Part 708, similar standards of proof have been applied by the federal courts and administrative agencies to whistleblower complaints filed under ' 210 of the Energy Reorganization Act of 1974 and the Whistleblower Protection Act of 1989. For example, in Marano v. Dep't of Justice, 2 F.3d 1137 (Fed. Cir. 1993), a DEA employee's complaints of mismanagement prompted an investigation, and the agency decided on the basis of the investigation that the complainant should be reassigned to another city. In that case, the court found direct evidence that the whistleblower's complaint had been a contributing factor to his reassignment. Id.

In most cases, however, it is impossible for a complainant to find a "smoking gun" that proves an employer's retaliatory intent. Thus, the complainant must meet his burden of proof through circumstantial evidence. A protected disclosure has been found to be a "contributing factor" in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." McDaid v. Dep't of Hous. and Urban Dev., 90 FMSR & 5551 (1990) (McDaid). See Couty v. Dole, 886 F.2d 147, 148 (8th Cir. 1989).

In its post-hearing brief, Sandia argues that Sorri must prove that there was a "causal connection" between his protected activity and his termination, and that "it would be entirely illogical to presume that the disconnected events [in this case] rise to the level of causative nexus." Post-Hearing Brief of Sandia at 5, 7. As authority for its position, Sandia relies on McNairn v. Sullivan, 929 F.2d 974, 980 (4th Cir. 1991), a retaliatory discharge case decided under Title VII of the Civil Rights Act of 1964. However, the "contributing factor" standard which governs the complainant's burden in this whistleblower case under Part 708 is different from the burden of proof imposed on the plaintiff in McNairn and the other Title VII cases cited by Sandia.

Congress made the meaning of this standard clear when it adopted the "contributing factor" test in the 1989 Whistleblower Protection Act (WPA). Prior to the enactment of the WPA, the courts had interpreted federal whistleblower law "as requiring the whistleblower to carry a considerable burden of proof in order to establish his case. The whistleblower was required to establish, inter alia, that the disclosure constituted a 'significant' or 'motivating' factor in the agency's decision to take the personnel action." Marano, at 1140 (footnote omitted). One of the purposes of the WPA was to reduce this "excessively heavy burden imposed on the employee" and thus make it "easier for an individual . . . to prove that a whistleblower reprisal has taken place." 135 Cong. Rec S2780, S2784 (daily ed. Mar. 16, 1989) (statement of Sen. Levin). In explaining the "contributing factor" standard, the House and Senate floor managers of the legislation stated:

One of the many possible ways to show that the whistleblowing was a factor in the personnel action is to show that the official taking the action knew (or had constructive knowledge) of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action.

135 Cong. Rec. H749 (daily ed. Mar. 21, 1989). After the enactment of the WPA, this same standard was adopted by Congress in 1992 when it amended the whistleblower provisions in ' 210 of the Energy Reorganization Act in the Energy Policy Act of 1992, Pub. L. No. 102-486, Title XXIX, ' 2902, 106 Stat. 3123-24 (1992). The DOE adopted the same standard when it issued the Part 708 regulations. See 57 Fed. Reg. 7533 at 7538 (March 3, 1992) (Preamble to Part 708).

I therefore reject Sandia's argument that a more stringent burden of proof be required of complainants

under Part 708 than that which DOE clearly intended by adopting the "contributing factor" standard. Next, I consider whether Sorri has met his burden of proving by a preponderance of the evidence that his protected conduct was a contributing factor in the decision by Sandia and L&M to terminate his employment.

During the period August 1990 through December 1991, Sorri made a number of disclosures which are protected under ' 708.5. In August 1990, Sorri verbally raised safety concerns to his MDL operations supervisor, Mike Nicholas, and again made those concerns known in a memorandum to Nicholas in December 1990. On January 3 and December 3, 1991, Sorri filed safety complaints with Sandia, and on February 14, 1991, Sorri filed a formal safety complaint with the DOE. Finally, Sorri wrote letters disclosing his concerns to Congressman Leon Panetta in March and November 1991.

Neither Sandia nor L&M disputes that it had actual knowledge of Sorri's disclosures prior to his termination. Sorri's initial disclosures prompted several meetings in December 1990 and January 1991 attended by the supervisors and managers of both contractors (John Doyle and Fil Martinez of L&M; Doug Weaver, Dale Blankenship, Ron Jones, and Bill Lucy of Sandia). See Report of Investigation at 6. The record also shows that Sandia and L&M took the first of several reprisals immediately after Sorri's February 14, 1991 complaint to the DOE. See Proposed Disposition at 6. In addition, Sorri's November 26, 1991 letter to Congressman Panetta prompted a response from the president of Sandia, and Sorri's December 3, 1991 health and safety complaint was filed directly with Sandia. See Hearing Exhibit (Ex.) 106; Tr., Vol. II at 91. L&M's evaluation of Sorri's performance for the last six months of 1991, which was given on March 27, 1992, states that Sorri was pursuing "trivial issues to the highest levels of Sandia management," and confirms L&M's awareness of Sorri's continuing complaints. See Hearing Ex.104.

The record indicates that the decision had been reached to terminate Sorri by March 2, 1992, when Harry Weaver wrote a memo advising his superior at Sandia, Paul Peercy, of this fact. See Hearing Exs. 106, 123, 137. This was less than three months after Sorri filed his December 3, 1991 safety complaint with Sandia, and little more than a month after the president of Sandia learned of Sorri's November 26, 1991 letter to Congressman Panetta. See Hearing Ex. 106. This short time period between Sorri's latest disclosures and his termination leads us to conclude that the disclosures were a contributing factor in Sorri's termination. This conclusion is further supported by the fact that the termination was only the last in a series of adverse actions taken against Sorri, each of which followed closely on the heels of Sorri's disclosures of safety problems. The present record easily satisfies the complainant's burden under Part 708 of proving by a preponderance of the evidence that his protected conduct was a contributing factor in his termination. As noted in McDaid, supra, at 1023, the Merit System Protection Board (MSPB) reviewed the legislative history of the 1989 Whistleblower Protection Act, and held that this requirement is satisfied by circumstantial evidence showing that there was a protected disclosure followed by an adverse personnel action which occurred reasonably close in time. Id., quoting S. Rep. No. 413, 100th Cong., 2d Sess. 13 (1988). For the reasons explained below, I find that the record is sufficient to shift the burden under ' 708.9(d) to Sandia and L&M to prove by clear and convincing evidence that they would have taken the same action absent Sorri's protected disclosures.

It is unquestioned that Sandia was aware of Sorri's disclosures and that its managers participated in the reprisals that were taken against Sorri after his safety complaints to DOE and Congressman Panetta. Sandia supervisory employees participated in the decisions to remove Sorri from the MDL one day after his complaint to DOE, and to reassign him to the job of writing maintenance specifications for the ion implanters. These same Sandia personnel also furnished information used by L&M's MDL contract manager Fil Martinez to prepare Sorri's performance evaluations. Thereafter, Harry Weaver and Ron Jones of Sandia were the principal actors in the resume rating process and the decision to terminate Sorri from the MDL without offering an opportunity for conditional retention and cross training. Finally, Sandia president Narath's February 12, 1992 letter to Bruce Twining of DOE's Albuquerque Office strongly suggests that the prime contractor had decided to get rid of Sorri well before the resume rating process was even carried out. For a whistleblower case where circumstantial evidence is normally expected, the Narath letter (Hearing Ex.106) is a virtual "smoking gun," because it supports Sorri's claim that the resume rating

process was a sham. For these reasons, I conclude that the complainant has met his burden of showing by a preponderance of the evidence that his protected conduct was a contributing factor in Sandia's decision to terminate him.

L&M maintains that it should have been dismissed from the case without being required to submit any exculpatory evidence under ' 708.9(d) because Sandia alone was responsible for Sorri's termination. Tr., Vol. II at 6, 7. I disagree. Despite L&M's limited discretion under its contract with Sandia, L&M retained administrative supervision over Sorri, and L&M principals Montoya and Jim Martinez exercised that authority when they made the ultimate decision to fire him. Tr., Vol. I at 104. Moreover, Sorri's termination was not an isolated event, but merely the end of a chain of reprisals in which Sandia's and L&M's actions were inextricably intertwined. From the time of Sorri's initial disclosures, L&M management willingly participated in decisions which were part of this pattern of reprisal, including the removal of Sorri from the MDL one day after he filed a safety complaint with DOE, and his later reassignment as a technical writer responsible for drafting maintenance procedures for the ion implanters. See Report of Investigation at 7-8. In addition, L&M Contract Manager Fil Martinez was responsible for Sorri's July 1, 1991 performance evaluation, which OCEP found was lowered as "a result of his whistleblowing activities," as well as his final March 27, 1992 evaluation, which was even lower than the previous one. See Report of Investigation at 11; Hearing Ex. 104. I therefore find that the complainant has met his burden of showing by a preponderance of the evidence that his protected disclosures were a contributing factor in L&M's decision to fire him. I turn now to a consideration of whether the contractors have met their respective burdens of proof under Part 708.

C. The Contractors' Burden

Part 708 provides that, once the complainant has met his burden of proof under ' 708.9(d), "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure...." 10 C.F.R. ' 708.9(d). The standard of proof by "clear and convincing evidence" is more stringent than the "preponderance of the evidence" standard applied to complainants under Part 708, but not as high as the "beyond a reasonable doubt" standard used in criminal cases. See McCormick on Evidence, ' 340 at 442. It has been described as that evidence sufficient to persuade a trier of fact that the truth of a contested fact is "highly probable." Id. For the reasons set forth below, I have concluded that neither contractor has met this burden.

Before he filed his safety complaints with Sandia and DOE, Sorri was a highly rated employee who received an above average performance evaluation for the period ending July 1, 1990. According to this evaluation, Sorri had "no problems" in the area of "Judgement and Stability," and in the category of "Cooperation," Sorri was characterized as "very good, no problem, gets along well, a team player." In "Versatility," Sorri was rated as "very experienced on job, goes beyond job description." Sorri received ratings of 4.5 out of 5 points in each of these categories. One year later--after his disclosures--Sorri's average score in these three areas had plummeted to 2.5 out of 5, with supervisor's comments such as "ability to function in a team environment need to be improved," "has resisted efforts to be utilized outside of implant," and "sound judgement, tact lacking." OCEP Complaint File, Book I, Item 11.

Sandia's defense rests on the assertion that Sorri was terminated because the mission of the MDL shifted from production to research and development, and his skills were not suited to the new environment. According to Sandia, the shift in mission was reflected in the January 12, 1992 RFQ, and the implementation of the new job descriptions proposed in the RFQ resulted in Sorri's dismissal. The OCEP investigation accepted Sandia's justification for firing Sorri, without probing any further. However, the testimony and demeanor of the witnesses at the hearing and the additional documentary evidence added to the record since the OCEP investigation has undercut Sandia's position. The present record leads to the inescapable conclusion that the contractors have failed to show by clear and convincing evidence that Sorri would have been fired if he were not a whistleblower.

A cloud of suspicion hangs over the entire process that was used to justify Sorri's termination. First, there

is no mention in the January 1992 RFQ of a change in mission at the MDL, or any statement in the RFQ that it was issued to implement this change. Tr., Vol II at 48. Sandia submitted no evidence at all about the actual impact in the workplace of the purported change in mission. By contrast, Sorri testified that the ion implanters in the MDL would still need intensive maintenance regardless of whether they were used in a normal production cycle. Tr., Vol II at 83-4. Second, while the RFQ proposed to reduce the number of job descriptions at the MDL, there is no indication in the document that this was to result in the termination of any employees. Harry Weaver, who played a major role in the process, testified that "[t]he idea was not to layoff people, okay, the idea was to change the way we did business. . . . I certainly had no instructions from anybody at Sandia that I had to change the number of people or who was working out there." Tr., Vol. I at 222. Weaver did not recall when it was decided that the resumes submitted in response to the RFQ would be used as the basis for layoff decisions. Id. at 195. He testified that when the RFQ was issued, he had envisioned a resume evaluation process, but not as part of a layoff plan. Id. at 187. Fil Martinez, the L&M contract manager, submitted the resumes with the understanding that they would be used "for reevaluation of everyone's position," but Martinez had "no knowledge whatsoever" that the resumes would be used in layoff decisions. Tr., Vol. I at 116.

The use of resumes as the basis for conducting a layoff was an unusual practice in the business community, and without precedent in the experience of the Sandia officials involved. Organizational development consultant Kelli Livermore, the expert witness called by the complainant, testified about standard practices in the personnel management field for structuring layoffs. Tr., Vol. I, at 58-72. She stated that she had never in her experience seen resumes used as the sole basis for making layoff determinations. Id. at 60. While both Sandia and L&M raised objections to the qualifications of this witness, the testimony of Sandia employees only confirmed her opinion. Harry Weaver stated that in his 15 years as a Sandia manager he had never before used resumes as the basis for layoffs. Tr., Vol. I at 208. Both Weaver and Ron Jones stated in their testimony that there were written Sandia Laboratories management guidelines which prescribed standard procedures for layoffs, but admitted that these guidelines were never consulted in conducting the layoff that resulted in Sorri's termination. Tr., Vol. I at 174 (Jones) and 210 (Weaver).

The evidence also shows that the process used by Sandia was unfair, and not designed to "build out" subjective factors. Tr., Vol. I at 62-3. First, the employees were given no notice that the resumes would be used to determine who would be retained and who would be fired. Tr., Vol. II at 88. Nor were they ever given copies of the Weaver rating sheet described below. This deprived them of any meaningful opportunity to tailor their resumes to the situation. Second, the resumes submitted were not in any standard format and, according to Ron Jones, they varied in length and style. Tr., Vol I. at 153. Jones was given a rating sheet by Harry Weaver to score the resumes in nine categories, with a maximum point value that varied depending on the category. However, Jones was given no oral instructions or written criteria by Weaver for determining how the contents of the resumes were to be translated into point values. Thus, Jones depended on his "feel for what I considered to be the maximum capability within an area or experience level within that area," though he admitted that this method was subjective and "somewhat arbitrary." Id. at 154. Finally, Harry Weaver admitted that Sorri's status as a whistleblower "had to be a subconscious factor" in the rating process. Id. at 221.

The scores that came out of this process were then used in an arbitrary fashion to determine who would be laid off and who would be retained. Since Sandia was not required to eliminate any jobs, it is conceivable that all of the MDL employees could have been found qualified to continue their employment if their scores met some independent standard of minimum qualification. We find it significant that the cutoff score of 40 out of a possible 100 points was not determined beforehand as representative of a minimum skill level needed by workers in the MDL. According to Harry Weaver, the cutoff point was selected "after the fact" by looking at how the employees scored in the ratings and finding a "natural break[ ]" in the scores. Tr., Vol I at 211. Yet, any natural break in the scores would not show how the employees rated in relation to a predefined minimum standard. If, for example, the entire group of employees was so outstanding that each employee scored exactly twice as high in the ratings, there would have been a natural break in the scores around 80. This obviously would not support a conclusion that those scoring

below 80 would not be qualified enough to keep their jobs. Thus, even if the rating process that Jones used to arrive at the individual scores had been objective, there is no rational basis in the record for Sandia's determination that those employees who scored below a "natural break" had to be terminated. That determination was an arbitrary one. As Harry Weaver admitted, the process provided "an opportunity" to eliminate Sorri. Tr., Vol. I at 211.

Harry Weaver testified that Sorri, despite a score of 28, could have been retained by Sandia and cross-trained to work in other areas of the MDL. Tr., Vol. II at 65. Weaver tried to justify his decision not to cross-train Sorri on the grounds that "there has to be some motivation" on the part of an employee for the training to be successful, and that Sorri had "given no evidence in his resume, in his dealings with people, not just management people, but with employees at Sandia, that he would be . . . willing to work in areas other than ion implantation." Tr., Vol. II at 66. This stated reason does not form a proper basis for terminating Sorri.

Under the circumstances of this case, I find it perfectly understandable that Sorri expressed a strong desire to return to work in ion implant and a reluctance to accept a change when it was forced upon him. He had been summarily "run out of the building" on February 15, 1991, one day after he filed a safety complaint with the DOE, and never allowed to return to his job. Tr., Vol II at 96. Neither contractor has contested OCEP's finding that this constituted a reprisal for Sorri's safety complaint to DOE. After that experience, Sorri testified, "all I wanted to do was to have my . . . regular assignment back in ion implant." Id. Instead, Sorri was reassigned to the job of writing maintenance procedures for the ion implanters, a task which he found difficult since he was not qualified to do it. As the Report of Investigation and Proposed Disposition concluded, reassignment to this job was clearly a reprisal against Sorri, who by his own admission "was not a technical writer," but someone who worked with his hands. Tr., Vol. II at 82, 100. Offering Sorri a choice between being cross-trained and losing his job certainly would have provided the motivation necessary to successfully cross-train him, but Harry Weaver and the contractors never gave Sorri this opportunity.

L&M maintains that Sandia alone was responsible for Sorri's termination. The firm claims that as a second-tier subcontractor, it had "no rational alternative but to terminate [Sorri]" once Sandia determined he would not retained at the MDL. Tr., Vol. II at 6-7. Simply by showing that it was unable to offer Sorri other employment after he was rejected by Sandia, L&M asserts that it has met its burden of showing by clear and convincing evidence that it would have fired Sorri in the absence of his protected conduct. This limited view of liability under Part 708 runs contrary to the whistleblower protection policy underlying the program and cannot be endorsed here. The legislative history of Part 708 makes it clear why DOE decided to extend the protection of the regulations to employees of all subcontractors:

The DOE believes that the health and safety of all contractor employees is of utmost importance and overrides enforcement and administrative difficulties that could be incurred in extending the rule to second- and lower-tier subcontractors.

57 Fed. Reg. 7533 at 7535. L&M's conduct was inextricably intertwined with that of Sandia throughout the events chronicled in this record. L&M actively participated in the pattern of reprisal against Sorri for his whistleblowing activities. Even though there is no direct evidence in the present record linking L&M to Sandia's decision not to retain him in the MDL, L&M was solely responsible for Sorri's administrative supervision and its president made the ultimate decision to fire him. Thus, there is enough evidence in the present record to warrant rejection of L&M's argument that it was not "responsible" for Sorri's termination. Moroever, even if L&M were not involved at all in rating or supervising Sorri, but only in formally terminating him, it still could conceivably be liable under Part 6708 for a reprisal. The protections afforded whistleblowers under Part 708 would be eviscerated if subcontractors could escape liability for actions adverse to whistleblowers simply because they merely "carried out" a reprisal contrived by someone else.

In light of the foregoing analysis, I have concluded that there is not even a preponderance of evidence, and certainly not clear and convincing evidence, that Sandia and L&M would have terminated Sorri if he had

not engaged in protected activities.

This conclusion is consistent with the findings of the federal courts under similar circumstances in other whistleblower cases. For example, in DeFord v. Sec'y of Labor, 700 F.2d 281 (6th Cir. 1983), a case decided under ' 210 of the Energy Reorganization Act, a Tennessee Valley Authority (TVA) employee was transferred from his position and demoted shortly after participating in a Nuclear Regulatory Commission (NRC) investigation. The United States Court of Appeals for the Sixth Circuit explained its basis for upholding the determination of the Secretary of Labor:

The Secretary found "that DeFord's transfer was a deliberate retaliation for his cooperation with NRC and his attempts to get his Quality Assurance Engineering section recognized by management." There was evidence that TVA did not follow its normal procedure in transferring DeFord, but rather unceremoniously dumped him from the quality assurance section shortly after the NRC investigation. There was evidence that DeFord had received superior performance ratings prior to the NRC investigation, although TVA claimed in defense of the transfer that he had performed badly in his job. There was evidence that DeFord worked well with his immediate supervisors and had not developed personality conflicts that would interfere with effective performance of his job. There was evidence that DeFord was singled out, in what was admittedly intended to be a negative remark, as a "very strong individual . . . who is instrumental in influencing the opinion and operation of the staff and input to management" and that such criticism of DeFord as a "strong individual" did not arise until TVA conducted its internal audit of the NRC's findings. Quite simply, there was substantial evidence to support the Secretary's conclusion that DeFord was demoted solely because he participated in an NRC proceeding.

Id. at 287 [emphasis in original]. The facts in the present case are strikingly similar, and the burden of proof for a whistleblower under Part 708 is less stringent than it was under the earlier version of ' 210 that the Sixth Circuit applied in DeFord. Sorri received above average performance ratings prior to his disclosures, including high marks in judgement and stability, cooperation, and versatility. Sorri was seen by his supervisors as "a team player" who "gets along well." Only after filing safety complaints did Sorri's rating for judgement and stability drop to 2 out of 5 (from a high of 4.5) because he pursued "trivial issues to the highest levels of Sandia management . . . ." Hearing Ex. 104. It was not until after Sorri's complaints and a series of reprisals that he was singled out for criticism by Ron Jones for "causing problems within the contract force, with negative statements during meetings and while talking to peers." Finally, like TVA in the DeFord case, Sandia did not follow normal business practices or its internal procedural guidelines in laying off Sorri.

In other cases where an employee's protected conduct is followed by the type of adverse actions taken against Sorri, and the employer cannot provide a reasonable alternative basis for its actions, the federal courts have readily concluded that the actions were taken in retaliation for the protected conduct. See Hathaway v. Merit Sys. Protection Bd., 981 F.2d 1237, 1243-44 (Fed. Cir. 1992); Ellis Fischel State Cancer Hosp. v. Marshall, 629 F.2d 563, 566 (8th Cir. 1980). The courts have found even ostensibly legitimate bases for adverse personnel actions to be pretexts for punishing or getting rid of a whistleblower, based on the circumstances surrounding the action. See, e.g., Kansas Gas & Elec. Co. v. Brock, 780 F.2d 1505 (10th Cir. 1985) (requiring whistleblower to document his educational credentials while not applying similar requirement to other employees). As analyzed above, Sandia's attempt to justify its decision to fire Sorri on the basis of a purported change in mission at the MDL was not supported by the evidence in the record. Sandia failed to dispel the concrete impression that the resume process was seized upon as a pretext for getting rid of Sorri. Moreover, an employee cannot be terminated for reasons which are rooted in the employee's experience as a whistleblower, like Sorri's understandable desire to return to work in the ion implant area after he was improperly removed from his regular job there. See Mackowiak v. University Nuclear Sys., Inc., 735 F.2d 1159, 1163 (9th Cir. 1984) (discussing the need to differentiate between protected and unprotected manifestations of "bad attitude").

As in DeFord, the evidence in this case as set forth above amply supports the conclusion that Sorri's disclosures to Sandia, the DOE, and the Congress, protected under Part 708, were a contributing factor in

Sandia and L&M's termination of Sorri, and that neither Sandia nor L&M have proven by clear and convincing evidence that his termination would have taken place absent these disclosures. Accordingly, I find that Sorri's termination violated ' 708.5.

III. Remedy

Having concluded that Sandia and L&M failed to meet their burden of showing by clear and convincing evidence that they would have taken the same personnel action against Sorri absent his disclosure of safety problems, and that a violation of the prohibitions set forth in Part 708 has occurred, I now turn to the remedy.

For those cases in which discrimination against an employee in reprisal for a protected disclosure is found to have occurred, the goal of the DOE regulations is to restore the employee to the position in which he or she would otherwise have been, absent the act(s) of reprisal, in a manner similar to other whistleblower protection schemes. See, e.g., Energy Reorganization Act of 1974, 42 U.S.C. ' 5851; Whistleblower Protection Act of 1989, 5 U.S.C. ' 1214(b)(4)(B). The initial agency decision may include an award of reinstatement, transfer preference, back pay, and all reasonable costs and expenses (including attorney and expert witness fees) "reasonably incurred" by the complainant in bringing the complaint. 10 C.F.R. ' 708.10(c). Sorri does not seek reinstatement.

An award of back pay is clearly appropriate in this case. Back pay is intended to restore the complainant to his proper position by providing compensation for the tangible economic loss suffered and by acting as a deterrent to employers. See United States v. N.L. Indus, Inc., 479 F.2d 354, 379 (8th Cir. 1973). It is evident that Sorri has suffered an economic loss from his termination on March 13, 1992. After he was fired by L&M, it took Sorri seven weeks to find a new job. He states that he lost gross income totalling $3,812, an amount which does not include approximately $1,000 in unemployment compensation benefits that he received. Tr., Vol I at 228. Sandia and L&M concede in their respective post-hearing briefs that the amount of unemployment compensation received should not be subtracted from the amount of back pay awarded to Sorri if a violation of ' 708.5 is found to exist. This result is consistent with the generally accepted "collateral source rule," which holds that unemployment compensation benefits should not be deducted from back pay awards. See, e.g., NLRB v. Gullett Gin Co., 340 U.S. 361 (1951).

In addition, the OCEP Report of Investigation found that as a result of his downgraded performance evaluation, Sorri lost $639.20 in salary enhancements he should have received. Sorri testified that he also lost $128.22 which would have been the approximate value of L&M's company contribution to a 401(k) program. Tr., Vol. I at 227. The amount of the lost 401(k) contribution is uncontested, but L&M claims that the Report of Investigation erred in the calculation of Sorri's lost salary enhancement. Tr., Vol II at 139. According to L&M, Sorri's overall performance rating for the period ending December 31, 1990 was 4.33 and not 4.375 as stated on page 11 of the Report. In the hearing, L&M's counsel also claimed that since the firm generally lowered the ratings for all employees by an average of .54 points, it is reasonable to assume that Sorri's rating would have dropped by that amount. Therefore, L&M maintains that if Sorri's rating had otherwise remained constant for the period ending July 1, 1991, .54 points should be deducted from 4.33 which would result in an adjusted rating of 3.79. As a result, L&M contends that the $639.20 salary enhancement calculated by OCEP was incorrect because it failed to take this factor into account. This contention is flawed. First, there is no evidence in the record to show how much Sorri's specific rating would be affected by a general lowering of the curve. Thus, there is no valid basis for concluding that Sorri's rating would have decreased by the average decline of .54 points. Second, in view of the finding that Sorri's lowered performance rating was a reprisal for his protected activities, it would contravene the whistleblower protection policy underlying Part 708 to base his salary enhancement on anything but his initial rating of 4.33. The purpose of the remedy is to restore Sorri to the position in which he would otherwise have been absent the acts of reprisal. 57 Fed. Reg. at 7539. Consequently, no adjustment will be made to the $639.20 salary enhancement calculated in the Report of Investigation. See 10 C.F.R. ' 708.10(b) (Hearing Officer may rely on findings in the Report of Investigation).

As part of his back pay and these other salary-related elements of the award, Sorri should receive interest to compensate him for the time value of money lost while while bringing his complaint. See, e.g., Garst v. Dep't of the Army, 90 FMSR & 5037 (1993) (interest on back pay awarded under WPA) (Garst). Since Part 708 does not specify the rates of interest that should be applied to back pay awards for DOE contractor employee whistleblowers under ' 708.10(c), I will follow the practice of the Merit Systems Protection Board under the WPA. The MSPB awards interest on back pay under the Office of Personnel Management (OPM) regulation found at 5 C.F.R. ' 550.806(d). That regulation refers to the "overpayment rate" established by the Secretary of the Treasury in 26 U.S.C. ' 6621. The overpayment rate is the Federal short-term rate, plus two percentage points. The Federal short-term rate for a particular calendar quarter is the short-term rate for the first month of the preceeding calendar quarter, rounded to the nearest whole percent. 26 U.S.C. ' 6621(a)(1); (b)(2)(A). The sum of Sorri's back pay, lost 401(k) contribution, and lost salary enhancements is $4,579. Interest on this amount will be assessed from April 1, 1992 through December 31, 1993, based on the quarterly overpayment rates for the seven calendar quarters included in that period, and compounded quarterly. The total amount of interest calculated in this manner is $527. The interest calculations are shown in the Appendix to this decision. Thus, the total amount of back pay and related items, plus interest, to be awarded Sorri is $5,106.

An award of all reasonable costs and expenses, including attorney and expert witness fees, is also appropriate. First, I will consider Sorri's prehearing legal expenses. The Proposed Disposition directed that Sorri be awarded attorney fees and costs "in connection with the processing of his complaint" under Part 708. Proposed Disposition at 12. This should include the attorney's fees charged by Barbara Pryor, Esq. on May 21, 1992 and by David S. Proffit, Esq. on September 29, 1992. The record indicates that Sorri contacted Barbara Pryor for legal services after he was terminated on March 13, 1992. In a letter to Pryor, Sorri requested that she provide legal services on a contingency basis. Sorri had no further communication with Pryor, who billed him $38. Tr., Vol. I at 229. Sorri later contacted David Proffit after his termination, seeking to obtain his legal services on a contingency basis. Proffit provided legal advice before Sorri's attempt at informal resolution. He also discussed the possibility of filing lawsuits in state and federal courts. Sorri paid $372.99 for Proffit's legal services. Tr., Vol I at 230. Sorri's claim for these amounts is uncontested.

Next, I consider the amount of attorney's fees that Sorri "reasonably incurred" for the hearing before OHA. Sorri entered into an agreement with Thad M. Guyer, Esq., his hearing counsel, to pay him a retainer of $2,500 to take all actions necessary within the scope of the hearing. Tr., Vol I at 231-234. This rate was quoted to Sorri based on the public interest nature of his case and did not constitute Guyer's normal hourly rate. Id. at 232. In addition, the retainer agreement stated that if Sorri were successful in his claim under Part 708, Guyer would ask the OHA to award a fee equal to the number of hours billed times his normal hourly rate. Sorri contends that any attorney fee awarded should be based on what is reasonable--the full value of Guyer's services--and not on what the complainant was able to pay his attorney before the hearing.

Sandia argues that the fee which Sorri should be awarded should be capped by the amount he agreed to pay his attorney, or $2,500. As authority for this argument, Sandia relies on Johnson v. Georgia Highway Express, Inc., 488 F.2d 714 (Fifth Cir. 1974) (Johnson). I reject Sandia's position. This issue was considered and resolved by the U.S. Supreme Court in Blanchard v. Bergeron, 489 U.S. 87 (1989), which overruled a lower court decision on the award of fees that had also relied on Johnson. The Court held that an attorney's private fee arrangement, standing alone, does not resolve the question of what is a "reasonable" fee. It held that the defendant should be required to pay a higher amount, "should a fee agreement provide less than a reasonable fee calculated." Id. at 92. According to the Court, the "lodestar figure--the product of reasonable hours times a reasonable rate--represents a reasonable fee...." Id. at 95. I will interpret the phrase "reasonably incurred" in ' 708.10(c) like the Supreme Court, and apply the same "lodestar" approach for determining the amount of attorney's fees to award to the successful complainant in this case under Part 708. See Hensley v. Eckerhart, 461 U.S. 424 (1983); Blum v. Stenson, 465 U.S. 886, 888 (1984) (directing lower courts to apply the lodestar approach). As a matter of Departmental policy, it is also important to recognize the public interest nature of representing a whistleblower under

Part 708, and to award a reasonable fee to encourage attorneys to take these cases. E.g., Blanchard at 96.

I have concluded that an award of back pay (plus interest), together with reasonable costs and expenses, including reasonable attorney and expert witness fees, is the appropriate remedy in this proceeding. In addition to the categories discussed above, Sorri should receive restitution for any other costs "reasonably incurred" in bringing his complaint under Part 708. These additional costs include the value of time lost from his current job in bringing the complaint, the value of time lost for the hearing (including time spent preparing for the hearing, and attending the hearing itself), and milage, long distance telephone charges, postage, copying, court reporters (for depositions), and all other related expenses. This decision will direct counsel Guyer to submit a full accounting of his hourly charges for attorney's fees together with any costs, expenses, and expert witness fees incurred in representing Sorri, and a full accounting of any and all other costs and expenses reasonably incurred by Sorri in bringing his complaint under Part 708. The fee applicant has the burden of producing satisfactory evidence that his requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, or reputation. See Blum v. Stenson, supra. Therefore, Guyer should also submit appropriate evidence to show what is a reasonable hourly rate for him to receive in this case.

IV. Conclusion

For the reasons set forth above, I conclude that Sorri has proven by a preponderance of the evidence that he engaged in activities protected under Part 708 and that these activities were a contributing factor in the decision by Sandia and L&M to terminate his employment. Neither Sandia nor L&M has proven by clear and convincing evidence that it would have terminated Sorri absent his protected activities. Furthermore, I conclude that Sandia and L&M were jointly responsible for the termination of Sorri's employment. I therefore find that a violation of Part 708 has occurred and Sorri should be awarded back pay lost as a result of the reprisals taken against him (plus interest), as well as all costs and expenses reasonably incurred by him in bringing the present complaint. After Guyer has provided the information described in Section III above, I will issue a Supplemental Order specifying the exact amount to be awarded Sorri.

It Is Therefore Ordered That:

(1) Sandia National Laboratories and L&M Technologies shall pay to Ronald Sorri the following amounts in compensation for actions taken against him in violation of 10 C.F.R. ' 708.5:

(a) $639.20 for lost salary enhancements for the period July 1, 1991 through March 13, 1992;

(b) $128.22 for lost L&M contributions to Sorri's 401(k) fund;

(c) $3,812.00 for income lost by Sorri from March 13, 1992 to the beginning of his employment with Phillips Semiconductors;

(d) $527 for interest on the amounts in (a) through (c) above, for the period April 1, 1992 through December 31, 1993;

(e) $410.99 for legal fees paid by Sorri to Barbara Pryor and David Proffit;

(f) An amount to be determined based on the information provided under paragraph (2) below in compensation for all costs and expenses, including attorney and expert witness fees, reasonably incurred by Ronald Sorri in bringing his complaint under Part 708.

(2) Thad M. Guyer, attorney for Sorri, shall, no later than 30 days after the issuance of this Decision, submit to the Hearing Officer a full accounting of his hourly charges for attorney fees together with any costs, expenses, and expert witness fees incurred in representing Sorri, including appropriate documentation as evidence that the rates requested are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, or reputation. In addition to the

cost categories described above, Guyer shall submit, on behalf of Sorri, a full accounting of any and all other costs and expenses reasonably incurred by Sorri in bringing his complaint under Part 708.

(3) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director, Office of Contractor Employee Protection.

Thomas O. Mann

Hearing Officer

Office of Hearings and Appeals

Date:

APPENDIX

I. Sorri Chronology

March 1990: Sorri begins employment with L&M.

August 23, 1990: Sorri receives performance evaluation rating of 4.588 on a 5 point scale for period ending 7/1/90, above the average of 4.16 for L&M employees in the MDL.

August 1990: Sorri verbally raises concerns to Mike Nicholas about overpressurized gas cylinders in ion implanters.

December 1990: Sorri writes a memorandum to Nicholas further detailing his concerns about pressures in the gas cylinders. Meeting between Sorri and managers from L&M and Sandia results in agreement to order new, lower pressure cylinders.

January 3, 1991: Sorri files internal safety complaint with Sandia after learning that new cylinders had not been ordered.

January 1991: Additional meetings are held between Sorri and managers from L&M and Sandia, at which agreement is reached on how safety concerns should be resolved. Sorri raises fears that reprisals will be taken against him.

February 13, 1991: Nicholas orders Sorri to vent cylinders of toxic arsine gas to reduce pressure; Sorri believes this is unsafe and contrary to agreement reached in January.

February 14, 1991: Sorri files safety complaint with DOE.

February 15, 1991: Sorri ordered to remove personal items from the MDL, stripped of employee badge, escorted from the premises, and relocated to L&M headquarters.

February 27, 1991: Sorri placed on administrative leave with pay.

March 22, 1991: Sorri receives performance evaluation rating of 4.33 on a 5 point scale for period ending 12/31/90, below the average of 4.6 for L&M employees in the MDL.

March 25, 1991: Sorri returned to MDL; assigned to review and rewrite ion implant maintenance procedures.

March 28, 1991: Sorri writes to Congressman Panetta, disclosing concerns regarding safety and the resolution of his safety complaints.

July 19, 1991: Sorri receives lowered performance evaluation rating of 3.438 on a 5 point scale for period ending 7/1/91, below the average of 4.06 for L&M employees in the MDL.

November 1991: Sorri again writes to Congressman Panetta regarding reprisals for his health and safety concerns.

December 3, 1991: Sorri files complaint with Sandia regarding safety of the mid-current ion implanter.

January 27, 1992: Sandia president Narath receives inquiry from DOE Albuquerque Office regarding Sorri's November 1991 letter to Congressman Panetta.

January 31, 1992: Sandia issues Request for Quotation to L&M, proposing an amendment of their contract to consolidate job descriptions in the MDL under three general task areas, and requesting resumes of L&M employees being proposed for tasks described in the RFQ.

February 5, 1992: Ron Jones sends memo to Harry Weaver stating that Sorri had "not progressed on a timely basis" on his writing assignment and "is causing problems within the contract force, with negative statements during meetings and while talking to his peers."

February 7, 1992: Fil Martinez sends memo to L&M employees requesting updated resumes by February 12, 1992.

February 12, 1992: Sandia president Narath writes in letter to DOE Albuquerque Office that Sorri will not be returned to his maintenance responsibilities in Ion Implant because the MDL's "new operation mode does not call for maintenance to support production."

February 1992: L&M submits resumes for its MDL contract employees to Sandia. Ron Jones evaluates resumes using rating scheme developed by Harry Weaver. Sorri receives a rating of 28, the lowest of all L&M employees.

March 2, 1992: Harry Weaver sends memo to Peercy stating that four MDL employees, including Sorri, will be terminated.

March 13, 1992: Sorri is terminated by L&M president Montoya.

March 27, 1992: Sorri given performance evaluation rating of 2.625 on a 5 point scale for period ending 1/1/92.

* * * *

II. Calculation of Interest on Back Pay and Related Awards

Calendar Quarter	Starting Amount	Interest Rate	Ending Amount
2d Quarter 1992	$4,579	7 %	$4,659
3d Quarter 1992	4,659	7%	4,741
4th Quarter 1992	4,741	6 %	4,812
1st Quarter 1992	4,812	6 %	4,884
2d Quarter 1992	4,884	6 %	4,957
3d Quarter 1992	4,957	6 %	5,031
4th Quarter 1992	5,031	6 %	5,106

* At the hearing, Sandia reiterated its challenge to the timeliness of Sorri's complaint. Since Sandia has

failed to provide any new evidence or legal arguments which would lead us to change our initial ruling, we affirm our determination that Sorri's complaint was properly accepted by the OCEP Director.

David Ramirez

March 17, 1994

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: David Ramirez

Date of Filing: September 22, 1993

Case Number: LWA-0002

This Decision involves a complaint filed by David Ramirez ("Ramirez" or "the complainant") under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. Ramirez contends that a reprisal was taken against him after he raised safety concerns with Brookhaven National Laboratory/Associated Universities, Inc. ("BNL" or "the Laboratory"), a DOE contractor. Specifically, the complainant alleges that he was terminated from employment at BNL on March 20, 1992, in retaliation for his having raised safety issues with his BNL supervisor. The DOE's Office of Contractor Employee Protection (OCEP) investigated the complaint and found that Ramirez' termination did not constitute a reprisal. Ramirez requested a hearing before an Office of Hearings and Appeals (OHA) Hearing Officer under 10 C.F.R. § 708.9(a), again maintaining that his termination was a reprisal for his safety disclosures. Neither BNL, nor Ramirez's employer, J. P. Daly & Sons, Inc. (Daly), a BNL contractor and thus DOE subcontractor, requested a hearing to challenge any of OCEP's findings. The hearing in this case was held on December 14 and 15, 1993, at the BNL facility in Upton, Long Island, New York.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE Contractor Employee Protection Program became effective on April 2, 1992. 57 Fed. Reg. 7533 (March 3, 1992). Its purpose is to encourage contractor employees at DOE's government-owned, contractor-operated (GOCO) facilities to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers. 10 C.F.R. § 708.1.

Before Part 708 was promulgated in 1992, contractor employee protection at DOE's GOCO facilities was governed by DOE Order 5483.1A (6-22-83) ("Occupational Safety and Health Program for DOE Contractor Employees at Government-Owned Contractor-Operated Facilities"). As with Part 708, the Order prohibited contractors from taking reprisals against whistleblowers. However, no formal procedures existed under Order 5483.1A. The Part 708 regulations were adopted to improve the process of resolving whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee.

B. Factual Background

The following summary is based on the testimony of witnesses at the December 14-15 hearing and the OCEP investigation.1/ From December 1985 until March 20, 1992, Ramirez was continuously employed at

BNL as an electrician by a series of DOE subcontractors, each of which had a contract with BNL to provide electrician labor support. These subcontractors supplied electricians to BNL on an "as-needed" basis through a referral process utilizing Local 25 of the International Brotherhood of Electrical Workers Union (IBEW). While working at BNL, the electricians were supervised by BNL personnel. At the time of the alleged reprisal, the firm that supplied electricians to BNL was Daly, which had become a BNL contractor, and therefore Ramirez' employer, on March 14, 1992.

Under the terms of the contract between BNL and Daly, BNL had authority to lay off subcontractor electricians working at BNL when their services were no longer required. When a work slowdown was anticipated, subcontractor electricians sometimes were laid off and sometimes were permitted to agree voluntarily to an informal system of furloughs to obviate the necessity of layoffs. When an electrician was laid off, the individual's name was placed on the bottom of the IBEW referral list for future work.

In January 1992, Ramirez' BNL supervisor, Donald Jesaitis, was promoted and replaced by a new Electrical Construction Support Supervisor, Bill Softye (Softye). Ramirez alleges that he informed Softye about two safety issues and that in retaliation for making these disclosures he was laid off from his position as a subcontractor electrician.

The first alleged disclosure occurred in mid-February 1992 when Ramirez and another electrician were working in Building 902. While tracing out electrical feeders in a high voltage "experimental cubicle" area, the power came on and red indicator lights flashed. Ramirez states that he became concerned and related his concerns to Softye. Ramirez alleges that Softye's response was "Another problem Dave?" Ramirez states that he returned to work, despite still feeling concerned about his safety, because he felt threatened by Softye's response. Softye disputes Ramirez' account of this incident and asserts that he was not made aware of the activation of the power source until subsequently.

The second disclosure by Ramirez involves asbestos in the ceiling of a hospital corridor in Building 490. While removing electrical fixtures on February 21, 1992, Ramirez was approached by a hospital custodian who informed him of the possibility that there was asbestos in the ceiling. Ramirez then apprised Softye about the potential asbestos problem. Softye contacted Peter Stelmaschuk,2/ Supervisor of Carpenters, who informed him that there was no asbestos in the ceiling tiles. Softye thereupon informed Ramirez that the "area was clean," and Ramirez returned to work. BNL has stipulated that Ramirez raised his concern regarding asbestos in good faith. Transcript of Proceedings (December 14-15, 1993 Hearing) at 21 (hereinafter "Tr.").

Ramirez' concern about asbestos did not end with the February 21 disclosure, however. During the week of February 24, 1992, carpenters started to remove the ceiling tiles in the hospital corridor where Ramirez had raised his asbestos concern. After completing their work on the morning of Friday, February 28, the carpenters were taken off the job because BNL's Health Physics Department had determined that there was a potential for release of asbestos-containing material from the area above the ceiling. Tr. at 330 (Ramirez); see also April 15, 1992 Safety & Environmental Protection Division (S&EP) Investigation Report at 2, OCEP Complaint File Tab P (S&EP Report). Ramirez was reluctant to install temporary pre-fabricated "carnival" lighting, as Softye had directed, and instead wanted to use temporary "pigtail" lighting.3/ However, after another electrician was assigned to assist him, he worked on the carnival lighting installation. Later that day, Ramirez and Softye had an argument regarding Ramirez' initial refusal to do this job.

Ramirez raised his asbestos concern the following work day, March 2, when he called the business manager of IBEW Local 25, William Lindsay (Lindsay). As a result of that call, Lindsay met with Ramirez and some of the other contract electricians the following day. At that meeting, Ramirez again mentioned his safety concerns with regard to the asbestos in Building 490 and also the incident in Building 902. Tr. at 336; see also Report at 17 (Lindsay Interview). Lindsay in turn informed William Slavinsky (Slavinsky), General Supervisor for Construction Support and supervisor of both Softye and Peter Stelmaschuk, of the concerns raised at his meeting with the contractor employees. Tr. at 449

(Slavinsky). Soon afterwards, Slavinsky and Softye went out speak with Ramirez. A heated argument between Ramirez and Softye occurred.

Ramirez again raised his safety concerns regarding the high voltage area in Building 902 and asbestos in Building 490 the following day, March 4, at a meeting of all the contract electricians. Softye in turn mentioned certain specific jobs that, he alleged, Ramirez had not performed as directed. Ramirez again lost his temper and, in a loud voice, accused Softye of lying.

At the March 4 meeting, Slavinsky had denied that there was any asbestos problem in the ceiling in the hallway in Building 490 where Ramirez had strung the carnival lighting. However, on the weekend of March 7 and 8, carpenters wearing protective clothing and respirators removed the ceiling tiles. Tr. at 87-89 (Ronald Kister).4/

On March 19, 1992, BNL notified Daly that there was an anticipated work slowdown, and directed Daly to lay off Ramirez and two other subcontractor electricians (Dennis Rhodes and Richard Chesney). On the following day, the three men were laid off. Ramirez alleges that his layoff was in retaliation for having previously raised legitimate concerns regarding safety.

BNL denies that Ramirez' layoff was in reprisal for his having disclosed safety concerns. BNL asserts that the decision to lay off several subcontractor electricians was based on a slowdown in work. Slavinsky and Softye assert that they independently decided that the same three electricians should be laid off, the former basing his decision on leadership potential, and the latter utilizing four criteria: seniority, attendance, performance, and work attitude. Both men state that they included Ramirez in the group to be laid off because of his frequent tardiness, failure to perform assigned jobs as directed, and bad attitude.

C. Procedural History of the Case

On May 19, 1992, Ramirez filed a complaint with the DOE Chicago Field Office under Part 708. After an unsuccessful attempt to reach an informal resolution, the complaint was forwarded on July 28, 1992 to OCEP to institute a formal investigation. OCEP conducted an investigation of Ramirez' allegations of reprisal and issued a Report of Investigation (OCEP Report) and a Proposed Disposition on July 29, 1993. The Proposed Disposition, which relied upon the findings in the OCEP Report, determined that Ramirez had established by a preponderance of the evidence that his safety disclosures may have been a contributing factor in BNL's decision to lay him off. However, the Proposed Disposition concluded that BNL had shown by clear and convincing evidence that the termination of Ramirez as a subcontractor electrician would have occurred absent his disclosure of safety concerns. Moreover, OCEP concluded that Ramirez was selected to be laid off because of factors that included his attendance, performance, and work attitude. Finally, OCEP did not find any evidence during its investigation to support Ramirez' allegation that his layoff was retaliatory.

On August 16, 1993, Ramirez submitted to OCEP his request for a hearing pursuant to section 708.9. On September 22, 1993, OCEP transmitted that request, together with the complaint file, to the OHA. On the following day, the Director of OHA appointed the undersigned as Hearing Officer. A hearing date and prehearing briefing schedule were established in letters sent to the parties on September 28, 1993. Subsequently scheduling changes were made on the basis of good cause shown by the attorneys for Ramirez and BNL. Prehearing statements were filed on behalf of Ramirez and BNL on November 5 and November 26, 1993, respectively. Counsel for Ramirez also separately submitted the names of witnesses she wanted subpoenaed by the Hearing Officer, and BNL submitted the affidavit of Daniel Ahearn, a proposed witness for both parties, who was to be out of the country on the scheduled hearing dates. A prehearing telephone conference was held on December 3, 1993.

In a letter filed on December 8, 1993, Daly, in its first submission in the proceeding, requested that the scheduled December 14 and 15, 1993 hearing be postponed.5/ Daly asserted that a determination should be made on its potential liability prior to the hearing. According to Daly, Ramirez had no legitimate complaint against Daly and the DOE had no jurisdiction over Daly. In a December 9, 1993 letter to Daly,

the Hearing Officer denied the firm's request for a suspension of the hearing.

At the start of the December 14, 1993 hearing, Daly and BNL each made an oral motion to dismiss the proceeding against it on jurisdictional grounds. For the reasons stated on the record, see Tr. at 15-16, and more fully set forth below, both motions were denied. However, on the basis of the OCEP Report and the proposed testimony of the parties at the hearing, the Hearing Officer dismissed Daly from the proceeding on the grounds that there was nothing in the record upon which he could find a prima facie case against the firm.

Since there was not sufficient time at the conclusion of the hearing for closing statements, permission was given for the submission of written closing statements. Written statements were filed by counsel for Ramirez and BNL on February 3 and 17, 1994, respectively.

The Part 708 regulations do not specify what is to be included in the record of the proceedings provided for in that Part. Consistent with a determination in the first case in which a hearing was requested pursuant to Part 708, the Hearing Officer defined the "record" in this proceeding to consist of the OCEP Complaint File, which includes the OCEP Report, all papers filed by the parties with the OHA, all letters and memoranda of telephone conversations in which procedural or other interlocutory determinations were made, the transcript of the testimony at the hearing, and any exhibits submitted by the parties at the hearing. Tr. at 6-7.

II. Discussion

A. The Motions to Dismiss

At the hearing, Daly argued that the proceeding should be dismissed against the firm since: (1) Daly's contract with BNL had no provisions for whistleblower procedures; (2) the whistleblower provisions under which this proceeding is being conducted did not go into effect until April 2, 1992, and Ramirez was laid off prior to that date; and (3) Ramirez was employed by Daly for only five days, and his raising of safety issues occurred while he was an employee of another BNL subcontractor, A & H Electrical Contractors (A&H).

At the hearing, and also in its pre-hearing written submission, BNL argued that Ramirez has no legal basis for bringing this case against the Laboratory. Like Daly, BNL contends that this case should be dismissed since the alleged reprisal occurred prior to the effective date of the Part 708 regulations. In addition, BNL contends that Ramirez does not have "standing" to bring a complaint against BNL since BNL was not his employer. BNL also argues that the case against it should be dismissed since its contract with Daly was entered into before the effective date of the Part 708 regulations and never incorporated those regulations.

As indicated above, at the hearing I rejected these arguments and denied the motions. Part 708, by its own words, applies to any complaint filed after the effective date if (i) the alleged reprisal stems from a disclosure, participation or refusal involving health and safety matters, and (ii) the underlying procurement contract requires compliance with all applicable health and safety regulations and requirements of DOE. 10 C.F.R. § 708.2(a); see also 57 Fed. Reg 7533 (March 3, 1992) ("This final rule is effective April 2, 1992"). There is nothing in the Part 708 regulations that limits these proceedings to alleged reprisals involving health and safety matters that occur after the effective date.6/ It is undisputed that the complaint in this case was filed after the effective date of Part 708 on April 2, 1992. Therefore, Ramirez' complaint is properly within the purview of Part 708. This conclusion is consistent with the first DOE whistleblower case issued under these regulations, Ronald A. Sorri, 23 DOE ¶ 87,503 (1993) (review requested December 22, 1993) (Sorri). In that case, while the contractor and subcontractor challenged the timeliness of the filing of the complaint under the "60 day rule" in section 708.6(d), they conceded the applicability of the Part 708 procedures to alleged acts of reprisal that occurred prior to April 2, 1992.

It is important to note in this regard that the Part 708 prohibition against reprisals for health and safety disclosures does not impose any new standards of conduct on contractors. Section 970.5204-2 of the

Department of Energy Acquisition Regulations, 48 C.F.R. § 970.5204-4, in effect in BNL's contract with DOE in March 1992, provided that "[t]he contractor shall take all reasonable precautions in the performance of the work under this contract to protect the safety and health of employees and of members of the public and shall comply with all applicable safety and health requirements ...of DOE." Similarly, the contract which Daly entered into with BNL on March 14, 1992, required that Daly "comply with all applicable environmental, safety and health regulations and requirements [of BNL] and DOE." Contract No. 482511, Attachment A, Article 30, OCEP Complaint File Tab L. DOE Order 5483.1A (6-22-83), which was in effect in March 1992, prohibited reprisals by contractors against employees who made workplace health and safety disclosures.7/ The Part 708 regulations thus changed only the procedures with regard to complaints by employees that they had been discriminated against for making health and safety disclosures and was effective with respect to any such complaints made after April 2, 1992.

BNL's argument that Ramirez does not have standing to bring this action against it because he was not employed by the Laboratory is also unpersuasive. Proceedings under Part 708 are not brought to vindicate an employee's contractual rights vis a vis his employer. Rather, they are intended to extend in a meaningful way to employees of DOE contractors (including subcontractors) the important national policy of protecting whistleblowers from reprisals for, inter alia, their disclosure of conditions dangerous to health and safety. Cf. 57 Fed. Reg. 7533-34 (March 3, 1992) (Preamble to Part 708 Regulations); see also URA, 23 DOE at 89,022. As the agency stated in explaining why it was extending the Contractor Employee Protection Program to cover the employees of subcontractors:

The DOE believes that the health and safety of all contractor employees is of the utmost importance and overrides enforcement and administrative difficulties that could be incurred in extending the ruling to second- and lower-tier subcontractors.

57 Fed. Reg at 7535.

In cases such as the present one, in which the day-to-day activities of a subcontractor employee are supervised by the prime contractor, it is evident that adverse personnel actions are frequently going to be taken by the subcontractor based solely on the directions of the prime contractor. Were we to accept BNL's attempt to avoid jurisdiction based upon the formalities of the employer-employee relationship, any contractor could be insulated from the prohibitions against whistleblower reprisals simply by virtue of having utilized a subcontractor. This would deprive Ramirez and many other whistleblowers of the procedures that were promulgated specifically to provide them with an equitable method of resolving complaints of illegal reprisals. Since this would be contrary to the overall framework and stated purpose of Part 708, BNL's argument must be rejected. Cf. Sorri, 23 DOE at 89,018 (prime contractor jointly liable for paying compensation under section 708.10(c) to complainant who was an employee of a subcontractor).

B. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under section 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). Thus, in order to meet his burden under this section, Ramirez must prove by a preponderance of the evidence, i.e., that it is more probable than not, see 2 McCormick on Evidence § 339 at 439 (4th ed. 1992), that he engaged in a protected activity that was a "contributing factor" in his termination.

The standard of proof adopted in section 708.9(d) is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C. § 1221(e)(1), and the 1992 amendment to § 210 (now § 211) of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. In explaining the "contributing factor" test in the WPA, the Senate floor managers, with the approval/concurrence of the legislation's chief House sponsors, stated:

The words "a contributing factor", ... mean any factor which, alone or in connection with other factors,

tends to affect in any way the outcome of the decision. This test is specifically intended to overrule existing case law, which requires a whistleblower to prove that his protected conduct was a "significant", "motivating", "substantial", or "predominant" factor in a personnel action in order to overturn that action.

135 Cong. Rec. H747 (daily ed. March 21, 1989)(Explanatory Statement on Senate Amendment-S.20). See Marano v. Dep't of Justice, 2 F.3d 1137 (Fed. Cir. 1993)(applying "contributing factor" test).

In addition, "temporal proximity" between a protected disclosure and an alleged reprisal has been held to be "sufficient as a matter of law to establish the final required element in a prima facie case of retaliatory discharge." County v. Dole, 886 F.2d 147, 148 (8th Cir. 1989).

Applying these standards to the present case, I find that Ramirez has met his burden under Part 708 of proving by a preponderance of the evidence that his safety disclosures were contributing factors in his being laid off by BNL. As indicated above, BNL has stipulated to the fact that Ramirez made a good faith safety disclosure concerning asbestos. In addition Ramirez' disclosure of the activation of the high energy power source was a protected safety disclosure.8/ Although there are inconsistencies in the testimony of Nelson Briggs, the foreman of the subcontractor electricians, Ramirez, and Softye regarding this incident, I am persuaded from Ramirez' testimony that he had a good faith belief that the activation of the power source created a substantial danger to his safety. I am also persuaded that Ramirez disclosed his safety concern to BNL prior to the alleged reprisal.9/

It is also evident that BNL's decision to direct Daly to terminate Ramirez' employment at the Laboratory was a "personnel action ... against the complainant" as that phrase is used in section 708.9(d).10/ Finally, Ramirez' employment at the Laboratory was terminated shortly after he raised his safety concerns. In fact, the last occasion when he raised those concerns was at the March 4, 1992 meeting, which occurred only 15 days before the BNL supervisors to whom he raised those concerns decided to lay him off. For these reasons I find that the record supports Ramirez' position that his safety disclosures were a contributing factor to his termination and is sufficient to shift the burden under section 708.9(d) to BNL.

No such finding can be made with respect to Daly, however.11/ It is undisputed that Ramirez' disclosures were made prior to his being employed by Daly. In addition, there is no evidence in the record that Daly, or its predecessor, A&H, had any knowledge of these disclosures. It is also undisputed that the decision to terminate Ramirez' employment at BNL was made solely by BNL employees.12/ This case is therefore readily distinguishable from the Sorri case, in which the Hearing Officer denied the subcontractor's motion to dismiss on the grounds that its actions were "inextricably intertwined" with those of the prime contractor. Sorri, 23 DOE at 89,012. For these reasons, Daly was dismissed from the proceeding at the start of the hearing.

C. The Contractor's Burden

Subsection 708.9(d) provides that, once the complainant has met his burden under that subsection, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure...." 10 C.F.R. § 708.9(d). The standard of proof by "clear and convincing evidence" is more stringent than the "preponderance of the evidence" standard applied to complainants, but not as high as the "beyond a reasonable doubt" standard used in criminal cases. See 2 McCormick on Evidence § 340 at 442. It has been described as that evidence sufficient to persuade a trier of fact that the truth of a contested fact is "highly probable." Id. For the reasons set forth below, I have concluded that BNL has not met this stringent standard.13/

As an initial matter, I am not persuaded that it was necessary for BNL to lay off, as opposed to furlough, Ramirez. BNL advanced two reasons for resorting to layoffs in March 1992. Slavinsky testified that, at the time the decision to lay off was made on March 19, furloughs were not an option because there was not much work for the subcontractor electricians and he did not anticipate that work would pick up soon, possibly not even for three months. Tr. at 455-56.14/ Slavinsky also stated that his decision was done to

"accommodate[]" IBEW Local 25 Business Manager Lindsay, after a conversation in which Lindsay had stated that furloughs were in violation of the union contract. Id. at 456.

Neither explanation is persuasive, and both appear to be mere pretexts. First, the work slowdown was very temporary, and during temporary slowdowns in the past experienced electricians such as Ramirez had not been laid off. On May 5 and 11, 1992, only a month and a half after Ramirez was laid off, two new subcontractor electricians began working at BNL. OCEP Complaint File Tab O (J.P. Daly [Brookhaven Lab] Listing of Employees). Prior to 1992, when there was a temporary slowdown such as this one, it had been the practice of Softye's predecessor, Donald Jesaitis, to maintain a "skeletal crew" of experienced subcontractor electricians by permitting them to take their union-mandated annual vacations. Tr. at 280-81 (Jesaitis). This skeletal crew included Ramirez. Indeed, even after Softye took over, one member of the skeletal crew, Dennis Rhodes, took his vacation in February 1992; two others, Dennis Thomas and Daniel Ahearn, took their vacations during the week of April 24, 1992, only a month after Ramirez was laid off; and another subcontractor electrician, Nelson Briggs, took a vacation during the week of May 8. Id. at 40 (Briggs). Ramirez and the other subcontractor electricians were also willing to take their vacations during the slow period in the spring of 1992. See, e.g., id. at 260-61, 267-70 (Michael Porwick).

Slavinsky's statement that he decided to lay off Ramirez in deference to the wishes of IBEW Local 25 is equally lacking in credibility. First, it is undisputed that the Laboratory was not a party to the contract with IBEW 25, and there is no evidence that it made any other attempts to comply with the union's wishes. On the contrary, counsel for BNL went to great lengths to emphasize that BNL was under no obligation to comply with the union's preferences with respect to type of temporary lighting fixtures to be installed by subcontractor union electricians. See, e.g., id. at 129-31 (cross examination of Dennis Thomas). Moreover, there is no reason to believe that the union's policy against furloughs was a new policy in early 1992 or that Slavinsky first learned about it in 1992. Even if there were a greater number of electricians unemployed in March 1992 than in prior years, neither the testimony of Slavinsky nor that of any other witness persuades me that accommodating IBEW 25 was an important BNL priority or that BNL would have laid off an experienced electrician like Ramirez unless it had its own reasons to do so. 15/

Thus the reasons presented by BNL for resorting to layoffs rather than permitting vacation furloughs are unconvincing. However, this in and of itself does not mean that BNL has failed to meet its burden of proof. To make a determination on that issue, we must also evaluate the reasons that BNL has advanced to support its contention that Ramirez was laid off for reasons other than the safety concerns that he raised.

In their testimony, both Slavinsky and Softye strongly denied that their decision to lay off Ramirez was based in any way upon his safety complaints. Softye stated that he rated each of the subcontractor electricians on a scale of one to ten in four categories -- performance, attendance, attitude and seniority -- and recommended that the three electricians with the lowest scores be laid off. While this sounds like an objective formula, the record suggests that it is nothing more than an after-the-fact rationalization for a much more informal and subjective decisionmaking process. First, no document containing these calculations was ever entered into the record; in fact, Softye never even stated that he wrote these calculations down anywhere. Moreover, his testimony raises serious questions concerning what, if any, calculations he actually performed:

Q. So was it the ones who received the lowest total score from you were laid off, you recommended to be laid off?

A. I don't recall. Yes, I believe it was.

Tr. at 533 (Direct Examination)

Q. How many points did Mr. Ramirez get for seniority?

A. I don't recall. I would say it was my understanding at the time that he had seven years seniority here.

Q. So would you score one point for every year?

A. I believe that's what I did, yes.

Q. And how many points did Mr. Ahearn get for seniority?

A. I think at that point maybe two years.

Q. And do you recall what kind of points were scored by Chesney for performance?

A. No, I do not.

Q. Do you recall what kind of points Mr. Rhodes scored for performance?

A. No, I do not.

Q. Do you recall what kind of points were scored for attendance, meaning the number of days on the job or missed?

A. No, I do not.

Q. Yet it's your testimony that you used this ten-point system and that's how you arrived at your decision?

A. That's correct.

Q. And you don't recall how these points were assigned? A. Not at this time, I don't.

Id. at 555-556 (Cross Examination)16/

Despite BNL's failure to advance a credible explanation of the process by which Ramirez was selected to be laid off, the Laboratory has shown that there were job-related factors involved in the layoff decision that were not related to Ramirez' protected activities. Softye and Slavinsky testified to nine incidents during the first two and a half months in 1992 in which Ramirez allegedly did not do a job as directed by Softye or otherwise caused trouble on the job. BNL's and Ramirez' versions of these incidents are briefly summarized in the Appendix to this Decision. In addition, there was testimony about Ramirez' tardiness, which allegedly was also a factor in the decision to lay him off.17/

Although BNL has shown that there were non-safety related factors involved its decision to lay off Ramirez, this is not sufficient to sustain the Laboratory's burden under section 708.9(d). First, with the exception of the carnival lighting incident (Appendix item H), these factors are all relatively trivial. Secondly, upon reviewing the entire record, I am persuaded that the crucial carnival lighting incident was an integral part of the asbestos safety issue raised by Ramirez. Finally, I am convinced that Ramirez would not have been terminated were it not for his behavior at the meetings that took place on March 3 and 4, shortly before BNL's layoff decision. In those meetings, which were a direct outgrowth of the carnival lighting incident, Ramirez' behavior was far more disruptive than that alleged with respect to any of the non-safety related factors cited by BNL. However, at the same time, Ramirez also raised his safety concerns.

Although it previously appeared to me that the carnival lighting incident was separate from the asbestos issue, see, e.g., Tr. at 128 (Hearing Officer), my evaluation of the entire record convinces me otherwise. This incident occurred in the same location where Ramirez made his asbestos disclosure on February 21. On February 28, the day that Softye first directed Ramirez to install the carnival lighting at that location, nothing had been done to remove the asbestos since BNL did not think that there was an asbestos problem. However, Ramirez had good reason to believe that, contrary to what Softye had indicated the previous week, there was in fact asbestos present in the ceiling where Softye wanted him to snake the carnival

lighting. When Softye had told Ramirez that the "area was clean," see supra p.3, he was relating what Peter Stelmaschuk had told him about the absence of asbestos in the ceiling tiles; he apparently had not asked Stelmaschuk about the presence of asbestos in the area above the ceiling. According to Ramirez, when he was directed to install the carnival lighting he was very worried about the asbestos both because the carpenters had been pulled off the job site earlier that day as a precaution and because Slavinsky appeared concerned about the asbestos. Tr. at 330-332.

Since Ramirez was aware of the presence of asbestos in the area above the ceiling, I find credible his assertion that he initially refused to install the carnival lighting because of his safety concern about the asbestos. I reach this finding despite the fact that Ramirez apparently did not expressly raise his safety concern when Softye directed him to install the carnival lighting. BNL contends that the reason Ramirez refused to do the job was because of the union's opposition to this type of prefabricated temporary lighting. However, as can be seen from the testimony of Softye excepted below, Ramirez, contrary to his reputation as a person who is outspoken and argumentative, did not assertively justify his initial refusal to do the job on the union's position:

Q. Did Mr. Ramirez say anything to you when you told him you had bought this lighting fixture and you wanted him to install it?

A. He seemed hesitant. I didn't know what the problem was at that point. He just seemed hesitant to get involved with it.

Q. Did he express [why] he was hesitant about it?

A. Not at that point.

...

Q. Did you subsequently have an opportunity to inspect the hospital or Building 490 job?

A. Yes.

Q. And what did you find?

A. That no progress had been made on the job.

Q. Was there any explanation given as to why no progress had been made?

A. No. Dave was just hesitant to even talk. ...

...

A. ... I think he said he needed help or assistance.

Tr. at 524-525.

Softye then testified that he asked Dennis Thomas, whom he had assigned to help Ramirez on the job, why Ramirez had initially refused to install the carnival lighting. In response, Thomas stated that "maybe" it was because Ramirez felt it was contrary to the union contract. Id. at 525. Softye in turn asked Ramirez whether that was the reason for his refusal to perform the job. According to Softye, Ramirez "just expressed the opinion that the union didn't like this type of light." Id. at 526.

That Ramirez' initial refusal to install the carnival lighting was based in large part on his concern about the asbestos in the ceiling is also confirmed by his raising a safety concern about asbestos on the following work days (Monday - Wednesday, March 2-4). On March 2, after he had been taken off the carnival lighting job by Softye, Ramirez called Bill Lindsay, the IBEW 25 business manager, "to express my

concerns because I was not getting any kind of positive input from management at the contract labor office in regards to the concerns I brought up." Id. at 336. That those "concerns" included the asbestos issue is made clear from accounts of Lindsay's meetings the next day both with Ramirez and some of his co-workers and with Slavinsky. According to the OCEP investigator, Lindsay indicated that at his meeting with some of the subcontractor electricians, Ramirez "outlined a number of what appeared to be serious safety concerns, involving asbestos and a high power generator." OCEP Report at 17 ¶ c. Lindsay then mentioned these matters to Slavinsky. Id.; see also Tr. at 449 (Slavinsky).18/

Lindsay's meeting with Slavinsky on March 3 led directly to the first of the two meetings in which Ramirez' confrontations with his supervisors finally impelled BNL to get rid of him. Ramirez stated that at his meeting with Messrs. Softye and Slavinsky on March 3 he brought up the same issues that he had raised with Lindsay. Id. at 337. As indicated in the previous paragraph, those issues included Ramirez' concern about the asbestos in the ceiling of Building 490. Ramirez testified that in response Softye called him a liar and he in turn lost his temper and called Softye a "fucking liar." Id. at 337-38.19/

We now come to the climactic March 4 meeting in which another confrontation occurred between Ramirez and his BNL supervisors. During the course of the proceeding, BNL has argued at great length that the March 4 meeting was not a "safety meeting." E.g., Respondent's Statement of Fact and Law at 6. It is not really important how the meeting is denominated. What is important is the ample evidence that Slavinsky convened this meeting in large part because of the safety concerns raised by Ramirez, and that Ramirez raised those concerns at this meeting.

Ramirez' contention that this meeting was a direct result of the safety concerns that he had previously raised with Lindsay and his BNL supervisors is confirmed by Slavinsky's explanation of how he came to convene the meeting. Slavinsky testified that during the course of the encounter on March 3 between Ramirez and Softye:

Nelson Briggs walked in. I said to Nelson Briggs, ... "Tomorrow morning, everybody reports to Building 452. We're going to have an open meeting, ... tell everybody that they are going to be able to express their viewpoints, either personal, safety related, anything that they want to bring up. They are going to have a chance to voice this right in front of Bill Softye, right to me, and we will resolve all the issues that Bill Lindsay had a concern over."

Tr. at 450. Slavinsky attempts to downplay the safety issue by his reference to "all the issues." However, as the record shows, Lindsay had gotten involved in this matter because of the telephone call in which Ramirez, shortly after the carnival lighting incident, had expressed his safety concerns.

It is undisputed that at the March 4 meeting Ramirez again raised his concerns about asbestos in Building 490. He did not limit his remarks to the February 21 incident; he also referred to the carnival lighting incident. See, e.g., Tr. at 153 (Thomas). In response, Slavinsky strongly denied that there was any asbestos problem. Id. at 453-54 (Slavinsky). Despite Slavinsky's statement, however, a few days later, carpenters who worked in his department under the supervision of Peter Stelmaschuk removed ceiling tiles in Building 490 wearing full asbestos containment clothing and equipment. See supra p.4.

Softye disputed the safety concerns raised by Ramirez and mentioned various incidents which BNL now relies upon to justify its decision to lay off Ramirez. Tr. at 347-48 (Ramirez).20/ Ramirez, as he has throughout this proceeding, strongly disputed Softye's account of these incidents. He also lost his temper and started yelling loudly at Softye.

BNL has referred to Ramirez' behavior on March 3 and 4 to support its contentions that Ramirez had a bad attitude and that there was a personality conflict between Ramirez and Softye. However, neither assertion, even if true, is sufficient to enable BNL to meet its burden in this case. Courts have considered the issue of profanities and other obstreperous behavior by purported whistleblowers on a number of occasions. While such behavior is not a protected activity, it is not sufficient to refute a claim of reprisal if it is

closely related to the events in which the protected activity occurred. For example, in Mackowiak v. University Nuclear Systems, Inc., 735 F.2d 1159 (9th Cir. 1984), the Secretary of Labor had dismissed a whistleblowers's claim of unlawful reprisal because there was substantial evidence that he was a difficult employee who created friction in his relations with his co- workers and superiors. However, the court of appeals remanded the case because the Secretary had failed to determine the extent to which the whistleblower's "troublesomeness arose from his persistence ... in identifying quality and safety problems." Id. at 1165. Accord, Passaic Valley Sewerage Commissioners v. Department of Labor, 992 F.2d 474, 481 (3rd Cir. 1993); see also Lewis Grocer Co. v. Holloway, 874 F.2d 1008 (5th Cir. 1989).

In the present case, Ramirez' behavior on March 3 and 4 was a continuation of a persistent attempt to raise the asbestos and high voltage issues. The asbestos issue was originally raised on February 21 and was also present in the context of the carnival lighting dispute. Although Ramirez' co- worker on the carnival lighting job on February 28, Dennis Thomas, testified that he had "no knowledge that [Ramirez] was laid off because of safety reasons," Tr. at 144-45, he also stated that there was a potential danger when installing carnival lighting when asbestos was in the ceiling or around the pipes there. Id. at 123-26. Similarly, Dennis Rhodes, who worked with Ramirez on that job on March 2, testified as to the potential safety problems when snaking carnival lighting through a ceiling area in which asbestos is present. Id. at 226-28.

Finally, I am not persuaded that Ramirez' lay off can be explained solely in terms of a "personality conflict," as suggested by a number of Ramirez' co- workers. When Dennis Thomas, for example, attributes Ramirez' lay off to a "personality difference," he is referring to Ramirez' failure to use more "diplomacy" in dealing with Softye. Id. at 145, 155. The record makes it clear that on no occasion was Ramirez more undiplomatic than at the meetings on March 3 and 4.21/ However, Ramirez' behavior in those meetings was inseparable from the safety concerns that he raised on those occasions. Thus, BNL has not presented clear and convincing evidence that Ramirez would have been laid off in the absence of the disclosures of his safety concerns. Accordingly, I find that BNL's decision to lay off Ramirez violated section 708.5.

III. Remedy

Having concluded that BNL has failed to meet its burden of showing by clear and convincing evidence that it would have taken the same personnel action against Ramirez absent his disclosure of safety problems, and that a violation of the prohibitions set forth in Part 708 has occurred, I now turn to the remedy.

In an addendum to his pre-hearing statement, Ramirez requested the following relief:

[F]ull restitution of all damages sustained since his wrongful discharge, such as back pay and the aggregate amount of all reasonable costs and expenses, including but not limited to attorney fees and expert-witness fees, reasonably incurred by him in bringing the complaint as well as transportation and other costs associated with alternative job-seeking.

Addendum (filed November 9, 1993).

There was no testimony or other evidence submitted at the hearing as to the amount of Ramirez' damages. However, in the Addendum Ramirez preserved his claim for relief. For this reason and in order to effectuate the important policies underlying the Part 708 regulations, Ramirez will be permitted to supplement the record by submitting written evidence of his damages.

For those cases in which discrimination against an employee in reprisal for a protected disclosure is found to have occurred, the goal of the DOE regulations is to restore the employee to the position in which he or she would otherwise have been, absent the act(s) of reprisal, in a manner similar to that provided by other whistleblower protection schemes. See Sorri, 23 DOE at 89,016. Section 708.10(c) provides that the initial agency decision may include an award of reinstatement, transfer preference, back pay, and all reasonable

costs and expenses (including attorney and expert witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision is issued.

Ramirez does not seek reinstatement, and transfer preference is not applicable to the circumstances of this case. An award of back pay is appropriate, however. Back pay is intended to restore the complainant to his proper position by providing compensation for the tangible economic loss suffered and by acting as a deterrent against unlawful reprisals. See United States v. N.L. Indus., Inc., 479 F.2d 354, 379 (8th Cir. 1973). Ramirez suffered an economic loss as a result of being laid off by BNL on March 20, 1992.

Ramirez must, however, document the extent of that loss during the period from March 20, 1992, until he was rehired to work at BNL.22/ In order to do this, his counsel must submit the information described in Ordering Paragraph (3), infra. As part of his back pay and any other salary-related elements of his award, Ramirez should receive interest to compensate him for the time value of money lost while bringing this complaint. In the Sorri case, the Hearing Officer followed the practice of the Merit Systems Protection Board (MSPB) under the WPA in determining the rate of interest that should be applied to the back pay award to a contractor employee whistleblower under section 708.10(c). The MSPB awards interest on back pay under the Office of Personnel Management regulation found at 5 C.F.R. § 550.806(d). That regulation in turn refers to the "overpayment rate" established by the Secretary of the Treasury under 26 U.S.C. § 6621(a)(1). The overpayment rate is the Federal short-term rate plus two percentage points. The Federal short-term rate for a particular calendar quarter is the short-term rate for the first month of the preceding calendar quarter, rounded to the nearest whole percent.

With respect to attorney's fees, I will follow the precedent of the Sorri case by applying the "lodestar approach" to determine the amount of attorney's fees to award in this case. See 23 DOE at 89,018 (citing Blanchard v. Bergeron, 489 U.S. 87, 95 (1989); Hensley v. Eckerhart, 461 U.S. 424 (1983); Blum v. Stenson, 465 U.S. 886, 888 (1984)). Under this approach, a reasonable attorney's fee is the product of reasonable hours times a reasonable rate. Interpreting the phrase "reasonably incurred" in section 708.10(c) in this manner recognizes the public interest nature of representing a whistleblower under Part 708 and encourages attorneys to take these cases. The Order below will direct counsel for Ramirez to submit a full, documented accounting of her hourly charges for attorney's fees together with any costs and expenses incurred in representing Ramirez. The fee applicant has the burden of producing satisfactory evidence that the requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, or reputation. See Blum v. Stenson, supra. Therefore, counsel for Ramirez should also submit appropriate evidence to show what is a reasonable hourly rate for her to receive in this case.23/

In addition to the categories discussed above, Ramirez should receive restitution for any other costs "reasonably incurred" in bringing his complaint under Part 708. These additional costs include the value of time lost from any employment he may have had in bringing the complaint (including the time lost for preparing and attending the hearing), and mileage, long distance telephone charges, postage, copying, the court reporter (for the transcript of the hearing), and all other related expenses.24/

IV. Conclusion

For the reasons set forth above, I conclude that Ramirez has established by a preponderance of the evidence that his disclosures of safety concerns regarding asbestos in building 490 and a high voltage incident in building 902 were contributing factors in the determination of BNL to lay him off as a subcontractor electrician on March 20, 1992. However, no such evidence was submitted with respect to Daly, and that firm has therefore been dismissed from this proceeding. BNL has failed to prove by clear and convincing evidence that it would have laid off Ramirez absent his protected activities. I therefore find that a violation of Part 708 has occurred and Ramirez should be awarded back pay lost (plus interest) as a result of the reprisal taken against him, as well as all costs and expenses reasonably incurred by him in bringing the present complaint. After counsel for Ramirez has provided the information described in Ordering Paragraph (3), infra, and BNL has had a chance to comment on that information, I will issue a

Supplemental Order specifying the exact amount to be awarded Ramirez.

It is Therefore Ordered That:

(1) David Ramirez' request for relief under 10 C.F.R. Part 708 is hereby granted as set forth in paragraph (2) below and is denied in all other respects.

(2) Brookhaven National Laboratory/Associated Universities, Inc. (BNL) shall pay to David Ramirez an amount to be determined based on the information provided under paragraph (3) below in compensation for lost salary and benefits, and interest thereon, and for all costs and expenses, including attorney's fees reasonably incurred by David Ramirez in bringing his complaint under Part 708.

(3) Claire C. Tierney, attorney for David Ramirez, shall, no later than 30 days after the issuance of this Decision by the Office of Contractor Employee Protection, submit to the undersigned Hearing Officer and to Andrea S. Christensen, attorney for BNL:

(a) a detailed schedule showing the amount of wages and other benefits that David Ramirez would have earned from his employment at BNL from March 20, 1992, until he was rehired to work at BNL. This schedule must specify the assumptions upon which it is based, including hourly wage and hours per week;

(b) a monthly schedule showing the amount of any wages, benefits and other income that David Ramirez earned from employment or self employment during this same period of time.

(c) copies of Ramirez' Federal Income Tax Return Form 1040 and Schedule C, if any, for 1992 and 1993, together with copies of all W2 forms;25/

(d) a full accounting of her hourly charges for attorney fees together with any costs and expenses incurred in representing David Ramirez, including appropriate documentation of both hours worked and that the rates requested are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, or reputation;

(e) a full accounting of any and all other costs and expenses reasonably incurred by David Ramirez in bringing his complaint under Part 708.

Ms. Tierney shall send this information to Ms. Christensen by United States Postal Service Express Mail, or an equivalent private overnight delivery service, or by facsimile transmission.

(4) Andrea S. Christensen, attorney for BNL, shall, no later than 15 days after receipt of a copy of the submission referred to in paragraph (4), submit to the Hearing Officer and to Ms. Tierney a response to that submission. This response shall be limited to the reasonableness and accuracy of the calculations set forth in that submission. Ms. Christensen shall send this information to the Hearing Officer and Ms. Tierney by United States Postal Service Express Mail, or an equivalent private overnight delivery service, or by facsimile transmission.

(5) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director of the Office of Contractor Employee Protection.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date: March 17, 1994

APPENDIX

The Nine Incidents

A. Building 911 (January 1992). BNL alleges that Ramirez did not use all new bolts to reassemble cable trays, as instructed by Softye. Ramirez claims that his use of galvanized spray on the rusty bolts was a more efficient way of doing this job and was approved by Softye, but he acknowledges that Softye was unhappy that he did not replace all of the bolts. Tr. at 308, 369.

B. Building 923.* BNL alleges that Ramirez installed wires on the outside of the walls, and not on the inside as instructed by Softye. Ramirez claims that Softye initially did not specify how the wires were to be installed, and that, when Softye expressed displeasure with the outside wiring, he re- routed the wires inside the walls even though this required the use of an additional 40-50 feet of wiring.

C. Building 923 (same day as item B). BNL alleges that Ramirez failed to label plates, as Softye had instructed. Ramirez asserts that he had intended to do so, but had not gotten around to this task which was to be done at the very end of the job.

D. Building 1008.* In connection with a rush job, BNL alleges that Ramirez did not replace light bulbs in the manner in which Softye had instructed. It is undisputed that the job was completed prior to the deadline. Ramirez asserts that his testing of the emergency circuits and ballasts was necessary to ensure that the lights would work.

E. Building 820.* In his interview with the OCEP investigator, Softye alleged that Ramirez failed follow instructions and label a circuit after replacing a disconnect switch. In her prehearing statement, counsel for Ramirez indicated that he did not remember this incident. At the hearing, Ramirez testified about the job, but did not address the allegation, which Softye subsequently testified to.

F. Building 902.* Softye testified at the hearing that several times when he went to check up on work that Ramirez was doing at this site, he found that Ramirez was not in his work area, but was conversing with other electricians. In response to a similar allegation in Softye's statement to the OCEP investigator, counsel for Ramirez asserted that those conversations were work related. However, at the hearing Ramirez did not testify about this matter.

G. Tank Farm Job. Softye alleges that Ramirez spent his time arguing with the team leader, Daniel Ahearn, rather than doing the assigned job. Ramirez claims that the job could not be done because of the absence of necessary tools and other equipment and that this was the responsibility of the lead person, Ahearn.

H. Building 490 (February 28 and March 2, 1992). BNL alleges that Ramirez refused to install temporary carnival lighting, as instructed by Softye. Ramirez asserts that his initial refusal to do this job was because of his concern about asbestos in the ceiling, but that he eventually did the job with the assistance of a co-worker.

I. The raincoat incident.* BNL alleges that Ramirez caused trouble by telling a carpenter to leave the work site and ask his BNL supervisor for a raincoat. Ramirez asserts that he simply brought up the subject, but that the carpenter left the work site at his own initiative.

* No testimony as to date of incident

1/ The OCEP investigation included the acquisition and analysis of relevant documents and the conducting of on-site interviews. Summaries of the interviews are contained in the OCEP Report of Investigation, OCEP Complaint File Tab E. Unless otherwise noted, any statement quoted from the OCEP Report is from the investigator's account of an oral statement made by one of the persons interviewed and is not a direct quote from the interviewee.

2/ Mr. Stelmaschuk's name is spelled "Stomajick" in the hearing transcript.

3/ Carnival and pigtail lighting are two types of temporary lighting fixtures. The former is a pre-assembled fixture that comes in one-hundred foot sections with wiring, lamp sockets every few feet, and cages with hooks so that it can be supported in the ceiling. A pigtail is a device that holds one lamp and is installed in the existing wiring.

4/ On the basis of air samples collected from the carpenters and bulk samples collected from utilities above the ceiling on March 6, S&EP concluded that the amount of asbestos was below OSHA regulatory limits. S&ECP Report at 4. This conclusion was accepted by the DOE in response to an Occupational Safety & Health Complaint filed by Ramirez on March 31, 1992. See Letter from Frank J. Crescenzo, Deputy Area Manager, DOE, to David Ramirez (May 4, 1992), OCEP Complaint File Tab P. This conclusion is disputed by Edward Olmsted of the New York Committee for Occupational Safety and Health in a December 22, 1992 letter to Ramirez. See Respondent's Statement of Issues Presented for Review, Attachment A.

5/ In a telephone conversation with the Hearing Officer on December 9, 1993, Daly's vice president, John P. Daly, III, stated that he had previously sent to the DOE Chicago Area Office a letter commenting on Ramirez' complaint. That letter is not a part of the record of this proceeding.

6/ In contrast, section 708.2(a) provides that, with respect to a disclosure, participation or refusal regarding matters other than health or safety, Part 708 is applicable only to alleged reprisals that occur after the April 2, 1992 effective date. This provision also requires that the underlying procurement contract with DOE contain a clause requiring compliance with the Part 708 regulations. However, once such a clause is incorporated into a procurement contract, any alleged reprisal after the April 2, 1992 effective date is subject to Part 708, even if it occurred prior to the modification of the procurement contract. See Universities Research Association, Inc., 23 DOE ¶ 87,504 (1993) (URA).

7/ Under the DOE Order, an employee could file a complaint with the head of the appropriate DOE office, who was authorized to investigate and resolve the complaint.

8/ At one point during the hearing I incorrectly stated that this disclosure was subject to BNL's stipulation. Tr. at 297.

9/ Softye denies that Ramirez notified him of this incident on the date in February that it occurred and suggests that he may not have heard about it until after Ramirez was laid off. Tr. at 528. However, Slavinsky testified that he heard about the incident several days after it occurred and was pretty sure that he had heard about it from Softye. Tr. 446-47. In addition, Ramirez' testimony that he raised this issue during the March 4 meeting at which Softye was present, id. at 346, is confirmed by Slavinsky's statement to the OCEP investigator. OCEP Report at 27.

10/ During the course of the hearing, counsel for BNL disputed the use of the word "termination" with regard to BNL's action on the grounds that, since BNL was not Ramirez' employer, it could not have terminated his employment. See, e.g., Tr. at 26-27. She did acknowledge that the decision to lay off Ramirez was made by BNL. Id. Regardless of what term is used, it is clear that BNL's action, if it occurred for the reasons alleged by Ramirez, would constitute a prohibited "discriminatory act" as that term is defined in section 708.4. The record in this case also makes it quite clear that Ramirez was an employee of Daly solely by virtue of Daly's contract with BNL, i.e., he had no independent employment contract with Daly outside of his employment at BNL, and that his being laid off by BNL terminated his employment and placed him at the bottom of the union's referral list.

11/ In fact, Ramirez does not even claim that Daly wrongfully discriminated against him in reprisal for his disclosures, and made his complaint solely against BNL. See, e.g., Proposed Disposition at 2 n.*, OCEP Complaint File Tab F.

12/ Although Nelson Briggs, the foreman of the subcontractor electricians and a Daly employee by virtue of Daly's contract with BNL, informed Ramirez that he was laid off, see 1 Tr. at 83-84, BNL does not suggest that he had any role in making the decision to lay off Ramirez.

13/ The standard of proof under section 708.9(d) is much more stringent than the standard applied by the National Labor Relations Board (NLRB) in denying Ramirez' unfair labor practice complaint against Daly and Brookhaven. See Letter Determination of Alvin Blyer, NLRB Regional Director (November 20, 1992) (Blyer Letter), Exhibit B to BNL's Statement of Fact and Law in Opposition to Complainant's Whistleblower Claim. Under the NLRB standard, after a complainant establishes a prima facie case, the respondent only has the burden of going forward; the ultimate burden of persuasion remains with the complainant. See NLRB v. Wright Line, 662 F.2d 899, 904-05 (1st Cir. 1981), cited with approval in Blyer Letter. Thus, in Ramirez' NLRB case, the respondents were not required to establish their position by clear and convincing evidence. For this reason, and because the record in Ramirez' NLRB case is not before me, I have given no weight to the NLRB determination.

14/ Slavinsky first said that he did not think that there would be work for "several weeks," but quickly increased that to "seven, eight weeks ...maybe even three months." Id. at 456. According to the OCEP investigator, Slavinsky stated that "BNL did not anticipate work picking up any time soon." OCEP Report at 27 ¶ i. In his testimony, Slavinsky indicated that, in view of the expected length of the slowdown, layoffs were a necessary cost-cutting measure. Tr. at 456-57. However, BNL did not submit any evidence to show that the work slowdown was projected to be any longer than other slowdowns or that the Laboratory was more concerned about the budgetary implications of work slowdowns in 1992 than in prior years.

15/ Although Slavinsky asserted that there were 600 "or so" unemployed electricians in March 1992, 2 Tr. at 456, I am more inclined to accept the figure of approximately 500, as testified to by two men who were placed at the bottom of the IBEW 25 referral list in that month. See Tr. at 294 (Ramirez); Id. at 237 (Rhodes). Although Rhodes indicated that there may have been a couple of hundred more electricians out of work in 1992 than 1991, he did not appear certain of either number, Id. at 245; see also id. at 235 (in which Rhodes agreed with counsel for BNL that there were "400-odd" electricians out work). Moreover, BNL has not introduced any objective, credible evidence that the number of electricians on the IBEW Local 25 referral list was significantly greater in March 1992 than in 1991 or prior years.

16/ While this testimony was given more than a year and a half after the events in question, Softye did not provide any more details of his rating process when he was interviewed by the OCEP investigator on August 25, 1992, five months after Ramirez was laid off. See OCEP Report at 23-24 ¶ r.

17/ In his direct examination, Softye asserted that Ramirez was "habitually late." Tr. at 533. Under cross examination, he quantified that by stating that Ramirez was late five or six times by ten or fifteen minutes. Id. at 521. Similar testimony was given by Nelson Briggs. Id. at 78 ("maybe once a week for like a month's time ... about five or ten minutes late").

18/ Slavinsky also stated that Lindsay had mentioned that some "personality problems" had been raised by the electricians. Id. However, he did not specify the nature of those problems or indicate that they were unrelated to the safety concerns.

19/ On cross examination, Ramirez stated that this incident occurred on Monday, March 2, prior to his call to Lindsay. Tr. at 412. However, his testimony on direct examination, that the incident occurred the day prior to the March 4 meeting and thus after his call to Lindsay, is confirmed by both Softye and Slavinsky. See id. at 449-51 (Slavinsky); id. at 528-29 (Softye).

20/ Although Ramirez stated that Softye brought up four or five different incidents, the only two non-safety related incidents that he expressly mentions are the tunnel job (Appendix item D) and the tank farm job (Appendix item G). It is likely that Softye mentioned other incidents which BNL has relied on in this

proceeding to justify its termination of Ramirez, including the then-recent carnival lighting incident.

21/ BNL might well have responded to Ramirez' safety concerns differently if he had raised them in a more tactful manner, see, e.g., 1 Tr. at 145 (positive response to safety concern raised by Dennis Thomas). However, there is nothing in Part 708 that permits the Laboratory to avoid the prohibition against reprisals on the grounds that a whistleblower raises safety concerns in an obnoxious manner.

22/ In her Closing Statement, counsel for Ramirez requested a back pay amount through November 1993. Closing Statement at 29. However, there is evidence in the record that Ramirez was rehired by a BNL subcontractor prior to that time and then laid off again. See, e.g, Record of September 23, 1993 Telephone Conversation between Ramirez and Len Tao, OHA attorney (Case No. LWA-0002). Although Ramirez apparently claims that the subsequent layoff was in reprisal for his earlier whistleblower complaint, id., there is no evidence in the record of the present proceeding to substantiate that claim. Accordingly, we will not consider that claim here, and in this proceeding Ramirez will not be awarded back pay for any time after he was rehired to work at BNL.

23/ Reasonable attorney's fees also include the services of a law clerk, paralegal or law student. Cf. 5 C.F.R. § 550.807(f).

24/ I will not, however, grant Ramirez' request for restitution for transportation and other costs associated with alternative job-seeking. Section 708.10(c) does not provide for this relief and Ramirez has not cited any other authority for it. Nor has Ramirez claimed that the transportation costs that he incurred in job seeking were any greater than those he would have incurred commuting to the Laboratory. In addition, Ramirez is not entitled to his requested expert-witness fees since no expert witness testified on his behalf.

25/ Counsel may delete Ramirez' social security number and other personal non-financial information, e.g., information about dependents. However, if Ramirez wishes any of financial information to be treated as confidential, counsel shall submit to the Hearing Officer one complete copy of the income tax returns and two copies with confidential information deleted, and shall prepare a protective order for signature by the parties and their attorneys and issuance by the Hearing Officer.

Universities Research Association, Inc.

March 17, 1994

Initial Agency Decision

Name of Petitioner: Universities Research Association, Inc.

Date of Filing: November 4, 1993

Case Number: LWA-0003

I. Introduction

Universities Research Association, Inc. (URA) manages and operates the Department of Energy's Superconducting Super Collider Laboratory (the Laboratory) in Waxahachie, Texas. On October 27, 1992, URA notified Dr. Naresh Mehta, a physicist at the Laboratory, that it was dismissing him from his employment. Mehta subsequently filed a complaint of reprisal under the provisions of the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708 (the Whistleblower Regulations). In his complaint, Mehta alleged that URA had dismissed him because he had charged URA with mismanaging the Laboratory's hypercube computer.

The Department of Energy (DOE) referred Mehta's complaint to its Office of Contractor Employee Protection (OCEP). After conducting an investigation, OCEP issued a Report of Investigation and Proposed Disposition on October 15, 1992. OCEP found that URA had violated the Whistleblower Regulations in dismissing Mehta, and proposed that Mehta be granted appropriate remedies.

In response to OCEP's Report and Proposed Disposition, URA filed a request for a hearing under 10 C.F.R. § 708.9(a). We conducted the hearing at the Laboratory site on January 5 and 6, 1994. After consideration of OCEP's Report of Investigation with the testimony given at the hearing and the briefs filed by both parties, we find that URA committed an act of reprisal prohibited under 10 C.F.R. §708.5.

II. Background

A. Mehta's employment at the Laboratory

Mehta was graduated from the University of California at San Diego with a doctorate in applied physics in 1978. After graduation, he worked as a physicist in several research and industrial positions. 1/ On October 22, 1990, Mehta was hired by URA for employment at the Laboratory in the grade of Scientist I. 2/ He was promoted to the grade of Scientist II by November 1991. 3/

When Mehta began work at the Laboratory, he was assigned to the Accelerator Physics Group. Initially, the Group Leader for the Accelerator Physics Group was Dr. Alex Chao. In June 1991, Dr. Michael Syphers replaced Chao as Group Leader. 4/ Mehta was working in Syphers' group at the time of his dismissal.

B. Mehta's concerns about the hypercube

In January, 1991, URA installed a hypercube computer in the Laboratory facility. Unlike a standard computer, the hypercube consists of processing nodes arranged in a parallel configuration. The arrangement facilitates the processing of scientific simulations. Funding for the purchase of the hypercube,

which cost approximately $995,000, was obtained from the DOE capital equipment fund. 5/

In the summer of 1992, Mehta concluded that his scientific research would benefit from the use of the hypercube. Mehta discussed the guidelines for using the hypercube with Ravishankar, the Group Leader of the Project Computing Group. Ravishankar told Mehta that most users were restricted to using 16 of the hypercube's 64 processing nodes. In addition, users generally could run programs for only a few hours at a time on the hypercube. 6/

Ravishankar also told Mehta that certain users could run programs on the hypercube for a longer period of time and use all 64 nodes. 7/ Mehta also learned members of this group could run a program, known as "kick," that would terminate any other programs that were in process. 8/ Dr. George Bourianoff, group leader of the Machine Simulation and Corrections Group, controlled the scheduling of hypercube users desiring to use more than 16 nodes or a few hours of time. 9/

Mehta felt the procedures for using the hypercube were "unfair" and "insulting," and discouraged other scientists from using the hypercube, leading to low utilization of the machine. He occasionally discussed the usage procedures with Syphers, his group leader, during the summer of 1992.

Executing programs on the hypercube requires special techniques. 10/ Between July and October 1992, Mehta logged onto the hypercube on several occasions to learn how to compile and run programs on it. Mehta says he made repeated attempts to log onto the hypercube over Labor Day weekend, September 4-7, 1992. He claimed he was unable to log on because all 64 nodes of the hypercube were in use for the entire weekend. Mehta says he continued to discuss the hypercube usage procedures with Syphers. He stated that usage statistics showed that one scientist, who worked in Bourianoff's group, was responsible for 60% to 90% of total hypercube usage. 11/

C. Mehta's dismissal

During the week of October 19, 1992, Mehta attended a workshop at the DOE's Brookhaven National Laboratory in Upton, New York. He returned to work at the Laboratory on Monday, October 26. That afternoon, he received a phone call from Syphers' secretary.

The secretary asked Mehta to see Syphers at 10 o'clock the next morning. When Mehta arrived, Syphers escorted him to a meeting in the office of Dr. Richard Briggs. As head of Accelerator Physics for the Laboratory, Briggs was Syphers' supervisor. Besides Mehta, Syphers, and Briggs, Merritt Wilkinson, an Employment Specialist at the Laboratory, was present at the meeting.

Thus far, Mehta had a record as a satisfactory employee at the Laboratory. That changed abruptly at the meeting. Briggs told Mehta that he had decided to dismiss him. The reason for dismissal given by Briggs was that Mehta had misused the Laboratory's computer by running programs connected with research unrelated to the Superconducting Super Collider project. Wilkinson instructed Mehta to turn in his keys and identification badge.

Later that day, Mehta requested a meeting with Steven Brumley, URA's general counsel at the Laboratory. The meeting was eventually held on November 3. Brumley arranged for Mehta to be placed on paid administrative leave pending an internal review of his dismissal. In a letter dated December 16, 1992, Douglas Kreitz, URA's personnel director at the Laboratory, informed Mehta that the review was complete and URA was going forward with his dismissal. Mehta filed his complaint of reprisal with OCEP on February 4, 1993.

III. URA's Motion to Dismiss

A. URA's claim that the Whistleblower Regulations were not applicable to Mehta's dismissal

At the outset of this case, URA moved to dismiss on the ground that the Whistleblower Regulations were

not applicable to Mehta's complaint. We denied the motion. Universities Research Association, 23 DOE ¶ 87,504 (December 22, 1993)(the December 22 Decision and Order). Nevertheless, URA has renewed its claim that the Whistleblower Regulations were not effective when Mehta was dismissed.

URA first argues the application of the Whistleblower Regulations to Mehta's dismissal is an example of the retroactive application of an administrative regulation. URA cites numerous cases to show that the retroactive application of regulations is disfavored. This argument is irrelevant to the facts of Mehta's case. The Whistleblower Regulations became effective on April 2, 1992, eight months before Mehta was formally notified of his dismissal. Hence the application of the Whistleblower Regulations to Mehta's dismissal involves no retroactivity.

Nevertheless, URA continues to argue that the Whistleblower Regulations were not effective until after Mehta's dismissal. It bases this contention on a strained reading of the scope provision at 10 C.F.R. § 708.2(a), which provides that:

This part is applicable to complaints of reprisal filed after the effective date of this part that stem from disclosures, participations, or refusals involving health and safety matters, if the underlying procurement contract described in sec. 708.4 contains a clause requiring compliance with all applicable safety and health regulations and requirements of DOE (48 C.F.R. 970.5204-2). For all other complaints, this part is applicable to acts of reprisal occurring after the effective date of this part if the underlying procurement contract described in sec. 708.4 contains a clause requiring compliance with this part.

Mehta's complaint, which concerns a matter of mismanagement rather than health or safety, falls under the second sentence of the section. This sentence provides that the Whistleblower Regulations are applicable if the act of reprisal occurred after the effective date (April 2, 1992), and if the procurement contract between the contractor and DOE contains a clause requiring compliance with the Whistleblower Regulations.

URA interprets the second sentence, however, to mean that the Whistleblower Regulations are applicable only after the procurement contract is modified. URA's procurement contract with DOE was modified on March 31, 1993. As Mehta was formally notified of his dismissal on December 16, 1992, or three months before the procurement contract was modified, URA argues that the Whistleblower Regulations are not applicable to Mehta's dismissal.

We cannot agree with URA's interpretation of §708.2(a). In the first place, the DOE's authority to promulgate the Whistleblower Regulations was granted by the Congress of the United States, and the DOE does not require the approval of URA to put the Whistleblower Regulations into effect. 12/ The modification to URA's procurement contract was mandatory and not a subject of arm's-length bargaining between the DOE and URA. The DOE has not expressed any intent to further delegate its authority to URA by allowing it to choose the date when it would be subject to the Whistleblower Regulations.

In addition, URA's interpretation goes against the plain meaning of the words. If the intent of the section was to provide that the Whistleblower Regulations applied to acts occurring after the procurement contract was modified, it would have said so. Instead, the section provides that the Whistleblower Regulations apply to acts that occur after the effective date of the Regulations. This provision would be mere surplusage if URA's interpretation were to prevail.

The intent of the phrase, "if the underlying procurement contract contains a clause requiring compliance with this part," is clarified in an Acquisition Letter issued by the DOE's Office of Procurement on December 8, 1992:

Contracting officers shall modify existing contracts and purchase orders which fall within the scope of the clause prescription at DEAR 913.507, 922.7101, and 970.5204, to incorporate the Whistleblower Protection for Contractor Employees clause not later than March 31, 1993. However, the clause need not be incorporated into contracts and purchase orders that are due to expire by June 30, 1992.

As the Acquisition Letter makes clear, some contracts, such as those that were to expire by June 30, 1992, would not be modified. Section 708.2(a) exempts these contracts from coverage by the Whistleblower Regulations, by providing that the Regulations are applicable only if the contract is ever modified. This provision has nothing to do with when the Whistleblower Regulations are applicable for contracts that are modified. The effective date is stated earlier in the section to be the effective date of the Whistleblower Regulations. URA does not dispute that (1) the alleged act of reprisal against Mehta occurred after April 2, 1992; and (2) the underlying procurement contract was modified. It follows, therefore, that the Whistleblower Regulations apply to Mehta's dismissal. 13/

B. URA'S Mediation Agreement

In our December 22 Decision and Order, we also pointed out that URA had signed a Mediation Agreement on September 21, 1993. In the Mediation Agreement, URA agreed that Mehta's complaint would be processed under the Whistleblower Regulations if mediation was unsuccessful. Such an agreement, we found, estopped URA from now asserting that the Whistleblower Regulations did not apply to Mehta's dismissal.

URA has objected to our use of the Mediation Agreement, arguing that it is a privileged document relating to an attempt at settlement. The argument is frivolous. So that the ensuing discussion will be clear, we cite the Mediation Agreement in its entirety:

MEDIATION AGREEMENT

This certifies agreement by senior officials of Universities Research Association, Inc. and Dr. Naresh Mehta to attempt to resolve Complaint No. SSC-93-0001, filed pursuant to Part 708, title 10, Code of Federal Regulations, through mediation. At the mutual request of the above parties, Sandra L. Schneider, Director, Office of Contractor Employee Protection (OCEP), and Steven D. Dillingham, Supervisory Adjudicator, OCEP, will assist in the mediation of this complaint.

Both parties have agreed that if attempts to resolve this complaint are unsuccessful, the complaint will be processed further consistent with Part 708, and the Director, OCEP, will issue a Report of Investigation and Proposed Disposition in this case.

/s/ Ezra D. Heitowit, University Research Association, Inc.

/s/ Norman Landa, attorney for Dr. Naresh Mehta

/s/ Sandra L. Schneider

URA asserts that the Mediation Agreement is "similar" to settlement discussions which are inadmissible as evidence under Federal Rule of Evidence 408. That Rule provides:

Evidence of (1) furnishing or offering or promising to furnish, or (2) accepting or offering or promising to accept, a valuable consideration in compromising or attempting to compromise a claim which was disputed at to either validity or amount, is not admissible to prove liability for or invalidity of the claim or its amount.... This rule does not require the exclusion of any evidence otherwise discoverable merely because it is presented in the course of compromise negotiations.

(Emphasis added). It is clear that Rule 408 provides for the exclusion of certain specific matters, and that the Mediation Agreement is not one of them. The Mediation Agreement is not an offer or promise, but an executed agreement. It makes no mention of valuable consideration. It was not cited by us in the December 22 Decision and Order to prove URA's liability for Mehta's dismissal or the amount due to Mehta. Contrary to URA's assertion, the Mediation Agreement does not constitute settlement negotiations that are protected by Rule 408. It is merely an agreement to enter into negotiations, and as such is not

privileged. Cf. Hanson v. Waller, 888 F.2d 806, 813 (11th Cir. 1989) (letter from counsel asking opposing counsel to discuss the case held not excluded under Rule 408). In short, there is nothing in URA's arguments that refutes our earlier finding that Mehta's dismissal is subject to the Whistleblower Regulations.

IV. The inclusion of OCEP's Report of Investigation in the

record

A. URA's claim that the Proposed Disposition is not contemplated by the Whistleblower Regulations

URA argues that the Proposed Disposition issued by OCEP should be stricken from the record. URA first contends that the Proposed Disposition "is not a document permitted, recognized, or prescribed by Part 708." 14/

In making this argument, URA has ignored the clear language of the Whistleblower Regulations. Section 708.9(f) provides that:

The investigator, within 60 days of appointment, shall submit a Report of Investigation to the Director. The Report of Investigation shall become a part of the record and shall state specifically a finding, and the factual basis for such finding, with respect to each alleged discriminatory act.

The Report of Investigation issued by OCEP on October 15, 1992 consists of two parts. The first part, not separately titled, consists of a narration of the facts in the case and a summary of the testimony obtained by the OCEP investigators. This first part of the Report draws no conclusions and states no findings.

The second part of the Report is the subject of URA's objection. This part contains the OCEP's finding, as required in the Whistleblower Regulations. In issuing the Proposed Disposition, the Director of OCEP is merely carrying out the duty to make and report a finding that is delegated to her in § 708.9(f) of the Whistleblower Regulations. Furthermore, since it is a part of the Report of Investigation, § 708.9(f) of the Whistleblower Regulations directs us to make it a part of the record.

B. URA's claim that the Proposed Disposition is inadmissible as opinion or hearsay

URA also objects to the Proposed Disposition section of the Report on the grounds that it "contains views and opinions" and is "composed, in its entirety, of inadmissible hearsay." 15/ There is no reason, however, why rules excluding opinion and hearsay evidence, formulated to protect juries, should be binding in administrative proceedings, because

One who is capable of ruling accurately upon the admissibility of evidence is equally capable of sifting it accurately after it has been received, and, since he will base his findings upon the evidence which he regards as competent, material, and convincing, he cannot be injured by the presence in the record of material which he does not consider competent or material.

Donnelly Garment Co. v. NLRB, 123 F.2d 215, 224 (8th Cir. 1942).

It is well-settled, therefore, that administrative agencies like the Office of Hearings and Appeals are not bound by the technical rules of evidence that control judicial proceedings. FTC v. Cement Inst., 333 U.S. 683 (1948); reh'g denied, 334 U.S. 839 (1948). The guiding principle in administrative proceedings is to admit "all evidence which can conceivably throw any light upon the controversy." Samuel H. Moss, Inc. v. FTC, 148 F.2d 378 (3rd Cir. 1945), cert. denied, 326 U.S. 734 (1945), reh'g denied, 326 U.S. 809 (1945), motion denied, 155 F.2d 1016 (2d Cir. 1946).

Thus, neither of the judicial rules excluding opinion evidence or hearsay evidence is mandatory in an administrative proceeding. Brockton Taunton Gas Co. v. SEC, 396 F.2d 717 (C.A.Mass 1968) (opinion

evidence); Martin- Mendoza v. INS, 499 F.2d 918 (9th Cir. 1974), cert. denied, 419 U.S. 1113 (1975), reh'g denied, 420 U.S. 984 (1975) (hearsay).

We will therefore deny URA's argument to exclude the Proposed Disposition section of the Report of Investigation. In so doing, we will follow the provision of the Whistleblower Regulations that we "may rely upon, but shall not be bound by, the findings contained in the Report of Investigation." 10 C.F.R. § 708.10(b).

V. Mehta's prima facie case

A. The protected status of Mehta's disclosure

The Whistleblower Regulations require a complainant in a whistleblower case to establish by a preponderance of the evidence: 1) that there was a protected disclosure, participation, or refusal; and (2) that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. 10 C.F.R. § 708.9(d).

URA argues that Mehta has failed to meet the first requirement, claiming Mehta's expressions of dissatisfaction about the hypercube usage procedures are not protected under the Whistleblower Regulations. According to URA, Mehta simply complained that the priorities for using the hypercube were "unfair and insulting." By URA's reasoning, Mehta cannot claim the protection of the Whistleblower Regulations because he made his disclosures merely to "further his own private interests." 16/

The record does not support URA's characterization of Mehta's complaints. Mehta testified that he discussed with Syphers an alternate plan for scheduling on the hypercube. 17/ Syphers confirmed this in his testimony, stating that Mehta "started telling me about how he felt the ... allocation on the hypercube could be done better. And he was concerned about it and wanted to know if there was anything we could do to improve that." 18/ Furthermore, Mehta asserted in an electronic mail message, "If a user cannot get even ONE node on our 64-node Hypercube for three days, there is something wrong with the way the Hypercube resources are managed." 19/

The record thus indicates that Mehta was concerned about the general procedures for use of the hypercube, and not merely his own use of the machine. Furthermore, if he had been concerned only about mismanagement as it applied to his personal use of the hypercube, we fail to see why that invalidates the protected status of his complaints. 20/ As the Whistleblower Regulations specifically protect disclosures relating to mismanagement, we find that Mehta's criticism of the hypercube management forms a protected disclosure under the Whistleblower Regulations. 10 C.F.R. §§ 708.1; 708.3; 708.5 (a)(1)(iii).

Finally, we note that we need not reach the question of whether Mehta was right in claiming the hypercube was mismanaged. The Whistleblower Regulations provide protection for the whistleblower who makes his disclosure in good faith, but do not require that he be correct. 10 C.F.R. 708.5(a)(1).

B. URA's managers' awareness of Mehta's whistleblowing

URA claims that "Mehta was not terminated because he voiced complaints about the hypercube's user priorities. Briggs, the supervisor responsible for terminating Mehta, was unaware of Mehta's concerns. Briggs based Mehta's termination on the fact that most of the work he performed was not relevant to [Laboratory] work." 21/

URA, in other words, believes that Mehta's dismissal could not be retaliatory if Briggs did not know about his complaints. We disagree. Syphers and Bourianoff, managers who were directly below Briggs, were aware of Mehta's complaints. Though Briggs was formally responsible for the decision to dismiss Mehta, his decision was not based on his personal assessment of Mehta's work. Briggs testified that he was not familiar with Mehta's work at the Laboratory until July 1992. Even after July 1992, his assessment of Mehta's work was not based primarily on first-hand knowledge, but on his discussions with Syphers and

Bourianoff. 22/

Briggs' testimony shows that Syphers' advice was instrumental in his decision to dismiss Mehta. 23/ In addition, it appears that Bourianoff played a part in Mehta's dismissal. Bourianoff testified that Briggs, before Mehta's dismissal, said in a meeting with Syphers and Bourianoff, "I'm getting ready to terminate Dr. Mehta. Do either of you have a problem with that?" Bourianoff told him he had no problem with dismissing Mehta. 24/

More importantly, Bourianoff assumed responsibility for reporting to Syphers that Mehta's computer file directory contained material unrelated to the Laboratory's mission. 25/ The record indicates that this report played a significant part in Syphers' finding that Mehta misused government property and his decision to recommend to Briggs that Mehta be dismissed.

It is difficult to explain Bourianoff's involvement in Mehta's dismissal except as his reaction to Mehta's complaints about his management of the hypercube. Bourianoff's key role here is consistent with the fact that he was instrumental in the Laboratory's acquisition of the hypercube. 26/ During Mehta's employment at the Laboratory, Bourianoff was personally responsible for managing the hypercube and scheduling users on it. 27/

Syphers admitted that Mehta disclosed to him his dissatisfaction with the hypercube management. 28/ Bourianoff, however, testified that no one ever complained to him about lack of access to the hypercube. 29/ The evidence contradicts Bourianoff's assertion.

An indication that Bourianoff was aware of complaints is found in an electronic mail message he sent to David Pan on August 20, 1992:

I am responsible [sic] for allocating time on the cube according to my evaluation of the relevant urgency of production jobs. This is NOT your or Ravi's responsibility. You are supposed to provide system support and have absolutely [sic] no responsibility or authority to allocate time. I take full responsibility for my decision and if you receive any complaints, please direct them to me. If the content of this message is unclear in any way, I will be happy to discuss it in person. 30/

It is difficult to conceive of such a message, significantly titled by Bourianoff "Cube Usage Contention," being sent unless some dispute had arisen over allocating time on the hypercube. In addition, the vehement tone of the message evidences annoyance on the part of Bourianoff in response to a challenge to his management of the hypercube.

Bourianoff also testified that he knew nothing about Mehta's difficulties logging onto the hypercube over the Labor Day weekend. 31/ This assertion is also contradicted by the evidence. Pan testified that he told Bourianoff about Mehta's problems logging on over the Labor Day weekend, specifying that it was Mehta who was making the complaint. 32/ In doing so, Pan would have been following the instructions of Bourianoff in the electronic mail message cited above, which had been sent less than three weeks earlier.

Bourianoff, in carefully chosen words, denies Pan's claim that Pan told him that Mehta had complained about hypercube scheduling. He concedes that Pan and Ravishankar, Pan's supervisor, came to him on several occasions, saying that "they wanted the ability to allocate time. And they said that people were putting pressure on them. They refused to name the people." 33/ Bourianoff also concedes that Syphers came to him to discuss a problem Mehta had with the hypercube. Bourianoff characterized Syphers' discussion with him as "more of a request for information" than a complaint. 34/ It is apparent from his testimony that Bourianoff's claim that he knew of no complaints about the management of the hypercube is plausible only by using a very restricted definition of "complaint." During his testimony on the issue it was clear from Bourianoff's demeanor that he was answering questions by using carefully chosen words and was not being candid.

Even if Pan or Syphers did not name Mehta in relaying his complaints to Bourianoff, it would not have

been difficult for Bourianoff to figure out that Mehta was the source of the complaints. Only about ten to fifteen people were using the hypercube at any one time. 35/ The majority of the users apparently came from Bourianoff's own group, which consisted of twelve people. 36/ Bourianoff could have easily, by process of elimination, determined that it was Mehta who took issue with the hypercube usage procedures.

Further evidence that Bourianoff knew of Mehta's complaints, is found in a memorandum Bourianoff issued for general distribution on September 9, 1992, the day after Mehta complained to Pan. The memorandum stated:

The current policy regarding access to the cube is to encourage the widest possible utilization within the laboratory.... For short runs ... just log onto Sycamore and do it. The machine is available on a first come first serve basis. In order to get larger blocks of time for production runs, it is necessary to check with me so I can coordinate the work load. Up to the present time, it has been possible to fill all such requests promptly. When and if competing demands for time exceed the available resources, the mechanism exists to convene a committee of interested parties to help set priorities. Until such time however, I would like to handle the scheduling on an informal basis. 37/

Bourianoff's memorandum does not announce a new policy about the hypercube; it merely restates and, to some extent, defends the existing policy. It is difficult to see why Bourianoff would issue such a memorandum unless he was aware that was some dissatisfaction with the scheduling of the hypercube. The fact that the memorandum was issued the day after Mehta complained to Pan raises the strong inference that Bourianoff was aware of Mehta's complaint.

Retaliatory intent can be inferred not only from knowledge of whistleblowing activity by the official who effectuates the dismissal, but also from knowledge by an official who advises dismissal. Warren v. Department of Army, 804 F.2d 654 at 658 (Fed. Cir. 1986). If this were not the case, a contractor could easily evade the Whistleblower Regulations by delegating all dismissal decisions to an official who was insulated from day-to-day contact with the whistleblower. It is therefore immaterial whether Briggs knew about Mehta's complaints, because Syphers and Bourianoff knew and were instrumental in influencing Briggs to dismiss Mehta.

C. Mehta's disclosure as a contributing factor in his dismissal

URA also argues that "to state a claim under [the Whistleblower Regulations], an employee must suffer a reprisal or retaliation because of his or her disclosure.... In other words, [the Whistleblower Regulations require] a 'nexus' between the employees actionable disclosure and his or her termination." 38/ URA questions whether Mehta has established the "nexus" between his complaints and his dismissal.

Contrary to URA's assertion, the Whistleblower Regulations do not require the showing of a "nexus." Instead, they require that the complainant show that the protected disclosure was a contributing factor in a personnel action taken against him. 10 C.F.R. § 708.9(d).

In order to clarify the meaning of "contributing factor," we look to a corresponding provision in the Whistleblower Protection Act (WPA) (Pub.L. No. 101-12, 103 Stat. 16, codified at various sections of 5 U.S.C.). The WPA protects employees of the federal government from reprisals for whistleblowing. The legislative history reveals that Congress intended the term "contributing factor" to have an expansive definition:

The words "a contributing factor" ... mean any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision. This test is specifically intended to overrule existing case law, which requires a whistleblower to prove that his protected conduct was a "significant", "motivating", substantial", or "predominant" factor in a personnel action in order to overturn that action.

135 Cong. Rec. 5033 (1989) (Explanatory Statement on S. 20).

Thus, the "contributing factor" test means that:

a personnel action, taken "because of" a protected disclosure, or "as a result of " a prohibited personnel practice ... may be taken "because of" or "as a result of" many different factors, only one of which must be a protected disclosure and a contributing factor to the personnel action in order for the [the whistleblower's] protection to take effect. Indeed, ... "any" weight given to the protected disclosure, either alone or even in combination with other factors, can satisfy the "contributing factor" test. It is thus evident ... that ... a whistleblower need not demonstrate the existence of a retaliatory motive on the part of the employee taking the alleged prohibited personnel action in order to establish that his disclosure was a contributing factor to the personnel action....

Marano v. Department of Justice, 2 F.3d 1137 at 1140-41 (Fed. Cir. 1993) (emphasis in the original). Mehta has shown that the two principal figures in his dismissal, Bourianoff and Syphers, were aware of his disclosures and acted to have him dismissed only after they learned of the disclosures. We find that Mehta has therefore met the burden of showing that his disclosures were a contributing factor in his dismissal.

Mehta has shown that he made a protected disclosure about perceived mismanagement of the hypercube, and that he was dismissed from his employment. 39/ He has further shown that the disclosure was a contributing factor in his dismissal. We find therefore that Mehta has made prima facie case of retaliatory dismissal for whistleblowing.

VI. URA's defense that the dismissal was not retaliatory

A. URA's allegation that Mehta misused government property

The burden now shifts to URA to prove by clear and convincing evidence that it would have dismissed Mehta absent his whistleblowing. 10 C.F.R. 708.9(d). Throughout the proceeding, URA has advanced several different reasons for dismissing Mehta. None of them is credible.

URA first claimed that Mehta had misused government property. According to URA, Mehta's misuse consisted of running programs of personal interest in adaptive optics that were not relevant to the Laboratory's work. 40/ We find that the evidence does not support a credible claim of misuse by Mehta.

URA bases this charge on two incidents that occurred shortly before Mehta's dismissal. In the first incident, Syphers observed some materials that Mehta was printing on a Laboratory printer. Syphers noticed that the materials related to adaptive optics. 41/ In the second incident, Syphers, at Bourianoff's instigation, examined the directory of the computer at Mehta's work station. 42/ Syphers found that 86% of the disk space on Mehta's hard disk that contained files was occupied by files relating to adaptive optics. 43/

It is not clear whether, by misuse of "government property" URA refers to Mehta's computer work station or the hypercube. As to Mehta's work station, we are not at all persuaded that his activities constitute misuse of government property. We believe that the costs of storing files on Mehta's hard disk were de minimis. In addition, we do not believe the storage of the adaptive optics program files was an improper use of government property.

URA never established that Mehta's programs in adaptive optics could be fully differentiated from his work for the Laboratory. Mehta's primary function at the Laboratory was to produce computer codes. 44/ Mehta believed that he could modify codes from the field of adaptive optics, which he was familiar with, for use in accelerator physics. 45/ His belief is supported by the testimony of Frank Guy, a physicist at the Laboratory. Mehta gave Guy a program routine that he had originally developed for adaptive optics, but which Guy used in making calculations for the Laboratory's linear accelerator. 46/

Dr. Harvey Lynch, a physicist at the Laboratory, is another witness who testified that Mehta's programs

were potentially relevant to the Laboratory's mission. Lynch had been assigned by URA to conduct an independent review of Mehta's dismissal. Lynch reported:

It is [Mehta's] position that [his computations on adaptive optics were] a platform to study a more general problem of dynamic control, and he believes that such control algorithms are of value to the [Superconducting Super Collider].... The fundamental problem is whether or not the work on dynamic control is applicable to the machine. I am not in a position to evaluate this question... On the face of it, the idea makes sense. I have a great deal of difficulty with the fact that Mehta apparently worked on such things for quite a while under the impression that it was useful, if in fact they are not useful. Apparently, no one told him they were not useful to the machine. If that is the case how is he supposed to know? He was hired at [the Laboratory] for his computing skills; he is not an accelerator physicist. 47/

Therefore, in view of the low cost and possible uses to the government, we do not believe the storage of Mehta's adaptive optics programs on his hard disk can be considered a misuse of government property.

Furthermore, we cannot agree that Mehta misused the hypercube. Mehta's use of the hypercube was minimal. The evidence shows that Mehta logged on to the hypercube five times in order to familiarize himself with how to compile, link, and run programs on it. 48/ Apparently, he was logged on for a very brief time and never used more than one node. 49/ Mehta is a highly- educated, experienced computational physicist who would have a legitimate interest in learning how to run programs on the hypercube. Even if the programs he ran were not directly related to the Laboratory's work, Mehta's effort to familiarize himself with parallel processing by running simple programs he had written in the past seems a valid and reasonable use of the hypercube. Bourianoff conceded that there were "legitimate things such as linking and computing" that one could learn by logging on to one node of the hypercube. 50/

We note also that the hypercube was available to persons outside the Laboratory; Bourianoff testified that a Professor Sugar of the University of Santa Barbara "ran extensively" on the hypercube. 51/ If someone outside the Laboratory could run programs unrelated to the Laboratory's mission, it is unclear why a scientist at the Laboratory should not have the same privilege.

There are two final circumstances supporting the conclusion that Mehta did not misuse government property. First, URA recognized that it is under a contractual obligation to report significant instances of misuse of government property to the DOE Inspector General. Steven Brumley, URA's general counsel at the Laboratory, admitted in January, 1993 that URA had not found grounds at that time to report Mehta to the Inspector General. 52/ At the hearing, Brumley conceded that URA has never reported Mehta's alleged misuse to the Inspector General. 53/

Second, the record shows that Mehta's work on adaptive optics was generally known to URA managers and that Mehta was never given any specific guidance regarding his use of government computers. 54/ It is simply not credible that URA had evidence of misuse that would warrant dismissing Mehta on the spot, but not enough information to discuss the matter with him prior to the dismissal, nor enough to fulfill its contractual obligation to submit a report to the Inspector General.

B. URA's allegation that Mehta was an unproductive employee

URA next purports to have dismissed Mehta because he was an unproductive or incompetent employee. 55/ At the hearing, both Briggs and Syphers testified to the inadequacy of Mehta's work. 56/ There is no corroboration in the evidence to support their testimony.

Mehta's performance was formally evaluated twice by URA. Both evaluations were written by Syphers. In the first evaluation, dated June 30, 1991, Mehta's overall performance was rated "fully satisfactory." 57/ The evaluation noted that Mehta had attended weekly accelerator physics classes. 58/

Syphers claimed at the hearing that he had little knowledge of Mehta's performance when he wrote the first evaluation because he had just moved to the Accelerator Theory Group. 59/ He said that he based the

evaluation on nothing more than his 25 days as group leader, and did not consult with Chao, his predecessor as group leader. 60/ Chao, however, stated that he provided Syphers with input for Mehta's first evaluation. 61/ As Chao had merely moved to another position at the Laboratory, it seems improbable that Syphers would have been unable to get his evaluations of the group members. We see no reason, therefore, to question that Mehta's first evaluation accurately reflects his performance as jointly appraised at the time by Chao and Syphers.

Mehta's second evaluation, dated July 22, 1992, was written by Syphers only three months before the dismissal. The rating scale on this form differed from the one used in Mehta's first evaluation; Syphers gave Mehta an overall rating of "meets expectations." On the evaluation form, Syphers wrote "Naresh produces quality work in a timely manner. He brings new insights to accelerator physics and operational issues with his experience in optimization and control algorithms; creative and resourceful." 62/

Syphers attempted to downplay this evaluation at the hearing by relating that he had originally prepared an evaluation rating Mehta as less than satisfactory. No copy exists of the purported original evaluation. Syphers said that he had to go over the evaluation with Mehta right after Mehta's return from a vacation. Syphers claimed that he felt it was not right to give someone a less-than-satisfactory evaluation immediately after a vacation, so he tore up the original evaluation and wrote the satisfactory evaluation. We do not believe that Syphers could be so derelict in carrying out his supervisory responsibilities.

We find that Syphers' attempt to explain away Mehta's positive performance appraisals completely lacks credibility. Except for rationalizing statements made by URA managers after the dismissal, the evidence shows that Mehta held a satisfactory employment record. Even as late as August 1993, ten months after Mehta's dismissal, Syphers commented that, "Dr. Mehta's output from his work was to produce codes and papers. The codes developed by him were unique and original. They were not an extension or add-on to a previously produced code. Many of the codes ... take a long time to develop." 63/ In addition, two of Mehta's colleagues in the Accelerator Physics Group -- Drs. Kenneth Kauffmann and Theodore Garravaglia -- testified that the quality of his work was on a par with the work of other physicists at the Laboratory. 64/

Here again, we have a situation in which URA management alleges that Mehta's performance was a basis for immediate dismissal, but the record shows that management did not deem his performance unsatisfactory enough to discuss with him before the dismissal. We find URA's assertions unreasonable, and conclude that there is no evidence to support URA's allegation that Mehta was dismissed because of poor performance. The record clearly shows that the issue of the quality of Mehta's work was raised only after URA realized that the evidence would not sustain a charge of misuse of government property.

C. URA's allegation that Mehta's work was irrelevant

Finally, URA alleges that Mehta's work was not "relevant" to the work of the Laboratory. 65/ This allegation has the same defects as charges of Mehta's poor performance -- there is simply no evidence to support it, it was not considered important enough to have been discussed with Mehta before his dismissal, and it was developed only after Mehta was dismissed. In the 1992 performance evaluation, Syphers set a goal for Mehta to "continue present studies." URA now claims that, only 90 days later, these same studies were found unrelated to the Laboratory's mission. URA made no attempt to show that the Laboratory's mission had undergone such a rapid change.

VII. Conclusion

After considering all the testimony, we have arrived at several conclusions concerning the witnesses. We believe the leading figure in Mehta's dismissal was Bourianoff. Despite his assertion that he did not know about Mehta's complaints, we believe that Bourianoff knew, or could infer, that Mehta was critical of the management of the hypercube. The evidence indicates that Bourianoff allowed outside users to access substantial blocks of time on the hypercube and was very sensitive to criticism of his management of the machine. Realizing that Mehta was critical of his management, and that the outside use of hypercube

would be difficult to explain to an investigator, Bourianoff decided to look at Mehta's file directory. He then reported to Syphers a series of half-truths that implied Mehta was misusing the hypercube. Mehta's dismissal soon followed.

After Mehta had been dismissed and it was apparent that the original charge of misuse of government property was untenable, URA managers tried to rationalize the dismissal with charges of poor performance and lack of productivity. These charges are unsupported by any evidence. We find that the real motive, therefore, was reprisal for Mehta's criticism of Bourianoff's management of the hypercube.

URA's testimony in defense of its treatment of Mehta is glaringly inconsistent. URA's managers assert that they dismissed Mehta because of the inadequacy or irrelevancy of his work. These managers would have us believe that Mehta had performed so poorly that they should dismiss him without bothering to hear his side of the matter. 66/ Yet these same managers worked with Mehta for two years without finding it necessary to talk with him about any deficiencies. We do not believe that URA's managers would have operated in such a self-contradictory manner.

Far from being clear and convincing, URA's evidence to establish a legitimate motive for dismissing Mehta is muddled and incredible. The inability of URA to set out a consistent account of the dismissal confirms our belief that the reasons it adduces for dismissing Mehta are pretexts. We find that URA has failed to meet its burden of showing by clear and convincing evidence that it would have dismissed Mehta absent his complaints about the management of the hypercube. We conclude therefore that URA violated the provisions of 10 C.F.R. Part 708 in dismissing Mehta.

It is Therefore Ordered That:

(1) Universities Research Association, Inc. (URA) shall reinstate Dr. Naresh Mehta (Mehta) to his former position as Scientist II or a comparable position.

(2) URA shall award Mehta all pay and benefits, including medical insurance payments, withheld from him due to the adverse actions taken against him by URA, retroactive to December 16, 1992, and all costs and expenses reasonably incurred by him in bringing Complaint No. SSC-93-0001 under 10 C.F.R. Part 708.

(3) Yona Rozen, attorney for Mehta, shall, no later than 30 days after the date of this Decision, submit to the Hearing Officer and to URA a full accounting of her hourly charges for attorney fees and any costs, expenses, and expert witness fees incurred in representing Mehta, including documentary evidence that the rates requested are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, or reputation. URA shall reimburse Rozen for all such fees.

(4) URA shall remove from Mehta's personnel records all information that indicates that Mehta's employment with URA was terminated for cause.

(5) Within thirty days of the date of this Decision, and notwithstanding any appeal or request for review, URA shall submit to the Hearing Officer a schedule listing the amount or description of each item of restitution it proposes to render to Mehta in accordance with Paragraph 2 above, together with the manner in which it proposes to provide the restitution. If Mehta objects to the amount, description, or manner of provision of any of the items of restitution proposed by URA, or requests any item not proposed by URA, he shall submit a statement explaining such objection or request to the Office of Hearings and Appeals within 15 days of the receipt of the schedule from URA. The Office of Hearings and Appeals will then determine the proper amount and manner of provision.

(6) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director, Office of Contractor Employee Protection.

Thomas L. Wieker

Deputy Director

Office of Hearings and Appeals

Date: March 17, 1994

Notes:

1/ Hearing Exhibit Mehta-1.

2/ Report of Investigation at 3.

3/ Hearing Exhibit Mehta-2.

4/ Report of Investigation at 3.

5/ "Acquisition Plan, Research Computer for the Superconducting Super Collider Laboratory, Accelerator Systems Division," Hearing Exhibit URA-8 at 10.

6/ Tr. at 343-44.

7/ Statement of Mehta, Exhibit 20 to Report of Investigation.

8/ See electronic mail message from Ben Cole to David Pan, dated July 29, 1991 (Exhibit 31 to Report of Investigation). The message provides that members of I&D, or the Instrumentation and Diagnostics Group, have priority in use of the hypercube over all other users. Bourianoff was head of a section within the I&D Group. Statement of Kauffmann, Exhibit 17 to Report of Investigation. After a reorganization, the I&D Group was dissolved and priority use of the hypercube was apparently assumed by members of Bourianoff's Machine Simulations and Corrections Group. Tr. at 132; cf. Hearing Exhibit URA-2 (Laboratory organization in October 1990) with Hearing Exhibit URA-3 (Laboratory organization in February 1993). All hypercube users at the Laboratory, including Mehta, had access to a version of "kick" that would terminate programs run by users outside the Laboratory. Tr. at 129.

9/ Tr. at 123; 125; 137; 154.

10/ Tr. at 117; 128; 159.

11/ Statement of Mehta, Exhibit 20 to Report of Investigation.

12/ See 42 U.S.C. 2201(b), 2201(c), 2201(i), and 2201(p); 42 U.S.C. 5814 and 5815; 42 U.S.C. 7251, 7254, 7255, and 7256.

13/ The Acquisition Letter also answers another argument that URA makes. URA claims that "following the [December 22 Decision and Order's] logic to its absurd end, URA's contract could have been modified today -- more than a year after URA's alleged acts of reprisal -- and Mehta would still be able to access its procedures. The drafters of 10 C.F.R. Part 708 could not have intended this sort of far-reaching retroactive effect." Post-Hearing Brief at 19. As the Acquisition Letter shows, the modification of all contracts that were going to be modified had to be completed by March 31, 1993, avoiding the "far-reaching retroactivity" that concerns URA.

18/ Tr. at 210.

19/ Electronic Mail Message from Mehta to David Pan, leader of the Laboratory's Programming and Analysis Section, dated September 8, 1992; Exhibit 2 to Report of Investigation (emphasis in the original).

20/ URA discusses at some length whether Mehta's complaints would have been protected by the public policy exception to the common-law right of an employer to terminate employment at will. Pre-hearing Brief at 7-10. Since this case arises under a federal regulation that specifically includes disclosures relating to mismanagement, we do not see how the analysis of a more restrictive common-law doctrine sheds any light on the issues. We note further that Mehta's allegations about the hypercube did not merely involve matters of URA's internal management. The hypercube cost nearly $1 million of federal funds, and the potential mismanagement of it is a legitimate concern of the DOE.

21/ Pre-hearing Brief at 13.

Case No. LWA-0005

July 29, 1994

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Francis M. O'Laughlin

Date of Filing: January 10, 1994

Case Number: LWA-0005

This Decision involves a complaint filed by Francis M. O'Laughlin (O'Laughlin) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. O'Laughlin contends that certain reprisals were taken against him after he raised concerns relating to health and safety with Boeing Petroleum Services, Inc. (BPS), a DOE contractor. The alleged reprisals included wrongfully denying O'Laughlin a management position to which he ostensibly was entitled, and later taking adverse personnel action against O'Laughlin which included a demotion and corresponding salary reduction. The DOE's Office of Contractor Employee Protection (OCEP) investigated the complaint and found that O'Laughlin had not actually made health and safety disclosures that might entitle him to relief for the alleged reprisals under Part 708. O'Laughlin requested a hearing before the Office of Hearings and Appeals (OHA) under 10 C.F.R. ' 708.9(a), reasserting his claim that reprisals were taken against him by BPS as a result of raising health and safety concerns. The hearing in this case was held on May 18 and 19, 1994, in New Orleans, Louisiana.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure will be directed by the DOE to provide relief to the complainant. The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2, 1992, establish administrative procedures for processing complaints of this nature.

Before Part 708 was promulgated, contractor employee protection at DOE's government-owned, contractor-operated (GOCO) facilities was governed by DOE Order 5483.1A (6-22-83) ("Occupational Safety and Health Program for DOE Contractor Employees at Government-Owned Contractor-Operated Facilities"). As with Part 708, the Order prohibited contractors from taking reprisals against whistleblowers. However, no formal procedures existed under Order 5483.1A. The Part 708 regulations were adopted to improve the process of resolving whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for

review by the Secretary of Energy or her designee.

B. Factual Background

The following summary is based on the testimony of witnesses at the May 18 and 19, 1994 hearing as cited below (the hearing transcript is hereinafter "Tr."), and pleadings submitted on behalf of O'Laughlin and BPS in the course of this proceeding. Except as indicated below, these facts are uncontroverted.

O'Laughlin is a logistics engineer who in March 1987 began working for BPS, then the management and operating (M&O) contractor for the DOE's Strategic Petroleum Reserve (SPR), at BPS' central SPR office facilities located in New Orleans, Louisiana. In January 1990, O'Laughlin was promoted to the position of Integrated Logistics Systems (ILS) Manager, a subgroup of the Engineering Directorate which was one of several directorates within the BPS organization. As described below, the actions underlying the present complaint stem from a BPS reorganization that was devised in March and April 1991, and then implemented in May 1991. This reorganization had the effect of splitting the ILS and substantially reducing the scope of O'Laughlin's management responsibilities.

Under O'Laughlin, ILS was generally divided into two components comprised of management organizations which performed these functions: (1) Reliability, Availability and Maintainability (RAM), and (2) Maintenance Management Information Systems (MMIS). See Tr., O'Laughlin Exhibit 1. The RAM division was primarily charged with conducting an ongoing performance analysis of SPR equipment and provisioning inventories for parts replacement on a priority basis. See Tr., Vol. I at 35. The principal functions of MMIS were preventive maintenance (PM) reporting and reliability centered maintenance (RCM). These MMIS functions warrant greater discussion.

Preventive maintenance at the SPR crude oil storage and transfer facilities was generally conducted by maintenance personnel in the field by adherence to a schedule of thousands of preventive maintenance procedures for the various equipment at the SPR sites. As these procedures were scheduled and completed, that information was put into a database which could then be accessed by various departments within BPS. Under the PM reporting function performed by ILS, this data was retrieved by MMIS personnel located at the central SPR office in New Orleans, who then generated a monthly PM status report for use by BPS management and the DOE. See Tr., Vol. I at 38-39.

The RCM function involves a system of anticipating potential equipment failure through an ongoing analysis of whether the equipment is performing in accordance with prescribed specifications. The RCM function performed by ILS under O'Laughlin was part of the Logistics Service Support Analysis (LSSA) program, a maintenance corrective action program that was adopted by BPS and endorsed by the DOE in late 1989 after a consultant study. The LSSA established a list of recommended procedures and initiatives designed to improve SPR logistics and maintenance, referred to as "milestones", which were to be scheduled and completed. See Tr., Vol. I at 35-36, and at 358-59. Under O'Laughlin, it was the responsibility of the ILS, working in conjunction with and assisted by other affected departments within BPS, to see that the LSSA milestones, including RCM, were completed as scheduled. See Tr., Vol. II at 20-21.

However, in late 1990, the President of BPS, Jerry E. Siemers (Siemers), determined that the firm should be reorganized in order to remedy material and logistics deficiencies on the part of BPS under the SPR M&O contract that had been identified by DOE. See Tr., Vol. I at 390-92, Vol. II at 506-08. Siemers determined that a new directorate, the Material Directorate, should be formed and headed by Anthony J. George (George), who had previously worked at BPS, but was then at a BPS affiliate. In January 1991, George accepted the position as Manager of the Material Directorate and, in March and April 1991, conducted a series of meetings with BPS management personnel in order to determine which organizations should become part of the new Material Directorate. See Tr., Vol. II at 283.

During the reorganization planning meetings in March and April 1991, one of the options proposed involved splintering ILS among several directorates, including moving the MMIS from the Engineering

Directorate to the Operations and Maintenance (O & M) Directorate. According to George, it was not his preference to split up ILS and he therefore solicited reasons from affected managers, including O'Laughlin, in support of keeping the ILS intact. See Tr., Vol. II at 285-87. Notwithstanding, in May 1991, it was ultimately determined by BPS management that the reorganization would proceed with the break up of ILS among three directorates as follows: (1) the Engineering Directorate retained the RAM function, (2) the MMIS, including the PM reporting and RCM functions, was placed under the O & M Directorate, and (3) all other logistics functions, involving logistical analysis and provisioning, were placed within the new Material Directorate under a newly created Logistics Manager position. See Tr., Vol. I at 25-26, Vol. II at 287.

When presented with the ILS breakup under the reorganization during the March and April 1991 meetings, O'Laughlin raised the following five concerns to George and others:

1) The Logistics Service Support Analysis (LSSA) milestones would not be met on a timely basis if Integrated Logistics Systems (ILS) were split up under the reorganization. See Tr., Vol. I at 48, Vol. II at 376. Although many of the LSSA milestones had already been completed, O'Laughlin believed that under the Operations and Maintenance (O & M) Directorate, the maintenance manager in charge of completing the remaining LSSA milestones, Charlie Mitchell, did not view the milestones as a priority. See Tr., Vol. I at 88, Vol. II at 51. O'Laughlin maintained this concern although the responsibility for monitoring the completion of the LSSA milestones remained in the Logistics Manager under the Material Directorate. Id. at 225.

2) The dispersal of logistics functions under the reorganization would be in violation of a pertinent DOE logistics order governing the SPR, SPRPMO 4000.1B. Although O'Laughlin concedes that the policy directive in this DOE order may reasonably be subject to a different interpretation, he believed that this order required that all logistics functions be integrated in one department rather than separated. See Tr., Vol. I at 48-49, and at 234-35.

3) It would be unwise to place the preventive maintenance (PM) reporting function under the Operations and Maintenance (O & M) Directorate whose personnel was responsible for performing maintenance since O & M would not objectively view the data sent in from the field in preparing the PM reports. O'Laughlin described his concern in this regard as "like putting the fox in the henhouse", although George did not recall his use of that expression. See Tr., Vol. I at 20, 49, Vol. II at 377. O'Laughlin's concern was based upon the possible falsification of data entered into or reported from the PM database, but was aware that there were independent departments within BPS responsible for monitoring the accuracy of data relating to PM performance and reporting. See Tr., Vol. I at 241-42, Vol. II at 296-97.

4) The reliability centered maintenance (RCM) milestone, described above, would not be done if Integrated Logistics Systems (ILS) were split up. Tr., Vol. I at 49. Similar to the other LSSA milestones, O'Laughlin had doubts concerning the willingness of Charlie Mitchell, the manager within O & M who would receive this responsibility, to perform this milestone. Id. at 89, 121. George could not recall O'Laughlin conveying this specific concern. Tr., Vol. II at 379.

5) Data concerning the packaging, handling, storage and transportation (PHST) of hazardous material should be incorporated into the logistics database. Tr., Vol. I at 50. O'Laughlin was aware that this data was already contained in a database maintained by the Property Control Division within BPS, which was in charge of handling the movement of any hazardous materials, but O'Laughlin believed that there should also be an integrated logistics PHST database. Tr., Vol. II at 66-68, and at 299-300. Although O'Laughlin maintains that George rejected his idea, the PHST data was incorporated in a database maintained by the Catalogue Division under the Logistics Manager following the reorganization. Id. at 300-01.

In communicating the five concerns described above, O'Laughlin made no references to health and safety, did not describe any dangerous situation, nor did he convey his concerns in those terms. See Tr., Vol. I at 233, 254, Vol. II at 45. However, O'Laughlin maintains that George, as Manager of the Material

Directorate, knew or should have known that safety is among the issues involved in the reorganization. Id. at 255.

According to O'Laughlin, reprisals were taken against him by BPS in retaliation for the five communications which he made to George. O'Laughlin states that he was led to assume that under the reorganization, he would be given the position of Logistics Manager, who would report directly to the Manager of the Material Directorate, George. See Tr., Vol. I at 216. George confirms that O'Laughlin started out being the leading candidate for the job. See Tr., Vol. II at 320. But instead, on May 13, 1991, the day office space was being reassigned under the reorganization, O'Laughlin was informed by George that O'Laughlin would not be the Logistics Manager, but that he had been given the position of ILS Manager, reporting to David Ryan who had been selected as Logistics Manager. See Tr., Vol. I at 136-38.

O'Laughlin contends that a second act of alleged reprisal occurred on August 15, 1991, when O'Laughlin was issued a Corrective Action Memo (CAM) which informed him that he had been demoted from his management position for failure to perform certain assigned duties as ILS Manager. Id. at 145-47. O'Laughlin was then transferred from his position as ILS Manager to the function of Policy Compliance, a non-management position, with a demotion that entailed a 7 percent reduction in annual salary, amounting to approximately $4,000. Finally, O'Laughlin claims that thereafter he continued to be subjected to harassment and intimidation by BPS management to the extent that he felt compelled to submit his resignation to BPS, which became effective May 15, 1992.

C. Procedural History of the Case

Beginning in August 1991, O'Laughlin initiated attempts of informal resolution of the adverse personnel action through internal BPS procedures. These attempts having been unsuccessful, however, O'Laughlin filed a complaint with the SPR Office pursuant to 10 C.F.R. Part 708, on April 1, 1992. That complaint was forwarded to DOE's Office of Contractor Employee Protection (OCEP) on April 3, 1992, but was initially dismissed by OCEP on April 10, 1992, for failure to state an actionable claim under Part 708. In reaching this determination, OCEP found that O'Laughlin's complaint did not reveal that he had made disclosures that related to actual or potential health or safety issues or that his disclosure contributed to the adverse personnel actions taken against him. On May 8, 1992, O'Laughlin filed for review with the Deputy Secretary of DOE and submitted an amended complaint asserting that his disclosures involved issues of health and safety, as well as possible waste, mismanagement, and the violation of a DOE Order. On August 30, 1992, the Deputy Secretary reinstated the complaint, and afforded an opportunity for attempts at informal resolution. During the interim, O'Laughlin submitted his resignation to BPS, which became effective on May 15, 1992.

Then, having been informed by the SPR Office that attempts at informal resolution had failed, OCEP performed an on-site investigation of the matter during the period February 28 through March 5, 1993, and issued a Report of Investigation and a Proposed Disposition on December 16, 1993. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that O'Laughlin's communications regarding the ILS reorganization did not present disclosures relating to health and safety protected under Part 708; it further concluded that the adverse personnel actions taken against him were not the result of any protected disclosure.1/ Accordingly, OCEP proposed to deny O'Laughlin's request for relief under Part 708.

During the deliberative stage of the OCEP proceeding, a change of the M&O contractor occurred at the SPR. On March 31, 1993, BPS ceased operations in that capacity and, on April 1, 1993, DynMcDermott Petroleum Operations Company (DynMcDermott) assumed the SPR M&O contract. As the succeeding M&O contractor, DynMcDermott has generally hired the employees formerly employed by BPS with the exception of upper management.

On January 2, 1994, O'Laughlin submitted his request for a hearing pursuant to 10 C.F.R. ' 708.9 to OCEP. On January 10, 1994, OCEP transmitted that request, together with the investigative file, to the OHA, and

requested that a Hearing Officer be appointed. I was appointed Hearing Officer on January 11, 1994. On February 10, 1994, procedures and a briefing schedule were established for the hearing in this case under ' 708.9(b).2/ Noting that O'Laughlin had requested reinstatement among the remedies he sought in compensation for the alleged whistleblower reprisals,3/ I determined that DynMcDermott should also be served with the Proposed Disposition and Report of Investigation, and provided the firm an opportunity to file a pre-hearing brief on the same basis as the other parties in the proceeding. Letter from Fred L. Brown, Deputy Assistant Director, OHA, to John A. Poindexter, General Counsel, DynMcDermott, January 31, 1994.

On March 24, 1994, BPS filed its pre-hearing brief which included a Motion to Dismiss the O'Laughlin complaint on grounds of timeliness and failure to state an actionable claim under Part 708. On March 25, 1994, DynMcDermott similarly filed a pre-hearing brief, in the form of a Motion to Dismiss the firm as a party to the proceeding. In his pre-hearing brief, also filed on March 25, 1994, O'Laughlin reasserts his claim and request for relief under Part 708. On April 8, 1994, BPS and O'Laughlin filed respective Responses to the pre-hearing briefs of the other parties.

On April 20, 1994, I issued an interlocutory Decision and Order in which I determined that BPS' Motion to Dismiss the O'Laughlin complaint should be denied. Boeing Petroleum Services, Inc., 24 DOE & 87,501 (1994). I further determined, however, that DynMcDermott's motion to be dismissed as a party should be granted on the basis of our finding that, under the particular circumstances of this case, reinstatement was not a remedy properly available to O'Laughlin even assuming his claim were successful on the merits. See 24 DOE at 89,006-08. Thereafter, on May 3, 1994, a conference telephone call was conducted among the OHA Hearing Officer and respective counsel for O'Laughlin and BPS, in order to clarify matters concerning pertinent issues to be addressed, proper witnesses and the conduct of the hearing. As previously indicated, the hearing was conducted on May 18 and 19, 1994 at the SPR facilities in New Orleans, Louisiana. On June 20, 1994, O'Laughlin and BPS filed post-hearing briefs that were authorized by the Hearing Officer at the close of the hearing. Finally, on June 30, 1994, O'Laughlin and BPS filed responses to the post-hearing brief of the opposing party.

II. Legal Standards Governing This Case

In 10 C.F.R. Part 708, we find the rule applicable to the review and hearing of allegations of reprisal based on protected disclosures made by an employee of a Department of Energy (DOE) contractor.4/ Proceedings under Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee. See David Ramirez, 23 DOE & 87,505 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has " . . . [d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences . . . a substantial and specific danger to employees or public health or safety." 10 C.F.R. ' 708.5 (emphasis added).

The Complainant's Burden

The regulations describe the burdens of proof in a whistleblower proceeding as follows:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under ' 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. ' 708.9(d).

It is the task of the finder of fact to weigh the sufficiency of the evidence presented by both parties at trial. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence ' 339 at 439 (4th Ed. 1992). Under this standard, the risk of error is allocated roughly equally between both parties. Grogan v. Garner, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). O'Laughlin has the burden of proving by evidence sufficient to "tilt the scales" in his favor that when he communicated the five specific concerns discussed above, he disclosed information which evidenced his belief in good faith 5/ that there was a substantial and specific danger to employees or public safety. 10 C.F.R. ' 708.5(a)(1)(ii). If this threshold burden is not met, O'Laughlin has failed to make a prima facie case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a contributing factor in a personnel action taken against the complainant. 10 C.F.R. ' 708.9(d); see Universities Research Association, Inc., 23 DOE & 87,506 (1993).

The Contractor's Burden

If the complainant has met his burden, the burden shifts to the contractor. The contractor must prove by "clear and convincing" evidence that it would have taken the same personnel action against the complainant absent the protected disclosure. "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". See Hopkins, 737 F. Supp. at 1204 n.3. Thus if O'Laughlin has established that it is more likely than not that he made protected disclosures that were a contributing factor to his demotion and/or non-selection as manager of the new unit, BPS must convince us that it would have taken these actions despite the five concerns communicated by the complainant to his managers from March through April 1991.

III. Analysis

In this case, the scope of the acts protected by this program are restricted to disclosures related to issues of health and safety that O'Laughlin made to the DOE and its M&O contractor for the Strategic Petroleum Reserve, Boeing Petroleum Services, Inc. (BPS). See Boeing Petroleum Services, Inc., 24 DOE & 87,501 at 89,002 and n.2 (1994). To be considered protected disclosures for purposes of the Contractor Employee Protection Program, O'Laughlin's disclosures must have divulged "information that the employee in good faith believes evidences . . . (ii) a substantial and specific danger to employees or public health or safety." 10 C.F.R. ' 708.5(a)(1).

In the course of this proceeding, O'Laughlin alleges that he made five distinct disclosures to various BPS employees, most notably to Anthony George, who was designated to become Manager of the Material Directorate under the BPS reorganization. According to O'Laughlin, George knew or should have known that implicit in these disclosures were his good faith concerns for health and safety. As a group, the disclosures clearly relate O'Laughlin's concerns that the proposed (and ultimately adopted) reorganization of BPS' logistics component would adversely affect its ability to carry out its mission. It is clear from the record that O'Laughlin had concerns about the success of the contractor's logistics operations under the reorganized structure, and expressed them both before and after the reorganization was implemented. His concerns alone, however, are not sufficient to raise his disclosures to the level of health and safety disclosures protected under the Program's regulations.

In considering this case, I must observe initially that the nature of O'Laughlin's principal disclosures are different from the type of health and safety disclosure where we have found the protection of Part 708 appropriate, involving the good faith belief on part of the complainant of an actual, existing danger to health and safety. For instance, in Ronald Sorri, 23 DOE & 87,503 (1993), the complainant, a technician, had disclosed an actual health and safety danger relating to the contractor's use of over-pressurized gas cylinders containing lethal gas in its production facilities. Similarly in David Ramirez, 23 DOE & 87,505

(1994), the complainant, an electrician, disclosed an unexplained high voltage power reading and his good faith belief that there was asbestos present in the ceiling from which he was removing electrical fixtures. In the present case, however, the purported health and safety dangers, claimed by O'Laughlin to be evident in his stated concerns, were not tangible but instead conditioned upon his belief, not shared by or within the reasonable perception of senior management, that under the BPS reorganization certain individuals would tend to be derelict or deceptive in their performance of the assigned duties for which he had previously been responsible.

The context in which O'Laughlin's disclosures were made also differentiates this case from the typical case involving a health and safety disclosure, such as Sorri and Ramirez. In those cases, the disclosures were made to the contractor by the complainant after having independently perceived or determined what the complainant in good faith believed to be a danger to health and safety. In other words, it was the perception of the health and safety danger that precipitated the disclosure. In the present case, however, O'Laughlin's concerns were actually solicited by BPS management, in the context of canvassing all affected managers for reasons for and against keeping ILS intact under the reorganization.

Finally, by his own admission, O'Laughlin never expressed his concerns in terms of health and safety or specified any dangerous situation possibly inherent in his concerns. While this is not determinative, particularly in a situation where a substantial health and safety danger is manifest in a complainant's disclosures, it certainly has bearing here in evaluating the relatively amorphous nature of the health and safety matters which O'Laughlin claims were evident in his stated concerns. The burden is on O'Laughlin to establish, by a preponderance of the evidence, that in communicating his concerns, he disclosed within the reasonable understanding of BPS management his good faith belief concerning a danger to health and safety.

Each of O'Laughlin's disclosures will be discussed in detail below. After reviewing the various pleadings submitted in this case and the testimony elicited at the hearing, I have concluded that O'Laughlin has not established by a preponderance of the evidence that his disclosures were of a nature that warrant protection under Part 708, because they did not meet the Program regulations' threshold test of disclosing "information that the employee believes evidences . . . a substantial and specific danger to . . . health or safety." 10 C.F.R. ' 708.5(a)(1)(ii).

1. The LSSA Milestones

As ILS Manager, O'Laughlin initiated performance of the Logistics System Support Analysis (LSSA) milestones before the time period at issue in this proceeding. Tr., Vol. I at 73. These milestones were published in a September 1989 report. Id. At the hearing, O'Laughlin described a "milestone" as "a date by which a project is estimated to become completed or some status on that project is to be identified as completed." Tr., Vol. I at 75. O'Laughlin testified that he communicated his concern that the LSSA milestones could not be completed on time in one-on-one meetings with George and in larger meetings with George, and affected managers, Tim Hewitt, Jim Morris, and in some instances Richard Dropik and Billy Mitchell. Tr., Vol. I at 52. He also communicated his reasons for his concern: under the reorganization, some of the logistics functions over which he had formerly had control were transferred to other directorates, and he had little confidence that the other directorates would complete the milestones on time. Tr., Vol. I at 48, 52. Regarding completion of the LSSA milestones, O'Laughlin had reservations about Charlie Mitchell (not related to hearing witness Billy Mitchell), who would acquire this responsibility: "The manager in charge of maintenance, Charlie Mitchell, I had been working with for a number of years [a]nd it was my opinion that these milestones would not be accomplished, primarily due to priorities that they viewed these milestones . . . different from mine." Tr., Vol. I at 88.

From the outset of this proceeding, however, O'Laughlin has been remiss in describing any health and safety matter which he actually communicated in expressing this, among other, concerns regarding the reorganization, but has instead expended considerable effort reemphasizing that there is general relationship between SPR equipment maintenance and health and safety. After gauging the tenor of

O'Laughlin's pre-hearing brief, I admonished counsel for O'Laughlin that I was prepared to take notice that there is, of course, a relationship between preventive maintenance and health and safety, and that he should instead focus his presentation upon the actual content of the alleged health and safety disclosures made by O'Laughlin. Letter of April 26, 1994, from Fred L. Brown, Deputy Assistant Director, OHA, to J. Arthur Smith, III, counsel for O'Laughlin and Stanford O. Bardwell, Jr., counsel for BPS. Accordingly, at the outset of the hearing, I took notice of the general relationship between preventive maintenance and health and safety. See Tr., Vol. I at 12-13. Notwithstanding, O'Laughlin focused much of his testimony on this general relationship rather than following my admonition to discuss what was actually stated in the pertinent communications with BPS management.

In the hearing, O'Laughlin testified at length that several of the LSSA milestones concern health and safety in his opinion. Tr., Vol. I at 76-85. Much of O'Laughlin's testimony centered on the general nature of logistics and the inherent concern for safety "within the functional process." Tr., Vol. I at 76. As O'Laughlin addressed each of the milestones he considered to have health and safety considerations, he focused for the most part on implicit aspects. For example, discussing LSSA Milestone 1, which concerns evaluating the logistic support function, he stated, "Obviously, you want to ensure that training is available to personnel so they can do the work safely. And in that context I believe that particular milestone has health and safety implications." Tr., Vol. I at 76-77. In another instance, regarding Provisioning Milestone 1, which concerns incorporating actual failure data into a particular database, O'Laughlin testified that it is important to distinguish between equipment that "failed in a safe mode or failed in an unsafe mode." Tr., Vol. I at 79. He also testified that equipment repair is a matter of health and safety, and that milestones concerning preventive maintenance and repair have health and safety implications. Tr., Vol. I at 84-85. 6/

Evidence that safety in the most general sense was referred to does not satisfy the regulatory standard of the complainant having actually disclosed information which in good faith is believed to evidence a substantial and specific danger, that applies to protected health and safety disclosures. We must instead consider whether O'Laughlin's actual communications imparted his good faith belief that failure to meet a specific milestone presented a "substantial and specific danger to employees or public health or safety." In this regard, the testimony elicited during the hearing demonstrates that although O'Laughlin clearly expressed his concerns that the LSSA milestones would no longer be met, he did not communicate to others any health and safety implications he may have in good faith believed to be inherent in his concerns. Indeed, when asked that in communicating this concern regarding completion of the LSSA milestones to George, whether he stated that there was any danger of someone getting hurt, O'Laughlin replied: "I don't remember saying anything like that." Tr., Vol. I at 233; see also Pre-Hearing Brief of Francis M. O'Laughlin, Appendix A at 3.

Richard Dropik (Dropik) testified that he heard O'Laughlin express his concerns in meetings that the split-up of the ILS functions into different directorates would impede timely completion of the LSSA milestones. Tr., Vol. I at 295. He also stated, however, that O'Laughlin never explicitly expressed in these meetings any health and safety concerns concerning the milestones. Tr., Vol. I at 337. Consequently, although he, as a logistician, perceived health and safety implications in O'Laughlin's communications, he believed that the others present in those meetings, including George and David Ryan, lacked the experience in the field of logistics to perceive those implications. Tr., Vol. I at 337-338, 343. Dropik's belief that O'Laughlin's health and safety concerns were not communicated to others attending the meetings is corroborated in the testimony of George. Tr., Vol. II at 290-291, 376. In addition, David Ryan, O'Laughlin's immediate supervisor after the reorganization testified that O'Laughlin never communicated to him that the split-up of ILS would create a potential safety or health problem on the SPR. Tr., Vol. II at 414, 447.

After reviewing the record in this proceeding, and in particular the testimony presented at the hearing, I have determined that O'Laughlin has not met his burden of establishing the disclosure of information which conveyed his good faith belief of a substantial and specific danger to health and safety in his expressing his concerns regarding completion of the LSSA milestones under the reorganization. Under the circumstances of O'Laughlin's communications, when BPS management was seeking alternative views

concerning the proposed reorganization, I find that the reasonable perception of BPS management was that in expressing the LSSA concern, O'Laughlin was merely identifying a potential performance difficulty rather than attempting to convey any substantial and specific danger to health and safety. Moreover, to the extent that there was a health and safety concern implicit in O'Laughlin's communication based upon the general nexus between preventive maintenance and health and safety, I cannot find that O'Laughlin revealed his good faith belief of any "substantial danger" to health and safety where, as here, the danger was not actual but potential and conditioned upon the listener agreeing with his unilateral judgment concerning the ability of BPS to handle logistics functions under the reorganization.7/ Nor can I find that O'Laughlin disclosed a "specific danger" to health and safety when he never expressed his concern in those terms and the health and safety danger was not apparent on the basis of what he said.

2. SPRPMO Order 4000.1B.

O'Laughlin testified at the hearing that this order "identifies the ILS requirements[,] policy[, and] procedure for the SPR." Tr., Vol. I at 48. In his opinion, splitting up the ILS functions or decentralizing them violated this order. Tr., Vol. I at 49. O'Laughlin raised this issue with George individually, in group meetings with George also attended by Tim Hewitt and Billy Mitchell, and with Bill Smollen of the DOE. Tr., Vol. I at 52. O'Laughlin did testify, however, that his interpretation of the order, which required the ILS functions to remain within a single organization, was not an exclusive interpretation, but in fact someone could read the order to require only that all logistics functions be performed rather than be integrated in one organization. Tr., Vol. I at 234-235.

Thus, on its face, O'Laughlin's concern with regard to the DOE order presents only an issue of interpretation and does not portend any health and safety matter. Further, O'Laughlin neither gave direct testimony nor produced any other evidence to demonstrate that he intimated any health and safety concern in raising this possible infringement of the DOE order. George testified that although he believed O'Laughlin raised the issue of potential violation of the order with him, Tr., Vol. II at 376, he did not recall the issue of safety or health problems being raised in that context. Tr., Vol. II at 293.

The burden of proof lies with O'Laughlin to establish by a preponderance of the evidence that he made a disclosure of information that he, in good faith, believed demonstrated a substantial and specific health or safety danger. Based on the record developed in this proceeding, I find that O'Laughlin has not met this burden in this instance. Although it is clear that he raised the issue of potential violation of SPRPMO Order 4000.1B with George and possibly others, there is no evidence any health and safety concerns were ever communicated. Nor is there any evidence that these concerns represented a substantial and specific health or safety danger. The little evidence regarding this disclosure seems to indicate that it is highly debatable whether the split-up of the ILS functions would actually constitute a violation of the order, let alone whether such a violation would create a health and safety danger of any type at all.

3. Preventive Maintenance Reporting

The third disclosure that O'Laughlin maintains is entitled to protection under the Program regulations consists of his objections to the transfer of the preventive maintenance (PM) reporting function under the reorganization, from the Maintenance Management and Information Systems (MMIS) component of ILS to the Operations and Maintenance (O & M) Directorate. Essentially, this function entailed preparing a monthly PM status report from data that was retrieved from a PM database which was continually updated by maintenance personnel in the field at the SPR facility sites as PM procedures were completed as scheduled. As the maintenance personnel were under the O & M Directorate, O'Laughlin expressed his belief that it would be improper to also place the PM reporting function under that Directorate since, according to O'Laughlin's testimony, permitting those performing the maintenance to measure their own performance was "like putting the fox in the henhouse." Tr., Vol. I at 49. In particular, O'Laughlin was concerned that the "level of objectivity would be diminished" in preparing the report, and that in analyzing the PM data to prepare the report "this evaluation may not have maintained the same standardized level it had in the past." Id. at 105, 253. Similar to the disclosures discussed above, O'Laughlin put forth this

concern to George, individually and at staff meetings attended by others including Tim Hewitt and Billy Mitchell, and to Billy Mitchell and Bill Smollen individually. Tr., Vol. I at 53.

O'Laughlin's testimony on cross-examination again reveals, however, that he never expressed his concern regarding transfer of the PM reporting function in terms of health and safety. He admittedly did not tell George that this transfer could create a dangerous situation for any employee. Tr., Vol. I at 254. The testimony of other witnesses also indicate that the health and safety dangers O'Laughlin may have perceived were not communicated to others. Richard Dropik testified that, in the meetings he attended, the gist of O'Laughlin's stated opposition to the split-up of the ILS functions was that a decentralized ILS organization would be unable to perform its required tasks. Tr., Vol. I at 285-286. Billy Mitchell testified that, in the meetings he attended, he could not recall any discussion of the possibility of employee safety issues arising as the result of the split-up of ILS. Tr., Vol. I at 379-380. George testified that O'Laughlin never made him aware that the MMIS transfer would create a potential safety problem. Tr., Vol. II at 293-294.

Despite conceding that no explicit health and safety matter was stated in expressing this concern regarding the reorganization, O'Laughlin nonetheless maintains that he expected that George, as head of the Material Directorate, "would know or should have known" that safety was among the issues inherent in transferring the PM reporting function. Tr., Vol. I at 255. However, the context of O'Laughlin's stated concern leads me to disagree. It is important to note that there is no direct connection between PM reporting and the actual performance of maintenance by field personnel at the SPR sites. In performing this function, the PM component of ILS did not perform or oversee maintenance, but merely captured information from a database, which was accessible throughout BPS, concerning completion status of scheduled PM procedures. For this reason, Billy Mitchell referred to PM reporting as "primarily a bean-counting function." Tr., Vol. II at 372. O'Laughlin asserts that there would be an adverse affect upon PM performance if the O & M Directorate falsified or failed to include pertinent data in preparing the PM status report. See Tr., Vol. I at 104-07. However, the pertinent testimony indicates that a cognizable likelihood of false PM reporting existed only in O'Laughlin's view. George testified that it was ultimately the oversight responsibility of O & M to assure the actual performance of maintenance, and the actual completion of PM procedures was monitored by a BPS division referred to as PP&C (Program, Planning and Control). Tr., Vol. II at 296-97.

Based on the record before me, I have determined that O'Laughlin has not effectively met his burden of establishing, by a preponderance of the evidence, that he communicated information which evidenced a substantial and specific danger to employees or public health or safety when he raised his objection to the transfer of the PM reporting function to the O & M Directorate. O'Laughlin's stated concern was couched in terms of performance efficiency with regard to the reorganization, and the speculative health and safety consideration which was arguably implicit in that concern did not rise to the level of communicating his belief of a health and safety danger which was either "substantial" or "specific."

4. Reliability Centered Maintenance

O'Laughlin's fourth disclosure focuses on his belief that reliability centered maintenance (RCM), a principal LSSA milestone conducted by the MMIS division of ILS, would not be conducted after the reorganization. According to O'Laughlin, responsibility for this milestone shifted to an O & M Directorate organization that, he believed, did not want to do it. Tr., Vol. I at 49, 121. O'Laughlin stated that the health and safety issue that he sees in this disclosure is "operational safety, being able to identify a piece of equipment before it fails and, in particular, fails catastrophically where it might injure somebody or contaminate the environment." Tr., Vol. I at 122. O'Laughlin testified that he raised this issue individually with George, Billy Mitchell and Bill Smollen. Tr., Vol. I at 53, 121, 132. Billy Mitchell testified that at one meeting he attended, "the concern was expressed that if that function went to the maintenance department, it may be in jeopardy of [not] being implemented." Tr., Vol. I at 361-362. George could not recall whether O'Laughlin ever raised this issue with him. Tr., Vol. II at 298, 379.

Again, O'Laughlin has presented no evidence and does not maintain that he expressed his concerns regarding the RCM milestone in terms of health and safety. 8/ Although George did not recall the RCM issue being raised, Billy Mitchell confirms that he never heard O'Laughlin express any health and safety danger in stating his objections, including the RCM milestone issue, to the proposed reorganization. See Tr., Vol. I at 379-80. For the reasons discussed above in considering O'Laughlin's objections to the reorganization regarding the LSSA milestones, I have concluded that O'Laughlin has not established, by a preponderance of the evidence, that in his statements to George and others concerning RCM he disclosed a good faith belief of a substantial and specific danger to employees or public health or safety.

5. Packaging, Handling, Storage and Transportation (PHST)

The final matter claimed by O'Laughlin as a protected disclosure involves his recommendation that data concerning the packaging, handling, storage, and transportation (PHST) of hazardous materials should be incorporated into the logistics database. Tr., Vol. I at 50. O'Laughlin testified that he made this recommendation once to George individually during a meeting in April 1991, prior to the reorganization. See Tr., Vol. I at 125-26. In making this recommendation, O'Laughlin was aware that this data was already contained in a database maintained by BPS' Property Control Division which had PHST responsibility; indeed, he had conferred with the Property Control Division concerning PHST data. See Tr., Vol. II at 66. O'Laughlin believed, however, that PHST data should be incorporated into the logistics database since military standards called for it, although the particular military standard which he cited had not been adopted by BPS at that time. See Tr., Vol. I at 126. He testified at the hearing that he addressed this concern to George once "for clarity and approval to proceed." Tr., Vol. I at 53-54.

I am again unable to find that in making this recommendation to George, O'Laughlin disclosed information evidencing a substantial and specific danger to health and safety. In claiming that this was a protected disclosure, O'Laughlin asserts the obvious, that "[a]ny type of hazardous material you're dealing with has a health and safety implication. . . [and] the packaging, handling, storage, and transportation of those materials, to me, is a safety concern . . . ." Tr., Vol. I at 125. However, the record of this proceeding reveals that the only matter actually communicated to George by O'Laughlin was his desired enhancement of the logistics database to include PHST information that was already maintained by the BPS division having this ultimate responsibility.

My view is confirmed by George's testimony in this regard. According to George, he was well aware that before and after the reorganization, the Property Control Division had the responsibility "for handling, safeguarding, and moving what little transportation of hazardous materials we had," and that Division maintained a Supply Services Manual that governed this function. See Tr., Vol. II at 300. George further testified that the idea to incorporate PHST data into the logistics database "came up from a number of camps" (id. at 299), but recalls that O'Laughlin made this recommendation:

Not as a concern. I remember him raising the issue of hazardous materials to me . . . in the context that it would be an enhancement to the logistics database . . . if we were able to use it in some fashion to identify hazardous materials or to expand it to incorporate the hazardous-materials area.

Tr., Vol. II at 379-380. 9/

Once again, the record clearly indicates that O'Laughlin made the statements he claims to have made. Once again, however, the record lacks a preponderance of evidence that indicates that, through his statements, O'Laughlin disclosed "information that [he] in good faith believe[d] evidence[d] . . . [a] substantial and specific danger to employees or public health or safety." 10 C.F.R. ' 708.5(a)(1)(ii).

IV. Conclusion

As set forth above, I have determined that O'Laughlin has not met his burden of proof of establishing by a preponderance of the evidence that he made disclosures protected under 10 C.F.R. Part 708. It is clear that O'Laughlin had some specific concerns about the reorganization of BPS, and expressed those concerns to

both DOE and contractor personnel. He did not, however, explicitly disclose any matter of health and safety which may have also been within his contemplation. Nor am I persuaded that he implicitly communicated a cognizable health and safety danger by his stated concerns, since the adverse impact upon health and safety that O'Laughlin claims "should have been known" was in fact highly general and speculative, based upon his uniquely subjective perspective of BPS' capacity to perform logistics functions under the reorganization. Finally, the ostensibly self-serving nature of O'Laughlin's stated objections is also a consideration from which I cannot escape. The unavoidable reality is that the BPS reorganization, which was encouraged by DOE to remedy certain logistics supply failures, came at the expense of O'Laughlin's management authority. I am therefore drawn to the view that O'Laughlin was adamant in attempting to keep ILS intact for personal reasons, and I am indelibly left with that impression by the record of this proceeding. I find any health and safety motivation O'Laughlin claims to have had to be transparent.

On this basis, I conclude that O'Laughlin has failed to show by a preponderance of the evidence that he disclosed information evidencing any health and safety danger, let alone a danger which rises to the level of substantial and specific. Because O'Laughlin has failed to make a prima facie case, there is no need to address the remaining regulatory criteria, e.g., whether the disclosures were contributing factors in the personnel actions taken, or whether Boeing would have taken those actions absent O'Laughlin's disclosures. 10 C.F.R. ' 708.9(d).

It Is Therefore Ordered That:

(1) Francis M. O'Laughlin's request for relief under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director of the Office of Contractor Employee Protection.

Fred L. Brown

Hearing Officer

Office of Hearings and Appeals

Date: July 29, 1994

NOTES

1/ OCEP states that although information relating to O'Laughlin's alleged disclosures regarding possible waste, mismanagement, and violation of a DOE Order was also examined, OCEP did not assert jurisdiction under Part 708 on the basis of these alleged disclosures. Notwithstanding, OCEP found in the Proposed Disposition that "[O'Laughlin]'s continued disagreement with the reorganization did not constitute disclosures of possible waste or mismanagement that merit protection under Part 708, had jurisdiction under that criteria been asserted in this case." Proposed Disposition at 15.

2/ Section 708.9(b) provides that hearings conducted under Part 708 "will normally be held . . . within 60 days from the date the complaint file is received by the Hearing Officer . . . ." However, upon initial contact, O'Laughlin informed the OHA Hearing Officer in this case that he would not be available within the 60-day time frame since he was about to begin 90 days of previously scheduled duty with the U.S. Naval Reserve. O'Laughlin therefore requested, and I as Hearing Officer approved, an extension of time for the convening the hearing until after the completion of his duty assignment in May 1994.

3/ OCEP states in the Report of Investigation that during the attempted informal resolution of the matter, O'Laughlin sought the following remedies: (1) reinstatement to his prior position, (2) back pay and

benefits, and (3) removal from his personnel files of any reference to the events and personnel actions surrounding the complaint. Report of Investigation at 5-6.

4/ I note at this time that the respondent BPS has renewed its objection to these proceedings, arguing that the rule (1) was applied retroactively and (2) does not comply with the Administrative Procedure Act (APA), 5 U.S.C. ' 551 et seq. Post-Hearing Brief of BPS at 1. I disagree. First, the original motion to dismiss was denied by the Hearing Officer. See Motion to Dismiss, Boeing Petroleum Services,Inc., 24 DOE & 87,501 (1994). It is DOE's position that the 60-day filing period of 10 C.F.R. '708.6(d) was tolled while O'Laughlin contacted BPS' parent company seeking resolution of his complaint. For the same reason, I again deny this objection. Second, these proceedings are not "subject to and governed by" the APA as interpreted by the Supreme Court in Ardestani v. I.N.S., 112 S. Ct. 515, 518-19 (1991) (holding that proceedings that fall "under section 554" are required by statute to be determined on the record after opportunity for an agency hearing). 5 U.S.C. ' 554 delineates the scope of proceedings governed by the formal adjudication requirements of the APA. "On the record" is interpreted as a proceeding held before an administrative law judge; the OHA Hearing Officer is not required to be and generally will not be an administrative law judge.

5/ The regulations provide protection for a good faith disclosure, even if incorrect. See Universities Research Association, Inc., 23 DOE & 87,506 (1993).

6/ Cross examination of O'Laughlin revealed that many of the LSSA milestones which he identified as involving health and safety had already been designated as completed in company reports, prior to the reorganization. See Tr., Vol. II at 51.

7/ As confirmed by the testimony of Billy Mitchell, simply moving the MMIS to the O & M Directorate did not, in and of itself, have any health and safety ramification. See Tr., Vol. I at 372-73. Furthermore, the actual business context of the reorganization is significant. According to the testimony of Ted Williams, a DOE employee who oversees the SPR M&O;contract, and Jerry Siemers, President of BPS, the reorganization was undertaken and in fact encouraged by DOE primarily to remedy logistics supply failures that had occurred in BPS' management of the SPR, while O'Laughlin was ILS Manager. See Tr., Vol. II at 507-09. It is therefore no surprise that when O'Laughlin continued to raise potential performance difficulties with the breakup of the ILS, his concerns "fell on deaf ears." Testimony of Richard Dropik, Tr., Vol. I at 295. Finally, senior BPS management did not share O'Laughlin's opinion that Charlie Mitchell was incapable or unwilling to perform the LSSA milestones under the O & M Directorate. See also note 8, infra. Siemers testified: "I have all the confidence in the world in Charlie Mitchell and his performance. So I had no concern with that reorganization." Tr., Vol. II at 517.

8/ O'Laughlin's testimony revealed that, similar to the other LSSA milestones, he doubted the commitment of Charlie Mitchell, an O & M Directorate manager, to administer RCM. According to O'Laughlin, he was told by Reggie Swanson, a maintenance engineer who had previously worked under him but then worked under Charlie Mitchell, that Charlie Mitchell was "not going to do RCM." Tr., Vol. I at 121. O'Laughlin states that when he informed George, "George told me that it wasn't my concern anymore; it was Charlie Mitchell's concern." Id. at 132. O'Laughlin stated nothing more concerning the content of their conversation regarding RCM.

9/ There was a conflict in the testimony concerning George's attitude towards O'Laughlin's PHST data recommendation. O'Laughlin believed his recommendation was "turned down" by George who felt that "we didn't need to do it." (cont'd) Tr., Vol. I at 50, 126. However, George testified that he thought "it was a good idea" (Tr., Vol. II at 300) and following the reorganization, incorporated PHST data within a database maintained by the Catalogue Division under the Logistics Manager. Tr., Vol. II at 301-02. O'Laughlin testified that he was unaware that PHST data had been incorporated into a database under the Logistics Manager following the reorganization. Id. at 68.

Case No. LWA-0006

September 2, 1994

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Helen Gaidine Oglesbee

Date of Filing: February 28, 1994

Case Number: LWA-0006

This Decision involves a whistleblower complaint filed by Helen Gaidine Oglesbee (Oglesbee) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. Oglesbee has been and is currently an employee of Westinghouse Hanford Company (WHC), the management and operating contractor at the DOE's Hanford Nuclear Site. She alleges that she made health and safety complaints to her immediate supervisor from December 1990 to August 1991, and that beginning in October or November 1991, she elevated these concerns to higher management officials at WHC. Oglesbee maintains that WHC took the following reprisals against her: failing to respond to her health-related issues and denying her access to reports and analyses of those issues; removing her designation as "lead" secretary; issuing her a performance improvement plan; transferring her involuntarily to another WHC office; issuing her a performance expectations letter; issuing her written reprimands, and delaying promotions to Level IV Secretary and to permanent Plant Engineer. These alleged actions occurred during the period January 1991 through June 1993. The DOE's Office of Contractor Employee Protection (OCEP) investigated the complaint and found that no reprisals had been taken against Oglesbee that would entitle her to relief under Part 708. Oglesbee requested a hearing before the Office of Hearings and Appeals (OHA) under 10 C.F.R. § 708.9(a), reasserting her claim that reprisals were taken against her for raising health and safety concerns. The hearing in this case was held on June 15 and 16, 1994 in Richland, Washington.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's government-owned, contractor-operated (GOCO) facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. In several previous decisions issued under Part 708, OHA Hearing Officers have determined that contractors discriminated against employees for such disclosures, and directed them to provide appropriate relief. See, e.g., Ronald Sorri, 23 DOE ¶ 87,503 (1993), David Ramirez, 23 DOE ¶ 87,505 (1994), Universities Research Association, Inc., 23 DOE ¶ 87,506 (1994). In another decision, however, an OHA Hearing Officer found that the complainant failed to meet his threshold burden of proving that a disclosure warranting protection under § 708.5 had been made, and denied relief. Francis M. O'Laughlin, 24 DOE ¶ 87,___, Case No. LWA-0005 (July 29, 1994).

B. Factual Background

The following summary is based on the OCEP investigative file, the hearing transcript (hereinafter "Tr."), and the pleadings submitted to OHA by the parties. Except as indicated below, these facts are uncontroverted.

Beginning in June 1987, Oglesbee was employed by WHC at the Hanford B Plant facility. OCEP Proposed Disposition at 2. B Plant was built in 1943 as part of the Manhattan Engineer District, the secret wartime project to develop the atomic bomb. From 1944 until approximately 1952, the facility was used to produce plutonium for nuclear weapons. See WHC Post-hearing Brief at 6. It was later used to extract radioactive strontium and cesium isotopes from liquid waste, and to store cesium capsules. Id. B Plant has been inactive since the mid-1980s, but given its history of processing toxic and radioactive materials, it must be maintained in safe condition for eventual decontamination and demolition. Id.

Oglesbee was first employed as a Secretary Level III (June 1987 to September 1992). OCEP Proposed Disposition at 2. During the time the alleged reprisals took place, Oglesbee was promoted to Secretary Level IV (September 1992 to January 1993), to a Temporary Upgrade Plant Engineer (January 1993 to June 1993), and finally, to a permanent Plant Engineer (June 1993 to the present). During this same period, Oglesbee received five successive pay raises, the last of which resulted in a 26.13 percent salary increase. Id. Her present duty station is located at the Federal Building in the city of Richland. Tr., Vol. I at 124-25.

At the hearing, Oglesbee's counsel set forth her allegations of reprisal in a chronology highlighting "seven significant periods of disclosure . . . almost immediately followed by some sort of an adverse personnel action." Tr., Vol. I at 9.

First, Oglesbee alleges that in December 1990, she told her supervisor, the late Robert Higbee, that she would not tolerate an unhealthy work site, and also wrote a memo to Michael Grygiel, then B Plant manager, complaining of intimidation of employees at B Plant who raised safety concerns. Id. at 10-11. In January 1991, and allegedly in reprisal for raising these concerns, Oglesbee was removed from her position as B Plant Operations lead secretary. Id. The second alleged reprisal was a Performance Improvement Plan issued to Oglesbee on March 26, 1991, which Oglesbee claims was a response to a March 19, 1991 memo she wrote to management requesting permission for the B Plant clerical staff to participate in Operation Clean Sweep sessions. Id. at 12-13. Third, Oglesbee alleges that in July 1991 she was transferred from her position as secretary to Higbee in response to disclosures she made during meetings that month with Michael Dickinson of the WHC employee concerns office. Id. at 13-14.

On November 3, 1991, the beginning of the fourth period of alleged reprisal, Oglesbee submitted a 13-page document to WHC management containing her health and safety concerns, to which Grygiel and WHC Vice- President Ronald Bliss responded in a January 3, 1992 memorandum to Oglesbee. Id. at 14-15. On January 10, 1992, a meeting was held in Bliss' office in which it was decided to return Oglesbee to the position from which she had been transferred. Id. at 15-16. In a second meeting held the same day, WHC management decided not to return Oglesbee to her former position, a decision she alleges was a reprisal in response to her health and safety complaints. Id. at 16.

Two alleged acts of reprisal took place during the fifth period set forth by the complainant. Oglesbee was issued a performance expectations letter on January 30, 1992, by her supervisor, Ray Menard, which she alleges was in retaliation for complaints she had made in a January 28, 1992 meeting with Larry Musen, the DOE Richland Field Office (DOE/RL) employee concerns program manager. Id. at 16-17. In addition, on February 26, 1992, one day after WHC received a letter from the DOE regarding the issues raised by Oglesbee, she received a written reprimand from Menard. Id. at 17-18. The sixth period began when Musen filed a report on April 5, 1992 stating that Oglesbee may have been exposed to hazardous materials and that WHC management appeared to be "scared of" Oglesbee. Id. at 18. On April 6, 1992, Oglesbee wrote to the DOE stating that WHC had not adequately responded to her concerns. Id. at 18. The

following day, Menard issued a second written reprimand to Oglesbee. Id. at 19.

The final reprisal alleged by Oglesbee occurred after she had filed her complaint under Part 708 on August 21, 1992, triggering OCEP's investigation of her complaints. In January 1993, Oglesbee was promoted to the position of temporary plant engineer, an action which Oglesbee contends was an attempt to persuade her to stop pursuing her concerns. Id. at 20. Oglesbee alleges that because she continued to raise health and safety concerns, she was informed by B Plant manager Duane Bogen on May 20, 1993 that her promotion to plant engineer would not become permanent until OCEP's investigation was completed. Id. at 20- 21.

WHC maintains that Oglesbee did not articulate specific health and safety concerns prior to November 1991, and steadfastly denies that any of the actions taken against the complainant were in reprisal for her protected disclosures. Tr., Vol. I at 24; Vol. II at 7. Rather, the company contends that these actions were taken in response to Oglesbee's interpersonal conflicts with supervisors and coworkers, and in response to deficiencies in her performance. Tr., Vol. I at 24-25. The company also notes that the letters of reprimand issued to the complainant were ordered removed by a WHC Employee Appeals Board, and that Duane Bogen's message regarding the delay in Oglesbee's permanent promotion to Plant Engineer was withdrawn and Oglesbee was quickly promoted to that position. Therefore, WHC argues that there is no basis for the complainant's claim that she is entitled to relief under Part 708 for any of these actions. Tr., Vol. II at 4.

C. Procedural History of the Case

On August 24, 1992, Oglesbee filed a complaint with DOE/RL pursuant to 10 C.F.R. Part 708. On October 2, 1992, after an unsuccessful attempt was made by DOE/RL to reach an informal resolution, Oglesbee's complaint was forwarded to OCEP to institute a formal investigation. OCEP conducted an on-site investigation of Oglesbee's allegations of reprisal and issued a Report of Investigation and a Proposed Disposition on February 18, 1994. Before the on-site phase of OCEP's investigation, Oglesbee alleged that WHC had threatened to extend her status as Temporary Plant Engineer, rather than promoting her to a permanent position. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that Oglesbee had made protected disclosures related to her health and safety concerns, but that a preponder- ance of the evidence did not support a finding that the disclosures were a contributing factor in any of the allegedly retaliatory actions taken against her. 1/

On February 28, 1994, Oglesbee submitted her request for a hearing under 10 C.F.R. § 708.9 to OCEP. On March 10, 1994, OCEP transmitted that request to the OHA, and a Hearing Officer was appointed. On May 4, 1994, procedures and a briefing schedule were established for the hearing in this case under § 708.9(b).

On April 5, 1994, WHC filed a Motion to Dismiss the proceeding, and submitted a statement in support of that Motion on May 13, 1994. The complainant filed a reply on May 18, 1994. In its statement, WHC maintained that Oglesbee's August 24, 1992 complaint was not timely filed, and that the complaint was insufficient to confer jurisdiction on OCEP to investigate Oglesbee's allegations. On May 26, 1994, I denied WHC's Motion to Dismiss, having determined that the acceptance of Oglesbee's complaint was a reasonable exercise of discretionary authority under Part 708 by the OCEP Director. See Westinghouse Hanford Co., 24 DOE ¶ 87,502 (1994).

The hearing was held in Richland, on June 15 and 16, 1994. 2/ At the close of the complainant's case, WHC again moved to dismiss the complaint. Tr., Vol II at 3-6. First, WHC reiterated its procedural arguments that the Oglesbee's complaint was insufficient to confer jurisdiction on OCEP under Part 708, and that the complaint was untimely filed. Second, WHC argued that the complainant had not met her burden of proving by a preponderance of the evidence that she had made disclosures protected under Part 708 and these disclosures were a contributing factor in personnel actions taken against her. WHC's procedural arguments were identical to those in its written motion, and I rejected them for the same reasons. Tr., Vol. II at 8-9; see Westinghouse Hanford Co., 24 DOE ¶ 87,502 (1994).

On the substantive issues, I dismissed the complainant's allegation that WHC failed to provide access to reports and analyses regarding her health concerns, on the grounds that this was not a discriminatory act that would form the basis for granting relief under Part 708. Tr., Vol. II at 8; see 10 C.F.R. § 708.5(a). The remaining allegations were not dismissed because the complainant had presented sufficient evidence, which, if uncontroverted by WHC, might have led me to conclude that she had made protected disclosures followed closely in time by adverse personnel actions that constituted violations of Part 708. Tr., Vol II at 8-16. Even though there were close calls on many of the issues at that stage in the case, I decided to deny the motion and hear the company's evidence. See Fed. R. Civ. Proc. 52(c). 3/

At the conclusion of the hearing on June 16, the parties elected to forego oral argument, and requested permission to file post-hearing briefs 30 days after they received copies of the transcript. Their post-hearing briefs were filed on August 8, 1994.

After considering the record established in the OCEP investigation, the evidence presented by both parties at the hearing, and their post-hearing briefs, I now conclude that with regard to certain of the allegations raised, the complainant failed to meet her burden to prove by a preponderance of the evidence that she made substantial and specific disclosures concerning health and safety to WHC. In those instances where the complainant made protected disclosures under Part 708 followed closely in time by adverse personnel actions, I find that WHC has proven by clear and convincing evidence that it would have taken the same actions absent her disclosures, or that WHC has already provided the complainant with an adequate remedy for the actions taken against her. Accordingly, I conclude that no relief is warranted under § 708.10.

II. Legal Standards Governing This Case

Proceedings under 10 C.F.R. Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee. See David Ramirez, 23 DOE ¶ 87,505 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has "[d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences . . . a substantial and specific danger to employees or public health and safety." 10 C.F.R. § 708.5; see also Francis M. O'Laughlin, 24 DOE ¶ 87,___, Case No. LWA-0005 (July 29, 1994).

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993), citing McCormick on Evidence § 339 at 439 (4th ed. 1992).

B. The Contractor's Burden

If the complainant has met her burden of proof by a preponderance of the evidence that her protected activity was a "contributing factor" to the alleged adverse actions taken against her, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993), citing McCormick on Evidence, § 340 at 442 (4th ed. 1992). As a practical matter, the application of these standards means that if Oglesbee has established that it is more likely than not that she made a protected disclosure that was a contributing factor to an adverse personnel action, WHC must convince us that it is highly probable that the company would have taken this action even if Oglesbee had not raised any health and safety concerns.

III. Analysis

A. Oglesbee's Removal as Lead Secretary

Under 10 C.F.R. Part 708, Oglesbee has the burden of establishing by a preponderance of the evidence that a disclosure of health and safety issues was a contributing factor in her removal from the position of lead secretary in January 1991. I find that the Complainant has not met this burden. Specifically, Oglesbee has not established that she ". . . [d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor) information that [she] in good faith believes evidences . . . a substantial and specific danger to employees or public heath and safety." 10 C.F.R. § 708.5 (emphasis added). See O'Laughlin, 23 DOE ¶____, Case No. LWA-0005 (July 29, 1994). Moreover, WHC has shown by clear and convincing evidence that intra-office personnel conflicts between December 1990 and January 1991 instigated Oglesbee's removal from the position of lead secretary. 4/

In December 1990, Oglesbee was designated as a lead secretary by Robert Higbee, her immediate supervisor in B Plant Operations. On December 8, 1990, the complainant had a doctor's appointment concerning medical problems which she thought were related to occupational exposures. Tr. Vol. I at 132. After this appointment, which complainant's counsel characterized as a "turning point for Ms. Oglesbee," she allegedly made two different protected disclosures of health and safety problems to her superiors. Tr. Vol. I at 10. First, on December 8, Oglesbee claims she told Higbee that she wasn't going to "tolerate the exposures any more." Tr. Vol. I at 132. However, Higbee died in November 1991, and there is no corroborating evidence in the record about the content of Oglesbee's dialogue with him on this occasion. Second, on "approximately December 11, 1990," the complainant claims that she sent a note, entitled "Product and Solution Data Sheets," to Higbee's supervisor, Michael Grygiel, "which identified [her] safety concerns." OCEP Report of Investigation (hereinafter "ROI"), Ex. 1 at 4. Oglesbee argues that these two disclosures resulted in her removal from the unofficial position of lead secretary in January 1991, in "[r]etaliation for safety and health issues." Tr. Vol. I at 133.

With respect to her removal as lead secretary, I find that Oglesbee has not met her burden of proving that a protected disclosure described under § 708.5 occurred, and that such act was a contributing factor in an adverse personnel action. See David Ramirez, 23 DOE ¶ 87,505 at 89,029 (1994). Although Oglesbee alleges that she complained to Higbee about "exposures," her December 8, 1990 statement to him does not constitute a protected disclosure about a "specific danger." At the hearing, her testimony about this occasion was vague, and it was not corroborated by any other contemporaneous evidence. As noted in O'Laughlin, to form a basis for relief under Part 708, a complaint must be more specific and it must point to a substantial danger.

As for the other alleged disclosure during this period, Oglesbee has failed to prove that a note from her actually reached Grygiel before the alleged reprisal in January 1991. OCEP Exhibit 1 at 5. She admits that the note could have gotten lost, since it was sent through Plant mail distribution. Due to this possibility, the complainant later reattached it to "a more formal safety document dated 11/3/91." Id. There is nothing in the record which shows that Grygiel actually received Oglesbee's note before her removal as lead secretary. Consequently, the note cannot be considered a protected disclosure under § 708.5 which was a contributing factor to that action.

Moreover, WHC has demonstrated by clear and convincing evidence that "Oglesbee's conduct during the period of time that she was the lead secretary was disruptive and was negatively impacting her co-workers whom she was 'leading,'" and therefore, her removal as lead secretary was unrelated to health and safety issues. WHC's Post-Hearing Brief at 19. At the hearing, I heard from numerous WHC employees, including Vikki Chappelle (an employee at B Plant from May 1990 to May 1992), who testified that the complainant was abusive during meetings that were called in an attempt to resolve personnel conflicts between Oglesbee and other employees:

She acted like she was going to get out of her chair. She wouldn't let you talk at all. She was almost to the

point of screaming. Her voice was very, very loud and to me . . . that's abusive . . . . Tr. Vol. II at 45.

I did not permit WHC to call a number of additional witnesses whose testimony would have been duplicative of Chappelle's testimony. Instead of presenting these witnesses at the hearing, counsel for WHC made proffers of what their testimony would have been, and counsel for Oglesbee entered into stipulations based on those proffers. These stipulations confirmed that other WHC employees had similar clashes with the complainant which negatively affected their work and "had nothing to do with any safety issues raised by Oglesbee." Tr. Vol. II at 254-256.

Based on the foregoing, I find that Oglesbee has neither "establish(ed) by a preponderance of the evidence that there was a disclosure . . .described under § 708.5" nor proved that it was a "contributing factor" in her removal from the position of lead secretary in January 1991. 10 C.F.R. §708.9 (d). Moreover, WHC has proven that there was an independent, non-discriminatory reason for Oglesbee's removal as lead secretary, even though it is not required to do so under the regulations. 10 C.F.R. § 708.9(d). In this instance, WHC management took what it saw as the necessary step to resolve a disruptive personnel situation and removed certain duties from the complainant.

B. Performance Improvement Plan

Oglesbee alleges that the second reprisal was a Performance Improvement Plan issued to her on March 26, 1991. This occurred during a time when WHC instituted a safety program known as Operation Clean Sweep, to encourage employees to write their concerns about health and safety issues on cards which they submitted. Tr. Vol I. at 105. On March 19, 1991, Oglesbee wrote a memo to management seeking permission for the B Plant clerical staff to participate in Operation Clean Sweep program sessions.

The record shows that on March 26, 1991, a Performance Improvement Plan prepared by Higbee was delivered to Oglesbee by Dan Lawrence, a WHC Human Resources Manager. It states that Oglesbee should "confine dealings during work hours to issues which pertain to: the direct operation of the B Plant Operation Manager's Office, personnel who directly deal with B Plant Operations Manager . . . , and preparation of correspondence, tracking of actions and resolutions of issues included in your job description." WHC Exhibit 1. Higbee also indicated that Oglesbee's "current unacceptable performance levels must change to improve your effectiveness on the job and your relationship with other plant personnel." Id. The complainant argues that her March 19 memo precipitated the Performance Improvement Plan, and that the memo is evidence that she made WHC aware of her health and safety concerns. See Complainant's Post Hearing Brief at 11. Oglesbee also testified that she filed Clean Sweep cards to voice her opinion about safety issues without reprisal. Tr., Vol. 1 at 134.

After reviewing the record, I find that like the complainant in the O'Laughlin case, Oglesbee has not met her threshold burden of showing that she made any protected disclosures during this period. For example, on one of her Clean Sweep cards Oglesbee wrote that "managers need to listen to all employees in a fair consistent manner, giving clear, concise directives that can be enforced by management." She further stated that "management needs to listen and handle with fairness and promptness the complaint of any employee." WHC Ex. 3. These writings simply do not raise a substantial and specific danger to health and safety. Likewise, Oglesbee's March 19 memo only vaguely indicated that she had health and safety concerns. In that memo, Oglesbee wrote "I am sure we have common complaints about our environment and procedure that should be discussed at this time." OCEP Ex. 10. Evidence that safety [and health] in the most general sense was referred to does not satisfy the standard prescribed in § 708.5 that the complainant must show she actually disclosed information which in good faith she believed evidences a substantial and specific danger. In O'Laughlin, the Hearing Officer found that the complainant failed to make a prima facie case when the evidence did not show that he disclosed information evidencing any substantial and specific health and safety concerns. The same conclusion is warranted regarding this particular aspect of Oglesbee's claim.

In addition to Oglesbee not meeting her threshold burden, WHC has shown by clear and convincing

evidence that the Performance Improvement Plan was issued in response to Oglesbee's disruptive interaction with co- workers which caused a decline in her work performance, and had nothing to do with her alleged mention of health and safety issues. During the hearing, several witnesses testified that Oglesbee was the cause of a disruptive work environment. For example, Vikki Chappelle described the situation as follows:

The job that I was doing at the time I liked very well but it became almost a regular basis when I'd wake up in the morning that I didn't want to go work . . . because of the conflicts at the office with Gai [Oglesbee]."

Tr., Vol. II at 46 and 47. See also the testimony of Ken Strickler, Tr., Vol. II at 238-247, and the stipulated testimony of Irene Palfrey and Tammy Doty, Id. at 255-6. Under these circumstances, there is no basis in the record for finding that the Performance Improvement Plan was an act of reprisal by Westinghouse that violated Part 708.

C. Transfer

Oglesbee alleges that following the issuance of the Performance Improvement Plan in February 1991, Higbee continued to retaliate against her for escalating her health and safety concerns with his superiors. Tr., Vol. I at 13. In July 1991, Oglesbee was transferred from her secretarial position in B Plant Operations to a similar position in B Plant Production Control. Oglesbee testified that she expressed her dissatisfaction with the possibility of a transfer. Tr., Vol I at 137. She was told that her transfer was suggested to increase her "organizational efficiency" and to relieve tensions between her and Higbee. Oglesbee believes that her transfer was retaliatory because it occurred close in time with meetings she had in July 1991 with Michael Dickinson of the WHC Employee Concerns Program office. She claims she raised health and safety concerns in these meetings. Dickinson testified that in these early meetings with him, Oglesbee primarily discussed the interpersonal problems she had with Higbee. Tr., Vol. II at 60. He indicated that the only health matter Oglesbee actually raised before the transfer concerned the alleged failure to issue a proper occurrence report after an incident in which a small quantity of asbestos fell through the ceiling into Higbee's office in 1989. Tr., Vol. I at 95-6. According to Dickinson, it was not until later in the process of working with Oglesbee--well after the transfer took place in July 1991-- that she began to articulate additional health and safety concerns in more specific detail. Id. Nevertheless, I find that the mention of the asbestos incident to Dickinson around the time of the transfer is sufficient to meet Oglesbee's burden of proving by a preponderance of the evidence that her disclosure was a contributing factor to the transfer. See, e.g., Marano v. Dep't of Justice, 2 F.3d 1137 (Fed. Cir. 1993).

The burden therefore shifts to WHC to prove by clear and convincing evidence that the transfer would have taken place even in the absence of Oglesbee's disclosure to Dickinson of the asbestos incident. As indicated below, I find that WHC has met that burden. There is ample evidence to show Oglesbee's transfer was not a reprisal for protected disclosures, but was instead the result of her problems with her supervisor and interpersonal conflicts with her co-workers. For example, Ken Strickler testified that Oglesbee became loud, threatening and disruptive during a meeting convened by the WHC Human Resources office to resolve conflicts between her and other clerical employees who worked in the same area. Tr., Vol. II at 246. During this period, WHC managers diligently attempted to address Oglesbee's personnel problems, and it is clear that they sincerely believed her transfer would provide a fresh start and an opportunity to work in a new environment. Tr., Vol. II at 137-8. Moreover, the record indicates that Oglesbee initially benefitted from her transfer. In October 1991, she received a high rating on her performance appraisal from Ray Menard, her new manager. Oglesbee herself indicated in her comments on that appraisal that she enjoyed her new job with Production Control. See WHC Exhibit 6, Tr., Vol. I at 212.

As indicated in the preceding discussion, I find that WHC has shown by clear and convincing evidence that it would have transferred Oglesbee absent any health and safety concerns raised by her. Accordingly, I find that Oglesbee's transfer in July 1991 to B Plant Production Control was not a violation of Part 708.

D. WHC's Decision Not to Return Complainant to B Plant Operations

In October 1991, Oglesbee told Dickinson that she wanted to return to her former position in B Plant Operations. Tr., Vol. II at 61. In response to this request, two meetings were held on January 10, 1992, with WHC Vice- President Ron Bliss, Dickinson, and others in attendance. The first meeting concluded with a decision to return Oglesbee to her former position. In the second meeting, which included the new B Plant Manager, Duane Bogen, the earlier decision was reversed and it was decided that Oglesbee would remain in her position in Production Control.

Tr., Vol. I at 98-101.

At the hearing, Oglesbee's counsel described this latter decision as one of the adverse personnel actions taken against the complainant, although this was not one of the allegations raised by Oglesbee in her complaint to OCEP. Tr., Vol I. at 15-16. This claim is without merit. I found above that WHC's initial decision to transfer Oglesbee from her job in Operations did not violate Part 708 since it had two legitimate purposes: (i) to relieve tensions in Operations, and (ii) to give her a fresh start in a new office. The transfer was successful initially in achieving its goals, and there is no basis for concluding that the decision to keep her in Production Control was a "discriminatory act" as defined in 10 C.F.R. § 708.4.

In addition, rather than constituting a reprisal, WHC's handling of the complainant's request to return to B Plant Operations demonstrates that the company separated Oglesbee's safety concerns from her personnel matters, e.g., her disagreements with Higbee and coworkers, and her desire to return to her former position. Dickinson testified that the company took this approach as Oglesbee set forth more specifically her complaints of "exposures," including the following: the incident where asbestos particles fell into Higbee's office (October 1989); the expulsion of dust-contaminated air by the plant's "fresh air" recycling fan, the Buffalo Forge Unit (between 1987 and 1990); the leaking of unknown liquids through the ceiling from the plant's Aqueous Make-Up area onto the wall in Oglesbee's office (1987- 1991); and the leaking of liquid from a light ballast on one occasion in Higbee's office (either 1989 or 1990). Tr., Vol. II at 63-64; see OCEP Report of Investigation at 2, 6-9.

There is no dispute that the company gave separate consideration to Oglesbee's safety disclosures and her personnel problems, although the complainant argues this was done "to deflect attention given to [her] complaints by the DOE and [WHC] Employee Concerns." Complainant's Post-Hearing Brief at 36. After listening to the witnesses at the hearing, I am convinced that WHC's attempt to investigate and address Oglesbee's safety issues on a separate basis from her personnel problems was a rational response to the complaints she raised. Moreover, Dickinson testified that it was not unusual for the company to deal with an employee's concerns in this manner. Tr., Vol. II at 64. An example of this approach is a January 3, 1992 memorandum from Grygiel, then B Plant Manager, which responded to a November 18, 1991 memorandum in which Oglesbee raised both personnel and safety issues. OCEP Exs. 28 and 31. In that memo, Grygiel addressed each item of the complainant's personnel concerns, and then stated with regard to her safety issues that, although none of the issues raised appeared to be a current problem, any additional safety issues were to be brought to "the immediate attention of your manager or to plant management." OCEP Ex. 31.

Finally, in a January 22, 1992 memo to the complainant, WHC President Thomas Anderson affirmed the company's decision to keep Oglesbee in her Production Control position, and stated that his memo was "our final response to your employee concern." OCEP Ex. 38. Dickinson testified that while he considered her personnel issues closed by the Anderson memo, he continued to investigate the safety issues raised by Oglesbee. Tr., Vol. II at 64.

E. Performance Expectations Letter and Reprimands

In early 1992, Oglesbee received a Performance Expectations Letter and two letters of reprimand, each of which she contends was a reprisal for her health and safety disclosures. These were given to the

complainant by Ray Menard, Oglesbee's supervisor after she was transferred to B Plant Production Control. Menard testified that Oglesbee initially performed well in her job, but that in late 1991 he became concerned because Oglesbee was spending a great deal of time on the telephone in the morning during the office's peak hours. He observed that Oglesbee would at times not answer incoming telephone calls, and that certain work was not being performed in a timely manner, such as producing daily reports and processing time cards. Tr., Vol. II at 205-09. Menard testified that he related his concerns to Oglesbee in November 1991, and that after her performance did not improve, he issued her a Performance Expectations Letter in January 1992. Id. at 209-11. On February 26, 1992, after continuing dissatisfaction with her performance and two contentious meetings with the complainant, Menard gave Oglesbee a letter of reprimand. Id. at 211-16; OCEP Ex. 82. A second reprimand was issued on April 7, 1992, following complaints from B Plant Deputy Manager Russ Murkowski that another employee, Sandra Rigney, had received unwanted telephone calls from the complainant. Tr., Vol. II at 216-18; OCEP Ex. 84.

It is undisputed that the Performance Expectations Letter and reprimands were issued to Oglesbee at a time when she was making continuing complaints to WHC management and the DOE which included health and safety concerns. In fact, it was Menard's observation that Oglesbee was not answering telephones or performing timely work because of the time spent on her concerns. See Tr., Vol. II at 223-23. Thus, an inference can be drawn that Oglesbee's protected disclosures were a contributing factor in these personnel actions. See, e.g., Ronald Sorri, 23 DOE ¶ 87,503 at 89,009-10 (1993).

The burden therefore shifts to WHC to prove by clear and convincing evidence that the same actions would have been taken against Oglesbee absent her protected health and safety disclosures. The company has not met this burden. Admittedly, the complainant's concerns were not confined to health and safety issues, and it is clear that some of Oglesbee's activities were not protected under the regulations. For example, it appears that the second reprimand issued to Oglesbee was prompted at least in part by complaints from the B Plant deputy manager about her annoying phone calls to Sandra Rigney. Tr., Vol. II at 217-18; OCEP Ex. 84. Nonetheless, the second letter of reprimand refers to "14 written communications and numerous phone calls" initiated by Oglesbee in pursuing her concerns with WHC and the DOE. OCEP Ex. 84. Although the record is not definitive on this point, the burden of persuasion remains with WHC, and there is not clear and convincing evidence that the Performance Expectations Letter and reprimands would have been given to the complainant if it were not for her protected activities.

To be sure, every employer has a strong interest in running an efficient organization, and it is not the purpose of Part 708 to hinder the ongoing work of DOE contractors. As a manager, Menard faced a dilemma. There is no evidence that his actions were taken in response to the substance of Oglesbee's complaints. Rather, his main concern appeared to be that Oglesbee complete her work on time, and he saw that the time spent on her concerns was getting in the way of effective performance. However, he also stated in his testimony that Oglesbee would have had 3-4 hours per day to pursue her complaints during the office's non-peak hours, so there was clearly room here to accommodate the interests of both employer and employee. Tr., Vol. II at 233. Unfortunately, the record indicates that this was never communicated to Oglesbee, either orally or through the disciplinary letters issued to the complainant. Id. at 237-38.

Thus, while Menard claims that he never intended to discourage Oglesbee from expressing her concerns, the Performance Expectations Letter and letters of reprimand as written could reasonably have been perceived as an attempt to do just that. It would therefore be consistent with the stated policy of the Part 708 regulations to conclude that such letters should not appear in a complainant's personnel file. See 10 C.F.R. § 708.3 (employees should be free to make disclosures "without fear of reprisal"). However, the regulations also favor resolution of whistleblower complaints through internal company grievance procedures. See 10 C.F.R. § 708.6. In the present case, a WHC Employee Appeals Board ordered that the letters of reprimand be removed from Oglesbee's personnel file on April 27, 1992. Colleen Lloyd, a WHC Personnel Records Custodian, confirmed that Oglesbee's personnel file does not contain the January 30, 1992 Performance Expectations Letter, or the two letters of reprimand. Tr., Vol II at 24. The Board's decision to remove the letters of reprimand was based on its finding that Menard had failed to follow the WHC progressive discipline policy. It did not conclude that the disciplinary letters were issued in

retaliation for the reporting of health and safety concerns. Tr., Vol. II at 120-3; OCEP Ex. 86. Regardless of the reason for its action, however, I conclude that the relief ordered by the Board renders this issue moot.

My conclusion regarding the mootness of the reprimand issue is in accord with two relevant federal court decisions. One is a U.S. Supreme Court case which discusses the issue in the Title VII context. County of Los Angeles v. Davis, 440 U.S. 625 (1979). The court stated that a controversy becomes moot when "(1) it can be said with assurance that 'there is no reasonable expectation . . .' that the alleged violation will recur . . . and (2) interim relief or events have completely and irrevocably eradicated the effects of the alleged violation." Id. at 631 (citations omitted) (quoting United States v. W. T. Grant Co., 345 U.S. 629, 633 (1953)). In that case, the conditions for mootness were met because (1) there was no reasonable expectation that the City would go back to using an old civil service examination that had been found to be discriminatory, and (2) the City's changed hiring practices had eradicated the effect of the past discrimination.

In the present case the conditions for mootness are met because (1) given WHC's treatment of Oglesbee since the reprimands, there is no reason to think that this particular problem will recur, and (2) the effects of the reprimands were eradicated when they were removed from her personnel file.

The second case is a federal employee whistleblower case decided by the U.S. Court of Appeals for the D.C. Circuit, and the facts are analogous. Frazier v. Merit Sys. Protection Bd., 672 F.2d 150 (D.C. Cir. 1982). In this case, the MSPB found that Frazier had been transferred improperly based on his exercise of EEO appeal rights. Frazier appealed the decision because the Board did not find, as he had contended, that the transfer was prompted by disclosures he made to Congress. He therefore claimed that the decision had a continuing "chilling" effect on him. The court found that "[e]ven if we determined that the Board's decision on this point was incorrect, Frazier would be entitled to no more relief than he has already received. Under these circumstances, Frazier presents us with no continuing controversy and we will therefore dismiss his petition . . ." Id. at 160-61.

Similarly in the present case, regardless of the reason that the WHC Appeal Board found that the reprimands should be removed, and whether or not we think that the Appeal Board should have found that Oglesbee's disclosures led to the reprimands, Oglesbee is entitled to no more relief than she already received. As OCEP noted in its Proposed Disposition, the proper remedy for the reprimands, if they had been found to be reprisals, would have been the removal of the material from her personnel file.

F. Delay in Promotion to Secretary IV

In September 1992, under a new supervisor, Don Bailey, Oglesbee was promoted to Secretary Level IV. Oglesbee alleged in her complaint to OCEP that this promotion would have taken place sooner were it not for her health and safety disclosures. While the complainant did not present any specific evidence at the hearing to support this allegation, WHC offered the testimony of Colleen Lloyd, a WHC Personnel Records Custodian. Lloyd testified that the five and one-half years spent by Oglesbee in her Secretary Level III position was not an unusually long time for an employee to remain in that position, and that the decision to promote secretaries is left to individual managers. Tr., Vol. II at 25.

Given the lack of evidence presented by the complainant on this issue, and the conflicts Oglesbee experienced with her supervisors and co-workers described above which occurred prior to any specific health and safety disclosures, it would be difficult to conclude that Oglesbee was not promoted because of protected activity. In fact, the complainant spent a comparatively brief time in her Level III position from the time of her initial disclosure in July 1991 to her promotion to Level IV Secretary in September 1992. I therefore find that Oglesbee has failed to meet her burden of showing by a preponderance of the evidence that her protected disclosures were a contributing factor to any delay in her promotion to a Level IV Secretary.

Even though WHC has no burden of going forward with the evidence on this aspect of the claim, the

record indicates that WHC management attempted to work with Oglesbee to find a position that would suit both her and the company, while at the same time demonstrating a concern for the health and safety issues she raised. For example, as discussed above, WHC continued to investigate the health and safety issues raised by the complainant after her personnel matters were considered closed. On July 9, 1992, Douglas Falk, a WHC Industrial Hygienist, issued a comprehensive report in response to Oglesbee's health and safety complaints. See OCEP Ex. 48. There is no claim that the report was not issued in good faith. In addition, when Oglesbee was promoted to the position of Plant Engineer, she was given the responsibility of monitoring employees' hazardous exposure concerns as part of the company's "ALARA" (As Low As Reasonably Achievable) program. Tr., Vol. I at 152-54. It is the circumstances surrounding this promotion that are the focus of Oglesbee's final allegation of reprisal.

G. Delay in Promotion to Permanent Plant Engineer

Oglesbee alleges that the final reprisal taken against her occurred close in time after she filed her complaint under Part 708 on August 21, 1992. Tr., Vol. I at 20. In January 1993, Oglesbee had been promoted to a Temporary Plant Engineer and was promised that her promotion would become permanent within six months. See OCEP Report of Investigation at 41. However, as explained at the hearing, promotions had to follow a routine procedure in WHC's personnel system under which employees were required to "post" for new positions. Tr., Vol. II at 164.

Duane Bogen, Plant Engineer, described the WHC posting process:

The Westinghouse system of filling positions, with the exception of management positions, is that you would fill out a position description and submit it to human resources, they would then publish this site-wide. All individuals on site who thought they would qualify and had interest in the position that was being advertised or posted could then apply for it.

Tr., Vol. II at 164-165. Bogen further testified that the manager of records (in Human Resources) would then sort through these postings, tentatively select an eligible applicant, and determine the pay grade based upon the applicant's qualifications. The job would then be offered to the applicant at that rate of pay, and he or she could decide whether to accept the offer. Id. A temporary upgrade did not require the use of this system, and it could last anywhere from a few months to a year. Tr., Vol. II at 175.

In May 1993, Oglesbee sent an electronic mail message to Bogen after she had occupied the position of Temporary Plant Engineer for five months, and after being informed by him that her temporary position would be extended an additional six months (until December 31, 1993). Tr., Vol. II at 172. Bogen testified that Oglesbee's message queried whether WHC was having "a problem with her upgrade because of her ongoing concern issues." Tr., Vol. II at 174. He responded with the following message:

You are doing OK. Very well in fact, according to Don Bailey. Until the investigation is over, and all recommendations have been made, it made sense to us to leave the situation as "Status Quo". It has nothing to do with your work performance.

Tr. Vol. II at 184.

When Bogen's superior, Ron Bliss, became aware of this response, he verbally reprimanded Bogen for taking an improper action, and immediately promoted Oglesbee to Permanent Plant Engineer effective May 24, 1993, thereby by-passing the normal requirements of the WHC posting procedure. Tr., Vol. II at 183.

Oglesbee's counsel contends that Bogen's e-mail message is "direct evidence that the extension of complainant's temporary upgrade was (1) a retaliatory action and (2) was taken solely because complainant filed a complaint under 10 C.F.R. 708." See Complainant's Post-Hearing Brief at 15. Standing alone, this evidence is enough to satisfy the complainant's burden of showing by a preponderance of the evidence that her health and safety concerns were a contributing factor to the delay in making permanent

her promotion to Plant Engineer. Thus, the burden is shifted to WHC to show by clear and convincing evidence that the delay in making Oglesbee's promotion permanent would have occurred even in the absence of her whistleblowing activities. The record shows that Bogen had two reasons for his action. First, he testified that:

My understanding is that generally [when] investigation, labor-type investigations are made, you try to leave the situation as is, status quo, you don't promote people, you try to leave things as is until it shakes out and truth is known and whatever decisions are made.

Tr. Vol. II at 178. Unfortunately, Bogen did not consult the WHC Legal Department before sending his reply to Oglesbee's e-mail message, or he would have learned that his first reason was incorrect. Id.

Second, and more importantly, Bogen went on to explain that there was an independent procedural reason for delaying the promotion of Oglesbee to the permanent position. WHC was downsizing its security guard force during this period. As a result, the normal posting process for all WHC jobs, including the Permanent Plant Engineer position, was temporarily halted while the effort was under way to place the guards whose jobs were eliminated into other positions at the Hanford Site. Tr., Vol. II at 175. Until the Plant Engineer job could be posted, Bogen lacked the authority to promote Oglesbee to the permanent position. Id. at 178. In other DOE whistleblower cases, we have found violations of Part 708 when contractors departed from their normal personnel procedures to the detriment of the complainant. E.g., Ronald Sorri, 23 DOE ¶ 87,503 (1993); see also Deford v. Sec'y of Labor, 700 F.2d 282 (6th Cir. 1983) (evidence showed that the agency did not follow its normal procedure in transferring whistleblower). In this case, however, the record indicates that WHC was merely following its normal personnel procedures by not making Oglesbee's promotion permanent until the job could be posted.

Based on the record developed in this proceeding, I find that WHC has shown by clear and convincing evidence that there were independent, non- discriminatory reasons which justified the delay in promotion. Although Bogen's e-mail message may have appeared to Oglesbee to be a reprisal, Bliss immediately recognized the problem and exercised his authority as WHC Vice- President to remedy any potential harm to Oglesbee. In doing this, the company by-passed its normal personnel procedures, but its action worked to Oglesbee's great advantage: she got the promotion without waiting until the position could be posted, and she received a 26 percent increase in salary. Under these circumstances, there is no basis in the record for finding that the delay in Oglesbee's promotion to permanent Plant Engineer was an act of reprisal by Westinghouse that violated Part 708.

III. Conclusion

As set forth above, I have determined that with regard to certain of the allegations raised, the complainant failed to meet her burden of proving by a preponderance of the evidence that she made substantial and specific disclosures concerning health and safety to WHC. In those instances where the complainant made protected disclosures under Part 708 followed closely in time by adverse personnel actions, I find that WHC has proven by clear and convincing evidence that it would have taken the same actions absent her disclosures, or that the complainant has already been provided an adequate remedy for the actions taken against her. Accordingly, I conclude that the complainant has failed to establish the existence of any violations of the DOE Contractor Employee Protection Program for which further relief is warranted under § 708.10.

It is Therefore Ordered That:

(1) Helen Gaidine Oglesbee's request for relief under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director of the Office of Contractor Employee Protection.

Thomas O. Mann

Hearing Officer

Office of Hearings and Appeals

Date: September 2, 1994

1/ With regard to Oglesbee's complaints that she was issued written reprimands and that her promotion to Plant Engineer was delayed, the OCEP found that these issues had already been resolved by WHC in accordance with the relief OCEP would have recommended had it found that the actions were retaliatory. WHC removed the written reprimands from Oglesbee's personnel file in April 1992, and she was promoted to Plant Engineer in June 1993.

2 / OHA staff attorneys Steven J. Goering and Kimberly A. Jenkins attended the hearing, and along with OHA staff analyst Stephani Ratkin, assisted in the drafting of this decision.

3 / As characterized by one federal court, a denial of defendant's motion to dismiss at the close of plaintiff's case "amounts to nothing more than a refusal to enter judgment at that time. At most it constitute[s] a tentative and inconclusive ruling on the quantum of plaintiff's proof." See Sanders v. General Services Admin., 707 F.2d 969, 972 (7th Cir. 1983) (quoting Armour Research Foundation of Illinois Institute of Technology v. Chicago, Rock Island & Pacific Railroad, 311 F.2d 493, 494 (7th Cir.), cert. denied, 372 U.S. 966 (1963)).

4/ The unofficial title of "lead secretary" is not a job position recognized by WHC's Human Resources department and therefore, has no pay or benefits attached to it. (WHC's Post-hearing Brief at 17).

Case No. LWA-0010

January 4, 1995

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Howard W. Spaletta

Date of Filing: June 27, 1994

Case Number: LWA-0010

This Decision involves a whistleblower complaint filed by Howard W. Spaletta (Spaletta) under the Department of Energy's (DOE) Contractor Employee Protection Program. From 1970 through May 1992 when he retired, Spaletta was employed as a metallurgical engineer at DOE's Idaho National Engineering Laboratory (INEL). For a number of years, EG&G, Idaho, Inc. (Contractor) was the management and operating contractor at INEL, and Mr. Spaletta was employed by EG&G Idaho at the time he filed his complaint.(1) Spaletta alleges that the Contractor retaliated against him for making health and safety disclosures to EG&G upper-level management, DOE's Idaho Operations Office (ID), DOE's Office of Inspector General, members of Congress, and the Nuclear Regulatory Commission (NRC). Spaletta maintains that because he made disclosures the Contractor (1) referred fewer and less important work assignments to him, (2) lowered his annual merit pay increases, (3) required him to take unpaid leave during a 1990 Christmas holiday curtailment of operations, and (4) constructively terminated him.(2)

After bringing his allegations of reprisal to the attention of a number of governmental entities, Spaletta filed a complaint with ID on April 14, 1992. ID was unable to resolve the complaint and forwarded it to the DOE's Office of Contractor Employee Protection (OCEP). OCEP investigated Spaletta's complaint and issued a Report of Investigation and Proposed Disposition on May 12, 1994. In its Proposed Disposition, OCEP found that Spaletta had made protected disclosures and thereafter the Contractor had retaliated against him by referring fewer work assignments to him and by reducing his annual merit pay increases. At the same time, OCEP found that Spaletta had not shown that the Contractor had retaliated against him by failing to assign him important and meaningful work, by requiring him to solicit work, or by requiring him to take unpaid leave during a Christmas 1990 holiday curtailment of work. In a letter dated June 7, 1994, Spaletta requested a hearing before an Office of Hearings and Appeals (OHA) Hearing Officer to challenge OCEP's findings and conclusions.

I. Background

A. Factual Background

The following summary is based on the OCEP investigative file, the hearing transcript (hereinafter "Tr."), and the submissions of the parties. Except as indicated below, the facts set forth below are uncontroverted.

In 1970, Spaletta began his employment at INEL's Materials Technology Group (MTG). His duties included design and program review, engineering failure analysis, materials specification, materials

performance evaluation, and technical consulting. OCEP Proposed Disposition at 1. The record shows that he enjoyed, and continues to enjoy up to the present time, a reputation among his peers and managers for excellence in engineering, technical integrity, and reliability.

In October 1985, the Tennessee Valley Authority (TVA) contracted with DOE to provide an independent evaluation of welding at TVA's Watts Bar Nuclear Power Plant, Unit One (Watts Bar), located in Oak Ridge, Tennessee. The purpose of the evaluation was two-fold: to determine whether TVA's welding program had complied with its Final Safety Analysis Report (FSAR) commitments, and to address the 472 concerns raised by TVA employees about the safety of welding performed at Watts Bar. DOE assigned the responsibility for conducting the evaluation to the Contractor. The Contractor in turn established a Weld Evaluation Program (WEP) and named Frank Fogarty as the WEP's director. In July 1986, Fogarty created a Senior Review Committee (SRC) consisting of Spaletta and four other EG&G employees to assist in evaluating the code compliance of the Watts Bar welding program and to review the WEP's final report (the report). James (Curt) Haire was chosen by Fogarty to act as Chairman of the SRC. During the week of July 7, 1986, the SRC members conducted an on-site assessment of the WEP at Watts Bar.

Spaletta and the three other members of the SRC with technical expertise each developed reservations about the Watts Bar welding program. Among their concerns was WEP's use of an inspection code (NCIG-01(3)) that was different from the inspection code TVA committed to use in the Watts Bar plant's FSAR (AWS D1.1, 1972, Rev. 2, 1974(4)). The SRC members believed that the welding standards contained in the NCIG-01 code were less stringent than the standards contained in the AWS D1.1 code.(5) On August 22, 1986, Chairman Haire wrote a memorandum to Fogarty on behalf of the SRC summarizing the results of the SRC's on-site review of the WEP. In that memorandum, Haire informed Fogarty of the SRC members' concerns, including the use of the NCIG-01 code to evaluate welds at the Watts Bar plant. In the following years, each of the SRC's technical experts communicated their concerns about the WEP or the final report to Fogarty or Haire in writing. *See* December 8, 1987, Interoffice Correspondence from T.F. Burns to J.C. Haire; December 11, 1987, Interoffice Correspondence from Ralph Marshall, Jr., to F.C. Fogarty. Spaletta's concerns about this issue were two-fold. First, he was concerned that the FSAR required welds at Watts Bar to be inspected using the AWS D1.1 code. Second, Spaletta was concerned that using the less stringent NCIG-01 code to evaluate employee safety concerns resulted in a conclusion which Spaletta believed to be false, namely, that the employee concerns were almost all inconsequential.

Fogarty prepared a draft version of the WEP final report, which he then provided to the members of the SRC for review and comment. The SRC identified a number of areas in which the report could be improved. While the final version of the report incorporated a number of the SRC members' suggestions, it did not incorporate all of them. Among those unheeded suggestions was a recommendation that the final report explicitly acknowledge that the WEP reinspected the welds using the NCIG-01 code instead of the AWS code set forth in the FSAR. Instead, the final report stated that the welds were reinspected to "applicable codes." Each of the SRC's technical experts expressed concern that the draft final report obscured the WEP's use of the less stringent NCIG-01 reinspection code without prior NRC approval. Testimony at the hearing indicated that adoption of this suggestion would have resulted in the addition of one or two sentences in the report and the modification of one table. The final report also stated that 451 of the 472 employee concerns about safety-related weld issues -- 95.6 percent -- could not be specifically confirmed. Of the remaining 4.4 percent, the final report found that two-thirds identified welds that "are in compliance with the applicable code and required no corrective action." Final Report, Weld Evaluation Program, ¶ 4.3 at 13.

The WEP final report was issued to ID in November 1987. On January 26, 1988, ID forwarded the WEP report to TVA. TVA submitted the WEP report to the NRC on February 17, 1988.

After the final report was issued, Spaletta continued to express his concerns about the final report to various EG&G and ID officials. He also sought its retraction or correction. A little more than one year after the TVA submitted the report to the NRC, on March 9, 1989, ID submitted Spaletta's concerns to the NRC. On July 10, 1989, the NRC's Office of Nuclear Reactor Regulation issued a document entitled

"Allegation Evaluation" in response to the issues raised by Spaletta. In its evaluation, the NRC stated in pertinent part:

The NRC staff concluded that the allegation is substantiated because the same observations were made by the NRC staff during its review of the DOE/WEP report. However, these issues were resolved in a meeting held on October 11, 1988 and based on the NRC staff's review of the raw data compiled by WEP, the staff concluded that the DOE/WEP reinspection at [Watts Bar] was an effective sampling effort, thus the reinspection results can be used to assess the welding at [Watts Bar]. Further, the staff concluded that the WEP was adequately implemented. In addition, TVA's current corrective action plans that resulted from the DOE/WEP evaluation appear adequate and, if properly implemented, should provide reasonable assurance that the quality of the welds at [Watts Bar] are adequate.

Allegation Evaluation at 6. Despite this NRC evaluation, Spaletta continued his efforts to have the Report retracted or corrected. On April 24, 1990, Spaletta sent a letter to Don Kerr, the Executive Vice President of EG&G, Inc. (EG&G Idaho's parent corporation), expressing his concerns about the WEP Report. On June 19, 1990, Spaletta sent a similar letter to John M. Kucharski, the Chairman and Chief Executive Officer of EG&G, Inc. On September 25, 1990, Spaletta wrote to William F. Willis, TVA's Executive Vice President, expressing his concerns. On October 16, 1990, Spaletta sent a letter to the DOE's Office of Inspector General (OIG) communicating his concerns about the WEP and its associated report.

During the period in which Spaletta made disclosures, he: (1) had difficulty obtaining work assignments; (2) received the lowest annual percentage merit increases of any professional employee in his work unit; (3) was warned that his continued failure to obtain new work assignments could result in the loss of his job; and (4) was directed to take leave during a company-wide, Christmas 1990, holiday work curtailment. Spaletta's employment at INEL ended on May 29, 1992, when he accepted an offer of early retirement.

B. Procedural History of the Case

On April 14, 1992, Spaletta filed a complaint with ID pursuant to 10 C.F.R. Part 708. On May 12, 1992, after concluding that it had found no record of retaliatory personnel actions by EG&G against Spaletta, ID forwarded Spaletta's complaint to OCEP. OCEP conducted an on-site investigation of Spaletta's allegations of reprisal and issued a Report of Investigation and a Proposed Disposition on May 12, 1994. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that: (1) Spaletta had made protected disclosures related to health and safety concerns; and (2) EG&G had retaliated against Spaletta by granting him lower annual merit pay increases than he otherwise would have obtained, and by referring less work to him.(6) Accordingly, OCEP proposed to order EG&G to:

(1) Pay lost wages representing the difference between his merit pay increases subsequent to February 11, 1991, and the average of the merit pay increase percentages given in 1991 and 1992 to employees within EG&G's Science and Technology Department who were rated as either "Excellent" or "Excellent Minus" in 1991, and rated "Excellent" or "Good" in 1992, and who were in the same salary range quintile as Spaletta;

(2) Pay Spaletta "reasonable" interest on his lost wages;

(3) Pay Spaletta's legal fees and expenses; and

(4) Review its policies and practices governing both work referrals and employee requirements for developing their own work assignments in order to safeguard against reprisals and adverse consequences stemming from protected employee disclosures and actions.

On June 7, 1994, Spaletta sent a letter to OCEP in which he requested a hearing under 10 C.F.R. § 708.9. The OHA received Spaletta's request from OCEP on June 27, 1994. On July 1, 1994, the Director of the OHA appointed me as Hearing Officer. Spaletta's pre-hearing brief was received on September 2, 1994,

and the Contractor's pre-hearing brief was received on September 20, 1994. A pre-hearing conference was conducted via telephone on September 27, 1994. The hearing was held in Idaho Falls, Idaho, on October 3-4, 1994.(7) At the conclusion of the hearing on October 4th, the parties elected to forego oral argument, and requested permission to file post-hearing briefs. The parties' post-hearing briefs were received by the OHA on December 5, 1994.

II. Legal Standards Governing This Case

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's government-owned, contractor-operated (GOCO) facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers.

Proceedings under 10 C.F.R. Part 708 offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by providing for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee.*See David Ramirez*, 23 DOE ¶ 87,505, *affirmed*, 24 DOE ¶ 87,510 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has "[d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences [a] violation of any law, rule, or regulation [or] a substantial and specific danger to employees or public health or safety." 10 C.F.R. § 708.5(a)(1); s*ee also Francis M. O'Laughlin*, 24 DOE ¶ 87,505 (1994).

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)).

B. The Contractor's Burden

If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. § 708.9(d). *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence, § 340 at 442 (4th ed. 1992)). Accordingly, in the present case if Spaletta establishes that he made a protected disclosure that was a contributing factor to an adverse personnel action, EG&G must convince me that it would have taken the action even if Spaletta had not raised any health or safety concerns.*Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507, at 89,034-35 (1994).

III. Analysis

After considering the record established in the OCEP investigation, the parties' submissions, the testimony presented at the hearing, and the post-hearing briefs, for the reasons stated below I have concluded that Spaletta has met his burden of proving by a preponderance of the evidence that he made protected disclosures concerning health or safety that resulted in adverse personnel actions against him. In addition, I have concluded that the Contractor has not shown by clear and convincing evidence that the same

personnel actions would have been taken absent Spaletta's disclosures. Accordingly, relief is warranted under § 708.10.

A. Whether Spaletta's Disclosures Are Protected Under 10 C.F.R. § 708.5(a)(1).

There is no dispute that Spaletta has made numerous disclosures to EG&G's management, to the DOE, and to Congress consisting, in part, of allegations that a safety report prepared by the Contractor for submission to DOE concealed the WEP's use of a weld inspection code less stringent than the code required by the Watts Bar FSAR. The Contractor contends that Spaletta's disclosures are not protected under § 708.5(a)(1) because: (1) his disclosures were made out of a concern for his reputation rather than a good faith belief that a threat to safety existed; (2) the safety issues disclosed by Spaletta were not substantial and specific; (3) Spaletta's disclosures related to technical and administrative issues rather than safety concerns; and (4) after the NRC had determined that the underlying data collected by the WEP established that the welds at Watts bar were "suitable for service," any subsequent disclosures could not have been made with a good faith belief that a threat to health or safety existed. Each of these arguments will be discussed in turn.

First, the Contractor contends that Spaletta's safety disclosures were not made in "good faith" because they were motivated by Spaletta's concern for his personal reputation rather than his concern for safety. As an initial matter, the Contractor has misinterpreted the term "good faith" as used in the regulations. The requirement that disclosures be made in "good faith" is not intended to require that a complainant prove that his only motive for making a disclosure was a concern for safety (or any of the other protected subjects). Instead, the good faith clause is intended to relieve complainants of the burden of proving that their allegations are correct or accurate. Under 10 C.F.R. § 708.5(a)(1), complainants must show only that they had a r*easonable belief* that their allegations were accurate. Therefore, as long as the complainant reasonably believed that his allegations were accurate, they were protected, regardless of the complainant's ultimate motives for making the disclosures. Accordingly, whether Spaletta was in fact motivated to protect his reputation is irrelevant to the question of whether the disclosures are entitled to protection under §708.5(a)(1).(8)

Second, the Contractor contends that the safety issues disclosed by Spaletta were not substantial and specific, as required by 10 C.F.R. § 708.5(a)(1). The Contractor spends many pages in its pre-hearing brief arguing that the facts in this case are similar to the facts in *Francis M. O'Laughlin*, 24 DOE ¶ 87,505 (1994), in which the OHA hearing officer held that the disclosures were not specifically related to safety. However, in that case, O'Laughlin complained about a proposed company reorganization, and none of the people to whom he complained reasonably understood there to be any safety implications in his complaints based upon the content and context of his communications. In the present case, not one witness has suggested that safety concerns were not involved in Spaletta's disclosures. I therefore conclude that the record amply indicates the presence of reasonable-held safety concerns of a "substantial and specific" nature.

The Contractor next contends that Spaletta's disclosures were not related to safety but were technical or administrative in nature. There were numerous disclosures by Spaletta during the relevant period, and the record supports the Contractor's position that some of them concerned non-safety issues. For example, on December 28, 1988, Spaletta wrote a memorandum to Dennis Keiser, a senior manager, articulating his concern that EG&G's management did not have an effective procedure for resolving employee concerns.(9) However, most of Spaletta's complaints involved a report concerning a safety inspection of a controversial nuclear power plant which he contends intentionally concealed potential safety problems, denigrated safety-related employee concerns, and violated NRC requirements and EG&G internal guidelines. I would be hard pressed to find a more substantial and specific danger to public health or safety than allegations of this nature.

Finally, the Contractor argues that any of Spaletta's disclosures made after July 10, 1989, (when the NRC informed Spaletta that it had resolved the WEP issues brought to its attention by Spaletta) could not have

been made with a good faith belief that a threat to safety existed. This contention is without merit. First, it incorrectly assumes that a complainant's disagreement with a regulatory agency's safety determination could not be reasonable. Second, the NRC's written report actually confirmed Spaletta's concerns and reserved its final judgment of the suitability of Watts Bar welds for a future date. Finally, this argument ignores the changing nature of Spaletta's allegations over time. As Spaletta began elevating his concerns up the chain of EG&G management, he began focusing on what he perceived to be a systematic failure on the part of EG&G management to address what he believed to be a recurring safety and quality problem. Spaletta frequently alleged that management's emphasis on business development often prevented its employees from bringing safety and quality problems to the attention of management. Spaletta often analogized this systematic deficiency to similar conditions identified by the Presidential Commission that investigated the Challenger space shuttle disaster. He also alleged that EG&G did not have a formal system established to resolve such concerns. In any event, many of the disclosures pre-dated the NRC's evaluation of the issues raised by Spaletta.

Under these circumstances, I have concluded that Spaletta made his disclosures with a good faith belief that the final report did not disclose that WEP had used a weld inspection code that was not mentioned in the FSAR and, as a consequence, evaluated employee weld safety concerns against a standard different from the standard contained in the FSAR. After considering the evidence submitted in this matter and the testimony and demeanor of the witnesses at the hearing, I have also concluded that Spaletta believed that these conditions impacted on safety at the Watts Bar plant. I therefore hold that Spaletta's disclosures are protected by 10 C.F.R. § 708.5(a)(1)(i) and (ii).

B. Whether the Contractor Retaliated Against Spaletta

Spaletta contends that as a result of his disclosures, EG&G retaliated against him by: (1) referring fewer work assignments to him, (2) lowering his annual merit pay increases, (3) requiring him to take unpaid leave during a 1990 holiday curtailment of operations, and (4) constructively terminating him. I will discuss each of Spaletta's contentions in turn.

1. Whether the Contractor Referred Fewer Work Assignments to Spaletta

Spaletta asserts that because of his disclosures, EG&G managers began referring fewer work assignments to him. The Contractor admits that the demand for Spaletta's services did noticeably decline, but contends that Spaletta's reduction in work assignments merely reflected the changing nature of the INEL's mission, which was shifting away from nuclear reactor production to research and environmental protection. According to the Contractor, this change in mission produced a decrease in demand for Spaletta's expertise.

The record, however, supports Spaletta's assertions. It shows that: (1) prior to Spaletta's disclosures his services as a welding engineer were in high demand, (2) despite the high esteem in which Spaletta's engineering skills were held by both his colleagues and managers, he began receiving fewer work referrals and assignments from them, (3) the decline in demand for Spaletta's services occurred after his disclosures to DOE, NRC, TVA, and EG&G management, (4) at least one EG&G manager who frequently referred assignments to Spaletta discontinued assigning work to Spaletta out of concern that the manager would antagonize a higher level EG&G manager, and (5) during the period in which Spaletta's work assignments declined, EG&G utilized the services of another engineer and hired an additional welding engineer to undertake assignments which Spaletta was capable of handling.

As late as early 1989, Spaletta's services were in demand at INEL. Two witnesses, Ralph Marshall and Bert L. Barnes, testified at the hearing that Spaletta's services were in great demand at INEL. Tr. at 61 (Marshall), Tr. at 109 (Barnes). No one suggested otherwise. At the same time, while Spaletta’s dispute about the WEP report was known to many of his peers and managers, the record contains numerous statements by EG&G employees attesting to Spaletta's engineering excellence. In fact, at the hearing a number of witnesses went out of their way to state that they still considered Spaletta to have excellent

technical skills. The testimony concerning Spaletta's excellent professional reputation is corroborated by comments contained in Exhibit 47 to the Report of Investigation, which is Spaletta's performance evaluation for the year 1989.

However, Spaletta began having difficulty obtaining work assignments and referrals. His supervisor began discussing this failure to obtain referrals of new work assignments in his performance evaluations and eventually began warning him that his failure to obtain new assignments could result in the loss of his job. Handwritten note of Dennis Keiser (July 18, 1991).

The testimony of one EG&G employee, Bert L. Barnes, provides crucial information about why this reduction in work assignments occurred. Barnes testified that he had formerly referred a great deal of consulting work for the NRC to Spaletta because of his high regard for Spaletta's engineering expertise and reliability. Tr. at 108-10. However, Barnes also testified that he discontinued referring or assigning projects to Spaletta because he feared retaliation from EG&G Management, particularly Frank Fogarty. Tr. at 108-09, 112-13, 119; Proposed Disposition at 13 (quoting E-mail Message from Barnes to Fogarty). Barnes testified that he was aware of Spaletta's disagreements with EG&G management about the WEP project since the disagreements were common knowledge among EG&G's employees. Tr. at 121. Those disagreements, Barnes testified, motivated him to discontinue referring work to Spaletta. Tr. at 108-12. Barnes also testified that no EG&G manager, including Fogarty, ever told him not to refer work to Spaletta. Nevertheless, it is clear that one EG&G manager -- Mr. Barnes -- discontinued assigning work to Spaletta because of his disclosures.

The loss of referrals from Barnes most likely had a significant impact on Spaletta's workload. An EG&G questionnaire completed by Spaletta on December 12, 1984, indicated that his consulting activities for NRC accounted for approximately 30 percent of his working hours. Since Barnes assigned NRC work to Spaletta, it appears that Barnes' decision to stop assigning Spaletta work resulted in a significant reduction in Spaletta's work assignments.

The record shows that EG&G hired other welding engineers during the period in which the demand for Spaletta's services declined. Ralph Marshall testified that the Advanced Test Reactor Project, which was managed by Frank Fogarty, hired additional personnel to do the work that had previously been assigned to Spaletta. Tr. at 62. Marshall specifically testified that EG&G had hired another welding engineer, Downey, who, in his opinion, was not as well qualified as Spaletta. Tr. at 63, 92-93. Marshall's testimony was corroborated by Spaletta's testimony that the Advanced Test Reactor Project had hired Downey as a welding engineer, Tr. at 465. Spaletta and Marshall's testimony concerning Downey was further corroborated by the testimony of Mark Henderson, EG&G's Manager of Loop Engineering Support. Tr. at 526. The record also shows that EG&G hired another metallurgical engineer, Peter Nagata, in May 1989. Nagata's primary function was to act as a consultant to the NRC. Tr. at 521-22. Although Nagata specialized in evaluating the brittleness of metal exposed to radiation, he testified that he was used on a number of occasions to evaluate weld failures. He stated that he saw no reason why he was assigned to do that work instead of Spaletta. Mark Henderson testified that he assigned work to Nagata that could have been performed by Spaletta. Tr. at 528-29.

The evidence cited above meets Spaletta's burden of proving that fewer work assignments were referred to him because of his disclosures. Accordingly, the burden shifts to the Contractor to submit clear and convincing evidence that the decline in demand for Spaletta's services would have occurred absent Spaletta's disclosures.

The Contractor has offered a number of reasons why Spaletta's workload decreased at this time. First, in support of its contention that Spaletta's reduction in work assignments was due to INEL's changing mission, the Contractor presented a number of witnesses who agreed with the statement that the mission and kind of work at INEL has changed since 1989. However, none of the witnesses was able to link the changes in mission at INEL to specific decreases in Spaletta's workload. The witnesses at the hearing agreed with the logic that the change in mission would necessarily mean that there would be less need for

the services of a welding engineer. But they never went beyond that to support the Contractor's contention by saying that Spaletta's workload would be affected in a substantial way. Indeed, some of the testimony at the hearing, outlined just above, contradicts these general statements. For example, at the time the mission at INEL was changing, an additional welding engineer was hired. Under these circumstances, I find that these statements fall short of the applicable clear and convincing evidentiary standard and are clearly rebutted by the evidence summarized above.

The Contractor also submitted the testimony of two witnesses to attempt to show that the decline in availability of work for Spaletta resulted from his poor performance. Ronald Hilker testified that he was dissatisfied with the results of an assignment that he had provided Spaletta. According to Hilker, during the two months that Spaletta charged his time to the assignment, Spaletta showed no progress and exceeded the budget for the assignment. Hilker testified that he had to remove responsibility for the assignment from Spaletta and have it completed by others. Robert Neilson, Spaletta's direct supervisor at this time, testified that he had heard some complaints about Spaletta's performance. However, the record strongly suggests that Spaletta's inability to obtain assignments was not due to his poor performance or a poor reputation. To the contrary, each of the individuals testifying at the hearing agreed on one thing: to this day Spaletta enjoys an excellent reputation among his peers and is a highly skilled engineer. Hilker himself testified that he was surprised about Spaletta's performance on the assignment he had provided and that he viewed it as an aberration. Neilson testified that the number and severity of complaints he received about Spaletta were not unusual, given the type of work Spaletta did. Neilson also testified that he received a number of compliments regarding Spaletta's work. After considering the Contractor's contentions together with the testimony presented at the hearing, I find that the Contractor has not shown that the decrease in work assignments resulted from any performance deficiencies on the part of Spaletta.

Accordingly, Spaletta has proven, by a preponderance of the evidence in the record, that his disclosures were a contributing factor in the reduction in work assignments he suffered during the period beginning in 1990 and continuing through 1992. Since the Contractor has not submitted clear and convincing evidence to the contrary, I hold that EG&G retaliated against Spaletta for making protected disclosures by reducing the amount of work assigned him. By doing so, EG&G violated 10 C.F.R. § 708.5.

2. Whether Spaletta's Work Performance was Evaluated Properly

The Record also supports Spaletta's claims that the Contractor retaliated against him by reducing his annual merit pay increases for the years 1989 through 1991.(10) Exhibit 48 to the Report of Investigation shows that for 1987, 10 of the 18 employees who were then employed in Spaletta's work unit received higher merit increase percentages than Spaletta. The next year, 1988, 11 of these 18 employees received higher merit increase percentages than Spaletta. For 1989, 1990 and 1991, however, Spaletta received the lowest merit increase, as a percentage, of any employee in his work unit, which by 1992 had grown to 30 employees.

The timing of Spaletta's fall from grace coincides with a period in which Spaletta began to escalate his concerns. During 1989 and 1990, Spaletta's concerns were brought to the attention of the NRC, TVA, DOE's Inspector General, and the highest levels of EG&G's parent corporation's management. *See, e.g.*, Memorandum of Telephone Conversation between Dave Terao and G. Georgiev of the NRC's Office of Special Projects and Spaletta (April 13, 1989); Letter from Spaletta to Don Kerr, Executive Vice President EG&G, Inc. (April 14, 1990); Letter from Spaletta to John M. Kucharski, Chairman and CEO, EG&G, Inc. (June 19, 1990). The proximity in time between these protected disclosures and the precipitous decrease in Spaletta's merit increase percentage relative to his peers strongly suggests that they were related, and therefore suffices to meet Spaletta's burden of showing that his disclosures were a contributing factor in those merit increases. *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993).

Accordingly, the burden shifts to the Contractor who must show that it would have given Spaletta the same merit increases even if he had not made his protected disclosures. The Contractor attempts to meet this burden by contending that Spaletta's merit salary increases were determined solely by his work

performance and his relatively high position in his job classification's salary range. However, the record does not support this explanation.

It is hard to reconcile the Contractor's contention that Spaletta's low merit increases resulted from his work performance. As discussed above, the record contains a great deal of evidence that Spaletta enjoyed, and continues to enjoy to this time, an excellent reputation among his peers and EG&G's managers, including those with whom he had an adversarial relationship regarding the WEP report. Indeed, the only negative comments appearing in his performance evaluations involve his failure to develop work and his exceeding time and cost limits for projects. As I will show below, these were not the reasons EG&G reduced Spaletta’s merit pay increases.

The performance evaluations' comments concerning Spaletta's "failure" to develop new work are instructive. As I discussed above, Spaletta's difficultly in obtaining work was due at least in part to his disclosures. Therefore, these statements provide a direct link between the withholding of work from Spaletta and his receipt of lower pay. Since Spaletta has established that his disclosures were a factor contributing to his difficulty in obtaining work assignments, lowering his annual merit increases because of his inability to develop new work violated 10 C.F.R. § 708.5(a).

While the record shows that Spaletta had exceeded some cost and time limits on projects assigned to him, the Contractor has failed to show that other employees who similarly exceeded cost and time limits incurred significant merit pay percentage decreases. An EG&G manager, Ronald Hilker, testified that he had assigned a project to Spaletta that exceeded the previously agreed upon time and cost limits. Tr. at 500. However, Hilker also testified that it was not uncommon for cost and time limits to be exceeded and that similar problems had arisen with other employees in the past. Tr. at 510. Similarly, another EG&G manager, Robert Neilson, Jr., Spaletta's direct supervisor from 1988 through 1992, testified that he had received some complaints about cost overruns and missed deadlines on various projects conducted by Spaletta. Tr. at 232-33. However, Neilson also testified that he had received complimentary feedback concerning Spaletta and admitted that Spaletta was not the only employee who missed deadlines and overran costs. *Id.* On the basis of the testimony at the hearing, I conclude that the Contractor has failed to show by clear and convincing evidence that the cost and time overruns by Spaletta justify the precipitous decline to the lowest merit pay increases of any employee in his unit.

The Contractor also contends that Spaletta's relatively high salary for his job classification accounts for his relatively low merit increases. However, this contention is not supported in the record. While it appears that Spaletta's salary was relatively high for his job classification and that EG&G took an employee's position within his or her job classification's salary range into account when making its merit pay increase determinations, the Contractor has failed to provide either an adequate explanation or documentation of its claim that Spaletta's position in his salary range accounted for his low merit pay increase percentages. Moreover, my analysis of the information supplied to OCEP by EG&G suggests that EG&G's determinations of Spaletta's merit increases for the years 1989, 1990, and 1991 were inconsistent with its standard practices. As the Contractor explained, it used a grid to allocate its budgeted merit pay increases in each year. One of the grid's coordinates consisted of five possible performance ratings. The other coordinate consisted of salary quintiles which were calculated by dividing a job classification's salary range into five equal ranges. This grid was designed to combine the two factors in order to equitably determine an employee's merit salary increase percentage. A higher performance rating was to positively affect an employee's merit increase and a higher position in an employee's salary range was supposed to lower an Employee's merit salary increase percentage. Spaletta's performance evaluations and Exhibit 48 to the Report of Investigation show that Spaletta should have at least been placed in that portion of the grid which corresponded to the second highest salary quintile and the second highest performance rating for 1989, 1990, and 1991. Given Spaletta's relatively high performance ratings during the years in question and given the fact that Spaletta was not in the highest salary quintile for his job classification in any of the years in question, it is surprising that Spaletta received the lowest merit increase percentage in his work group. The Contractor was in position to show that other employees in the same portion of the grid received similar merit increase percentages or that no other employees occupied similar or less favorable

sectors of the grid, but did not do so. Accordingly, I find that the Contractor has failed to submit clear and convincing evidence showing that the grid was properly applied to Spaletta.

Spaletta has shown that his disclosures were a contributing factor to an inability to obtain new work, which negatively impacted his performance evaluations and his merit pay increases. As a result, the burden shifted to the Contractor to show that it would have given Spaletta the same merit increases if he had not made the protected disclosures. I find that the Contractor has failed to submit clear and convincing evidence that Spaletta's merit increases for the years 1989, 1990, and 1991 were not negatively affected by his disclosures.

3. Whether the Contractor's Requirement that Spaletta Take Leave During the Holiday Curtailment of 1990 was a Reprisal.

Spaletta alleges that EG&G retaliated against him by requiring him to take leave without pay during a company-wide work curtailment at the end of 1990. On August 14, 1990, Spaletta received a memorandum sent to all EG&G Idaho employees urging them to take leave during the period between December 25, 1990 and January 1, 1991, unless their work was "required." According to Spaletta, this memo also stated that no employees would be compelled to take time off. On December 19, 1990, Spaletta alleges that his supervisor urged him to take leave during the curtailment, but reiterated that Spaletta would not be required to do so. Two days later, however, Spaletta received a memorandum from his supervisor informing him that since his services were not essential he was "requested" to take either vacation leave or leave without pay during the curtailment. Spaletta apparently elected to take leave without pay during the work curtailment period.

The record is devoid of any evidence supporting even a reasonable inference that the EG&G's holiday curtailment policy was applied to the Complainant during the relevant period in a manner that was inconsistent with that applied to other EG&G employees. Accordingly, I find that the Complainant has failed to carry his burden of proof on this issue.

4. Whether Spaletta Was Constructively Terminated.

Spaletta alleges that the Contractor constructively terminated him. Traditionally, employees alleging constructive discharge bear the burden of proof. *Boze v. Bransteter*, 912 F.2d 801, 804-05 (5th Cir. 1990). Courts considering claims of constructive discharge require employees to prove that their working conditions were so difficult or unpleasant that a reasonable employee in their shoes would have felt compelled to resign. *See, e.g., Ugalde v. W.A. McKenenzie Asphalt Co.*, 990 F.2d 239, 242-43 (5th Cir. 1993); *Goldsmith v. Mayor and City Council of Baltimore*, 987 F.2d 1064, 1072 (4th Cir. 1993); *Cortes v. Maxus Exploration Co.*, 977 F.2d 195, 200 (5th Cir. 1992). An employee seeking to show constructive discharge must also establish that the intolerable working conditions resulted from the deliberate actions of the employer. *See, e.g., Johnson v. Shalala*, 991 F.2d 126 (4th Cir. 1993); *Jurgens v. EEOC*, 903 F.2d 386, 390 (5th Cir. 1990). The test is an objective one, and therefore the question is not whether the employee felt compelled to resign, but whether a reasonable person in the employee's shoes would have felt so compelled. *Guthrie v. J.C. Penney Co., Inc.*, 803 F.2d 202, 207 (5th Cir. 1986). Whether a reasonable employee would feel compelled to resign depends on the facts of each case. *Barrow V. New Orleans S.S. Ass'n.*, 10 F.3d 292 (5th Cir. 1994). "Deliberateness can be demonstrated by actual evidence of intent by the employer to drive the employee from the job, or circumstantial evidence of such intent, including a series of actions that single out [an individual] for differential treatment." *Johnson v. Shalala*, 991 F.2d 126, 131 (4th Cir. 1993). A showing of constructive discharge is difficult to make.

Spaletta has failed to meet his burden of proof on this issue. As an initial matter, I note that Spaletta did not claim that he had been constructively terminated until he filed his pre-hearing brief, which occurred relatively late in this proceeding. That fact, while not fatal to a constructive discharge claim, detracts from its credibility. More importantly, Spaletta has failed to submit any evidence in support of his constructive discharge claim. Nor has Spaletta made any apparent effort to develop the claim in his pre-hearing

submissions, at the hearing, or in his post-hearing brief. Under these circumstances, I must conclude that Spaletta has failed to show that EG&G deliberately created a work environment that a reasonable employee would find intolerable.

C. Remedy

Having concluded that the Contractor has failed to meet its burden of showing by clear and convincing evidence that it would have taken the same personnel actions against Spaletta absent his protected disclosures, and that a violation of Part 708 has occurred, I now turn to the remedy.

For those cases in which discrimination against an employee in reprisal for a protected disclosure is found to have occurred, the goal of the DOE regulations is to restore the employee to the position to which he or she would have otherwise have been absent the acts of reprisal, in a manner similar to other whistleblower protection schemes. *See, e.g.*, Energy Reorganization Act of 1974, 42 U.S.C. § 5851; Whistleblower Protection Act of 1989, 5 U.S.C. § 1214(b)(4(B). The initial agency decision may include an award of reinstatement, transfer preference, back pay, and all reasonable costs and expenses (including attorney and expert witness fees) "reasonably occurred" by the complainant in bringing the complaint. 10 C.F.R. § 708.10(c). Spaletta does not seek reinstatement or a transfer preference.(11) Instead, Spaletta seeks back pay, compensation for lost benefits, as well as, costs and expenses (including attorney's fees) associated with the prosecution of the present claim. In addition, Spaletta seeks the following forms of extraordinary relief:

1) "That EG&G Idaho, Inc. must review its policies and practices governing both work referrals and employee requirements to develop their own work assignments in order to safeguard against reprisals and adverse consequences stemming from protected employee disclosures and actions." Pre-hearing brief at 2.

2) "That EG&G Idaho, Inc., shall formally withdraw its Weld Evaluation Project (WEP) final report for the Tennessee Valley Authority's Watts Bar Nuclear Power Plant Unit 1, dated November 1987 (Ref: DOE/ID-107175-9). Further, this report shall not be used by the Nuclear Regulatory Commission for licensing purposes or any other safety related activity."

3) "That DOE shall, within 120 days after the date of order, conduct a hearing to ensure that EG&G Idaho, Inc., complies with the relief sought [above]."

The first form of extraordinary relief proposed by Spaletta is that EG&G be required to conduct an internal review of its policies concerning work referrals and requirements that its employees develop their own work assignments. However, this request is now moot. As of October 3, 1994, EG&G was replaced by Lockheed Idaho Technologies Company as INEL's management and operating contractor.

The second form of extraordinary relief requested by Spaletta is the formal withdrawal of the Weld Evaluation Program final report. This remedy would clearly be inappropriate. Part 708 proceedings are not designed to make findings concerning the validity of a whistleblower’s safety related allegations. While it is clear that the issuance of the report in its final form has caused Spaletta a great deal of discomfort, directing the withdrawal of the WEP report would not mitigate an adverse action taken against Spaletta. Therefore, I conclude that withdrawal of the report is beyond the scope of the present proceeding.

I therefore turn to the third and final form of extraordinary relief requested by Spaletta: that OHA conduct a hearing to ensure compliance with its order of relief. This request is simply unnecessary. Spaletta has not provided any evidence that such a procedure is necessary to effectuate the relief granted by this decision.

I turn now to Spaletta's request for back pay. Back pay is intended to restore the complainant to his proper position by providing compensation for the tangible economic loss suffered by the complainant and to act as a deterrent to future acts of reprisal by employers. *See United States v. N.L. Industries, Inc.*, 479 F.2d 354, 379 (8th Cir. 1973). Spaletta seeks: (1) the salary and benefits that he would have received if he had

not retired in May 1992, but rather continued to work for EG&G until the present; and (2) compensation for any reduction in merit pay increases resulting from his protected disclosures.

Spaletta's request for salary and benefits for the period between his retirement and the present is based upon his contention that he was constructively discharged. However, since I have found that Spaletta has failed to show that he was constructively discharged, an award of this nature is inappropriate.

However, Spaletta has shown that his annual merit pay increases for work performed during the years 1989, 1990, and 1991 were negatively affected by his protected disclosures. Thus an award of relief in the form of back pay is appropriate. Such relief is appropriately calculated as the difference between the annual merit pay increase percentage that Spaletta actually received during each of the three years and the average annual merit increase percentage of those employees in Spaletta's work group who received the highest performance rating and who were in the second highest salary quintile. Since I do not have the information necessary to accurately calculate this award, I will direct the Contractor to provide us with sufficient information to allow us to accurately calculate this portion of the award. After I receive this information I will issue a Supplemental Order specifying the exact amount of back pay to be granted to Spaletta.

Spaletta should also receive interest compensating him for the time value of money lost while bringing his complaint. *See, e.g., Garst v. Dep't of the Army*, 90 FMSR ¶ 5037 (1993) (interest on back pay awarded under the Whistleblower Protection Act) (*Garst*). In the past, OHA Hearing Officers have followed the practice of the Merit Systems Protection Board under the Whistleblower Protection Act. *See, e.g., Ronald Sorri*, 23 DOE ¶ 87,503 (1993). The MSPB awards interest on back pay under the Office of Personnel Management (OPM) regulation found at 5 C.F.R. § 550.806(d). That regulation refers to the "overpayment rate" established by the U.S. Treasury in 26 U.S.C. § 6621. The overpayment rate is the Federal short-term rate, plus two percentage points. The Federal short term rate for a particular calendar quarter is the short term rate for the first month of the preceding calendar quarter, rounded to the nearest whole percent. 26 U.S.C. § 6621(a)(1); (b)(2)(A). I will calculate an exact amount of interest in a Supplemental Order.

Next I consider Spaletta's request for reimbursement of legal expenses. Since Spaletta has prevailed in his whistleblower claim, he may receive from the Contractor an amount corresponding to all of the direct costs he reasonably incurred in bringing his whistleblower claim, including the reasonable value of the attorney services he utilized. In addition to attorney's fees, Spaletta may also receive mileage, long distance phone charges, postage, photocopying, and any other related expense.

Attorney's fees shall be calculated by the use of the "lodestar" approach described by the U.S. Supreme Court in *Blanchard v. Bergeron*, 489 U.S. 87 (1989), and first applied to proceedings under 10 C.F.R. Part 708 by the OHA Hearing Officer in *Ronald Sorri*, 23 DOE ¶ 87,503 (1993). Under the lodestar approach, reasonable attorney's fees are calculated as the product of reasonable hours multiplied by reasonable rates. The fee applicant has the burden of producing satisfactory evidence that his requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation. *See Blum v. Stenson*, 465 U.S. 886, 888 (1984).

Accordingly, Spaletta should submit a full accounting of all costs and expenses he reasonably incurred in bringing the complaint. This accounting should include the following elements.

a) A detailed and itemized list of each and every expense incurred, the dates incurred and the provider of the good or service in question.

b) Documentation for each requested expense such as bills, invoices, receipts or affidavits.

c) For any attorney fees claimed; the identity of each attorney providing such services, the date, time, duration and nature of all services provided to the complainant.

d) For any attorney who provided services to Spaletta; evidence that the hourly rate for services incurred is

comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation.

After Spaletta and the Contractor have provided the information described above, I will issue a Supplemental Order specifying the exact amount to be awarded Spaletta.

IV. Conclusion

For the reasons set forth above, I have concluded that Spaletta has proven by a preponderance of the evidence that he engaged in activities protected under 10 C.F.R. Part 708 and that those activities were a contributing factor to his receipt of fewer work assignments and lower annual merit increases for the years 1989, 1990, and 1991. The Contractor has failed to prove by clear and convincing evidence that it would have taken these adverse personnel actions absent Spaletta's protected activities. I therefore find that a violation of 10 C.F.R. §708.5 has occurred and Spaletta should be awarded back pay lost as a result of the reprisals taken against him (plus interest), as well as all costs and expenses reasonably incurred by him in bringing the present complaint.

It Is Therefore Ordered That:

(1) Howard W. Spaletta's request for relief under 10 C.F.R. Part 708 is hereby granted as set forth in this Decision and denied in all other aspects.

(2) Howard W. Spaletta shall no later than 30 days after the issuance of this Decision, submit to the Hearing Officer a full accounting of any and all costs and expenses reasonably incurred by him in bringing this complaint under 10 C.F.R. Part 708. This accounting shall include a full accounting of hourly charges for attorney's fees and appropriate documentation as evidence that the rates requested are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, or reputation. A copy of any submission shall be sent on the same day to Lockheed Idaho Technologies Company.

(3) EG&G, Idaho, Inc., or its successor Lockheed Idaho Technologies Company, shall no later than 30 days after the issuance of this Decision, submit to the Hearing Officer information which shows the average merit increase percentage for employees in Howard W. Spaletta's work unit who received the second best performance rating and who were in the second highest salary quintile for the years 1989, 1990, and 1991. A copy of any submission shall be sent on the same day to Howard W. Spaletta.

(4) No later than 15 days after receipt of a copy of the submissions referred to in paragraphs (2) and (3), Howard W. Spaletta and Lockheed Idaho Technologies Company may submit to the Hearing Officer a response to the submission served by the other party. Each response shall be limited to the reasonableness and accuracy of the calculations set forth in that submission.

(5) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting the complaint in part unless within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director of the Office of Contractor Employee Protection.

Roger Klurfeld

Hearing Officer

Office of Hearings and Appeals

Date: January 4, 1995

(1) As of October 3, 1994, Lockheed Idaho Technologies Company became the management and operating contractor at INEL. Lockheed has agreed to assume the responsibilities of the contractor in this proceeding. Hearing Transcript at 12.

(2) Spaletta was still employed by EG&G when he filed his complaint with ID. Thus his complaint did not contain any allegation of constructive termination. His constructive termination allegation first appears in his pre-hearing brief.

(3) The NCIG-01 code was promulgated by the Nuclear Construction Issues Group.

(4) The AWS code was promulgated by the American Welding Society.

(5) They were not alone in harboring these concerns. Similar concerns were expressed by the NRC. See July 24, 1986 letter from B.J. Youngblood, Director of PWR Project Directorate #4, NRC, to S.A. White, TVA's Manager of Nuclear Power.

(6) OCEP also concluded that Spaletta's other allegations of retaliation by EG&G were not sufficiently substantiated.

(7) OHA staff attorneys Steven Fine and Ann Augustyn attended the hearing and assisted in the preparation of this decision.

(8) Moreover, the record contradicts the contention that Spaletta's disclosures were not motivated by his concerns about the safety consequences of the Report. While the record contains Spaletta's complaint that the WEP report had hurt his reputation, that fact alone does not suggest that Spaletta was not concerned about safety and adherence to safety rules and regulations. To the contrary, the record contains numerous instances of Spaletta's contemporaneous statements expressing his concerns that the allegedly misleading nature of the WEP report would compromise the safety of the Watts Bar welding program, interfere with the proper functioning of Watts Bar's NRC-mandated employee concerns program, and serve to cover-up TVA's failure to meet its FSAR commitments. For example, in the same letter in which Spaletta expressed his opinion that "[t]he subject report is an embarrassment to me," he also expresses a safety concern by stating: "There are many similarities between the causes of the Challenger disaster and the conduct of EG&G Idaho's Management during the TVA weld program." Memorandum from Howard W. Spaletta to Dennis Keiser (August 17, 1989). Spaletta went on to contend that EG&G violated some of its own internal guidelines by preparing a misleading Report. Id. at 2.

(9) While Spaletta characterizes this concern as safety related, it is more in the nature of an administrative concern.

(10) Merit pay increases for a given year were based up a performance evaluation that occurred in February of the next year. Therefore, for example, a merit pay increase for 1989 was based on an employee’s evaluation in February 1990.

(11) In his post-hearing brief, Spaletta for the first time states that he seeks reinstatement. While I might be inclined to entertain such a late request if I were to find that he had been constructively discharged, I have not so found and I decline to consider that request.

Ronald A. Sorri

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motions for Discovery

Supplemental Order

Name of Petitioner: Ronald A. Sorri

L&M Technologies, Inc.

Ronald A. Sorri

Dates of Filing: September 24, 1993

September 27, 1993

October 12, 1993

Case Numbers: LWD-0008

LWD-0009

LWX-0011

This determination will consider two requests for discovery filed with the Office of Hearings and Appeals (OHA) on September 24 and 27, 1993, by Ronald A. Sorri (Sorri) and L&M Technologies, Inc. (L&M), respectively. These motions concern the hearing requested by Sorri under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708, on June 9, 1993 (OHA Case No. LWA-0001). The DOE Contractor Employee Protection Program and the Sorri proceeding are described in a previous decision issued by the OHA, Sandia National Laboratories, 23 DOE ¶ 82,502 (1993) (Sandia). The hearing will be convened on October 26 and 27, 1993, in Albuquerque, New Mexico. In addition to ruling on the discovery requests, we will establish procedures for the submission of exhibits before the hearing, and set the order of witnesses.

I. Requests for Discovery

In a letter dated September 24, 1993, Sorri requested discovery of "all resumes and ranking materials for each L&M employee ranked, and for each of these ranked employees, the last two written performance appraisals immediately preceding the resume ranking process." Sorri indicated that he planned to have an expert witness examine the performance appraisals and testify about their role in the decision by Sandia officials not to retain Sorri as an employee of L&M. */ As explained in Sandia, Sorri claims that decision constituted an act of retaliation for his filing of a safety complaint with DOE about conditions in the Microelectronics Development Laboratory (MDL). In a letter dated September 27, 1993, L&M requested that Sorri identify the expert witness he planned to call at the hearing, and provide answers to written interrogatories.

The issuance of discovery orders in proceedings under Part 708 is within the discretion of the Hearing Officer. As indicated in the preamble to the DOE Contractor Employee Protection regulations,

administrative hearings conducted under Part 708 are intended to be informal in nature and are not intended to emulate formal trial proceedings. 57 Fed. Reg. 7533, 7537-8, (March 3, 1992) (formal rules of evidence, including the Federal Rules, are to be used only as a guide in hearings under Part 708). While the regulations do not provide a formal mechanism for conducting discovery, they grant the Hearing Officer authority to

arrange for the issuance of subpoenas for witnesses to attend the Hearing on behalf of either party, or for the production of specific documents or other physical evidence, provided a showing of the necessity for such witness or evidence has been made to the satisfaction of the Hearing Officer.

10 C.F.R. § 708.9(f); see also 10 C.F.R. §§ 708.9(c), (i) and (j) (sanctions for failure to comply with a lawful order of the Hearing Officer including adverse findings, and dismissal of a claim, defense or party). In the same manner as suggested in the preamble to Part 708 for informally using the Federal Rules of Evidence, we will use the Federal Rules of Civil Procedure as a guide for discovery. It is within the spirit of both the Federal Rules and the DOE Contractor Employee Protection Program regulations that arrangements for pre-hearing discovery be worked out between the parties, without the need of a formal discovery order from the OHA Hearing Officer. However, as we advised the parties to this proceeding, the OHA is prepared to issue a discovery order if necessary to ensure compliance with any reasonable discovery request. On October 5 and 6, 1993, Sorri reported certain difficulties that he had encountered in obtaining the requested discovery from the other parties. This matter was discussed at length in a telephonic prehearing conference with counsel for the parties that was held on October 12, 1993.

As explained in the prehearing conference, we have determined that Sorri's request for the L&M performance appraisals, and any other ranking materials used by Sandia MDL manager Ronald V. Jones in the selection process, is reasonable. It is designed to yield evidence that may be relevant and material to the alleged retaliatory discharge issue in this case, and it is not unduly burdensome on either L&M or Sandia to produce the requested documents. Therefore, we will order that L&M and Sandia produce these materials no later than October 15, 1993. For the same reasons, we also find that the L&M request for discovery about Sorri's expert witness is reasonable under the circumstances of this case. Thus, we will also order Sorri, as soon as possible, to provide L&M and Sandia with full information about the identity and qualifications of his expert witness, and the substance of the facts and opinions to which the expert is expected to testify.

II. Other Prehearing Matters: Exhibits and Witnesses

In addition to discovery, our October 12, 1993 prehearing conference also discussed arrangements for the submission of exhibits, and the scheduling of witnesses. With respect to exhibits, we stated that each party shall, no later than October 22, 1993, file with the OHA and serve on the other parties, a numbered list, and one numbered set, of any exhibits which the party intends to submit at the hearing. We determined that the order of witnesses will be as follows: (1) witnesses for Sorri; (2) witnesses for Sandia; and (3) witnesses for L&M. If necessary, arrangements will be made to schedule the hearing on October 27 to accommodate a Federal court appearance by Sandia's counsel.

It Is Therefore Ordered That:

(1) The Motions for Discovery filed by Ronald Sorri and L&M Technologies, Inc., Case Nos. LWD-0008 and LWD-0009, are hereby granted as set forth in Paragraphs (2), (3), and (4) below.

(2) L&M Technologies, Inc. shall submit to counsel for Ronald A. Sorri, no later than October 15, 1993, the two written performance evaluations immediately preceding the ranking process for each of the L&M contract employees ranked under Task II of the contract between L&M and Sandia National Laboratories

(3) Sandia shall submit to Sorri, no later than October 15, 1993, all resumes and other materials used in ranking L&M contract personnel under Task II of the contract between L&M and Sandia.

(4) Sorri shall submit to the counsels for L&M and Sandia, at the earliest possible date prior to the hearing in this matter, information regarding:

(a) the identity of the expert witness whom he expects to call to testify at the hearing,

(b) the subject matter on which the expert is expected to testify,

(c) the relevant credentials of the expert which qualify the expert in the subject matter to which he or she will testify,

(d) the substance of the facts and opinions to which the expert is expected to testify and a summary of the grounds for each opinion.

In addition, the prospective expert witness shall be made available for depositions or shall provide answers to written interrogatories of L&M and Sandia prior to the hearing.

(5) Sorri, Sandia, and L&M shall submit to the OHA and to each other, no later than October 22, 1993, a numbered list, and one numbered set, of any exhibits which the party intends to submit at the hearing.

(6) This is a final Order of the Department of Energy.

Thomas O. Mann

Deputy Director

Office of Hearings and Appeals

Date:

*/ Sorri also requested that subpoenas be issued to several L&M and Sandia employees he planned to call as witnesses, and sought the opportunity to depose these persons. Arrangements have been made between counsel for the parties to conduct these depositions in Albuquerque on October 15 and 20, 1993.

Case No. LWJ-0004

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Protective Order

Name of Petitioner: Westinghouse Hanford Company

Date of Filing: May 31, 1994

Case Number: LWJ-0004

On February 28, 1994, Helen "Gai" Oglesbee filed a request for hearing under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. This request has been assigned Office of Hearings and Appeals (OHA) Case No. LWA-0006. On May 31, 1994, Westinghouse Hanford Company (WHC) filed a request that the OHA issue a Protective Order concerning certain documents which the company has agreed to provide to the Government Accountability Project (GAP) and Thad M. Guyer, counsel for Ms. Oglesbee.

In conjunction with the request, WHC has submitted a Stipulated Protective Order, attached to this Decision, to which WHC, GAP and Mr. Guyer have agreed to be bound.*/ The Order states, inter alia, that GAP and Mr. Guyer shall not make use of nor disclose any information in the documents provided by WHC except for purposes related to the present proceeding, and that upon the termination of the proceeding shall either destroy the documents or return them to WHC.

We have reviewed the attached Stipulated Protective Order and have concluded that it should be issued as an Order of the Department of Energy. This Order is issued pursuant to the authority given the Hearing Officer under the Part 708 regulations to "arrange . . . for the production of specific documents or other physical evidence, provided a showing of the necessity for such . . . evidence has been made to the satisfaction of the Hearing Officer." 10 C.F.R. ' 708.9(e).

It Is Therefore Ordered That:

The attached Stipulated Protective Order is hereby issued as a final Order of the Department of Energy.

Thomas O. Mann

Hearing Officer

Office of Hearings and Appeals

Date:

*/ Charles K. MacLeod, Senior Labor Counsel, WHC, and Alene Anderson, GAP, have signed the Order. In a May 30, 1994 telephone conference, Thomas G. Carpenter, GAP, stated that Ms. Anderson was authorized to sign the Order on behalf of Mr. Carpenter and GAP, and Mr. Guyer stated that he agrees to be bound to the Order to the same extent as is GAP.

Case No. LWN-0003

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Interim Order

Name of Petitioner: Dr. Naresh Mehta

Date of Filing: July 18, 1994

Case Number: LWN-0003

On March 17, 1994, the Department of Energy (DOE) issued an Initial Agency Decision in the matter of Universities Research Association (URA), Case No. LWN-0003. In the Decision, we found that URA had discharged Dr. Naresh Mehta in violation of the Contractor Employee Protection Regulations, 10 C.F.R. Part 708. Universities Research Association, 23 DOE & 87,506. As part of Dr. Mehta's remedy, we ordered URA to reinstate him to his former position as Scientist II, or to a comparable position.

URA requested a review of our Decision by the Secretary of Energy pursuant to 10 C.F.R. ' 708.10(c)(2). The request is still pending. Because the Decision has not become final, Dr. Mehta has not received any remedy for the retaliatory discharge.

Dr. Mehta had been employed by URA at DOE's Superconducting Super Collider (SSC) Laboratory in Waxahachie, Texas. He was discharged in December 1992 and filed a complaint with the DOE's Office of Contractor Employee Protection in February 1993. In October 1993, before Dr. Mehta's complaint was resolved, the U.S. Congress cut off funding for the SSC project. Preparations were made to shut down the SSC Laboratory and lay off the employees. In November 1993, a severance benefits package was announced for employees of project contractors, including URA. The benefits package includes a dislocation allowance, severance pay, medical insurance, and job placement assistance.

On July 15, 1994, Dr. Mehta filed through counsel a petition for interim reinstatement. Dr. Mehta proposes that interim reinstatement would help alleviate the burden of eighteen months without employment, to tie up loose ends at his workplace, and to secure personal effects that are still in his office. Authority for interim reinstatement is found in 10 C.F.R. ' 708.10 (c) (3), which provides that:

[I]f the agency decision contains a determination that a violation of ' 708.5 has occurred, it may contain an order requiring the contractor to provide the complainant with interim relief, including but not limited to reinstatement, pending the outcome of any request for review. This paragraph shall not be construed to require the payment of any award of back pay or attorney fees before the DOE decision is final.

URA claims in its response to Dr. Mehta's request that there is no relevant work for Dr. Mehta to do at the SSC Laboratory. Even if this were true, we do not believe it would be adequate reason for denying him interim reinstatement. By delaying the resolution of the case through various appeals processes, URA is prolonging and thus increasing the harm to Dr. Mehta. Moreover, because of the imminent shut down of the SSC laboratory, delay in providing interim relief to Dr. Mehta could reduce the value of any restitution that the DOE could provide to him.

If URA has no work for Dr. Mehta after reinstating him, it should treat him like its other employees at the SSC Laboratory and provide him with the severance benefits package. URA has not alleged that any harm

will come to it from the interim reinstatement of Dr. Mehta. For the reasons stated above, we will grant Dr. Mehta's petition.

It Is Therefore Ordered That:

(1) Universities Research Association shall reinstate Dr. Naresh Mehta on August 15, 1994 to his former position as Scientist II or a comparable position. This reinstatement shall be on an interim basis, pending the outcome of the review by the Secretary of Energy or designee of the Initial Agency Decision issued March 17, 1994. Furthermore, the reinstatement shall be notwithstanding any appeal or request for review.

(2) This is a final Order of the Department of Energy.

Thomas L. Wieker

Deputy Director

Office of Hearings and Appeals

Date:

Case No. LWX-0013

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Supplemental Order

Name of Petitioner: David Ramirez

Date of Filing: April 18, 1994

Case Number: LWX-0013

This Decision supplements an Initial Agency Decision, dated March 17, 1994, issued by the undersigned Hearing Officer of the Office of Hearings and Appeals (OHA) of the Department of Energy in a case involving a "whistleblower" complaint filed by David Ramirez (Ramirez) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. See David Ramirez, 23 DOE & 87,505 (1994) (Ramirez or "the March 17 Decision").1/ In the March 17 Decision I found that Brookhaven National Laboratory/Associated Universities, Inc. (BNL or "the Laboratory"), a DOE contractor, had violated the provisions of 10 C.F.R. ' 708.5 by directing the termination of Ramirez' employment as a BNL subcontractor employee in reprisal for his making protected safety disclosures. The March 17 Decision further determined that Ramirez should be awarded back pay and reimbursement for all costs and expenses reasonably incurred by him in bringing his complaint. Since there was no evidence in the record as to the amount of Ramirez' damages, he was provided an opportunity to supplement the record by providing certain specified information regarding back pay and expenses. Ramirez submitted this information on April 18, 1994, in a submission consisting of an affidavit (Ramirez Aff.) with attached exhibits and an attorney's affirmation by his attorney, Claire C. Tierney (Tierney Aff.). BNL submitted a response to the April 18 submission on May 16, 1994.1/ This Supplemental Order awards Ramirez $122,088.18 in back pay

(including interest) and costs and expenses (including attorney's fees).

I. Ramirez' Claim

As compensation for his damages, Ramirez requests a total of $121,474.28, of which $89,822.08 is for lost wages and benefits (and reimbursement for miscellaneous expenses) and $31,652.20 is for attorney's fees and disbursements.

A. Back Pay

Ramirez calculates that his lost pay (including fringe benefits and estimated overtime pay) during the period from his layoff at BNL on March 20, 1992 through his rehiring by a BNL subcontractor on June 7, 1993 was $90,493.30.1/ From this amount, Ramirez subtracted $3,397.26 in earnings from UE&C Catalytic, Inc. in April 1993 and $17,700 in state unemployment benefits to arrive at a net lost pay figure of $69,396.04.

B. Attorney's Fees

In her attorney's affirmation in support of Ramirez' request for attorney's fees reasonably incurred in bringing the complaint in this case, Ms. Tierney describes her legal experience and states that her normal

and customary fee in a case of this type is $175 per hour. She also indicates that she made an informal survey of the hourly fees of plaintiff's-side labor attorneys on Long Island, and that the range of those fees is from $175 to $225. Ms. Tierney also states that she has spent, or will spend, approximately 140 hours on this case. In an attached schedule, she documents 138.5 hours that she spent from October 25, 1993 through April 15, 1994. At 140 hours, Ms. Tierney's fee would total $24,500 ($175 x 140). Ms. Tierney also states that her law clerk, a third year law student, worked a total of 24 hours on the case and is paid at the rate of $10 per hour. Finally, Ms. Tierney documents disbursements of $87.35. The total of these fees and documented disbursements is $24,827.35 ($24,500 + $240 + $87.35). The total amount requested by Ms. Tierney is $31,652.20.1/ No explanation is given for the additional requested amount of $6,824.85 ($31,652.20 - $24,827.35).

C. Other Costs and Expenses

Ramirez asserts that he was compelled to withdraw money from his union annuity and welfare funds as a result of his being laid off from his job at BNL, and requests $19,625 for the damages that he alleges he incurred as a result of these withdrawals. Finally, Ramirez requests reimbursement of $801.04 for incidental expenses incurred in bringing his whistleblower complaint.

II. BNL's Response

In its response to Ramirez' April 18 submission, BNL disputes only two parts of Ramirez' claim. The Laboratory contends that Ramirez has not proven that he was compelled to withdraw money from his union annuity and welfare funds, and therefore should not be compensated for those withdrawals. Citing cases decided under Rule 54(d) of the Federal Rules of Civil Procedure (FRCP), the Laboratory argues that any costs that Ramirez may have incurred as a result of these withdrawals were not "reasonable costs and expenses" incurred by him in bringing his complaint under Part 708. In addition, BNL contends that Ramirez' request for $2,755 in lost overtime pay should be denied. The Laboratory argues that there is no evidence in the record that he would have earned any overtime pay during the period in which he was laid off.

III. Discussion

Section 708.10(c) states that an Initial Agency Decision may include back pay and "reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses (including attorney and expert-witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision was issued." This section, by its reference to "costs and expenses," is by its very terms broader than FRCP Rule 54(d), which refers only to"costs."1/ Thus, the first Initial Agency Decision under the DOE whistleblower regulations interpreted the "costs and expenses" covered by section 708.10(c) more expansively than the way the word "costs" is generally interpreted under FRCP Rule 54(d). Compare Ronald A. Sorri, 23 DOE & 87,503 at 89,016-89,018 (1993) (Sorri), with 10 C. Wright, A. Miller, & M. Kane, Federal Practice and Procedure ' 2677 at 370-372 (1983). In the general discussion on remedy in the March 17 Decision, I indicated that I would follow the standards set forth in the Sorri Decision. Ramirez, 23 DOE at 89,035-037. With these considerations in mind, I now turn to the remedy requested by Ramirez.

A. Back Pay

After considering the submissions by Ramirez and BNL, I have decided to approve, with the adjustments noted below, Ramirez' request for back pay, including overtime.

Ramirez has documented the number of hours that he would have worked by reference to a logbook maintained by his former foreman (Briggs) for the period from March 20, 1992 through March 26, 1993 (Ramirez Aff. Exhibit 6) and by reference to the pay stubs of a BNL subcontractor journeyman electrician employee for the remainder of the relevant period (Ramirez Aff. Exhibit 7). He has also documented the amount of hourly wages, including fringe benefits, that he, as a unionized journeyman electrician working

for a BNL subcontractor, would have earned (Ramirez Aff. Exhibits 5A and 5B). BNL has not objected to this aspect of Ramirez' back pay claim, and his calculations are, for the most part, accurate.1/ Accordingly, after making the adjustments indicated in footnote 6, I find that Ramirez' lost regular pay for the period of his layoff is $89,187.78.

Ramirez, however, has not justified the total amount of overtime pay that he claims. Using the Briggs logbook, he calculates that during the relevant period BNL subcontractor electrician employees worked 141 hours of overtime at one and a half times basic hourly pay and 50 hours at double time.1/ Ramirez asserts that overtime was generally divided among five subcontractor electrician employees, and, on that basis, divides the total number of overtime hours by five to arrive at the amount of hours that he claims that he would have received overtime pay at time and a half and at double time. He therefore requests $1,871 for 28.2 hours at $66.36 per hour and $884 for 10 hours at $88.48 per hour.

Contrary to the argument advanced by BNL, I find that the logbook constitutes sufficient evidence of the likelihood that Ramirez would have worked some overtime and a means to estimate that amount. According to the logbook, during the relevant period there were 22 subcontractor employees, of whom 12 worked a total of 149.5 hours overtime at time and a half. Although 10 employees did not work overtime, the four experienced electricians who were on the "skeletal crew" (see Ramirez, 23 DOE at 89,031) at the time Ramirez was laid off all worked overtime at time and a half. I find it reasonable to assume that, like the other members of his team, Ramirez would have worked some overtime too. Since the total amount of overtime presumably would have been the same even if Ramirez had been employed, I have divided 149.5 by 13 (the 12 employees who worked overtime plus Ramirez) to arrive at 11.5 hours as a reasonable estimate of the number of overtime hours that Ramirez would have worked at time and a half. Since Ramirez has documented that the hourly rate for overtime at time and a half was $66.36, he is entitled to back pay of $763.14 for this lost overtime pay. Similarly, I have divided the 50 double time hours by 7 (the 6 employees who worked this overtime plus Ramirez) to arrive at 7.14 hours as a reasonable estimate of the number of overtime hours that Ramirez would have worked at double time. Since the hourly rate for overtime at double time was $88.48, Ramirez is entitled to back pay of $631.75 for this lost overtime pay. Thus the total amount of pay that Ramirez lost as a result of his lay off was $90,582.67 ($89,187.78 + $763.14 + $631.75).

As indicated above, Ramirez has deducted from his back pay claim $3,397.26 in earnings in April 1993 and $17,700 in state unemployment benefits. However, on the basis of the Initial Agency Decision in the Sorri case, I have decided not to offset Ramirez' lost wages by the unemployment compensation payments that he received. The determination in Sorri was in accordance with the generally accepted "collateral source rule." See 23 DOE at 89,016 (citing NLRB v. Gullett Gin Co., 340 U.S. 361 (1951)). This doctrine holds that as a general rule damages cannot be mitigated or reduced because of payments received by an injured party from a source wholly independent of and collateral to the wrongdoer. Although state unemployment benefits have not always been treated as collateral source payments, in recent years federal circuit courts of appeal generally have determined that unemployment benefits should not be deducted from back pay awards. See Gaworski v. ITT Commercial Finance Corp., 17 F.3rd 1104, 1112-14 (8th Cir. 1994), and cases cited therein. Although those cases involved discrimination complaints, the policy reasons for applying the collateral source rule in those cases are equally applicable to whistleblower cases; namely, to make victimized employees whole for the injuries suffered as a result of prohibited conduct by an employer and to deter such conduct by the employer in the future. Id. at 1113. Accordingly, I have decided not to deduct the state unemployment benefits received by Ramirez from the back pay award in this case. Ramirez is thus entitled to $87,185.41 in back pay ($90,582.67 less $3,397.26 in earnings in April 1993).

In addition, as decided in the March 17 Decision, Ramirez is entitled to pre-judgment interest on this back pay award. The total amount of interest that will have accrued during the period through June 30, 1994 is $9,278. Compound interest was calculated by multiplying the aggregate net amount of lost wages, fringe benefits and overtime for each calendar quarter by the quarterly "overpayment rate" for that quarter.1/ The "overpayment rate," as established by the Secretary of the Treasury pursuant to 26 U.S.C. ' 6621, is the

Federal short-term rate, plus two percentage points. The Federal short-term rate for a particular quarter is the short-term rate for the first month of the preceding calendar quarter, rounded to the nearest whole percent. See Rev. Rul. 94-21, 1994-14 I.R.B. 9.

B. Attorney's Fees

I have decided to approve Ramirez' request for reasonable attorney's fees. The specific dollar award will be limited to those fees that have been documented in Ms. Tierney's affirmation and the attached schedule.

As indicated above, Ms. Tierney has documented 138.5 hours of work that she performed on this case and has explained how she arrived at a fee of $175 as a reasonable hourly fee. She has also estimated that she would spend 1.5 hours on preparing the reply brief to BNL's brief in support of its request for review of the March 17 Decision. BNL has not objected to either the amount of hours or the hourly fee claimed by Ms. Tierney and both factors appear reasonable. Accordingly, Ramirez will be awarded reasonable attorney's fees in the amount of $24,740.1/

However, there is no basis in the record for approving the $6,824.85 which Ms. Tierney requests over and above her documented fees and disbursements. Since Ms. Tierney expressly requests leave to revise Ramirez' attorney fee claim in the event the reply brief consumes more time than anticipated, see n. 4, supra, I assume that the additional amount, totally or in large part, reflects an "upward adjustment" in her hourly fee and not an amount for unanticipated work. Ms. Tierney does not present any reasons in support of this enhancement and, accordingly, it must be denied. See Blum v. Stenson, 465 U.S. 886 (1984), cited in Ramirez, 23 DOE at 89,018.

C. Other Expenses

The bulk of the remaining costs and expenses for which Ramirez requests reimbursement relates to funds that Ramirez received from his union during the period of his lay off. For the reasons set forth below, this request will be denied with respect to the union payments, but will be approved, with one adjustment, for the incidental costs and expenses incurred by Ramirez or disbursed by Ms. Tierney.

Ramirez documents that he prematurely withdrew $9,000 from his union annuity fund during the relevant portion of 1992 and $5,000 more during four of the first five months of 1993. He requests reimbursement for these amounts plus what he claims is a 20 percent penalty for these early withdrawals. He also documents his receipt of $2,700 from his union welfare fund in 1992 and $675 from his union health and benefit fund in 1993, and requests reimbursement for these amounts.

This portion of Ramirez' claim is denied. In my view, the withdrawal of these funds does not meet the section 708.10(c) criterion of "reasonable costs and expenses ... reasonably incurred by the complainant in bringing the complaint upon which the [initial agency] decision was issued." Most of the amount claimed by Ramirez involves payments received by him and not expenses incurred by him. With respect to the annuity fund payments, the exhibits submitted by Ramirez contradict his claim that he incurred a 20 percent penalty because of the premature withdrawal of these funds.1/ The 20 percent figure represents not a penalty, but the amount of Federal income tax withholding required when there is a premature withdrawal of an annuity. See Ramirez Aff. Exhibit 4 (a union instruction sheet entitled, "To: Applicants for Annuity Fund Pre-Retirement Benefits") & 5. Moreover, according to the W-2 forms submitted by Ramirez, while a portion of his annuity payments was withheld in 1993, nothing was withheld in 1992. See Ramirez Aff. Exhibits 3A and 3B. The union instruction sheet does indicate that there is a 10 percent penalty tax for the withdrawal of annuity funds. Ramirez Aff. Exhibit 4 & 6. However, there is no penalty if the recipient is 59 1/2 years of age or older or qualifies for certain other exemptions. Id. Ramirez does not allege that he incurred the 10 percent penalty tax and it is not reflected in his Federal income tax returns for 1992 and 1993. See Ramirez Aff. Exhibits 3A and 3B.1/ Finally, Ramirez has not explained or quantified how he was damaged by his receipt of the other union benefits included in his claim.1/

Even if Ramirez incurred uncompensated financial loss as a result of his withdrawal of money from the

union funds, he has not shown that this loss was incurred in connection with his bringing this case. Rather, as his affidavit makes clear, he needed these funds in order to meet his living expenses. See Ramirez Aff. && 7, 25. This is understandable in view of his lack of employment, but it appears to be too remote from the litigation-related costs and expenses for which reimbursement is provided by section 708.10(c). Examples of the types of expenses which are covered by this section are payment for court reporters for a hearing transcript, photocopying of the transcript, long distance telephone calls and postage. Accordingly, Ramirez will be awarded $797.42 as reimbursement for expenses incurred by him for the hearing transcript and long distance telephone calls and $87.35 as reimbursement for Ms. Tierney's disbursements for copying and postage.1/

V. Conclusion

For the reasons set forth above, Ramirez shall be awarded the following amounts of back pay and reimbursement for costs and expenses in accordance with the provisions of 10 C.F.R. ' 708.10(c):

Back Pay (including overtime)	$87,185.41	
Interest on Back Pay	$9,278.00 (as of 6/30/94)	
Attorney's Fees		$24,740.00
Miscellaneous Expenses	$884.77	
Total		$122,088.18

It is Therefore Ordered That:

(1) Brookhaven National Laboratory/Associated Universities, Inc.

shall pay to David Ramirez the following amounts in compensation for actions taken against him in violation of 10 C.F.R. ' 708.5:

(a) $87,185.41 for lost wages, fringe benefits, and overtime pay for the period from March 20, 1992 through June 7, 1993.

(b) $9,278 in interest on the lost wages, fringe benefits and overtime pay as of June 30, 1994, plus additional interest from July 1, 1994 until the date of payment calculated by multiplying the cumulative amount of unpaid back pay plus interest each calendar quarter by the quarterly "overpayment rate" for that quarter.

(c) $797.42 for reimbursement for incidental expenses incurred by David Ramirez in bringing his complaint under 10 C.F.R. Part 708.

(d) $24,827.35 for attorney's fees and disbursements incurred in this proceeding with respect to Claire C. Tierney, Esq.

(e) An additional amount, at the rate of $175 per hour for each hour in excess of 140 hours reasonably spent by Claire C. Tierney, Esq. in representing David Ramirez before the Department of Energy in this case.

(f) An additional amount as reimbursement for documented, reasonable disbursements incurred by Claire C. Tierney, Esq. in her representation of David Ramirez in this case subsequent to April 15, 1994 and for long distance telephone calls documented in the attachment to Ms. Tierney's affirmation, dated April 15, 1994.

(2) This is a Supplemental Order to the Initial Agency Decision issued on March 17, 1994, and shall be subject to review by the Secretary of Energy or her designee pursuant to the request for review that Brookhaven National Laboratory submitted to the Office of Contractor Employee Protection on April 1,

1994.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date:

1/ The OHA case number for the Ramirez Decision is LWA-0002. As indicated above, the OHA case number for this Supplemental Order is LWX-0013. 1/ On April 1, 1994, BNL submitted a request for review of the March 17 Decision pursuant to 10 C.F.R. ' 708.10(c). That request is currently pending, and this Supplemental Order is being issued with the expectation that it will be reviewed by the Secretary of Energy or her designee together with the March 17 Decision. 1/ This consists of $87,738.30 for lost wages, see n. 6, infra, and $2,755 in estimated lost overtime pay. 1/ Ms. Tierney requests that this amount be subject to revision should her reply brief to BNL's brief in support of its request for review of the March 17 Decision consume more time than anticipated. 1/ In Crawford Fitting Co. v. J.J. Gibbons, Inc., 482 U.S. 437 (1987), the Supreme Court held that costs awarded under Rule 54(d) are limited to the items set forth in 28 U.S.C. ' 1920 and other related statutes. 1/ In paragraph 21 of his affidavit, Ramirez submits the following breakdown for 61 of the 62 weeks of his lay off (through the week ending May 28, 1993): 5 weeks of 35 hours at $41.90 per hour = $ 7,332.50 45 weeks of 35 hours at $44.24 per hour= $69,678.00 (includes 4 weeks with one paid vacation day) 4 weeks of 28 hours at $44.24 per hour = $ 4,954.88 (includes 4 weeks with one unpaid vacation day) 4 weeks of 32 hours at $45.14 per hour = $ 5,772.92 (should be $5 more [$5,777.92]) 1 unpaid Christmas week 0.00 2 weeks union-paid vacation in 1992 0.00 61 weeks $87,738.30 Since Ramirez did not return to work at BNL until June 7, 1993, there was one additional week of 32 hours at $45.14 per hour for a total of $1,444.48. Thus the gross amount of lost pay is $89,187.78 ($87,738.30 + $5.00 + $1,444.48). The payment of two weeks' vacation is verified by a W-2 Form from the union VHT fund for 1992. See Ramirez Aff. Exhibit 3A. 1/ During the relevant time period, BNL subcontractor electricians were paid at time and a half when they worked more than the standard number of hours in a day or week (7 hours a day for 5 days during the period prior to May 1, 1993, and 8 hours a day for 4 days for the period beginning May 1, 1993) and were paid double time when they worked on a Saturday. See Ramirez Aff. && 11, 12, 16. 1/ These calculations are summarized in the Appendix to this Supplemental Order. The work week ending March 27, 1992 has been included in the first quarter for which interest was calculated, the quarter ending June 30, 1992. For the purpose of calculating the accrual of interest on lost overtime pay, the $1,395 of lost overtime pay was prorated according to the approximate number of overtime hours during the relevant periods as follows: $625 during the quarter ending September 30, 1992, $221 during the quarter ending December 31, 1992, and $549 during the quarter ending March 31, 1993. As a result of the rounding of the back pay figures used in the interest calculations, the cumulative back pay + interest figure in the Appendix is slightly less than the total of the back pay and interest figures in ordering paragraph (1)(a)&(b). 1/ This amount is the total of 140 hours of work performed by Ms. Tierney at $175 and the 24 hours of work performed by Ms. Tierney's law clerk multiplied by $10. 1/ Ramirez requests reimbursement for $2,250, which he claims was the 20 percent penalty incurred in 1992, but he does not specify an amount for 1993. 1/ Ramirez has also not attempted to quantify the amount of the interest income that he lost as a result of his withdrawal of money from the union annuity fund. Even assuming that such damages are covered by section 708.10(c), they would be compensated for by the interest on back pay being awarded by this Supplemental Order. 1/ Although Ramirez does not refer to these payments as supplemental unemployment benefits, they are identified as "S.U.B." benefits in his W-2 forms for 1992 and 1993. See Ramirez Aff. Exhibits 3-A and 3-B. While Ramirez could have been damaged if these benefits were depleted as a result of BNL's wrongful reprisal, he has not alleged that these benefits have not been available to him as a result of his receipt of payments made during the March 1992 to June 1993 period. 1/ The amount approved for long distance telephone calls is slightly less than the amount claimed by Ramirez because of the deduction of two telephone calls that were made not to the DOE, but to the National Labor Relations Board. Ms. Tierney

has documented the date and length, but not the cost, of approximately one dozen long distance calls made in connection with this case. Ramirez will be entitled to reimbursement for the cost of these calls and for other, reasonable, documented disbursements made after April 15, 1994 by Ms. Tierney in her representation of Ramirez before the DOE.

Case No. LWX-0014

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Supplemental Order

Name of Petitioner: Ronald A. Sorri

Date of Filing: September 26, 1994

Case Number: LWX-0014

This Decision supplements an Initial Agency Decision, dated December 16, 1993, issued by the undersigned Hearing Officer of the Office of Hearings and Appeals (OHA) of the Department of Energy in a case involving a "whistleblower" complaint filed by Ronald A. Sorri (Sorri) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. See Ronald A. Sorri, 23 DOE & 87,503 (1993) (Sorri). In the December 16 Decision, I found that Sorri had proven by a preponderance of the evidence that he engaged in activities protected under Part 708 and that these activities were a contributing factor in the decision by Sandia National Laboratories (Sandia) and L&M Technologies, Inc. (L&M) to terminate his employment. I further concluded that Sandia and L&M were jointly responsible for the termination of Sorri's employment and that a violation of Part 708 had occurred. In the December 16 Decision, I determined that Sorri should be awarded back pay lost as a result of the reprisals taken against him, as well as all costs and expenses reasonably incurred by him in bringing his complaint. At that time, Thad M. Guyer, attorney for Complainant, was directed to submit a full accounting of his hourly charges for attorney's fees together with any costs, expenses, and expert witness fees incurred in representing Sorri, and a full accounting of any other costs and expenses reasonably incurred by Sorri in bringing his complaint under Part 708.

Both Sandia and L&M filed requests for review of the December 16 Decision by the Secretary of Energy or her designee. See ' 708.11. Sandia subsequently withdrew its request; however, L&M did not. The parties entered into negotiations, and on June 7, 1994, they stipulated to the dismissal of the Part 708 proceeding against L&M. By so stipulating, the parties agreed that the dismissal of L&M shall not operate to affect the liability established against Sandia. In a Final Decision and Order issued on August 25, 1994, the Deputy Secretary, as the Secretary's designee under ' 708.11, approved the dismissal of L&M as a party to this proceeding, and affirmed the elements of relief ordered by the OHA. On September 26, 1994, Guyer submitted a motion for attorney's fees and costs, together with a supporting affidavit and attachments. The OHA served Sandia with a copy of Guyer's motion and Sandia submitted a response on October 11, 1994. On October 17, 1994, Guyer submitted a reply to Sandia's response. This Supplemental Order awards Guyer $25,356.43 in attorney's fees and costs.

I. Discussion

Section 708.10(c) states that an Initial Agency Decision may "include an award of reinstatement, transfer preference, back pay and reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses (including attorney and expert-witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision was issued." In Sorri, I concluded that an award of back pay, together with reasonable costs and expenses, including reasonable attorney and expert witness fees was the appropriate remedy in this proceeding. Id. In addition, I determined that Sorri should receive

restitution for any other costs "reasonably incurred" in bringing his complaint under Part 708, which includes mileage, long distance telephone charges, postage, copying, court reporters, and all other related expenses. As stated above, I further directed Guyer to submit a full accounting of his hourly charges for attorney's fees together with any costs, expenses, and expert witness fees incurred in representing Sorri, as well as a full accounting of any and all other costs and expenses reasonably incurred by Sorri in bringing his complaint.

As compensation for his costs and expenses, Guyer requests a total of $25,356.43, of which $22,093.75 is for attorney's fees, $900.00 is for legal assistant costs, and $2,362.68 is for litigation costs and expenses. In Guyer's affidavit in support of his request for attorney's fees and costs, Guyer describes his legal experience and states that his normal hourly billing rate is $175, which is commensurate with that charged by other lawyers with his experience in Albuquerque, New Mexico. In an attached schedule, Guyer documents 126.25 hours that he spent working on the Sorri case from September 8, 1993 through April 6, 1994. At 126.25 hours, Guyer's fee totals $22,093.75 ($175 x 126.25). In addition, Guyer documents 60 hours that his legal assistant spent working on the Sorri case from October 12, 1993 through November 15, 1993. At 60 hours, Guyer's legal assistant costs total $900.00 ($15 x 60). Finally, Guyer documents his litigation costs and expenses which include the cost of depositions, the cost of an expert witness, as well as indirect litigation costs of transportation and lodging for him and his legal assistant at the hearing. These litigation costs and expenses also include costs personally incurred by Sorri, such as telephone, postage, and travel expenses. The total of these costs and expenses is $2,362.68.

In its response to Guyer's Motion for Attorney's Fees and Costs, Sandia does not contest either the amount of Guyer's hours or the reasonableness of Guyer's hourly billing rate. However, Sandia states that Guyer's charges for the activities of organizing, abstracting and indexing exhibits, as well as conducting research for a post hearing brief appear to duplicate the time charged for these same categories of work performed by Guyer's legal assistant. Guyer has responded by explaining that his tasks were clearly distinct and different from those of his legal assistant. He states that he organized, abstracted and indexed the most important exhibits and that he used his legal assistant to organize, abstract and index exhibits which he determined were of lesser importance. See Guyer's Reply at 1 and 2. I find that Guyer's explanation of these charges resolves the question raised by Sandia about apparent double billing. The use of a legal assistant to perform this work was clearly a cost saving measure. I therefore find that the reimbursement of $900 for the work performed by Guyer's legal assistant is reasonable, and it should be approved.

Sandia also argues that the guidelines established in DOE's interim policy statement for litigation management limit the reimbursement of travel time to the portion of time during which an attorney actually performs legal work. See 59 Fed. Reg. 44981 (August 31, 1994). Sandia states that "Guyer's charges for travel should be reduced accordingly." Sandia's Response at 1. However, Guyer has responded by explaining that he did not bill Sorri for his travel time, but only for legal work actually done while in flight. As an example, Guyer explains that he drove his car "five hours each way to get to the Sacramento airport to get the cheapest flight to Albuquerque" and that he did not charge Sorri for this travel time. Guyer's Reply at 2. Guyer also explains that while in flight he studied exhibits, reviewed DOE regulations and worked on pleadings. Id. Based on Guyer's explanation, I find that his requested legal fees for time spent working on the case during travel are reasonable.

Sandia nevertheless argues that according to the interim guidelines, incidental postage charges, long distance telephone charges, mileage reimbursements, and travel expenses should be considered part of Guyer's general overhead and not recoverable as litigation costs. In regard to travel expenses, Sandia cites cases which generally state that they are not recoverable as costs.1 However, these cases are distinguishable because they involved costs sought under the Rule 54(d) of the Federal Rules of Civil Procedure, and the Supreme Court has stated that such costs are generally limited to the restrictive list of items set forth in 28 U.S.C. ' 1920 and other related statutes.2 This restrictive definition of costs is clearly inapposite to the present case, where there is a more expansive provision in the governing regulations that authorizes the reimbursement of costs to the complainant. As noted above, 10 C.F.R. ' 708.10(c) states that an Initial Agency Decision "may include...reimbursement to the complainant up to the aggregate amount

of all reasonable costs and expenses...reasonably incurred by the complainant in bringing the complaint upon which the decision was issued." 10 C.F.R. ' 708.10(c). I find that Guyer's travel expenses are reasonable out-of-pocket expenses that should be recoverable as costs. With regard to the incidental postage charges, long distance telephone charges and mileage reimbursements, Guyer has indicated that these expenses were personally incurred by Sorri and not a part of Guyer's overhead. These charges have been sufficiently documented and I find that they are also reasonable costs. I have therefore determined that Guyer's request for reimbursement of $2,362.68 for these litigation costs and expenses is reasonable, and it should be approved.

It is important as a matter of Departmental policy to recognize the public interest nature of representing an alleged whistleblower under Part 708, and to award a reasonable fee to encourage attorneys to take these cases. See Sorri, 23 DOE & 87,503 at 89,018 (1993) and cases cited therein. Based upon my review of Guyer's Motion and the supporting Affidavit and attachments, I have decided to approve Guyer's request for attorney's fees and costs. As indicated above, Guyer has documented 126.25 hours of work performed on the Sorri case and has affirmed that $175 is a reasonable hourly billing rate for lawyers with similar experience in Albuquerque, New Mexico. Sandia does not contest these figures, and I find that they are reasonable. See David Ramirez, 24 DOE 87,504 (1994), appeal pending, (OHA Hearing Officer determined that the attorney's hourly rate of $175 for representing a whistleblower under Part 708 was reasonable and awarded fees of $24,740). Accordingly, I have concluded that Guyer should be awarded attorney's fees of $22,093.75, which is consistent with the "lodestar" approach (the product of reasonable hours times a reasonable rate for determining the amount of attorney's fees to award a successful complainant) approved by the Supreme Court in Blum v. Stenson, 465 U.S. 886, 888 (1984).

II. Conclusion

For the reasons set forth above, Guyer shall be awarded the following amounts of attorney's fees, legal assistant costs, and litigation costs and expenses in accordance with the provisions of 10 C.F.R. ' 708.10 (c):

Attorney's Fees $22,093.75

Legal Assistant Costs $900.00

Litigation Costs and Expenses $2,362.68

Total $25,356.43

It Is Therefore Ordered That:

(1) Sandia National Laboratories shall pay Thad M. Guyer $25,356.43 in compensation for actions taken against Ronald A. Sorri in violation of 10 C.F.R. ' 708.5.

(2) Sandia National Laboratories shall pay the above amounts to Thad M. Guyer within 20 days of the issuance of this Order.

(3) This is a Supplemental Order to the Initial Agency Decision issued on December 16, 1993, and may be appealed to the Deputy Secretary of Energy.

Thomas O. Mann

Sandia National Laboratories

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motions to Dismiss

Names of Petitioners: Sandia National Laboratories

L & M Technologies, Inc.

Dates of Filing: August 11, 1993

August 17, 1993

Case Numbers: LWZ-0021

LWZ-0022

This determination will consider two Motions to Dismiss filed by Sandia National Laboratories (Sandia) and L & M Technologies, Inc. (L&M) on August 11 and 17, 1993, respectively. In their Motions, Sandia and L&M seek the dismissal of the underlying complaint and hearing request filed by Mr. Ronald A. Sorri (Sorri) under the Department of Energy's Contractor Employee Protection Program. Sorri's present request for a hearing under § 708.9 was filed on June 9, 1993, and it has been assigned Office of Hearings and Appeals (OHA) Case No. LWA-0001. Sorri's is the first hearing request received by the OHA under the DOE's new Contractor Employee Protection Program.

I. Background

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's Government- owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. In view of its recognized jurisdiction, the DOE established new administrative procedures to deal with complaints of this nature. The Notice of Proposed Rulemaking for these new administrative procedures was published in the Federal Register on March 13, 1990. 55 Fed Reg. 9326 (March 13, 1990). Interested persons were given the opportunity to submit written comments, and the final rule was published in the Federal Register on March 3, 1992. 57 Fed. Reg. 7533 (March 3, 1992). The new DOE Contractor Employee Protection Program regulations, codified as Part 708 of Title 10 of the Code of Federal Regulations, became effective on April 2, 1992.

The following three provisions of the regulations in Part 708 are relevant to the present Decision. Section 708.6(d) provides, in pertinent part:

A complaint . . . must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later.

Once a complaint has been filed, § 708.8(a)(2) provides that the Director of DOE's Office of Contractor Employee Protection (OCEP) may accept the complaint, unless she determines that the complaint is untimely. The third provision, § 708.15, permits the "Secretary or designee," i.e. the appropriate DOE official depending on the stage of the proceeding, to extend the time frames set forth in Part 708.

Sorri was a Senior Maintenance Technician employed by L&M, a subcontractor at the Microelectronics Development Laboratory (MDL) at Sandia National Laboratories in Albuquerque, New Mexico, from March 1990 until March 1992. During that time, Sorri disclosed safety concerns to management officials of both L&M and Sandia involving the possible release of lethal gases as a result of overpressurized gas cylinders. After communicating his safety concerns on a number of occasions to officials at Sandia, Sorri filed a formal safety complaint with the DOE on February 14, 1991. He alleges that after doing so, L&M and Sandia took the following reprisal actions against him: reassignment and relocation from the MDL to L&M's off-site headquarters, cancellation of requested training, a downgraded performance evaluation, and termination from employment on March 13, 1992.

On July 23, 1992, Sorri filed a complaint with the DOE Albuquerque Field Office (DOE/AL) pursuant to 10 C.F.R. Part 708. After an unsuccessful attempt was made by DOE/AL to reach an informal resolution, Sorri's complaint was forwarded on September 29, 1992, to the DOE's Office of Contractor Employee Protection to institute a formal investigation. The OCEP conducted an on-site investigation of Sorri's allegations of reprisal and issued a Report of Investigation and a Proposed Disposition on April 30, 1993. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that Sorri's relocation and reassignment, as well as his downgraded performance evaluation, occurred as a result of his protected disclosures. However, the Proposed Disposition also concluded that the cancellation of Sorri's training and his termination were not the result of, or constituted reprisals for, his protected disclosures.

On May 14, 1993, Sorri submitted his request for a hearing pursuant to 10 C.F.R. § 708.9 to OCEP. On June 9, 1993, OCEP transmitted that request, together with the investigative file, to the OHA, and requested that a Hearing Officer be appointed. On June 16, 1993, procedures and a briefing schedule were established for the hearing in this case under § 708.9(b). The hearing is presently set for September 14 and 15, 1993, in Albuquerque, New Mexico.

On August 11, 1993, Sandia filed a Motion to Dismiss the proceeding. In its Motion, Sandia maintains that Sorri's July 23, 1992 complaint was not timely filed. The regulations require an individual to file a complaint under the Contractor Employee Protection Program "within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." 10 C.F.R. § 708.6(d). Sandia asserts that this requirement is jurisdictional in nature, and that the DOE therefore does not have the authority to proceed in any case where the time period for filing a complaint is exceeded. According to Sandia, Sorri filed his complaint too late to challenge an event occurring on March 13, 1992, the date on which Sorri's employment with L&M was terminated. Motion to Dismiss at 1. Sandia states that Sorri would have had to file his complaint by May 30, 1992, in order to meet the 60-day time period, and even if the 60 days was counted from the effective date of the new Part 708 regulations on April 2, 1992, Sorri's complaint, filed on July 23, 1992, is still untimely. Id. Finally, Sandia maintains that the discussion of the 60-day filing requirement in the preamble to Part 708 "makes it clear that DOE feels that 60 days is reasonable because investigation of claims filed after 60 days is made more difficult by fading memories." Id.; see 57 Fed. Reg. at 7537 (March 3, 1992). On August 17, 1993, L&M filed a similar Motion to Dismiss in which it also claims, for the reasons cited in Sandia's motion, that the Sorri complaint is time barred.

II. Analysis

The DOE regulations governing this proceeding do not expressly provide for the submission of motions to dismiss based upon an allegation that the underlying complaint was untimely. As noted above, under § 708.8(a)(2), the OCEP Director must determine whether to dismiss a DOE Contractor Employee

Protection Program complaint on the grounds that it is untimely. While it is true that § 708.6(d) states that a complaint must be filed within 60 days after the alleged discriminatory act occurred, § 708.15 allows "all time frames" set forth in Part 708 to be extended. It is therefore clear that under these regulations, the decision to accept a complaint filed after the 60-day period in § 708.6(d) is within the discretion of the OCEP Director. In the present case, the OCEP Director did not dismiss the complaint as untimely, and there is nothing in the record to suggest that she abused her discretion. As explained below, her decision to accept and investigate Sorri's complaint is consistent with the important Departmental policy objectives behind Part 708. Moreover, there is no evidence in the present record that the investigation was hampered in any way because Sorri may have exceeded the 60-day time period, nor any reason to believe that any party has been prejudiced as a result.

In its Motion, Sandia attempts to avoid this conclusion by characterizing the 60-day time period in § 708.6(d) as jurisdictional. However, there is nothing in Part 708 that would indicate that the 60-day period was meant to be inflexible - i.e. jurisdictional - in nature. Indeed, there are a number of reasons why § 708.6(d) should not be read as barring the investigation of a complaint that is filed more than 60 days after the alleged discriminatory act occurred or should reasonably have been discovered.

First, the DOE Contractor Employee Protection Program is intended to encourage contractor employees to come forward "with information that in good faith they believe evidences unsafe, unlawful, fraudulent, or wasteful practices." 57 Fed. Reg. at 7533 (March 3, 1992). Employees of DOE contractors and subcontractors should be able to disclose safety concerns without fear of employer reprisal, and employees who believe they have been subject to a reprisal should feel they are able to seek protection from the DOE. It is clear from the regulatory history of this new program that the 60- day time limitation for the submission of complaints was never intended as an ironclad technical requirement. Such a technical, not generally understood requirement could dissuade employees from disclosing such important information.

Second, the preamble to Part 708 states that the reason for adopting a time limit for the filing of a complaint of discrimination under this new program was to ensure the investigation of complaints would not be rendered "more difficult as memories grow dimmer with the passage of time." 57 Fed. Reg. at 7537 (March 3, 1992). In the present case, after conducting an investigation, the OCEP Director found that there was sufficient evidence on which to move forward, so there is no evidence at this stage in the proceeding that any delay in the filing of the complaint hampered the investigation. Nor has there been any showing (or even a credible suggestion) by Sandia or L&M that either was prejudiced in its ability to defend itself against Sorri's allegations as a result of any delay which may have occurred.

A motion to dismiss is appropriate only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See M&M Minerals Corporation, 10 DOE ¶ 84,021 (1982). Since dismissal is the most severe sanction that we may apply, it should be used sparingly, and only to prevent a miscarriage of justice. In this regard, we have determined that the acceptance of Sorri's complaint was a reasonable exercise of discretionary authority under Part 708 by the Director of the Office of Contractor Employee Protection. There is no evidence that the policy underlying the 60-day time limit has been contravened by the acceptance of the complaint, or that either Sandia or L&M was prejudiced by any brief delay which may have occurred between Sorri's termination in March 1992 and the filing of his complaint under the newly promulgated provisions of Part 708 in July of that year. Accordingly, the Motions to Dismiss filed by Sandia National Laboratories and L & M Technologies, Inc. should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Sandia National Laboratories on August 11, 1993, is hereby denied.

(2) The Motion to Dismiss filed by L & M Technologies, Inc. on August 17, 1993, is hereby denied.

(3) This is an Interlocutory Order of the Department of Energy.

Roger Klurfeld

Assistant Director

Office of Hearings and Appeals

Date:

Universities Research Association, Inc.

December 22, 1993

Motion to Dismiss

Name of Movant: Universities Research Association, Inc.

Date of Filing: December 9, 1993

Case Number: LWZ-0023

Universities Research Association, Inc. (URA) is the management and operating contractor for the Department of Energy's (the DOE) Superconducting Super Collider Laboratory (the Laboratory) in Waxahachie, Texas. On February 4, 1993, Dr. Naresh C. Mehta, a former physicist at the Laboratory, filed complaint SSC-93-0001 against URA under 10 C.F.R. Part 708 (the "Whistleblower Regulations"). In his complaint, Mehta alleged that URA had terminated his employment because he had charged URA officials with mismanaging the Laboratory's hypercube computer. 1/

The DOE referred Mehta's complaint to its Office of Contractor Employee Protection (OCEP). After an extensive investigation, OCEP issued a Proposed Disposition on October 15, 1993. In the Proposed Disposition, OCEP found that Mehta had made a good faith disclosure of his concerns about mismanagement of the hypercube. Furthermore, OCEP found that URA had not shown a legitimate business reason for terminating Mehta's employment. OCEP concluded that URA's actions against Mehta were retaliatory and prohibited under the Whistleblower Regulations. Accordingly, OCEP ordered URA to reinstate Mehta, grant him back pay and benefits, pay his legal fees and costs, and expunge information relating to the termination from his personnel record.

URA filed a request for a hearing on the merits of the complaint under § 708.9 of the Whistleblower Regulations. The DOE's Office of Hearings and Appeals scheduled the hearing for January 5, 1994. URA filed the present Motion to Dismiss on December 9, 1993. The grounds of URA's Motion to Dismiss are (1) the Whistleblower Regulations were not in effect for the Laboratory when URA committed the alleged acts of reprisal; and (2) Mehta's complaint was not timely filed. For reasons discussed below, we reject both grounds and will deny the motion.

The term "whistleblowing" has been described as referring to "employees who make disclosures outside of their organizations, [as well as] employees who raise questions about improper practices through their employers' internal channels, or who refuse to carry out illegal instructions." 2/

The current Secretary of Energy, Hazel O'Leary, has established a departmental policy of encouraging whistleblowing. Secretary O'Leary has stated that "I need whistleblowers, the department needs whistleblowers, and our country needs whistleblowers." Concerning employers' reprisals against whistleblowers, she added that, "I commit today to zero tolerance, zero tolerance of reprisals," seeking to "encourage dissent, encourage disagreement...." 3/

The DOE has been given the statutory authority to prescribe rules and regulations deemed necessary or appropriate to protect health, life, and property and to otherwise administer and manage its responsibilities and functions. See, e.g., the Atomic Energy Act of 1954, as amended (42 U.S.C. 2201); the Energy Reorganization Act of 1974, as amended (42 U.S.C. 5814 and 5815); and the Department of Energy Organization Act, as amended (42 U.S.C. 7251, 7254, 7255, and 7256). These statutory grants were the basis for the DOE's Whistleblower Regulations, published in 57 Fed. Reg. 7533 (March 3, 1992), with an

effective date of April 2, 1992.

In addition, the DOE amended the Department of Energy Acquisition Regulations (DEAR) (48 C.F.R. Chapter 9) to require that all DOE contracts and subcontracts contain a provision requiring compliance with the Whistleblower Regulations. 57 Fed. Reg. 57638 (December 8, 1992). The DOE described this amendment as "a technical and conforming change to make the DEAR consistent with 10 C.F.R. Part 708."

URA's first argument follows from its reading of 10 C.F.R. § 708.2 (a), which sets out the scope of the Whistleblower Regulations. The section provides that:

For all other complaints [i.e., not relating to health or safety matters], this part is applicable to acts of reprisal occurring after the effective date of this part if the underlying procurement contract ... contains a clause requiring compliance with this part.

URA's argument hinges on the clause, "if the underlying procurement contract ... contains a clause requiring compliance with this part," hereafter referred to as the Compliance Clause. URA contends that the Compliance Clause means that "for complaints of reprisal allegedly arising out of other [i.e., not relating to health or safety] protected disclosures, including mismanagement, Part 708 was not applicable until the contract contained the clause required by DEAR 970.5204-59." URA's contract with the DOE was modified to conform with the Whistleblower Regulations and to incorporate its protections for contractor employees on March 31, 1993. 4/ Because URA terminated Mehta's employment before the modification was signed, URA contends that the Whistleblower Regulations do not apply in Mehta's case.

URA's interpretation is incorrect. The focus of the Compliance Provision is not when the Whistleblower Regulations are effective, but whether a contractor is subject to the Regulations. Employees of the Laboratory are covered by the protections of the Whisleblower Regulations because the contract between URA and DOE has been modified to incorporate those protections. In a letter transmitted with the modification, Terrell C. Cone, Director of the Department's Contract Administration Office for the Superconducting Super Collider Project, explained the scope of the Whistleblower Regulations:

Once the clause specified at 970.5204-59 and the subject of modification A033 was accepted by Universities Research Association, Inc. and by the DOE Contracting Officer, all cognizant allegations of reprisal after April 2, 1993 (including fraud, mismanagement, etc.,) are covered.

Cone's explanation of the scope of the Whistleblower Regulations is supported by the DOE's Acquisition Letter 92-9, dated December 8, 1992. The Acquisition Letter states that:

With respect to complaints involving other matters, Part 708 is applicable to acts of reprisal occurring on or after April 2, 1992, if the subject contract contains a clause requiring compliance with Part 708....

The Acquisition Letter then explains that certain contracts will not be modified:

Contracting officers shall modify existing contracts and purchase orders which fall within the scope of the clause prescription at DEAR 913.507, 922.7101, and 970.5204, to incorporate the whistleblower protection for Contractor Employees clause not later than March 31, 1993. However, the clause need not be incorporated into contracts and purchase orders that are due to expire by June 30, 1993.

It follows from the discussion in the Acquisition Letter, and from the plain meaning of § 708.2 (a), that URA's reliance on the Compliance Provision is misplaced. The Compliance Provision does not establish an effective date for the Whistleblower Regulations. Rather, it provides for the eventuality that some contracts would not be modified. URA's contract has been modified, and therefore, as with all contractors performing under contracts that have been modified, URA is subject to the provisions of the Whistleblower Regulations as of April 2, 1992.

Furthermore, URA has entered into an agreement with the DOE in which it concedes that Mehta's complaint will be processed pursuant to the Whistleblower Regulations. The agreement, styled a "Mediation Agreement," was executed on September 21, 1993 by Ezra D. Heitowit, Vice-President/Secretary of URA; Norman Landa, attorney for Mehta; and Sandra L. Schneider, Director of OCEP. The agreement provides in part that:

This certifies agreement by senior officials of Universities Research Association, Inc. and Dr. Naresh Mehta to attempt to resolve Complaint No. SSC-93-0001, filed pursuant to Part 708, title 10, Code of Federal Regulations, through mediation.... Both parties have agreed that if attempts to resolve this complaint are unsuccessful, the complaint will be processed further consistent with Part 708, and the Director, OCEP, will issue a Report of Investigation and Proposed Disposition in this case. 5/

URA thus voluntarily agreed to be bound by the Whistleblower Regulations in Mehta's case. It would be manifestly unjust to allow URA to assert that the Whistleblower Regulations are not applicable after OCEP made a determination, pursuant to the Regulations, that URA finds unfavorable. The Mediation Agreement estops any claim by URA that the Whistleblower Regulations are not applicable to Mehta's complaint.

URA's second argument is that Mehta failed to file his complaint within 60 days of the termination of his employment. There is no supporting discussion of this argument in the motion. Apparently, URA attempts to rely on § 708.6 (d) of the Whistleblower Regulations, which provides that:

A complaint filed pursuant to ... this section must be filed within 60 days after the alleged discriminatory act occurred.... In cases where the employee has attempted resolution through internal company grievance procedures ... the 60-day period for filing a complaint shall be tolled during such resolution period and shall not again begin to run until the day following termination of such dispute-resolution efforts.

The "discriminatory act," as defined in § 708.4 of the Whistleblower Regulations, is the termination of Mehta's employment. URA concedes in its motion that Mehta was notified of the termination on October 27, 1992. On November 3, 1992, Steven Brumley, the Laboratory's legal counsel, agreed to arrange at Mehta's request an independent review of the termination. 6/ Douglas P. Kreitz, the Laboratory's personnel director, notified Mehta in a letter dated December 16, 1992, that the review had been completed and that the Laboratory was "proceeding with [Mehta's] termination." 7/ Mehta then filed his complaint on February 4, 1993.

Mehta's request for review constitutes an attempted resolution through internal company grievance procedures as required in §708.6 (d). Thus, the 60-day filing period did not begin running until Mehta knew, or should have known, that the review had been completed. URA has made no attempt to show that Mehta knew or should have known about the completion of the review before Kreitz's letter of December 16, 1992. Mehta filed his complaint on February 4, 1993, which is within 60 days of December 17, 1992, the day after Kreitz's letter. We reject, therefore, URA's assertion that Mehta failed to file a timely complaint.

In conclusion, we find no basis in URA's motion that justifies the dismissal of Mehta's claim. We will therefore deny the motion.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Universities Research Association, Inc. on December 9, 1993, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

Case No. LWZ-0026

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Motions to Dismiss

Names of Petitioners: Boeing Petroleum Services, Inc.

DynMcDermott Petroleum Operations Company

Dates of Filing: March 24, 1994

March 25, 1994

Case Numbers: LWZ-0026

LWZ-0027

This determination will consider two Motions to Dismiss filed by Boeing Petroleum Services, Inc. (Boeing) and DynMcDermott Petroleum Operations Company (DynMcDermott) on March 24 and 25, 1994, respectively. In the Motion filed by Boeing, the firm seeks the dismissal of the underlying complaint and hearing request filed by Mr. Francis M. O'Laughlin (O'Laughlin) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. O'Laughlin's present request for a hearing pursuant to section 708.9 of those provisions was filed with the Office of Hearings and Appeals (OHA) on January 10, 1994. Francis M. O'Laughlin v. Boeing Petroleum Services, Inc., OHA Case No. LWA-0005. In the Motion filed by DynMcDermott, the firm seeks the dismissal of DynMcDermott as a party in the O'Laughlin proceeding.

I. Background

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure will be directed by the DOE to provide relief to the complainant. The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2, 1992, establish administrative procedures for processing complaints of this nature.

From March 1987 until his resignation on May 15, 1992, O'Laughlin was employed by Boeing, the then management and operating (M&O) contractor for the DOE's Strategic Petroleum Reserve (SPR) Office located in New Orleans, Louisiana. In January 1990, O'Laughlin was appointed to the position of Integrated Logistics Systems (ILS) Manager, a subgroup of the Engineering Directorate, which was responsible for a number of logistics functions including: (1) Logistics Engineering, which entailed oversight of the Logistics Service Support Analysis (LSSA) program; and, (2) Maintenance Management Information Systems (MMIS), which reported the status of preventive maintenance of SPR facilities. However, in late 1990 or early 1991, notification was given by the Boeing Project Manager to the various

managers that a reorganization was planned which involved, inter alia, moving many logistics functions to a newly formed Material Directorate under the management of an individual designated as the Material Director. In addition, it was determined that other ILS functions should be splintered among other Directorates. In particular, the reorganization called for moving the MMIS preventive maintenance reporting function to the previously existing Operations and Maintenance (O&M) Directorate within Boeing.

During April and May 1991, when implementation and potential impacts of the planned reorganization were being discussed, O'Laughlin voiced and documented his objections to the dispersal of the ILS functions, particularly with regard to the transfer of preventive maintenance reporting to the O&M Directorate. O'Laughlin advised Boeing management that transfer of the preventive maintenance function was not prudent and would result in inefficiency since it amounted to having the O&M Directorate report on itself.1 In addition, O'Laughlin expressed concern that splintering logistics functions from the ILS might result in Boeing not meeting LSSA program milestones established by agreement with the DOE, and indeed might constitute a violation of a pertinent DOE Order, SPRO Order 4000.1B, Strategic Petroleum Reserve Integrated Logistics Support Policy.

According to O'Laughlin, two acts of reprisal were taken against him by Boeing. First, although preliminary drafts of the proposed Material Directorate organization chart specified O'Laughlin as the Logistics Manager, who would report directly to the Material Director upon reorganization, O'Laughlin did not receive this position. Instead, on May 13, 1991, the day after the office was physically restructured under the reorganization, O'Laughlin was surprised to learn upon trying to locate his new office that he would not be the Logistics Manager, but would be the ILS Manager, reporting to the Logistics Manager. The second act of alleged reprisal occurred on August 15, 1991, when O'Laughlin was issued a Corrective Action Memo which informed him that he had been demoted from his management position. O'Laughlin was then transferred from his position as ILS Manager to the function of Policy Compliance, a demotion that entailed a reduction in annual salary of approximately $4,000.

Beginning in August 1991, O'Laughlin initiated attempts of informal resolution of the adverse personnel action through internal Boeing procedures. These attempts having been unsuccessful, however, O'Laughlin filed a complaint with the SPR Office pursuant to 10 C.F.R. Part 708 on April 1, 1992. That complaint was forwarded to DOE's Office of Contractor Employee Protection (OCEP) on April 3, 1992, but was initially dismissed by OCEP on April 10, 1992, for failure to state an actionable claim under Part 708. In reaching this determination, OCEP found that O'Laughlin's complaint did not reveal that he had made disclosures that related to actual or potential health or safety issues or that his disclosure contributed to the adverse personnel actions taken against him. On May 8, 1992, O'Laughlin filed for review with the Deputy Secretary of DOE and submitted an amended complaint asserting that his disclosures involved issues of health and safety, as well as possible waste, mismanagement, and the violation of a DOE Order. On August 30, 1992, the Deputy Secretary reinstated the complaint, and afforded an opportunity for attempts at informal resolution. During the interim, O'Laughlin submitted his resignation to Boeing, which became effective on May 15, 1992.

Then, having been informed by the SPR Office that attempts at informal resolution had failed, OCEP performed an on-site investigation of the matter during the period February 28 through March 5, 1993, and issued a Report of Investigation and a Proposed Disposition on December 16, 1993. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that O'Laughlin's communications regarding the ILS reorganization did not present disclosures relating to health and safety protected under Part 708; it further concluded that the adverse personnel actions taken against him were not the result of any protected disclosure.2 Accordingly, OCEP proposed to deny O'Laughlin's request for relief under Part 708.

During the deliberative stage of the OCEP proceeding, a change of the M&O contractor occurred at the SPR. On March 31, 1993, Boeing ceased operations in that capacity and, on April 1, 1993, DynMcDermott assumed the SPR M&O contract. As the succeeding M&O contractor, DynMcDermott has generally hired

the employees formerly employed by Boeing with the exception of high management officials.

On January 2, 1994, O'Laughlin submitted his request for a hearing pursuant to 10 C.F.R. ' 708.9 to OCEP. On January 10, OCEP transmitted that request, together with the investigative file, to the OHA, and requested that a Hearing Officer be appointed. On February 10, 1994, procedures and a briefing schedule were established for the hearing in this case under ' 708.9(b). The hearing is presently set for May 18 and 19, 1994, in New Orleans, Louisiana.3 Noting that O'Laughlin had requested reinstatement among the remedies he sought in compensation for the alleged whistleblower reprisals,4 we determined that DynMcDermott should also be served with the Proposed Disposition and Report of Investigation, and provided the firm an opportunity to file a pre-hearing brief on the same basis as the other parties in the proceeding. Letter from Fred L. Brown, Deputy Assistant Director, OHA, to John A. Poindexter, General Counsel, DynMcDermott, January 31, 1994.

On March 24, 1994, Boeing filed its pre-hearing brief which included the present Motion to Dismiss. DynMcDermott similarly filed a pre-hearing brief in the form of a Motion to Dismiss on March 25, 1994. In his pre-hearing brief, also filed on March 25, 1994, O'Laughlin reasserts his claim and request for relief under Part 708. On April 8, 1994, Boeing and O'Laughlin filed respective Responses to the pre-hearing briefs of the other parties.

II. Analysis

A. Boeing's Motion To Dismiss

In its Motion to Dismiss the O'Laughlin complaint, Boeing lists five reasons in support of its motion. Boeing Motion to Dismiss; Boeing Memorandum in Support of Motion to Dismiss. First, Boeing states that the complaint does not state a claim cognizable under 10 C.F.R. Part 708 because the allegations of protected disclosure and reprisal occurred prior to the effective date of the regulation. Second, Boeing claims that the information allegedly submitted to it regarding safety concerns resulting from a proposed reorganization does not constitute a disclosure under section 708.5. Third, Boeing submits that the complaint is untimely, since it was filed more than 60 days after the alleged reprisal and more than 60 days following the termination of internal company grievance procedures. Fourth, Boeing alleges that the disclosure does not describe a substantial and specific danger to employees or to public health or safety. Finally, Boeing states that no disclosure of a safety concern was ever expressed. The first and third reasons can be analyzed together since the underlying issue concerns the time requirements imposed by the regulations. We will discuss reasons 2, 4, and 5 together since they deal with the issue of the content and relevance of the alleged disclosure, and whether that content was entitled to protection under Part 708. For the reasons below, we have determined that Boeing's Motion to Dismiss must be denied.

1. Timeliness of the Complaint

A complaint must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or should have known of the alleged discriminatory act, whichever is later. 10 C.F.R. ' 708.6 (d). This 60-day period is tolled while an employee attempts resolution through internal company grievance procedures, and begins to run again the day following termination of such dispute resolution efforts. Id. According to Boeing, the O'Laughlin claim should be dismissed because the alleged retaliatory acts occurred prior to the effective date of the regulation and there is no specific language in the statute to give it retroactive effect. Further, Boeing contends that the complaint should be dismissed for being filed more than sixty days after the alleged retaliatory action occurred.

We note here that the DOE Contractor Employee Protection Program regulations do not expressly provide for the submission of motions to dismiss based upon an allegation that the underlying complaint was untimely or an allegation that the retaliatory events occurred prior to the effective date of the regulation. The regulations do, however, allow the Director of the Office of Contractor Employee Protection (Director) to make a determination of the timeliness of the complaint prior to its acceptance or rejection. 10 C.F.R. ' 708.8 (a) (2). In addition, the regulations provide for the extension of all time frames with the

approval of the Secretary or her designee. 10 C.F.R. ' 708.15; see also Sandia National Laboratories and L & M Technologies, 23 DOE & 82,502 (1993) (Sandia). It is also clear that DOE will not tolerate frivolous or meritless complaints, and has given the Director broad discretion to dismiss such actions early in the process. 57 Fed. Reg. 7539 (Mar. 3, 1992). Therefore, although DOE established a specific timetable for this administrative procedure5, ample opportunity exists for the appropriate official to relax these guidelines in order to further the underlying policy, which is to encourage contractor employees to disclose practices which are unsafe, unlawful, fraudulent or wasteful. 57 Fed. Reg. 7533 (March 3, 1992).

In the present case, we find that the Part 708 60-day filing period was tolled pending final resolution by Boeing of O'Laughlin's employee grievance which he filed subsequent to receiving the Corrective Action Memo and demotion in August 1991. On December 3, 1991, the Boeing human resources director rejected O'Laughlin's appeal. O'Laughlin wrote to the company again on March 3, 1992 requesting advice on the company appeal process. Addendum to O'Laughlin Reply to Pre-hearing Brief. After one month had passed without a reply, O'Laughlin wrote to Boeing's parent company on April 3, 1992 requesting its involvement. Id. O'Laughlin filed this complaint on April 1, 1992. In view of these actions, we find that the Director has not abused her discretion by accepting this complaint. In fact, we agree with the Director that the complainant actively pursued redress within Boeing until notification on April 29, 1992 by the Human Resources Manager of the parent company (Boeing Inc.) that no further appeal procedures existed. See Proposed Disposition, Francis M. O'Laughlin v. Boeing Petroleum Services, Inc., Case No. SPRO-92-0001 (December 15, 1993) at 4. Thus, the filing period was tolled beyond the April 2, 1992 effective date of Part 708.

Boeing contends that the complainant's attempts to obtain relief through the parent company cannot be considered a part of the appeal process. We disagree. It is not DOE's policy to discourage employees from seeking any means of resolution possible within the overall corporate structure in which they operate. Moreover, an employee of a subsidiary could reasonably make inquiries at the parent company in an attempt to find resolution of an employment (or personnel) issue involving the subsidiary, since the parent company may well have some authority over the personnel activities of a subsidiary. 18A Am. Jur. 2d Corporations ' 773 (1985) (describing the relationship between a parent company and its subsidiary as one in which one party owns and has custody of the other, as in the relationship between parent and child or warden and prisoner). Moreover, the underlying policy of the regulations directs us to encourage reasonable attempts at internal company resolution before an employee embarks upon the costly and time-consuming process of a formal administrative hearing. See 57 Fed Reg. 7538 (March 3, 1992); 10 C.F.R. ' 708.6 (c). This is not an attempt to "unilaterally create out of thin air an adjunct procedure" (Boeing Memorandum III. at 2), but rather a reasonable effort by a subsidiary company employee to seek to be heard by an organization he considers the supreme authority within his corporate environment.

2. Content and Relevance of the Disclosure

Boeing alleges that the disclosures made by the complainant are not of the type contemplated by DOE as requiring protection under section 708.5. Memorandum in Support of Motion to Dismiss at II, IV and V. Boeing contends that O'Laughlin's disclosures were so speculative and limited in impact as to be "meaningless for purposes of performing corrective action." Id., at IV. Boeing frames the pertinent issues in this matter as ". . . whether the complainant disclosed to management a `substantial and specific safety risk' about the reorganization," and ". . . whether senior management heard and understood that a safety objection was being raised." Boeing Response to Pre-Hearing Memorandum at I; Memorandum in Support of Motion to Dismiss at V. Boeing therefore argues that O'Laughlin's claim is legally insufficient since O'Laughlin's communications in objecting to the Boeing reorganization had only a theoretical connection with health and safety, and the record reveals "utterly no knowledge or perception on [Boeing management's] part of [O'Laughlin's] objections being safety driven . . . ." Id.

A motion to dismiss is appropriate only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See M&M Minerals Corporation, 10 DOE & 84,021 (1982). OHA considers dismissal "the most severe

sanction that we may apply," and has stated that it will be used sparingly. See Sandia, 23 DOE & 82,502 (1993) (reserving use of a motion to dismiss only to prevent a miscarriage of justice). Based upon this standard, we are unpersuaded that O'Laughlin's claim should be dismissed at this point in the proceedings.

O'Laughlin continues to maintain that "[his] concern regarding this [reorganization] issue was not given serious attention by the Material Director and most certainly did involve Health and Safety," and that Boeing management "knew or should have known." O'Laughlin Pre-Hearing Brief at 2, 3; Appendix "A" at 4. We therefore do not consider the present complaint to be frivolous. We agree that O'Laughlin bears the burden of proving that his communications constituted a protected disclosure under 10 C.F.R. ' 708.9(d). We further believe, however, that he should be afforded that opportunity. The asserted state of mind of Boeing management in perceiving the substance of O'Laughlin's objections to the reorganization is certainly not determinative of whether a health and safety concern was adequately communicated. It is apparent that substantial disputed issues of fact remain concerning the nature, content and reasonable interpretation of O'Laughlin's communications, and we therefore find that the interests of all the parties will best be served by proceeding with the requested hearing.

B. DynMcDermott's Motion to Dismiss

In its Motion to Dismiss, DynMcDermott argues that it is not a proper party to the O'Laughlin proceeding. DynMcDermott points out that the firm never employed O'Laughlin since it assumed the SPR M&O contract on April 1, 1993, nearly a year after O'Laughlin resigned from Boeing, and consequently was not involved in any of the circumstances surrounding the O'Laughlin Part 708 complaint.

DynMcDermott further argues in support of its dismissal from the proceeding that: (1) in order to be a proper party under Part 708, one must be or have been the employer of the complainant; (2) Part 708 does not impose liability on a party that did not commit a proscribed act; (3) DynMcDermott cannot be considered a "proper party" to the proceeding since the firm cannot give effect to the "reinstatement" remedy sought by O'Laughlin when he was never employed by DynMcDermott; (4) the inclusion of DynMcDermott in the proceeding will only duplicate litigation costs while serving no fruitful purpose; (5) reinstatement is only one of the available remedies under Part 708, and is not appropriate under the present circumstances where O'Laughlin voluntarily resigned from his position; and (6) requiring DynMcDermott to employ O'Laughlin would unduly interfere with the firm's contractual right to evaluate all of the employees it assumed from Boeing, during the 12-month phase-in period of the new M&O contract with DOE (see 48 C.F.R. ' 970.5204-56(c)). In its pre-hearing brief, Boeing concurs with DynMcDermott that "DynMcDermott is not in a position to grant [O'Laughlin] the relief contemplated in [Part] 708, especially as it relates to reinstatement to his previous job [and t]here is no reason for them to be made a party." Boeing Pre-Hearing Brief at 4.

Nonetheless, reinstatement remains one of the remedies sought by O'Laughlin, in addition to back pay, expunging of his personnel records, and reimbursement of costs and fees. O'Laughlin's present requests for relief are set forth in Appendix "B" of his pre-hearing brief. Although somewhat confusing and ostensibly contradictory, O'Laughlin states as follows with respect to reinstatement:

The following is the relief that I seek:

1. Reinstatement to my former position with title, management level, and commensurate salary based on previous history of performance prior to the establishment of the [Boeing] Material Directorate, or, equivalent position.

. . . .

4. If reinstatement is not desired by DynMcDermott, I am seeking reimbursement of future lost wage and benefits on my reduction in salary (September 1991) and subsequent constructive discharge (May 1992).

With regard to liability for the relief requested, O'Laughlin states that "[Boeing] is totally responsible for

any monetary relief, however, DynMcDermott should be held accountable for reinstatement." O'Laughlin Pre-Hearing Brief, Appendix "D". O'Laughlin argues that DynMcDermott should be held to share liability since there is a substantial continuity of business operations from Boeing to DynMcDermott, which uses the same facilities and employs substantially the same work force. O'Laughlin Response at 2, citing Kolosky v. Anchor Hocking Corp., 585 F. Supp. 746 (W.D. Pa. 1983).

We have carefully considered the matter of DynMcDermott's joinder in this proceeding. It is clear that DynMcDermott, which succeeded Boeing as M&O contractor nearly a year after O'Laughlin's resignation, in no way participated in the actions forming the basis of the present complaint. Thus, the parties concur, and we agree also, that DynMcDermott's joinder in this proceeding is necessary and proper only to the extent that reinstatement is a potential remedy available to O'Laughlin were his claim to be successful on the merits. We do not endorse, nor need we necessarily reach, the arguments in opposition to joinder advanced by DynMcDermott in its present motion. For the reasons below, however, we have determined that reinstatement is not a remedy which is properly available to O'Laughlin in this case, and DynMcDermott's motion for dismissal will therefore be granted.

We must initially reject O'Laughlin's reliance on Kolosky, supra, as a basis for extending liability to DynMcDermott in this case. That case concerns situations in which a successor corporation may be held liable for a discriminatory act or practice of its predecessor under Title VII of the Civil Rights Act, 42 U.S.C. ' 2000e-5(g), on the basis that the successor corporation has purchased the assets of the corporation and essentially constitutes a continuation of the predecessor corporation. See Kolosky, 585 F. Supp. at 748, citing EEOC v. MacMillan Bloedel Containers, Inc., 503 F.2d 1086, 1091 (6th Cir. 1974); see also Trujillo v. Longhorn Manufacturing Co., Inc., 694 F.2d 221, 224-25 (10th Cir. 1982). No such corporate nexus exists between Boeing and DynMcDermott in this case. DynMcDermott operates the same facilities as did Boeing because the DOE owns those facilities and, similarly, DynMcDermott has taken on nearly all of the former Boeing employees not as a result of any dealings with Boeing but as a condition of assuming the M&O contract with the DOE.

Instead, this case is substantially similar to the circumstances confronted by the court in Holley v. Northrop Worldwide Aircraft Services, Inc., 835 F.2d 1375 (11th Cir. 1988), which held that a worker (Holley) who had proven an illegal retaliatory discharge (Fair Labor Standards Act, 29 U.S.C. ' 215(a)(3)) by his employer (Northrop) was not entitled to reinstatement after the government contract under which he had been employed was terminated. Indeed, the court denied any relief for the period following the termination of the contract. Although Northrop recommended its employees to the new contractor (which in fact retained 75% of the former Northrop employees), the court found that "Holley presented nothing more than circumstantial and inconclusive evidence to support the proposition that the employment decisions made by the new company were influenced by Northrop's recommendation." 835 F.2d at 1377. The decision in Holley was followed by the court in Blackburn v. Martin, 982 F.2d 125 (4th Cir. 1992), a case brought under the employee protection (whistleblower) provisions of the Energy Reorganization Act of 1974, 42 U.S.C. ' 5851(c), holding that though the complainant has proven a retaliatory discharge, "liability ends when the contract under which the employee worked is terminated." 982 F.2d at 129.

Thus, as a general matter, we do not believe that reinstatement is an appropriate remedy under Part 708 where, as here, there is a new M&O contractor that has no connection with the firm actually employing the complainant or the circumstances surrounding the discharge of the complainant, and the retention of employees by the new contractor is not directly influenced by the former contractor but merely a condition of assuming the M&O contract. Nonetheless, we remain keenly aware of the strong policy dictates underlying Part 708, favoring full protection of contractor employees that have been wrongfully discharged as a result of a protected disclosure. Therefore, we might exercise our equitable authority under Part 708 to order the reinstatement of a wrongfully discharged employee under particular circumstances.6 However, even assuming O'Laughlin's claim were meritorious, we do not believe that this remedy is appropriate in this case.

O'Laughlin has requested reinstatement to a management position equivalent to that which he occupied

prior to the Boeing reorganization, in which he had extensive authority over SPR logistics functions. DynMcDermott indicates that it has a "different organizational structure" (DynMcDermott Pre-Hearing Brief at 5) from Boeing and consequently there is no assurance that such a position exists. However, even assuming its existence, arguendo, it is clear that a management position of this capacity is singular in nature and the reinstatement of O'Laughlin would therefore require the displacement of an innocent employee, independently selected by DynMcDermott. Under these circumstances, reinstatement is a disfavored remedy. See, e.g., Edwards v. Department of Corrections, 615 F. Supp. 804, 811 (M.D. Ala. 1985).7

Finally, O'Laughlin has now conditionally relinquished his request for reinstatement, stating that "[i]f reinstatement is not desired by DynMcDermott, I am seeking reimbursement of future lost wage and benefits . . . ." O'Laughlin Pre-Hearing Brief, Appendix "B". It is certainly unmistakable from DynMcDermott's submission that it does not "desire" to reinstate O'Laughlin. Though ordering future lost wages (or front pay) is not among the remedies specified under Part 708,8 we take note that O'Laughlin is amenable to receiving monetary compensation in lieu of reinstatement. Therefore, in fashioning any relief which may be ordered were O'Laughlin successful on the merits of this case, we will consider whether O'Laughlin is entitled to any additional back pay9 in lieu of reinstatement, having determined that reinstatement is not an available remedy in this case.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Boeing Petroleum Services, Inc. on March 24, 1994, is hereby denied.

(2) The Motion to Dismiss filed by DynMcDermott Petroleum Operations Company on March 25, 1994, is hereby granted.

(3) This is an Interlocutory Order of the Department of Energy.

Fred L. Brown

Deputy Assistant Director

Office of Hearings and Appeals

Date:

1As will be explored in greater detail in considering Boeing's Motion to Dismiss, a critical factual issue in this case is whether, and the extent to which, O'Laughlin's communications to Boeing management disclosed matters relating to health and safety.

2OCEP states that although information relating to O'Laughlin's alleged disclosures regarding possible waste, mismanagement, and violation of a DOE Order was also examined, OCEP did not assert jurisdiction under Part 708 on the basis of these alleged disclosures. Notwithstanding, OCEP found in the Proposed Disposition that "[O'Laughlin]'s continued disagreement with the reorganization did not constitute disclosures of possible waste or mismanagement that merit protection under Part 708, had jurisdiction under that criteria been asserted in this case." Proposed Disposition at 15.

3Section 708.9(b) provides that hearings conducted under Part 708 "will normally be held . . . within 60 days from the date the complaint file is received by the Hearing Officer . . . ." However, upon initial contact, O'Laughlin informed the OHA Hearing Officer in this case that he would not be available within the 60-day time frame since he was about to begin 90 days of previously scheduled duty with the U.S. Naval Reserve. O'Laughlin therefore requested, and the Hearing Officer approved, an extension of time for the convening the hearing until after the completion of his duty assignment in May 1994.

4OCEP states in the Report of Investigation that during the attempted informal resolution of the matter,

O'Laughlin sought the following remedies: (1) reinstatement to his prior position, (2) back pay and benefits, and (3) removal from his personnel files of any reference to the events and personnel actions surrounding the complaint. Report of Investigation at 5-6.

5 The preamble to Part 708 states that the reason for adopting a time limit for the filing of a complaint under this program was to ensure that investigations would not be rendered "more difficult as memories grow dimmer with the passage of time." 57 Fed. Reg. 7537 (March 3, 1992).

6Thus, we reject DynMcDermott's position that it is beyond the scope of the DOE's authority under Part 708 to order the reinstatement by a succeeding M&O contractor of an employee found to have been wrongfully discharged by the previous M&O contractor as a result of a protected disclosure. The DOE procurement contracts executed after the effective date of Part 708, such as DynMcDermott's contract, generally incorporate a provision requiring full compliance with all pertinent health and safety regulations, including Part 708. See 10 C.F.R. ' 708.2(a); 48 C.F.R. (DEAR) ' 970.5204-2. DynMcDermott argues that imposition of reinstatement would infringe upon its right under its M&O contract with DOE to conduct evaluation of employees the firm was required to employ during the 12-month period following its assumption of the contract. DynMcDermott Pre-Hearing Brief at 7 citing 48 C.F.R. (DEAR) ' 970.5204-56(a)(2)(c). However, merely requiring DynMcDermott to reinstate an employee under condition that it could temporarily treat the employee as a new employee subject to evaluation would hardly amount to a serious infringement of its contractual rights. In any event, the DOE has sovereign authority to modify contracts to effectuate overriding regulatory policies adopted in the public interest. See Winstar Corporation v. United States, 994 F.2d 797 (Fed. Cir. 1993).

7Boeing further asserts that, in any event, O'Laughlin has waived his right to reinstatement, and is entitled to only limited back pay, since he voluntarily resigned from his position in May 1992. Indeed, there is ample support for Boeing's position that an employee, although discriminated against, is not entitled to reinstatement where there was no actual or constructive discharge from employment. See, e.g., Maney v. Brinkley Municipal Waterworks and Sewer Department, 802 F.2d 1073, 1075 (8th Cir. 1986); Derr v. Gulf Oil Corp., 796 F.2d 340 (10th Cir. 1986). However, O'Laughlin maintains that his resignation was precipitated by being "belittled and harassed by management personnel" and therefore did in fact constitute a "constructive discharge", thus entitling him to reinstatement and back pay. O'Laughlin Response to Boeing Pre-Hearing Brief at 4. Since this is a factual matter that is in dispute, it is premature for us to rule upon whether O'Laughlin has established the existence of circumstances amounting to a "constructive discharge" from his position.

8Section 708.10(c) specifies the following remedies where a Part 708 violation is determined: "[The initial agency decision may include an award of reinstatement, transfer preference, back pay, and reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses (including attorney and expert witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision was based."

9The amount of any back pay that O'Laughlin is entitled to, assuming his complaint were determined to be meritorious, is a matter in dispute. As noted above, Boeing contends that the pertinent period for purposes of calculating this remedy should terminate as of May 15, 1992, since O'Laughlin "voluntarily" resigned on that date, while O'Laughlin contends that his termination from employment constituted a "constructive discharge". It is therefore conceivable in this case, depending upon the determinations reached, that the back pay period that O'Laughlin might be awarded could terminate on the date of his resignation or the date the Boeing contract terminated. It is also within our authority, however, to extend the back pay period to the date of issuance of a final determination in this matter if O'Laughlin has not obtained other employment.

Case No. LWZ-0031

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioners: Westinghouse Hanford Company

Date of Filing: April 5, 1994

Case Number: LWZ-0031

This determination will consider a Motion to Dismiss filed by Westinghouse Hanford Company (WHC) on April 5, 1994. In its Motion, WHC seeks the dismissal of the underlying complaint and hearing request filed by Helen "Gai" Oglesbee under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. Oglesbee's request for a hearing under 708.9 was filed on February 28, 1994, and it has been assigned Office of Hearings and Appeals (OHA) Case No. LWA-0006.

I. Background

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased (GOCO) facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

Oglesbee is currently an employee of WHC, the prime contractor at the DOE's Hanford Nuclear Site. Since June 1987, Oglesbee has been employed by WHC as a Secretary Level III (June 1987 to September 1992), Secretary Level IV (September 1992 to January 1993), Temporary Upgrade Plant Engineer (January 1993 to June 1993), and Plant Engineer (June 1993 to the present).

Oglesbee alleges that she made various health and safety complaints to her immediate supervisor on a continuing basis from June 1987 to August 1991, and that beginning in October or November 1990 she raised these concerns with her supervisor's superiors. She alleges that after doing so, WHC retaliated by failing to respond to her health-related issues and denying her access to reports and analyses of those issues; removing her designation as "Lead" Secretary; denying her a promised promotion; issuing her a performance improvement plan; transferring her involuntarily to another WHC office; issuing her a performance expectations letter; and issuing her written reprimands. These

alleged actions occurred over a period from 1987 through April 1992 (issuance of second written reprimand).

On August 24, 1992, Oglesbee filed a complaint with the DOE Richland Field Office (DOE/RL) pursuant to 10 C.F.R. Part 708. On October 2, 1992, after an unsuccessful attempt was made by DOE/RL to reach an informal resolution, Oglesbee's complaint was forwarded to the DOE's Office of Contractor Employee Protection (OCEP) to institute a formal investigation. OCEP conducted an on-site investigation of Oglesbee's allegations of reprisal and issued a Report of Investigation and a Proposed Disposition on February 18, 1994. / Prior to the on-site phase of OCEP's investigation, Oglesbee alleged that WHC had

threatened to extend her status as Temporary Plant Engineer, rather than promoting her to a permanent position. The Proposed Disposition, which relied upon the findings in the Report of Investigation, concluded that Oglesbee had made protected disclosures related to her health and safety concerns, but that a preponderance of the evidence did not support a finding that the disclosures were a contributing factor in any of the alleged actions taken against her. / With regard to Oglesbee's complaints that she was issued written reprimands and that her promotion to Plant Engineer was delayed, the OCEP found that these issues had already been resolved by WHC in accordance with the relief it would have recommended had it found that the actions were retaliatory. WHC removed the written reprimands from Oglesbee's personnel file and she was promoted to Plant Engineer in June 1993.

On February 28, 1994, Oglesbee submitted her request for a hearing under 10 C.F.R. 708.9 to OCEP. On March 10, 1994, OCEP transmitted that request to the OHA. On May 4, 1994, procedures and a briefing schedule were established for the hearing in this case under 708.9(b). The hearing is presently set for June 15, 16, and 17, in Richland, Washington. On April 5, 1994, WHC filed a Motion to Dismiss the proceeding, and submitted a statement in support of that Motion on May 13, 1994 (hereinafter "Statement"). The complainant filed a reply to WHC's statement on May 18, 1994 (hereinafter "Reply"). In its statement, WHC maintains that Oglesbee's August 24, 1992 complaint was not timely filed, and that the complaint was insufficient to confer jurisdiction on OCEP to investigate Oglesbee's allegations. For the reasons stated below, I find both arguments to be without merit. I will therefore deny WHC's Motion.

II. Analysis

A. Timeliness of the Complaint

The Part 708 regulations provide that a "complaint . . . must be filed within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew, or reasonably should have known, of the alleged discriminatory act, whichever is later." 10 C.F.R. 708.6(d). WHC asserts that Oglesbee's August 24, 1992 complaint must be dismissed because it was filed more that 60 days after the discriminatory acts alleged by the complainant. Statement at 7-8.

Once a complaint has been filed, 708.8(a)(2) provides that the OCEP Director may accept the complaint, unless she determines that the complaint is untimely. While it is true that 708.6(d) states that a complaint must be filed within 60 days after the alleged discriminatory act occurred, 708.15 permits the "Secretary or designee," i.e. the appropriate DOE official depending on the stage of the proceeding, to extend "all time frames" set forth in Part 708. It is therefore clear that under these regulations, the decision to accept a complaint filed after the 60-day period in 708.6(d) is within the discretion of the OCEP Director. In the present case, the OCEP Director did not dismiss the complaint as untimely, and there is nothing in the record to suggest that she abused her discretion.

In its Statement, WHC attempts to avoid this conclusion by characterizing the 60-day time period in 708.6(d) as jurisdictional. In Sandia National Laboratories, 23 DOE 87,501 (1993) (Sandia), we considered, and ultimately rejected, the same argument. There is nothing in Part 708 that would indicate that the 60-day period was meant to be jurisdictional in nature. / WHC analogizes the Part 708 proceedings to the employee protection schemes administered by the Department of Labor, where, WHC argues, a "30-day limitations period has been strictly construed . . . ." Statement at 9. However, as pointed out by the complainant, the time limits imposed in DOL proceedings are expressly prescribed by statute. Reply at 6; see Solid Waste Disposal Act, 42 U.S.C. 6971; Safe Drinking Water Act, 42 U.S.C. 300j-9(i); Comprehensive Environmental Response, Compensation and Liability Act of 1974, 42 U.S.C. 9610; Toxic Substances Control Act, 15 U.S.C. 2622; Energy Reorganization Act, 42 U.S.C. 5851; Federal Water Pollution Control Act, 33 U.S.C. 1367; Clean Air Act, 42 U.S.C. 7622. By contrast, the more flexible time frames governing this proceeding originated in the Part 708 regulations, which were not mandated by a specific statute, but were issued pursuant to the broad authority granted the DOE to manage the GOCO facilities in its nuclear weapons complex by the Atomic Energy Act of 1954, as amended, 42 U.S.C. 2201, the Energy Reorganization Act of 1974, as amended, 42 U.S.C. 5814 and 5815, and the Department of

Energy Organization Act, as amended, 42 U.S.C. 7251, 7254, 7255, and 7256. Indeed, there are a number of reasons why 708.6(d) should not be read as barring the investigation of a complaint that is filed more than 60 days after the alleged discriminatory act occurred or should reasonably have been discovered. See Sandia, 23 DOE at 89,002-03.

First, the DOE Contractor Employee Protection Program is intended to encourage contractor employees to come forward "with information that in good faith they believe evidences unsafe, unlawful, fraudulent, or wasteful practices." 57 Fed. Reg. at 7533 (March 3, 1992). Employees of DOE contractors and subcontractors should be able to disclose safety concerns without fear of reprisal, and employees who believe they have been subject to a reprisal should feel they are able to seek protection from the DOE. The regulations should be construed in a manner which furthers this primary purpose. It is clear from the regulatory history of this new program that the 60-day time limitation for the submission of complaints was never intended as an ironclad technical requirement. Id.; see also Sandia, supra.

Second, the preamble to Part 708 states that the reason for adopting a time limit for the filing of a complaint of discrimination under this new program was to ensure the investigation of complaints would not be rendered "more difficult as memories grow dimmer with the passage of time." 57 Fed. Reg. at 7537 (March 3, 1992). In the present case, after conducting an investigation, the OCEP

Director found that there was sufficient evidence on which to move forward. WHC's argument that fading memories "may have easily hampered OCEP's investigation in ways that may not be brought out until the proposed hearing" is purely speculative at this time. Statement at 10-11. At this stage in the proceeding there is no evidence that any delay in the filing of the complaint hampered the investigation.

Finally, WHC contends that it "has been prejudiced in its ability to defend itself because of Ms. Oglesbee's delay in filing the Complaint." Statement at 11. Again, any argument based on prejudice is purely conjectural at this stage of the case. I fail to see how any delay conceivably worked to the detriment of WHC, since OCEP found in favor of the company with regard to each of the complainant's allegations.

B. Sufficiency of the Complaint

In its Statement, WHC also maintains that the Complaint is insufficient because it does not meet the criteria outlined in 708.6 (c). WHC contends that there are no allegations in the Complaint that **specifically** state or identify acts of reprisal by WHC. The firm also states that OCEP does not have the authority to find alleged discriminatory acts outside of the Complaint and cannot create a sufficient complaint by verbal discussions. Finally, WHC contends that OCEP's investigation of the Complaint violated the Administrative Procedure Act (APA). Statement at 2-7.

The criteria for filing a complaint are stated in 708.6 (c):

A complaint need not be in any specific form provided it is signed by the complainant and contains the following: A statement setting forth specifically the nature of the alleged discriminatory act, and the disclosure, . . . a statement that the complainant has not . . . pursued a remedy available under State or other applicable law; and an affirmation that all facts contained in the complaint are true and correct to the best of the complainant's knowledge and belief. Additionally, the complaint must contain a statement affirming that (1) All attempts at resolution through an internal company grievance procedure have been exhausted; (2) The company grievance procedure is ineffectual . . . or (3) The company has no such procedure.

10 C.F.R. 708.6 (c).

Oglesbee's formal written complaint was filed with DOE/RL on August 24, 1992 and consisted of a document entitled "Review of Ms. Gai Oglesbee's Submitted Issues." It was forwarded to OCEP along with many pages of supplemental documentation provided by Oglesbee. OCEP was provided with additional information, both orally and in writing, throughout the investigation. At this stage of the

proceedings, Oglesbee's complaint file consists of a voluminous amount of supplemental documentation, including records of telephone conversations between Oglesbee and OCEP personnel.

We need not analyze whether Oglesbee's complaint specifically met each of the criteria outlined in 708.6, since the decision to accept a complaint is clearly within the discretion of the OCEP Director. In the present case, although Oglesbee's complaint was not perfect, the Director exercised her discretion to accept the complaint while also accepting supplemental documentation to support the complaint.

It is clear from the regulatory history that the remedial purpose underlying Part 708 is to ensure that contractor employees are protected from reprisal for disclosing valuable information. Sandia, supra. Therefore, it is important to construe these regulations liberally in favor of disclosure, and not to hold these employees to the strictest standards of technical pleading. As noted above, there is no evidence in the record to suggest that the OCEP Director abused her discretion in accepting Oglesbee's complaint.

In addition, the purpose of the requirement that a complaint be specific and informative is to avoid unfairness to the contractor. In this case, WHC received adequate notice of the allegations in Oglesbee's complaint. WHC was apprised of Oglesbee's allegations during the investigation, and the alleged retaliatory actions were outlined in a September 29, 1993 letter to WHC. OCEP also sent a letter dated May 28, 1993 to Mr. Thomas M. Anderson, president of WHC, setting forth the WHC actions which Oglesbee alleges were in retaliation for her disclosures. WHC has therefore been afforded a full opportunity to respond to Oglesbee's allegations of reprisal. Also, as evidenced by OCEP's favorable ruling for WHC with regard to each of the complainant's allegations, WHC has certainly not been prejudiced to date by the acceptance of the complaint.

Lastly, WHC asserts in its Statement that the APA was violated by OCEP's investigation of the Complaint, citing 5 U.S.C. 706. Section 706 states, in pertinent part, that "The reviewing court shall . . . hold unlawful and set aside agency action, findings, and conclusions found to be arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law . . . ." However, as stated above, there is no evidence whatsoever in the record that the OCEP Director abused her discretion in accepting Oglesbee's complaint; nor is there evidence that the acceptance of the complaint was arbitrary or capricious. For this reason, I find this argument to be without merit.

III. Conclusion

A motion to dismiss is appropriate only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See Sandia, 23 DOE at 89,003. Since dismissal is the most severe sanction that we may apply, it should be used sparingly, and only to prevent a miscarriage of justice. In this regard, we have determined that the acceptance of Oglesbee's complaint was a reasonable exercise of discretionary authority under Part 708 by the Director of the Office of Contractor Employee Protection. Accordingly, the Motion to Dismiss filed by WHC will be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Westinghouse Hanford Company on April 5, 1994, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

Thomas O. Mann

Hearing Officer

Office of Hearings and Appeals

Date:

July 8, 2005

**DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY**

Appeal

Name of Petitioner: Gilbert J. Hinojos

Date of Filing: May 13, 2005

Case Number: TBA-0003

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on April 27, 2005, involving a Complaint filed by Gilbert J. Hinojos (also referred to as the employee or the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his Complaint, Hinojos claims that his former employer, DOE contractor Honeywell Federal Manufacturing & Technologies (Honeywell or the contractor), retaliated against him for engaging in activity that is protected by Part 708. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that the employee engaged in activity that is protected under Part 708, but that Honeywell showed that it would have taken the same personnel action in the absence of the protected activity. Hinojos appeals that determination. As set forth in this decision, I have decided that the determination is correct.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their

employers. Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"], will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations establish administrative procedures for the processing of complaints. Under these regulations, review of an Initial Agency Decision, as requested by Hinojos in the present Appeal, is performed by the Director of the Office of Hearings and Appeals (OHA). 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

The events leading to the filing of the Complaint are fully set forth in the IAD. *Gilbert J. Hinojos* (Case No. TBH-0003), 29 DOE ¶ 87,005 (2005)(hereinafter IAD). For purposes of the instant appeal, the relevant facts are as follows.

Hinojos was employed by Honeywell as a "material control coordinator, sr." at a DOE facility in Albuquerque, New Mexico. In July 2002, he filed a Complaint under Part 708, alleging that his employer retaliated against him for filing several complaints with the Equal Employment Opportunity Commission (EEOC) and the New Mexico Human Rights Division (NMHRD). These complaints alleged discrimination based on national origin. In January 2003, while the Complaint under Part 708 was pending, the employee was discharged from his position with the Contractor. The employee was permitted to amend his Part 708 Complaint to include this termination as a retaliation for participating in conduct protected under Part 708. 10 C.F.R. § 708.5(b). 1/

After completion of an investigation pursuant to 10 C.F.R. § 708.22, Hinojos requested and received a hearing on this matter before an Office of Hearings and Appeals Hearing Officer. The hearing lasted two days. Hinojos testified as to why he believed his termination was a result of the filing of his Part 708 Complaint. He presented no other witnesses. The contractor

---

1/ The Hearing Officer dismissed the EEOC and NMHRD claims because they are barred under Section 708.4. However, the claim of the termination as a retaliation for participating in a proceeding under Part 708 was permitted. *Gilbert J. Hinojos*, 28 DOE ¶ 87,037 (2003).

presented the following witnesses: (i) the director of the contractor's New Mexico operations (the director); (ii) the employee's supervisor (the supervisor); (iii) the contractor's manager of environment, safety & health (the ESH manager); (iv) the contractor's human resources manager (HR manager) and (v) a forklift operator who was a co-worker of Hinojos (co-worker or forklift operator). The contractor also submitted an exhibit book with numbered exhibits (hereinafter referred to as Ex.)

After considering the hearing testimony and other relevant evidence, the Hearing Officer issued the IAD that is the subject of the instant appeal.

II. The Initial Agency Decision

The IAD set forth the burdens of proof in cases brought under Part 708. The IAD stated that it is the burden of the complainant under Part 708 to establish by a preponderance of the evidence that he or she engaged in a protected activity, and that the activity was a contributing factor to an alleged retaliation. *See* 10 C.F.R. §§ 708.5 and 29. The IAD further noted that if the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure. 10 C.F.R. § 708.29. The IAD considered the application of these elements to the Hinojos proceeding.

A. Protected Activity and Contributing Factor

The IAD found that the employee's initial Part 708 Complaint was made in good faith. The IAD also found that a human resource manager who participated in the separation review board that made the decision to terminate Hinojos' employment had knowledge of his Part 708 Complaint. Further, given the pendency of the employee's Part 708 hearing request at the time of his termination, the IAD determined that there was sufficient temporal proximity to conclude that filing the Part 708 Complaint was a contributing factor to the termination. Based on these findings, the Hearing Officer concluded that the employee satisfied his burden of proof under Part 708. IAD, slip op. at 4.

B. Whether Honeywell would have terminated Hinojos absent the Protected Activities

At the hearing, the contractor's witnesses maintained that the complainant was terminated because he was a safety risk. The IAD recounted testimony describing the following incident which was the reason given for his discharge. On December 6, 2002, the employee was assigned to drive a government-owned flat-bed truck carrying large, aluminum containers, known as CRTs, from the contractor's facility to an off-site vendor. The CRTs weigh about 250 pounds each. The co-worker, who operated a fork lift, assisted the employee in loading the CRTs onto the flat bed of the truck. The CRTs were not secured in the bed of the truck, but merely stacked on top of each other. The employee then proceeded to transport the CRTs over public roadways to a facility where the CRTs were to be sandblasted in order to remove rust buildup. During transport of the CRTS, the employee stopped the truck suddenly, and the unsecured CRTs shifted and struck the rear window of the truck cab, shattering the glass, and shifting part of the load to the top of the cab. It was the testimony of the contractor's witnesses that the accident was very severe, and although no one was injured, the accident "had the potential to be a very serious incident and in and of itself was a very serious incident." IAD at 4-6; Transcript of Hearing (Tr.) at 253.

The contractor's witnesses testified that it was the employee's responsibility to make sure the CRTs were secured with tie-down straps that were provided for this purpose. IAD at 9. In this regard, the forklift operator testified that he provided the employee with a tie-down strap and told him to secure the load. According to contractor witnesses, the employee stated in one interview that the forklift operator/co-worker might have told him to secure the load, but he did not remember exactly. Ex. 16 at 637. In another interview, the employee purportedly stated that he asked the forklift operator whether he needed to tie down the load, and the forklift operator replied that it did not need to be tied down. Ex. 16 at 642. IAD at 9. The IAD ultimately found that as the driver of the vehicle, the employee was responsible for ensuring that the load was secure prior to transport. The IAD also noted the contractor's testimony that the employee had received specific training on securing loads. IAD at 5.

The IAD also addressed the issue of the contractor's assessment that the accident was severe and the contractor's contention that the employee's reaction to the accident demonstrated indifference to the importance of safety and a lack of understanding of the

severity and potential consequences of the accident. In particular, the IAD noted the testimony of the HR manager that in a post-accident interview, the employee was asked if he realized "how close he was to being severely injured by the CRT coming through the back of the window." The witness testified that the employee used words to the effect that "it wasn't that big of a deal." It was the employee's testimony that the accident could not have had the severe consequences that the contractor's witnesses believed could have occurred, and that he did not see the danger in driving with the unsecured load. He denied saying that the accident was not "that big of a deal," but stated that he did not put himself or anyone else at risk. The IAD agreed with the contractor's assessment that the accident was a serious one, and also found that the employee did not believe that the accident could have had grave consequences. The IAD therefore agreed with the contractor's position that the employee's attitude constituted a safety risk. IAD at 11-12. Finally, the IAD found highly relevant the evidence of the contractor that in a previous incident, in which a senior maintenance worker failed to take proper safety measures and cut through an electrical conduit while digging a trench in an area with electrical lines, the worker was terminated outright solely as a result of the incident. According to the contractor, of all its terminations, that termination incident was most similar to the instant case, because they both involved potential for severe consequences, even multiple fatalities. IAD at 6.

The IAD therefore found clear and convincing evidence that Hinojos would have been terminated whether or not he engaged in protected activity under Part 708. In sum, the IAD concluded that Hinojos was not entitled to relief.

III. Analysis

Hinojos filed a statement identifying the issues that he wished the Director of the Office of Hearings and Appeals to review in this appeal phase of the Part 708 proceeding (hereinafter Statement of Issues or Statement). Honeywell filed a Response to the Statement. 2/ 10 C.F.R. § 708.33.

2/ There is no need in the instant case to set out the specifics of the response, some of which are incorporated into my analysis below.

After fully reviewing the voluminous record in this case, as well as the arguments raised in the Statement of Issues, I find that there is no basis for overturning the result in this case.

The employee first claims that the Hearing Officer "merely accepted as credible the contractor's self serving statement" that he was terminated because he was a safety risk, and not because he engaged in protected activity. In this regard, the employee argues that "instead of giving weight to [Hinojos'] testimony, the Hearing Officer accepted at face value" the version of the facts offered by contractor management officials.

This assertion is incorrect. The Hearing Officer did not simply "accept" as credible the contractor's statement as to the reason for the termination. In fact, the contractor brought in the testimony of five witnesses, including the director of the contractor's New Mexico operation, the employee's supervisor, the contractor's manager of environmental safety & health, the contractor's human resources manager and a forklift operator who was a co-worker of the employee. These witnesses consistently supported the contractor's overall position that the individual caused a safety incident that in itself was serious and could have caused severe damage. The only testimony brought forward by the employee was his own. The employee's testimony on this point was that the event was not particularly serious, and overall was not his fault. The Hearing Officer analyzed all the testimony in detail, and concluded that the testimony of the contractor's witnesses was more persuasive. This is the very essence of the role of the Hearing Officer: to listen to the testimony of witnesses, observe their demeanor, and make a judgment as to their credibility. I see no error in the judgment of the Hearing Officer that the five contractor witnesses were more credible than the employee and that, overall, their testimony outweighed the employee's testimony. In fact, given that the only testimony in this case that supported the employee was his own, I am inclined to believe that it was the employee's testimony that was self serving, and not that of the contractor's witnesses.

The employee next reargues the issue of whether the accident was severe, claiming that the accident, when reviewed in light of the evidence presented, was not severe. As described above, the accident involved large pieces of heavy equipment that were placed in the bed a truck that was being driven on public streets. The equipment was dislodged, pierced the glass window of the cab and shifted to the roof of the cab of the truck. In my view this incident in and of itself is a very serious one, and could have been disastrous. For example, the employee could have been seriously

injured by the glass and equipment that pierced the cab. Other drivers on the public road could also have been seriously injured. The Hearing Officer's determination that the accident was severe was clearly well supported by the record. I reviewed the photos of the accident that were included in the exhibits submitted in this case. Exh. 8. They are in my view irrefutable, graphic evidence that not only was this indeed a serious incident, but also that only by sheer good fortune was it not a horrific one. 3/ The employee's assertion that the accident was not particularly severe is subterfuge or self-delusion. I see no Hearing Officer error here.

In this regard, the employee raises once again an argument about his own attitude toward the seriousness of the accident. He believes that it was "well within his rights to disagree with the contractor's assessment," and for the Hearing Officer not to weigh this into his decision was arbitrary and capricious. I concur that the employee had the right to disagree with the determination of the contractor regarding the seriousness of the accident. However, as I indicated above, I believe that the accident was very serious, and that the Hearing Officer made a correct determination in this regard. The employee's protestation to the contrary leads me to believe that he has a rather callous view of this serious safety incident. It does not cause me to make any adjustment in the IAD.

The employee next raises the issue of training. He states that "it is clear that Mr. Gibb Lovell [the fork lift operator] was not trained in how to load and secure material." This is irrelevant. It is simply a transparent but useless attempt to shift the blame to another employee. In this regard, I have reviewed the record in this case and I see no error in the Hearing Officer's determination that it was the employee's responsibility to secure the load. I note the testimony of the fork-lift operator, safety manager and the supervisor that the driver of the load has responsibility for securing the load. IAD at 9. It is convincing. This operating procedure makes more common sense than the procedure put forth by the employee, i.e., that it was the fork lift operator's job to see that the load was secure.

3/ In his testimony, the employee denied that a CRT pierced the glass and another CRT shifted to the roof of the cab. IAD at 10. I agree with the Hearing Officer's finding that the contractor's version was more plausible. The photos belie the testimony of the employee.

I further note the employee's testimony that contractor policy did not require him to use the straps to take the CRTs over to be sandblasted, but only on the way back. The reason, purportedly, was that on the way over, the rust would keep the CRTs from shifting, but on the way back they needed protection so they would not be scratched. Tr. at 99-100 This nonsensical explanation is wholly unconvincing. It does not convince me that the contractor's policy did not require the driver to secure the load. In fact, it is simply another example of inconsistent explanations that the employee has put forth in this case: on the one hand he states that it was the fork lift operator's job to secure the load, and on the other hand he states that the load needed to be secured only on the return trip. These statements lead me to suspect the overall credibility of the employee.

Finally, the employee contends that he was never provided with a copy [of the report] of the investigation by the Human Resources Department and was never given notice of the separation committee meeting or allowed to refute the basis for his termination, including any inconsistent statements that were attributed to him.

None of these contentions indicates that the result in this case should be overturned. As I concluded above, the company policy is that the driver of the vehicle has the ultimate responsibility to secure the load. Therefore, the employee's argument that he did not make inconsistent statements about tying down the load is ultimately irrelevant. Even if he convinced me that he made no inconsistent statements, it would not cause me to change the result here. 4/

Finally, I see no harm to the employee in connection with his assertion that he did not have the opportunity to appear before the separation committee. Even if he was entitled to appear before the committee and was not provided that opportunity, I see no reason to conclude that the employee did not have the chance to fully air any response to committee's conclusions in the context of the hearing and on this appeal. I see no unfairness that should be redressed by any change in the result of this case.

4/ As I indicated above there is at least one instance in his hearing testimony in which the employee made inconsistent statements. This leads me to think that the contractor's assertion that the employee gave inconsistent statements in his post-accident interviews is probably correct.

In sum, I am convinced that there was sufficient evidence in the record in this case to support the hearing officer's conclusion that Honeywell clearly and convincingly established that it would have terminated Hinojos absent his protected activity.

V. CONCLUSION

As is evident from the above description of the IAD, this case involves factual issues which are strongly disputed. Ultimately, it was the role of the Hearing Officer to make findings of fact based on his assessment of the witnesses and their testimony. The Hearing Officer did so, and after the reviewing the entire record, I find no error. I see nothing in the Hinojos Statement of Issues that would cause me to overturn the IAD in this case. Accordingly, the instant appeal should be denied and the IAD affirmed.

It Is Therefore Ordered That:

(1) The Appeal filed by Gilbert Hinojos on May 13, 2005 (Case No. TBA-0003), of the Initial Agency Decision issued on April 27, 2005, be and hereby is denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Appeal

Name of Case:	**Gary S. Vander Boegh** **Weskem, LLC** **Bechtel Jacobs Company, LLC**
Date of Filing:	**July 11, 2003**
Case Number:	**TBA-0007**

This determination concerns appeals filed by Gary S. Vander Boegh (Vander Boegh or complainant), Weskem, LLC (Weskem), and Bechtel Jacobs Company, LLC (BJC) under 10 C.F.R. Part 708, the Department of Energy (DOE) Contractor Employee Protection Program (Part 708). All three appeals challenge various aspects of an Initial Agency Decision (IAD) issued by a DOE Office of Hearings and Appeals (OHA) Hearing Officer on the merits of a complaint filed in 2001 by Gary S. Vander Boegh against his employer Weskem and his employer's higher tier contractor BJC.[1] *Gary S. Vander Boegh*, 29 DOE ¶ 87,040 (2003). In the IAD, the Hearing Officer found that Vander Boegh had made protected disclosures under 10 C.F.R. Part 708 regarding landfill procedures at the DOE's Paducah Kentucky site, and that Weskem and Bechtel had retaliated against Vander Boegh in reprisal for those protected disclosures. The Hearing Officer found that Vander Boegh was entitled to relief. Vander Boegh appealed that decision, as did Weskem and BJC. This proceeding will hereinafter be referred to as Vander Boegh I.

In February 2006, Vander Boegh filed another Part 708 complaint with the DOE. This proceeding will be referred to as Vander Boegh II. In this complaint, he made similar allegations that his employer retaliated against him for making disclosures about

---

[1] **At the time Mr. Vander Boegh filed his 2001 complaint, BJC was the management and integration (M&I) contractor at the DOE's Paducah Gaseous Diffusion Plant located in Paducah, Kentucky. Weskem was a subcontractor at the plant in 2001. On April 24, 2006, a new M&I contractor, Paducah Remediation Services (PRS), and a new subcontractor, Duratek, assumed operations at DOE's Paducah, Kentucky plant.**

landfill procedures. He alleged ongoing employment retaliations, which eventually included termination by Weskem, the outgoing sub-contractor, and the failure of the incoming contractor/subcontractor (Paducah Remediation Services and Duratek) to hire him. On April 18, 2006, during the pendency of that complaint, Vander Boegh filed a complaint with the Department of Labor (DOL) under numerous statutory provisions, including Section 211 of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. In that filing, Vander Boegh also argued that he was being terminated for raising concerns about landfill pollution activities at the DOE's Paducah, Kentucky facility. Vander Boegh was terminated by Weskem on April 23, 2006, and on April 24, 2006, a new prime contractor and subcontractor took the place of BJC and Weskem, respectively. Vander Boegh claimed that the new contractor's failure to hire him was a retaliation for his protected disclosures. On July 13, 2006, DOL found that there was no evidence to support Vander Boegh's allegation of wrongful termination for engaging in whistleblower activities, or that the new contractor's failure to hire him was retaliatory.

Based on the DOL decision, we dismissed Vander Boegh II. We cited 10 C.F.R. §708.17(c)(3), which provides that dismissal is appropriate if a complainant filed a "complaint under State or other applicable law with respect to the same facts as alleged under this regulation." *Gary S. Vander Boegh*, 29 DOE ¶ 87,010 (2006). We found that the issues raised in the DOL proceeding and those raised in the Vander Boegh II complaint were virtually identical, and accordingly dismissed Vander Boegh II. This determination was upheld by the Deputy Secretary of Energy. 10 C.F.R. § 708.19. See Letter of January 9, 2007 from Fred L. Brown, Acting Director, Office of Hearings and Appeals to Gary S. Vander Boegh.

Given this background, we asked Vander Boegh to show good cause why his appeal in Vander Boegh I should not also be dismissed as moot. See Letter of February 1, 2007, from Fred L. Brown, Acting Director, Office of Hearings and Appeals, to John Stewart, et al., counsel for Vander Boegh. In his response, dated February 14, 2007, Vander Boegh raises the following arguments: (i) the DOL determination has not yet been made final; (ii) the doctrines of mootness, res judicata and collateral estoppel do not yet apply here, and therefore do not preclude further consideration of Vander Boegh I, even in light of the DOL determination; and (iii) there are several remedies for which Vander Boegh is eligible even though he has been terminated, including back pay, compensation for lowered merit increases and attorney fees.

After reviewing these contentions, we find that they are without merit. As an initial matter, Vander Boegh's assertions regarding the finality of the DOL determination and whether the doctrines of res judicata and collateral estoppel come into play here are irrelevant. There is no need for us to wait for a final DOL decision on the issues here. As we stated above, Section 708.15(a) provides that a complainant "may not *file* a complaint under this regulation if, with respect to the same facts, [he] chooses to pursue a remedy under State or other applicable law. . . ." (Emphasis added). In this case, as stated above, Vander Boegh elected to file a complaint with the DOL regarding the same essential facts: he believed that his employer retaliated against him for voicing concerns regarding landfill pollution. The retaliations involved pay issues, and, ultimately, termination. We find that the issues involved in the DOL determination are virtually the same as those raised in Vander Boegh I and he therefore no longer has the option of continuing to pursue those very issues here. While Vander Boegh asserts that the pay issues are different from his termination, which was directly considered by DOL, we believe these alleged retaliations all fall within the same retaliatory stream that was engendered by the landfill disclosures, and which culminated in the termination. We therefore find that in the overall scheme of this case, the pay and attorney fee issues have been subsumed into the DOL proceeding, and are covered by that proceeding. Accordingly, based on Section 708.17, we have determined that the complainant may no longer pursue Vander Boegh I under Part 708 at the DOE, and the relief proposed in that proceeding.

Accordingly, the Vander Boegh appeal should be dismissed. The appeals filed by Weskem and BJC should therefore also be dismissed.

It Is Therefore Ordered That:

The appeals filed in Case No. TBA-0007 by Gary S. Vander Beogh, Weskem LLC, and Bechtel Jacobs Company, LLC be and hereby are dismissed.

Acting Director
Office of Hearings and Appeals

Date: February 22, 2007

July 9, 2007

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner: **Franklin C. Tucker**

Date of Filing: **April 25, 2007**

Case Number: **TBA-0023**

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on April 9, 2007, involving a Complaint of Retaliation filed by Franklin C. Tucker (also referred to as the employee or the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his Complaint, Tucker claims that his former employer, DOE contractor BWXT Y-12, L.L.C. (BWXT or the contractor), retaliated against him for engaging in activity that is protected by Part 708. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that the employee engaged in activity that is protected under Part 708, but that BWXT showed that it would have taken the same adverse personnel actions in the absence of the protected activity. Tucker filed a Statement of Issues appealing the IAD determination. 10 C.F.R. § 708.33. As set forth below, I have decided that the IAD is correct.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have taken adverse personnel

actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"], will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations establish administrative procedures for the processing of complaints. Under these regulations, review of an Initial Agency Decision, as requested by Tucker in the present Appeal, is performed by the Director of the Office of Hearings and Appeals (OHA). 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

The events leading to the filing of Tucker's Complaint are fully set forth in the IAD. *Franklin C. Tucker* (Case No. TBH-0023), 29 DOE ¶ 87,021 (2007). For purposes of the instant appeal, the relevant facts are as follows.

Tucker was employed by BWXT at a DOE facility in Oak Ridge, Tennessee, first as a security inspector, then as a laboratory technician, and finally as a chemical operator. On October 20, 2003, he filed a Complaint of Retaliation under Part 708, alleging that his employer retaliated against him for disclosing safety-related concerns. According to the record, on September 30, 2001, the complainant alleged that proper precautions were not taken during the removal of PCB paint chips in his work area and that management did not require respirators to be worn while workers were involved in the process of converting liquid waste to dry material for disposal.

The complainant alleged that thereafter BWXT took the following adverse personnel actions against him. First, in November 2001, the complainant received counseling for sleeping while on duty. Then, in February and March 2002, the complainant was not interviewed for two BWXT positions for which he applied. Next, on May 17, 2002, the complainant received a "pattern of absence" letter. In addition, on June 14, 2002, the complainant left work on two weeks of medical leave authorized by the BWXT medical department. This short-term leave was extended through January 2003. In a January 2003 case review meeting, the medical department at BWXT again reviewed the complainant's case and found that in view of his medical condition, certain restrictions on his work assignments were appropriate, including that the complainant refrain from prolonged or strenuous exertion, use of a ladder over four feet high and work at an unprotected elevation. BWXT then

determined that the complainant could not be permitted to return to work as a chemical operator with his work-related restrictions. Finally, Tucker contends that BWXT allowed another employee to harass him and to circulate rumors that he was a "snitch for the DOE." 1/ These actions constitute the contractor's retaliations that Tucker alleges took place in this proceeding.

On October 20, 2003, the complainant filed this Part 708 whistleblower complaint with the Oak Ridge Operations Office of the DOE. The matter was referred to the Office of Hearings and Appeals for an investigation, and a Report of Investigation (ROI) was issued on February 2, 2005. 10 C.F.R. § 708.22, .23.

Thereafter, Tucker requested and received a hearing on this matter before an Office of Hearings and Appeals Hearing Officer. The Hearing Officer received testimony from 14 witnesses. The complainant testified and presented the testimony of two of his former co-workers, Mark Korly and Carl Smith. BWXT presented the testimony from the following employees: Les Reed, the division manager for environment safety and health for BWXT Y-12 at the time of the allegations; Ben Davis, operations manager for special materials; Earl Dagley, shift manager; Karl Vincent, chemical supervisor and the complainant's direct supervisor; Janet Sexton, labor relations representative; Diane Grooms, staffing manager; Pat Fortune, department manager for the assembly and disassembly organization; Gary Bowling, general foreman in the garages and the fleet; Tonya Warwick, certified physician assistant in the medical department; Dr. Russ Reynolds, staff clinical psychologist; and Steve Laggis, manager of the special materials organization. 2/

After considering the hearing testimony and other relevant evidence, the Hearing Officer issued the IAD that is the subject of the instant appeal.

1/ The Hearing Officer determined that BWXT took appropriate steps to minimize this matter and that it is not the responsibility of BWXT to ensure that employees get along. Accordingly, she gave this issue no further consideration.

2/ All the job descriptions relate to the time during which the complainant has alleged that he was retaliated against. Many of these employees have changed job titles since then; one has retired.

II. The Initial Agency Decision

The IAD set forth the burdens of proof in cases brought under Part 708. The IAD stated that it is the burden of the complainant under Part 708 to establish by a preponderance of the evidence that he or she engaged in a protected activity, and that the activity was a contributing factor to an alleged retaliation. *See* 10 C.F.R. §§ 708.5 and .29. The IAD further noted that if the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure. 10 C.F.R. § 708.29. The IAD considered the application of these elements to the Tucker proceeding.

A. Protected Activity and Contributing Factor

The IAD first noted that BWXT admitted that the complainant made protected disclosures, and that it took the four personnel actions about which Tucker has complained. Further, the IAD found that the complainant established by a preponderance of the evidence that his protected disclosures were a contributing factor to the personnel actions. The Hearing Officer based this conclusion on the fact that there was proximity in time between the disclosures and the allegedly retaliatory personnel actions. The Hearing Officer also found that Tucker made his protected disclosures to the very supervisors who were involved in the adverse personnel actions, and that they were thus aware of the protected disclosures. Based on these findings, the Hearing Officer concluded that the employee satisfied his burden of proof under Part 708. IAD at 20.

B. Whether BWXT would have terminated Tucker absent the Protected Activity

The IAD analyzed each of the alleged retaliations cited by Tucker.

<u>Sleeping on Duty</u>

The IAD found that in spite of the fact that the complainant denied he was sleeping on duty, the weight of the evidence was convincing that BWXT was justified in "coaching and counseling" Tucker in this regard. This level of discipline was the mildest possible and was less than other employees had received for this infraction. Accordingly, the IAD determined that BWXT would have taken this same action absent the protected disclosures. The IAD also noted that since there was nothing in the complainant's permanent record

to show that he was coached and counseled, there is no remedy that OHA could provide.

Not Being Interviewed for Two BWXT Positions

After hearing the testimony of the contractor's witnesses and considering the job qualifications as specified in the relevant postings, the Hearing Officer found that Tucker did not have the necessary qualifications for either of the two positions. She found convincing the testimony of the staffing manager and the two persons responsible for choosing those who would be interviewed for the positions that the complainant's resume did not indicate that he had the minimum qualifications for the positions. IAD at 21.

Pattern Absence Letter

BWXT witnesses testified that the complainant had a pattern of absences in which he took sick leave adjacent to a scheduled day off or a holiday. IAD at 10-12. They believed that the incidence of his "pattern" of such absences was excessive when compared to other employees. IAD at 12. For this reason, the individual was issued a pattern absence letter which informed him that he would be required to have a doctor's verification if he wished to be paid for the days that he took sick leave. The Hearing Officer was convinced by testimony that there was a pattern of absences by this individual prior to a holiday, scheduled day off or weekend. She also noted BWXT evidence showing 31 examples of pattern absence letters that were presented to other employees. Based on this evidence, the Hearing Officer concluded that BWXT would have issued the Tucker pattern absence letter in the absence of the protected disclosures. IAD at 21-22.

Long Term Disability

The IAD stated that BWXT placed the complainant on long term disability when it was unable to find a position for him with the work restrictions placed by the BWXT medical department. The Hearing Officer found that BWXT showed that the medical department had reasonable concerns about the complainant's ability to do strenuous work. She noted that the complainant admitted to the staff clinical psychologist that he had pressured his personal physician into releasing him to work. While the complainant denied at the hearing that he made this statement, the Hearing Officer found the testimony of the staff clinical psychologist more convincing on this matter. The Hearing Officer also noted the testimony of the staff clinical psychologist to the effect that the

complainant had symptoms that concerned him, such as night sweats which kept him from sleeping and caused him to be extremely fatigued the following day.

The Hearing Officer was not convinced by the complainant's assertions that many people work at BWXT with more restrictions than his. She believed BWXT's evidence that the restrictions under which he would have had to work would have made it impossible for him to work as a chemical operator. Based on these considerations, the Hearing Officer concluded that BWXT had shown by clear and convincing evidence that it would have taken the same action absent the complainant's protected disclosures.

IAD therefore found clear and convincing evidence that BWXT would have taken each of the personnel actions regarding Tucker even if he had not engaged in protected activity under Part 708. In sum, the IAD concluded that Tucker was not entitled to relief.

III. Issues on Appeal and Analysis

Tucker filed a statement identifying the issues that he wished the Director of the Office of Hearings and Appeals to review in this appeal phase of the Part 708 proceeding (hereinafter Statement of Issues or appeal). BWXT filed a Response to the Statement of Issues. 3/ 10 C.F.R. § 708.33.

After fully reviewing the arguments raised in the Statement of Issues, I find that there is no basis for overturning the result in this case.

Complainant's Arguments On Appeal

A. Medical Disability

The complainant's chief objection to the IAD involves the issue of his medical disability. As stated above, the Hearing Officer found that BWXT justifiably placed the complainant on long term disability when it was unable to find a position for him with the work restrictions placed on his return to work by the BWXT medical department. In reaching this conclusion, the Hearing Officer noted that the complainant admitted to the staff clinical psychologist,

---

3/ There is no need in the instant case to set out the specifics of the response, some of which are incorporated into my analysis below.

Dr. Russ Reynolds, that he had pressured his personal physician into releasing him to work. In his appeal, Tucker claims that this statement is false, and insists that he did not "pressure" his physician into "returning him to work." He points to two reports that were filed at the time he tried to return to work, one by his physician, Dr. Bennet, and the other by his psychologist, Dr. Simmons. He alleges that both reports show he was able to return to work. Tucker therefore claims that he had no need to assert to Dr. Reynolds that he had "pressured" his doctors to allow him to return to work.

I have reviewed those reports, copies of which were included with the appeal. Dr. Bennet's report was made in connection with Tucker's disability claim. Seemingly dated November 27, 2002, it advises that Tucker is able to return to work as of that date. The "Supplemental Statement of Functional Capacity" signed by Dr. Simmons does not indicate any significant function impairment, other than depression and anxiety disorder, which according to the report "have improved substantially." Thus, Tucker's claim that his own physicians held the opinion that he was fit to return to work in November 2002 seems to be substantiated by these two reports. However, the reports do not prove or disprove any assertion regarding whether Tucker may have pressured those doctors to return him to work. In any event, this point, even if true, does not establish that Tucker is entitled to prevail. The key here is whether Tucker was fit to return to work as a chemical operator, or whether BWXT correctly placed him on long term disability.

I see nothing in the record here that would suggest that the Hearing Officer's finding was incorrect. From my own review of the hearing transcript, I note that Dr. Reynolds stated that Tucker was "exhausted," and "stressed," and experienced fevers. Transcript of Hearing (Tr.) at 237-38. Dr. Reynolds had "real concerns" about the complainant's return to work as a chemical operator. Tr. at 245. I also note the testimony of the BWXT physician assistant, Tonya Warwick, who performs "return to work" evaluations for BWXT. Tr. at 218. She stated that she did not necessarily agree with opinions of "outside doctors" who recommended that employees be returned to work, because these outside physicians are not familiar with the working conditions faced by employees. Tr. at 224. Thus, she provided an important reason why the reports of Tucker's own medical team might not be considered definitive.

The record shows that as of January 2003, Dr. Reynolds and Ms. Warwick believed that Tucker's functional status was such that he could only return to work with significant restrictions. Tr. at

240-41. Thus, there is considerable evidence to support the Hearing Officer's determination that BWXT would not have allowed Tucker to return to full time work as a chemical operator even if he had not made protected disclosures. There is also evidence from Dr. Reynolds that BWXT did not have any part time work of this nature available for Tucker, whom he believed had only "two or three good days a week." I therefore see no reason to disturb the Hearing Officer's determination regarding the long term disability issue.

B. Work Place Violence Issue

Tucker reiterates that BWXT did not correctly handle his concerns about work place violence by restraining Danny Mullins. The Hearing Officer found that BWXT took appropriate steps to minimize this matter. IAD at note 3. In fact, Tucker has not shown any retaliatory action by BWXT in this regard. He has simply made allegations that a fellow employee may have acted improperly. Thus, overall, I find no adverse personnel action with respect to Tucker that falls within the purview of Part 708.

C. Animosity of Earl Dagley

Tucker also argues that shift manager Earl Dagley did not want him to return to work. Tucker explains in great detail the reasons for the animosity that Earl Dagley purportedly felt towards him. Tucker thereby implies that the adverse testimony from Earl Dagley regarding the pattern absence letter, not being interviewed for the two job openings, the long term disability determination, and the counseling for sleeping on duty was false, simply reflected Dagley's own negative view of Tucker, and should therefore be disregarded.

The fact that Earl Dagley may have had some reason to seek Tucker's severance from the BWXT workplace does not establish any error in the IAD. Even if Tucker's assertions regarding Dagley's animosity towards him were true, I find that the Hearing Officer's conclusion about the reliability of testimony and other evidence concerning the adverse personnel actions was sound. Tucker's accusations in and of themselves do not establish that the Hearing Officer's overall conclusions were incorrect, based on the testimony at the hearing. There was ample evidence besides that of Dagley to support her conclusion. For example, the Labor Relations Representative provided considerable testimony on the issue of the pattern absence letter, and the Hearing Officer relied extensively on that testimony. IAD at 21-22. With respect to the job interview issue, the Hearing Officer relied on the testimony of the staffing manager, Diane Grooms, for her conclusion that Tucker was not qualified for

either of the advertised positions. IAD at 21. I reviewed above, the solid evidence confirming that BWXT's placing Tucker on long term medical disability was justified. Accordingly, I will not overturn the Hearing Officer's conclusions based on Tucker's assertion that Dagley did not want him to return to work.

D. False and Misleading Statements

In his appeal, Tucker alleges 13 instances of false and misleading testimony by five witnesses. He requests that his allegations be reviewed and that the witnesses providing that testimony "be stripped of their clearances and turned over to the Department of Justice for further action."

After reviewing Tucker's allegations, I cannot find that he has established falsification in any of those examples. Accordingly, I see no basis for any further action with respect to the allegations, and furthermore see no reason to disturb the Hearing Officer's conclusions based on any of these assertions regarding falsehood. I discuss below three typical examples of the purportedly false or misleading testimony.

The complainant's technique in several instances is to ask "questions" about the testimony. These "questions" do not establish error or falsehood. For example, Tucker cites testimony of Earl Dagley that a piece of machinery that Tucker operated was dangerous. Tucker then states, "How come my line supervisor was not notified?" This type of objection does not show any false or misleading testimony by Dagley or any error in the IAD.

As an example of purportedly unreliable testimony, Tucker cites the following: "Earl Dagley states he saw Dennis Nabors on Dock 212 and that he told Mr. Dagley I was being interviewed for an assembly position and this was close to happening. [Tr. at 103 line 20.] On page 199 line 8 Diane Grooms states that I did not meet the requirements for the assembly job and I would not be interviewed. Why did Dennis Nabors state I was close to an interview to Earl Dagley when Diane Grooms states I wasn't even qualified for the job." With respect to this example, I find that the Hearing Officer properly gave little weight to the second-hand, hearsay evidence of Dagley, and properly relied on the direct testimony of Diane Grooms. Further, although these two witnesses may have held differing views of Tucker's situation regarding a possible interview, I no evidence of any falsification, especially since Dagley was only referring to what he had heard from Nabors.

Tucker also reargues the conclusion by the Hearing Officer that BWXT should have accommodated his work restrictions. In this regard, he stated: "Another operator had restrictions to the amount of weight he could move. When I returned to work I had no restrictions placed on me by my doctor. The plant medical staff placed restrictions on me when I returned to work. It is shown that SMO [Special Materials Organization] had operators working with work restrictions. Why didn't SMO accommodate me like they did the other operators?"

With respect to this assertion, Tucker cites testimony by Dagley at page 96, line 13 of the hearing transcript. In this part of his testimony, Dagley was referring to another SMO employee who had had work restrictions that involved weight. Accordingly, SMO measured the weight of the carts this employee would be required to push. Dagley testified that the carts weighed 35-40 pounds. There was no testimony that this individual was offered any kind of accommodation due to his restriction. Dagley's testimony only confirmed that the amount of weight that a worker might be required to push was 35 to 40 pounds, and that SMO knew this because it had to measure the weight on behalf of an employee with weight restrictions. Thus, Tucker's assertion that this testimony shows other employees' restrictions were accommodated, but his was not, is simply unfounded. Moreover, there is nothing in this testimony that is false or misleading.

None of Tucker's contentions persuades me that the result in this case should be overturned, or that there is any false or misleading testimony in the examples Tucker has offered. I am convinced that there was sufficient evidence in the record in this case to support the Hearing Officer's conclusion that BWXT clearly and convincingly established that it would have taken the cited personnel actions absent Tucker's protected activity. I am also convinced that the testimony received at the hearing was given in good faith and that the Hearing Officer properly relied on it.

E. Procedural Objections

Tucker also raises two procedural objections in this case. He complains of an excessive time period between the date he filed his complaint of retaliation in 2003 and the hearing date in August 2006. This delay, while indeed unfortunate, does not in and of itself show any error in the IAD. However, Tucker further argues in this regard that because he was excluded from the BWXT site he could not gain access to information from Larry Jones of the National Nuclear Security Administration (NNSA) or from the OHA

investigator in this proceeding. Tucker contends that the Hearing Officer refused to subpoena these witnesses.

Tucker seems to think the Jones report is necessary because he claims the Jones report showed "what I had complained about was true as far as health and safety went." Since the substance of Tucker's protected disclosures is not an issue in this case, there was no need for testimony or other evidence on this point.

It was further unnecessary to have testimony from the OHA investigator in this case. Tucker asserts that the investigator found that retaliation by BWXT was probable, thereby implying that her testimony would have helped him. 4/ The investigator's conclusion is not determinative. She simply made some preliminary findings of fact about the issues here. The Hearing Officer is not required to follow those findings. 10 C.F.R. § 708.30(c). Tucker has provided no basis for requiring the testimony of the investigator and I see none here.

Thus, the refusal to issue subpoenas to these two individuals was correct.

IV. Conclusion

As is evident from the above discussion, Tucker disputes both the findings of fact and conclusions of law reached in the IAD. Ultimately, it was the role of the Hearing Officer to make findings of fact based on her assessment of the witnesses and their testimony. The Hearing Officer did so and, after the reviewing the entire record, I find no error. I see nothing in the Tucker Statement of Issues that would cause me to overturn the IAD in this case. Accordingly, the instant appeal should be denied and the IAD affirmed.

4/ This assertion is not accurate. The investigator concluded that BWXT had not provided clear and convincing evidence that it would have taken the adverse personnel actions in the absence of the protected disclosure.

It Is Therefore Ordered That:

(1) The Appeal filed by Franklin C. Tucker on April 25, 2007 (Case No. TBA-0023), of the Initial Agency Decision issued on April 9, 2007, be and hereby is denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

Fred L. Brown
Acting Director
Office of Hearings and Appeals

Date: July 9, 2007

May 9, 2007

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner: Clint Olson

Date of Filing: November 18, 2005

Case Number: TBA-0027

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on October 27, 2005, involving a Complaint of Retaliation filed by Clint Olson (also referred to as the employee or the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Olson was an employee of BWXT Pantex (also referred to as BWXT, the firm, or the contractor), the Management and Operating Contractor at the DOE's Pantex Plant in Amarillo, Texas. In his Complaint, Mr. Olson claims that BWXT retaliated against him for making disclosures that are protected under Part 708. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that the employee engaged in activity that is protected under Part 708, and that BWXT did retaliate against him for the disclosures. BWXT has appealed that determination. As set forth in this decision, I have decided that the Appeal filed by BWXT should be granted, and that Mr. Olson's request for relief should be denied, on the ground that BWXT has proven, by clear and convincing evidence, that it would have taken the same action, in not granting a proposed comparative salary increase to Mr. Olson's working group, without Mr. Olson's protected disclosures.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent,

or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"], will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of "retaliation").

The DOE Contractor Employee Protection Program regulations establish administrative procedures for the processing of complaints. Under these regulations, review of an Initial Agency Decision, as requested by BWXT in the present Appeal, is performed by the Director of OHA. 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

The events leading to the filing of the Complaint are fully set forth in the IAD. Clint Olson (Case No. TBH-0027), 29 DOE ¶ 87,007 (2005) (hereinafter IAD). For purposes of the instant Appeal, the relevant facts are as follows.

From July 1999 until November 2004, Mr. Olson was employed by BWXT in the counter-intelligence unit (CIU) as a counter-intelligence officer (CIO) at the Amarillo Plant. In March 2004, he filed a Complaint under Part 708, alleging that BWXT retaliated against him for making disclosures regarding the handling of a classified hard drive. In this regard, Mr. Olson stated that in February 2002 he told his supervisor about BWXT personnel who he believed were grossly negligent in the handling of a classified drive. Mr. Olson indicated that BWXT's security incident report regarding this matter reached an incorrect conclusion regarding the destruction of the classified hard drive. Based on his review of the report, Mr. Olson believed that the facts as stated in the report did not support the report's conclusion that the missing classified hard drive had actually been destroyed. Mr. Olson also stated that in a March 2002 conversation he allegedly told BWXT's Safety, Security, and Planning (SS&P) Manager that contrary to BWXT's conclusion in the incident report, it was not clear that the classified hard drive had in fact been destroyed. Mr. Olson believed that disclosures that the report's conclusion overstated the likelihood that the hard drive had been destroyed were protected under Section 708.5, which (in part) protects disclosures that concern substantial violation of a law, rule, or regulation. Moreover, Mr. Olson alleged that BWXT took retaliation against him for making these protected disclosures by taking no action on a pending request for a comparative salary increase for his working group, the CIU. IAD, 29 DOE at 89,022-24.

After completion of an investigation pursuant to 10 C.F.R. § 708.22, Mr. Olson requested and received a hearing on this matter before an OHA Hearing Officer. At the Hearing, testimony was received from twelve witnesses. The complainant testified and presented the testimony of BWXT's former Senior CIO, Curtis Broaddus (the complainant's supervisor); DOE's former Safety, Security, and Planning (SS&P) Manager at Pantex; a Special Agent with the Federal Bureau of Investigation (FBI); the Chief of the Office of Defense Nuclear Counterintelligence in DOE's National Nuclear Security Administration (NNSA), Catherine Sheppard (the Defense Nuclear CI Chief); BWXT's

former Human Relations Compensation and Employment Manager, John T. Merwin (the former HR Compensation Manager); and BWXT's current Compensation Manager, Richard E. Frye. BWXT presented the testimony of BWXT's current Senior CIO, Darlene Holseth; DOE's Assistant Site Manager, Safeguards and Security, for the Pantex Site Office (the DOE Assistant Site Manager); BWXT's Division Manager for Safeguards and Security, Alexandra Sowa (BWXT's current S&S Manager); BWXT's former General Manager, Dennis Ruddy; and BWXT's current General Manager, Michael Mallory. IAD, 29 DOE at 89,022.

After considering the hearing testimony and other relevant evidence, the Hearing Officer issued the IAD that is the subject of the instant appeal.

II. The Initial Agency Decision

The IAD set forth the burdens of proof in cases brought under Part 708. The IAD stated that it is the burden of the complainant under Part 708 to establish by a preponderance of the evidence that he or she engaged in a protected activity, and that the activity was a contributing factor to an alleged retaliation. IAD, 29 DOE at 89,033 (citing 10 C.F.R. §§ 708.5, 708.29). The IAD further noted that if the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure. Id. The IAD considered the application of these elements to the Olson proceeding, as well as several procedural issues.

After finding that the Complaint was timely filed (IAD, 29 DOE at 89,033-35), the IAD held that Mr. Olson had shown, by a preponderance of the evidence, that on two occasions he had made protected disclosures under Part 708, which were a contributing factor to BWXT's decision not to grant the comparative salary increase to Mr. Olson's working group; and that BWXT had failed to show, by clear and convincing evidence, that it would have taken the same action, in not granting the comparative salary increase, in the absence of Mr. Olson's protected disclosures. Id. at 89,035-42. The IAD therefore concluded that BWXT should be required to take restitutionary action by making payment to Mr. Olson of "a sum equal to the fifteen percent comparative salary increase that he would have received if the Defense Nuclear CI Chief's March 2002 proposal had been accepted and implemented." Id. at 89,042.

III. Analysis

BWXT filed a statement identifying the issues that it wished the Director of OHA to review in this appeal phase of the Part 708 proceeding (hereinafter Statement of Issues or Statement). BWXT identified the following issues: (1) the Hearing Officer erred in finding that the Complainant's Part 708 disclosures involved a danger to public safety and health; (2) the Hearing Officer did not adhere to the regulations; (3) the IAD denied BWXT procedural due process; (4) the IAD is arbitrary and capricious and an abuse of discretion; (5) the Hearing Officer erred in finding that the Complaint was timely filed; (6) the Hearing Officer erred in finding that BWXT's failure to grant a pay raise was an act of retaliation; (7) the Hearing Officer erred in relying upon improper activities imputed to a

DOE official (Defense Nuclear CI Chief Catherine Sheppard, who had proposed the comparative salary increase for Mr. Olson's working group); and (8) the Hearing Officer erred in giving substantial weight to the testimony of Mr. Olson's former supervisor, Curtis Broaddus, and BWXT's former HR Compensation Manager, John Merwin. BWXT also filed supplemental information regarding issue (7) above. This supplemental material included a January 5, 2006 affidavit of Daniel E. Glenn, a DOE employee and the Site Manager at the Pantex Site Office, and a series of e-mail messages among DOE officials generated between April and June 2002. Mr. Olson filed a response to BWXT's Statement and supplemental information, in which he responded to the arguments raised by BWXT. 10 C.F.R. § 708.33.

After fully reviewing the arguments raised by BWXT, I find that the Appeal filed by BWXT should be granted, and that Mr. Olson's request for relief should be denied, on the ground that BWXT has proven, by clear and convincing evidence, that it would have taken the same action, in not granting the proposed comparative salary increase to Mr. Olson's working group, without Mr. Olson's protected disclosures, for the non-retaliatory reason that DOE determined that its Defense Nuclear CI Chief lacked the authority to propose and fund that salary increase. BWXT identified that issue as number (7) in its Statement. Because that is the fundamental ground on which the Appeal is granted, this Appeal Decision will not address the other issues identified by BWXT in its Statement.

A. BWXT Has Proven, By Clear And Convincing Evidence, That It Would Have Taken the Same Action In Not Granting The Salary Increase Proposed By DOE's Defense Nuclear CI Chief, Without Mr. Olson's Protected Disclosures, Because DOE Determined That Its Defense Nuclear CI Chief Lacked The Authority To Propose And Fund That Salary Increase.

It was the Defense Nuclear CI Chief in DOE's NNSA, Catherine Sheppard, who proposed the comparative salary increase for Mr. Olson's working group. The IAD was correct in finding that at a November 2001 meeting, Ms. Sheppard first made her proposal to BWXT by telling BWXT's General Manager, Dennis Ruddy, that "she would provide the funding to bring the salaries at the Pantex CIU [Counterintelligence Unit] up to a comparable level with CIU's at other DOE facilities" (IAD, 29 DOE at 89,039); that Mr. Ruddy "responded positively to her offer to provide additional funds for comparative salary increases for BWXT's CIU" (id.); that in a January 13, 2002 letter from Ms. Sheppard to Mr. Ruddy, she stated, "We at Headquarters are prepared to provide the dollars to support increases just as soon as we get the word" (id. at 89,039-40); and that in a March 27, 2002 letter from Ms. Sheppard to the DOE Contracting Officer, Office of Amarillo Site Operations, Ms. Sheppard requested, "I ask that you take action to immediately effect the following adjustments to their current pay" at BWXT's CIU, which was Mr. Olson's work unit, including an "increase by fifteen percent" for Mr. Olson's position (id. at 89,040).

The IAD was also correct in finding, based on uncontested portions of the record, that "[a]t the Hearing, the Defense Nuclear CI Chief [Ms. Sheppard] stated that she was notified by the DOE that her March 2002 proposal to raise salaries for BWXT's CIU was inappropriate and had been rejected" (IAD, 29 DOE at 89,041 n.10) (emphasis added); and that "[s]he testified that she was later notified

by the DOE that her proposal to raise the salaries was not appropriate" (id. at 89,027) (emphasis added).

Ms. Sheppard's testimony that it was the DOE that rejected her salary increase proposal was confirmed by the testimony of BWXT's Mr. Ruddy, which the IAD accurately described as follows:

> [Mr. Ruddy] testified that when in March 2002 the Defense Nuclear CI Chief [Ms. Sheppard] sent a letter to Pantex indicating that the DOE would support specific raises for BWXT employees in the Pantex CIU, he referred it to the DOE's site office manager who "took immediate action to have the letter withdrawn."
>
> > . . . he thought it was highly inappropriate, a conclusion that I shared, and it was not the purview of that office or any other office to direct individual salaries.
>
> TR at 36-37. He stated that managing and operating contractors had a responsibility for conducting a process that insured fair compensation to their employees, and that accepting guidance from the Government would undermine that process and could lead to other groups "petitioning their customer for some special consideration." TR at 108.

IAD, 29 DOE at 89,032 (emphasis added).

Ms. Sheppard's and Mr. Ruddy's testimony that it was the DOE that rejected her salary increase proposal is further confirmed by the Affidavit of Daniel E. Glenn, DOE's site manager at the Pantex Site Office in Amarillo, Texas. That affidavit was submitted by BWXT during its appeal of the IAD. In his affidavit, Mr. Glenn explained that DOE rejected Ms. Sheppard's salary increase proposal, and the reasons for DOE's rejection:

> In April of 2002, it came to my attention that Catherine Sheppard, Chief of the Office of Defense Nuclear Counterintelligence, (previously known as Catherine Eberwein) had made certain representations to the Contractor concerning funding counterintelligence unit salary increases. These representations were made during the time she was conducting a review of the Pantex Counterintelligence operations. In response, I communicated to Ms. Sheppard my concerns in several areas, including the fact that it was inappropriate for her review to have included any discussion on wages and salaries. During our discussion, I further advised Ms. Sheppard that management and operating employee salaries were to be based on the Contractor's internal processes, consistent with the M&O contract, and that her report would not set a precedent to change the policy since she had no contractual authority over the matter of compensation for BWXT Pantex employees.
>
> Further, I discussed this matter with Mr. Dennis Ruddy, then the General Manager of BWXT Pantex and the supervisor of the Chief Counterintelligence Officer, and told him that it was inappropriate for the representations from Ms. Sheppard to have included any

> discussion on wages and salaries. Ms. Sheppard did not have any authority to direct the Contractor on wages and salaries of its employees. M&O employee salaries were to be based on their internal company processes, consistent with the contract, and this review did not set a precedent that was to change that policy. I made it clear to Mr. Ruddy that he was not to consider any salary statement in the report as directive in nature, and that all salary actions should be consistent with existing internal corporate practices and contract requirements. My instructions to Mr. Ruddy were consistent with communications on this subject from the highest level of the Procurement Directorate in the Department of Energy.

Affidavit of Daniel E. Glenn (Glenn Affidavit) at 1-2 (emphases added).

The Glenn Affidavit, together with the above-quoted testimony of Ms. Sheppard and Mr. Ruddy, thus provides clear and convincing evidence that it was DOE – not Mr. Ruddy or BWXT – that rejected Ms. Sheppard's proposal for a salary increase for contractor employees. Mr. Glenn, as the DOE site manager with authority over the Pantex Plant where Mr. Olson was employed, confirms that the non-retaliatory reason that BWXT did not grant the salary increases proposed by Ms. Sheppard was that DOE determined that her proposal was ultra vires: "Ms. Sheppard did not have any authority to direct [BWXT] on wages and salaries of its employees," and her "representations to [BWXT] concerning funding counterintelligence unit salary increases" were inappropriate "since she had no contractual authority over the matter of compensation for BWXT Pantex employees." Glenn Affidavit at 1.

In finding that BWXT had not met its burden of proof, the IAD paraphrased the testimony of BWXT's Mr. Ruddy in a manner that created the impression that Mr. Ruddy – and not DOE – had rejected Ms. Sheppard's proposed salary increases as "inappropriate." The IAD paraphrased, "[Mr. Ruddy] testified that he rejected the proposal of the Defense Nuclear CI Chief to fund specific comparative salary increases for BWXT's CIU on the grounds that it was inappropriate." IAD, 29 DOE at 89,041. However, Mr. Ruddy's complete testimony, as cited elsewhere in the IAD, included his statement that the DOE's "Site Office Manager, Dan Glenn (phonetic), he took immediate action to have the letter withdrawn," and that "what Mr. Glenn ex-, expressed to me, that he thought it was highly inappropriate, a conclusion that I shared, and, and that it, it was not the purview of that office or, in fact, any other office to direct individual salaries." TR at 36-37, cited in IAD, 29 DOE at 89,032. Thus, Mr. Ruddy testified that the rejection was by DOE, on the ground that Ms. Sheppard's proposal was inappropriate (because it was beyond her office's purview, or authority, as confirmed in the Glenn Affidavit). Mr. Ruddy testified that he shared DOE's conclusion.

The IAD also stated that "[w]hile [Mr. Ruddy] provides a plausible explanation for rejecting the offer of the Defense Nuclear CI Chief to raise those salaries, it is not convincing in light of the testimony provided by" John Merwin, BWXT's former Human Relations Compensation Manager. IAD, 29 DOE at 89, 042. The IAD then paraphrased Mr. Merwin's testimony as stating that "Ruddy initially supported increasing salaries of BWXT's CIU employees, but that he later emphatically rejected an internal BWXT proposal for increasing those salaries because he was upset about the CIU's activities concerning the classified hard drive," which had been the subject of Mr. Olson's

disclosures;[1] and as stating that "Ruddy rejected his [Merwin's] advice when he [Ruddy] later rejected the Defense Nuclear CI Chief's proposal." 29 DOE at 89,042. However, Mr. Merwin's complete testimony, as cited elsewhere in the IAD, included his statement that when Mr. Ruddy had sought his guidance on whether Ms. Sheppard could solicit a pay increase for the Pantex CIU, Mr. Merwin had answered that "it is highly unusual for the Department of Energy to look at a contractor and to determine what those salary determinations should be, because we make those salary determinations based on salary studies, and [they] are determinations based across the [DOE] complex;" but that Mr. Merwin had nevertheless told Mr. Ruddy that "[i]t is probably politically astute to make payment and move forward." TR at 365-66, cited in IAD, 29 DOE at 89,040-41. Mr. Merwin thus confirmed to Mr. Ruddy that it was "highly unusual" for a DOE employee in Ms. Sheppard's position to make the proposal that she had made. Mr. Ruddy – instead of doing what Mr. Merwin described as "probably politically astute" – referred, to DOE's Mr. Glenn, the letter from Ms. Sheppard in which she made her "highly unusual" proposal. It was then DOE's Mr. Glenn who rejected Ms. Sheppard's salary increase proposal as beyond her authority.

The Glenn Affidavit, and the testimony of Ms. Sheppard, Mr. Ruddy, and Mr. Merwin cited above, thus make it clear that there were three distinct, consecutive actions after Ms. Sheppard made her proposal: (1) Mr. Ruddy's referral, to DOE's Mr. Glenn, of Ms. Sheppard's letter containing her "highly unusual" proposal to increase the salaries of Mr. Olson's work group and provide DOE funding for that increase; (2) DOE's rejection of Ms. Sheppard's proposal on the ground that she had

[1] Specifically, the IAD found that Mr. Olson made two disclosures, in February and March 2002, in which he told other BWXT employees that he believed that there was insufficient evidence to support the findings in a BWXT Incident Report that a missing classified computer hard drive had been destroyed and there was no compromise of classified data. After Mr. Olson's disclosures, the Incident Report's findings were amended from "Loss/Compromise did not occur" to "Probability of Compromise is remote." IAD, 29 DOE at 89,035-37. Although Mr. Olson had contended throughout the proceeding that his disclosures were protected because they revealed substantial violations of law under 10 C.F.R. § 708.5(a)(1), the IAD instead found that his disclosures were protected for a different reason, i.e., because they revealed a substantial and specific danger to employees and to public health and safety under 10 C.F.R. § 708.5(a)(2). Id. However, in a closely-related Part 708 case involving the identical disclosures made by Mr. Olson's supervisor, Curtis Broaddus, a different OHA hearing examiner issued an IAD that found that the disclosures were not protected under Part 708 because Mr. Broaddus had not met his burden of establishing that he reasonably believed that the disclosures revealed a substantial violation of law under section 708.5; and that IAD did not find that the disclosures were protected for any other reason. Curtis Broaddus, Case No. TBH-0030, slip op. at 12-14 (Nov. 7, 2006). Therefore, the Broaddus IAD denied the request for relief filed by Mr. Broaddus (id.); and did not consider actions taken by BWXT allegedly in retaliation for a protected disclosure (id. at 6). With regard to the Olson IAD, this Appeal Decision will not address the Broaddus issue of whether the complainant Mr. Olson met his burden of proof, because the fundamental ground on which this Appeal is granted is that BWXT has met its own burden of proof, as explained above.

no authority to make the proposal; and (3) BWXT's action in not granting Ms. Sheppard's salary increase proposal that DOE had determined was beyond her authority.

Therefore, BWXT has done more than provide a plausible explanation for its not granting Ms. Sheppard's salary increase proposal. BWXT has also provided substantiation to support its explanation. The Glenn Affidavit helps to establish that DOE itself rejected Ms. Sheppard's proposal because it was ultra vires, and confirms the testimony on that issue by Ms. Sheppard and Mr. Ruddy. It even confirms the testimony of Mr. Merwin, on whom the IAD relied, that Ms. Sheppard's proposal was "highly unusual." It has now been established that her proposal was so highly unusual because, as determined by DOE, "she had no authority over the matter of compensation for BWXT employees." Glenn Affidavit at 1.

In Complainant's Response to BWXT's Statement and Supplemental Statement, at 9-10, Complainant (1) argues that the OHA Director should not afford weight to the Glenn Affidavit as newly discovered evidence; and (2) responds to the Glenn Affidavit by alleging that "it is unclear whether NNSA would not have funded the salary increase but rather Mr. Glenn, DOE Pantex Site Office, objected to Ms. Sheppard's determination of what the compensation level should be for the Pantex counterintelligence salaries." Id. at 10. First, the Glenn Affidavit is indeed newly discovered evidence. It was not created until after the date on which the IAD was issued. The OHA Director's consideration of the Glenn Affidavit will not prejudice the Complainant, because the Affidavit does not introduce a new issue into the case, but confirms the testimony of Ms. Sheppard, Mr. Ruddy, and Mr. Merwin; and because the Complainant has had the opportunity, in his Response, to respond to the Glenn Affidavit. Second, the Complainant's above-quoted response to the Glenn Affidavit is not persuasive. In his Affidavit, Mr. Glenn does not personally "object[] to Ms. Sheppard's determination of what the compensation level should be for the Pantex counterintelligence salaries," as the Complainant alleges. On the contrary, Mr. Glenn states that "Ms. Sheppard did not have any authority to direct [BWXT] on wages and salaries of its employees," and her "representations to [BWXT] concerning funding counterintelligence unit salary increases" were inappropriate "since she had no contractual authority over the matter of compensation for BWXT Pantex employees." Glenn Affidavit at 1. He concludes by stating that his instructions "were consistent with communications on this subject from the highest level of the Procurement Directorate in the Department of Energy." Id. at 2.

In addition, a recent OHA decision, that was issued after the hearing officer issued the IAD in the present Appeal, provides further support for BWXT's position in this case. On September 19, 2006, OHA issued its decision in John Merwin, 29 DOE ¶ 87,012 (2006), in which Mr. Merwin had filed his own Part 708 complaint against BWXT. Mr. Merwin claimed in that case that BWXT retaliated against him because he had appeared as a witness in the hearing in the present case involving Mr. Olson. Mr. Merwin alleged that BWXT retaliated against him by refusing to certify him under DOE's Human Reliability Program (HRP), 10 C.F.R. Part 712. OHA held that "if Merwin can establish that BWXT has not followed its normal procedures in determining whether to submit his name to the DOE for HRP status, this could fall within the realm of a Part 708 retaliation;" and that "[i]n such a case, we could, if otherwise appropriate . . . , direct BWXT to follow its normal

procedures and submit Mr. Merwin for HRP consideration." Merwin, 29 DOE at 89,052 (emphases added). OHA then found that the record did not suggest that BWXT had not followed its normal procedures. OHA therefore sustained the determination regarding Mr. Merwin's HRP status, and denied Mr. Merwin's appeal of the dismissal of his complaint. Id.

In the present Appeal, the record has established that BWXT followed normal procedures, as it did in the Merwin case, in not granting the comparative salary increase that had been proposed by Ms. Sheppard. As explained above, the affidavit of DOE's Mr. Glenn confirmed that "management and operating employee salaries were to be based on the Contractor's internal processes, consistent with the M&O contract, and that her report would not set a precedent to change the policy since she had no contractual authority over the matter of compensation for BWXT Pantex employees." Glenn Affidavit at 1 (emphasis added). By following the "policy" that its employee salaries were to be based on its internal processes consistent with its contract with DOE, and not setting "a precedent to change the policy," BWXT was following normal procedures in the present case, as in the Merwin case.

BWXT has thus shown that it was DOE that determined that Ms. Sheppard lacked the authority to propose and provide DOE funding for the salary increase for BWXT's employees. That left BWXT in the same position that it had been in before Ms. Sheppard's ultra vires proposal, when BWXT lacked the funds to pay for the comparative salary increase for its employees. Mr. Merwin – BWXT's former Compensation Manager, on whom the IAD relied – testified that "[t]he problem was, at that period of time there was no money available;" and that "they knew from when I first came in and did my analysis and sat down with Mr. Broaddus [Mr. Olson's supervisor] and Mr. Mallory [BWXT's General Manager at the time of the hearing] that we were near to being broke with regards to the compensation fund." TR at 350-51 (emphases added), cited in 29 DOE at 89,040.

In this regard, OHA has held in another case that "the remedies available under Part 708 are aimed at restoring employees to the employment position and situation that they occupied before Part 708 retaliations took place;" and "that Part 708 did not provide a remedy for longstanding salary differences that predated an individual's protected disclosures." Gary S. Vander Boegh, 28 DOE ¶ 87,040 at 89,296 (2003). Similarly, in the present case, after BWXT's action in not granting the comparative salary increase that Ms. Sheppard had proposed (without authority) for DOE to fund, Mr. Olson had the same longstanding salary difference, compared to other employees at other DOE sites, that predated his protected disclosures. Moreover, Mr. Olson later received merit pay increases after BWXT's action in not granting him Ms. Sheppard's proposed comparative salary increase in 2002. Indeed, he received at least the average merit pay increase for the Pantex site. IAD, 29 DOE at 89,039 (citing TR at 422-23).[2]

[2] Those facts may explain why Mr. Olson waited for two years, after BWXT's action in not granting him the comparative salary increase proposed by Ms. Sheppard, to file his Part 708 (continued...)

In sum, I find that BWXT has proven, by clear and convincing evidence, that it would have taken the same action, in not granting the proposed comparative salary increase to Mr. Olson's working group, without Mr. Olson's protected disclosures, for the non-retaliatory reason that DOE determined that its Defense Nuclear CI Chief lacked the authority to propose and fund that salary increase.

IV. CONCLUSION

For the reasons set forth above, I find that BWXT's Appeal of the IAD should be granted, and that the complainant Mr. Olson's request for relief should be denied.

It Is Therefore Ordered That:

(1) The Appeal filed by BWXT Pantex on November 18, 2005 (Case No. TBA-0027), of the Initial Agency Decision issued on October 27, 2005, is hereby granted.

(2) The Request for Relief filed by the complainant Clint Olson under 10 C.F.R. Part 708 is hereby denied.

(3) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

Fred L. Brown
Acting Director
Office of Hearings and Appeals

[2](...continued)
complaint, instead of filing his complaint within 90 days, as provided in 10 C.F.R. § 708.14. Although BWXT has objected to the IAD's finding that Mr. Olson's complaint was timely filed, despite the passage of two years. This Appeal Decision will not address that issue because the fundamental ground on which the Appeal is granted is that BWXT has met its burden of proof, as explained above.

August 29. 2007

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner: Curtis Broaddus

Date of Filing: November 22, 2006

Case Number: TBA-0030

Curtis Broaddus filed a complaint of retaliation under the Department of Energy (DOE) Contractor Employee Protection Program. *See* 10 C.F.R. Part 708. Mr. Broaddus alleged that he engaged in protected activity and that his employer, BWXT Pantex (BWXT), retaliated by not giving his working group a proposed salary increase. An Office of Hearings and Appeals (OHA) Hearing Officer denied relief, and Mr. Broaddus filed the instant appeal. In a companion case involving Mr. Broaddus' subordinate, Clint Olson, I held that BWXT's failure to grant the proposed salary increase was not retaliatory. That holding governs this case. Accordingly, Mr. Broaddus' request for relief - a retroactive salary increase - is denied.

I. Background

Mr. Broaddus was BWXT's senior counter-intelligence officer. Mr. Broaddus' subordinate, Mr. Olson, was also a counter-intelligence officer.

In 2002, Mr. Broaddus and Mr. Olson raised security concerns about the protection of classified information. Thereafter, BWXT did not implement a DOE proposal to give their working group a fifteen percent "comparative" salary increase, i.e., an increase to bring their salaries more in line with those of others doing comparable work.

In 2004, Mr. Broaddus and Mr. Olson filed retaliation complaints. See 10 C.F.R. Part 708. They alleged that, when they raised their security concerns, they made "protected disclosures" and that BWXT retaliated by failing to grant the

fifteen percent comparative salary increase. Mr. Broaddus also alleged other retaliations specific to him.

The Broaddus and Olson complaints were referred to OHA. An OHA attorney investigated the complaints and issued a separate Report of Investigation (ROI) for each. *See* 10 C.F.R. §§ 708.22, 708.23. Upon the issuance of the ROIs, two Hearing Officers were appointed - one for each complaint. The Hearing Officers held a joint hearing on the issues common to the complaints, and then the Broaddus Hearing Officer held a further hearing on issues specific to the Broaddus complaint.

Each Hearing Officer issued an Initial Agency Decision (IAD). The IADs reached opposite results. The Hearing Officer for the Olson complaint held that Mr. Olson was entitled to relief. *Clint Olson (Case No. TBH-0027),* 29 DOE ¶ 87,007 (2005) (the Olson IAD). The Hearing Officer for the Broaddus complaint held that Mr. Broaddus was not entitled to relief. *Curtis Broaddus (Case No. TBH-0030),* 29 DOE ¶ 87,015 (2006) (the Broaddus IAD). BWXT appealed the Olson IAD, and Mr. Broaddus appealed the Broaddus IAD.

In May 2007, I reversed the Olson IAD. *Clint Olson (Case No. TBA-0027),* 29 DOE ¶ 87,023 (2007) (the Olson Appeal Decision). I held that BWXT had demonstrated, by clear and convincing evidence, that its failure to grant the comparative salary was not retaliatory. Because that holding precluded the grant of relief to Mr. Olson, I did not address BWXT's other challenges to the Olson IAD.

In the instant appeal, Mr. Broaddus requests that I reverse the Broaddus IAD and grant him relief. As explained below, Mr. Broaddus' request is denied.

II. Applicable Standards

The DOE Contractor Employee Protection Program sets forth the standards governing the program. The contractor employee has the burden of showing, by a preponderance of the evidence, that the employee engaged in protected activity and that the protected activity was a contributing factor to an alleged retaliation. 10 C.F.R. § 710.29. If the employee meets that burden, the contractor has the burden of showing, by clear and convincing evidence, that it would have taken the same action in the absence of the protected activity. *Id.*

III. Analysis

I need not address the issue of whether Mr. Broaddus engaged in protected activity or whether such a disclosure was a contributing factor to the alleged retaliations. I have concluded that no Part 708 retaliation occurred.

In the Olson Appeal Decision, I considered whether BWXT's failure to grant a fifteen percent comparative increase to Mr. Broaddus' working group was retaliatory. I discussed the extensive evidence in the proceeding, which indicated that the salaries of individual contractor employees are based on the contractor's internal processes, consistent with the contract with DOE. *Olson,* 29 DOE at 89,126. Contrary to that policy, a DOE official proposed a fifteen percent comparative salary increase and related funding for Mr. Broaddus' working group, and BWXT referred the "highly unusual" proposal to DOE. *Id.* at 89,125. The DOE site manager informed BWXT that the DOE official lacked the authority to direct or fund such an increase. *Id.* BWXT lacked the funds for such an increase. *Id.* at 89,126. Accordingly, I held that BWXT had demonstrated, by clear and convincing evidence, that its failure to grant the fifteen percent salary increase was not retaliatory.

I have reviewed the Olson Appeal Decision and continue to believe that it was correct. Accordingly, consistent with the Olson Appeal Decision, Mr. Broaddus' claim concerning the fifteen percent comparative salary increase should be denied.

The Broaddus Hearing Officer agreed to consider other alleged retaliations. *See Broaddus IAD*, 29 DOE at 89,065. Mr. Broaddus devoted little or no attention to those allegations at the hearing.

The first alleged retaliation was the former plant manager's statement "I don't know what I'm going to do to you, Curtis, but I am doing to do something." Mr. Broaddus conceded that this statement followed a DOE-sponsored audit that criticized aspects of Mr. Broaddus' operations. Tr. at 652-71.

The second alleged retaliation was a purported "reprimand" for a traffic violation. During the investigation, the manager stated that he had counseled, but not reprimanded, Mr. Broaddus. *See* ROI at 26. The ROI invited Mr. Broaddus to produce evidence of a reprimand, *id.,* but Mr. Broaddus did not do so.

The third alleged retaliation concerned Mr. Broaddus' supervisory responsibilities for the Human Reliability Program (HRP), *see* 10 C.F.R. Part 712. The deputy plant manager assumed Mr. Broaddus' responsibilities. During the investigation, the deputy plant manager stated that Mr. Broaddus did not support the HRP program. *See* ROI at 26-27. Mr. Broaddus did not challenge that statement.

The fourth alleged retaliation was a supervisory change. The current plant manager reassigned Mr. Broaddus to his deputy. Although the ROI invited Mr. Broaddus to explain how this change may have harmed him, see ROI 27-28, 33, Mr. Broaddus did not do so.

The fifth alleged retaliation concerned a Personnel Assurance Program meeting at which a BWXT psychologist discussed a psychiatric evaluation of Mr. Broaddus. Mr. Broaddus alleged that the disclosure of that information was improper. The information gathered in the investigation indicated that the attendees consisted of authorized BWXT personnel and two of Mr. Broaddus' invitees. *See* ROI at 16; Interviews of Roxanne Steward (3/7/05), Sharon Armatrout (3/9/05), John Bovey, MD (3/28/05). Mr. Broaddus presented no testimony to the contrary.

As the foregoing indicates, Mr. Broaddus has not met his burden of showing, by a preponderance of the evidence, that a potential retaliation occurred. In fact, Mr. Broaddus did not request any specific relief for these alleged retaliations. Instead, they were apparently intended to establish BWXT animus and, therefore, bolster Mr. Broaddus' contention that BWXT's failure to grant the fifteen percent salary increase was retaliatory. As indicated above, I have rejected that contention.

IV. Conclusion

BWXT's failure to grant a fifteen percent comparative salary increase for Mr. Broaddus' working group was not retaliatory. Mr. Broaddus has not shown, by a preponderance of the evidence, that the other five alleged retaliations were potential retaliations.

It Is Therefore Ordered That:

(1) The Appeal filed by Curtis Broaddus on November 22, 2006 (Case No. TBA-0030), of the Initial Agency Decision issued on November 7, 2006, be and hereby is denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

Fred L. Brown
Acting Director
Office of Hearings and Appeals

Date: August 29, 2007

February 13, 2008

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Appeals

Names of Petitioners:	Curtis Hall Bechtel National, Inc.
Date of Filings:	April 2, 2007 April 2, 2007
Case Numbers:	TBA-0042 TBA-0064

This Decision considers two Appeals of an Initial Agency Decision (IAD) issued on March 15, 2007, by a Hearing Officer in the Department of Energy's (DOE) Office of Hearings and Appeals (OHA). The IAD addressed the merits of a whistleblower complaint filed by Curtis Hall against his former employer, Bechtel National, Inc. (BNI), under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. *See Curtis Hall*, 29 DOE ¶ 87,022 (2007). In his complaint, Mr. Hall alleged that BNI inappropriately selected him for termination under a reduction in force (RIF) in retaliation for his having made disclosures protected under the provisions of Part 708. In the IAD, the OHA Hearing Officer found that BNI had retaliated against Mr. Hall in violation of Part 708, and ordered BNI to take certain remedial action. In its Appeal, BNI challenges the IAD's findings of liability in the case. OHA has designated BNI's Appeal as Case No. TBA-0064. Mr. Hall's Appeal focuses on the remedy provided in the IAD, arguing principally that the Hearing Officer should have afforded the parties an opportunity to submit arguments on matters relating to the appropriate relief in the case. OHA has designated Mr. Hall's Appeal as Case No. TBA-0042. As set forth in this Decision, I have determined that BNI's Appeal is without merit and that the Hearing Officer's liability determination contained in the IAD should be sustained. With regard to Mr. Hall's Appeal, I have determined that some portions of it have merit and that the Appeal should be granted in part.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary

purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"], will be directed by the DOE to provide relief to the complainant. *See* 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations contained in 10 C.F.R. Part 708 establish administrative procedures for the processing of complaints. Under these regulations, review of an Initial Agency Decision, as requested by BNI and Mr. Hall in their respective Appeals, is performed by the Director of the Office of Hearings and Appeals (OHA).[1] 10 C.F.R. § 708.32.

B. Factual Background

At all times relevant to this proceeding, BNI was the prime contractor at the DOE's Hanford Site[2] in Richland, Washington. Under the terms of its contract with the DOE, BNI is charged with designing, building, and commissioning the Waste Treatment Plant (WTP) at the Hanford Site to immobilize millions of gallons of chemical and radioactive waste through a process known as vitrification, whereby the waste will be mixed with molten glass and the resulting glass logs will be shipped to a federal repository for safe storage. IAD at 3.

BNI hired Curtis Hall on January 10, 2005, for the position of Controls and Instrumentation (C&I) Engineer in BNI's Plant Wide Systems Group (PWS) at the WTP. *See* BNI Exhibit (Ex.) 2. The PWS group is responsible for the design, configuration and qualification testing of the Integrated Network Control (INC) System and interconnected field devices that track waste and materials as they are processed through the WTP. IAD at 4. The INC being developed for use in the WTP at the time Mr. Hall began his employment with BNI was designed by ABB, a recognized industrial automation and engineering firm. Hereinafter the INC will be referred to as the ABB control system. The communication technology that linked the ABB control system to external monitoring devices throughout the plant was Foundation Fieldbus (FF). ROI at 3. The fieldbus devices associated with the FF consist of transmitters, analyzers, indicators and control valves that measure and execute various process variables, including pressure, temperature, flow, conductivity and radiation. *Id.* Mr. Hall's principal responsibility as a

---

1 On April 4, 2007, the Acting OHA Director at the time, Fred L. Brown, appointed Ann S. Augustyn to act in the capacity as OHA Director to perform the functions specified in 10 C.F.R. §§ 708.33 and 708.34 in connection with the two Appeals under consideration. While the two Appeals were pending, the Deputy Secretary of Energy appointed the undersigned as OHA Director.

2 The 586-square mile Hanford Site was established during World War II to produce plutonium for the nation's nuclear weapons defense and operated for four decades until the late 1980s. *See* Report of Investigation in Case No. TBI-0042 (ROI). Since that time, the Hanford Site has been engaged in the world's largest environmental cleanup. *Id.* Sixty percent by volume of the nation's high-level radioactive waste is stored at Hanford in 177 underground storage tanks. *Id.*

C&I Engineer was to configure and test software for FF field devices to determine their compatibility with the ABB control system. *Id.*

On two occasions in April 2005, April 1st and April 15th, Mr. Hall raised safety concerns with his BNI supervisors about his perception that the ABB control system was unreliable.[3] IAD at 5. BNI relieved Mr. Hall of significant job responsibilities after April 1, 2005, and selected him for a RIF that resulted in the termination of his employment from BNI in July 2005. *Id.*

C. Procedural Background

Mr. Hall filed a Part 708 complaint on October 20, 2005, with the DOE's Employee Concerns Program Office (ECP) at the Hanford Site, alleging that he was improperly selected for the RIF because he had raised protected disclosures about the safety of the ABB control system. When efforts to mediate the complaint proved futile, Mr. Hall requested the ECP on February 23, 2006, to forward his complaint to the DOE's Office of Hearings and Appeals (OHA) for an investigation followed by a Hearing. An OHA investigator conducted an investigation into the allegations contained in Mr. Hall's complaint and then issued a Report of Investigation (ROI) on June 22, 2006. In the ROI, the OHA investigator concluded that Mr. Hall had made a protected disclosure that, on the basis of its proximity in time, was a contributing factor to adverse personnel actions taken against him by BNI. ROI at 18. The OHA investigator also concluded that the evidence developed during the investigation did not support a finding that BNI had met its "clear and convincing evidence" burden that it would have selected Mr. Hall for the RIF in the absence of his having made a protected disclosure. *Id.*

Immediately following the issuance of the ROI, the OHA Director appointed a Hearing Officer in the case. The Hearing Officer conducted a four-day hearing in Richland, Washington, from October 3, 2006, to October 6, 2006. At the hearing, 15 witnesses testified and hundreds of exhibits were discussed. After receiving closing arguments and considering the parties' briefs, along with the documentary and testimonial evidence presented, the Hearing Officer issued the 65-page IAD on March 15, 2007, finding in favor of Mr. Hall.

II. The IAD

In the IAD, the Hearing Officer first found that Mr. Hall had met his burden of establishing by a preponderance of evidence that he had made disclosures, as described in 10 C.F.R. § 708.5, and that those disclosures were contributing factors to an act of retaliation against him by BNI. IAD at 44-45. Specifically, the Hearing Officer determined that Mr. Hall had made disclosures to BNI officials on April 1 and April 15, 2005, that were based on his reasonable belief that there were serious problems with the interoperability of the ABB control system selected for use at the WTP with other digital programs. *Id.* at 45. In addition, the Hearing Officer found that Mr. Hall's April 1 and 15,

[3] The thrust of Mr. Hall's disclosures was that any malfunction in a computerized system that "controls" the production processes in a nuclear waste treatment operation implicates public health and safety.

2005, disclosures constituted "protected" disclosures under 10 C.F.R. § 708.5(a)(2) because they revealed information about a "substantial and specific danger to employees or to public health or safety." *Id.* Next, the Hearing Officer determined that BNI's selection of Mr. Hall for the RIF that led to his eventual termination in July 2005, constituted an act of retaliation as defined in 10 C.F.R. § 708.3. *Id.* at 52. Finally, the Hearing Officer decided that Mr. Hall's protected disclosures were contributing factors to BNI's retaliation against him because (1) the BNI officials responsible for the retaliation had actual knowledge of Mr. Hall's protected disclosures; and (2) there was temporal proximity between the two April 2005 protected disclosures and Mr. Hall's selection for inclusion in the RIF that led to his July 2005 termination. *Id.* at 51.

Once the Hearing Officer concluded that Mr. Hall had met his "preponderance of evidence" burden as described above, he shifted his analysis to evaluating whether BNI had met its "clear and convincing" evidentiary burden that it would have terminated Mr. Hall through the RIF process absent Mr. Hall's protected disclosures.[4] The Hearing Officer first rejected BNI's contention that workplace conflict between Mr. Hall and another employee, Brandon Gadish, would have resulted in Mr. Hall's termination. *Id.* at 55. The Hearing Officer next rejected BNI's argument that it had selected Mr. Hall for inclusion in the RIF based on a ranking that it did of Mr. Hall's group in February and March 2005. *Id.* at 56. The Hearing Officer also found without merit BNI's position that the B-minus rating it had given to Mr. Hall in February 2005 reflected Mr. Hall's job skills or performance. *Id.* In addition, the Hearing Officer found unpersuasive BNI's argument that it would have terminated Mr. Hall because he had been selected for termination by an "Assignment Complete" [5] date in March 2005. *Id.* at 59. Finally, the Hearing Officer concluded that testimony at the hearing indicated that BNI officials had considered Mr. Hall's protected disclosures in selecting him for the July 2005 RIF. *Id.* In the end, the Hearing Officer decided that BNI had not shown by clear and convincing evidence that it would have selected Mr. Hall for the July 28, 2005, RIF had he not made protected disclosures on April 1 and 15, 2005. *Id.* at 62. Accordingly, the Hearing Officer ordered BNI to provide relief to Mr. Hall for the company's retaliation against him.

With regard to the relief, the Hearing Officer ordered BNI to reinstate Mr. Hall to his former position at the WTP or to a position that is comparable to the one from which he was laid off. The Hearing Officer further directed BNI: (1) to provide Mr. Hall with lost wages, [6] plus interest, to be calculated in accordance with an Appendix attached to the

---

[4] The Hearing Officer first found that the purpose and scope of the RIF was legitimate based on convincing evidence that the RIF was necessitated by a reduction in federal funding for the construction of the WTP and the need to adjust the design of the plant. *Id.* at 52.

[5] One of the managers at WTP testified that BNI maintained a document called the "register" that listed every employee by his or her position number, the date the employee began his or her employment, and the projected release date for the employee. Tr. at 780-781. The projected release date was referred to throughout the Part 708 proceeding as the "Assignment Complete" date.

[6] The Hearing Officer did not specify in the Ordering Paragraphs of the IAD that Mr. Hall was entitled to compensation for lost benefits such as sick leave, annual leave, overtime pay, and retirement benefits. The Appendix to the Decision, however, clearly enumerated these lost benefits as part of the remedial action in the case.

Decision; and (2) to reimburse Mr. Hall for reasonable legal fees and other expenses related to his Part 708 complaint. *Id.* at 64.

III. BNI's Appeal

On April 2, 2007, BNI filed a Notice of Appeal with OHA in accordance with 10 C.F.R. § 708.32. BNI filed its "Statement of Issues" for review on appeal on April 17, 2007, and it filed its brief in support of its Appeal on June 13, 2007. Mr. Hall, through his counsel, filed his response to BNI's brief on July 13, 2007.

In its Appeal, BNI does not contest the IAD's finding that Mr. Hall made protected disclosures on April 1 and 15, 2005, about safety issues pertaining to the ABB control system. BNI Brief at 1. Instead, BNI raises several legal and factual challenges to the Hearing Officer's findings that: (1) Mr. Hall established by a preponderance of evidence that his protected disclosures were contributing factors to BNI's ultimate termination of Mr. Hall's employment, and (2) BNI failed to establish by clear and convincing evidence that it would have selected Mr. Hall for inclusion in the RIF and eventual termination on July 28, 2005, absent his protected disclosures. *Id.* at 2. More specifically, BNI argues that the Hearing Officer made a legal error in his "contributing factor" analysis in that he failed to properly consider that BNI had designated Mr. Hall's employment as "Assignment Complete" prior to any of Mr. Hall's protected disclosures. *Id.* at 1, 21-22, 28. Moreover, BNI also submits that it had legitimate, non-retaliatory, business reasons for selecting Mr. Hall for the RIF, and argues that the Hearing Officer erred in finding otherwise.

A. Analysis

It is well established in appeals brought under 10 C.F.R. Part 708 that factual findings of a Hearing Officer are subject to being overturned only if they can be deemed to be clearly erroneous, giving due regard to the trier of fact to judge the credibility of witnesses. *Oglesbee v. Westinghouse Hanford Co.*, 25 DOE ¶ 87,501, 89,001 (1995); *O'Laughlin v. Boering Petroleum Services, Inc.*, 24 DOE ¶ 87,513, 89,064 (1995); *Rosie L. Beckham*, 27 DOE ¶ 87, 557, 89,317 (2000). With respect to a Hearing Officer's conclusions of law, they are reviewable *de novo*. *Salvatore Gianfriddo*, 27 DOE ¶ 87,544 (1991); s*ee Pierce v. Underwood*, 487 U.S. 552, 558 (1988) ("For purposes of standard of review, decisions by judges are traditionally divided into three categories, denominated questions of law (reviewable *de novo*), questions of fact (reviewable for clear error), and matters of discretion (reviewable for "abuse of discretion').")

1. BNI's Challenges to the IAD's "Contributing Factor" Findings

BNI first contends that the Hearing Officer misapplied the law with regard to his "contributing factor" analysis and finding, arguing that Mr. Hall's showing of a coincidence of timing between his protected disclosure and an adverse employment action is not sufficient to prove retaliation. BNI Appeal at 28. BNI then re-argues most of the matters that it raised its in Post-Hearing Closing Argument, including its

contention that Mr. Hall's protected disclosure post-dated the "Assignment Complete" process. Relying on *Clark County School District v. Breeden*, 532 U.S. 268 (2001) (*Breeden*), BNI then argues that Mr. Hall's protected disclosures "could not possibly have motivated [its] layoff decision because Hall was designated "Assignment Complete" and destined for layoff *before* the "disclosures" were made. For the following reasons, I find all of BNI's arguments on this issue to be devoid of merit.

a. The Applicable Legal Framework Underlying the "Contributing Factor" Analysis

Regarding BNI's contention that the Hearing Officer misapplied the law in his "contributing factor" analysis in this case, the legal burden-shifting framework embodied in the Part 708 regulations was first explained by OHA in 1993 in *Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (*Sorri*). In *Sorri*, the Hearing Officer stated that in most cases, it is impossible for a complainant to find a "smoking gun" that proves an employer's retaliatory intent. Thus, the Hearing Officer concluded that a Part 708 complainant can meet its burden of proof through circumstantial evidence. *Citing* among other cases, *Couty v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*Couty*), the Hearing Officer in *Sorri* held that a protected disclosure may be found to have been a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Sorri* at 89,010. The Hearing Officer in *Sorri* also noted that the standard of proof adopted in the Part 708 regulations is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C.§ 1221(e)(1), and the 1992 amendment to Section 210 (now 211) of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. The Hearing Officer in *Sorri* then pointed to the legislative history of the WPA and explained that "any" weight given to the protected disclosure, either alone or in combination with other factors, can satisfy the "contributing factor" test:

> The word "a contributing factor" . . . means any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision. This test is specifically intended to overrule existing case law, which requires a whistleblower to prove that his protected conduct was a "significant", "motivating", or predominant" fact in a personnel action in order to overturn that action.

135 Cong. Rec. H747 (daily ed. March 21, 1989) (Explanatory Statement on Senate Amendment-S.20).

In cases arising under 10 C.F.R. Part 708, OHA Hearing Officers have consistently relied, in deciding whether a complainant has met its burden of proof, on the contributing factor analysis first articulated in *Sorri. See e.g. Barbara Nabb*, 27 DOE ¶ 87,519 (1999), *Jimmie Russell*, 28 DOE ¶ 87,002 (2000); *Franklin Tucker*, 29 DOE ¶ 87,021 (2007). The instant case is no exception. In the IAD, the Hearing Officer determined that the

testimonial evidence in the record supported a finding that BNI officials had actual knowledge of Mr. Hall's protected disclosures. *See* IAD at 51. Specifically, the Hearing Officer found that Mr. Hall made his protected disclosures to: (1) his group leader and his supervisor on April 1, 2005, and (2) his supervisor and BNI's Discipline Engineering Manager on April 15, 2005. *Id.* The Hearing Officer also found that Mr. Hall's supervisor immediately conveyed Mr. Hall's disclosures to other BNI officials, including Ms. McKenney and Mr. Stewart. *Id.* With regard to the temporal proximity, the Hearing Officer found that the protected disclosures took place in early and mid-April 2005, and that BNI's decision to include Mr. Hall in a July 28, 2005 RIF, took place in early July 15, 2005.[7] *Id.* The Hearing Officer then opined that "a reasonable person could conclude that the protected disclosures were a factor in BNI's decision to RIF [Mr. Hall] because the RIF selection process began shortly after the disclosures were made and lasted only about three months." *Id.*

I am unpersuaded by BNI's argument that Mr. Hall failed to meet his burden of showing by a preponderance of evidence that BNI's decision to select him for the RIF constituted retaliation under Part 708 because Mr. Hall failed to prove "retaliatory intent" on BNI's part. BNI Brief at 20-21, 28. The *Couty* and *Sorri* cases and their progeny are clear that temporal proximity between protected activity, combined with actual or constructive knowledge of the protected activity, can fully support an inference of retaliatory motive. [8] Accordingly, I find that the Hearing Officer's use of the contributing factor analysis was proper, and consistent with the OHA precedent first established in the *Sorri* case.

---

[7] In reaching this finding, the Hearing Officer rejected BNI's contention that it had made a final decision to terminate Mr. Hall before July 2005. *See* footnote 15 to the IAD.

[8] BNI claims that "countless courts have rejected such claims, absent actual evidence of retaliatory motive. BNI Brief at 28. BNI then cites four cases to support this proposition: *Sauzek v. Exxon Coal USA, Inc.*, 202 F.3d 913 (7th Cir. 2000), *Longstreet v. Illinois Department of Corrections*, 276 F.3d 379 (7th Cir. 2002), *Gagnon v. Sprint Corp*., 284 F.3d 839 (8th Cir. 2002), and *Bilow v. Much Shelist Freed Denenberg Ament & Rubenstein.* All of the cases cited by BNI arise under Title VII of the Civil Rights Act of 1964, as amended, 42 U.S.C. § 2000e, *et seq.* (Title VII). BNI's reliance on these cases is misplaced. The legal burden of proof in cases arising under 10 C.F.R. Part 708 and the WPA is different from the burden of proof in cases arising under Title VII. In the former kinds of cases, as noted above, the complainant must establish that his or her whistleblowing was "a contributing factor" in an adverse employment action, while under Title VII, the complainant must establish a "causal connection" between his or her protected activity and an adverse employment action. *See Rouse v. Farmers* State Bank *of Jewell, Iowa*, 866 F.Supp. 1191, 1207 (N.D. Iowa 1994), *Hill v. Mr. Money Finance Company*, 491 F.Supp.2d 725 (N.D. Ohio 2007).

BNI also cites three OHA cases for the same proposition: *Janet L Westbrook*, Case No. VBH-0059 (2001), *Thomas T. Tiller*, Case No. VWH-0018 (1999) and *Ronny J. Escamilla*, Case No. VWA-0012 (1996). BNI's reliance on these cases is also misplaced. In all three of the OHA cases cited above, the Hearing Officer found that the complainant had established a prima facie case that his or her protected disclosure was a contributing factor to an act of retaliation. None of the OHA cases cited by BNI required the complainant to prove "retaliatory intent;" rather the cases inferred retaliatory motive based on the temporal proximity and management knowledge test set forth in *Sorri.*

b. Whether the Hearing Officer Erred in Rejecting BNI's Claim that It Had Marked Mr. Hall for Termination Prior to his Protected Disclosures

In its Appeal, BNI does not challenge the Hearing Officer's findings that the BNI officials who were involved in the decision to put Mr. Hall on the RIF list that led to his termination had actual or constructive knowledge of Mr. Hall's protected disclosures. Rather, BNI believes that it rebutted the presumption of retaliation stemming from the temporal proximity between the protected disclosures at issue and Mr. Hall's termination. Specifically, BNI contends in its Appeal, as it did at the hearing, that its decision to place Mr. Hall on the RIF list pre-dated either of his two protected disclosures. BNI argues that "the record is clear and the evidence uncontroverted that on March 28, 2005 – before Hall and four other Grade 24 engineers were designated 'Assignment Complete,' portending layoff." BNI Brief at 22. According to BNI, the fact that it identified Mr. Hall for layoff before his protected activity, even if only preliminarily, negates any reasonable inference of retaliation in this case. *Id.* at 24. Furthermore, BNI argues that the deferral of the layoff only benefitted Mr. Hall, thereby dispelling any inference of retaliation.

i. The IAD Findings

In the IAD, the Hearing Officer made extensive findings of fact to support his conclusion that the March 2005 "Assignment Complete" process was not connected to BNI's decision in July 2005 to terminate Mr. Hall's employment. *See* IAD at 53-54, 56-57, 59, 61-63. Specifically, the Hearing Officer made six separate factual findings on this issue. First, the Hearing Officer pointed to the testimony of Mr. Douglass (Tr. at 530) that the February/March 2005 salary rankings and ratings for Mr. Hall (upon which the "Assignment Complete" rankings were compiled) were not based on Mr. Hall's performance but instead upon a "B-" rating that BNI assigned to all newly hired engineers who had not yet been given a performance evaluation. From this testimonial evidence, the Hearing Officer concluded that BNI officials had not assessed Mr. Hall's job skills and job performance for purposes of the subject performance salary ranking. *Id.* at 56-57. Second, the Hearing Officer found that the March 29, 2005 "Assignment Complete" list was based solely on the February/March salary rankings and that Mr. Hall's ranking was not related in any way to Mr. Hall's actual performance as an employee at WTP. *Id.* at 59, citing Mr. Anderson's testimony (Tr. at 745), Mr. Hall's Exhibit 13 and BNI Exhibit 276. Third, the Hearing Officer found that the testimony of Tanya Zorn indicated that the selection of employees for termination by "Assignment Complete" dates was based primarily on the most recent employee ratings. IAD at 58. In this connection, the Hearing Officer noted that Ms. Zorn testified that the March 29, 2005 "Assignment Complete" selections relied on the "reward for performance" employee rankings completed in February 2005 for engineering employees in various peer groups. *Id.* The Hearing Officer further pointed to Ms. Zorn's testimony that the employees whose positions were selected for "Assignment Complete" dates were the lowest ranked employees because higher ranked employees in positions scheduled for an early termination date had the right to bump lower ranked employees. *Id.* Fourth, the Hearing Officer found, contrary to Mr. Anderson's testimony, that "changing an employee's 'Assignment Complete' date generally is not an action which leads" to that employee's

termination. *Id.* Fifth, the Hearing Officer determined that there was no evidence that BNI ever evaluated Mr. Hall's job performance prior to April 1, 2005. Sixth, the Hearing Officer found that the four other engineers in the group of five who were to be terminated based on the "Assignment Complete" list were not new hires like Mr. Hall and that the low ratings for the other four engineers were based on actual performance evaluations. From this fact, the Hearing Officer concluded that Mr. Hall's inclusion in this group was arbitrary.

ii. BNI's Challenges to the IAD Findings

With the exception of the Hearing Officer's factual findings regarding Ms. Zorn's testimony, BNI does not attempt to demonstrate that any of the other five factual findings enumerated in Section A.1.b.i. above are clearly erroneous. Instead, BNI simply re-argues factual assertions that the Hearing Officer already rejected. In *S.R. Davis v. Fluor Fernald, Inc.*, 29 DOE ¶ 87,014 (2006) (*S.R. Davis*), the OHA Director refused to entertain, on appeal, the appellant's re-arguments of the same matters already considered by the Hearing Officer on the basis that the Hearing Officer had reviewed voluminous documentary evidence and considered testimony that had been subject to cross examination. Leaving aside the Hearing Officer's factual findings regarding Ms. Zorn's testimony, BNI has not attempted (1) to show that the Hearing Officer made any findings of facts relative to the "Assignment Complete" process that were unsupported by the evidence in the record, or (2) to point to any material facts in the record that the Hearing Officer overlooked which would have led to a different outcome. *S.R. Davis* controls here. Accordingly, I will not review five of BNI's six factual challenges to the IAD as they relate to the Hearing Officer's "contributing factor" finding. *See also C. Lawrence Cornett v. Maria Elena Torano Associates, Inc.*, 27 DOE ¶ 88,020 (1998) (Deputy Secretary holding that there is a difference between a Hearing Officer overlooking facts and rejecting them in the Initial Agency Decision.)

With regard to Ms. Zorn's testimony, BNI alleges that the "IAD misstated Tania Zorn's testimony about the role of performance ratings in the 'Assignment Complete' process." BNI Brief at 33, n.10. According to BNI, the IAD's conclusion is completely contrary to what Ms. Zorn stated. *Id.* BNI asserts that Zorn actually testified that an "Assignment Complete" date was totally unrelated to an employee's rating and cites the transcript at pages 977 to 983 to support its assertion. I have carefully reviewed Ms. Zorn's testimony with particular focus on those pages cited by BNI to support its challenge to the Hearing Officer's characterization of Ms. Zorn's testimony. There is nothing in the cited pages that undermines the Hearing Officer's characterization of Ms. Zorn's testimony. On page 982, the Hearing Officer asked Ms. Zorn: "So you used ratings to arrive [at] an assignment complete date; generally?" Ms. Zorn replied, "generally," adding, "If there was a higher-rated individual holding a position that ended sooner than a lower-rate individual, then the higher-rated individual would bump that person, the lower-rated individual and his or her employment would be extended for the position end date and the lower-rate individual would either be transferred to another position within the WTP or at another Bechtel project or their employment would end." Tr. at 982-983.

In reviewing Ms. Zorn's testimony in its entirety on appeal, I noted that she admitted that the "Assignment Complete" dates are "very fluid" and not a good indication of whether an employee would lose his or her job. Tr. at 987. On page 989 of the transcript, Ms. Zorn contradicted her earlier testimony when she advised that "Assignment Complete" dates are not based on ratings but are tied to positions. *Id.* at 989. When the Hearing Officer expressed confusion on this matter and asked again whether ratings were factored into the "Assignment Complete" dates, Ms. Zorn responded: "They're not tied into when - - they're not tied into the schedule of the position. The only time the rating comes into play is if the position has been identified by the manager to end and there is a higher-rated performer." *Id.*

Regarding the Assignment Complete dates in general, Ms. Zorn testified that she determined the assignment end dates in the initial instance for the engineering group and would then go to the manager and inquire if the release date was "real." *Id.* at 990. If the manager confirmed the release date, she would generate a list with the employee's name, send it to Human Resources (HR), and if approved by HR, notified the employee of his termination. *Id.* She added that nine times out of ten, the "Assignment Complete" dates were not "real." *Id*. When a manager informed Ms. Zorn that the "Assignment Complete" date was not "real," she re-worked the "Assignment Complete" date and extended it for six more months. *Id.* By way of explanation, Ms. Zorn stated that a manager had to review his or her schedule and budget to determine whether the "Assignment Complete" date was "real." *Id.* at 991.

Ms. Zorn then provided the following information regarding Mr. Hall's "Assignment Complete" dates. On February 7, 2005, Mr. Hall's "Assignment Complete" date was listed as January 15, 2006. *Id.* at 991. The documentary evidence in the record supports Ms. Zorn's testimony. *See* BNI Ex. 89. On February 21, 2005, BNI extended Mr. Hall's "Assignment Complete" date to September 7, 2006. *Id.* Again, the documentary evidence supports this fact. *See* BNI Ex. 91. On March 29, 2005,[9] Ms. Zorn sent an e-mail to HR attaching a list of employees with Assignment Complete dates of May 5, 2005. *See* BNI Ex. 103. Mr. Hall's name was on that list. Six days later, on April 4, 2005, Mr. Hall's "Assignment Complete" date was changed back to September 7, 2006. *See* BNI Ex. 110.

iii. Conclusion

The record is clear that BNI was constantly evaluating its employees' "Assignment Complete" dates and that those dates were, as Ms. Zorn testified, "fluid." The fact that BNI changed Mr. Hall's "Assignment Complete" date back to September 7, 2006, on April 4, 2005, undermines BNI's argument that the July 2005 RIF merely effectuated a decision that it had made on March 29, 2005, to lay Mr. Hall off from his employment. While Ms. Zorn's testimony may not be the model of clarity, in the end, it is the Hearing Officer who is responsible for assessing the demeanor and credibility of the witnesses, including Ms. Zorn. Since BNI has not convinced me that the Hearing Officer improperly

[9] Mr. Hall's "Assignment Complete" date was confirmed as being September 7, 2006, on six more occasions between February 21, 2005, and March 29, 2005: on February 28, March 4, March 7, March 14, March 18 and March 21, 2005. *See* BNI Exs. 94, 96, 97, 99, 100, 101.

characterized Ms. Zorn's testimony or made any other factual findings with regard to the contributing factor analysis that were clearly erroneous,[10] I affirm the Hearing Officer's finding that the "Assignment Complete" date was not connected to BNI's decision to terminate Mr. Hall.

2. Whether the Hearing Officer Erred in Finding that BNI Had Failed to Meet its Evidentiary Burden in the Case

BNI also challenges the Hearing Officer's finding that it did not present clear and convincing evidence that it would have terminated Mr. Hall in the absence of his protected disclosures. First, BNI maintains that it did, in fact, submit overwhelming evidence that Mr. Hall was among the least qualified to survive the RIF. BNI Brief at 35. Second, BNI contends that the Hearing Officer overlooked "critical comparative evidence" in the case. *Id*. at 36. Third, it argues that the Hearing Officer's reasoning is "demonstrably flawed" because he failed to consider the collective effect of the factors that led to Mr. Hall's termination. *Id.*

To support its first argument, BNI states "any reasonable manager would have concluded that Hall was among the least qualified to survive the layoff," and cites in support thereof portions of its own "Statement of Facts" on appeal that refers to testimony at the hearing. BNI does not attempt, however, to point out why the Hearing Officer's findings with regard to these same facts[11] are clearly erroneous. Instead, BNI re-asserts the same arguments that the Hearing Officer rejected in the IAD. Mere disagreement with the Hearing Officer's factual determinations is not sufficient for me to overturn his findings. As noted *supra*, it is well settled that the factual findings of a Hearing Officer are subject to being overturned only if they can be deemed clearly erroneous, giving due regard to the trier of fact to weigh the evidence and to judge the credibility of the witnesses. *Eugene J. Dreger*, 27 DOE ¶ 87,564 at 89,351-52 (2000), citing, *Oglesbee v. Westinghouse Hanford Co.*, 25 DOE ¶ 87501, 89,001 (1995), *et. al*.

BNI's second argument is that the Hearing Officer failed to consider that Mr. Hall was terminated along with the four other employees who were designated on March 29, 2005, for completion of their assignments on May 5, 2005. BNI Brief at 36. BNI contends in this regard that it treated Mr. Hall in the same manner as it did the four others who did not engage in protected conduct. *Id.* BNI is incorrect on this matter. In the IAD, the Hearing Officer carefully analyzed the evidence before him and assessed the credibility of several key BNI officials before finding that Mr. Hall's ranking in late March 2005 was based on an arbitrary rating ("B-") assigned to him because Mr. Hall had not, like the

---

[10] I rejected BNI's contention that its deferral of Mr. Hall's layoff dispelled any inference of retaliation. I base this finding on the evidence in the record that the "Assignment Complete" date was fluid and not determinative of layoff.

[11] In the IAD, the Hearing Officer held: "BNI's assertions fail to establish by clear and convincing evidence that, in the absence of his protected disclosures, [Mr. Hall] would have been included in the July 28, 2005 RIF based on workplace conflicts, poor performance or because he lacked the necessary job skills." IAD at 55. The Hearing Officer provided ample support for this finding in the IAD. *Id* at 55-59.

others in his group, been at BNI long enough to receive "reward for performance employee rating" or any other job evaluations. IAD at 56-59, 63. The Hearing Officer also carefully analyzed the ratings given to Mr. Hall by Mr. Billings in early July 2005 before concluding that BNI had not provided probative evidence to demonstrate that BNI's negative assessment of Mr. Hall would have occurred in the absence of his protected disclosures. I find that the Hearing Officer provided clear, compelling reasons to support his findings under review. I find that BNI has not demonstrated that the Hearing Officer's factual findings on this matter are clearly erroneous.

BNI also argues that the Hearing Officer committed other errors in the IAD. Specifically, BNI alleges that the Hearing Officer: (1) failed to consider the collective effect of the factors that led to Mr. Hall's low performance rating, instead considering each factor in isolation; (2) assumed rather than demonstrated that Hall's low ratings were the product of retaliation, (3) failed to determine whether any retaliatory bias in the ratings actually mattered, and (4) accepted as persuasive Mr. Hall's unsubstantiated statements that his low ratings in connection with the RIF were retaliatory. BNI Brief at 36. To support its position, BNI provides the following elaboration.

With regard to the first alleged error, BNI contends that the Hearing Officer failed to consider Mr. Hall's performance, skill set, and alleged lack of teamwork individually rather than collectively in deciding that no factor, on its own, was sufficient to "justify" discharge. *Id.* at 37. I find that BNI's position on this matter is simply untenable. The Hearing Officer provided ample justification for rejecting BNI's contention that it would have terminated Mr. Hall for the deficiencies that he allegedly possessed. *Id.*

BNI next claims that in a RIF case, the employer is never expected to prove a case for discharge. It then complains that the Hearing Officer should have examined whether BNI had honestly judged Mr. Hall to be among those who logically could be released. *Id.* at 38. Finally, BNI claims that the Hearing Officer exceeded his role as fact-finder because he acted like a "personnel manager of last resort." *Id.* at 39. Specifically, BNI argues that the Hearing Officer second-guessed BNI's judgment about the amount of Foundation Fieldbus testing needed, and whether Hall or another engineer could have performed it. *Id.* BNI is incorrect on all counts. First, it was indeed BNI's burden under the Part 708 regulations to demonstrate by clear and convincing evidence that it would have terminated Mr. Hall in the absence of his protected disclosures. The Hearing Officer concluded, and I agree based on the record in this case, that BNI did not meet its evidentiary burden in the case. Second, I find that the Hearing Officer analyzed the structure of the RIF in question and carefully reviewed the worksheets that BNI completed to rate Mr. Hall and 38 other employees. *Id.* at 61-62. The record supports the finding made by the Hearing Officer after his extensive review of the worksheets and his assessment of the testimonial evidence relating to the worksheets that BNI failed to prove that the very low ratings given to Mr. Hall were accurate assessments of his performance, teamwork and skills. *Id.* at 62. Contrary to BNI's contentions, I find that the Hearing Officer did not second-guess BNI's judgment; he merely reached findings based on the evidence presented and the entire record in the case.

BNI next argues that the Hearing Officer failed to examine the factors upon which Mr. Hall was rated in the July 8, 2005 weighted rating and compare them to the shortcomings identified before Hall's April 2005 protected disclosures. BNI Brief at 39. The company further argues that the Hearing Officer's finding that BNI would not have rated Hall as low as he did absent his protected disclosures lacks support in the record. *Id.* at 40. Moreover, BNI argues that the Hearing Officer should have explained who should have replaced Hall on the layoff list because the Hearing Officer failed to explain whether Hall would have been rated differently enough to have survived layoff. Having reviewed the relevant portions of the IAD, I find that the Hearing Officer carefully examined the ratings by Mr. Hall's supervisor, Mr. Billings, which led to Mr. Hall being placed on the RIF list. *See* IAD at 61-62. It was BNI's responsibility, not the Hearing Officer's, to do whatever comparisons it deemed necessary to meet its clear and convincing evidence burden that it would have selected Mr. Hall for the RIF in the absence of his protected disclosures. [12] This it failed to do.

BNI's final argument is that the Hearing Officer accepted Mr. Hall's unsupported uncorroborated testimony that he was rated erroneously in the RIF decision-making process. Id. at 41. There is no merit to this contention. I find that the Hearing Officer carefully evaluated and weighed the testimony of Mr. Billings, Mr. Douglas, Mr. Anderson, Ms. Zorn, and Ms. Tuttle and numerous exhibits in the case before rendering his finding on this matter. BNI also argues that "it is not retaliatory or discriminatory for an employer to make erroneous personnel judgments, and an inference of discrimination or retaliation cannot be drawn just because a fact-finder apprises qualifications differently." This argument seems to constitute an admission by BNI that it erred in its personnel decision to place Mr. Hall on the RIF. Assuming that this is a fair reading of BNI's argument, it is not probative on the appeal before me.

3. Summary

On the basis of the foregoing, I conclude that there is ample evidence in the record to support the Hearing Officer's findings that Mr. Hall made two protected disclosures which were contributing factors to BNI's decision to place Mr. Hall on the RIF list that

---

[12] It does not appear from the record that BNI questioned Mr. Billings at the hearing about the performance problems that resulted in the low scores. In short, BNI did not carry its burden at the hearing of justifying these critical ratings that it gave to Mr. Hall. Moreover, the Hearing Officer was concerned from the testimonial evidence in the record that Mr. Billings' low ratings of Mr. Hall were the product of knowing manipulation designed to ensure Mr. Hall's layoff. In *Sorri*, OHA rejected an employer's RIF defenses where "[a] cloud of suspicion hangs over the entire process that was used to justify [the whistleblower's] termination." *Sorri* at 89,012. In that case, the Hearing Officer found that a contractor cannot sustain its affirmative defense in a RIF case where "[t]he evidence also shows that the process by [the contractor] was unfair, and not designed to 'build out' subjective factors." *Id.* at 89,013. In cases where there is a subjective rating process, tainted by consideration of protected activity, as the Hearing Officer thought there was in this case, BNI needed to present first hand probative, specific evidence to validate its ratings of Mr. Hall. *See Steven F. Collier*, 28 DOE ¶ 87,041 (2003). It did not do so, and it cannot now complain that the Hearing Officer should have performed comparative analyses that were not raised in the first instance by BNI.

lead to his termination in July 2005. I also find that the Hearing Officer properly found that BNI had failed to meet its evidentiary burden in this case. I therefore deny BNI's Appeal and affirm the Hearing Officer's liability finding in the IAD.

IV. Mr. Hall's Appeal

On April 2, 2007,[13] Mr. Hall filed a Notice of Appeal with OHA in accordance with 10 C.F.R. § 708.32. Mr. Hall filed his "Statement of Issues" for review on appeal on April 19, 2007, and its brief in support of its appeal on June 12, 2007. BNI, through its counsel, filed its response to Mr. Hall's brief on July 10, 2007.

In his Appeal, Mr. Hall seeks review only of the remedy portions of the IAD. According to Mr. Hall, the Hearing Officer committed a procedural error when he (1) entered an appealable order prior to calculating the final award of Mr. Hall's relief in the case, and (2) failed to allow the parties an opportunity to provide input into all the remedies before summarily denying all relief except the relief awarded in the IAD. Mr. Hall also complains that the Hearing Officer was not specific enough in his ordering paragraphs. For example, Mr. Hall states that the Hearing Officer did not define "immediately" when he ordered BNI to "immediately" reinstate Mr. Hall. Similarly, Mr. Hall complains that the Hearing Officer did not define "former position" or establish a process for determining what Mr. Hall's former position was. Finally, Mr. Hall requests that I remand the case to the Hearing Officer with instructions that he complete the remedy process set forth in the IAD, including, if necessary, the taking of additional evidence as to monetary, reinstatement and affirmative relief remedies.[14] Hall Brief at 3.

A. Whether the Hearing Officer Erred in Entering the IAD as an Appealable Order

Mr. Hall first argues that the Hearing Officer should have issued the IAD as an interlocutory order, solicited supplemental evidence on the remedy in the case, and then issued a final appealable order which incorporated the specific remedy ordered. Mr. Hall's argument is without merit. Prior to the hearing, Mr. Hall provided a very detailed enumeration of the relief that he sought in this Part 708 proceeding. *See* Mr. Hall's Ex. 1

---

[13] BNI has challenged the timeliness of Mr. Hall's appeal, arguing that Mr. Hall filed his Appeal two days late. BNI is incorrect on this matter. I have verified with OHA's Docket Control Division that Mr. Hall filed his Appeal at 3:37 p.m. on April 2, 2007 through OHA's special e-mail address, OHA.filings@hq.doe.gov.

[14] Mr. Hall also requests in his Appeal that I award him additional relief not previously requested. That additional relief includes: (1) reinstatement until the completion of the project in 2019; (2) a retroactive seniority date and transfer; (3) front pay until 2019 in lieu of reinstatement; (4) reimbursement of costs and expenses, including attorney's fees that Mr. Hall paid to his prior counsel; and (5) expungement of Mr. Hall's personnel record. Mr. Hall's Brief at 4-5. Only those remedies requested by Mr. Hall prior to the issuance of the IAD will be considered on appeal. Mr. Hall will not be allowed to augment his remedial relief request at the Appeal stage of this proceeding.

at 39-40.[15] Hence, there was no need for supplementary evidence on the remedy issue. The regulations at 10 C.F.R. § 708.30(d) state that: "If the Hearing Officer determines that an act of retaliation has occurred, the initial agency decision will include an order for any form of relief permitted under § 708.36." This regulatory provision supports the Hearing Officer's decision to include the remedy in his IAD. Moreover, inasmuch as the IAD considered both liability and remedy, it was appropriate for the Hearing Officer to deem the IAD "final" as both parties had the opportunity to present evidence on all issues before the Hearing Officer and to appeal the IAD under 10 C.F.R. § 708.32.

B. Whether the Hearing Officer Erred in Not Allowing the Parties an Opportunity to Provide Input into the Remedy in the Case

Mr. Hall contends that the Hearing Officer should have afforded the parties an opportunity to provide input into all the possible remedies available prior to his issuing the IAD which set forth the remedy in this case. Mr. Hall is mistaken on this matter. As noted above, Mr. Hall had ample opportunity during the prehearing phase of this case to advance his remedial requests. In fact, he clearly articulated in one of his prehearing exhibits the remedial relief that he was seeking in this proceeding. During the hearing, the Hearing Officer advised the parties at the hearing that he would ask for the precise calculations of lost wages, and expenses after issuing the IAD if he found in favor of Mr. Hall. Tr. at 212. Both parties agreed to this approach at the hearing. *Id.* In the IAD, the Hearing Officer ordered BNI to reinstate Mr. Hall to his former position or a comparable position and to pay Mr. Hall for his lost wages, plus interest, and his litigation expenses. The Hearing Officer then ordered both parties to make specific calculations to effectuate the Hearing Officer's remedial findings. In addition, the Hearing Officer provided a period of up to 60 days for the parties to discuss and negotiate any disputes concerning the calculations. There will be ample opportunity for the parties to collaborate on the remedial aspects of this case during the negotiation period provided for in the IAD, and to report back, if necessary, to the Hearing Officer at the conclusion of that period, as required by the IAD.

C. Whether the Hearing Officer Erred in Denying All Relief Except That Ordered by the Hearing Officer

Mr. Hall asserts that the Hearing Officer set forth a comprehensive and reasonable post-decision process for determining the specific relief that should be awarded, with the exception of the generalized ruling that "all other relief is denied." Mr. Hall's Brief at 2. According to Mr. Hall, the Hearing Officer gave no reasons or fact findings as to why all other relief was peremptorily denied. *Id.* at 3. The Hearing Officer was under no obligation to address "all" the possible relief that Mr. Hall might have been entitled to in the IAD. I find, however, that the Hearing Officer did not provide his reasons for

---

[15] In his pre-hearing exhibit, Mr. Hall requested the following remedies: (1) reinstatement to a Grade 25 "Not-at-Will" position, with at 10% raise, and guaranteed employment until 2011 or 2015; (2) transfer preference; (3) back pay at two times his hourly rate; (4) reimbursement of reasonable costs and expenses, including attorney and expert witness fees; (5) formal classroom training and (6) compensation for pain and suffering and emotional distress. Ex. 1.

rejecting some of the relief that Mr. Hall had requested prior to the hearing. That "other" relief included the specific terms of the reinstatement requested, *i.e*. a Grade 25 "Not-at-Will" position, with at 10% raise, and guaranteed employment until 2011 or 2015, as well as transfer preference, back pay at two times his hourly rate, formal classroom training and compensation for pain and suffering and emotional distress. Rather than remanding the case to the Hearing Officer and further delaying this proceeding, I have decided to evaluate, on my own, the remedies requested by Mr. Hall and not addressed by the Hearing Officer in the IAD. *See* 10 C.F.R. § 708.34(b)(1).

As an initial matter, I find that the following remedies requested by Mr. Hall are not available under the Part 708 regulations: (1) reinstatement to a position at a grade higher than that vacated as the result of the July 2005 RIF; (2) reinstatement to a "not-at-will" position when the position vacated was an "at-will" position; (3) guaranteed employment at the WTP, or reinstatement for a fixed period of time at the site; (4) backpay at a rate double that of what he was earning prior to the RIF; (4) compensation for pain, suffering and emotional distress. The remedies enumerated immediately above, if granted, would have placed Mr. Hall in a position better than that occupied by him prior to his termination. This is not the goal of the Part 708 regulations. The preamble to the interim final rule to 10 C.F.R. Part 708 clearly announced that the goal of the restitutionary remedies set forth in 10 C.F.R. § 708.36 "is to restore employees to the position that they would have occupied but for the retaliation." 64 Fed. Reg. 12862, 12867 (March 15, 1999). The final rule that set forth the Part 708 regulations stated that: "A complainant should consider other forums if he or she seeks more than the abatement of the retaliatory practices and basic restitution." *See* Final Rule at 65 Fed. Reg. 6314 (March 10, 2000).

As for the 10% raise that Mr. Hall requested, I find that there is no evidence in the record to support Mr. Hall's request for a 10% raise. Nevertheless, in order to place Mr. Hall in the position that he would have been in had he not made his protected disclosures, I find that Mr. Hall might be entitled to that raise if similarly situated Grade 24 engineers received such a raise between July 2005 and the date that Mr. Hall is reinstated.

Regarding Mr. Hall's request for formal classroom training, BNI should provide this training only if it cannot reinstate Mr. Hall to his former position[16] and can find a comparable Grade 24 engineer position for him at the worksite. OHA has previously ordered a DOE contractor to provide training at the contractor's expense as an associated feature of reinstatement. *See Sue Rice Gossett*, 28 DOE ¶ 87,028 (2002). Finally, I find it appropriate to grant Mr. Hall transfer preference if BNI is able to place him in a position comparable to the one that he vacated.

[16] BNI states in its Response Brief on the Remedial Appeal that BNI eliminated Mr. Hall's former position after it deemed the position to be no longer necessary due to the change in the scope of the project at the WTP. *See* BNI Response Brief at 14.

D. Whether the Terminology Contained in the Remedial Provisions of the IAD Lacked Specificity

Mr. Hall contends that the Hearing Officer's award of "immediate" reinstatement and possible reinstatement to a "comparable" position is not specific enough for the parties to understand how and when reinstatement will be effectuated in this case. There is some merit to Mr. Hall's contentions. To remedy this matter, I will order the parties to discuss and negotiate these matters during the 60-day "Negotiation Period" established by the Hearing Officer in the Appendix to the IAD. Should the parties agree upon a "comparable" position for Mr. Hall, BNI will reinstate Mr. Hall to that "comparable position" no later than 61 days following the issuance of this Appeal. By way of clarification, the 60-day negotiation period will commence on the date this Appeal Decision is issued by OHA. These time periods will, however, be suspended if either party seeks Secretarial Review of this appeal in accordance with 10 C.F.R. § 708.35.

V. Summary

As discussed above, the arguments advanced by BNI in its Appeal, Case No. TBA-0064, are without merit. Therefore, I find that the liability determinations contained in the IAD should be sustained and BNI's Appeal denied. As for Mr. Hall's Appeal, Case No. TBA-0042, I have determined that some of his arguments have merit and that his Appeal should be granted in part. For administrative efficiency, however, I have rendered findings myself on those remedial matters that could otherwise have been remanded to the Hearing Officer.

It Is Therefore Ordered That:

(1) The Appeal filed by Bechtel National, Inc. on April 2, 2007, Case No. TBA-0064, be and hereby is denied;

(2) The Appeal filed by Curtis Hall on April 2, 2007, Case No. TBA-0042, be and hereby is granted in part as set forth in paragraphs 3, 4, 5, 11, 13, 14, and 15 below, and denied in all other respects;

(3) Paragraph (2) of the Initial Agency Decision issued on March 15, 2007, by Hearing Officer Woods in the matter of *Curtis Hall v. Bechtel National, Inc*., Case No. TBH-0042, be and hereby is amended as follows: No later than 61 days after the issuance of this Appeal, and after conferring with counsel for Curtis Hall, BNI will reinstate Mr. Hall to the position that he occupied prior to his termination (at-will, Grade 24 engineer), if that position is available, or to a "comparable position" to be agreed upon with counsel for Mr. Hall in accordance with paragraphs (14) and (15) below;

(4) Paragraph (4) of the Initial Agency Decision issued on March 15, 2007, by Hearing Officer Woods in the matter of *Curtis Hall v. Bechtel National, Inc*., Case No. TBH-0042, be and hereby is amended as follows: Bechtel National, Inc. shall produce a report that calculates the lost wages and lost benefits (such as sick leave, annual leave,

overtime pay, and retirement benefits), plus interest payable to Mr. Hall. Bechtel National Inc.'s report shall be calculated in accordance with the Appendix attached to the Initial Agency Decision;

(5) Paragraph (5) of the Initial Agency Decision issued on March 15, 2007, by Hearing Officer Woods in the matter of *Curtis Hall v. Bechtel National, Inc.*, Case No. TBH-0042, be and hereby is amended as follows: Bechtel National, Inc. shall pay Mr. Hall lost wages and lost benefits (such as sick leave, annual leave, overtime pay, and retirement benefits), plus interest. The amount of this payment shall be determined in accordance with the report specified in Paragraph (4) immediately above;

(6) Except to the extent altered in this Appeal, the ordering paragraphs contained in the Initial Agency Decision in Case No. TBH-0042, and Sections A, B, C and E of the Appendix which is attached to the Initial Agency Decision are affirmed;

(7) Mr. Hall's request that he be promoted to a Grade 25 engineer position as part of his reinstatement be and hereby is denied;

(8) Mr. Hall's request that he be reinstated to a "not-at-will" position be and hereby is denied;

(9) Mr. Hall's request that he be guaranteed employment by BNI, or be reinstated for a fixed duration at the Waste Treatment Plant, be and hereby is denied;

(10) Mr. Hall's request that he be reinstated to a position that pays twice his previous hourly rate be and hereby is denied;

(11) Mr. Hall's request that he receive a 10% raise when reinstated will be granted only if BNI determines that similarly situated Grade 24 engineers at the Waste Treatment Plant received 10% more in compensation between July 2005 and the date of Mr. Hall's reinstatement;

(12) Mr. Hall's request for compensation for pain, suffering and emotional distress be and hereby is denied;

(13) BNI will provide formal classroom training to Mr. Hall only if it cannot reinstate Mr. Hall to his former position and can place him in a comparable Grade 24 engineer position at the Waste Treatment Plant;

(14) If BNI is able to place Curtis Hall in a position comparable to the one that he vacated, the company will provide Mr. Hall with transfer preference;

(15) Section D entitled, "Negotiation Period" which is contained in the Appendix to the Initial Agency Decision issued on March 15, 2007, by Hearing Officer Woods in Case No. TBH-0042 be and hereby is amended to read as follows:

> The parties will have up to sixty days from the date of this Appeal Decision (or, if appealed, the final determination issued pursuant to 10 C.F.R. § 708.35(d)) to discuss and negotiate any disputes regarding (1) the calculations to be made under the terms of the Initial Agency Decision, and (2) Mr. Hall's reinstatement, including, but not limited to, what comparable positions, if any, are available for Mr. Hall and, what training, if any, would be necessary to allow Mr. Hall to quickly assimilate into that comparable position. During the period of negotiation, both parties will provide reasonable information to the other party to facilitate the other party's understanding of the calculations and the reinstatement matters.

(16) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial Review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner: Battelle Energy Alliance

Date of Filing: July 3, 2008

Case Number: TBA-0047

Dennis D. Patterson filed a complaint of retaliation under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Patterson alleged that he engaged in protected activity and that his employer, Battelle Energy Alliance (BEA), engaged in a series of retaliatory acts. An Office of Hearings and Appeals (OHA) Hearing Officer granted relief, *Dennis D. Patterson,* Case No. TBH-0047 (2008),[1] and BEA filed the instant appeal. As discussed below, the appeal is denied.

I. Background

The DOE established its Contractor Employee Protection Program to safeguard public and employee health and safety; ensure compliance with applicable laws, rules and regulations; and prevent fraud, mismanagement, waste and abuse at DOE facilities. 57 Fed. Reg. 7533 (1992). To that end, the program prohibits a contractor from retaliating against an employee who discloses certain information or engages in certain activity. 10 C.F.R. § 708.1.[2]

If an employee believes that a Part 708 retaliation has occurred, the employee may file a complaint requesting that the DOE order the contractor to provide relief. *Id.* The employee has the

[1] Decisions issued by the Office of Hearings and Appeals (OHA) are available on the OHA website located at http://www.oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

[2] Part 708 concerns (i) disclosures of information concerning substantial violations of law; dangers to health and safety; and fraud, gross mismanagement, and abuse of authority, and (ii) refusals to participate in dangerous activities. 10 C.F.R. §§ 708.1, 708.5.

burden of showing, by a preponderance of the evidence, that the employee engaged in protected activity and that the protected activity was a contributing factor to the alleged retaliation. 10 C.F.R. § 710.29. If the employee meets that burden, the contractor has the burden of showing, by clear and convincing evidence, that it would have taken the same action in the absence of the protected activity. *Id.*

Patterson has worked at the Idaho National Laboratory (INL) and its predecessor, the Idaho National Engineering and Environmental Laboratory (INEEL), since 1980. Ex. 3. In 1994, the site management contractor at the time – Lockheed Martin Idaho Technologies Company (LMITCO) - appointed Patterson as manager of its ethics office, a position reporting to the company president. Ex. 114; Tr. at 535-38. In 1999, Bechtel BWXT Idaho, LLC (BBWI) replaced LMITCO and moved Patterson's office to the audit and oversight office, headed by Douglas Benson. Tr. at 548, 637. As a result, Patterson reported to Benson. *Id.* at 637. For each of the years 2000 through 2004, Benson rated Patterson's performance as "outstanding." Exs. C-G.

In 2005, BEA succeeded BBWI, and Patterson continued to report to Benson, as the manager of employee concerns. Tr. at 629, 646. That same year, a site worker - the son of Patterson's cousin – reported that the BEA security office improperly revoked his site access. Patterson investigated and concluded that the revocation did not comply with applicable procedures. Exs. 10, 127. Ultimately, BEA acknowledged that procedures had been violated, restored the worker's site access, and disciplined the BEA personnel security manager responsible for the revocation. Nonetheless, Patterson pressed for additional action, arguing that racial discrimination was an underlying factor. BEA's Equal Employment Opportunity (EEO) officer investigated and concluded that no racial discrimination had occurred.

Patterson's relationship with BEA management became strained as he continued to press his views that racial discrimination had occurred and that BEA management had engaged in misconduct. BEA's parent organization – Battelle Memorial Institute (BMI) - investigated and issued a report. Ex. 37. BMI concluded that BEA managers had not engaged in unethical conduct. *Id.* at 2. BMI did, however, voice a concern that Patterson refused to (i) accept the EEO officer's conclusion that no racial discrimination had occurred and (ii) recognize that his involvement in a relative's concern created the appearance of a lack of impartiality. *Id.* at 2-3. BMI recommended actions to improve the working relationship between Patterson and the others involved in the site access issue. *Id.* at 3.

In early 2006, Patterson received his 2005 performance appraisal and associated merit pay increase. Patterson's overall rating was "all expectations met, some exceeded." Ex. H. Also, in early 2006, BEA reclassified Patterson's position from "manager" to "specialist," because he did not have any direct reports. Exs. 41, 43; Tr. at 646. Thereafter, Patterson refused to refer to himself as the manager of employee concerns, instead using the term "specialist." Tr. at 384, 646. He also declined Benson's invitations to attend two manager meetings. *Id.* at 690-91.

In March 2006, Patterson filed an EEO complaint with the Idaho Human Rights Commission (IHRC), alleging discrimination and retaliation. Ex. 44. On May 1, 2006, BEA counsel told Patterson that BEA did not permit employees to use company time and resources "to pursue personal litigation matters." Ex. 45. Thereafter, Patterson used company email to withdraw the IHRC complaint, stating that he intended to pursue another avenue of relief. Exs. 49-51. Upon seeing the emails, BEA counsel asked BEA's security office to investigate Patterson for misuse of company time and resources. Ex. 54.

On June 1, 2006, Patterson filed a Part 708 complaint, alleging that BEA retaliated against him for disclosing (i) the security office's improper revocation of the worker's site access and (ii) subsequent management impropriety. Ex. J. He alleged that BEA retaliated against him by, *inter alia,* giving him a lower performance appraisal and pay increase and by reclassifying his job from "manager" to "specialist."

In July 2006, a security office investigator interviewed Patterson, asking him about his use of company time and resources for (i) his IHRC and Part 708 complaints and (ii) emails with a diversity organization. Ex. 54 at 5-9. In late August 2006, the investigator made a follow-up telephone call to Patterson about the investigation, and he asked if Patterson knew about a new investigation. Patterson responded, but did not answer the question.

In September 2006, the security office investigator interviewed Patterson in the new investigation, which concerned a manager's allegation that Patterson exhibited bias in investigating an employee concern filed by the manager's subordinate. Ex. 61. Just before that interview, Patterson asked BEA counsel whether BEA permitted the use of company time and resources to pursue a Part 708 complaint. She responded that such use was permitted, subject to certain limitations. Ex. 60.

During the September 2006 interview, the security office investigator asked Patterson again if he had advance knowledge of the new investigation. When Patterson answered "no," the

security office investigator asked why Patterson had not answered the question a week earlier. Patterson answered "to keep you guessing" and "keep the playing field level" (hereinafter the "keep you guessing/level the playing field" comment). Ex. 61 at 28. When Patterson made the statement, both parties laughed. Tr. at 934, 962 (security office investigator).

Although the security office investigator did not review the file documenting the investigation giving rise to the bias allegation against Patterson, Tr. at 950-51, the security office investigator asked Patterson numerous questions about the process. One question he asked concerned the fact that Patterson's report was not marked "Official Use Only." Ex. 61 at 14. Patterson conceded the error, but argued that he was being unfairly singled out, stating that others were sending unmarked emails about his Part 708 complaint. *Id.* The security investigator asked Patterson if Benson's administrative assistant had shared information with him, and Patterson refused to answer. *Id.* at 15-16. The security investigator then interviewed Benson's administrative assistant and another employee, but did not substantiate that any such sharing had occurred.

A week after the September 2006 interview, Patterson amended his complaint, citing the security office investigations as retaliations for his pursuit of his Part 708 complaint. Ex. W. The investigations did not substantiate that Patterson had misused company time and resources or that Patterson had exhibited bias.

In October 2006, BEA suspended Patterson for three days without pay. Ex. 65. The suspension notice cited, *inter alia*, a failure to cooperate with the security office investigator during the September 2006 interview and a failure to follow BEA counsel's May 1, 2006, instruction not to use company resources to pursue litigation against BEA. Exs. 65, 67 at 5. Patterson amended his complaint again, citing the suspension as retaliation for pursuit of his Part 708 complaint. Ex. Z.

In January 2007, Benson gave Patterson his 2006 performance appraisal, with an overall rating of "some expectations not met." Ex. 79. Benson cited, *inter alia,* the suspension notice and conduct referenced therein. *Id.* Patterson amended his complaint, citing the appraisal as retaliation for his pursuit of his Part 708 complaint. Ex. CC.

During the spring of 2007, Patterson had ongoing discussions with Benson about an employee concern that had been transferred to the security office. Ex. 76 at 1. Patterson refused to provide the name of the concerned employee, arguing that the security office did not need the name and its disclosure would violate the BEA's

written procedure that confidentiality should be protected to the maximum extent possible. Ex. 66 at 19. Discussions on this matter escalated in March and April 2007, Exs. 82-89, and culminated in an April 24, 2007, meeting, in which Benson instructed Patterson to provide the name, Ex. EE. The meeting took place at 3:00 P.M., and Benson instructed Patterson to provide the name by 9:00 A.M. the next day. Patterson proposed elevating the matter to the site head; Benson stated that Patterson's right to talk to the site head did not affect his right to impose the deadline. Patterson did not provide the name, but provided information from which the security office identified the individual.

In June 2007, Benson told Patterson that, as a result of his 2006 performance appraisal, his 2007 pay did not include a merit pay increase. The same month, BEA reassigned Patterson to another position at the same pay; BEA cited, *inter alia,* Patterson's conduct during the April 24, 2007, meeting. Ex. FF. Patterson amended his complaint, citing the zero merit pay increase and reassignment as retaliations for his pursuit of his Part 708 complaint. Ex. HH.

As of November 2007, the parties were preparing for Patterson's Part 708 hearing. BEA had filed a Motion for Summary Judgment, which the Hearing Officer granted in part, dismissing the allegations in the original complaint, largely on the grounds of timeliness. *Battelle Energy Alliance,* Case No. TBZ-0047 (2007). The same month, the Hearing Officer convened a four-day hearing, and the parties presented witnesses and documents.

Various witnesses testified about the two investigations. Benson justified his choice of the security office to investigate the bias concern on the ground that he, and the legal and personnel offices, had actual or perceived conflicts. Tr. at 656-660. As to the October 2006 suspension notice, Benson testified that, although the suspension notice listed various items as "misconduct," the actual basis for the suspension was Patterson's conduct during the September 2006 security interview, specifically his "keep you guessing/level the playing field" comment and his refusal to answer the question concerning Benson's administrative assistant. Benson further testified about the other alleged retaliations, including the directed reassignment. Benson testified that, despite the various conduct cited in the memorandum that directed the reassignment, the actual basis for the reassignment was Patterson's conduct during the April 24, 2007, meeting. Tr. at 900.

On June 20, 2008, the Hearing Officer found in favor of Patterson. *Dennis D. Patterson,* Case No. TBH-0047 (2008) (the IAD). The Hearing Officer found that Patterson's pursuit of his

Part 708 complaint was a contributing factor to the investigations and subsequent adverse actions. IAD at 16-18. In doing so, she rejected BEA's contention that an investigation cannot constitute a Part 708 retaliation. *Id.* at 19-20. The Hearing Officer further found that, with one exception (the June 2006 investigation), BEA would not have taken the same actions in the absence of the protected activity.

The Hearing Officer rejected BEA's rationale for choosing the security office to investigate the bias concern, i.e., that the security office did not have an actual or perceived conflict. IAD at 20-21. She cited the "controversy" over the security office's June 2006 investigation of Patterson. *Id.* at 21.

As for the suspension, the Hearing Officer found that Benson overstated the seriousness of Patterson's remarks during the September 2006 interview. She found that Patterson "jokingly" made the "keep you guessing/level the playing field" comment. IAD at 11. She found that Patterson's refusal to answer the question concerning Benson's administrative assistant did not impede the bias investigation. *Id.* at 23. She rejected BEA's example of the discipline of another employee for failure to cooperate with an investigation, as not comparable, because it also involved time card fraud. *Id.*

As for the marginal 2006 performance appraisal and zero merit pay increase, the Hearing Officer noted that much of the appraisal referred to the suspension (and events cited therein) and two other questionable rationales. IAD at 24-25. She found that BEA had not presented clear and convincing evidence that the rating would have been the same in the absence of the protected activity. *Id.* at 25.

Finally, the Hearing Officer addressed the directed reassignment. Benson testified, although the memorandum directing the reassignment cited various conduct, Benson's basis was Patterson's conduct toward Benson and the security office manager during the April 24, 2007, meeting. Tr. at 900. The Hearing Officer found that Patterson had been less than professional, but that the context was significant, i.e., that Patterson was accountable to INL senior management and that he believed Benson's order was not consistent with BEA procedures and put BEA at risk. IAD at 26.

Based on the foregoing, the Hearing Officer ordered various forms of relief. IAD at 29-30. The relief included monetary relief and an order that the contractor identify any vacancy comparable to Patterson's previous position and, if Patterson desires, transfer Patterson to that position.

In July 2008, BEA filed the instant appeal. As an initial matter, BEA contends that an investigation cannot constitute a Part 708 "retaliation." BEA Br. at 13-32. In any event, BEA contends that it would have taken all of the same actions in the absence of Patterson's pursuit of his Part 708 complaint. BEA Br. at 36-137. In support of this contention, BEA challenges many of the Hearing Officer's findings and conclusions.

II. Analysis

The standard of review for Part 708 appeals is well-established. Conclusions of law are reviewed *de novo. See Curtis Hall,* Case No. TBA-0042 at 5 (2008). Findings of fact are overturned only if they are clearly erroneous, giving due regard to the trier of fact to judge the credibility of witnesses. *Id.; Salvatore Gianfriddo,* Case No. VBA-0007 (1999).

A. Whether an Investigation Can Be a Part 708 "Retaliation"

In support of its contention that an investigation cannot be a Part 708 retaliation, BEA argues that the Part 708 definition of "retaliation" governs. BEA Br. at 18. BEA further argues that the definition's examples indicate that it does not encompass investigations, even if they are retaliatory. *Id.* at 19.

BEA is correct that the Part 708 definition of "retaliation" governs, but BEA is incorrect that it does not encompass retaliatory investigations. Part 708 defines "retaliation" as follows:

> *Retaliation* means an action (including *intimidation,* threats, restraint, coercion or *similar action*) taken by a contractor against an employee with respect to employment (*e.g.,* discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities defined in Section 708.5 of this subpart.

10 C.F.R. § 702.8. As the regulation indicates, the Part 708 definition of "retaliation" includes "intimidation" or "similar action." A retaliatory investigation is a form of "intimidation" or "similar action." The Part 708 preamble supports this conclusion. During the rulemaking, a commenter asked about whether a retaliatory investigation fell within the term "retaliation." In response, the DOE stated that a retaliatory investigation and other specified actions were "generally meant to be covered by the broad definition of "retaliation." *Criteria and Procedures for DOE Contractor Employee Protection Program,*

65 Fed. Reg. 6314, 6316 (2000). Consistent with the preamble, OHA precedent recognizes a broad definition of "retaliation." *See generally John Merwin,* Case No. TBU-0052, at 3 (2006) (deviation from normal procedures to require multiple psychological evaluations could constitute a "retaliation"). Given the plain meaning of the definition, the Part 708 preamble, and OHA precedent, there is no merit to BEA's reliance on the examples of retaliations provided in the definition of retaliation, or BEA's other arguments as to why retaliatory investigations cannot be Part 708 retaliations. *See also Russell v. Dep't of Justice,* 76 M.S.P.R. 317 (1997).

B. Whether BEA Would Have Taken the Same Actions in the Absence of the Protected Activity

BEA contends that the Hearing Officer erred when she concluded that it would not have taken the same actions in the absence of the protected activity. Throughout its lengthy brief, BEA argues that the Hearing Officer ignored, misconstrued, or inaccurately described evidence.

The Hearing Officer saw the witnesses testify, and she listened to the tapes of the two security office interviews of Patterson, Tr. at 185, 916. She was, thus, in a position to consider the testimony and tape recordings in conjunction with the documentary evidence presented at the hearing. Most of the alleged Hearing Officer errors are mere disagreements with the Hearing Officer's assessment of the testimony, evidence, and credibility of the witnesses. The Hearing Officer's findings in this regard are not clearly erroneous and will be allowed to stand. Any actual Hearing Officer error is insignificant.

1. The September 2006 Bias Investigation

BEA contends that the Hearing Officer erred in concluding that it had not presented clear and convincing evidence that it would have chosen the security office to investigate the bias allegation in the absence of the protected activity. In support, BEA makes two principal arguments.

First, BEA argues that the Hearing Officer ignored evidence that the bias concern required an investigation. BEA Br. at 38-44. That is not correct. The Hearing Officer acknowledged Benson's testimony that the manager's allegation of bias was more serious than prior concerns. IAD at 20. What the Hearing Officer did reject was Benson's rationale for choosing the security office, which is the subject of BEA's second argument.

BEA argues that Benson's testimony – that he thought Patterson would be comfortable with a security office investigation -

recognized that Benson, and the legal and personnel offices, had actual or alleged conflicts; accordingly, BEA argues, it was "necessary" for Benson to transfer the concern to the security office for an investigation. BEA Br. at 40 n. 11, 45-46. BEA's argument ignores, however, that the security office also had a conflict or the appearance of a conflict. Patterson's 2005 investigation found security office deficiencies that resulted in corrective action, *see, e.g.,* Ex. 19 at 3, Patterson's allegations of security office and BEA management unethical behavior led to a review of the security office by BMI, *see, e.g.,* Ex. 30 at 5, and Patterson included these allegations in his Part 708 complaint, s*ee, e.g.,* Ex. 1 (June 1, 2006 complaint). The Hearing Officer alluded to this when she cited the "controversy" over the first investigation. IAD at 21. Because BEA's rationale for transferring the investigation outside of Benson's office would have eliminated the security office, BEA has not demonstrated that the Hearing Officer erred when she rejected the rationale.

2. The October 2006 Suspension

BEA also contends that the Hearing Officer erred in concluding that it did not present clear and convincing evidence that it would have suspended Patterson in the absence of the protected activity. In support, BEA makes three principal arguments.

First, BEA contends that the Hearing Officer erred when she found that Patterson made the "keep you guessing/keep the playing field level" comment "jokingly," citing Patterson's belief that the investigation was unfair, and the security office investigator's testimony that he not take the comment as a joke. BEA Br. at 54. The Hearing Officer listened to the tape-recording of the conversation, Tr. at 916; Patterson testified to some "levity" in his answer, *id.* at 934; and the security office investigator conceded that he and Patterson laughed at Patterson's answer, *id.* at 934, 962. The parties' contemporaneous laughter amply supports the Hearing Officer's skepticism of BEA's reliance on the comment as a basis for suspension. On this issue, BEA has not demonstrated Hearing Officer error.

Second, BEA contends that the Hearing Officer erred when she found that Patterson's refusal to answer the question about Benson's administrative assistant did not impede the investigation, stating that Patterson's refusal required that the security office investigator interview two employees and review emails. BEA Br. at 55.

As an initial matter, BEA's argument assumes that a Patterson answer would have avoided additional interviews. More importantly, as the security office investigator conceded, the

unanswered question concerning Benson's administrative assistant was not relevant to the bias investigation. Tr. at 959-60. Accordingly, the additional interviews on that question do not contradict the Hearing Officer's finding that Patterson's refusal to answer did not interfere with the investigation being conducted – the bias investigation. On this issue, BEA has also not demonstrated Hearing Officer error.

Finally, BEA contends that the Hearing Officer erred in rejecting its examples of discipline meted out to other employees as not involving similar conduct. BEA Br. at 58-62. This contention is based on BEA's characterization of Patterson's conduct as a "failure to cooperate" with an investigation. As discussed above, the Hearing Officer concluded that BEA's evidence on this issue was not clear and convincing, and BEA has not demonstrated otherwise. Since BEA has failed to establish a "failure to cooperate," BEA's reliance on discipline for "failure to cooperate" or other "prohibited practices" is misplaced. *See, e.g.,* BEA Br. at 59. Accordingly, BEA has not demonstrated that the Hearing Officer erred in rejecting examples of treatment of other employees.

3. 2006 Performance Appraisal and 2007 Zero Merit Pay Increase

BEA contends that the Hearing Officer erred in concluding that BEA would not have given Patterson a marginal performance appraisal in the absence of the protected activity. BEA Br. at 80-88. This contention lacks merit. In concluding that BEA's evidence was not clear and convincing, the Hearing Officer found that the performance appraisal given to Patterson relied extensively on the September 2006 investigation and related October 2006 suspension. IAD at 25. BEA has not argued, let alone demonstrated, that Patterson would have received the same rating in the absence of those events. Accordingly, BEA has not demonstrated Hearing Officer error.

4. Directed Reassignment

BEA contends that the Hearing Officer erred in concluding that it did not present clear and convincing evidence that it would have reassigned Patterson in the absence of the protected activity. BEA Br. at 88-122. This contention lacks merit.

The Hearing Officer discussed the circumstances of the meeting. IAD at 25-27. She did not question that Patterson could have behaved more professionally. *Id.* at 26. She noted, however, that (i) Patterson was accountable to senior INL management, (ii) Patterson had never before been ordered to disclose a reporting employee's name, and (iii) Patterson believed that

Benson's order was not consistent with BEA procedures. *Id.* at 26. These matters are not disputed. It is also undisputed that (i) the meeting occurred at 3:00 P.M. in the afternoon, (ii) Benson gave Patterson a deadline of 9:00 A.M. the next morning, (iii) Patterson asked to elevate the issue to INL senior management, and (iv) Benson refused to modify the deadline. The Hearing Officer also heard Patterson's former and current manager testify that Patterson treats colleagues with respect. Tr. at 543-46, 1011-13. Thus, the record indicates that Benson's refusal to extend the deadline, following BEA's prior retaliatory acts, precipitated Patterson's behavior. Since the behavior would not have occurred in the absence of the protected activity, BEA has not demonstrated, by clear and convincing evidence, that it would have reassigned him in the absence of the protected activity.

Finally, BEA argues that Patterson's post-reassignment behavior toward various BEA managers and employees precludes reinstatement to the employee concerns manager position. The Hearing Officer heard the witnesses testify on this issue and found that the testimony was not convincing. IAD at 26-27. Accordingly, BEA has not demonstrated that the Hearing Officer's findings were clearly erroneous.

III. Conclusion

The Hearing Officer correctly concluded that Patterson met his burden of showing, by a preponderance of the evidence, that he engaged in protected activity which was a contributing factor to the alleged retaliations. The Hearing Officer also correctly concluded that BEA did not meet its burden of showing, by clear and convincing evidence, that it would have taken the same actions in the absence of the protected activity.

It Is Therefore Ordered That:

(1) The Appeal filed by Battelle Energy Alliance on July 3, 2008 (Case No. TBA-0047), of the Initial Agency Decision (IAD) issued on June 20, 2008, be and hereby is denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioners:	David L. Moses UT-Battelle, L.L.C.
Date of Filing:	September 8, 2008
Case Number:	TBA-0066

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on September 3, 2008, involving a Complaint of Retaliation filed by David L. Moses (also referred to as the employee or the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708.[1] In his Complaint, Moses alleged that his former employer, UT-Battelle, L.L.C. (UT-Battelle or the contractor), retaliated against him for engaging in activity protected under Part 708. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that Moses engaged in activity protected under Part 708, but UT-Battelle established that it would have taken the same adverse personnel action in the absence of the protected activity. Moses appealed that determination. The IAD also made a finding regarding the applicability of the attorney-client privilege with respect to two exhibits submitted at the hearing, finding that certain redacted portions of those exhibits were not shielded by the attorney-client privilege and should be released. UT-Battelle appealed the portion of the IAD ordering the release of the redacted information. As set forth below, we find that the determination in the IAD that UT-Battelle met its burden under Part 708 is correct. In addition, we find that the issue of whether the redacted portions of two exhibits are protected by the attorney-client privilege is moot and, therefore, UT-Battelle shall not be required to release the documents.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, was and abuse" at DOE's government-owned or –leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary

[1] Decisions issued by the Office of Hearings and Appeals (OHA) are available on the OHA website located at http://www.oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

purpose is to encourage contractor employees to disclose information which they "reasonably and in good faith" believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. 10 C.F.R. § 708.5(a). Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"], will be directed by the DOE to provide relief to the complainant. *See* 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations set forth at 10 C.F.R. Part 708 establish administrative procedures for the processing of complaints. Under these regulations, review of an IAD, as requested by Moses and UT-Battelle in their respective appeals, is performed by the Director of the OHA. 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

The events leading to the filing of Moses' Complaint are fully set forth in the IAD. *David L. Moses*, Case No. TBH-0066 (2008). With respect to this appeal, the relevant facts are as follows.

UT-Battelle is the contractor employed by the DOE to manage and operate the Oak Ridge National Laboratory (ORNL). Moses was employed by UT-Battelle as Senior Program Manager for Nuclear Nonproliferation Programs at ORNL. A requirement of his position at ORNL was that he secure funding from DOE elements for his time. On February 23, 2007, he filed a Complaint of Retaliation under Part 708, alleging that his employer retaliated against him for disclosing irregularities in DOE contracting practices and alleging waste of funds related to a particular research project.

In 2004 and early 2005, Moses was the ORNL Lead Program Manager on DOE's Fissile Materials Disposition Program (FMDP), a program sponsored by the National Nuclear Security Administration (NNSA) Office of Fissile Materials Disposition (NA-26). Between January 10, 2004, and April 4, 2005, Moses sent 17 emails to various DOE officials and others regarding DOE contracting practices. In those emails, Moses referred to possible violations of the Foreign Corrupt Practices Act (FCPA), the Federal Acquisition Regulations (FAR), and the Department of Energy Acquisition Regulations (DEAR). Among the 17 emails was a February 2005 email to Bruno Sicard, a French representative to a multinational effort to modify Russian VVER-1000 reactors, in which Moses raised concerns that a Russian firm was impeding ORNL's ability to create contracts that did not violate the FCPA. IAD at 5. After learning of Moses' email to Sicard, Moses' NA-26 point of contact, Robert Boudreau, expressed concerns to Moses' manager, Dr. Lawrence J. Satkowiak, Director of ORNL's Nuclear Nonproliferation Office, regarding whether Moses should continue as Lead Program Manager of the FMDP. Subsequently, Moses was replaced as Lead Program Manager for the FMDP and he became a Senior Adviser to the Program.

After his change from Lead Program Manager to Senior Adviser for the FMDP, Moses sent a copy of the memorandum announcing the change to an NNSA employee at the DOE's Savannah River site, along with an email accusing his former NA-26 point of contact, Norman Fletcher, of

improper behavior in connection with the VVER-1000 project. *Id*. at 5-6. The NNSA employee forwarded Moses' email to Kenneth M. Bromberg, the NNSA Acting Deputy Administrator for Fissile Material Disposition. Ultimately, Bromberg decided that, given Moses' problems and "unsupported allegations" regarding NA-26 staff, NA-26 would no longer fund Moses' work. *Id*. at 6.

After losing his NA-26 funding, Satkowiak arranged for Moses to begin working on a project in the DOE's Reduced Enrichment for Research and Test Reactors (RERTR) program, sponsored by NNSA's Office of Global Threat Reduction (NA-21). *Id*. at 6. In September 2006, Moses exchanged emails with Charlie Allen at the University of Missouri Research Reactor Center (MURR) and George Vandergrift at Argonne National Laboratory (ANL) regarding the RERTR program. Those emails were copied to Satkowiak, Ralph Butler, MURR Director, and Parrish Staples, Moses' NA-21 point of contact, as well as others within ANL and ORNL. In a September 6 email, Moses harshly criticized Allen's and Vandergrift's research practices and alleged wasteful spending regarding the program. Following this email, Moses was placed on paid administrative leave for one week, without access to the ORNL computer system, and was issued a "disciplinary written warning" due to the unprofessional language and tone he used in addressing his colleagues in the September 6 email. Subsequently, NA-21 withdrew its funding of Moses' work. *Id*. at 9.

On October 5, 2006, Satkowiak sent Moses a memorandum which, among other things, reminded Moses that his position as a Senior Program Manager required him to secure funding for his time. The memo further stated that, if Moses did not secure alternate funding, his employment with ORNL would be terminated for failure to meet the performance requirements of his position. *Id*. On January 25, 2007, Moses received a rating of "Not Fully Contributing" on his 2006 performance assessment. Moses received a Performance Improvement Plan (PIP) on February 2, 2007, which emphasized his need to secure funding for his work and correct the behaviors which led to his loss of funding from NA-26 and NA-21. On February 25, 2007, Moses informed Satkowiak that he had not secured funding for work beyond March 2007. Consequently, Satkowiak referred Moses' case to an ORNL Suspension/ Termination Review Committee (STRC), with a recommendation that Moses's employment be terminated for lack of funding. On March 12, 2007, the SRTC determined that Satkowiak should offer Moses the option of early retirement and, if Moses declined that option, Satkowiak had the STRC's approval for termination. Moses elected early retirement. *Id*. at 10.

This matter was referred to OHA for an investigation followed by a hearing. An OHA investigator issued a Report of Investigation on October 2, 2007. 10 C.F.R. §§ 708.22, 708.23. Subsequent to the investigation, an OHA Hearing Officer held a hearing in this matter over a period of three days. During the hearing, the Moses testified on his own behalf and presented the testimony of two additional witnesses: an ORNL management employee and a DOE official. UT-Battelle presented the testimony of eight ORNL management employees.

After considering the hearing testimony and other relevant evidence, the Hearing Officer issued the IAD that is the subject of this appeal.

II. INITIAL AGENCY DECISION

The IAD set forth the burdens of proof in cases brought under Part 708. The IAD stated that it is the burden of the complainant under Part 708 to establish by a preponderance of the evidence that he or she engaged in a protected activity, and that the activity was a contributing factor to an alleged retaliation. 10 C.F.R. §§ 708.5, 708.29. The IAD further noted that if an employee meets this burden, the burden then shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's protected disclosure or activity. 10 C.F.R. § 708.29. The IAD considered the application of these elements to the Moses proceeding.

A. Protected Activity and Contributing Factor Analysis

The IAD noted that the Complainant's alleged protected disclosures fall into two categories: (1) the 2004-2005 emails regarding DOE contracting practices and (2) the September 6, 2006, email concerning alleged wasteful spending on the RERTR program. As to the first category of disclosures, the IAD found that the 2004-2005 emails, with the exception of the February 2005 email to Bruno Sicard, contained protected disclosures under Part 708. The IAD noted that UT-Battelle agreed that those emails contained protected disclosures. *Id*. at 11. The IAD further noted that the September 6, 2006, email contained information that the Complainant reasonably believed revealed a gross waste of funds. *Id*. at 13.

The IAD further noted that the Complainant alleged that three negative personnel actions were retaliations for his making protected disclosures: (1) in September 2006, he was placed on paid administrative leave for one week, with no access to his work computer or email during that time; (2) he was denied a merit increase as a result of an unsatisfactory fiscal year 2006 performance assessment, and (3) he was offered the choice between early retirement and termination in March 2007. *Id*. at 14.

Regarding whether the protected disclosures were a contributing factor to the alleged retaliations, the Hearing Officer found that the January 2004 - April 2005 emails were not a contributing factor in either the September 2006 decision to place Moses on paid administrative leave, or in his receipt of an unsatisfactory fiscal year 2006 performance appraisal and the resulting denial of a merit increase. *Id*. at 17-18. The Hearing Officer based this finding on the fact that the alleged retaliations took place approximately 17 months and 21 months, respectively, after the most recent protected disclosure in April 2005. Therefore, he found that a reasonable person could not conclude "that the April 2005 disclosure, and those that preceded it, were contributing factors in these two personnel actions." *Id*. at 17. However, the Hearing Officer determined that the 2004-2005 emails were a contributing factor in the STRC's decision to offer the Complainant the choice between early retirement or termination. The Hearing Officer based this finding on the temporal proximity between the time the STRC members made their decision, during the March 12, 2007, STRC meeting, and when they learned of the nature of the 2004-2005 emails, either on the day of the meeting or the business day preceding it. *Id*. at 19. Similarly, the Hearing Officer found that the September 6, 2006, email was a contributing factor to each of the three alleged retaliations noted above based solely on the temporal proximity between the email and when each of the alleged retaliations occurred. *Id*. at 15-16.

B. UT-Battelle's Affirmative Showing

The Hearing Officer analyzed each of the alleged retaliations in light of the protected disclosures and determined in the IAD that UT-Battelle established by clear and convincing evidence that it would have taken the same actions in the absence of Moses' protected disclosures. As an initial matter, the IAD noted that it is "the disclosure of particular information contained in a communication that is protected [under Part 708], not the communication itself." *Id*. at 20. Therefore, the Hearing Officer concluded that Moses' September 6, 2006, email contained protected disclosures, but the email as a whole was not protected. *Id*. This distinction is of particular importance in light of the reasons offered by UT-Battelle for the allegedly retaliatory actions taken against Moses. Those reasons are set forth below. In examining each of the three allegedly retaliatory actions taken against Moses, the Hearing Officer considered several factors, including: "(1) the strength of the employer's reason for the personnel action excluding the whistleblowing, (2) the strength of any motive to retaliate for the whistleblowing, and (3) any evidence of similar action against similarly situated employees." *Id*. at 20 (*citing Kalil v. Dep't of Agriculture*, 479 F. 3d 821, 824 (Fed. Cir. 2007)).

1. September 2006 Paid Administrative Leave and "Not Fully Contributing" Rating on 2006 Performance Assessment (and Resulting Denial of Merit Increase)

The Hearing Officer found that Satkowiak, Moses' manager, would have placed Moses on paid administrative leave in September 2006, and would have given him a "not fully contributing" rating on his 2006 performance assessment, even if the September 6, 2006, email had not contained protected disclosures.

The Hearing Officer found strong evidence in the record supporting UT-Battelle's assertion that its objection to the email was not anchored in any protected disclosures contained in the email, but rather was based solely on the tone and language used in the email to convey those disclosures. *Id*. at 21-22, 23. According to the Hearing Officer, the September 6, 2006, email "went well beyond being merely blunt, and became sarcastic and gratuitously insulting to his fellow scientists." *Id*. at 22. The IAD also noted that given the nature of the email, and the fact that Moses had already lost his funding from NA-26 the previous year, Satkowiak had ample reason to be concerned that the email "would be disruptive in its consequences, a concern that was proven to be well-founded when NA-21 decided later that month that it could no longer fund Moses' work." *Id*. Therefore, the Hearing Officer concluded that there were strong reasons for the decision to place Moses on paid administrative leave apart from his protected disclosures.

Similarly, the Hearing Officer found that Satkowiak had strong reasons for giving Moses a "not fully contributing" rating on his 2006 performance assessment. The basis for this rating was Moses' "inability to interact professionally with [the] NNSA/NA-20 sponsors," as well as his inability to secure alternate funding for his time after losing both his NA-26 and NA-21 funding.[2] *Id*. at 23. The Hearing Officer concluded that Satkowiak's assessment that Moses was unable

[2] NNSA's Office of Defense Nuclear Nonproliferation, NA-20, is comprised of seven program offices, including NA-26 and NA-21.

to "interact professionally" was based on the manner and tone he used in presenting his disclosures in the September 6, 2006, email, not on the disclosures themselves. Similarly, the Hearing Officer found that Satkowiak's comments in the assessment pertaining to Moses' inability to secure funding for his time were well-founded given that by the time the performance assessment was prepared, Moses had alienated two of the "primary sources of potential funding," NA-26 and NA-21. *Id.*

In addition, the Hearing Officer found no evidence of any motive on the part of Satkowiak, or UT-Battelle, to retaliate against Moses for making protected disclosures by placing him on administrative leave or giving him a less than favorable rating on a performance assessment. The IAD noted that the disclosures were not critical of Satkowiak or ORNL. Rather, the disclosures pertained to "officials at other DOE laboratories and at DOE headquarters." *Id.* at 22. Finally, the IAD noted that UT-Battelle had not presented evidence of similar actions against similarly situated employees. Citing *Kalil* and *Carr v. Social Security Administration*, the Hearing Officer found, however, that an employer can meet its evidentiary burden despite the lack of such evidence. *Id.* at 22, 24; *see also Kalil*, 479 F.3d at 825; *Carr v. Soc. Security Admin.* 185 F.3d 1318, 1326-27 (Fed. Cir. 1999) .

2. Decision of STRC to Offer Moses Choice of Early Retirement or Termination

Applying the three factors listed above, the Hearing Officer determined that the STRC would have made the same decision in the absence of Moses' protected disclosures. The Hearing Officer found, based on the evidence in the record, that the basis for the STRC's decision was Moses' inability to secure funding for his time. The IAD noted that, when the STRC met to discuss Moses' case, five months had passed since he lost his NA-21 funding, and his prospects for securing funding in the future "were dim." *Id.* at 26. As with the allegedly retaliatory actions discussed above, the Hearing Officer found no motive on the part of the STRC to retaliate against Moses, given that the targets of the disclosures were not ORNL or any of the STRC members, but rather were officials at other DOE laboratories and DOE headquarters. *Id.*

Finally, the Hearing Officer considered the evidence presented by UT-Battelle of its similar treatment of similarly situated employees. Among that evidence was a document showing that nine other ORNL employees who were expected to secure funding for their time like Moses were ultimately terminated after failing to do so. The length of time between when those employees lost their funding and the date their employment was terminated ranged from "zero to seven and one-half months, and average[ed] approximately three and one-half months." *Id.* at 27. Moses was offered the choice between early retirement and termination approximately five months after losing his NA-21 funding. *Id.* at 25. Based on these factors, the Hearing Officer concluded that, due to Moses' lack of funding and lack of prospects for future funding, the STRC would have offered him the choice between early retirement and termination absent his protected disclosures.

III. ARUGUMENTS ON APPEAL AND ANALYSIS

Moses appealed the Hearing Officer's findings in the IAD and filed a statement identifying the issues that he wished the Director of the Office of Hearings and Appeals to review in this appeal phase of the Part 708 proceeding and a subsequent supplement to that statement (hereinafter "Moses Statement of Issues" and "Supplementary Statement," respectively). UT-Battelle filed a response to the Moses Statement of Issues.[3] 10 C.F.R. § 708.33. In addition, UT-Battelle appealed a portion of the IAD, Section I. C., and submitted a statement of issues supporting its appeal (hereinafter "UT-Battelle Statement of Issues"). Moses did not file a response to UT-Battelle's appeal. *Id*.

A. Moses' Appeal of Initial Agency Decision

On appeal, Moses does not specifically challenge any of the Hearing Officer's findings regarding whether his disclosures were a contributing factor to the retaliations and whether UT-Battelle satisfied its burden under Part 708. Rather, Moses alleges that the Hearing Officer's findings in the IAD overstep the regulatory limitations placed on OHA by various statutes. Moses Statement of Issues at 1. In his Statement of Issues, Moses argues:

> The [IAD] exceeds its statutory mandates in excusing the actions taken by UT-Battelle … the [IAD] fails to provide remedies both as required by law and in likely violation of the equal protection and due process provisions of civil rights law based on the manner in which the statutory authorization for 10 C.F.R. Part 708 has been reinterpreted to excuse the contractor for improper, noncompliant[,] if not illegal[,] acts.

Id. at 7. Essentially, Moses' Statement of Issues and Supplementary Statement can be distilled down to one principal argument: OHA's interpretation of 10 C.F.R. § 708.29, which sets forth the burdens of proof of the parties in a Part 708 proceeding, exceeds its authority by violating provisions of various statutes. *See* Moses Statement of Issues at 1; Supplementary Statement at 2. According to Moses, having found that he satisfied his burden of demonstrating that he made protected disclosures which were a contributing factor to an alleged retaliation, the Hearing Officer had no choice but to grant Moses relief. Moses Statement of Issues at 4. He further argues that the only issue for the Hearing Officer to decide was whether his complaint was frivolous. If he found that the complaint was not frivolous, Moses contends, the Hearing Officer was required to grant him relief. *Id*. at 6. This argument is completely inconsistent with any reasonable interpretation of the Part 708 regulations.

Part 708 was promulgated pursuant to the broad authority granted to DOE by the Atomic Energy Act of 1954 and the Department of Energy Organization Act to implement rules and regulations as necessary or appropriate to protect health, life and property. 57 Fed. Reg. 7533 (March 3, 1992). As stated above, the program's primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those employees from consequential reprisals by their employers. Section 708.29

[3] It is unnecessary in this case to set out the specifics of the response, some of which are incorporated into my analysis below.

states that after a complainant has satisfied his or her Part 708 burden, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's [protected conduct]." 10 C.F.R. § 708.29. OHA's interpretation and application of Part 708 – specifically, the burdens of proof set forth in section 708.29 – are well-settled case law. *See Franklin C. Tucker*, Case No. TBA-0023 (2007); *Gilbert J. Hinojos*, Case No. TBA-0003 (2005); *Janet Westbrook*, Case No. VBA-0089 (2002).

Essentially, under section 708.29, a complainant has the burden of establishing a *prima facie* case of retaliation. The burden then shifts to the contractor to rebut the complainant's *prima facie* case. Contrary to Moses' assertions, the inquiry does not end after a complainant has made his or her showing under Part 708. The language of section 708.29 is clear – the contractor has the opportunity to rebut the complainant's showing, by demonstrating that it would have taken the same action absent any protected conduct. Moses has presented no evidence which persuades us that our long-standing precedent in this regard is improper, and we see none.

We find no error in the Hearing Officer's application of section 708.29 in this case. After concluding that Moses satisfied his Part 708 burden, the Hearing Officer then examined the contractor's evidence. The Hearing Officer weighed the evidence and testimony and was persuaded that the contractor would have taken the same action absent Moses' protected disclosures. Moses presented no evidence indicating that any of the Hearing Officer's findings on this issue are clearly erroneous, and we find none on our review of the record. Consequently, we find nothing in the record which would cause us to set aside the Hearing Officer's findings in the IAD.

Moses also argues that the Hearing Officer denied him "access during the hearing to witnesses who could corroborate the truth of my disclosures…" Moses Statement of Issues at 7. This argument is completely baseless. Part 708 does not impose on complainants the burden of establishing the truth of their protected disclosures. Rather, in order to satisfy his or her Part 708 burden, a complainant must show that they disclosed information which they *reasonably and in good faith* believed revealed, *inter alia*, fraud, gross mismanagement, gross waste of funds, or abuse of authority. 10 C.F.R. § 708.5(a).[4]

In this case, the Hearing Officer did not hear testimony from witnesses whose sole purpose, according to Moses, would be to attempt to establish the truth of his protected disclosures. Such testimony was irrelevant here, there being no dispute that Moses made disclosures or as to the reasonableness of his belief that the disclosures revealed information protected under Part 708. To include it would have been an unnecessary waste of time and resources. Accordingly, we find no error in the Hearing Officer's decision to exclude the testimony of these witnesses at the hearing.

Based on the foregoing, we find that Moses has not brought forth any evidence indicating an error in the IAD warranting reversal of the Hearing Officer's findings.

[4] In some Part 708 proceedings, evidence purporting to establish the truth of a complainant's disclosures might be relevant. For instance, in a case where there is a dispute regarding a complainant's reasonable belief that his disclosures revealed protected information, as set forth in section 708.5, evidence as to the truth of those disclosures may be useful in helping the complainant meet his evidentiary burden on that issue.

B. UT-Battelle's Appeal of Section I. C. of the Initial Agency Decision

Claiming attorney-client privilege, UT-Battelle redacted material from the following documents submitted at the hearing: Exhibit A and the portion of Exhibit 22 marked "Attorney-Client Privilege 0002."[5] After an *in camera* review of the unredacted versions of those documents, the Hearing Officer determined that they were not shielded by the attorney-client privilege. Therefore, he ordered that "unless UT-Battelle file[d] a notice of appeal by the fifteenth day after its receipt of [the IAD], a copy of the information [he found was] not protected [would] be released to the complainant." *Id*. at 4. UT-Battelle has appealed the Hearing Officer's ruling pertaining to the release of the redacted documents. UT-Battelle disagrees with the Hearing Officer's interpretation and application of the privilege to the documents in question, and cites various cases in support of its position.

We have reviewed the redacted information *de novo*. We find that it is irrelevant to any of the arguments presented during the hearing or on appeal, and its release would not change the findings and ultimate result in the IAD. In this regard, the Hearing Officer noted that even if he had considered all of the redacted information as evidence, he would have reached "the same relevant legal conclusions and the same ultimate decision" he reached without considering the redacted information. *Id*. at 29, n. 17. Further, as stated above, Moses did not file a response to UT-Battelle's appeal on this issue. We are unable to discern any way that release of the withheld information could have changed either the result of the IAD or the outcome of this appeal. Therefore, the issue of whether the information is shielded by the attorney-client privilege, and consequently whether it should be released, is moot and we need not reach it here. Accordingly, UT-Battelle will not be required to comply with ordering paragraph (2) in the IAD, which requires release of the unredacted copies of the exhibits at issue.

IV. CONCLUSION

As is clear from the discussion above, Moses' appeal of the IAD turns not on any factual disputes, but rather on a disagreement with OHA's interpretation and application of the Part 708 regulations. As stated above, OHA's interpretation and application of the Part 708 regulations are well-settled case law and nothing in Moses' appeal convinces us that our established precedent on this issue is improper. Therefore, we find no error in the Hearing Officer's consideration of the evidence presented by UT-Battelle to satisfy their evidentiary burden under Part 708. Accordingly, we will deny Moses' appeal of the IAD. In addition, we find the issue of whether the redacted portions of two exhibits submitted at the hearing are shielded by the

---

[5] Exhibit A, is a record of the STRC meeting convened to consider Moses' case. It contains three separate portions redacted by UT-Battelle pursuant to the attorney-client privilege. The first redaction contains advice from UT-Battelle's in-house counsel about including the requirement that an employee secure funding for his or her time in performance improvement plans intended to address funding deficiencies. The second redaction pertains to the in-house counsel's opinion regarding whether the amount of time Moses was afforded to secure alternate funding was reasonable. Finally, the third redaction concerns the in-house counsel's advice regarding potential legal consequences should the STRC decide to terminate Moses' employment. The portion of Exhibit 22 marked "Attorney-Client Privilege 0002" is an email from the UT-Battelle in-house counsel to an ORNL official regarding Moses' protected disclosures.

attorney-client privilege is moot. Therefore, UT-Battelle will not be required to release unredacted copies those documents.

It Is Therefore Ordered That:

(1) The appeal filed by David L. Moses on September 8, 2008 (Case No. TBA-0066), of the Initial Agency Decision issued on September 3, 2008, be and hereby is denied.

(2) UT-Battelle shall not be required to comply with ordering paragraph (2) of the Initial Agency Decision, which required release of unredacted copies of Exhibit A and the portion of Exhibit 22 marked "Attorney-Client Privilege 0002."

(3) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Appeal

Name of Case:	Gary S. Vander Boegh Weskem, LLC Bechtel Jacobs Company, LLC
Date of Filing:	May 9, 2007
Case Number:	TBA-0069

This Decision considers three Appeals of an Initial Agency Decision (IAD) issued on July 11, 2003, involving a complaint filed by Gary S. Vander Boegh under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his Complaint, Vander Boegh claimed that his former employer, Weskem, LLC (Weskem) and the contractor that employed Weskem, Bechtel Jacobs Company, LLC (Bechtel), retaliated against him for making disclosures that were protected by Part 708.[1] In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that some of Vander Boegh's disclosures were protected. He also found that with regard to some of Bechtel and Weskem's personnel actions, the firms had failed to demonstrate by clear and convincing evidence that they would have taken these personnel actions in the absence of the protected disclosures. In the IAD, the Hearing Officer ordered Weskem and Bechtel to undertake a number of actions to mitigate the retaliatory personnel actions. Weskem and Bechtel each filed appeals from the IAD. Because the Hearing Officer did not grant all of the relief requested, Vander Boegh also appealed the decision. The three appeals are consolidated for review, and have been assigned a single case number by OHA, Case No. TBA-0069.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their

[1] Bechtel was the Management and Integration contractor at the DOE's Paducah, Kentucky, facility at the time of the alleged retaliatory activities.

employers. Thus, contractors found to have retaliated against an employee for such a disclosure, or for participating in a related proceeding, will be directed by the DOE to provide relief to a complainant.

The DOE Contractor Employee Protection Program regulations establish administrative procedures for the processing of complaints. Under these regulations, review of an Initial Agency Decision, as requested by Vander Boegh, Weskem and Bechtel in the present Appeals, is performed by the Director of the Office of Hearings and Appeals (OHA). 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding and General Background

The events leading to the filing of the instant Complaint are fully set forth in the IAD. *Gary S. Vander Boegh* (Case No. TBH-0007), 28 DOE ¶ 87,040 (2003) (*Vander Boegh I*).[2] For purposes of the current appeal, the relevant facts are as follows.

Vander Boegh was a landfill manager at the DOE's Paducah facility from 1992 to the date of his termination, April 23, 2006. At the time of his Part 708 complaint, Vander Boegh was the manager of the C-746-U Landfill (U Landfill), a sanitary/industrial landfill located three miles from the DOE's Paducah facility. The U Landfill was constructed by DOE to dispose of solid waste. In 1998, DOE contracted with Bechtel to be the management and integration contractor responsible for environmental management of the DOE's Paducah facility. At that time, Vander Boegh became a Bechtel employee. In February 2000, Bechtel subcontracted the operation of the U Landfill to Weskem and Vander Boegh then became a Weskem employee.

Beginning on February 2, 2001, Vander Boegh sent several E-mails to officials at Weskem and Bechtel identifying the lack of reserve leachate (groundwater) tank space as a potential problem that could affect the operation of the landfill.[3] On March 4, 2001, Vander Boegh sent an E-mail to two Weskem officials entitled "C-746-U Leachate Issues." In this message, Vander Boegh identified problems with the lack of storage capacity in the groundwater tanks, the lack of groundwater transfer equipment and the potential risk to the landfill's 2001 operating permit if remedial action wasn't taken. Subsequently, Vander Boegh experienced a number of personnel actions he believed were motivated by his disclosures. Eventually, Vander Boegh filed a Part 708 complaint on January 4, 2002. [4]

---

[2] The Hearing Officer decision will be referred to either as the IAD or *Vander Boegh I*.

[3] The U Landfill generates groundwater under the landfill itself and this groundwater is pumped to storage tanks for later disposal. The regulatory authority for the Commonwealth of Kentucky, the Kentucky Division of Waste Management (KDWM), issued a permit in February 2001 for the U Landfill. The permit specified that the groundwater tanks must have enough space to store groundwater for 15 days at U Landfill's peak production rate. Additionally, the permit required that enough groundwater must be continually removed from the tanks so that at all times the tanks have the capacity to store another 8 days production of groundwater from the landfill (8-day reserve requirement).

[4] When Vander Boegh submitted his whistleblower complaint, the Employee concerns manager dismissed his complaint for lack of jurisdiction on April 21, 2003. Vander Boegh appealed and in considering the appeal, OHA decided that, in fact, jurisdiction existed to allow the employee concerns manager to continue to process the case. *Gary S. Vander Boegh*, 28 DOE ¶ 87,038 (2003).

The Hearing Officer conducted a hearing on March 4-6, 2003, concerning Vander Boegh's whistleblower complaint.[5] In his July 11, 2003 IAD, the Hearing Officer found that Vander Boegh's February 2, 2001 E-mail to two Weskem officials detailing potential problems with groundwater storage and transfer was protected under 10 C.F.R. Part 708. He further found that none of Vander Boegh's claims of retaliation were barred due to a lack of timeliness.

The Hearing Officer then analyzed the alleged retaliations. The Hearing Officer found that the following personnel actions were retaliatory[6]:

> 1. A March 5, 2001, memorandum from Mr. Dan Watson, a project manager at Weskem regarding the priorities that should be given to various functions of Vander Boegh's employment and warning Vander Boegh about excessive E-mails;
> 2. The Weskem and Bechtel decision to halt construction of an office trailer at the U Landfill site for Vander Boegh;
> 3. Weskem's August 2001 proposal to relocate Vander Boegh's office to the Paducah Plant site;
> 4. Bechtel's proposal to DOE for contract changes (Option A) that would have transferred Vander Boegh's position from Weskem to Bechtel;
> 5. Weskem's low rating of Vander Boegh in several performance categories and critical remarks contained in his 2001 performance review.

To remedy the retaliatory actions taken against Vander Boegh, the Hearing Officer found that Vander Boegh was entitled to the following remedial actions:

> 1. Removal of the March 5, 2001, memo from Vander Boegh's personnel file;
> 2. An Order mandating the construction of an office trailer at the U-Landfill;

---

[5] As an initial matter, before the hearing, the Hearing Officer found that he could not provide a remedy for longstanding salary differences between Vander Boegh and similarly situated employees that predated his protected disclosures. The Hearing Officer also determined that he would not consider claims regarding the inadequacy of Vander Boegh's support staff or the deficiencies of Vander Boegh's office space that existed prior to the alleged protected disclosures discussed *Vander Boegh I*, 28 DOE at 89,281.

[6] The Hearing Officer found that the "aggressive" actions and threats and intimidation taken by Bechtel and Westkem employees towards Vander Boegh did not merit a full determination whether the actions were retaliatory, since Bechtel had counseled the employee responsible for three of the specific acts of threats and intimidation against Vander Boegh and thus there was no need for Part 708 relief. *Vander Boegh I*, 28 DOE at 89,291-92.

3. An Order that Vander Boegh's primary office not be moved from the U-Landfill site for a period of one year without the permission of Vander Boegh;
4. An Order prohibiting Bechtel from recommending any change with respect to Vander Boegh's job for a period of one year without the permission of Vander Boegh;
5. Removal of the 2001 Performance Appraisal from Vander Boegh's personnel file;
6. Preparation of a list of litigation expenses incurred by Vander Boegh;
7. An Order requiring Weskem and Bechtel to pay the litigation expenses detailed in the schedule of litigation expenses prepared by Vander Boegh.

Bechtel and Weskem appealed the IAD. Vander Boegh also filed an appeal claiming that the Hearing Officer had failed to address the issue of whether or not the negative March 5, 2001 memo and the below-average ratings in certain performance categories adversely affected Vander Boegh's pay raise for that year. *See Vander Boegh's Limited Appeal of Order*, Case No. TBH-0007 (August 4, 2003).

On March 19, 2003, during the pendency of the appeal, Vander Boegh filed a second complaint with DOE (Complaint No. 2). *See* Employee Concerns Reporting Form (received March 19, 2003). In Complaint No. 2, Vander Boegh alleged that Bechtel employees had interfered with his ability to perform his proper duties as a Landfill manager in retaliation for his Part 708 complaint. He also alleged that he was improperly forced by Bechtel officials to sell the Lockheed-Martin stock in his 401(k) retirement plan in retaliation for his Part 708 activities.

In an agreement dated January 4, 2004, Vander Boegh and Bechtel settled Vander Boegh's Complaint No. 2. *See Settlement Agreement and Full and Final Release of Claims.* In the Settlement Agreement, Bechtel agreed to undertake a number of actions with regard to the Vander Boegh's job and working conditions in exchange for Complainant's agreement to withdraw Complaint No. 2 and release Bechtel from liability related to that particular complaint.

On February 21, 2006, Vander Boegh filed another whistleblower complaint and later submitted two supplements to the complaint (collectively "February 21 Complaint"). The February 21 Complaint first alleges that Bechtel breached several provisions of the Settlement Agreement relating to an inquiry Bechtel agreed to make concerning Vander Boegh's liquidation of his Lockheed Martin stock and Bechtel's failure to submit disclosure statements that would have identified him as "Landfill Manager" to the KDWM. Vander Boegh alleges that as a result he was thus subject to intimidation by Bechtel and Paducah Remedial Services (PRS), the new M&I contractor at the DOE's Paducah facility, in an effort to accept waste in violation of the DOE waste acceptance criteria and the Commonwealth of Kentucky's administrative regulations. Vander Boegh also alleged that Bechtel had failed to honor a provision in the Settlement Agreement whereby Bechtel employees were forbidden to disapprove WESKEM recommendations for promotions or salary increases for Vander Boegh. In this regard, the Complaint alleged that he had been informed that his continued employment was not guaranteed when PRS and a new subcontractor, Duratek, took over operations at the DOE's Paducah facility. Vander Boegh alleged that he was informed that he could not attend a work force transition meeting, but as a subcontractor employee was offered an opportunity to attend

a "retirement session." Vander Boegh believed that he was being marked for termination due to his Part 708 activities.

Vander Boegh was subsequently terminated from his position on April 23, 2006. On April 14, 2006, Vander Boegh filed a complaint with the Occupational Safety and Health Administration (OSHA) of the United States Department of Labor. This complaint accused Bechtel, Weskem, PRS, Duratek and the DOE of violations of various environmental statutes and alleged the same facts as his February 21 Complaint. On July 13, 2006, the Regional Administrator of OSHA issued findings concerning the April 14, 2006 OSHA Complaint. In her findings, the Regional Administrator found that Weskem, Bechtel and DOE provided clear and convincing evidence that they had not engaged in a conspiracy to take adverse action against Vander Boegh and that PRS and Duratek had provided clear and convincing evidence that they would have hired another landfill manager notwithstanding Vander Boegh's raising safety concerns or filing complaints against them.[7] *See* July 13, 2006, Determination Letter from OSHA to Gary S. Vander Boegh at 4.

On June 29, 2006, the DOE's Environmental Management Consolidated Business Center (EMC) dismissed Vander Boegh's February 21 Complaint for lack of jurisdiction. EMC determined that the February 21 Complaint should be dismissed under 10 C.F.R. § 708.17(c)(3), which provides for dismissal of Part 708 claims for lack of jurisdiction if an individual files a complaint under state or other applicable law with respect to the same facts as those alleged in the 708 complaint. EMC found that Vander Boegh's April 14, 2006, OSHA complaint alleged the same facts as his February 21 Complaint. Vander Boegh then filed an appeal of EMC's dismissal with OHA. In an August 3, 2006 decision, OHA, after examining the DOL's determination of Vander Boegh's complaint, affirmed EMC dismissal of the February 21 complaint, citing 10 C.F.R § 708.17(c)(3). [8] *Gary S. Vander Boegh* (Case No. TBU-0049), 29 DOE 87,010 (2006) (*Vander Boegh II*).

After *Vander Boegh II* was issued, the Acting Director of the OHA, Fred L. Brown, sent a letter to the parties, dated February 1, 2007, in which he ordered the parties to show cause why all of the appeals of *Vander Boegh I* should not be dismissed. The Acting Director stated that, in light of recent events, namely, the change in M&I contractor and subcontractor, rendering the workplace relief granted in *Vander Boegh I* moot and the findings in regard to Vander Boegh's OSHA complaint that held that Vander Boegh's discharge was not retaliatory, dismissal of all appeals might be appropriate. Vander Boegh filed a response to the show cause letter on February 14, 2007.

On February 22, 2007, the Acting Director subsequently issued a Decision regarding all appeals in this matter. *Gary S. Vander Boegh* (Case No. TBA-0007), 29 DOE ¶ 87,018 (2007). The Decision

---

[7] Vander Boegh has appealed this decision and a hearing concerning his OSHA complaint is scheduled for February 26-29, 2008.

[8] The decision noted that there were some alleged retaliations that were not explicitly considered by the DOL but that these retaliations were not of the type that Part 708 was designed to remedy. Additionally, with regard to a claim of retaliation in being forced to sell his Lockheed-Martin stock, the decision found that there was "no meaningful direct relationship" between the stock sale and an adverse personnel action against Vander Boegh. *Vander Boegh II*, 29 DOE at 89,048.

dismissed all of Vander Boegh's whistleblower claims. Subsequently, however, on May 10, 2007, the Acting Director withdrew this Decision because he had been the investigator of Vander Boegh's original whistleblower complaint. To be addressed in this Decision are the appeals by the parties of *Vander Boegh I.*

II. Analysis

Under the Part 708 regulations pertaining to whistleblower hearings, Vander Boegh has the burden of establishing by a preponderance of the evidence that he made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal. *See* 10 C.F.R. § 708.29.

A Hearing Officer's findings of fact are entitled to deference unless they are clearly erroneous. *Kaiser-Hill Company, L.L.C.*, 27 DOE ¶ 87,555 (2000); *Oglesbee v. Westinghouse Hanford Co.*, 25 DOE ¶ 87,510 at 89,001 (1995). With regard to a Hearing Officer's conclusions of law, these are subject to *de novo* review. *Salvatore Gianfriddo*, 27 DOE ¶ 87,544 at 89,221 (1991); *see Pierce v. Underwood*, 487 U.S. 552, 558 (1988).

A. Preclusive effect of Vander Boegh's OSHA complaint on this Appeal

Section 708.17 provides that the Employee Concerns Manager may dismiss a complaint if "[Vander Boegh] filed a complaint under State or other applicable law with respect to the *same facts* as alleged in a complaint under this regulation." 10 C.F.R. § 708.17 (emphasis added). In the current case, the Employee Concerns Manager dismissed the February 21 Complaint on this ground and OHA affirmed the Manager's decision. *See Vander Boegh II.* Vander Boegh's April 14, 2006, OSHA Complaint, however, does not reference the alleged breaches of the Settlement agreement. Nevertheless, Vander Boegh's remedy for a breach of the contractual provisions of the Settlement Agreement lie in civil court, not a DOE whistleblower administrative proceeding. Thus any complaints about a breach of the Settlement Agreement are also dismissed.

Nevertheless the April 14, 2006, OSHA complaint does not pre-empt consideration of the original whistleblower complaint decided in *Vander Boegh I*. Vander Boegh's April 14, 2006, OSHA complaint does not reference any of the whistleblower retaliations or the underlying facts or allegations cited by Vander Boegh that were decided in the March 2003 whistleblower hearing. The April 14, 2006, OSHA Complaint involves facts and circumstances immediately leading up to Vander Boegh's dismissal in 2006, not the retaliations that took place in 2001-2002. Consequently, I find that Vander Boegh's April 14, 2006, OSHA Complaint does not share the same facts as his original whistleblower complaint. Therefore, *Vander Boegh I* is not precluded from consideration on appeal.

B. Vander Boegh I

1. Timeliness of Vander Boegh's Part 708 Complaint

Weskem and Bechtel specifically challenge the Hearing Officer's finding that Vander Boegh's original Part 708 complaint was not time barred by the provisions of Section 708.14. This section provides that an employee must file a complaint by the 90th day after the date he knew or should have reasonably known of the retaliation. 10 C.F.R. § 708.14. Weskem asserts that Vander Boegh filed his Part 708 complaint in January 2002. However, the first alleged retaliatory act claimed by Vander Boegh was the issuance of a memo on March 5, 2001, approximately nine months from the date the complaint was filed. Similarly, the proposal in August 2001 to move Vander Boegh from the U Landfill as well as Weskem's decision in March 2001 to halt construction of an office trailer for Vander Boegh at the U Landfill occurred long before the complaint was filed. Further Weskem argues that Vander Boegh sent Seaborg an August 3, 2001, E-mail in which he states, "I feel I am being attacked on all fronts." Vander Boegh Exhibit K. Consequently, Weskem argues that Vander Boegh must have believed he was experiencing retaliation by August 3, 2001. Weskem goes on to argue that, since Vander Boegh must have known about the retaliation on that date, Vander Boegh's complaint should have been time barred with respect to all of the retaliatory acts found by the Hearing Officer in *Vander Boegh I* described above with the exception of the 2001 performance review.

In his Decision, the Hearing Officer found that none of these retaliations was so obviously adverse in nature that a reasonable person would have known it was retaliatory in nature and that Vander Boegh did not realize the retaliatory nature of these actions until shortly before he filed his Part 708 complaint in January 2002. *Vander Boegh I*, 28 DOE at 89,284. The Hearing Officer found that while Vander Boegh did not view the retaliatory actions as "neutral or innocent" employment actions, the actions themselves were not so overtly punitive in nature that a "reasonable person should have known they were Part 708 retaliations when they occurred." *Vander Boegh I*, 28 DOE at 89,283. Specifically, the Hearing Officer noted that Vander Boegh's response to the March 5, 2001, memo did not indicate that Vander Boegh thought the memo was hostile. Nor could the Hearing Officer find anywhere in the record where Vander Boegh considered the termination of construction of an office trailer retaliation. The Hearing Officer determined that the only evidence as to the date Vander Boegh knew he was being retaliated against was contained in Vander Boegh's January 4, 2002, complaint. The Hearing Officer found that the weight of the evidence indicated that Vander Boegh did not recognize that the various actions taken against him were retaliations until shortly before he submitted his complaint. *Vander Boegh I*, 28 DOE at 89,284. Further, the Hearing Officer concluded that a reasonable person would not have recognized these actions as being Part 708 retaliations until January 2002.

My examination of the record indicates that there is significant evidence to conclude that Vander Boegh in fact must have subjectively known or should have reasonably believed the personnel actions taken were retaliations. Vander Boegh testified as to his feelings when he received the March 5 memorandum on March 5, 2001:

> Well, his tone of his letter was, in my opinion at that point, an attempt to say and put

> in a negative file - begin a negative file on me. And, so, I stopped him, I said, before - would you mind if I read the letter myself? Because I could see that he was beginning to develop a negative file on what was happening.

Tr. at 85.[9] Even before he received this memorandum, Vander Boegh testified, he felt "threatened" by a prior March 4, 2001, E-mail from Watson. Tr. at 84; *see* Vander Boegh Exhibit I. Vander Boegh's response to the March 5 memorandum complains that the memorandum contains "so many inaccuracy and innuendo [sic]." Administrative Record (AR) at 16.

With regard to the proposal to remove him from the U Landfill site, in an August 2, 2001, E-mail Vander Boegh asks:

I respectufully request an explanation of why this move is being proposed by Weskem, especially at this time of great importance affecting the overall ability for
DOE to accept waste.

Vander Boegh Hearing Exhibit J. The question itself indicates that Vander Boegh suspected that the motivation for the proposed move was improper. In an E-mail on August 3, 2001, to Seaborg, in which he references the proposal to move him, Vander Boegh states "I feel I'm being attacked on all fronts, due to a lack of understanding of others (not DOE)." Vander Boegh's Exhibit K. Given the evidence in the record, I believe that the Hearing Officer's determination that Vander Boegh did not realize that he was being retaliated against until shortly before he filed his complaint on January 4, 2002, is clearly erroneous. I find that Vander Boegh reasonably should have known that he was being retaliated against beginning on March 5, 2001. *Cf. Steven F. Collier*, 28 DOE ¶ 87,036 (2002) (Hearing Officer, after examining factual evidence, finds that whistleblower failed to demonstrate that he did not know or could not have reasonably known that an act constituted retaliation). As such, all of the actions that the Hearing Officer determined to be retaliatory should have been barred from consideration with the exception of the 2001 performance review which was issued to Vander Boegh on April 4, 2002. [10]

2. Vander Boegh's 2001 Performance Evaluation by Weskem

[9] Vander Boegh testified concerning the March 5 memorandum "I took this letter and took it to my attorneys, because it bothered me that I received this letter after also getting that Sunday afternoon e-mail." Tr. at 202.

[10] I also note that, with regard to Bechtel's liability, the Hearing Officer found that Bechtel had not met its burden to avoid liability, because it had failed to show that it proposed Option A knowing that it would not have adversely affected Vander Boegh. *Vander Boegh I slip op.* at 34. This analysis misapplies the standard given in Section 708.2. To find liability for Bechtel, the Hearing Officer should have determined whether Bechtel had shown by clear and convincing evidence *that it would have proposed Option A* to DOE notwithstanding Vander Boegh's protected disclosures. The state of Bechtel officials' knowledge as to the potential harm to Vander Boegh or whether Vander Boegh, in fact, would have been harmed is irrelevant to this determination. While the Hearing Officer's analysis started with a statement of the correct standard, he did not use that formulation of the standard in his analysis. Had I not found that the claim against Bechtel was time barred, I would have remanded this issue to the Hearing Officer so that he might make a specific finding using the correct standard.

The sole remaining basis for finding that Weskem retaliated against Vander Boegh is Vander Boegh's 2001 Performance evaluation by Weskem. The Hearing Officer determined in *Vander Boegh I* that Vander Boegh's previous two performance evaluations in 1998 and 1999, issued by Bechtel, were complimentary of his work. *Vander Boegh I*, 28 DOE at 89,294. These evaluations did not contain overall numeric and descriptive ratings. The Weskem 2001 performance evaluation of Vander Boegh gave him an overall rating of "Fully Satisfactory." AR at 597-600. Nine specific performance ratings were rated as "needs improvement" and were rated as a "3" on a scale from "1"- marginal to "9" - "Distinguished." *Vander Boegh I*, slip op. at 36. The Hearing Officer also cited a critical narrative passage written by the evaluator concerning Vander Boegh's ability to work with others. *Vander Boegh I*, 28 DOE at 89,295. The Hearing Officer found that Vander Boegh had met his burden to show that he had suffered a negative personnel action and that his protected disclosures were a contributing factor to that action. Specifically, the Hearing Officer noted that the evaluation was written during the pendency of Vander Boegh's Part 708 complaint. *Vander Boegh I*, 28 DOE at 89,295.

The Hearing Officer went on to find that Weskem had failed to show by clear and convincing evidence that it would have given Vander Boegh the same ratings notwithstanding his protected disclosures. While Weskem presented evidence that its evaluation system was totally different from the prior Bechtel system, testimony from Vander Boegh's Weskem supervisor that the review was an "average review overall," and testimony from the general manager of Weskem expressing his dislike of grade inflation, the Hearing Officer found that Weskem provided insufficient evidence to meet the "clear and convincing" standard. Specifically, the Hearing Officer found that Weskem had failed to demonstrate that Vander Boegh's job performance had actually deteriorated significantly in the areas cited in the 2001 evaluation. *Vander Boegh I*, 28 DOE at 89,295. Additionally, he found that Weskem had failed to produce evidence that other employees with similar performance problems had received similar ratings in their reviews.

On appeal, Weskem argues that it is not appropriate to compare different rating systems. Further, it argues that the Hearing Officer ignored the fact that Vander Boegh's supervisor had to intercede in a number of incidents where Vander Boegh and another individual had "heated discussions" and that the supervisor had to "counsel" Vander Boegh. With regard to the Hearing Officer's opinion that Weskem would have to show that Vander Boegh was treated the same as other employees with similar performance problems, Weskem argues that no other Weskem employee had performance problems similar to Vander Boegh's. Weskem also asserts that even if all of the nine performance ratings cited areas cited by the Hearing Officer as potentially affected by his disclosure were scored as high as possible, the overall score would not have been sufficient to push Vander Boegh to the next higher level of performance evaluation, "Commendable."

After examining the record, I believe that Weskem has provided compelling arguments for me to reverse the Hearing Officer's finding of retaliation regarding the 2001 performance evaluation. An examination of Vander Boegh's 2001 Performance Evaluation Form indicates that Vander Boegh was rated on 12 areas of performance each containing 5 sub-elements which the evaluator could rate from 1 to 9 as described above. A numerical score for each area was obtained by totaling the sub-element scores and dividing by 5. The area scores were added together to obtain an overall score which was used to determine the overall performance rating. For example, a overall score of 46 to

81 would result in an employee receiving a rating of "Fully Satisfactory." AR at 600. Vander Boegh's overall score was 55.4. Even if each of the nine alleged retaliatory lower rated sub-element (each rated as a "3") had been rated instead at "9," the highest score possible, Vander Boegh's overall score would have been 66.2 points, which would not have resulted in a higher overall rating. Vander Boegh would have still only been rated "Fully Satisfactory." Consequently, assuming that Weskem retaliated against Vander Boegh in this manner, Weskem has demonstrated that this retaliation caused no harm to the Complaint's overall rating or pay raise for that year.

3. Vander Boegh's Appeal

Vander Boegh's Appeal argues that the Hearing Officer failed to consider the negative effect that the March 5, 2001, Memo and the 2001 Performance evaluation had on Vander Boegh's pay raise for that year. *See Vander Boegh's Limited Appeal Issue (Case No. TBH-0007)* (August 4, 2003). This argument is unavailing. Even assuming that the Hearing Officer improperly failed to consider these retaliation's effect on Vander Boegh's pay raise and future pay, such an error would be harmless in this case. As demonstrated above, Weskem has demonstrated that the alleged retaliation concerning the 2001 Performance evaluation did not affect Vander Boegh's pay raise. Further, the testimony presented at the hearing indicated that the March 5, 2001, memo was never a part of Vander Boegh's personnel file. Tr. at 492. Consequently, given the facts in front of me, Weskem has demonstrated that Vander Boegh's pay raise was not in fact affected by the two alleged retaliations. Consequently, I will dismiss Vander Boegh's appeal.

4. Summary of Appeal Decision concerning Vander Boegh I

As discussed above, I find that all the actions that the Hearing Officer determined to be retaliatory should have been time barred from consideration with the exception of the 2001 performance review which was issued to Vander Boegh on April 4, 2002. With regard to the 2001 performance review, I find that sufficient factual evidence exists to reverse the Hearing Officer's finding that Vander Boegh was harmed by the lowered scores on the 2001 performance review. I also find, for the reasons discussed above, that Vander Boegh's appeal is without merit. Consequently, I will grant Weskem's and Bechtel's appeals and deny Vander Boegh's appeal.

It Is Therefore Ordered That:

(1) The Appeals filed by Weskem, LLC and Bechtel Jacobs, LLC from the Initial Agency Decision issued on July 11, 2003, concerning Gary S. Vander Boegh's Part 708 complaint are hereby

granted. All remedial actions ordered by the Hearing Officer in the Initial Agency Decision are hereby reversed. Bechtel Jacobs, LLC and Weskem, LLC need not undertake any of the remedial actions ordered by the Hearing Officer in the July 11, 2003, Initial Agency Decision.

(2) The Appeal filed by Gary S. Vander Boegh from the July 11, 2003, Initial Agency Decision is hereby denied.

(3) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

Poli A. Marmolejos
Acting Director
Office of Hearings and Appeals

Date: December 18, 2007

Department of Energy
Washington, DC 20585

JUL 22 2009

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Appeal

Name of Petitioner:	Dean P. Dennis
Date of Filing:	March 2, 2009
Case Number:	TBA-0072

Dean D. Dennis filed a complaint of retaliation under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Mr. Dennis alleged that he engaged in protected activity and that his employer, National Security Technologies, LLC (NSTec), subsequently terminated him. An Office of Hearings and Appeals (OHA) Hearing Officer denied relief in *Dean P. Dennis,* Case No. TBH-0072,[1] and Mr. Dennis filed the instant appeal. As discussed below, the appeal is denied.

I. Background

The DOE established its Contractor Employee Protection Program to "safeguard public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). To that end, the program prohibits a contractor from retaliating against an employee who discloses certain information or engages in certain activity. 10 C.F.R. § 708.1.[2]

If an employee believes that a Part 708 retaliation has occurred, the employee may file a complaint requesting that the DOE order the contractor to provide relief. *Id.* The employee has the burden of showing, by a preponderance of the evidence, that the employee engaged in protected activity and that the protected activity was a contributing factor to the alleged retaliation. 10 C.F.R. § 708.29. If the employee meets that burden, the contractor has the burden of showing, by clear and convincing evidence, that it would have taken the same action in the absence of the protected activity. *Id.*

---

[1] Decisions issued by the Office of Hearings and Appeals after November 16, 1996, are available on the OHA website located at http://www.oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm. The Hearing Officer's Decision in this matter will be cited henceforth as "H.O. Decision."

[2] Part 708 concerns (i) disclosures of information concerning substantial violations of law, substantial dangers to health and safety, and fraud, gross mismanagement or waste of funds, or abuse of authority; (ii) participation in Congressional proceedings; and (iii) refusals to participate in dangerous activities.

The facts surrounding Mr. Dennis's complaint have been set forth in detail in the Hearing Officer's Decision from which Mr. Dennis has taken this appeal, and a full recounting will not be reproduced here. The facts pertinent to this appeal are as follows. Mr. Dennis's educational background is in finance and management. In 2003 he began working at the Nevada Site Office as a contractor employee. Due to a reorganization of his initial employer, Mr. Dennis's position was abolished, and his new position was that of a Senior Operations Specialist. He was asked to assume additional duties as an Information Systems Security Officer (ISSO) at the Sensitive Compartmented Information Facilities (SCIF)[3] at the Remote Sensing Laboratory (RSL) and the Nevada Intelligence Center. *See* Ex. D. Mr. Dennis testified that he had no background or training for either the Senior Operations Specialist position or the ISSO position. When NSTec became the management and operating (M&O) contractor for the NNSA's Nevada Test Site and the Nevada Site Office in 2006, it retained Mr. Dennis in the same position. Although NSTec management recognized that Mr. Dennis had no background in the positions that he occupied, it believed that he was qualified for his positions with "some on-the-job training." Mr. Dennis participated in several training programs that covered cyber security and other security-related topics. H.O. Decision at 5.

Due to the nature of his position, Mr. Dennis reported to several supervisors and managers. Ron Gross, Manager of the Special Programs Department, was his manager of record. For technical matters, he reported to Jeff Harvey, the Information Systems Security Manager (ISSM). For functions he performed in the RSL SCIF, he reported to Loretta DeVault, the Deputy Field Intelligence Element (FIE) Director and Special Security Officer, or, in her absence, Rhonda Fulkerson, the Alternate Special Security Officer. All of these supervisors reported to Alan Will, the Deputy Director of the RSL and the Director of FIE. *Id.* at 6.

Early in 2007, the DOE directed NSTec to implement new procedures to improve the safeguarding of classified and non-classified media. His reaction to these new procedures caused two of his supervisors, Mr. Gross and Ms. DeVault, to raise concerns with Mr. Will. Among the concerns they brought to Mr. Will, in separate conversations, were that Mr. Dennis sought permission to use a thumb drive, which had been banned under the new procedures; that he had gained access to a large number of classified documents as a derivative classifier; that he often worked after regular business hours, in isolated circumstances; that he was suffering financial and emotional stress due to a divorce and an automobile accident; that he was accessing classified sites on the computer that he should not have; that he had often expressed his opinion that the new procedures were ineffective; and that he had on at least one instance stated that, as an insider with his responsibilities, he had the ability to circumvent the procedures without being detected. Mr. Will communicated these concerns to NSTec senior management and to the DOE overseer of NSTec's operations in April 2007. *Id.* at 6-9.

---

[3] A SCIF is an "accredited area, room, group of rooms, or installation where Sensitive Compartmented Information may be stored, used, discussed, and/or electronically processed." *See* DOE Order 5639.8A at http://www.directives.doe.gov.

In mid-May 2007, Mr. Dennis reported to Mr. Harvey that he had discovered tracking software on his computer. Mr. Harvey immediately brought this matter to the attention of Ms. DeVault and Mr. Will. On May 31 and June 1, 2007, Mr. Dennis sent e-mails to Mr. Will requesting an opportunity to discuss with him the negative impact of the new procedures on his work responsibilities; this meeting was scheduled for June 6, 2007. At roughly the same time, the DOE notified NSTec that Mr. Dennis was no longer to work in the SCIF. NSTec senior management then met and unanimously agreed to terminate Mr. Dennis's employment. Mr. Dennis was terminated on June 6, 2007. *Id.* at 9-10.

On August 10, 2007, Mr. Dennis filed a Part 708 Complaint against NSTec with the local DOE Employee Concerns Program (ECP) Office. After efforts to engage in mediation proved unsuccessful, the ECP Office transferred the Complaint to OHA for an investigation, followed by an administrative hearing. In his Complaint, as clarified in conversations with the OHA investigator, Mr. Dennis alleged that he made six disclosures to NSTec management that led to his termination, four related to security matters and two related to management issues. *Id* at 2-3. At the hearing, the Hearing Officer received evidence regarding all six alleged disclosures, but ultimately held, in her February 12, 2009, Decision, that only one—Mr. Dennis's reporting that there was tracking software on his classified computer—was a protected disclosure under Part 708. *Id.* at 3, 13-14. She also determined that the disclosure was a contributing factor in his termination, and therefore found that Mr. Dennis had successfully met his burden under the Part 708 regulations. *Id.* at 15-16. Mr. Dennis did not ultimately prevail in his request for relief under Part 708, however, because the Hearing Officer also found that NSTec had proven by clear and convincing evidence that it would have terminated Mr. Dennis even if he had not made a protected disclosure. *Id.* at 16-20.

On March 2, 2009, Mr. Dennis filed the instant appeal. In his appeal, Mr. Dennis challenges the Hearing Officer's finding that NSTec met its burden of demonstrating, by clear and convincing evidence, that it would have terminated him even if he had not made his protected disclosure. Dennis Br. at 2. His primary argument is that the Hearing Officer relied on the testimony of Loretta DeVault, despite the fact that she had found her testimony on one occasion not to be credible. *Id.* at 3-6. He also contends that Mr. Will was aware that Mr. Dennis had a concern about tracking software before he was terminated, *id.* at 7, and that NSTec's claim that it had lost trust in Mr. Dennis is not supported by the evidence. *Id.* at 8-9. Finally, Mr. Dennis argues that his immediate termination, without following a process of progressive discipline, did not adhere to NSTec's company policy and was without precedent. *Id.* at 9, 11-12. Throughout his brief, Mr. Dennis argues that the Hearing Officer relied on non-credible testimony, ignored inconsistent testimony, and misinterpreted evidence, all of which caused her to reach her erroneous conclusion. He also presents new facts in his brief to demonstrate that the conclusion is wrong. After careful consideration of the various bases for Mr. Dennis's appeal, I have determined, as explained below, that the Hearing Officer was correct when she concluded that NSTec met its evidentiary burden.

II. Analysis

The standard of review for Part 708 appeals is well-established. Conclusions of law are reviewed *de novo. See Curtis Hall,* Case No. TBA-0002 at 5 (2008). Findings of fact, however, are overturned only if they are clearly erroneous, giving due regard to the trier of fact to judge the credibility of the witness. *Id.; Salvatore Gianfriddo,* Case No. VBA-0007 (1999).

As stated above, Mr. Dennis has limited his appeal to a challenge of the Hearing Officer's conclusion that NSTec met its burden of showing by clear and convincing evidence that it would have terminated Mr. Dennis even if he had not made a protected disclosure. My review of the testimony and other evidence in this proceeding is therefore restricted to those portions of the evidence that had a bearing on that conclusion. For the reasons set forth below, I find that the Hearing Officer's findings of fact are not clearly erroneous and her conclusions of law are sound. Consequently, the Hearing Officer's decision will be allowed to stand as written.

A. The Credibility of Loretta DeVault as a Witness and NSTec's "Loss of Trust"

A substantial portion of Mr. Dennis's appeal is devoted to attacking Ms. DeVault's credibility, both as a supervisor reporting to management and as a witness at the hearing. Mr. Dennis argues that Ms. DeVault was the source of all complaints that NSTec management received about Mr. Dennis, and it should not have given credence to her complaints. Dennis Br. at 3-4. He further argues that NSTec management's alleged loss of trust in Mr. Dennis arose solely from those complaints, and therefore was unfounded. *Id.* at 4. Whether NSTec was reasonable in believing Ms. DeVault's complaints about Mr. Dennis's behavior is not a proper subject for appeal in this forum. This appellate review may consider whether the Hearing Officer erred in her findings of fact or conclusions of law, but it is not a vehicle for finding whether the contractor was at fault for misplacing its belief in one of its employees.

I may therefore review whether the Hearing Officer properly supported her conclusion that NSTec would have terminated Mr. Dennis in the absence of his disclosure regarding tracking software. NSTec's stated position is that (1) it terminated Mr. Dennis because it "lost trust" in him, and (2) that loss of trust was predicated upon information its management received from his supervisors, including Ms. DeVault. Therefore, if NSTec management knew that the information it received from Ms. DeVault was not reliable, then its reliance on that information would demonstrate that it was less than candid in claiming a loss of trust, and the Hearing Officer improperly concluded that the purported loss of trust was the basis for Mr. Dennis's termination. After reviewing the record in this proceeding, I conclude that there is simply no evidence that would have supported the Hearing Officer finding that NSTec management had any reason to question the accuracy of the concerns Ms. DeVault expressed concerning Mr. Dennis's behavior.

In her Decision, the Hearing Officer did find Ms. DeVault's testimony not credible in one respect: that she did not recollect that Mr. Harvey had reported the discovery of

unauthorized tracking software on Mr. Dennis's computer. H.O. Decision at 13 n.17. In his appeal, Mr. Dennis sets forth the following argument: if Ms. DeVault was not credible regarding her recollection in the above instance, then none of her testimony should be considered credible regarding any of the complaints she raised to NSTec management about Mr. Dennis. Dennis Br. at 3. Mr. Dennis contends that Ms. DeVault was factually inaccurate in three areas: her recollections of certain meetings, her reporting of Mr. Dennis's financial and emotional difficulties to management, and her testimony that Mr. Dennis had asked her to research the clearance of a former girlfriend. *Id.* at 4-5. As support for these accusations, he refers to portions of his own testimony at the hearing and offers new testimony and opinion in the body of the appeal. For example, he claims that Ms. DeVault included "fictitious allegations" regarding his divorce and an insurance claim when she spoke to Mr. Will about her concerns, and reiterates facts and dates from his testimony to establish that those difficulties were no longer relevant at the time Ms. DeVault reported them to Mr. Will. *Id.* at 5; *see* Tr. at 480, 488. In addition, he objects to Ms. DeVault's testimony, at Tr. at 381, that, at Mr. Dennis's request, she obtained the security status of a former girlfriend. In his appeal, he contends that "[t]he truth regarding this can easily be verified as this simply didn't happen," and then submits his version of the events. Dennis Br. at 5-6.

Mr. Dennis's contention that the Hearing Officer erred in finding any of Ms. DeVault's testimony credible is flawed in two respects. First, as trier of fact, the Hearing Officer assessed the credibility of all of the witnesses who appeared before her, including Ms. DeVault. The Hearing Officer saw the witnesses testify and had the opportunity to observe their demeanor. She was in a position to consider the testimony in conjunction with the documentary evidence presented at the hearing. Although she found that, in one particular instance, Ms. DeVault's testimony was not credible, the Hearing Officer clearly determined that the remainder of Ms. DeVault's testimony was reliable. *See, e.g., id.* at 8-9. That determination is not clearly erroneous merely because the Hearing Officer found one portion of the witness's testimony unreliable. The Hearing Officer observed Ms. DeVault as she testified, and received additional testimony, such as that of Mr. Gross and Mr. Will, that permitted her to assess the reliability of Ms. DeVault's testimony regarding what she divulged to Mr. Will. Tr. at 290-97 (testimony of Gross), 384 (testimony of Will). The references to Mr. Dennis's testimony and the recitations of facts that Mr. Dennis has produced in his appeal brief do not in fact support his challenge to Ms. DeVault's credibility as a witness at the hearing, because they do not establish that she provided Mr. Will with information different from that which she testified she did. Instead, they address his contention that the concerns she expressed to Mr. Will contained "fictitious allegations." Even if they successfully established that Ms. DeVault's concerns were not based in fact, they do not constitute evidence that Ms. DeVault did not testify credibly at the hearing about the concerns she expressed to Mr. Will. Consequently, I cannot find that the Hearing Officer was clearly erroneous in accepting Ms. DeVault's testimony as credible in this regard.

Second, Mr. Dennis appears to assume that if he can establish that NSTec relied on false information in its deliberations regarding his June 2007 termination, then the Hearing Officer was wrong to conclude that NSTec would have terminated Mr. Dennis absent his

protected disclosure. That assumption lacks logic. Mr. Dennis does not claim that Ms. DeVault's testimony was untrue regarding her recollection of which concerns she brought to Mr. Will's attention; the Hearing Officer's enumeration of that information is not challenged. What is challenged, however, is the factual bases for those concerns. Mr. Dennis has supported his challenge with references to his own testimony, which the Hearing Officer has already considered, and with new versions of facts, of which the Hearing Officer was not aware. The critical question regarding Mr. Dennis's termination was what information the decisionmakers relied upon in reaching their decision. However, even if we were to assume that the concerns Ms. DeVault provided to Mr. Will, and through him to senior management, were falsified, and even if we were also to assume that NSTec relied on those concerns when it decided to terminate Mr. Dennis because it had "lost trust" in him, it does not follow that the Hearing Officer's conclusion was incorrect.[4] Nothing in the record indicates that the decisionmakers believed or had any reason to believe that any information before it had been deliberately falsified or was unreliable. If NSTec had no reason to believe the concerns were factually unfounded, the Hearing Officer correctly concluded that NSTec lost trust in Mr. Dennis and would have terminated him even in the absence of his protected disclosure.[5]

Moreover, the record reflects that Mr. Dennis is incorrect in contending that NSTec management relied solely on Ms. DeVault's concerns when it determined that it had "lost trust" in Mr. Dennis. Mr. Will had transmitted Mr. Gross's concerns, as well as Ms. DeVault's, to senior management and to the DOE in early April 2007. Tr. at 384, 389. In addition, at the time of its decision, NSTec management also knew that DOE no longer supported Mr. Dennis working in the SCIF. *Id.* at 389. Thus, NSTec management clearly had other, independent information before it when it decided to terminate Mr. Dennis and, even if the decisionmakers had discounted Ms. DeVault's concerns, the Hearing Officer had a sufficient basis to conclude that NSTec would have terminated Mr. Dennis absent his protected disclosure, based on its "loss of trust" in Mr. Dennis.

B. Whether Mr. Will Knew Mr. Dennis Was Aware of the Tracking Software

---

[4] I note that the Hearing Officer found no credible evidence to support NSTec's concern about Mr. Dennis's alleged financial difficulties. H.O. Decision at 17 n.21. Discounting this alleged concern, she nevertheless concluded that NSTec management had "lost trust" in Mr. Dennis.

[5] Although Mr. Dennis did not raise this argument, there is one situation in which Ms. DeVault's alleged falsification might have a bearing on this conclusion. If Ms. DeVault, as Mr. Dennis's supervisor, had fabricated her concerns in response to Mr. Dennis making a protected disclosure to her, in an effort to have his employment adversely affected, her fabrications might constitute an act of retaliation under Part 708. Under the facts presented in this case, however, this result is not possible. Ms. DeVault discussed her concerns with Mr. Gross and Mr. Will before Mr. Gross issued his performance evaluation of Mr. Dennis in March 2007. Tr. at 257-58 (testimony of Mr. Gross), 282-83 (testimony of Mr. Will). Mr. Dennis testified that he reported his discovery of the tracking software to Mr. Harvey, who immediately reported it to Ms. DeVault, in mid-May 2007. *Id.* at 92, 94, 96. Therefore, because Mr. Dennis made his protected disclosure about two months after Ms. DeVault delivered her concerns to management, even if those concerns were falsified as Mr. Dennis claims, his protected disclosure could not possibly have been a contributing factor to her expression of concerns.

In his appeal, Mr. Dennis contends that Mr. Will knew that he was aware of tracking software on his computer and had asked for a meeting with Mr. Will on that topic. Dennis Br. at 7. Mr. Will testified at the hearing that he believed Mr. Dennis had requested the meeting in order to discuss access procedures in the SCIF. Tr. at 378-81. To establish that Mr. Will was incorrect in his belief, Mr. Dennis cites a portion of a June 1, 2007, e-mail message from Mr. Dennis to Mr. Will, which reads, "I don't even know what the rules are. At first, I had to be let in, which doesn't pose a problem for me at all . . . but now I have to be 'escorted' but not really." Dennis Br. at 7-8.

I fail to see how the cited language establishes that Mr. Will's belief was other than that to which he testified. Moreover, I fail to see what bearing Mr. Will's belief regarding the scope of the requested meeting has on the Hearing Officer's finding that NSTec had met its burden. Mr. Will was clearly aware of the tracking software issue, Tr. at 403, even if he did not believe it to be the topic Mr. Dennis wanted to discuss with him. The Hearing Officer acknowledged that NSTec management was aware of Mr. Dennis's knowledge of the tracking software, because she found that Mr. Dennis had made a protected disclosure in that regard. H.O. Decision at 14. She nevertheless found that NSTec would have terminated Mr. Dennis in the absence of his protected disclosure. H.O. Decision at 19. Mr. Dennis has not presented any argument regarding the tracking software that convinces me that her conclusion should be overturned.[6]

C. Whether NSTec Followed Its Termination Procedures

In his appeal, Mr. Dennis contends that NSTec's failure to follow its own procedures when it terminated his employment is additional evidence that the Hearing Officer erred in finding that NSTec had met its burden. Mr. Dennis argues that he should have been subjected to progressive discipline rather than immediate termination.[7] Dennis Br. at 6, 9. He also challenges NSTec's contention that other employees who had been immediately terminated were similarly situated to Mr. Dennis. *Id.* at 9.[8]

---

[6] Mr. Dennis also asserts that Mr. Will admitted in his testimony that "the decision to speed up Dennis' termination was based on his protected disclosure that he found" the tracking software. Dennis Br. at 11-12 (citing Tr. at 403). I have reviewed that portion of Mr. Will's testimony and have determined that the context in which it was presented does not in any way support Mr. Dennis's interpretation: the "decision" that Mr. Will states needs to be made refers to reaching a conclusion in an ongoing cyber security investigation, not reaching a conclusion regarding Mr. Dennis's possible termination.

[7] He also finds NSTec at fault for "not using the DOE Administrative Review process for security matters" and for not "even asking my client any questions." I note that administrative review is one stage of adjudication of an individual's eligibility for access to classified material or information under 10 C.F.R. Part 710. It has no bearing on employment determinations and thus does not constitute an alternative mechanism for resolving workplace concerns raised by an employee's managers.

[8] Mr. Dennis also contends that the Hearing Officer ignored evidence that the decision to terminate him had been made before the meeting of the NSTec managers at which his termination was ostensibly decided. *Id.* at 11 (citing Mr. Gross's testimony, Tr. at 305, that a few days earlier he had been told that Mr. Dennis was going to be terminated). As this is the totality of the evidence on this matter, and it is unclear even who relayed this information to Mr. Gross, let alone its accuracy, I find that it is not reliable enough to prove, as Mr. Dennis alleges, that NSTec "lied about its [termination] process." Dennis Br. at 11.

To place this argument in the appropriate context, the Hearing Officer addressed NSTec's compliance with existing employee relations procedures in her application of a Federal Circuit opinion that provides guidance on whether an employer has met its evidentiary burden in a Part 708 case. *See Kalil v. Dep't of Agriculture,* 479 F.3d 821 (Fed. Cir. 2007). *Kalil* sets forth three factors to consider in evaluating the employer's burden. The third factor is "any evidence of similar action against similarly situated employees . . ." *Id.* at 824. After finding that the first two factors weighed in favor of NSTec having met its burden, the Hearing Officer considered the evidence relevant to this factor: that the company president admitted he had never previously fired anyone else for concerns related to national security, but that the employee relations manager testified that the company had terminated other employees when it determined that termination was "the immediate and only discipline." Tr. at 467. Acknowledging that NSTec had not had "an employee similarly situated to Mr. Dennis," the Hearing Officer found that NSTec had demonstrated that "it has disciplined other employees through immediate termination when it deemed conduct to be so serious that it resulted in management losing 'trust' in an employee." H.O. Decision at 19.

I find no error in the Hearing Officer's finding that, despite the non-existence of a similarly situated employee who faced similar action by the employer, NSTec satisfied the third factor of the test set forth in *Kalil.* Even if Mr. Dennis's behavior was not identical to the behavior that led to the termination of other employees—and it clearly was not—the record supports the Hearing Officer's finding that the company had lost trust in Mr. Dennis and deemed his conduct to be extremely serious. Moreover, NSTec established that, in such circumstances, it had immediately terminated employees, as it did Mr. Dennis. Taking into consideration that these findings of fact affected only one of three factors the Hearing Officer considered, and that the Hearing Officer found that NSTec clearly met two of the three *Kalil* factors in addition to this factor, I agree with the Hearing Officer that under the *Kalil* test, the company met its burden of proving that it would have taken the same action against Mr. Dennis even if he had not made his protected disclosure.

D. Other Grounds for Appeal

In his appeal, Mr. Dennis raises a number of additional challenges to the Hearing Officer's conclusion that NSTec met its evidentiary burden, and he is therefore not entitled to relief under Part 708. He claims that the Hearing Officer misinterpreted or misunderstood some of the evidence in the record. Examples of such evidence are whether, in his role as a derivative classifier, he was in fact aggressively pursuing classified information, Dennis Br. at 8-9, and whether he was in fact an insider threat to national security, when he told Ms. DeVault and others of the security breach he could inflict were he so inclined. *Id.* at 10-11. Mr. Dennis also questions why his complaints about the prohibition against using thumb drives raised a concern, when Mr. Will himself testified that many employees were unhappy with the new rule. *Id.* at 10. As with other facts in evidence in this proceeding, Mr. Dennis's opinion of their significance to his termination is at odds with the opinions of a number of NSTec managers, including those to whom he made statements and those responsible for his termination. Despite the

divergence of opinion and Mr. Dennis's reiteration of his interpretation of the import of these facts, I cannot find that the Hearing Officer was clearly erroneous in finding the facts as she did. Consequently, I cannot overturn her decision on these grounds.[9]

III. Conclusion

The Hearing Officer correctly concluded that NSTec met its burden of showing, by clear and convincing evidence, that it would have terminated Mr. Dennis even if he had not made a protected disclosure.

It Is Therefore Ordered That:

(1) The Appeal filed by Dean P. Dennis on March 2, 2009 (Case No. TBA-0072), of the Initial Agency Decision IAD) issued on February 12, 2009, under 10 C.F.R. Part 708 is hereby denied.

(2) This Appeal Decision shall become the Final Decision of the Department of Energy unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this Decision. 10 C.F.R. § 708.35.

Poli A. Marmolejos
Director
Office of Hearings and Appeals

Date: JUL 22 2009

[9] Finally, Mr. Dennis demands that certain passages of the Hearing Officer's decision be stricken, as they consist of "speculative remarks," *id.* at 11, and "speculative conclusions . . . that are inappropriate and potentially damaging to Mr. Dennis's reputation." *Id.* at 10. In fulfilling her duties to reach findings of facts and conclusions of law, the Hearing Officer must draw inferences that are based on her interpretation of the evidence before her. To the extent that any of her inferences appear derogatory, I do not find them excessively inflammatory or beyond her proper role as Hearing Officer.

December 3, 2009

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Appeal

Names of Petitioners:	Billy Joe Baptist
Date of Filing:	May 27, 2009
Case Number:	TBA-0080

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on May 7, 2009, involving a complaint of retaliation filed by Billy Joe Baptist ("Baptist," or "Complainant") under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his complaint, Baptist alleged that his former employer CH2M-WG Idaho (CWI) retaliated against him for engaging in activity protected under Part 708. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that five of the six alleged acts of retaliation set forth in the complaint are time-barred under Part 708. The Hearing Officer also granted summary judgment to CWI regarding the sixth act of retaliation, Baptist's termination, and then dismissed the complaint without a hearing. Baptist appealed the decision. As set forth below, the appeal is denied.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned or-leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they "reasonably and in good faith" believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. 10 C.F.R. § 708.5 (a). Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"] will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations set forth at 10 C.F.R. Part 708 establish administrative procedures for the processing of complaints. Under these regulations, review of an IAD, as requested by Baptist, is performed by the Director of OHA. 10 C.F.R. §708.32.

B. History of the Complaint Proceeding

For purposes of review, I set forth the pertinent facts as averred in the Report of Investigation (ROI) and in the subsequent IAD.[1] CWI is the management and operating contractor for the Idaho Cleanup Project at the DOE Idaho National Laboratory (INL) site. Baptist was a CWI employee who was appointed to serve on the Electrical Safety Committee (ESC), a group that monitored the implementation of the Electrical Safety Improvement Plan. Baptist alleges that two weeks after CWI won a DOE safety contest in January 2006 that recognized Baptist's personal efforts, the then-president of CWI designated Baptist as a Subject Matter Expert (SME) for electrical safety.[2] Baptist was responsible for conducting independent assessments and in May 2007, he submitted a report alleging safety and regulatory violations concerning a transformer on the site. At a June 4, 2007, ESC meeting, Baptist expressed his safety concerns about the transformer to CWI senior management. Baptist alleges that he was removed from his supervisory duties, his duty as a SME, and his positions on several CWI safety committees immediately after the meeting. ROI at 6.

Baptist took personal leave for a medical condition after the ESC meeting on June 4, 2007. On June 6, 2007, he completed an application for short-term disability benefits (STD) with CWI's insurance carrier, Cigna Insurance Group. ROI at 7. Debbie Anglin, CWI Human Resources Benefits Specialist, assisted Baptist with his application. Shortly thereafter he had surgery for his condition and began to receive STD payments. In October 2007, Cigna contacted CWI to determine if Baptist could return to work. Baptist's physician cleared him to return to work with a 15-pound weight restriction and Anglin asked Baptist's supervisor if a light duty position was available.[3] She then told Cigna that CWI could not accommodate Baptist in a light duty position. IAD at 4.

In December 2007, Baptist was approved for long term disability benefits (LTD) when his STD ran out. He requested Inactive Employee Status (IES) on Dec 19, 2007, and his manager approved the IES request retroactive to July 2007. [4] ROI at 7; IAD at 4.

---

[1] The events leading to the filing of Baptist's complaint are fully set forth in the IAD. *See Billy Joe Baptist*, Case No. TBH-0080 (2009). Decisions issued by OHA are available on the OHA website located at http://www,oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

[2] CWI denies that Baptist was designated an SME. ROI at 4.

[3] Baptist's managers did not recall speaking to Anglin about a new position for Baptist.

[4] IES is a form of unpaid leave available to regular full-time CWI employees who have worked for at least one year and need to be absent from work due to illness or injury. ROI at 15. There are four options for an employee whose IES status has expired: (1) return as a full time employee after receiving medical clearance; (2) return to work as a part time employee after receiving medical and management clearance; (3) take an unpaid administrative leave of absence; and (4) termination. IES required CWI to return an employee to the same or equivalent position, assuming that the employee complied with the requirements to obtain proper clearances. Response at 12, fn 50. Complainant does not dispute that he understood the policy that he would be terminated for failure to get the proper medical clearances to return to work. CWI asserts that its policy is that all employees who are on IES for one year and who have not sought reinstatement or other employment with the company during that year are automatically terminated. IAD at 4, fn 10.

On January 10, 2008, Baptist filed a complaint under the DOE Worker Health and Safety Program, 10 C.F.R. Part 851.[5] On March 6, 2008, Baptist filed a whistleblower complaint under Part 708. He alleges that he made two protected disclosures: (1) he submitted a safety report in May 2007, and (2) he discussed his safety concerns at the June 4, 2007, ESC meeting. In the whistleblower complaint, Baptist described five acts of alleged retaliation (Retaliations 1-5): (1) CWI relieved him of his supervisory duties; (2) CWI removed him from his responsibilities as a SME for electrical safety; (3) CWI removed him from the Project Evaluation Board PEB; (4) CWI removed him from Energy Facilities Contractor's Group Committee (EFCOG) committee; and (5) CWI removed him from the PLN-1971 Board. According to Baptist, Retaliations 1-5 occurred on January 4, 2007, the day of the ESC meeting. He also claimed that his termination in June 2008 at the expiration of his IES was the sixth retaliatory act (Retaliation 6).

CWI sent Baptist a letter on April 29, 2008, stating that if he wished to return to work he needed to obtain medical clearances as specified in his Request for IES.[6] Baptist never indicated that he sought to return to work and never contacted the INL medical dispensary to obtain a medical clearance to return to work. He also assumed that CIGNA would explore a new position for him at CWI. Response at 11. Baptist asserts that because of the weight restriction on his physical activities, he could only return to work as an SME for Electrical Safety. ROI at 8. CWI terminated his employment on June 10, 2008, as Baptist had anticipated in his complaint, stating that his IES status had expired.

The Idaho Operations Office referred the complaint to OHA for an investigation. An OHA investigator issued a Report of Investigation (ROI) on December 19, 2008. 10 C.F.R. §§ 708.22-23. In the ROI, the investigator concluded that the first five retaliations were "time-barred [o]n their face" because they occurred in June 2007, ten months prior to the filing. ROI at 9.[7] Because he did not file his complaint until March 2008, the investigator concluded that Baptist had the burden of showing that he had good cause for missing the 90-day deadline. [8] She also found that Retaliation 6, Baptist's anticipated termination on June 2008, fell within the regulatory deadline. *Id.*

On February 3, 2009, an OHA Hearing Officer issued a Show Cause Order, asking Baptist to show why Retaliations 1-5 were not barred from consideration under the 90-

---

[5] The DOE Worker Safety and Health Program establishes worker safety and health requirements that govern the conduct of contractor activities at DOE-controlled workplaces. *See* 10 C.F.R. Part 851.

[6] According to the request, an employee who wishes to return to work requires written release from their personal physician and then must report to the nearest INL medical dispensary to obtain a medical clearance.

[7] She found that Baptist was aware of the retaliation in June 2007 when it occurred because he had visited a doctor for work-related stress and the doctor had prescribed medicine (blood pressure, nerves, and sleeping pills) for stress-related ailments prior to the alleged retaliations. ROI at 9.

[8] Part 708 states that "[you] must file your complaint by the 90th day after the date you knew, or reasonably should have known, of the alleged retaliation." 10 CFR § 708.14 (a).

day deadline in 10 C.F.R. 708.14. On February 18, 2009, CWI filed a Motion for Summary Judgment asking OHA to dismiss the final alleged retaliatory act, Baptist's termination. Baptist filed responses to the Show Cause Order and the Motion for Summary Judgment on April 20, 2009. CWI filed a reply to Baptist's Response to the Motion for Summary Judgment on April 27, 2009.

C. The Initial Agency Decision (IAD)

The IAD set forth the Hearing Officer's decision regarding the Show Cause Order, the Motion for Summary Judgment and Baptist's Complaint. The Hearing Officer concluded that: (1) Retaliations 1-5 were time-barred from his consideration; and (2) CWI met its burden of showing that it would have terminated Baptist in June 2008 (Retaliation 6) notwithstanding his protected disclosures because Baptist's IES status expired in June 2008. In the IAD therefore, the Hearing Officer granted CWI's Motion for Summary Judgment and dismissed Baptist's complaint.

(1) Timeliness of Retaliations 1-5

In his response to the Show Cause Order, Baptist argued that his complaint should not be deemed untimely because: (1) DOE-Idaho field officials accepted the complaint; (2) CWI failed to investigate his whistleblower complaint after he contacted the benefits specialist in June 2007 and told her about the retaliation; and (3) he worked in a hostile work environment, making the retaliations part of a continuing violation by CWI. IAD at 6. The Hearing Officer was not persuaded by any of these arguments.

First, the Hearing Officer found that mere acceptance of a complaint by the field office does not cure an untimely filing. He cited OHA precedent in support of his finding. *See, e.g., Ronald E. Searle*, Case No. TBU-0065 (2007) (case dismissed for failure to comply with 90-day deadline). Second, the Hearing Officer concluded that the failure of CWI's Benefits Specialist to investigate Baptist's complaint was not an act of retaliation against Baptist. Instead he found that Baptist should have had no reasonable expectation that a conversation with the CWI Benefits Specialist about Baptist's disability benefits would trigger a whistleblower investigation. IAD at 7. The Hearing Officer was also concerned that Baptist did not raise the issue of failure to investigate until one year after filing his whistleblower complaint. IAD at 7.

Finally, the Hearing Officer found no evidence of a hostile work environment. Making reference to the Supreme Court definition of a hostile work environment as "an environment where the workplace is sufficiently permeated with harassment that is sufficiently severe or pervasive to alter the conditions of the victim's employment and create an abusive working environment," the Hearing Officer concluded that those elements were not present in Baptist's complaint. IAD at 8 (quoting *Meritor Savings Bank, FSB v. Vinson*, 477 U.S. 57 (1986)). Thus, the alleged "failure to investigate" was not a continuing violation that would permit the complaint to proceed to hearing with alleged retaliations that fell outside the 90-day filing deadline. Therefore, the Hearing

Officer concluded that Baptist did not provide evidence of a hostile work environment at CWI.

(2) Retaliation 6 - Complainant's Termination

In its Motion for Summary Judgment, CWI argued that there were no disputed material facts concerning Baptist's complaint and that the facts demonstrate as a matter of law that his protected disclosures could not have been a contributing factor to his termination because: (1) CWI's Benefits Specialist had no constructive knowledge of Baptist's protected disclosures; (2) there was no temporal proximity between the disclosures and Baptist's termination due to the 12 months between those events; and (3) Baptist was terminated simply for failure to comply with the requirements for reinstatement under CSI's long-standing IES policy. CWI argued that it had shown by clear and convincing evidence that CWI would have terminated Baptist notwithstanding his disclosures. IAD at 9.

According to CWI, Baptist did not comply with the CWI procedures that require an employee in IES status to indicate his intention to return to employment. [9] Consequently, CWI, in accordance with its IES policy, terminated Baptist in June 2008. Thus, the Hearing Officer concluded that CWI had shown that it would have terminated Baptist despite his protected disclosure because IES policy clearly stated that an employee on IES who did not indicate that he wanted to return to work, or did not choose any of the other available alternatives under the policy, would be terminated upon the expiration of the IES (one year). CWI had sent Baptist documents explaining his options for retaining employment after his IES status expired.[10] In addition, CWI argued that the Benefits Specialist had no actual or constructive knowledge of Baptist's alleged protected conduct, since she had no contact with him beyond the issue of his medical disability leave. Finally, CWI argued that the time between Baptist's disclosure and his termination (one year) was too long to permit any inference that the disclosure was a factor in Baptist's termination. The Hearing Officer found the above arguments to be persuasive.

In summary, the Hearing Officer ruled in the May 7, 2009, IAD that Retaliations 1-5 were time-barred and that there was clear and convincing evidence that CWI would have terminated Baptist from his position notwithstanding his disclosures. Consequently, the Hearing Officer granted the Motion for Summary Judgment on Retaliation 6 and dismissed Baptist's complaint. IAD at 6. Because all six alleged retaliatory acts had been dismissed or time-barred, the Hearing Officer did not convene a hearing on the matter.

D. The Appeal

[9] "IES" is used to describe the entire year that an employee is on STD and LTD. ROI at 7.

[10] The CWI Benefits Specialist stated that ten employees had been terminated under similar situations since 1998. CWI Response to Appeal at 9.

On May 27, 2009, Baptist appealed the Hearing Officer's findings in the IAD and filed Complainant's Statement of the Issues for Appeal identifying the issues that he wished the Director of OHA to review in the appeal phase of the Part 708 proceeding. *See Appeal*. Baptist also requested a hearing on his complaint. On July 7, 2009, CWI filed a response to Baptist's Appeal. *See Response.* In the Response, CWI requested that OHA deny the Appeal and dismiss the underlying complaint.

In his Statement, Baptist sets forth two issues on appeal:

(1) Are there any disputed facts as to whether the Complainant was retaliated against by the contractor's failure to return him to his former position or accommodate him in a comparable position that he could perform within his 15-pound lifting limitation?

(2) Can a contractor's complete failure to investigate a whistleblower retaliation complaint constitute a continuing violation under a hostile work environment claim for purposes of Part 708's 90-day period of limitations?

See Appeal at 8, 11.

As for Issue 1, Baptist argues that he was terminated because the CWI Benefits Specialist mismanaged his IES application and because CWI failed to return him to a job that did not require heavy lifting. *Id.* at 8. Complainant contends that he had no choice but to apply for IES because CWI would not provide a position that he could perform without risk of injury. Baptist argues that this issue must be reviewed *de novo* because it was not discussed in the IAD, and that "the IAD is entitled to no weight or deference on such review." Appeal at 2. According to Baptist, "[t]he IAD does not acknowledge or discuss that the Complainant only took inactive status because the retaliators would not allow him to be active in his prior or comparable position." Appeal at 8.

Regarding Issue 2, Baptist advances three arguments: (1) the Hearing Officer erred in holding that a failure to investigate a retaliation complaint is not actionable under Part 708; (2) the Hearing Officer erred in holding that there can be no hostile work environment claim unless the hostile acts are similar and within the same chain of command; and (3) the Hearing Officer has created a "strict pleading rule" for Part 708 cases by holding that Baptist's failure to plead "failure to investigate" in his initial complaint bars its consideration at any later stage of the proceeding. Appeal at 11.

Finally, Complainant also questions the summary judgment decision. Baptist argues that the Hearing Officer's finding--that there were no material facts in dispute regarding Baptist's termination--is a conclusion of law and thus reviewable *de novo*, and that all evidence should be viewed most favorably to the party (Baptist) opposing summary judgment. Appeal at 2. Baptist argues that the IAD should be overturned because the Hearing Officer did not view the evidence most favorably "both because ignoring evidence means it has not been favorably viewed, but also because the IAD repeatedly gives more favorable views to the contractor's evidence." Appeal at 2.

II. ANALYSIS

The standard of review for Part 708 appeals is well established. Conclusions of law are reviewed *de novo*. *See Curtis Hall*, Case No. TBA-0002 at 5 (2008). Findings of fact are overturned only if they are clearly erroneous, giving due regard to the trier of fact to judge the credibility of the witness.

A . Appeal Issue 1- Retaliation and Accommodation

Baptist's claims that there are disputed facts as to whether he was retaliated against by CWI's failure to either return him to his former position or to accommodate him in a comparable position that he could perform within his 15 pound lifting limitation. The Appeal states that "[t]he IAD is completely silent on this question, which complainant thoroughly briefed in his opposition to summary judgment." Appeal at 8. According to the Appeal, Baptist was forced to take IES status because CWI's retaliatory actions prevented him from holding a light duty position. Appeal at 2.

I agree with Baptist that the IAD is silent on this question, and rightfully so. Based on my review of the record, the Hearing Officer had no actionable claim in front of him that would allow him to proceed to the question of retaliation. The retaliations in the complaint fell outside of the 90-day deadline, and Baptist did not show good cause for the Hearing Officer to waive the deadline. The record reflects Baptist's perception that CWI was retaliating against him prior to the June 2007 ESC meeting. *See* ROI at 8-9. Complainant did not avail himself of the opportunities under the IES policy to request a new position, or any of the other alternatives under IES. Baptist asks us to ignore his noncompliance with the policy and procedures of Part 708, his failure to exercise the options available to him under the IES policy that may have allowed him to return to work, and the OHA precedent that complainants are presumed to understand their rights and responsibilities under the regulations. IAD at 7.

Under Baptist's logic, a Hearing Officer would be required to examine the issues underlying a claim that the Hearing Officer has previously found to be barred from consideration due to a fatal procedural error. Such a policy would diminish the importance of the regulations that were thoughtfully designed to govern Part 708 proceedings.

I find that the Hearing Officer did not commit error by failing to address this issue. Rather, the Hearing Officer did not reach this issue because the complaint did not meet the threshold procedural requirements to proceed to the hearing stage. The Hearing Officer cannot address the issue of retaliation (or any other issue) if the complaint does not meet the procedural requirements. In this case, Baptist filed his Part 708 complaint in March 2008, nine months after five of the six alleged retaliatory acts occurred and six months beyond the 90-day deadline.[11] Thus, I find that the Hearing Officer properly

[11] The Hearing Officer did not err when he found that the field office's acceptance of the complaint did not cure any filing deficiencies. Moreover, even though Mr. Baptist was a *pro se* complainant, he was familiar

concluded that the first five retaliations were time-barred. Once he reached that conclusion, the regulations precluded any consideration of whether the contractor refused to offer accommodation to Baptist.[12] Even assuming, *arguendo*, that there are disputed facts surrounding this issue, Baptist has not shown good cause to waive the regulatory procedures and consider the allegations.[13] Therefore, once the Hearing Officer decided that Retaliations 1-5 were time-barred and Retaliation 6 was not a retaliatory action, his determination was complete.[14]

C. **Appeal Issue 2 - Failure to Investigate and a Hostile Work Environment**

(1) Failure to Investigate

Baptist argues that the IAD erred in concluding that a contractor's failure to investigate cannot be an act of retaliation under Part 708. However, I find that Baptist misstates the conclusion of the IAD. The IAD sets forth the following two reasons why Baptist could not rely on a failure to investigate as his excuse for missing the 90-day deadline: (1) because Baptist did not raise the issue until one year after he filed his complaint; and (2) because failure to investigate could not be considered retaliation under the facts of this case as there was no reasonable expectation that conversations with an employee benefits specialist would trigger a whistleblower investigation. The IAD did *not* hold that a failure to investigate is not actionable under Part 708. Rather, the Hearing Officer found in this specific case that it was not actionable because there was no reasonable expectation that the CWI Benefits Specialist would investigate. The CWI Benefits

---

with the procedure for filing complaints, having filed a Part 851 complaint with the appropriate office in January 2008.

[12] Complainant suggests that his application for IES in December 2007 was the result of a retaliation (CWI would not accommodate Mr. Baptist's lifting restriction), and thus the retaliation fell within the 90-day limit (because the complaint was filed in March 2008). Appeal at 7. However, because Complainant did not list his application for IES as a retaliatory action in the complaint, I cannot agree with Baptist's argument that we should consider his IES application a retaliatory act. This would allow Baptist to raise this argument for the first time on Appeal, wrongfully expanding the scope of the Appeal. I also note that the Hearing Officer gave Baptist an opportunity to add additional retaliatory acts to his complaint during a conference call in February 2009, and Baptist, who was represented by counsel at that time, did not supplement his complaint. CWI Response at 28.

[13] Throughout the Appeal Baptist notes the role of the Benefits Specialist in his termination. According to the record, the Benefits Specialist admitted that she did not ask him if he was going to return to work. She also told CIGNA that there was no accommodation for Baptist, even though there is some question whether his managers had agreed with this. She handled his disability applications without the input of his first line supervisor, contrary to IES policy. Baptist states that the Benefits Specialist guided him towards applying for IES and did not discuss alternatives. Nonetheless, these arguments do not change the fact that Baptist did not comply with the terms of the IES policy that could have returned him to active duty at CWI. Thus, I agree with the Hearing Officer that, based on the record, there is no proof of animus by the CWI Benefits Specialist towards Baptist.

[14] Baptist argues that the Motion for Summary Judgment was not properly granted because the Hearing Officer did not consider all materials in the light most favorable to Baptist, the opposing party. However, the Hearing Officer did just that by beginning his analysis with the assumption that Baptist made protected disclosures and that he had SME status. *See* IAD at 5, fn 13.

Specialist told Baptist that she would work with him on his disability application, and did not indicate that she would investigate his allegations of retaliation. Therefore, the contractor did not retaliate against Baptist when the CWI Benefits Specialist did not initiate an investigation into his allegations. That was not her responsibility, nor had she given Baptist any indication that she would do so. Therefore, I find no error in the Hearing Officer's decision regarding this allegation.

In addition, Complainant argues that the Hearing Officer has now imposed a "strict pleading rule" on *pro se* applicants to the Contractor Employee Protection Program because the Hearing Officer did not consider Baptist's contention that CWI failed to investigate his allegations of retaliation expressed to the CWI Benefits Specialist. According to Baptist, the Hearing Officer has concluded that unless a complainant pleads a cause of action in his initial complaint, OHA will neither consider it an adverse action nor allow an evidentiary connection to other acts of retaliation. Appeal at 12. After examining the record on this issue, I conclude that the Hearing Officer did not impose a new strict pleading rule in Part 708 cases.

The Part 708 regulations anticipate that many filings will be submitted by *pro se* complainants, and consequently the pleading rules are uncomplicated and easy to understand:

> Your complaint *does not need to be in any specific form* but must be signed by you and contain the following: (a) A statement specifically describing (1) the alleged retaliation taken against you and (2) the disclosure, participation, or refusal that you believe gave rise to the retaliation . . . "

10 C.F.R. § 708.12 (emphasis added).

Baptist's argument obfuscates the real issue—that Baptist himself failed to bring up the new allegation of "failure to investigate" until one year after filing his Part 708 complaint. Baptist had an opportunity to advance his argument in the complaint, and then again during a conference call where the Hearing Officer asked him if there were any additional retaliations that the Hearing Officer should consider. CWI Response at 28. Baptist, represented by counsel by this time, did not mention any additional retaliation, and therefore cannot now argue that an impermissible "strict pleading rule" prevented him from being heard.

In summary, the Hearing Officer did not initiate a new strict pleading rule. After examining the facts of this case, the Hearing Officer correctly concluded that Baptist had an opportunity to advance his argument much earlier in the case, but for some reason declined to do so. [15]

[15] Baptist argues that CWI would not have been surprised by the "failure to investigate claim" if OHA had not granted CWI's motion prior to Baptist's scheduled deposition. Appeal at 13. Baptist alleges that CWI could have inquired about the failure to investigate claim at the deposition, thus avoiding any surprise. This argument does not negate a party's responsibility to present their argument at the proper time.

(2) Hostile Work Environment

Baptist argues that the alleged failure to investigate was part of a hostile work environment at CWI created by his managers. After reviewing Complainant's arguments, I conclude that Baptist has provided no argument to disturb the Hearing Officer's decision on this issue. It is true that Baptist experienced sufficient stress at his workplace and that he visited a doctor seeking relief from that stress. The doctor prescribed medicine for stress-related maladies (e.g., high blood pressure and anxiety). Baptist stated in the pleadings that he felt that his work was not appreciated, and he felt that he was treated poorly. However, without minimizing the distress experienced by Mr. Baptist, on review I cannot find that his workplace could be considered a "hostile work environment." Even if I more properly characterize his argument as an "abuse of authority" under Part 708, I find no merit to his claims. [16]

To sum up, although Baptist clearly experienced a high level of stress at CWI, in this case there was insufficient evidence to support a finding that his managers had committed an abuse of authority. Therefore, I find that the Hearing Officer committed no error in his decision.

III. CONCLUSION

The Hearing Officer correctly concluded that Retaliations 1-5 were time–barred under 10 C.F.R. §§ 708.14 because they did not occur within 90 days of the date that Mr. Baptist filed his complaint. I also affirm the Hearing Officer's grant of the Motion for Summary Judgment, thereby dismissing Retaliation 6 of the complaint. I conclude that the Hearing Officer has not established a "strict pleading rule" for complainants in Part 708 actions. For the reasons discussed above, I find that Baptist's appeal is without merit. Consequently, I will deny the appeal.

It Is Therefore Ordered That:

---

[16] I further find that Baptist has misstated the conclusions of the IAD. Baptist argues that the Hearing Officer has imposed a requirement that "only hostile acts that are similar and within the same chain of command are actionable under Part 708." Appeal at 12. However, nowhere in the IAD did the Hearing Officer impose this requirement on all Part 708 cases. Rather, he used Supreme Court precedent as a guideline to make a determination about the workplace environment, not as a strict rule. The Hearing Officer stated:

> None of the alleged conduct was physically threatening or humiliating or of a severe or pervasive nature that would raise [a] hostile work environment claim. Nor can I find any other factual circumstance in this case that would support a finding of a hostile workplace environment.

IAD at 8.

(1) The Appeal filed by Billy Joe Baptist from the Initial Agency Decision issued on May 7, 2009, is hereby denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner: Arun K. Dutta

Date of Filing: September 7, 2010

Case Number: TBA-0088

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on August 25, 2010, involving a Complaint of Retaliation filed by Arun K. Dutta (Mr. Dutta or the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his Complaint, Mr. Dutta alleged that his former employer, Parsons Infrastructure and Technology Group, Inc. (Parsons or the contractor), retaliated against him for engaging in activity protected under Part 708. In the IAD, the Office of Hearings and Appeals (OHA) Hearing Officer determined that Mr. Dutta had engaged in activity that is protected under Part 708, but that Parsons had shown that it would have taken the same personnel action in the absence of the protected activity. Mr. Dutta appeals that determination. As set forth in this decision, I have decided that the determination is correct.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure, or participating in a related proceeding, will be directed by the DOE to provide relief to the complainant. *See* 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations establish administrative procedures for the processing of complaints. Under these regulations, review of an IAD, as requested by Mr. Dutta in the present Appeal, is performed by the Director of the OHA. 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

The events leading to the filing of the Complaint are fully set forth in the IAD. *Arun K. Dutta*, Case No. TBH-0088 (2010).[1] For purposes of the instant appeal, the relevant facts are as follows:

Parsons is a contractor employed by the DOE to construct a salt waste processing facility (SWPF) at the DOE's Savannah River Site.[2] Mr. Dutta was employed by Parsons as a Senior Pipe Stress Engineer in March 2007. He was assigned to the Engineering Mechanics Group (EMG). IAD at 2. In the summer of 2007, Mr. Dutta was assigned to work on two specifications (documents requiring that certain equipment meets statutory and regulatory safety requirements), numbered 11818 and 11819. Specification 11818 detailed seismic qualification criteria for PC-3 vessels, and 11819 set forth seismic qualification criteria for PC-1 and PC-2 vessels.[3] *Id.* These documents had already been submitted for inter-disciplinary review (IDR), and it was Mr. Dutta's job to review, and make a preliminary disposition of, the IDR's committee's comments.[4] Mr. Dutta performed this duty, and then gave the specifications to Mr. Richard Stegan, the Lead Discipline Engineer (LDE), for his review. However, instead of approving these documents and forwarding them to his direct report, Mr. James Somma, Mr. Stegan cancelled specification 11818 and assigned another engineer, Anthony Edwards, to revise specification 11819. *Id.* Mr. Edwards incorporated elements from specification 11818, revised the specification given to him, and submitted the finished product, specification 11819, rev. 0, to Mr. Stegan. *Id.* Mr. Stegan forwarded the specification to Mr. Somma, Mr. Somma approved it, and on October 31, 2007, specification 11819, rev.0, was entered in Parsons' document control system (DCS). *See* IAD at 3.

On November 13, 2007, Mr. Dutta sent a letter to David Amerine, Senior vice President/Project Manager, SWPF, alleging that "an inferior quality document [the revised specification 11819, rev.0] was slipped into our Document Control system using fraudulent means." *Id.* Mr. Dutta also alleged that specification 11819, rev. 0 did not go through the IDR process, but was instead improperly substituted for specification 11819, which Mr. Dutta worked on, and which did go

---

[1] Decisions issued by OHA are available on the OHA website located at *http:www.oha.doe.gov*. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at *http:www.oha.doe.gov/search.htm*.

[2] A SWPF processes nuclear waste.

[3] PC-1, PC-2 and PC-3 are classes of seismic regulatory requirements. PC-1 and PC-2 are very similar, while PC-3 is more stringent.

[4] The IDR process is a review process for specifications and other documents. An engineer drafts or "initiates" a specification and sends it to a reviewer. If the reviewer "signs off" on the document, it is then sent to the IDR committee, along with an IDR form. The IDR committee returns comments on the form, and the initiator resolves the comments. The reviewer, the Lead Discipline Engineer (LDE), and the Engineering and Design Manager then review the form, and if they all sign off, the specification is then submitted to the document control system (DCS) operator, who verifies the signatures and dates on the specification and on the IDR form, and enters the data into the document control system.

through IDR. *Id.* The IDR form that originally accompanied specification 11819 was passed on with specification 11819, rev. 0. Mr. Dutta claimed that "this is a case of an intentional falsification of [a] safety document since these specs deal with design requirements of safety-related equipment." *Id.* Mr. Amerine stated that it looked as if Mr. Dutta had identified a problem and forwarded the letter to Mr. Somma. *Id.*

In November 2007, Parsons divided the EMG group into two groups: the vessel design group, under the supervision of Mr. Stegan, and the pipe stress group, under the supervision of Calvin Hughes. Mr. Dutta was placed in the pipe stress group which became official as of January 2008. *Id.* On January 3, 2008, Mr. Somma met with Mr. Dutta, Mr. Stegan and Mr. Edwards to discuss Mr. Dutta's allegations. *Id.* After the meeting, Mr. Dutta initiated a Condition Report (CR) at Mr. Somma's suggestion.[5] In November 2008, Mr. Dutta discussed a concern with Mr. Hughes that, although design of the SWPF was 90% complete, the pipe support design had not been completed. On January 15, 2009, Parsons terminated Mr. Dutta's employment. *Id.*

On April 6, 2009, Mr. Dutta filed a Part 708 Complaint with the Director of the DOE's Office of Civil Rights at the DOE's Savannah River Operations Office. This matter was referred to OHA for an investigation followed by a hearing. An OHA investigator issued a Report of Investigation on December 4, 2009. 10 C.F.R. §§ 708.22, 708.23. Subsequent to the investigation, an OHA Hearing Officer held a hearing in this matter over a period of three days. Over the course of the hearing, 14 witnesses testified. Mr. Dutta introduced 47 exhibits into the record, and Parsons submitted 68 exhibits.

After considering the hearing testimony and other relevant evidence, the Hearing Officer issued the Initial Agency Decision that is the subject of this appeal.

II. The Initial Agency Decision

The Hearing Officer set forth the burdens of proof in cases brought under Part 708. He stated that it is the burden of the complainant under Part 708 to establish by a preponderance of the evidence that he or she engaged in a protected activity, and that the activity was a contributing factor to an alleged retaliation. 10 C.F.R. §§ 708.5, 708.29. The Hearing Officer further noted that if an employee meets this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's protected disclosure or activity. 10 C.F.R. § 708.29. He considered the application of these elements to the Dutta proceeding.

[5] A Condition Report is a pre-printed form that an initiator used to identify issues and provide recommendations. An evaluator signs off on it, beginning an action plan. The last step verifies the action.

A. Protected Activity and Contributing Factor Analysis

The Hearing Officer found that Mr. Dutta made two protected disclosures regarding: (1) Parsons' failure to send the revised specification 11819, Rev.0 through IDR, and (2) Parsons' failure to complete the pipe support design before the construction phase of the SWPF. *Id.* at 5. He found that the complainant had a reasonable belief that Parson's failure to send the revised document through IDR violated company procedure. Likewise, with respect to the second disclosure, the Hearing Officer noted that the complainant reasonably believed that Parsons' failure to complete the pipe support design prior to the construction phase of the SWPF would result in a gross waste of funds. *Id.* at 6.

The Hearing Officer further noted that the complainant alleged that two negative personnel actions were retaliations for his making protected disclosures: (1) he claimed that his assignment to the pipe stress group was in retaliation for his first protected disclosure, and that while working in this group, he was not given work that was commensurate with his abilities and level of experience, and (2) he alleged that he was retaliated against by being terminated in January 2009. *Id.* at 7.

Regarding whether the protected disclosures were a contributing factor to the alleged retaliations, the Hearing Officer found that Mr. Dutta's November 13, 2007, disclosure to Mr. Amerine was not a contributing factor to his assignment to the pipe stress group. *Id.* at 8. The Hearing Officer based this finding on the fact that Mr. Stegan made the decision to place Mr. Dutta in the pipe stress group before November 13, 2007, thus finding that Mr. Dutta's protected disclosure on that date could not have been a contributing factor to this personnel action. Regarding Mr. Hughes' alleged treatment of the complainant, the Hearing Officer found no evidence in the record that Mr. Hughes had actual or constructive knowledge of the complainant's first disclosure until after he had filed his Complaint. Thus, he could not conclude that Mr. Dutta's first disclosure was a contributing factor to Mr. Hughes's alleged assignment of tasks to the complainant that Mr. Dutta believed not to be commensurate with his skills and experience. *Id.* at 9. However, the Hearing Officer determined that Mr. Dutta's second disclosure was a contributing factor to Parson's decision to terminate his employment. The Hearing Officer based this finding on Mr. Somma's constructive knowledge of the complainant's protected disclosure, as well as the fact that Mr. Dutta's November 2008 disclosure was sufficiently close in time to the January 2009 termination such that a reasonable person could conclude that the disclosure was a contributing factor to the termination. *Id.* at 10.

B. Whether Parsons Would Have Terminated Mr. Dutta Absent the Protected Activities

The Hearing Officer analyzed the alleged retaliation in light of the protected disclosures and determined that Parsons had established by clear and convincing evidence that it would have taken the same action in the absence of Mr. Dutta's protected disclosures. In examining the alleged retaliatory action taken against Mr. Dutta, the Hearing Officer considered several factors, including: "(1) the strength of the employer's reason for the personnel action excluding the whistleblowing, (2) the strength of any motive to retaliate for the whistleblowing, and (3) any evidence of similar action against similarly situated employees." *Id.* at 20 *(citing Kalil v. Dep't of Agriculture*, 479 F. 3d 821, 824 (Fed. Cir. 2007)).

Neither party disputed at the hearing that after the SWPF project moved from the design stages into the construction stages, a substantial number of layoffs of Parsons employees and contractors who were involved in design-related activities were necessary. Parsons maintained that a Reduction-in-Force (RIF) was necessary because it was only given limited funds to complete the project and it needed to stay within budget. IAD at 10. According to Parsons, 17 of the 22 employees in the pipe stress group were terminated, including Mr. Dutta. The Hearing Officer found that Parsons had substantial reasons for terminating Mr. Dutta's employment. The Hearing Officer also found that the RIF was conducted using facially-neutral standards, that the quality of Mr. Dutta's work in the pipe stress group was average, and that the number of calculations that Mr. Dutta completed compared to other engineers who were retained, was below average. The Hearing Officer further concluded in the IAD that these factors suggest that Parsons would have terminated Mr. Dutta in the absence of his protected disclosures. *Id.* at 14.

The Hearing Officer also examined the strength of any motive on the part of Parsons management to retaliate against Mr. Dutta. Although the Hearing Officer found that there was some evidence of a motive to retaliate on the part of Mr. Somma, who made the final decision to terminate the complainant, the Hearing Officer determined that the motive did not appear to have been particularly strong. *Id.* at 15. He further found no motive to retaliate on the part of the other Parsons management officials involved in the termination of Mr. Dutta. Finally, the Hearing Officer examined the treatment of similarly-situated employees who were selected to be laid off, and found that most, if not all, of the analysts who were in situations analogous to Mr. Dutta were also terminated. He further found, however, that a number of analysts who were selected to be laid off were either able to locate another job within Parsons or were subsequently re-hired by Parsons. *Id.* at 16. Based on the evidence in the record, these analysts re-applied for their positions, whereas Mr. Dutta did not. The Hearing Officer concluded that Parsons would have terminated the complainant's employment even in the absence of his protected disclosures. *Id.*

III. Analysis

It is well established in appeals brought under 10 C.F.R. Part 708 that factual findings of a Hearing Officer are subject to being overturned only if they can be deemed to be clearly erroneous, giving due regard to the trier of fact to judge the credibility of witnesses. *See Curtis Hall*, Case No. TBA-0042 (2008). With respect to a Hearing Officer's conclusions of law, they are reviewable de novo. *Id.; see Pierce v. Underwood,* 487 U.S. 552, 558 (1988) ("For purposes of standard of review, decisions by judges are traditionally divided into three categories, denominated questions of law (reviewable *de novo*), questions of fact (reviewable for clear error), and matters of discretion (reviewable for "abuse of discretion').")

Mr. Dutta filed a statement identifying the issues that he wished the OHA Director to review in this appeal phase of the Part 708 proceeding (hereinafter Statement of Issues or Statement). His Statement focuses exclusively on his contention that the Hearing Officer erred in finding that Parsons met its evidentiary burden in this case. Parsons filed a Response to the Statement arguing generally

that there is no merit to Mr. Dutta's appeal. [6] 10 C.F.R. § 708.33. As fully discussed below, after carefully reviewing the voluminous record in this case, as well as the arguments raised in the Statement of Issues, I find that there is no basis for overturning the findings in this case.

A. Whether the Hearing Officer Erred in Making Credibility Determinations

Mr. Dutta contends that the Hearing Officer erred in finding that Parsons met its evidentiary burden and asserts that the Hearing Officer gave Parsons "every benefit of the doubt" when making his credibility determinations. Statement at 1. Mr. Dutta points to several instances where the Hearing Officer incorrectly determined that the contractor's testimony in the record was credible. Specifically, Mr. Dutta asserts that the Hearing Officer erred in finding credible Parsons testimony: (1) about "the competency of Helton" [a pipe stress engineer]; (2) that the engineers had been "rated fairly by Hughes and Neidbolski [Parsons management] based on the number of calculations they performed;" and (3) that Mr. Dutta was "an average engineer and not capable of doing checker work . . ." In addition, Mr. Dutta argues that the Hearing Officer incorrectly gave little weight to the testimony of the complainant or his primary witness in finding that Parsons would have terminated Mr. Dutta's employment even in the absence of his protected disclosure. *Id.* at 2 and 3. As explained below, I find no merit to any of Mr. Dutta's arguments. I find that the record clearly shows that the Hearing Officer analyzed all of the testimony in the case in detail regarding these issues, and clearly explained his conclusion that Parsons had substantial reasons for terminating Mr. Dutta's employment.

With regard to Mr. Dutta's view that he was more qualified than at least three of the five pipe stress analysts who were retained, including Mr. Helton, and his contention that he should have been retained over Mr. Helton, the Hearing Officer adequately explained why he found Mr. Hughes' testimony to be entitled to more weight than Mr. Dutta on the issue of whether other engineers had less problems than Mr. Dutta with their calculations. Tr. at 155-158, IAD at 12. The Hearing Officer also noted that Mr. Helton had the highest cumulative score in Mr. Somma's ranking of the eight remaining pipe stress engineers. *Id.* Based on the testimony in the record, the Hearing Officer provided reasons why he could not conclude that Parsons would have retained Mr. Dutta instead of Mr. Helton in the absence of Mr. Dutta's protected disclosures. *Id.*

Second, I find that the Hearing Officer adequately assessed the validity of Mr. Dutta's claim that he was more qualified than some of the five pipe stress analysts who were retained. Specifically, the Hearing Officer reviewed the testimony of Mr. Somma who prepared a Group Assessment Summary consisting of the names of the eight remaining engineers in Hughes' pipe stress group, and ratings of each engineer in five separate skill areas. IAD at 11. Mr. Dutta received the lowest cumulative score of the eight engineers. *Id.* The Hearing Officer determined that Mr. Somma's assessment of Mr. Dutta was based in part on input from Mr. Hughes and Mr. Niedbalski regarding the work that

---

[6] In general, in its Response, Parsons maintains that Mr. Dutta identifies no specific issues for review by the OHA Director and points to no testimony or evidence that the Hearing Officer failed to consider, but rather asserts that Mr. Dutta misconstrues the findings made by the Hearing Officer. It presents numerous citations to the record to support its position. *See* Parsons Response.

was performed after Mr. Dutta joined the pipe stress group, primarily pipe stress calculations. *Id.* The record reflects that the Hearing Officer thoroughly analyzed the testimony of Mr. Hughes, Mr. Neidbalski and Mr. Dutta regarding the number and quality of the pipe stress calculations produced by Mr. Dutta . The Hearing Officer attributed more weight to the testimony of Mr. Hughes and Mr. Niedbalski characterizing Mr. Dutta's technical skills as being "average," specifically indicating that the number of calculations Mr. Dutta produced was "below average." IAD at 13, Tr. at 733, 752, 758. He based his finding in part on the fact that Mr. Niedbalski had more opportunity to observe the quality of Mr. Dutta's work. *Id.* at 13. The very essence of the role of the Hearing Officer is to listen to the testimony of witnesses, observe their demeanor, and make a judgment as to their credibility. The Hearing Officer explained why he weighed the evidence and testimony on these issues as he did. There is no evidence that the Hearing Officer abused his discretion in determining that the Parsons witnesses testimony regarding these issues was credible.

Third, I find that the Hearing Officer explained why he relied on and gave considerable weight to testimony that Mr. Dutta was an "average" engineer in determining that Parsons had substantial reasons for terminating Mr. Dutta's employment. By way of example, the Hearing Officer highlighted evidence that Mr. Dutta was not able to complete as many calculations as other engineers in the pipe stress group, and that Mr. Dutta's calculations were not more difficult than those performed by other pipe stress engineers. IAD at 12; Tr. at 166-167. The Hearing Officer did not make a finding, as Mr. Dutta asserts, that he was not "as capable of doing checker work;" rather the Hearing Officer concluded, based on the evidence taken as a whole, that the quality of Mr. Dutta's work in the pipe stress group was average at best and the number of calculations he completed was below average. [7]

Finally, I find that the Hearing Officer reviewed all of the testimony in detail, including that of Mr. Dutta and his witness, regarding Mr. Dutta's job performance. The Hearing Officer examined the number and level of difficulty of calculations Mr. Dutta had performed, as well the variation and level of difficulty of calculations performed by other engineers who were retained by Parsons. *See* IAD at 13. Again, based on his analysis of the testimony, the Hearing Officer concluded that the quality of Mr. Dutta's work was average, and the number of calculations that he completed was below average. Mr. Dutta has failed to show that the factual findings made by the Hearing Officer were "clearly erroneous." Further, after carefully reviewing the evidence, I find no evidence to suggest that the Hearing Officer abused his discretion in making credibility determinations or weighing any evidence in the case.

B. Whether the Hearing Officer Erred in Finding Motive to Retaliate

The complainant contends in his Statement that the Hearing Officer erred in finding that there was "no evidence of a strong motive to retaliate on the part of Mr. Somma." Statement at 3. He contends

---

[7] In his Statement, Mr. Dutta further asserts that the Hearing Officer's finding that he was an average engineer was "based on the testimony of the two engineers that set up a contradictory methodology for rating the engineers." Statement at 2. The Hearing Officer found no evidence in the record of a "contradictory methodology" for the rating engineers.

that out of the eight individuals who were considered for layoff, he was the "only Parsons Employee selected for layoff." *Id.* Mr. Dutta's assertions are again misplaced. I find that the Hearing Officer thoroughly examined the strength of any motive on the part of Mr. Somma and other Parsons' management to retaliate against Mr. Dutta for his whistleblowing. The record reflects that the Hearing Officer found that there was some evidence of a motive to retaliate on the part of Mr. Somma. He noted that Mr. Somma signed off on a document (specification 11819, rev.0) that the complainant called "fraudulent." He further testified that he was "a little disappointed" when the complainant presented his concerns directly to Mr. Amerine (Senior Vice President/Project Manager, SWPF) rather than coming to Mr. Somma first. However, the Hearing Officer ultimately concluded that Mr. Somma's motive to retaliate against Mr. Dutta did not appear to have been "particularly strong." *Id.* at 14. He noted that it was Mr. Stegan, who was the primary actor in the series of events that led to Mr. Dutta's first disclosure, not Mr. Somma. The record shows clearly that the Hearing Officer carefully analyzed the actions and involvement of each Parsons' management official and based his conclusions on those findings. In addition, I find no error in the Hearing Officer's analysis of the strength of a motive to retaliate on the part of Mr. Somma. Mr. Dutta's assertion that he was the only Parsons employee selected for layoff is contradicted by the evidence in the record which indicates that at least two other Parsons employees were either laid off at the same time as Mr. Dutta or scheduled for layoff, but able to obtain another position with Parsons. Again, the Hearing Officer thoroughly analyzed the record and I find no error in his findings.

In sum, I am convinced that there was sufficient evidence in the record in this case to support the Hearing Officer's conclusion that Parsons met its evidentiary burden and clearly and convincingly established that it would have terminated Mr. Dutta absent his protected activity.

IV. Conclusion

As discussed above, I find no merit to any of the arguments advanced by Mr. Dutta. Therefore, I find that Mr. Dutta's appeal should be denied and the IAD affirmed.

It Is Therefore Ordered That:

(1) The Appeal filed by Arun K. Dutta on September 7, 2010 (Case No. TBA-0088), of the Initial Agency Decision issued on August 25, 2010, be and hereby is denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Appeal

Name of Case:	David M. Widger
Date of Filing:	December 14, 2010
Case Number:	TBA-0097

This Decision considers an Appeal from a November 17, 2010, Initial Agency Decision (IAD) granting the Motion to Dismiss the Complaint filed by David M. Widger (Widger) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708.

I. Background[1]

Safety & Ecology Corp. (SEC) is a subcontractor supporting the Separations Process Research Unit (SPRU) at the Knolls Atomic Power Laboratory in upstate New York. IAD at 2. In August 2008, Widger began working for SEC as a Radiological Controls Technician. IAD at 2. In February 2009, Widger became the coordinator for the "As Low As Reasonably Achievable" (ALARA) program at the facility. IAD at 2. As the ALARA coordinator, Widger drafted and revised procedures to contain radioactive materials. IAD at 2.

During the period July 2008 to October 2009, Widger claims that he made 24 protected disclosures.[2] IAD at 5. Widger believes that as a result of making these disclosures and for filing whistleblower complaints on October 19 and November 10, 2009,[3] he was subjected to the following alleged acts of retaliation: (i) he was directed to fix the issues that he brought forward; (ii) he was subjected to excessive meetings with management; and (iii) he was not adequately compensated. Widger further asserts that he left his position on November 16, 2009.[4] IAD at 11. During the OHA investigation of his Complaint, Widger asserts that his leaving should be deemed a retaliatory constructive discharge. IAD at 11.

---

[1] The events leading to the filing of the instant Complaint and Motion are fully set forth in the IAD.

[2] The Hearing Officer numbered each of these disclosures from 1 to 24. IAD at 5.

[3] OHA accepted the Complaints as one case file, TBH-0097. IAD at 2 n.1.

[4] Widger asserts that he did not formally resign his position. Appeal at 2. Despite Widger's attempt to draw a distinction between his leaving his position and a formal resignation, his action in leaving his position is a *de facto* resignation, which he himself characterizes as a constructive discharge. *See infra*. For the purposes of this decision, we will refer to Widger's abandonment of his position as a resignation.

On July 22, 2010, SEC filed a Motion to Dismiss Widger's Complaint.[5] In its Motion, SEC argued that Widger's alleged protected disclosures were vague, non-specific, and not substantial enough to be deemed a protected disclosure pursuant to Part 708. SEC also argued that the alleged disclosures related to the concerns and circumstances of employees other than Widger and, thus, were not covered by Part 708. IAD at 4. Additionally, SEC argued that Widger could not prove that, in fact, he suffered any retaliation. IAD at 11.

In the November 17, 2010, IAD, which addressed SEC's Motion to Dismiss, the Hearing Officer found that the vast majority of the disclosures cited by Widger were "frivolous" and thus not protected by Part 708. In making this determination, the Hearing Officer found that Widger had failed to provide sufficient facts or other information to allow a conclusion that the disclosure referenced a substantial threat to human health or public safety or a significant violation of any law, rule, or regulation. Further, the Hearing Officer found that some of the disclosures were not specific enough or that there was insufficient information indicating that the disclosure was a communication to SEC management. However, the Hearing Officer found that portions of Disclosure Nos. 10 and 11 (pertaining to a failure to obtain a radiation work permit for a survey) and 20 (regarding inadequate number of respirators inspected for defects) were not "frivolous" and thus might be protected disclosures for Part 708 purposes. IAD at 10-11. Further, with regard to Widger's allegation that he experienced retaliation for filing two whistleblower complaints, the Hearing Officer found that the filing of the whistleblower complaints was protected conduct for purposes of Part 708. IAD at 11.

The Hearing Officer then examined three of the alleged retaliations: (i) being required to fix the issues that he brought forward; (ii) excessive meetings with management; and (iii) substandard compensation. The Hearing Officer concluded that all were frivolous allegations of retaliations. In making this determination, the Hearing Officer found that meeting with management and addressing the concerns he raised were normal job requirements and, as such, were not retaliations actionable under Part 708. IAD at 18. Further, because SEC management was scheduled to evaluate Widger's compensation on November 13, 2009, a date Widger had voluntarily taken paid leave and three days prior to Widger's resignation, Widger's alleged inadequate compensation could not be considered actionable retaliation under Part 708. IAD at 13.

With regard to the remaining alleged retaliation, constructive discharge, the Hearing Officer examined the working conditions which Widger cited as supporting such a finding. These cited conditions are listed below:

- An SEC manager stated, "I . . . hate my job and . . . the people I work with";
- An SEC manager "pitted half his work crew against the other half on a daily basis through treatment, conflict, slander and work assignments";
- When Widger saw an SEC manager one morning, Widger said "good morning," but there was not a reply;
- SEC failed to resolve Widger's first Part 708 complaint before his resignation, which occurred approximately four weeks after the filing of the complaint;
- Widger's manager did not communicate with him;
- Widger was instructed to "not do anything unless directed";

[5] The Hearing Officer deemed this motion as a Motion to Dismiss for Lack of Jurisdiction. IAD at 4. SEC had also filed another Motion to Dismiss (Case No. TBZ-1097) which is not at issue in this Appeal.

- Widger received no direction on the ALARA program;
- SEC management refused to take Widger's input seriously;
- SEC management limited his computer access; and
- Widger felt that he was being targeted for termination.

IAD at 11-12.

In articulating the standard to be used to determine whether constructive discharge has been established for the purpose of the Motion, the Hearing Officer cited an MSPB case, *Heining v. General Serv. Admin.*, 68 M.S.P.R. 513, 519 (1995), for the proposition that resignations are presumed voluntary. He went on to use *Heining* to hold that an employee may "rebut the presumption of voluntariness" if he or she "can establish that the resignation . . . was the product of duress . . . brought on by the employer." IAD at 11 (citing *Heining*). The Hearing Officer reviewed each of the working conditions cited above. In reviewing them, he found that several of the cited conditions were only normal conditions of employment or reflected an impolite workplace which, in the absences of duress, would not constitute evidence supporting a finding of constructive discharge. IAD at 12. With regard to the delay in resolving Widger's first whistleblower complaint, the Hearing Officer noted that resolving such complaints typically takes many months and that no reasonable person could consider a one-month delay in resolving such a complaint as duress by management. IAD at 12. Other cited conditions, such as restricted access to work E-mail or allegations of management indifference, were not supported, in the Hearing Officer's opinion, by the evidence available in the record. IAD at 13. With regard to Widger's belief that he was being targeted for termination, the Hearing Officer noted that a November 11, 2009, E-mail from a co-worker named Robert Massengill (Massengill E-mail), in which Massengill stated his belief that management was out to terminate Widger, did not constitute a reasonable, objective basis for making a finding of constructive discharge. IAD at 13. Lastly, the Hearing Officer found that, based on the available evidence in the record, on the date Widger resigned, SEC management was, in fact, requesting that Widger continue working at SEC. IAD at 13. Consequently, the Hearing Officer found that Widger voluntarily chose to stop working. IAD at 13. The Hearing Officer concluded, in sum, that Widger had not "made a non-frivolous allegation that he suffered retaliation due to a constructive discharge." IAD at 13.

In his Appeal, Widger claims generally that the Hearing Officer (i) failed to provide him with sufficient guidance to enable him to support his Complaint and (ii) failed to understand or overlooked relevant information regarding the alleged protected disclosures. Specifically, Widger challenges the Hearing Officer's findings that various disclosures were frivolous and thus not protected under Part 708. With regard to the Hearing Officer's assessment as to the sufficiency of Widger's allegations concerning his alleged constructive discharge,[6] Widger asserts that the Hearing Officer erred in believing that Widger had cited his limited E-mail access as a circumstance supporting a finding of constructive discharge and that the Hearing Officer failed to appreciate the evidentiary weight of the Massengill E-mail.[7] Widger points out that Massengill, the author of the E-mail, was the Senior Project Manager for SEC during most of Widger's

[6] Widger did not challenge the Hearing Officer's finding regarding the three other alleged retaliations.

[7] The E-mail reads in pertinent part "I am sure that you heard all about the turmoil at SPRU. Dave W[idger] went to into the DOE and spilled his guts. I don't think that he had a choice because my guess is that when I left, Stace was going to make it his mission to fire Dave ." Appellant Brief (Attachment 4).

employment. Widger implies that, because of Massengill's position, the Massengill E-mail should have mandated a conclusion that Widger's resignation should be deemed a constructive discharge.

Finally, Widger challenges the Hearing Officer's finding that the failure of SEC to resolve Widger's first whistleblower complaint within a month was not a work circumstance that would support a finding that Widger had been constructively discharged. Widger alleges that employees familiar with the project he was working on could have produced a written report of investigation within two weeks.

II. Analysis

The Part 708 regulations do not include procedures and standards governing motions to dismiss. In the absence of such standards, the Federal Rules of Civil Procedure, though not governing this proceeding, may be used for analogous support. *See, e.g., Hansford F. Johnson*, Case No. TBZ-0104 (November 24, 2010); *Billy Joe Baptist*, Case No. TBH-0080 (May 7, 2009); *Edward J. Seawalt*, Case No. VBZ-0047 (August 20, 2000) (applying standards of Fed. R. Civ. P. 56 to Motion for Summary Judgment). The Motion to Dismiss filed by SEC in the present case is most analogous to what would, under the Federal Rules, be a motion to dismiss for "failure to state a claim upon which relief can be granted . . . ." Fed. R. Civ. P. 12(b)(6).

The Supreme Court has held that, to survive a Rule 12(b)(6) motion to dismiss, a complaint must plead "only enough facts to state a claim to relief that is plausible on its face." *Bell Atl. Corp. v. Twombly*, 550 U.S. 544, 570 (2007). While the complaint "does not need detailed factual allegations, . . . [f]actual allegations must be enough to raise a right to relief above the speculative level, on the assumption that all of the complaint's allegations are true (even if doubtful in fact)." *Id.* at 555 (citations omitted).

As an initial matter, we reject Widger's arguments with regard to the alleged lack of assistance and guidance from the Hearing Officer. The Hearing Officer, as an impartial adjudicator, cannot provide explicit guidance to any party as to the type and amount of evidence to submit in a case. The complaining employee alone has the responsibility to prove the elements of his or her complaint. 10 C.F.R. § 708.29. In addition, an examination of the record indicates that Widger had sufficient opportunities to submit evidence to support his Complaint.

Further, we need not review Widger's many arguments concerning the Hearing Officer's determinations regarding the protected disclosures. As referenced above, Widger asserts that the Hearing Officer failed to understand or appreciate the subject matter of these alleged disclosures. Even assuming, for the purposes of this appeal, that the Hearing Officer misunderstood the nature of these disclosures, the Hearing Officer still found that Widger did make three non-frivolous protected disclosures and that Widger's two whistleblower complaints were protected activities. SEC has not appealed this determination. Because there are protected disclosures and activities to sustain Widger's complaint for the purposes of considering a Motion to Dismiss, we need not consider his arguments regarding the other alleged protected disclosures.

We now turn to Widger's contention that the Hearing Officer erroneously concluded that, as a matter of law, Widger had not alleged facts sufficient to support a claim of constructive discharge, or any other type of actionable retaliation. For a whistleblower to establish that he or she was constructively discharged, the whistleblower must prove that his or her working

conditions became so intolerable that a reasonable person in the employee's position would have felt compelled to resign. *Richard L. Urie*, Case No. TBH-0063 (May 21, 2008) slip op. at 11. This is an objective "reasonable employee" standard that cannot be triggered by an employee's subjective beliefs. *See Roman v. Porter*, 604 F. 3d 34, 42 (1st Cir. 2010).

In reviewing this appeal, we will assume that all of Widger's allegations are true. Nonetheless, given Widger's allegations, no reasonable Hearing Officer could conclude that Widger's working conditions were so intolerable that a reasonable person would feel compelled to resign. As cited by the Hearing Officer, many of the working conditions cited by Widger are workplace verbal incidents reflecting a problematic working environment or reflect Widger's complaints as to his work assignments and guidance from his manager. As such, they do not support a constructive discharge claim. *See, e.g., Williams v. Giant Food Inc.*, 370 F. 3d 423, 434 (4th Cir. 2004) ("dissatisfaction with work assignments, a feeling of being unfairly criticized, or difficult or unpleasant working conditions are not so intolerable as to compel a reasonable person to resign"). The fact that SEC failed to address Widger's first whistleblower complaint before his resignation some four weeks later reflects only a normal working condition notwithstanding Widger's assertion to the contrary. Even if one assumes that the delay was intentional, this short delay would not rise to the level of an intolerable work condition. Lastly, with regard to the Massengill E-mail, the fact that a supervisor may have had an intent to remove Widger does not itself establish that Widger's actual working conditions were sufficiently intolerable to prompt his resignation. *Cf. Petrosino v. Bell Atlantic*, 385 F. 3d 210, 229-231 (2nd Cir. 2004) (Title VII constructive discharge case where court found that supervisors created a hostile work environment for a complainant but did not create sufficiently intolerable work conditions to compel an employee's resignation).

In sum, we conclude, as a matter of law, that Widger failed to allege sufficiently intolerable working conditions to support a constructive discharge claim under Part 708. Further, Widger has not challenged the Hearing Officer's findings regarding the non-validity of the other claimed retaliations in his Complaint. Because there are no non-frivolous retaliations alleged in Widger's Part 708 Complaint, the Complaint should be dismissed.

It Is Therefore Ordered That:

(1) The Appeal filed by David M. Widger on December 14, 2010, Case No. TBA-0097, of the Initial Agency Decision issued on November 17, 2010, is hereby denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision.

Poli A. Marmolejos
Director
Office of Hearings and Appeals

Date: March 14, 2011

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Appeal

Name of Petitioner:	Vinod Chudgar
Date of Filing:	January 28, 2011
Case Number:	TBA-0100

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on January 13, 2011, involving a complaint of retaliation filed under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708, by Vinod Chudgar (hereinafter referred to as "the Complainant" or "Mr. Chudgar") against Savannah River Remediation (hereinafter referred to as "the Respondent" or "SRR"). SRR is the Management and Operations contractor for the Department of Energy's (DOE) Savannah River Site (SRS). In his complaint, Mr. Chudgar alleged that he engaged in protected activity and, as a consequence, suffered reprisals by the Respondent. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer granted a Motion to Dismiss filed by the Respondent. Mr. Chudgar appealed the decision. As set forth below, the Appeal is denied.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent [] fraud, mismanagement, waste and abuse" at DOE's government-owned or-leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they "reasonably and in good faith" believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. 10 C.F.R. § 708.5 (a). Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"] will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations set forth at 10 C.F.R. Part 708 establish administrative procedures for the processing of complaints. Under these regulations, review of an IAD, as requested by Mr. Chudgar, is performed by the Director of OHA. 10 C.F.R. § 708.32.

B. Factual Background

For purposes of review, I set forth the pertinent facts as set out in the Report of Investigation (ROI) and in the subsequent IAD.[1] The Complainant has been employed at SRS since 1988. In April 2009, he was a Senior Engineer A for Washington Savannah River Company (WSRC), then the Management and Operations contractor for SRS. Mr. Chudgar's job was to electronically file software and software revisions as they were created. This software was written and tested by design engineers, implementing engineers and software end-users who were tasked with designing and implementing the software. The Complainant acknowledged that he did not use his engineering background to perform his duties as a Senior Engineer A, and other employees described his duties as clerical.

In early 2009, SRR became the prime contractor for nuclear cleanup at SRS. During the transition from WSRC to SRR, a management team was selected to evaluate all applicants for employment under the new contract. The team members were SRR managers and other managers chosen based on their expertise in the various functional areas that had vacancies. WSRC employees had to apply for employment under the new SRR contract. Applicants were asked to answer eight competency-based questions, and could also add supplemental information to their applications. The panel restricted its evaluation to the application package. They did not review or accept performance evaluations, nor did they interview or solicit information from the applicant's managers or colleagues. The panel that evaluated the Complainant's application found it to be poorly written and difficult to understand. They rated the application very low and recommended that SRR not hire Mr. Chudgar. However, SRR decided to hire all of the applicants. Over 500 applicants were offered engineering positions and 12, including the Complainant, were offered other positions. In July 2009, he was offered, and accepted, his current position as a Principal Process Computer Analyst.

C. Procedural Background

On July 13, 2009, Mr. Chudgar filed a Part 708 complaint with the Employee Concerns Manager of the DOE's Savannah River Operations Office. In the complaint, Mr. Chudgar alleged that in April 2009, while employed by the predecessor contractor WSRC, he engaged in conduct that was protected under 10 C.F.R. Part 708 and, as a result, was transferred to a non-engineering position in July 2009 when SRR won the contract. As a remedy for this alleged act of retaliation, the Complainant sought relief including reinstatement to an engineering position and disciplinary action against certain employees. July 13, 2009 complaint at 2. SRR filed its response to this complaint on October 9, 2009, arguing that Mr. Chudgar had not made a protected disclosure as defined by Part 708, that none of the people who decided to offer the Complainant his current position had any knowledge, constructive or actual, of his allegedly protected activities, and that his placement in a

---

[1]The events leading to the filing of Mr. Chudgar's complaint are fully set forth in the IAD. *See Vinod Chudgar*, Case No. TBH-0100 (2011). Decisions issued by OHA are available on the OHA website located at http://www,oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

new position was not retaliatory and did not result in a materially adverse change in his employment. The parties unsuccessfully attempted to mediate the dispute. The Employee Concerns Manager of the Savannah River Operations office then forwarded the complaint to OHA in May 2010 for an investigation followed by a hearing.

On September 27, 2010, an OHA Investigator issued her Report of Investigation (ROI). In the ROI, the Investigator identified two potentially protected disclosures. First, the Complainant claimed that a WSRC employee tried to intimidate him into archiving an incomplete revision of software that was designed to control the function of a pump that was used to move liquid from one storage tank to another, and that, after he refused, the software was archived anyway. Mr. Chudgar contends that his disclosure of these events revealed a substantial violation of a law, rule or regulation and a substantial danger to employees or to the public. Second, the Investigator cited Mr. Chudgar's contention that SRR violated a procedure because a safety committee had not approved the changes recommended in another software design package and thus it was not implemented according to established company procedures. Specifically, he claimed that engineers were not following requirements to supercede previous revisions when "baselining" the files. [2]

With regard to the first disclosure, the Investigator could not conclude from the evidence that the Complainant reasonably believed that this disclosure revealed a substantial danger to employees or to the public. She concluded that the Hearing Officer might want to ask for further evidence concerning the Complainant's contention that the disclosure revealed a substantial violation of a law, rule or regulation. ROI at 10. With regard to the second disclosure, the Investigator was also unable to conclude that it revealed a substantial danger to employees or the public or a substantial violation of a law, rule or regulation.

The Investigator also addressed the issue of whether the individuals who decided to offer the Complainant his current position had actual or constructive knowledge of his alleged protected activities, and concluded that, in all likelihood, they did not. Finally, she concluded that, even if the individual made at least one protected disclosure, and even if that disclosure was a contributing factor to a negative personnel action taken against him, it is likely that SRR would be able to offer compelling evidence that it would have taken the same action regarding Mr. Chudgar's employment in the absence of that disclosure. On December 8, 2010, SRR filed a Motion to Dismiss the complaint. Mr. Chudgar filed his response to the Motion on December 21, 2010.

D. The Initial Agency Decision

In her Initial Agency Decision (IAD), the Hearing Officer first set forth the burdens that parties to Part 708 proceedings bear. She stated that in order to prevail, a Complainant must show, by a preponderance of the evidence, that he or she made a protected disclosure, participated in a proceeding, or refused to participate as described in 10 C.F.R. § 708.5, and that such an act was a contributing factor to a retaliatory action. If the Complainant satisfies these requirements, then the

[2] "Baselining" is adding software revisions to the existing software in the library.

burden shifts to the Respondent to demonstrate, by clear and convincing evidence, that it would have taken the same action absent any protected activity on the part of the Complainant.

The Hearing Officer then discussed the Respondent's Motion to Dismiss. In its Motion, the Respondent argued that the Complainant could not have reasonably believed that his disclosures revealed a substantial risk of harm to employees or the public or a substantial violation of a law, rule or regulation. The Respondent also contended that the complaint must be dismissed because Mr. Chudgar would be unable to show that the individuals who offered him his current position had actual or constructive knowledge of his alleged protected behavior. This is relevant because, under the circumstances in this case, in order to demonstrate that his allegedly protected behavior was a contributing factor to his reassignment, Mr. Chudgar would have to show that the personnel who reassigned him had actual or constructive knowledge of that behavior, and that the reassignment occurred sufficiently close in time to the Complainant's disclosures to permit a reasonable inference that one was a contributing factor to the other. *See, e.g., Ronald Sorri*, Case No. LWA-0001 (1993).

Next, the Hearing Officer described the Complainant's disclosures, and concluded that they did not constitute protected behavior pursuant to 10 C.F.R. Part 708. With regard to Mr. Chudgar's first disclosure, the Hearing Officer stated that on April 8, 2009, Jim Coleman, Production Lead Engineer at WSRC, brought the Complainant a software revision to archive. That revision was titled Computer Program Modification Tracker (CMT) -0133. The revision contained schematics showing a software change of the sort that Mr. Chudgar was tasked with filing, and a hardware change that was implemented using a separate document. [3] This software change was intended to alter the function of a pump that was used to move liquid from one storage tank to another. The software had been tested and accepted on April 7-8, 2009, and was in use prior to Mr. Coleman asking the Complainant to archive the software. According to the Hearing Officer, Mr. Chudgar knew that the software had been tested and accepted by two systems engineers. Mr. Coleman had to make additional changes, but could not continue with his work until the changes in the software package had been archived, thereby establishing a "baseline." The Complainant examined the schematics and realized that they depicted a hardware change, but there was no documentation about the hardware change in the package. Since the documentation did not contain an explanation of the hardware change, Mr. Chudgar refused to archive the software revision. Mr. Coleman explained that the hardware change was controlled by another document. However, the Hearing Officer observed, the Complainant refused to archive the software package and the men argued.

At this point, the Hearing Officer continued, the facts are in dispute. The Respondent claims that Mr. Chudgar did not elevate the issue to management, nor did he call for a "time out" or a "stop work." [4] Motion to Dismiss at 3. According to SRR, management was unaware of this incident until Mr. Chudgar filed his complaint on April 13, 2009. The Complainant, however, contends that on April

---

[3]Significant software and hardware changes are controlled by a Design Change Form (DCF). Software changes are tracked using a Computer Program Modification Traveller (CMT).

[4] A "time out" is an informal process used to address safety concerns where an employee (1) feels uncomfortable in performing a task or (2) observes an unsafe condition that he wants corrected.

8, 2009, he called the Quality Assurance Manager, who advised Mr. Coleman to file a Non-Conformance Report (NCR) and enter his concern into the Site Tracking, Analysis and Reporting (STAR) system. [5] There is no evidence that Mr. Chudgar or Mr. Coleman filed an NCR. In fact, Mr. Chudgar left the office for the weekend, assuming incorrectly that Mr. Coleman would not continue with the changes. However, another engineer archived the software changes after the Complainant departed. Mr. Chudgar did not make any further report until April 13, 2009, when he reported this incident to the Office of Employee Concerns. The Office of Employee Concerns then contacted WSRC management about the report, and WSRC investigated the concern and issued a timeout. The investigation concluded that there was no safety concern and that the engineers could file an "as found" document in the software archives. [6]

The Hearing Officer concluded that Mr. Chudgar's communications with WSRC concerning this incident did not constitute a protected disclosure under Part 708 because he could not have had a reasonable belief that his disclosure revealed a substantial and specific danger to employees or to the public. She pointed out that, instead of filing an NCR or calling for a time out, measures that an employee in his position with his level of experience should have taken if he was concerned about public or employee safety, the Complainant left for the weekend. In response to Mr. Chudgar's argument that the QA Manager directed Mr. Coleman to file a NCR, the Hearing Officer concluded that it was not logical that Mr. Coleman, who did not believe that there was any problem, would file such a report. The Hearing Officer did not address the issue of whether the Complainant reasonably believed that this first disclosure revealed a substantial violation of a law, rule, or regulation.

The Hearing Officer then addressed Mr. Chudgar's second alleged protected disclosure. She said that on April 23, 2009, the Complainant amended his concern, claiming that WSRC had violated its procedure when it changed to a new computer operating system. The change involved approximately 500 files, much larger than the typical software update that Mr. Chudgar was assigned to catalog and record. The Complainant reviewed the change documentation and alleged that it violated WSRC procedure because it was lacking the proper approvals by the Facility Operations Safety Committee (FOSC), and because WSRC engineers were not following requirements to supercede previous revisions when "baselining" the files.

The Hearing Officer cited with approval the Respondent's claim that the FOSC only had to approve changes that were "Safety Significant," and that only 20 pages of the 500 page package were safety significant. The Hearing Officer concluded that those 20 pages had indeed been approved. She further found that Mr. Chudgar's manager asked him to identify his concerns and notify the

---

[5] A NCR is required when an item fails to satisfy required technical, design or quality requirements, is of indeterminate quality, is found to be suspect (counterfeit), has documentation deficiencies which render the item indeterminate, or meets one or more of the previous conditions but its continued use is required. The STAR system is available to all employees to identify and report safety concerns.

[6] An "as found" document is an existing design document that defines and reflects what the field condition should be. It is placed into a DCF as a convenience for the user.

appropriate manager, but that the Complainant did not do so, and stated that he was satisfied with the package. The Hearing Officer concluded that the fact that Mr. Chudgar could not articulate his concerns when asked undermines the reasonableness of any belief that the new system violated company procedures.

Based on the evidence, the Hearing Officer found that the Complainant could not have reasonably believed that his second disclosure revealed a substantial violation of a law, rule or regulation, or a substantial and specific danger to employee or public health or safety. She cited FOSC's approval of the portion of the change package that was "safety significant," the Complainant's knowledge that the software changes had been successfully tested, that the rules cited by Mr. Chudgar were not applicable to the engineering procedures that the Complainant catalogued, and his inability to articulate to the Respondent, when asked, any safety problem that he found with the changes.

The Hearing Officer further stated that, even if either of the Complainant's two disclosures could be considered to be protected under Part 708, he would not be able to show that either of the two disclosures was a contributing factor to an act of retaliation. Specifically, the Hearing Officer concluded that the people who decided to offer the Complainant his current position did not have actual or constructive knowledge of the disclosures and the alleged retaliatory act did not occur sufficiently soon after the disclosures to permit a reasonable inference that the disclosure was a contributing factor. Furthermore, she found that Mr. Chudgar's reassignment to a non-engineering position did not constitute a retaliation because it had no negative effect on the terms and conditions of the Complainant's employment.

E. The Statement Of Issues

Mr. Chudgar's Statement of Issues was largely unresponsive to the Hearing Officer's findings in the IAD. [7] For example, a substantial portion of the Statement was devoted to the ratings given to him by the management team that offered him his current position, even though they were not a significant factor in the Hearing Officer's decision. Moreover, the Statement did not address the Hearing Officer's conclusions that the Complainant could not have had a reasonable belief that his

---

[7]Mr. Chudgar's response to the IAD was set forth in its entirety in his Notice of Appeal. In a letter to the Complainant dated January 13, 2011, the OHA acknowledged receipt of the Notice, and stated that, although the Notice included some discussion of the relevant issues, a more complete explanation of the basis for his Appeal was needed. Our letter then briefly described the bases for the Hearing Officer's decision, and said that Mr. Chudgar should identify the Hearing Officer's findings with which he disagreed and the reasons for that disagreement. *See* January 31, 2011, letter from Poli Marmolejos, Director, OHA, to Vinod Chudgar.

In a telephone conversation with Robert Palmer of this Office, Mr. Chudgar stated that he did not intend to make another filing regarding his Appeal, and that he wished for his Notice of Appeal to also serve as his Statement of Issues. *See* memorandum of February 15, 2011, telephone conversation between Mr. Chudgar and Mr. Palmer. For this reason, I have referred to his Notice as his Statement of Issues in the body of this Decision.

disclosures revealed a substantial and specific danger to employees or to the public. Also not discussed in the Statement were the Hearing Officer's findings that the management team that offered him his current position did not have actual or constructive knowledge of the individual's disclosures, that the alleged retaliation did not occur soon enough after the disclosures to allow for a reasonable inference that the disclosures were a contributing factor, and that the Complainant's reassignment did not constitute retaliation because it did not materially and adversely affect the terms and conditions of his employment. Instead, the Statement focused on Mr. Chudgar's claim that he reasonably believed that his disclosures revealed a substantial violation of a law, rule, or regulation.

II. ANALYSIS

As set forth above, the Respondent filed a Motion to Dismiss, and in the IAD, the Hearing Officer granted that Motion. However, because the Hearing Officer's analysis went beyond an examination of the sufficiency of the complaint and was in fact a ruling on the merits of the case, it can be more accurately described as a summary judgement in favor of the Respondent. I will therefore evaluate the IAD using standards established for summary judgements in prior Decisions of this Office and in the federal courts.

The Part 708 regulations do not include procedures and standards governing summary judgment. I note, however, that the Federal Rules of Civil Procedure provide that a Motion for Summary Judgement shall be granted "if the pleadings, depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." Fed. R. Civ. P. 56(c). While the Federal Rules do not govern this proceeding, Rule 56 has been used as a guide in the evaluation of Motions for Summary Judgment filed in a Part 708 proceeding. *See Colleen* Monk, Case No. TBA-0105 (2011); *Edward J. Seawalt*, Case No. VBZ-0047 (2000). In *Mary Ravage*, Case No. TBA-0102 (2011), we stated that summary judgment may be entered, after adequate time for discovery and upon motion, against a party who fails to make a showing sufficient to establish the existence of an element essential to that party's case, and on which that party will bear the burden of proof at trial. In such a situation, there can be "no genuine issue as to any material fact," since a complete failure of proof concerning an essential element of the nonmoving party's case necessarily renders all other facts immaterial. We further said that in such a case, the moving party is "entitled to a judgment as a matter of law" because the nonmoving party has failed to make a sufficient showing on an essential element of his case with respect to which he has the burden of proof. *Celotex v. Catrett*, 106 S. Ct. 2548, 2552-2553 (1986). The Supreme Court has further articulated the following test: "If the record taken as a whole could not lead a rational trier of fact to find for the non-moving party, there is no genuine issue for trial." *Matsushita v. Zenith Radio Corp.*, 475 U.S. 574, 597 (1986).

Because the IAD involved questions of law, we will review the Hearing Officer's findings *de novo*. For the reasons set forth below, I conclude that, after an ample opportunity for discovery, the Complainant is unable to establish, by a preponderance of the evidence, the existence of an element essential to his case, and on which he bears the burden of proof. Consequently, no purpose would be served by proceeding to a hearing in this matter.

A. Mr. Chudgar's Disclosures Did Not Reveal A Substantial And Specific Danger To Employees Or To The Public

After reviewing the record in this matter, I agree with the Hearing Officer that Mr. Chudgar could not have reasonably believed that his disclosures revealed a substantial and specific danger to the health or safety of employees or of the public. As an initial matter, the Complainant did not call for a time out nor did he file a NCR with regard to either of his disclosures, actions that one would reasonably expect an employee of Mr. Chudgar's level of experience to take when faced with a dangerous condition. Moreover, with regard to the first disclosure, both WSRC and the DOE investigated the issue, and concluded that there was no safety concern. *See* Affidavit of David B. Little, Deputy Chief Engineer, SRR. Finally, concerning the second disclosure, the record supports, and the Complainant did not dispute, the Hearing Officer's finding that WSRC's safety committee had examined and approved the documents in question and Mr. Chudgar knew that the software changes had been successfully tested. Consequently, I will not disturb the Hearing Officer's findings on this point.

B. Whether Mr. Chudgar Reasonably Believed That His Disclosures Revealed A Substantial Violation Of A Law, Rule, Or Regulation

As previously stated, Mr. Chudgar's Statement of Issues focused on his contention that he reasonably believed that his disclosures revealed a substantial violation of a law, rule, or regulation. Specifically, he argues that WSRC's actions regarding CMT-1033 were taken in violation of the provisions governing Design Change Forms set forth in Engineering Manual E-7, Procedure 2.37. Statement at 1. He contends that his second disclosure revealed a violation of company rules set forth in Procedures 2.37 and 2.38. Statement at 2.

There is some support in the record for the Complainant's claim that he reasonably believed that his first disclosure revealed a substantial violation of company procedures. During the WSRC investigation of the Complainant's Employee Concern, the investigator concluded that "Manual E7, Procedure 2.37 *Design Change Form* requirements were violated during implementation of the referenced documents [CMT-1033]." *See* June 18, 2009 letter from Larry Adkinson, Lead Investigator, WSRC ECP, EEO & Ethics, to Mr. Chudgar (italics in original). However, because I conclude, in section II.C below, that the Complainant did not suffer retaliation as a result of his disclosures, I do not believe that further development of the record on this point at a hearing is required.

As for the second disclosure, there is no support for the proposition that the Complainant reasonably believed that it revealed a substantial violation of a law, rule, or regulation. In his Statement, Mr. Chudgar contends that WSRC engineers violated Procedures 2.37 and 2.38 and Manual 2s, Procedure 1.3 by not superceding previous software revisions before baselining the files. However, there is evidence in the record that, while this may have been the better practice, there were no company rules that required that revisions be done in this way. *See* May 11, 2009 electronic mail from the Complainant's manager, Tony Tipton, to the Complainant. The Complainant failed to point out the language in the rules that he cited that specifically prohibits the practices that he complained of, and after reviewing those provisions, I find no reasonable basis for the Complainant's belief.

According to the IAD, this is consistent with the experiences of the Respondent's investigation team, who asked Mr. Chudgar to clarify his contention that WSRC had not followed proper procedure in changing to a new computer operating system. The Hearing Officer's findings that the Complainant did not provide any clarification and the team still did not understand his concern was not disputed by Mr. Chudgar. His inability to point to specific company rules and clearly explain how WSRC's actions violated those rules strongly suggests that Mr. Chudgar did not reasonably believe that his second disclosure revealed a substantial violation of a law, rule, or regulation.

C. The Complainant's Reassignment Did Not Constitute Retaliation Under The Part 708 Regulations

Pursuant to 10 C.F.R. § 708.2, "retaliation" means "an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (*e.g*., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities described in § 708.5 of this subpart."

Mr. Chudgar contends that his reassignment from his previous position as a Senior Engineer A to his current position as a Principal Process Computer Analyst constituted retaliation. However, it is undisputed that he is currently employed at the same salary and grade level that he was previously receiving. [8] Moreover, there is ample evidence in the record to indicate that the Complainant was not using his engineering background in his previous position, and that his current assignment is not dissimilar to what he was doing before. During his June 17, 2010, interview with the OHA Investigator, Clifford Winkler, Chief Engineer, SRR and a member of the transition management team, stated that the job offer to Chudgar matched his previous assignment, where he worked with computers. Mike McEver, Manager, Tank Farms Process Controls Support Group, SRR, told the Investigator on June 23, 2010, that the Complainant's former job did not require an engineering background, and that Mr. Chudgar was not utilizing that background in his position. He characterized the baselining of software, in which the Complainant was engaged, as "an IT function." Tony Tipton and Albert Zaharia, his former manager and co-worker, respectively, described his previous duties as managing data and computer software. *See* memoranda of OHA Investigator's interviews with Mr. Tipton on June 24, 2010 and Mr. Zaharia on June 30, 2010. The evidence in the record indicates that the reassignment did not adversely affect the terms and conditions of the individual's employment, and therefore did not constitute "retaliation" as that term is defined in the Part 708 regulations. *See Mark D. Siciliano*, Case No. TBH-0098 (2010).

[8] The Complainant claims that in his previous position, he was able to work a substantial amount of overtime that is currently unavailable to him. However, after an ample opportunity for discovery, he was unable to submit any evidence to support this contention.

III. CONCLUSION

I agree with the Hearing Officer's findings regarding the Complainant's second disclosure, and with the Hearing Officer's conclusion that the first disclosure did not reveal a substantial and specific danger to employees or to the public. Although the Hearing Officer did not address the Complainant's claim that his first disclosure also revealed a substantial violation of a law, rule or regulation, I agree with the Hearing Officer's dismissal of the Complaint, because I conclude that the Respondent did not retaliate against the Complainant. Accordingly, I will deny the Appeal.

It Is Therefore Ordered That:

(1) The Appeal filed by Vinod Chudgar from the Initial Agency Decision issued on January 13, 2011, Case No. TBA-0100, is hereby denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner:	Mary Ravage
Date of Filing:	January 19, 2011
Case Number:	TBA-0102

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on January 6, 2011, involving a complaint of retaliation filed by Mary S. Ravage ("Ravage" or "Complainant") under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In her complaint of retaliation (hereinafter "the Complaint"), Ravage alleged that her former employer, Medcor, Inc. (Medcor), retaliated against her for making a protected disclosure under Part 708 regarding an alleged incident where a fellow employee slapped another fellow employee on the arm. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer determined that Ravage had not shown, and could not show pursuant to 10 C.F.R. § 708.5(a), that she reasonably believed that in disclosing the alleged arm slap to her superiors, she revealed either (1) a substantial violation of law, rule or regulation, or (2) a substantial and specific danger to employees or to public health and safety. The Hearing Officer therefore granted a Motion for Summary Judgment filed by Medcor, and then dismissed the Complaint without a hearing. Ravage appealed the decision. As set forth below, the appeal is denied.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned or-leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they "reasonably and in good faith" believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. 10 C.F.R. § 708.5 (a). Thus, contractors found to have taken adverse personnel actions against an employee for such a

disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"] will be directed by the DOE to provide relief to the complainant. *See* 10 C.F.R. § 708.2 (definition of "retaliation").

The DOE Contractor Employee Protection Program regulations set forth at 10 C.F.R. Part 708 establish administrative procedures for the processing of complaints. Under these regulations, review of an IAD, as requested by Ravage, is performed by the Director of OHA. 10 C.F.R. §708.32.

B. History of the Complaint Proceeding

For purposes of review, I set forth the pertinent facts as averred in the Report of Investigation (ROI) and in the subsequent IAD.[1] Medcor ran two clinics as a subcontractor of Bechtel National Inc. (Bechtel). Bechtel is the contractor responsible for the environmental clean-up operation for the DOE's Office of River Protection (ORP). Medcor hired Ravage in June 2009 to work on an "as needed" basis as a nurse for the clinics.

Ravage contends that on October 8, 2009, she was told by a co-worker, Kristine Welsh, that the previous evening Welsh had been struck by another co-worker, XXXXX. That evening, Ravage verbally reported Welsh's allegations to Medcor's Director of Operations, Cindi McCormack. Welsh subsequently informed McCormack that, on October 7, 2009, XXXXX had "slapped my left arm pretty hard." October 12, 2009, e-mail from Welsh to McCormack. On October 28, 2009, XXXXX was promoted to XXX XXX, and on October 29, 2009, Ravage was hired as a full-time nurse.

In her Complaint, Ravage contends that she found Welsh's allegation credible because she alleges that she too was struck by XXXXX during the week prior to XXXXX's alleged arm-slap of Welsh. Although Ravage asserts that in her October 8, 2009, conversation with McCormack, she told McCormack that she (Ravage) had been struck by XXXXX on a separate occasion, McCormack has stated that she has no recollection of Ravage making this assertion. Instead, McCormack contends that on October 8, 2009, she asked Ravage if she had ever experienced any physical assault or threat of violence in the workplace, and Ravage denied having experienced them. November 12, 2010, Affidavit of Cindi McCormack, Exhibit A to Medcor's November 23, 2010, Motion for Summary Judgment at 2. On November 1, 2009, Ravage sent an e-mail to McCormack reiterating the concerns about XXXXX's conduct towards Welsh that she had verbally expressed on October 8, 2009. Ravage's November 1, 2009, written account does not assert that Ravage was ever struck by XXXXX. The November 1, 2009, e-mail does, however, accuse XXXXX of speaking to her with "an angry voice and

[1] The events leading to the filing of Ravage's complaint are fully set forth in the IAD. *See Mary Ravage/Medcor, Inc.*, Case Nos. TBH-0102, TBZ-0102 (2011). Decisions issued by OHA are available on the OHA website located at http://www,oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

with a mean face." November 1, 2009, e-mail from Ravage to McCormack. A subsequent, December 7, 2009, e-mail from Ravage to McCormack complains about XXXXX's aggressiveness but also fails to contain an allegation that Ravage was struck by XXXXX. The first record of an allegation that Ravage was struck by XXXXX appears in a December 22, 2009, e-mail from Ravage's husband, Dr. Chris Ravage, M.D., to Medcor's Chief Operating Officer, Bennet W. Petersen. In that e-mail, Dr. Ravage alleges that XXXXX "hip-checked" his wife during the week prior to XXXXX's alleged striking of Welsh. [2]

Medcor contends that Ravage's poor work performance in November and early December 2009 resulted in two written warnings to Ravage. On December 8, 2009, Ravage was warned by a Medcor supervisory team that future problems could result in disciplinary action including termination. On January 6, 2010, Medcor asked Ms. Ravage to resign.[3] When Ravage refused to resign, Medcor terminated her employment. IAD at 3.

On January 21, 2010, Ravage filed her Complaint. The Complaint alleges that "Medcor had been given copious warning[s] that there were issues in their Richland operation and the response was to try and reign [sic] in the squeaky wheel." Complaint at 4. In this regard, the Complaint alleges that XXXXX systematically harassed and undermined Ravage in retaliation for Ravage's reporting of Welsh's allegation to McCormack. As noted above, the Complaint alleges that XXXXX had struck Ravage less than a week before the alleged incident involving Welsh. Complaint at 1.

Medcor filed responses to the Complaint on March 4, 2010, and on May 14, 2010, arguing that Ravage had made no disclosures protected under Part 708, and that her termination was not retaliatory. In June 2010, ORP's Employee Concerns Manager transmitted the Complaint to OHA for an investigation followed by a hearing. On June 9, 2010, the OHA Director appointed an Investigator (OHA Investigator) who conducted an investigation into the allegations contained in Ravage's Complaint. On September 8, 2010, the OHA Investigator issued a Report of Investigation (ROI) in this case. In the ROI, the OHA Investigator concluded that Ravage was alleging a single protected disclosure, *i.e.*, reporting to McCormack on October 8, 2009, that Welsh alleged that she was struck by XXXXX. With regard to that one disclosure, the OHA Investigator found that Ravage had not demonstrated, by a preponderance of the evidence, that this information met the criteria for a Part 708 protected disclosure. ROI at 4.

---

[2] In Ravage's Response to Medcor's Motion for Summary Judgment, Dr. Ravage refers to this alleged action by XXXXX as "a hip check like in a hockey game." Response at 1. A "hip-check" is a term used in ice hockey to describe the action that occurs when a player drops to a near-crouching stance and swings his hips towards an opposing player in order to knock him off balance. *See* http://en.wikipedia.org/wiki/Checking_(ice_hockey)

[3] Although not mentioned in the IAD, Medcor cited a subsequent event in which Ravage allegedly did not follow security rules.

Upon the issuance of the ROI, the OHA Director appointed a Hearing Officer to conduct a hearing concerning the Complaint. On November 12, 2010, Medcor submitted a Motion for Summary Judgment contending that Ravage had not met her burden of proof. Specifically, the Motion asserted that Ravage's report of an alleged arm-slapping incident involving Welsh and XXXXX does not constitute a protected disclosure under 10 C.F.R. § 708.5. Ravage filed a Cross-Motion for Partial Summary Judgment on November 12, 2010, and submitted a supplemental response to Medcor's Motion on November 22, 2010. The Cross-Motion requested a ruling that her October 8, 2009, report of an alleged arm-slapping incident constitutes a protected disclosure. Ravage asserted that her October 8, 2009, report met two of the criteria for protected disclosures set forth at § 708.5. She asserted that the reported incident "was a violation of law" under § 708.5(a)(1), and that her disclosure communicated a reasonable belief that "XXXXX posed a substantial and significant danger to employees" under § 708.5(a)(2) and. IAD at 4, *citing* Ravage Supplemental Response at 1.

C. The Initial Agency Decision (IAD)

The IAD set forth the Hearing Officer's decision regarding Medcor's Motion for Summary Judgment and Ravage's Complaint. The Hearing Officer found that it is Ravage's burden to prove, by a preponderance of the evidence, that she made a protected disclosure as described in 10 C.F.R. § 708.5, and that, if she cannot meet this threshold showing, then judgment cannot be awarded in her favor. In this regard, the Hearing Officer found that it was appropriate to grant summary judgment against Ravage if she has failed to make a showing sufficient to establish the existence of this element essential to her case. IAD at 5, *citing Celotex v. Catrett*, 106 S. Ct. 2548, 2552-2553 (1986). The Hearing Officer then considered whether Ravage had shown, or could show, that she reasonably believed that in disclosing the alleged arm slap of Welsh by XXXXX, she revealed either (1) a substantial violation of a law, rule or regulation, or (2) a substantial and specific danger to employees or to public health and safety.

1. Reasonable Belief Concerning a Substantial Violation of Law, Rule, or Regulation

The Hearing Officer found that Ravage was correct that intentionally slapping a fellow employee could violate state law depending on the circumstances and severity of the slap. However, the Hearing Officer also found that, under Part 708, a protected disclosure must communicate a reasonable belief of a *substantial* violation of a law, rule, or regulation in order to receive protection. 10 C.F.R. § 708.5(a)(1). In reviewing the record of the alleged arm slap of Welsh by XXXXX, the Hearing Officer found that Welsh contemporaneously described the alleged incident as an intentional, hard arm slap, and he concluded that while such an arm slap may have resulted in a technical violation of the law, it did not constitute a sufficiently substantial violation of law to be protected under § 708.5(a)(1). The Hearing Officer also observed that Welsh's failure to immediately report the incident indicated that Welsh did not believe that a substantial violation of law had occurred. The Hearing Officer therefore concluded that the record

contained no reliable evidence supporting Ravage's contention that she could reasonably believe that a substantial violation of law had occurred. He, therefore, granted summary judgment to Medcor on the issue of whether Ravage disclosed information that she reasonably believed revealed a substantial violation of law, rule, or regulation.

2. Reasonable Belief Concerning a Substantial and Specific Danger to Employees or to Public Health and Safety

The Hearing Officer noted that Ravage had conceded that "no reasonable person" would believe that "a simple, isolated slap on the arm . . . poses . . . a danger. It is our contention that the assault was violent, not isolated, and XXXXX showed a consistent pattern of aggressive abusive behavior." Ravage Supplemental Response at 1. The Hearing Officer found that Ravage was attempting to re-characterize her October 8, 2009, report to McCormack by asserting that she had reported a pattern of aggressive, violent, and abusive behavior, as well as an alleged incident in which XXXXX hip-checked Ravage. IAD at 6-7. The Hearing Officer found that Ravage's accounts of the alleged incident were inconsistent, and that Ravage's written communications with McCormack on November 1, 2009, and December 7, 2009, discuss allegations of angry behavior by XXXXX but do not allege any physical aggression by XXXXX against Ravage. Finally, the Hearing Officer noted that (i) McCormack denied being told by Ravage on October 8, 2009, of any physical aggression against Ravage by XXXXX, and (ii) more importantly, that Ravage admitted at her deposition that she did not know if she told McCormack of the hip-checking incident on October 8, 2009. Accordingly, the Hearing Officer found that Ravage's claim that she reported a hip-checking incident to McCormack on October 8, 2009, "is simply not credible." *Id*. at 7. He concluded that, considering all of the evidence in the light most favorable to Ravage, Ravage "will not meet her evidentiary burden regarding an alleged, hip-checking incident." IAD at 8.

With respect to Ravage's contention that she reported a pattern of aggressive, violent, and abusive behavior to McCormack on October 8, 2009, the Hearing Officer found that Ravage's statements at her deposition do not support and, in fact, undercut this claim. He notes that in her Complaint, Ravage contends that XXXXX began systematically harassing and undermining Ravage "very shortly *after*" she reported the alleged arm-slapping of Welsh to McCormack, and that, during her deposition testimony, Ravage stated that XXXXX had started being aggressive to her at some point *after* Medcor's investigation of the alleged arm-slapping incident with Welsh had been concluded. IAD at 8, *citing* Complaint at 1, November 2010 Deposition Transcript at 16. [emphasis added].

Based on these findings, the Hearing Officer concluded that Ravage would not be able to establish that she disclosed information that she reasonably believed revealed a substantial and specific danger to employees or to public health or safety, and that no reasonable trier of fact could find in her favor on this issue. IAD at 8. Accordingly, the Hearing Officer granted summary judgment in favor of Medcor on the issue of whether

Ravage had disclosed information that she reasonably believed revealed a substantial and specific danger to employees or to public health or safety.

In the IAD, therefore, the Hearing Officer concluded that no rational trier of fact would be able to conclude that Ravage made a disclosure protected by Part 708 on October 8, 2009. Accordingly, he granted Medcor's Motion for Summary Judgment and dismissed Ravage's Complaint.

D. The Appeal

On January 19, 2011, Ravage appealed the Hearing Officer's findings in the IAD and identified the issues that she wished the Director of OHA to review in the appeal phase of the Part 708 proceeding.[4] *See Appeal*. On February 22, 2011, Medcor filed a response to Ravage's Appeal. *See Response.* In the Response, Medcor requested that the IAD be affirmed.

In her Appeal, Ravage contends that the investigation of her Complaint was incomplete because individuals that she identified who could corroborate various aspects of the complaint were not interviewed. She also states that the Hearing Officer offered to facilitate discovery if the parties were unable to reach agreement, and then failed to respond to requests by Ravage for assistance with discovery items that Medcor had refused to provide. Appeal at 1.

With respect to the Hearing Officer's factual findings in the IAD, Ravage first contends that the Hearing Officer erred in stating that Medcor "issued" two written warnings to Ravage for inappropriate conduct. Ravage asserts that one of the warnings was never presented to her and that the other warning has notations from Ravage and McCormack that mitigate the concern presented in the document. *Id.*

Ravage next contends that the Hearing Officer should have found that Ravage had established by a preponderance of the evidence that she had informed McCormack in their October 8, 2009, conversation of her allegation that XXXXX had struck Ravage. In this regard, Ravage asserts that the Hearing Officer mischaracterized Ravage's deposition testimony by stating that Ravage "admitted that she does not know if she informed Ms. McCormack of this incident . . ." IAD at 7. Ravage refers to testimony at the deposition where she stated that "I know I told her - - I had to have told her that because that was the whole realm of the whole thing, of her anger, and she had done it to me." Appeal at 2, *citing* Deposition Transcript at 36.

Ravage also contends that the Hearing Officer erred in stating that none of the written communications between Ravage and Medcor in November and December 2009 state that Ravage discussed XXXXX's alleged striking of Ravage in her October 8, 2009, conversation with McCormack. Ravage asserts that Dr. Ravage's December 22, 2009, e-mail to Petersen stated that Ravage discussed this alleged striking in her October 8,

[4] Although it is entitled Notice of Appeal, Dr. Ravage confirmed by e-mail dated January 31, 2011, that Ravage had nothing to add to the issues presented in her Notice of Appeal.

2009, conversation with McCormack. Ravage asserts that this corroborative statement by Dr. Ravage "should reasonably swing the preponderance of the evidence toward believing [Ravage's] version due to its timing." Appeal at 2. Based on this finding, Ravage contends that the Hearing Officer should have concluded that Ravage did report an alleged pattern of aggressive, violent and abusive behavior involving XXXXX in her October 8, 2009, conversation with McCormack, and that therefore she disclosed information that she reasonably believed revealed a substantial and specific danger to employees or to public health and safety. *Id.*

II. ANALYSIS

The Part 708 regulations do not include procedures and standards governing motions for summary judgment. In the absence of such standards, the Federal Rules of Civil Procedure, though not governing this proceeding, may be used for analogous support. *See, e.g., Hansford F. Johnson*, Case No. TBZ-0104 (November 24, 2010); *Billy Joe Baptist*, Case No. TBH-0080 (May 7, 2009); *Edward J. Seawalt*, Case No. VBZ-0047 (August 20, 2000) (applying standards of Fed. R. Civ. P. 56 to Motion for Summary Judgment). In the instant case, we find that the Hearing Officer correctly applied the standards for determination found in Fed. R. Civ. P. 56(c) to Medcor's Motion for Summary Judgment. That rule states that summary judgment is proper "if the pleadings, depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law." The IAD correctly states that summary judgment may be entered, after adequate time for discovery and upon motion, against a party who fails to make a showing sufficient to establish the existence of an element essential to that party's case, and on which that party will bear the burden of proof at trial. In such a situation, there can be "no genuine issue as to any material fact," since a complete failure of proof concerning an essential element of the nonmoving party's case necessarily renders all other facts immaterial. It notes that a moving party is "entitled to a judgment as a matter of law" because the nonmoving party has failed to make a sufficient showing on an essential element of her case with respect to which she has the burden of proof. *Celotex v. Catrett*, 106 S. Ct. 2548, 2552-2553 (1986). The Supreme Court has further articulated the following test: "If the record taken as a whole could not lead a rational trier of fact to find for the non-moving party, there is no genuine issue for trial." *Matsushita v. Zenith Radio Corp.*, 475 U.S. 574, 597 (1986) (*Matsushita*). IAD at 5.

As an initial matter, we need not address Ravage's argument that the OHA investigation of her Complaint was incomplete. Such an allegation has no bearing on our review of the IAD. 10 C.F.R. § 708.22(a) clearly indicates that an investigation is not an essential element of a Part 708 proceeding, and our current review is confined to the determinations made by the Hearing Officer in the IAD. See 10 C.F.R. § 708.32. Nor can Ravage rely on investigative findings to support her Complaint. The complaining employee alone has the responsibility to prove the elements of his or her complaint. 10 C.F.R. § 708.29.

We also need not review Ravage's contention that the Hearing Officer erred with respect to the discovery process. 10 C.F.R. § 708.28(b) invests the Hearing Officer with all powers necessary to regulate the conduct of the hearing proceeding. It is certainly within the Hearing Officer's discretion to decline to order discovery requests that he believes are unnecessary, and to halt discovery while considering a Motion for Summary Judgment based on the present record of the case.

Furthermore, we need not review Ravage's contention that the Hearing Officer made erroneous factual findings in the IAD with respect to written warnings contained in Ravage's personnel file at Medcor. The written warnings are relevant to the issue of Medcor's basis for terminating Ravage's employment. The Hearing Officer's determination in the IAD to grant Medcor's Motion for Summary Judgment and to dismiss the Complaint is based solely on the finding that Ravage failed to make a protected disclosure under Part 708.

We now turn to Ravage's contention that the Hearing Officer erred when he concluded that Ravage would not be able to establish that she disclosed to McCormack, in their October 8, 2009, conversation, that Ravage allegedly had been struck by XXXXX. That contention is without merit. As discussed below, Ravage's own description of this alleged incident at her deposition, as well as the characterization of it in her Complaint, does not establish that it was an instance of angry striking by XXXXX that Ravage would have been likely to report to McCormack in the context of informing her about XXXXX's alleged slapping of Welsh. Moreover, Ravage admitted in her deposition testimony that she could not specifically recall relating this incident to McCormack.

At the outset, we note that Ravage's deposition testimony does not support an account of Ravage being struck by XXXXX in a manner that would necessitate mention of the incident in any discussion of XXXXX's alleged anger. At her deposition, Ravage stated that she was struck by XXXXX while XXXXX was teaching Welsh to operate the x-ray machine. She stated that XXXXX grabbed an x-ray cassette from Welsh, "walked by and pushed [Ravage] against the door and went over to the x-ray machine and slammed [the x-ray cassette] in the x-ray [machine]." Ravage stated that XXXXX "struck me with her elbow" as she "pushed me away so that she could get by me to go put [the x-ray cassette] into the x-ray machine." *Id.* at 37-38. When Dr. Ravage later asked her if XXXXX's action was an elbowing or a hip check, she replied that "It was both at the same time. Move over so she could get by." *Id.* at 75. Based on our review of the record, we find that the Hearing Officer reasonably concluded from Ravage's deposition testimony that the incident of XXXXX allegedly striking Ravage was not a clear instance of anger-motivated violence that Ravage would have been likely to report to McCormack in the context of XXXXX's alleged striking of Welsh. In this regard, we note that the Complaint described XXXXX as acting "more in arrogance than anger." Complaint at 1.

We conclude from our review of Ravage's deposition testimony that the Hearing Officer did not err in concluding that this testimony indicated that Ravage did not recall if she informed McCormack of the incident. At the November 2010 deposition, Medcor counsel asked Ravage if, during her October 8, 2009, conversation with McCormack, she had told McCormack she was struck by XXXXX. Ravage stated:

> Yes. I told her that [XXXXX] had been aggressively getting anger [sic] at everything. And I said she's even done things to me. **I don't know if I said she struck me.** But we talked to her prior - - [McCormack] prior to that, to this incident, me and Kerry did, that [XXXXX] was getting angry at work."

Deposition Transcript at 35 [emphasis added]. She was then again asked to answer the specific question of whether she told McCormack that XXXXX allegedly struck her. She stated:

> I know that I told her – I had to have told her that because that was the whole realm of this whole thing, of her anger, and she had done it to me.

Id. at 36. The Hearing Officer rationally viewed this testimony as an admission that Ravage did not recall if she told McCormack on October 8, 2009, that XXXXX allegedly struck her. Ravage's statement that she "had to have told her" because they were discussing XXXXX's alleged anger is not a statement that she recalls telling McCormack, but a rationalization based on the subject of the conversation. As discussed above, the record does not support Ravage's reasoning that she must have told McCormack of the incident because it was an instance of XXXXX's alleged anger. In the IAD, the Hearing Officer finds that, at her deposition, Ravage's initial account of allegedly being struck by XXXXX was simply being struck by XXXXX's elbow as XXXXX brushed Ravage aside, and that she mentioned XXXXX giving her a hip-check only in response to a leading question from Dr. Ravage. IAD at 7. We concur with the Hearing Officer's assessment of Ravage's account.

Finally, we find no merit in Ravage's contention that the Hearing Officer erred in not considering Dr. Ravage's December 22, 2009, e-mail to Petersen, where he states that Ravage told McCormack on October 8, 2009, of allegedly being struck by XXXXX. The Hearing Officer specifically states that Dr. Ravage made this allegation to Petersen on December 22, 2009. IAD at 7. The Hearing Officer notes that Ravage's written communications with McCormack on November 1, 2008, and December 7, 2008, discuss Ravage's concerns about XXXXX's anger in the workplace, but that these communications fail to mention XXXXX's alleged striking of Ravage in early October 2009. We find that it was reasonable for the Hearing Officer to find the omission of this incident from Ravage's communications with McCormack as support for his conclusion that Ravage's claim to have discussed this incident with McCormack on October 8, 2009, is not credible. In light of the other evidence discussed above concerning this incident, we reject Ravage's contention that Dr. Ravage's corroborative statement to Petersen on December 22, 2009, "should reasonably swing the preponderance of the evidence toward believing [Ravage's] version due to its timing." Appeal at 2.

Accordingly, we find that the Hearing Officer rationally concluded that Ravage did not report an alleged pattern of aggressive, violent and abusive behavior involving XXXXX in her October 8, 2009, conversation with McCormack, but rather an isolated act of XXXXX allegedly striking a co-worker. We therefore find that the Hearing Officer correctly concluded that Ravage did not disclose information to McCormack that she

reasonably believed revealed a substantial and specific danger to employees or to public health and safety.

III. CONCLUSION

In sum, we find that the Hearing Officer correctly concluded that Ravage did not make a disclosure to Medcor officials that is protected under 10 C.F.R. § 708.5. We also affirm the Hearing Officer's grant of the Motion for Summary Judgment, and his dismissal of Ravage's Complaint. For the reasons discussed above, we find that Ravage's Appeal is without merit and should be denied.

It Is Therefore Ordered That:

(1) The Appeal filed by Mary Ravage from the Initial Agency Decision issued on January 6, 2011, is hereby denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

Poli A. Marmolejos
Director
Office of Hearings and Appeals

Date: March 25, 2011

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Appeal

Names of Petitioners:	Colleen Monk
Date of Filing:	February 10, 2011
Case Number:	TBA-0105

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on January 20, 2009, involving a complaint of retaliation filed by Colleen Monk ("Monk," or "Complainant") against Washington TRU Solutions, VJ Technologies, and Mobile Characterization Services (hereinafter referred to individually as "WTS," "VJT," and "MCS," respectively, or collectively as "the Respondents"), under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In her complaint, Monk alleged that, during her employment with VJT, she engaged in protected activity and, as a consequence, suffered reprisals by the Respondents. In the IAD, an Office of Hearings and Appeals (OHA) Hearing Officer granted a Motion for Summary Judgment filed by the Respondents, and denied Monk's complaint. Monk appealed the decision. As set forth below, the Appeal is denied.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned or-leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they "reasonably and in good faith" believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. 10 C.F.R. § 708.5 (a). Thus, contractors found to have taken adverse personnel actions against an employee for such a disclosure or for seeking relief in a "whistleblower" proceeding [a "protected activity"] will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations set forth at 10 C.F.R. Part 708 establish administrative procedures for the processing of complaints. Under these regulations, review of an IAD, as requested by Monk, is performed by the Director of OHA. 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

For purposes of review, I set forth the pertinent facts as averred in the Report of Investigation (ROI) and in the subsequent IAD.[1] WTS is the Management and Operations contractor for the DOE's Waste Isolation Pilot Plant (WIPP) in Carlsbad, New Mexico. The function of the WIPP is to safely store radioactive waste collected from various defense-related facilities around the United States. One of the departments within WTS is the Central Characterization Project (CCP).

It is the responsibility of the CCP to provide on-site analysis of the radioactive wastes, which are usually contained in 55-gallon drums, to determine their composition and to ensure that no prohibited items are included in the drums for shipment to the WIPP. Drums shipped to WIPP are subject to strict controls regarding their content, and specifically regarding the amount of liquid wastes they contain. This analysis, called "characterization," is sometimes performed by subcontractors. MCS is one such subcontractor, providing Real Time Radiography (RTR) and Non-Destructive Assay services for WTS. RTR, which is the only characterization procedure that is relevant to this proceeding, essentially consists of X-raying the 55-gallon drums and analyzing their contents.

Monk was hired by VJT, an MCS subcontractor, in September 2001. The Complainant received her qualifications and became an RTR Operator in January 2006. The Complainant alleges that, during the period from 2007 to 2009, WTS wanted all operators to also act as "spotters" for the forklifts used to move the 55-gallon drums of radioactive waste. However, Monk refused to act as a "spotter" because of a LANL rule that required forklift "spotters" to be qualified forklift operators. The Complainant had no such qualification. She alleges that WTS management was "not happy with her over this refusal." *See* Addendum to Complaint at 2. Monk alleged that her action was protected under Part 708 as a refusal to participate in an activity that caused her to have a reasonable fear of serious injury to herself or to other employees. *See* 10 C.F.R. § 708.5(c)(2).

Beginning in January 2009, the Complainant began experiencing constant pain and fatigue. She was subsequently diagnosed as suffering from Fibromyalgia. She informed her supervisor that she was taking pain medication and that she could not take her medication while working in the field (as an RTR Operator). Monk alleges that, during that same time, she made protected disclosures, primarily regarding issues related to safety at LANL.

In March 2009, she informed her supervisor of her concern that employees who were not forklift-qualified were being required to act as "spotters." *Id.* The Complainant also alleges that in the same month, she approached a Site Project Manager at LANL with her concerns about the use of an Excel spreadsheet to calculate the amount of liquid in the drums of radioactive waste. According to the Complainant, the Manager had determined that the RTR Operators' rejection

[1] The events leading to the filing of Monk's complaint are fully set forth in the IAD. *See Colleen Monk*, Case No. TBH-0105 (2011). Decisions issued by OHA are available on the OHA website located at http://www,oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

rate for the drums was too high, and asked that the Operators use the spreadsheet. Specifically, the spreadsheet would calculate the amount of liquid in a drum after the Operator entered the physical measurements of the liquid observed inside the drum. Monk and other RTR Operators believed that the spreadsheet would underestimate the amount of liquid in the drums. The Complainant states that she told the Site Project Manager of her concerns in this area during February and March 2009, and that the Manager informed her that she and other RTR Operators would have to use the spreadsheets or he would find other RTR Operators who would.

The Complainant's final alleged protected disclosure concerns a March 2009 incident during which a technician improperly performed maintenance on an energized RTR generator. Monk stated that she informed VJT and WTS management of this unsafe situation, and unsuccessfully tried to stop the technician herself, but was told by one of the VJT employees that she was "overstepping her bounds." *See* Addendum to Complaint at 13.

In August 2009, Monk, for reasons that are discussed in more detail below, requested that she be moved to another position. *Id.* at 8; *See* OHA Investigator's Record of Telephonic Interview with Steve Halliwell, Head of Nuclear Division, VJT, at 2 (Halliwell Interview) (stating the Halliwell met with Monk on August 12th or 13th and she expressed to him that she was looking for office work); OHA Investigator's Record of Telephonic Interview with Karen Ventura, HR Director, VJT, at 2.

In October 2009, because of concerns on the part of WTS and VJT management that RTR Operators were not following a consistent procedure for determining the amount of liquid in drums of radioactive waste, WTS revoked the qualifications of all RTR Operators at LANL. In November 2009, WTS management informed the Operators that they would be trained on the use of the spreadsheet and would be tested on their knowledge in order to be re-qualified. Six Operators took the test, and two of the six passed. These two were placed on the List of Qualified Individuals (LOQI), and were subsequently re-qualified as RTRs. The Complainant also passed the test, but she was not placed on the LOQI. In December 2009, Monk was moved to an administrative position with MCS. As a result of this reassignment, the Complainant's pay was reduced by about $2.00 per hour.

On January 20, 2010, Monk filed a Part 708 complaint with the DOE's Carlsbad Field Office, which referred the complaint to OHA for an investigation and hearing. The Carlsbad Field Office forwarded the complaint to OHA and the OHA Director appointed an Investigator, who issued a Report of Investigation (ROI) on August 25, 2010. 10 C.F.R. §§ 708.22-23. In the ROI, the Investigator concluded that the only alleged action of Monk that might have been protected under Part 708 was her disclosure concerning the technician's unauthorized work on an energized piece of equipment. ROI at 7; *see* 10 C.F.R. § 708.5(a)(2).

Regarding the alleged retaliations, the Investigator found that, while Monk alleged she had been subjected to a hostile work environment, the "mere assertion of a hostile work environment does not rise to the level of retaliation." ROI at 8 n.11. The Investigator also found there to be some question as to whether Monk's transfer from her position as an RTR Operator to an administrative position, with the accompanying reduction in pay, rose to the level of a retaliation under Part 708, due to the circumstances surrounding the reassignment. *Id.* at 7-8. Assuming

that it did, the Investigator stated that the Complainant might be able to show that her alleged protected disclosure was a contributing factor to this action. *Id.* at 8. However, the Investigator concluded that, in all likelihood, the Respondents would be able to show, by clear and convincing evidence, that they would have taken the same actions in the absence of any protected disclosure. *Id.* at 8-10.

On August 26, 2010, the OHA Director appointed a Hearing Officer, who requested that the parties submit briefs focusing on the findings and conclusions in the ROI with which they disagreed, and the reasons for their disagreement. The parties submitted briefs and replies setting forth their positions concerning the issues raised in the ROI. Among the briefs submitted was Respondent VJT's September 30, 2010, "Brief in Support of Summary Judgment" joined in by Respondents WTC and MCS.

C. The Initial Agency Decision (IAD)

In the IAD, the Hearing Officer noted that, while the Federal Rules of Civil Procedure do not govern a Part 708 proceeding, Rule 56 has been used as a guide in the evaluation of Motions for Summary Judgment. That rule provides that such a motion shall be granted "if the pleadings, depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." Fed. R. Civ. P. 56(c).

The Hearing Officer discussed the burdens of the parties under Part 708, that the complainant must establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. If the complainant meets this burden of proof, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." *Id.* The Hearing Officer found that summary judgment in favor of the Respondents would be appropriate if there are no genuine issues as to any material fact and the Respondents are entitled to a judgment as a matter of law on *any of these elements*.

Thus, the Hearing Officer did not determine whether the Complainant engaged in activity protected under Part 708 or whether, if she had, such activity was a contributing factor to an act of retaliation by the Respondents. Neither did the Hearing Officer rule on whether the transfer of Monk to an administrative position could be considered as retaliation as defined in section 708.2, though he expressed "serious doubts" as to whether, under the circumstances, it could. IAD at 8. Rather, the Hearing Officer concluded that, *even if* the Complainant could meet her burden as set forth in section 708.29, "as a matter of law, . . . the Respondents would have taken the same actions in the absence of any protected activity on the part of the Complainant." *Id.*

In reaching his conclusion, the Hearing Officer considered factors that have been applied by the U.S. Court of Appeals for the Federal Circuit in cases interpreting the federal Whistleblower Protection Act (WPA), upon which Part 708 is modeled. The court has identified several factors that may be considered in determining whether an employer has shown that it would have taken

an alleged act of retaliation against a whistleblower in the absence of the whistleblower's protected conduct. Those factors include "(1) the strength of the [employer's] reason for the personnel action excluding the whistleblowing, (2) the strength of any motive to retaliate for the whistleblowing, and (3) any evidence of similar action against similarly situated employees for the non-whistleblowing aspect alone." *Kalil v. Dep't of Agriculture*, 479 F.3d 821, 824 (Fed. Cir. 2007) (*citing Greenspan v. Dep't of Veterans Affairs*, 464 F.3d 1297, 1303 (Fed. Cir. 2006)). Because the showing that must be made by an employer is virtually identical under the WPA and Part 708, prior OHA decisions have applied the factors set forth in *Kalil*. 5 U.S.C. § 1214(b)(4)(b)(ii); 10 C.F.R. § 708.29; *see, e.g., Dean P. Dennis*, Case No. TBH-0072 (2009), *aff'd* Case No. TBA-0072 (2009); *David L. Moses*, Case No. TBH-0066 (2008), *aff'd* Case No. TBA-0066 (2008).

First, the Hearing Officer found that the Respondents' reasons for transferring the Complainant to an administrative position were "exceptionally strong," including the undisputed fact, noted above, that she had requested the transfer. IAD at 7. In addition, the Hearing Officer cited evidence that her employer was concerned about her Fibromyalgia and the pain medication that she would sometimes have to take, "including hydrocodone, that, at least on occasion, rendered her unfit for work in the field." *Id.* The Hearing Officer also found evidence of management concerns "about 'liability issues' that could result from allowing the Complainant to continue to work as an RTR operator." *Id.*

Regarding the second *Kalil* factor, the Hearing Officer found that "the strength of the Respondents' motive to retaliate appears to have been minimal." *Id.* He noted that Monk's disclosure about the technician's unauthorized work on an energized piece of equipment, the only action alleged by Monk that the OHA Investigator found might have been protected under Part 708, did not directly implicate the Respondents' employees who played a role in the Complainant's reassignment. Further, the Hearing Officer agreed with the OHA Investigator that this incident was appropriately investigated and adequately addressed by the Respondent's in a "Root Cause Analysis Report." *Id.*

Finally, the Hearing Officer found evidence that the Respondents took similar actions against a similarly-situated employee for reasons that had nothing to do with "whistleblowing." The IAD cited the record of the OHA Investigator's interview with Steve Halliwell, VJT's Head of Nuclear Division, as indicating that another RTR operator requested reassignment because of the superior benefits that he would be eligible for in his new position, *id.* at 8 (citing Halliwell Interview at 2), and that, like Monk, his name was taken off the LOQI and not placed back on the List because he was being reassigned.

D. The Appeal

In her Appeal, Monk does not take issue with the analysis of the Hearing Officer in his consideration of the second and third *Kalil* factors. Instead, she focuses on the reasons cited in the IAD for the Respondents' decision to transfer her to an administrative position. The Complainant disputes that VJT had a "genuine concern to limit liability and keep me out of the field," and contends that she "was able to perform my job functions and keep my medication to a minimum." Appeal at 2.

II. ANALYSIS

Because this case involves an Appeal of a grant of summary judgment, I review the Hearing Officer's decision *de novo*, applying the appropriate standard of law. *See Eastman Kodak Co. v. Image Technical Services, Inc.*, 504 U.S. 451, 465 n.10 (1992) ("on summary judgment we may examine the record de novo without relying on the lower courts' understanding"); *Maydak v. United States*, 630 F.3d 166, 174 ("We review the grant of summary judgment *de novo*, applying the same standard of review as that of the District Court."). As noted by the Hearing Officer in the IAD, prior decisions of our office have considered motions for summary judgment under the standard used by the federal courts in applying Rule 56 of the Federal Rules of Civil Procedure. *See, e.g., Mary Ravage*, Case No. TBA-0102 (2011).

Applying this standard, *de novo*, to the facts before me, I find that the Hearing Officer appropriately granted the summary judgment motion. The Complainant notes what are, arguably, genuine disputes in the record as to facts that the Hearing Officer relied upon in the IAD in reaching his conclusion. *See Scott v. Harris*, 550 U.S. 372, 380 (2007) ("At the summary judgment stage, facts must be viewed in the light most favorable to the nonmoving party if there is a 'genuine' dispute as to those facts."). [2] However, as explained below, even viewing those facts in the light most favorable to the Complainant,[3] there is ample basis for finding clear and convincing evidence that VJT would have transferred Monk to an administrative position in the absence of any protected activity. As such, the Respondents were entitled to judgment as a matter of law, the basis upon which a summary judgment motion must be granted.

In addition to the undisputed findings in the IAD under the second and third *Kalil* factors, there is still a solid basis for the Hearing Officer's finding on the first factor, the strength of VJT's reason for transferring Monk to an administrative position. There is no dispute that Monk requested the transfer, and I agree with the Hearing Officer that this stands as an "exceptionally strong" reason for VJT's action. In her Appeal, Monk contends that her "request was made solely out of my fear of being let go by VJT. At the time of my request I had been through several months of a hostile work environment, . . ." Appeal at 2. However, as explained below, the Hearing Officer addressed these issues in the IAD.

---

[2] In her Appeal, the Complainant asks why, if she in fact posed a liability concern for VJT, did the company not keep her working as an RTR Operator, and allow her to do office work during the time she could not work in the field. Monk states, as an "undisputed fact," that "there have been and continue to be RTR personnel, both VJT and WTS employees, who are qualified RTR Operators/ITRs at LANL who cannot work in the field for medical, training deficiencies, or logistical issues." Appeal at 2. However, this issue, disputed or not, is not one of "material" fact. In other words, the Hearing Officer's decision did not turn on what actions VJT *could have taken*, but rather on the action that VJT *did take*, and whether it would have taken the same action in the absence of any protected activity by the Complainant. As such, the issue is not relevant to the disposition of the Motion for Summary Judgment.

[3] Monk also states in the Appeal her opinion that the investigation of her complaint was not "adequate," that "[s]everal key personnel were not interviewed," and that a hearing would allow her to "have witness validation of my allegations." Appeal at 3. However, because I agree with the Hearing Officer's conclusions, even when viewing any facts as to which there is a genuine dispute in the light most favorable to the Complainant, validation of the individual's allegations as to any such facts would not alter the outcome of this case. Thus, the Complainant's opinion notwithstanding, the Respondents are entitled to summary judgment as a matter of law.

Regarding the Complainant's allegation of a hostile work environment, the Hearing Officer found that Monk "knew, or should have known, of any hostile work environment more than 90 days prior to the date on which she filed her Part 708 complaint. Her allegation regarding a hostile work environment is therefore time-barred." IAD at 5 n.1 (citing 10 C.F.R. § 708.14(a)). Though Monk's complaint does not specify when she made her request for a transfer, the OHA Investigator cited her interview with a VJT management official that Monk approached him regarding her request on August 12 or 13, 2009. ROI at 9 (citing Halliwell Interview). In her response to the ROI, Monk does not take issue with this account, nor does she specify a later date on which she made her request.

The critical point here is that, by her own admission, the Complainant was aware of what she claims were already "several months of a hostile work environment" by the time she requested a transfer and, as the Hearing Officer correctly found, she did not file her January 20, 2010, complaint "by the 90th day after the date [she] knew, or reasonably should have known, of the alleged retaliation." 10 C.F.R. § 708.14(a).

As for her expressed fear of being fired motivating her request for a transfer, the Hearing Officer found that Monk

> appears to be claiming that she feared termination because of a potential inability to be available for duty as an RTR operator to the extent demanded by her employer, and not because of retaliation for engaging in protected activity. Termination solely because of an inability to be available for duty on the schedule set by the employer is not a violation of the Part 708 regulations.

IAD at 7. More importantly, even if the Complainant believed in August 2009 that she faced a threat of termination in retaliation for conduct protected under Part 708, her complaint, filed on January 20, 2010, would have been untimely, just as it was as to any claim of hostile work environment. In short, to the extent Monk argues that her request for a transfer was a result of retaliation she perceived as of August 2009, her complaint as to that retaliation is clearly time-barred. If, on the other hand, the transfer is claimed to be a discrete act of retaliation by VJT, there is clear and convincing evidence that VJT would have taken the same action in the absence of any protected activity, even viewing the facts in the record in a light most favorable to the Complainant.

In addition, the burden of the Respondents aside, I share the "serious doubts" of the Hearing Officer as to whether the transfer of the Complainant could even be considered as "retaliation" under section 708.2, and this issue goes to whether the Complainant met *her* initial burden in this case. To meet the definition of "retaliation" under Part 708, an action must taken "against an employee," and the examples of actions given in the definition are described as "negative action[s] with respect to the employee's compensation, terms, conditions or privileges of employment." 10 C.F.R. § 708.2. First, the undisputed fact that Monk requested the transfer makes it extremely difficult for her to prove that the action was taken "against" her. And while the resulting reduction of pay, from $25.75 to $23.50 per hour, is clearly a "negative action," there is evidence in the record that Monk was well aware that the position being offered to her in

response to her request would pay less, and wanted the position nonetheless. Halliwell Interview at 2; Ventura Interview at 2. The Complainant does not dispute this, but chooses to focus on her alleged reasons for requesting the transfer: "I did not seek out a lower paying position because of my illness. I was afraid of losing my job." Complainant's Response to ROI at 3. Whatever her reasons, it is difficult to see how transferring Monk to a position *she sought* can be construed as an action taken "against" her.

II. CONCLUSION

For the reasons set forth above, I conclude that the Hearing Officer correctly granted the Respondent's Motion for Summary Judgment and denied Monk's complaint, as there was clear and convincing evidence that VJT would have transferred the Complainant to an administrative position in the absence of any protected activity. Moreover, while the IAD stopped short of a definitive finding on whether Monk's transfer could be considered retaliation under section 708.2, the record, as a matter of law, would support a finding that the Complainant did not meet her burden of proving that the transfer is within the scope of the definition of retaliation under Part 708. Accordingly, I will deny the Appeal.

It Is Therefore Ordered That:

(1) The Appeal filed by Colleen Monk from the Initial Agency Decision issued on January 20, 2011, is hereby denied.

(2) This Appeal Decision shall become a Final Agency Decision unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this decision. 10 C.F.R. § 708.35.

Appeal

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on September 8, 2011, involving a Complaint of Retaliation that Greta Kathy Congable (Ms. Congable or the complainant) filed under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In her Complaint, Ms. Congable alleged that she engaged in activity protected under that program and that her employer, Sandia Corporation (Sandia or the contractor), retaliated against her for doing so. In the IAD, the Office of Hearings and Appeals (OHA) Hearing Officer denied relief to Ms. Congable, dismissing her complaint. Ms. Congable appeals that determination. As set forth in this decision, I have decided that her Appeal should be denied.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The DOE established its Contractor Employee Protection Program to "safeguard public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 2, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The Part 708 regulations prohibit retaliation by a DOE contractor against an employee because the employee has engaged in certain protected activity, including "disclosing to a DOE official … information that [the employee] reasonably believe[s] reveals (1) a substantial violation of a law, rule, or regulation; (2) a substantial and specific danger to employees or to public health or

safety; or (3) fraud, gross mismanagement, gross waste of funds, or abuse of authority." 10 C.F.R. § 708.5(a).

If an employee believes that a Part 708 retaliation has occurred, the employee may file a complaint requesting that the DOE order the contractor to provide relief. 10 C.F.R. § 708.1, The DOE's Office of Hearings and Appeals (OHA) is responsible for investigating complaints, holding hearings, and considering appeals. 10 C.F.R. Part 708, Subpart C. According to the Part 708 regulations, a complaint must include "a statement specifically describing . . . the alleged retaliation taken against [the complainant] and . . . the disclosure, participation, or refusal that [the complainant] believe[s] gave rise to the retaliation." 10 C.F.R. § 708.12.

B. Factual Background

The Complainant has been employed by Sandia in a variety of administrative support positions since 1994. In August 2004, she was promoted to Administrative Staff Assistant (ASA) and assigned to Sandia's Corporate Investigations (CI) Office. In September 2006, Christopher Padilla was named Senior Manager for CI, becoming Ms. Congable's direct supervisor. Shortly thereafter, she was promoted to PASA (Principal ASA). Between September 2008 and April 2010, Ms. Congable purportedly disclosed to several individuals at Sandia and Lockheed Martin, Sandia's parent company, the presence of unprotected personally identifiable information (PII) on Sandia's computer network, and Mr. Padilla's alleged improper alteration of inquiry and case files. In June 2010, Ms. Congable was transferred from her PASA position in CI to a PASA position in Sandia's Management Assurance and Reporting Department (MA), retaining her same job title, job level, and salary.

C. Procedural Background

The facts surrounding Ms. Congable's complaint were set forth in detail in the IAD from which Ms. Congable has taken this appeal, and a full recounting will not be reproduced here. Ms. Congable filed a Part 708 complaint with the National Nuclear Security Administration Service Center (NNSA/SC) in Albuquerque, New Mexico, on September 14, 2010. In her complaint, Ms. Congable alleged that Sandia retaliated against her for making disclosures regarding the unsecured PII and Mr. Padilla's alleged misconduct by involuntarily transferring her from CI to MA. On October 27, 2010, NNSA/SC dismissed the complaint. Ms. Congable appealed the dismissal of her complaint to the OHA Director, pursuant to 10 C.F.R. § 708.18. On December 6, 2010, the OHA Director granted Ms. Congable's appeal in part, and remanded her complaint back to NNSA/SC for further processing. *See Greta Kathy Congable*, Case No. TBU-0110 (2010).[1]

On April 5, 2011, NNSA/SC transmitted Ms. Congable's complaint to OHA, together with her request for an investigation followed by a hearing. The OHA Director appointed an Attorney-Investigator, who conducted an investigation and issued a Report of Investigation (ROI) on June 1, 2011. On June 2, 2011, a Hearing Officer was appointed in this matter. At the Hearing

[1] Decisions issued by OHA are available on the OHA website located at http://www.oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

Officer's direction, the parties submitted briefs and replies setting forth their positions regarding the findings in the ROI. After reviewing the documents in the record and the parties' submissions, the Hearing Officer determined that further briefing was necessary on a threshold issue, namely whether Ms. Congable's transfer constituted retaliation within the meaning of Part 708. Ms. Congable submitted her additional brief on August 6, 2011. In this brief, Ms. Congable argued that her transfer led to specific, negative consequences: (1) she does not have comparable duties and, in fact, very little work, in her new position; (2) she does not have promotional opportunities in her new position, whereas she was a subject matter expert with significant responsibilities in her former position; and (3) her security clearance was downgraded due to her transfer, which further limits her employment opportunities. Complainant's Response to Request for Information Regarding Complainant's Transfer (Case No. TBH-0110) at 4-5. On August 12, 2011, Sandia submitted its reply brief in which it contended that Ms. Congable's transfer did not constitute a "retaliation" because her new position provided her the same pay, title, and benefits, and therefore was not a "negative action with respect to [her] compensation, terms, conditions or privileges of employment." Respondent's Reply to Complainant's Response to Request for Information Regarding Complainant's Transfer (Case No. TBH-0110) at 5. Absent any negative action, there could be no retaliation, Sandia argued, and requested that Ms. Congable's complaint be dismissed. *Id.*

The Hearing Officer considered the issues raised in the parties' briefs, including Sandia's request for dismissal of the complaint and, on September 8, 2011, issued an IAD. In keeping with OHA precedent, the Hearing Officer recharacterized Sandia's request for dismissal as a Motion for Summary Judgment. In the IAD, the Hearing Officer found that, based on the record in this case, the transfer did not negatively affect the terms and conditions of Ms. Congable's employment. IAD at 4-5. She determined that Ms. Congable had not shown, and could not show, that her transfer constituted a retaliation as defined at 10 C.F.R. § 708.2, an essential element of her burden under Part 708. She then granted summary judgment in favor of Sandia, and dismissed Ms. Congable's Part 708 complaint. *Greta Kathy Congable*, Case Nos. TBH-0110, TBZ-0110 (2011).

Pursuant to 10 C.F.R. § 708.32, Ms. Congable filed an appeal of the Hearing Officer's IAD on September 28, 2011. In her brief, she argues that the Hearing Officer erred (1) by *sua sponte* converting a reply brief into a Motion for Summary Judgment, (2) by ruling on that Motion without affording her, as the non-moving party, the opportunity to respond to the Motion, (3) by ruling on the Motion before scheduled discovery was completed, (4) by failing to consider the evidence in the record in the light most favorable to her, as the non-moving party, and (5) by determining that her transfer did not constitute retaliation for purposes of Part 708. Complainant-Appellant's Statement of Issues Regarding Her Notice of Appeal of Initial Agency Decision (Congable Appeal Brief). Sandia addressed each of Ms. Congable's arguments in its reply brief, contending that the Hearing Officer's IAD was correct and should stand as written. Respondent's Response to Complainant's Statement of Issues (Sandia Appeal Brief).

II. ANALYSIS

A. The Applicable Legal Standards

1. Retaliation

In order to meet his or her burden under Part 708, a complainant must demonstrate, by a preponderance of the evidence, each of the following elements: (i) he or she made a protected disclosure or engaged in protected activity; (ii) he or she was the subject of a retaliation; and, (iii) the protected disclosure or activity was a contributing factor to the retaliation.[2] 10 C.F.R. § 708.29. Only if the complainant meets his or her burden does the burden then shift to the contractor to prove, by clear and convincing evidence, that it would have taken the same action absent the protected disclosure or activity. *Id*. Because the Hearing Officer granted summary judgment for Sandia on a determination that Ms. Congable would not be able to prove retaliation, we focus the analysis on that element of Ms. Congable's burden.

The Part 708 regulations define "retaliation" as "an action (including intimidation, threats, restraint, coercion or similar actions) taken by a contractor against an employee with respect to employment (*e.g.*, discharge, demotion, or other *negative action* with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities" protected under Part 708. 10 C.F.R. § 708.2 (emphasis added). It is well established in OHA precedent that in order to constitute a "retaliation" within the ambit of Part 708, the allegedly retaliatory personnel action must negatively affect the terms and conditions of the complainant's employment. *See Colleen Monk*, Case No. TBA-0105 (2011) (transfer requested by complainant not a "negative action" within the meaning of Part 708, despite entailing slightly lower salary); *Vinod Chudgar*, Case No. TBH-0100 (2011) (transfer "did not have a negative effect on the terms and conditions of [his] employment because his new position retained his salary and grade level"); *Mark D. Siciliano*, Case No. TBH-0098 (2010) (contractor's failure to invite complainant to an event did not negatively affect the complainant's "compensation, terms, conditions or privileges of employment" and, therefore, was not a "negative action" within the meaning of Part 708).[3]

Ms. Congable argues, *inter alia*, that her new position held very little work and that it diminished her opportunities for promotion. The issue of whether the alleged reduction in workload or in advancement opportunities qualifies as retaliatory because it is a "negative action with respect to the employee's . . . terms, conditions or privileges of employment" has not previously been addressed in the Part 708 context. In cases arising under Title VII of the Civil Rights Act, which provides relief for "adverse employment actions," the courts have found that significantly

---

[2] The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely than not true when weighed against the evidence opposed to it. *See Joshua Lucero*, Case No. TBH-0039 (2006) (*citing Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990)).

[3] Sandia also contends that Ms. Congable has never presented any evidence that Sandia intended or expected her new position to be "meaningless or worthless." Sandia Appeal Brief at 10-11. Sandia's intent or expectation regarding the transfer is irrelevant. Retaliatory intent is required under Title VII of the Civil Rights Act of 1964, 42 U.S.C. § 2000e *et seq.* (Title VII), which requires a "causal connection" between protected activity and adverse employment action. The legal burden of proof in cases arising under Part 708 is different, in that it requires only that the protected activity is a "contributing factor" in one or more alleged acts of retaliation, a test that can be met through, *e.g.*, management knowledge and temporal proximity of the two events. *Curtis Hall*, Case No. TBA-0042 at 7 n.8 (2008).

reduced work responsibilities and reduced promotion potential may constitute "adverse employment actions."[4] Nevertheless, the outcomes of these cases are entirely dependent on the facts presented in each case.

2. Motion for Summary Judgment

The Part 708 regulations do not include procedures and standards governing motions to dismiss or motions for summary judgment. In the absence of such standards, the Federal Rules of Civil Procedure, though not governing this proceeding, may be used for analogous support. *See, e.g., Billy Joe Baptist*, Case No. TBH-0080 (2009). OHA has used Rule 56(a) of the Federal Rules of Civil Procedure as a guide in considering motions for summary judgment filed in Part 708 cases. *See Mary Ravage*, Case No. TBH-0102 (2011); *Colleen Monk*, Case No. TBH-0105 (2011); *Edward J. Seawalt*, Case No. VBZ-0047 (2000).

Under Rule 56, summary judgment is proper "if the movant shows that there is no genuine issue as to any material fact and the movant is entitled to a judgment as a matter of law." Fed. R. Civ. P. 56(a). Under this standard, "the mere existence of *some* alleged factual dispute between the parties will not defeat an otherwise properly supported motion for summary judgment; the requirement is that there be no *genuine* issue of *material* fact." *See Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 247-48 (1986) (emphasis in original). The Supreme Court has viewed the plain language of Rule 56 to mandate "the entry of summary judgment, after adequate time for discovery and upon motion, against a party who fails to make a showing sufficient to establish the existence of an element essential to that party's case, and on which that party will bear the burden of proof at trial." *Celotex Corp. v. Catrett*, 477 U.S. 317, 322 (1986). In such cases, there can be "no genuine issue as to any material fact," since the non-moving party's complete failure of proof concerning an essential, threshold element of his case necessarily renders all other facts immaterial. The moving party is then "entitled to a judgment as a matter of law" because the non-moving party has failed to satisfy his burden of proof on an essential element of his case. *Id.* at 323.

The Hearing Officer specifically referred to the above standards in the IAD. IAD at 3. In addition to those standards, it is well recognized that, when considering whether summary judgment is proper, the decisionmaker must draw inferences from the existing evidence "in the light most favorable to the non-moving party, and where the non-moving party's evidence

---

[4] *See Martires v. Conn. Dep't of Transpo.*, 596 F. Supp. 2d 425, 438 (D. Conn. 2009) (disproportionately heavy workload or significantly diminished material responsibilities may constitute adverse employment actions); *Bennett v. Watson Wyatt Co.*, 136 F. Supp. 2d 236 (S.D.N.Y. 2001) (employment action is adverse if the employee endures a materially adverse change in the terms or conditions of employment, including significantly diminished work responsibilities, citing *Galabya v. New York City Bd. of Educ.*, 202 F.3d 636, 640 (2d Cir. 2000)). In the same context, the courts have stated that a diminution of advancement possibilities can, if objectively established, constitute an adverse employment action: even if a transfer does not "result in a decrease in pay, title or grade, it can be a demotion if the new position proves objectively worse—such as . . . providing less room for advancement." *Alvarado v. Texas Rangers*, 492 F.3d 605, 613 (5th Cir. 2007) (internal citation omitted). *See also De la Cruz v. New York City Human Resources Admin.*, 82 F.3d 16, 21 (2d Cir. 1996) (transfer from an "elite division . . . which provided prestige and opportunity for advancement, to a less prestigious unit with little opportunity for professional growth" is adverse employment action); *Cepada v. Bd. of Educ. of Baltimore Cty.*, 814 F. Supp. 2d 500, 510 (D. Md. 2011) (*citing Boone v. Goldin*, 178 F.3d 253, 255 (4th Cir. 1999)) (adverse employment actions can include reduced opportunities for promotion).

contradicts the movant's, then the non-movant's evidence must be taken as true." *Big Apple BMW, Inc. v. BMW of N. Am., Inc*., 974 F.2d 1358, 1363 (3d Cir. 1992), *cert. denied,* 507 U.S. 912 (1993); *see also Matsushita Elec. Indus. Co.. Ltd. v. Zenith Radio Corp.,* 475 U.S. 574, 587 (1986); *Adickes v. S.H. Kress & Co.*, 398 U.S. 144, 157, 158-59 (1970) (burden on moving party to show absence of genuine issue as to any material fact).

B. Whether Summary Judgment for Sandia Was Appropriate

The standard of review for Part 708 appeals is well established. Conclusions of law are reviewed *de novo. See Curtis Hall*, Case No. TBA-0042 at 5 (2008). Findings of fact are overturned only if they are clearly erroneous, giving due regard to the trier of fact to judge the credibility of the witness. *Billy Joe Baptist*, Case No. TBA-0080 at 7 (2009). *See also Pierce v. Underwood*, 487 U.S. 552, 558 (1988) ("For purposed of standard of review, decisions by judges are traditionally divided into three categories, denominated questions of law (reviewable *de novo*), questions of fact (reviewable for clear error), and matters of discretion (reviewable for 'abuse of discretion')."). Because the Hearing Officer determined, as a matter of law, that Ms. Congable could not demonstrate retaliation, we review *de novo* whether that determination was appropriate.

As discussed above, OHA has often looked to Rule 56 for guidance on the matter. While we are not bound by the Rule and therefore not subject to all of its procedural requirements, we should ensure that fundamental due process be provided to the parties when we rule on a Motion for Summary Judgment. At a minimum, we consider, as the Hearing Officer stated, whether there is an absence of genuine issue of material fact and whether there has been adequate time for discovery. Any inferences we draw from the evidence are drawn in favor of the non-moving party, in this case, Ms. Congable.

The plain language of the definition of "retaliation" clearly encompasses a broad scope of negative actions, including those affecting the terms, conditions and privileges of employment. 10 C.F.R. § 708.2. *See also Lucy B. Smith*, Case No. VWZ-0020 (1999) ("privilege" held to include inclusion in a preferential rehiring database). The Hearing Officer reached her conclusion that Ms. Congable could not demonstrate retaliation after finding (1) that the record established that Ms. Congable's transfer did not result in a loss in pay, benefits, or seniority, and (2) that, despite her contention that she had no meaningful duties in her new position, her duties were comparable in her new position. IAD at 4-5. It is clear from the definition of "retaliation" that, for Part 708 purposes, retaliation may take forms other than those the Hearing Officer considered. As set forth above, Ms. Congable points to three forms of alleged retaliation in a brief requested by the Hearing Officer: (1) her security clearance was downgraded due to her transfer, (2) she does not have comparable duties and, in fact, very little work, in her new position, and (3) she does not have comparable promotional opportunities in her new position.[5] If any one of those truly constitutes retaliation, then evidence of such would be a material fact,

[5] In her Appeal Brief, Ms. Congable also alludes to an actual demotion following the transfer. She contends that she was a PASA in her old position but only an ASA in her new position. Congable Appeal Brief at 11-12. Sandia replied that Ms. Congable retained her PASA status in her new position. Sandia Appeal Brief at 12. The record clearly supports Sandia's contention, *id.* at Attachment 1-B, and I find that no actual demotion took place as the result of the transfer.

on which a legal determination could be made of an essential, threshold element of her complaint. Conversely, if none is a form of retaliation under Part 708, or if the evidence in the record demonstrates that no facts could support her claims, then Ms. Congable could not demonstrate retaliation as a result of her transfer. Under those circumstances, she would have failed to make a showing sufficient to establish the existence of an element essential to her case, and on which she bears the burden of proof, specifically retaliation, and summary judgment would be appropriate. We address Ms. Congable's arguments *seriatim.*

1. Security Clearance Downgrade as a Retaliatory Act

Ms. Congable claims that, as a result of her transfer, her security clearance was downgraded after her employer transferred her to her new position. Even if Ms. Congable established that such a downgrade in fact occurred, it could not possibly be found to be retaliation under Part 708. As defined above, "retaliation" is an action that must be taken by the contractor. Determinations regarding levels of security clearance are made by the DOE, not by contractors. Therefore, even assuming that Ms. Congable's security clearance level was reduced after her transfer, and assuming that this reduction constituted a negative consequence of the transfer, it is a negative consequence that cannot be attributed to Sandia.

2. Lack of Meaningful Work and Lack of Promotion Potential as Retaliatory Acts

Ms. Congable argues that her new position held very little work, and that it diminished her potential for promotion in comparison to her former position. Given the broad protection Part 708 is intended to provide to whistleblowers in order to encourage the reporting of unsafe, unhealthy or wasteful business practices, we believe that significantly reduced workload or work responsibilities, as well as diminished opportunities for promotion, can constitute negative actions "with respect to the employee's . . . terms, conditions or privileges of employment," and might, under some circumstances, constitute retaliation under Part 708.

In this case, the record shows that in her former administrative position, Ms. Congable performed work beyond that which she was assigned, including assisting at interviews, providing insight to the investigators she supported and asking questions on her own; assisting with discovery production; and editing the office's reports. Complainant's Response to Request for Information Regarding Complainant's Transfer (Case No. TBH-0110) at Attachments A (Performance Management Form completed by supervisor) and B (co-workers' feedback of Ms. Congable as requested by supervisor). In her new position, Ms. Congable alleges that she has no meaningful work for 80 to 85% of her workday. Deposition of Greta Kathy Congable (attachment to Complainant's Response to Request for Information Regarding Complainant's Transfer (Case No. TBH-0110)) (Deposition) at 78. When assessing a Motion for Summary Judgment, we are instructed to draw inferences in favor of the non-moving party, in this case, Ms. Congable. Even if we assume that her statement is correct, however, we must also consider whether her stated lack of work in her new position, in reality, supports her claim of retaliation. In her Deposition, Ms. Congable explains that her lack of work eliminated any promotional opportunities in her new position. Deposition at 80. For this reason, the only issue is whether her transfer diminished her potential for future promotion.

Ms. Congable expressed her opinion at her Deposition that her new position holds less promotion potential than her former position, because she will never become a subject matter expert as she was in her former position. Deposition at 80-81.[6] In the declaration he provided during the investigation stage, however, her supervisor at her former position stated that he had researched the possibility of a promotion for Ms. Congable from PASA to DASA (Distinguished ASA) in approximately September 2008, and learned that her job position would not justify such a promotion. Declaration of Chris Padilla (Case No. TBI-0110). He also stated that he had received a request from a co-worker that Ms. Congable be considered for a promotion to Member of Laboratory Staff (MLS) when she received her bachelor's degree in May 2010. As she did not receive her degree at that time, he took no action. *Id.* In an e-mail she wrote on June 29, 2010, Ms. Congable stated, "I was told that to be considered for promotion within Corporate Investigations it would be necessary for me . . . to obtain my college degree." Attachment B to Declaration of Alice Eldridge (Case No. TBI-0110). As of her deposition in 2011, Ms. Congable has not yet received her degree. Deposition at 81. Even accepting the evidence in a light most favorable to Ms. Congable, I find that she had no potential for promotion in her former position prior to the transfer, as she lacked a necessary prerequisite, her college degree. Under those circumstances, she cannot assert that her advancement opportunities were diminished as the result of her transfer. Therefore, while it is possible to establish retaliation under Part 708 by demonstrating reduced promotion potential, Ms. Congable is unable to do so in this case.

III. CONCLUSION

After reviewing the evidence in the record at the time of the Hearing Officer's grant of summary judgment, I conclude that none of Ms. Congable's three alleged negative consequences of her transfer constitutes retaliation in this case under Part 708, for various reasons. Her allegation of security clearance downgrade is not cognizable under Part 708. Her allegation of lack of work is not an independent form of retaliation, but rather a factual underpinning of her third allegation, reduction of promotion potential, which I have determined to be an allegation that cannot stand under the facts already in evidence. No additional discovery would yield relevant information in this proceeding, as there remains no genuine issue of material fact regarding Ms. Congable's allegations of retaliation. Because no further discovery is warranted, I conclude that there has been adequate time for discovery. Under those circumstances, Ms. Congable has failed to make a showing sufficient to establish the existence of an element essential to her case, and on which she bears the burden of proof, specifically retaliation, and summary judgment is appropriate.

It Is Therefore Ordered That:

(1) The Appeal filed by Greta Kathy Congable on September 26, 2011 (Case No. TBA-0110), of the Initial Agency Decision (IAD) issued on September 8, 2011, under 10 C.F.R. Part 708 is hereby denied.

(2) This Appeal Decision shall become a Final Decision of the Department of Energy unless a party files a petition for Secretarial review with the Office of Hearings and Appeals within 30 days after receiving this Decision. 10 C.F.R. § 708.35.

---

[6] There is no evidence that Ms. Congable was a subject matter expert at her former position.

Poli A. Marmolejos
Director
Office of Hearings and Appeals

Date: May 4, 2012

Department of Energy
Washington, DC 20585

SEP 19 2005

Gilbert J. Vigil, Esq.
1615 Central Avenue, NW
Albuquerque, NM 87104

Re: Case No. TBB-0003

Dear Mr. Vigil:

This letter pertains to a Petition for Secretarial Review that you filed on August 8, 2005, on behalf of Gilbert Hinojos. In the Petition, you requested that the Secretary of Energy review a July 8, 2005 appeal decision, issued by the Director of the Office of Hearings and Appeals. That appeal decision denied Mr. Hinojos' complaint of retaliation filed pursuant to 10 C.F.R. Part 708.

In an August 9 letter, we advised you that the regulations governing this matter provide that within 15 days after submitting a Petition for Secretarial Review, you are required to file a statement identifying the issues that you wish the Secretary to consider. 10 C.F.R. § 708.35. Accordingly, that filing should have been submitted by August 23.

We also informed you that the Secretary will reverse or revise an appeal decision by the OHA Director only under extraordinary circumstances. 10 C.F.R. § 708.35(d). We therefore indicated that your statement of issues should identify the extraordinary circumstances warranting a reversal of the OHA's July 8 Decision and Order.

As of this date, you have not submitted a statement of issues for the Secretary to review. Thus, the time period for filing your submission has now elapsed. Further, your August 8 submission does not identify any issues for review. Accordingly, since you have failed to complete the filing of your appeal in this case, and since there are no issues in your submission that could be considered reviewable, I find that your Petition for Secretarial Review should be dismissed.

Accordingly, the Petition for Secretarial Review filed in Case No. TBB-0003 is hereby dismissed.

If you have any questions regarding this matter, please contact Virginia Lipton at telephone number (202) 287-1436.

Sincerely,

George B. Breznay
Director
Office of Hearings and Appeals

Re: Case No. TBB-0030

Dear Mr. Pridmore:

This letter concerns the complaint of retaliation filed with the Department of Energy (DOE) under 10 C.F.R. Part 708 by Curtis Broaddus. On October 3, 2007, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the August 29, 2007, Appeal Decision issued by the OHA Acting Director.

Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.35. As discussed below, your submission does not meet this standard.

In your petition, you raise three arguments in support of your contention that Secretarial review is warranted. First, you claim that you were not accorded an opportunity to brief retaliation issues during the Appeal phase of this proceeding. However, the record indicates that while you did have the chance to file a brief on such matters, in a letter of August 7, 2007, you requested that the record be closed. You did not include any arguments regarding retaliation. This objection is untimely raised.

Second, you allege that the OHA Hearing Officer improperly limited the retaliations that he would consider during the hearing. The record shows that the exclusions were warranted. They involved alleged retaliations such as the reassignment of Broaddus' wife to another program, and the purportedly improper suspension of Broaddus' security clearance. Both of these actions lie outside the purview of Part 708. Since Broaddus filed the Part 708 complaint of retaliation in this case, he is entitled to a review of any alleged retaliations taken against him. However, Part 708 does not provide protections for Broaddus' wife in this same proceeding. Further, the allegedly improper suspension of Broaddus' security clearance is subject to review under the provisions of 10 C.F.R. Part 710, not under Part 708. 10 C.F.R. §710.4(b). *See also* 64 Fed. Reg. 12862 at 12867 (March 15, 1999).

In any event, objections regarding the Hearing Officer's ruling as to the scope of the retaliations that would be considered should have been raised during the hearing phase of this proceeding, not at the Secretarial review phase.

Finally, you contend that Broaddus was improperly removed from his position at BWXT. This allegation was not a retaliation claimed in this Part 708 proceeding. Therefore it lies outside the purview of the instant Secretarial appeal. Moreover, the termination took place in connection with the revocation of Broaddus' security clearance under 10 C.F.R. Part 710. As such, it is not entitled to review under the provision of Part 708.

The Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances.

Accordingly, the petition for review filed in Case No. TBB-0030 is hereby dismissed.

If you have any questions regarding this letter, please call Fred L. Brown, Associate Director, Office of Hearings and Appeals, at telephone number (202) 287-1545.

Sincerely,

Poli A. Marmolejos

Re: OHA Case No. TBB-0040

Dear Ms. Roberts:

This letter concerns the complaint of retaliation that you filed with the Department of Energy (DOE) under 10 C.F.R. Part 708. On March 24, 2006, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the February 23 jurisdictional appeal decision issued by the OHA Director. Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.19.

In this case, the Whistleblower Program Manager at the DOE's NNSA Service Center dismissed your complaint of retaliation because it was untimely filed. You appealed that dismissal. After reviewing the facts in this matter, I upheld the dismissal. I found that the fact that you were unaware of the Part 708 program was not a sufficient reason to waive the Part 708 filing period.

In your petition for Secretarial review, you again contend that you were unaware of the Part 708 program. Since I responded fully to that claim in the February 23 appeal decision, no further review here is necessary. You also contend that you made many disclosures of a serious nature. This assertion, even if true, does not in and of itself entitle you to protection under Part 708 if you file an untimely complaint. You also cite alleged retaliations against you and other purported misbehavior by your contractor. Again, even if such assertions are true, they do not overcome the serious deficiency in the filing of your Part 708 complaint. In sum, your arguments here do not raise any issue of an extraordinary nature.

The Deputy Secretary of Energy has reviewed your petition and concurs with the above determinations. He has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances.

Accordingly, the petition for review filed in Case No. TBB-0040 is hereby dismissed.

If you have any questions regarding this letter, please call Virginia Lipton at telephone number (202) 287-1436.

Sincerely,

George B. Breznay

Re: OHA Case No. TBB-0042

Dear Mr. Guyer:

This letter concerns the complaint of retaliation filed by Curtis Hall (the complainant or Mr. Hall) with the Department of Energy under 10 C.F.R. Part 708, the DOE Contractor Employee (Whistleblower) Protection Program. On March 13, 2008, the Office of Hearings and Appeals (OHA) received your Petition for Secretarial Review of the appeal decision we issued on February 13, 2008. Under Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.35(d).

The complainant, a former employee of Bechtel National, Inc. (BNI) at the DOE's Hanford site in Richland, Washington, filed a Complaint of Retaliation under Part 708. He alleged that he had made protected disclosures regarding the safety of a control system used to track waste and materials as they are processed through the waste treatment plant at the Hanford site. The complainant claimed that, in retaliation, he was selected for inclusion in a reduction in force (RIF) that led to his termination.

OHA conducted an investigation and a hearing regarding this matter. On March 15, 2007, an OHA Hearing Officer issued a Decision (IAD), finding that Mr. Hall had made protected disclosures, and that BNI's termination of Mr. Hall in the RIF was a retaliation for those disclosures. The IAD ordered BNI to reinstate the complainant to the position from which he was laid off, or to a comparable position, and to reimburse him for lost wages, legal fees and other expenses. Mr. Hall appealed, challenging several of the relief provisions. BNI also appealed, challenging the overall finding that its decision to include the complainant in the RIF was retaliatory. On February 13, 2008, we issued a decision rejecting BNI's challenge to the IAD, and sustained the finding that Mr. Hall was entitled to relief. We made additional findings regarding the relief to which he would be entitled, including that he be provided

training and transfer preference if BNI places him in a position comparable to the one he vacated. Pursuant to 10 C.F.R. § 708.35, the complainant requested Secretarial review of our February 13 appeal decision. He filed a statement of issues for review and BNI filed a response to the statement of issues. After a review of the submissions, we believe that Mr. Hall has not shown the existence of extraordinary circumstances meriting Secretarial review under Part 708.

The complainant's key contentions at the Secretarial review phase are as follows. Mr. Hall seeks damages for pain, suffering and emotional distress. Based on Section 708.36(a)(3) and our precedent, monetary awards are limited to reimbursement of lost wages. *See also* 64 Fed. Reg. 12867-68 (March 15, 1999). Accordingly, this type of remedy has never been awarded under Part 708.

Mr. Hall also asks for a clearer description of his former position. In addition, he seeks reinstatement to the position he purportedly would have had if he had been promoted. He requests that he be reinstated to a "not-at-will" position, and guaranteed a period of employment through approximately 2019. The complainant seeks greater training and transfer preferences than those provided in the February 13 Order.

These matters do not rise to the extraordinary level necessary to invoke Secretarial review under Part 708. They amount to minor objections to the February 13 determination.

The Acting Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances. Accordingly, the Petition for Secretarial Review filed in Case No. TBB-0042 is hereby dismissed.

If you have any questions regarding this letter, please call Virginia A. Lipton at telephone number (202) 287-1436.

JAN - 9 2007

Mr. Gary S. Vander Boegh
7660 Old Hinkleville Road
West Paducah, KY 42086

Re: Case No. TBB-0049

Dear Mr. Vander Boegh:

This letter concerns the complaint of retaliation that you filed with the Department of Energy (DOE) under 10 C.F.R. Part 708. On September 6, 2006, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the August 3 jurisdictional appeal decision issued by the OHA Director. Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.19.

In this case, you alleged that several DOE contractor employers retaliated against you for participating in a protected proceeding and for making protected disclosures under Part 708. These retaliations included terminating you from your position. The Office of Civil Rights and Diversity of the DOE's Environmental Management Consolidated Business Center (EMCBC) dismissed your complaint of retaliation because you had filed a complaint regarding the same issues with the Department of Labor (DOL). Part 708 provides that it is appropriate to dismiss a complaint of retaliation if the complainant "filed a complaint under State or other applicable law with respect to the same facts as alleged in a complaint under this regulation." 10 C.F.R. § 708.17(c)(3).

You appealed that dismissal. After reviewing the facts in this matter, the Director of OHA upheld the dismissal. Specifically, he found that not only had you filed a complaint involving the same issues with both the DOE and the DOL, but also that the DOL had issued a substantive determination regarding your complaint. Specifically, the DOL found that there was clear and convincing evidence that with respect to the termination there was no retaliation by your contractor employer for your protected disclosure. The OHA Director further found that there was no merit to any of the other retaliations you raised in your complaint, but which were not specifically considered by the DOL.

In the petition for Secretarial review, your key contention is that the complaint filed with the DOL involved a different set of facts from the complaint filed with the DOE. In this regard, you state that the disclosures you alleged in the DOL complaint involved different aspects of improper handling of leachate from those asserted in your DOE complaint. You therefore believe that Section 708.17(c)(3) is not applicable. These assertions do not rise to the level necessary to invoke Secretarial review under Part 708. As an initial matter, the DOE and DOL disclosures that you refer to are not meaningfully different. They all involve your perceptions of allegedly improper leachate handling by your contractor employer. Secondly, the key retaliation you assert is identical in the DOL proceeding and the DOE proceeding: you were terminated by your contractor employer. Your petition seeks merely to reargue the findings and conclusions set out in the EMCBC and appeal determinations. However, you do not set forth any reasoning as to what extraordinary circumstances exist that would justify a reconsideration here, and I do not see any issue of an extraordinary nature.

The Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances.

Accordingly, the petition for review filed in Case No. TBB-0049 is hereby dismissed.

If you have any questions regarding this letter, please call Virginia Lipton at telephone number (202) 287-1436.

Sincerely,

Fred L. Brown

Re: Case No. TBB-0069

Dear Mr. Stewart:

This letter concerns the complaint of retaliation filed with the Department of Energy (DOE) under 10 C.F.R. Part 708 by Gary S. Vander Boegh (Vander Boegh). On February 5, 2008, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the December 18, 2007, Appeal Decision issued by the Director of OHA.

Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.35. As discussed below, your submission does not meet this standard.

In your petition, you argue that we had no authority to issue the December 18, 2007, decision because you had filed a Petition for Secretarial Review before we issued our December 18 appeal decision. However, your earlier Petition became moot when a February 22, 2007, decision dismissing Vander Boegh's complaint was withdrawn. To the extent this argument raises only a procedural legal question under Part 708, it does not merit Secretarial review.

You also assert that we erred with regard to our finding as to the timeliness of Vander Boegh's Part 708 complaint. In essence, your arguments represent a difference with our assessment of the evidence with regard to the issue of timeliness - specifically, our determination of when Vander Boegh knew or should have known that the actions taken against him by his former employers were retaliatory. These arguments disagreeing with our assessment of the weight of evidence do not rise to the standard for Secretarial review. You also argue in your Petition that Vander Boegh's former employers are "estopped" from asserting a defense of a lack of timeliness. The Petition asserts that Vander Boegh's former employers cannot argue that their actions were not retaliatory and, at the same hearing, argue that his whistleblower complaint was filed untimely. The validity of the arguments raised by Vander Boegh's former employers is irrelevant. OHA has made its own determination that the complaint was untimely.

Your Petition further argues that we erred when we found that Vander Boegh's subsequent Part 708 complaint was properly dismissed. Your Petition seeks to raise a legal argument concerning the provision of Part 708, 10 C.F.R. § 708.17, that provides for dismissal of Part 708 claims that are raised in alternate legal forums. We believe that Part 708 is clear on this point. The fact that you disagree with our view of the regulations does not present extraordinary circumstances.

The Acting Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances. Accordingly, the petition for review filed in Case No. TBB-0069 is hereby dismissed.

If you have any questions regarding this letter, please call Richard A. Cronin, Jr., Attorney-Examiner, Office of Hearings and Appeals, at telephone number (202) 287-1589.

Re: OHA Case No. TBB-0070

Dear Ms. Fiorillo:

This letter concerns the complaint of retaliation that you filed with the Department of Energy (DOE) under 10 C.F.R. Part 708. On August 20, 2007, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the July 16, 2007, jurisdictional appeal decision issued by the OHA Acting Director. You filed a statement of arguments in support of your position on September 4, 2007.

Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the OHA Director only in extraordinary circumstances. 10 C.F.R. § 708.19.

The basis of this proceeding is your contention that you made a disclosure that is protected under Part 708, and that your employer improperly terminated you for making that disclosure. The disclosure that you made consisted of a statement to the DOE Office of Inspector General (DOE/IG), that your supervisor failed to take action against another employee who stated in a three-way telephone conversation with you and your supervisor that had she seen you in person she "would have spit in your face." You believe that disclosing this statement to the DOE/IG constitutes a revelation of violation of law, and your supervisor's failure to take action against the employee who made the remark is evidence of mismanagement and abuse of authority. In this case, the OHA Acting Director dismissed your complaint of retaliation, finding that the disclosure you describe was trivial. In your petition for Secretarial review, you object to this conclusion, but you do not provide any significant new arguments in this regard. Accordingly, since the OHA Acting Director responded fully to that claim in the July 16 appeal decision, no further review here of that issue is warranted.

You further maintain in your statement of arguments that it is your "personal feeling" that your termination "was to serve the purpose of alleviating funding for PRC's fixed fee award contract. . . .

[the] termination allowed PRC to maintain the funds provided by DOE for [you] ($50,000 annually-$44,449 salary plus benefits package) to promote two Secretary I's and hire a new Receptionist." This suggests that you actually believe the basis for your termination was not a retaliation due to your disclosure to the DOE/IG, but rather because your contractor employer had management and hiring goals that did not include your position.

Thus, ultimately there is no basis for your Part 708 complaint, and certainly no assertion here that rises to the extraordinary level necessary to invoke Secretarial review under Part 708.

The Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances.

Accordingly, the petition for review filed in Case No. TBB-0070 is hereby dismissed.

If you have any questions regarding this letter, please call Virginia Lipton, Assistant Director, Office of Hearings and Appeals, at telephone number (202) 287-1436.

Sincerely,

Poli A. Marmolejos
Director

Re: OHA Case No. TBB-0071

Dear Mr. Burnette:

This letter concerns the Complaint of Retaliation that you filed with the Department of Energy (DOE) under 10 C.F.R. Part 708. On October 10, 2007, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the August 30, 2007, jurisdictional appeal decision issued by the OHA Deputy Director. Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the OHA only in extraordinary circumstances. 10 C.F.R. § 708.19.

In this case, the Whistleblower Program Manager (WP Manager) of the DOE's National Nuclear Security Administration (NNSA) Service Center located in Albuquerque, New Mexico, dismissed your Part 708 Complaint of Retaliation because it was untimely filed. You appealed that dismissal. After reviewing the facts in this matter, we upheld the dismissal. We found in the determination of August 30, 2007, that you had not alleged any retaliation in your Complaint that took place within 90 days prior to the filing of that Complaint. 10 C.F.R. § 708.14.

In your petition for Secretarial review, you again allege retaliations that appear to have been connected with earlier Complaints, which were filed in 2001 and 2002. These alleged retaliations include: coercion by the contractors to settle your previous Part 708 proceeding; delay of BWXT Y-12 employment; harassment and isolation "beginning early at Y-12;" denial of a pay raise and employment opportunities; loss of seven months salary and two weeks of accrued vacation in 2001; and lost reputation.

You have not explained why you did not file a timely complaint regarding these alleged retaliations. Nor have you specifically alleged any retaliation that took place within the 90 days preceding the filing of your 2006 Complaint of Retaliation. Accordingly, there is no basis for any further review of your

Part 708 Complaint. Moreover, we fail to see any issue of an extraordinary nature warranting Secretarial review.

The Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances.

Accordingly, the petition for review filed in Case No. TBB-0071 is hereby dismissed.

If you have any questions regarding this letter, please call Virginia Lipton of my staff at telephone number (202) 287-1436.

Sincerely,

Poli A. Marmolejos

DEC - 8 2008

Mr. Donald E. Searle
1308 Barcelona Drive
Knoxville, TN 37923

Re: Case No. TBB-0079

Dear Mr. Searle:

This letter concerns your complaint of retaliation filed with the Department of Energy (DOE) under 10 C.F.R. Part 708. On September 8, 2008, the Office of Hearings and Appeals (OHA) received your petition for Secretarial review of the July 25, 2008, Appeal Decision issued by the Director of OHA.

Under the Part 708 Regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.19. As discussed below, your submission does not meet this standard.

In your petition, you argue that in the July 25 decision, we, in essence, established an arbitrary 12-month liability "time limit" between a protected disclosure or activity and the subsequent retaliation, for purposes of having a whistleblower complaint considered. This contention essentially attempts to reargue and rebut our legal conclusion as to whether the facts alleged in your complaint, assuming they are true, could demonstrate that the filing of your first whistleblower complaint in January 2007 was a contributing factor to your allegedly inadequate pay raise in January 2008. We believe, based on the record in this proceeding, that a 12-month period between the protected activity (the filing of your January 2007 complaint) and the alleged retaliation (your January 2008 pay raise), was too long to permit the inference that the protected activity was a contributory factor to the retaliation. During the pendency of this appeal, you have not presented any additional evidence to suggest that our conclusion is in error. Your disagreement with our legal determination on this issue does not establish the existence of extraordinary circumstances.

You also argue in your petition that in assessing whether your April 7, 2008, complaint was without merit, OHA incorrectly applied the burdens of proof as set forth in 10 C.F.R. § 708.29. You believe that this section applies to only whistleblower hearings. This is incorrect. Section 708.29 sets forth the basic elements that comprise a valid whistleblower complaint and is applicable to Part 708 proceedings as a whole. In the present case, OHA assumed that the facts alleged in your complaint were true and examined these facts to determine if all of the required elements contained in Section 708.29 were present in the complaint. Thus, it is appropriate for OHA to use those legal standards in evaluating the sufficiency of your complaint of retaliation. Your arguments regarding the applicability of Section 708.29 do not rise to the level of extraordinary circumstances meriting Secretarial intervention.

Finally, you argue that OHA improperly considered the fact that UT-Battelle rehired you as evidence of your employer's lack of retaliatory intent. You allege that when UT-Battelle rehired you in May 2006 it did not yet know you were a whistleblower. This is obviously incorrect, since you made protected disclosures to your supervisor regarding beryllium handling in the summer of 2005. For the purpose of our analysis of UT-Battelle's lack of retaliatory intent, the focus is on the date you complained to your employer about beryllium handling (summer of 2005), and not the date when you actually filed your first complaint of retaliation (January 2007). It was as of the earlier date that UT-Battelle was fully aware of the disclosure. Given these facts, we reasonably concluded that the 2006 rehiring constituted important evidence that UT-Battelle had no retaliatory intent. Your argument regarding our analysis of the evidence in this case does not demonstrate extraordinary circumstances.

The Acting Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances. Accordingly, the petition for review filed in Case No. TBB-0079 is hereby dismissed.

If you have any questions regarding this letter, please call Richard A. Cronin, Jr., Attorney-Examiner, Office of Hearings and Appeals, at telephone number (202) 287-1589.

Sincerely,

Poli A. Marmolejos

Re: OHA Case No. TBB-0080

Dear Mr. Guyer and Ms. Ayers:

This letter concerns the Complaint of Retaliation filed by Mr. Billy Joe Baptist with the Department of Energy under 10 C.F.R. Part 708, the DOE Contractor Employee (Whistlebower) Protection Program. On January 5, 2010, the Office of Hearings and Appeals (OHA) received your Petition for Secretarial Review of the Appeal Decision that we issued to Mr. Baptist on December 3, 2009. Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in extraordinary circumstances. 10 C.F.R. § 708.35(d).

On May 7, 2009, an OHA Hearing Officer issued an Initial Agency Decision (the "IAD") in which he granted a Motion for Summary Judgment regarding Mr. Baptist's whistleblower complaint. In the IAD, the Hearing Officer first dismissed five of the six alleged retaliations because Mr. Baptist had failed to file his complaint within the 90-day deadline set forth in Part 708. With regard to the remaining alleged retaliation, *i.e.*, improper termination from his job, the Hearing Officer decided that his employer, CH2M-WG Idaho, LLC (CWI), had established that it would have terminated Mr. Baptist even if he had made no protected disclosures. The Hearing Officer therefore granted summary judgment to CWI regarding the sixth alleged act of retaliation, Mr. Baptist's termination, and then dismissed the complaint without a hearing. *See Billy Joe Baptist*, OHA Case Nos. TBZ-0080, TBH-0080 (2009).

Pursuant to 10 C.F.R. § 708.32, Mr. Baptist requested a review of the IAD by the OHA Director. On December 3, 2009, the OHA Director issued a decision concerning this appeal. *See Billy Joe Baptist*, OHA Case No. TBA-0080 . In this decision, OHA determined that arguments raised by you on behalf of Mr. Baptist, challenging OHA's interpretation and application of the filing requirements and burdens of proof set forth in Part 708, were without merit and that the appeal should be denied.

The Department has reviewed your Petition for Secretarial Review.

With respect to the timeliness of the five claims rejected by OHA on this basis, Part 708 expressly requires that complaints be filed within 90 days of the date the employee "knew or reasonably should have known of the alleged retaliation." *See* 10 C.F.R.

§ 708.14. Here the complainant waited almost nine full months to file these five claims. While the Petition for Secretarial Review attempts to place blame for this failure on the Employee Concerns office, there is no indication that the petitioner was misled or in any way otherwise prevented by that office from timely filing his claims.

Concerning the sixth claim challenging the complainant's termination, OHA granted the contractor summary judgment. OHA found that the contractor employer had established by clear and convincing evidence that the complainant's termination was due to his failure to comply with the requirements for reinstatement following a year's absence on Inactive Employee Status, including the specific requirement that an employee in these circumstances obtain a medical release before returning to duty.

The underlying decisions are well supported. The petition fails to demonstrate any "extraordinary circumstances" warranting Secretarial intervention.

The Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances. Accordingly, the Petition for Secretarial Review filed in Case No. TBB-0080 is hereby dismissed.

If you have any questions regarding this letter, please call Kent S. Woods at telephone number (202) 287-1454.

Sincerely,

Poli A. Marmolejos

APR 19 2011

Ms. Melinda Gallegos
P.O. Box 224
Los Ojos, NM 87551

Re: OHA Case Number TBB-0103

Dear Ms. Gallegos:

This letter concerns the Petition for Secretarial Review that you filed on July 19, 2010, relating to a Complaint of Retaliation that you filed on April 15, 2010, with the National Nuclear Security Service Center (NNSA) of the Department of Energy under 10 C.F.R. Part 708, the DOE Contractor Employee Protection Program. On May 20, 2010, the Whistleblower Program Manager of the DOE/NNSA dismissed your complaint as untimely. You appealed the dismissal to OHA and on June 18, 2010, OHA affirmed the dismissal of the complaint. Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of OHA only in *extraordinary circumstances*. 10 C. F. R. § 708.19(d) (emphasis added). For the reasons below, we have determined that such extraordinary circumstances do not exist in this case.

You stated in your complaint that from 1989 to 1998 you were an employee of the Los Alamos County Fire Department (LACFD), a DOE subcontractor at the DOE Los Alamos National Laboratory. According to your complaint, you expressed safety concerns to your supervisor about a Criterion Task Test, and were suspended for refusing to participate in the test. In 1996, you suffered a disabling injury on the job and were placed on leave without pay for two years, and then terminated by LACFD in 1998.

In appealing the dismissal of your complaint, you argued that you were incapacitated since 1996 by spasms in your eyelid and by the effects of the medications you took for this condition. However, in upholding the dismissal, OHA noted that you filed your complaint almost 12 years after LAFCD terminated your employment. Although DOE has discretion to accept late filings of Part 708 complaints if it determines that there is a good reason for the delay, the Director found that the reasons advanced in your appeal were insufficient to justify the delay in filing the complaint. *Id.*

On July 19, 2010, OHA received the Petition for Secretarial Review of the dismissal of your appeal. 10 C.F.R. § 708.19(b). On September 22, 2010, you filed a statement of issues for review. On November 5, 2010, the County of Los Alamos filed a Response to the Petition for Secretarial Review (Response). *Id.*

After a careful review of the record, we affirm the dismissal of your appeal and agree that the complaint, filed 12 years after the alleged retaliation, is untimely. *See, e.g., Billy Joe Baptist*, OHA Case No. TBB-0080 (nine month delay untimely). We further find that the petition fails to

demonstrate any "extraordinary circumstances" that would warrant secretarial intervention. *Id.*

In addition, the Part 708 program states that you may not file a complaint against your employer under Part 708 *if the complaint is based on the same facts for which you have chosen to pursue a remedy available under state or other applicable law. See* 10 C.F.R. § 708.4 (c) (3) (emphasis added). In the present case, in 1998, you filed a complaint under the New Mexico Human Rights Act with the New Mexico Department of Labor, Human Rights Division. This complaint was closed with prejudice in 1998. *See* Exhibit A of Response. You then filed a complaint with the U.S. District Court, District of New Mexico. The District Court dismissed the complaint with prejudice in June 2000. *See* Exhibit B of Response. You then appealed the dismissal to the Tenth Circuit Court of Appeals, which affirmed the lower court's dismissal in December 2000. *See* Exhibit C of Response. Therefore, the underlying decisions are well supported and there is no evidence of extraordinary circumstances that warrant Secretarial intervention.

The Secretary of Energy has delegated the responsibility of reviewing Petitions for Secretarial Review in cases arising under 10 C.F.R. Part 708 to the Deputy Secretary of Energy. The Deputy Secretary of Energy has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances. Accordingly, the Petition for Secretarial Review filed in Case No. TBB-0103 is hereby dismissed.

If you have any questions regarding this letter, please call Valerie Vance Adeyeye, Attorney-Examiner, Office of Hearings and Appeals, at (202) 287-1486.

Sincerely,

Poli A. Marmolejos
Director
Office of Hearings and Appeals

JUN - 5 2012

Mr. Gennady Ozeryansky
39 Newbridge Circle
Cheshire, CT 06410

Re: OHA Case No. TBB-0119

Dear Mr. Ozeryansky:

This letter concerns the Petition for Secretarial Review that you filed on September 24, 2011, relating to the complaint of retaliation that you filed on August 26, 2010, with the Employee Concerns Program (ECP) Manager of the Department of Energy under 10 C.F.R. Part 708, the DOE Contractor Employee Protection Program.

The ECP Manager issued a determination on July 13, 2011, dismissing your complaint. On July 29, 2011, you filed an appeal of the July 13 Determination and, on August 29, 2011, the Director of the Office of Hearings and Appeals (OHA) affirmed the dismissal of the complaint. On September 24, 2011, you filed a Petition for Secretarial Review of the dismissal of the OHA appeal decision, followed by a September 29, 2011, statement of issued presented for review. On November 16, 2011, SupraMagnetics filed a Response in Opposition to the Secretarial Review.

Under the Part 708 regulations, the Secretary will reverse or revise an appeal decision by the Director of the Office of Hearings and Appeals (OHA) only under extraordinary circumstances. 10 C.F.R. § 708.19(d). Your statement in support of the petition contends that OHA erred in denying you protection from retaliation under Part 708, and that OHA's decision presents extraordinary circumstances meriting the intervention of the Secretary. However, far from demonstrating the requisite "extraordinary circumstances" necessary to warrant Secretarial intervention, the petition does not reveal any error in OHA's determination that, because SupraMagnetics is not a contractor or subcontractor as defined by 10 C.F.R § 708.2, there is no jurisdiction under Part 708 for consideration of your complaint.

The Secretary of Energy has delegated the responsibility of reviewing Petitions for Secretarial Review in cases arising under 10 C.F.R. Part 708 to the Deputy Secretary of Energy. The Deputy Secretary has authorized me to send you this letter dismissing the petition for failure to demonstrate extraordinary circumstances warranting reversal or revision of OHA's determination. Accordingly, the Petition for Secretarial Review filed in Case No. TBB-0119 is hereby dismissed.

If you have any questions regarding this letter, please call Kimberly Jenkins-Chapman, Attorney-Examiner, Office of Hearings and Appeals, at (202) 287-1499.

Sincerely,

Poli A. Marmolejos

DECISION AND ORDER
OFFICE OF HEARINGS AND APPEALS

Motion to Compel Discovery

Case Names:	Jonathan K. Strausbaugh Richard L. Rieckenberg
Date of Filing:	April 2, 2008
Case Numbers:	TBD-0073 TBD-0075

Pending before me is a consolidated Motion to Compel Discovery filed with the Office of Hearings and Appeals (OHA) on behalf of Jonathan K. Strausbaugh and Richard L. Rieckenberg (the complainants) by their attorney. This Motion relates to a hearing requested by the complainants under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708), in connection with the Part 708 complaints they filed against KSL Services, Inc. (KSL). The OHA has assigned Mr. Strausbaugh's and Mr. Rieckenberg's hearing requests Case Nos. TBH-0073 and TBH-0075, respectively, and the present Motion to Compel Discovery, as it relates to each of those cases, Case Nos. TBD-0073 and TBD-0075.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

B. Factual Background

The complainants were employees of KSL at the DOE's Los Alamos site. KSL is responsible for the maintenance of the TA-3 steam distribution system, a 57-year-old steam piping system. The TA-3 system was scheduled for an extended shutdown in order to undergo extensive maintenance, beginning on May 31, 2007. The complainants had the primary responsibility for planning and coordinating the steam system shutdown. Shortly after the maintenance work

began, one crew identified a substance they suspected was asbestos in the manhole in which they were working. The work was suspended until a laboratory could analyze the substance. The substance was confirmed to be asbestos, and the complainants reported this discovery to their managers.

In their complaints, the complainants allege that KSL retaliated against them for disclosing the presence of asbestos on the worksite by terminating them. Mr. Rieckenberg further alleges that he was terminated because he raised the possibility that untreated asbestos may have been present in the manholes for a significant period of time and that there may have been numerous undocumented exposures to the substance over the years. KSL concedes that the complainants informed their managers of the presence of untreated asbestos, but maintains that the complainants were terminated for reasons unrelated to their disclosure. More specifically, KSL alleges that the complainants were terminated because they failed to take appropriate precautions in planning for the maintenance work and because they created a hostile work environment in which employees were unable to discharge their duties.

On March 10, 2008, the complainants asked KSL to produce documents, described in 22 document production requests, relating to their Part 708 complaints. KSL responded on March 31, 2008, by generally arguing that discovery had not been authorized in this proceeding, and by specifically objecting to each of the 22 requests. KSL refused to produce any documents. On April 2, 2008, the complainants then filed a Motion to Compel Discovery with this office.[1]

II. Analysis

The Part 708 regulations state that the "Hearing Officer may order discovery at the request of a party, based on a showing that the requested discovery is designed to produce evidence regarding a matter, not privileged, that is relevant to the subject matter of the complaint." 10 C.F.R. § 708.28(b)(1). After carefully considering the arguments of both parties on the present Motion to Compel Discovery, I have decided to grant the Motion in part.

A. General Objections

KSL first argues that discovery has not been authorized, because an order for discovery "has not been entered in this case." KSL's argument is meritless. It is within the spirit of the Part 708 regulations that arrangements for pre-hearing discovery be worked out between the parties, without the need of a formal discovery order from the OHA Hearing Officer, particularly when both parties are represented by competent counsel. In this case, the complainants' attorney specifically requested whether an order for discovery was needed, in a February 15, 2008, e-mail to me, copied to KSL. I advised the parties in writing that "I would prefer that you work with each other to obtain the discovery you seek. I will resolve any disputes that arise in the course of your discovery." E-mail from William M. Schwartz, Hearing Officer, OHA, to Timothy L.

[1] In their Motion, the complainants withdrew one request, Document Request #16, in which they sought the names of the witnesses KSL anticipates calling at the upcoming hearing. The pre-hearing schedule established for this proceeding provides a date for the exchange of witness lists by the parties.

Butler, Counsel for Complainants, and Dean Graves, Counsel for KSL, February 15, 2008. KSL did not object at the time to my guidance on this matter. Instead, it waited until it was presented with the complainants' request for document production before voicing its objections.[2] At this stage, the parties have unfortunately reached an impasse in their discovery efforts, and I will now issue an order mandating that KSL turn over certain documents to the complainants.

KSL has also objected to all of the complainants' current requests for production of documents, on the grounds that they have not made a showing that each document request is designed to produce relevant evidence and, regarding nearly all of them,[3] that they are "overly broad and unduly burdensome." Other than as I discuss below, I find that these document requests are not overly broad or unduly burdensome, and designed to produce evidence relevant to and within the scope of this proceeding. Moreover, KSL has not provided any evidence that would lead me to conclude that "complying with the discovery request would produce undue delay in this matter or otherwise prejudice" the company. *Lucy B. Smith*, 27 DOE ¶ 87,521 (August 10, 1999).

Upon careful review of the document production request, I find that six document requests (Document Requests #8, 10, 11, 15, 17, and 20) are broad beyond the scope of that which would be "designed to produce" evidence relevant to the present matter. Thus, I will grant, in part, five requests for production of documents and deny a sixth. Regarding Document Request #20, I find that the subject matter of the documents requested bears no relevancy to the matters within the scope of this proceeding and therefore deny that request. As for Document Requests #8, 10, 11, 15, and 17, I will narrow these requests as follows:

- Document Request #8, which seeks "[c]opies of all incident reports, lab sample results and documentation regarding discovery and determination/assessment of uncontrolled asbestos at issue" will refer only to documents that relate to the May 31, 2007 TA-3 steam system shutdown.

- Document Request #10, which seeks copies of e-mails and attachments between Torres and Rieckenberg, Torres and Strausbaugh, Hay and Rieckenberg, and Hay and Strausbaugh, generated in 2006 and 2007, will refer only such e-mails that relate to the May 31, 2007 TA-3 steam system shutdown, the complainants' termination, or the decision to terminate the complainants.

- Document Request #11, which seeks copies of KSL disciplinary documents in effect during the complainants' termination of Strausbaugh and Rieckenberg will refer to only those documents that address KSL's rules, regulations or policies regarding termination of employment.

---

[2] Counsel for KSL notes in its April 2, 2008, response to the Motion to Compel Discovery that it was not involved in the case at the time I advised the parties to proceed with discovery. Its relatively late entry into this proceeding as outside counsel does not excuse it from complying with clear instructions I issued to both parties.

[3] KSL does not contend that Document Requests #7, 17, and 21 are "overly broad and unduly burdensome."

- Document Request #15, which seeks "[d]ocuments relating to any complaints made by Taylor concerning Strausbaugh, Rieckenberg, Torres or against any other individuals" will refer only to documents generated through June 14, 2007.

- Document Request #17, which seeks "[c]ontact information for Trosen, and a complete description of circumstances for leaving KSL" will exclude those portions of the requested description that concern non-work-related matters.

B. Specific Objections

Regarding Document Request #2, which seeks e-mails generated or received by named individuals within specified dates "regarding the TA-3 Extended Steam Distribution Shutdown relating to the termination of" the complainants, KSL raises two objections. First, KSL objects that the request "vague." I find merit to KSL's objection and will grant the request only in part, as modified below:

> All emails and attachments from May 1, 2007 through June 30, 2007, generated or received by David Whitaker, Keith Trosen, Tom Hay, Joan Taylor, Richard Chavez, Martin Dominquez, Laura Jenkins, B.J. Tedder, Ted Torres, Steve Long, David Lujan, Jerome Gonzales, David Padilla, Benito Garcia, Rick Nelson, Mike Goodwin, Chris Tolleson, Carol Lowe, Mark Romero, Stephanie Bement, Richard Flores, and Kiki Sanchez, on the following subjects:
>
> (a) project management, project planning, project budget, project safety, asbestos, and alleged personnel harassment related to the May 31, 2007, TA-3 steam system shutdown; and
>
> (b) the decision to investigate, investigatory suspension, review and discussion of investigation, and decision to terminate Rieckenberg and Strausbaugh.

KSL also objects to Document Request #2 on the grounds that several of the named individuals named have never been KSL employees. I find no merit to this objection and will deny it. If KSL has records of any e-mails in its possession that are responsive to this document request, it should provide them; if it does not, it should so inform the complainants.

Document Request #6 seeks the complete file of KSL's investigation of the May 31, 2007 TA-3 steam system shutdown, including investigators' notes, drafts, and recordings. KSL has objected to this request to the extent that some responsive documents are protected by "the attorney-client privilege and/or the work-product doctrine." I find that there is merit to KSL's argument, to the extent that privileged documents need not be produced in discovery. Document Request #6 will therefore be granted in part and modified to read: "Complete file of KSL's investigation, including investigators' notes, drafts, and recordings, to the extent that such documents are not privileged."

Document Request #17 seeks contact information for Keith Trosen and a complete description of his circumstances for leaving KSL. KSL has objected to this request in part because, to the

extent that the complainants' attorney intends to communicate with Mr. Trosen, a former manager of KSL, such communication would be a violation of a New Mexico Rule of Professional Conduct that appears to prohibit such conduct with managers "of a corporation . . . about the subject matter of the representation even though the corporation . . . is represented by counsel." *N.M. Rules of Prof'l Conduct* R. 16-402. While I note that Mr. Trosen is no longer a manager of KSL, it would be inappropriate for me to rule on whether this rule applies to the facts of this case. Nevertheless, this objection is speculative in that we do not know what the complainants' attorney's intentions are with respect to contacting Mr. Trosen. I find no merit to KSL's objection and will grant this request.

Document Request #7 seeks a copy of PADOPS BOP-2007-0011, which the complainants allege is a Department of Energy document that concerns in some manner the May 31, 2007, TA-3 steam system shutdown. Document Request #21 seeks a copy of LANL LIR 402-810.01.1, a Los Alamos National Laboratory regulation that addresses Confined Space entries, evaluations and permits. KSL objects to each of these requests, claiming that the documents requested are not KSL documents. I find no merit to this objection and will deny it. If KSL has the requested documents in its possession, it should provide them to the complainants.[4]

C. Request for Exclusion of Evidence

In their Motion to Compel Discovery, the complainants request that I "exclude evidence at the hearing," presumably of any documents that KSL refuses to produce through discovery. I find no basis in the Part 708 regulations for doing so at this time. However, after the present order is issued and the parties have had an opportunity for full discovery, both parties should bear in mind that a hearing officer in a Part 708 proceeding "may, at the request of a party or on his or her own initiative, dismiss a claim, defense, or party and make adverse findings upon the failure of a party or the party's representative to comply with a lawful order of the Hearing Officer." 10 C.F.R. § 708.28(b)(5).

[4] KSL also objects to Document Requests #6, 8, 9, 11, and 15, on the grounds that the complainants have some or all of the requested documents. I find no merit to this objection and will deny it. Clearly, KSL need not provide the complainants with additional copies of documents it has already provided. However, to the extent that it possesses documents responsive to these requests that it has not yet provided to the complainants, this objection does not relieve KSL from providing such documents. The parties should note that the following documents responsive to these requests for production of documents are part of the record in this proceeding, having been provided to this office during the investigation stage of this case:

- KSL Services Employee Relations Investigative Report (re: suspension of complainants) (7 pp.)
- Performance Improvement and Disciplinary Action for KSL Employees, 14-10-111 (12 pp.)
- Confined Space Entry, 12-10-007 (10 pp. plus one-page attachment on training plans)
- Confined Space Evaluations on Manhole 1009 (5/21/07) and Manhole 1022 (5/21/07 and 5/30/07)

Any other documents that either party wishes to rely upon at the hearing with respect to the subject matter of these requests must be provided to the opposing party and the hearing officer by the exchange date I shall establish.

III. Conclusion

For the foregoing reasons, I find that Document Request #20 should be denied, that Document Requests #1, 3, 4, 5, 7, 9, 12, 13, 14, 18, 19, 21, and 22 should be granted, and that Document Requests #2, 6, 8, 10, 11, 15, and 17 should be granted in part.

Is It Therefore Ordered That:

(1) The Motion to Compel Discovery filed by Jonathan K. Strausbaugh and Richard L. Rieckenberg, Case Nos. TBD-0073 and TBD-0075, is hereby granted in part and denied in part, as specified in Paragraphs (2) through (4) below.

(2) Document Request #20 of the March 10, 2008 Request for Discovery submitted by Jonathan K. Strausbaugh and Richard L. Rieckenberg to KSL Services, Inc., is hereby denied.

(3) Document Requests #1, 3, 4, 5, 7, 9, 12, 13, 14, 18, 19, 21, and 22 of the March 10, 2008 Request for Discovery submitted by Jonathan K. Strausbaugh and Richard L. Rieckenberg to KSL Services, Inc., are hereby granted. KSL Services, Inc., shall provide Jonathan K. Strausbaugh and Richard L. Rieckenberg with its responses to these Document Requests by no later than April 30, 2008.

(4) Document Requests #2, 6, 8, 10, 11, 15, and 17 of the March 10, 2008 Request for Discovery submitted by Jonathan K. Strausbaugh and Richard L. Rieckenberg to KSL Services, Inc., are hereby granted in part. KSL Services, Inc., shall provide Jonathan K. Strausbaugh and Richard L. Rieckenberg with its responses to these Document Requests, as modified below, by no later than April 30, 2008:

> (a) Document Request #2: All emails and attachments from May 1, 2007 through June 30, 2007, generated or received by David Whitaker, Keith Trosen, Tom Hay, Joan Taylor, Richard Chavez, Martin Dominquez, Laura Jenkins, B.J. Tedder, Ted Torres, Steve Long, David Lujan, Jerome Gonzales, David Padilla, Benito Garcia, Rick Nelson, Mike Goodwin, Chris Tolleson, Carol Lowe, Mark Romero, Stephanie Bement, Richard Flores, and Kiki Sanchez, on the following subjects:
>
> > (i) project management, project planning, project budget, project safety, asbestos, and alleged personnel harassment related to the May 31, 2007, TA-3 steam system shutdown; and
> >
> > (ii) the decision to investigate, investigatory suspension, review and discussion of investigation, and decision to terminate Rieckenberg and Strausbaugh.
>
> (b) Document Request #6: Complete file of KSL's investigation, including investigators' notes, drafts, and recordings, to the extent that such documents are not privileged.

(c) Document Request #8: Copies of all incident reports, lab sample results and documentation regarding discovery and determination/assessment of uncontrolled asbestos concerning the May 31, 2007 TA-3 steam system shutdown.

(d) Document Request #10: Copies of all e-mails and attachments between Torres and Rieckenberg, Torres and Strausbaugh, Hay and Rieckenberg, and Hay and Strausbaugh, generated in 2006 and 2007, that relate to the May 31, 2007 TA-3 steam system shutdown, the complainants' termination, or the decision to terminate the complainants.

(e) Document Request #11: Copies of KSL disciplinary documents in effect during the termination of Strausbaugh and Rieckenberg that address KSL's rules, regulations or policies regarding termination of employment

(f) Document Request #15: Documents relating to any complaints made by Taylor through June 14, 2007, concerning Strausbaugh, Rieckenberg, Torres or against any other individuals.

(g) Document Request #17: Contact information for Trosen, and a complete description of circumstances for leaving KSL, excluding those portions of the requested description that concern non-work-related matters.

(5) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of the Office of Hearings and Appeals upon the issuance of a decision by the hearing officer on the merits of the complaints.

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Hearing Officer's Decision

Name of Case: Gilbert J. Hinojos

Date of Filing: December 20, 2002

Case Number: TBH-0003

This Decision concerns a whistleblower complaint filed by Gilbert J. Hinojos (the Employee) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The Employee worked as a "Material Control Coordinator, Sr." at Honeywell Federal Manufacturing & Technologies (the Contractor), a DOE facility in Albuquerque, New Mexico. The Employee alleges that he engaged in protected activity and that the Contractor retaliated by taking several actions. The Employee's allegation of retaliatory discharge is the subject of this proceeding. As the decision below indicates, I have concluded that the Contractor would have taken the same action in the absence of protected activity and, therefore, the Employee is not entitled to relief.

I. Background

A. The DOE's Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program prohibits contractors from retaliating against contractor employees who engage in protected activity. Protected activity includes disclosing information that an employee believes reveals a substantial violation of a law, rule, or regulation or gross fraud, waste, or abuse of authority. Protected activity also includes participating in a Part 708 proceeding. If a contractor retaliates against an employee for protected activity, the employee may file a complaint. *See* 10 C.F.R. Part 708.

B. Procedural History

In July 2002, the Employee filed a complaint under 10 C.F.R. Part 708. In the complaint, the Employee alleges that he was subject to two acts of retaliation from the Contractor due to his having filed several complaints with the Equal Employment Opportunity

Commission (EEOC) and the New Mexico Human Rights Division (NMHRD). The first alleged act of retaliation was the Contractor's denial of the Employee's request to attend classes during his scheduled work hours despite the fact that the Contractor had previously granted the Employee permission to attend those classes. The second alleged act of retaliation occurred when the Contractor told the Employee to stop circulating a letter among his co-workers seeking support for his initial request to attend classes.

On October 22, 2002, the Director of the Office of Hearings and Appeals (OHA) appointed an investigator to examine the issues raised in the Employee's complaint. In December 2002, in his Report of Investigation, the investigator concluded that the Employee had not engaged in protected conduct under the Contractor Employee Protection Program because the program does not cover claims based upon the filing of EEOC complaints. The investigator further concluded that, even if the Employee had engaged in protected conduct, there was clear and convincing evidence that the Contractor's denial of the Employee's request to attend classes during scheduled work hours was not related to his filing complaints with the EEOC and NMHRD. After the OHA investigator issued his Report of Investigation, I was appointed the Hearing Officer in the case.

In January 2003, while this Part 708 action was pending, the Employee was discharged from his position with the Contractor. The Employee requested and was granted permission to amend his original Part 708 complaint to include the termination of his employment as an additional act of retaliation.

In April 2003, the Contractor filed an Amended Motion to Dismiss the Original and Amended Complaints. The Contractor argued that the Employee failed to make a claim for which relief could be granted under Part 708. The Contractor asserted that the Employee's claims were based on actions allegedly taken as a result of his filing claims with the EEOC and NMHRD and, therefore, are barred under 10 C.F.R. § 708.4. In May 2003, I granted the Contractor's motion in part. I determined that the claims regarding the first two alleged acts of retaliation—the denial of the Employee's request to attend classes during work hours and the Contractor's demand that the Employee stop circulating a letter among his coworkers in support of that request—should be dismissed because those claims alleged that the retaliatory actions were taken as a result of the Employee filing discrimination complaints with the EEOC and NMHRD and such claims are barred by 10 C.F.R. § 708.4. I further determined that the claim of retaliatory termination was not barred insofar as the claim alleged that the discharge was due to his filing a Part 708 claim, which is protected activity. *Gilbert J. Hinojos*, 28 DOE ¶ 87,037 at 89,264 (2003) (Motion to Dismiss) (*Hinojos*).

A hearing was held at Albuquerque, New Mexico on July 14-15, 2004. The Employee testified as to why he believed his termination was a result of the filing of his Part 708 complaint. The Contractor presented evidence, in the form of several witnesses and exhibits, seeking to establish that the Contractor would have taken the same action in the absence of the protected conduct. The Contractor's witnesses were the director of the Contractor's New Mexico operations (the Director), the Employee's supervisor (the

Supervisor), the Contractor's manager of Environment, Safety & Health (the Safety Manager), the Contractor's Human Resources Manager, and a forklift operator who was a co-worker of the Employee. The Contractor submitted an exhibit book. The Contractor numbered its exhibits and they are cited as "Ex. [number]."

II. Analysis

A. The Complainant's Burden

In filing a Part 708 complaint, the complainant must establish, by a preponderance of the evidence, that the complainant engaged in protected activity and that the activity was a contributing factor to an alleged retaliation. *See* 10 C.F.R. § 708.29; *see also Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). In the present case, although the Employee had a request for a hearing concerning his Part 708 claims pending at the time of his termination, the underlying original Part 708 claims were eventually dismissed because they were barred under 10 C.F.R. § 708.4. The only claim which was not dismissed was the Employee's claim that his employment was terminated because he filed the original Part 708 claim. The question then is whether the Employee's filing of a Part 708 claim, even though it was eventually dismissed as being barred by the regulations, is "protected activity" within the meaning of the regulations and therefore entitles the Employee to the benefit of protection against retaliatory discharge under Part 708. In my previous decision in *Hinojos*, I found that filing a Part 708 complaint was a protected activity and I reaffirm my decision below.

The stated purpose of the regulations is to provide "procedures for processing complaints by employees of DOE contractors alleging retaliation by their employers for disclosure of information concerning danger to public or worker health or safety, substantial violations of law, or gross mismanagement; for participation in Congressional proceedings; or for refusal to participate in dangerous activities." 10 C.F.R. § 708.1. Part 708 states that an employee may file a complaint against an employer for retaliation for participating in a proceeding under Part 708. *See* 10 C.F.R. § 708.5(b). Nonetheless, as demonstrated here, the fact that a claim is filed under Part 708 does not necessarily mean that the complaint is, on its face or in substance, one covered by the regulations.

Individuals who file complaints in good faith under Part 708 should not be denied its protection simply because they were mistaken in their belief that their claims fell within the scope of the regulations. The Part 708 regulations are intended to protect employees from retaliation for making disclosures about workplace safety or violations of law. To require employees to have absolute certainty that their claims fall within the scope of the regulations would deter employees from making such claims and would possibly subject employees whose claims are ultimately dismissed to retaliation for the simple act of filing the claim. This would frustrate the intention of the regulations. If we must err, it is better to err on the side of granting the protection to employees whose claims ultimately are not covered by the regulations than denying the protection to employees who file the claims in good faith. *See Rosie L. Beckham*, 27 DOE ¶ 87,557, Case No. VBA-0044 (2000)

("[F]or purposes of Part 708 it does not matter whether the information of a putative whistleblower disclosed is ultimately factually substantiated.") Therefore, I again find that filing a claim under Part 708 constitutes a disclosure as to a potential violation of law and may be a protected activity.

In the present case, I believe that the Employee made his initial Part 708 complaints in good faith. An examination of his submissions and pleadings in this matter convince me that his initial Part 708 complaint was made in good faith. Additionally, a Human Resource Manager who participated in the separation review board that made the decision to terminate the Employee's employment had knowledge of Hinojos' previous Part 708 complaint. *See* Hearing Transcript (Tr.) at 433, 438-39. Further, given the pendency of Employee's Part 708 hearing request at the time of his termination, I believe that there is sufficient temporal proximity to conclude that the Part 708 complaint was a contributing factor to his termination. Accordingly, I find that the Employee has satisfied his burden.

B. The Contractor's Burden

If the employee makes the required showings of protected activity and retaliation, the burden shifts to the contractor to establish by clear and convincing evidence that it would have taken the same action in the absence of the employee's protected activity. *See* 10 C.F.R. § 708.29; *see also Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)).

After considering the record established in the investigation by OHA, the parties' submissions, and the testimony presented at the hearing, for the reasons stated below, I find that the Contractor has met its burden of establishing by clear and convincing evidence that it would have taken the same action in the absence of the Part 708 proceeding.

1. The Contractor's Arguments and Evidence

The Contractor maintains that the Employee's filing of the complaint was not considered when the decision regarding the termination was made. According to the Contractor, the Employee was terminated because he was a safety risk. The Contractor stated that it primarily based its decision on an accident involving the Employee which occurred on December 6, 2002. Following that incident, the Contractor convened a separation committee to evaluate the Employee and the accident. In considering whether to terminate the Employee, the Contractor looked at the severity of the accident, the Employee's failure to take preventative measures, the Employee's attitude about the accident, and a prior safety incident in which the Employee was involved. Tr. at 251. The Contractor maintains that it considered precedent in determining the best course of action and found that discharging the Employee was appropriate given the circumstances.

At the time of the December accident, the Employee was transporting large, aluminum containers, known as CRTs, from the Contractor's facility to an off-site vendor in a

government-owned truck. The CRTs weigh about 250 pounds each. Tr. at 356; Ex. 8. The CRTs were not secured in the bed of the truck. At a point during the transport the Employee stopped suddenly, causing the unsecured CRTs to shift. This resulted in the rear window of the truck cab shattering and a part of the load shifting atop the cab. [1] Tr. at 272, 304-307; Ex. 8.

The Contractor asserts that the accident was very severe and, although no one was injured, could have had very serious consequences. The Director testified at the hearing that the accident "had the potential to be a very serious incident, and in and of itself was a very serious incident." Tr. at 253. The Supervisor stated that that by failing to secure the load, the Employee "was subjecting not only the general public, but also himself and the material to danger, high probability of danger." Tr. at 409-410. The Contractor also presented evidence identifying safety as an integral component of its operations. The Director stated, "[Safety is] so ingrained in our environment that we expect each of the staff members and leadership to be safe, and be accountable for safety." Tr. at 243. The Contractor's Human Resources Manager testified that "[s]afety is paramount in our organization. In fact, safety is considered a lifestyle." Tr. at 435. The Contractor argues that, although no one was injured, the Employee could have been seriously injured had one of the CRTs struck him and that there could have been serious injury to a member of the general public had a CRT fallen off the truck and struck someone else. *See* Tr. at 355.

The Contractor also asserts that it considered the fact that the Employee had the training necessary to take preventative measures and failed to do so. The Safety Manager testified to the training the Employee received. The Safety Manager specifically mentioned training relating to the proper way to secure and transport a load. *See* Tr. at 351-355; *see also* Exhibit 1. The Supervisor also testified as to the Employee's training and stated that he believed that the Employee had the necessary training to properly secure the load he was transporting during the December 2002 accident. Tr. at 400.

The Contractor further asserts that the Employee's attitude toward the accident was a key factor in determining that the Employee should be discharged. The Director testified that it was apparent from the investigation that the Employee did not take responsibility for and did not acknowledge the seriousness of the accident. Tr. at 252.

The Contractor also stated that it considered a prior safety incident in making the decision to terminate the Employee. In August 2002, the Employee was involved in a safety incident involving an unsecured load, categorized as a "near-miss" since no one was injured and the damage was minimal. This incident involved items that were loaded onto a pallet or cart to be lowered by forklift from one floor to another. The materials were improperly secured and the load improperly balanced causing some of the items to fall. None of the individuals involved in the incident were reprimanded; they all received training on securing and transporting loads. Tr. at 250, 407. *See* Ex. 17 at 470, 632. The Contractor's position is that, although no one was assigned blame for the August 2002 incident, following the incident the Employee received training that should have

[1] The Employee denies that any of the CRTs shifted to the roof of the truck cab as a result of the December accident. Tr. at 459.

prevented the December 2002 accident. The Contractor maintains that the Employee's failure to use that training was a willful disregard for the Contractor's safety procedures.

The Contractor further asserts that in deciding the Employee's case it looked to precedent to help determine the appropriate course of action. The Director testified that in deciding the case, the Contractor looked at, among other things, "past precedent and other similar situations [the Contractor] had in the organization, [the Contractor] at large, not just New Mexico." Tr. at 248. In this regard, the Human Resources Manager testified about the procedure the Contractor's Environment Safety and Health (ES&H) Office used to find precedent. She stated that when the ES&H office was told of the accident, it "characterized" the incident. A search was run in the Contractor's databases for similar incidents. The Human Resources Manager stated that in terms of potential severity of consequences only one other case was found. In that case, a senior maintenance worker, in the process of working on an electrical problem, failed to take proper safety measures and cut through an electrical conduit while digging a trench in an area with electrical lines. Although the damage in that incident was minor, there was a potential for severe consequences, even multiple fatalities. In that case, the worker was terminated outright solely as a result of the incident. Tr. at 434-35. When asked on cross-examination about whether the incident with the maintenance worker was the only one the separation committee considered, the Human Resources Manager stated that while there may have been other incidents, the one they considered was the only one that had a potential for severe consequences similar to the Employee's accident. Tr. at 443-44; *see* Ex. 18.

Finally, the Human Resources Manager testified that the Employee's version of what happened in the December 2002 accident was inconsistent. She testified that in the ES&H investigation of the accident the Employee stated that the forklift operator may have told him to secure the load but that he did not remember exactly what was said. In a subsequent investigation of the incident by the Contractor's Human Resources department, the Employee stated that he took a strap from behind the driver's seat in the truck and put it on the bed of the truck. In that investigation the Employee also stated that he asked the forklift operator if the load needed to be secured and that the operator responded that the load did not need to be tied down. Tr. at 428. The Human Resources Manager also pointed out that the forklift operator's version of the incident (that he had told the Employee to tie down the load) remained consistent between the two investigations. *See infra* at 8-9.

The Contractor asserts that its decision to terminate the Employee was consistent with actions it had taken in the past for comparable incidents. Moreover, the Contractor argues that the Employee's failure to take the proper safety precautions to prevent the accident, the fact that he had the training to do so, the inconsistency in the Employee's version of events in the two investigations, and his attitude toward the seriousness of the accident all warranted his termination. The Contractor maintains that the Employee's general attitude toward safety made him a safety risk and, therefore, termination was an appropriate course of action. *See* Tr. at 251-53.

2. The Employee's Arguments and Evidence

The Employee alleges that his termination was based on the fact that he had filed a Part 708 complaint and that the December 2002 accident was merely an excuse to discharge him. The Employee testified at the hearing and his testimony, in pertinent part, is set out below.

The Employee stated that in December 2002 he was picking up a load of CRTs to transport them to an off-site vendor. After the forklift operator had loaded the CRTs into his truck, the employee left to deliver them to the off-site vendor. The Employee stated that while he was transporting the CRTs, he pressed on the brake of the truck and the load shifted. [2] He described the accident as follows:

> [A]ll I heard was a crash, you know, sounded like a gun went off. And I looked up, and you could just barely see one of the CRTs that had barely cleared the gate, the fence there, and it hit the frame, the window frame of the truck, not the – it didn't hit the glass at all, it just hit the frame. And I looked up at it, and I couldn't believe the noise and the glass. So I says, well, I better get out of here. I looked around and saw everything was okay. So I drove to a phone booth, and I knew there was a gas station down the road. So I drove down there and I parked the truck and I called up [a coworker], who was our lead person…I said 'I was in an accident. One of the CRTs shifted' – I think it was two of them that had shifted.

Tr. at 100. He further testified that none of the CRTs had shifted to the top of the roof of the truck's cab. Tr. at 459. The Employee stated that immediately after the accident no one was disciplined and no other action was taken. Tr. at 105. However, the Employee testified that a few days after the accident his driving privileges were restricted. Tr. at 117.

The Employee stated that about a week after the accident, an investigation of the accident began. The Employee testified that he told one of his coworkers at that time that "they're [the Contractor] trying to fire me" and that the coworker responded that he had been involved in an accident with one of the trailers and not been fired. Tr. at 119. The Employee testified that he felt he was being treated differently because of his prior complaints. *Id*. The Employee testified that he knew of several other safety incidents that did not result in terminations for those involved. Tr. at 121, 183.

C. Disputed Issues and Findings

The Employee argues that, contrary to the Contractor's stated reasons for discharging him, he had not been guilty of repeated violations of safety procedures. The Employee also maintains that the forklift operator told him that he had secured the load of CRT's

[2] The truck that the Employee drove during the December 2002 accident was a pick-up truck that had a railing around the bed of the truck. The height of the railing was approximately that of the roof of the truck's cab. *See* Ex. 8 at 659-61.

and that it was not the Employee's responsibility to secure the load. Related to this issue is whether the ultimate responsibility of securing the load belonged to the Employee or the forklift operator. The Employee also maintains that the Contractor overstates the severity of the accident. Finally, the Employee disputes the Contractor's characterization of his attitude toward the accident.

1. Stated Reasons for the Employee's Discharge from Employment

The Employee argues that one of the reasons listed in his termination notice - "repeated violations of safety procedures" - is false and is merely a pretext to fire him for filing his Part 708 complaint. See Ex. 17 at 424 (Memorandum terminating Employee's employment). The record clearly indicates that with regard to the August 2002 accident, there was no formal adjudication of responsibility. Tr. at 250, 407. Since the record only discloses one safety incident where the Employee was found at fault, namely, the December 2002 accident, one of the stated reasons for the Employee's discharge - "repeated violation of safety procedures" - is erroneous. However, the facts as described below still support a finding that the Contractor would have discharged the Employee in any event, notwithstanding his Part 708 complaint.

2. Securing the Load Prior to Transport

The Employee disputes the Contractor's assertion that he was responsible for tying or strapping the load of CRTs that shifted in the December 2002 accident. The Employee testified that while the forklift operator loaded the CRTs on to the Employee's truck, the Employee went "around the front" to take his break. Tr. at 99. He stated that before he went on his break, he handed the forklift operator a tie-down strap in case he needed it to secure the load. Tr. at 99, 160. The Employee stated that when he returned from his break he asked the forklift operator, "Is the load ready to go?" and the forklift operator responded, "Yeah, it's ready. Go ahead and go." Tr. at 100. The Employee stated that, as far as he was aware, he was not required to do an inspection of the load before he drove away from the Contractor's facility. Tr. at 101. He also testified that according to "the procedures he was aware of" it wasn't necessary to strap the CRTs down since they were "rusty and would stack on top of each other." Tr. at 99.

The forklift operator's version of events significantly conflicts with the Employee's version. He stated at the hearing that after he loaded the CRTs onto the truck he handed a tie-down strap to the Employee and told the Employee to tie down the load. Tr. at 298. The forklift operator testified that he asked the Employee whether the Employee needed help securing the load and the Employee responded, "No, I don't need any help, I'll take care of it." Tr. at 299. The forklift operator stated that after the Employee told him he did not need help in securing the load, the forklift operator backed the forklift back into the bay area and lowered the bay door. The forklift operator stated he did not see "any more of what he [the Employee] did or did not do, what he failed to do." Tr. at 332. Further, the forklift operator denied that the Employee had offered him a strap or asked him to tie the CRTs down. Tr. at 312.

The forklift operator, the Safety Manager, and the Supervisor each testified that the driver of a vehicle has the burden of ensuring that a load is secure. The forklift operator stated that "once you're the custodian of a vehicle, you're responsible for everything. He doesn't have to pull it [the vehicle] off the lot if he's uncomfortable about the way it's loaded." Tr. at 331. According to the Safety Manager, "It's still the driver's responsibility to make sure to check that load and make sure it's secure. You don't drive off without making sure that that load is secure." Tr. at 367. When asked whether it would make a difference if the driver had been told the load was secure or given the go-ahead to proceed, the Supervisor testified that such assurances do not lift the burden from the driver:

> I think he still should have looked at the load, you know. As the driver of the vehicle, he should have looked at the load, made sure that he thought it was safe to transport. And if he didn't, then he should have loaded and secured it, and resecured it or whatever he thought. It was his responsibility, in my opinion.

Tr. at 411.

After examining the evidence as well as assessing the demeanor of the witnesses, I find that the forklift operator gave the Employee the tie-down strap and told the Employee to be sure to secure the load. The forklift operator's version of events remained consistent through two investigations and at the hearing. In each of those instances, he testified that he provided the Employee with a tie-down strap and told him to secure the load. See Tr. at 303, 312, 426; Ex. 16 at 637 (ES&H Investigation); Ex. 16 at 477, 641 (HR Investigation). As mentioned above, the Human Resources Manager testified that the Employee's version of events was inconsistent from the ES&H investigation to the Human Resources investigation. The report of Employee's interview by ES&H indicate that the Employees told investigators that the forklift operator might have told him to secure the load but he did not remember exactly what was said. Ex. 16 at 637. The report of HR's interview with the Employee indicates that the Employee claims to have asked the forklift operator whether he needed to tie down the load and that the forklift operator replied that it did not need to be tied down. Ex. 16 at 642.

I also find that the driver of a vehicle is ultimately responsible for ensuring that a load is secure prior to transport. In making this finding I was persuaded by the testimony of the Safety Manager, supervisor and forklift operator. It is unreasonable to argue that the driver of a vehicle carrying a load does not have the responsibility to ensure that the load is safe for transport. I find that, despite his training on the proper securing of loads for transport, the Employee failed in his duty to ensure that the load he was transporting was secure and safe for travel.

3. Severity of the Accident

According to the Contractor, a critical factor in deciding to terminate the Employee was the severity of the accident and the possible consequences. The Contractor believes the

accident could have injured or even killed both the Employee and members of the general public. The Employee testified that, given the nature of the accident, he did not believe that anyone could have been injured. The validity of these assertions necessarily turns on what actually happened in the accident of December 6, 2002.

The Employee testified that when he pressed on his brake, the CRTs shifted forward a bit causing one to bump against the window frame which caused the glass in the rear window of the truck cab to shatter. He stated that a CRT never touched the glass. Tr. at 100. The Employee further stated that no part of a CRT ever shifted atop the cab of the truck. Tr. at 165, 170.

The forklift operator, who arrived at the scene of the accident after the Employee called a coworker to inform them of the accident, testified that a part of one of the CRTs had penetrated the rear window of the truck and that part of another CRT had shifted atop the cab roof of the truck. Tr. at 304. The forklift operator stated that he personally shifted the CRT from the roof of the truck back into place and secured the load in order to return the truck to the Contractor's facility. Tr. at 305.

In light of all of the testimony, I am inclined to agree that a CRT did penetrate the rear glass of the truck and another shifted atop the roof of the vehicle. Based upon the evidence and my assessment of the demeanor of the Employee's and forklift operator's testimony, I find that the forklift operator's version of the damage in the accident is the more plausible one. I also find the Employee's version of the damage in the accident, while not necessarily impossible, very unlikely. The forklift operator testified that he personally saw that the CRT had penetrated the glass and the other had slid atop the roof. *See* Ex. 8 at 660. The Safety Manager testified that the glass in the truck in question consisted of safety glass and that a "light broadside hit" on the frame of the back cab window would not caused the safety glass to shatter as it did. Tr. at 357. The Safety Manager also pointed out that in his opinion the Employee could have been seriously injured or killed. Tr. at 361. Given the nature of the damage in the accident, I find that the Contractor's estimation of the seriousness of the accident is reasonable.

4. The Employee's Attitude Toward the Accident

The Contractor maintains that the Employee's reaction to the accident demonstrated a disregard or indifference to the importance of safety in the workplace and a lack of understanding of the severity and the potential consequences of the accident. The Safety Manager testified that the Employee was concerned that he was going to lose job. Tr. at 358. The Safety Manager also testified that he believed the Employee "understood that it was a potentially severe situation" but that he could not speak to whether the Employee accepted responsibility for the accident. Tr. at 361. When asked about her interview with the Employee after the accident, the Human Resources Manager testified as follows:

> Q.: Did [a human resources associate] ask [the Employee] if he realized how close he was to being severely injured by the CRT coming through the back window?
>
> A.: Yes.
>
> Q.: What was [the Employee's] response?
>
> A.: That he didn't consider it serious, it wasn't that big of a deal.
>
> Q.: Did he use words like that?
>
> A.: He used words like that.
>
> Q.: Not that big of a deal?
>
> A.: Um-hum.

Tr. at 431-432. The Human Resources Manager repeated this testimony on cross-examination. Tr. at 442-443. The Employee maintains that his attitude toward the accident was not indifference toward safety, but rather a disagreement as to the seriousness of the accident. The Employee stated that he did not think the accident could have had the severe consequences the Contractor believed could have occurred. *See* Tr. at 467. The Employee testified that when he was interviewed during the investigation of the accident he was asked whether he was aware of how serious the accident was and that people could have been injured or even killed. He testified that he never made a statement disavowing any risk and saying that the accident was not serious. Tr. at 467. Instead, the Employee stated that no one could have been injured by his transporting unsecured CRTs. Tr. at 168. The Employee testified that he did not see the danger in his driving with the unsecured load based on the vehicle he was driving and his previous trips with similar loads. Tr. at 230. He also stated that he never said the accident was not "a big deal." The Employee stated that he responded that the accident was not intentional and that he did not put himself or anyone else at risk. Tr. at 122.

Based upon the testimony, I find that the Contractor's assessment of the Employee's attitude toward the accident was a reasonable one. Regardless of whether the Employee used the words "no big deal," it is clear from his own testimony at the hearing that he did not think, and still does not believe, the accident had the potential for serious consequences. As mentioned above, the Employee testified that he never made a statement in which he disavowed the risks or seriousness of the accident; however, earlier in his testimony, on cross-examination, when questioned about the statement he stated, "I felt it wasn't that serious." Tr. at 181. In essence, the Employee clearly did not believe that the accident could have had grave consequences.

III. Conclusion

After examining all of the evidence and testimony before me I find that the Contractor has presented clear and convincing evidence that it would have terminated the Employee notwithstanding the Part 708 complaint. As discussed above, I also find that the Employee was in fact responsible for ensuring that the CRT load was tied down and that he failed to fulfill this responsibility. In this regard, the testimony of the forklift operator, the Supervisor and the Safety Manager is more convincing than that of the Employee. Further I find that even if the Employee had instructed the forklift operator to tie the load down, he as the driver was ultimately responsible for ensuring that the load was properly secured. His failure to secure the load resulted in the December 2002 accident. This accident could have had serious consequences for the safety of the Employee or other public traffic around him. This accident occurred despite the fact that Employee had received specific training regarding securing loads to be transported.

The Contractor has also sufficiently proved that, in light of the severity of the accident, the Employee's failure to take appropriate preventative measures despite having prior training on the proper method of doing so, and the Employee's failure to this day to acknowledge the seriousness of the accident, the Employee was a safety risk. The Contractor further established that the Employee's case was handled in a manner appropriate for the serious safety violation involved and that the sanction of dismissal from employment was consistent with the sanction given in the only other case that the Contractor's ES&H department, after doing a database search, could find involving a similar potential for harm. Accordingly, I find that the Employee's claim for relief under Part 708 should be denied.

IT IS THEREFORE ORDERED THAT:

(1) The Complaint filed under 10 C.F.R. Part 708 by Gilbert J. Hinojos against Honeywell Federal Manufacturing & Technologies, Case No. TBH-003 is hereby denied.

(2) This is an initial agency decision, which shall become the final decision of the Department of Energy unless, within 15 days of issuance, a notice of appeal is filed with the Office of Hearings and Appeals, in which a party requests review of this initial agency decision.

Richard A. Cronin, Jr.
Hearing Officer
Office of Hearings and Appeals:

Date: April 27, 2005

July 11, 2003

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: **Gary S. Vander Boegh**

Date of Filing: **November 20, 2002**

Case Number: **TBH-0007**

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Gary S. Vander Boegh (also referred to as the Complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Mr. Vander Boegh holds the position of Landfill Manager at the C-746-U Landfill for the DOE's Paducah Gaseous Diffusion Plant (the "Paducah Plant") located outside of Paducah, Kentucky. He is an employee of WESKEM, LLC (WESKEM), a subcontractor for Bechtel Jacobs Company, LLC (BJC). BJC is the management and integration (M&I) contractor for the Paducah Plant, and WESKEM is the subcontractor charged with operating the C-746-U Landfill. In his complaint, Mr. Vander Boegh contends that reprisals were taken against him after he made certain disclosures of safety violations to officials of WESKEM, BJC and the DOE. Mr. Vander Boegh contends that WESKEM and BJC retaliated against him in response to these disclosures.

I. Summary of Determination

In this Decision, I first provide background information concerning the Part 708 program, discuss the Complainant's employment situation and the nature of his complaint, and summarize the OHA Investigator's findings and preliminary determinations made by me to frame issues for the hearing. I then present the legal standards governing this case. Next is my analysis of this complaint. In that analysis, I first find that Mr. Vander Boegh made at least three protected disclosures that are proximate in time to several personnel actions that he contends were taken by WESKEM and BJC. I find that additional personnel actions were

taken after Mr. Vander Boegh initiated his Part 708 complaint, and are also proximate in time to his protected activity. I then find that with respect to all but one of these personnel actions, Mr. Vander Boegh has shown by a preponderance of the evidence that they constitute retaliations against him under Part 708. Under these circumstances, the DOE's strong commitment to defending whistleblowers and Part 708 impose the significant requirement that WESKEM or BJC show by clear and convincing evidence that, in the absence of these protected disclosures, it would have taken the same adverse personnel actions against Mr. Vander Boegh. Next I analyze the evidence and argument presented by the contractors. Ultimately, I find that in five instances, BJC or WESKEM failed to establish by clear and convincing evidence that it would have taken the adverse personnel action in the absence of Mr. Vander Boegh's protected disclosures. In one other instance, I find that BJC has shown by clear and convincing evidence that no Part 708 relief is required.

Accordingly, I find that WESKEM and BJC committed reprisals against Mr. Vander Boegh, and that they should be required to take restitutionary action.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise take any adverse personnel action against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority.

See 10 C.F.R. § 708.5(a)(l), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations are entitled to receive protections. They may file a whistleblower complaint with the DOE. As part of the proceeding, they are entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they are entitled to an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. History: Mr. Vander Boegh's Complaint and Relevant Events Concerning his Employment at WESKEM

Mr. Vander Boegh filed his Part 708 complaint with the Oak Ridge Operations Diversity Programs and Employee Concerns Office on January 4, 2002. On April 29, 2002, that Office informed him that a preliminary determination had been made by the DOE to accept jurisdiction over the complaint. Further processing of the complaint was suspended while Mr. Vander Boegh, WESKEM and BJC attempted to resolve his complaint through mediation. When this effort failed, the complaint was forwarded to the DOE Office of Hearings and Appeals (OHA) on August 15, 2002, and on that date the OHA Director George B. Breznay appointed an OHA Investigator to conduct an investigation of Mr. Vander Boegh's complaint. On November 20, 2002, the OHA Investigator issued his Report of Investigation (the ROI).

Mr. Vander Boegh's employment history at BJC and WESKEM may be summarized in the following manner. Mr. Vander Boegh has been a landfill manager since 1992, and is currently the manager of the C-746-U Landfill (U Landfill) located three miles from the Paducah Plant. The U Landfill is a sanitary/industrial landfill that was constructed from 1995 to 1997 by DOE for disposal of solid wastes generated at the Paducah Plant that are not regulated as hazardous waste under federal regulation. Construction of the U Landfill was needed to continue on-site disposal of this type of waste generated at the Paducah Plant after an older landfill was filled to capacity and closed by the Commonwealth of Kentucky regulatory authority, the Kentucky Division of Waste Management (KDWM). Mr. Vander Boegh has been the landfill manager of the U Landfill since it began operations. In 1998, DOE contracted with BJC, making the firm its management and integration (M&I) contractor responsible both for the Paducah site's

nuclear enrichment program and for the site's environmental management. At that time, Mr. Vander Boegh became a BJC employee. In February 2000, BJC subcontracted the operation of the U Landfill to WESKEM, and Mr. Vander Boegh became an employee of WESKEM. ROI at 2-3.

The events relevant to Mr. Vander Boegh's Part 708 complaint began in early 2001. Acceptance of waste into the U Landfill had been suspended in November 1999 pending an environmental assessment when it was discovered that some waste materials disposed of at the landfill contained small quantities of residual radioactive materials. On February 1, 2001, KDWM issued DOE a new operating permit (Feb. 2001 Permit) for the U Landfill, which specified a number of conditions that must be satisfied in order for the landfill to begin receiving waste again. In response, BJC and WESKEM management initiated a series of meetings, discussions and exchanges of information during February 2001, addressing the conditions necessary to begin operating the U Landfill under the Feb. 2001 Permit. A tentative target date of July 2001 was set to begin full operation of the Landfill. One of the conditions (#9) of the Feb. 2001 Permit concerns the adequacy of the leachate storage capacity at the landfill.1/

1/ As discussed in detail in the ROI at 2-3, the U Landfill has an underdrain system to collect leachate (groundwater) generated from the landfill. The amount of leachate wastewater is dependent upon a number of factors including rainfall, groundwater runoff, and levels of evaporation. Leachate collection lines transport leachate to a below ground wet well pumping facility that pumps the leachate into two 30,000 gallon leachate storage tanks (Tanks F-001 and F-002) located above ground. At this point, two leachate disposal options are allowed by the Feb. 2001 Permit. The primary disposal option is the recirculation of landfill leachate to the working phase of the U Landfill. The second option is the disposal of the leachate at the Paducah site's wastewater treatment plant. Leachate is required to be sampled for contamination and characterized prior to disposal at the Paducah site's treatment plant. Under the terms of the Feb. 2001 Permit, the leachate tanks must have enough space to store leachate for 15 days at peak production rates. In addition, enough leachate must be continually removed from the tanks to maintain enough vertical space above the level of leachate already contained in the tanks to cover eight days of

(continued...)

The ROI finds that it was known to individuals who had been working at the U Landfill since l998 that there was a potential difficulty with inadequate storage capacity of the leachate tanks, specifically the regulatory requirement that enough reserve space be maintained in the leachate storage tanks to cover eight days of additional leachate collection (the 8-day reserve requirement). The ROI finds that in 1998, an unusually heavy rainfall caused an apparent violation of the 8-day reserve requirement. Again in February and March 2001, the regulatory 8-day reserve requirement was not available for a 21 day period. ROI at 3-4.

Beginning on February 2, 2001, Mr. Vander Boegh sent several e-mails to officials at BJC and WESKEM identifying the lack of reserve tank space as a potential liability for the operation of the landfill. ROI at 3-4. Then, on March 4, 2001, he sent an e-mail to Jan Buckmaster of WESKEM, with a copy to WESKEM Project Manager Dan Watson, captioned "C-746-U Leachate Issues" in which he identified the inadequacies of the leachate storage tanks, the lack of leachate transport equipment to rectify the problem and the potential risk to the Feb. 2001 Permit for the landfill. ROI at 4.

In his complaint and subsequent filings, Mr. Vander Boegh contends that these disclosures of potential environmental regulatory violations resulted in retaliatory actions from officials at WESKEM and BJC. These alleged retaliations include:

> (1) a disciplinary memorandum, dated March 5, 2001 to him from Mr. Watson of WESKEM (March 5 Memo);
> (2) WESKEM and/or BJC's decision in 2001 not to provide additional office space for Mr. Vander Boegh and his support staff at the U Landfill;
> (3) a proposal in August 2001, by Mr. Jeff Fletcher (WESKEM Operations Manager) to relocate the complainant's office from the U Landfill to the Paducah Plant site;
> (4) a change by BJC of the final version of a July 2001 white paper on waste acceptance under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA);
> (5) a memorandum dated August 1, 2001 from BJC manager Stephen Davis that directed Mr. Vander Boegh not to make protected disclosures to the DOE;

1/ (...continued)
additional leachate collection. This is known as the "8-day free board reserve" (8-day reserve) requirement.

(6) a reduction in the complainant's support staff in October 2001;
(7) a proposed subcontract change notice considered in March 2002, that would have affected the Complainant's position as landfill manager;
(8) ongoing acts of harassment and intimidation by BJC personnel, particularly Mr. Kevin Barber (BJC's Subcontractor Technical Representative);
(9) an annual performance evaluation in 2001; and
(10) a low salary for the Complainant in comparison to other WESKEM managers and landfill managers.

C. The ROI's Findings and the Hearing Officer's Preliminary Determinations.

The ROI finds that Mr. Vander Boegh warned WESKEM and BJC management in February and March 2001 about excessive accumulations of leachate in the storage tanks at the U Landfill, that had reached and surpassed maximum levels that could be maintained under the reserve capacity requirements of the Feb. 2001 Permit. Specifically, it finds that the warnings contained in two emails from the Complainant to WESKEM and BJC officials dated February 16 and March 4, 2001 constituted protected disclosures under section 708.5(a)(1) of the whistleblower regulations. ROI at 10-11.

With respect to Mr. Vander Boegh's claims of retaliations, the ROI determined that only the March 5 Memo and the alleged incidents of harassment and intimidation of Mr. Vander Boegh by BJC personnel during the late summer and autumn of 2001 constitute possible retaliations under Part 708. The ROI also finds that the knowledge element and proximity in time exist between these retaliations and the protected disclosures made by Mr. Vander Boegh in February and March 2001, making them contributing factors to the retaliations. ROI at 14. The ROI further concluded that WESKEM and BJC had not provided the OHA Investigator clear and convincing evidence that those retaliations would have occurred in the absence of the complainant's protected disclosure. ROI at 15.

With respect to Mr. Vander Boegh's other claims of adverse personnel actions, the ROI noted that his allegations concerning his compensation compared to other landfill managers could warrant greater examination in the context of a hearing. ROI at 12. The ROI also found "insufficient basis" for Mr. Vander Boegh's claim that WESKEM's refusal to increase his office space at the landfill and its proposal to relocate his office to the Paducah Plant site were retaliatory. ROI at 12, n. 4.

In a November 27, 2002 letter to the parties, I established a briefing schedule for the parties. I also asked Mr. Vander Boegh to "indicate specifically the remedy that he is requesting for the March 5 memo and the alleged acts of harassment and intimidation by BJC personnel." November 27, 2002 letter at 3. Counsel for Mr. Vander Boegh responded on December 23, 2002. In a January 7, 2003 letter, I addressed issues raised by this response and by discovery requests made by BJC, and made preliminary rulings concerning the Complainant's allegations.

Specifically, I noted that the remedies available under Part 708 are aimed at restoring employees to the employment position and situation that they occupied had the retaliations not occurred. In fact, the definition of the term "retaliation" in the regulations clearly requires that the employer's action must have had a tangible effect on the employee's terms and conditions of employment in order to constitute a retaliation covered by Part 708.

> Retaliation means an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee *with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment)* as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities described in § 708.5 of this subpart.

January 7, 2003 letter to the parties at 1-2, *citing* 10 C.F.R. § 708.2 [emphasis added]. Accordingly, I rejected Mr. Vander Boegh's contention that he be awarded an equitable salary relative to other similarly situated employees, and stated that Part 708 did not provide a remedy for longstanding salary differences that predated an individual's protected disclosures. I ruled that any remedy concerning Mr. Vander Boegh's salary from WESKEM would be limited to relief for specific retaliatory actions found to have been taken by WESKEM following his protected disclosures. January 7, 2003 letter at 2-3.

Further, I found that certain relief requested by Mr. Vander Boegh concerning his working conditions and support staff was outside the scope of Part 708. Specifically, his requests for "adequate office facilities" to allow him to perform his functional

responsibilities, and "adequate support staff" for his position of landfill manager could not be provided as Part 708 relief. With respect to the individual's office space, I noted that any alleged deficiencies that existed prior to the individual's protected disclosures are outside my remedial authority in this proceeding, and that for me to consider a possible remedy concerning office space, Mr. Vander Boegh must establish that the current alleged deficiencies are the result of specific adverse personnel decisions taken by WESKEM or BJC following his alleged protected disclosures. *Id.*

With respect to correcting the alleged inadequacy of his support staff, I stated that I would not consider that issue in this proceeding. I stated that I could find no grounds under Part 708 for granting relief concerning an individual's support staff. Part 708 relief is limited to restoring an individual's position, salary and related benefits to remedy specific adverse actions by an employer. I found that the issue of support staff implicates larger questions involving the adequacy of management discretion to achieve program objectives that are beyond the scope of this proceeding. January 7, 2003 letter at 3. Only a showing that a staff reduction affected the Complainant's ability to perform his job functions would convince me that a Part 708 issue has been raised. In the present case, such a showing clearly is not possible because the proposed staff reduction was never implemented. Accordingly, I will not consider Complainant's alleged retaliation (6) listed above.

The parties exchanged and submitted responses to the findings of the ROI in January 2003. In these briefs, both parties objected to findings made in the ROI. 2/ The parties also exchanged and

---

2/ In a submission dated January 10, 2003, BJC moved to dismiss Mr. Vander Boegh's Part 708 complaint on the grounds that adequate relief is not available under Part 708 to remedy the alleged retaliations claimed by Mr. Vander Boegh. BJC further contended that Mr. Vander Boegh had failed to meet his initial burden under Part 708, and that, to the extent this burden had been met, the claim itself is now moot, because Mr. Vander Boegh had developed a good working relationship with BJC employees. I reviewed Mr. Vander Boegh's submissions and found that they contained claims of protected disclosures and claims of related adverse personnel actions by WESKEM and BJC that were sufficient to support a hearing. Accordingly, I denied the Motion to Dismiss. *See* February 3, 2003 letter to the parties at 3.

submitted extensive documentary evidence, reply briefs, and witness lists. On March 4, 5 and 6, 2003, I convened an evidentiary hearing (the Hearing) at which a total of seventeen witnesses presented testimony.

Following the Hearing, I permitted the parties to submit their final arguments through post-hearing briefs and reply briefs. Upon receipt of reply briefs on May 12, 2003, I closed the record of the proceeding.

III. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish

> by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both Mr. Vander Boegh and by WESKEM and BJC. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

B. The Contractor's Burden

If I find that Mr. Vander Boegh has met his threshold burden, the burden of proof shifts to the contractors. WESKEM and BJC each must prove by "clear and convincing" evidence that it would have taken the same personnel actions regarding Mr. Vander Boegh absent the protected disclosure. "Clear and convincing" evidence is a more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus if Mr. Vander Boegh has established that it is more likely than not that he made a protected disclosure that was a contributing factor to an adverse personnel action taken by WESKEM or BJC, the contractor must convince me that it clearly would have taken this adverse action had Mr. Vander Boegh never this protected disclosure.

IV. Analysis

A. Mr. Vander Boegh Made Protected Disclosures

As discussed above, the ROI finds that Mr. Vander Boegh warned managers at WESKEM and BJC in February and March 2001 about excessive accumulations of leachate in storage tanks at the U Landfill, that had reached excessive levels, causing the freeboard reserve (8-day reserve) to shrink below the minimum capacities required under the Feb. 2001 Permit. The ROI finds that these disclosures are documented in e-mail messages to WESKEM and BJC managers dated February 16 and March 4, 2001. A. Record at 172-173 and 181-182. The ROI concludes that these warnings constituted protected disclosures under both Section 708.5(a)(l), which involves a believed substantial violation of law, rule or regulation, and Section 708.5(a)(2), which involves a believed substantial or specific danger to public health and safety. ROI at 11. In their filings in this proceeding, neither WESKEM nor BJC dispute that these two communications from Mr. Vander Boegh constituted protected disclosures under Part 708. Accordingly, I concur with the ROI's conclusion in this regard.

In addition, I find that an earlier E-mail communication discussed in the ROI constituted a protected disclosure. That E-mail, dated February 2, 2001, was from Mr. Vander Boegh to Stephen Davis, BJC's Paducah Project Manager, with a copy to WESKEM manager Dan Watson. It also reported a potential environmental concern regarding the U-Landfill's leachate. As noted above, the Feb. 2001 Permit specified a number of qualifying requirements, including a specific

reference to adequate leachate storage capacity. ROI at 3. In commenting on this document in his E-mail to Mr. Davis, Mr. Vander Boegh stated in part:

> It is interesting that [KDWM] emphasized leachate storage capacity in condition #9 (in the Technical Application also) of the new operating permit. I've always interpreted this as a potential liability, especially since 28,000 gallons of leachate were recorded in the Quarterly Report after a heavy rainfall event over 2 years ago. At that time, KDWM inquired about this event and log entry.

February 2, 2001 E-mail from Mr. Vander Boegh to Mr. Davis with a copy to Dan Watson of WESKEM. A. Record at p. 146. In this communication, Mr. Vander Boegh clearly identified the U Landfill's limited storage tank capacity for leachate as a "potential liability" that could keep the landfill from qualifying for the Feb. 2001 Permit. He also provided Mr. Davis and Mr. Watson with information concerning a specific instance where KDWM previously expressed concern about leachate capacity. The KDWM operating permit requirements concerning leachate storage capacity clearly are intended to protect the public from the potentially serious environmental hazards posed by the danger of leachate contamination of groundwater. Accordingly, I find that the February 2, 2001 E-mail from Mr. Vander Boegh to Mr. Davis makes a protected disclosure involving "a substantial or specific danger to public health and safety." 10 C.F.R. § 708.5(a)(2).

B. None of Mr. Vander Boegh's Allegations of Retaliation Are Barred for Lack of Timeliness

As an initial matter, I must determine whether the first three of Mr. Vander Boegh's alleged retaliations can properly be considered in this proceeding. 10 C.F.R. § 708.14(a) requires that complainants file their complaint "by the 90th day after the date you knew, or should have known, of the alleged retaliation." WESKEM and BJC both contend that because Mr. Vander Boegh did not file his complaint until January 4, 2002, this provision bars any consideration of the complaints relative to the March 5, 2001 memorandum of Dan Watson and to the decisions of BJC and WESKEM not to provide Mr. Vander Boegh with an office trailer at the U Landfill. WESKEM Post Hearing Brief at 11-12. BJC Post Hearing Brief at 9-10. BJC also contends that this provision bars consideration of Mr. Vander Boegh's claim that BJC employee Steve Davis' August 1, 2001 memorandum regarding permit modification

roles and responsibilities was an adverse personnel action. BJC Post Hearing Brief at 10. Applying the logic of this argument would also bar my consideration of Mr. Vander Boegh's claim that WESKEM's August 2001 proposal to move the Complainant's office was a Part 708 retaliation.

I reject these arguments. In a recent Part 708 decision, the Hearing Officer discussed the relevant regulatory language, and whether and under what circumstances actions more than ninety days old can be considered as retaliations if the complainant only came to regard them as such at a later date. He found that the complainant should be allowed some time to recognize a retaliatory action for what it is. *Steven F. Collier (Case No. VBH-0084),* 28 DOE ¶ 87,036 at 89,257 (2003) (*Collier*).

In the present case, the personnel actions at issue - rejecting as "too expensive" plans to improve the individual's office space, a proposal to relocate his office, and memoranda allegedly imposing restrictions on the individual's activities - certainly were not viewed as neutral or innocent employment actions by Mr. Vander Boegh at the time that they occurred. However, these personnel actions are not so overtly punitive in nature that I find that a reasonable person "should have known" that they were Part 708 retaliations at the time that they took place. Additional analysis is therefore necessary. I believe that Section 708.14(a) of the regulation requires me to consider the evidence in the record, especially evidence as to Mr. Vander Boegh's state of mind, in order to determine when he knew or should have known that these were possible Part 708 retaliations, and to measure the ninety day filing requirement from that time.

I have examined the record, and conclude that there is no evidence indicating that Mr. Vander Boegh identified these four personnel actions as Part 708 retaliations prior to the filing of his whistleblower complaint in January 2002. With respect to the March 5, 2001 Watson memorandum, Mr. Vander Boegh's March 27, 2001 response to Mr. Watson makes no reference to the memorandum as the kind of personnel action adverse to him and in response to protected activity that would constitute a Part 708 retaliation. Rather, Mr. Vander Boegh seems to consider the memorandum part of an ongoing dialogue and he focuses on responding to the "many inaccuracies and innuendo" that he sees in the memorandum. Nor can I find any instance prior to his January 2002 complaint where Mr. Vander Boegh characterized the BJC/WESKEM decision to halt construction on his new office space as a Part 708 retaliation. In an email responding to WESKEM's proposal to relocate his office,

Mr. Vander Boegh states that such a move would negatively affect his ability to perform his duties as a landfill manager, but he does not characterize the move as a penalty or accuse WESKEM of retaliatory activity. Nor is there any contemporaneous evidence that he viewed the August 1, 2001 memorandum of Steven Davis as a retaliation. At the hearing, Mr. Vander Boegh testified that when he read this memorandum, he viewed the protocols set forth therein as an attempt by BJC to prevent him from reporting landfill problems directly to the DOE. TR at 726-728. He did not testify that he immediately viewed these protocols as a retaliation for protected disclosures that he had made earlier that year. By contrast, in his January 4, 2002 Part 708 Complaint, Mr. Vander Boegh clearly acknowledges his belief that he has experienced numerous retaliations for his protected activities:

> This Employee Concerns [Form] is filed, due to numerous attempts to conceal program deficiencies by the M&I Contractor BJC. It has also become necessary to further document numerous attempts to retaliate against the Landfill Manager for exposing Landfill issues of risk through the chain of command. Most notably were actions by my employer and BJC after regulatory deficiencies were presented to DOE on February 6, 2001. WESKEM disciplined the Landfill Manager on March 6, 2001.

Employee Concerns Reporting Form, p. 2, Vander Boegh Hearing Exhibit X.3/ Accordingly, the weight of the evidence indicates that Mr. Vander Boegh did not actually recognize adverse personnel actions as retaliations for protected activity until shortly before he submitted his complaint. Nor do I find that a reasonable person necessarily would have recognized these adverse actions as Part 708 retaliations prior to December 2001. I therefore find that my consideration of these alleged retaliations is not barred by the ninety day limitation of 10 C.F.R. § 708.14(a), and will proceed with my analysis.

3/ As indicated below, the factual record indicates that the Complainant was disciplined at a meeting on March 5, 2001, not March 6, 2001.

C. Mr. Vander Boegh's Protected Disclosures Were a Contributing Factor to Alleged Acts of Retaliation Found in the ROI

Under 10 C.F.R. § 708.29, Mr. Vander Boegh must also show that his protected disclosures were a *contributing factor* with respect to a particular adverse personnel action taken against him. *See Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 (1994). A protected disclosure may be a contributing factor to an adverse personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990). *See also Russell P. Marler, Sr.*, 27 DOE ¶ 87,506 at 89,056 (1998).

I conclude that Mr. Vander Boegh has established by a preponderance of the evidence that his protected disclosures were contributing factors to the retaliations he alleges. I base this conclusion on a finding that there is both constructive knowledge and proximity in time between the protected disclosures made by Mr. Vander Boegh and his allegations of retaliation. With respect to constructive knowledge of the disclosures, Mr. Vander Boegh made his February 2, 2001 disclosure to Mr. Davis, the BJC's Project Manager for Waste Disposition. His February 16 and March 4, 2001 disclosures were to WESKEM and BJC managers concerned with waste disposition. ROI at 10. Clearly, the WESKEM and BJC managers and employees who allegedly retaliated against Mr. Vander Boegh can be presumed to have had actual or constructive knowledge of these disclosures in the absence of a clear and convincing evidentiary showing to the contrary. With regard to timing, the disclosures took place in February and March 2001, and the alleged retaliations taken against Mr. Vander Boegh by WESKEM and/or BJC officials prior to the filing of his Part 708 complaint took place during the period March 5, 2001 through December 8, 2001. This is a period of approximately nine months between Mr. Vander Boegh's most recent protected disclosure and the latest alleged retaliation that occurred prior to the filing of his Part 708 complaint. A nine month period, especially where there are allegations of persistent retaliatory activity, is certainly a reasonable period of time within which to presume that the disclosures were a contributing factor to alleged retaliations. *See Luis P. Silva*, 27 DOE ¶ 87,550 (2000) (nine months between disclosure and alleged retaliatory action); *Barbara Nabb*, 27 DOE ¶ 87,519 (1999), *aff'd in relevant part,* 27 DOE

¶ 87,555 (2000) (more than seven months between alleged disclosures and alleged retaliatory actions).

The alleged retaliations that occurred subsequent to January 4, 2002, are proximate in time to Mr. Vander Boegh's pending Part 708 action filed on that date. This Part 708 action is protected activity, and I deem it to be a contributing factor under Part 708 to personnel actions adverse to him that occurred in 2002.

Accordingly, with respect to each of the personnel actions discussed below, I will first determine whether Mr. Vander Boegh has shown by a preponderance of the evidence that the personnel action took place and meets the criteria for a Part 708 retaliation. If I make this finding in the affirmative, I will then determine whether WESKEM or BJC has shown, or together have shown, by clear and convincing evidence, that the protected disclosures were not a contributing factor to the adverse personnel action or that they would have taken the same action in the absence of the protected disclosure.

D. Mr. Watson's March 5, 2001 Memo was a Retaliation

Mr. Vander Boegh contends that Mr. Watson's March 5 Memo was intended to discipline him and to restrict his protected activity at a time when he had been tasked with developing a list of landfill deficiencies. Post Hearing Brief at 3. In the days proceeding the issuance of the memo, Mr. Watson was aware that Mr. Vander Boegh was developing such a list. Vander Boegh Hearing Exhibit E consists of a March 1, 2001 email exchange between Gregory Shaia, a BJC deputy waste project manager, and Mr. Vander Boegh. Mr. Watson and Mr. Fletcher of WESKEM also were recipients of these emails. In the initial e-mail, Mr. Shaia requests that

> WESKEM develop a comprehensive list of landfill deficiencies. This list should include permit or other regulatory or agreement citations indicating why said item is a deficiency or has non-compliance vulnerability. I further request that this list include a proposed solution for each item listed.

In his response, Mr. Vander Boegh indicates that he will prepare a detailed response by March 6.

> Your action item is noted and appreciated. However, this will require a more detailed response than an e-mail. I will provide by COB Tuesday, bullets to address the

> obvious deficiencies. A word of caution, these involve programmatic deficiencies that go back to the permit process in 1992.

Vander Boegh Hearing Exhibit E. On Sunday, March 4, 2001, Mr. Watson emailed the Complainant the following message:

> I just finished reading the request from Greg Shaia for the list of landfill concerns. I want a concise list and path forward on each item by COB Tuesday, March 6, 2001. Please list the items in a table format and keep the problems and path forward to less than 40 words each. We will discuss at length on Monday, between you and I. Please be available to meet in my office at 9 am. Until then, please focus on this list and refrain from lengthy discourse by e-mail to anyone. WESKEM has to focus on the problems and provide a path forward.

March 4 Email from Watson to Vander Boegh, Vander Boegh Hearing Exhibit I. At the Monday meeting, Mr. Watson presented the Complainant with the March 5 Memo and read it to him. Entitled "Expectations of WESKEM's Landfill Manager", the stated objective of the memo is to assign priorities to Mr. Vander Boegh's activities as landfill manager. Three sections of priorities are listed in three paragraphs: (1) the priority to operate the landfill in regulatory compliance; (2) the priority to "keep WESKEM's interest at heart when operating the landfill, working with subordinates and superiors, and procuring needed supplies for the landfill"; and (3) the priority to WESKEM's client, BJC. In these paragraphs, Mr. Watson gives a number of instructions to Mr. Vander Boegh. In paragraph (1), he is told that his priority to operate the landfill in full regulatory compliance "does not allow the use of regulatory leverage against WESKEM, LLC, its employees or customers." He is directed to "contact regulatory agencies only as is required to fulfill your position as landfill manager and only with the foreknowledge of Bechtel Jacobs Company's environmental compliance group and [WESKEM's Subcontractor Technical Representative]." Under paragraph (2), he is instructed that "[a]ll communication from you to other WESKEM operations should be through your organization to me or other managers reporting to me . . . ." He is told to avoid overtime and that

> The time you spend issuing email is excessive. Please utilize e-mail communication judicially. I expect a list of landfill issues that is concise, to the point, and

> timely to be updated weekly and provided to me every Monday morning.

In paragraph (3), he is instructed that "[a]ny action on your part that undermines our client [BJC] is wrong." Ad. Record, pp. 14-15. The Complainant characterizes this document as a "reprimand memo for protected activity" and asks that it be "expunged from the Complainant's personnel file." Complainant's Post Hearing Brief at 11.

WESKEM argues that the March 5 Memo cannot be viewed as a adverse personnel action because it is not disciplinary in nature. According to WESKEM, the memo's entire purpose was to get the Complainant to focus on his job so that work could be performed in a timely fashion and the landfill could receive a permit to reopen. It cites the March 4, 2001 email from Mr. Watson to Mr. Vander Boegh urging him to focus on creating a concise list of landfill issues requested by BJC manager Gregory Shaia, and asserts that the March 5 Memo was a further effort in that area.

> Greg Shaia's request ultimately led to the delivery of the March 5 memorandum. What must be abundantly clear is that the memorandum was written not in response to any protected disclosure made by complainant Vander Boegh, but directly related to the ongoing work of WESKEM. WESKEM was trying to service the needs of its customer, Bechtel Jacobs. Dan Watson was charged with that obligation. Dan Watson was trying to get his employee and landfill manager to concentrate and focus on the issues. Accordingly, it is submitted that a legitimate business interest existed for the authorship of the memorandum and that interest is a complete defense to any allegation of retaliation by complainant Vander Boegh.

WESKEM Post Hearing Brief at 16. I cannot accept the assertion that the March 5 Memo was issued solely for the purpose of offering guidance and encouragement to Mr. Vander Boegh in responding to Mr. Shaia's request. Mr. Watson's March 4 email to the Complainant had already provided detailed instructions and a deadline for this project. In addition, the factual record of this proceeding contradicts WESKEM's assertion. The ROI reports that Mr. Watson told Mr. Fred Brown, the Complaint Investigator, that the March 5 memo stemmed from an ongoing request by the complainant for additional office space, and that he wrote the memo to direct the Complainant to focus on his duties as Landfill Manager, and also to remind the complainant that he must keep WESKEM and BJC informed

when he was meeting with or providing information concerning the Landfill to DOE or the Kentucky regulatory authorities. ROI at 14-15. The March 5 Memo itself, with its specific prohibition against the Complainant's use of "regulatory leverage", its directive that he contact regulatory agencies only with the "foreknowledge" of BJC and WESKEM, and its admonition for him to "limit your communication" with WESKEM's client BJC, reveals that its purpose was to restrain the Complainant's communications with BJC and Kentucky officials rather than to focus his attention on a specific assignment, as WESKEM contends.

WESKEM also asserts that the March 5 Memo cannot be viewed as retaliatory because its statements concerning the Complainant's duties and responsibilities are "accurate and truthful." It contends that at the Hearing, the Complainant essentially agreed with all of the memo's statements in this regard. WESKEM Post Hearing Brief at 16-20, citing TR at 180-186. I disagree. While the Complainant agreed with the memo's general statements concerning his duties, he specifically disagreed with the memo's statement that "the time you spend issuing e-mail is excessive." TR at 184. Moreover, he found the content and tone of the letter to be threatening.

> I took it as a threatening . . . letter due to the fact that everything in this letter is what's in the contract that we are obligated to follow. And it's in the regulations. So, there's only one reason I understood this letter was written, and that is to start discipline action against me.

TR at 187. I agree that the memorandum was disciplinary in nature and effectively warned the Complainant that he was violating duties if he communicated excessively with BJC officials or had contacts with state regulators without the foreknowledge of WESKEM and BJC managers. I therefore am not convinced by WESKEM's arguments that this memo is not an adverse personnel action.

For the reasons stated above, I find that the Complainant has met his evidentiary burden of showing that the March 5 Memo constituted a Part 708 retaliation. I concur with the ROI's preliminary finding that this memo is clearly disciplinary in its tone and directs the Complainant to refrain from certain conduct, notably excessive e-mail messages and unnecessary communications with KDWM and BJC, in order to fulfill his proper role as a landfill manager employed by WESKEM. *See* ROI at 12-13.

Nor has WESKEM shown by clear and convincing evidence that it would have issued this memo in the absence of those disclosures. In its Post Hearing Brief, WESKEM contends that Mr. Watson could not have been motivated by the Complainant's protected activity when he issued this memo because he was as yet unaware of the leachate issues raised by Mr. Vander Boegh. I do not find that Mr. Watson's testimony is particularly persuasive concerning this alleged lack of knowledge. Although he testified that he did not know of the Complainant's protected disclosures concerning leachate storage issues at the time that he wrote the memo [TR at p. 488], his subsequent testimony greatly qualifies this denial. Rather than testifying that he never heard of leachate storage issues at that time, he stated that he had not "focused on it". TR at p. 488.

> There were so many blooming lists of problems at the landfill, that this is just one of several. And it just didn't appear to be -- I never took it to be a problem.

TR at 488. Under cross examination, Mr. Watson acknowledged having read his copy of the March 4 email from Mr. Vander Boegh to Mr. Buckmaster on leachate issues. He acknowledged that he was working that Sunday and may have read it on that date, prior to writing the March 5 Memo to the Complainant. TR at 505. He continued to maintain at the Hearing that he did not fully understand the issue:

> I knew that there were a list of problems and leachate problems were on that list of problems. But I didn't know about the seriousness or what exactly was associated with [the] leachate problem.
>
> . . . At the time I understood that we had a [leachate] capacity problem. I didn't understand that it was a permit issue.

TR at 506. In addition to the March 4 email from the Complainant, Mr. Watson also had been copied on the earlier February 16, 2001 email warning that a critical amount of leachate had accumulated, and on the February 2, 2001 email that identified leachate storage capacity as a critical issue in obtaining the Feb. 2001 Permit. Accordingly, I conclude that WESKEM has not rebutted the assumption that Mr. Watson was aware of or affected by Mr. Vander Boegh's protected disclosures concerning leachate storage problems at the time that he wrote his March 5 memo.

Accordingly, I will provide the Complainant with relief from this retaliation. Based on the testimony of Mr. Watson at the Hearing, WESKEM asserts that the March 5 Memo is not in Mr. Vander Boegh's personnel file. WESKEM Post Hearing Brief at 20. Nevertheless, I will direct WESKEM to review the Complainant's personnel file, and to remove the March 5 Memo if they find it there. I will also direct WESKEM to issue a written statement to the Complainant declaring that the March 5 Memo has been rescinded.

E. The WESKEM/BJC Decision to Halt Construction of an Office Trailer for the Complainant was a Retaliation

The Complainant contends that during March 2001, BJC canceled plans to build an office/document center trailer (hereafter the "office trailer") at the site of the Complainant's landfill. At the Hearing, he testified that the proposal to modify the U Landfill by constructing the office trailer and other buildings had been developed by BJC when he was a BJC employee [TR at 61], and the permit for these proposed improvements allowed construction to begin on February 1, 2001. He estimated that BJC completed the construction of a storm shelter and a shower trailer by April 1, 2001. TR at 50. At the Hearing, the Complainant testified that the office trailer would have increased his office space significantly. TR at 52. He stated that BJC developed the proposal because they were aware of a deficiency in office space at the U Landfill. TR at 61-62. He testified that he was not informed of any reason why the office trailer was not constructed. TR at 51.

In support of these assertions, the Complainant introduced a copy of the Modification proposal submitted by the DOE to the KDWM. Vander Boegh Hearing Exhibit D. The copy indicates that the Modification proposal was received by the KDWM on August 7, 2000. It provides for the construction of "an office/document center trailer" to be located east of the existing personnel building and "approximately 12' x 40' for future offices, conference room, and document storage." Modification proposal at 1. The document includes a drawing indicating the location of the proposed trailer. On the last page, the document is stamped "as approved February 1, 2001." *Id.* The complainant also introduced the testimony of Mr. Roger Alcock, a union worker at the U Landfill. He confirmed that there were plans to build an office trailer at the U Landfill. He testified a pad for this trailer was constructed. TR at 446. He stated that he had spoken to Mr. Watson and was told that the office trailer was not being built because it would cost too much

money. He testified that Mr. Watson gave him an inflated estimate for the cost of the office trailer. TR at 447.4/

I find that the Complainant has met his evidentiary burden of showing by a preponderance of the evidence that BJC and/or WESKEM took adverse personnel action when they canceled their plan to construct the office trailer at the U landfill. The evidence indicates that the plans to construct the office trailer did exist, and that preliminary site work for the office trailer was completed. The project was abandoned by BJC and/or WESKEM in February and March 2001, just after Mr. Vander Boegh made protected disclosures. The decision not to build the office trailer clearly is adverse to Mr. Vander Boegh, as it would have increased his office space. Not implementing an approved plan that would improve an employee's working conditions clearly is an adverse personnel action as defined in Part 708. Accordingly, the burden shifts to BJC and WESKEM to show by clear and convincing evidence that they would have canceled the construction in the absence of Mr. Vander Boegh's protected disclosures.

During the investigation and at the Hearing, BJC and WESKEM both attempted to show that their actions in this matter were not retaliations under Part 708. BJC contends that it did not retaliate against Mr. Vander Boegh because it made a decision prior to February 1, 2001 to let WESKEM provide the office trailer to be built at the U Landfill. At the Hearing, Mr. Stephen Davis, BJC's Project Manager for Waste Disposition, testified concerning this matter. He acknowledged that BJC prepared the Modification proposal, including the office trailer and other structures, that

---

4/ The available evidence indicates that sometime in late February 2001, Mr. Watson stated to Mr. Vander Boegh that the proposed costs for constructing the office trailer were too high. ROI at 14. This statement appears to have been made before the Complainant's March 4, 2001 protected disclosure, but there is no indication that it occurred prior to his February 2 and February 16, 2001 disclosures. However, Mr. Watson apparently did not inform the Complainant at that time that the trailer would not be built. A contemporaneous email and telephone memorandum by WESKEM employee Cindi Wahl indicates that on March 21, 2001, the Complainant informed Ms. Wahl that WESKEM was installing a new trailer at the U Landfill "in the near future," and that he had spoken to Mr. Watson on March 20, 2001 about installing a bathroom in the trailer. A. Record at 00603-00604.

the DOE then submitted to the KDWM for approval. He also acknowledged that BJC built a shower and change trailer for union workers, and a storm shelter at the U Landfill, both of which were included in the Modification proposal. TR at 633-636.

Mr. Davis testified that BJC submitted the construction proposal for the office trailer to the DOE with the understanding that WESKEM would finance its construction. He testified that WESKEM indicated to him that it would pay for construction of the office trailer at some point in time between its receipt of the subcontract to manage the U Landfill and the Modification proposal being submitted to the DOE in August 2000. TR at 639.

> I recall it was prior to this letter going in. Again, I can not remember the exact date, but the fact that there is a dimension here for that office trailer must have indicated at some point, they decided on that size trailer.

TR at p. 639. In his testimony, WESKEM manager Dan Watson confirmed this account, stating that he knew "we were going to do it out of the monies with WESKEM, but it became way to expensive." TR at 500. Based on this testimony, I conclude that prior to the Complainant's protected disclosures, WESKEM and BJC had an agreement whereby WESKEM had agreed to finance and construct the proposed office trailer at the U Landfill. Accordingly, BJC has shown by clear and convincing evidence that WESKEM rather than BJC planned to construct the office trailer.

WESKEM contends that its decision not to construct the proposed office trailer was based entirely on cost, and therefore its decision not to construct the trailer would have been the same if there had been no protected disclosures. Mr. Watson testified that WESKEM purchased an inexpensive, used trailer with the intention of remodeling it as an office/document center trailer for the U Landfill.

> We inspected [the trailer], we looked at it, thought about some of the modifications associated with it. And we purchased it for 2,000 dollars.

TR at 478-479. However, Mr. Watson testified that "I could not come to terms under working with [the Complainant] on the issue of the office trailer as to what the trailer would be." He stated that Mr. Kerry Stone, an employee at the U Landfill supervised by the Complainant, sent him a memo outlining several different

improvements. Mr. Watson stated that he authorized Mr. Stone to get estimates for these improvements, which "were in the neighborhood of twenty thousand dollars or so." TR at 479. Mr. Watson testified that WESKEM then abandoned the project of converting the trailer to office space because these estimated expenses were deemed to be "very, very expensive." He explained that WESKEM was not to be reimbursed by BJC or the DOE for these expenses, and twenty thousand dollars would amount to half of WESKEM's annual profits on its operation at the U Landfill. TR at 480.5/ He said that WESKEM then decided to use the unrenovated trailer to keep industrial hygiene equipment in an air conditioned environment so it would not expire. At that time they moved it to the Paducah Plant, where it continues to be used for storage purposes. TR at 481.

WESKEM has not shown by clear and convincing evidence that it would have made the decision to abandon the construction of an office trailer at the U Landfill in the absence of the Complainant's protected disclosures. WESKEM acknowledges that it intended to pay for the construction of the office trailer at the time that the proposal was first submitted by the DOE to the KDWM. WESKEM has not shown why or to what extent the cost estimates provided by Mr. Stone were out of line with its previously approved projected costs for the proposed office trailer. It therefore has not shown convincingly that its decision to abandon reconstruction of the trailer was based on unexpectedly high costs for the project. Under the standards of proof set forth in Part 708, I conclude that WESKEM has not demonstrated by clear and convincing evidence that its decision to abandon construction of the office trailer would have occurred in the absence of the Complainant's protected disclosures.

Accordingly, I will provide relief to the Complainant for this retaliation. I will direct WESKEM to proceed with this renovation based on the projected costs provided by Mr. Stone.

F. WESKEM retaliated against the Complainant when it proposed to Relocate his Office to the Paducah Plant Site

The Complainant contends that following his protected disclosures, a WESKEM official proposed that his office be relocated to the Paducah Plant, a distance of three miles from the U Landfill. He

---

5/ In later testimony, he refers to this $20,000 as thirty to forty percent of the profit from the landfill. TR at 496.

contends that this proposed relocation would have made the performance of his duties as Landfill Manager more difficult, negatively affecting the terms and conditions of his employment. Vander Boegh Post Hearing Brief at 4.

The record indicates that in early August 2001, WESKEM Operations Manager Jeff Fletcher orally informed the Complainant that WESKEM was proposing to relocate his office to the Paducah Plant. In an August 2, 2001 email to Mr. Fletcher, the Complainant indicated that this move would seriously affect his ability to manage the U Landfill. Vander Boegh Hearing Exhibit J. In an August 3, 2001 email to Mr. Don Seaborg of the DOE, he repeated these objections to the move.

> I have been asked to vacate the landfill office and I have asked Jeff Fletcher for an explanation. His supervisor is requesting this move. I have no problem with a secondary in plant satellite office, but a land fill manager can't manage a contained landfill from the plant.
>
> My goals have always been to resolve conflicts not be the center of conflicts and my record over the past few months especially should account for that. I feel I am being attacked on all fronts, due to a lack of understanding of others (not DOE).

Vander Boegh Hearing Exhibit K. At the Hearing, the Complainant described how the proposed relocation would have affected his ability to perform his duties as a Landfill Manager. He stated that as one of two employees licensed to monitor access to the U Landfill, it would have been very difficult to perform his supervisory responsibilities at the new location. He testified that he would have to spend a great deal of time traveling back and forth between the U Landfill and the Paducah Plant. TR at 92.

Although this relocation proposal was later withdrawn by WESKEM, the Complainant asserts that a threatened action to adversely affect working conditions is by itself an actionable retaliation. He argues that

> the job detriment need not be actual but may be potential and threatened. The threats themselves operated as a restraint on the Complainant's ability to perform his job duties and serve as further evidence of the hostility

> that the Respondents bore to the Complainant for his protected activity.

Vander Boegh Post Hearing Brief at 11.

Part 708 specifically defines "retaliation" to include intimidation, threats or "similar action" concerning conditions of employment. 10 C.F.R. § 708.2(2). I conclude that anyone familiar with Mr. Vander Boegh's job duties would have understood that relocating his office away from the U Landfill would interfere with his day-to-day management and make his conduct of those duties more time consuming and difficult. Accordingly, I find that the Complainant has met his evidentiary burden of showing by a preponderance of the evidence that when WESKEM announced its intention to relocate his office to the Paducah Plant, it committed a Part 708 retaliation against him.

In response, WESKEM argues that its proposal to relocate Mr. Vander Boegh to the Paducah Plant was based on legitimate business interests. It contends that Mr. Fletcher requested the move shortly after he became General Manager for WESKEM, and that he had a legitimate interest in having his front line managers easily accessible to him. At the Hearing, Mr. Fletcher testified that all of his other front line managers were at the Paducah Plant and "I was just wanting him to be closer to me so that I would have access when I needed him." TR at 537. He denies that there was any retaliatory motivation for his action. TR at 538.

WESKEM's explanations do not establish by clear and convincing evidence that Mr. Fletcher would have directed the Complainant to relocate his office in the absence of the Complainant's protected activity. WESKEM has not explained why Mr. Fletcher's legitimate business interest in having the Complainant easily accessible to him would override Mr. Fletcher's business interest in having the Complainant, a landfill manager, based primarily at the site that he is managing. Nor am I convinced that Mr. Fletcher's inexperience as WESKEM's General Manager is a convincing explanation for his relocation directive to the Complainant. Although Mr. Fletcher was appointed Operations Manager shortly before he directed the Complainant to relocate, he had been employed by WESKEM as Operations Manager since February 2001, and had interacted with Mr. Watson and Mr. Vander Boegh during the intervening period. Nor am I convinced by Mr. Fletcher's claim that his relocation directive was entirely untainted by retaliatory intent toward the Complainant. In fact, Mr. Fletcher reviewed Mr. Watson's earlier March 5 Memo to the Complainant prior to its

being given to him. TR at 535-536. I therefore find that Mr. Fletcher was either aware of or negatively influenced by WESKEM or BJC officials who were aware of the Complainant's protected disclosures. I also am unconvinced that he was unaware of the adverse impact on the Complainant that his proposed relocation would cause, and that this was not a factor in his decision to make the proposal.

Finally, WESKEM argues that it was not unreasonable for Mr. Fletcher to request this relocation because in 1997, while employed by another contractor, Mr. Vander Boegh had managed the U Landfill successfully from an even more remote location than the Paducah Plant. *See* Complainant's testimony, TR at 166-67. This assertion is beside the point. The issue is not whether the Complainant *could* manage the U Landfill from a remote location, but whether the conditions of his employment would be adversely affected by moving his office away from the landfill.

Accordingly, I will provide relief to the Complainant for this adverse proposal concerning his working conditions. I will direct that WESKEM shall not relocate the Complainant's primary office to a location outside the U Landfill without the Complainant's express consent for one year from the date of this Decision.

G. BJC's Change to the CERCLA White Paper Was Not Retaliatory

Mr. Vander Boegh contends that in July 2001, BJC changed some key language in the final version of a white paper on CERCLA waste acceptance. The Complainant states that he and three other individuals who had co-authored the white paper had no opportunity to review this change before the white paper was issued, even though BJC continued to list them as the authors of the white paper. At the Hearing, co-author Randall Russell, vice president of an environmental engineering firm, testified that he also was upset by BJC's failure to consult the authors concerning this change. TR at 459. I conclude that the Complainant has shown by a preponderance of the evidence that BJC adversely affected the conditions of his employment when it made this change without consulting him.

BJC contends that its action had nothing to do with Mr. Vander Boegh's protected activity. In a contemporaneous email to Ms. Forsee, another co-author, BJC Project Manager Stephen Davis stated:

> I agree with the comment [that the final draft of the white paper] as authored should not have been further revised by legal without the authors approval. Unfortunately, we have little influence on how a document is written after it has legal review. Additionally, I was not aware of this final change. Bottom line it should have received concurrence from the authors.

August 2, 2001 email from Mr. Davis to Ms. Forsee, BJC Hearing Exhibit 5.

As the above circumstances indicate, it appears that the legal division of BJC made a revision to the white paper prior to its issuance without consulting the document's four authors. I cannot see in these circumstances any indication of a specific intent to retaliate against Mr. Vander Boegh. Accordingly, I find that BJC has met its burden of showing by clear and convincing evidence that its legal department would have modified the same language in the report in the absence of the Complainant's protected disclosures.

H. BJC Manager Stephen Davis' August 1, 2001 Memo Was Not Retaliatory

In his filings in this proceeding, the Complainant refers to a memorandum dated August 1, 2001 from BJC manager Stephen Davis regarding permit modification roles and responsibilities (the Davis Memo). In his Pre-Hearing Brief, he contends that the March 5 Memo prohibited him from reporting any safety violations "except through certain stifling procedures" and "some of these obligatory procedures" were repeated in the Davis Memo. Vander Boegh Pre-Hearing Brief at 2. In his Post-Hearing Brief, the Complainant states that the Davis Memo delineates a "protocol, which required Bechtel Jacobs participation in reports to the DOE or the state." The Complainant contends that Mr. Davis stated at the Hearing that this protocol was mostly his own "philosophy." Vander Boegh Post Hearing Brief at 9.

The Complainant appears to be arguing that the Davis Memo is an attempt to impose arbitrary and "stifling" procedural restrictions on his contacts with state authorities and the DOE. At the Hearing, he testified that he read the Davis Memo as discouraging him from going directly to the DOE with reports of regulatory or environmental violations at the landfill. TR at 728.

My review of the Davis Memo is that it is almost solely a statement of company procedures and policy. Entitled "Landfill Permit R&R

[Roles and Responsibilities]" and addressed to the Complainant and Rebecca Ann Forsee, a WESKEM employee, it states in pertinent part:

> Let me reiterate the statements I made in our status meeting yesterday about the Landfill permit roles and responsibilities. Permit interpretations, updates, revisions, verbal discussions and written correspondence with the state regulators, and other subjects concerning the permit *requires* the involvement of STR [the BJC subcontractor technical representative], regulatory compliance, and the landfill operator.

A. Record at p. 819 (emphasis in original). The Davis Memo states that it "reiterates" a previous oral statement and emphatically "requires" the memo's recipients to "involve" BJC and WESKEM officials in any of their contacts with state regulators. As one of those recipients, the memo is clearly seeking to discourage Mr. Vander Boegh and Ms. Forsee from any private contacts with state regulators. However, to the extent that established company policy prohibits such contacts, a memorandum restating that policy cannot be seen as an adverse personnel action. Under Part 708, a DOE contractor certainly is permitted to state its official policies in neutral terms, and without threats, to its employees or subcontractor employees.

As discussed above with regard to the March 5 Memo, Mr. Vander Boegh acknowledges that he must report his contacts with the state regulators to WESKEM and BJC officials. Unlike the March 5 Memo, the Davis Memo contains no implied criticism of the Complainant's "regulatory leveraging" and "excessive" use of emails. The Complainant has not established that any of the requirements stated in the Davis Memo go beyond previous statements of BJC or WESKEM policy, while BJC has presented testimony indicating that this memorandum merely restates the company's policies and does not impose additional restrictions on the Complainant. Accordingly, I conclude that the Complainant has not met his burden of showing that the Davis Memo constituted an adverse personnel action against him.

I. Actions by BJC Employee Kevin Barber Toward the Complainant and the Response of BJC Management Are Not Retaliations that Require Relief

The Complainant contends that following his protected disclosures he was repeatedly confronted by threats and intimidation from BJC and WESKEM employees. In addition to the allegations discussed

above, Mr. Vander Boegh contends that on two specific occasions he was confronted by threats and intimidation from Mr. Kevin Barber, BJC's Subcontractor Technical Representative for its mixed waste treatment project. He states that the first occasion was at a regular weekly meeting on October 16, 2001, when Mr. Barber suggested that he would no longer be recognized as the landfill manager and accused the Complainant of not getting work done. Vander Boegh Post Hearing Brief at 4-5. The Complainant contends that he delivered a memorandum documenting the alleged harassment and intimidation to BJC Project Manager Steve Davis the following day. TR at 126. This memorandum describes the incident as follows:

> Mr. Barber intimated that I had apparently incorrectly prepared the WESKEM disclosure statements prior to the contract date of 2/28/01. He further insisted that BJC legal counsel would be correcting my error. . . . There was an inference that [the Complainant] would no longer be recognized as "key personnel" as required by KDWM. During later discussions regarding leachate disposal arrangements . . . , Mr. Barber interrupted and proceeded to make the statements that "if [the Complainant] could not begin work by Friday, that wouldn't be anything new since I was noted for not getting any work done anyway."

Vander Boegh Hearing Exhibit T.

A second instance of aggressive behavior by Mr. Barber toward the Complainant was documented at the Hearing. DOE employee Mr. Mitch Hicks, the PDGP's health physicist, testified that he was asked by the Complainant to attend a weekly landfill meeting for BJC and its subcontractors on March 5, 2002. He said that an altercation began after Mr. Vander Boegh complained that he had not been kept in the loop on documents that were being circulated that would require his review. He then recounted the following:

> The response was [BJC Project Manager Steve Davis] said that [he] thought we had this problem solved. [The Complainant's] supposed to be kept in the loop on the documents that are going forward. He then turned to Mr. Kevin Barber . . . and berated him a little bit about it, that, I thought we had this problem solved. And Kevin got a little bit upset about that. As a matter of fact, he kind of blew his stack with [the Complainant] while we were there. And later on, Steve asked Gary and Kevin Barber to please leave the meeting.

TR at 312-313.

The Complainant contends that a third incident involving Mr. Barber occurred on March 13, 2002, when several parties, including the Complainant and Mr. Barber, participated in a conference about landfill issues. During this discussion, the Complainant contends that Mr. Barber suggested that the Complainant leave the conference, saying "there's the door." He asserts that Mr. Fletcher of WESKEM reported this incident to Mr. Davis of BJC, but that BJC took no corrective action. Complainant's Response to Hearing Officer's January 6, 2003 Order of Discovery at 3. At the Hearing, Mr. Barber confirmed that he made this statement to the Complainant at that meeting. TR at 603.

These three incidents, as documented by the Complainant, establish conduct by one BJC employee, Mr. Barber, that certainly was aggressively hostile towards the Complainant on three specific occasions. I find that such actions reasonably may be deemed to constitute harassment and intimidation of the Complainant for his protected activity under Part 708. Accordingly, I find that Mr. Vander Boegh has met his evidentiary burden on this issue.

However, in this instance it is not necessary for me to analyze whether BJC has shown, by clear and convincing evidence, that Mr. Barber would have taken these actions against Mr. Vander Boegh in the absence of his protected disclosures. As discussed below, based on extensive testimony and other evidence presented by BJC at the Hearing, I find that BJC has established that it has aggressively counseled Mr. Barber concerning the inappropriateness of his actions toward the Complainant, and has ensured that this type of behavior has not recurred since March 2002. Accordingly, there is no present need for me to provide Part 708 relief to the Complainant concerning this issue.

Determining appropriate Part 708 relief for Mr. Barber's actions requires me to consider to what extent BJC management was aware of that conduct and whether they effectively intervened to ameliorate it. In this regard, the Complaint Investigator stated that he found no indication that there was any attempt by BJC management in October 2001 to rectify the complainant's perception that he was being harassed by Mr. Barber. ROI at 13. However, through testimony at the Hearing and by its exhibits, BJC has established that it did make ongoing efforts to resolve what it believed to be an ongoing personality conflict between Mr. Barber and Mr. Vander Boegh.

The record now indicates that immediately following receipt of the Complainant's October 17, 2001 memorandum by BJC management, WESKEM General Manager Jeffrey Fletcher and Mr. Davis of BJC agreed to hold a coaching and counseling session with Mr. Vander Boegh and Mr. Barber. The Complainant testified that this meeting lasted more than one and one half hours, and that "Jeff Fletcher interceded on a couple of heated discussions." TR at 128. He also stated that he and Mr. Barber were told to work on their relationship, and that he interpreted statements made by Mr. Davis to Mr. Barber as a disciplinary counseling of Mr. Barber. TR at 260.

As noted above, at the March 5, 2002 meeting where Mr. Barber "blew his stack" at the Complainant, Mr. Davis asked both individuals to leave the meeting. There is not enough evidence of the Complainant's conduct at this meeting to ascertain whether Mr. Davis acted fairly in asking both individuals to leave, but he clearly did not tolerate Mr. Barber's outburst. Mr. Hicks further testified that after the Complainant and Mr. Barber left the meeting, Mr. Davis indicated to those remaining that there was a personality conflict between Gary Vander Boegh and Kevin Barber. TR at 313.

With respect to the March 13, 2002 meeting, Mr. Barber testified that he was upset with the Complainant because he was not sticking to the agenda of the meeting. TR at 603. Mr. Cliff Blanchard, a consulting engineer with Tetratech, Inc., confirmed this account (TR at 439) although he also testified that he thought that asking the Complainant to leave the meeting was unjustified. TR at 434. After Mr. Barber reported to Mr. Davis that he may have made an inappropriate remark to the Complainant, Mr. Davis asked Mr. Barber to send him an email message summarizing the meeting. TR at 607, 662; BJC Hearing Exhibit 4. Mr. Davis testified that after receiving this message, he and Mr. Barber's functional manager at BJC held a second coaching and counseling session with Mr. Barber, who was told to improve his working relationship with Mr. Vander Boegh. TR at 663-664. Mr. Davis stated that he believes there has been a significant improvement in Mr. Barber's relationship with the Complainant since that time. 664-665.

In light of BJC's efforts to intervene on behalf of the Complainant, I agree with BJC's assertion that Mr. Barber's instances of agressive conduct toward the Complainant have been remedied. BJC Post Hearing Brief at 21. I also note that Mr. Barber is no longer employed by BJC. *Id. at n.* 5.

J. BJC's Presentation to the DOE of a Proposed Subcontract Change Affecting the Complainant Was a Retaliation

The Complainant contends that in March 2002, the DOE adopted a proposal that would have changed his job position or resulted a demotion. Although the DOE later abandoned the proposal prior to implementing it, the Complainant asserts that BJC's role in developing and recommending the proposal constituted a retaliation. At the Hearing, the Complainant testified that in March 2002, he spoke by telephone with Mr. Harvey Rice, the program manager for the DOE's Oak Ridge environmental management division. He testified that during this conversation, Mr. Rice stated that BJC was proposing contract changes to the DOE that would effectively remove the Complainant's position of Landfill Operator from WESKEM and transfer it to BJC. The Complainant stated that since Mr. Barber was a BJC employee, he believed that Mr. Barber would replace him as Landfill Manager of the U Landfill. He memorialized his conversation with Mr. Rice in an email to his attorney. Vander Boegh Hearing Exhibit V. TR at 135-139. In his testimony at the Hearing, Mr. Rice confirmed that at a March 2002 meeting, BJC presented a proposal to the DOE that involved changing the Complainant's job position at the U Landfill. TR at 373-374. On March 26, 2002, BJC manager Steve Davis sent an email to the DOE's Paducah site manager Don Seaborg summarizing this meeting. He stated that the meeting had been attended by himself, WESKEM manager Jeff Fletcher, Mr. Rice, Mr. Seaborg, and others. Mr. Davis summarized the options presented by BJC and the decision reached by BJC and the DOE, as follows:

> **A discussion was conducted concerning the landfill management and operations protocol. The current protocol and three options were discussed. It was stated the current protocol is not working very well. The options discussed include: a) BJC as manager with licensed landfill managers assigned to the Waste Project with support by WESKEM as field operator, b) WESKEM performing full management and operation with BJC providing baseline controls and reporting, and c) BJC self-performing all work. DOE decided to implement Option a) above. ACTION: BJC will work with DOE and WESKEM to facilitate the change over as soon as possible. Davis has the responsibility to lead the effort.**

Email submitted by Complainant's Hearing witness Mitch Hicks, identified as "Hicks Exhibit A". DOE employee Mitch Hicks also testified that Mr. Rice informed him of this proposal. TR at 314-

15. In a March 28, 2002 email to Rufus Smith, Employee Concerns Manager for the DOE's Oak Ridge Operations Office, Mr. Hicks presented the following description of Option (a) and its effect on Mr. Vander Boegh, as related to him by Mr. Rice:

> DOE legal has stated to Harvey Rice (DOE Waste Management), that the subcontractor, WESKEM (Vander Boegh's employer), should not be acting as the landfill manager. The position of the landfill manager under Kentucky law requires the ability to redirect resources, which is the function of BJC, according to DOE legal.
>
> This was considered during the landfill meeting, and DOE Paducah site manager Don Seaborg . . . decided to authorize BJC to become the official landfill manager, with WESKEM remaining as the operator of the facility.
>
> Mr. Vander Boegh (according to Harvey Rice) is to be offered another position within WESKEM at the same pay and benefits that he is currently receiving. Or, he can stay at the landfill as an Operator (not as landfill Manager) at less pay. I'm sure that Mr. Vander Boegh will not like either option.

Hicks Hearing Exhibit A. In his filings in this proceeding, the Complainant contends that these actions constituted a threat by BJC to demote and replace the Complainant from his position as Landfill Manager. Complainant's Post Hearing Brief at 13.

I agree that BJC's actions in this proposed subcontract change appear to constitute a Part 708 retaliation. By presenting a recommendation to the DOE that would result in Mr. Vander Boegh losing his job title and authority, and having to chose between a job transfer and a pay reduction, BJC certainly took an adverse action against the individual that threatened the conditions of his employment. 10 C.F.R. § 708.2. Although the Davis email indicates that other options were presented to the DOE at this meeting, the DOE site manager's decision to select option (a), with its negative impact on the Complainant, relied on the knowledge and experience of the contractors and was influenced by the presentation and discussion of each option by Mr. Davis and Mr. Fletcher. Accordingly, I conclude that the Complainant has met his evidentiary burden of showing by a preponderance of the evidence that BJC took retaliatory action against him in its communications with the DOE regarding changing the Complainant's position at the U Landfill.

I find that BJC has not established by clear and convincing evidence that it would have provided the same advice to the DOE on this subject in the absence of the Complainant's protected disclosures. BJC contends that the option that it presented at the March 26, 2002 meeting that was adopted by the DOE was not detrimental to Mr. Vander Boegh. At the Hearing, Mr. Davis testified that if that option had been implemented with a licensed Landfill Manager employed by BJC, he expected that the Complainant would continue to be the landfill manager because of his rights under the workforce transition roles. TR at 670-671. It contends that this view of the Complainant's rights was confirmed by WESKEM's Preventive Maintenance Manager, Mr. George Johnson (TR at 580) and by the Complainant (TR at 237). I cannot accept this contention. Although BJC has shown that it is likely that the Complainant would have transitioned back to BJC if his job title had been transferred there, it has not been established that BJC and WESKEM officials were aware of this outcome at the time of the March 26, 2002 meeting. Mr. Rice, who attended the meeting by telephone was quite specific when he contemporaneously informed Mr. Hicks that under the adopted proposal Mr. Vander Boegh would be offered another position within WESKEM at the same pay and benefits that he is currently receiving, or could stay at the landfill as an Operator (not as landfill Manager) at less pay. March 28, 2002 email from Mr. Hicks to Rufus Smith. At the Hearing, Mr. Rice testified that he had no knowledge whether BJC ever considered the option of transferring the Complainant back to BJC.

> I think one possible solution to the modifying of the contract and getting the title to match the regulations was to move [the Complainant] back to Bechtel Jacobs as a Bechtel Jacobs employee. But I don't know if Bechtel Jacobs really seriously considered that or not.

TR at 375. Accordingly, I find that BJC has not shown by clear and convincing evidence that it made its proposal to the DOE in March 2002 with the understanding that it would have no negative impact on the terms and conditions of the Complainant's position of Landfill Manager. I conclude that its proposal was a Part 708 retaliation.

I will therefore direct BJC to refrain from recommending any changes with respect to the Complainant's job position for a period of one year from the date of this Decision without the express consent of the Complainant.

K. WESKEM's Below Average Rating of Mr. Vander Boegh in Certain Categories of his 2001 Performance Review Was a Retaliation

The Complainant disagrees with the performance review that he received from WESKEM after his protected activity in February and March 2001. Specifically, he objects to low ratings in certain categories such as teamwork and creativity and to the overall review of "Fully Satisfactory", which he refers to as "average". Vander Boegh Post Hearing Brief at 5, *referring to* WESKEM Performance Appraisal for Gary Vander Boegh covering the period 01/01 through 12/01 (hereafter referred to as the "WESKEM Appraisal"). He asserts that his immediately preceding performance appraisals were more favorable. As support for this assertion, he has submitted two performance appraisals conducted by BJC for the years 1998 and 1999.6/ The Complainant concludes that he has suffered an adverse action because his personnel file now contains a performance appraisal that is unduly critical of him. Vander Boegh Post Hearing Brief at 11.

My review of these performance appraisals indicate that the Complainant's factual assertions are accurate. While neither of the BJC appraisals gives the Complainant an overall rating, both are complimentary of him. The 1998 BJC Appraisal notes under the heading "Strengths" that "Gary produces quality work. He is a team player. He provides initiative and leadership to perform work." The 1999 BJC Appraisal states that the Complainant has "met his goals over the past year." It states that

> **Gary's strengths are his understanding of the regulations and his permit conditions. He understands what it takes to accomplish work safely and in a timely manner.**

1999 BJC Appraisal at 3. Neither of these appraisals identifies any weaknesses or deficiencies concerning the Complainant's abilities. Under the heading "Actions for Performance Enhancement," both of the BJC appraisals repeat the Complainant's concern that his office space at the landfill is congested. The 1999 BJC Appraisal also notes that the Complainant will assume a new responsibility with WESKEM to manage wastewater, and that he "will need mentoring/training by WESKEM in order to properly manage wastewater." 1999 BJC Appraisal at 3.

6/ WESKEM was the Complainant's employer in 2000, but it did not issue an evaluation of his performance for that year. *See* Testimony of WESKEM Project Manager Dan Watson, TR at 490.

By contrast the WESKEM Appraisal contains ratings that are critical of the Complainant's abilities. The appraisal was completed by Mr. Fletcher, and contains numerical scores for statements about the Complainant's performance. The following statements were assigned a numerical score of three by Mr. Fletcher, indicating that the Complainant "needs improvement."

> Foresees needs and takes action to fulfill them.
> Demonstrates ability to make decision with minimal direction.
> Ability to base decisions on fact rather than emotion.
> Willingness to work harmoniously with others in getting job done.
> Knows how to express opinions and ideas in ways that are respectful of others.
> Builds on others ideas and doesn't shoot them down.
> Accepts constructive criticism.
> Actively listens, asks open-ended questions and genuinely hears what the other person is saying.
> Ask questions to see if others understand what he/she says.

WESKEM Appraisal at 2. Under managerial comments, Mr. Fletcher included the following critical analysis and suggestions:

> Areas for improvement include ownership of issues and taking actions to resolution, developing relationships and working with others harmoniously, and actively listening to the ideas of others. Seek out training seminars and read books to develop these leadership skills.

WESKEM Appraisal at 4.

The low numerical scores and the written criticism contained in the WESKEM Appraisal clearly constitute an adverse action by WESKEM affecting the Complainant's employment. Mr. Vander Boegh's protected disclosures occurred near the beginning of the evaluation period covered by the WESKEM Appraisal, and the appraisal itself was written during the pendency of the Complainant's Part 708 complaint. I therefore conclude that the Complainant has met his burden of showing by a preponderance of the evidence that the WESKEM Appraisal is an adverse personnel action that constitutes a Part 708 retaliation.

WESKEM asserts that its overall rating of the Complainant as "fully satisfactory" cannot be regarded as a retaliation. It also contends that the WESKEM and BJC appraisals cannot be compared because BJC used an "entirely different form and procedure for its evaluation of employees." WESKEM Post Hearing Reply Brief at 5-6. It refers to the testimony of its general manager, Mr. Watson, who stated that he hates "grade inflation" and that he told everybody at the site that a numerical score of five was a person doing their job in a fully satisfactory manner. TR at 491. With respect to the Complainant's appraisal he stated that he would not be surprised if there were scores of three on the appraisals for performance relating to cooperation and teamwork. *Id.* Mr. Fletcher, the supervisor who conducted the WESKEM Appraisal, testified that his appraisal of the Complainant was "about an average review overall." TR at 542. He also testified that in his opinion, "a couple of [the Complainant's] weaknesses are in personal skills and communication skills." TR at 540.

I find that WESKEM has not met Part 708's clear and convincing evidentiary standard with regard to the below average ratings and written criticisms contained in the WESKEM Appraisal. Under the evidentiary standard set forth at Section 708.29, WESKEM must show by clear and convincing evidence that the WESKEM Appraisal would have been the same in the absence of his protected activity. It is therefore crucial for WESKEM to show both that the ratings and statements were accurate, and that the Complainant was treated similarly to other employees with similar performance problems. That full consideration of WESKEM's general employment practices is required is fully consistent with OHA precedent in this area. See Thomas Dwyer, 27 DOE ¶ 87,560 at 89,337 (2000); Roy Leonard Moxley, 27 DOE ¶ 87,546 at 89,241 (1999); and Morris J. Osborne, 27 DOE ¶ 87,542 at 89,209 (1999). As indicated in those determinations, the standard in the clear and convincing area is not whether it was *reasonable* for WESKEM to have taken its adverse personnel actions regarding the Complainant. The standard is whether WESKEM *actually would have taken* these actions absent his protected disclosures.

As a preliminary matter, WESKEM has not shown by clear and convincing evidence that the WESKEM Appraisal's criticism of the Complainant was accurate. The two BJC appraisals received by Mr. Vander Boegh in 1999 and 1998 do not indicate any previous problems by the Complainant's employer with his job performance, and especially not in the areas identified by the WESKEM Appraisal. The 1998 BJC Appraisal actually commends the Complainant for being a "team player" and for providing "initiative to perform work".

Both of these areas are rated as needing improvement in the WESKEM Appraisal. WESKEM has provided no evidence indicating that the Complainant's job performance deteriorated significantly in these areas following his transition to WESKEM, and little specific evidence to support the testimony of Mr. Watson and Mr. Davis that they believed that the Complainant needed to increase his ability to cooperate with others in performing his job duties.

Nor has WESKEM met its evidentiary burden of showing that other WESKEM employees with similar performance problems received similar ratings and criticism in their appraisals. Mr. Watson's general statements about discouraging grade inflation in employee evaluations are insufficient in this regard.

In light of the failure to provide convincing evidence indicating that the Complainant's ratings were accurate, and in the absence of specific evidence concerning WESKEM's practices for evaluating other employees, I conclude that WESKEM has not met its evidentiary burden concerning this issue. Accordingly, I will direct WESKEM to remove the WESKEM Appraisal from Mr. Vander Boegh's personnel file.

L. Complainant's Allegation that He Continues to be Underpaid in Comparison to other WESKEM Managers or Landfill Managers is not a Retaliation

The Complainant contends that he has suffered from an "inequitable salary" from before the time of his protected activity until the present. He states that organizational charts show that the Complainant was considered the equivalent of a project manager from the time that he was transitioned from BJC to WESKEM, and that project managers receive significantly greater compensation than does the Complainant. Vander Boegh Post Hearing Brief at 3, 10. Vander Boegh Hearing Exhibits A and B. He argues that an organizational chart issued after his protected disclosures put another employee between himself and his previous immediate supervisor, effectively demoting him "at least two levels from the project manager status." *Id.*, Vander Boegh Hearing Exhibit C. He states that this reorganization is a reason why he currently is being paid less than employees with similar duties. He also asserts that testimony at the Hearing proves that he was paid significantly less than the landfill manager at the Oak Ridge site. He argues that the increased disparity in total salary between the Complainant's salary and those of similarly-situated employees caused by identical percentage salary increases is also an adverse action. *Id.* He contends that WESKEM has not shown that employees

with similar duties and responsibilities are paid at the low salary level of the Complainant. *Id.* at 14.

WESKEM asserts that it agreed to pay the Complainant the same salary for the same job classification and duties as he was paid by BJC before the Complainant accepted employment with WESKEM. WESKEM also states that since his employment with WESKEM, the Complainant has received two substantial pay increases. WESKEM asserts that the Complainant is WESKEM's only Landfill Manager. Rebuttal Brief of WESKEM at 1-4.

The Complainant has not raised issues concerning his salary that are appropriate for remedial action in this proceeding. As noted above, in a January 7, 2003 letter to the parties, I stated that the remedies available under Part 708 are aimed at restoring employees to the employment position and situation that they occupied before Part 708 retaliations took place. At that time, I
rejected Mr. Vander Boegh's contention that he be awarded an equitable salary, and stated that Part 708 did not provide a remedy for longstanding salary differences that predated an individual's protected disclosures. Mr. Vander Boegh's contention that there is an "increased discrepancy" between his salary and that of other managers that can be addressed in this proceeding is another attempt to redress these longstanding differences. Mr. Vander Boegh does not contend that the raises he has received from WESKEM are smaller percentage raises than those received by other WESKEM employees. Rather, he argues that his base salary is lower, so that his raises are not keeping pace with those of higher paid employees. I find that WESKEM's decision to raise his salary and the salaries of his co-workers by a certain percentage of base pay is not a retaliatory action for his protected disclosures.

V. Conclusion

Based on the analysis presented above, I find that Mr. Vander Boegh made three disclosures protected under Part 708, and that one or more of these protected disclosures were contributing factors to adverse personnel actions taken by WESKEM and BJC against him. However, I find that Mr. Vander Boegh has not met his evidentiary burden of showing that WESKEM's salary determinations regarding the Complainant constitute Part 708 retaliations. Furthermore, I find that WESKEM has not shown by clear and convincing evidence that it would have issued the March 5 Memo, halted the construction of an office trailer at the U Landfill, proposed to relocate the Complainant's office, or issued the WESKEM Appraisal to the Complainant in the absence of his protected activity.

I find that BJC has shown by clear and convincing evidence that it would have revised the CERCLA white paper and issued the Davis Memo in the absence of Mr. Vander Boegh's protected disclosures. BJC also has established that no Part 708 relief is necessary for BJC employee Kevin Barber's actions toward the Complainant. However, BJC has not shown by clear and convincing evidence that it would have proposed a subcontract change notice to the DOE negatively affecting the Complainant's position as landfill manager in the absence of his protected activity.

Accordingly, Mr. Vander Boegh is entitled to the remedial action ordered below.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Mr. Gary S. Vander Boegh (the Complainant) under 10 C.F.R. Part 708 is hereby granted as set forth below, and denied in all other respects.

(2) WESKEM, LLC (WESKEM) immediately shall review the Complainant's personnel file, and shall remove from it the March 5, 2001 Memorandum to the Complainant from Dan Watson, WESKEM Paducah Project Manager entitled "Expectations of WESKEM's Landfill Manager" (the March 5 Memo), if it is found there. WESKEM also shall issue immediately a written statement to the Complainant declaring that the March 5 Memo is rescinded.

(3) WESKEM immediately shall proceed with the construction of an office/document center trailer at the C-746-U Landfill. It shall use either the trailer that it purchased for that purpose or its equivalent, and renovate that trailer in a manner consistent with the proposals and cost estimates provided to Paducah Project Manager Dan Watson by WESKEM employee Kerry Stone in early 2001.

(4) WESKEM shall not relocate the Complainant's primary office to any location outside the C-746-U Landfill without the Complainant's express consent for one year from the date of this Decision and Order.

(5) Bechtel Jacobs Company, LLC (BJC) shall refrain from recommending any changes with respect to the Complainant's job position for a period of one year from the date of this Decision without the express consent of the Complainant.

(6) WESKEM immediately shall remove from the Complainant's personnel file its Performance Appraisal for the Complainant covering the period 01/01 through 12/01.

(7) The Complainant shall produce a report that provides information on his litigation expenses. The Complainant's report shall be calculated in accordance with the Appendix.

(8) WESKEM and BJC shall pay the Complainant's litigation expenses. The amount of this payment shall be in accordance with the report specified in paragraph (7) above.

(9) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting the Complainant relief unless, within 15 days of receiving this decision, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Kent S. Woods
Hearing Officer
Office of Hearings and Appeals

Date: July 11, 2003

APPENDIX

The Part 708 regulations provide that if the initial agency decision determines that an act of retaliation has occurred, it may order: reinstatement; transfer preference; back pay; and reimbursement of reasonable costs and expenses; and such other remedies as are necessary to abate the violation and provide the employee with relief. 10 C.F.R. § 708.36.

As discussed in my initial agency decision in this matter, Mr. Vander Boegh is entitled to remedial action from the WESKEM, LLC (WESKEM) and Bechtel Jacobs Company, LLC (BJC). A portion of this remedial action consists of reimbursing Mr. Vander Boegh for litigation expenses that he incurred. Accordingly, in order to implement this remedy, I have here provided clarifications concerning the nature and extent of certain benefits that Mr. Vander Boegh is entitled to received. I direct Mr. Vander Boegh to make certain calculations and provide them to the other parties within 30 days of the date of this order. Finally, I have provided for a negotiation period between the parties and a final report on remedial calculations. In the event of an appeal, the parties shall follow the negotiating and reporting steps set forth below unless those requirements are specifically stayed by an appropriate official.

A. Mr. Vander Boegh's Calculations

Within 30 days of this order Mr. Vander Boegh shall provide WESKEM and BJC with the following information,

> **A calculation of attorney fees and out of pocket litigation expenses incurred by Mr. Vander Boegh with respect to this Part 708 complaint. Mr. Vander Boegh and his legal counsel shall provide reasonable information supporting their claims for fees and out of pocket litigation expenses.**

B. Negotiation Period

The parties will have ample time up to sixty days from the date of this order to discuss and negotiate any disputes regarding the calculations. During that period I expect that both parties will

provide reasonable information to facilitate the other party's understanding of calculations.

C. Final Report

Seventy days from the date of this order Mr. Vander Boegh shall provide a report to WESKEM, BJC, and the Office of Hearings and Appeals with a summary calculation. Mr. Vander Boegh shall describe in detail any matters that remain in dispute. WESKEM and BJC will have 15 days from the date of that report to provide a response.

April 9, 2007

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Names of Petitioners: Franklin C. Tucker

Date of Filing: February 2, 2005

Case Numbers: TBH-0023

This Initial Agency Decision concerns a whistleblower complaint filed by Franklin C. Tucker (the Complainant) against his previous employer, BWXT Y-12, L.L.C. (BWXT) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. BWXT is the manager of Y-12, part of the National Nuclear Security Administration's Nuclear Weapons Complex.

The Complainant filed the complaint of retaliation against BWXT with the Oak Ridge Operations Diversity Programs and Employee Concerns Office on October 20, 2003.[1/] In the complaint, the Complainant contends that he made protected disclosures to officials of BWXT and the DOE, and that BWXT took four adverse personnel actions against him in retaliation for these disclosures. BWXT admits that the Complainant made protected disclosures and that the four personnel actions occurred. However, BWXT argues that it would have taken those four actions absent the Complainant's protected disclosures. Later in this decision, I find that BWXT has shown by clear and convincing evidence that it would have taken the personnel actions against the Complainant absent his protected disclosures.[2/]

[1/] When this matter was sent to the Office of Hearings and Appeals by the Oak Ridge Operations Office Diversity Programs and Employee Concerns Manager his letter indicated that the complaint was filed with his office on November 25, 2003. I do not see that date on any of the filings made by the Complainant. The original complaint was dated September 23, 2003, by the Complainant and received on October 20, 2003, by the Office of Diversity Programs and Employee Concerns. Therefore, I will use the October 20, 2003 date in this Decision.

[2/] The Complainant seeks as restitution for the alleged retaliations that he be reinstated as a BWXT employee and be compensated for harassment. He also requests that the Shift Manager be relieved

(continued...)

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or, fraud, gross mismanagement, gross waste of funds, or abuse of authority. *See* 10 C.F.R. § 708.5(a)(1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an independent fact-finding by an investigator from the Office of Hearings and Appeals (OHA), a hearing by an OHA Hearing Officer, and an opportunity for review of the hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Factual Background

The Complainant worked for BWXT and its predecessor, Martin Marietta, in Oak Ridge, Tennessee, from April 1991 until he was placed on long-term disability in January 2003. The Complainant worked in various positions first as a security inspector, then as a laboratory technician, and finally as a chemical operator. On September 30, 2001, the Complainant, while working as a chemical operator, communicated a safety-related concerns to a management official.

In early November 2001, the Complainant received counseling for sleeping while on duty. In February and March 2002, the Complainant was not interviewed for two positions for

---

[2/] (...continued)
of his position. The Part 708 regulations allow the following relief (1) reinstatement, (2) transfer preference, (3) back pay, (4) reimbursement of your reasonable costs and expenses, or (5) such other remedies as are deemed necessary to abate the violation and provide the Complainant with relief. *See* 10 C.F.R. § 708.36(a). Thus, much of the relief the Complainant asks for is not within my ability to grant.

which he applied at BWXT. On May 17, 2002, the Complainant received a "pattern absence" letter. On June 14, 2002, the Complainant left work on two weeks of medical leave authorized by the BWXT medical department. This short-term medical leave was extended through January 2003 for reasons that are not clear from the record. In November 2002, the Complainant told the medical department that his personal physician had released him to return to work. Following a medical leave of longer than two weeks, an employee's physical and mental health are reviewed by BWXT's medical department before he is permitted to return to work. The Certified Physician's Assistant, in consultation with the Staff Clinical Psychologist, determined that in view of the Complainant's medical condition certain restrictions on his work assignments were appropriate. These restrictions required that the Complainant not engage in prolonged or strenuous exertion, not use a ladder over four feet, and not work at an unprotected elevation.

A medical case review meeting was held January 8, 2003. The attendees were the Certified Physician's Assistant, Staff Clinical Psychologist, the Complainant's supervisors, and the Labor Relations Representative. The medical case review meeting was held to determine if the Complainant could return to his prior position with the restrictions imposed by the medical department. At the medical case review, BWXT determined that the Complainant could not be permitted to return to work as a chemical operator with his work-related restrictions.

C. Procedural History

On October 20, 2003 the Complainant filed this whistleblower complaint with the Oak Ridge Operations Office of DOE under Part 708. Pursuant to the Part 708 Regulations, the matter was referred to the Office of Hearings and Appeals for an investigation on April 27, 2004. The OHA Director appointed an Investigator on May 5, 2004, and on February 2, 2005, she issued a Report of Investigation (ROI) concerning the complaint.

In the ROI, the Investigator conducted an initial factual and legal analysis of the Complainant's claims and made some preliminary determinations concerning possible protected disclosures and adverse personnel actions. Following the issuance of the ROI, I was appointed the Hearing Officer in this matter. A Hearing was held on August 16, 2006. At the Hearing, the Complainant was given the opportunity to introduce evidence that BWXT took adverse personnel actions against him by (1) sending him to an informal coaching session for sleeping while on duty, (2) not interviewing him for two jobs he applied for within BWXT, (3) issuing him a May 17, 2001 pattern absence letter, (4) placing

him on long-term disability.[3/] Conversely, BWXT had the opportunity to demonstrate by clear and convincing evidence that it would have taken the above actions absent the Complainant's reporting of safety-related concerns.

II. Legal Standards Governing This Case

A. The Complainant's Burden

Under Part 708, the Complainant has the burden to establish by a preponderance of the evidence that he made a protected disclosure and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. 10 C.F.R. § 708.29. *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993). In the present case, BWXT admits that the Complainant made protected disclosures and that it took the four personnel actions described by the Complainant. Hearing Transcript (Tr.) at 12. Later in this decision, I will review the evidence that I find demonstrates that the temporal proximity between the September 2001 protected disclosures and 2001 and 2002 personnel actions indicates the disclosures were a contributing factor to the personnel actions.

B. BWXT's Burden

Section 708.29 provides that once the employee has met his burden, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure." 10 C.F.R. § 708.29. BWXT argues it would have taken the same personnel actions against the Complainant absent the protected disclosures. BWXT makes specific arguments with respect to each of the adverse personnel actions.

With regard to the first action, BWXT asserts that all employees that are believed to have been sleeping while on duty receive, at a minimum, coaching and counseling to discuss the concerns associated with sleeping while on duty. The Complainant argues that he was not sleeping while on duty. With regard to the second personnel action, BWXT admits that the Complainant applied for two jobs. However, BWXT argues that the Complainant was not qualified for those jobs and, therefore, was not interviewed. The Complainant responds that he was qualified for the job positions for which he applied and should have been interviewed for those positions.

[3/] In addition, the Complainant claims that BWXT allowed a fellow employee to harass him and to circulate rumors that he was a "snitch for DOE." The Complainant's supervisors testified that BWXT attempted to keep the two employees separated within the confines of the work environment. It is not BWXT's role or responsibility to ensure that employees get along. I believe that BWXT took appropriate steps to minimize the problem.

With respect to the third personnel action, BWXT argues that the Complainant did have a pattern of excessive absences from work. The Complainant responds that his absences from work did not show a pattern, especially if his vacation days were not considered as absences. Finally, BWXT argues that at the end of his medical leave the Complainant was too ill to return to his position. The Complainant stated that he should have been allowed to return to work. The Complainant believes if the restrictions kept him from his position as a chemical operator, BWXT should have been able to find another position for him. He claims that there were employees with far worse restrictions than his who worked for BWXT.

III. Hearing Testimony

At the Hearing, testimony was received from fourteen witnesses. The complainant testified and presented the testimony of two of his former co-workers, Mark Korly and Carl Smith. BWXT presented the testimony of : Les Reed, the division manager for environment safety and health for BWXT Y-12 at the time of the allegations; Ben Davis, operations manager for special materials; Earl Dagley, shift manager; Karl Vincent, chemical supervisor and the Complainant's direct supervisor; Janet Sexton, labor relations representative; Diane Grooms, staffing manager; Pat Fortune, department manager for the assembly and disassembly organization; Gary Bowling, general foreman in the garages and the fleet; Tonya Warwick, certified physician assistant in the medical department; Dr. Russ Reynolds, staff clinical psychologist; and Steve Laggis, manager of the special materials organization.[4/] The Hearing testimony summarized below concerns the complainant's alleged disclosures and the four adverse personnel actions.

A. Division Manager for Environment, Safety, and Health

Les Reed, BWXT's Division Manager for Environment, Safety, and Health (Division Manager) testified that he first spoke with the Complainant in September 2001, when the Complainant called him. Hearing Transcript (Tr.) at 18. Soon after that conversation, he met with the Complainant. Tr. at 19. The Division Manager listened and took notes while the Complainant described his safety concerns. Tr. at 19. One safety concern related to a violation of the lock and tag-out procedure. Tr. at 20. The second concern was about ongoing work on a roof repair. Tr. at 20. The Complainant was concerned that water might enter and cause a safety concern. The final specific issue concerned the availability of proper respirators. Tr. at 22.

[4/] All the job descriptions relate to the time during which the Complainant has alleged that he was retaliated against. Many of these employees have changed job titles since then; one has retired.

The Division Manager testified that the Complainant raised other concerns that appeared to fall into two categories. The first category was suggestions to improve efficiency of operations. Tr. at 20. The second category regarded the safety counsel which did not afford the Complainant an opportunity to participate because it did not meet during his shift. Tr. at 21.

The Division Manager stated that he toured the facility fairly soon after meeting with the Complainant. He testified that the Complainant's safety concerns had either been addressed or did not present an imminent safety hazard. Tr. at 23. Had the concerns been immediate, the Division Manager testified that he would have had the problem corrected immediately. Tr. at 24.

The Division Manager testified that he was contacted later in October 2001 by the Complainant regarding rumors being circulated by another employee that the Complainant had been talking to the Division Manager about safety issues. Tr. at 31. The Division Manager offered to arrange a meeting between the Complainant, the other employee and an uninterested third party. Tr. at 31-32. The Division Manager stated that the Complainant declined his offer. Tr. at 32.

B. Operations Manager for Special Materials

Ben Davis, BWXT's Operations Manager for Special Materials (Operations Manager) testified that the Complainant frequently submitted "I care / We care" safety suggestion memoranda. Tr. at 56. He stated that employees were encouraged to submit these memoranda by being issued a meal ticket if they submitted one. Tr. at 56-57. He was responsible for authorizing the meal ticket and remembered presenting more meal tickets to the Complainant than any other operator in his group. Tr. at 57.

On October 5, 2001, the Operations Manager escorted the Division Manager on his tour of the facility. Tr. at 57. He arranged for a meeting room for the Division Manager , the Complainant, and two other workers. Tr. at 57.

The Operations Manager testified that in late October 2001, a maintenance coordinator saw the Complainant asleep at his duty station. Tr. at 61. The Operations Manager stated that the Complainant was coached and counseled about the situation on November 2, 2001. Tr. at 62. The Operations Manager testified that a coaching and counseling session is a discussion with the employee and is the lowest level of discipline. Tr. at 62.

The Operations Manager stated that the Complainant was often absent before or after weekends or other breaks. Tr. at 67. He perceived this as a clear pattern of absence abuse.

Tr. at 67. Vacation is not considered when determining a pattern of absence. Tr. at 76. The Complainant was issued a "pattern absence" letter in May 2001.

The Operations Manager testified that when the Complainant tried to return to work after being on short-term disability leave, the medical office placed restrictions on his work. Tr. at 68. The restrictions provided that the Complainant was not allowed to take part in prolonged strenuous work, climb ladders, or work on elevated surfaces. Tr. at 68. The Operations Manager testified that the use of ladders or stairs was required in most of the functions his group performed. Tr. at 68. The Operations Manager testified that the work area has many mezzanines and significant heat stress in most areas. Tr. at 68. The Complainant asked the Operations Manager about specific jobs to which he could have been assigned. Tr. at 80. The Operations Manager reiterated that most of the jobs would have ladders or stress associated with them. Tr. at 80. The Operations Manager testified that the medical review board is an independent panel that evaluated whether the Complainant could return to his previous position or to another position. Tr. at 70.

Finally, the Operations Manager testified that he did not talk to any of the hiring managers about the two jobs the Complainant applied for. Tr. at 66-67.

C. Shift Manager

Earl Dagley, the Complainant's Shift Manager, testified that the Complainant was required to drive a fork lift, lift bags that weighed up to 100 pounds, and climb ladders. Tr. at 95-96. He characterized the Complainant's job as strenuous, especially because of the heat in the area and safety equipment that had to be worn. Tr. at 96. The Complainant brought safety concerns to him in the form of "I care / We care" memoranda. Tr. at 96. The Complainant was commended for raising the safety concerns by being given a meal ticket. Tr. at 97.

1. Counseling for Sleeping while on Duty

The Shift Manager testified that a member of management approached him on October 17, 2001, to say the Complainant was asleep. Tr. at 97-98; BWXT Ex. 7 at 1. The Shift Manager went to see the Complainant, who was standing when he arrived. Tr. at 98. He stated that the Complainant's eyes appeared to be red. Tr. at 98. He called labor relations and was advised to have a coaching and counseling sessions with the Complainant. Tr. at 100. Two weeks after the incident, the Complainant was coached and counseled to stay alert on the work site. BWXT Ex. 7 at 1. The Shift Manager testified that the Complainant did not lose any money or job opportunities because of the coaching and counseling session. Tr. at 102.

2. Not Being Interviewed after Two Job Applications

The Shift Manager testified that he was aware the Complainant applied for other jobs at BWXT. Tr. at 103. Neither of the hiring managers called him in connection with either of the jobs the Complainant had applied for. Tr. at 103.

> [T]here was a gentleman, I do not know if he was part of the interview process for them or not. Dennis Nabors. Mr. Nabors told me that Mr. Tucker had bid on a job for them and he was close to getting interviewed. Asked me what I thought about Mr. Tucker. I said he was a fair employee.

Tr. at 103-04

3. Pattern Absence Letter

The Shift Manager testified that during 2001, he met with a Labor Relations employee to discuss employees with large numbers of absences. Tr. at 104. He was given a list of the individuals with poor attendance records. Tr. at 104. Included on that list was the Complainant. Tr. at 104. At that time, the Shift Manager counseled the Complainant that his attendance had to improve. Tr. at 105.

In May 2002, the Shift Manager requested that Labor Relations determine if there was a pattern to the Complainant's absences. Tr. at 105. Labor Relations determined there was a pattern and on May 17, 2002, issued a letter to the Complainant regarding the pattern of his absences. Tr. at 106; BWXT Ex. 8. The letter carried no monetary penalty. Tr. at 106. However, the Complainant was required to obtain a doctor's excuse to take sick leave. At least one other employee in the Complainant's group received a similar letter. Tr. at 106.

4. Being Placed on Long-Term Disability

The Shift Manager testified that he attended the January 2003 medical case review meeting regarding the Complainant. Tr. at 108. At the meeting, the impact of the Complainant's medical restrictions on his ability to return to his job was discussed. These restrictions directed that the Complainant not do strenuous labor, climb a ladder, or work on elevated platforms. The restriction also specified that the Complainant initially could only work a four-hour day. The restrictions indicated that the Complainant might be able to work up to a twelve-hour day. Tr. at 109. The Shift Manager testified that he did not believe that anyone could work in his group with the restrictions imposed on the Complainant. Tr. at 110. He stated that he only had one vote in the group and was the only one who would have been aware that the Complainant had reported health and safety matters. Tr. at 112.

D. Chemical Supervisor

Karl Vincent, a Chemical Supervisor, was the direct supervisor of the Complainant. Tr. at 126. He knew that the Complainant applied for two jobs outside their group. Tr. at 127. He did not speak to the hiring managers about the hiring decision. Tr. at 128. He never saw the Complainant asleep while on duty. Tr. at 130. He testified that the Complainant was a good employee. Tr. at 130.

The Chemical Supervisor testified about the Complainants' work restrictions. He stated that most of the medically mandated work restrictions under which people work at the plant are specific. Tr. at 139. In his view, the Complainant's restrictions were much broader than most. Tr. at 140.

E. The First Co-Worker

The first co-worker, Mark Corly, testified that he worked with the Complainant for a while. Tr. at 141. It was well known that the Complainant liked to write "I care/We care" memoranda and that he often pointed out safety violations. Tr. at 141. The co-worker testified that he was aware that the Complainant was asked to report safety violations to the DOE. Tr. at 141. He testified that the Complainant was not a "sloppy" operator nor would he violate procedures. Tr. at 144.

F. The Second Co-Worker

The second co-worker, Karl Smith, testified that he and the Complainant worked on the same shift. Tr. at 145. He stated that they were working the same piece of equipment on the day the Complainant was found sleeping while on duty. Tr. at 146. Usually two people were responsible for running that equipment, but that day the co-worker left to get some pizza at a party being held in their department. Tr. at 146. The co-worker testified that the area where the equipment is located is a high traffic area. Tr. at 146-47. He testified that he had not seen the Complainant asleep, nor did he see the Shift Manager in the area that day. Tr. at 147. The co-worker testified that everyone in the building was at the party. Tr. at 146-48. He stated that he was not aware on the day of the incident that the Complainant had been sleeping while on duty. Tr. at 148.

He testified that the Complainant often wrote "I care/We care" memoranda. Tr. at 149.

G. Labor Relations Representative

During 2001 and 2002, Janet Sexton, Labor Relations Representative, was responsible for applying and interpreting the two bargaining unit contracts with the union. Tr. at 153. She

was also responsible for enforcing Human Resources policies and procedures, discipline procedures, attendance procedures, addressing grievances, and arbitrations. Tr. at 153. As part of her job, she was responsible for administering BWXT's absence and discipline policy. Tr. at 153.

1. Counseling for Sleeping while on Duty

The Labor Relations Representative testified that she was first contacted in October 2001 regarding the Complainant's sleeping while on duty. Tr. at 153-54. She was asked for guidance as to how to handle the situation. Tr. at 154. She testified that sleeping while on duty is prohibited by the company handbook. Tr. at 154. According to the handbook, an individual found sleeping while on duty could be terminated. BWXT Ex. 11 at 2. She testified that the usual discipline for sleeping while on duty is a written reminder up to a day off and 12 months of probation. Tr. at 155; BWXT Exs. 14 & 15. The Labor Relations Representative stated that the Complainant received no discipline for sleeping while on duty. Tr. at 157. She testified that coaching and counseling are an informal corrective action. Tr. at 157. His pay was not reduced. Tr. at 159. Because he was coached and counseled only, the sleeping while on duty was not entered into his personnel file. Tr. at 159. The Labor Relations Representative was aware of two other situations where an employee was found sleeping while on duty and was only coached and counseled. Tr. at 160.

2. Pattern Absence Letter

The Labor Relations Representative stated that the next time she was involved in a personnel issue related to the Complainant was in May 2002. Tr. at 163. She testified that the Shift Manager called her because the management suspected the Complainant had an attendance issue. Tr. at 163. The Labor Relations Representative explained what a pattern absence is and why it is a problem. Tr. at 163-64.

Q. And what was the issue?
A. The issue was suspicion of patterned absence. Absences at work, and Mr. Dagley had called me. He had consulted with management, and called and would like, wanted labor relations to look into the issue to verify attendance issue or the absenteeism issue.
Q. And did you look into it?
A. Yes, Sir, I did.
Q. And what did you find?
A. We found that Mr. Tucker's a 12 hour shift worker. We found evidence of a patterned absence which is days absence connected to either holidays, SDO's, those days off.

Q. What's an SDO?
A. SDO is scheduled day off for a shift worker.
Q. And when you say an absence, you're talking about a sick day.
A. Yes, Sir
Q. So a patterned absence is a sick day that is adjacent to a scheduled day off?
A. Correct.
Q. Weekend? Holiday, vacation also?
A. Yes, Sir.
Q. And why does the company have a problem with that?
A. The company has a problem with that, first of all, it's outlined in our attendance, absence and attendance monitoring procedure that a patterned absence, the company has a problem with it because in a production area, you cannot plan work if a person has a long scheduled time off, unplanned, it makes a long absence. If you have a person that takes off on Friday and Monday and has the weekend scheduled there, or especially with a shift worker, if you have someone that has seven scheduled days off, and then there's a day off before and a day off after, that creates a long absence.
Q. But people get sick from time to time. What's wrong with people taking off, taking advantage of the sick leave policy?
A. No one's saying anybody cannot take advantage of a sick leave policy, but on an issue , when there's a suspicion of a patterned absence, it does have to be addressed.
Q. You used the word suspicion. Can you explain that?
A. Suspicion is when you review the record in its totality and you see mapped out without much doubt a continued pattern of an absence always on a certain time, and not any other date.

Tr. at 163-65. She testified that she reviewed the Complainant's attendance sheet. Tr. at 166.

A. Yes, this is my data collection and what I've prepared for this to show Mr. Tucker's absenteeism record for a 12 hour shift worker. The first H there, of course, is a holiday. But the M's stand for the midnight shift, which is the term the hourly use, which is a 7:00 a.m. to 7:00 p.m. And the yellow, the days highlighted in yellow are scheduled days off. Full scheduled shifts off.
Q. So that's the SDO's you were talking about earlier?
A. Yes, Sir.
Q. And that would include holidays, weekends, and vacations?

A. No. These are only scheduled days off. This doesn't include any vacation.

Q. Go ahead.

A. And the 12 hour shift workers, they do not get to celebrate weekends, this is scheduled days off. The AA shift, the 7:00 a.m. to the 7:00 p.m. And the X's across these labeled days are days absent. Disability absences. Short term disability absences.

* * *

A. For the year 2001, you start in January, and you see an absence on the 10th and 11th and then you have seven scheduled days off. So you have an absence before your SDO, seven. You go in to the month of February, it's the same. The pattern continues. Absence on the 18th and 19th, and then scheduled days off.

The month of March continues, three days off. Sick days off, and then seven scheduled days off and then you go into the midnight shift with four sick days.

The month of April, the same.

Q. So - -

A. And then the month of May is the only month that there's a lot of absences there, but the month of May, I think the 30th of May was the only day that we identified that wasn't linked to a pattern.

Tr. at 166-68. She testified that only one day of all of the Complainant's absences in 2001 was not part of the patterned absence. Tr. at 170. The Labor Relations Representative testified that the Complainant's pattern was to take leave prior to and / or after a holiday or scheduled day off. She testified that the Complainant's pattern demonstrated excessive leave compared to other employees. Tr. at 171. She recommended that the Complainant be issued a pattern absence letter, requiring the employee to have a doctor's verification when he is absent for the absences to be paid. Tr. at 170-71.

3. Placing the Complainant on Long-Term Disability

The Labor Relations Representative testified that she was present at the medical case review meeting on January 8, 2003, when the committee reviewed the need for work restriction to be placed on the Complainant. Tr. at 181. She stated that she has attended many medical case reviews. Tr. at 191. She testified that at the meeting the Complainant's manager indicated he did not believe his group could find work for an employee with the Complainant's medical restrictions. Tr. at 188.

H. Staffing Manager

Diane Grooms, BWXT's Staffing Manager, is responsible for supervising the hiring process. Tr. at 196. The Complainant applied for two jobs in early 2002. Tr. at 196. She testified that the person responsible for the actual hiring decision came to her and asked for a copy of the applicant's resume which she retrieved from the employee's personnel file. Tr. at 197. BWXT submitted into the record the Complainant's 2002 resume. BWXT Ex. 22. She explained that an applicant is responsible for confirming that the resume on file is updated. Tr. at 198.

The Staffing Manager testified that when the Complainant applied for the two jobs, his bids were sent to the hiring organizations along with his resume. The hiring organization determined that the Complainant's resume indicated he did not to meet the minimum requirements of the job postings. Tr. at 199. He was not given an interview for either position. Tr. at 199. The Staffing Manager testified that the hiring manager made the decision not to interview the Complainant. Tr. at 199. She stated that the experience listed on the Complainant's resume, while similar to the requirements for each of the jobs, nevertheless did not actually meet the minimum requirements of either position. Tr. at 200. "And the chemical operator experience and the other experience listed on your resume is not what was deemed a minimum requirement on the assembly person A and B position." Tr. at 200. "Under the necessary qualifications . . ., it says it requires three year of on the job training in assembly operations in the Y-12 plant. . . . [Y]ou do not meet the minimum qualifications according to the resume that was on file." Tr. at 202.

I. Assembly/Disassembly Department Manager

Pat Fortune, The Assembly / Disassembly Department Manager, was responsible for hiring for the first of the two positions that the Complainant applied for in early 2002. Tr. at 206. She was the final decision maker as to who would be interviewed and who would be given the position. Tr. at 206. After reviewing the job description and the Complainant's resume, she did not believe that he met the minimum requirements and stated the Complainant was therefore not interviewed for the position. Tr. at 207. She stated that she did not talk to the Complainant's managers regarding his application for the position. Tr. at 208. She stated that she did not know who his managers were. Tr. at 208. She stated that hiring decisions considered seniority and experience factors but, in order to interview, an individual must meet the minimum qualifications. Tr. at 209.

J. General Foreman

Gary Bowling, a General Foreman, was responsible for hiring for the second of the two positions that the Complainant applied for in early 2002. The General Foreman was

responsible for supervising the garages in early 2002. Tr. at 212. He testified that the Complainant's resume did not indicate that he had the minimum requirements of six years practical experience as a mechanic. Tr. at 213. He testified that although the Complainant is a certified mechanic, that does not necessarily mean he has six years of practical experience. Tr. at 215. He stated that he did not speak to the Complainant's managers about his applying for a job at the garage. Tr. at 214.

K. Certified Physician's Assistant

Tonya Warwick, a Certified Physician's Assistant, is responsible for evaluating employees for occupational illnesses and injuries, and prior to returning to work after a significant medical leave. Tr. at 218. She and the Staff Clinical Psychologist evaluated the Complainant in December 2002. Tr. at 218. She testified that the restrictions on the Complainant's work involved no prolonged or strenuous exertion, no use of a ladder over four feet, and no work at an unprotected elevation. Finally, he could only work four hours a day for the first one to two weeks after his return. Tr. at 219. The restrictions were based on an interview with the Complainant, information from his personal physician, and her physical exam. Tr. at 221.

The Certified Physician's Assistant testified that the Complainant's personal physician stated that he could return to work. However, she testified that BWXT's medical department does not always follow a personal physician's recommendation. Tr. at 224. She believes that an outside doctor does not know the details of the job requirements. Tr. at 225.

The Certified Physician's Assistant also participated in the medical case review held on January 8, 2003. Tr. at 220. She did not remember any discussion of the Complainant's having reported health and safety issues. Tr. at 221.

L. Staff Clinical Psychologist

The Staff Clinical Psychologist, Russ Reynolds, testified that he has participated in many return to work evaluations. Tr. at 227. In these evaluations, he has to understand the person's job responsibilities and do a functional assessment of the person's fitness to perform those duties. Tr. at 227. He focuses on the emotional, psychological, and psychiatric fitness. Tr. at 227. He reviews medical files to evaluate whether work restrictions are necessary for an individual. Tr. at 228.

The first step in returning to work when a person has been out of work for more than two to four weeks is a written release from their personal physician. Tr. at 228. The Staff Clinical psychologist testified that in half the return to work situations, BWXT follows the

personal physician's recommendation. Tr. at 229. The medical department does not always follow the personal physician's recommendations because the personal physician is not in a position to assess the person's job responsibilities. Tr. at 229.

The Staff Clinical Psychologist stated that the Complainant came to see him on June 14, 2002. The Complainant was concerned about the way he was feeling. Tr. at 230. The Staff Clinical Psychologist believed the Complainant was clinically depressed. Tr. at 230. He suggested and the Complainant agreed that the Complainant should not be at work. Tr. at 230. He authorized two weeks of medical leave in order for the Complainant to be able to consult with his personal physician. Tr. at 231.

The Staff Clinical Psychologist was involved in the Complainant's fitness to return evaluation in December 2002. Tr. at 231. He testified that the Complainant told him that he had pressured his doctor to allow him to come back to work. Tr. at 234. The Staff Clinical Psychologist believed that the Complainant was no better, and perhaps worse, than he had been prior to his going on medical leave. Tr. at 234. The Staff Clinical Psychologist was concerned, after hearing the Complainant's current symptoms, that the Complainant would not be able to tolerate working as a chemical operator because of the physical exertion required in the job. Tr. at 235.

The Staff Clinical Psychologist testified that the Complainant did well on a test of concentration and memory. Tr. at 236-37. However, the Staff Clinical Psychologist was concerned because the Complainant continued to complain about not being able to sleep. Tr. at 237-38.

The Staff Clinical Psychologist and the Certified Physician's Assistant met and agreed on the restrictions to be placed on the Complainant's return to work. Tr. at 240. Then they both participated in the medical case review on January 8, 2003. Tr. at 240. In these meetings, he and the Certified Physician's Assistant meet with the employee's management, Labor Relations, and someone from Human Resources. Tr. at 240. The purpose of the meeting is to discuss employees' functional status. Tr. at 241. In the case of the Complainant, the decision was that management could not accommodate his restrictions. Tr. at 241. The Staff Clinical Psychologist did not remember any mention of the fact that the Complainant had raised health and safety concerns in the past. Tr. at 242.

M. Manager of Special Materials Organization

Steve Laggis, the Manager of Special Materials Organization (Manager), testified that the Complainant worked in the Special Materials Organization. Tr. at 249. He first spoke with the Complainant in July 2001, when the company was conducting a rolling safety focus. Tr. at 249. He had a meeting in October 2001 with the Division Manager for Safety and

Health regarding issues raised by the Complainant. Tr. at 250. The Manager stated he was aware of a number of the issues. Tr. at 250. He believes that at the time he met with the Division Manager for Safety and Health, all of the issues were either resolved or "on his radar screen" to be resolved. Tr. at 252.

The Manager stated that he was told the Complainant had been found sleeping while on duty in October 2001. Tr. at 252. He told the Shift Manager to contact Labor Relations for guidance. Tr. at 253. He knew that the Complainant was coached and counseled as a result of the incident. Tr. at 253.

The Manager testified that he was unaware that the Complainant had applied for two other positions. Tr. at 253. He was not contacted by either hiring manager for the positions. Tr. at 253.

The Manager stated that the only time he spoke with anyone outside of his organization about the Complainant was in regard to the Complainant's attendance. Tr. at 253. At that time, he spoke with the Labor Relations Representative who indicated that there was a pattern to the Complainant's absences. Tr. at 254.

The Manager participated in the Complainant's medical case review on January 8, 2003. Tr. at 255. The medical case review is an opportunity for him to hear the medical staff's opinions. Tr. at 255. It is also an opportunity to have an independent evaluation. Tr. at 257. There was no discussion during the medical case review that the Complainant had raised safety and health concerns. Tr. at 257. It was his decision as to whether the Complainant could return to work with the restrictions specified by the medical department. Tr. at 255.

N. The Complainant

1. Counseling for Sleeping while on Duty

The Complainant contends that it would be impossible to sleep where he was accused of sleeping. There were doors and hallways. Tr. at 71, 131, 146-47, 279. He testified that many people were in the area where he was working because of the pizza party, so it was too noisy and crowded for him to have slept. Tr. at 72. He also testified that he was not alone at his post long enough to have slept. Tr. at 280. Further, he testified that had a supervisor seen him asleep, the supervisor would have woken him. Tr. at 73. Alternatively, the supervisor would have warned the Complainant's first line supervisor because a malfunction in the machine he was monitoring could have catastrophic results. Tr. at 131. Finally, he asserts the Shift Manager could not have seen that his eyes were red because he always wore tinted safety glasses. Tr. at 148, 279.

2. Pattern Absence Letter

The Complainant testified that if his vacation days were removed from his absence information, there would not be a pattern of absences. Tr. at 282. He also claimed that most of his absences were for Family Medical Leave (FMLA) and could not be counted in determining whether he had a patterned absence. Tr. at 136. He testified that he had a great deal of FMLA leave. Tr. at 136. He claimed he cannot be coached or counseled for FMLA.[5/] Tr. at 183. In addition, he testified that other employees were absent more often than he was. Tr. at 282.

3. Not Being Interviewed after Two Job Applications

The Complainant testified that he was qualified for the two positions for which he applied. The first position was in the assembly and disassembly department. Tr. at 200-01. The Complainant testified that his experience as a laboratory technician qualified him for the position. Tr. at 200. He testified he was interviewed for the assembly position in 1997. Tr. at 208.

Regarding the second position as a mechanic in the garage, he testified that he is a certified mechanic and, therefore, was qualified for the position. Tr. at 204, 214-15. He testified that it should have been apparent he had experience as a mechanic because he was a certified mechanic. Tr. at 214-15.

4. Being Placed on Long-Term Disability

Finally, the Complainant testified that he should not have been placed on long-term disability. Tr. at 284. He argued that there were employees with far greater restrictions who were accommodated by BWXT. Tr. at 246, 285. He also contended that the restrictions were temporary. Tr. at 79, 189. The Complainant testified that there were many jobs in his department he could have done, such as taking readings, running the [reactors], and loading and unloading. Tr. at 80. He believes he should have been permitted to return because it would have taken time for his security clearance to be reinstated. Tr. at 190-91. He claimed that by the time his security clearance was reinstated, the work-related restrictions would have been removed. Tr. at 190-91.

The Complainant tried to find a job outside his department prior to going on medical leave. Tr. at 283.

[5/] The Labor Relations Representative agreed that the Complainant could not be coached or counseled for FMLA leave. However, she stated it can be used when determining whether there is a pattern in an individual's absences. Tr. at 185.

> Hey, I bid out. I bid out on assembly. Now you have seen my resume. College education, certified in half a dozen different things, and there's no way that I shouldn't have been eligible for that job. None whatsoever.
>
> Had been interviewed before for it. The only reason I didn't get it then was people above me in seniority had taken the job. But this time, they didn't interview me. . . .
>
> Now the garage mechanic. Yeah. I didn't have on there I had six years' experience. But I was a certified mechanic and a certified motorcycle mechanic. That right there in itself should tell you that you do not get your certifications unless you do a little hands on work.
>
> I could not even get an interview. So I guess a man has to be just an out and out genius. But I guarantee you if you go and pull the two people who did get the jobs information, that neither of them are certified mechanics either.
>
> So what it boils down to is, hey, them not letting me come back to work. Granted with the disease I have now, who knows if I could have worked and we'll never know. That's just plain and simple.
>
> I tried to come back to work. I made an effort at it. But like I said, I was blocked. And I find it just unusual the way I was blocked because the time that I'd been in that building, I had never seen a medical review ever used before.

Tr. at 283-84. He disputed that he pressured his personal physician to release him to return to work. Tr. at 245.

IV. Analysis

A. The Complaint was Timely Filed

In its submissions, BWXT contends that the individual's complaint of retaliation was not timely filed. Part 708 provides that "[y]ou must file your complaint by the 90th day after the date you knew, or reasonably should have known, of the alleged retaliation." 10 C.F.R. § 708.14(a). The complaint was filed on October 20, 2003. The Complainant was placed on long-term disability on January 8, 2003.

In a 2003 decision, a Hearing Officer discussed the relevant regulatory language, and whether and under what circumstances complaints filed more than ninety days after a

retaliation can be considered as timely filed under Part 708. He found that the complainant should be allowed sufficient time to recognize that a personnel action taken by management was indeed retaliatory in nature. *See Steven F. Collier* (Case No. VBH-0084), 28 DOE ¶ 87,036 at 89,257 (2003); *see also Gary S. Vander Boegh*, 28 DOE ¶ 87,040 at 89,283-84 (2003)(certain personnel actions, while not regarded as neutral in their impact by the complainant, were not so overtly punitive in nature that a reasonable person "should have known" that they were Part 708 retaliations at the time that they took place). This is because employees often are not familiar with the way that personnel decisions are made and find it difficult to determine whether a negative action concerning a request is retaliatory and when a lengthy delay in providing a promised benefit becomes a determination to deny that benefit.

In the present case, the severity of the personnel actions raised by the Complainant escalated over time. I must determine at what point after the January 8 action the Complainant, as a reasonable person "should have known" that the action taken against him were a Part 708 retaliation. I must consider the Complainant's state of mind in order to determine when he knew or should have known that a Part 708 retaliation had taken place, and to measure the ninety-day filing requirement from that time.

During questioning by the attorney for BWXT, the Complainant stated that prior to filing the written statement on October 20, 2003, he met with a number of people at DOE trying to resolve the situation. Tr. at 261. During January 2003, he "went to the Federal Building" to rectify the situation and get his job back. Tr. at 261. Section 708.14(d) of the regulation states that

> [i]f you do not file your complaint during the 90-day period, the Head of Field Element or EC Director (as applicable) will give you an opportunity to show any good reason you may have for not filing within that period, and that official may, in his or her discretion, accept your complaint for processing

10 C.F.R. § 708.14(d). I therefore believe that because the actions increased over time the Complainant was not fully aware that BWXT's unwillingness to allow him to return to work constituted a retaliation until the summer of 2003.

The record indicates that BWXT did not raise the timeliness issue with the Employee Concerns Manager when notified of the filing of the complaint, 10 C.F.R. §708.16(a), and at no time during the investigation was the issue raised. Instead, BWXT did not raise this issue until just prior to the hearing. Accordingly, I find that the complaint was timely filed in accordance with the provisions of 10 C.F.R. § 708.14 and will consider the merits of the complaint.

B. Whether the Complainant Has Met the "Contributing Factor" Test

Under 10 C.F.R. § 708.29, the Complainant must show that his protected disclosures were a *contributing factor* with respect to a particular adverse personnel action taken against him. *See Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 (1994). A protected disclosure may be a contributing factor to an adverse personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990). *See also Russell P. Marler, Sr.*, 27 DOE ¶ 87,506 at 89,056 (1998).

I conclude that the Complainant has established by a preponderance of the evidence that his protected disclosures were contributing factors to the personnel actions. I base this conclusion on a finding that there are both knowledge and proximity in time between the protected disclosures made by the complainant and his allegations of retaliation.

With respect to knowledge of the disclosures, the Complainant made many disclosures to his supervisors, including meeting with the Division Manager in September 2001. Clearly, the Complainant's supervisors, who were responsible for the actions taken against him, had actual knowledge of these disclosures. Indeed, BWXT admits that the Complainant's supervisors had actual knowledge of the disclosures the Complainant repeatedly made.

With regard to timing, the most obvious of the disclosures took place in September 2001. The first alleged retaliation taken against the complainant occurred in October 2001, with him being coached and counseled for sleeping while on duty. I conclude the disclosures were a contributing factor to an alleged ongoing retaliation. See *Jimmie L. Russell*, 28 DOE ¶ 87,002 at 89,014 and 89,025-26 (2000) (protected disclosure found to be contributing factor when it occurred proximate in time to the beginning of an ongoing retaliation).

Accordingly, with respect to the alleged retaliations, I have determined that the Complainant has shown by a preponderance of the evidence that adverse personnel actions took place and meet the criteria under Part 708.

C. BWXT's Showing

Given that the Complainant has made his showing, BWXT must demonstrate by clear and convincing evidence that it would have taken the same personnel actions absent the protected disclosures. *See* 10 C.F.R § 708.29. As discussed below, I find BWXT has made that showing.

1. Counseling for Sleeping While on Duty

While the Complainant denies that he was sleeping while on duty, the weight of the testimony and evidence persuades me that BWXT was justified in coaching and counseling the Complainant for sleeping while on duty. The coaching and counseling the Complainant received is the lowest level of discipline possible. Tr. at 157; BWXT Ex. 13 at 2. There was testimony by the Labor Relations Representative that coaching and counseling is not actually discipline. Tr. at 157. The coaching and counseling were not made part of the Complainant's employment record. BWXT showed that the Complainant received less discipline than most employees found sleeping while on duty. I believe BWXT took the same action against the Complainant for sleeping while on duty that it would have taken absent his disclosures.[6/]

2. Not Being Interviewed for Two Job Applications

The Complainant did not receive interviews for two jobs that he applied for in early 2002. BWXT provided significant evidence that the Complainant did not have the requisite experience on his resume for either position.

The evidence indicates that both job postings specified the specific necessary qualifications. BWXT Exs. 20, 21. The evidence further indicates that the Complainant's resume on file at the time he applied for both positions did not contain the necessary qualifications. BWXT Ex. 22. I found the testimony of the Staffing Manager and the two persons responsible for choosing who would be interviewed convincing. All three testified that they did not believe the Complainant's resume showed he had the minimum qualifications for the positions. Tr. at 199, 207, 212.

Further, the Staffing Manager and the two people responsible for deciding who to interview and hire all confirmed that they did not know that the Complainant had made protected disclosures and they did not speak to anyone in the Complainant's management team. Therefore, I find there is a clear and convincing demonstration that the Complainant's lack of experience made him unqualified for either position. Therefore, I am convinced he would not have been interviewed absent the protected disclosures.

3. Pattern Absence Letter

The Complainant received a pattern absence letter on May 17, 2002. BWXT has shown that pattern absence letters were routinely issued to employees. The evidence indicated that

---

[6/] In any event, since there is nothing in the Complainant's permanent record to show that he was coached and counseled, Tr. at 157, there is no remedy that we can provide.

the Complainant's pattern of absences were more severe than some employees that received such a letter. The Labor Relations Representative reviewed the Complainant's absence chart and convinced me that a very definite pattern of absences prior to a holiday, scheduled day off or weekend could be seen in the Complainant's absences. BWXT presented 31 examples of pattern absence letters that had been presented to other employees. The Labor Relations Representative's testimony convinces me the Complainant had a pattern of absences and that BWXT would have issued the pattern absence letter to the Complainant absent his protected disclosures.

4. Being Placed on Long-Term Disability

BWXT placed the Complainant on long-term disability when they were unable to find a position for him with the work restrictions placed by the BWXT medical department on his return. BWXT showed that the medical department had reasonable concerns about the Complainant's ability to do strenuous work. The Complainant admitted to the Staff Clinical Psychologist that he had pressured his personal physician into releasing him to work. The Complainant now denies that he made this statement, but I found the Staff Clinical Psychologist more convincing on this matter. The Staff Clinical Psychologist further testified that the Complainant had symptoms that concerned him, such as night sweats which keep him from sleeping and causing him to be extremely fatigued during the following day.

The Complainant argues that he should have been allowed to return to work with the work restrictions specified by the medical department. The Complainant argues there are jobs that he could perform with his work restrictions.

The Complainant believes many people work at BWXT with more restrictions than his. BWXT presented evidence that the restrictions under which he would have had to work would have made it impossible for him to work as a chemical operator. The Complainant attempted to find another position with BWXT but could not. He does not argue that the company was required to find a position for him or had done that in the past. Therefore, I find that BWXT has shown by clear and convincing evidence that it would have taken the same action absent the Complainant's protected disclosures.

V. Conclusion

The Complainant made protected disclosures by reporting safety and health violations. The Complainant has shown by a preponderance of the evidence that BWXT took adverse personnel actions against him and that his protected disclosures were a contributing factor in those actions. However, BWXT has shown by clear and convincing evidence that it would have taken the personnel actions absent his protected disclosures.

Accordingly, I will deny Mr. Tucker's request for relief under 10 C.F.R. Part 708.

It is Therefore Ordered That:

(1) The complaint for relief under 10 C.F.R. Part 708 submitted by Franklin Tucker, OHA Case No. TBH-0023, is hereby denied.

(2) This is an initial agency decision, which shall become the final decision of the Department of Energy unless, within 15 days of issuance, a notice of appeal is filed with the Office of Hearings and Appeals, in which a party requests review of this initial agency decision.

Janet R. H. Fishman
Hearing Officer
Office of Hearings and Appeals

Date: April 9, 2007

October 27, 2005

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: **Clint Olson**

Date of Filing: **April 12, 2005**

Case Number: **TBH-0027**

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Clint Olson (also referred to as the complainant or the individual) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant is an employee of BWXT Pantex (BWXT), the Management and Operations Contractor at the DOE's Pantex Plant in Amarillo, Texas. From July 1999 until November 2004, he was employed as a counter-intelligence officer (CIO) at the plant. On March 15, 2004, he filed a complaint of retaliation against BWXT with the Manager of the Employee Concerns Program (Employee Concerns Manager) at the DOE's National Nuclear Security Administration Service Center (NNSASC). In his complaint, the individual contends that he made certain disclosures to officials of BWXT and the DOE, and that BWXT retaliated against him in response to these disclosures.

I. Summary of Determination

In this Decision, I first provide background information concerning the Part 708 program,. I then discuss the filing and the development of the issues raised in the individual's Part 708 Complaint, focusing on the Office of Hearings and Appeal's Report of Investigation and the parties' subsequent efforts to frame issues for the Hearing. I then present the relevant testimony provided at the Hearing. Next is my analysis of this complaint, beginning with a discussion of the legal standards governing this case. With regard to the issues raised in this proceeding, I first find that the Complainant's filing of his Part 708 complaint was timely. I then find that the Complainant made at least two

protected disclosures that are proximate in time to BWXT's decision not to grant comparative salary increases to his working group (the adverse personnel action). I further find that the Complainant has shown by a preponderance of the evidence that BWXT's decision not to grant the comparative salary increases in March and April 2002 constitutes a retaliation against him under Part 708. Under these circumstances and in light of the DOE's strong commitment to defending whistleblowers against adverse personnel actions, Part 708 imposes the significant requirement that BWXT show by clear and convincing evidence that, in the absence of the Complainant's protected disclosures, it would have taken the same personnel action against the Complainant.

Ultimately, I find that BWXT failed to establish by clear and convincing evidence that it would not have granted the comparative salary increases in 2002 in the absence of the Complainant's protected disclosures. Accordingly, I find that BWXT should be required to take restitutionary action.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from adverse personnel actions by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not take any adverse personnel action against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation; or a substantial and specific danger to employees or to public health or safety. See 10 C.F.R. § 708.5(a)(l), (2). Employees of DOE contractors who believe that they have made such a disclosure and that their employer has taken adverse personnel actions against them may file a whistleblower complaint with the

DOE. As part of the proceeding, they are entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they are entitled to an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. History: The Individual's Part 708 Complaint and the Identification of Relevant Issues for the Hearing

The Complainant filed his Part 708 complaint with the Employee Concerns Manager at the NNSASC in March 2004.1/ On January 5, 2005, the Employee Concerns Program Manager forwarded the complaint and other filings tendered by BWXT to the OHA Director. The OHA Director appointed an Investigator on January 11, 2005, and on April 12, 2005, she issued a Report of Investigation (ROI) concerning the complaint.

In the ROI, the Investigator conducted an initial factual and legal analysis of the complainant's claims and made some preliminary determinations concerning possible protected disclosures and adverse personnel actions that may have been retaliatory. Following my appointment as Hearing Officer in this matter on April 14, 2005, I directed the complainant and BWXT to submit briefs focusing on the findings and conclusions in the ROI that they intended to dispute at the Hearing.2/ At a June 20, 2005 telephone conference call, the complainant's counsel indicated that

---

1/ On June 22, 2004, the Employee Concerns Manager dismissed the complaint on the grounds that it failed to meet the requirements of the Contractor Employee Protection Program. The Complainant appealed this dismissal to the OHA, and in an August 2004 decision, the OHA granted his appeal and remanded his Part 708 complaint to the Employee Concerns Program Manager for further processing. *Clint Olson (Case No. TBU-0027)*, 29 DOE ¶ 87,002 (2004).

2/ In this regard, I noted that while the ROI has made certain findings, I would be conducting an independent review of the issues. In making my findings, I stated that I would be most convinced by the best available evidence. April 14, 2005 letter to the parties at 2.

he did not intend to pursue some of the alleged protected disclosures and alleged retaliations discussed in the ROI and agreed to their dismissal. In light of the agreements reached during that conference call, I issued a June 22, 2005 letter to the parties indicating that the Hearing in this matter would address the following protected disclosures:

> The complainant's alleged disclosures concerning the security incident that occurred at Pantex in 2002 with regard to a missing classified hard drive (referred to in the ROI as the 2002 Incident). Specifically, the complainant's first alleged protected disclosure occurred on or about February 28, 2002 when he allegedly conveyed his belief to his supervisor at that time (the former Senior CIO) that BWXT personnel were grossly negligent in the handling of a classified hard drive and that BWXT's [Security Incident Report] contained false statements regarding the destruction of the classified hard drive. The complainant's second alleged protected disclosure occurred on or about March 4, 2002 when he allegedly told BWXT's Safety, Security & Planning Manager at that time (the former SS&P Manager) that contrary to BWXT's [Incident] Report, no evidence existed which confirmed the destruction of the classified hard drive and explained to her that providing a false report regarding the destruction of the hard drive would violate federal law.

In my letter, I dismissed the other alleged disclosures.

Hereinafter, the February 28, 2002 and the March 4, 2002 alleged disclosures will be referred to collectively as the February 2002 disclosures. With regard to alleged retaliations, I stated that the Hearing would address only the complainant's allegation that BWXT retaliated him by taking no action on a pending request made by the former Senior CIO for comparative salary increases for employees in BWXT's Counterintelligence Unit (CIU).3/

3/ Testimony at the Hearing also addressed the timeliness of the individual's filing of his Part 708 Complaint. In its Reply brief, BWXT contended that the complaint was not timely filed because the individual should have known no later than the summer of 2002 that the former Senior CIO's request for a comparative salary increases for the CIU had been rejected by

(continued...)

III. Hearing Testimony

At the Hearing, testimony was received from twelve witnesses. The complainant testified and presented the testimony of BWXT's former Senior CIO Curtis Broaddus (the complainant's supervisor), the DOE's former SS&P Manager at Pantex, a Special Agent with the Federal Bureau of Investigation (FBI), the Chief of the Office of Defense Nuclear Counterintelligence (the Defense Nuclear CI Chief), BWXT's former Human Relations Compensation and Employment Manager John T. Merwin (the former HR Compensation Manager), and BWXT's current Compensation Manager Richard E. Frye. BWXT presented the testimony of BWXT's current Senior CIO Darlene Holseth, the DOE's Assistant Site Manager, Safeguards & Security, for the Pantex Site Office (the DOE Assistant Site Manager), BWXT's Division Manager for Safeguards & Security Alexander Sowa (BWXT's current S&S Manager), BWXT's former General Manager Dennis Ruddy, and BWXT's current General Manager Michael Mallory. The Hearing testimony summarized below concerns the complainant's alleged disclosures and the alleged retaliation. Testimony concerning the issue of timeliness of the individual's filing of his Part 708 Complaint is discussed in the section of my analysis dealing with that issue.

A. The Complainant's Witnesses

1. The Complainant

The complainant testified that he started working at Pantex as a security police officer in 1992. From July 1999 until November 2004, he worked at the Pantex facility in the CIU and completed his CIO training in 2001. TR at 276-277, 291.4/ He testified that the CIU regularly received incident reports prepared by BWXT Security concerning security infractions at the Pantex facility. The CIOs reviewed these reports to see if they raised any counterintelligence issues. TR at 283.

3/ (...continued)
BWXT management. Counsel for the complainant responded that he intended to present evidence that the individual did not learn that the request for comparative salary increases had been rejected until 2004. In a June 24, 2005 email to the parties, I permitted testimony at the Hearing on this issue.

4/ The complainant testified that he now works in BWXT's Classification Department at the Pantex facility. TR at 290.

a. The February 2002 Protected Disclosures

The complainant stated that in February 2002, he and another CIO reviewed a Security Incident Report that discussed a missing classified hard drive (hereinafter the "Incident Report").5/

The Incident Report contains a one page "Inquiry Summary Report" that provides a description of the security incident and the investigation by BWXT Security, and presents BWXT Security's conclusions concerning the security incident (the Incident Report Conclusion). The Incident Report Conclusion states that an "Accountable Secret RD hard drive containing Sigmas 1 and 15 was destroyed without proper documentation or witness." The Incident Report Conclusion states that in early February 2002, BWXT Security officials conducted an inquiry to confirm the location of the hard drive. The Security officials were told by the user of the hard drive that he gave it to his supervisor for destruction several months earlier. The subsequent investigation and the conclusions of BWXT Security are described as follows:

> **Repositories were re-checked to confirm that the hard drive had not been misplaced or overlooked. Signed statements were received, stating that although [the hard drive user] was aware of [Secret Accountability System] handling and destruction procedures for accountable matter, it had simply slipped his mind and the hard drive had been included with others for destruction. Some time after August 2001, several classified hard drives had been picked up by Electronics for disassembly; then taken to the Data Center for degaussing.**
>
> **During the investigation, records were retrieved to support the degaussing and to confirm proper destruction methods for classified information had been applied. It was determined that no compromise of classified information had occurred.**

Incident Report Conclusion, included in complainant's June 14, 2005 submission of documents at p. 00006.

At the Hearing, the complainant testified that when he and the other CIO reviewed the Incident Report in February 2002, they

---

5/ A copy of this report was submitted by the complainant's counsel.

concluded that the facts in the Incident Report did not support the report's conclusion that the missing classified hard drive had been destroyed. They immediately decided to bring their concern that the Incident Report Conclusion was inaccurate to the attention of their supervisor. The complainant testified

> At first I was kind of timid to go in [to the complainant's supervisor's office], because we had two Headquarters people there. But myself and [another CIO] looked at this Security Incident Report and thought that there was some anomalies with it, so we took it to [the complainant's supervisor] and said "we've got some anomalies with this incident. It's closed out already by [BWXT] Security, but to me there looks like there's some misleading statements involved with this incident."

TR at 279-280.6/ Specifically, the complainant reported to his supervisor that "there's no proof that his hard drive was destroyed. The numbers do not match." He stated that none of the identifying numbers on the missing hard drive matched any of the numbers on the list of hard drives that were listed in the Incident Report as having been destroyed. TR at 285.

The complainant also pointed out to his supervisor that any computer hard drive with Secret Accountability System data is required to have a "fluorescing yellow or other sticker about three inches-by-three inches placed on it" which is "very, very visible." TR at 286-287. The Incident Report stated that hard drive user's supervisor did not recall seeing any Secret Accountability System material in the batch of hard drives that he turned in for destruction. The complainant concluded that there's no way to know if the classified hard drive was destroyed. TR at 287.

The complainant also pointed out to his supervisor that the only piece of evidence that the missing hard drive was destroyed was an unconvincing statement made to BWXT Security by the hard drive user's supervisor. That supervisor had asserted that because the missing classified hard drive could not be located in the "two places that I keep these hard drives," that he felt "quite sure" that the hard drive was in the group that he sent to be destroyed.

6/ The complainant's supervisor testified that this meeting probably took place on Friday, February 22, 2002, the day that the Incident Report was issued, and a copy was sent to the CIU. TR at 231 and 242.

TR at 300-301 *citing* supervisor's statement in the Incident Report. Finally, the complainant pointed out to his supervisor that there was no evidence for the destruction of the classified hard drive because security procedures requiring media custodians to witness the degaussing of classified hard drives had not been followed by BWXT's Data Center. TR at 306-307.

The complainant testified that during the February 2002 meeting in which the disclosures were made, two DOE officials were present in the complainant's supervisor's office, and that they took part in the conversation. TR at 288-289. The complainant stated that his supervisor reviewed the Incident Report and agreed with the complainant's conclusion that there was insufficient evidence to support the Incident Report's conclusion that the classified hard drive had been destroyed. The complainant stated that the three CIOs developed a plan of action to conduct a preinquiry to ascertain if the missing classified hard drive raised any counterintelligence issues. TR at 280. Specifically, he testified that the CIU opened its preinquiry in order to look at the possibility of a foreign nexus concerning the missing classified hard drive. Opening a preliminary inquiry enabled the CIU to pull records and see if the user of the missing hard drive or his supervisor reported any foreign contacts or were involved with any joint-operation working groups with other countries under the Mutual Defense Agreement. TR at 295-296.

Shortly after opening this preinquiry, the complainant indicated that he and his supervisor met with the former SS&P Manager and talked to her about the matter. He stated that at this meeting, he told the former SS&P Manager that the Incident Report Conclusion's findings that the hard drive was destroyed and that there was no possible compromise of classified information were misleading. TR at 281 and 289. He stated that the SS&P Manager sent an email to him the following day, March 5, 2002. The former SS&P Manager's email reads in part:

> A meeting was conducted Monday afternoon to discuss the hard drive situation which occurred during the Aug-Oct timeframe of last year. I briefed [former General Manager Ruddy] and [General Manager Mallory] after that meeting. The BWXT process as a whole is broken and this meeting is needed to follow up on corrective actions and determine if other actions are necessary.

March 5, 2002 Email from the SS&P Manager to the complainant, attached to complainant's June 14, 2005 submission at p. 00013.

b. The Alleged Retaliation

The complainant testified that prior to February 2002, he was expecting either comparative salary increases and/or promotions for persons working in the CIU at Pantex. He stated that the complainant's supervisor had informed members of the CIU of statements made by the former BWXT General Manager about increasing compensation levels for the CIU. The complainant's supervisor told the complainant that he met with BWXT's former General Manager Ruddy and with the former Defense Nuclear CI Chief during her visit to the Pantex facility in early January of 2002, and that he used the opportunity of this meeting to raise the issue of comparative salary increases for the CIU. TR at 309. The complainant was told that at this meeting, the former BWXT General Manager stated that he would work on providing raises or promotions for employees in the CIU. TR at 309.

The complainant also testified that he was aware of a follow up letter from the Defense Nuclear CI Chief to the former BWXT General Manager thanking him for the meeting and thanking him for working out the salary issues with the Pantex CIU. TR at 309.

> **I greatly appreciate your support for the [complainant's supervisor] and the Pantex Counterintelligence Program. And I also appreciate your support in rectifying the salary shortfalls we discussed. We at Headquarters are prepared to provide the dollars to support increases just as soon as we get the word.**

January 13, 2002 letter from the Defense Nuclear CI Chief to the former BWXT General Manager, attached to the complainant's June 14, 2005 submission at p. 00003. The complainant indicated that in late 2001 and early 2002, the BWXT Office of Human Resources had asked the complainant's supervisor to go out and collect salary data from other DOE complexes to justify the comparative salary increases that he was requesting. He stated that they informed the complainant's supervisor that any raises for the CIU had to be deferred until the following year because the budget already was finalized. TR at 324-325. The complainant also stated that he was told that the BWXT official who was working on the CIU's comparative salary increases had been terminated, and the comparative salary increases were delayed until the new official could study the issue. TR at 315.

The complainant testified that he did not file a Part 708 Complaint prior to March 2004 because throughout this period the CIU

employees were told that the complainant's supervisor was still working on the raise issue. TR at 314. When he was asked what precipitating event caused him to file his Part 708 Complaint in March 2004, the complainant referred to a December 2003 meeting with General Manager Mallory and the complainant's supervisor that involved an issue that he is not currently pursuing as part of his Part 708 Complaint. TR at 318.

The complainant testified that during the period from 2002 through 2004, he received annual cost-of-living and merit pay increases, but that these raises did not address the CIU's compensation disparity with other DOE facilities. TR at 311-314. He stated that more than two years later, in the middle of 2004, BWXT's current Compensation Manager conducted a comparative analysis of CI salaries in different DOE facilities and identified an obvious disparity in the salaries being paid to employees of the Pantex CIU. TR at 310.

2. The Complainant's supervisor

a. The February 2002 Protected Disclosures

The complainant's supervisor testified that in February 2002, he was conducting a program review with two visitors from the DOE Office of Counterintelligence when the complainant and another CIO at the Pantex CIU came into the office. He stated that they told him that they had reviewed the Incident Report concerning the missing classified hard drive and that they had concerns about the destruction of the classified hard drive. TR at 224. The complainant's supervisor testified that the complainant detailed a couple of things.

> He said, "they've lost complete control of that drive." He said, "And there's no evidence that the drive has been found at all." And he said, "Additionally, . . . the statements that are being made by Security relating to the destruction of that drive, aren't right. There's no way they could have made those assumptions."

TR at 227. He stated that the complainant and the other CIO pointed out to him that the facts in the Incident Report did not support the statement in the Incident Report Conclusion that "no compromise of classified information had occurred." TR at 227-228.

The complainant's supervisor testified that he shared the complainant's concerns. He stated that because the classified

hard drive contained Secret Accountability System material, it was labeled with a special sticker and required a special chain of custody and special destruction processes. TR at 232-234. He stated that both the user of the hard drive and his supervisor knew the rules

> and yet they didn't follow the rules with some very highly classified data.

TR at 234. The complainant's supervisor stated the incident involving the missing hard drive indicated that the user of the classified hard drive and his supervisor had failed to follow security procedures. He also believed that the Incident Report Conclusion

> would lead people to believe that there was direct evidence that the drive was destroyed, and that direct evidence has, to my knowledge, never been developed.

TR at 239. He said that he disclosed his beliefs about the actions of these BWXT employees to the two DOE officials who were present in his office on February 22, 2002. TR at 239-240. He also contacted DOE Headquarters and notified an official there that he was opening a Preliminary Inquiry regarding the incident. TR at 241. The complainant's supervisor stated that in the next several days he informed several BWXT officials, an official of the FBI, and the DOE's Assistant Manager for Safeguards & Security at the Pantex Site that he believed that BWXT employees had failed to protect the classified hard drive and that the finding in the Incident Report Conclusion that the classified hard drive had been destroyed was unsupported. TR at 244-246.

He testified that the complainant and he met with BWXT's former SS&P manager. He stated that she had been put in charge of doing a "lessons learned" review of what had happened in the breakdown of the system. He stated that they told the former SS&P manager that there was no evidence to support that the classified drive had ever been destroyed, that there was a failure to protect and account for the classified hard drive, and that the findings in the Incident Report Conclusion were unsupported. TR at 251-252.7/

7/ The complainant's supervisor also indicated that on March 19, 2003, the CIU put its investigation of the 2002 incident in abeyance because it had determined that their was no evidence

(continued...)

b. The Alleged Retaliation

Regarding the issue of comparative salary increases for the CIU at the Pantex facility, the former BWXT Senior CIO stated that he attended a meeting in about November 2001 attended by the former BWXT General Manager and the Defense Nuclear CI Chief. He stated that at this meeting, the Defense Nuclear CI Chief told former General Manager Ruddy that the CI program at Pantex was direct-funded and that she would provide the funding to bring the salaries of the four BWXT CIU employees up to a comparable level with CIUs at other DOE facilities. He stated that the General Manager then said to her:

> **It's direct-funded. This is a no-brainer. I'll have one of my people get with you.**

TR at 252.

The complainant's supervisor testified that after he disclosed his concerns about the 2002 incident and the Incident Report, it became "harder and harder to get things done." He indicated that his ongoing project to increase salaries for the CIU suddenly stalled. He said that he had been asked by BWXT's former HR Compensation Manager to get points of contact at different DOE sites so that HR could make salary comparisons. At some point after the disclosures were made, he was informed by the HR Compensation Manager that there would be no raises for the CIU at that time, and that he did not believe that such raises would be made in the future. TR at 259.

3. The DOE's former SS&P Manager at Pantex

The DOE's former SS&P Manager at Pantex testified that she does not recall whether she met with the complainant and the complainant's supervisor concerning the 2002 Incident.

> **I went back and looked and saw an appointment, but I do not remember physically meeting with them. . . .**

7/ (...continued)
of a foreign nexus in the loss of the classified hard drive. TR at 257. He stated that he put the CIU case in abeyance in order to allow BWXT Security to continue to do its job, and because "at that time [the CIU] did not know what their final conclusion was going to be." TR at 254.

> There was a meeting on the hard drive and there were lots of people there, and it very well could be that [the complainant and the complainant's supervisor] were in that meeting, and that may be the meeting in question. But I just don't remember who all was in that meeting.

TR at 593. She stated that other individuals involved with the 2002 Incident were aware of the concerns expressed by the complainant and the complainant's supervisor, and repeated these concerns to her. She testified that she was aware in March 2002 that the complainant and the complainant's supervisor were concerned that there was no evidence of destruction of the classified hard drive, but that

> I don't know that they personally told me whether they had that question.

TR at 594.

The DOE's former SS&P Manager testified that she recalled briefing former BWXT General Manager Ruddy and current General Manager Mallory about the 2002 Incident, but that she did not mention the specific concerns of the complainant and the complainant's supervisor to them. TR at 595.

4. The FBI Special Agent

The FBI Special Agent testified that he has been with the FBI for seven years and has been assigned to the Pantex facility since October 2003. TR at 153-154. He stated that when he arrived at the FBI's office in Amarillo, Texas, he reviewed a copy of the Incident Report that had been sent there by the DOE's Assistant Security Manager at Pantex. He stated that when he reviewed the report, he had "some concerns as to the accountability of the classified hard drive." TR at 155. He stated that his FBI office opened an investigation of the matter to determine if classified material had been mishandled, whether there was a possibility of espionage, and whether there would be any criminal prosecution under 18 U.S.C. § 793. TR at 157.

He stated that the decision to open an investigation after reviewing the Incident Report was based on his determination that "there's no document that shows definitively that this hard drive was one of the hard drives that was destroyed." TR at 158.

He testified that the FBI's investigation focused on whether the hard drive was accounted for and whether there was negligence in handling it. He stated that the FBI issued a declassified conclusion that he described as follows:

> The investigation yielded no evidence that proved or disproved the destruction of the Number 492 hard drive, nor could it definitively eliminate all of the possibilities that might explain the inability to account for the Number 492 hard drive.
>
> So basically what this says here is we found no evidence to confirm the destruction of the hard drive, nor did we uncover evidence to the contrary, that it had not been destroyed. Therefore, we have no reason to conclude anything other than the Inquiry Report, other than that it was destroyed.

TR at 160. He stated that the FBI's finding differed from the finding in the Incident Report Conclusion because it acknowledged the possibility that "something else" could have happened to the classified hard drive. TR at 161.

The FBI Special Agent testified that the FBI routinely looks at incidents of security concern involving classified information to see if there has been a violation of law. TR at 167-168. In this instance, he stated that the FBI did not make any referrals for prosecution based on allegations of willful misconduct committed by those who were involved with the loss of the hard drive. TR at 168. He also indicated that the FBI found no evidence of a foreign nexus or gross negligence in the matter. TR at 168-169.

5. The Defense Nuclear CI Chief

The Defense Nuclear CI Chief testified that she has held her current position for four years, and that previously she served as the Deputy for CI at the DOE. She stated that the Office of Defense Nuclear CI has under its purview a number of field sites, which includes the CI program at Pantex. She stated that she knows both the complainant's supervisor and the complainant. TR at 180.

a. The February 2002 Protected Disclosures

The Defense Nuclear CI Chief stated that on February 22, 2002, at the request of the complainant's supervisor, Defense Nuclear CI headquarters opened a pre-inquiry into the hard drive matter.

> Because it was a missing piece of classified material, we wanted to determine if there was a foreign nexus. The foreign nexus is what we need to understand or discover in order to open a counterintelligence investigation. So, working closely with my deck officer, . . . [the complainant's supervisor] was instructed to go ahead and look and see if there was a foreign nexus. And he reviewed it to see if there was. Discovering nothing, we closed the case on March 19, 2002, or closed the preliminary look, not a full case.

TR at 187. She stated that because she was aware that the FBI had been informed of the hard drive matter, she wrote a letter to the head of counterintelligence at the FBI informing them that "we see no foreign nexus on this matter; no further actions." TR at 188.8/

She said that initially, the chief issue raised about the hard drive matter was the manner in which it was reported directly to the DOE by the Pantex CIU and Defense Nuclear CI.

> . . . it caused some concern [to BWXT] about [the Pantex CIU] reporting it up through the chain, through me to Headquarters. There seemed to be some concern on [the former BWXT General Manager's] part of why they had to do that . . . .

TR at 191. She stated that she believed that it was appropriate for the complainant's supervisor to report to her his concerns about a missing classified hard drive.

> Whenever you have missing, unaccounted-for classified information, you want to make sure that it didn't go out the door because you had a foreign visitor in last week . . . [or that] the pool of employees who may have had some contact with this thing haven't come across our screen, or the other CI concerns.

8/ She testified that when the FBI opened a preliminary investigation of the hard drive incident in 2003, Defense Nuclear CI opened a case just to track it. This case was closed when the FBI ended its preliminary investigation. TR at 202.

TR at 208. She stated that the complainant's supervisor may have mentioned the complainant as someone who was working on this matter, but "I don't have any recall of it." TR at 209.

The Defense Nuclear CI Chief indicated that she learned "several months later" that the complainant's supervisor had concerns about the [BWXT] review of the 2002 Incident. TR at 191. She stated that he had concerns about the findings presented in the Incident Report Conclusion and that he advised BWXT Security to have it changed.

> **They had an emphatic statement that there was no compromise of classified information, and I think they changed it to the probability that compromise occurred is remote.**

TR at 210-211.

b. The Alleged Retaliation

She stated that in November 2001, she met with BWXT's former General Manager Ruddy and at that meeting she discussed with him the need for comparative salary increases for employees of BWXT's CIU.

> **I told him we were anticipating a counterintelligence inspection in the next year, and there were some concerns about salary parity on a couple of the employees. I told him that if he would look into the matter, I would be willing to provide additional funds if we determined that they were not paid to a level that was comparable or appropriate.**

TR at 182. She stated that BWXT's former General Manager Ruddy responded positively.

> **And he said he would be willing to look into it, but it would make it easy if I was willing to come forward with the money. And that was the end of the conversation on that matter.**

TR at 183.

The Defense Nuclear CI Chief stated that in January 2002, she sent a letter to former General Manager Ruddy discussing comparative salary increases for the CIU employees that the DOE would fund. TR at 185, *citing* "the January 13, 2002 Letter." She testified that she was later notified by the DOE that her proposal to raise the salaries was not appropriate. TR at 185.

6. The Former BWXT HR Compensation Manager

BWXT's former HR compensation manager testified that he held that position from April 2001 until April 21, 2003. He stated that part of his job was to review salary analyses. He stated that the complainant's supervisor contacted him in about May or June of 2001 and said that he felt that levels of compensation in the CIU were below standard. TR at 344. The HR compensation manager stated that he replied that he would have to do some investigation of the CIU's comparative standing, and that currently there was no money available for comparative salary increases. TR at 344. He stated that in the next four or five months, he and the complainant's supervisor looked at compensation for CIUs at Hanford, Savannah River, Los Alamos, and Sandia. TR at 345. He testified that

> **My determination when looking at these numbers that my compensation people put in front of me was that there was room for a ten to fifteen percent adjustment for [the complainant's supervisor]. And I don't recall [for the complainant].**

TR at 345. The former HR compensation manager stated that he was contacted by NNSA's Counterintelligence Headquarters officials three or four times by telephone encouraging him to provide more compensation for the Pantex CIU, although they were reluctant to share comparative salary data with him. TR at 346. He said that in the late Fall of 2001, he informed BWXT's Deputy for HR as well as BWXT's Manager and Deputy Manager that with regard to the Pantex CIU "there's room for increase [in salaries] to bring them more in line with the rest of these [DOE CIUs], based on our philosophy," but that the problem was, at that period of time there was no money available. TR at 351. Around the same time, he also remembers a visit from the Defense Nuclear CI Chief, who said that the DOE could provide the money for comparative salary increases for the CIU. TR at 346-347 and 356. He stated that the DOE loads the money for BWXT in the January timeframe, and that it "was [BWXT's] intention at the time to give those raises." TR at 356. He indicated that BWXT's former General Manager Ruddy initially supported the comparative salary increases for the Pantex CIU, but that he put a halt to any such increases for the CIU in early 2002. TR at 356-357. He stated that he was in General Manager Ruddy's office in early 2002 to inform him that HR was getting ready to "load some increases and some promotional monies."

> **And I remember bringing up the Counterintelligence Group, and [the former BWXT General Manager] was rather colorful**

> in his response. And I won't go into any details as to the kinds of vernacular, but he wanted it stopped dead in the water because of a hard-drive issue, a hard-drive investigation.

TR at 358. He further testified that General Manager Ruddy

> made the comment that he thought it, the [hard drive] investigation was getting – Careful with my words here. - out of control with regards to how he perceived things, and as a result, he was going to work to ruin [the former Senior CIO].

He recalled that the former BWXT General Manager stated on a couple of occasions that increased compensation for the CIU was "not going to happen". TR at 358. He stated that in the March-April 2002 timeframe, General Manager Ruddy asked him if he was required to accept the offer of the Defense Nuclear CI Chief to provide additional monies for the salaries of the Pantex CIU. The former HR compensation manager stated that he told him that it was highly unusual for the DOE

> to look at a contractor and to determine what those salary determinations should be, because we make those salary determinations based on salary studies, and [they] are determinations based across the [DOE] complex.

TR at 366. Nevertheless, he testified that he told the former BWXT General Manager that "it is probably politically astute to make payment and move forward." TR at 366. The former HR compensation manager also stated that General Manager Ruddy told him at about that time that "he wanted [the complainant's supervisor] gone" and that it was the job of the HR manager to get rid of him. TR at 359. The former HR compensation manager replied that he would be willing to search for other positions for the complainant's supervisor across the DOE complex. TR at 359.

7. BWXT's Compensation Manager

BWXT's Compensation Manager testified that he first worked at the Pantex facility in March 2004 when he was hired for his current position. He stated that almost immediately he was asked by the BWXT's current General Manager Mallory to do a comparative salary analysis for the Pantex CIU. TR at 394, 409 and 425. He stated that it took him about two months to conduct this analysis. TR at

426. He indicated that after conducting the analysis, he concluded that the complainant's salary and the other CIU employee salaries were "behind market of the ones that we looked at." TR at 410. He explained that

> When you do a salary band . . . for a certain grade level, you have a range that you can pay within that. And that range is considered to be within market, so the market midpoint is sitting in the middle of that. And typically 20 percent either side of that is deemed acceptable or normal. So you can pay within that salary range or that salary band at that point.

TR at 410-411. He testified that the complainant's salary was 22.8 percent behind the market average in the survey that he conducted. TR at 413. The market average for the complainant's position was $6,965 per month. TR at 585. He stated that he did a complete survey for the three different positions in the Pantex CIU, and that all three were below market. TR at 418-419.

The Compensation Manager testified that in May 2004, he presented the results of the survey to the General Manager Mallory along with the recommendation "to go forward with [comparative salary] increases for the Counterintelligence group." TR at 427. General Manager Mallory approved the implementation of this plan, which was to provide initial comparative salary increases and promotions for the three individuals in the CIU in May 2004, and to continue to provide incremental comparative salary increases on an annual basis for the next three years. TR at 429. Pursuant to this plan, the complainant received an initial comparative salary increase of seven percent on May 24, 2004. TR at 430. The Compensation Manager stated that this seven percent increase "was based on the market adjustment from the information that we provided [from the comparative salary analysis]." TR at 422. The complainant's supervisor received an initial comparative salary increase of three percent on May 24, 2004. TR at 430. Because both the complainant and the complainant's supervisor left their positions at the CIU prior to January 2005, they did not receive the next scheduled comparative salary increase for CIU employees that took place in that month. TR at 431-432.

The Compensation Manager testified that it was not common for this office to conduct an equity analysis for job classifications to the level of detail of his analysis for the CIU positions because "we have market surveys that we rely on for all the information." TR at 587. He also stated that there were no DOE site procedures or

other requirements that compelled BWXT to provide an equity analysis for a particular job at the Pantex facility. TR at 588.

The Compensation Manager stated that he reviewed the complainant's records to see if he received his annual merit pay increases in recent years. He found that in 2000, the complainant received a 7.4 percent increase, in 2001 he received 6.1 percent, in 2002 he received 4.37 percent, in 2003 he received 4 percent. TR at 422. He stated that with respect to these increases, the complainant received at least the average increase for the Pantex site. TR at 423.

B. BWXT's Witnesses

1. BWXT's Current Senior CIO

BWXT's current Senior CIO testified that she has had more than twenty years of experience in intelligence work, and has served as the Senior CIO at Pantex since November 2004. TR at 441-442. She stated that she recently reviewed the CIU's file on the 2002 classified hard drive incident, and described it as follows:

> It was a security incident where a security inquiry was conducted because there was a hard drive that did not have the appropriate documentation that it was or was not destroyed.

TR at 442-443. She stated that in February 2002, the CIU made an initial review of the incident, and after about five weeks this preliminary inquiry was closed when the complainant's supervisor determined that there was no foreign national involvement. TR at 443. She states that the CIU file indicates that the complainant's supervisor briefed the FBI's Supervisory Special Agent in Amarillo about the matter. *Id.* She stated that when the FBI later opened an inquiry into the incident, the CIU followed standard procedure "to monitor and assist [the FBI] in their investigation." TR at 444-445. She testified that the CIU file's only reference to a foreign nexus was "that we were looking into it," and that the file contained no information of theft or other criminal violations. TR at 447. She stated that incidents investigated by the CIU involve either "typically minor" security issues, slightly more serious security infractions, or security violations, where there is a reasonable expectation that classified information may have been compromised. She stated that "beyond that would be criminal behavior [under the] Espionage Act." TR at 448-449. With regard

to the 2002 classified hard drive incident, she stated that the incident involved security infractions.

> Well, my opinion it was a paperwork issue. There was a problem with paperwork; that as far as I have been able to determine, it is not something that was consistently wrong at, at that location. . . . but [the classified hard drive] was unaccounted for. So, infractions were issued to the people who were supposed to have logged in whatever happened to the hard drive.

TR at 450. She concluded that there was nothing in the CIU file to lead someone with counterintelligence training to believe that a criminal act had occurred with respect to the missing hard drive. TR at 453. She also stated that there was no evidence that the two individuals who received security infractions were guilty of gross negligence. TR at 471.

> Gross negligence is something that tends to be a lot more willful. For instance, the hard drive that was missing from Los Alamos, we know that it held very high-level, top-secret information . . . and somebody clearly took it home. . . . That was something that they did on purpose. This appears to be an administrative error, like leaving your safe drawer open.

TR at 486-487.

However, she stated that the possibility exists that the classified hard drive was lost and not destroyed.

> Anything is possible. The probability is that these are a couple of people who forgot to fill out paperwork. However, I don't have the hard drive in front of me. I cannot say definitively that it was not lost.

TR at 457. She therefore agreed that it was reasonable to conclude at the time that the Pantex CIU opened its review that a criminal act *may* have occurred. *Id.* She also stated that the Incident Report Conclusion was inaccurate when it stated that the incident involved no loss or compromise of classified data, because there is no documentation indicating that the hard drive was destroyed. TR at 459.

> I disagree completely with the statement that no loss occurred, or whatever she said in there, to say

> definitively [the hard drive] was destroyed. I mean, there is no way to prove that. You have the testimony of the people given the infractions.

TR at 484. She also stated that the Incident Report Conclusion was inaccurate because under "Determination of Inquiry", it checked a box for "Loss compromise did not occur" when it should have checked "Probability of compromise is remote." TR at 474-475. However, she did not believe that these inaccuracies rose to the level of willful false statements under the Intelligence Act. TR at 476. She also did not believe that either the complainant or the complainant's supervisor, given their CI training and experience, would have reasonably believed that a security violation occurred. TR at 479.

The current Senior CIO testified that the CIU file on the 2002 Incident indicated that the complainant's supervisor made notes of several meetings that he had with BWXT officials concerning issues raised by the Incident Report. Notations on March 1, 2002 indicated that former General Manager Ruddy and current General Manager Mallory were unavailable, and that the complainant's supervisor briefed a BWXT Division Manager and told him that the Incident Report provided no evidence of destruction of the classified hard drive, and that the CIU would treat it as a missing classified document. She stated that later, that day, the file indicates that the complainant's supervisor briefed General Manager Mallory and informed him that the Office of Defense Nuclear Counterintelligence and the FBI would be notified of the incident. TR at 461. She further indicated that the DOE's Assistant Site Manager for Safeguards & Security at Pantex was briefed and agreed to work the case from the security side. TR at 461. She testified that the CIU file indicates that on March 4, 2002, the complainant's supervisor first met with former General Manager Ruddy and informed him that the CIU had concluded from the Incident Report that there was no evidence of destruction of the hard drive. TR at 463. Later that day, the complainant's supervisor met again with former General Manager Ruddy as well as General Manager Mallory, and the former head of BWXT Security and briefed them "on the entire case to date." 462-463.

The current Senior CIO testified that the complainant's supervisor followed procedures in reporting the hard drive incident. However, she stated that she would have urged BWXT Security or DOE Security to make the report to the FBI.

> This was a security incident, and would appropriately have been referred to the FBI from the security apparatus at this facility as opposed to Counterintelligence.

TR at 464. She added that if she had been in the complainant's supervisor's position and security had refused to inform the FBI, then "I would have done it anyway." TR at 464-65.

2. The DOE's Assistant Site Manager for S&S at Pantex

The DOE's Assistant Site Manager for S&S at Pantex testified that he had thirty years of experience in safeguards and security at various DOE sites. He stated that in early 2002, during a BWXT self assessment, a classified hard drive was found to be missing. BWXT notified the DOE immediately and proceeded to investigate the incident. He indicated that about 30 to 45 days later, BWXT Security sent him the Incident Report, which he sent to DOE Headquarters. He also provided notification to the FBI. The Assistant Site Manager stated that he evaluated the Incident Report and thought that the finding that the classified hard drive was destroyed was overstated. TR at 495. He stated that

> The bottom line was that BWXT personnel failed to follow proper procedure in the destruction of the hard drive. As we reviewed that independently, we came to the same conclusion, as did the FBI in their review of the case.
>
> There is a procedure that requires individuals very prescriptively to follow a destruction path for a classified matter, in this case the hard drive. That path, that set of procedures was not followed. The [user of the hard drive] turned his hard drive over to [his supervisor] for destruction. There was no paperwork or change of accountability from that individual to the second individual.
>
> [The supervisor] then, along with a number of other drives, had those drives destroyed by a technician, and there were violations of procedures on both individuals' parts. They failed to follow procedures, and both were assessed by BWXT security infractions for their failure to follow procedures.

TR at 496-497. The Assistant Site Manager stated that he thought that the issuance of security infractions was the appropriate response in this case, and that he saw no information in the

Incident Report to suggest that either of these individuals raised a concern about a foreign nexus or committed gross negligence. TR at 498.

The Assistant Site Manager stated that the DOE "took some issue" with the Incident Report Conclusion's finding that there was no potential for the disclosure of classified information in this incident. TR at 499. He stated that the DOE questioned BWXT Security on the findings in the Incident Report Conclusion. TR at 500.

He stated that it was appropriate for BWXT, the DOE and the FBI to conclude that the drive had been destroyed because there was no evidence of "anything else occurring."

> It was that they just had no evidence; that there isn't noticed evidence that indicates something else happened with this hard drive other than it was destroyed, the procedures were violated and [it] was destroyed.

TR at 513.

The Assistant Site Manager stated that the only evidence for the destruction of the classified hard drive were the statements of the hard drive's user and his supervisor. TR at 538. He testified that the serial number of the missing classified hard drive did not show up either on the list maintained by the supervisor or on any of the degaussing documents. TR at 537. He stated that BWXT attempted without success to connect the degaussed computer platters in their possession to the missing classified hard drive.

> The manufacturer of the cases of the hard drives was contacted in an attempt to associate the platters with the case parts. Additionally, the platters were sent to the cyber forensic laboratory to determine if there was any readable material left on the platters.

TR at 530.

3. BWXT's current S&S Manager

BWXT's current S&S Manager testified that he has worked in security at the Pantex site since 1992 and was the Deputy Manager for Safeguards and Security at the time of the 2002 Incident. TR at 543-545. With regard to the missing classified hard drive, he stated that the problem arose when the user of the hard drive turned

it over to his supervisor without the proper paperwork and without identifying it as "accountable" media. TR at 547.

BWXT's current S&S Manager stated that in 2004, General Manager Mallory asked him to perform an independent review of the Incident Report and to give him the results. TR at 551. He stated that after reviewing the report, he recommended that the conclusion "Loss/Compromise did not occur" be changed to "Probability of compromise is remote." TR at 551-552. He stated that this change was appropriate because it was not possible to "conclusively prove" that the disks that had been degaussed by BWXT in the Fall of 2001 included the missing hard drive.

> Because it was degaussed, and no technology exists to read those disks, while [I am] 99.5 percent certain it occurred, as inquiry officials felt it occurred, we couldn't prove it one hundred percent because we can't read the degaussed disk and say, "Here's [the missing] disk."

TR at 552.9/ He stated that although he recommended changing the conclusion of the Incident Report Conclusion, he did not believe that the Incident Report and the Incident Report Conclusion contained any willful false statements. TR at 552-553. He testified that he did not re-interview the hard drive user or his supervisor because "they were retired, gone, and the FBI was working the case." TR at 558. He stated that he relied completely on the signed statements of these individuals that were in the report. TR at 560. The statement of the supervisor contains the following assertions:

> This being a special marked hard drive, I should have noticed the [Secret Accountability System] marking and handled it as directed in the disposal of [Secret Accountability System] controlled material. I DO NOT REMEMBER seeing this special marking. If [the hard drive user] gave it to me, and I am sure that he did, it was handled as described above. Toward the end of 2001, I had some 40 to 50 hard drives destroyed. I feel quite sure it was in this group.

9/ When asked to clarify what he meant by 99.5 percent certain, he stated "I'm comfortable that the drive was destroyed. That probably is a good way to put it." TR at 568.

Statement of Hard Drive User's Supervisor contained in Incident Report (emphasis in the original).

Finally, he stated that in January 2005, after the FBI concluded its investigation of the matter, he directed that the conclusion of Incident Report Conclusion be changed to fit his recommendation. TR at 578.

4. BWXT's former General Manager Ruddy

Former General Manager Ruddy testified that from February 1, 2001 until January 31, 2003, he was the president and general manager of BWXT, the managing contractor for the Pantex site. TR at 31-34. He stated that during his entire tenure on the site, the complainant's supervisor was his chief counterintelligence officer. TR at 34.

a. The February 2002 Protected Disclosures

With regard to the 2002 Incident, he testified that the missing hard drive raised an issue of accountability for classified information rather than the compromise of classified information.

> And there were quite a few corrective actions put in place to increase the rigor and the accountability of the process, but I think all the evidence, when it was put together, concluded that the issue was an accountability issue and not a compromise issue.

TR at 62. Former General Manager Ruddy recalls that he met with the complainant's supervisor in early March 2002 regarding the hard drive issue, but that his recollection of the meeting "is very vague." TR at 47. He stated that he had been told by "the Government" that a CI investigation of the incident had been opened, and he remembers that he gave the complainant's supervisor some feedback about his expectation that he be notified of CI investigations. TR at 48-49. Former General Manager Ruddy testified that he is certain that the complainant's supervisor explained to him why he felt it was important to open the investigation, but that "really wasn't the important issue."

> I never questioned whether or not a CI investigation should be opened, but just the fact that it had been opened and I wasn't aware of it.

TR at 105. He stated that if he had been absent from Pantex, then the complainant's supervisor should have informed BWXT's assistant general manager on the day that he opened the investigation. TR at 110.

b. The Alleged Retaliation

With regard to the issue of comparative salary increases for the CIU, former General Manager Ruddy recalled meeting with the Defense Nuclear CI Chief in about November 2001 and that during that meeting she made a qualitative statement that the salaries of the CI employees at Pantex were not in sync with the rest of the counterintelligence community. TR at 71. He stated that

> If I had been convinced by information that she provided me that they were seriously out of line, then we would have gone back and, looked at our process by which we slotted those positions to make sure that they were slotted correctly.

TR at 83-84. He stated that any adjustment in salaries would have been incremental, and that he could not recall any instance where an employee of BWXT received more than a fifteen percent raise at one time. TR at 84-85.

He stated that BWXT did not have a general standard of how it wanted the salaries of its employees to compare to what was paid elsewhere. He stated that BWXT performed analyses based on how competitive it was in getting people in various positions and that this standard varied "according to our success in hiring folks and retaining folks." TR at 75.

He testified that when in March 2002 the Defense Nuclear CI Chief sent a letter to Pantex indicating that the DOE would support specific raises for BWXT employees in the Pantex CIU, he referred it to the DOE's site office manager who "took immediate action to have the letter withdrawn."

> . . . he thought it was highly inappropriate, a conclusion that I shared, and it was not the purview of that office or any other office to direct individual salaries.

TR at 36-37. He stated that managing and operating contractors had a responsibility for conducting a process that insured fair compensation to their employees, and that accepting guidance from

the Government would undermine that process and could lead to other groups "petitioning their customer for some special consideration." TR at 108.

5. BWXT's current General Manager Mallory

BWXT's General Manager Mallory testified that he started working at Pantex in February 2001 as BWXT's Deputy General Manager, and has been the General Manager since February 1, 2003. TR at 112-113. He stated that he could not recall whether he met with the complainant's supervisor in March 2002 concerning the hard drive incident. TR at 137. He stated that during the time that he was Deputy General Manager, the complainant's supervisor did not report to him, although he would occasionally attend the Deputy General Manager's staff meetings. TR at 136.

a. The February 2002 Protected Disclosures

He stated that when the classified hard drive incident occurred in February and March 2002, he was not informed directly.

> I don't remember anybody coming to me directly. And I wouldn't have expected them to come to me, because Security, Counterintelligence, none of that reported to me. But certainly as Deputy General Manager, I wanted to know what was going on. And to the best of my recollection, when we heard that there were hard drives unaccounted for, that certainly got my attention.

TR at 121. He stated that the problem was reported in a timely manner to DOE Headquarters, and that BWXT Security completed its evaluation "in a relatively short period of time, less than a week." TR at 132. He stated that the evaluation concluded that it was an administrative issue and that there had been no loss of information.

> That's the reason we filled the report out the way we did, that there had been no loss of information; that we had a situation where they did not follow procedures, and took the drives apart before they could match the specific disks up to a drive. But they had all the different pieces. They's all added up to the right total, and that's why they were coming to that conclusion. And that was the way it sat for several years.

TR at 132. General Manager Mallory testified that he had no recollection of the complainant's supervisor meeting with him on this issue in late February or early March of 2002. TR at 136, 137.

General Manager Mallory stated that he recalled meeting with the complainant's supervisor about concerns over the hard drive incident in late 2003 or 2004. He indicated that at that time the complainant's supervisor expressed the concern that the Incident Report Conclusion

> may have stated too strongly that there had been positively no loss of information.

TR at 116. He described the complainant's supervisor's concern as follows:

> Because the hard drives had been in a vault, but theoretically accessible to someone for a period of time, and since we could no longer take the specific disks and connect them to a specific hard drive because they had been taken apart before the serial numbers had been written down, as best I can remember, [the complainant's supervisor] felt that we had come to too strong a conclusion, and that there was another box on the form that could have been checked that would have said – I'm going to paraphrase here - that it was improbable that there was a loss of information, but it wasn't impossible.

TR at 116. He stated that at that meeting he directed BWXT's S&S Manager to review the matter and that BWXT Security later acted to change the Incident Report's conclusion.

> Since we couldn't match hard-drive case and disks up because they'd been taken apart improperly, to state that there was no compromise of classified information was too strong. And that's why we changed the outcome of the report.

TR at 145.

b. The Alleged Retaliation

On the issue of comparative salary increases for BWXT's CIU, General Manager Mallory stated that he was aware that in 2002 the DOE's site manager at Pantex had taken issue with the efforts of the Defense

Nuclear CI Chief to raise the salaries of the Pantex CIU, and that the site manager sent an e-mail to DOE Headquarters stating that her efforts were inappropriate. TR at 127. He then stated that

> The issue just kind of went away. I don't remember anything after that.

TR at 127. He testified that at a meeting with the complainant's supervisor in 2004, the complainant's supervisor stated that the employees in the CIU were underpaid. TR at 128-129. He stated that at that meeting he directed his HR Manager to look into the matter, and that they conducted "a very thorough study and inquiry." TR at 129. He said that the result indicated that the employees of the CIU were

> probably not underpaid from a salary bracket standpoint, but they are certainly low in the salary bracket compared to places in other parts of the United States.

Id. He stated that the HR Manager told him that

> "We don't have to give them a raise, but it wouldn't be unwarranted to get them higher in their salary bracket."

TR at 129-130. Based on this recommendation, General Manager Mallory testified that he authorized raises for the four employees of the CIU. TR at 130.

IV. Legal Standards Governing This Case

A. The Complainant's Burden

Once it is determined that the complainant has met the procedural requirements for submitting a Part 708 complaint, he must then establish by sufficient evidence that relief is warranted. Specifically, it is the burden of the complainant under Part 708 to establish

> by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing

> evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both the complainant and by BWXT. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

B. The Contractor's Burden

If I find that the complainant has met his threshold burden, the burden of proof shifts to the contractor. BWXT must prove by "clear and convincing" evidence that it would have taken the same personnel actions regarding the complainant absent the protected disclosures. "Clear and convincing" evidence is a more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus if the complainant has established that it is more likely than not that he made protected disclosures that were a contributing factor to an adverse personnel action taken by BWXT, the contractor must convince me that it clearly would have taken this adverse action had the complainant never made this protected disclosure.

V. Analysis

A. The Complaint Was Timely Filed

In its submissions, BWXT contends that the individual's complaint of retaliation was not timely filed. It notes that the Part 708 regulation provides that

> You must file your complaint by the 90th day after the date you knew, or reasonably should have known, of the alleged retaliation.

10 C.F.R. § 708.14(a). As noted above, the complainant filed a complaint of retaliation against BWXT with the Employee Concerns Manager at the NNSASC on March 15, 2004. In his original complaint,

the complainant described efforts by his supervisor and the Defense Nuclear CI Chief to get BWXT's former General Manager Ruddy to agree to comparative salary increases for BWXT's CIU. He stated that BWXT management was "very unhappy" when in February 2002 the BWXT CIU reported its concerns about the 2002 Incident to Headquarters CI and to the FBI. Following the 2002 disclosures, BWXT's management changed its position and acted negatively on the pending issue of comparative salary increases for the BWXT CIU. Complaint at 2.

In its Reply Brief in this proceeding, BWXT contends that the complainant knew as early as the summer of 2002 that his supervisor's efforts to secure comparative salary increases for the CIU (including the salary of Complainant) had failed. It therefore contends that there is no reasonable basis for the complainant to wait until March of 2004 to submit a Part 708 Complaint concerning this alleged retaliation. BWXT Reply Brief at 1.

I reject this argument. In a 2003 decision, a Hearing Officer discussed the relevant regulatory language, and whether and under what circumstances actions more than ninety days old can be considered as retaliations under Part 708. He found that the complainant should be allowed sufficient time to recognize that a personnel action taken by management was indeed retaliatory in nature. *See Steven F. Collier (Case No. VBH-0084),* 28 DOE ¶ 87,036 at 89,257 (2003); *see also Gary S. Vander Boegh*, 28 DOE ¶ 87,040 at 89,283-84 (2003)(*Vander Boegh*)(certain personnel actions, while not regarded as neutral in their impact by the complainant, were not so overtly punitive in nature that a reasonable person "should have known" that they were Part 708 retaliations at the time that they took place). This is because employees often are not familiar with the way that personnel decisions are made and find it difficult to determine whether a negative action concerning a request is retaliatory and when a lengthy delay in providing a promised benefit becomes a determination to deny that benefit.

In the present case, the personnel action raised by the complainant - no comparative salary increases provided by BWXT to its CIU employees in 2002 and 2003 - was not so overtly punitive towards the complainant that a reasonable person "should have known" immediately that it was a Part 708 retaliation. Additional analysis is therefore necessary. Section 708.14(a) of the regulation requires me to consider the evidence in the record, especially evidence as to the complainant's state of mind, in order to determine when he knew or should have known that a Part 708 retaliation had taken

place, and to measure the ninety day filing requirement from that time.

Contrary to BWXT's contention, the complainant's May 24, 2005 Response to the ROI makes no assertion concerning when the complainant realized that BWXT management had decided to take no action on the raises. *See* Complainant's May 24, 2005 Response at 5. In his testimony at the Hearing, the complainant stated that throughout 2002 and 2003 he was told by his supervisor that he was still working with BWXT's Office of Human Resources on the raise issue. He testified that the BWXT Office of Human Resources offered his supervisor a number of reasons for its delay in acting on the requested raises, including the need to collect comparative salary data to justify the increases, the need to defer any raises until the next fiscal year for budgetary reasons, and administrative confusion caused by BWXT's dismissal of the former HR Compensation Manager. TR at 314-315.

The complainant's supervisor testified that following the disclosures concerning the 2002 Incident, he was told by the former HR Compensation Manager that the CIU would receive no comparative salary increases at that time, and that he did not believe that there would be such salary adjustments in the future. TR at 259. However, he did not testify that he shared this information with the complainant. The complainant's testimony indicates that until early 2004 he was told by his supervisor that he was still working on obtaining comparative salary increases for the CIU, and that the process had been delayed by the departure of the former HR Compensation Manager. TR at 314. This departure occurred in April 2003. TR at 342.

The former HR compensation manager testified that in the March-April 2002 timeframe, the former BWXT General Manager stated that he wanted efforts to increase salaries for the CIU "stopped dead in the water." TR at 358. Nevertheless, the former HR compensation manager stated that he continued to push the issue of comparative salary increases for the CIU with BWXT's General Manager and Deputy General Manager until they responded in very direct terms and said, "The issue is dead." TR at 375. However, even after this happened, he told the complainant's supervisor that he would continue "pushing the issue, and try to take a logical approach," but that "some of these decisions are just above my pay rate." TR at 375-376. He stated that "after the mid-February/mid-March time frame," he believed that the complainant's supervisor knew that the former HR compensation manager was powerless to do anything about increasing salaries for the CIU. TR at 376. He stated that he may have had

some conversations with the complainant's supervisor in 2003 regarding comparative salary increases for the CIU, but that his response was that the complainant's supervisor needed "to take this matter up with your boss." TR at 381.

The former HR compensation manager stated that it was not until early 2004, after he had left his position at BWXT's HR and before he returned to BWXT in another capacity, that he disclosed to the complainant's supervisor how former General Manager Ruddy had refused to approve comparative salary increases for the CIU. TR at 371, 387-388.

Based on this testimony, there is no indication that the individual should have realized that his failure to receive a comparative salary increase was a retaliatory act more than ninety days prior to the filing of his Part 708 Complaint. I find that it was reasonable for the complainant to accept the explanations offered to him by his supervisor in 2002 and 2003 that BWXT's Office of Human Resources was still considering comparative salary increases for the CIU and that the increases had been delayed for legitimate administrative reasons. The testimony of the complainant's supervisor and the former HR Compensation Manager indicates that although the supervisor was aware that the process had stalled in early 2002, he continued to receive some assurances that it remained in consideration after that time, and that he did not learn of former General Manager Ruddy's 2002 decision to deny consideration of comparative salary increases for the CIU until early 2004.

Moreover, BWXT has failed to bring forward convincing evidence for its position on this issue. It has not provided evidence that the complainant or his supervisor were told that BWXT had definitively rejected comparability raises for employees in the CIU. In his testimony, former General Manager Ruddy stated only that he thought it was inappropriate for the Defense Nuclear CI Chief to suggest specific raises for employees in BWXT's CIU. TR at 36-37 and 108. He indicated that any comparative salary increases should be based on BWXT's own analyses. TR at 44. He further stated that at no time did he direct the former HR Compensation Manager to cease looking at a salary review for the CIU. TR at 45.

Accordingly, I find that the individual's March 2004 filing of his Part 708 Complaint was timely filed in accordance with the provisions of 10 C.F.R. § 708.14(a).

B. The Complainant Made Protected Disclosures

As noted above, in order for the information that the complainant disclosed to his supervisor and to DOE officials to constitute a protected disclosure under Part 708, the complainant must reasonably believe that the information reveals one of the following:

> **(1) A substantial violation of a law, rule, or regulation;**
>
> **(2) A substantial and specific danger to employees or to public health or safety; or**
>
> **(3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority . . .**

10 C.F.R. § 708.5(a)(l), (2) and (3). Throughout this proceeding, the complainant has contended that his disclosures regarding the 2002 Incident were protected because they revealed substantial violations of law under 10 C.F.R. § 708.5(a)(1). Specifically, he asserted that the BWXT employees who handled the classified computer hard drive were grossly negligent when they ignored required procedures for recording the hard drive for collection and destruction. He also asserted that the BWXT's Inquiry Official committed gross negligence or made false statements when she concluded in the Incident Report Conclusion that the classified hard drive had been accounted for and that no compromise of classified information had occurred.

After reviewing the testimony and other evidence in the record of this proceeding, I find that it is not necessary to examine the motives and intent of the Inquiry Official and the BWXT employees who handled the classified hard drive in order to find that the complainant's disclosures are protected under Part 708. As discussed below, I find that the missing classified hard drive contained highly restricted classified nuclear information. The complainant disclosed on two occasions that the findings contained in the Incident Report Conclusion were inaccurate, and that this hard drive and its information could not definitely be identified as having been destroyed. His disclosure that BWXT had failed to properly account for this information was the disclosure of "a substantial and specific danger to employees or to public health and safety" protected under Part 708.

1. The Complainant Made Disclosures Concerning the Classified Hard Drive on Two Occasions

The complainant testified that after he and another CIO reviewed the Incident Report in February 2002, he shared his concerns with his supervisor and two DOE counterintelligence officers. Specifically, he told them that he believed that there was insufficient evidence to support the Incident Report Conclusion's findings that the classified hard drive had been destroyed and that there was no compromise of classified data. The complainant also indicated that on March 4, 2002, he and his supervisor met with the former SS&P Manager to discuss the Incident Report, and he shared the same concerns with her. TR at 281 and 289.

The complainant's supervisor testified that both of these meetings took place as the complainant described them. He stated that at the March 4, 2002 meeting, both he and the complainant told the former SS&P manager that there was no documentation confirming that the classified hard drive had been destroyed. TR at 251-252. The former SS&P Manager testified that she cannot recall meeting with the complainant and his supervisor about the 2002 Incident. However, she acknowledges her records indicated that she had an appointment with them. She does recall that she was aware that both the complainant and his supervisor were concerned that there was no evidence confirming the destruction of the classified hard drive. She also stated that other individuals involved with the 2002 Incident were aware of the concerns expressed by the complainant and his supervisor, and that they repeated these concerns to her. TR at 593-594.

Based on this testimony, I conclude that the complainant reported his concerns about the missing classified hard drive to his supervisor and to two DOE counterintelligence officers in February 2002 and to the DOE's former SS&P Manager at Pantex in March 2002.

2. The Individual Accurately Disclosed that the Missing Classified Hard Drive Had Not Been Accounted for by BWXT Security

The testimony of several witnesses at the Hearing supports the accuracy of the complainant's contention that BWXT security had not accounted for the missing hard drive, and had inaccurately concluded that there was no possiblity that classified data on the hard drive had been compromised. The complainant's supervisor testified that he shared the complainant's concern that the classified hard drive had not been accounted for by BWXT Security and opened a preliminary inquiry regarding the incident. TR at 251-252. The FBI Special

Agent stated that his decision to open an investigation after reviewing the Incident Report was based on his determination that there was no documentary evidence showing that the missing classified hard drive was one of the hard drives that was destroyed. TR at 158. BWXT's current Senior CIO at Pantex testified that she had recently reviewed the CIU's file on the 2002 Incident and agreed that there is no documentation verifying that the hard drive had been destroyed. TR at 459. The DOE's Assistant Site Manager also testified that there was no data or documentary evidence such as serial numbers to support the conclusion that the missing classified hard drive had been destroyed. He agreed that the only support for the Incident Report's Conclusion that the missing classified hard drive had been destroyed was the statement of the hard drive's user and the statement of his supervisor. TR at 537-538.

3. The Complainant's Disclosures Revealed a Substantial and Specific Danger to Public Health and Safety

At the Hearing, Counsel for BWXT argued that the 2002 Incident involved nothing more than "a failure to follow procedures on the destruction of this hard drive." TR at 606. He contended that as such it does not rise to the level of a protected disclosure under Part 708.

> The fact that someone didn't lock out his safe; the fact that someone may have left an STU phone key in, or may not have signed the proper paperwork, which is the incident here, are not the sort of matters that were meant to be considered as protected disclosures under [Part] 708.

TR at 608-609. At the Hearing and in BWXT's June 15, 2005 Reply Brief, Counsel for BWXT asserted that one of the DOE's principal purposes for amending its regulations in 1999 to require "substantial" disclosures under Part 708 was to eliminate from consideration under Part 708 those complaints that dealt with minor, insubstantial or de minimus matters. TR at 608, BWXT Reply Brief at 7. He quoted the following portion of the January 1998 Notice of Proposed Rulemaking that discussed this issue:

> [T]he Senate Report accompanying the Civil Service Reform Act of 1978 explained that general criticisms or complaints, or those of a non-substantial nature were not intended to be covered. The Report stated that 'the Committee intends that only disclosures of public health and safety dangers which are both substantial and

> ***specific*** **are to be protected.' Thus, for example, general criticism by an employee of the Environmental Protection Agency that the Agency is not doing enough to protect the environment would not be protected under this subsection. (S. Rep. No. 969, 95th Cong., 2nd Sess. 21 (1978). (emphasis added)**

BWXT Reply Brief at 8 *citing* 63 Fed. Reg. 373 (January 3, 1998).

Some of the testimony at the Hearing supports a de minimus characterization of the 2002 Incident. Several of BWXT's witnesses characterized the issue of the missing hard drive as a "procedural" or "paperwork" issue, indicating that they believed it involved only the failure to properly document the destruction of the missing hard drive and not the actual compromise of classified information. *See* testimony of BWXT's current Senior CIO (TR at 450), the DOE's Assistant Site Manager for S&S at Pantex (TR at 496), BWXT's current S&S Manager (TR at 37), Former General Manager Ruddy (TR at 62), and BWXT's General Manager Mallory (TR at 132).

Nevertheless, BWXT's efforts to characterize the complainant's disclosures as raising only procedural issues are misplaced. The proper focus of my inquiry is whether the disclosures raise a substantial and specific danger to health and safety. While it may appear probable that the missing hard drive was destroyed by BWXT and that the files simply lack the required documentation to confirm that destruction, there also is a real possibility that the missing hard drive was not destroyed. This real possibility that the classified hard drive had been compromised was acknowledged by several witnesses at the Hearing, including the complainant's supervisor (TR at 232-234), the FBI Special Agent (TR at 161), the Defense Nuclear CI Chief (TR at 208), BWXT's current Senior CIO (TR at 457), and DOE's Assistant Site Manager for S&S (TR at 499). BWXT's current S&S Manager testified that BWXT could not "conclusively prove" that the missing hard drive had been destroyed, and that therefore he amended the findings in the Incident Report Conclusion from "Loss/Compromise did not occur" to "Probability of compromise is remote." TR at 551-552.

I therefore find that in his disclosures, the complainant identified the real possibility that the classified hard drive had not been destroyed and that its contents may have been compromised. I also find that evidence provided at the Hearing establishes that the dangers to public health and safety raised by the possible misappropriation of classified hard drive were both specific and

substantial. The Incident Report states that the hard drive contained Sigmas 1 and 15 classified material. The record supports the finding that this Sigma 15 material, in particular, was highly restricted and included classified nuclear information. In his testimony, BWXT's former General Manager Ruddy stated that he was familiar with Sigma 15 data and agreed that it was "very important or highly restricted classified data." TR at 59. The DOE Assistant Site Manager testified that Sigma 15 data "is secret restricted data, and as such, it is highly classified." TR at 518. The FBI Special Agent agreed that the Sigma 1 and 15 information should be considered potentially dangerous if it got into the wrong hands.

> The fact that it's secret information; the fact that it contains nuclear information - without getting into specifics and a lot of that I don't know anyway - any time something like that would occur, we would be concerned . . . that secret information is potentially out there where it shouldn't be. . . . If it's got nuclear-related information, it's even more concerning.

TR at 177.

Testimony at the Hearing indicated that the Complainant's disclosures prompted additional actions to ensure the safety and security of the public that were necessary and appropriate. Both the Pantex CIU and the FBI conducted preliminary investigations to ensure that no foreign nexus existed with respect to the missing hard drive. The Defense Nuclear CI Chief indicated that she believed that it was appropriate for the Pantex CIU to investigate this issue [TR at 23], as did BWXT's current Senior CIO. TR at 457.

Finally, the fact that the missing classified hard drive raised a substantial issue of public safety and security is supported by BWXT's continuing efforts to resolve the issue and link the degaussed platters in its possession with the missing hard drive. The DOE's Assistant Site Manager for S&S at Pantex testified that BWXT contacted the manufacturer of the hard drive to see if additional means of identification existed, and that it sent the degaussed platters to a cyber forensic laboratory to determine if they contained any readable information that could be used for identification. TR at 37.

In light of this evidence, I reject BWXT's argument that its failure to document the destruction of the classified hard drive raised nothing more than a housekeeping issue of failing to complete the proper paperwork. TR at 608. In fact, the individual disclosed

significant information when he reported that BWXT Security was inaccurate in finding that the missing hard drive had been destroyed. The complainant's disclosures resulted in investigations by the Pantex CIU and the FBI to ensure that the missing hard drive had not been vulnerable to appropriation by foreign nationals, and in subsequent efforts by BWXT to locate and identify the hard drive. I find that the complainant's disclosures that highly restricted nuclear information remained unaccounted for at the Pantex facility revealed a substantial and specific danger both to Pantex employees and to general public's health, safety and security, and therefore are clearly the type of disclosures that are protected under Part 708.

C. The Complainant's Protected Disclosures Were a Contributing Factor to the Alleged Act of Retaliation

Under 10 C.F.R. § 708.29, the complainant must also show that his protected disclosures were a *contributing factor* with respect to a particular adverse personnel action taken against him. *See Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 (1994). A protected disclosure may be a contributing factor to an adverse personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990). *See also Russell P. Marler, Sr.*, 27 DOE ¶ 87,506 at 89,056 (1998).

I conclude that the complainant has established by a preponderance of the evidence that his protected disclosures were contributing factors to the retaliation he alleges. I base this conclusion on a finding that there are both constructive knowledge and proximity in time between the protected disclosures made by the complainant and his allegations of retaliation.

With respect to constructive knowledge of the disclosures, the complainant made his disclosures to his supervisor in late February 2002, and to the DOE's former SS&P Manager at Pantex in early March 2002. The complainant's supervisor stated that he immediately conveyed these concerns to several BWXT officials, including former General Manager Ruddy. Clearly, the former BWXT General Manager can be presumed to have had actual or constructive knowledge of these disclosures in the absence of a clear and convincing evidentiary showing to the contrary.

With regard to timing, the disclosures took place in February and March 2002, and the alleged retaliation taken against the complainant, *i.e.* failing to grant him a comparative salary increase, began shortly thereafter in March or April 2002, and lasted at least until May 2004, when a comparative salary increase of seven percent was provided to the complainant. TR at 429-430. A reasonable person could conclude that the alleged retaliation was caused by the protected disclosures, because the alleged retaliation began shortly after the disclosures were made and continued for a considerable period. The disclosures were thus a contributing factor to an alleged ongoing retaliation. *See Jimmie L. Russell*, 28 DOE ¶ 87,002 at 89,014 and 89,025-26 (2000) (protected disclosure found to be contributing factor when it occurred proximate in time to the beginning of an ongoing retaliation).

Accordingly, with respect to the alleged retaliation, I will first determine whether the complainant has shown by a preponderance of the evidence that an adverse personnel action took place and meets the criteria for a Part 708 retaliation. If I make this finding in the affirmative, I will then determine whether BWXT has shown, by clear and convincing evidence, that the protected disclosures were not a contributing factor to the adverse personnel action or that they would have taken the same action in the absence of the protected disclosure.

D. BWXT's Failure to Provide a Comparative Salary Increase to the Complainant was a Retaliation

The complainant contends that in March or April 2002, BWXT reversed its previous position and refused to accept an offer from the DOE to provide funds for comparative salary increases to BWXT's CIU. At the Hearing, he testified that his supervisor had told him that at BWXT General Manager previously had stated that he would work on providing raises for the CIU. TR at 309.

1. BWXT's Jurisdictional Objections to the Complainant's Alleged Retaliation

In its filings in this proceeding and at the Hearing, BWXT argues that the failure to provide comparative salary increases to the CIU in 2002 and 2003 is not a retaliation under Part 708. It makes both legal arguments and a factual argument in this regard. In its Pre-Hearing Brief in this proceeding, BWXT contends that comparability salary adjustments constitute terms and conditions of the complainant's employment. BWXT cites 10 C.F.R. § 708.4(e), which

provides that complaints dealing with "'terms and conditions of employment' within the meaning of the National Labor Relations Act" are not covered by Part 708, "except as provided in Section 708,5." It argued that

> **the Complainant has been unable to establish any cognizable act of retaliation that would bring this complaint within the scope of 708.5. Therefore, Complainant may not address any matter that deals with the "terms and conditions of his employment." Since the matter of salary structure for CI officers is asserted in his complaint, we contend that this constitutes part of the classic "terms and conditions of employment" addressed in 708.4(e). Accordingly, OHA lacks jurisdiction to hear this complaint.**

I reject BWXT's argument. Section 708.5 addresses what constitutes a *disclosure* under Part 708, and it does not define the scope of potential *retaliations* from which a complainant may seek redress. Section 708.4's reference to "terms and conditions of employment" in the context of Section 708 means that a *disclosure* involving the employee's terms and conditions of employment does not invoke protections under Part 708 unless it simultaneously involves matters listed under Section 708.5, such as a substantial and specific danger to employees or to public health or safety. In the present case, I have found that the Complainant has made disclosures protected under Section 708.5, and therefore may be protected from subsequent adverse personnel actions that are found to be retaliatory. Accordingly, I find that the fact that the Complainant's alleged retaliation deals with a "term or condition of employment" does not exclude that alleged retaliation from coverage under Part 708.

Next, BWXT argues that the complainant has received merit pay increases from 2002 until the present that were similar to those received by other BWXT employees at Pantex. In this regard, BWXT's Compensation Manager testified that in 2000, the complainant received a 7.4 percent increase, in 2001 he received 6.1 percent, in 2002 he received 4.37 percent, and in 2003 he received 4 percent. TR at 422. He stated that with respect to these increases, the complainant received at least the average increase for the Pantex site. TR at 423. At the Hearing, Counsel for BWXT further contended that the comparative salary increases for employees of BWXT's CIU are discretionary and cannot be considered the basis for a retaliation under Part 708. TR at 609-610. In this regard,

BWXT's Compensation Manager testified that it was not common for his office to conduct an equity analysis for job classifications to the level of detail of his analysis for the CIU positions because "we have market surveys that we rely on for all the information." TR at 587. He also stated that there were no DOE site procedures or other requirements that compelled BWXT to provide an equity analysis for a particular job at the Pantex facility. TR at 588. BWXT therefore contends that because comparative salary increases are discretionary and not generally provided to employees, the failure to provide such increases cannot form the basis for an alleged retaliation.

I reject this argument. Discretionary benefits provided to an employee by his employer can provide the basis for a retaliation under Part 708 if the benefit is withheld or withdrawn because of the employee's protected disclosure. Retaliation is broadly defined under Part 708 to include any negative actions taken against an employee's "compensation, terms, conditions or privileges of employment." 10 C.F.R. § 708.2. If an employer makes a commitment to provide a benefit to an employee, and then fails to provide the benefit because of the employee's protected disclosure, the employee can seek relief from that action under Part 708. *See Vander Boegh*, 28 DOE at 89,287 (failure to implement an approved plan to improve an employee's working conditions found to be an adverse personnel action under Part 708). Accordingly, if the complainant has established by a preponderance of the evidence that BWXT was preparing to provide him with a comparative salary increase in early 2002, and that it changed its position as a result of his protected disclosure, the complainant is entitled to relief for that adverse action under Part 708.

2. The Record Supports the Complainant's Contention that BWXT Had Committed to Provide a Comparative Salary Increase to the CIU and Later Reversed that Position

There is considerable evidence in the record to support the complainant's contention that BWXT reversed its decision to provide his group with comparative salary increases following his protected disclosures. At the Hearing, the complainant's supervisor testified that at a November 2001 meeting, the Defense Nuclear CI Chief had told former General Manager Ruddy that the CI program at Pantex was direct-funded and that she would provide the funding to bring the salaries at the Pantex CIU up to a comparable level with CIUs at other DOE facilities. He stated that the General Manager then said to her:

> It's direct-funded. This is a no-brainer. I'll have one of my people get with you.

TR at 252. The complainant's supervisor testified that after he disclosed his concerns about the 2002 incident and the Incident Report, it became "harder and harder to get things done." He indicated that his ongoing project to increase salaries for the CIU suddenly stalled. He said that he had been asked by BWXT's former HR Compensation Manager to get points of contact at different DOE sites so that HR could make salary comparisons. At some point after the disclosures were made, he was informed by the HR Compensation Manager that there would be no raises for the CIU at that time, and that he did not believe that such raises would be made in the future. TR at 259.

In her testimony, the Defense Nuclear CI Chief confirmed the complainant's supervisor's account of the November 2001 meeting, and stated that BWXT's former General Manager Ruddy had responded positively to her offer to provide additional funds for comparative salary increases for BWXT's CIU.

> And he said he would be willing to look into it, but it would make it easy if I was willing to come forward with the money. And that was the end of the conversation on that matter.

She stated that in January 2002, she sent a letter to former General Manager Ruddy concerning the offer to fund comparative salary increases. This letter stated in part:

> I greatly appreciate your support for the [complainant's supervisor] and the Pantex Counterintelligence Program. And I also appreciate your support in rectifying the salary shortfalls we discussed. We at Headquarters are prepared to provide the dollars to support increases just as soon as we get the word.

January 13, 2002 letter from the Defense Nuclear CI Chief to the former BWXT General Manager, attached to the complainant's June 14, 2005 submission at p. 00003. The record also indicates that in a March 27, 2002 letter to the Contracting Officer, Office of Amarillo Site Operations, she asked that immediate action be taken to raise the salaries of members of BWXT's CIU, including the complainant. That letter provides, in part

> It has come to my attention that ODNCI [Office of Defense Nuclear CI] personnel under BWXT at the Pantex Plant are under-compensated in comparison with others doing like work within ODNCI. Per recommendation made in the referenced discussion, I am writing to ask for your assistance in correcting that.
>
> . . . I have made a comparison between [compensation provided for job categories in BWXT's CIU] and that provided other ODNCI personnel in those same categories, at other NNSA sites (factoring in reasonable variations mentioned previously). Based on that comparison, and with the knowledge that our Pantex people have benefitted from recent Pantex initiated increases, I ask that you take action to immediately effect the following adjustments to their current pay:
>
> . . . CIO [the complainant's position] - increase by fifteen percent
>
> . . . I trust that BWXT Pantex shares my interest in external equitability for compensation provided to ODNCI program personnel. My office directly funds the ODNCI program at Pantex, including salaries, and we will ensure the availability of funds to sustain these changes.

March 27, 2002 letter from the Defense Nuclear CI Chief to the Contracting Officer, Office of Amarillo Site Operations, attached to the complainant's June 14, 2005 submission at p. 00018.

BWXT's former HR compensation manager testified that beginning in May or June 2001, he began looking at the salaries for BWXT's CIU, and that over the next four or five months, he and the complainant's supervisor looked at compensation for CIUs at Hanford, Savannah River, Los Alamos, and Sandia. TR at 345. He testified that

> My determination when looking at these numbers that my compensation people put in front of me was that there was room for a ten to fifteen percent adjustment for [the complainant's supervisor]. And I don't recall for [the complainant].

TR at 345. He said that in the late Fall of 2001, he informed BWXT's Deputy for HR as well as BWXT's Manager and Deputy Manager that with regard to the Pantex CIU "there's room for increase [in salaries] to bring them more in line with the rest of these [DOE

CIUs], based on our philosophy," but that the problem was, at that period of time there was no money available. TR at 351. Around the same time, he also remembers a visit from the Defense Nuclear CI Chief who said that the DOE could provide the money for comparative salary increases for the CIU. TR at 346-347 and 356. He stated that the DOE loads the money for BWXT in the January timeframe, and that it "was [BWXT's] intention at the time to give those raises." TR at 356. He indicated that the former BWXT Manager initially supported comparative salary increases for the Pantex CIU, but that he put a halt to any such increases for the CIU in early 2002. TR at 356-357. He stated that he was in former General Manager Ruddy's office in early 2002 to inform him that HR was getting ready to "load some increases and some promotional monies."

> And I remember bringing up the Counterintelligence Group, and [the former BWXT General Manager] was rather colorful in his response. And I won't go into any details as to the kinds of vernacular, but he wanted it stopped dead in the water because of a hard-drive issue, a hard-drive investigation.

TR at 358. He further testified that the former BWXT General Manager

> made the comment that he thought it, the [hard drive] investigation was getting – Careful with my words here. - out of control with regards to how he perceived things, and as a result, he was going to work to ruin [the former Senior CIO].

He also recalled that the former BWXT General Manager stated on a couple of occasions that increased compensation for the CIU was "not going to happen". TR at 358. He stated that in the March-April 2002 timeframe, the former BWXT Manager asked him if he was required to accept the offer of the Defense Nuclear CI Chief to provide additional monies for the salaries of the Pantex CIU. The former HR compensation manager stated that he told him that it was highly unusual for the DOE

> to look at a contractor and to determine what those salary determinations should be, because we make those salary determinations based on salary studies, and [they] are determinations based across the [DOE] complex.

TR at 366. Nevertheless, he testified that he told the former BWXT Manager that "it is probably politically astute to make payment and move forward." TR at 366.10/

Finally, BWXT's current Compensation Manager testified that almost immediately after he arrived at the Pantex facility in March 2004, he was asked by the current BWXT General Manager to do a comparative salary analysis for the Pantex CIU. TR at 394, 409 and 425. He stated that it took him about two months to conduct this analysis. TR at 426. He indicated that after conducting the analysis, he concluded that the complainant's salary and the other CIU employee salaries were "behind market of the ones that we looked at." TR at 410. He testified that the complainant's salary was 22.8 percent behind the market average in the survey that he conducted. TR at 413.

The Compensation Manager testified that in May 2004, he presented the results of the survey to the current BWXT General Manager along with the recommendation "to go forward with increases for the Counterintelligence group." TR at 427. The BWXT General Manager approved the implementation of this plan, which was to provide initial comparative salary increases and promotions for the three individuals in the CIU in May 2004, and to continue to provide incremental comparative salary increases on an annual basis for the next three years. TR at 429. Pursuant to this plan, the complainant received an initial comparative salary increase of seven percent on May 24, 2004. TR at 430. The Compensation Manager stated that this seven percent increase "was based on the market adjustment from the information that we provided [from the comparative salary analysis]." TR at 422. Because the complainant left his position at the CIU prior to January 2005, he did not receive the next scheduled comparative salary increase for CIU employees that took place in that month. TR at 431-432.

I find that the Complainant has met his evidentiary burden of showing by a preponderance of the evidence that BWXT management took adverse action against him when it reversed its previous commitment and rejected the proposals for comparative salary increases for BWXT's CIU in 2002. The evidence indicates that the issue of comparative salary increases for BWXT's CIU had been considered by

---

10/ At the Hearing, the Defense Nuclear CI Chief stated that she was notified by the DOE that her March 2002 proposal to raise salaries for BWXT's CIU was inappropriate and had been rejected. TR at 185.

BWXT during the latter half of 2001, and that BWXT intended to raise those salaries in 2002 provided that funding was available. According to the former HR compensation manager, the plans to raise those salaries were halted in March 2002 at the specific directive of Former General Manager Ruddy because of the CIU's investigation of the missing classified hard drive. The evidence also indicates that former General Manager Ruddy ignored the advice of the former HR compensation manager when he later rejected the specific proposal by the Defense Nuclear CI Chief for DOE-funded comparative salary increases for BWXT's CIU. Accordingly, I conclude that the decision of former General Manager Ruddy to cancel plans for comparative salary increases for BWXT's CIU and later to reject the proposal for comparative salary increases offered by the Defense Nuclear CI Chief clearly are adverse personnel actions as defined in Part 708.

E. BWXT has not Shown by Clear and Convincing Evidence that it would have taken these Actions in the Absence of the Complainant's Protected Disclosures

Accordingly, the burden shifts to BWXT to show by clear and convincing evidence that it would have acted in March and April 2002 to cancel plans for comparative salary increases for BWXT's CIU and to reject a similar salary proposal from the Defense Nuclear CI Chief in the absence of the complainant's protected disclosures.

At the Hearing, BWXT's former General Manager Ruddy testified that he recalled a 2001 conversation with the Defense Nuclear CI Chief in which she stated that salaries being paid to BWXT's CIU were seriously out of line, and that he asked her to provide information on this issue. TR at 83-84. He identified the former HR Compensation Manager as the individual who "was pivotal in the administration of our performance evaluation and salary administration programs." TR at 43. However, he could recall no conversations with the former HR Compensation Manager on the subject of comparability raises for employees in BWXT's CIU. TR at 44-45. He testified that he rejected the proposal of the Defense Nuclear CI Chief to fund specific comparative salary increases for BWXT's CIU on the grounds that it was inappropriate. He stated that managing and operating contractors had a responsibility for conducting a process that insured fair compensation to their employees, and that accepting guidance from the Government would undermine that process and could lead to other groups "petitioning their customer for some special consideration." TR at 108.

He also stated that any comparability adjustment in salaries for BWXT's CIU approved by him would have been incremental, and that he

could not recall any instance where an employee of BWXT received more than a fifteen percent raise at one time. TR at 84-85.

The testimony of BWXT's former General Manager Ruddy does not convince me that BWXT would have failed to provide comparative salary increases to its CIU employees in the absence of the complainant's protected disclosures. While he provides a plausible explanation for rejecting the offer of the Defense Nuclear CI Chief to raise those salaries, it is not convincing in light of the testimony provided by the former HR Compensation Manager. As noted above, that individual testified that former General Manager Ruddy initially supported increasing salaries for BWXT's CIU employees, but that he later emphatically rejected an internal BWXT proposal for increasing those salaries because he was upset about the CIU's activities concerning the classified hard drive. The former HR Compensation Manager also stated that Former General Manager Ruddy rejected his advice when he later rejected the Defense Nuclear CI Chief's proposal. Former General Manager Ruddy cannot recall these conversations with the former HR Compensation Manager, although he acknowledged that he was "pivotal" in administering salaries at BWXT. Accordingly, under the standards of proof set forth in Part 708, I conclude that BWXT has not demonstrated by clear and convincing evidence that the decision by its former General Manager Ruddy to reject proposals for comparative salary increases for BWXT's CIU employees would have occurred in the absence of the Complainant's protected disclosures.

F. The Complainant is entitled to Relief under Part 708

I therefore will provide relief to the complainant for this retaliation. I will direct BWXT to provide the complainant with the fifteen percent comparative salary increase that he would have received if the Defense Nuclear CI Chief's proposal had been accepted. This comparative salary increase will be retroactive to May 1, 2002 and continue until the complainant's departure from his CIO position in November 2004. However, it will be offset by the seven percent comparative salary increase that he received on May 24, 2004. I also will direct BWXT to provide the complainant with interest on this retroactive salary increase and to reimburse the complainant for his reasonable litigation expenses.

VI. Conclusion

Based on the analysis presented above, I find that the complainant made two disclosures protected under Part 708, and that one or more of these protected disclosures were contributing factors to adverse

personnel actions taken by BWXT against him. Furthermore, I find that BWXT has not shown by clear and convincing evidence that it would have rejected proposals in 2002 to provide a comparative salary increase to the complainant in the absence of his protected activity.

Accordingly, the complainant is entitled to the remedial action ordered below.

It Is Therefore Ordered That:

(1) The Request for Relief filed by the complainant under 10 C.F.R. Part 708 is hereby granted as set forth below, and denied in all other respects.

(2) BWXT shall make payment to the complainant of a sum equal to the fifteen percent comparative salary increase that he would have received if the Defense Nuclear CI Chief's March 2002 proposal had been accepted and implemented. This increase will be calculated on a monthly basis for the period from May 1, 2002 until the complainant's departure from his CIO position in November 2004. However, this comparative salary increase will be offset by the seven percent comparative salary increase that he received in the months following May 24, 2004. BWXT also shall pay interest on this monthly salary adjustment at the rate of one percent simple interest per month from the date that the money would have been received until the date that the money is actually paid to the complainant.

(3) The complainant shall produce a report that provides information on his litigation expenses. BWXT shall produce a report that provides information on the salary adjustment and interest calculation ordered in paragraph (2) above. These reports shall be completed in accordance with the Appendix.

(4) BWXT shall pay the complainant's litigation expenses. The amount of this payment shall be in accordance with the report specified in paragraph (3) above.

(5) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting the complainant

relief unless, within 15 days of receiving this decision, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Kent S. Woods
Hearing Officer
Office of Hearings and Appeals

Date: October 27, 2005

APPENDIX

The Part 708 regulations provide that if the initial agency decision determines that an act of retaliation has occurred, it may order: reinstatement; transfer preference; back pay; and reimbursement of reasonable costs and expenses; and such other remedies as are necessary to abate the violation and provide the employee with relief. 10 C.F.R. § 708.36.

As discussed in my initial agency decision in this matter, the complainant is entitled to remedial action from BWXT in the form of a retroactive salary adjustment with accrued interest. A portion of this remedial action consists of reimbursing the complainant for litigation expenses that he incurred. Accordingly, in order to implement this remedy, I am directing the complainant and BWXT to make certain calculations and to serve them on each other within 30 days of the date of this order. I then have provided for a negotiation period between the parties and for the filing of final reports on remedial calculations. In the event of an appeal, the parties shall follow the negotiating and reporting steps set forth below unless those requirements are specifically stayed by an appropriate official.

A. The Complainant's Calculations

Within 30 days of this order the complainant shall provide BWXT with a calculation of attorney fees and out of pocket litigation expenses incurred by the complainant with respect to this Part 708 complaint. The complainant and his legal counsel shall provide reasonable information supporting their claims for fees and out of pocket litigation expenses.

B. BWXT's Calculations

Within 30 days of this order, BWXT shall provide the complainant with a calculation of the monthly salary adjustment [May 2002 through November 2004]. It also shall calculate the simple interest that has accrued using a rate of one percent a month.

C. Negotiation Period

The parties will have ample time up to sixty days from the date of this order to discuss and negotiate any disputes regarding these calculations. During that period I expect that both parties will

provide reasonable information to facilitate the other party's understanding of the calculations.

D. Final Report

Seventy days from the date of this order the complainant and BWXT shall provide reports containing a summary calculation to each other and to the Office of Hearings and Appeals. The complainant and BWXT shall describe in detail any matters that remain in dispute. The parties will have 15 days from the date of that report to submit responses to these final reports.

November 7, 2006

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Curtis Broaddus

Date of Filing: April 29, 2005

Case Number: TBH-0030

This Decision concerns a whistleblower complaint that Mr. Curtis Broaddus (the complainant) filed under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant is an employee of BWXT Pantex (BWXT), the management and operations contractor at the DOE's Pantex Plant in Amarillo, Texas. The complainant contends that he made a number of disclosures that are protected under Part 708, and that BWXT retaliated against him for making those disclosures. According to the complainant, BWXT reprisals against him included the withholding of salary increases, disparaging remarks, verbal threats, unwarranted reprimands, improper releases of personal information, reassignment of some of the responsibilities associated with his position, and reassignment of line of management reporting, that is, changing his status from a direct report to the manager to one who reports to the deputy manager. As relief from these alleged retaliations, the complainant seeks back pay, reinstatement to his former position or, in the alternative, preference to transfer to another suitable position, and reimbursement of all reasonable costs and expenses, including attorney fees. After considering all the submissions by the parties and all the testimony received at the hearing held on this matter, I have concluded that the complainant has not made a disclosure protected under Part 708 and, therefore, is not entitled to relief.

I. Background

A. The Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that

they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. *See* 10 C.F.R. § 708.5(a)(1), (3). Employees of DOE contractors who believe that they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an investigation by an investigator from the Office of Hearings and Appeals (OHA), an evidentiary hearing before an OHA Hearing Officer, and an opportunity for review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Procedural History

1. The Report of Investigation

On August 13, 2004, the complainant filed a whistleblower complaint with the Office of Employee Concerns at the National Nuclear Security Administration (NNSA) Service Center in Albuquerque, New Mexico. After receiving comments from BWXT in response to the complaint, that office transmitted the complaint to the OHA, together with the complainant's request that the OHA Director appoint an investigator to examine his allegations, and a hearing officer to conduct an administrative hearing regarding the complaint.[1]

After interviewing numerous witnesses, including attorneys representing the complainant and BWXT, and reviewing documents submitted by both parties, the investigator issued her Report of Investigation on April 29, 2005.[2] In that Report, the investigator addressed each of 14 protected disclosures the complainant alleged he had made and each of ten acts of retaliation he alleged BWXT had perpetrated. She declined to investigate a number of the issues the complainant raised, explaining that, in her opinion, they were not actionable under Part 708.

---

[1] The OHA Director assigned this case and a companion case, regarding a Part 708 complaint filed by the complainant's subordinate, Clint Olson, to the same investigator. While recognizing that some of the issues were common, the investigator issued discrete Reports of Investigation for Mr. Broaddus and Mr. Olson.

[2] In making his or her findings in an initial agency decision, the hearing officer may rely upon, but is not bound by, the report of investigation. 10 C.F.R. § 708.30(c).

As for those concerns that she did investigate, the investigator found that the disclosures that the complainant alleged he made fell into three groups. The first group concerned BWXT's handling of the discovery that a computer hard drive that may have contained classified information was not accounted for (the 2002 Incident). The investigator concluded that the complainant had indeed made disclosures about his concerns regarding the 2002 Incident, but he had not established by a preponderance of evidence that he reasonably believed that his disclosures revealed a substantial violation of law, rule, or regulation. The second group of alleged protected disclosures concerned claims that BWXT was abusing or misusing the Personnel Assurance Program (PAP) when it temporarily suspended the complainant's PAP certification. The investigator determined that none of the complainant's disclosures in this area were "protected disclosures," some because they lacked sufficient specificity to have been interpreted by the listener as disclosures, and others because the facts in the record did not support his claims of impropriety and retaliation. As for the third area of alleged protected disclosures, which consisted of a letter from the complainant's attorney to the president and chief executive officer of BWXT's parent company, the investigator found that the information contained in the letter was too general and too vague to constitute a protected disclosure for the purposes of this proceeding.

The investigator then assessed each of BWXT's alleged actions that the complainant contended were retaliations against him for making disclosures protected under Part 708. Because I have concluded that Mr. Broaddus has not made a disclosure protected under Part 708, her determinations regarding his allegations of retaliations are not relevant to my decision here, and I will not address that portion of the Report of Investigation.

2. Motion to Dismiss

I asked the parties to brief two jurisdictional matters in advance of the hearing: whether the complaint was filed beyond the 90-day deadline established in 10 C.F.R. § 708.14, and whether the Department of Labor has addressed the same issues as Mr. Broaddus has raised in this complaint in such a manner that the complaint should be dismissed, as provided in 10 C.F.R. § 708.15. In its prehearing brief, BWXT argued that both matters were appropriate grounds for dismissing Mr. Broaddus's complaint.

It is well settled that a Motion to Dismiss in a 10 C.F.R. Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact on a more complete record. *Sandia Corp.,* 27 DOE ¶ 87,533 (1999); *Lockheed Martin Energy Systems, Inc.*, 27 DOE ¶ 87,510 (1999) (*Lockheed*); *EG&G Rocky Flats*, 26 DOE ¶ 82,502 (1997) (*EG&G*). The OHA considers dismissal "the most severe sanction that we may apply," and we have rarely ordered it. *Boeing Petroleum Services*, 24 DOE ¶ 87,501 at 89,005 (1994). To be successful, the movant, in this case BWXT, must show that the "complaint is untimely" or that the complainant filed a complaint under Part 708 and also pursued a remedy "under State or other applicable law with respect to the same set of facts." 10 C.F.R. § 708.17(c)(1),(3). Under the circumstances presented to me before the hearing, BWXT did not meet that burden. I could not find clear and

convincing grounds for dismissal. Both bases for dismissal depended on facts that were not sufficiently developed to support granting the motion for dismissal.[3]

Moreover, even after considering the additional, conflicting evidence produced at the hearing concerning the timeliness of Mr. Broaddus's complaint, I cannot find that there are clear and convincing grounds for dismissing his complaint for lack of timeliness. I therefore deny BWXT's motion to dismiss Mr. Broaddus's complaint. Without deciding whether his complaint was in fact filed in a timely manner, I will assume so for the sole purpose of permitting the analysis of the elements of the complaint set forth below.

3. Scope of the Hearing

At the prehearing conference, counsel for Mr. Broaddus stated that he would be focusing his efforts on only one group of protected disclosures that had been alleged in the complaint: those that the complainant made regarding the allegedly improper handling of, and investigation into, the destruction of a classified hard drive in 2002. He further stated that he would not be addressing the other alleged protected disclosures enumerated in the complaint. I permitted the complainant to address a second set of alleged protected disclosures, those related to alleged misuse of the Personnel Assurance Program, at the hearing. Tr. at 16. Such testimony was not received. I will therefore not address any allegations of protected disclosures, other than those that the complainant made regarding the allegedly improper handling of, and investigation into, the destruction of a classified hard drive in 2002.

At the start of the hearing, I dismissed all allegations of retaliation except for the following six: (a) BWXT's withholding of salary increases from Mr. Broaddus; (b) verbal threats that Dennis Ruddy, BWXT General Manager, made to the complainant; (c) a formal reprimand for an on-site traffic violation; (d) improper disclosure of private information during a Potentially Disqualifying Information meeting; (e) reassignment of the complainant's responsibilities under the Human Reliability Program; and (f) a change in line of reporting such that the complainant no longer reported directly to the General Manager but rather to the Deputy General Manager. Tr. at 16.

---

[3] BWXT also argued that dismissal was appropriate because the complainant had failed, in its estimation, to establish *prima facie* (i) that he made a protected disclosure, BWXT Prehearing Brief at 9-11, (ii) that he reasonably believed his disclosure related to a substantial violation of a law, rule, or regulation, *id.* at 11-15, and (iii) that BWXT's alleged actions constituted retaliations cognizable under Part 708. *Id.* at 15-18. These arguments for dismissal fail as well for the same reason. A Part 708 hearing is the appropriate vehicle for full development of facts that may have been only partly unearthed during the investigation stage.

4. Witnesses at the Hearing

The following witnesses appeared at the hearing on behalf of the complainant:

Curtis Broaddus, the Complainant, Senior Counterintelligence Officer for BWXT from 1998 to November 2004

Bradley Beman, a Special Agent of the FBI, assigned to the Pantex site from October 2003 through the date of the hearing

Catherine Sheppard, Chief of the NNSA's Office of Defense Nuclear Counterintelligence in Washington, D.C.

Don Clinton Olson, a subordinate of Mr. Broaddus who worked in the BWXT Office of Counterintelligence from July 1999 to November 2004

John Merwin, Compensation Benefits and Employment Manager for BWXT from April 2001 to April 2003

Richard Frye, Compensation Manager for BWXT from March 2004 through the date of the hearing

Darlene Holseth, Senior Counterintelligence Officer for BWXT from November 2004 through the date of the hearing

Roxanne Steward, Former Manager of BWXT's Safety, Security and Planning Department

Sharon Armontrout, Personnel Assurance Program (later Human Reliability Program) Coordinator for BWXT

The following witnesses appeared at the hearing on behalf of BWXT:

Dennis Ruddy, General Manager of BWXT from February 2001 to January 2003

Mike Mallory, Deputy General Manager of BWXT from February 2001 to January 2003 and General Manager from February 2003 through the date of the hearing

Gary Wisdom, DOE Assistant Site Manager for Safeguards and Security at Pantex

Alexander Paul Sowa, Deputy Manager of BWXT's Safeguards and Security Division from February 2001 through the spring of 2003, and Manager of that division from the spring of 2003 through the date of the hearing

II. Findings of Fact

In this section, I will lay out the evidence received in this proceeding that has permitted me to determine facts, events and circumstances surrounding Mr. Broaddus's alleged disclosures. Although I also received evidence concerning BWXT's alleged acts of retaliation, I will not address this evidence. Because I find that Mr. Broaddus did not make a disclosure that was protected under Part 708, I need not consider actions taken allegedly in retaliation for a protected disclosure.

A. The Disclosures to BWXT and DOE Officials

Mr. Broaddus testified at the hearing that he made a series of disclosures to BWXT managers regarding the 2002 Incident, that is, BWXT's discovery and subsequent investigation of the unaccountability of a classified hard drive. According to his testimony, he first notified NNSA's Defense Nuclear Counterintelligence Office in Washington, D.C., that he was opening a preliminary inquiry. Tr. at 241. Unable to reach BWXT General Manager Dennis Ruddy after he had reviewed the incident and the ensuing security infraction report, dated February 22, 2002, Mr. Broaddus spoke with Gary Wisdom of DOE Security, an FBI contact, and Carl Durham, the manager of the BWXT Engineering Department. Tr. at 244-45. He expressed his concerns to them, specifically that he had reached the following conclusions: (1) that there had been gross negligence in failing to protect the hard drive, (2) that BWXT Security had made certain statements in the report that were not factually accurate, in that they indicated that the hard drive had been destroyed when it was not clear that it had in fact been destroyed, and (3) that the gross negligence and the factual inaccuracies were violations of law. Tr. at 245-46, 249.[4] On the day Mr. Ruddy returned to the office, according to Mr. Broaddus's testimony, he met first with Mr. Ruddy alone to brief him. Later the same day Mr. Broaddus met with Mr. Ruddy, Mr. Mallory, and John Noon, the Manager of BWXT's Safeguards and Security Division, and set forth his concerns. Tr. at 248-50. A few days later, Mr. Broaddus also met with Roxanne Steward, and expressed his concern that there could be a violation of law arising from the same matters he raised with the other managers. Tr. at 251-52.

Mr. Broaddus stated, both during his investigation and at the hearing, that the law that he believed was being violated was 18 U.S.C. § 793(f), which reads, "Whoever, being entrusted with or having lawful possession or control of any document, writing, code book, signal book, sketch, photograph, photographic negative, blueprint, plan, map, model, instrument, appliance, note or information, relating to the national defense, (1) through gross negligence permits the same to be removed from its proper place of custody or delivered to anyone in violation of his trust, or to be lost, stolen, abstracted, or

---

[4] The Report of Security Incident/Infraction states in pertinent parts: "Nature of incident: Accountable Secret RD hard drive containing Sigmas 1 and 15 was destroyed without proper documentation or witness." and "Details of incident: . . . . During the investigation, records were retrieved to support the degaussing and to confirm proper destruction methods for classified information had been applied. It was determined that no compromise of classified information had occurred." Exhibit W.

destroyed, or (2) having knowledge that the same has been illegally removed from its proper place of custody or delivered to anyone in violation of his trust, or lost, or stolen, abstracted, or destroyed, and fails to make prompt report of such loss, theft, abstraction, or destruction to his superior officer shall be fined under this title or imprisoned not more than ten years, or both." *See, e.g.*, Tr. at 236-37.

Mr. Olson testified that summaries of Mr. Broaddus's meetings with Mr. Ruddy, Mr. Mallory, Mr. Noon, and Ms. Steward appeared in the BWXT Counterintelligence Office's file concerning this matter. Tr. at 333-40. He also testified that he was present at the meeting between Mr. Broaddus and Ms. Steward, during which he told Ms. Steward that they were concerned that the security incident report's conclusion that there was no compromise of classified information constituted "false and misleading statements . . . that could be [a] violation of law." Tr. at 281, 290.

Mr. Ruddy testified at the hearing that he first learned that BWXT's Counterintelligence Office had opened an investigation into the 2002 Incident from a source in the federal government. Tr. at 42. He stated that he was dissatisfied with the communication he was receiving from the Counterintelligence Office, because he had expected that he would first learn of such an investigation from that office, rather than from an outside source. Tr. at 42-43, 91, 105, 109, 110. He also stated that he made that expectation known to Mr. Broaddus. Tr. at 43. He recalled meeting with Mr. Broaddus only once regarding this matter. While he did not recall the content of the discussion at that meeting nor whether others were in attendance, he did recall that Mr. Broaddus "communicated to me, in my mind a little belatedly, that he had opened a CI investigation in the matter. . . . The issue was not whether he had opened an investigation. The issue in my mind at that point was that he had not communicated that to me." Tr. at 48-49.

Ms. Steward could not recall meeting with Mr. Broaddus and Mr. Olson regarding their concerns over the 2002 Incident. Tr. at 592. She did, however, state that in March of 2002 she was aware of their concerns, but she was unsure whether she learned of them from Mr. Broaddus and Mr. Olson directly, or from others. Tr. at 594.

At the hearing, Mr. Mallory testified that he first met with Mr. Broaddus regarding the 2002 Incident in late 2003 or 2004. Tr. at 115. By that point, he had become the General Manager of BWXT at Pantex, the 2002 Incident had been considered by a number of agencies including the FBI and, on the basis of internal recommendation, BWXT had determined it would change the conclusion of its own incident investigation from one that stated that no information had been lost to one that stated that any loss of information was highly improbable. Tr. at 116-17. He had no recollection of meeting with Mr. Broaddus in February or early March of 2002. Tr. at 136. He recalls first becoming aware of Mr. Broaddus's concerns regarding the 2002 Incident in August or September of 2002. Tr. at 114.

Catherine Sheppard testified that Mr. Broaddus had notified NNSA's Defense Nuclear Counterintelligence Office that "there had been a report of a missing hard drive." Tr. at 187. As a result, that office opened a file on the matter on February 22, 2002, the date

the report was issued. Ms. Sheppard's office conducted a preliminary inquiry into the facts surrounding the destruction of the hard drive "to determine if there was a reason to truly open a Counterintelligence investigation in this matter." Tr. at 187. She explained that, in order to open such an investigation, an inquiry must be conducted to determine whether there was a loss of classified information, and whether there was a foreign nexus. Tr. at 189. After reviewing the facts, her office determined that there did not appear to be a loss of classified information, but rather an accountability problem. *Id.* Furthermore, it found that no foreign nexus existed, and closed the preliminary inquiry on March 19, 2002. Tr. at 188. In her interview with the investigator, Ms. Sheppard confirmed that Mr. Broaddus had complained to her that BWXT had failed to protect classified information in connection with the 2002 Incident. Report of Investigation at 8.

It is clear from the summary of this evidence that there are factual inconsistencies regarding the circumstances in which Mr. Broaddus disclosed his concerns about the possible mishandling of a classified hard drive and possible misstatements contained in a BWXT security incident report. Nevertheless, there is sufficient evidence to support a finding that Mr. Broaddus disclosed those concerns to his superiors at BWXT (Mr. Ruddy) and at the NNSA (Ms. Sheppard). I will next address whether he reasonably believed the concerns he disclosed to these individuals revealed a "substantial violation of law, rule or regulation," a requisite condition for the disclosures to be considered protected under 10 C.F.R. § 708.5(a)(1).

B. Reasonable Belief that Disclosures Revealed a Substantial Violation of Law, Rule or Regulation

In many documents and at many points during the hearing, Mr. Broaddus has asserted his belief that his disclosures to BWXT managers and to the NNSA revealed violations of law. He has maintained throughout the proceeding that BWXT's "failure to protect classified information" and "failure to accurately report the compromise of classified information" represent substantial violations of law, rule, or regulation. *E.g.*, Complaint at Paragraph 33(D). He testified that he believed gross negligence was the cause for the mishandling of the hard drive's destruction. Tr. at 245. He further testified that there was no factual basis for the conclusion in BWXT's security incident report that the hard drive had in fact been destroyed rather than lost. Tr. at 236-38. Mr. Broaddus testified that the mishandling of the hard drive and the incorrect conclusion in the report are violations of 18 U.S.C. § 793(f)(1) and (2). Tr. at 235-36. He maintained this position even though both the NNSA Defense Nuclear Counterintelligence Office and the FBI closed their investigations, concluding that no violations of law occurred. Tr. at 268, 271. As an explanation for arriving at a different conclusion than the FBI, Mr. Broaddus stated, "The FBI actually was able to look into the, the situation at more depth than I did. They had more authority to go look deeper than what I did. My conclusion was based on what I knew at that time, and what I know to date." Tr. at 272.

Other witnesses at the hearing testified regarding whether those actions constituted violations of that statutory provision. Darlene Holseth, who succeeded Mr. Broaddus as BWXT's senior counterintelligence officer at Pantex, provided background on the scope

of concerns of a counterintelligence office. She testified that counterintelligence's concerns are espionage, sabotage, assassination, and international terrorist activities. Tr. at 468. If, in investigating an incident, the counterintelligence staff believes there is foreign nexus or a criminal act has occurred, then it is referred to the FBI or other investigatory agencies. *Id.* Ms. Holseth stated that the counterintelligence file on the 2002 Incident made no reference to foreign nexus other than that they were "looking into it," and no reference to a criminal violation. Tr. at 447. After reviewing that file, she concluded that a person in her capacity could not reasonably believe that a criminal act or violation of the federal espionage act had occurred. Tr. at 470. She stated that she had seen no evidence of gross negligence on the part of the individuals who were cited for security infractions as a result of the 2002 Incident. Tr. at 471. It appeared to her instead that the hard drive was in fact destroyed, but that the paperwork documenting the destruction had not been completed. Tr. at 455. Ms. Holseth was also asked to comment on the conclusions the responsible official reached in the Inquiry Summary Report concerning this incident. Specifically, she was referred to portions of the report and summary, in which the official concluded that no compromise of classified information had occurred and that no violation of law appeared to have occurred. Tr. at 472-74. When asked whether there could be a reasonable argument that those statements of the official constituted willful false statements from a counterintelligence perspective, Ms. Holseth responded that they could not, because those statements were opinions. Tr. at 475-76. She also pointed out that the 2002 Incident was determined to have been caused by security infractions rather than by security violations, and stated she was unaware of any infractions leading to criminal cases in her five-year experience with the DOE. Tr. at 478. In light of her training and experience as a counterintelligence officer, and the fact that Mr. Broaddus never mentioned any violation of a statute in his numerous entries in the counterintelligence file regarding the 2002 Incident, her opinion was that Mr. Broaddus could not reasonably have believed that a violation of law occurred. Tr. at 479-80.

Bradley Beman, an FBI employee assigned to the Pantex site in October 2003, testified that his office looked into the facts concerning the 2002 Incident to determine whether any criminal prosecution should follow the mishandling of the hard drive, under the Espionage Statutes at 18 U.S.C. § 793. Tr. at 154-57. The FBI's concern was that the responsible official concluded that the hard drive's destruction was confirmed, but that there was no supporting documentation definitively showing that the hard drive had been destroyed. Tr. at 158. The FBI ultimately concluded that, while there was no documentation that the hard drive had been destroyed, there was no evidence to the contrary, and "[t]herefore, we have no reason to conclude anything other than the Inquiry Report, other than that it was destroyed." Tr. at 161. The FBI made no referral for prosecution, not finding any evidence of foreign nexus or gross negligence. Tr. at 168-69, 171.

Catherine Sheppard testified, as discussed above, that the Defense Nuclear Counterintelligence Office opened a preliminary inquiry of the 2002 Incident. Finding no evidence of loss of classified material, no gross negligence and no foreign nexus, the

office closed its inquiry, ascribing the cause of the problem to lack of proper accountability measures.

Alexander Paul Sowa testified that he has extensive experience in security matters, including many years as the manager of Pantex's security force, following a military career that included infantry, military police and counter-terrorism experience. After he became manager of BWXT's Safeguards and Security Division in the spring of 2003, he held a meeting with Mr. Broaddus and Mr. Mallory regarding the 2002 Incident. Tr. at 551. Mr. Mallory, as general manager, asked Mr. Sowa to conduct an independent review of the February 2002 inquiry into that incident. In his interview with the OHA investigator, Mr. Sowa stated that Mr. Broaddus did not express any concern that BWXT had violated any law, including any espionage law codified in Title 18 of the United States Code. Report of Investigation at 10. After completing his review of the inquiry and the ensuing security incident report, Mr. Sowa recommended to Mr. Mallory that the report's conclusion that "Loss/Compromise did not occur" be changed to "Probability of compromise is remote." Tr. at 551. He made this recommendation because BWXT could not establish with 100% certainty that the particular hard drive at issue had in fact been degaussed, though he was "99.5% certain it occurred." Tr. at 553. When questioned by counsel at the hearing, Mr. Sowa stated that there was nothing he found in his review of the incident that would indicate the existence of foreign nexus or involvement in the matter or gross negligence in the handling of the hard drive destruction. Tr. at 564. He also stated that he found no indication that the BWXT security incident report contained willful false statements. *Id.* When asked, based on his experience in counterintelligence, whether he could reasonably believe that a trained counterintelligence professional would have interpreted any of the actions associated with the 2002 Incident as criminal violations, Mr. Sowa responded, "No." Tr. at 563.

Gary Wisdom testified that he has 30 years of experience in safeguards and security matters, including counterintelligence. Tr. at 493. His office, the DOE Office of Safeguards and Security at the Pantex site, received and evaluated BWXT's security incident report concerning the 2002 incident. Tr. at 494-95. Its review of the report, which was independent of BWXT or any other agency, led it to conclude that the content and the analysis of the report was good, but the conclusion was overstated in stating that there was no possibility that disclosure of classified information had occurred. Tr. at 495, 499. His office concluded that "BWXT personnel failed to follow proper procedure in the destruction of the hard drive." Tr. at 495. Mr. Wisdom testified that he felt BWXT had properly identified the severity of the security concern as an incident of security infraction rather than security violation. Tr. at 497. He further testified that he did not find any evidence of foreign nexus or gross negligence involved in the 2002 Incident. Tr. at 503. Defining "gross negligence" as requiring willful disregard, he believed that the individuals charged with security infractions failed to follow procedures, but did not act in a manner that demonstrated willful disregard or negligence. Tr. at 510. He stated that the report's overstated conclusions did not constitute willful false statements on the part of the responsible official. Tr. at 504. The following exchange then took place:

> Q. Would someone with a background in security or counterintelligence matters, in your opinion, have reasonably arrived at a conclusion that a violation of law had occurred?
>
> A. There's no violation of law. I cannot understand why anyone would, would think that.

Id. Finally, when asked whether, during his oversight of handling of the 2002 Incident between February 2002 and the day he was testifying, anyone at Pantex had described the matter as involving a "serious potential violation of law," Mr. Wisdom answered, "No." Tr. at 527-28.

III. Analysis

A. Legal Standards Governing This Case

The obligations on each of the parties to this proceeding are established in the governing regulations. First, the employee who files the complaint has the burden of establishing by a preponderance of the evidence (1) that he or she made a disclosure, participated in a proceeding, or refused to participate, as described in § 708.5 of the regulations, and (2) that that action was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. 10 C.F.R. § 708.29. If the employee meets this burden, the burden then shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal. *Id.* Accordingly, in the present case, if Mr. Broaddus establishes that he made a protected disclosure, and that disclosure was a factor that contributed to any of the retaliations he alleges BWXT has made, he is entitled to relief unless BWXT convinces me that it would have taken the same actions even if he had not engaged in any activity protected under Part 708.

It is therefore my task, as the hearing officer, to weigh the sufficiency of the evidence presented by Mr. Broaddus and BWXT in this proceeding. Preponderance of the evidence, the burden applied to Mr. Broaddus's evidence, has been defined as proof sufficient to persuade the finder of fact that a proposition is more likely true than not. McCormick on Evidence, § 339 at 439 (4th Ed. 1992). Clear and convincing evidence, which BWXT must provide in order to prevail against those claims for which Mr. Broaddus has met his burden, has been described as that evidence sufficient to persuade a trier of fact that the truth of a contested fact is "highly probable." *Id.*, § 340 at 442. This latter burden is clearly more stringent than the former.

Some additional terms contained in § 708.29 require amplification. Section 708.5, referred to above, defines what constitutes employee conduct that is protected from retaliation by an employer. The portions of that provision that are pertinent to Mr. Broaddus's complaint require that an employee file a complaint that alleges that he has been subject to retaliation for disclosing, to a DOE official or his employer, information that he reasonably believes reveals a substantial violation of a law, rule, or regulation.

10 C.F.R. § 708.5(a)(1). We have found, in earlier cases, that a complainant's reasonable belief should be assessed objectively. *See, e.g., Frank E. Isbill*, 27 DOE ¶ 87,529 at 89,152 (1999). The complainant must show that his disclosure described a matter that a reasonable person in his position with his level of experience could believe revealed a substantial violation of law, rule, or regulation. *Id.*

B. The Disclosures

10 C.F.R. § 708.5 defines the type of employee activity that is protected from retaliation by an employer. In pertinent part, it provides that "you may file a complaint alleging that you have been subject to retaliation for (a) disclosing to a DOE official . . . [or] your employer . . . information that that you reasonably believe reveals (1) a substantial violation of a law . . ." In addition, 10 C.F.R. § 708.29 states that the complainant has the burden of establishing, by the preponderance of the evidence, that his disclosures meet the requirements established in 10 C.F.R. § 708.5. Therefore, if Mr. Broaddus has shown that his disclosures regarding the 2002 Incident meet those requirements, he will have established that he should be protected from any resulting retaliation taken against him by BWXT.

Mr. Broaddus has clearly shown by a preponderance of the evidence that he made disclosures concerning the 2002 Incident to a DOE official or to his employer. Both Mr. Broaddus and Ms. Sheppard, a DOE official, testified that Mr. Broaddus disclosed his concerns to her. Mr. Broaddus testified that he disclosed his concerns to Mr. Ruddy, Mr. Mallory, Mr. Durham, Mr. Noon and Ms. Steward, all members of BWXT management, and to Mr. Wisdom of DOE. Mr. Olson testified that he was present at a meeting in which Mr. Broaddus related his concerns to Ms. Steward. Mr. Ruddy, Mr. Mallory, and Ms. Steward could not recall whether Mr. Broaddus had communicated his concerns directly to them, but each acknowledged that he or she was aware of those concerns. In any event, Mr. Broaddus has established that he made a disclosure regarding the 2002 Incident to Ms. Sheppard.

A great deal of testimony at the hearing reflected the opinions of security and counterintelligence professionals about whether the 2002 Incident involved a substantial violation of 18 U.S.C. § 793(f).[5] In his complaint, Mr. Broaddus alleged that that statute

[5] In his complaint, Mr. Broaddus also claimed that he disclosed to "his employer that compliance with [its] expectation to notify [it] of investigations prior to outside agencies violated . . . § 811 [of the] Intelligence Authorization Act" of 1995. Complaint at Paragraph 33(A). He contended that in February 2004 he refused to brief Mr. Mallory, then BWXT General Manager, about an FBI investigation arising from the 2002 Incident because he believed that he might be subjected to criminal prosecution if he did. Complaint at Paragraph 33(L). Interviews conducted during the investigative stage of this proceeding yielded inconclusive evidence regarding whether Mr. Broaddus could have reasonably believed that compliance with BWXT management's request for information constituted a violation of § 811. ROI at 11-12. Mr. Broaddus did not develop any additional evidence at the hearing or in his submissions to me that supported this claim. I find that Mr. Broaddus has not met his burden of establishing by a preponderance of the evidence that he reasonably believed his disclosures relating to the 2002 Incident revealed a substantial violation of § 811 of the Intelligence Authorization Act of 1995.

was violated because there was gross negligence in the potential loss of classified information when the classified hard drive's destruction was not properly documented, and because the ensuing security incident report willfully concealed that a potential loss of classified information may have occurred. The issue before me at this juncture is whether Mr. Broaddus reasonably believed his disclosures revealed a substantial violation of law.

Mr. Broaddus testified that he believed gross negligence was the cause for the mishandling of the hard drive's destruction, in violation of 18 U.S.C. § 793(f)(1). He also testified that there was no factual basis for the conclusion in BWXT's security incident report that the hard drive had in fact been destroyed rather than lost, and that that conclusion constituted a violation of 18 U.S.C. § 793(f)(2). Although Mr. Broaddus has consistently asserted these beliefs since he filed his complaint in August 2004, he has not offered any convincing support. When questioned how he maintained that belief even after he learned that the FBI had determined that no violations had occurred, he responded that the FBI may have had access to more information than he did. He did not dispute the FBI's conclusion in any way. His failure to articulate a rationale for personally believing that violations of law occurred raises doubt in my mind as to the credibility of his belief. Moreover, there is evidence that Mr. Broaddus's contemporaneous notes to the counterintelligence file concerning the 2002 Incident contain no mention of violation of law. The absence of reference to violation of law in contemporaneous notes that otherwise appear to be detailed and complete leads me to question whether Mr. Broaddus truly held such a belief at the time he created those notes. Indeed, he may well have imposed that belief onto his disclosures at a later stage of this proceeding.

Additional evidence gathered at the hearing supports a conclusion that Mr. Broaddus's alleged belief that violations of law had occurred was not reasonable. The NNSA Defense Nuclear Counterintelligence Office closed its preliminary inquiry into the matter without opening an investigation, because it found neither foreign involvement nor the gross negligence necessary to support a criminal violation. The FBI investigation into the matter was closed for similar reasons. Finally, Ms. Holseth, Mr. Sowa, and Mr. Wisdom testified they did not believe there was a substantial violation of 18 U.S.C. § 793(f) involved in the 2002 Incident. Each of these individuals has a solid background in counterintelligence, and Ms. Holseth succeeded Mr. Broaddus as senior counterintelligence officer. Each of them further expressed his or her opinion that under the circumstances of the 2002 Incident, a trained counterintelligence professional could not reasonably have believed that a criminal violation had taken place.[6]

---

[6] Mr. Broaddus focuses on the fact that the conclusion of the security incident report was ultimately changed from "Loss/Compromise did not occur" to "Probability of compromise is remote." Although this modification demonstrates that BWXT later acknowledged a possibility, however remote, that the security of the classified information may have been compromised, this modification of the report is not evidence either that gross negligence may have occurred or that false or misleading statements were made, within the purview of 18 U.S.C. § 793(f).

As discussed above, hearing officers have applied an objective standard when considering the reasonableness of a complainant's belief. The *Isbill* case stated that the complainant must show that his disclosure described a matter that a reasonable person in his position with his level of experience could believe revealed a substantial violation of law, rule, or regulation. *Frank E. Isbill,* 27 DOE ¶ 87,529 at 89,152 (1999). While Mr. Broaddus testified to his reasonable belief, other persons with similar experience, particularly Ms. Holseth, testified that such a belief would not be reasonable. Applying the preponderance-of-the-evidence standard of 10 C.F.R. § 708.29 to the evidence received on this matter, I find that Mr. Broaddus has not met his burden. He was right to insist that the Security Infraction Report concerning the missing hard drive was incorrect as originally filed. That matter received additional attention and the report was ultimately modified. Nevertheless, Mr. Broaddus has not demonstrated that it is more likely than not that he reasonably believed that his disclosures revealed a substantial violation of law.

Because Mr. Broaddus has not met his burden of establishing that he reasonably believed his disclosures revealed a substantial violation of law, his disclosures do not comport with the description of protected activity under 10 C.F.R. § 708.5. Therefore, I find that Mr. Broaddus has not engaged in activity protected from retaliation under that provision of the Part 708 regulations.

IV. Conclusion

As set forth above, I have concluded that the complainant has not met his burden of establishing by a preponderance of the evidence that he engaged in an activity protected under 10 C.F.R. Part 708. After a thorough review of the evidence offered in this proceeding, I find that although Mr. Broaddus made disclosures to at least one DOE official and to his employer, he did not reasonably believe that his disclosures revealed a substantial violation of law, rule, or regulation. Consequently, he has failed to establish the existence of any violations of the DOE's Contractor Employment Protection Program for which relief is warranted. Accordingly, I have determined that Mr. Broaddus is not entitled to the relief he has requested in his complaint.

It Is Therefore Ordered That:

(1) The request for relief filed by Curtis Broaddus under 10 C.F.R. Part 708 on April 29, 2005, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the 15th day after receipt of the decision in accordance with 10 C.F.R. § 708.32.

William M. Schwartz
Hearing Officer
Office of Hearings and Appeals

Date November 7, 2006

November 2, 2007

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: **Casey von Bargen**

Date of Filing: **May 21, 2007**

Case Number: **TBH-0034**

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Casey von Bargen (also referred to as the complainant or the individual) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant was an employee of COMPA Industries, Inc. (COMPA), a subcontractor of Sandia Corporation (Sandia) which manages the Sandia National Laboratories (SNL) in Albuquerque, New Mexico for the DOE. On June 2, 2003, he began employment at the SNL facility as a safety engineer. On September 20, 2004, the complainant was terminated from his position. In November 2004, he filed a complaint of retaliation against Sandia with the Employee Concerns Manager of the National Nuclear Security Administration (NNSA) Service Center. In his complaint, the individual contends that he made certain disclosures and that Sandia retaliated against him in response to these disclosures.

I. Summary of Determination

In this Decision, I first provide background information concerning the Part 708 program. I then discuss the filing and the development of the issues raised in the individual's Part 708 Complaint, focusing on the Office of Hearings and Appeal's Report of Investigation and the parties' subsequent efforts to frame issues for the Hearing. I then present the relevant testimony provided at the Hearing. Next is my analysis of this complaint. With regard to the issues raised in this proceeding, I first find that the complaint was timely filed. Second, I find that the complainant made two protected disclosures prior to the alleged

retaliations that he claims. I then find that Sandia's decision to terminate the complainant from his position at SNL meets the Part 708 criteria for a retaliation but that Sandia's refusal to assist the complainant in finding a transfer position at Sandia does not meet those criteria. I next find that the complainant's termination by Sandia occurred proximate in time to the complainant's protected disclosures and that therefore the complainant has shown by a preponderance of the evidence that his termination from SNL constitutes a retaliation against him under Part 708. On the basis of that finding, Part 708 imposes the significant requirement that Sandia show by clear and convincing evidence that, in the absence of the complainant's protected disclosures, it would have taken the same personnel action against the complainant.

Ultimately, I find that Sandia has established by clear and convincing evidence that it would have terminated the complainant's employment at SNL in the absence of the complainant's protected disclosures. Accordingly, I find that the complainant is not entitled to any relief under Part 708.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The purpose of this program is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices by protecting such "whistleblowers" from adverse personnel actions by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, protection against adverse personnel actions taken in retaliation against an employee for disclosing, to a DOE official or to a DOE contractor, information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation; or a substantial and specific danger to employees or to public health or safety. See 10 C.F.R. § 708.5(a)(l), (2). Employees of DOE

contractors who believe that they have made such a disclosure and that their employer has taken adverse personnel actions against them may file a whistleblower complaint with the DOE. As part of the proceeding, they are entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they are entitled to an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. History: The Individual's Part 708 Complaint and the Identification of Relevant Issues for the Hearing

The complainant filed his Part 708 complaint with the Employee Concerns Manager in November 2004. In June 2005, the complaint was referred to the OHA for an investigation followed by a hearing. The OHA Director appointed an Investigator on June 21, 2005. On May 30, 2006, the Investigator issued a decision denying Sandia's Motion to Dismiss the complaint. *Von Bargen, Casey (Case No. TBZ-0034)*, 29 DOE ¶ 87,009 (2006). On May 21, 2007, the Investigator issued a Report of Investigation (ROI) concerning the complaint.

In his November 2004 complaint, the individual contended that after reporting safety concerns to Sandia officials, Sandia refused to assist him in transferring to another division at SNL and then terminated his employment. November 2004 complaint at 1, 9. In the ROI, the Investigator conducted an initial factual and legal analysis of this complaint, and made some preliminary determinations concerning protected disclosures and adverse personnel actions.

The ROI finds that the complainant worked as a Sandia contractor employee at SNL in the position of a safety engineer. His duties included reviewing safety plans provided by Sandia contractors, inspecting safety equipment, and investigating safety concerns. ROI at 2.

1. ROI Findings on Disclosures

The ROI indicates that the complainant made the following two disclosures relating to an April 21, 2004 incident during which a Sandia contractor employee received a shock while working on an overhead fluorescent lighting fixture:

> **(1) in June 2004, the complainant told Carla Lamb, who at the time was the Facilities Environmental, Safety and Health (ESH) Coordinator, that locking light switches in the off position does not safely cut off power to 277 volt fluorescent lighting systems. Specifically, he told her that 29 C.F.R. § 1910.147 does not allow control devices [such as light switches] to be used as a Lock-Out Tag-Out (LOTO) point. The complainant also communicated the substance of his conversation with Ms. Lamb to his supervisor, Mr. Johnny Vaughan, in a September 14, 2004 e-mail; and**
>
> **(2) The complainant also reported to SNL management that the contractor whose employee received the shock, and 13 other contractors, did not have site-specific safety plans on file at SNL.**

ROI at 3-5.

2. ROI Findings on Retaliation

The ROI indicates that Sandia, in consultation with COMPA, took an adverse personnel action affecting the complainant when it terminated his employment at SNL on September 20, 2004. *See* ROI at 5. The ROI finds that Mr. Vaughan was the individual who made the decision to terminate the complainant. The ROI finds that Mr. Vaughan indicated that his decision to terminate the complainant was based on the complainant's poor performance at SNL. The ROI refers to a September 24, 2004 memorandum in which Mr. Vaughan explained why he believed that the complainant's workplace performance merited termination. The memorandum indicates:

> **1. That the complainant does not work well with others to arrive at solutions to problems, and reacts with a negative attitude to anyone who might suggest another way to get to the same level of safety;**
>
> **2. That when the complainant reported safety-related issues as part of his job, he expected immediate responses, and interpreted any less-than-immediate responses as "indicative of SNL's lackluster attitude toward safety ..."**

> 3. That on September 14, 2004, the complainant presented data on occupational injury and illness to a meeting of the Metal Trades Council-represented employees and the Joint Union Mgt. Council in a very condescending and unprofessional way; and
>
> 4. That the complainant frequently circumvented the work assignment system at SNL and became angry when required to repeat work when it was formally assigned to him. He reacted with insults when asked to follow the work assignment system, "calling it stupid";

ROI at 7-8 *citing* Mr. Vaughan's September 24, 2004 memorandum. The ROI also states that in an interview with the investigator, Mr. Vaughan asserted that the complainant was terminated because he seemed distracted and unhappy at SNL, because he was not a team player, and because he directed his anger at certain, female SNL employees to the extent of making sexual harassment allegations against them. ROI at 8.

Following my appointment as Hearing Officer on May 21, 2007, I directed the complainant, Sandia and COMPA to submit briefs focusing on the findings and conclusions in the ROI that they intended to dispute at the Hearing.1/ In its brief, Sandia disputes the ROI's finding that the complainant made protected disclosures. In addition, Sandia and COMPA both contend that even if the complainant made protected disclosures, they were not a contributing factor in their decision to terminate his employment. Further, they assert that the decision to fire the complainant was based on legitimate business reasons unrelated to any protected activity. Accordingly, the Hearing focused on the complainant's alleged disclosures relating to safety concerns, and on Sandia and COMPA's contention that the complainant's employment at SNL was terminated in September 2004 for reasons unrelated to any protected disclosures.

1/ In this regard, I noted that while the ROI has made certain findings, I would be conducting an independent review of the issues. In making my findings, I stated that I would be most convinced by the best available evidence. May 23, 2007 letter to the parties at 3.

III. Hearing Testimony

At the Hearing, testimony was received from twelve witnesses. The complainant testified and presented the testimony of Miriam Minton, a safety engineer with SNL's Environmental Safety and Health (ES&H) support group, and Al Bendure, a manager of Industrial Hygiene and Safety Programs at SNL. Sandia presented the testimony of Don Kerekes, a lighting systems technician, Diane Nakos, a consultant in Sandia's equal employment opportunity (EEO) department, Anthony Chavez, the Manager of SNL's Business Support Operations Department, Carla Lamb, the Facilities ES&H coordinator, Greg Kirsch, a safety engineer with the Safety Engineering Group, Gwen Germany, an analyst in the EEO department, Ann Jensen, an industrial hygienist with the ES&H support group, and Johnny Vaughan, the manager of the ES&H support group. COMPA presented the testimony of its president, Edna Lopez. 2/

As indicated in my analysis below, I find that the complainant's disclosures concerning LOTO requirements for the 277 volt lighting systems at SNL constitute protected disclosures under Part 708 that were made proximate in time to his termination. I also find that Sandia has shown, by clear and convincing evidence, that it would have terminated the complainant based on his performance and behavior in the workplace. Accordingly, my summary of relevant testimony will focus chiefly on the complainant's LOTO disclosures and his performance and workplace behavior.3/

A. The Complainant's Witnesses

1. The Complainant

The complainant testified that he has a bachelor of science degree in loss control management, industrial safety and environmental health. TR at 12. He stated that he has worked in the safety field since 1983. TR at 20. He testified that he was hired by

---

2/ The job titles refer to the positions held by these individual's during the 2003-2004 time frame.

3/ Because I find that the complainant's LOTO disclosures are protected under Part 708, there is no need for me to address in this decision whether his disclosures concerning the lack of approved safety plans for SNL contractors also are protected under Part 708.

Sandia to work as a safety engineer. He stated that he was a subject matter expert on safety-related topics.

> Our job is to cover a lot of different safety requirements. Essentially what we do is if we find something that we don't feel is our level of expertise, we go find somebody that is. I mean, we had different people in our group that were considered to be the most knowledgeable on related topics.

TR at 51. He stated that he is not a licensed electrician, and that he initially was unfamiliar with the workings of fluorescent lights and ballasts, particularly the Microlite 277 volt system. He stated that he did not initially realize that the light switch for the Microlite 277 volt system was a control volt relay into the lighting panel and that the wall switch would not completely shut off the power to the light fixture. TR at 52. After an employee received a shock while performing ballast replacement on a lighting panel on one of these systems in April 2004, he did additional research to understand the appropriate LOTO procedures for 277 volt systems. The complainant stated that he learned that while it is acceptable safety practice to deactivate a 120 volt lighting system by placing a LOTO device in the light switch, the manufacturer indicates that LOTO on a 277 volt lighting system should take place at the electrical panel. This procedure is utilized because the wall switch does not stop power from partially flowing to the lighting system. TR at 12-17.

a. The Complainant's Disclosures Concerning LOTO Procedures

The complainant testified that he raised the issue of LOTO procedures for the Microlite 277 volt lighting systems at SNL on June 17, 2004 with Ms. Lamb. He told her that the applicable Occupational Safety and Health Administration (OSHA) safety regulation at 29 C.F.R. § 1910.147 does not allow light switches to be used to perform LOTO in 277 volt lighting systems. He testified that an OSHA interpretation of Section 1910.147 issued to Mr. David Teague on July 15, 2003 indicated that it is not permissible to use control devices such as switches as a means of locking out electrical systems. TR at 19.

The complainant stated that when he advised Ms. Lamb of the OSHA requirements for LOTO on a 277 volt light system, he also told her that he had discussed this matter with Mr. Brian Drennan at SNL, and that SNL's Electrical Safety Committee wanted to have a meeting to discuss the proper LOTO on a 277 volt lighting system. The

complainant testified that Ms. Lamb then made the following statement to him.

> We are just going to violate the standard, there's not going to be any meeting and this is going to be the end of it. The only reason that it will go further is if you make it an issue.

TR at 19.

The complainant stated that after his conversation with Ms. Lamb, he raised this issue with Mr. Gary Bultman, who he identified as the high voltage electrical supervisor at SNL. He stated that he also raised the issue with Mr. Herman Gomez, the supervisor at SNL who was overseeing the work on the 277 volt lighting systems. He stated that he told Mr. Gomez

> Look, Herman. They are taking shortcuts on this stuff. We need to make sure that people are protected properly. The way it's supposed to be done is you go back to the electrical panel that actually controls the lighting panel and do the Lock-Out-Tag-Out....

TR at 24. The complainant stated that SNL continued to practice unsafe LOTO procedures for the 277 volt lighting systems through the summer of 2004. In a September 14, 2004 e-mail, Ms. Lamb indicates that SNL's "relamping/ballast folks" have been told that wherever lamp fixtures at SNL contain a fuse that deactivates the lamp's ballast, removing the fuse will serve as SNL's means of deactivating the lighting panel for purposes of replacing the ballast or other maintenance. September 14, 2004 e-mail from Ms. Lamb to Mr. Vaughan, Sandia Exhibit 5A. The complainant stated that this method for deactivating the lighting panels was not a safe method.

> If I remember correctly, [the technician who got shocked in April 2004] removed a fuse from the system. Yet, there was a wire adjacent to that that was hot. That's why he was shocked. If you do a proper Lock-Out-Tag-Out, go back to the electrical panel and do the Lock-Out-Tag-Out so there's no current shooting through the wires associated with the light fixtures.

TR at 26-27. The complainant stated that he sent Mr. Vaughan an e-mail expressing his disagreement with Ms. Lamb's instructions. This e-mail, dated September 14, 2004, reads as follows:

> **Johnny,**
> **This is rather interesting. The original issue was performing LOTO on control devices which is prohibited by 29 C.F.R. 1910.147. When I told Carla Lamb that the previous mentioned was an OSHA requirement, that there was an OSHA Letter of Interpretation prohibiting the use of a control device as a LOTO point and that the Electrical Safety Committee wanted to meet and discuss it, I was told by Carla "Well, we are just going to violate the standard, there is not going to be any meeting, and this is going to be the end of it." I found it rather bizarre that someone that is an ESH Coordinator would put someone's life at risk from electrocution, which is why I came to see you and you wrote the email response back on June 17th.**

September 14, 2004 e-mail from complainant to Mr. Vaughan, attached to Complainant's November 19, 2004 Part 708 Complaint. The complainant testified that on the same e-mail string as Ms. Lamb's instructions, there is an e-mail from Mr. John J. Thayer that confirms the complainant's concerns with using light switches and fuses to disconnect lighting fixtures for repair and maintenance. This e-mail reads in part:

> **My recommendation is that all fixture LOTO's be done at the circuit breaker level where possible, as this is the safest method. From talking with Greg Anderson, Facilities Maintenance, it is common practice to replace ballasts by removing the fixture fuse to the ballast; this is questionable, but it does disconnect the power conductors. Fuses are required in our SNL Standard 16501 for fluorescent fixtures. If this is the case, only unfused fixtures would be an issue requiring shutdown of the entire circuit at the circuit breaker. Low voltage controlled lighting fixtures without fuses must always be shut down at the circuit breaker, regardless of the type of switch used.**

June 17, 2004 e-mail from John J. Thayer, the electrical engineer who represented Sandia's Facilities Division on SNL's Electrical Safety Committee 4/, regarding "Light Switch LOTO", Sandia Exhibit 5B.

4/ *See* testimony of Ms. Lamb, TR at 223.

The complainant testified that he considered proper LOTO procedures for the 277 volt lighting system to be a "very serious" safety matter.

> **It doesn't take a lot of electricity to kill somebody. If there's one person who has already been shocked on it. If you don't do Lock-Out-Tag-Out properly, you can be killed by it. To me this is very serious. I have been in the safety field since 1983 in various forms of safety, and [Ms. Lamb's comments] to me meant it's time for me to go to [Human Resources] to talk about this.**

TR at 20. The complainant also testified that he received an e-mail from Microlite, the manufacturer of the 277 volt lighting system, that stated that LOTO for these lighting panels should take place at the electrical panel that controls the lighting.5/

b. The Complainant's workplace behavior and performance

The complainant testified that when he was employed at the DOE's Hanford site in about 1994, he became sensitized to issues concerning inappropriate workplace behavior because a female manager, tried to pinch and touch him in inappropriate ways. He stated that, as a result of this behavior, he quit his job at Pantex and transferred out of the area. TR at 36-37. He stated that he later worked at the DOE's Pantex plant in Amarillo, Texas. He testified that while working at Pantex, he was bothered by a female employee who

> **seemed to think it was acceptable to come and hang out in my cubicle and make comments, things that I just thought, "Just go away. If it's business related I will be more than happy to talk to you about it."**

TR at 37.

The complainant testified that when he worked at SNL as a general safety engineer, his supervisor was Mr. Vaughan, but that he also was supplying safety information to staff members of Sandia's Facilities Division, and that operation was headed by Ms. Lamb. TR

5/ These E-mail messages, dated June 1, June 3, and July 20, 2004 between Mr. Steve Jaskowiak at microlite.net and the complainant, are attached to the complainant's November 19, 2004 Part 708 Complaint.

at 50. He stated that his working group supplied expert advice to Ms. Lamb on health and safety issues.

> Essentially what we do is if we find something that we don't feel is our level of expertise, we go find somebody that is. I mean, we had different people in our group that were considered to be the most knowledgeable on related topics.

TR at 51. He stated that his area of expertise was safety related to facilities maintenance, while Mr. Kirsch handled construction safety issues and Ms. Jensen covered industrial hygiene. TR at 53.

The individual testified that while he was working at SNL, he had three angry outbursts while he was making personal telephone calls from his work cubicle during his lunch hour. TR at 72-75. He stated that on one of these occasions, he apologized to people working nearby because he had used profanity. TR at 73. He stated that he could not recall referring to his Sandia facilities customers as idiots after speaking to them on the telephone, although he admitted that he may have "muttered something under by breath" following telephone conversations. TR at 74.

The individual stated that in early 2004 he filed a complaint against a female co-worker in the safety group who interacted with him on hygiene and safety issues. TR at 78. He stated that he was uncomfortable with the way that she pressed against him when he showed her information on his computer screen. TR at 78. He stated that on another occasion, he was uncomfortable when she touched the back of his neck to illustrate where a co-worker had received a mosquito bite. TR at 79. He stated that after that incident, he began to view her repeated greetings and efforts at communication as a form of abuse.

> We did that [exchanging greetings] a few minutes ago. Why are you having to do it again? To me, it was about power and control. I mean, it was definitely more than once, and finally I was to the point where I said – it creeped me out. I had chest pains. I thought I was going to be retaliated against because of this. I just wanted her to leave me alone.

TR at 80. He stated that he discussed this situation with Ms. Lopez, and that the two of them visited Ms. Nakos at Sandia's EEO on January 20, 2004. TR at 82-83. He stated that after Ms. Nakos investigated his complaints against this female co-worker,

she had another meeting with him and Ms. Lopez where she stated that the co-worker's behavior did not rise to either an EEO violation or an ethics violation. TR at 84.

The complainant testified that around July 6, 2004, he and Ms. Lopez met again with Ms. Nakos at the Sandia EEO because the complainant wanted to report some problems that he was having with Ms. Lamb. TR at 88. He stated that at this meeting he discussed Ms. Lamb's alleged statement to him on June 17, 2004, that he should violate OSHA LOTO requirements, along with other statements from Ms. Lamb that he considered to be inappropriate. TR at 89. He testified that she had come to the office area where he worked and stated "I need a man" because she needed someone to fix the chair in her office.

> I felt it was inappropriate. If somebody wanted help in getting a chair fixed, they should have come out and said, "Can you help me fix my chair." I thought it was over the top to say "I need a man." Because I know if I walked up to one of these women in the workplace and said, "I need a woman," I think that would probably be looked at as inappropriate.

TR at 90. The complainant testified that he also reported that Ms. Lamb once asked him "where do you live?", which he considered inappropriate. He stated that

> In general, she was kind of a difficult person to deal with. She always wanted a lot of attention. She needed to be the center of attention. . . . it was when you went to talk to her about a safety issue that could take place in seven or eight minutes you would be there a half hour, 45 minutes with her talking about herself.

TR at 92. He also recalled that on a couple of occasions, she made what he considered to be inappropriate comments related to female physiology. TR at 93-95. He stated that after Ms. Nakos investigated his complaints, Ms. Nakos had a follow-up meeting with the complainant and Ms. Lopez where she informed them that nothing Ms. Lamb had done rose to the level of an EEO or Sandia ethics violation. TR at 98. He stated that he did not challenge Ms. Nakos' conclusions at this meeting.

> I was rather stunned. After the fact, when I read through the documentation, apparently all you have to do is say, "No, I didn't do it," and everything is fine.

TR at 99.

The complainant stated that on July 26, 2004, he and Ms. Lopez again went to Sandia EEO concerning a problem that he was having with the industrial hygienist in his working group, Ms. Jensen. TR at 99, 108. On this occasion, they met with EEO counselor Gwen Germany. TR at 108.

The complainant acknowledged that he and Ms. Jensen worked closely together on different aspects of the same occurrence or safety issue, and that they occasionally would be involved in joint inspections of Sandia facilities. TR at 103. He stated that initially he got along with Ms. Jensen "for the most part" because "I am pretty tolerant of people." However, in his meeting with Ms. Germany, he stated to Ms. Germany that at least half a dozen times, Ms. Jensen clasped her hands around his forearm or touched his shoulder when she spoke to him. TR at 101. He stated that

> Finally, one day I said, "Ann, I really don't like people touching me," and her response was to turn to me, grab me by the forearm and say, "I am just a touchy-feely sort of person." I thought wow, if a woman told a man they didn't like being touched and they did that, I wonder what the response would be.

TR at 102. He also stated that she made an inappropriate comment when she announced that she was leaving for a doctor's appointment. TR at 103. He testified that on August 3, 2004, he had a follow-up meeting with Ms. Germany and that she told him that none of Ms. Jensen's actions rose to the level of an EEO violation or a Sandia Ethics violation. TR at 114.

2. Miriam Minton

Ms. Minton testified that she worked as a safety engineer at the Facilities support group for about three years before leaving in early 2004. TR at 136, 138. Ms. Minton stated that she was not aware of the LOTO issues raised by the complainant, and that she left before the April 2004 electrical accident. TR at 148-149.

Ms. Minton testified that the complainant had been hired to perform the safety engineering tasks in the maintenance area, while she and another engineer devoted more time to construction matters. TR at 136. She stated that part of her reason for leaving was "personality conflicts" with Ms. Lamb. TR at 136.

She stated that there were a couple of times where she and Ms. Lamb disagreed on how to read a safety policy,

> and if I ever felt like it needed to be pushed forward, I would go to the subject matter expert. . . . Or I would go to my management. Because it didn't just stop with me. If I felt there was a safety issue I would go to the manager and bring in the safety matter expert and we would come together as a group and say, "Okay, how are we going to handle this?"

TR at 154.

Ms. Minton testified that as a safety engineer assigned to maintenance operations, the complainant did a lot of job site hazard evaluations. TR at 142. She stated that her routine was to arrange for a maintenance worker to walk the site with her so that she could learn exactly what the job entailed. She testified that the complainant preferred to have his own key and to perform the job site inspections by himself.

> It seemed like Casey wanted to do it his way and not the way we had always done it. There were some times where it seemed like he wanted to work on the things that he was interested in and not what we were actually needing help on.

TR at 143. She testified that on at least two or three occasions, she heard the complainant lose his temper while on the telephone, then slam down the receiver and cuss the person to whom he had been speaking. TR at 144. Ms. Minton testified that the complainant always seemed uncomfortable around a large group of people. She stated that she believed that he made an effort to be an effective team member, but that it was difficult for him. TR at 146. She stated that he tried to contribute to assisting with the workload of the Facilities Support Group, but that his effort "did not take up the slack that we thought it would." TR at 147. She believed that this was because the complainant

> tended to focus on the things that he wanted to do. He was interested in doing emergency management and instead of asking us if we needed help on additional things, he started ramping up on trying to get his niche in emergency management and emergency response.

TR at 147.

3. Al Bendure

Mr. Bendure testified that in 2004, he was the manager of Industrial Hygiene and Safety Programs at SNL. He stated that in the late summer of 2004, the complainant talked with him about a transfer from the Facilities Support Group to Industrial Hygiene. Mr. Bendure stated that he spoke to Mr. Vaughan about this conversation and then sent an e-mail to the complainant that he needed to "work on this" with Mr. Vaughan. TR at 160-161.

Mr. Bendure stated that some people who worked for Ms. Lamb had problems working for her and that there was a fair amount of turnover in the department due to her. TR at 161. He stated that he recalled that the complainant had told him in 2004 that he had made complaints about women that he worked with in his current position. Mr. Bendure testified that he did not recall telling the complainant that the actions of these female coworkers constituted harassment or suggesting that he contact Sandia's EEO. TR at 162.

Mr. Bendure testified that his experience with Ms. Jensen is that she is "a top-notch industrial hygienist, very professional, forthright" and that no one other than the complainant ever accused her of sexual harassment. TR at 163.

B. Sandia's Witnesses

1. Johnny Vaughan

Mr. Vaughan testified that in 2004, he was the manager of the ES&H support group and the individual's supervisor. He stated that the ES&H group provided multi-disciplinary environmental, safety and health subject matter experts to the line organizations at SNL. TR at 347.

a. *Testimony Concerning LOTO Procedures*

Mr. Vaughan testified that Ms. Lamb and other Sandia electrical experts had used the light switch to deactivate power to the lighting panels, but that once they were made aware of the OSHA requirements in this area, the practice stopped.

> [Ms. Lamb] discussed the light switch [in her hearing testimony]. That was one element and it was low voltage control, but once we got that, everybody that got involved agreed. Lights – that light switch, low voltage

> in this application, is not acceptable and does not meet Lock-Out-Tag-Out and we are not going to continue to do that.

TR at 389. Mr. Vaughan testified that the purpose of LOTO is to prevent and eliminate the risk associated with an employee coming into contact with electricity, and that Sandia always has established procedures and followed a process aimed at preventing electrical shocks. He stated that, with regard to the employee who received a shock while replacing fluorescent light ballasts in April 2004, even if the breaker connection to the those lights had been deactivated and locked out, the employee would have received a shock because "there was a stray wire up there that [was not powered through the lighting system and] could very well have remained energized." TR at 403.

Mr. Vaughan testified that following this accident, Sandia reviewed its practices for cutting power to fluorescent lighting systems at SNL with the goal of finding a method for depowering the lighting ballasts that was acceptable to the DOE. He stated that the string of e-mails entitled "Re: Light Switch LOTO" indicated that until they came up with an approved fixture or alternative method for cutting power to the fluorescent lamp ballasts,

> that we would just have [the power] locked out at the breaker box, not at the switch. No one ever said that that switch, when we found out that [it] was a low voltage item, control item, that that was adequate. No one ever said that.

TR at 407-408, *see also* Sandia Exhibit 5A-D. Mr. Vaughan stated that after Sandia stopped work on the ballasts because of the April accident,

> we never used that switch from that date forward. We found alternatives but we didn't develop the little locking device - I'm not sure exactly when that went in. But until that went in we went back to the breaker box.

TR at 408.

Mr. Vaughan stated to the complainant at the Hearing that he could not understand why the complainant was disagreeing with Sandia's actions in this area.

> I felt we were aggressively, with the experts at Sandia, addressing the safety and health issues to ensure the worker was protected. If that meant going back to the breaker we went back to the breaker. I didn't understand why going back to the breaker, which was some of the things we put in place, or removing the fuse, but nothing had to do with the switches and that seemed to be the focus of your concern, the switches, using the switches for Lock-Out-Tag-Out, as I recall.

TR at 414.

Mr. Vaughan testified that Sandia initially believed that pulling the fuse from fluorescent lighting ballasts was a means of deactivating the power to the ballasts that did not require OSHA mandated LOTO. He stated that OSHA does not require Lock-Out-Tag-Out procedures where you can simply unplug an electrical device for servicing. He testified that removing the in-line fuse from a lighting ballast is similar to disconnecting the power cord from an electrical device, and that he believed that this method of cutting the power to lamp ballasts was an acceptable alternative to LOTO procedures at the breaker box. TR at 388-389.

He stated that Sandia and Mr. Ralph Fevig at the DOE ultimately agreed that power to the fluorescent lighting ballasts could be disconnected by removing the fuse, but that in order to comply with OSHA requirements, the fuse had to be tagged out.

> At that point they made a little plastic thing that would go in this end [of the fuse] so nobody could put the fuse back in until you took it off.

TR at 405. He stated that the dialogue on this issue between Mr. Fevig and Sandia "was not really are we protecting the worker, but it was what's the interpretation of OSHA." *Id.* Mr. Vaughan testified that Sandia and the DOE reached their agreement on the appropriate LOTO for the fuses in fluorescent lamp ballasts sometime after March 2005. TR at 409.

b. Testimony Concerning the Complainant's Workplace Behavior and Performance Issues

Mr. Vaughan testified that in February 2004, he began to get reports that the complainant "didn't like the structure and the formality required to work in Facilities." TR at 352. He stated

that the complainant was tasked to review safety plans after they had been provided by the subcontractor to the Facilities division. However, the complainant was getting the plans for review directly from the subcontractor and then objecting to reviewing the plans again when they were submitted to the Facilities. TR at 352-353.

Mr. Vaughan testified that in January 2004, the complainant came to his office and complained about being physically harassed by a female co-worker. Mr. Vaughan stated that this matter was "certainly beyond my expertise" and referred him to Sandia's EEO. He stated that he had no complaints from other employees about this female co-worker. TR at 355-356.

He testified that the co-worker quit as a result of the complainant's allegations.

> I came in one morning and I went to my mailbox, which was outside my office, and inside my mailbox was her phone, her pager, her badge, and a handwritten note saying that she couldn't take being accused like this. She had never experienced anything like this before in her life, and she got the feeling that even when people looked at her that they were thinking dirty old woman or something. If you knew [the coworker], it was just devastating for her, and she resigned.

TR at 357-358. He stated that he did not believe that Sandia policy allowed him to reveal her expressed reasons for leaving, so he explained at a meeting of his work group that she had another employment opportunity. TR at 358. He also stated that communicating her reasons for leaving would have created more anguish and hostility in the workplace, and his job was "to create cohesion and teamwork." He stated that the complainant attended this meeting, and reacted with a "gloat of satisfaction" when he announced that she had left. TR at 359.

Mr. Vaughan stated that in March 2004, the complainant came into his office and announced, using a derogatory epithet for women, that he had "just got rid" of one female co-worker and was not going to "take this stuff" from another one. TR at 359. He stated that the complainant told him that he was having problems with Ms. Lamb.

> and he was saying she was asking him questions like, "Casey, where do you live?" "Casey, what are you doing this weekend?" Spread over some period of time. Then

> there was "I need a man" and [it] turned out her chair was broken and she wanted him to work on it.

TR at 359. Mr. Vaughan testified that the complainant asked him to speak to Ms. Lamb and instruct her that any dialogue with the complainant "will stick to business". Mr. Vaughan stated that

> I did, in fact, follow up with Carla and had some dialogue that I said basically that Casey had taken exception with some of the discussion that was not work-related and that just try to be conscious, and that's again, not really in Carla's nature, so to speak. She is another one of those fairly flamboyant people. I don't know if I would say flamboyant, but she is a people person. So she likes to have, you know, not all work. You know, we mix, like the average person, and again, that's my judgment. The average person you can talk about what you did this weekend and you can talk about what we need to do today to get the job done. That was the kind of person she was.

TR at 360. He stated that after his March 2004 conversation with the complainant about Ms. Lamb, he was told by another of the complainant's co-workers that several people in the Facilities Support Group felt threatened by the complainant's angry outbursts during or after his telephone conversations. TR at 361.

Mr. Vaughan stated that on April 26, 2004, the complainant again came to speak to him about Ms. Lamb. The complainant told him that she had "horned in" on a conversation that he had been having about the effects of blood sugar with a discussion of female hormonal cycles that he found extremely offensive. TR at 362.

Following this meeting, he met with the complainant's employer, Ms. Lopez, to try to get a better understanding of what his working group and the complainant could do "to make this relationship work."

> I felt Casey had a background on resume and stuff where he could contribute to Sandia, but if everything that was said was going to be taken with such sensitivity, there was no way that I could create the work force that would be compatible with the comfort zone that Casey was exhibiting at that point and get work done.

TR at 363.

Mr. Vaughan stated that on May 3, 2004, he met separately with the complainant and Ms. Lamb about their working relationship, which he believed had become a problem.

> I decided okay, we are at this juncture and [it] doesn't look like it's working for me, for Carla, for the corporation, the people. We are spending all out time, and I felt as a group it was becoming totally distracted. And in the business that we are in, we can't afford people to be distracted. All I need is somebody to mess up on a confined space or electrical safety job review or something and people's safety is at risk. And that's my responsibility.

TR at 364. He said that he told the complainant that he had to follow the processes that were in place, and that meant that "Carla is going to tell us what we need to do." TR at 364. He testified that he discussed with Ms. Lamb the need to censor herself around the complainant, and that she was struggling with this. He stated that Ms. Lamb reported to him that the complainant was avoiding her and that would not work because she needed to discuss issues with the Facilities Support Group as a team. TR at 365.

Mr. Vaughan testified that the complainant began to approach him frequently with suggestions for assignments, rather than interact with Ms. Lamb and accept assignments from her. Mr. Vaughan stated that the complainant needed to be in contact with Ms. Lamb about work assignments because he was not knowledgeable about the work direction and priorities in the Facilities Division. TR at 411-412.

Mr. Vaughan testified that in July 2004, he was kept informed when the complainant and Ms. Lopez met with Ms. Nakos and Ms. Germany concerning the complainant's problems with Ms. Lamb. Then, on August 3, 2004, Mr. Vaughan stated that he met with Ms. Nakos and Ms. Germany after he learned that the complainant had raised allegations of sexual harassment against another person in the Facilities Support Group, Ann Jensen. TR at 366. Mr. Vaughan stated that he had this meeting was to explore his options as a manager.

> To be honest with you, I was beginning to feel as though I had a performance problem and my hands were tied. I was trying to understand how do we bring this resolution where we are meeting the EEO things and that I can deal

> with a performance problem without it being construed as harassment over some EEO allegations.

TR at 367. Mr. Vaughan stated that on September 10, 2004, he contacted Ms. Germany to ask when the EEO would complete its investigation of the complainant's allegations against Ms. Jensen. TR at 368. On September 14, 2004, he again contacted Ms. Germany to report that Ms. Jensen was very upset by the complainant's allegations, which she believed were false, and had told him that she would quit Sandia because she could no longer work in close proximity to the complainant. TR at 369.

Mr. Vaughan stated that no one had ever complained about Ms. Jensen's behavior previously, and that she was a highly valued employee who he could not afford to lose.

> With her expertise and her abilities combined with the excellent working relationship she had, not only with the people that were in Facilities but with the other team, it would have been devastating, yet another blow to a team I am tying to make.

TR at 369.

Mr. Vaughan stated that he is the chairman of Sandia's Joint Union Management Safety Committee, and that when this committee met on September 14, 2004, the complainant was assigned to provide a status report on developments since the last meeting with respect to on-the-job injuries, contributing factors, and safety lessons learned. He stated that the complainant made the comment at this meeting that some workers were probably injured away from work and are just trying to get workmen's compensation to cover it. Mr. Vaughan testified that such a comment was inappropriate and damaging to the working relationship between union representatives and safety representatives. TR at 371.

Mr. Vaughan stated that the complainant wanted to spend too much time helping out at the emergency operations center, but that was not his job assignment.

> I guess obviously, he wasn't happy with his job. And he says so in his briefs, you know. He was distracted, he was unhappy. He expressed it to [Ms. Lopez], he expressed it to me. I was just wondering, okay, we have someone who is disruptive of the team that I am trying to provide service. We have someone who is unhappy. They

> don't like where they are working. We have tried to do [some] things that we thought might be able to be a working relationship for both of us, or all three of us, including contractor management, and it wasn't coming together. It was getting worse. It was digressing.

TR at 376. Mr. Vaughan stated that he believed that it would be inappropriate for Sandia to transfer the complainant to another assignment at SNL because the complainant was the employee of a Sandia contractor.

> I don't work to accommodate contractors like I do [Sandia] employees. . . . we have fluctuating needs of business, and that's where we use contractors to supplement the needs of the business. So far as I am not the employer, I wouldn't be doing professional development, and this was something [the complainant] felt he wanted as professional development and he didn't like the area that he was working in.

TR at 377. Mr. Vaughan stated that he believed it was not common for contract employees of Sandia change job assignments by making contacts within the Sandia organization. TR at 378.

Mr. Vaughan testified that aside from the complainant, he was involved in the termination of two other employees at SNL. One was a Sandia employee and the other a Sandia contractor employee. With regard to the former, he stated that

> The termination of a [Sandia] employee takes on all of the legal ramifications with Sandia as the employer. Associated with that, there's a lot more, I would say, responsibility to accommodate, to look at opportunities for reassignment, to look at all of the things we might do to try to turn this around.

TR at 380. He stated that the Sandia contractor employee had worked as a radiation technician and suffered from narcolepsy. Mr. Vaughan stated that this technician fell asleep and rolled into a contamination area. He was fired because he failed to report that he had fallen in a contamination area. TR at 384. Mr. Vaughan testified that he knew of no Sandia or contract employees who had been fired for reporting a safety issue. *Id.*

Mr. Vaughan offered the following explanation for terminating the complainant from his position at SNL.

> It just seemed there were two major issues that there was no way to overcome. One was a lot of his co-workers found him intimidating. There was nothing I could do to change that. That's just the way he was. Number two is the inability to work with the people who were directing and controlling the work. In this case it was Carla, and not able to get along with the team.

TR at 385. Mr. Vaughan testified that the complainant disclosures about LOTO issues and safety plans for contractors had nothing to do with his termination.

> There was nothing associated with those items that had to do with the cause or the reason for termination. Absolutely nothing associated with those.

TR at 392.

2. Carla Lamb

Ms. Lamb testified that as the Facilities ES&H coordinator, her job made her the team lead for Sandia's matrix support team in responding to ES&H concerns and events. She stated that the Facilities organization is responsible for all of the construction and maintenance work at Sandia, and the matrix support team is designed to make ES&H experts available to Facilities personnel.

> So we have two safety engineers, two industrial hygienists, one [radiation] technician, [and] two environmental folks matrixed from the ES&H group . . . over to Facilities.

TR at 210. She stated that the complainant was one of the safety engineers in the matrix support team. TR at 211.

a. *Testimony Concerning LOTO Procedures*

Ms. Lamb testified that the April 2004 electrical accident involved a contract employee who was replacing the ballasts in 277 volt fluorescent lamps at SNL.6/ She stated that following this

---

6/ She explained that fluorescent lamp ballasts transform electrical current into the form needed to operate fluorescent

(continued...)

accident, a LOTO issue arose over the proper way to shut down the 277 volt lighting systems. She testified that

> One of the maintenance people went over to do some LOTO and said that he didn't have the right LOTO mechanism for the switch. It had a toggle type switch instead of a regular light switch that you normally see, so he went back to his team lead and asked for a new mechanism to do that. It was my understanding from the team lead that he went and talked to the systems engineer and to [the complainant] in Safety as the person supporting maintenance, could they get us the right lock-out mechanism.

TR at 222. She stated that while they were responding to this request, Mr. Thayer, the systems engineer, stated that

> we shouldn't be depending on the light switch to turn off the circuit to the light because [OSHA] says that you will not lock and tag or use the control voltage when you are working on a system.

TR at 222.

Ms. Lamb testified that no one at Sandia had realized until then that the OSHA requirement against using control devices for LOTO applied to light switches in certain fluorescent systems. TR at 222. She stated that once Mr. Thayer announced this requirement, Sandia began to work on developing other means of cutting power to the fluorescent lighting. They proposed to the DOE that for purposes of replacing lamp ballasts, pulling out the in-line fuses to the ballasts would be an acceptable method of cutting power because it would be a variation of the "cord and plug" method that is acceptable under OSHA rules. TR at 223-224. She stated that the DOE eventually accepted this proposal, but added the requirement that the fuses be tagged out when they are removed. TR at 224.

Ms. Lamb testified that the complainant was a part of the give and take and exploration to develop the best way to cut power to the fluorescent lights that met OSHA requirements. TR at 226. She stated that she was not directly involved in this dialogue, but

---

6/ (...continued)
bulbs. TR at 221.

understood that "everything was moving forward" with a plan based on removing in-line fuses. TR at 226-227.

Ms. Lamb testified that it came to her attention that the complainant still felt that there was a problem; that it wasn't being resolved appropriately. TR at 226. She stated that she had spoken to Greg Anderson, her team lead for Sandia subcontractors, and that Mr. Anderson reported that the complainant had issues with Sandia's approach of removing in-line fuses. She testified that she understood from her conversation with Mr. Anderson that Sandia had

> met with the contractors [and told them] that we would use the fuses, that we would not lock and tag at the switch, depending on the 110 circuit, so we were no longer depending on 277 [control circuits], and they were resolving the issue whether that would be treated with cord and plug. That is how I remember that issue.

TR at 238. She stated that based on her conversation with Mr. Anderson, she went to talk to the complainant about LOTO for the 277 volt fluorescent lights. TR at 238. She stated that she explained to the complainant that in addition to performing LOTO on the light switch

> on the 277 [volt lighting system], they would also ensure there was an in-line fuse [to disconnect] or bring in a qualified electrician to go to the panels.

TR at 227. She stated that during this conversation, the complainant kept insisting that she take the issue of appropriate LOTO on the 277 volt lighting system to Sandia's Electrical Safety Committee. She testified that she finally said to him

> You know, you want to take it to the Electrical Safety Committee, go on, take it to the Electrical Safety Committee, but I don't feel the need to do that. If you need to take it to them, feel free. Go ahead. If they want to come and tell us that we need to do something different, that's fine, but I am not going to take that step. I don't think we need to do that. We are working in a safe manner, you know.

TR at 229. Ms. Lamb testified that everybody felt comfortable that pulling an in-line fuse was a safe solution, and that the only question was whether the DOE would agree that pulling a fuse was

a "cord and plug" disconnection acceptable under OSHA regulations. TR at 229.

b. Testimony Concerning the Complainant's Workplace Behavior and Performance Issues

Ms. Lamb testified that as the Facilities ES&H coordinator, she was responsible for organizing a response to ES&H concerns or events. She stated that she functioned as the team lead for the Facilities Support Group, which consisted of two safety engineers, two industrial hygienists, one radiation technician, and two environmental experts matrixed from the ES&H group over to Facilities. TR at 209-210.

She stated that in 2003 and early 2004, she had been occupied with issues of safety engineering and industrial hygiene, and had not had a lot of contact with the complainant who, as the safety engineer supporting maintenance, interfaced chiefly with the team leads at the Facilities Division. TR at 211-212. She stated that "it seemed kind of awkward sometimes with Casey" and that "I remember at one point thinking that I needed to be friendlier and talk to him more." TR at 212. She testified that because she was often overseeing the work of Ms. Jensen, who sat across from the complainant, she made an effort "to stop and say hello [to the complainant], try to be friendlier, try to talk more." TR at 213. She stated that this approach "didn't seem to really make a difference" and because she had good feedback from the team leads about the complainant, "I just decided it would be more of a hands off kind of situation . . . ." TR at 213.

Ms. Lamb testified that Ms. Jensen was finding it difficult to interact with the complainant. She stated that previously Ms. Jensen and Ms. Minton would team up and inspect spaces together, but that "we were having problems with Ann [Jensen] and [the complainant] kind of teaming on the process."

> Just everything seemed really bad, so I went to talk to Johnny [Vaughan]. I said, "Johnny, can you help us? Can you help us figure out what we need to do here? How can we make this better?"
>
> At that time I learned that Casey had made complaints about his interfaces with me, and with Ann. So I tried to talk to him, he tried to talk to Casey, but Casey went and talked to Johnny that he wasn't happy with the

> interface, I wasn't happy with the interface, Ann wasn't happy with the interface. It wasn't going smoothly.

TR at 215. Ms. Lamb stated that she never "did anything that I would feel was sexual in nature to Casey." TR at 215. She recalled a conversation with the complainant about blood sugar where she referred to PMS symptoms affecting blood sugar.

> The conversation [with the complainant] kind of stopped right there so - like somehow I felt like maybe I had said something that I shouldn't have. So we never had a conversation about blood sugar or exercise again. That's the only time. I just remembered it because it seemed kind of like it ended sort of strange.

TR at 216. She stated that she told Mr. Vaughan two weeks after his May 2004 efforts to improve their interactions, that her ability to communicate with the complainant was "getting worse and not better; that we just weren't communicating." TR at 249.

3. Don Kerekes

Mr. Kerekes testified that he works as a lamper performing maintenance and repair work on the lighting systems for Sandia six and a half years. He stated that he is an apprentice electrician. TR at 167. He stated that when he came to work at Sandia, he followed a LOTO procedure that involved turning off the light switch and putting a device on the switch that locks the switch in the off position. TR at 168. He stated that within six months of starting work a Sandia, he reported to his manager that there were light switches at Sandia that he could not lock out with the device. TR at 169. He stated that his manager reported to him that Sandia was considering various options, such as making devices that would fit the various light switches in use at Sandia. TR at 170. He stated that he finally was instructed to use one of two options.

> If there's a fuse in the fixture, I was allowed to lock out there. If there wasn't, and I couldn't do it at the switch, we had to go to the breaker.

TR at 171.

Mr. Kerekes testified that all of the buildings constructed at Sandia within the last twenty years use 277 volt lighting. TR at 172. He stated that he performs the same LOTO procedures on both

the 277 volt lighting and the older 120 volt lighting systems. He stated that he uses the toggle switch LOTO device on both the 120 and 277 volt systems, but that in addition

> **we are checking for zero voltage before we cut anything or put ourselves in danger, so I am wearing my [personal protective equipment] while I am doing the voltage checking.**

TR at 173.

4. Diane Nakos

Ms. Nakos testified that from 1992 until July of 2005, she worked as a consultant in Sandia's EEO and AA Department. TR at 174-175. She stated that she met with the complainant and his employer, Ms. Lopez, in January 2004, because the complainant was concerned about a female employee in his work area who "was maybe brushing up against him more often that he felt comfortable." TR at 176. She stated that the complainant also expressed a concern that the female co-worker had touched him to illustrate where a friend of hers was bitten by a bug. TR at 177. She stated that she told the complainant that she had a lot of experience and training in policy violations concerning harassment, and that "in my view the allegations did not rise to the level of violation." TR at 179. She stated that she agreed to meet with the female co-worker and have a discussion with her about the behavior. *Id.* She stated that when she spoke to the female co-worker

> **she was stunned, she was really devastated. She was mortified to think that her behaviors could be interpreted in any way as being remotely of a sexual nature. She was very upset and confused as to why her behavior would be construed that way.**

TR at 180.

Ms. Nakos testified that in July 2004, she again met with the complainant and Ms. Lopez. She stated that the complainant raised some safety concerns regarding LOTO "that I felt were more appropriately addressed through his management team." TR at 182. She stated that he also raised concerns about inappropriate comments made by Ms. Lamb. She stated that none of the alleged comments made by Ms. Lamb appeared to violate any EEO or Sandia Ethics standards of behavior. She testified that

> But at the end of the second interview, I did get the sense that he had difficulties working with the women in the organization. It started to form a pattern and the allegations were such that some of the comments were what I would deem more as standard office - you know, where are you going this weekend, what did you do this weekend. Those kinds of things are fairly standard in the workplace.

TR at 185.

Ms. Nakos stated that on August 3, 2004, she met with Mr. Vaughan and Ms. Germany because the complainant had now made complainants about three female co-workers, and they needed to assess the situation. She stated that customarily EEO consultants would ask a supervisor to wait until the results of an investigation are completed before they take action. TR at 187.

She stated that they discussed concerns raised by some of Mr. Vaughan's staff concerning his refusal to be a team player.

> And that was important, I think, because the workload was increasing, and they needed people to work in teams better. And I believe that Mr. von Bargen was refusing to do that, wanting to work on his own and not really interested in working with others.

TR at 187. She stated that she could not recall if the meeting resulted in any consensus for action. TR at 187.

5. Anthony Chavez

Mr. Chavez testified that in 2003 and 2004 he was Sandia's project manager for service contracts at SNL. TR at 197. He stated that Sandia had about fifty service contracts and that Sandia management understood that not all of these contractors had approved safety plans for the work they were performing at SNL. He testified that the complainant was assigned that task of determining which contractors had safety plans. TR at 199.

Mr. Chavez stated that he worked with Ms. Lamb when she was the Facilities ES&H coordinator and that he believed that she was knowledgeable about electrical safety and concerned about safety issues. TR at 199-201.

He stated that he generally was able to have discussions of safety issues with the complainant, but that when the complainant became red-faced and raised his voice, "I just tended to put it off and we would talk about it at a later date." TR at 202.

6. Greg Kirsch

Mr. Kirsch testified that he started working at SNL in 2002 as a contract safety engineer and is currently a Sandia employee. TR at 264-265. He stated that he worked with the complainant in the Facilities Support Group, and that the complainant was assigned maintenance safety activities while he and Ms. Minton focused on construction and service contracts. TR at 265-266.

He stated that on a few occasions he overheard the complainant having angry conversations on the telephone, and on one occasion he heard the complainant call someone who he was speaking to on the telephone a "[expletive deleted] idiot." TR at 268-270.

He stated that prior to the complainant's arrival the Facilities Support Group "was a good, cohesive team and we got a lot done and there was a lot of sense of team work and accomplishment." TR at 266. He stated that after the complainant went to the EEO in January 2004 about the behavior of a female coworker, he spoke with the female employee.

> And she basically said somebody had said some stuff that was not true and made the work environment impossible for her to stay there. And she was very uncomfortable and very teary and very upset.

TR at 268. He stated that he never observed this female coworker acting in a sexually aggressive manner. TR at 275. Mr. Kirsch testified that Ms. Jensen is very pleasant to work with and does not have a sexually aggressive personality. TR at 276.

With regard to Ms. Lamb, Mr. Kirsch testified that he advises her frequently on safety matters. He stated that they have frequent disagreements, and she often asks him to justify his position. TR at 277-278. He stated that Ms. Lamb is very committed to keeping people safe. TR at 281. He stated that he still has disagreements with Ms. Lamb on safety issues but has never felt that his position at SNL was jeopardized by those disagreements. He testified that "I moved up raising safety concerns." TR at 282.

He stated that after the complainant arrived, the mood of the Facilities Support Group shifted and became "uptight."

> You want it to flow, especially if you have a lot of extra work. And I think it affected kind of the teamwork. The intensity was different, you know. If you are worried about other people and their communication, that energy, it kind of takes away from what you are trying to get done, so I think from a teamwork standard it dropped off.

TR at 272. He stated that team camaraderie returned after the complainant was terminated. *Id.*

7. *Gwen* Germany

Ms. Germany stated that she has worked as an analyst at Sandia's EEO and AA department since 1992, performing consultations and investigations related to Sandia ethics policies and federal civil rights laws. TR at 292-293. She stated that on July 26, 2004, she met with the complainant, who discussed comments made to him by Ms. Lamb and Ms. Jensen that he found offensive. She stated that she had a telephone conference with Ms. Lopez, who told her that she hoped to move the complainant within the next couple of months. TR at 296-297. She stated that at a later, debrief meeting attended by the complainant and Ms. Lopez, she indicated to him that the comments of Ms. Lamb and Ms. Jensen did not rise to the level of either an EEO or a Sandia policy violation. TR at 302.

Ms. Germany testified that the complainant told her that he was trying to avoid Ms. Jensen and Ms. Lamb. TR at 298. She stated that in a September 8, 2004 telephone conversation with Mr. Vaughan

> Mr. Vaughan told me that Mr. von Bargen was doing everything in his power to not have interactions with [Ms. Lamb], and that a lot of things that should be going to [Ms. Lamb], Mr. von Bargen was actually bringing to Mr. Vaughan.

TR at 300. She stated that Mr. Vaughan also reported that Ms. Jensen had come to him and stated that she was getting nervous because of some of the complainant's reactions to her. *Id.* She stated that Mr. Vaughan told her that the complainant was not a "viable candidate" for transfer to another Sandia organization because of his "interpersonal behaviors" which included avoidance,

belligerence, and being withdrawn. TR at 301. She stated that she was not surprised when Mr. Vaughan terminated the complainant because of the personality issues that the complainant was having

> created a lot of disturbance within the work group to the impact of decreasing productivity within the group. Team work was affected, and based on what I knew of the situation, it seemed to all be pointed towards Mr. von Bargen and his behaviors, his reactions to people, and the fact that he did not seem to want to cooperate with others.

TR at 301.

8. Ann Jensen

Ms. Jensen testified that she is a Sandia contract employee working as an industrial hygienist with the Facilities Support Group since 1999. TR at 319-320. She stated that with maintenance and construction ES&H issues

> it was essential that you be a team working together, because it's a pretty fast pace to the edge of chaos kind of environment.

TR at 320. She stated that it was important for members of the team to consult with each other concerning ES&H issues. TR at 321.

Ms. Jensen testified that she worked out of a cubicle space that was across the corridor from the complainant's cubicle.

> So it's a pretty close environment, and as I mentioned, you can hear over the cubby walls, so there wasn't a lot of privacy. People oftentimes would take a cell phone and go outside if they wanted to have a private conversation. So I did, in fact hear [the complainant] on a couple of occasions on the telephone in an upset condition. And I can only remember one time when he was - it was a banking type of business - and he was really upset.

TR at 322.

Ms. Jensen stated that in late January, early February 2004, a recently hired female co-worker told her that someone had accused her of harassment and that this female co-worker "was in total and

complete distress." TR at 327. She stated that the co-worker eventually left and that it was an "immense loss" to the Facilities Support Group. TR at 327.

Ms. Jensen stated that when the complainant was hired, she looked forward to working closely with him, because industrial hygiene and safety experts in the Facilities Support Group constituted a "sub team within the larger team." TR at 327. She testified that she never intended to say anything inappropriate or personal in her efforts to be friendly with him. TR at 329. She stated that she once referred to him as a SNAG or Sensitive New Age Guy because someone had used that term to describe her husband and she considered it a complement. TR at 330.

Ms. Jensen testified that when she was asked to meet with an EEO interviewer, she was not aware that the complainant had accused her of harassing behavior. She was told that the interview was about tension in the workplace. TR at 330. She stated that she never made inappropriate comments to the complainant concerning a visit to her doctor. TR at 331. She stated that her working relationship with the complainant deteriorated.

> I can't give you a date or time, but there was a time, a specific time, when I was obviously irritating to him. Again, he and I were to have been a subset of the larger matrixed organization, and things that I was doing, saying, were obviously extremely - not just slightly but extremely - irritating to him.
>
> . . . I was in my 50's by then, and I had never, never experienced a work setting - I mean, I might have irritated people. I probably did. But I had never been in a situation where it was so overt, and I felt like our ability to work as a sub team - I mean it was not only compromised it just wasn't there. It wasn't happening.

TR at 332. She stated that it was impossible to "bounce ideas" with the complainant or to ask for his assistance with a task. ***Id.*** She testified that, towards the end, the complainant refused to make eye contact with her when they communicated. TR at 333. She testified that she sometimes touches a person's arm or shoulder when she is conversing with them, but that she recalled no instance where she touched the complainant after he told her not to do so. TR at 334. She stated that other than the complainant, no one has ever filed any sort of complaint against her. ***Id.***

C. COMPA's witness: Edna Lopez

Ms. Lopez testified that she is the President of COMPA, a company that supplies individuals for different government entities, and that it has about 180 employees working on contracts at SNL. TR at 313. She stated that she was present at a number of meetings with the complainant, Ms. Germany, Ms. Nakos and Mr. Vaughan. She stated that when Sandia officials would convey concerns or problems regarding the complainant to her, she would convey those concerns to the complainant in her capacity as his employer. TR at 314.

Ms. Lopez stated that in July 2004, she told the complainant that she thought that he should actively be seeking other employment. TR at 315. She testified that beginning in July, COMPA's recruiter began working with the complainant to place him in another position at Sandia or elsewhere. Ms. Lopez stated that she instructed the complainant to look at Sandia's website for job announcement and that the recruiter began to send him the job listings collected by COMPA. TR at 342.

Ms. Lopez testified that she was not surprised when Sandia terminated the complainant's contract. She stated that for several months her staff had been tracking various problems raised by Sandia regarding the complainant, and that this was unusual for one of her contract employees. TR at 315. She stated that in the complainant's case, she was notified that "his contract was just going to be terminated, that [Mr. Vaughan] no longer had work to support the contract." TR at 316. In a previous conversation with Mr. Vaughan, he rejected her suggestion that she make a written report on the complainant's problems in the workplace.

> **I mean, usually if we are having a situation with an employee and we write them up, it's almost like [termination] will happen within 30 days, because people don't change. But [Mr. Vaughan] said, "Well, let's wait."**

TR at 317. Ms. Lopez testified that unlike some employees who have been fired from SNL for security breaches or other serious infractions, she does not believe that the complainant is barred from seeking future employment at SNL, and that COMPA would be willing to submit his resume to Sandia for a future position at SNL. TR at 343-346.

IV. Legal Standards Governing This Case

A. The Complainant's Burden

Initially, in a Part 708 proceeding, the burden is on the complainant to establish

> **by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor.**

10 C.F.R. § 708.29.

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by the complainant. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

B. The Contractor's Burden

If I find that the complainant has met his threshold burden, the burden of proof shifts to the contractor. Sandia and COMPA must then prove, by "clear and convincing" evidence, that they would have taken the same personnel actions regarding the complainant absent the protected disclosure. "Clear and convincing" evidence is a more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus, if the complainant has established that it is more likely than not that he made a protected disclosure that was a contributing factor to an adverse personnel action taken by his employers, Sandia and COMPA must convince me that they clearly would have taken this adverse action had the complainant never made this protected disclosure.

V. Analysis

A. The Complaint Was Timely Filed

In its Initial Brief in this proceeding, Sandia asserted that the complainant's Part 708 complaint was not timely filed. Specifically, Sandia states that the filing date listed on the first page of the ROI is June 15, 2005, and that the ROI at page 2 contains the statement that "Mr. von Bargen filed this Complaint on June 15, 2005." Because the Part 708 regulations provide that a complainant has 90 days to file a complaint, and because the complainant was terminated by Sandia on September 20, 2004, Sandia contends that this complaint is untimely and the OHA does not have jurisdiction in this matter. Sandia's Initial Brief at 1. I find no merit to this argument. While the Part 708 regulations provide a ninety-day period for filing these complaints, the initial filing of a complaint is not with the OHA, but with the "Head of the Field Element at the DOE field element with jurisdiction over the contract." 10 C.F.R. § 708.10(b). The complainant's Part 708 complaint is signed and dated November 12, 2004, and an attached e-mail from the complainant to Ms. Eva Glow Brownlow at the DOE field office dated November 19, 2004, indicates that Ms. Brownlow already was reviewing the complaint on November 19th. The date of June 15, 2005, is the date on which the DOE field office forwarded the complaint to the OHA for an investigation and a hearing. *See* 10 C.F.R. § 708.21. Accordingly, I find that there is ample evidence to establish that this complaint was timely filed and was being reviewed by the DOE field office in November 2004, well within ninety days of the complainant's termination.

B. The Complainant Made a Protected Disclosure

As noted above, in order for the information that the complainant allegedly disclosed to Ms. Lamb and Mr. Vaughan in 2004 to constitute a protected disclosure under Part 708, the complainant must reasonably believe that the information reveals one of the following:

> **(1) A substantial violation of a law, rule, or regulation;**
>
> **(2) A substantial and specific danger to employees or to public health or safety; or**

> (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority . . .

10 C.F.R. § 708.5(a)(l), (2) and (3). Throughout this proceeding, the complainant has contended that his June 17, 2004, disclosure to Ms. Lamb that light switch LOTO procedures at SNL violated OSHA safety regulations was protected because it revealed a substantial and specific danger to employees or to public health or safety under 10 C.F.R. § 708.5(a)(2). However, in order for his statement to Ms. Lamb to be a protected disclosure of a health and safety concern under Part 708, the complainant must have had a reasonable belief at the time that he made the statement that the LOTO practices on lighting systems at SNL constituted a "substantial and specific danger" to SNL employees. The complainant asserts that he had such a belief, and that it was based upon: (1) his research on current OSHA rulings concerning the use of control devices for LOTO; (2) his e-mail correspondence with a Microlite company representative concerning the proper way to cut off power to their 277 volt lighting system; and (3) his education and years of work experience as a safety engineer. As discussed below, my review of the testimony and other evidence in the record of this proceeding leads me to conclude that the complainant made a disclosure to Ms. Lamb on or about June 17, 2004, that was based on his reasonable belief that Sandia was improperly performing LOTO on light switches, and that these LOTO practices presented "a substantial and specific danger to employees or to public health and safety" protected under Part 708.

1. The Complainant Disclosed to Ms. Lamb and Mr. Vaughan that Sandia's Light Switch LOTO Practices Violated OSHA Safety Regulations

As the summary of his testimony at the hearing indicates, the complainant contends that on June 17, 2004, he informed Ms. Lamb that the applicable OSHA safety regulation at 29 C.F.R. § 1910.147 does not allow controlled devices such as light switches to be used to perform LOTO. In her testimony at the hearing, Ms. Lamb stated that she recalled having a conversation with the complainant where he "was still concerned that we were using the switch that was controlling the lighting panel" to perform LOTO on the 277 volt lighting system. TR at 277. I conclude from this testimony that the complainant did say to Ms. Lamb that the use of light switches for LOTO violated OSHA safety regulations.

I also find that the complainant's September 14, 2004 e-mail to Mr. Vaughan constituted the disclosure of a safety concern. In his e-mail, entitled "RE: Light Switch LOTO - regulatory requirements clarified", he refers to his June 17, 2004 conversation with Ms. Lamb and states that he told her that the OSHA safety regulations prohibit the use of a "control device", *i.e.*, a light switch, for LOTO. His e-mail then recounts her alleged rejection of his advice. While the primary purpose of the September 14, 2004 e-mail appears to be to inform Mr. Vaughan of Ms. Lamb's alleged rejection of the complainant's earlier safety disclosure, the facts discussed in the e-mail repeat the complainant's earlier statements that it is unsafe to use control devices for electrical LOTO.

I do not believe that the complainant has shown that he made the other alleged disclosures concerning lighting system LOTO that he discussed at the hearing. He did not attempt to corroborate the alleged statements that he made to Mr. Bultman or Mr. Gomez following his conversation with Ms. Lamb. Nor is there any support in the record for his assertion that he specifically stated to Ms. Lamb or Mr. Vaughan that he had safety concerns about Sandia's practice of cutting power to lamp ballasts by removing the in-line fuse. Accordingly, in my analysis below, I will examine whether the complainant reasonably believed on June 17 and September 14, 2004, that Sandia's practice of locking out light switches on Microlite 277 volt lighting systems constituted a substantial danger to the employees servicing light fixtures at SNL.

2. The Complainant Had a Rational and Reasonable Belief that the use of Light Switches to Perform LOTO on Microlite 277 Volt Lighting Systems was a Safety Concern

Based on the testimony and evidence at the Hearing, I find that the individual reasonably believed that his June 17, 2004, disclosure to Ms. Lamb and his September 14, 2004, disclosure to Mr. Vaughan provided information of a significant safety issue at SNL. The complainant stated at the hearing that he contacted a Microlite company representative by e-mail after the April 2004 accident and asked him how Microlite recommended that power to the lighting system be cut off for servicing. The Microlite representative, Mr. Steve Jaskowiak, replied by e-mail on June 3, 2004, and stated that power should be cut off by going to the electrical panel and turning off the breaker switch that is feeding power to the lighting panel being serviced. He specifically noted that turning off the "control voltage" to the lighting panel at the light switch will have "no effect on the actual [power] loads" running to the lighting

panel. E-mail from Mr. Jaskowiak to Complainant's November 12, 2004 Part 708 Complaint.

The complainant testified that he also discovered prior to his conversation with Ms. Lamb that, in 2003, OSHA had interpreted its LOTO regulation to forbid the use of light switches or other control devices to lock out electrical systems. This reading of OSHA requirements is supported by an e-mail that the complainant received from Mr. Thayer on June 17, 2004, and the hearing testimony of Mr. Vaughan. Accordingly, I find that when the complainant had his conversations with Ms. Lamb concerning light switch LOTO on the Microlite 277 volt lighting system, he had a reasonable belief that locking out the light switch would be ineffective in cutting power to the lighting panel.

Therefore, based on the testimony and evidence in the record, I find that the information known by the complainant at the time of his June 17, 2004 conversation with Ms. Lamb was sufficient to provide him with a reasonable belief that using light switch LOTO as a means of cutting power to the Microlite 277 volt lighting system was ineffective and considered a dangerous practice by OSHA.

3. The Complainant's June 2004 Disclosure to Ms. Lamb and His September 2004 Disclosure to Mr. Vaughan Revealed A Substantial and Specific Danger to Employees at SNL

The complainant has shown that he reasonably believed that light switch LOTO was an ineffective and therefore unsafe means of cutting power to the Microlite 277 volt lighting system. However, Sandia argues that the complainant's disclosure of this fact to Ms. Lamb and Mr. Vaughan did not reveal a substantial and specific danger to the safety of Sandia employees. It first contends that no substantial or specific danger can exist because at the time the complainant made his disclosures, Sandia had stopped using light switches for LOTO, and that it never resumed this practice.

I find this argument to be without merit. The record indicates that Sandia had temporarily halted the servicing of its lighting systems while it investigated the causes of the April 2004 accident. However, it is clear that at some point Sandia would resume the servicing of its lighting fixtures, and therefore the complainant's statements that Sandia's LOTO practice was unsafe procedure for servicing the 277 volt lighting system is protected under Part 708. A danger, by definition, generally involves an element of future

possibility and risk.7/ Moreover, the regulatory language does not state that the danger must be "imminent" or "immediate" as a means of restricting this aspect of the term's meaning. *See Curtis Hall*, 29 DOE ¶ 87,022 at 89,113 (2007). Sandia argues that at the time of the complainant's conversation with Ms. Lamb, Sandia already had established a policy of eliminating light switch LOTO from its safety procedures. I find that this contention is not supported by the record. As late as June 16, 2007, Mr. Cerutti, a Sandia manager, e-mailed the complainant and Mr. Vaughan that it was important that "the huge number of [light] switches that will be installed in the MESA complex will be ones that we can lock out at the individual switches." Light Switch LOTO e-mail string, Sandia Hearing Exhibit 5C. In his September 14, 2004, e-mail to Mr. Vaughan, the complainant states that he brought Ms. Lamb's resistance to ending light switch LOTO to the attention of Mr. Vaughan following his June 17, 2004, conversation with her, and that this resulted in Mr. Vaughan's June 17, 2004, e-mail to Ms. Lamb in which he stated that locking out light switches "does not provide the power isolation required by OSHA" and stated that "breaker isolation" or in some cases the removal of fuses should be used to cut power in the future. Sandia Hearing Exhibit 5A. The complainant's recollection of Ms. Lamb's resistance to ending light switch LOTO is supported by her hearing testimony.

> what I understood from the conversation was that Casey was still concerned that we were using the switch that was controlling the lighting panel, and I explained that we were not depending on that. If people also wanted to put the Lock-Out-Tag-Out switch on that, we thought that was the best practice.

TR at 227. Accordingly, Sandia has not shown that it had changed its policy to eliminate light switch LOTO prior to the complainant's June 17, 2004 conversation with Ms. Lamb. It is important to note

---

7/ "DANGER, the general term, implies the contingent evil (troubled by the *danger* that the manuscript will be lost - Carl Van Doren)(realizing that the buffalo in the United States were in *danger* of becoming extinct - Amer. Guide Series: N.H.)(the *dangers* of travel by air) (the *danger* of lowering one's standards) PERIL implies more strongly the imminence and fearfulness of the danger (the ship was in deadly peril of seizure by mutineers - C.C.Cutler)" *Webster's Third International Dictionary, Unabridged*, G&C Merriam Company, 1964 at 573.

that Sandia also would have to convince me that the complainant was aware that this LOTO practice had been changed.

Moreover, Sandia has not shown that it stopped using light switch LOTO when it resumed servicing its lighting systems following the April 2004 accident. Although Mr. Vaughan testified that the practice has stopped at Sandia [TR at 408], the statements of another Sandia witness contradict this testimony. Mr. Kerekes, a lighting technician, testified that he continues to use a toggle switch LOTO device to lock out the light switches at Sandia. TR at 173. Accordingly, I find that the complainant's disclosures concerning the dangers of light switch LOTO revealed a specific danger that concerned Sandia employees.

Finally, Sandia argues that the complainant's disclosure about light switch LOTO did not constitute a substantial danger to Sandia employees because Sandia did not rely exclusively on light switch LOTO to cut power to the Microlite 277 volt lighting panels. It stated that the longstanding practice of electricians at Sandia is to pull the in-line fuse to the lamp ballasts in the individual lighting panels prior to repairing or replacing those ballasts. Mr. Vaughan testified that it is now Sandia policy to either disconnect these fuses using a LOTO device or, where no in-line fuse exists, to lock out the power at the breaker box. However, in his testimony at the hearing, the complainant stated that he did not believe that pulling the fuse to the lamp ballast was an adequate safety practice, because electricity would continue to flow to other parts of the lighting panel and could expose a maintenance worker to the risk of shock. TR at 26-27. In his June 17, 2004 e-mail, Mr. Thayer stated that

> My recommendation is that all fixture LOTO be done at the circuit breaker where possible, as this is the safest method. From talking to Greg Anderson, Facilities Maintenance, it is common practice to replace ballasts by removing the fixture fuse to the ballast; this is questionable, but it does disconnect the power conductors.

Sandia Hearing Exhibit 5B.

I find that the complainant has established that he reasonably believed that there are dangers inherent in cutting off power to only a portion of a lighting unit when servicing that unit. I also find that it was reasonable for the complainant to believe that Sandia's practice of ineffective light switch LOTO coupled with

pulling the fuse within a lighting fixture created a substantial danger of injury to employees.

In light of the evidence discussed above, I find that the evidence in this proceeding indicates that the complainant reasonably believed that his June 17, 2004 disclosure to Ms. Lamb and his September 14, 2004 disclosure to Mr. Vaughan revealed a substantial and specific danger to the health and safety of Sandia employees, and therefore constitute the type of disclosures that Part 708 was designed to encourage and protect.

C. The Complainant's Alleged Retaliations

As discussed above, the ROI finds that Sandia took an adverse personnel action affecting the complainant when Mr. Vaughan terminated his employment at SNL on September 20, 2004. *See* ROI at 5. I agree that Sandia's decision to discharge the complainant from his position at SNL meets the definition of a "retaliation" as that term is defined in Part 708. *See* 10 C.F.R. § 708.2.

In his November 2004 complaint, the complainant also asserts that Sandia retaliated against him in the period immediately prior to his dismissal. He asserts that, at that time, Mr. Vaughan and other Sandia managers failed to assist him in transferring out of his position in the Facilities division to another position at SNL.

The complainant did not explain in his filings or at the hearing why he believed that Sandia would under normal circumstances assist him with a transfer to another Sandia position. Indeed, his closing argument does not refer at all to this alleged retaliation. In his testimony, the complainant did not identify any subcontractor employees who have been assisted by Sandia in transferring to other positions.

Although Sandia may sometimes assist subcontractor employees in transferring to different positions within Sandia, there is no evidence that such assistance with transfers is customarily provided. Indeed, there is some evidence from the hearing which indicates the contrary. In his testimony, Mr. Vaughan stated that he believed it was not common for subcontractor employees of Sandia to get assistance from Sandia managers to change job assignments within the Sandia organization, and that he did not consider it proper for the complainant to ask him for assistance with such a transfer. TR at 377-378. He testified that because Sandia was not the complainant's employer, he did not believe that he was

responsible for the complainant's "professional development" at SNL. TR at 377.

While there is no evidence that Sandia commonly assists its subcontractor employees in changing jobs, Ms. Lopez testified that the complainant's subcontractor employer, COMPA, is regularly engaged in seeking transfer or replacement positions for its employees. In this regard, Ms. Lopez testified that beginning in July 2004, she was counseling the complainant on locating a new position at SNL and that COMPA's recruiter was sending him job listings. TR at 342.

Accordingly, the complainant has not established by a preponderance of the evidence that Sandia's refusal to assist the complainant in transferring to another position at SNL constituted a Part 708 "retaliation."

D. The Complainant's Protected Disclosures Were a Contributing Factor to His Dismissal from SNL

Under 10 C.F.R. § 708.29, the complainant must also show that his protected disclosures were a *contributing factor* with respect to a particular alleged retaliation taken against him. *See Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 (1994).8/ A protected disclosure may be a contributing factor to an adverse personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990). *See also Russell P. Marler, Sr.*, 27 DOE ¶ 87,506 at 89,056 (1998).

I conclude that the complainant has established by a preponderance of the evidence that his protected disclosures were contributing

---

8/ A contributing factor is "any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision." *Luis P. Silva*, 27 DOE ¶ 87,550 at 89,263 (2000), *citing* 135 Cong. Rec. H747 (daily ed. March 21, 1989)(Explanatory Statement on Senate Amendment-S.20); *see also Stephanie A. Ashburn*, 27 DOE ¶ 87,554 (2000), *Marano v. Department of Justice*, 2 F.3d 1137 (Fed. Cir. 1993)(applying the "contributing factor" test in a case under the Whistleblower Protection Act, 5 U.S.C. § 1201).

factors to his termination. I base this conclusion on a finding that there are both knowledge and proximity in time between the protected disclosures made by the complainant and Mr. Vaughan's decision to terminate his employment at SNL in September 2004.

With respect to knowledge of the disclosures, the complainant made his disclosures to Ms. Lamb on June 17, 2004 and to his supervisor on September 14, 2004. With regard to timing, the disclosures took place in June and early September 2004, and the complainant's supervisor terminated his employment on September 20, 2004. This termination of employment clearly is an adverse personnel action and meets the criteria for a Part 708 retaliation. A reasonable person could conclude that the protected disclosures were a factor in Sandia's decision to terminate the complainant's employment because the termination occurred only a week after one protected disclosure and only about three months after the other disclosure. The disclosures were thus a contributing factor to the alleged retaliation. *See Jagdish C. Laul*, 28 DOE ¶ 87,006 at 89,050 (2000), *aff'd.* 28 DOE ¶ 87,011 at 89,086 (2001) (protected activity found to be contributing factor when it occurred proximate in time to a retaliation).

Sandia asserts that the complainant's protected disclosures have not been shown to constitute a contributing factor in his termination because it has shown that several other Sandia employees made similar safety disclosures and were not retaliated against, and because the complainant has admitted that Sandia had other reasons to take action against him. Sandia's Post-hearing brief at 8-11. I find that these contentions are just the type of argument that is appropriately considered when analyzing whether Sandia would have terminated the complainant in the absence of his protected disclosures. The complainant's showing that protected activity occurred proximate in time to his termination is sufficient for the complainant to meet the contributing factor test. I therefore will proceed to determine whether Sandia has shown, by clear and convincing evidence, that it would have taken the same action to dismiss the complainant in the absence of his protected disclosures.

E. Sandia has Shown by Clear and Convincing Evidence that it would have Terminated the Complainant's Employment in the Absence of his Protected Disclosures

In its closing argument, Sandia contends that it has presented substantial evidence to support its position that the complainant would have been terminated even in the absence of his alleged

disclosures. Sandia asserts that the complainant's continuing litany of behavior and attitude problems caused Mr. Vaughan to make the determination that the complainant's services were unsatisfactory and that he should be removed from his position. Referring to the points raised in Mr. Vaughan's September 24, 2004, memorandum, it contends that the testimony at the hearing demonstrated that the complainant demonstrated little ability to operate in accordance with the work processes in place at Sandia and to interact effectively with his co-workers. It asserts that the hearing testimony confirmed several of the criticisms contained in Mr. Vaughan's September 24, 2004, memorandum concerning the complainant. Sandia Closing Argument at 13. Sandia cites the complainant's inability to work as part of a team as a crucial factor in its decision to terminate his employment.

> His inability to work with others was not limited to one or even two co-workers with which he allegedly had some sort of personality conflict - rather he demonstrated a general inability to work with anyone on a regular basis. His possessive attitude toward his own work and solutions to the exclusion of that of others was demonstrated in his hostile reactions to suggestions or discussion. When Complainant raised concerns about sexual harassment to his Sandia assigned manager, Johnny Vaughan, Mr. Vaughan diligently pursued internal EEO processes. These complaints were thoroughly investigated and determined to be unfounded. Although the EEO department and Mr. Vaughan made extraordinary efforts to attempt to repair relations between Complainant and his colleagues, Complainant's own attitude made resolution impossible. His continuous refusal to work with his colleagues caused not only constant strife within his own department, but also negatively affected his Sandia customers in facilities with whom he was assigned to provide safety engineering services.

Sandia Closing Argument at 14. Based on my analysis of witness testimony at the hearing, I find that Sandia has clearly and convincingly shown that its decision to fire the complainant was based on his poor performance, caused by his inability to interact with his co-workers.

As indicated in the summary of testimony, several of the complainant's co-workers and customers reported that they were concerned that he displayed angry or unfriendly behavior in the workplace. Ms. Minton, Ms. Jensen and Mr. Kirsch testified that the

complainant displayed anger during and after certain telephone conversations, and Mr. Chavez stated that he would postpone safety discussions with the complainant on occasions when the complainant became red-faced and raised his voice.

An even more disruptive aspect of the complainant's behavior involved his interactions with female co-workers or customers. The hearing testimony establishes that the complainant reported to Sandia's EEO that he was bothered by the behavior or conversation of three female employees who he worked with on a regular basis. I am convinced by the testimony and witness demeanor of Ms. Jensen and Ms. Lamb that their comments or behavior towards the complainant were not intended in any way to harass or disturb the complainant. I further accept the testimony of Ms. Nakos and Ms. Germany that they investigated the complainant's concerns and could find no evidence that the three female employees had violated any EEO or Sandia ethics provision in their interactions with the complainant. Rather, it appears that the complainant has a sensitivity that can make him very uncomfortable when he is required to work closely with women. The testimony of Ms. Jensen and Ms. Lamb convinces me that the complainant's ability to work with them steadily deteriorated to the point where it became impossible for them to interact with the complainant in a normal manner. The testimony of Ms. Jensen, Mr. Kirsch, and Mr. Vaughan indicates that the other female coworker left her position at Sandia in reaction to the complainant's allegations that she had behaved improperly towards him.

Regarding his interactions with the complainant, Mr. Vaughan testified that the complainant expressed contempt for his former female coworker and for Ms. Lamb. He stated that on May 3, 2004, he met separately with the complainant and Ms. Lamb about their working relationship, which he believed had become a problem. He testified that he told the complainant at that time that he had to take direction from Ms. Lamb, but that the complainant continued to approach him frequently with suggestions for assignments, rather than interact with Ms. Lamb and accept assignments from her.

Mr. Vaughan testified that on August 3, 2004, he was informed by Ms. Nakos and Ms. Germany that the complainant had raised allegations of sexual harassment against a third co-worker, Ms. Jensen. He testified that, at this point, he felt that he had a serious performance problem with the complainant but did not know how to address the problem "without it being construed as harassment over some EEO allegations." TR at 367. On September 14, 2004, Mr. Vaughan stated that he was told by Ms. Jensen that she would quit Sandia because she could no longer work in close proximity to

the complainant. TR at 369. Mr. Vaughan testified that Ms. Jensen was a highly valued employee who he could not afford to lose. On September 20, 2004, Mr. Vaughan made the decision to terminate the complainant's employment.

I find that as of September 14, 2004, Mr. Vaughan clearly believed that Ms. Jensen and the complainant could no longer work together on the ES&H Customer Support team. Mr. Vaughan also was aware that the complainant had serious problems interacting appropriately with the support team's chief customer, Ms. Lamb. Under these circumstances, the removal of the complainant from his position at SNL was a necessary and appropriate response to the complainant's inability to interact in a positive manner with his co-worker and his chief customer.

While the record indicates that Mr. Vaughan was unhappy about the way in which the complainant argued about safety issues with Ms. Lamb and others, I find that his overriding reasons for removing the complainant from his position at SNL were independent of the complainant's disagreements concerning LOTO safety procedures. As he testified convincingly at the hearing, Mr. Vaughan believed that the complainant's intimidating attitude and his inability to work with Ms. Jensen and Ms. Lamb could not be changed, and that his interactions were distracting team members from their jobs and undermining the effectiveness of their work. I find that this belief was reasonable, based on Mr. Vaughan's testimony concerning his interactions with the complainant and with the complainant's co-workers. In addition, the record indicates that the complainant's inability to work with Ms. Lamb predates their June 17, 2004 disagreement concerning LOTO procedures. The record also indicates that the complainant's problems interacting with Ms. Jensen were unrelated to safety concerns. These problems were undermining the effectiveness of the ES&H Customer Support team, not the complainant's disclosures about unsafe LOTO procedures. I find that it was these problems that led Mr. Vaughan to conclude that the termination of the complainant's position was essential to the effective function of his ES&H team and to safety at SNL. *See* TR at 364 and 385. Accordingly, the complainant's conduct leading to his termination was completely unrelated to his Part 708 protected activity. *See Diane E. Meier, Case No. VBA-0011*, 28 DOE ¶ 87,004 at 89,042 (2000) (DOE contractor found not to have retaliated against a complainant because her removal from a project was due to "irreconcilable differences" with her co-worker that were unrelated to her protected activity).

Finally, the testimony of Mr. Vaughan convinces me that his decision to terminate the complainant's employment was generally consistent with his previous treatment of contract employees in his organization. This conclusion also is supported by the testimony of Ms. Lopez, who as COMPA's president and the complainant's direct employer, met and spoke frequently with Mr. Vaughan concerning the complainant's workplace issues.

In his closing argument, the complainant contends that the behavior that Sandia cites as grounds for his termination has been exaggerated. He states that he can recall losing his temper on the telephone on only a few occasions, that e-mails in the record of the proceeding indicate that he had positive working relationships with several Facilities managers at Sandia, and that the demeanor of his co-workers became negative only after he "reported issues, including safety violations, to Sandia Human Resources." Complainant's Post-Hearing Brief at 4-7. There is factual support in the record for some of these contentions. The complainant received positive feedback for his safety work from Mr. Chavez and other facilities managers, and Ms. Lamb acknowledged in her testimony that she received no complaints from these managers about the complainant's performance. However, even two or three instances of angry telephone conversations over a one-year period may have a negative effect on working relationships with co-workers. Moreover, the complainant's arguments and his testimony at the hearing do not refute the testimony of several Sandia witnesses that he had serious personality conflicts with female co-workers that were unrelated to protected activity and that were seriously disruptive of the mission of his team.

The complainant admits in his closing argument that he adopted a pattern of avoiding Ms. Jensen, and states that it is a reasonable reaction to the negative experiences with her that resulted in his making an EEO complaint. Complainant's Closing Argument at 5. He does not discuss his difficulties in dealing with Ms. Lamb in that document, although at the hearing he presented Ms. Minton's testimony that Ms. Lamb could be a difficult person to work with. My observation of the complainant's demeanor at the hearing also leads me to conclude that he is uncomfortable in the presence of Ms. Jensen and Ms. Lamb, and would have difficulty interacting with them effectively in a business setting.

I reject the complainant's position that his avoidance of Ms. Jensen was reasonable and therefore something that Sandia management could be expected to tolerate. As discussed above, I find that the evidence at the hearing establishes that neither Ms. Jensen nor

Ms. Lamb behaved in an inappropriate manner toward the complainant. Nor has the complainant refuted the testimony of Ms. Jensen that she and the complainant were expected in many instances to operate as a team to survey work sites together for safety and hygiene issues. Finally, the complainant has not refuted the evidence presented by Sandia that his practice of avoiding Ms. Lamb violated work assignment procedures for the ES&H support team and diminished his effectiveness in providing safety support to SNL facilities managers. Accordingly, I find that there is abundant evidence to support the complainant's termination by Mr. Vaughan based on poor performance in the workplace, most notably the complainant's lack of an effective working relationship with Ms. Lamb and Ms. Jensen.

I therefore find that Sandia has established by clear and convincing evidence that it would have terminated the complainant's employment at SNL in the absence of his protected disclosures.

VI. CONCLUSION

As set forth above, I have determined that the complainant has failed to establish the existence of a violation on the part of Sandia or COMPA for which he may be accorded relief under DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708. I find that the complainant made protected disclosures under Part 708, and that such disclosures were a contributing factor in the alleged retaliation of terminating his employment at SNL. Notwithstanding, I find that Sandia has shown by clear and convincing evidence that it would have taken the same action even in the absence of the protected disclosures. Accordingly, I will deny the complainant's request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Mr. Casey von Bargen under 10 C.F.R. Part 708, OHA Case No. TBH-0034, is hereby denied.

(2) This is an initial agency decision, which shall become the final decision of the Department of Energy unless, within 15 days of

receiving this decision, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Kent S. Woods
Hearing Officer
Office of Hearings and Appeals

Date: November 2, 2007

November 19, 2007

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Joshua Lucero

Date of Filing: June 30, 2006

Case Number: TBH-0039

This Initial Agency Decision concerns a whistleblower complaint filed by Joshua Lucero (Lucero) against his former employer, Wackenhut Services, Inc. (WSI), under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. WSI is a contractor that provides services to the DOE's Office of Secure Transportation (OST). Lucero alleges that he engaged in activity protected by Part 708 and, as a result, was retaliated against by WSI.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The regulations governing the DOE's Contractor Employee Protection Program (CEPP) are set forth at Title 10, Part 708 of the Code of Federal Regulations. The CEPP regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. *See* 10 C.F.R. §§ 708.5(a)(1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE. Upon acceptance of jurisdiction over the complaint by the local DOE Field Office, the Complainant is entitled to an investigation by an investigator from the Office of Hearings and Appeals (OHA), followed by a hearing and an Initial Agency Decision by an OHA Hearing Officer. If dissatisfied with the decision, a party may appeal the Hearing Officer's Decision to the Director of the Office of Hearings and Appeals (the OHA Director). 10 C.F.R. §§ 708.21, 708.32.

B. Procedural History

Lucero filed a whistleblower complaint with the DOE's National Nuclear Security Administration (NNSA) Service Center on July 6, 2005. After conducting a preliminary analysis of the allegations contained in this complaint, the NNSA Service Center forwarded it to the OHA. OHA received the complaint on January 9, 2006, and the OHA Director appointed an

investigator who conducted an investigation of the allegations in the complaint and issued a Report of Investigation (the ROI). Immediately following the issuance of the ROI, the OHA Director appointed me as Hearing Officer. I conducted a three-day hearing on January 9, 10, and 11, 2007, in Albuquerque, New Mexico. The transcript of the hearing will be cited as "Tr." The hearing was followed by an exchange of Post Hearing Briefs.

C. Factual Background

Lucero began working as a part-time van (escort vehicle) driver for the OST's Contractor Transportation Utilization Program (CTUP) program on October 27, 2003. The CTUP was formed to support the OST's nuclear courier program, which is responsible for transporting nuclear weapons and special nuclear materials. The CTUP was created to conserve resources by allowing contractors to operate transport and escort vehicles when the vehicles were not transporting nuclear weapons or special nuclear materials. Most of the CTUP employees, including all of its first tier managers, were former federal agents who had operated these vehicles in the past. All CTUP drivers were employed on an on-call basis and paid only for time spent on transport missions or training. Transport missions generally lasted from a few days to several weeks.

On December 6, 2004, Lucero filed a whistleblower complaint against WSI, under 10 C.F.R. Part 708, with the NNSA Service Center.1 Exhibit 18. On April 28, 2005, WSI and Lucero entered into a settlement agreement in resolution of the December 6, 2004 complaint. Exhibit 24. The April 28, 2005 settlement agreement precludes relief for any preceding adverse personnel actions.

On May 18, 2005, Lucero's supervisor, Douglas Turner, held a verbal counseling session with Lucero. Exhibit 27; Exhibit H6. Turner told Lucero that he had observed Lucero's work on the last trip and that Lucero "had done a good job." Exhibit 27 at 1. However, Turner advised Lucero of some problems with his performance, specifically, it noted that Lucero had been sleeping in his vehicle at a time when he was expected to be awake and alert and that Lucero had used a government vehicle for his personal use. Exhibit 27 at 1. Turner further advised Lucero that "he needed to be a team member and work with others to get the job done." Exhibit 27 at 1.

On June 13, 2005, Lucero was part of a convoy returning a number of tractor-trailers and vans to a storage facility. Lucero was driving one of the vans. As the tractor trailers and vans were

[1] The December 6, 2004 whistleblower complaint was based upon Lucero's assertion that he was retaliated against for an August 20, 2004, incident. On that date, Lucero reported that a coworker, Martin Abeita, intended to transport both alcohol and a firearm on an upcoming flight of an NNSA Aircraft. Exhibit 14. Approximately, one month prior to this incident, the DOE Office of Inspector General had issued an Inspection Report in which it found that two WSI employees transported handguns through the NNSA aviation facility in violation of DOE and FAA policies. Office of Inspector General Inspection Report: Unauthorized Handguns on National Nuclear Security Administration Aircraft at http://www.ig.energy.gov/documents/CalendarYear2004/ig-0654.pdf. Lucero was suspended, without pay, as a result of this incident. Tr. at 424. The December 6, 2004 complaint asserted that both Lucero's suspension and a Letter of Reprimand issued to him on October 1, 2004 occurred in retaliation for Lucero's reporting the firearm incident.

being parked, Lucero drove past the front of a tractor-trailer operated by Abeita. Abeita's vehicle was moving forward at the time. Abeita slammed on the brakes. After Abeita finished parking the tractor-trailer, he proceeded to the debriefing room where he verbally accosted Lucero.

On July 6, 2005, WSI issued a Letter of Counseling to Lucero. Exhibit 36; Exhibit A. The July 6, 2005, Letter of Counseling states, in pertinent part:

> On Monday June 13 at 1615 in the afternoon, you were involved in an unsafe driving act. Five other CTUP drivers witnessed the incident, which occurred at the Agent Operations Western Command parking lot. As Mr. Martine Abeita was pulling forward in a tractor/trailer so as to position it for parking in a designated spot, you drove through the narrow gap between the truck he was pulling forward in and a van driven by Laura Legacy. Your maneuver caused Mr. Abeita to slam on his brakes in order to keep from hitting your vehicle. The witnesses stated you were driving too fast for the parking area and showed no regard for the safety of others in the area.

Exhibit 36 at 1. Later that day, Lucero filed the present whistleblower complaint with the NNSA Service Center. Exhibit E.

On November 1, 2005, NNSA's Office of Business Services issued a letter to WSI officially requesting "WSI to stand down and discontinue over-the-road operations in support of the CTUP . . . effective . . . November 7, 2005." Exhibit 50 at 1. This stand down continued until January 25, 2006. During the stand down, OST made a number of changes to the CTUP's Standard Operating Procedures (SOP). Among the changes mandated by the OST were requirements that each of CTUP's drivers have (1) a Commercial Driver's License (CDL) with a Hazardous Material (HazMat) endorsement, and (2) a DOE "Q" Clearance. Exhibit 62. Lucero has been an insulin dependant diabetic since the age of four. Tr. at 27. The Federal agency that established the standards for the CDL, the Federal Motor Carrier Safety Administration, prohibits insulin dependant diabetics from obtaining or maintaining a CDL. 49 C.F.R. § 391.41(b)(3) Accordingly, Lucero has not driven for CTUP since the implementation of the revised SOP.

II. ANALYSIS

A. The Parties' Respective Burdens Under Part 708

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate as described in § 708.5, and that such act was a contributing factor to one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29; *see Ronald Sorri*, 23 DOE ¶ 87,503 (1993). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*). Once the complainant has met this burden, the burden shifts to the

contractor, which then must show, by clear and convincing evidence, that it would have taken the alleged act of retaliation in the absence of the complainant's protected conduct. It is well settled that several factors may be considered in determining whether an employer has shown, by clear and convincing evidence, that it would have taken the alleged act of retaliation against a whistleblower in the absence of the whistleblower 's protected conduct. Specifically, the Federal Circuit, in cases interpreting the federal Whistleblower Protection Act (WPA), upon which Part 708 is modeled, has identified several factors that may be considered, including "(1) the strength of the [employer's] reason for the personnel action excluding the whistleblowing, (2) the strength of any motive to retaliate for the whistleblowing, and (3) any evidence of similar action against similarly situated employees for the non-whistleblowing aspect alone." *Kalil v. Dep't of Agriculture*, 479 F.3d 821, 824 (Fed. Cir. 2007) *citing Greenspan v. Dep't of Veterans Affairs*, 464 F.3d 1297, 1303 (Fed. Cir. 2006).

B. Complainant's Burden

The Part 708 regulations specifically protect employees of DOE who participate in **"**an administrative proceeding conducted under this regulation." 10 C.F.R. Section 708.5(b).

1) Lucero's Protected Conduct

In the present case, it is self-evident that Lucero engaged in protected conduct when he filed whistleblower complaints under Part 708 in December 2004 and July 2005. *See* 10 C.F.R. Sections 708.5(a)(1) and (2); 708.5(b).

2) Adverse Personnel Actions

Lucero asserts that the following adverse personnel actions were taken against him by WSI employees during his tenure as a CTUP driver: (1) the issuance of the July 6, 2005, Letter of Counseling; (2) WSI's alleged failure to discipline Abeita for his conduct in the debriefing room on June 13, 2005; (3) WSI's verbal counseling of Lucero in May 2005; (4) Lucero being called up for a trip only to be sent home when he arrived for the trip; (5) WSI's alleged failure to fulfill all terms of the April 28, 2005, settlement agreement; (6) Lucero receiving fewer work assignments after he filed his Part 708 complaints; (7) a pattern of hostility towards Lucero, and (8) WSI's implementation of a DOE-mandated requirement that all CTUP vehicles be operated by drivers possessing a Commercial Driver's License (CDL).

(a) July 6, 2005 Letter of Counseling

The July 6, 2005, Letter of Counseling clearly constitutes an adverse personnel action under 10 C.F.R. Section 708. Citing *Spears v. Missouri Dep't of Corrections & Human Resources*, 210 F.3d 850, 852 (8th Cir. 2000) (*Spears*), and similar cases from the eighth circuit, WSI contends that Letters of Counseling or Reprimand do not constitute adverse personnel actions under Part 708. WSI's reliance upon these cases is clearly misplaced. *Spears* and the other cases cited by WSI involve civil rights actions under Title VII of the Civil Rights Act of 1964, 42 U.S.C. Sections 2000e *et seq*. *See Spears*, 210 F.3d at 850. The present action is governed by the regulations set forth at 10 C.F.R. Part 708. Part 708 does not specifically define the term

"adverse personnel action." Instead, OHA looks to see if a given personnel action on the part of a DOE contractor falls with the scope of Section 708.2. Section 708.2 states, in pertinent part:

> *Retaliation* means an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (*e.g.*, discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) . . .

10 C.F.R. Section 708.2. Clearly, the issuance of a Letter of Counseling is "an action . . . taken by a contractor with respect to employment." OHA Hearing Officers have consistently treated counseling, in both verbal and written form, as adverse personnel actions. *Gary S. Vander Boegh*, OHA Case No. TBH-0007, http://www.oha.doe.gov/cases/whistle/tbh0007.pdf (July 11, 2003) at 17 (finding contractor's contention that a letter of reprimand was not a adverse personnel determination to be without merit), *appeal dismissed*, Case No. TBA-0007, http://www.oha.doe.gov/cases/whistle/tba0007.pdf (OHA Director, February 22, 2007); *see also, e.g. Franklin Tucker*, Case No. TBH-0023, http://www.oha.doe.gov/cases/whistle/tbh0023.pdf (April 9, 2007); *aff'd*, Case No. TBA-0023, http://www.oha.doe.gov/cases/whistle/tba0023.pdf (OHA Director, July 2007) (treating counseling as an adverse personnel act); *John L. Gretencord*, Case No. VBZ-0033, http://www.oha.doe.gov/cases/whistle/vwa0033.htm (November 4, 1999), *aff'd*, Case No. VBA-0041, http://www.oha.doe.gov/cases/whistle/vba0041.htm (OHA Director, March 13, 2000), *petition for Secretarial review dismissed* (August 11, 2000). Moreover, Letters of Counseling are clearly considered to be adverse personnel determinations under the Federal Whistleblower Protection Act (WPA), upon which Part 708 is modeled. *Greenspan v. Dep't of Veterans Affairs*, 464 F.3d 1297, 1303 (Fed. Cir. 2006) (Letter of Reprimand was an adverse personnel determination).

(b) WSI's Alleged Failure to Discipline Abeita for His Conduct in the Debriefing Room on June 13, 2005

Lucero alleges that WSI failed to discipline Abeita for his verbal abuse of Lucero which occurred in the debriefing room minutes after the June 13, 2005, parking lot incident and that the alleged failure to discipline Abeita was an adverse personnel action. However, Turner verbally counseled Abeita about his behavior towards Lucero in the debriefing room and informed Abeita that he would not be allowed to work until "he comes in for further counseling." Exhibit 33; Tr. at 331- 332. Because the record shows that Abeita was in fact disciplined for his conduct in the debriefing room, I find this contention is without merit.

(c) WSI's Verbal Counseling of Lucero for Visiting His Aunt's Home in Las Vegas, New Mexico, in a DOE Vehicle While on DOE Business

On May 18, 2005, Turner verbally counseled Lucero, for "sleeping in the vehicle when he should have been awake and alert" and for "the miss-use of a gov't vehicle." Exhibit 27. As I have discussed above, it is well settled that counseling constitutes an adverse personnel action.

(d) Lucero Being Called Up for a Trip Only to be Sent Home When He Arrived for the Trip

Lucero testified that Turner instructed him to report for duty on an unspecified date at 6:00 a.m. for a scheduled trip. Tr. at 69. Lucero testified that he did so and boarded a bus to the airport with his co-workers. Tr. at 69. Lucero testified that, at the airport, the WSI manager in charge of this trip, T.R. Sanchez, informed Lucero that no flight arrangements had been made for him. Tr. at 70. Lucero then contacted Turner, who told Lucero to go home. Tr. at 70. Turner testified:

> I told Mr. Lucero that there was a trip coming up, but I did not call him and tell him he was on the trip. And the next thing I knew was, I believe it was Mr. Sanchez called me, and Lucero was on a bus and thought he was on a trip. Well I talked to Mr. Lucero and apologized to him immediately, and said no he was not on the trip. I was sorry if he thought he was.

Tr. at 363. Essentially, this issue pits Lucero's word against that of Turner. Since, as I discuss below, Lucero's credibility has been convincingly impeached, I find he has not shown, by a preponderance of evidence, that he was scheduled for this trip.

Exhibit 97 is a letter dated April 2, 2003 from Gilbert G. Gallegos, the Chief of Police for the Albuquerque Police Department (APD), to Lucero stating that the APD was terminating Lucero's Employment. [2] Exhibit 6 is a partial copy of a Questionnaire for National Security Positions (QNSP) Lucero submitted as part of the background investigation conducted by DOE in order to determine his eligibility for a DOE security clearance. Lucero's answers to Section 22 of the QNSP clearly intentionally omitted the fact that he had been terminated for cause by the APD. Moreover, on June 23, 2004, Lucero filed a lawsuit against the APD contesting his termination. On July 18, 2005, he was deposed by the APD. During this deposition, Lucero was asked if he had ever been disciplined by WSI. Lucero answered in the negative. Exhibit 40 at 7. Lucero denied having been disciplined by WSI even though he had previously received two letters of reprimand and had been suspended as a result of the firearm incident. This evidence strongly impeaches Lucero's credibility. As a result, I have given little or no evidentiary weight to Lucero's testimony throughout this proceeding. Accordingly, I find that Lucero has not met his burden of producing a preponderance of evidence showing that he was scheduled and then removed from this trip.

---

2 During the present proceeding, the Contractor submitted a number of documents related to a lawsuit filed by Lucero against the APD alleging that Lucero had been wrongfully terminated. Lucero objected to the inclusion of these documents in the record, arguing that they are "irrelevant and prejudicial." Certain of these documents indicate that Lucero lied during a deposition and provided false or misleading information to DOE officials investigating his eligibility to obtain or maintain a "Q" level access authorization. Those documents are relevant because they unambiguously show Lucero's willingness to provide false or misleading information under oath. The documents that I am admitting into evidence contain evidence which reflects on Lucero's credibility and they appear in the record as Exhibits 6, 12, 40, 84, 85, 86, 87, 92, 93, 94, 95, 96, 97, and 98. Those documents that WSI has submitted as Exhibits 78, 79, 80, 81, 82, 83, 88, 89 , 90, 91, and 99, do not reflect on Lucero's credibility, and I have not relied upon them in reaching any of my conclusions or findings. I am, however, including them in the record, in order to provide a more complete record for consideration on any appeal.

(e) WSI's Alleged Failure to Fulfill All Terms of the April 28, 2005 Settlement Agreement

Lucero claims that the settlement of his December 6, 2004, whistleblower complaint required WSI to hold an all-hands meeting to insist that all WSI employee's stop harassing Lucero. Tr. at 33. However, enforcement of a settlement agreement is beyond the scope and jurisdiction of Part 708. Therefore, I will not consider this contention.

(f) WSI's Implementation of a DOE Mandated Requirement that all CTUP Vehicles Be Operated by Drivers Possessing a Commercial Driver's License

The record shows that OST changed the task order[3] to require that all drivers in the CTUP maintain a CDL. Lucero asserts that WSI convinced DOE to change the task order in order to render Lucero ineligible to receive future work assignments. In support of this contention, Lucero notes that Sanchez's son was the OST official responsible for oversight of the CTUP. Tom Kreider, a member of WSI's management team, testified that Sanchez frequently lobbied his son to adopt more stringent safety standards for the CTUP and that some of Sanchez's suggestions were ultimately adopted by OST. Tr. at 957.

Part 708 does not allow for a complaint to be filed against the DOE. *Ronald E. Timm*, Case No. VBU-0077, http://www.oha.doe.gov/cases/whistle/vbu0077.htm (October 25, 2001) (only acts of retaliation by entities in the contractor chain, not the DOE, are covered under Part 708). Accordingly, I have no jurisdiction to consider any allegations of retaliation by DOE or DOE officials. We need not rule on the issue of whether a contractor could be found to have retaliated against a whistleblower by convincing DOE to take a specific regulatory action that negatively affected the whistleblower, since Lucero has presented nothing other than suspicion on this issue, and thus failed to meet his burden of showing, by a preponderance of evidence, that WSI actually convinced DOE to change the task order.

(g) Lucero's Allegations that He Received Fewer Work Assignments

Lucero was paid on an hourly basis. Lucero worked only when he was called in to drive a van during sporadic transfers of DOE equipment. Lucero testified that, prior to filing his whistleblower complaints, he was being assigned to one or two trips per month. Tr. at 98-99. Lucero further testified that, after he had filed his whistleblower complaints, he was assigned to fewer trips. Tr. at 99. The only evidence in the record that Lucero received fewer work assignments after he made his protected disclosures is Lucero's testimony. Since, as I have discussed above, Lucero's credibility has been strongly impeached, I find that Lucero has not met his burden of proof on this issue.

(h) Lucero's Allegations of A Pattern of Hostility

The evidence in the record indicates a pattern of hostility towards Lucero on the part of WSI

[3] Under the Federal Acquisition Regulations, the term "'task order' means an order for services placed against an established contract or with Government sources." 48 C.F.R. Section 2.101.

managers and employees. A number of Lucero's coworkers testified that certain members of WSI management appeared to harbor a bias towards, or "have it out for," Lucero. Tr. at 224-225, 227, 234, 236 (George Martinez), 711-712, 714-15, 724 (Alan Payne), 857 (Bill Fuller) 959, 975 (Tom Kreider). Tom Kreider testified that Lucero was always the topic of conversation and was picked on. Tr. at 943, 959. Ken Kreider testified that Lucero was a frequent topic of conversation among the drivers and was often the subject of jokes. Tr. at 992. Ken Kreider testified that Lucero got written up for things other drivers did not get written up for. Tr. at 1005. Several drivers refused to travel with Lucero because they claimed he was an unsafe or inconsiderate driver. The testimonial evidence suggests that Lucero was the subject of social ostracization and was subject to an unusual level of management scrutiny which could be construed as rising to a level of intimidation proscribed by Part 708.

3) Lucero's Protected Conduct Was a Contributing Factor to Adverse Personnel Actions

Having established, by a preponderance of evidence, that he (1) had engaged in protected conduct under 10 C.F.R. § 708.5, (*i.e.* filing two Part 708 complaints) and (2) suffered adverse personnel actions (*i.e*. intimidation, written and verbal counseling), Lucero must also show, by a preponderance of evidence, that his protected conduct was a contributing factor to adverse personnel actions taken against him.

a) Temporal Proximity

In most whistleblower cases, it is difficult or impossible for a complainant to point to or find a "smoking gun" that proves an employer's retaliatory intent. Therefore, Congress and the courts, recognizing this difficulty, have found that protected conduct may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993), *citing McDaid v. Department of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, the courts have found that "temporal proximity" between protected conduct and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F.2d at 148.

Since Lucero engaged in protected conduct by the filing of a whistleblower complaint in December 2004, there was temporal proximity between his protected conduct and the May 18, 2005, verbal counseling, the July 6, 2005, letter of counseling and the pattern of hostility. As noted above, the December 2004 complaint proceeding was not settled until April 2005. Moreover, since Lucero also filed a complaint on July 6, 2005, temporal proximity existed between that protected conduct and the hostility that he endured subsequent to July 6, 2005. It is clear that the WSI managers who decided to take these adverse personnel actions had actual knowledge of his protected conduct. Therefore, the temporal proximity between Lucero's protected conduct and the three adverse personnel actions taken against him is sufficient to establish, by a preponderance of the evidence, that his protected conduct was a contributing factor to the July 2005 Letter of Counseling, the May 18, 2005, verbal counseling, and the pattern of hostility.

C. Contractors Burden: Whether WSI Would Have Taken Adverse Personnel Actions Against Lucero in the Absence of His Protected Conduct

I have found that the Complainant has shown, by a preponderance of evidence, that (1) he engaged in protected conduct, and (2) this protected conduct was a contributing factor to the July, 2005, letter of counseling, the May, 2005, verbal counseling, and the pattern of hostility. Therefore, the burden has been shifted to WSI to prove by clear and convincing evidence that the company would have issued the July 2005 Letter of Counseling, conducted the May, 2005, verbal counseling session, and that a pattern of hostility against Lucero would have existed even if Lucero had not engaged in protected conduct. 10 C.F.R. § 708.29. Clear and convincing evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F. Supp. at 1204 n.3. For the reasons set forth below, I find that WSI has shown that, by clear and convincing evidence, it would have conducted the May, 2005, verbal counseling session even if Lucero had not engaged in protected conduct. I also find that WSI has not carried its burden with regard to the July 2005 Letter of Counseling and pattern of hostility. I conclude, however, that there is no relief possible with regard to either of these personnel actions.

1. July 6, 2005, Letter of Counseling

On June 13, 2005, Lucero drove a van past the front of a tractor-trailer operated by Abeita that was moving forward at the time. Abeita suddenly applied the brakes of the tractor trailer he was operating. After the incident occurred, Turner gathered witness statements from five of the eight WSI employees present at the parking lot incident: Abeita, Sharp, Legacy, Schoonover, and Fuller. However, Turner did not contact the other three witnesses to the parking lot incident: Lucero, Tom Kreider and Ken Kreider. Lucero, and both Kreiders testified that Lucero had not operated his vehicle in an unsafe manner during the parking lot incident. Tr. at 945, 1022. On July 6, 2005, Lucero was called to a meeting in Turner's office and presented with a previously prepared Letter of Counseling. Turner testified that he did not allow Lucero an opportunity to be heard before being issued the July 6, 2005, Letter of Counseling because Lucero "did not indicate that he had a side." Tr. at 341, 344.

While Lucero likely operated a van in a less than safe manner during the parking lot incident, WSI's decision to issue the Letter of Counseling is troubling. WSI issued the Letter of Counseling by relying on one witness, Abieta, who obviously had a highly antagonistic relationship with Lucero, and another witness, Bill Fuller, who later testified that he didn't witness the incident for which Lucero was disciplined. Tr. at 843-44. Moreover, two of the other three eyewitnesses downplayed its significance. In a March 21, 2006, telephone conversation with the OHA Investigator, Schoonover indicated that while Lucero was going too fast and was not careful enough, he would not have filed an incident report because he did not believe that the incident was "that big a deal." Memorandum of March 21, 2006 Telephone Interview of Olin Schoonover. Troy Sharp also testified that he would not have filed a statement if he had not been pushed into doing so by Sanchez and a Mr. Cisco. Tr. at 1075 -1077. During his testimony and a telephone interview with the OHA Investigator, Sharp played down the importance of the parking lot incident. Tr. at 1086-1087. Memorandum of March 30, 2006

Telephone Interview of Troy Sharp. The remaining witness to the parking lot incident was Legacy, whose testimony revealed that she had a low opinion of Lucero. Tr. at 1175-1177.

Moreover, evidence in the record indicates that other CTUP employees who had operated their vehicles in a reckless manner had not been as severely disciplined. Tom Kreider testified that a CTUP driver drove a vehicle into a building. Tr. at 971-972. There is no evidence in the record that the driver was disciplined for this incident.[4] Sanchez and Martinez testified that Sanchez had tied empty wine barrels to the government vehicle he was operating. Because a wine barrel fell off while the vehicle was moving, the convoy in which the vehicle was traveling had to be stopped so that the wine barrels could be removed. Tr. at 237-238, 281. Sanchez testified that he was verbally counseled for this incident. Tr. at 282. Sanchez also testified that the incident eventually cost him a promotion.

WSI submitted evidence showing that it disciplined three other CTUP drivers for unsafe driving. Exhibit 7. However, the record shows that each of these employee's actions resulted in gross safety violations. The first employee was terminated for "operating a government vehicle around a safety barrier and into a swollen stream" and, in another incident, contributing to an accident which resulted in damage to a government vehicle. Exhibit 7 at 1. The second and third employees were suspended for one day without pay for concurring with the decision of the first employee to enter the swollen stream. Exhibit 7 at 3.

Accordingly, while I find that WSI has presented mitigating evidence, I am not persuaded that WSI has shown, by clear and convincing evidence, that it would have issued the July 6, 2005, Letter of Counseling if Lucero had not engaged in protected conduct. The clear and convincing evidence standard requires "a degree of persuasion much higher than 'mere preponderance of the evidence.'" *Collins Sec. Corp. v. Sec. & Exchg. Com'n*, 562 F.2d 820 (D.C. Cir. 1977). *See also*, *Hopkins V. Price Waterhouse*, 737 F. Supp. 1202, 1204 n.3 (D.D.C. 1990). Because WSI has not met the particularly heavy burden required by the clear and convincing evidence standard, I find that WSI's issuance of this letter constitutes retaliation under Part 708. However, the Letter of Counseling indicates that it would only be retained in Lucero's personnel file for a period of one year. Exhibit 36 at 1. Over two years have passed since the Letter of Counseling was issued. Accordingly, as Turner has testified, the Letter of Counseling has been removed from Lucero's personnel file. No further relief for this act of retaliation is available under Part 708.

2. The May 18, 2005, Verbal Counseling

In a verbal counseling meeting with Lucero, Turner noted that Lucero had done a good job and that Turner had observed Lucero "pitching in and helping on his last trip." Exhibit 27. Turner also noted that Lucero had driven a government vehicle to his aunt's home in Las Vegas, New Mexico, and had been observed sleeping in the passenger seat when he should have been alert and awake. Exhibit 27. Turner also informed Lucero that the "lead" in each vehicle could make driving hour assignment changes if he needed to for operational purposes. Finally, Lucero was

[4] Tom Kreider did testify that in the debriefing that took place at the conclusion of that trip, WSI managers did not mention the accident, but rather focused on the fact that Lucero had been first in line to check in at a motel on that trip. Tr. at 971-972.

counseled "to be a team member and work with others to get the job done." Exhibit 27.

Lucero admits that he drove a government vehicle to his aunt's home. Tr. at 189-191. WSI would have been remiss had it not counseled Lucero on this matter. Moreover, sleeping in a government vehicle when he was supposed to be awake and alert also merited counseling. By informing Lucero that the lead in each vehicle could make driving hour assignment changes if he needed to for operational purposes, Turner was obviously clarifying a misunderstanding that had occurred between Lucero and Payne. Turner's clarification was especially appropriate, because Lucero had been informed to the contrary by a lower level supervisor, Sanchez. Finally, there is ample evidence in the record that other employees, fairly or unfairly, perceived Lucero to be inconsiderate of his fellow employees. Turner's apparently evenhanded approach, where he informed Lucero that he had observed him "pitching in and helping" but noted there was room for improvement was reasonable and prudent. Accordingly, I find that WSI has shown that the verbal counseling session would have taken place regardless of Lucero's protected conduct.

3. Pattern of Hostility or Intimidation

The record shows that Lucero was less than an ideal employee. During his tenure at WSI, Lucero clearly conducted himself in an immature, selfish and emotionally volatile manner. Moreover, it is clear that Lucero, a much less experienced driver than most of the other CTUP drivers, often operated vehicles assigned to him in a rough and perhaps unsafe manner. These characteristics no doubt account for some of the conflict with some of his coworkers and management.[5]

While WSI has succeeded in showing that Lucero had earned some of the ill-will that existed between him and some of his coworkers and managers, it is also clear that Lucero's protected conduct changed his relationship with his peers and direct supervisors. WSI's Closing Argument Brief implicitly admits this to be true. It focuses on a number of incidents which WSI asserts illustrate that Lucero's own behavior is responsible for his failure to get along with his coworkers and managers. Specifically, Lucero's (1) abusive behavior towards Tom Seese, (2) reporting a firearm incident (*see note 1, supra*), (3) submission of a concern about a CTUP Manager being intoxicated on the job to DOE, (4) yelling at Sanchez, and (5) alleged treatment of a supervisor, Torres, in an inappropriate manner. WSI Closing Argument Brief at 6, 7, 14, 16. A discussion of each of these allegations is instructive.

WSI raises an incident in which Lucero charged Seese and screamed and yelled at him. However, there is no evidence that any disciplinary action was taken as a result of this incident, which occurred on June 20, 2005, two months prior to the firearm incident. WSI's suspension of Lucero for expressing his concerns about the possibility of a firearm being carried on an NNSA

---

[5] However, the evidence in the record also shows at least four of Lucero's coworkers thought he was a qualified driver. Tr. at 722 (Payne), 959 (T. Kreider), 1069 (K. Kreider) and 1238-1239 (Manzanares). Moreover, some of Lucero's coworkers vouched for him personally. Tr. at 244 (Martinez), 625, 632 (Cook). Torres testified that Lucero was not a problem employee. Tr. at 1230. Martinez noted Lucero responded well to suggestions and improved his driving. Tr. at 244.

aircraft is troubling. This incident does not reflect poorly upon Lucero, but rather reflects poorly on WSI management's attitude toward an employee who raised a reasonable safety concern. Similarly, WSI cites Lucero's reporting to a DOE Employee Concerns official that he had observed Donaldson in a state of intoxication in a hotel lobby while on a CTUP trip as a source of WSI employees' and manager's animosity towards Lucero. Once again, it is troubling that WSI would cite the reporting of a safety concern as evidence that Lucero gave his managers and coworkers good reason to dislike him. WSI also alleges that Lucero treated a WSI manager, Torres, in an inappropriate and disrespectful manner. However, Torres denied having words with Lucero when the alleged incident occurred. Tr. at 1218. In fact, Torres indicated that Lucero has always treated him with respect. Tr. at 1218.

Since the incident leading to the filing of the December 6, 2004 complaint, WSI management has subjected Lucero to an enhanced level of scrutiny and has done little or nothing to discourage Lucero's fellow employees from harassing Lucero. If motivated by intent to retaliate against, or to prevent future protected conduct, these actions would clearly violate Part 708, whose coverage explicitly includes "intimidation, threats, restraint, coercion, or other similar actions." While the ill will exhibited towards Lucero by WSI management and his coworkers no doubt resulted in some part from Lucero's own actions, the burden is upon WSI to show, *by clear and convincing evidence*, that this ill will would have occurred in the absence of Lucero's protected conduct. *See, e.g., Jagdush C. Laul*, 28 DOE ¶ 87,006 (2000), *aff'd*, 28 DOE ¶ 87,011 (2001). Since WSI has not met this particularly heavy burden, I find that WSI retaliated against Lucero for engaging in protected conduct.[6]

If Lucero were still employed by WSI, a remedy could be fashioned to abate the ongoing intimidation. However, since Lucero is no longer employed by WSI, such a remedy is unavailable. Moreover, since Lucero has failed to show that this retaliation resulted in any monetary loss on his part after April 28, 2005, the date on which WSI and Lucero entered into a settlement agreement resolving Lucero's December 6, 2004 whistleblower complaint, and because punitive damages are unavailable under Part 708, no relief can be awarded to Lucero for WSI's pattern of intimidation.

III. Conclusion

The Complainant Joshua Lucero has met his burden of proving that he engaged in protected conduct, and that this protected conduct was a contributing factor to adverse personnel actions taken against him by the Contractor. The Contractor has shown by clear and convincing evidence that it would have verbally counseled Lucero on May 18, 2005, even if he hadn't engaged in protected conduct. The Contractor has failed to meet its burden of showing that it would have issued the Letter of Counseling in the absence of the Complainant's protected conduct and failed to show that it's unfavorable treatment of Lucero would have occurred in the absence of his protected conduct. Accordingly, I find in the Complainant's favor on these issues. However, while Lucero has shown that his protected conduct lead to retaliation and intimidation by WSI, he has not set forth a claim for which relief may be granted.

---

[6] Had this finding been addressed under a preponderance of evidence standard, the outcome may have been different.

It Is Therefore Ordered That:

(1) The complaint filed by Joshua Lucero under 10 C.F.R. Part 708, OHA Case No. TBH-0039, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party's receipt of the initial agency decision.

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: **Curtis Hall**

Date of Filing: **June 22, 2006**

Case Number: **TBH-0042**

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Curtis Hall (also referred to as the complainant or the individual) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant was an employee of Bechtel National, Inc. (BNI), the prime contractor at the DOE's Hanford Site in Richland, Washington. From January 10, 2005 until July 28, 2005, he was employed as a Controls & Instrumentation (C&I) Engineer to work at the Waste Treatment Plant (WTP) being constructed at the Hanford Site. On October 20, 2005, he filed a complaint of retaliation against BNI with the DOE Office of River Protection, Employee Concerns Program Office (ORP) at the Hanford Site. In his complaint, the individual contends that he made certain disclosures to officials of BNI, and that BNI retaliated against him in response to these disclosures.

I. Summary of Determination

In this Decision, I first provide background information concerning the Part 708 program. I then discuss the filing and the development of the issues raised in the individual's Part 708 Complaint, focusing on the Office of Hearings and Appeal's Report of Investigation and the parties' subsequent efforts to frame issues for the Hearing. I then present the relevant testimony provided at the Hearing. Next is my analysis of this complaint, beginning with a discussion of the legal standards governing this case. With regard to the issues raised in this proceeding, I first find that the Complainant made at least two protected disclosures that are proximate in time to BNI's decision to select the

complainant for a Reduction in Force (RIF) at the WTP (the adverse personnel action). I therefore find that the complainant has shown by a preponderance of the evidence that BNI's decision to select the complainant for its RIF constitutes a retaliation against him under Part 708. On the basis of that finding, Part 708 imposes the significant requirement that BNI show by clear and convincing evidence that, in the absence of the complainant's protected disclosures, it would have taken the same personnel action against the complainant.

Ultimately, I find that BNI has failed to establish by clear and convincing evidence that it would have selected the complainant for its RIF in the absence of the complainant's protected disclosures. Accordingly, I find that BNI should be required to take restitutionary action.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from adverse personnel actions by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not take any adverse personnel action against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation; or a substantial and specific danger to employees or to public health or safety. See 10 C.F.R. § 708.5(a)(l), (2). Employees of DOE contractors who believe that they have made such a disclosure and that their employer has taken adverse personnel actions against them may file a whistleblower complaint with the DOE. As part of the proceeding, they are entitled to an investigation by an investigator appointed by the Office of

Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they are entitled to an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. History: The Individual's Part 708 Complaint and the Identification of Relevant Issues for the Hearing

The complainant filed his Part 708 complaint with the ORP in October 2005. In February 2006, following an unsuccessful effort by the complainant and BNI to mediate the complaint, the complainant requested that his complaint be referred to the OHA for an investigation followed by a hearing. The OHA Director appointed an Investigator on March 10, 2006, and on June 22, 2006, the Investigator issued a Report of Investigation (ROI) concerning the complaint.

In the ROI, the Investigator conducted an initial factual and legal analysis of the complainant's claims with regard to his employment with BNI, and made some preliminary determinations concerning possible protected disclosures and adverse personnel actions.

The ROI states that BNI is a large engineering-construction firm which develops, engineers, builds, manages and operates installations for customers internationally, and is a prime contractor at the DOE's Hanford Site in Richland, Washington. The 586-square-mile Hanford Site was established during World War II to produce plutonium for the nation's nuclear weapons defense and operated for four decades until the late 1980's. Since that time, the Hanford Site has been engaged in the world's largest environmental cleanup. Sixty percent by volume of the nation's high-level radioactive waste is stored at Hanford in 177 underground storage tanks that are aging and deteriorating. The Office of River Protection (ORP) was established by Congress in 1998 to manage the complex cleanup of waste that has become a threat to the Columbia River corridor. In December 2000, BNI was awarded a ten-year contract by ORP to design, build and commission the WTP at Hanford to immobilize the millions of gallons of chemical and radioactive waste through a process known as vitrification, whereby the waste will be mixed with molten glass and the resulting glass logs will be shipped to a federal repository for safe storage. ROI at 3.

The ROI finds that the complainant was hired by BNI on January 10, 2005, and began working on January 18, 2005, as a Controls & Instrumentation (C&I) Engineer at the WTP construction project. He was assigned to the Plant Wide Systems (PWS) group of C&I Engineering which is responsible for design, configuration and qualification testing of the integrated network control system and interconnected field devices that will track waste and materials as they are processed through the WTP. The C&I Manager is Stephen Anderson and the C&I PWS Supervisor is Peter Douglass. At the time the complainant began employment, there were approximately 25 engineers working in the C&I PWS group. *Id.*

The ROI finds that upon assuming his position as a C&I engineer, the complainant's primary function was to configure and test Foundation Fieldbus (FF) measuring devices to determine their compatibility with the WTP's planned control system.1/ The integrated control network system being developed for use in the WTP was designed by ABB (hereinafter the ABB control system). The ROI finds that the ABB control system was procured by BNI for use at the WTP under a $15 million contract awarded in 2001. ROI at 3.

The complainant's task leader was senior engineer Shaun Luper, who reported to group leader Todd Billings, also a senior engineer. Mr. Billings reported to C&I PWS Supervisor Peter Douglass, who also functioned as the complainant's official supervisor. Another PWS engineer, Brandon Gadish, who previously performed measurement device compatibility testing, was assigned by Mr. Luper to assist and mentor the complainant in assuming his compatibility testing duties. The complainant also was required to interact frequently with the ABB on-site engineer, Dave Thomas. As part of his compatibility testing duties, the complainant was assigned the task of writing a Device Test Guide to be used by other BNI engineers to perform this function. ROI at 4.

1/ FF is a communication technology that will link the WTP's integrated control network system to external measuring devices throughout the plant. Each of the numerous FF field devices must be configured and tested before being purchased on a large scale for installation. These FF measuring devices are generally comprised of transmitters, analyzers, indicators and control valves that measure and execute various process variables including pressure, temperature, flow, conductivity and radiation.

With regard to the complainant's alleged disclosures, the ROI finds that on April 1, 2005, Mr. Hall made statements to his BNI supervisors regarding safety concerns raised by the unreliability of the ABB control system, and that these disclosures appear to be protected disclosures under Part 708. However, the ROI also notes that BNI argues that the complainant did not have a reasonable basis for believing that the ABB control system raised a safety concern, particularly since the ABB system was not yet operational. ROI at 12.2/

With regard to the complainant's allegations of a Part 708 retaliation by BNI, the ROI investigator found that it is undisputed that BNI relieved the complainant of significant job duties after April 1, 2005, and selected him for a Reduction in Force (RIF) that resulted in the termination of his employment with BNI in July 2005. ROI at 15.3/ The ROI also notes that BNI claims that the complainant's supervisor sought to terminate the complainant as early as March 2005. ROI at 17. BNI later explained that in March 2005, BNI officials changed the Assignment Completion dates for the complainant and four other PWS engineers as a means of terminating their employment, but that this process was supplanted by the July 2005 RIF. Hearing Transcript (TR) at 47. The ROI investigator finds that BNI justified the complainant's selection for lay off on the basis of performance

---

2/ The ROI also discusses earlier alleged protected disclosures made by Mr. Hall to BNI personnel and finds that they do not appear to be protected disclosures under Part 708. ROI at 10-14.

3/ The ROI discusses other alleged retaliations raised by the complainant. These include (1) acts of harassment and intimidation by Mr. Gadish that were condoned by his supervisors; (2) the cancelling of a training opportunity for the complainant after it had been approved; (3) placing the complainant's name at the bottom of an organization chart; (4) requiring the complainant to perform work responsibilities at a desktop computer located at a PWS lab workbench; and (5) blacklisting of the complainant by Mr. Douglass when he applied for other positions with BNI. The ROI Investigator found that alleged retaliations (1) through (4) occurred prior to the complainant's April 1, 2005 protected disclosure, and that alleged retaliation (5) was unsubstantiated. ROI at 14.

deficiencies including lack of computer and interpersonal skills. ROI at 17, 18.4/

Following my appointment as Hearing Officer on June 23, 2006, I directed the complainant and BNI to submit briefs focusing on the findings and conclusions in the ROI that they intended to dispute at the Hearing.5/ In a September 19, 2006 e-mail to the parties, the complainant's counsel indicated that he did not intend to pursue some of the alleged retaliations raised by the complainant and discussed in the ROI and agreed to withdraw these allegations. Accordingly, the Hearing focused on the complainant's April 1, 2005 and April 15, 2005 disclosures concerning the ABB system and on the chief adverse action that Mr. Hall experienced after April 1, 2005, *i.e.*, his inclusion in a July 28, 2005 RIF of WTP employees.

III. Hearing Testimony

At the Hearing, testimony was received from fifteen witnesses. The complainant testified and presented the testimony of BNI software engineer Timothy Spicer. BNI presented the testimony of Peter Douglass, Todd Billings, Brandon Gadish, and David Thomas. BNI also presented the testimony of Stephen Anderson, who is the

---

4/ The ROI investigator notes that BNI submitted 4500 pages of investigatory materials and reports compiled by its Employee Concerns Program (ECP) concerning the complainant's issues. He stated that these materials may contain conclusive evidence and that "BNI will have an opportunity to present such evidence and to carry its burden under Part 708 at the hearing stage." ROI at 16-17. BNI has submitted significant documents from among these investigatory materials as Hearing Exhibits and has presented the testimony of BNI officials and employees who participated in the investigation. Accordingly, I will rely on the BNI Hearing exhibits and witness testimony in evaluating BNI's positions concerning the complainant's issues. I will not include the 4500 pages of materials generated by the ECP investigation in the record of this proceeding, or specifically address the conclusions of the ECP investigation.

5/ In this regard, I noted that while the ROI has made certain findings, I would be conducting an independent review of the issues. In making my findings, I stated that I would be most convinced by the best available evidence. June 23, 2006 letter to the parties at 2.

Discipline Engineering Manager for the control system discipline at the WTP, Tanya Zorn, who was a human resources interfacer in the Engineering Department of the WTP, and Patricia Talmadge, who is a Senior Quality Engineer for BNI with an area of expertise in control systems. In addition, BNI presented several witnesses from its Personnel and Human Resources area: Linda McKenney, BNI's Employee Relations Manager; Sheila Spellman, BNI's Human Resources Administrator for the WTP; Edward Rogers, BNI's Business Manager for the WTP; Cathy Tuttle, BNI's Manager of Human Resources at the WTP; and Thomas Stuart, BNI's Employee Concerns Manager at the WTP.6/ At the outset of the Hearing, counsel for the complainant and for BNI presented detailed opening statements aimed at providing an overview of their respective positions in this matter.

A. Opening Statement of the Complainant

The complainant's counsel argued that the hostility of the complainant's group leader and supervisor toward the complainant for his raising of safety issues in March and April 2005 was a significant factor in BNI's decision to include the individual in the July 2005 RIF. He stated that throughout March 2005, the complainant raised various safety issues with his task leader, Mr. Luper, and his group leader, Mr. Billings. He asserted that BNI officials met on March 24, 2005 for the purpose of discussing how to terminate the complainant's employment. The counsel asserted that the complainant's April 1, 2005 statement about the safety of the ABB control system created a flashpoint of hostility to the complainant. Following the April 1, 2005 statements, he states that BNI officials acted on the advice of the Human Resources Coordinator to bifurcate the complainant's safety issues from issues relating to his conduct and performance. This led Mr. Billings and Mr. Douglass to meet with the complainant concerning his safety issues on April 15, 2005. He asserts that the performance rating for the complainant that got him included in the initial RIF notice issued on April 21, 2005 was completed by Mr. Billings on about April 18, 2005. However, due to employee complaints, BNI directed that new ratings be conducted regarding the RIF. The final rating of the complainant that resulted in his being part of the RIF was completed in early July 2005.

6/ The job titles refer to the positions held by these individual's during the first half of 2005.

B. Opening Statement of BNI

In its Opening Statement, counsel for BNI stated that in February 2005, the WTP was seriously short of operating funds. BNI's business manager for the WTP, Mr. Rogers, concluded that a major layoff was required. Consequently, the complainant was one of about 350 WTP employees whose jobs were eliminated in July 2005. She stated that all employees of BNI have "assignment complete" dates, and that when the complainant was hired in January 2005, his assignment complete date was January 15, 2006. She stated that in late March 2005, BNI management decided in light of the budget situation that the complainant and four other grade 24 engineers should have their assignment complete dates moved up significantly. She stated that once it was decided to conduct a plant wide RIF, the complainant was included in those deliberations, and that he was selected for the RIF pursuant to evaluations that took place in mid-April and again in early July 2005. TR at 47.

Counsel for BNI acknowledged that the complainant made several statements to BNI management in February, March and April 2005 regarding the functionality of the WTP's control system. She stated that the complainant's April 1, 2005 allegations concerning the safety of the ABB system are unreasonable and that there is no evidence that the ABB system is unsafe. TR at 50. She asserted that BNI management was having problems with the complainant's inability to get along with his coworkers. TR at 48. She stated that as a result of the complainant's ongoing conflicts with his mentor, Brandon Gadish, and others, Mr. Douglass, Mr. Luper and Mr. Billings arranged a meeting with Linda McKenney in Employee Relations on March 24, 2005,

> **not because they are hoping on firing [the complainant]. They go to talk to Linda McKenney because they are seeking advice on what process should we use from an employee relations perspective because this person has behavioral issues. He's disruptive to our group.**

TR at 52. She stated that following the complainant's April 1, 2005 meetings with Mr. Billings and Mr. Douglass, BNI's Human Resources and Employee Concerns offices advised the complainant's supervisor to address his behavioral issues and his safety concerns separately, and that the behavioral issues were addressed in a meeting that took place with the complainant, Mr. Douglass, and Mr. Billings on April 14, 2005. TR at 53. In a meeting on April 15, 2005, Mr. Douglass and Mr. Billings met with the complainant and

asked him to identify his safety concerns.7/ She asserts that BNI concluded that

> Mr. Hall's problems with ABB were not about ABB. They were about the fact that he did not understand the programming that was necessary for ABB to talk to the equipment.

TR at 54-55. She contends that his disclosures had nothing to do with his being selected as one of 350 individuals who would be laid off at the WTP site. TR at 55.

As indicated in my analysis below, the two key issues for my determination in this matter are (1) whether the complainant has shown that the statements that he made on April 1, 2005 and repeated on April 15, 2005 concerning the impact of problems in the ABB system on environmental safety are protected disclosures under Part 708, and (2) assuming the complainant made a protected disclosure, whether BNI has shown that the complainant would have been terminated in the July 2005 RIF even in the absence of such a protected disclosure. Accordingly, my summary of relevant testimony will focus chiefly on those two issues. With regard to the latter issue, it is critical whether BNI has shown that the July 2005 evaluation of the complainant by Mr. Billings accurately and impartially rated the complainant's abilities for purposes of the RIF.

C. The Complainant's Witnesses

1. The Complainant

a. The Complainant's Professional Training and Work Experience

The complainant testified that initially he received a two-year degree in instrumentation controls at Columbia Basin College, and worked at the Hanford Site from 1985 until 1989. TR at 59. In 1989, he went back to school on a part-time basis during which he

---

7/ Counsel for BNI states that the specific concerns identified at that meeting all were reviewed and addressed by BNI. TR at 54. This proceeding does not concern whether BNI's response to the complainant's disclosures was reasonable. The only relevance of BNI's response is the extent to which it indicates whether the complainant reasonably believed that the disclosures indicated a significant danger.

also worked part-time as an instrument technician at facilities regulated by the Nuclear Regulatory Commission (NRC). TR at 61. In 2000, he completed his education when he received a Bachelor of Science degree magna cum laude from Washington State University in electrical engineering. TR at 59.

With regard to his work experience with nuclear control systems, he has worked a total of seven contract assignments at NRC-licensed powerplants in the capacity of an instrument technician and a compliance engineer. He stated that NRC-licensed plants are run for eighteen months and then shut down for a two-month maintenance period. During that period, the complainant was employed to run testing procedures for the plant's instrumentation. TR at 62. He testified that it is very important for both NRC-licensed powerplants and DOE run facilities to follow procedures and ensure that procedural compliance is met

> Because properly done, nuclear energy is very safe. That hinges upon following procedures and documentation and working to implement safety standards.

TR at 62.

The complainant stated that he considers himself to be experienced with the use of personal computers and has some computer programming skills. He stated that while at college, he wrote software programs in "Basic, Four-Tran, and C." TR at 69. He also stated that he was not hired by BNI to do computer programming or software design, but to perform configuration and functional testing for FF measuring devices. TR at 70.

He stated that in November 2004, he was interviewed by Mr. Billings and another BNI official for a position at the WTP, and later accepted BNI's employment offer. He stated that he was never given any indication of a time limit for the position that he accepted, and that the hiring document stated that the position was "long term." TR at 71.

He stated that he joined the Plant Wide Systems (PWS) engineering group at the WTP on January 18, 2005, and from that date through mid-February 2005, he completed a total of 35 BNI project documents and training modules, most of which involved procedures having to do with nuclear safety, "procedure compliance and quality assurance, which is strictly synonymous with nuclear safety." TR at 72. With respect to the ABB control system itself, he stated that he observed that there was no procedure to document to the DOE

the safety standards for FF instrument testing. He testified that he took the initiative to begin to write his own procedure for testing, and that his task leader, Mr. Luper, asked him to write a formal procedure for FF testing. TR at 75.

b. The Complainant's Two Concerns About the Safety of the ABB System

The complainant testified that he learned that the ABB system had been ordered for installation at the WTP in 2002, and that by 2004 there were issues involving the functioning of the ABB system. The complainant stated that he would go to the on-site ABB representative, Dave Thomas, with his questions about the ABB system because the complainant's assigned mentor, Mr. Gadish, lacked a practical background in the implementation of control systems. TR at 77-79.

The complainant testified that he believed that proper operation of the ABB control system is important to safety at the WTP because it maintains

> process variables at their set point: pressure, temperature level, flow, radiation – and it's the first line of defense for safety.

TR at 88-89. He stated that some of the waste to be processed at the WTP using the ABB control system would contain uranium or plutonium. TR at 93.

I. The Computer Lock-Up Concern

The complainant testified that the ABB control system was designed to be run on dedicated computers and would have its own software code. TR at 94. He stated that on February 22, 2005, the ABB system locked up on his computer.

> It was not a blue screen. It was a lockup freeze. And that has nuclear safety implications in a facility because it could freeze up and the operators would be looking at the screen and everything would appear to be okay but it wouldn't be okay.

TR at 94-95, 98. He then reported this event to Mr. Thomas, who "looked to be very distressed about it." TR at 100. He stated that he had to

> go down into the code and set down some of the software to clear up the frozen condition. . . . An operator wouldn't be able to do that.

TR at 100. He stated that another engineer in PWS, Mr. Jason Aldridge, told him in March 2005 that the Engineering 2 server which was on the ABB integrated control network had locked up on him. TR at 101, 125. The complainant explained that a lock-up cannot safely be addressed by rebooting the system because it could cause some of the valves the system's cooling and other processes to go into a state of emergency and shut down. TR at 104.

The complainant stated that in his work at NRC regulated power plants, he has had experience with four different distributed control systems, and that the ABB system is a hybrid of these systems. He stated that he helped to install, test, and start up a distributed control system at the Hanford Inlet nuclear plant. TR at 104. He stated that he never experienced a freeze-up while working with these four other systems, and that a freeze-up is a potentially dangerous proposition. TR at 105. The complainant testified that the WTP's process for testing and fixing the ABB system as it was being installed at the WTP was "very inadequate" because

> No one, to my knowledge, was documenting when the system froze up, how often it froze up, what caused it to freeze up.

TR at 105. He contended that the ABB control system did not meet the required safety specifications for a control system. TR at 105. He stated that he shared his concerns about the ABB system's unreliability on several occasions in March 2005 with his task leader, Mr. Luper.

> I spoke to Mr. Luper. He said, well, that's the system we got and we've got to make the best of it. And [he said that] I realize the Delta B [control system] is a better system but [the ABB System is] the one they purchased, you know, [Mr.] Billings and [Mr.] Douglass. And he was basically resigned to just going along with the system which is kind of rotten.

TR at 108.

ii. Concerns Related to ABB Communications with FF Measuring Devices

The complainant stated that he was assigned to conduct verification and validation testing of field measuring devices prior to their purchase in bulk for installation at the WTP. TR at 114-115. The complainant stated that in March 2005, he was unable to get the ABB control system to communicate with a field measuring device known as a Foxboro pressure transmitter. After the initial failure, he contacted Foxboro and asked the company to send him a second transmitter along with testing documentation.

> **I said, take another pressure transmitter, same model, and test it, and I want to see the documentation. And they tested it on two different [control] systems and it passed both systems without a problem. And we got the second transmitter shipped directly to me. . . . And we hooked it up to the ABB system, and the ABB system failed to communicate with it.**

TR at 139.8/ He stated that he worked with a BNI expediter and a responsible engineer (known as an RE) on this problem, and the expediter and the RE both suggested that BNI send the device to the Fieldbus Foundation, the independent foundation that sets FF standards and tests measuring devices, to determine whether the Foxboro transmitter was compliant with FF standards. The complainant stated that he agreed with this advice because the representatives of Foxboro and ABB were "pointing fingers at each other" and the Fieldbus Foundation, in his opinion, would provide a definitive test of whether the Foxboro pressure transmitter or the ABB system was noncompliant with industry standards.9/ TR at

---

8/ The complainant later testified that sometimes the Foxboro pressure transmitter would appear to be properly installed on the ABB system and then "drop off" the system within 24 hours. TR at 178.

9/ The complainant appears to assume that if either the ABB system or the field measuring devices require capabilities in excess of existing FF standards, their failure to conform to those standards is itself a safety concern. While that appears to be a plausible conclusion, there is very little in the record to support that assumption or to convince me that ongoing adjustments in communications standards are not

(continued...)

140. On about March 31, 2005, he suggested to Mr. Billings in an e-mail that the Foxboro pressure transmitter be sent to the Fieldbus Foundation for independent testing. The complainant stated that he believed that the problem rested with the ABB system rather than the Foxboro transmitter because he had observed a pattern of measuring devices that would not communicate consistently with the ABB system.

> **This is an ongoing problem with [the ABB] system. They've got another, different manufacturer of a control valve that wasn't imported in the [ABB] system. They had a Foxboro temperature transmitter that wasn't imported into the ABB system. And so it wasn't just that one transmitter that wouldn't work on the ABB system. And that showed me as an engineer that the common problem here was the ABB system.**

TR at 142.

c. The Complainant's Alleged Protected Disclosures

I. The Complainant's April 1, 2005 Disclosures

The complainant testified that Mr. Billings called a staff meeting for the morning of April 1, 2005. He stated that the meeting was attended by several BNI engineers, and that they discussed the Foxboro pressure transmitter issue. On the morning of the meeting, while he and Mr. Billings were walking to the meeting, Mr. Billings asked him what he thought was the source of the problem. The complainant told him that the Foxboro pressure transmitter tested good, so he thought that the ABB system was the problem. TR at 146-147. The complainant stated that at the meeting he explained that the Foxboro pressure transmitter had tested good on two other control systems, and that two of the engineers, Mr. Larry Odom and Mr. Shareet Amant, appeared ready to look at the ABB system as the problem. TR at 148-149. The complainant testified that after the meeting had gone on for ten or fifteen minutes, he passed out copies of a survey from a trade magazine for control systems whose readers rated the ABB last out of five systems being assessed. TR at 153. He stated that after a short discussion of the ABB, Mr. Billings asked to speak with him outside the meeting, where he told the complainant that he did not want to discuss the ABB system

---

9/ (...continued)
appropriate.

being the problem, and directed the complainant to return to his office. TR at 150-151.

The complainant testified that later that morning, Mr. Billings escorted him to a meeting with Mr. Billings and the complainant's supervisor, Mr. Douglass. TR at 164. He stated that Mr. Douglass was upset about his behavior at the earlier meeting, and said that the complainant should not bring up any issues about the ABB control system except to him. TR at 164-165. The complainant stated that he told Mr. Douglass about computer lock-ups involving the ABB system and about the measuring devices dropping off the ABB system. He told Mr. Douglass and Mr. Billings that these problems indicated safety concerns. TR at 165-166. The complainant stated that he felt that his job had been threatened by his disclosures that the ABB control system was the source of several operating problems.

> I asked [Mr. Douglass] if he was going to fire me, and he sat there and grinned. And I think that's the point where I told him that [I could] go to the DOE about it. And then I ended up going back to my cubicle.
>
> TR at 17. The complainant stated that about half an hour after this meeting, Mr. Billings "informed me that I would no longer be working on the ABB-Foxboro transmitter issue." TR at 168. The complainant stated that Mr. Billings instructed him to inform his contact at Foxboro to direct all e-mails concerning the ABB system to Mr. Billings. TR at 169.

ii. The Complainant's April 15, 2005 Disclosures

The complainant testified that on April 15, 2005, Mr. Douglass arranged a meeting attended by the complainant, Mr. Douglass and Mr. Anderson, the Discipline Engineering Manager for the WTP, to provide the complainant an opportunity to discuss his concerns with the ABB control system. The complainant testified that at the beginning of the meeting, Mr. Douglass stated that he asked Mr. Anderson to attend because Mr. Douglass had a "conflict of interest" regarding the ABB system. TR at 174. At that meeting, the complainant stated that he told Mr. Anderson about the lockups and the communication problem with measuring devices. TR at 176. The complainant stated that Mr. Thomas, the ABB representative, was assigned by Mr. Billings to handle the lock up issue that he had reported. The complainant testified that when Mr. Thomas questioned other WTP engineers about the issue, two of them

reported that the ABB system software had locked up on them. TR at 184.

d. Subsequent Information Supporting the Individual's Concerns

At the Hearing, the complainant testified that subsequent research by Foxboro regarding its pressure transmitter verified that the transmitter's inability to communicate properly with the ABB system was caused by the ABB system. The complainant stated that his position that the ABB system had caused the communication problem was supported by a June 2005 letter from Foxboro to Mr. Campbell at BNI. Complainant's Exhibit 26. TR at 153. That letter stated that "Todd Billings speculated that there was a mismatch between the code in the transmitter and the files sent on diskette with the transmitter [for loading into the ABB system]. We would like to assure Bechtel that there is no such mismatch." After Mr. Billings testified that Foxboro eventually had revised its software to make the transmitter compatible with the ABB system, the complainant asserted that the fact the Foxboro had been required to revise its software indicated that the ABB system was not properly designed to operate with all field measuring devices that meet the FF standards. TR at 1170-1174.

After hearing the testimony of Ms. Talmadge, BNI's Senior Quality Engineer, the complainant stated that he disagreed with her assessment that the WTP's function of processing waste rather than generating power would not raise a danger of serious safety incidents. He stated that the WTP will have to handle and move nuclear waste on a regular basis, while power plants

> don't move nuclear waste around except when they procure a plant. It is very limited.

TR at 1208. The complainant also rejected Ms. Talmadge's testimony that the testing being done by the complainant at PWS could not raise safety issues because the instruments will be retested before the WTP is put on line. He stated that the communication incompatibility between measuring devices and the ABB system might not be revealed through "a different type of test" at a later time. He also stated that he believed that the ABB system problems of lockups and communication failures with measuring devices would cause lengthy and costly delays in bringing the WTP on line, and that such delays presented a significant health and safety problem because of the ongoing leakage of untreated radioactive waste into the groundwater. TR at 1223-1224. He added that the system failure rate for the ABB system was far in excess of the contract

specifications for a nuclear control system, based on the problems that he had observed or been told about concerning the ABB system prior to April 1, 2005. TR at 1251-1253.

e. The Complainant's Job Performance Issues

The complainant stated that he disagreed with the Mr. Gadish's testimony that he was responsible for their workplace personality conflict. TR at 1189. With respect to his task leader, Mr. Luper, the complainant testified that he "had a pretty good working relationship" with him. TR at 1241. When asked about negative assessments of himself that Mr. Luper provided in a September 2005 interview with BNI officials (BNI Exhibit 203), the complainant stated that

> I said on the surface, that I felt that Shaun and I had a pretty good working relationship, but, you know, he may have had his own agenda. And that may have been the agenda of Mr. Billings and Mr. Douglass.

TR at 1242. The complainant stated that after he was notified in April 2005 that he would be part of the RIF, he was assigned to train his replacement, Mr. Scott Roselle, in the testing of FF devices. TR at 1235. He reported that he became friends with Mr. Roselle, and that they had a good working relationship. TR at 1235.

The complainant also stated that he disagreed with the testimony of Mr. Spicer, Mr. Thomas, Mr. Gadish and the cited assessment of Mr. Luper (BNI Exhibit 203) that he lacked basic computer skills.

> Well, I think the record proves I wrote the H-1 Foundation Fieldbus test guide, which has detailed steps on how to use the ABB software. And Mr. Luper complimented me on the writing of that test guide. So, I don't see how this can be true, when the fact is . . . that I wrote it, and my peers reviewed it and Mr. Anderson approved it.

TR at 1209.

2. Mr. Timothy Spicer, BNI Software Engineer

Mr. Spicer testified that in early 2005, he was assigned by Mr. Douglass to develop a safety plan for the PWS laboratory at the WTP. TR at 218. He testified concerning the need for better safety procedures at the laboratory, and cited that hazards posed by certain laboratory equipment, such as forced air canisters. TR at 222-223. He stated that Mr. Thomas, the ABB representative, had made one of the female programmers cry because he made her feel ignorant when she went to him for advice. TR at 227. He characterized Mr. Thomas as "a rough guy." TR at 229.

Mr. Spicer stated that he had observed Mr. Thomas and the complainant interact, and that he thought that Mr. Thomas was frustrated by the complainant's lack of basic computer skills. TR at 237. He testified that he observed the complainant on more than one occasion have trouble logging onto the system and selecting the correct domain. TR at 243. He also observed the complainant shut down his computer in an improper manner without logging off. TR at 241.

Mr. Spicer stated that he did not believe that any of the laboratory safety concerns that the complainant raised constituted serious safety concerns. TR at 232.

With respect to the ABB system, he stated that "ABB is a very difficult controller." TR at 239. He further stated that

> I've spent probably half my career in the nuclear industry. While any software PLC or DCS-based system has troubles – I mean, they all have their little quirks. So does Microsoft. I've been on several FAT [Factory Acceptance Tests], successful FAT tests, one with a very sophisticated robot just outside Denver where [the ABB system] performed flawlessly.

TR at 239-240.

D. BNI's Witnesses

1. Peter Douglass

a. The complainant's disclosures

Mr. Douglass stated that he was the complainant's supervisor during the complainant's 2005 employment at the WTP. TR at 493. He stated that on April 1, 2005, Mr. Billings reported to him that the complainant had made negative comments at a staff meeting concerning the ABB System. He stated that Mr. Billings was "notably upset" regarding the complainant's behavior and statements at the meeting. TR at 504. He stated that Mr. Billings told him that

> **The meeting was to try to resolve an issue with a transmitter which was communicating to the ABB system and there was a problem therein, and [the complainant] was making declarations about the entire ABB system being unsuitable for the nuclear facility, being unsafe, and he was adamant that ABB was at fault in this situation.**

TR at 505. Mr. Douglass testified that he did not believe that the complainant's criticism of the ABB system raised safety issues because the ABB control system does not perform safety functions, and because he believed that the complainant "was speaking without knowing all the background" concerning the ABB system. TR at 506. He stated that later that morning he had a meeting with the complainant and Mr. Billings. He testified that the complainant asserted that Mr. Billings had told him to leave the earlier meeting because he was bringing up quality and safety issues with the ABB system. TR at 508. He stated that he did not tell the complainant that his [Douglass'] career was dependent on the success of the ABB system.

Mr. Douglass testified that he told the complainant in the context of finding the proper ways to resolve safety issues or concerns regarding the control system, that

> **the safety or reliability of the control system is - you know, my career is dependent on that. I did not make any reference to it needing to be the ABB system - [that] it had to be ABB that was successful.**

TR at 510.

Mr. Douglass testified that he was on the BNI team that recommended that BNI procure the ABB system for use at the WTP. He stated that initially the team had recommended the Honeywell control system because it was more mature, but that they later endorsed the ABB system. TR at 511-512. He acknowledged that at a 2004 PowerPoint presentation to the Defense Nuclear Facility Safety Board, the WTP presentation stated that "Control systems are an important but frequently overlooked component of a safe facility." BNI Exhibit 268. He further testified that this statement referred "only in part" to the ABB control system, because there also were "safety instrumented systems" and a "programmable protection system" at the WTP that was dedicated to safety functions. TR at 512-517. He stated that the ABB system monitors the safety functions performed by these other systems. TR at 518.

Mr. Douglass stated that he met with Thomas Stewart, the Employee Concerns Manager, who told him that the complainant had "whistleblower potential" and advised him to investigate the complainant's statements about safety and keep them separate from the complainant's performance problems. TR at 520. He stated that on April 14, 2005, he met with the complainant concerning his workplace conflict with Mr. Gadish.

> In the meeting we went through all the items that I had identified [as] concerns. Curtis responded with all the problems he was having with Brandon and identified those items. And at the end of the meeting, I tried to talk to Curtis. You know, maybe there were other reasons or maybe the problems were maybe not all Brandon's and asked him to try to work out and try to work through some of the issues.

TR at 521.

Mr. Douglass testified that on April 15, 2005, he and Mr. Anderson, the WTP's Discipline Engineering Manager, met with the complainant to listen to his safety concerns. He stated that he later documented the concerns in an e-mail (BNI Exhibit 75). He stated that the complainant was asked to document his complaint that one of the Fieldbus devices that he was testing was getting a slow response. He also was asked to document the criteria used to evaluate control systems in the magazine survey cited by the complainant at the April 1, 2005 staff meeting. TR at 525. He stated that the complainant later informed him that each participant in the survey simply ranked the control systems on the basis of their personal criteria. TR at 525. Mr. Douglass stated

that he concluded from this information that the survey could not be used as evidence that the ABB system was considered unsafe by the survey participants. *Id.*

Mr. Douglass testified that in its final technical evaluation prior to the award of the plant-wide control system to ABB, BNI acknowledged that there was a certain amount of risk in procuring the ABB system because certain aspects of the system could not be fully evaluated at the time of purchase. TR at 549. He also agreed that data on the ABB system's compatibility with FF standards was not available and could not be evaluated at the time of purchase. TR at 553. He added that "the integrated engineering tools were not currently available and could not be evaluated at that time." TR at 558. He stated that the project team considered this to be an acceptable risk.

> The project team was well versed in the state of the Foundation Fieldbus at the time. We evaluated the risks and so we knew all the potential problems we were going to have with Foundation Fieldbus. So that issue was definitely discussed and the risk accepted.

TR at 554. He stated that the PWS group at the WTP is continuing to conduct testing on the ABB system's compatibility with FF measuring devices at the present time, and that it is "occasional work for one individual." TR at 590. He testified that there is still work to be done to insure that the FF measuring devices will function with the ABB system. *Id*.

b. Employment issues

Mr. Douglass testified that Mr. Gadish complained to him in March 2005 concerning the complainant's behavior towards Mr. Gadish in the workplace. He stated that he did not recall advising Mr. Gadish to submit a complaint to the WTP's Human Resources department. He stated that in March 2005 he, Mr. Billings and Mr. Luper met with Ms. McKenney, BNI's employee relations manager, concerning the conflict between Mr. Gadish and the complainant and that they discussed options. He stated that they discussed giving a verbal warning to the complainant, followed by a written warning and possible termination, but that a course of action was not finalized. TR at 498-504.

c. Rating and RIF issues

Mr. Douglass testified that a salary planning ranking was done for WTP employees around February 24, 2005, and he identified that document as the portion of the Complainant's Exhibit 13 designated "Hall Ex. 013-2." He stated that he prepared cards for each employee and numbered the cards as a ranking. Then Mr. Anderson would take the cards and develop the completed list. TR at 529. He stated that because the complainant had only been employed at the WTP for about six weeks, he was not included in the initial portion of the employee ranking process.

> **After we did the first ranking or ranked everyone, [Mr. Anderson] pulled the cards out for the people who were new to the job and said, we have to put these people in. [The complainant] would be one of those. And they were put in like in the low Bs basically so that it doesn't help them or hinder them.**

TR at 530.

Mr. Douglass testified that he first learned of the need for a RIF at the WTP in the last week of March or the first week of April 2005. TR at 530. He stated that he met with Mr. Meinert and Mr. Billings in early April to develop a list of employees to be included in the RIF, and that the complainant was included on this list. He stated that the complainant was selected for the RIF because

> **He hadn't been here on the project long, so we didn't have any in-depth knowledge that would be difficult to lose. The activities Curtis was working on weren't activities that were critical at the time. It was something that could be absorbed by others or done later. And we also had the performance problems with Curtis as well.**

TR at 532. He stated that when the complainant was informed that he was included in the RIF, the complainant asserted that he should be retained because his FF device testing would need to continue. TR at 535.

Mr. Douglass testified that prior to the expiration of the two month notification period for the RIF, the decision was made to go through the selection process again, using a standardized format. TR at 537. He testified that Mr. Billings completed the

standardized ranking form for the complainant, and that he then signed it. He stated that he did not instruct Mr. Billings how to rate the complainant, and that they did not talk about the complainant specifically during the second review process. TR at 537. Mr. Douglass stated that he believed that there was no connection between the statements regarding safety made by the complainant and the determination that he should be laid off. TR at 540.

2. Todd Billings

Mr. Billings stated that he was the lead engineer for the complainant's PWS working group. TR at 253. He stated that when the complainant joined the working group, he was on the team that interviewed the complainant, and that he recommended that the complainant be hired.

> I felt that his background in instrumentation and in other nuclear facilities might be beneficial to our project as well as his stated background in working with smart devices, the types of devices that communicate using a digital protocol with the control system.

TR at 265. He stated that the complainant was assigned to Mr. Luper as a task leader to assist with FF instrumentation testing. TR at 266.

a. The Complainant's disclosures

Mr. Billings stated that in March 2005, the complainant had reported that there were communication problems between the ABB system and the Foxboro pressure transmitter. TR at 298. He stated that he learned through Mr. Luper that the complainant concluded in late March 2005 that the ABB system was the source of these communication problems. *Id.* Mr. Billings stated that he told Mr. Luper that he thought that it was "too early in the investigative process to have reached that conclusion, although that was certainly one of the possibilities." TR at 299. He stated that at the April 1, 2005 staff meeting, the complainant explained that he had tested two Foxboro pressure transmitters and that they would not communicate properly with the ABB system. The complainant had handed out copies of a trade magazine article that gave a low rating to the ABB system, and he then made the statements that the ABB system was the cause of the problems with the Foxboro transmitter, and that the ABB system was not good for

use in a nuclear facility. TR at 304-306. Mr. Billings stated that he thought that the complainant's statements that the ABB system was inappropriate for use in a nuclear facility were clouding the discussion of the communication issue and taking over the meeting, so he sent him away. TR at 305-306. He stated that at a subsequent meeting with Mr. Douglass, he told Mr. Douglass that the complainant had undermined "myself and other members of our team that was working on the [ABB] system. . . ." TR at 309. He stated that he the complainant later joined the meeting with Mr. Douglass and himself and repeated the issues that he raised at the staff meeting. TR at 311.

Mr. Billings stated that he viewed the complainant's assignment of blame to the ABB system as a hindrance and removed him from the review of the communication problem involving the Foxboro transmitter. He stated that the complainant is the only person who has questioned the propriety of using the ABB system at the WTP. Mr. Billings stated that later that day he sent an e-mail to Ms. McKenney documenting this meeting [BNI Exhibit 72] because he believed that the complainant's behavior "violated some of the Bechtel covenants and needed to be categorized in that way":

> In addition, Mr. Hall had made a statement to the effect that he had enough evidence to go public as far as the implication being something about the ABB system. And to me that sort of raised the bar as far as what his intentions might be and that I needed to ensure that I was trying to document what I had observed that day and what I had been involved with.

TR at 313.

Mr. Billings stated that the communication problem between the Foxboro pressure transmitter and the ABB system was later revealed to be a problem with the Foxboro transmitter:

> Foxboro and ABB had collaborated to identify the problem. Foxboro had then relayed to us that the problem was in their transmitter, that they had an issue that was causing it to drop off the network, the Foundation Fieldbus Network. . . .

TR at 317-320, citing BNI Exhibits 51, 52 and 53. Later during questioning on this issue by complainant's counsel, Mr. Billings was asked to review a June 2, 2005 letter from Foxboro project manager Brian Haynes to BNI concerning BNI's problem with the

pressure transmitter. In the letter, Mr. Haynes stated that the complainant had identified the interoperability problem to Foxboro on March 16, 2005. BNI Exhibit 65. Mr. Haynes then discussed his finding that certain unique characteristics of the ABB system led to a data overload and the communication problem with the Foxboro pressure transmitter. BNI Exhibit 65. Mr. Haynes then stated that installing a secondary communication buffer on the Foxboro pressure transmitter appeared to resolve the problem, but he noted that such a buffer is not required by FF specifications. *Id*. Finally, Mr. Haynes stated that it was up to the Fieldbus Foundation that sets standards for FF devices to decide whether this additional capability required for interface between Foxboro's pressure transmitter and the ABB System would become part of its FF specifications. *Id.*

Responding to this letter in his testimony, Mr. Billings stated that the Foxboro pressure transmitter already had the necessary secondary buffer to handle the ABB system's continuous readings of all parameters, but that a previously undetected error in the software code of the Foxboro transmitter had made it inoperable:

> Foxboro had never tested that secondary communication buffer. The first time that this had come up was in our testing because in the way that we had configured the ABB system it had actually stressed the network a little bit more than Foxboro had during their testing process, and that's where this line of code that was causing the fault inside their transmitter was revealed. And they had to go in and modify that so that the secondary communication buffer which they had implemented actually worked.

TR at 384.

Mr. Billings stated that sometime in 2005, the start-up date for the WTP was "pushed out" until at least the "the 2012 time frame." TR at 259. Mr. Billings stated that the untreated waste currently at the Hanford site has created a "danger to the environment and potentially to people's health." He also agreed that the longer this waste goes untreated, the longer that danger persists. TR at 390.

b. Employment and RIF issues

Mr. Billings stated that when a conflict developed between the complainant and his assigned mentor, Mr. Gadish, Mr. Luper

unsuccessfully attempted to rectify it. TR at 283. He stated that in March 2005, he attended a meeting with Mr. Luper and Mr. Douglass and Employee Relations specialist McKenney concerning the complainant's conflict with Mr. Gadish. TR at 285-286. He stated that he also had been told by PWS supervising engineer Meinert that the hostile environment created by this conflict was affecting his team, and by ABB system representative, David Thomas, that the complainant was not taking instruction well and causing people in the laboratory environment "to sort of avoid being in there with him...." TR at 290-291. He said that firing the complainant was viewed as only a potential outcome by the attendees at the meeting, not the objective. TR at 286. Ms. McKenney told them that they needed to closely monitor the situation and clearly lay out expectations whenever the complainant was asked to do something. He stated that Ms. McKenney said that she would start a file associated with the concerns. TR at 291-292.

Mr. Billings testified that he removed the complainant from working on the Foxboro pressure transmitter problem

> Because I felt the Mr. Hall's biases, his stated biases, would prevent him from being objective and presenting all the information that was necessary on both sides, both between Foxboro and to Bechtel.

TR at 321. He stated that after the complainant was removed from the Foxboro pressure transmitter testing, the complainant continued to test other FF measuring devices and to write a guide for testing measuring devices. TR at 322.

Mr. Billings testified that prior to the April 2005 RIF announcement, the complainant had been rated 12 out of 17 in his peer group and given the grade of B. TR at 373 citing complainant's Exhibit 13. He stated that he could not recall participating in this rating of the complainant. After the RIF was announced in late March or early April, he gave input to Mr. Douglass and they provided BNI management with a list of employees to be included in the RIF. He stated that he included the complainant on the list because he had difficulty getting along with other members of the team and because while working on the Foxboro transmitter issue he displayed a lack of engineering judgment by concluding that the use of the ABB control system raised safety concerns. TR at 325-326. He stated that in early July 2005, he rated the complainant on a form provided by BNI and that Mr. Douglass signed the rating. TR at 327, BNI Exhibit 146. He stated that this evaluation was

> sort of a confirmatory action, you know, with a structured worksheet to the - some of the discussions that we had had previously with Mr. Douglass.

TR at 327-328. He stated that he did not know how the rating he provided was used by BNI Human Resources in selecting employees for RIF. TR at 328.

3. David Thomas

Mr. Thomas testified that he works for ABB as an engineer and in 2005 was assigned to the PWS laboratory at the WTP. TR at 396. The ABB system will be the main operator interface and control system for the WTP vitrification plant, encompassing mechanical handling, process control, and general operational control of the plant. TR at 397. He stated that the designated safety system at the WTP will not be the ABB system but the Trikonics system, which he described as "a backup system [that] monitors and controls important safety items." TR at 398.

Mr. Thomas stated that when the complainant reported to him that his ABB central processing unit (CPU) locked up, the complainant was unable to repeat the sequence of events that led to the lock-up. TR at 400-401. He stated that the complainant demonstrated a lack of computer skills:

> There was no proficiency. There was a definite learning curve necessary for him to be able to do the job.

TR at 401-402. Mr. Thomas stated that on or after April 15, 2005, he was tasked with investigating the complainant's assertion that PWS engineers had experienced computer lock-ups while using the ABB system. TR at 407. He stated that the first thing that he did was to gather the people who were using the ABB equipment frequently to get a summary of the issues that they were having. He described the ABB system at the laboratory as consisting of the following:

> . . . we had I believe at that time it would have been 15 ABB clients connected to the system and five ABB aspect system servers that were being used by miscellaneous engineers plus three . . . laptops that were being used for factory acceptance testing or equipment in the field.

TR at 408. He stated that the only problems that he recalled being reported to him were some blue screen issues involving a laptop. TR at 415. He described this problem as follows:

> The blue screens was an ongoing issue that we were addressing through Dell computers. That was a Dell laptop that was purchased. Although it was procured through ABB, it was a Dell laptop. [An ABB engineer] contacted Dell on several occasions regarding that problem. Dell had made one trip to site and replaced the CPU and fan, I believe.

TR at 410. Mr. Thomas believed that Dell had not fully resolved the problems with this laptop at the time that he reported his results to Peter Douglass on May 2, 2005. BNI Exhibit 80. Mr. Thomas then was asked to review BNI exhibit 201, which is an unsigned document purporting to be responses by PWS engineer Jason Aldridge to statements made by the complainant. These responses indicate that Mr. Aldridge's only problem involving a computer lock-up at the laboratory occurred when a Dell laptop "began to crash at various stages of boot-up and operating." BNI Exhibit 201. Mr. Thomas testified that he believed that this statement was consistent with what he had learned from Mr. Aldridge during his investigation. TR at 414. Mr. Thomas stated that he agreed with BNI's conclusion that the ABB system was reliable and safe for use at the WTP:

> The [ABB] system as it will be configured at the plant is totally different from the office environment. Reliability issues that were brought up here would, even if they did occur, a blue screen, would not impact plant safety. The Trikonics safety system is handling all safety issues. The operators had dual CPUs for their operating consoles. There's lots of redundancy in the system, lots of fallback options so to speak on how it's configured, how the system is distributed. The office environment that we were working under was loading all services and systems under one server, which would not be the norm.

TR at 419-420.

Mr. Thomas testified that he believed that control systems are an important part of plant safety. TR at 421. He stated that the ABB system would be responsible for the monitoring of radioactive materials. TR at 424-425. He agreed that a systemic problem in the ABB system could result in all of the computers in the WTP control room going blank. TR at 426.

After reviewing an unsigned interview purporting to be of PWS engineer Glenn Upton [Exhibit 202], Mr. Thomas recalled that Mr. Upton had experienced problems with the Dell laptop that he had previously discussed. TR at 435. Mr. Thomas disagreed with the statement attributed to Mr. Upton that a number of employees using the ABB system had experienced a crash or blue screen on their computers. TR at 436. Mr. Thomas stated that in conducting his investigation, he did not contact all of the ABB users to inquire if they had experienced lock-ups on their computers. TR at 436. He also stated that he is not aware that the ABB control system being installed at the WTP is used currently in any nuclear facility. TR at 445.

4. Patricia Talmadge, Bechtel's Senior Quality Engineer

Ms. Talmadge testified that she is a software quality and safety engineer who has worked for BNI since 2001. She stated in August and September 2005, at the request of WTP's Employee Concerns Program, she participated in the Quality Assurance surveillance of the WTP's controls and instrumentation equipment testing activities in the laboratory where the complainant had been working. This surveillance and the accompanying report (BNI Exhibit 269) were aimed at addressing safety concerns identified by the complainant. Ms. Talmadge concluded that the laboratory had no significant safety problems, and characterized the surveillance as a waste of taxpayer dollars. TR at 638, 649. Ms. Talmadge stated that the ABB is not a safety-related system and is not intended to be used for safety purposes at the WTP:

> We have nuclear engineers that conduct what we call [integrated safety management] meetings. They do the actual walkdowns of all the accident scenarios that could possibly occur per the design at the time and it evolves over time. And the control system strategy is based on the difference between a safety system and a non-safety system. And if you were crediting yourself with a safety function it belongs on the safety system.

TR at 609. When asked how BNI would address the hypothetical problem of a non-safety system that created numerous safety-related incidents, she responded that

> based on the severity of the hazard or the possibility of recurrence you put additional barriers in place and those barriers could be swapping equipment out, going to another supplier, changing your design if you have to.

> There's multiple, multiple things that you could do to mitigate that.

TR at 613.

With regard to the complainant's concerns about the ABB system, she testified that the test environment does not mimic an operational environment. TR at 614. She stated that her investigation found only one laptop issue involving the ABB system, and no server lock-ups. TR at 615-616.

Ms. Talmadge testified that in October 2005, BNI made the decision not to use FF devices as monitors for its safety control system (PPJ/Tricon):

> We cannot use Foundation Fieldbus on a programmable system. And that's due to some of the technical issues we have with the pulse jet mixer system. That type of technology will not be allowed on the [PPJ/Tricon] system because of the fact that we don't feel it's reliable and the signals do not transfer to the length we need them to.

TR at 626. She testified that the digital communication using FF standards is not reliable enough for the WTP's safety system. However, she stated that she had no safety reservations about the use of FF measuring devices with the WTP's integrated control system [ICN] which will use the ABB technology:

> The remaining part of the plant, the controls are closer together and it's not an issue. The issue would be when it's in the hot cells and I have to rely on that reliability. As far as any of the other [systems], PPJ is responsible for shutting the system down. It takes control from the ICN if there's a problem. The ICN is basically a monitoring system. It monitors, it tells the operators if there's alarms. It shows communications happening amongst non-safety equipment in the plant.
>
> The PPJ monitors and actually has control over safety equipment in the plant. So for safe shutdown everything is independent from each other and the PPJ is master.

TR at 627-628. She stated that the PPJ system would have its own monitors that would operate independently from the monitors for the ABB system. TR at 628, 634-638.

Ms. Talmadge stated that the complainant's manual of procedures for testing the communication of FF measuring devices with the ABB system erred in not being related to the formal process for certifying the equipment to become operational. TR at 642-646.

Ms. Talmadge testified that the WTP did not require the same level of nuclear safety protections that are required for nuclear power generating plants because there is little danger of a major release of radiation into the environment:

> We are not a nuclear facility in the sense of having a reactor or large critical events that occur or that could occur or that have occurred. A release of radiation is nominal in the majority of the cases of the accident scenarios in the plant. When there is a release, it's in a contained area which is considered a hotset basically. It's a hot environment.

TR at 611. She stated that the Safety Requirements Document for the WTP specifically provides that

> The control philosophy for a nuclear power generating station is not applicable for the RPP WTP project.

TR at 654, citing BNI Exhibit 273.

Under questioning by the complainant's counsel, Ms. Talmadge agreed that delays in treating radioactive wastes at the Hanford site are potentially bad for public safety. TR at 670. She also agreed that if operating problems with the ABB system delayed the WTP coming on line, that would "be a bad thing." TR at 671.

5. Stephen Anderson, former Discipline Engineering Manager for the WTP's Control System Discipline

Mr. Anderson testified that he started working at the WTP 2000 as the discipline control manager, and that his role was to develop an execution plan for constructing the WTP. TR at 720.

a. The Complainant's Safety Concerns

Mr. Anderson stated that at the April 15, 2005 meeting with Mr. Douglass and the complainant, he and Mr. Douglass gave the complainant an opportunity to document problems he observed with the ABB system. TR at 730-731. He stated that the complainant was

unable to replicate in a laboratory setting one of the problems that he claimed to have experienced with a FF device not interacting properly with the ABB system. TR at 731. He agreed with Mr. Douglass that the ABB system concerns reported by the complainant were all resolved in April 2005 and that the ABB system was suitable for the WTP. TR at 732.

He stated that the ABB system at the WTP was not responsible for "program protection", "although it did monitor program protection." TR at 733.

b. The Complainant's Salary Ranking

Mr. Anderson testified that WTP's 2005 salary planning program was conducted in late February and early March 2005. He stated that it consisted of a ranking exercise using input from his group's supervisors and fitting that input into the fixed percentages for each rating level. TR at 741. Mr. Anderson was shown a document entitled "2005 Salary Planning Program, Bechtel Systems Infrastructure, Inc." BNI Exhibit 276. He stated that he did not know the date of the document, but that the date of November 2005 printed on the document was not correct. He affirmed that it reflected the salary planning process that took place in February or early March 2005. Mr. Anderson was asked to explain why BNI Exhibit 276 lists the complainant with a B-minus rating while another 2005 salary ranking document [Complainant's Exhibit 013-2 lists him with a B rating. He stated that the B rating "would have been our input" into the ranking process. TR at 745. He stated that adjustments to these grades can take place "when all the disciplines are brought together and everybody has to meet these quotas." TR at 744. He stated that officials in human resources convene a meeting a discuss how to put the ratings together.

> Because what happens is a lot of people that are well-known on the project either good or bad and so people have input on those people. So sometimes there's adjustments. In addition to that, there are a number of people that did not get graded and they're inserted in this process during that review. When that happens somebody is inserted as an A and moves everybody down, somebody is inserted as a B, everybody below that gets pushed down. So they try to protect – at the margins you try to protect your people from that happening. But it does happen.

TR at 744.

c. The Complainant's Assignment Complete Update

Mr. Anderson stated that BNI maintains a document called the "register" that lists every employee's position number, who occupies the position, the date they started, and their projected release date. He stated that he maintains this register for the employees in his division at the WTP, and that he electronically enters any changes in an employee's projected release date. TR at 780-781. He testified that he would provide a mark-up of his changes in release dates to Tanya Zorn, who would manage the Assignment Complete process for the affected employees.

Mr. Anderson testified that in early 2005 the WTP was "near our peak [of staffing] and were starting to reduce down" through normal staff reductions. TR at 746. He stated that just prior to the announcement of the RIF, on March 29, 2005, the complainant's assignment complete date and that of some other engineers had been moved up to May 5,2005. TR at 749, Complainant's Exhibit 48. He stated that

> **The position that [the complainant] was occupying we predicted that it must not be a position that we would need to sustain for a long period of time.**

TR at 750. He stated that the ending of assignments for employees was a means "to keep our resources within . . . budget levels." *Id.*

Mr. Anderson stated that he has the "final input" for moving up an employee's assignment complete date, but that Mr. Douglass, as the complainant's supervisor, "would have had some input" in moving up the complainant's assignment complete date. TR at 750. However, Mr. Anderson testified that in this instance he had no "specific knowledge" that Mr. Douglass had any input into moving up the complainant's assignment complete date. TR at 780.

Mr. Anderson testified that when the RIF was announced, the complainant and the other employees who had received 30-day assignment complete notices got rolled into the RIF process. TR at 751. He stated that in a November 2005 memorandum to Mr. Robertson in Employee Concerns he wrote that a change in an employee's assignment complete date

> **is probably not a good indication that we wanted to terminate someone, only that we expected that some work**

> would be completed in the near term. Generally we did some long range forecasting of the reduction in positions based on schedule and budget considerations. Many times these reductions are less than accurate as they were not adjusted every month.
>
> I think a better indication of the status of performance would be the salary planning effort. There was an exercise in February or March '05 to indicate general performance of our engineers, designers and technologists for salary planning purposes.

BNI Exhibit 44, TR at 757. He stated that Mr. Douglass and Mr. Hall's group leaders had given him a B rating for this exercise. TR at 758.

d. The Complainant's Selection for the RIF

Mr. Anderson testified that the planning for the 2005 RIF at the WTP started in very early April. TR at 747. He stated that an employee's assignment complete date was considered in determining whether to include them in the RIF. TR at 775. He stated that he gave the complainant his RIF notice in late April 2005.

Mr. Anderson stated that in July 2005, BNI took a second look at the RIF. He stated that this involved an objective evaluation of all WTP employees using a standardized form, and that he had no input into the complainant's second evaluation. TR at 753.

6. Brandon Gadish, PWS engineer assigned as mentor to Complainant

Mr. Gadish stated that he has worked with the ABB system at the WTP laboratory since 2002, and had more than six months of experience with testing FF measuring devices when the complainant joined the laboratory workforce in 2005. He stated that the complainant was assigned to take over his FF device testing and that he was assigned to mentor the complainant. He stated that he provided the complainant with educational materials, but that the complainant rejected one-on-one training. TR at 793-795. He stated that he complained to Mr. Luper that the complainant had rejected training, and that Mr. Luper met with the complainant and Mr. Gadish to lay out boundaries and guidelines for their work duties. TR at 797-798.

Mr. Gadish stated that on March 10, 2005, he had an "in your face" argument with the complainant that led him to file an employee concern. Mr. Gadish admitted that he used an expletive and called the complainant an idiot during this encounter. TR at 806-808. He stated that he was not disciplined for this behavior. TR at 822-823.

7. Linda McKenney, former Employee Relations Manager at the WTP

Ms. McKenney testified that in 2005, she worked as an employee relations manager with HR at the WTP. She stated that she convened a March 24, 2005 meeting with Mr. Douglass, Mr. Billings and Mr. Luper concerning the conflict between the complainant and Mr. Gadish. After reviewing her notes of the meeting, she stated that at that meeting, no one stated that the complainant should be fired. TR at 850-852. BNI Exhibit 6. She stated that she recommended a formal verbal warning to the complainant regarding his behavior to Mr. Gadish. TR at 855-856. She testified that she later conducted an employee concerns investigation of Mr. Gadish's concern and learned from his co-workers that the complainant and Mr. Gadish were not speaking or interacting in the workplace. TR at 848-849.

Ms. McKenney stated when Mr. Billings sent her an e-mail complaining about his April 1, 2005 altercation with the complainant, she asked Ms. Spellman in HR to investigate. She stated that Ms. Spellman saw whistleblower potential in the statements that the complainant made to Mr. Billings and Mr. Douglass on April 1, 2005, and that she was comfortable with this assessment. TR at 857-858. She testified that on April 7, 2005, she had contacted Danette Brophy in the engineering, staffing and training department and instructed her that BNI policy required that the complainant could not be laid off while there were ongoing employee concern issues involving him. TR at 860.

She stated that her office did not classify the April 1, 2005 altercation between the complainant and Mr. Billings as an incident of misconduct by the complainant. She stated that there were no reports to her of any misconduct by the complainant occurring after her March 24, 2005 meeting with the complainant's supervisor. TR at 878-879.

8. Sheila Spellman, former Human Resources Administrator at the WTP

Ms. Spellman testified that she assisted Ms. McKenney in processing Mr. Gadish's employee concern regarding the complainant. TR at 882. She stated that she worked with Mr. Douglass and Mr. Billings to implement her recommendations to have a

> **discussion with the [complainant] about unprofessional behavior and how to talk to the [complainant] about learning the Bechtel covenants and following the covenants and interacting with his co-workers professionally.**

TR at 883-887. She stated that in an e-mail to Mr. Douglass, she wrote that the complainant has violated the Bechtel covenants because his behavior displays a lack of trust in his co-workers, that he does not welcome help from others, and that he displays a lack of teamwork. TR at 887. She stated that she understood that Mr. Douglass counseled the complainant on April 14, 2005 regarding these issues. TR at 889.

She testified that on April 6, 2005, Ms. McKenney asked her to respond to an e-mail from Mr. Billings about his April 1, 2005 altercation with the complainant. TR at 890, 900. BNI Exhibits 71 and 72. She testified that

> **I recognized that [the complainant] was bringing up issues that I identified at the time as quality issues. And I felt that they needed to be dealt with. We needed to know what they were. Is there any problem with the plant, with quality, safety, environmental issues that an employee is raising? That's something that we as a company are obligated to address and try to find out what they are.**

TR at 894. She stated that Mr. Billings' notes of the meetings indicated that the complainant would go public with his concerns if he was fired, and that this indicated that he might become a whistleblower. TR at 895. She stated that she discussed the complainant's situation with Mr. Stewart at Employee Concerns and that he advised that BNI needed to address the complainant's behavioral issues and his quality concerns separately. TR at 897. She stated that she learned on April 6, 2005 through Ms. McKenney that the complainant was listed to be laid off because his

Assignment Complete date had been moved up in late March. TR at 908-909. She stated that in late July 2005, she sent Ms. Tuttle in Human Resources a report on the complainant's situation. TR at 919.

9. Edward Rogers, Bechtel's Business Manager for the WTP

Mr. Rogers testified that he has worked for BNI for almost nine years and is BNI's Business Manager for the WTP. He stated that in February 2005, the WTP project was seriously short of operating funds. TR at 929-934. He stated that BNI concluded that its current "spend rate" was too high and looked at ways to reduce it. TR at 935. He stated that because of the need to review completed construction and planned construction to meet new seismic requirements, BNI made an immediate forced reduction in the field on craftsmen.

> That was followed up very closely by a forced reduction within the non-manual ranks both in construction and engineering and some of the other organizations.

TR at 935-936.

Mr. Rogers stated that all of the ratings of employees for the RIF were redone at the request of Ms. Tuttle, who was concerned about the criteria that was used:

> I believe we had used the rating originally from our salary, planning and rewarding for performance program that we have as kind of a bonus program. And she was concerned that that rating, the criteria used for the rating in those programs is slightly different than the rating criteria used for retention.

TR at 937. He stated that she also wanted a more standardized and formal process of employee rating. TR at 939.

10. Tanya Zorn, BNI Human Resources Representative in Engineering Department

Ms. Zorn testified that from January to July 2005, she worked as a human resources representative in the WTP's engineering staffing office, and was involved with moving and transferring employees and with workforce planning. TR at 945-947.

She testified that the complainant was hired as a "long term" employee, which meant that his position was expected to last more than twelve months. TR at 949-950. She stated that he also was an "at will" employee and could be terminated by BNI at any time for any reason. TR at 952-953. She stated that all WTP employees had assignment complete dates, and that these dates were based on the expected scope of work and changed frequently on the basis of project and staffing assessments. TR at 953-954. She stated that dates could be moved up for de-staffing purposes, and that normal de-staffing plans were reviewed by Ms. McKenney in HR for outstanding employee concerns. TR at 954-957. She stated that when employees are notified that they will soon reach their assignment complete date,

> it meant that the assignment at WTP was over. It did not necessarily mean that their career or their appointment with Bechtel was over. If the employee had notified us that he or she was mobile and could relocate to other projects and there were positions available on other projects, and they were selected, they could transfer to other Bechtel assignments.

TR at 958-959. She stated that she sent a list of five engineers that included the complainant with "assignment complete dates" of May 5, 2005 to Ms. McKenney in HR in late March 2005. TR at 955-960. Complainant's Exhibit 48. She stated that prior to March 29, 2005, the complainant's assignment complete date had been September 7, 2006. TR at 968. Ms. Zorn then testified that the May 5, 2005 assignment complete dates were never implemented with respect to any of the engineers:

> Just after I submitted this March 29th list there was some indication from our senior management that we would have to reduce our staff by a certain percentage. And so everything sort of got put on hold at that time to not give notifications until we can figure out what was going on. We knew we were going to have to reduce our staff by a bogey of 20 or 30 percent, if you will. And so engineering decided that rather than give notice of the assignment complete we would wait until we knew how deep our cut had to be to be funding compliant for the year. And we would roll the assignments complete into that larger reduction in force number. Eventually what happened was, rather than giving notification to these folks to go out and have their assignments completed on

> May 5th, their assignments were essentially extended out approximately two, almost three months.

TR at 968-969. She stated that the complainant's assignment complete was officially changed to June 16, 2005 on a project staffing assistant form dated April 12, 2005. TR at 973, BNI Exhibit 117. She stated that both the March 29, 2005 assignment complete date changes and the April 21, 2005 RIF selections relied on the salary planning rankings of employees within their peer groups that were completed in the February to March time frame. TR at 983-984. She stated that the complainant's ranking of 18 out of 24 employees in his peer group in the April 21 RIF selection reflected his B minus rating in the February/March 2005 salary ratings:

> In other words, [the complainant's rating] was equivalent to whatever the score was once everybody got considered, once Mr. Anderson' group got rolled into the bigger group and they came up with the master scores, if you will, that was what was used.

TR at 984-985.

Ms. Zorn testified that the positions filled by the lowest ranked employees were ended first under the Assignment Complete process because higher ranked employees had bumping rights over lower ranked employees.

> If there was a higher-rated individual holding a position that ended sooner than a lower-rated individual then the higher-rated individual would bump that person (the lower rated individual), and his or her employment would be extended for the position and end date and the lower-rated individual would either [be transferred to another BNI position] or their employment would end.

TR at 983.

Ms. Zorn testified that when the engineering group leaders and supervisors selected employees for the April 21 RIF notice, they relied on the employee ratings that already were established for the February/March salary ratings. She stated that "we didn't adjust ratings for the RIF." TR at 1002.

11. Kathy Ann Tuttle, Manager of Human Resources at WTP

Ms. Tuttle testified that she is an HR manager at the WTP working for Mr. Rogers, and that she never met the complainant during his employment at the WTP. TR at 1014-1016. She stated that on or about April 1, 2005, the decision was made to lay off employees through a RIF. TR at 1016. She stated that the goal was to reduce the workforce by 500 people in 90 days, with a 60-day notice to the affected employees. TR at 1018-1019.

She stated that initially supervisors were told where to get employee ratings and instructed to prepare their lists of employees for the RIF. TR at 1020. She testified that the supervisors

> **were to determine the scope of work that they were going to be able to do within the funding restrictions and the bogeys, the targets, that they were given. And then based on that scope of work, to make a determination of how many FTEs, full-time equivalents, they were going to need and what type of skill sets, define the skill sets for the positions for each discipline that they were staffing. And that they were to use the ratings from . . their salary planning ratings for the people in Grades 24 and below. And those had been done, I believe [in the] February and March time frame.**
>
> **And then that they were to look at the scope and the people they had, the skill sets, the individuals, determine how many of those from each skill set they needed to place into the positions that they had to perform the scope. And then the ratings would determine a totem ranking and they were to place the people in the positions from the top and we would release from the bottom if there were too many people in certain skill sets that there weren't enough positions for the number of people that we had. And then they were to develop that list and give it to Human Resources to run an adverse impact analysis.**

TR at 1023-1024. She stated that the initial selection process for the RIF led to questions and allegations that older employees had been negatively impacted. TR at 1022. She stated that BNI determined to take a second look at the selection process and to use standardized business assessments in each department and individual employee rating (IER) worksheets that used "very objective criteria." TR at 1028, citing BNI exhibit 277. She

stated that once the supervisors had rated their employees in different categories on the IER worksheets, these categories were weighted using spreadsheet software and rankings for peer groups of employees throughout the WTP were developed. TR at 1028-1035. She stated that some of the employee evaluation categories rated by supervisors received a greater weight in this spreadsheet ranking than did other categories:

> [The supervisor's rating] doesn't tell you how a peer group is totem ranked on the ratings because you have to put [the rating] in the worksheet and then the sections [of the rating] have weights applied to them. The way the weights are applied is that it's a higher weighting for individual skills and qualifications and value of contributions. It says here it's a 50 percent weight for the skills whereas the teamwork and leadership section . . . is weighted at 20 percent and the current state performance is at 30 percent.

TR at 1033. Ms. Tuttle stated that if the ratings assigned to an employee by his supervisor were consistently low, "it is reasonable to believe that [the employee] would fall in the lower totem rating." TR at 1057. She testified that, as a result of the rating that the complainant received from his supervisor, and the weights assigned to the categories of that rating by the spreadsheet software, the complainant was totem ranked 16th in his peer group of 19 Grade 24, Engineer III employees. TR at 1065-1066. She stated that BNI determined the number of employees in the peer group who were needed for future work at the WTP, and they then released employees from the bottom of the list until that number was achieved. TR at 1066. She stated that in the complainant's peer group, the employees ranked 14 through 19 received RIF notices. TR at 1094. BNI Exhibit 279.

12. Thomas Stewart, WTP's Employee Concerns Officer

Mr. Stewart testified that in July 2005, the complainant filed an employee concerns complaint alleging that his inclusion in the April 21, 2005 RIF was a retaliation for protected disclosures. He stated that on July 19, 2005, he met with the complainant for a couple of hours to discuss his concerns, and at that time the complainant asked that he not be released under the RIF. TR at 1270-1271. He stated that after a three-month complaint investigation, WTP's Employee Concerns found no nexus between the complainant's disclosures of alleged safety concerns and any adverse actions taken by BNI. TR at 1277-1279, BNI Exhibit 230.

With respect to BNI's decision to move up the complainant's Assignment Complete date, Mr. Stewart testified that his investigation found that in early March 2005, the PWS group at the WTP received word from the WTP's project controls group that it needed to eliminate a number of employees. He stated that by March 9, 2005, the C&I division headed by Mr. Anderson completed ratings for their employees "which were flowed up . . . to their management." TR at 1282-1283. He testified that Ms. Zorn helped him to establish that

> on or before March 29, the [Estimated Assignment Complete] had been submitted to Human Resources indicating that [the complainant] and others had been slated for estimate of completion, I believe around [May] 5th.

TR at 1281.

He stated that there is no nexus between the complainant's alleged disclosures on April 1 and April 15, 2005 and his inclusion in the RIF because BNI management had already decided to terminate the complainant prior to his disclosures:

> I am aware [that] in March [2005], prior to his management having any awareness of alleged . . . protected disclosures, they had made a decision that Mr. Hall and other co-workers were to be released. As we look at the subsequent re-rating and rankings that were done, at least two of them, Mr. Hall stayed essentially [in] the same position, even though there were deeper and deeper cuts being made into all of the organization.

TR at 1294.

> What I was told by my staff and Human Resources that the ratings and rankings stayed consistent throughout the process in regards to Mr. Hall's positioning. Therefore, I had no reason to assume anything negative had happened, he stayed about the same.

TR at 1301. Mr. Stewart stated that if the complainant had received a good rating in March 2005 and then his ratings had declined subsequent to his protected April 1, 2005 protected disclosure, "that would be an instant red flag to me." TR at 1309.

Mr. Stewart stated that he could not recall having reviewed Mr. Billings July 2005 rating of the complainant. TR at 1299.

IV. Legal Standards Governing This Case

A. The Complainant's Burden

Once it is determined that the complainant has met the procedural requirements for submitting a Part 708 complaint, he must then establish by sufficient evidence that relief is warranted. Specifically, it is the burden of the complainant under Part 708 to establish

> by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both the complainant and by BNI. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

B. The Contractor's Burden

If I find that the complainant has met his threshold burden, the burden of proof shifts to the contractor. BNI must prove by "clear and convincing" evidence that it would have taken the same personnel actions regarding the complainant absent the protected disclosures. "Clear and convincing" evidence is a more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus if the complainant has established that it is more likely than not that he

made protected disclosures that were a contributing factor to an adverse personnel action taken by BNI, the contractor must convince me that it clearly would have taken this adverse action had the complainant never made this protected disclosure.

V. Analysis

A. The Complainant Made Protected Disclosures

As noted above, in order for the information that the complainant disclosed to his group leader, his supervisor and others on April 1, 2005 to constitute a protected disclosure under Part 708, the complainant must reasonably believe that the information reveals one of the following:

> (1) A substantial violation of a law, rule, or regulation;
>
> (2) A substantial and specific danger to employees or to public health or safety; or
>
> (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority . . .

10 C.F.R. § 708.5(a)(l), (2) and (3). Throughout this proceeding, the complainant has contended that the disclosures he made to BNI officials concerning problems involving the future control system for the WTP were protected because they revealed a substantial and specific danger to employees or to public health or safety under 10 C.F.R. § 708.5(a)(2). Specifically, he asserted that the ABB control system software did not communicate or interact reliably with field measuring devices or with the operating programs in computer monitors. He stated that this assessment was based on his experience (1) in testing FF devices for use on the ABB system, (2) his own experiences and reports he received concerning frozen computer screens and computer system lock-ups involving the ABB system, (3) his knowledge that the ABB system was a new and largely untested technology, and (4) his personal research indicating that the ABB system was not well regarded by people working with control systems. As discussed below, my review of the testimony and other evidence in the record of this proceeding leads me to conclude that the complainant made disclosures to BNI officials on April 1 and April 15, 2005 that were based on his reasonable belief that there were serious problems with the interoperability of the ABB control system selected for use at the WTP with other digital programs, and

that these disclosures presented "a substantial and specific danger to employees or to public health and safety" protected under Part 708.

1. The Complainant Made Disclosures on April 1 and April 15, 2005 Concerning the ABB Control System

The complainant testified that on the morning of April 1, 2005, he stated to his group leader, Mr. Billings, that he thought that the ABB system's software had problems communicating with the Foxboro pressure transmitter. Later, at a staff meeting, he explained to Mr. Billings and several BNI engineers that the Foxboro pressure transmitter communicated effectively on two other control systems, and therefore he believed that the ABB system appeared to cause the communication problem. He stated that he then passed out copies of a survey from a trade magazine for control systems that rated the ABB last out of five systems being assessed. In his testimony at the Hearing, Mr. Billings essentially confirmed that the complainant made these statements. TR at 304-306.

At a meeting with his supervisor, Mr. Douglass and Mr. Billings later that morning, the complainant stated that he repeated his observations that he had made earlier about ABB system communication problems with the Foxboro transmitter and also stated his concern that the ABB system was causing computer lockups. He stated that these problems were safety issues. TR at 165-166. These statements by the complainant were confirmed by the testimony of Mr. Billings (TR at 311) and Mr. Douglass (*see* TR at 508). The complainant testified that on April 15, 2005, Mr. Douglass arranged a meeting attended by the complainant, Mr. Douglass and Mr. Anderson, the Discipline Engineering Manager for the WTP, at which the complainant repeated his concerns regarding the computer lockups and communication problems. Mr. Douglass and Mr. Anderson confirmed that they met with the complainant on that date to hear his concerns about the reliability of the WTP's future control system.

Based on this testimony, I conclude that the complainant reported his concerns about computer lockups and FF measuring device communication problems to his group leader and his supervisor on April 1, 2005 and to his supervisor and another BNI official on April 15, 2005. The complainant also stated his belief at these meetings that the ABB control system was the cause of these problems, and further that the ABB control system was unsafe and unreliable to be utilized in the WTP.

2. The Complainant Had a Reasonable Belief that the Interaction of the Control System Components with ABB System Software Was Not Sufficiently Reliable

Based on the testimony and evidence at the Hearing, I find that the individual reasonably believed that his April 1 and April 15, 2005 disclosures raised significant reliability issues related to plant safety. The complainant has a BS in electrical engineering and has worked a total of seven contract assignments at NRC-licensed powerplants as an instrument technician and a compliance engineer. This education and work experience has provided him with a basic understanding of the workings of control systems and how they communicate with measuring devices.

The complainant testified that on February 22, 2005, the ABB system software locked up on his computer. TR at 94, 95 and 98. He stated that in March 2005, Mr. Aldridge, another PWS engineer, reported to him that a server running the ABB system software had locked up on him. TR at 101, 125. The testimony of Mr. Thomas, the ABB representative, indicates that Mr. Aldridge's computer problem may have been the result of hardware or operating software problems on a Dell laptop computer.10/ Nevertheless, I believe that the complainant experienced at least one problem and heard of at least one other similar problem. The complainant convinced me that he believed that if the ABB system displayed a frozen screen while monitoring control functions, the operators might not immediately recognize an emergency situation such as a failure in the cooling system that could lead to a serious outcome. TR at 104.

The complainant testified that he also had a concern about the ability of FF measuring devices to communicate reliably with ABB system software. Specifically, he stated that after he encountered a communication problem when testing the Foxboro pressure transmitter on the ABB system, he contacted Foxboro to see if they could identify a problem with the transmitter. When Foxboro sent him a second pressure transmitter that it had pretested on two different control systems, and this second pressure transmitter also failed to consistently communicate with the ABB system, the complainant concluded that the transmitter was functioning properly and therefore he reached the conclusion that the ABB system was

---

10/ The only evidence on this issue appears to be an unsigned statement attributed to Mr. Aldridge and Mr. Thomas' recollection of his April 2005 conversation with Mr. Aldridge. TR at 414, BNI Exhibit 201.

causing the communication problem. TR at 139. He also testified that he was told by co-workers that, prior to his being hired in 2005, PWS engineers had experienced trouble importing data from other measuring devices into the ABB system, including a Foxboro temperature transmitter, and a valve control device made by another manufacturer. TR at 142. Accordingly, when the complainant discussed his concerns with his group leader and supervisor on April 1 and April 15, 2005, I find that he reasonably believed that the ABB control system software was unable to consistently communicate with the Foxboro pressure transmitter and other devices.

At the Hearing, Mr. Billings testified that subsequent research by Foxboro and ABB revealed that the Foxboro pressure transmitter had a problem that caused it to stop communicating with the ABB system. TR at 317-320. The problem in the Foxboro pressure transmitter was not identified until early June 2005, and does not in my opinion serve to refute that the complainant reasonably believed in April 2005 that there was a serious communication problem involving the ABB system software. Indeed, the June 2, 2005 letter from Foxboro to BNI makes clear that the ABB control system's characteristic of constantly reading all parameters of measuring devices requires an operable secondary buffer in the Foxboro pressure transmitter to prevent a malfunction. In its letter, Foxboro noted that

> Generally, other control systems do not operate in this manner because this approach is perceived as an unnecessary risk to system performance.

BNI Exhibit 65. Foxboro also pointed out to BNI that such a secondary buffer on its pressure transmitter is an "implementation detail" not required by the FF specifications for such devices, and not tested by the Foundation. *Id*. It appears from this letter that the complainant was reasonable in his conclusion that the ABB system raised unique challenges for communication with measuring devices designed to meet the uniform communication standards of the Fieldbus Foundation.11/

11/ Even if BNI is correct that the communication problem was caused by the Foxboro pressure transmitter, the individual's repeated disclosures concerning that communication problem [the complainant's initial March 2005 disclosure to Mr. Billings (TR at 298), the complainant's March 31, 2005 email to Mr. Billings (TR at 139), the complainant's April 1

(continued...)

Finally, the complainant testified that he believed that the trade magazine's random poll that rated the ABB system last out of five control systems provided additional evidence that other professionals in the field appeared to be having problems with the ABB system and that the ABB system could be the source of the Foxboro transmitter communication problem. TR at 153.

Based on the testimony and evidence in the record, I find that the information known by the complainant in April 2005 was sufficient to provide him with a reasonable belief that the ABB system was the source of computer lock ups and that there were measuring device communication problems that raised concerns about the reliability of the control system being designed to control processes at the WTP.

3. The Complainant's April 2005 Disclosures Revealed A Substantial and Specific Danger to Employees or to Public Health or Safety

The complainant has shown that he reasonably believed that there were flaws in the plant operating system that caused computer screen lock ups and the system had problems communicating with measuring devices. He testified that once the WTP began operations, these problems with the ABB control system could result in emergency situations. TR at 104. However, BNI argues that none of the disclosures made by the complainant reveal a substantial and specific danger to the safety of WTP employees or the public. It first contends that no substantial or specific danger can exist because at the time the complainant made his disclosures, ABB system was in a testing and design mode in the laboratory environment and did not control or monitor any operations involving hazardous materials. BNI Reply Brief at 2.

It further argues that any dangers posed by flaws in the WTP's control system are completely mitigated by the redundancies that will be built into the system, and by a separate safety system that will monitor functions at the WTP.

I find that BNI's arguments are without merit. I reject the position that Part 708 does not protect whistleblowers who identify a danger to public health and safety that is substantial and

---

11/ (...continued)
and April 15, 2005 meetings with Mr. Billings and Mr. Douglass] might still qualify as protected Part 708 disclosures.

specific, and that is likely to occur at some point in the future. A danger, by definition, generally involves an element of future possibility and risk.12/ Moreover, the regulatory language does not state that the danger must be "imminent" or "immediate" as a means of restricting this aspect of the term's meaning. In the present case, the ABB system had been selected as the control system for the WTP, which was under construction. At the time that the individual made his April 2005 disclosures, he stated that he believed that the WTP was scheduled to be completed and operational by 2008. TR at 1250. Other testimony indicates that sometime in 2005, the completion date was extended to 2012.13/ Regardless of whether the scheduled operation date for the WTP was 2008 or 2012 at the time that the individual made his disclosures, I find that the design and the procedures for the future operation of the WTP were sufficiently established in 2005 to enable the individual to identify a substantial and specific danger relating to the future operation of the WTP.

BNI also argues that the there is no significant risk that any malfunction in the ABB system would lead to an emergency involving harm to employees or to the public. As an initial matter, I find that witness testimony at the Hearing did not establish BNI's contention that the ABB system controls no plant functions but only monitors "non-safety related instruments and equipment." BNI Reply Brief at 7. No testimony contradicts the complainant's assertion that the ABB control system will be used to maintain as well as to monitor process variables such as pressure, temperature level, flow, and radiation for the vitrification processes that will take place at the WTP. TR at 88-89. In addition, Mr. Spicer testified that the ABB system is being tested to perform robotic processes

---

12/ "DANGER, the general term, implies the contingent evil (troubled by the *danger* that the manuscript will be lost - Carl Van Doren)(realizing that the buffalo in the United States were in *danger* of becoming extinct - Amer. Guide Series: N.H.)(the *dangers* of travel by air) (the *danger* of lowering one's standards) PERIL implies more strongly the imminence and fearfulness of the danger (the ship was in deadly peril of seizure by mutineers - C.C.Cutler)" *Webster's Third International Dictionary, Unabridged*, G&C Merriam Company, 1964 at 573.

13/ The testimony of Mr. Billings indicates "sometime in 2005" the start-up date for the WTP was "pushed out" until at least the "the 2012 time frame." TR at 259.

that will be used at the WTP. TR at 239-240. Finally, Mr. Thomas stated that the ABB system would be responsible for the mechanical handling of container and canister movement control and monitoring at the WTP. He stated that these containers and canisters would contain samples of radioactive materials "at different points within the process." TR at 424-425.

Nor do I agree with BNI's position that design redundancy and a separate safety system eliminate any significant risk caused by a malfunction of the ABB system. As summarized above, Mr. Douglass, Mr. Thomas, Ms. Talmadge and others testified that even if concerns raised by the individual were correct and the use of the ABB system as an operating WTP produced a computer screen lock-up or a failure to communicate with measuring devices, there would be no significant danger to employees or the public. They testified that the WTP's PPJ/Tricon safety control system will operate independently from the ABB system, and is designed to detect and respond to emergency situations when the WTP is in operation. They also indicated that the use of multiple computer consoles in the ABB system's control room will insure that any lock-up of a single computer screen will be promptly detected and will not jeopardize the operation of the system.

I find that it was reasonable for the individual to believe when he made his disclosures in April 2005 that the flaws that he identified in the ABB control system would have the potential to create a situation that plant operators and the contingencies designed into the PPJ/Tricon safety system might not be able to control in time to prevent injury to employees or a significant public health problem. In particular, I find that it was reasonable for the individual to believe that his concern that the ABB system could fail to reliably communicate with measuring devices that provide it with data on the temperature and pressure levels created by waste processing functions presented a substantial danger to employees and the public.

In light of the evidence discussed above, I reject BNI's argument that the complainant could not have reasonably believed that problems he identified with the WTP's ABB control system created a substantial and specific danger to employees or to public health and safety. In fact, the individual disclosed significant information when he reported specific problems in the ABB system relating to computer screen lock-ups and to communication problems with FF measuring devices. I find that the evidence in this proceeding indicates that the complainant reasonably believed that his April 1 and April 15, 2005 disclosures revealed a substantial

and specific danger both to WTP employees and to the general public's health and safety, and therefore constitute the type of disclosures that are protected under Part 708.

B. The Complainant's Protected Disclosures Were a Contributing Factor to the Alleged Act of Retaliation

Under 10 C.F.R. § 708.29, the complainant must also show that his protected disclosures were a *contributing factor* with respect to a particular adverse personnel action taken against him. *See Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 (1994).14/ A protected disclosure may be a contributing factor to an adverse personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990). *See also Russell P. Marler, Sr.*, 27 DOE ¶ 87,506 at 89,056 (1998).

I conclude that the complainant has established by a preponderance of the evidence that his protected disclosures were contributing factors to the retaliation he alleges. I base this conclusion on a finding that there are both knowledge and proximity in time between the protected disclosures made by the complainant and his allegations of retaliation.

With respect to knowledge of the disclosures, the complainant made his disclosures to his group leader and his supervisor on April 1, 2005 and to his supervisor and BNI's Discipline Engineering Manager on April 15, 2005. The complainant's supervisor stated that he immediately conveyed these concerns to other BNI officials, including Ms. McKenney and Mr. Stewart.

14/ A contributing factor is "any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision." *Luis P. Silva*, 27 DOE ¶ 87,550 at 89,263 (2000), *citing* 135 Cong. Rec. H747 (daily ed. March 21, 1989)(Explanatory Statement on Senate Amendment-S.20); *see also Stephanie A. Ashburn*, 27 DOE ¶ 87,554 (2000), *Marano v. Department of Justice*, 2 F.3d 1137 (Fed. Cir. 1993)(applying the "contributing factor" test in a case under the Whistleblower Protection Act, 5 U.S.C. § 1201).

With regard to timing, the disclosures took place in early and mid-April 2005, and the alleged retaliation taken against the complainant, *i.e.* determining to include him in a July 28, 2005 RIF, took place in early July 2005.15/ A reasonable person could conclude that the protected disclosures were a factor in BNI's decision to RIF the individual because the RIF selection process began shortly after the disclosures were made and lasted only about three months. The disclosures were thus a contributing factor to the alleged retaliation. *See Jagdish C. Laul*, 28 DOE ¶ 87,006 at 89,050 (2000), *aff'd.* 28 DOE ¶ 87,011 at 89,086 (2001) (protected activity found to be contributing factor when it occurred proximate in time to a retaliation).

With respect to the alleged retaliation, I find that the complainant has shown by a preponderance of the evidence that his July 28, 2005 termination from employment is an adverse personnel action and meets the criteria for a Part 708 retaliation. I now will determine whether BNI has shown, by clear and convincing evidence, that it would have taken the same action to dismiss the complainant in the absence of the protected disclosures.

C. BNI has not Shown by Clear and Convincing Evidence that it would have dismissed the Complainant in the Absence of his Protected Disclosures

I find that BNI has established that the site-wide RIF that it conducted in 2005 was necessitated by a reduction in federal funding for the construction of the WTP and the need to adjust the design of the plant. Testimony of Mr. Rogers, TR at 931-935. It also has shown that the RIF reduced the workforce at the WTP site by about 500 people. Testimony of Ms. Cathy Tuttle, TR at 1018.16/ I therefore conclude that the purpose and scope of the RIF were legitimate. Accordingly, the issue that I will examine is whether BNI has shown by clear and convincing evidence that if would have RIFed the complainant absent the protected disclosures.

15/ As discussed below, I find that BNI has failed to show that a final decision to terminate the complainant was made before July 2005.

16/ BNI's Initial Brief that the complainant was "one of thousands at the Hanford site that was terminated in connection with the RIF" [Initial Brief at 13] therefore appears to refer to RIF selections at the entire Hanford site, not just at the WTP construction project.

1. BNI's Contentions Regarding Its Termination of the Complainant's Employment

BNI argues that the testimony of Ms. Zorn indicates that February 2005 salary planning ratings for the complainant's peer group were "an important consideration" for the assignment complete process. BNI Closing Argument at 22. BNI states that no later than March 29, 2005, the complainant and four other members of his peer group were "identified for termination" and their assignment complete dates were moved up to May 5, 2005. It contends that

> **because of a change in project priorities resulting from funding and seismic issues, the determination was made that Hall's skill set was no longer needed on the project and his end date was moved up to May 5, 2005 by March 29, 2005.**

Id. **17/ BNI then states that once it was determined that BNI would be required to engage in a large site-wide RIF at the WTP, all of the engineers on the Assignment Complete list were reviewed in connection with the RIF:**

> **BNI ceased the Assignment Complete process entirely and simply concentrated on the reduction in force procedure to accomplish the necessary destaffing requirements.**

BNI Closing Argument at 23. It states that the complainant and the four other employees on the Assignment Complete list "were ultimately identified for termination in connection with the RIF." ***Id.*** **BNI states that in early to mid-April 2005, Mr. Douglass, Mr. Billings and Mr. Meinert met to discuss the employees that they supervised and to identify the five employees to be slated for termination in the RIF. BNI states that**

17/ **In its July 31, 2006 Initial Brief in this proceeding, BNI asserted that BNI made its determination to select the complainant for a RIF "at the latest, on March 9, 2005." Initial Brief at 20.** ***See also*** **BNI's August 21, 2006 Reply Brief at 5 ("Hall's fate, as well as the fate of many other BNI employees, was sealed by early March 2005). I will treat the assertions made by BNI at the Hearing and in its closing argument as an alteration and clarification of its previous position.**

> The three supervisors wrote the names of the employees who were potential candidates for termination in connection with the reduction in force on a white board and discussed each employee. [BNI Exhibit 173]. The focus of the meeting, according to Billings, was to identify the employees who were contributing the least to the group, to find the weakest performers - those whose skills could be replaced in the future if necessary. *Id.* Billings explained that Hall's name was one of several that was discussed in connection with the reduction in force. *Id.* All were of the opinion that Hall was one of the weakest members of the group. Hall had not demonstrated strong computer skills, a strong understanding of control systems, leadership, or objectivity, making it difficult for his supervisors to assign him work. *Id.* Furthermore, his supervisors had observed his great difficulty in getting along with other members of the group. *Id.* The three supervisors agreed that Hall was one of the individuals to be slated for termination in connection with the reduction in force. *Id.*

BNI Closing Argument at 24. BNI states that as a result of this process, the complainant and the four other employees previously identified for the Assignment Complete termination were identified for the RIF termination. BNI asserts that when the April 2005 RIF determinations were reevaluated in June 2005, all employees at the WTP were reevaluated using a more objective tool - the WTP Individual Employee Rating Worksheet. *Id.*

> In the reevaluation, all employees at the WTP were re-rated and ranked against their peer groups. Their direct supervisors were responsible for filling out the worksheet and evaluating the employee in three areas - current/sustained performance; teamwork/leadership; and skills, qualifications, and value of performance. [BNI Exhibit 146]. In Hall's case, Billings completed his evaluation, but Douglass, as his manager, signed the worksheet. *Id.*

BNI states that after the managers rated the employees using this worksheet, the worksheets were forwarded to Human Resources where the scores were entered into a spreadsheet tool that weighted the scores. BNI contends that the use of this tool means that

> a supervisor cannot manipulate an employee's rating because he or she cannot know what effect the weighting will have on specific areas of the rating.

BNI Closing Argument at 25. BNI states that after this weighting was applied to the complainant's peer group of engineers, the complainant and the four other engineers identified for termination through Assignment Complete and the April 2005 RIF determination were once again identified for termination. *Id.*

BNI concludes that the testimony at the Hearing established that the complainant was a difficult employee who refused to take direction, was not a team player, was single-handedly eroding group morale, and that he had minimal skills for his position and especially poor computer skills. *Id.* at 26. For the reasons presented below, I find that BNI's assertions fail to establish by clear and convincing evidence that, in the absence of his protected disclosures, the complainant would have been included in the July 28, 2005 RIF based on workplace conflicts, poor performance or because he lacked necessary job skills.

2. BNI Has Not Shown that the Complainant's Workplace Conflict with Mr. Gadish Would Have Resulted in his Termination

The record indicates that on March 24, 2005, BNI officials convened a meeting to address the complaints made by Mr. Gadish concerning the complainant's behavior in the workplace. The meeting was convened by Employee Relations specialist McKenney and also was attended by Mr. Douglass, Mr. Luper and Mr. Billings. In his testimony, Mr. Billings stated that in addition to the complaint from Mr. Gadish, he also had been told by PWS supervising engineer Meinert that the hostile environment created by this conflict was affecting his team, and by ABB system representative, David Thomas, that the complainant was not taking instruction well and causing people in the laboratory environment "to sort of avoid being in there with him...." TR at 290-291. He stated that Ms. McKenney told them that they needed to closely monitor the situation and clearly lay out expectations whenever the complainant was asked to do something. He stated that Ms. McKenney said that she would start a file associated with the concerns. TR at 291-292.

While the complaints and concerns discussed at this meeting indicate that the complainant's supervisors had developed a negative view of his social skills and to some extent his workplace performance, they do not provide substantial support for finding

that the complainant would have been terminated on the basis of the concerns relating to his conflict with Mr. Gadish. Mr. Billings testified that firing the complainant was viewed as only a potential outcome by the attendees at the meeting, not the objective of the meeting. TR at 286. Ms. McKenney reviewed her notes of the meeting and testified that no one at the meeting stated that the complainant should be fired. She stated that they accepted her recommendation to deliver a formal verbal warning to the complainant regarding his behavior. TR at 850-856. Mr. Douglass testified that this verbal warning could if necessary be followed by a written warning and possible termination, but he stated that a course of action involving termination was not finalized at this March 2005 meeting. TR at 498-504.

This testimony indicates that the complainant would not have been terminated for the behavior that he exhibited to Mr. Gadish prior to this March 24, 2005 meeting, but that his supervisors agreed to warn the complainant about his behavior and to clearly set out their expectations for his future interactions with co-workers. Nor has BNI established that the type of behavior exhibited by the complainant in his conflict with Mr. Gadish generally resulted in the termination of an employee at the WTP. Accordingly, I find that BNI has not shown that the complainant's workplace conflict with Mr. Gadish would have resulted in his termination.

3. BNI Has Not Shown that It's February/March 2005 Ranking of the Complainant would have resulted in his Termination of Employment

BNI's basic argument is that the complainant and the same four co-workers were selected for lay off on three occasions in 2005, once through the Assignment Complete process and twice through the RIF process. It contends that these circumstances convincingly establish that in each instance, he and his coworkers were selected for lay off for legitimate business purposes. As discussed below, I do not believe that the evidence presented by BNI adequately substantiates this conclusion.

a. BNI Has Not Shown that its February 2005 Salary Ranking of the Complainant at the B-minus Level Reflected his Job Skills or Performance

At the Hearing, Mr. Douglass testified that because the complainant was recently hired, he did not attempt to evaluate his abilities and job skills for purposes of the February/early March 2005 reward for performance salary rankings. Rather, he stated that the

complainant and other new hires were inserted into the salary rankings "in the low Bs basically so that it doesn't help them or hinder them." TR at 530. Accordingly, there does not appear to have been an assessment by BNI officials of the complainant's job skills and job performance for purposes of this performance salary ranking.

BNI has established that it gave the complainant a B-minus rating and ranked him 18th out of 24 in his peer group during this February/March 2005 reward for performance rating process. An undated and untitled salary ranking document gives the complainant a B rating, a point rating of 6.7, and ranks him 12th out of 17 engineers. In a November 2005 e-mail, Mr. Douglass identified this document as the "peer rating" done on February 24, 2005. Complainant Ex. 13. At the Hearing, Mr. Anderson identified the document as his division's input into the plant-wide salary ranking process. TR at 745. Another undated document, entitled "2005 Salary Planning Program, Bechtel Systems Infrastructure, Inc.", lists the complainant with a B-minus rating and a point rating of 6. BNI Ex. 276. The peer ranking assigned to the complainant was 18 out of 24, and appears on the Assignment Complete list established by Mr. Anderson in late March 2005. The explanation provided by Mr. Anderson and Ms. Zorn for these changes is that such a reduction in grades and scores can occur when engineers from one division are rolled into a plant-wide peer group. Based on this evidence, I find that BNI has demonstrated that it gave the individual a B-minus rating and a peer group ranking of 18 out of 24 prior to his first protected disclosures on April 1, 2005. However, it has not shown that this rating and peer ranking was in any way related to his actual performance as an employee at the WTP.

b. BNI Has Not Shown that the Complainant's Selection for Termination by Assignment Complete was based on an Assessment of his Performance or Job Skills

With respect to the Assignment Complete process, BNI claims that the complainant was included in the group of engineers selected for Assignment Complete on March 29, 2005 on the basis of its February/early March 2005 reward for performance employee ranking and solely for legitimate business purposes. There is considerable testimony in the record supporting this position. Mr. Stewart testified that in March 2005 the WTP's project controls group had assessed its staffing needs and informed the C&I group headed by Mr. Anderson that it needed to reduce its staff by several

employees. TR at 1281. The testimony of Mr. Anderson indicates that he made the final decision in late March 2005 to terminate five C&I engineering positions by moving their assignment complete dates to May 5, 2005.18/ He stated that he informed Ms. Zorn, who on March 29, 2005 began the termination process by sending a memorandum to Linda McKenney in Human Resources. Complainant's Exhibit 84.

The testimony of Ms. Zorn indicates that the selection of employees for termination by Assignment Complete were made based primarily on the most recent employee rankings. She stated that the March 29, 2005 assignment complete selections relied on the reward for performance employee ranking of engineering employees by peer groups that was completed in the February to early March time frame. TR at 983-984. She also testified that because higher ranked employees in positions scheduled for an early termination date had the right to bump lower ranked employees, the employee whose positions were selected for Assignment Complete had to be the lowest ranked employees.

Documentary evidence also supports Ms. Zorn's testimony. Attached to her March 29, 2005 memorandum was a document entitled "Engineering Sort by Discipline, Grade, Performance." This document shows that although the complainant is ranked 18 out of 24 in his peer group, two of the peer group members who are ranked below him are not engineers. The employee ranked 19th is a technologist and the employee ranked 20th is a senior designer.

18/ Despite Mr. Anderson's testimony in this regard, other evidence indicates that changing an employee's Assignment Complete date generally is not an action which leads to termination. Mr. Anderson's own memorandum of November 2005 states that an employee's Assignment Complete date "is probably not a good indication that we wanted to terminate someone, only that we expected that some work would be completed in the near future." BNI Exhibit 44. Similarly, Ms. Zorn testified that Assignment Complete dates change frequently on the basis of project and staffing assessments, and that "[i]t did not mean that their career or their appointment with Bechtel was over" and possibly "they could transfer to other Bechtel assignments." TR at 953-954, 958-959. Thus, unlike the RIF initiated after the complainant's protected disclosures in April 2005, the record does not establish that the Assignment Complete process necessarily would have resulted in the complainant being terminated.

Complainant's Exhibit 84. Accordingly, the complainant ranking of 18 out of 24 in this peer group made him one of the five lowest ranking engineers and resulted in his selection for Assignment Complete.

Based on this testimony and evidence, I find that the complainant's selection for termination through the Assignment Complete process in late March 2005 relied on his ranking in the February/early March reward for performance employee rating. As discussed above, the complainant's actual performance and job skills were not assessed when he was inserted into the reward for performance ranking as a recently hired employee at the lower B level. Accordingly, BNI has not shown that the complainant was selected for termination by Assignment Complete based on his performance, or that his job performance would have placed him in the bottom third of employees in his peer group. The complainant appears to have been included in a staff reduction of engineering positions based on an arbitrary rating assigned to him as a new employee.

c. BNI Has Not Shown that It Would Have Terminated the Complainant by Assignment Complete

Finally, I find no merit in the assertion that because the complainant was selected for termination by Assignment Complete, BNI has established that it would have terminated him in the absence of his protected disclosures. The testimony of Mr. Anderson and Ms. Zorn indicates that the Assignment Complete process for the complainant and the other engineers scheduled for termination was halted shortly after Ms. Zorn sent her March 29, 2005 memorandum to Human Resources. The official assignment complete dates for the affected employees never were changed to May 5, 2005. Mr. Anderson stated that he made a decision to make all of the staff reductions required for his division at the WTP through the RIF process. Accordingly, I will examine whether BNI has established by clear and convincing evidence that it would have included the individual in its July 28, 2005 RIF in the absence of his protected disclosures.

4. Hearing Testimony Indicates that BNI Officials Considered the Complainant's Protected Disclosures in Selecting Him for the July 2005 RIF

Ms. Zorn testified that with respect to the selection process that resulted in the April 21, 2005 RIF notifications, BNI officials relied on the same February/March 2005 reward for performance

employee rankings that Mr. Anderson had used for his selecting C&I engineers for Termination by Assignment Complete. She stated that complainant's ranking of 18 out of 24 engineers in his peer group for the April 2005 RIF selection reflected his B minus rating in the February/March 2005 reward for performance ratings. TR at 978-1002. However, unlike the Assignment Complete process, the RIF selection process that occurred in April 2005 also involved evaluations of the complainant's performance and job skills by his supervising officials. Moreover, in early July 2005, the final selection for the RIF rejected use of the reward for performance rankings entirely and replaced them with a contemporaneous evaluation by employee supervisors. As discussed below, these April and July evaluations of the complainant's performance and job skills by his supervising officials appear to have been influenced by his protected disclosures.

The testimony of Mr. Douglass and Mr. Billings indicates that the complainant's supervisor and group leader discussed several aspects of the complainant's potential contribution to the WTP at their April meeting before selecting him for inclusion in the April 21, 2005 RIF notifications. BNI does not contest that this discussion took place. Mr. Douglass testified that the complainant was selected for the RIF at this April meeting because he was new on the project and was viewed as having no in-depth knowledge that would be difficult to lose, because the activities that he was working on were not activities that were critical at the time, and because of performance problems. TR at 532. The record of this proceeding does not provide strong support for Mr. Douglass' assertion that there was no anticipated need for the complainant's job skills and work activities. The complainant testified that after he was selected for the RIF, he was assigned to train another engineer who would remain at the PWS and continue to conduct FF testing. TR at 1235.

The April 2005 meeting involving the complainant's group leader and supervisor occurred very shortly after the complainant's April 1, 2005 disclosures to Mr. Douglass and Mr. Billings, which raises the likelihood that their assessments of the complainant may have been influenced by these disclosures. In fact, Mr. Billings testified that the complainant's position that the ABB system was the likely source of the communication problem between that system and the Foxboro transmitter was a significant consideration in selecting him for the RIF.

> Mr. Hall had demonstrated that he had some difficulties getting along with other members of the team and at that

> point he had also displayed what I guess I'd call a lack of engineering judgment in resolution of the Foxboro transmitter issue – those things combined together were limiting his ability to make useful contributions to the group going forward.

TR at 326.

The record in this proceeding indicates that the evaluation that led to the complainant's selection for the July 28, 2005 RIF was the IER Worksheet completed by Mr. Billings in early July 2005 and signed by Mr. Douglass on July 8, 2005. TR at 464, BNI Exhibit 146. At the Hearing, Mr. Billings confirmed that he rated the complainant using the worksheet and that his evaluation was

> sort of a confirmatory action, you know, with a structured worksheet to the - some of the discussions that we had had previously with Mr. Douglass.

TR at 327-328. The IER Worksheet completed by Mr. Billings awarded the complainant a total 66 out of a possible 145 points in the category of "Current/Sustained Performance"a total of 36 out of a possible 85 points in "Teamwork Leadership", and a total of 31 out of 70 in the category of "Skills, Qualifications & Values of Contributions". BNI Exhibit 146. Mr. Billings testified that he did not know how the rating he provided would be used by BNI Human Resources in selecting employees for RIF. TR at 328. However, he stated that he believed that employees with the lowest ratings were more likely to be selected for the RIF than employees with the highest ratings. TR at 465.

The IER Worksheet completed by Mr. Billings and signed by Mr. Douglass awarded the complainant less than half of the available points in all three of the categories for non-supervisory employees. In his closing argument, the complainant contends that he was rated the lowest of all engineers of his grade under the supervision of Mr. Douglass. Complainant's Closing Argument at 17. I have reviewed the other thirty eight IER Worksheets signed by Mr. Douglass (BNI Exhibit 142) and compared them to the IER Worksheet completed for the complainant. I find that the complainant received the very lowest rating of any of these employees, regardless of grade, in both the "Current/Sustained Performance" and the "Teamwork Leadership" categories, and that the complainant and one other employee received the lowest numerical rating in the "Skills, Qualifications & Values of Contributions" category. I conclude from this analysis that Mr. Billings gave the

complainant the lowest ratings of any of the employees that he graded on the IER Worksheet, and that these ratings also were the lowest numerical scores in these categories for all of the employees supervised by Mr. Douglass.

I reject BNI's assertion that a supervisor cannot manipulate an employees' rating because he or she cannot know what effect the subsequent weighting by HR will have on specific areas of the rating. Ms. Tuttle, the Manager of HR, testified that if the ratings assigned to an employee by his supervisor were consistently low, "it is reasonable to believe that [the employee] would fall in the lower totem rating." TR at 1057. She testified that, as a result of the ratings that the complainant received from his supervisor on his WTP IER Worksheet, and the weights assigned to the categories of that rating by the spreadsheet software, the complainant was totem ranked 16th in his peer group of 19 Grade 24, Engineer III employees. TR at 1065-1066. She stated that BNI determined the number of employees in the peer group who were needed for future work at the WTP, and they then released employees from the bottom of the list until that number was achieved. TR at 1066. She stated that in the complainant's peer group, the employees ranked 14 through 19 received RIF notices. TR at 1094. BNI Exhibit 279.

In light of this evidence, I conclude that BNI has not shown by clear and convincing evidence that it would have selected the complainant for the July 28, 2005 RIF in the absence of the protected disclosures that he made on April 1 and April 15, 2005. Mr. Billings' rating of the complainant placed him at the bottom of all three categories for non-supervisory employees on the IER Worksheet and gave him the very lowest ratings of any employees supervised by Mr. Douglass. These low ratings resulted in his final ranking of 16 in his 19 member plant-wide peer group, and his inclusion in the RIF. While Mr. Douglass, Mr. Billings and other BNI witnesses testified that the complainant exhibited some problems interacting with Mr. Gadish and may have lacked some computer skills, this evidence does not establish by clear and convincing evidence that the very low ratings that he was given by Mr. Billings and Mr. Douglass were accurate assessments of his performance, teamwork and skills.

In fact, the record indicates that Mr. Billings' opinion of the complainant's job performance was significantly influenced by the complainant's disclosures regarding the control system. Mr. Billings testified that his July 2005 rating of the complainant confirmed on a structured worksheet the assessment of the

complainant that took place at an early April 2005 meeting with Mr. Douglass. He stated that at that meeting the complainant's perceived lack of engineering judgment on the Foxboro transmitter issue was a significant factor in concluding that he should be selected for the RIF because his future contribution to the WTP would be limited. It therefore appears that the complainant's April 2005 disclosures regarding the ABB system significantly influenced Mr. Billings' and Mr. Douglass' decision to give the complainant ratings on his July 2005 IER worksheet that were the lowest of any given to Mr. Douglass' employees.

Finally, BNI has not shown that it evaluated the complainant at a consistently low level before and after his April 2005 protected disclosures. BNI asserts that the complainant and the same four engineers selected for termination by Assignment Complete in March 2005 also were selected for termination by RIF both in April 2005 and July 2005. However, I reject BNI's efforts to connect the complainant to this group of employees. Evidence in this proceeding establishes that the complainant, as a new employee, was arbitrarily inserted into the reward for performance employee ranking in February/early March 2005 and that this ranking served as the basis for the termination by Assignment Complete selections and the April 2005 RIF selections. There is no evidence that the complainant's job performance was ever evaluated prior to his April 1, 2005 protected disclosures. The other four engineers selected for termination by Assignment Complete presumably received reward for performance rankings based on their performance and would understandably continue to be evaluated near bottom of their peer group during the RIF selection process. However, the complainant's connection with this group appears to be based solely on his arbitrarily assigned reward for performance ranking, and does not indicate that he was consistently evaluated as a below average employee from February through July 2005.

I conclude that BNI has not shown that its highly negative assessment of the complainant would have occurred in the absence of his protected disclosures. The rating given to the complainant on the July 2005 IER Worksheet was the lowest rating signed by Mr. Douglass and resulted in the complainant being rated 16 out of 19 in his peer group, with employees rated 14 through 19 receiving RIF notices. (Testimony of Ms. Tuttle, TR at 1094, BNI Exhibit 279). I an not convinced that if the complainant had not antagonized his group leader and supervisor with his concerns about the operational problems with the control system, that he would have received this low rating and would have been selected for the RIF.

Under the standards of proof set forth in Part 708, I conclude that BNI has not demonstrated by clear and convincing evidence that the decision to select the complainant for its July 28, 2005 RIF would have occurred in the absence of the Complainant's April 2005 protected disclosures.

D. The Complainant is entitled to Relief under Part 708

I therefore will provide relief to the complainant for this retaliation. I will direct BNI to reinstate the complainant to a position at the WTP that is comparable to the one from which he was laid off. I further direct BNI to provide the complainant with the lost wages and other compensation that resulted from his being selected for the July 2005 RIF, and to reimburse him for reasonable legal fees and other expenses related to his Part 708 complaint.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Mr. Curtis Hall under 10 C.F.R. Part 708 is hereby granted as set forth below, and denied in all other respects.

(2) Bechtel National, Inc. (BNI) immediately shall reinstate Mr. Hall into his former position of employment at the Waste Treatment Plant (WTP) being constructed at the DOE's Hanford Site in Richland, Washington. In the alternative, BNI may place Mr. Hall in a comparable position of employment at the WTP.

(3) Mr. Hall shall produce a report that provides information on his earnings since July 28, 2005 and his litigation expenses (reasonable legal fees and other expenses related to his Part 708 Complaint). Mr. Hall's report shall be calculated in accordance with the Appendix.

(4) BNI shall produce a report that calculates the lost wages plus interest payable to Mr. Hall. The BNI's report shall be calculated in accordance with the Appendix.

(5) The BNI shall pay Mr. Hall's litigation expenses. The amount of this payment shall be in accordance with the report specified in paragraph (3) above.

(6) The BNI shall pay Mr. Hall lost wages plus interest. The amount of this payment shall be in accordance with the report specified in paragraph (4) above.

(7) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting Mr. Hall relief unless, within 15 days of receiving this decision, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: David K. Isham

Date of Filing: June 19, 2007

Case Number: TBH-0046

David Isham filed a retaliation complaint (the Part 708 Complaint or the Complaint) under the Department of Energy (DOE) Contractor Employee Protection Program. 10 C.F.R. Part 708 (2007). As explained below, I have determined that the Complaint should be dismissed.

I. Background

A. The Complaint

Mr. Isham was employed by EG&G Technical Services (EG&G), a subcontractor of Bechtel BWXT Idaho, LLC (BWXT). Mr. Isham worked as a "Visual Examiner" on the Idaho Cleanup Project (ICP), where he inspected waste prior to its shipment to the Waste Isolation Pilot Project (WIPP) in New Mexico. A third firm, Washington True Solutions (WTS)/Central Characterization Project (CCP), characterized waste prior to shipment. A fourth firm, CH2M-WG Idaho, LLC (CWI), BWXT's successor on the ICP, represents BWXT in this matter.

EG&G terminated Mr. Isham on April 1, 2005. On May 10, 2006, Mr. Isham filed the Part 708 Complaint with the local employee concerns office. After initial processing, that office forwarded the Complaint to OHA.

In his Complaint, Mr. Isham alleged that he was terminated in response to a protected disclosure contained in his March 29, 2005, email to Christine Gomez, a CCP employee. Complaint at 3. In that email, he complained of being required to change his inspection reports. Also in his Complaint, Mr. Isham alleged

that Larry J. Walker, the CCP visual examiner "lead," told employees "to leave early on occasion", but Mr. Isham did not allege that he disclosed that matter prior to his termination. *Id.* at 5.

The OHA Investigator found that the March 29, 2005, disclosure concerning changes in inspection reports was a possible Part 708 protected disclosure. June 19, 2007 Report at 5. The OHA Investigator also found that Mr. Isham alleged a disclosure to Thomas Johnsen, a BWXT employee, that Mr. Walker was allowing employees to leave early; the OHA Investigator found that allegation to be a possible protected disclosure. *Id.* at 6.

The OHA Acting Director appointed me to serve as the Hearing Officer. I offered Mr. Isham several opportunities to provide further detail concerning his alleged protected disclosures.

B. Pre-Hearing Efforts to Identify the Alleged Protected Disclosure

1. July 5, 2007 Letter

In a July 5, 2007 letter to the parties, I noted that Mr. Isham's alleged protected disclosures lacked specificity. *See* 10 C.F.R. § 708.12(a)(2) (2007). I asked Mr. Isham to provide three examples of changes to the inspection reports and explain why he believed that those changes revealed a violation, danger, or impropriety that forms the basis of a protected disclosure. *See* 10 C.F.R. § 708.5(a) (2007). I also asked Mr. Isham to specify the date of his alleged disclosure to Mr. Johnsen concerning early departures.

In his response, Mr. Isham maintained that any changes made or directed by others rendered the reports "fraudulent." July 27, 2007 Response at 2. Mr. Isham did not provide the date of his alleged disclosure to Mr. Johnsen concerning early departures.

2. August 29, 2007 Letter

In an August 29, 2007 letter to the parties, I proposed to dismiss the Complaint. I noted that the governing regulations require that a complaint include a statement "specifically describing" the alleged protected disclosure. 10 C.F.R. § 708.12(a)(2) (2007). I stated that, if Mr. Isham objected to the proposed dismissal, he should provide specific information about the changes made in his reports, as well as a specific description of his disclosure to Mr. Johnsen. Finally, I stated

that Mr. Isham should respond to BWXT's arguments that Mr. Isham did not allege a protected disclosure.

In response to that letter, Mr. Isham stated that (i) Mr. Walker instructed him to delete the word "cylinder" or "cylindrical" and to substitute alternative terminology, (ii) other inspectors changed weights that he recorded, and (iii) visual examiners were experiencing "difficulties" in correcting graphite's density value. As for his allegation that he disclosed to Mr. Johnsen that Mr. Walker allowed employees to leave early, Mr. Isham did not provide further detail, except to say that he also made the disclosure to Tammy Hobbes, another BWXT employee.

3. October 1, 2007 Letter

In an October 1, 2007 letter to the parties, I found that Mr. Isham's allegations concerning the inspection reports did not rise to the level of protected disclosures. I stated:

> The foregoing alleged disclosures do not warrant further consideration. Mr. Isham does not allege that the substitution of alternative terminology for the words "cylinder" or "cylindrical" violated the characterization standards. Nor does he allege that the waste was ineligible for shipment to WIPP. In fact, Mr. Isham reported a "dose rate" for the object and certified that it was not a prohibited item. *See* September 7 Submission, Ex. F. Similarly, Mr. Isham does not allege that, when other examiners revised data prior to the finalization of a report, the revised values were inaccurate or less reliable. Finally, as an example of the "difficulties" he reported in correcting the density value for graphite, Mr. Isham cites his desire to start a fresh report, rather than continue to revise an existing report. As the foregoing indicates, Mr. Isham was unable to describe a reasonable belief that the information disclosed rose to the level of the type of violation, danger, or impropriety covered by Part 708.

October 1, 2007 Letter at 2. Accordingly, I stated that I would give no further consideration to the alleged inspection report disclosures. *See* 10 C.F.R. § 708.28(b)(5) (2007) (granting a hearing officer the authority to dismiss claims or defenses).

I also continued to question the specificity of Mr. Isham's alleged disclosure to Mr. Johnsen and Ms. Hobbes that Mr. Walker

allowed employees to leave early, and I cautioned that I had not ruled out the possibility of dismissal. I ordered pre-hearing affidavits from both parties, including an affidavit from Mr. Isham detailing what he disclosed about early departures, "including any statements he made concerning the number of occasions on which employees left early and, for each occasion, the identity of the employees who left early and how early they left ...." October 1, 2007 Letter at 4.

Mr. Isham filed an affidavit (Isham Affidavit 1), providing none of the requested detail about his alleged disclosure. Instead, he merely reiterated his allegation that he told Mr. Johnsen and Ms. Hobbes that Mr. Walker allowed employees to leave early. Aff. 1 at 2. Mr. Johnsen and Ms. Hobbes filed affidavits denying that Mr. Isham made the alleged disclosure. In his response (Isham Affidavit 2), Mr. Isham again did not provide the requested detail concerning his disclosure but requested Respondents' records concerning time and attendance.

II. Analysis

A complainant is required to include in his complaint a "statement specifically describing ... the disclosure" giving rise to the retaliation. 10 C.F.R. § 708.12(a)(2). A complaint may be dismissed where the complaint fails to allege facts which, if established, would constitute a protected disclosure. *See* 10 C.F.R. § 708.17(c)(2) (2007).

The Complaint did not comply with Section 708.12(a). In the Complaint, Mr. Isham did not allege that he disclosed that Mr. Walker was allowing employees to leave early, let alone specifically describe the disclosure.

Mr. Isham has not cured that deficiency by alleging a disclosure that is specific enough to be protected. I required that Mr. Isham submit an affidavit, stating "in detail what he told Mr. Johnsen and Ms. Hobbes, including any statements he made concerning the number of occasions on which employees left early and, for each occasion, the identity of the employees who left early and how early they left." October 1, 2007 Letter at 4. In the affidavit, Mr. Isham stated that he told Mr. Johnsen "that employees were being instructed to leave the work site early" and that he told Ms. Hobbes "that employees had been instructed to leave early on more than one occasion." Aff. 1 at 2, 3. In his supplemental affidavit, Mr. Isham stated that he told Mr. Johnsen and Ms. Hobbes that "employees were being directed and/or allowed to leave the work place early after

their time sheets had already been turned in for submission to the federal government." Aff. 2 at 3.

As the foregoing indicates, at most, Mr. Isham has alleged that he disclosed to Mr. Johnsen and Ms. Hobbes that Mr. Walker let more than one employee leave an unspecified amount of time early on more than one occasion. That leaves open the possibility that Mr. Isham disclosed that two employees left five minutes early on two occasions, a de minimus amount of time. *See generally Donald R. Rhodes*, 29 DOE ¶ 87017 (2006) (TBU-0058) (contractor change from 20-minute to 30-minute billing increments was *de minimis).* Thus, Mr. Isham's alleged disclosure is too general to support a reasonable belief that it reveals fraud or some other impropriety or that it involves some other protected activity.

Mr. Isham's other statements about early departures do not change that conclusion. First, in those statements, he does not discuss his alleged disclosure; instead, he simply refers to his underlying allegation that Mr. Walker allowed employees to leave early. Second, I question whether it is appropriate to rely on post-termination statements to characterize this disclosure. *Cf. Ellison v. Merit Systems Protection Bd*., 7 F.3d 1031, 1036 (Fed. Cir. 1993) ("[T]he test of the sufficiently of an employee's charges of whistleblowing . . . is the statement that the employee makes in the complaint . . ., not the employee's *post hoc* characterization of those statements") (citations omitted). In any event, those statements do not provide *post hoc* clarification of the alleged disclosure.

Mr. Isham's post-termination statements concerning his allegation that Mr. Walker allowed employees to leave early are inconsistent. In an April 26, 2005 letter to the Office of the Inspector General (OIG), Mr. Isham stated that employees left early on "several occasions" after time sheets had been submitted to the employer. April 26, 2005 Letter at 1. He later told the OIG that employees left an hour early every other week. April 28, 2005 OIG Form. In his Complaint, Mr. Isham stated that employees left early "on occasion," elaborating:

> It is more important to show the ability of the action than the actual action itself. Were we told to leave early on occasion? Yes, but what is more important is the power or the control that one can think he or she can do something that is not legal and is unethical!

Complaint at 5. In October 2007, in his first affidavit, Mr. Isham described the frequency as a "daily occurrence:" "I remember that this was a daily occurrence which would escalate as we neared the end of our shift. Employees would consistently leave at least 10 to 20 minutes early." Aff. 2 at 2. A week later, in his second affidavit, Mr. Isham stated that there was "at least one instance" in March 2005 in which three or more employees left early[1] and that records would show "a substantial number of other such occurrences." Aff. 2 at 4. Given the inconsistent and generally escalating nature of these post-termination allegations, they are unreliable and their use as a *post hoc* characterization of his alleged disclosure inappropriate.

As the foregoing indicates, Mr. Isham has not alleged facts which, if proven, would establish that he made a protected disclosure. Accordingly, the Complaint will be dismissed with prejudice. Based on this determination, I need not address other requests that the parties have made.

IT IS THEREFORE ORDERED THAT:

The Complaint filed by David Isham on May 10, 2006, be and hereby is dismissed.

Janet N. Freimuth
Hearing Officer
Office of Hearings and Appeals

Date:November 5, 2007

[1] Mr. Isham has alleged that he left early in March 2005 at Mr. Walker's direction and, therefore, would have been one of those employees. Nonetheless, Mr. Isham has not stated how early he left, something clearly within his knowledge.

June 20, 2008

DECISION AND ORDER OF
THE DEPARMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Dennis Patterson

Date of Filing: April 25, 2007

Case Number: TBH-0047

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Dennis Patterson ("Patterson," "the complainant," or "Complainant") under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant was an employee of Batelle Energy Alliance, LLC, ("BEA" or "the contractor") the management and operating contractor of the DOE Idaho National Laboratory (INL) in Idaho Falls, Idaho, where he was employed as the Employee Concerns Program Manager until June 2007. On June 1, 2006, he filed a complaint of retaliation against BEA with the DOE Office of Employee Concerns. In his complaint, Patterson contends that he made certain disclosures to officials of BEA, and that BEA retaliated against him in response to these disclosures.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard public and employee health and safety; ensure compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. 10 C.F.R. Part 708. Under the regulations, protected conduct includes:

> (a) Disclosing to a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, [the] employer, or any higher tier contractor, information that [the employee] reasonably believes reveals –
>
> (1) A substantial violation of a law, rule, or regulation;

> (2) A substantial and specific danger to employees or to public health or safety; or
>
> (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority; or
>
> (b) Participating in a Congressional proceeding or an administrative proceeding conducted under this part; or
>
> (c) Subject to § 708.7 of this subpart, refusing to participate in an activity, policy, or practice if you believe participation would-
>
> (1) Constitute a violation of a federal health or safety law; or
>
> (2) Cause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public.

10 C.F.R. § 708.5.

Part 708 sets forth the proceedings for considering complaints of retaliation. The DOE's Office of Hearings and Appeals (OHA) is responsible for investigating complaints, holding hearings, and considering appeals. See 10 C.F.R. §§ 708.21-708.34.

B. Procedural Background

Patterson filed a complaint ("First Complaint") with the Idaho Operations Office Employee Concerns Office (DOE/ID) on June 1, 2006. DOE/ID dismissed his complaint and Patterson appealed this dismissal to OHA. OHA reversed the dismissal and ordered DOE/ID to proceed with the case. *See Dennis Patterson,* 29 DOE ¶ 87,011 (2006). On September 6, 2006, Patterson requested an investigation, pursuant to 10 C.F.R. 708.21(a)(2), and a hearing, and the complaint was transferred to OHA. On September 19, 2006, Patterson filed an addendum to the complaint ("First Addendum"). He then filed addenda on October 31, 2006 ("Second Addendum"), and February 20, 2007 ("Third Addendum"), requesting a hearing on the issues raised, but without an investigation.

On April 25, 2007, OHA issued a Report of Investigation (ROI) and I was appointed the Hearing Officer in the case on the same day. The ROI concluded that Patterson had met his burden of demonstrating that he made protected disclosures alleging that BEA abused its authority, and that those disclosures were a contributing factor to three alleged retaliatory acts. The investigator also concluded that BEA had provided sufficient evidence to demonstrate that it would have taken these actions notwithstanding Patterson's protected disclosures. On May 24, 2007, I scheduled a hearing in the case to be held on August 21, 2007. However, Patterson filed another addendum on June 26, 2007 ("Fourth Addendum"), also requesting a hearing without investigation. All of the addenda were consolidated into one complaint under the original case number. At the

request of the parties, I rescheduled the hearing to September 17, 2007. The parties participated in mediation on August 7, 2007, but the session was not successful.

On August 10, 2007, BEA filed a Motion for Summary Judgment. Mr. Patterson filed a Response to that pleading on August 27, 2007. BEA then filed a Reply in Support of BEA Motion for Summary Judgment on August 30, 2007. On August 30, 2007, the parties submitted a Joint Order to consolidate Dockets and Vacate Schedule. At the request of the parties, I granted an extension of the hearing date to November 27, 2007. On November 21, 2007, I granted in part BEA's Motion for Summary Judgment, and dismissed Mr. Patterson's First Complaint.[1] All other addenda remained under the same case number.

I finally convened the hearing in this case in Idaho Falls over a four-day period from November 27-30, 2007. Both parties submitted exhibits. BEA presented exhibits into the record which were numbered Exhibit 1 through Exhibit 137, and Mr. Patterson submitted 55 exhibits, lettered Exhibit A through Exhibit SS. BEA presented nine BEA management and non-management employees as witnesses. Mr. Patterson testified on his own behalf, and also called five current and former colleagues as witnesses. The parties submitted post-hearing briefs on February 4, 2008 ("BEA Brief," "Patterson Brief"), at which time I closed the record in this case.

C. Preface to Factual Background

This case is a consolidation of four separate complaints that arise from events that occurred between February 2005 and June 2007. This case contains many facts, names, and issues, and they are set forth in detail in Section D, "Factual Background." In that section, I set forth the facts, as elicited through documentary evidence and four days of testimony, in chronological order. However, to assist the reader, I first present this very brief summary of the facts and issues in this matter.

In 2005, BEA assumed the operations of INL and consolidated the workforces of the two previous contractors, Bechtel BWXT Idaho, LLC (BBWI) and Argonne National Laboratory-West (ANL-W). This action resulted in changes in personnel classification and performance appraisals. Patterson was Employee Concerns Manager under BBWI, and had one employee reporting to him. When BEA assumed the contract in 2005, that employee no longer reported to Patterson. In February 2005, BEA Security revoked the site access of a subcontractor employee who is also a relative of Patterson. Patterson maintained that this action was unjustified, and he launched an extensive investigation into the procedures BEA used to execute the revocation. Patterson was vocal in escalating this concern to BEA senior management, also alleging racial discrimination by the contractor. BEA found no evidence of discrimination, but Patterson did not accept that finding, to the dismay of his management. As a result of Patterson's investigation, BEA restored site access to the subcontractor employee, BEA management

[1] On November 21, 2007, I dismissed the First Complaint because five of the six allegations of retaliation were outside of the 90-day limit, and the sixth was not a negative personnel action. *See Dennis Patterson*, 29 DOE ¶ 87,035, Case No. TBZ-0047 (2007).

acknowledged that procedures had been violated, BEA revised some procedures, and the BEA Security manager was officially reprimanded. However, the relationship between Patterson and his management became strained as Patterson continued to press his views about the motivation behind the revocation. Mr. Patterson's manager directed the complainant to repair the damaged relationship between Employee Concerns and other BEA offices.

In 2006, BEA changed Patterson's job code from manager to specialist. In the spring of 2006, Patterson filed a discrimination complaint with the Idaho Human Resources Commission and, in June 2006, he filed a Part 708 complaint with DOE. The BEA Office of the General Counsel advised Patterson that he could not use company or government resources for personal litigation and, in June 2006, requested that BEA Security investigate Patterson's use of corporate and government resources for possible abuse. This led to workplace conflict and strained relations between Patterson and employees in BEA Safeguards and Security ("Security") and the BEA Office of the General Counsel. Later that year, a BEA manager, the subject of an investigation conducted by the complainant, accused Patterson of bias during that investigation. This led to BEA Security investigating Patterson again, this time on the manager's allegation of bias, in September 2006. Also in September 2006, a confidential source (a BEA employee) reported a concern to Patterson that resulted in a Security investigation into the activities of a colleague of the source. Security asked Patterson to disclose the identity of his confidential source in order to aid their investigation, but he refused because of his conviction that confidentiality was critical to encourage employees to file their concerns with his office, and also to protect those employees. In October 2006, Patterson was suspended for three days without pay, principally for his alleged lack of cooperation with Security in the two investigations into his behavior.

In February 2007, Patterson's manager rated his 2006 performance as "1" (on a scale of "0" to "4" with "4" as the highest rating). In April 2007, at a meeting with Patterson and the director of Security, Patterson's manager presented Patterson a directive to disclose the name of his confidential source in order to assist Security. The meeting was heated, and Patterson's manager alleges that Patterson was insubordinate. Patterson again refused to name the source. In June 2007, Patterson's manager gave him a zero merit increase for his 2006 performance, and a "directed reassignment" (involuntary transfer) to another position.

As discussed below, after carefully reviewing the documentary and testimonial evidence in this case, I have determined that Patterson engaged in protected conduct, and that BEA retaliated against him by the September 2006 bias investigation, the three-day suspension, the low performance rating and zero merit increase, and the directed reassignment. I have ordered relief for the retaliation, but I do not order Patterson's reinstatement to his previous position, because that position no longer exists.

D. Factual Background

(1) BEA

The Idaho National Laboratory (INL) is a DOE research and development laboratory located in Idaho Falls, Idaho. In 2002, INL was managed by Bechtel BWXT Idaho, LLC (BBWI) and Argonne National Laboratory-West (ANL-W). However, that year DOE changed the site mission to focus on building prototype nuclear plants, and began the search for a new contractor for the mission, as well as a new contractor for environmental management responsibilities. The INL contract was awarded to BEA, a nonprofit limited liability company (LLC) owned by Battelle Memorial Institute (BMI) in November 2004, and on February 1, 2005, BEA assumed operation of INL. BBWI assumed responsibilities for advance mixed waste treatment.

BEA combined the BBWI and ANL-W work forces when it assumed the contract as management and operating contractor, and also modified personnel and compensation policies as a result. BEA utilized a web-based performance evaluation system that differed from its predecessors in the categories to be evaluated. According to BEA, BBWI's system was more subjective because each supervisor determined the rating of those that reported to him or her. BEA's system, on the other hand, placed greater emphasis on performance expectations and how employee performance related to accomplishing the BEA mission.

(2) The Complainant

Patterson has worked at INL since 1980, and served as Ethics Officer/Department Manager from 1994 to 1999 under BBWI's predecessor, Lockheed Martin Idaho Technologies company (LIMITCO). At LIMITCO, Patterson reported directly to the president, John Denson. (Transcript of Hearing) Tr. at 534-538. In 1999, BBWI replaced LMITCO and Patterson became Employee Concerns (EC) Program Manager, reporting to Doug Benson (Benson), BBWI Audit and Oversight Director. One employee, Joan Mehner (Mehner), reported to Patterson. In December 2004, BEA offered employment to Patterson effective February 1, 2005, as Department Manager of Employee Concerns reporting to Benson. BEA does not have an Ethics Officer, but rather assigns the responsibility for the ethics function and "Standards of Conduct" to the Office of the General Counsel. Transcript of Hearing (Tr.) at 637-8. During the transition to BEA in 2005, Mehner elected to stay with BBWI and consequently Patterson had no employees reporting to him.

According to the BEA Charter, the mission of the ECP Office was to oversee and promote ethical business behavior as a government contractor and to provide an independent avenue for employees to resolve concerns. Exhibit (Ex.) 69; Ex. 70 at 1. The Employee Concerns Office is responsible for receiving, coordinating and conducting investigations of reported concerns. The EC Office advises employees who report concerns that they may elect to remain anonymous, in which case confidentiality is

maintained "to the maximum extent possible." Ex. 70. A source is only divulged if "clearly essential" to the investigation. *Id.* at 3, 4. Unless divulging names is clearly essential to the investigation, the investigator is to protect the confidentiality of both the concerned employee and the person named in the complaint. Ex. 70 (Management Control Procedure (MCP)) at 3. Benson, the first level manager of the Employee Concerns Manager, makes the final decision on whether a name should be disclosed. Tr. at 640. Mehner testified at the hearing that, with one exception, EC had honored all requests for anonymity during the years that she worked there under BBWI, even when a complaint was transferred to Security. Tr. at 600-01. In that case, she asked the employee for his permission to disclose his name to Security. *Id.*

(3) Chronology

a. 2005

BEA Revokes Site Access of a Subcontractor Employee

On February 1, 2005, BEA assumed the operations of INL. Patterson's first complaint arises from the events that occurred when a subcontractor employee ("the subcontractor") was denied access to the INL site in February 2005. The subcontractor, a relative of Patterson, had worked at the site periodically for eight years. On February 24, 2005, Security staff at INL revoked the site access of the subcontractor employee based on a previous felony conviction and allegedly "ongoing" problems with the law. Tr. at 115-16; Ex. 19. The subcontractor employee then contacted Patterson for assistance in getting his site access restored. Patterson met with his supervisor (Benson) and the General Counsel, Mark Olsen (Olsen). Patterson wanted to investigate the matter and expressed concerns with the manner in which Security had handled the incident. During the meeting, Patterson, Benson and Olsen discussed the issue of a possible conflict of interest due to the family relationship between Patterson and the subcontractor employee. However, according to Benson, Olsen concluded that any conflict of interest could be waived because of the limited scope of the investigation. Benson determined how to handle the conflict of interest issue. Tr. at 885.

On March 3, 2005, Patterson gave the BEA Personnel Security Manager, Jody Streier (Streier), a copy of the subcontractor employee's police record, which showed no problems since 1998, and recommended that BEA restore the subcontractor's site access. Tr. at 117. When the subcontractor asked about appealing the decision, Security told him that there was no opportunity to appeal. The subcontractor employee's union later informed him how to appeal the decision. On March 8, 2005, BEA granted the subcontractor an appeal of the decision. On March 15, 2005, the appeal panel met and denied his appeal, based on Streier's assertion that the subcontractor employee had not reported problems with the law that occurred since 2003. According to Patterson, Benson recommended that Patterson drop the matter after the appeal, but Patterson refused. Tr. at 118, 133.[2] Up until the investigation, Benson and Patterson had a "very positive, cordial relationship." Tr. at 133.

[2] Benson, on the other hand, testified that both men jointly agreed to investigate further. Tr. at 886.

On March 16, 2005, Patterson requested the information that caused the appeal panel to deny the appeal. Streier denied his request. Patterson pursued his investigation by reviewing the applicable standards and procedures regarding site access and also collected information regarding the subcontractor's criminal record.

Patterson Alleges Violations of Procedure

Patterson continued with his own investigation. On April 22, 2005, Security gave Patterson and Benson access to the subcontractor employee's file. Ex. 19. Patterson met with Security, but found them uncooperative and after researching their procedures, he found violations. Tr. at 120. During an interview on May 3, 2005, Streier told Benson that she believed that the subcontractor could not possibly have stopped his criminal activity, and that he either got lucky and had not been caught, or he had learned to manipulate the system. Tr. at 122. On May 4, 2005, Patterson sent an e-mail to Benson reporting several procedural and regulatory violations that BEA Security had committed in the site revocation. Patterson reported procedural and regulatory violations committed by BEA Security and also filed a discrimination complaint with the BEA EEO officer. Tr. at 122.

On May 9, 2005, Patterson met with the BEA Manager of Workforce Practices in Human Resources, Arantza Zabala (Zabala), and expressed concern that the action against the subcontractor employee may have been motivated by race.[3] Zabala initiated an investigation.

On June 8, 2005, Patterson met with BEA officials and discussed problems relating to alleged violations of company procedure in the matter of the subcontractor employee. On June 15, 2005, Security restored site access to the subcontractor. As a result of the investigation, Security changed at least one of its site access procedures. Tr. at 128. The relationship between Benson and Patterson, formerly friendly, began to deteriorate.

On July 9, 2005, Zabala sent Patterson an e-mail and concluded that she was unable to establish that discrimination was a factor in the removal of the subcontractor employee's access. Despite this conclusion, Patterson maintained that Steier had discriminated against his relative. On July 27, 2005, Benson informed Olsen that Patterson was going to report his concerns to the BEA president, and Olsen objected.

On August 11, 2005, Patterson met with Juan Alvarez (Alvarez), Deputy Laboratory Director for Management, and other BEA officials concerning the violations he had found during his investigation of the revocation of the subcontractor employee's site access. Patterson became agitated and visibly angry, according to the other attendees, alleging a cover-up and racial discrimination. Tr. at 641. However, Patterson denies that his behavior was unprofessional. Patterson testified that he speaks passionately and

---

[3] Zabala is responsible for Labor Relations, Employee Relations, Diversity and Affirmative Action at BEA. TR. at 1195.

directly on issues. Tr. at 135. He considered his behavior at the meeting to be professional. *Id.*

On August 12, 2005, Alvarez issued a memo about the incident to BEA officials that explained the problems and recommended corrective and disciplinary actions. At the end of the memo, Alvarez wrote that he found Patterson's conduct at the meeting "lacked impartiality" and was interpreted by his staff to be offensive and threatening. Ex. 30. Streier received a verbal warning about her misconduct that was noted in her personnel file for six months. Tr. at 885-888.

INL Requests an Investigation of the Site Access Revocation

In October 2005, INL asked BMI to investigate the subcontractor access matter. INL later expanded its request to include an investigation of the Ethics Office investigation function, and the optimal organizational location of the Ethics Office. This investigation found that "most of the substantive aspects" of Patterson's investigation were appropriate and that Patterson's and Benson's efforts were instrumental in leading to the proper reinstatement of the subcontractor employee's site access. Ex. 37 at 2. The report concluded that Katherine Moriarty (Moriarty), BEA Senior Counsel, helped to resolve the issues of the incorrect revocation and correctly interpreted several items in the employee's record, permitting Security to reinstate access. The BMI investigators found no unethical conduct by management. Alvarez related that he may have been hasty in distributing his memorandum widely. The investigators did voice concern about Patterson's interaction with BEA managers and staff, specifically his refusal to accept the conclusion of the BEA EEO officer that racial discrimination was not involved, and his apparent inability to understand that there was an appearance of a lack of impartiality in his actions because of his relationship to the subcontractor employee. BMI recommended actions appropriate to improve the working relationships between the Ethics Office and the managers involved in the site access matter. *Id.* at 3.

b. 2006

In his 2005 performance evaluation, Benson commented on Patterson's willingness to ensure that the Standards were effectively enforced and that he "knows and lives the Standards without compromise." Ex. H; Tr. at 125. Benson gave Patterson his 2005 performance evaluation with a rating of "all expectations met" (the third highest rating). Patterson felt that he deserved a higher evaluation and, after some discussion, Benson changed the rating to the second highest rating ("all expectations met, some exceeded). However, Patterson had received the highest rating (under BBWI) for his 2004 performance as a BBWI employee. On February 24, 2006, BEA changed Patterson's job code from Manager to Specialist 5, which reduced his maximum possible monthly salary from $11,047 to $9,198. BEA applies the term "Specialist" to professionals, such as attorneys. Tr. at 561-2. However, Patterson's position was no longer considered managerial, since no employees reported to him after Mehner opted to remain with BBWI. Benson informed Patterson that his position description would maintain the "functional title" of Employee Concerns Manager. Tr. at 646. Patterson refused to use

the functional title, and referred to himself as "Specialist." Tr. at 646-7. According to Benson, the relationship between Benson and Patterson deteriorated further. Tr. at 780. On March 14, 2006, Benson gave Patterson a 4.05 percent merit increase. Patterson's merit increase for the previous year was 4.32%.

Idaho Human Resources Commission (IHRC) Complaint and Allegations of Misuse of Government and Corporate Equipment

On March 14, 2006, Patterson filed a complaint with the Idaho Human Rights Commission (IHRC) alleging discrimination based on race and retaliation. Ex. 44. On April 27, 2006, Patterson asked Moriarty for two files that Moriarty assumed were for the purpose of furthering his IHRC complaint. On May 1, 2006, Moriarty informed Patterson that it was inappropriate for employees to pursue personal litigation during business hours. Patterson replied that he would follow the Standards of Conduct and the BEA Employee Handbook. Patterson sent four e-mails and one fax to the IHRC on May 24-25, 2006. On May 25, 2006, the IHRC notified Moriarty of Patterson's intent to withdraw his IHRC complaint, and referenced Patterson's office e-mail address, and telephone and fax numbers.

Several important events occurred on June 1, 2006. First, Patterson filed a Part 708 complaint alleging that BEA retaliated against him for making protected disclosures when he reported procedural violations committed by BEA surrounding the revocation of the subcontractor employee's site access Second, the IHRC withdrew Patterson's complaint upon his request for administrative dismissal without a Notice of Right to Sue. Ex. M. Finally, surprised that Patterson had ignored her admonition about personal litigation, on June 1, 2006, Moriarty initiated an investigation to determine the extent of Patterson's use of company time and equipment. Tr. at 1352-1360. In the past, when confronted with an allegation that an employee had used company resources, Benson had either counseled the employee about the use of company resources or he had put that information in the employee's Performance Appraisal. *Id.* at 891-3. The investigation was assigned to Torrance Shirley (Shirley), BEA Security, who examined Patterson's e-mails and informed Moriarty on June 6, 2006, that Patterson had filed or was about to file a Part 708 complaint.

On July 5, 2006, BEA received a copy of Patterson's complaint. On July 10, 2006, Moriarty directed the investigator to proceed with the investigation. On July 13, 2006, Shirley informed Patterson that he was under investigation for possible misuse of government equipment and resources, and later that day he interviewed Patterson for approximately 20 minutes. Ex. NN; Tr. at 957. The interview was recorded and transcribed. Ex. NN; Ex. 54.

Shirley found that Patterson had made ten calls to the IHRC. Ex. 54 at 7. Shirley also found that Patterson had used company time to work on his Part 708 complaint. However, Patterson steadfastly maintained that company policy permitted some use of company time and resources for his Part 708 complaint and, at the end of the investigation, Shirley concluded that Patterson's use of company resources was

incidental. Tr. at 154-157. BEA acknowledged that an employee could use company time and equipment to purse a Part 708 complaint, and to contact DOE, thereby affirming Patterson's previous contention. Tr. at 194-196; 446-47; Ex. U, Ex. BB at 4. Shirley presented his findings to a Personnel Action Advisory Group (PAAG), a group of managers convened by Human Resources to determine disciplinary action.

Employee Confidentiality Issue

In September 2006, a BEA employee filed a complaint with the Employee Concerns Office alleging that another employee, who also held a political office, was using company time to conduct political activities on the telephone. Ex 86. As a 501(c) (3) entity, BEA was prohibited from participating in any political campaign and such actions, if true, put their contract in jeopardy. On September 22, 2006, Patterson, Benson, Moriarty and two employees from Security met to determine the appropriate course of action. The group decided to transfer the case to Security, headed by Tom Middleton (Middleton), for investigation. Dee Wise (Wise) was assigned as principal investigator, and Patterson sent his file to Wise that day.[4] On September 25, 2006, Wise informed Patterson that she needed the name of the person who reported the allegation, and added that Security could protect his or her identity. Tr. at 1148; Ex. 75. Patterson refused to release the name, and said that he would intercede and ask questions of the source. Tr. at 1148. Wise felt limited without the name of the source. *Id.* at 1152.

On September 28, 2006, Benson sent Security an e-mail stating that confidentiality was required by the EC Procedure and that they could not breach that requirement. Patterson offered three options for Wise to get information that she needed, but he refused to reveal the name.[5] However, after discussions with Middleton, Benson asked Patterson to disclose the name of his source so that Wise could complete her assignment.

Although the request had been transferred to Security for investigation, Patterson contacted Wise three times asking for updates and also a copy of the final report. Wise then asked Patterson not to communicate with her except through her managers. Tr. at 1150-2.

Events That Led to Allegation of Bias Against Patterson

Between May and July 2006, Patterson conducted an investigation of an employee concern, an allegation that an employee was not properly evaluated by his manager. Tr. at 205; Ex. OO; Ex. 61. As part of the investigation, he interviewed the complainants' manager. Patterson concluded that the manager had not evaluated the employee properly and did not use information from all relevant contributors. The manager then filed a formal employee concern with Benson alleging bias in Patterson's conduct during the

[4] When a case is transferred from the Employee Concerns Office, the receiving organization has full responsibility for the new matter.

[5] Even though Wise was new to the company, she had substantial experience in investigations. Tr. at 1139-42.

investigation. Tr. at 659. Specifically, the complainant alleged that Patterson was "prosecutorial," had failed to inform him of the scope of the investigation, and had failed to validate the facts presented by the interviewee during the interview, resulting in inaccuracies in the report. No one challenged the accuracy of the report. Ex. 61 at 5. On July 19, 2006, Benson asked Security to investigate the concern, recusing himself because Patterson's first Part 708 Complaint had accused Benson of retaliation. Tr. at 656, 897. The investigation was again assigned to Torrance Shirley.

On August 31, 2006, Shirley called Patterson for follow-up questions on the first investigation, and Patterson asked him "Is there anything else?" Tr. at 927-8. Shirley then asked Patterson if anyone had informed him of the second investigation, but Patterson at first refused to answer the question and later stated "I'd rather not answer that question." At the time, Patterson was at the hospital visiting a sick friend. Tr. 200-02. He chose to defer answering that question until the interview. Tr. at 202.

On September 6, 2006, Patterson was told to attend an interview with Shirley. The interview lasted one hour and 14 minutes. Ex. OO; Tr. at 957. Patterson's attorney was present. Shirley informed Patterson that he was required to answer all questions and that failure to respond would be viewed as not cooperating with the investigation. Ex. 61. When Shirley asked why Patterson had not told him if anyone had given him advance notice of the second investigation, Patterson jokingly stated that he liked "to keep [Shirley] guessing" and "to level the playing field." Ex. 61 at 28. Patterson said this jokingly, but Shirley testified that he did not take it as a joke, rather he was surprised. Tr. 934. The men then had a discussion of e-mails, with Patterson complaining that Shirley and Benson sent unencrypted e-mails about the investigations that Patterson alleged invaded his privacy; *i.e.*, people who did not have a "need to know" had seen e-mail correspondence. According to Patterson, he had knowledge of administrative personnel opening mail that concerned his issues. Shirley asked Patterson if he had unauthorized access to Benson's e-mail messages via Benson's secretary, and Patterson at first said "I'm not saying anything like that. No." Ex. 61 at 15. Patterson later stated "I'm not answering your question." *Id.*

Patterson acknowledged that this would be held against him. *Id.* Shirley also questioned why Complainant had failed to mark a document "Official Use Only." Complainant admitted the mistake, and explained what he did to correct the mistake. Shirley investigated Benson's secretary in order to see if she had shared Benson's e-mails with Patterson. However, Shirley could not substantiate that Patterson had inappropriate access to any e-mail and the investigation into the matter was dropped. Tr. at 846-47. The investigation did not establish bias by Patterson in his conduct of the employee concern investigation.

On September 19, 2006, Patterson filed an "Addendum" alleging that BEA management initiated two Security investigations as retaliation for filing a Part 708 complaint. As a remedy, Patterson requested reimbursement for the attorney fees incurred when his attorney attended the September 6, 2006, Security interview, and also an undetermined

remedy set forth as "To be determined based on the outcome of the Security Investigations."

Three-Day Suspension

Benson was concerned by Patterson's behavior and interaction with Shirley during the interviews. At the conclusion of the investigations, Benson convened a Personnel Action Advisory Group (PAAG) to discuss appropriate disciplinary action.[6] Members of the PAAG included Benson, Moriarty, Shirley, Terry Brooks of Human Resources and Art Clark. Tr. at 605. Shirley presented summaries of his investigation. Benson testified that he read the transcripts and listened to portions of the recorded interviews and then made a decision on discipline based on Patterson's behavior in the September 2006 investigation. Tr. at 666-667. Human Resources prepared a suspension notice, reciting all inappropriate behavior or performance, including issues that standing alone would not warrant suspension. Tr. at 1055-1056; 1110-111; 1132-33.[7] Consequently, on October 16, 2006, Complainant was suspended without pay for three days for the following misconduct:

> Your failure to cooperate with an investigation by misleading an investigator; refusal to answer investigation questions regarding the unauthorized use of government computers and systems and the attendant inferred unauthorized use of government computers and systems; failure to follow company policies and protocols regarding an Employee Concerns investigation; failure to follow directions from BEA Office of General Counsel.

Ex. X. Patterson had not received a verbal or written warning prior to this suspension. Tr. at 136; Ex. O. The Notice also highlighted Patterson's position as program manager for the Employee Concerns Office, and stated that his "misconduct demonstrates a lack of judgment and has resulted in a loss of credibility regarding your ability to ensure fair treatment, to effectively address resolution of employees' concerns in compliance with INL's Standards of Conduct, Conflict of Interest criteria and BEA's policies and protocols, and/or to effectively implement DOE Order 442.IA, Department of Energy Employee Concerns Program. Further, your misconduct has demonstrated an inability to communicate effectively with co-workers and has severely hampered your ability, and hence BEA's ability to coordinate multi-discipline investigations to resolve employee concerns." Ex. X. The notice directed Patterson to immediately begin to restore the trust and confidence of management and his fellow employees. Ex. 65.

Benson testified that the primary reasons for suspending Patterson were: (1) the complainant's refusal to answer Shirley's question on whether Patterson had gained

---

[6] Prior to initiation of any proposed suspension or discharge or at the request of a manager, BEA Employee Relations will convene a PAAG to assist line management to determine a possible course of disciplinary action. Ex. 67 at 1-73.

[7] The items that did not warrant suspension were: (1) Patterson's failure to follow Benson's directive to allow all interviewees to review their statements; and (2) Patterson's failure to follow Moriarty's directive not to use government property to pursue his IHRC complaint. Tr. at 671.

access to e-mails regarding the investigations; and (2) Patterson's statements that he had refused to answer a question "to keep [Shirley] guessing and level the playing field." Benson described this conduct as "inappropriate." Tr. at 668-9.

On October 31, 2006, Patterson filed an "Update to Addendum" (Complaint III) indicating that the suspension was a retaliation for his past 708 activity. As a remedy, he requested (1) removal of the suspension notice from his personnel file, and (2) reimbursement for lost pay and benefits.

On November 2, 2006, a second employee sent Patterson an e-mail complaining about the political phone calls, and Wise asked to speak to the new source. Patterson conducted an interview with the source in his office, but Wise again maintained that she could not proceed without direct contact with the sources.

c. 2007

In January 2007, Benson rated Patterson's 2006 performance as "some expectations not met ("1" on a scale of "0" to "4," with "4" as the highest rating)."

On February 20, 2007, Patterson filed a "Second Addendum" (Fourth Complaint) alleging that BEA had retaliated against him by evaluating his performance at the level of "1" on a scale of 0 to 4 for the period January 1-September 30, 2006. The Second Addendum was processed as Patterson's fourth complaint. Patterson requested that his appraisal be revised to reflect his actual performance.

On March 13, 2007, Wise interviewed the subject of the political telephone calls investigation, but determined that she needed more information to rebut certain statements from the interview. Tr. at 1154-55. On March 28, 2007, Security decided to contact the people who had received calls from the subject of the investigation in order to ascertain the subject of their conversation, i.e., to determine if the conversation was political in nature. Wise first obtained background information on the recipients of the calls and then traced the phone calls that Patterson had identified as relevant. Tr. at 1153. Wise determined that each individual called had a potential political connection to the subject of the investigation. Security was unwilling to risk exposure of the subject employee, and did not go forward with contacting the individuals who had received the phone calls. Tr. at 712, 719. Security still maintained that the name of the source was critical to its investigation.

On April 19, 2007, Patterson sent an e-mail to Benson and Middleton telling them to invite their families to the Part 708 hearing so that they could see justice done. Ex. 90.

Events Leading to Patterson's "Directed Reassignment"

On April 24, 2007, Benson, Patterson and Middleton met regarding the confidential source. Benson presented Patterson a formal directive to disclose the name of the source to Wise by the following day at 9 o'clock. Benson stated that a personal meeting
