The Complainant also asserts that ERC has admitted that part of its funding is based on "a series of research and development contracts, grants and cooperative agreements with the Department of Energy as well as other government and commercial contracts." Complainant's September 7, 1999 Submission at 4. The Complainant therefore contends that since part of ERC's "funding is based on contracts, it clearly falls within the definition of contractor in Part 708." Id. At the very least, the Complainant contends that it is entitled to an evidentiary hearing to ascertain whether ERC has entered into any contract with the DOE in which it has agreed to be bound by Part 708.

This argument, too, is unavailing. The Complainant's protected disclosure related solely to fuel cell matters covered by the cooperative agreement. Any arrangements that ERC may have entered into which do not involve fuel cells are irrelevant in this case. I further see no reason to believe that ERC has entered into other agreements to perform work involving fuel cells that do refer to Part 708.

Accordingly, for the reasons set forth above, I find that ERC's Motion to Dismiss should be granted.

It Is Therefore Ordered That:

(1) The Complaint of Reprisal filed by Salvatore Gionfriddo on June 23, 1999, be and hereby is dismissed.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy unless, within 15 days of its receipt, a Notice of Appeal is filed with the OHA requesting review of the Initial Agency Decision by the Director of the Office of Hearings and Appeals.

Virginia A. Lipton

Hearing Officer

Office of Hearings and Appeals

Date: September 27, 1999

(1)On March 15, 1999, the DOE published as an Interim Final Rule a revised regulation governing the Contractor Employee Protection Program. 64 Fed. Reg. 12862 (March 15, 1999). It became effective on April 14, 1999. Section 708.8 of the new procedures states that they "apply prospectively in any complaint

proceeding pending on the effective date of this part." The Complainant argues that the Interim Final Rule is applicable in this case. Unless otherwise indicated, in this Initial Agency Decision I will refer to the Interim Final Rule. Part 708 was originally published at 57 Fed. Reg. 7533 (March 3, 1992). This version was in effect in 1994, when ERC entered into the relevant agreement with the DOE. I find considerable merit in ERC's position that it is unfair at this point to apply the new rule in a manner that would work to the detriment of the firm. However, I believe that the Motion to Dismiss is meritorious under either version of the Rule.

(2)See OHA Case No. VWA-0040, Investigatory Report, Exh. 2.

(3)Section 708.3 provides in relevant part:

This part applies to a complaint of retaliation filed by an employee of a contractor that performs work on behalf of DOE, directly related to activities at a DOE-owned or -leased site, if the complaint stems from a disclosure, participation or refusal described in § 708.5.

Section 708.2 defines "Contractor" as "a seller of goods or services who is a party to:

(1) A management and operating contract or other type of contract with DOE to perform work directly related to activities at DOE-owned or -leased facilities ....

(4)In its September 14 Memorandum, the firm argues that there is no evidence concerning what took place during ERC's visits to DOE and implies that evidence should be taken on this point.

(5)META never argued that its contract did not include language requiring it to comply with Part 708.

(6)Further, under the Federal Grant and Cooperative Agreement Act, substantial involvement is contemplated between the Agency and the entity carrying out the activity set forth in the cooperative agreement. 31 U.S.C. § 6305(2). Thus, the ties between the DOE and ERC, as discussed in the text above, are fully consistent with that Section of the Act, and lend support to the position that the arrangement was a cooperative agreement.

Case No. VBH-0010

September 1, 2000

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Petitioner: Jagdish C. Laul

Date of Filing: December 3, 1999

Case Number: VBH-0010

This Decision involves a complaint filed by Dr. Jagdish C. Laul (hereinafter the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant contends that his dismissal by his employer, Excalibur Associates, Inc. (Excalibur) was a reprisal for his participation in a prior Part 708 proceeding. Excalibur is a subcontractor of Kaiser Hill Company (Kaiser) who is the managing and operating contractor of DOE's Rocky Flats Field Office (Rocky Flats).

I. The DOE Contractor Employee Protection Program

A. Regulatory Background

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensure compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). The program's primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. A DOE contractor may not discharge or otherwise discriminate against any employee because that employee has participated in a Part 708 proceeding or otherwise engaged in protected conduct. 10 C.F.R. § 708.5(b). Employees of DOE contractors who believe they have been discriminated against in violation of Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to (i) an investigation by an Office of Hearings and Appeal (OHA) investigator, (ii) a hearing and independent fact-finding by an OHA hearing officer, and (iii) an opportunity for review of the hearing officer's initial agency decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.30, 708.32.

B. Procedural History

On December 18, 1998, the complainant filed this complaint with the DOE Office of Inspections of the Office of the Inspector General. On April 16, 1999, the Office of Inspections transferred a number of pending complaints, including the subject complaint, to OHA. On April 26, 1999, the OHA Director

appointed an investigator to examine and focus the issues raised in the complaint. The investigator conducted an investigation, and issued a Report of Investigation on December 3, 1999. (1) On that same day, the OHA Director appointed me the hearing officer in this case.

On May 10, and May 11, 2000, I convened a hearing on the complaint in Rocky Flats. The transcript of the Hearing will be referred to in this decision as TR.

II. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). See also Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins).

B. The Contractor's Burden

If the complainant meets his burden, the regulations require Excalibur to prove by "clear and convincing" evidence that it would have terminated the complainant if he had not engaged in protected conduct. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3. In evaluating whether a contractor has met its burden, the hearing officer considers the strength of the contractor's evidence in support of its action and any evidence that the contractor takes similar actions against employees who are not whistleblowers but who are otherwise similarly situated.

III. Background

Excalibur is a small company(2) formed to provide technical services to DOE contractors. Excalibur received its first contract during May 1997. Excalibur's closing brief at 2. The two founders and principals of Excalibur are Charlie Burns, Chief Executive Officer and Wayne Spiegel, Chief Operating Officer. Hereinafter these two individuals will collectively be referred to as Excalibur's senior management. The third member of Excalibur's management with significant involvement in this proceeding is David Richards. He was employed by Excalibur between October 1997 and May 1999. Starting in February 1998 he was the direct supervisor of the complainant.

Excalibur's primary contract with Kaiser required that Excalibur prepare "Emergency Preparedness Hazards Assessments" (EPHA) and "Emergency Assessment Resource Manuals" (EARM) for most of the sites at the Rocky Flats facility. A building or a work area is considered a site. The EPHA described in detail the risks associated with the release of each hazardous material located within a site. TR. at 318. After the EPHA for a given site was prepared by Excalibur and approved by Kaiser, Excalibur prepared the EARM for that site. Because the EARM used the EPHA as its primary source, during the hearing the EARM was often referred to as a derivative document. The EARM provided operational guidance on the appropriate actions to take in the event of the release of each hazardous material located within a site.

Two Kaiser employees, Mark Spears and Wilbert Zurline, had the primary responsible for substantively reviewing the EPHAs and EARMs written by the Excalibur employees. Mr. Spears was the manager of the Hazardous Assessment Committee (HAC); Mr. Zurline was the alternate manager. Mr. Zurline was

responsible for the initial review of the EARMS. Mark Spears was responsible for the final review. Collectively, Mr. Spears and Mr. Zurline will be referred to as the HAC managers.

The complainant started working for Excalibur on November 17, 1997, AR at 405, as a principal scientist.(3) Excalibur assigned the complainant to work primarily on drafting and revising EARMs.(4)

During the hearing there was significant testimony regarding the complainant's performance. The testimony generally indicated that the complainant was a hard worker, motivated and technically competent. The testimony also indicated several areas in which the complainant needed to improve, including the quality of his written work, his ability to follow oral direction and his responsiveness to others' concerns.(5) I will briefly review some of the testimony regarding the complainant's performance.

Mr. Burns, Excalibur's Chief Executive Officer, testified that the complainant was "motivated" and he would volunteer to undertake "a task that I wanted done." TR at 390. "I looked at [motivation to undertake a project] very favorably." TR at 391. Mr. Burns' testimony further indicated that the complainant had difficulties dealing with comments. TR at 392. I found Mr. Burns' testimony particularly thoughtful and candid when he indicated the complainant had difficulties dealing with others and was sometimes unwilling or unable to follow direction he received from management. Mr. Burns also indicated that the complainant's final documents required an additional review by editors because the first set of editorial comments was not always properly implemented. TR at 415. Mr. Burns summarized his testimony by indicating there was good and there was bad in the complainant's work. TR at 391. Mr. Burns' testimony was confirmed by Tony Miles.(6) Mr. Miles worked in a cubicle that was next to the complainant's. He testified:

> On numerous occasions Charlie Burns came over and he gave [the complainant] some assignments that required extra work. And it showed that Charlie Burns had a lot of faith and confidence in [the complainant]. And on other occasions he came by and he complimented [the complainant] on work that he had done.

TR at 333. Mr. Miles also testified that he had a Ph.D. and did peer review of the complainant's work. He testified that he thought that the complainant's work was of high caliber and he was technically knowledgeable. TR at 334.

The testimony of Mr. Spiegel, Excalibur's Chief Operating Officer, indicated that he had little first hand contact with the individual. He testified that he deferred to Mr. Burns in evaluating the technical abilities of the complainant. TR at 266. He further testified that in evaluating the complainant's teamwork and work quality, he deferred to comments from his peers and Mr. Richards. TR 266. The OHA investigator's notes indicate that Mr. Spiegel's evaluation was that the complainant's work was satisfactory and that "he would have no problems rehiring him should the company have a future need of his skills." AR at 275.

Mr. Richards testified that the complainant's work was generally technically accurate. TR at 205. He also testified that "technically in some of his documents he was better and more detail-oriented. Sometimes, he missed things. I can't really say how he compared directly to any of the other analysts." TR. at 216. The testimony of Mr. Richards confirmed that the complainant had some difficulty with written and oral communications.

The complainant was discharged on October 21, 1998. The October 21, 1998, out processing form provided to the complainant indicates the complainant was discharged because there was "insufficient scope of work to justify retaining the service of [the complainant]." AR at 365. Mr. Spiegel's testimony also indicated the complainant was discharged because there was insufficient work for the complainant. TR at 545.

There is no dispute that prior to the complainant's dismissal he participated in "an administrative proceeding conducted under part 708." 10 C.F.R. § 708.29(b). That administrative proceeding was initiated

in June of 1996 when the complainant filed a whistleblower complaint against Kaiser and his direct employer Tenera, a subcontractor of Kaiser. The final agency decision on that complaint was issued on August 19, 1998. The complainant believes the October 21, 1998 dismissal was a retaliatory act for his participation in that Part 708 proceeding.

IV. Analysis

A. Complainant's Showing

As stated above, under Part 708 a complainant has the burden of demonstrating, by a preponderance of the evidence, that the complainant engaged in protected conduct and that the protected conduct was a contributing factor to a reprisal. As explained below, I have concluded that the complainant has met his burden.

1. The protected conduct

As indicated above, it is undisputed that the complainant participated in the administrative proceeding conducted under Part 708 from June 1996 through August 1998. This was protected conduct under Part 708.

2. The adverse personnel actions

Three relevant personnel actions by Excalibur's management preceded the complainant's October 21, 1998 dismissal. Each of these actions contributed to the dismissal.

The first personnel action occurred in February 1998 when Mr. Burns directed "Mr. Richards to take the lead in dealing with [Kaiser]." TR at 385. This meant the complainant would no longer be the team lead for the EARMs, he would not be permitted to sign the documents he prepared, and his interactions with the HAC managers would be reduced.

The second personnel action was Excalibur's decision to enter into a subcontract with Global Business Associates (GBA).(7) This contract was entered into during June 1998. GBA was a subcontractor with one employee, Mr. Ron Beaulieu. Under this contract GBA was given the responsibility for preparing and maintaining certain EPHAs and ERAMs. This contract and the extension of the contract into fiscal 1999 had the effect of reducing the work on EARMs available for employees of Excalibur.

The third personnel action was Excalibur's senior management's written rating of each of its twelve analytical employees. Complainant's exhibit #12. This rating was prepared in June 1998.(8) The complainant was rated the lowest of the twelve Excalibur employees. That written rating of its employees was the most important factor in Excalibur's determination of which employee to dismiss.

As the foregoing indicates, three negative actions - Excalibur's removal of the complainant as the team lead, Excalibur's transfer of work to an outside contractor and Excalibur's low rating of the complainant - contributed to the complainant's dismissal. As explained below, the complainant has met his burden of demonstrating that his protected conduct was a contributing factor to the three negative actions that led to his dismissal.

3. Contributing Factor

It is undisputed that a complainant can show that protected conduct was a contributing factor by showing that the official taking the action had actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the

personnel action. For an example of a case applying this standard, see Barbara Nabb, 27 DOE ¶ 87,519 (1999).

As explained below, the complainant has met this standard: the complainant has shown such constructive knowledge and temporal proximity. I consider the temporal proximity first.

a. Temporal proximity

In this case the three preliminary Excalibur personnel decisions all occurred at the same time as the protected conduct, i.e., during the pendency of the complainant's protected participation in the Part 708 proceeding. Therefore, there is a direct temporal nexus between the complainant's protected conduct and the personnel decisions that led to his dismissal. There is also a close time nexus between the protected conduct, which concluded during August 1998, and his October 21, 1998 dismissal.

b. Actual or constructive knowledge

Although it is clear that Excalibur had no direct knowledge of the protected conduct, the complainant has demonstrated that Excalibur's management had constructive knowledge of such conduct. As explained in section i below, the complainant can demonstrate constructive knowledge by demonstrating that the individuals making the personnel decision were influenced by the opinions of those persons with knowledge of the protected conduct. In this case, there are two communication linkages that demonstrate that negative information was passed from those with knowledge of the protected disclosure to Excalibur's management. The first is between Kaiser employees involved in that protected proceeding and the Kaiser HAC managers. The basis for finding a passage of negative information from those involved in the protected proceeding to the HAC managers will be discussed in section ii below. The second linkage is between the HAC managers and Exclaibur's management. The method used to pass negative information from the HAC managers to Excalibur management will be discussed in section iii below.

i. The legal standard for demonstrating constructive knowledge

Under Part 708 case law, a complainant can establish constructive knowledge by showing that the person taking the alleged retaliatory act was influenced by the negative opinions of those with knowledge of the protected conduct. See Am-Pro Protective Services, Inc., 26 DOE ¶ 87,511 (1996) (Am-Pro); Morris J. Osborne, 27 DOE ¶ 87,542 (1999); Jimmie L. Russell, 28 DOE ¶ 87,502 (2000). For example, in Am-Pro, the complainant's first and second level supervisors recommended to the third level supervisor that he terminate the complainant for insubordination, and the third level supervisor took the recommended action. Am-Pro found that, because the third level supervisor acted on information originating with those with knowledge of the protected conduct, the third level supervisor had constructive knowledge of the protected conduct. Thus, the decision stands for the proposition that if the alleged retaliation is based on information that is tainted by the protected disclosure, the decision maker has constructive knowledge of the protected disclosure. In the other two cases cited, the personnel recommendation of independent committees were directly affected by those with direct knowledge of the protected conduct.

The foregoing decisions take into account the realities of organizational structure and the manner in which we have seen retaliations occur in the workplace. If a complainant makes a protected disclosure to his immediate supervisor, and his immediate supervisor retaliates by recommending the complainant's dismissal, it is unlikely that the immediate supervisor will cite the protected disclosure. Instead, the immediate supervisor will likely cite a pretext such as poor performance or misconduct. As a result, the decision maker is led to believe and reasonably believes that poor performance or misconduct prompted the recommended action, and the decision maker takes the recommended action on that basis. Thus, the decision maker's lack of knowledge of the protected conduct is attributable to reasonable reliance on subordinates.

Excalibur argues, however, that in order for a complainant to demonstrate that the person taking the retaliatory action had constructive knowledge of the protected conduct, the complainant must establish that the person should have known, in the exercise of reasonable care, of the protected conduct. As authority for this proposition, Excalibur cites the definition of "constructive knowledge" in Black's law dictionary.

Excalibur's definition of constructive knowledge is not applicable in this proceeding. As just explained, under Part 708, a complainant can demonstrate constructive knowledge by showing that the alleged retaliation is based on information that is tainted by the protected disclosure. None of the decisions cited above contained a finding that the decision maker should have known, in the exercise of reasonable care, of the protected conduct, and there is nothing in those decisions to indicate that the decision makers' lack of knowledge resulted from a lack of reasonable care. Indeed, those decisions demonstrate how a definition of constructive knowledge that requires proof of lack of reasonable care would ignore the decision making context in which reprisals commonly occur.

Finally, I note that, aside from Excalibur's specific argument about constructive knowledge, a thread running through Excalibur's submissions is that Part 708 protections do not apply where the decision maker has no retaliatory intent. I disagree. By looking at the decision maker, this narrow reading would deny Part 708 protection to any complainant even though the employee's protected conduct contributed to the adverse action. It would thereby frustrate Part 708's purpose of protecting whistleblowers. Moreover, the respondent's argument is inconsistent with case law under the Whistleblower Protection Act, 5 U.S.C. § 1221(e)(1). Marano v. Dep't of Justice, 2 F.3d 1137 (Fed. Cir. 1993). In Marano, the complainant disclosed mismanagement in his office. The resulting agency investigation confirmed the accuracy of the disclosures, which in turn led to a reorganization of the office, including the transfer of the complainant. The court held that, even though the agency did not have any retaliatory motive in transferring the complainant, the complainant had met his burden of establishing that his disclosures were a contributing factor to the transfer. Thus, the Marano decision makes clear that a complainant can meet his burden without establishing retaliatory motive.

As explained below, the complainant has demonstrated that Excalibur's management had constructive knowledge that he participated in a protected proceeding. Although the linkage between these Kaiser employees and Excalibur's senior management is more attenuated than the linkage in the three cases cited above, the same principle applies. The record indicates that it is more likely than not that the complainant's participation in a prior Part 708 proceeding led various Kaiser employees to make negative comments about the complainant that predisposed the HAC managers to negatively evaluate the complainant to Excalibur.

ii. The HAC managers' constructive knowledge of the protected conduct

As discussed below, the record indicates that the complainant's prior Part 708 proceeding resulted in a general animus toward the complainant, that Kaiser employee Spears was aware of that animus, and that Kaiser HAC manager Spears and his fellow HAC manager Zurline, passed negative comments about the complainant along to Excalibur's management. I conclude that the HAC managers' comments were based on a preconceived negative bias toward the complainant because the HAC managers made those comments in unusual haste, the comments had significant immediate effects on the complainant, and there is no support for the accuracy of their comments.

In this case at least three Kaiser officials were directly aware of the complainant's participation in the protected proceeding. They are R. E. Kell, the deputy manager of the Kaiser Safety Engineering and Technical Service Office (SETS office), Robert Allen, Manager, Kaiser Human Resources, and Dana Dorr, Kaiser Work Force Restructuring Manager (hereinafter referred to collectively as the "directly involved Kaiser employees"). Mr. Kell signed the April 1996 memorandum that directed Tenera, the complainant's employer, to dismiss the complainant. Excalibur Exhibit #17. That dismissal was the adverse personnel action that led to the prior whistleblower proceeding. Mr. Allen and Mr. Dorr worked for Kaiser on investigating and evaluating the prior whistleblower complainant.

The evidence is clear that other Kaiser employees knew of the protected conduct and made negative comments about the complainant. The record indicates that two senior Kaiser/Tenera employees, Mr. Maini, a Tenera employee who headed the Kaiser SETS Office, and Ms. Bateman, made comments that the complainant was a whistleblower and should not be rehired during 1996.(9) In addition the record indicates that Mr. Tony Buhl, Vice President Environment Safety and Health and Assurance, made comments that he would not hire the complainant during 1998.(10)

It is clear that HAC manager Spears worked with various Kaiser employees who had knowledge of the complainant's participation in the protected proceeding. On the organization chart for the SETS Office(11) dated March 1, 1996, Mr. Spears reported directly to Mr. Maini and his deputy Mr. Kell. As mentioned above, Mr. Kell was directly involved in the prior proceeding and Mr. Maini, his supervisor, was found by the Deputy Inspector General to have made negative comments about hiring the complainant. Ms. Bateman is also listed on that organization chart. As also mentioned above, she was also found by the Deputy Inspector General to have made comments aimed at assuring the complainant was not hired. Including Mr. Spears, there are six people named on the March 1996 organization chart of the SETS Office. Three of the other five people on the chart were directly involved in the prior protected proceeding. In such an office set up I believe that while Mr. Spears may not have been aware that the complainant was a whistleblower, Mr. Spears would have been aware of the problems being caused by the complainant and the negative feeling of his peers and supervisors toward the complainant.

Excalibur asked Mr. Spears two questions in an attempt to demonstrate that Mr. Spears did not have knowledge of the negative feeling toward the complainant in the SETS office. Those questions were "Do you know if [the complainant] was a whistleblower?" and "Did you ever have any conversation with Mr. Dick Kell about [the complainant]?" TR at 249-250. Mr. Spears answered no to both of those questions. However, this testimony does not even address the issue whether Mr. Spears was aware of the bad feeling in the office toward the complainant.(12)

The HAC managers' alacrity in negatively evaluating the complainant's work and their weak and evasive testimony regarding the basis for their determination provide further support for the conclusion that the HAC managers had a preconceived negative bias toward the complainant.

HAC managers Spears and Zurline negatively evaluated the complainant's work from the outset, i.e., in January 1998. HAC manager Spears testified that he first met the complainant during January 1998 when the complainant was preparing the first group of EARMs. That month the complainant provided ten draft EARMs to the HAC managers for their review. At that point the complainant had been an employee for less than two months and had just completed the first drafts of ten EARMs; these ten EARMs were the first group of EARMs that had been developed for Rocky Flats. TR at 179 and 202.

The HAC managers testified that during January 1998 they each provided negative comments directly to Excalibur's senior management, regarding the quality of all documents received from Excalibur, but the HAC managers did not testify with any specificity concerning their quality concerns. TR at 207 and 240.

HAC manager Spears testified that he provided feedback to Excalibur's CEO Spiegel, which indicated Mr. Spears "was dissatisfied with the quality of the products he was given to review." TR at 240. He indicated that there were "an excessive number of substantive and technical errors in the document." TR at 240. But he did not provide any examples of such errors at the Hearing.

Similarly, HAC manager Zurliene testified that he had meetings with the complainant and others in which he criticized the complainant's work product. TR at 179. He testified that he told Mr. Spiegel that the complainant's work was not "competently based." TR at 181. When he was asked "What was not technically competent about the [complainant's] work?", his testimony was evasive and did not specifically point to any incompetence. TR at 182. From his demeanor and the lack of specifics in his testimony, I conclude that he did not have a reasonable basis for his conclusion that the complainant's work was not technically competent. TR at 181.(13)

In summary, the initial contact between the HAC managers and the complainant was in January 1998. There was limited contact between the HAC managers and the complainant during that month.(14) The HAC managers' specific concerns regarding the EARMs were quickly resolved. Yet, the HAC managers provided negative comments to Excalibur which, as discussed below, caused Excalibur's management to quickly downgrade the complainant.

I believe the HAC managers did not testify honestly at the Hearing about the nature of their comments. The HAC managers suggested in a portion of their testimony that their comments in January 1998 to Excalibur's senior management related to the quality of all documents received from Excalibur. TR at 500 and 501. In that testimony they were trying to convince me that they did not make comments regarding specific employees' work.(15) My evaluation of this testimony was that it was intentionally vague and was intended to be evasive. When they made these statements, their general demeanor indicated they were not willing to recall the substance of their comments and that they were attempting to minimize the importance of their comments. Their evasiveness led me to believe their comments to Excalibur's management regarding the complainant were specific and strongly negative. The fact that only the complainant was downgraded and only his contact with the HAC managers was reduced supports my evaluation of the HAC manager's testimony.

As the foregoing indicates, I have concluded that the HAC managers had constructive knowledge of the protected conduct. It is not the complainant's burden to demonstrate exactly how the animus was passed to the HAC managers by Kaiser/Tenera employees. Such a burden is typically beyond the ability of any whistleblower. The complainant has shown that his protected conduct caused animus by the Kaiser/Tenera management and that it is more likely than not that this animus influenced the HAC managers to make negative comments to Excalibur.

iii. Excalibur's constructive knowledge of the protected conduct

It is clear that beginning in January 1998 HAC manager Spears and Zurline provided negative evaluations of the documents prepared by the complainant. Mr. Richards clearly remembered that "It was right after [the complainant] had produced the first couple of documents and we had gotten comments on them. Then I was instructed to assume full responsibility for all of them." TR at 200. Mr. Burns testified that he recalled that comments he received from Kaiser either directly or indirectly indicated that "there are problems with [the complainant's] ability and/or willingness to accept and/or deal with comments . . ." TR at 384. He also indicated that "There was a difficulty in the ability for [the complainant] to deal with the comments and come back with an answer that resolved the issue in more than just a superficial way." TR at 384. However, Mr. Spiegel described the information he received from the HAC managers in a slightly different manner. He testified that the comments indicated that the documents lacked quality. TR at 273. He also stated that the HAC managers indicated "our process lacked proper definition and that the documents had not gone through a rigid quality assurance before being forwarded to him." TR at 274.

Therefore, even though I believe that Excalibur employees were not aware of the complainant's participation in the prior protection proceeding, I find that Excalibur's senior manager received and considered the negative opinions of the HAC managers. These findings lead to the conclusion that Excalibur had constructive knowledge of the complainant's participation in the protected proceeding when it made various personnel decisions regarding the individual. Once there is a reasonable inference that the complainant's participation in the protected proceeding had an effect on the individuals making personnel decisions at Excalibur the complainant has met his burden of showing that his participation in the protected proceeding was a contributing factor to the adverse personnel decisions.

B. Excalibur's Showing

In light of my finding that the complainant's protected activity was a contributing factor to his dismissal, the burden is on Excalibur to show by clear and convincing evidence that the complainant would have

been dismissed absent the participation in the prior Part 708 proceeding. Excalibur must demonstrate by clear and convincing evidence that it would have taken the personnel actions even if it had not received the HAC managers' evaluation that the complainant's work was not technically accurate. As an initial matter there has been no analysis to support the HAC managers' comments that the complainant's work was not technically competent. Excalibur did not submit any documents prepared by the complainant. Nor did it provide any analysis to support the position that the complainant's work was technically unsatisfactory.

Instead Excalibur has attempted to show that its decision to dismiss the complainant was a reasonable business decision. Excalibur has provided testimony from its senior management which indicates its reasons for reducing the complainant's contact with the HAC managers, contracting GBA, and rating the complainant as its poorest performing employee. The testimony tends to indicate that given Excalibur's receipt of the negative evaluations from the HAC managers, there was a reasonable basis for each of the three preliminary personnel decisions. The testimony also indicates that after those preliminary decisions were made it was reasonable to dismiss the complainant.(16) I am convinced that the senior management officials of Excalibur made each of the initial decisions without malice toward the complaint. Nevertheless, the burden is on Excalibur to show that it would have dismissed the complainant absent the effects of the complainant's participation in the protected proceeding.

In this case Excalibur's senior management's opinions of the complainant were clearly affected in a number of ways by the evaluation of the HAC managers.(17) Over time, the HAC managers provided information which indicated that the complainant's work was technically incompetent. Therefore, in order to prevail Excalibur is required to demonstrate that, in the absence of knowledge of the HAC managers' opinions, it would have reached the decision to hire a subcontractor, rate the complainant poorly and then dismiss him. I do not believe the testimony provided by Excalibur comes close to making these showings under the clear and convincing standard.

For instance, the decision to hire a subcontractor (GBA) was critical to the company's ability to perform its work without the services of the complainant. The testimony of Mr. Burns attempts to convince me that performing the work through GBA was more cost effective than performing the work in house. Mr. Burns suggested two reasons why he believed GBA was more cost effective. Mr. Beaulieu (the sole employee of GBA) agreed to a fixed price contract to complete 16 EPHAs and 16 EARMs in fiscal 1999. TR at 409. Mr. Burns indicated that such production levels would significantly exceed the production level of Excalibur employees in 1998. Mr. Burns further indicated that under the guidance of GBA and using GBA's methodology, an Excalibur employee, Mr. Blumstein produced significantly more EPHAs and ERAMs than he had in fiscal 1998. TR at 423. Mr. Burns ascribed the increase in production of Mr. Blumstein to the efficiency of GBA's methodology and supervision. I found this portion of his testimony to be deceptive. In fact, the development work on all of the EPHAs was completed in fiscal 1998. Mr. Burns' initial testimony indicated that you could measure the increase in production by comparing the number of documents prepared in each year. However, cross examination confirmed the prior testimony at the hearing that the work to be done in fiscal 1999 constituted revising and updating the documents prepared in 1998 and that revising and updating a document took less time than the initial preparation of a document. When asked about the difference between the 1998 development and the 1999 maintenance, Mr. Burns recognized that his stated reason for believing that 1999 production was higher than 1998 was illogical. Initially he seemed confused and was unable to articulate a reason why he believed production levels per employee were higher in 1999. Finally, after some confusion he testified without support that "It well could have taken twice to three times as many hours as what it took in fiscal 1999 as it did take." TR at 439. His initial statements provided a misleading comparison and his final statement was unconvincing and provided no reason other than his extemporaneous opinion to believe that production was higher in 1999. Therefore, Excalibur has provided no support for its position that GBA was more productive than Excalibur employees. Excalibur has failed to present a convincing rationale for hiring GBA in the absence of the negative comments of the HAC managers.

Another stated basis for Excalibur's decision to dismiss the complainant was Mr. Spiegel's often-repeated

assertion that in making his decision to lay off the complainant he considered only Excalibur employees. He was clear that he did not consider laying off subcontractors. TR at 279. The decision to consider Excalibur employees only made it much more likely the complainant would be dismissed. There is no support for the proposition that Mr. Spiegel would have only considered Excalibur employees in the absence of the complainant's participation in the protected proceeding. If the HAC managers' evaluations of the complainant had been more positive, Excalibur certainly would have at least considered other options for reducing costs. Therefore, I find there was no clear and convincing evidence presented to support the position that Excalibur would have subcontracted with GBA and would have considered dismissing only Excalibur employees in the absence of the comments of the HAC managers.

After considering the documentary information, the briefs of the parties, the testimony given at the hearing, and the parties' post- hearing submissions, I find Excalibur has not shown by clear and convincing evidence that it would have discharged the complainant absent the poor evaluations of his work provided by the HAC managers.

V. Conclusion

Based on the analysis presented above, I find that the complainant has participated in an administrative proceeding conducted under Part 708, and that Excalibur's dismissal of the complainant was an adverse personnel action that constituted a retaliatory act under Part 708. Therefore, the complainant is entitled to remedial action from Excalibur. The individual has requested back pay and litigation expenses. The back pay shall be calculated from October 21, 1998 until the day the complainant accepted a position at Los Alamos National Laboratory, October 12, 1999. The hourly rate shall be the rate the complainant was paid as a consultant, $39.60.

It Is Therefore Ordered That:

(1) The Request for Relief filed by the complainant under 10 C.F.R. Part 708 is hereby granted as set forth below.

(2) Within thirty days of the date of this order the complainant shall provide Excalibur with a detailed report that provides a detailed calculation of attorneys' fees and litigation expenses.

(3) Within thirty days of the date of this order the complainant shall provide Excalibur with a report which calculates back wages for forty hours each week from October 21, 1998, through October 12, 1999. The hourly rate shall be $39.60. There shall be no offsets for unemployment benefits or wages earned by the complainant. Interest shall accrue on the back-wages at the rate of 1% per month starting on November 1, 1999. Interest shall compound monthly.

(4) Within sixty days of the date of this order Excalibur shall pay the attorney's fees and litigation expenses as reported pursuant to Paragraph (2) above and shall pay back wages as reported pursuant to Paragraph (3) above.

(5) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting the complainant relief unless, within 15 days of the date of this Order, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Thomas L. Wieker

Hearing Officer

Office of Hearings and Appeals

Date: September 1, 2000

(1)The Investigator's Report is a ten page written determination. It will be referred to as the "IR". The Administrative Record of the OHA investigative proceeding consists of 489 pages and will be referred to as the "AR".

(2)During the 1998 fiscal year (October 1, 1997 through September 30, 1998) Excalibur had between ten and twenty employees.

(3)Mr. Burns testified that prior to hiring the complainant he did not check the complainant's references nor did he call anyone at Rocky Flats regarding the complainant. TR at 376.

(4)Mr. Burns testified that the analyst that created an EARM signed it as the subject matter expert and therefore in January 1998 the complainant was signing the EARMs that he authored. TR 379.

(5)In addition to the testimony at the hearing, the record contains three relevant memoranda from Excalibur's management. The first is an April 29, 1998, memorandum from Mr. Spiegel to the file indicating concerns that he had discussed with the complainant. AR at 399. This memorandum indicates Mr. Spiegel discussed the complainant's inability to communicate with co-workers and his failure to listen to instruction. The memorandum also indicated that Mr. Spiegel indicated to the complainant that he had many talents that were valuable to the company. The second is an August 11, 1998, memorandum from Mr. Richards to Mr. Spiegel indicating problems with the complainant's work. AR at 403. That memorandum indicated Mr. Richards' opinion that the complainant had difficulty following guidance on the structure of reports and that the complainant's written language skills were weak. The third is an August 31, 1998, memorandum from Mr. Spiegel to the file indicating he had discussed Mr. Richards' concerns with the complainant. AR at 402.

(6)Mr. Miles worked for Excalibur as an employee of G.D. Barri. G.D. Barri was subcontractor of Excalibur.

(7)Mr. Spiegel testified that the decision to subcontract some of Excalibur's work to GBA was a business decision made by Mr. Burns. TR at 536. He also testified that he knew the decision to hire GBA had the potential of causing the layoff of current employees. TR at 539.

(8) Mr. Spiegel testified that the written evaluation was prepared during the May/June time frame. TR at 558.

(9)Complainant's exhibit #4 is the June 22, 1998, Supplemental Report of Inquiry and Recommendation. That report was prepared by the Acting Deputy Inspector General for Inspections. The report indicates Mr. Maini and Ms. Bateman attempted to dissuade Tenera management from rehiring the complainant. Complainant Exhibit #14 at 13. The organization charts contained in complainant's exhibit #9 indicate that Mr. Maini was the head of the Kaiser SETS Office and was a Tenera employee.

(10)Tony Miles testified at the hearing. He indicated that during 1998 he was considering submitting a bid to become a subcontractor. Mr. Miles testified that he discussed the proposal with Mr. Buhl. Mr. Miles indicates that Mr. Buhl was favorably inclined to the project. However, Mr. Miles testified that when he mentioned the complainant's name Mr. Buhl indicated that the complainant had "been engaged in a whistleblowing incident, and, he said that he would probably have some reluctance to bring a person like that into his company." TR at 243.

(11)There were four Kaiser organization charts included in complainant's Exhibit #10. The first is an overall organization chart for Kaiser. The second and third indicate the organization of two offices listed on the overall organization chart and mentioned in the text. The fourth is a lower level office which is not referred to in this decision. Two of the office organization charts are dated March 1, 1996. The other two organizational charts are undated but they appear to reflect the organization on March 1, 1996.

(12)It is difficult to elicit testimony that the HAC managers were aware of the negative feeling of other Kaiser employees toward the complainant because the HAC managers themselves would not recall a general comment that indicated euphemistically that the complainant was not a team player. Nevertheless, such a euphemism or code word would have led the HAC managers to form the opinion that the complainant should be placed under a higher level of scrutiny. Euphemisms/code words that have been seen in other cases include “insubordinate”, “dangerous” and “does not act in the best interest of the company”. People usually pick euphemisms/code words that are somewhat reasonable. Therefore, my impression is that the euphemisms/code words used in this case probably were more likely to have been along the lines of “he is a pain in the neck”, “he never listened to what I tell him”, “he is hard to get along with” and “he makes my life difficult”.

(13)In addition there was no testimony or documents indicating a basis for finding the complainant’s work was, in fact, technically unsatisfactory. In the last week of January nine of the EARMs were accepted after the requested changes were made. See the “approved by” date on the first ten pages of complainant exhibit #5. There was no basis presented to indicate specific technical errors in the complainant’s work nor was any testimony provided which indicated that the complainant’s work was less satisfactory than other Excalibur employees.

(14)Mr. Spears met with the complainant only two times before the complainant was removed from his lead position. Excalibur’s post hearing brief at 16.

(15)Mr. Burns testified that he received comments from the HAC managers regarding specific Excalibur engineers. TR at 500. Additionally, in its post hearing brief Excalibur indicates that Mr. Spears provided specific comments about the quality of work presented by Mr. Beaulieu. Post Hearing brief at 17.

(16)Mr. Spiegel testified that prior to the complainant’s dismissal, Excalibur moved Mr. Blumstein and Mr. Richards to other activities. TR at 563.

(17)The complainant need only establish that the HAC managers’ negative comments contributed to Excalibur’s decisions. In Osborne a supervisor convinced a disciplinary committee that the complainant was engaged in time card fraud. The committee had no retaliatory motive. However, the committee was manipulated into recommending dismissal by the false information provided by the supervisor. In that case the committee relied on the statements of the supervisor that the individual had committed time card fraud. In this case Excalibur’s senior management relied on the evaluations of the HAC managers. At the hearing in the Osborne case the committee members were convinced they had made an independent judgment. However, they were unable to explain why they believed the action of the complainant constituted time card fraud.

Case No. VBH-0011

December 22, 1999

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner:Diane E. Meier

Date of Filing: April 16, 1999

Case Number: VBH-0011

This Decision involves a complaint filed by Diane E. Meier (Meier or “the complainant”) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Meier is the former employee of a DOE contractor, Lawrence Livermore National Laboratory (LLNL or “the contractor”), and alleges in her complaint that certain reprisals were taken against her, including being the subject of unjustified anger and threats from her supervisor, and ultimately being removed by the contractor from her position on a favored work project, as a result of her participating in an act protected under Part 708. More specifically, Meier alleges that these adverse personnel actions were taken against her in retaliation for disclosing to the contractor her disapproval of the supervisor’s improper conduct in assuming supervision of his wife working on the project, in violation of the contractor’s personnel rules concerning the supervision of “near relatives.” In compensation for these alleged retaliations, the complainant seeks reinstatement, back pay, other unspecified damages, and reasonable attorney’s fees. On the basis of the hearing that was conducted and the record before me, I have concluded that Meier is not entitled to relief under 10 C.F.R. Part 708.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533

(March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure, or participating in a related proceeding, will be directed by the DOE to provide relief to the complainant.

As initially formulated, the program regulations, codified at 10 C.F.R. Part 708, generally prescribed independent fact-finding by the DOE Office of Inspector General (IG), followed by the issuance of a Report of Inquiry setting forth the IG’s findings and recommendations on the merits of the complaint. Thereafter, the complainant could request a hearing before a Hearing Officer assigned by the DOE Office of Hearings and Appeals (OHA), pursuant to which the Hearing Officer rendered an Initial Agency

Decision. However, on March 15, 1999, DOE issued an amended Part 708, effective April 14, 1999, setting forth procedural revisions that "apply prospectively in any complaint proceeding pending on the effective date of this part." 10 C.F.R. § 708.8; *see* 64 Fed. Reg. 12,862 (March 15, 1999). Under the revised regulations, OHA conducts the investigation of the complaint, if one is requested by the complainant. 10 C.F.R. § 708.22. Similar to the prior regulations, the Director of OHA then appoints a Hearing Officer who conducts a hearing on the record and issues an Initial Agency Decision. 10 C.F.R. §§ 708.28, 708.30. Parties may seek review of an Initial Agency Decision by the filing of an appeal with the Director of OHA, in accordance with section 708.32.

B. The Present Proceeding

(1) Procedural History

On April 22, 1998, Meier filed her complaint under Part 708 with the IG, which accepted jurisdiction in a letter dated June 2, 1998. On April 16, 1999, the complaint was transferred to OHA which immediately assigned an investigator to the case, 10 C.F.R. § 708.22. OHA Case No. VBI-0011. In conducting the investigation of the complaint, the investigator interviewed the complainant and other key individuals, and received pleadings and supporting documents filed on behalf of the individual and contractor. Based upon this information, the investigator issued a Report of Investigation on June 14, 1999.

In the Report of Investigation, the investigator sets forth her findings that the complainant arguably made disclosures protected under Part 708, and assuming a protected disclosure is found, that there is sufficient temporal proximity to the retaliations alleged by the complainant to permit an inference that the disclosure was a contributing factor. The investigator further found that while the contractor claimed that its actions with respect to the complainant were not in retaliation for any protected disclosure, the complainant challenges the contractor's support for this claim.

Concurrent with the issuance of Report of Investigation, I was appointed as Hearing Officer in this case. 10 C.F.R. § 708.25. After a number of contacts with the parties in the form of written correspondence and conference calls, I conducted a hearing in this proceeding on September 9-10, 1999. The official transcript of that hearing will be cited in this determination as "Tr.". Meier and LLNL filed respective post-hearing closing arguments on October 29, and November 2, 1999.

(2) Factual Background

The following summary is based upon the hearing testimony, the investigation file and submissions of the parties. Except as indicated, the facts set forth below are uncontroverted.

The complainant, Meier, was first employed by LLNL in September 1992, as a supplemental labor employee at the Washington Operations Office (WASHOP) located in Germantown, Maryland, a satellite office under LLNL's Fission Energy Systems and Safety Program (FESSP). However, in March 1994, Meier accepted a position as a career LLNL employee working under Thomas Crites (Crites), who in early 1995 became Associate Program Leader (APL) for Environmental Safety and Health (ES&H). In the fall of 1995, the complainant assumed the position of Deputy APL under Crites.

Beginning in 1993, Crites' wife, Linda Rahm-Crites (Rahm-Crites), also worked at WASHOP. Rahm-Crites was actually employed by an LLNL subcontractor, but worked at WASHOP as a supplemental labor employee performing technical editing and writing on various projects on an hourly rate. Although Rahm-Crites was assigned work as needed by project managers, she ultimately reported to Nancy Swertz, another APL who had overall WASHOP management responsibility. In early 1996, however, Ms. Swertz returned to LLNL's home office in Livermore, California (Livermore), and under a reorganization, Crites assumed the position as APL in charge of general office management.

FESSP management personnel at Livermore oversee WASHOP, and ultimately determine hiring and firing of all WASHOP personnel as well as organizational structure. Thus, FESSP management was well aware of the potential conflict of interest associated with Rahm-Crites working under her husband, Crites, and was concerned that this arrangement under the reorganization might constitute a violation of LLNL's "near relative" policy. This policy, as described in LLNL's Personnel Policies and Procedures Manual, prohibits employees from working under the supervision of near relatives. During 1996, Shirley Loquist (Loquist), a FESSP administrator responsible for WASHOP staffing matters, examined this matter and determined that there was no violation since Rahm-Crites was not supervised by Crites, and he was not responsible for her assignments, salary or appraisal. Loquist also visited WASHOP and interviewed employees, including the complainant, to ascertain whether there were problems associated with Crites and Rahm-Crites working in the office. At that time, Meier raised no objection to the arrangement, stating only that it was sometimes "awkward." The complainant and Crites had a friendly, supportive relationship in the workplace, and Meier often interacted socially with Crites and Rahm-Crites outside of the workplace.

However, the friendly relationship between Meier and Crites began to deteriorate in August 1997, when both the complainant and Crites took on new work assignments as a result of impending budget restrictions imposed by DOE and consequential changes in WASHOP's project priorities. WASHOP managers anticipated that in fiscal year 1998 (beginning October 1997), DOE would significantly cut defense program projects, previously a leading source of WASHOP funding. It appeared, however, that there would be ample funding for an emerging project administered by WASHOP, the Highly Enriched Uranium (HEU) Transparency Program (HEU Project). Under the HEU Project, DOE provides assistance to Russia in accounting for and disposing of highly enriched uranium. As part of the program, the United States sends monitors to Russia to ensure that highly enriched uranium from nuclear weapons is properly down- blended. Part of WASHOP's mission for DOE under the HEU Project is to design and conduct the training of these monitors. From January 1996 until September 1997, the WASHOP project manager for the HEU Project was Joe Glazer (Glazer).

In August 1997, Meier completed a project assignment that had previously accounted for a major portion of her time, and Glazer agreed to have the complainant assume the position of Training Coordinator for monitor training under the HEU Project. Although Crites, as APL, agreed to the assignment of Meier as Training Coordinator, he expressed reservations since the complainant had no previous training experience. Crites also had reservations about the handling of the HEU Project in general, since during this time frame he had received complaints from the DOE sponsors about Glazer's performance in administering the program. On August 25, 1997, a meeting was held to discuss a proposed HEU Project training plan prepared by a member of Glazer's staff (not Meier). During this meeting, attended by Crites, Meier, Glazer and Rahm-Crites, Crites was caustically critical of the training plan and suggested that his wife, Rahm-Crites, should perhaps rewrite it. Both Meier and Glazer considered it inappropriate for Crites to have suggested using his wife, Rahm-Crites, to perform work on the project. Meier states that following the meeting, she telephoned Loquist to complain about Crites' behavior at the meeting as well as his attempt to insert his wife in the HEU Project. The complainant states that she also expressed these concerns to Crites. Notwithstanding, the complainant herself gave Rahm-Crites work assignments reviewing training modules on the HEU Project during September 1997, and the complainant was instrumental in having Rahm-Crites appointed as editor of the HEU quarterly newsletter.

Continuing to be concerned with Glazer's performance, however, Crites decided in late September 1997 that he would assume the position as Program Manager of the HEU Project in place of Glazer, and relinquish his position as APL in charge of WASHOP. Crites informed the DOE sponsors of this determination and new HEU Project staff assignments in a letter dated September 26, 1997. Most significantly, the letter states that "Linda Rahm-Crites will assume editorship of the quarterly report." Following issuance of the letter, Meier stated her concerns to Crites in a voice mail message that having Rahm-Crites working directly for him created an improper appearance to DOE sponsors and might cause problems for WASHOP. Almost immediately after making the appointment, however, Crites recognized that due to LLNL policy, he could not have his wife working under him and therefore, during the first week of October 1997, he rescinded the appointment and removed Rahm-Crites from the HEU Project.(1)

Beginning in October 1997, Pete Prassinos (Prassinos) assumed the position of Acting APL, replacing Crites as manager and director of WASHOP. Following the removal of Rahm-Crites from the HEU Project, Prassinos became increasingly concerned that there was insufficient work to justify retaining Rahm-Crites as a subcontracted supplemental employee in view of the diminishing work and available budget resources remaining on other WASHOP projects. Prassinos discussed this matter with the complainant, who continued to serve as Deputy APL besides holding the position of HEU Project training coordinator. Prassinos also discussed the matter with WASHOP project managers, the WASHOP office administrator, and ultimately with FESSP management personnel at Livermore, including Loquist, Mark Strauch (Strauch, FESSP Program Leader), and C.K. Chou (Chou, LLNL Associate Director in charge of FESSP). Based upon these discussions, Prassinos determined that Rahm-Crites should be released. Strauch made the decision to release Rahm-Crites on the basis of Prassinos' recommendation, and Chou approved the decision. Prassinos informed Rahm-Crites in mid-October 1997 that she would be laid off effective November 26, 1997.(2) Upon being informed of this determination, Crites attempted to intervene on his wife's behalf, since he believed that sufficient work remained in the office to justify retaining her services, and he did not believe that Prassinos had the authority to remove her. Crites acquiesced in the termination of Rahm-Crites when it became apparent that Prassinos' action was in fact authorized by FESSP management.

Meier maintains that once Crites became aware of the determination to terminate his wife, he became distant and withdrawn in his relations with the complainant and began take retaliatory actions against her. First, the complainant states that in October 1997, Crites informed the complainant that her billable working hours on HEU Project training were being cut to half time. The complainant states that when she complained about this training cutback, Crites reminded her that he had intended to recommend the complainant for the APL position (of ES&H) which he vacated. Meier states that she took this comment as a threat that Crites no longer intended to do so. In November 1997, the complainant states that Crites became enraged over a minor disagreement concerning the graphics to be used on the cover of the HEU Annual Report. In this instance, the complainant claims that Crites yelled at her with his hands raised in clenched fists and stormed out of the office. According to the complainant, these actions by Crites were taken in retaliation against her because Crites held the complainant responsible for the termination of his wife. Meier maintains that on separate occasions in late 1997, she complained about Crites' behavior toward her to Loquist and to Chou.

The complainant states that during January 1998, Crites continued to exert subtle pressure to undermine her position as HEU Project Training Coordinator. According to the complainant, the most egregious example of this occurred on January 30, 1998, when Crites improperly issued an HEU training solicitation letter. At the time the letter was issued, Meier was away in Oak Ridge, Tennessee (Oak Ridge), conducted HEU monitor training with Janie Benton (Benton), the DOE employee responsible for oversight of HEU Project training. The January 30, 1998, letter issued by Crites concerned proposed training on the use of specialized uranium testing equipment, referred to as NDA. Upon seeing the letter after returning from Oak Ridge, the complainant felt strongly that Crites had transgressed proper procedures by not getting approval from Benton to proceed with the NDA training, and the complainant was also disturbed that he had not discussed the matter with her. According to the complainant, Crites refused to discuss the NDA training letter with her in private and she therefore confronted Crites with the matter on February 13, 1998, at the monthly HEU Project staff meeting held to discuss action items. Meier states that Crites again attempted to avoid discussing the NDA training letter, stating that it was not an appropriate agenda item for the staff meeting. The complainant states that when she refused to drop the matter, Crites became enraged and told Meier with a hostile expression on his face that he had not involved her in NDA training since she was not competent to conduct training in this technical area, whereupon the complainant left the meeting.

On February 17, 1998, Meier telephoned Strauch and emotionally voiced her concerns that Crites was out of control and destroying the HEU Project, citing the NDA training letter and their confrontation at the February 13, 1998, meeting as examples. The complainant further claimed that Crites was physically

threatening to her and was retaliating against the complainant for her involvement in having Rahm-Crites terminated. The complainant insisted that Crites be removed from the HEU Project and warned Strauch that if Crites were not removed, she would go to the DOE Inspector General (IG) about the former improper working relationship between Crites and his wife. In response to this phone call, Strauch dispatched a crisis management team from Livermore, including an LLNL psychologist and a personnel specialist, to ascertain the causes of the turmoil in WASHOP and the legitimacy of Meier's charge that Crites had physically threatened her. The next day, on February 18, 1998, Meier had a private meeting with DOE sponsors overseeing the HEU Project, including Edward Mastel (Mastel), HEU Project Director. Mastel states that during that meeting, the complainant expressed her discontent with how the HEU Project was being run by Crites, and stated the operational and staffing changes that she would make if she were placed in charge of the project. At the time, Mastel had no difficulties about the manner in which Crites was running the HEU Project.

The next day, on February 19, 1998, the complainant had a conference call with FESSP management personnel including Chou, Strauch and Loquist, in which she vociferously restated her charges against Crites, claiming that she feared for her personal safety. The complainant again threatened that she would go to the IG if Crites were not removed from the HEU Project. According to Strauch, the complainant also threatened to take the HEU Project to another national laboratory. Strauch indicated that he would get back to the complainant with his decision within a few days.

In the interim, on February 24, 1998, the crisis management team that Strauch had sent to WASHOP issued its report of its findings with regard to the allegations made by Meier, based upon its interviews with staff personnel including those present at the February 13, 1998 meeting. The crisis management team found no basis for the complainant's allegation of "physical threats" by Crites, stating in the report that "[n]one of the individuals interviewed have observed behaviors by [Crites] that they interpreted as threatening toward [Meier]." To the contrary, the report states that "[s]everal individuals have expressed concern for [Meier's] behavior in dealing with these issues." While staff members noted a change in Crites' behavior toward Meier, perhaps attributable to the termination of his wife, "[o]f greater concern to several interviewed is recent behavior by [Meier]" and "[s]everal indicated that they feel she is overreacting to events and on the edge of losing control." At the same time, the report finds that Crites was not sensitive to "people issues."

On February 27, 1998, Strauch telephoned Meier and informed her of his determination that due to "irreconcilable differences" between her and Crites, Strauch had determined to remove Meier from the HEU Project. In a letter to the complainant issued the same day, Strauch explains that the DOE sponsors were generally satisfied with Crites' performance and "there is no significant basis for the removal of [Crites] from this leadership position as you have requested." The letter further notes what Strauch deemed "inappropriate interaction" between Meier and the DOE sponsors, and that the complainant had taken an "unprofessional approach" in conveying her demands to FESSP management. In this regard, the letter states that while any employee is free to go to the IG, "to frame a request for management action in your favor by threatening to go to the IG if not implemented is not a professional way to resolve differences with management." The letter concludes by itemizing a list of expectations regarding the complainant's future conduct, *e.g.* maintaining "civil, courteous and professional interaction" with all staff members. Strauch sent a corresponding letter to Crites informing him of his determination to transfer the complainant from the HEU Project that concludes with a similar list of behavioral expectations.

After receiving Strauch's telephone call, the complainant flew into a rage, based upon the observations of those present. The complainant first went to the personnel office and began copying portions of Rahm-Crites' time cards. Glazer stated that in the process of doing this, Meier upset the personnel secretary to the point of tears and also threatened to "steamroll" him if he got in her way. Meier later apologized to the secretary before packing some of her things and leaving the work site. The complainant never returned to work at WASHOP, but went on medical disability leave, apparently on the basis those prior occurrences had exacerbated a mental condition that prevents her from working. After a year's time, LLNL requested medical documentation of the work restriction from the complainant, which she refused to provide.

Therefore, in a letter to the complainant dated June 18, 1999, LLNL separated Meier from employment based upon her inability to perform the essential functions of her position.

II. Legal Standards Governing This Case

The regulations of the Contractor Employee Protection Program, 10 C.F.R. Part 708, provide in pertinent part that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because the employee "[d]isclosed to . . . the contractor . . . information that the employee in good faith believes evidences-- . . . (iii) Fraud, management, gross waste of funds, or abuse of authority; . . . ." 10 C.F.R. § 708.5(a)(1). In the present case, Meier claims in her complaint that adverse personnel actions were taken against her, including threats and physical intimidation by her supervisor, Crites, and being removed from a favored work project by the contractor, as a result of making protected disclosures to Crites and FESSP management personnel. According to the complainant, her protected disclosures concerned, first, Crites improperly assigning his wife to a position on the HEU Project and, second, threatening behavior by Crites in retaliation for the complainant's involvement in having his wife terminated.

A. The Complainant's Burden

The regulations describe the burdens of proof in a whistleblower proceeding as follows:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. § 708.9(d); *see* *Ronald Sorri*, 23 DOE ¶ 87,503 (1993). "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the burden of persuasion is allocated roughly equally between both parties. *Grogan v. Garner*, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). As a result, Meier has the burden of proving by evidence sufficient to "tilt the scales" in her favor that she made a protected disclosure under Part 708. 10 C.F.R. § 708.5(a). If the complainant does not meet this threshold burden, she has failed to make a *prima facie* case and her claim must therefore be denied. If the complainant meets his burden, she must then prove that the disclosure was a "contributing factor" in the personnel actions taken against her. 10 C.F.R. § 708.9(d); *see* *Helen Gaidine Oglesbe*e, 24 DOE ¶ 87,507 (1994); *Universities Research Association, Inc.*, 23 DOE ¶ 87,506 (1993). This standard of proof is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C. § 1221(e)(1), and the 1992 amendment to § 210 (now § 211) of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. In explaining the "contributing factor" test in the WPA, the Senate floor managers, with the approval/concurrence of the legislation's chief House sponsors, stated: "The words ?a contributing factor' . . . mean any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision." 135 Cong. Rec. H747 (daily ed. March 21, 1989) (Explanatory Statement on Senate Amendment-S.20). *See Marano v. Dep't of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying "contributing factor" test).

B. The Contractor's Burden

If the complainant meets her burden, the burden shifts to the contractor. The contractor must prove by "clear and convincing" evidence that it would have taken the same personnel action(s) against the

complainant absent the protected disclosure(s). "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus, if Meier has established that it is more likely than not that a protected disclosure was a contributing factor in alleged retaliations, LLNL must convince me that it would have taken these actions despite the complainant's disclosure.

III. Analysis

I have carefully reviewed the record in this proceeding, including the testimony of the witnesses at the hearing and supporting documents submitted by the parties. For the reasons set forth below, I have determined that the complainant is not entitled to relief under the provisions of the 10 C.F.R. Part 708. While I find that Meier made protected disclosures, and that the complainant has by inference carried her burden to show that her protected disclosures were a contributing factor in the retaliations which she alleges, the contractor has met its burden to show by clear and convincing evidence that it would have taken the same actions in absence of such protected disclosures.

A. Protected Disclosures

The complainant made disclosures arguably protected under Part 708 first in August and September 1997, when the complainant expressed her disapproval of Crites assigning his wife to perform work on the HEU Project. Tr. at 49-51, 233-34, 476-77. The complainant also made arguably protected disclosures in February 1998, when she voiced a number of concerns to FESSP management in support of her effort to have Crites removed from the HEU Project. As discussed below, I find that while the complainant made protected disclosures in the first instance, in the latter she did not.

I am persuaded that the complainant's objections to Crites attempting to have his wife work on the HEU Project, and later selecting of his wife to the HEU Project then under his supervisory authority, fall within the purview of section 708.5(a)(1). Meier states she telephoned Loquist in August 1997 to complain about Crites, then APL, attempting to have his wife work on the HEU Project training report, and then complained to Crites directly in late September 1997, when Crites became HEU Project Manager and designated his wife as newsletter editor. LLNL concedes that the latter action, when Crites placed his wife under his supervisory authority, constituted a clear violation of their "near relative" policy. Tr. at 334. It is apparent that Meier was not specifically aware of LLNL's "near relative" policy at that time, and therefore did not couch her objection to Crites' actions in those terms. Nonetheless, the record shows that in both instances, Meier expressed her belief reasonably and in good faith that Crites' actions created an appearance of serious impropriety, particularly at a time of impending budget cutbacks on other projects. I am therefore persuaded that Meier's objections amounted to a protected disclosure of "abuse of authority" by Crites, deserving of protection under Part 708.

However, I am not persuaded that Meier made a protected disclosure in February 1998, when she demanded that FESSP management remove Crites from the HEU Project. The complainant's demand was lodged in two telephone discussions with FESSP managers, ensuing an acrimonious exchange between Meier and Crites during an HEU Project staff meeting held on February 13, 1999. During this meeting, Meier confronted Crites about his action in issuing an NDA training letter while she was away conducting HEU monitor training, an action which she perceived to be both a breach of proper protocol with respect to DOE and a transgression of her position as Training Coordinator. Tr. at 155-62.(3) The record persuades me that the NDA training matter and the complainant's claim that Crites had become a physical threat in the workplace were at the heart of the matters raised by Meier to FESSP management, in support of her position that Crites had lost judgment and should be removed from the HEU Project. Tr. at 101. Strauch confirmed that the complainant also charged Crites with nepotism for attempting to assign his wife to the HEU Project in violation of LLNL's "near relative" policy, and further claimed that Crites was retaliating against her for involvement in having his wife laid off. Tr. at 411. It is apparent, however, these latter assertions were designed to lay basis for Meier's ultimatum that if FESSP did not remove Crites, she

would go to the IG. According to the complainant: "I told them I would go [to the IG] unless something was done about [Crites], I had no recourse . . . I was afraid for my safety." Tr. at 102. Having examined the complainant's February 1998 statements in context, I do not find that the complainant at that time was making a disclosure protected under Part 708. While Meier referred to Crites' past misconduct, I find nothing to indicate that Meier was attempting to reveal, reasonably and in good faith, an "abuse of authority" by Crites in February 1998.(4)

Thus I find that the complainant made protected disclosures in August and September 1997, relating to Crites' improper behavior in attempting to assign his wife a position on the HEU Project. I now turn to whether the complainant has carried her burden to show that these disclosures were a contributing factor in any of the retaliations which she alleges.

B. Contributing Factor

A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald Sorri*, 23 DOE at 89,010, *citing McDaid v. Dept. of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F. 2d 147, 148 (8th Cir. 1989).

Applying these standards to the present case, I find that there is temporal proximity between Meier's protected disclosures in August and September 1997, and the subsequent alleged retaliations beginning in October by Crites, and ending in February 1998, when the complainant was removed from the HEU Project.

I therefore find Meier has established a *prima facie* case that her protected disclosures were a contributing factor in the retaliations which she alleges. The burden now shifts to LLNL to prove by clear and convincing evidence that it would have taken the same actions absent her protected disclosures. 10 C.F.R. § 708.9(d).

C. Clear and Convincing Evidence

The predominant portion of the retaliations alleged by Meier involve actions taken against her by Crites. Only the final alleged retaliation, the removal of Meier from the HEU Project, was an adverse personnel action taken against the complainant by the contractor itself. My consideration of the alleged retaliations is bifurcated in this manner below.

(1) Alleged Retaliations by Crites

The complainant asserts that Crites took a number of retaliations against her, including reducing her work as Training Coordinator on the HEU Project to half time, and then threatening and directing anger toward her. I emphasize, however, that the complainant does not contend that any of these alleged retaliations were specifically in response to her protected disclosure, *viz.* her stated disapproval of Crites' decision to place Rahm-Crites on the HEU Project, particularly after he had become HEU Project Manager.(5) Instead, Meier claims that the alleged reprisals began weeks later when Crites learned that Prassinos had given notice to Rahm-Crites that she would be terminated due to lack of funding. According to Meier, Crites retaliated against her because he blamed her for the decision to terminate his wife. Tr. at 62, 592. However, in moving to the complainant's highly subjective belief that Crites blamed her, in particular, I observe that there is no direct connection between the substance of the complainant's protected disclosure and the alleged basis for the purported retaliations by Crites.(6)

Although the complainant apparently believes that Crites blamed her in particular for his wife's dismissal from WASHOP, it is not clear to me that this was truly the case. Crites admits that he resented the dismissal of his wife because he believed that there were ample work and funding remaining on projects apart from the HEU Project to justify her retention. Tr. at 472, 483. When Crites questioned Prassinos, then Acting APL, on the decision to release Rahm-Crites, Prassinos told him that he had discussed the matter with a number of individuals besides the complainant, including the WASHOP office administrator, WASHOP project managers, and FESSP management personnel at Livermore, who ultimately made the decision. Tr. at 482-83, 587-88 (Prassinos). Thus, I find Crites believable when he asserted during his testimony that he did not blame Meier for his wife being laid off, because the complainant had no authority to make that determination. Tr. at 530-31.(7) The complainant asserts that the reason she believes that Crites blamed her is a statement he made during a meeting in late October 1997, when Crites informed Meier that her training hours were to be cut to half time (discussed below). Meier states that when she challenged this decision, Crites responded by stating among other things that "no one was protecting [Rahm-Crites]." Tr. at 62. While Crites confirmed that he may have made the statement, Tr. at 496, I find no basis to assume that he was referring specifically to the complainant. Instead, under the circumstances presented, it is obvious that by use of the phrase "no one" Crites was referring to all of the individuals who had input regarding the determination to release his wife.

In any event, I find insufficient factual support in the record for Meier's claims of retaliation by Crites. The first matter she raises is that Crites informed her in late October 1997 that her billable hours for HEU Project training were being cut to half time. Tr. at 61-62. Crites explained, however, that the determination to cut training to half time was based upon fiscal year 1998 budget restrictions and specific instructions received from the DOE sponsor, specifically Mastel, HEU Project Director. Tr. 533-34. Mastel corroborated that for fiscal year 1998, HEU Project training was allocated only a half time budget, testifying that DOE envisioned that over the year, training should comprise "no more than six months." Tr. at 206. The complainant claims that another retaliation came at the very same meeting, when Crites made a statement to the effect that he "had been" intending to recommend her to Chou (FESSP Director) for an APL position. Meier states that "I took that to mean that now he wouldn't." Tr. at 63.(8) While it is difficult to assess whether Crites intended this statement to be a threat not to recommend the complainant, Chou verified in his testimony that at the ensuing management meeting in October 1997, Crites did in fact recommend Meier for the APL position. Tr. at 577-78.

Next, Meier claims that Crites retaliated against her in November 1997, when Crites became enraged over a minor disagreement concerning the graphics to be used on the cover of the HEU Annual Report. In this instance, the complainant claims that Crites yelled at her with his hands raised in clenched fists and stormed out of the room. Tr. at 65-66. Crites testified that he recalls the graphics matter as only a minor incident, and maintains that he never got angry. Tr. at 499-500. Since there were apparently no witnesses to the incident, I have no means to gauge the veracity of these conflicting accounts. Notwithstanding, the record provides little support for the complainant's logical leap that Crites' behavior could only have been because he blamed her for his wife's dismissal. Other WASHOP workers testified that during this time period, Crites was under strain in his position as HEU Project Manager, apparently driven to achieve project deliverables, and was many times abrupt and insensitive to his employees. Tr. at 289-90, 602, 621.(9) However, there was no perception that Crites was more harsh to the complainant. Tr. at 281, 621.

Finally, Meier's claims that the most severe retaliation by Crites came at the February 13, 1998, meeting when according to the complainant, Crites physically threatened her after she confronted him about the NDA training matter.(10) I consider this matter below in addressing the alleged retaliation by the contractor, since it is intertwined with LLNL's determination to remove Meier from the HEU Project.

(2) Alleged Retaliation by LLNL

The complainant finally alleges that, as a result of her disclosures regarding Crites' nepotism, LLNL retaliated against her by removing her from the HEU Project in February 1998.(11) I find, however, that the contractor has clearly and convincingly shown that this personnel action was completely justifiable,

and in no way related to the complainant's protected disclosures.

As indicated in the factual summary, Meier had telephone conversations with FESSP management on two occasions in February 1998, in which she demanding that Crites be removed as HEU Project Manager since Crites had physically threatened her, and threatened that she would go to the IG if Crites were not removed. Tr. at 95-96, 102.(12) Strauch dispatched a crisis management team to investigate Meier's claim that she had been physically threatened by Crites when she confronted him during the February 13, 1998, meeting. Based upon interviews with staff members including those present at the meeting, the crisis team determined in its report that there was no foundation for the complainant's claim of physical threats by Crites, but it was instead the complainant's behavior that caused the difficulty and was of greater concern to staff members. At the hearing, Dave Thomas (Thomas), a senior engineer who was present at the meeting, confirmed the findings of the crisis team. Thomas testified that Meier refused to allow Crites to conduct the meeting on the HEU Project agenda items, but continued to press him for an explanation of the NDA training letter while ignoring the urging from others present that she drop the subject. Tr. at 639-42. Thomas stated that while the complainant was clearly angry, Crites did not appear to be angry but gave her "very matter of fact, low key answers." Tr. at 643.(13) When Crites finally responded by telling the complainant that she was technically incompetent in the matter of NDA training, Thomas stated that Meier got up and left while Crites continued the meeting. Tr. at 642-43. Glazer and Ken Young similarly testified they had never observed any behavior by Crites that they considered physically threatening. Tr. at 283, 626.

Thus, while there was no basis for Meier's claim of a physical threat, it was clear on the basis of the complainant's demand for Crites' dismissal under threat of going to the IG, that she and Crites should no longer work together on the same project. Since FESSP and the DOE sponsor were satisfied with Crites' management of the HEU Project, I deem the removal of Meier from the project an appropriate response. I find absolutely nothing in the record which would lead me to conclude that LLNL's decision to remove Meier from the HEU Project was in any way related to Meier's disclosure in September 1997 about Crites' wife, a matter that FESSP deemed rectified months earlier when Rahm-Crites was removed from the HEU Project and subsequently released from WASHOP due to budget restraints. Instead, I find legitimacy for LLNL's charge in Strauch's February 27, 1998, letter of "inappropriate interaction" by the complainant with the DOE project sponsors(14), lending additional support for LLNL's determination.

IV. Conclusion

As set forth above, I have determined that the complainant has failed to establish the existence of a violation on the part of LLNL for which she may be accorded relief under DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708. I find that the complainant made protected disclosures under Part 708, and that such disclosures were a contributing factor in the alleged retaliations taken against her. Notwithstanding, I find that to the extent that any of the actions raised by the complainant might be deemed to be truly retaliatory in nature, the contractor has shown by clear and convincing evidence that it would have taken the same actions even in the absence of the protected disclosures. Accordingly, I will deny Meier's request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The complaint filed by Diane E. Meier on April 22, 1998, under 10 C.F.R. Part 708 is hereby denied.

(2) This Initial Agency Decision will become the Final Decision of the Department of Energy denying the complaint unless within fifteen days of its receipt, a party files a Notice of Appeal requesting review by the Director of the Office of Hearings and Appeals, in accordance 10 C.F.R. § 708.32.

Fred L. Brown

Hearing Officer

Office of Hearings and Appeals

Date: December 22, 1999

(1)By this time, FESSP management at Livermore had received a copy of the September 26, 1997, letter and determined that Rahm-Crites could not be allowed to remain on the HEU Project since it was a clear violation of LLNL's "near relative" policy. Mark Strauch, FESSP Program Leader, states that he instructed Loquist that the assignment could not be allowed. However, Loquist apparently issued no formal directive to Crites since Crites had already rescinded the appointment of his wife on his own initiative.

(2)Rahm-Crites was allowed to stay temporarily in order to work on certain assigned projects that were yet uncompleted on her scheduled separation date, and thus Rahm-Crites did not actually leave WASHOP until early December 1997.

(3)At the hearing, the complainant testified that her primary concern was that Crites should have cleared the NDA training letter with Janie Benton, DOE training coordinator, and she did not consider the training letter as a personal affront to her. Tr. at 155. However, Dave Thomas, an engineer who was present at the February 13, 1998, meeting testified that it was the complainant's unrelenting insistence on an explanation of why Crites had not involved her in NDA training that led to the verbal exchange. Tr. at 642. The account given by Thomas is consistent with testimony of Crites and the complainant that the confrontation finally ended, and Meier abruptly left the meeting, after Crites told her that the reason he had not involved her in NDA training was that she is not technically competent in that area. Tr. at 93, 509.

(4)Clearly, Crites' decision to issue the NDA training letter did not constitute an "abuse of authority." Crites explained during his testimony that he had been directed by the DOE, specifically, Edward Mastel (Mastel), HEU Project Director, to initiate NDA training. Tr. at 504. Mastel corroborated this testimony and stated the he was remiss in not having first run the matter of NDA training by Janie Benton, DOE training coordinator on his staff. Tr. at 196, 199. Nor do I find that the complainant made statements that might possibly constitute a protected disclosure of "mismanagement." 10 C.F.R. § 708.5(a)(1)(iii). The complainant disagreed with Crites' handling of the HEU Project, believing that Crites "had lost all judgment and sense of proportion." Tr. at 101. However, this general disagreement with management decisions does not rise to a protected disclosure of "mismanagement." *See, e.g.*, *Roger H. Hardwick*, Case No. VWA-0032 (July 6, 1999, *affirmed*, Case No. VBA- 0032 (November 26, 1999). Moreover, I note that FESSP management and the DOE sponsors were pleased with Crites' handing of the HEU Project. Mastel, DOE HEU Project Director, testified with regard to his performance: "I enjoyed it. He was taking responsibilities for actions. In terms of milestones being met and reported against, we saw marked improvement since [Crites] came on board and was doing the work." Tr. at 211.

(5)Meier states that she first talked with Crites about his wife in September 1997, asking Crites about his plans concerning his wife in view of the budget cuts expected beginning October 1997 (fiscal year 1998). Tr. at 51-52. Meier states in her complaint, however, that during this time, she herself had Rahm-Crites appointed as editor of the HEU newsletter, prior to the time that Crites took over as HEU Project Manager. Declaration of Diane E. Meier, ¶ 23. Meier later criticized Crites' appointment of Rahm-Crites in the September 26, 1997 letter. However, Crites apparently realized the error of this appointment, which he himself had disclosed by issuance of the letter, and rescinded the appointment on his own initiative without intervention by FESSP management. Tr. at 476.

(6)It might be argued that the termination of Rahm-Crites was inevitable once she was removed from the HEU Project. Nonetheless, I draw a distinction between the determination to remove Rahm-Crites from the HEU Project, made by Crites, and the decision to terminate her, made by FESSP management upon the recommendation of Prassinos. Both Prassinos and Strauch testified that the decision to terminate Rahm-Crites was a budgetary matter, and not related to the past "near relative" policy violation which in their estimation had been rectified by removal of Rahm-Crites from the HEU Project. Tr. at 338, 607. Rahm-Crites had been employed at WASHOP since 1993, working on various projects. However, the 1998 fiscal

year budget was barely adequate to cover full time LLNL career employees at WASHOP, and a subcontracted supplemental labor employee such as Rahm-Crites was expendable.

(7)Crites maintains that the conflicts he had with Meier had purely to do with her handling of HEU Project training matters, such as budget overruns. Tr. at 490, 530, 542-43. Ken Young, a WASHOP project manager, also testified that in his perception based upon his conversations with the complainant, the conflicts between Crites and Meier stemmed from training matters. Tr. at 622.

(8)Interestingly, Meier stated that she didn't really want the position, Tr. at 63, and told others that she never expected to get the position because of sexism. Tr. at 137, 578. Notwithstanding, the complainant considered it a retaliation when she thought that Crites would not recommend her and, according to Glazer, she was upset when she did not in fact get the position when announced in December 1997. Tr. at 288-89.

(9)Strauch, FESSP Program Leader, testified that although Crites was successful as HEU Project Manager, he characterized Crites as "a hard-nosed manager that wants to deliver results for the customer, and the human side of him is not as warm and fuzzy as someone might like for a manager." Tr. at 360.

(10)I also find no appearance of retaliation in the issuance of the NDA training solicitation by Crites prior to reviewing the matter with the complainant. As noted above, Crites was directed to initiate NDA training by the DOE sponsor while the complainant was away conducting monitor training in Oak Ridge. *See* note 4, *supra*.

(11)I note that the removal of Meier from the HEU Project did not constitute termination or demotion, but was an adverse personnel action only to the extent that it reflected unfavorably upon the complainant, and she would no longer be able to work on this favored project.

(12)In Meier's view, Crites' past nepotism was just cause for his removal, under threat to initiate an IG investigation if necessary, despite the fact the matter had been resolved months earlier. According to the complainant, "It doesn't matter. He still did it." Tr. at 165. The complainant chose to ignore cautions from co-workers that her gambit to force the removal of Crites by ultimatum might not work out in her favor. Tr. at 293-94 (Glazer), 625-26 (Young).

(13)The complainant concedes that Crites did not raise his voice, but claims that there was "rage in his face." Tr. at 93, 162-63.

(14)On February 18, 1998, the day after the complainant's initial phone call to FESSP demanding the removal of Crites, the complainant admits that she met with the DOE sponsors and informed them that Crites would likely not be continuing as HEU Project Manager. Tr. at 99. The complainant maintained that she never mentioned herself as possible replacement manager or as APL in charge WASHOP, but only suggested that Glazer resume the position as HEU Project Manager. Tr. at 100. However, Mastel, the DOE HEU Project Director, recounted that during the meeting, the complainant stated how she would administer the HEU Project and change the staffing structure "if she were placed in charge or she was able to take over as the project leader." Tr. at 203. According to Mastel, "[the complainant] was trying to get our support to put her into a position as the project manager for the WASHOPS group." Tr. at 210. Consistent with Mastel's testimony, Glazer testified that Meier told him in mid-February 1998 that "she was going to take over, you know, the position that [Crites] held, head of the office . . . [and] she was going to put me back down as program manager." Tr. at 292.

Case No. VBH-0014

December 29, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner:Roy Leonard Moxley

Date of Filing:November 7, 1996

Case Number: VBH-0014

This Initial Agency Decision concerns a whistleblower complaint filed by Roy Leonard Moxley against his employer, Westinghouse Savannah River Company (WSRC), under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. At all times relevant to this proceeding, WSRC was the management and operating contractor at the DOE's Savannah River Site in Aiken, South Carolina. Mr. Moxley alleges that during a period of at least two years, he made several disclosures to WSRC that its personnel practices were in violation of the Fair Labor Standards Act (FLSA). According to Mr. Moxley, WSRC demoted him in October 1996 as a consequence of his disclosure. As discussed below, I have determined that Mr. Moxley is entitled to relief because WSRC has not proven by clear and convincing evidence that it would have taken the same action against him had he not made those disclosures.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. (1) The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee in good faith believes reveals a violation of a law, rule, or regulation; or fraud, mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a)(1)(i), (iii), as published at 57 Fed. Reg. 7533, 7542. Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an investigation by an OHA investigator, an independent fact-finding and a hearing by an OHA Hearing Officer, and an opportunity for review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Procedural History

On November 7, 1996, Mr. Moxley filed a Whistleblower Complaint against WSRC pursuant to 10 C.F.R. Part 708. On April 16, 1999, the Office of Inspections of the DOE's Office of Inspector General transferred a number of pending complaints, including this one, to OHA. On April 26, 1999, the OHA Director appointed an investigator to examine the issues raised in Mr. Moxley's Part 708 Complaint. The investigator promptly conducted an investigation, and issued a Report of Investigation on June 10, 1999. On that same day, the OHA Director appointed me the hearing officer in this case.

On September 29, 1999, I convened a hearing on Mr. Moxley's Part 708 complaint in Aiken, South Carolina. I received the hearing transcript on October 18, 1999 at which time I closed the record in the case.

II. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

In the case at hand, WSRC stipulated at both the investigatory and hearing stages of this proceeding that (1) Mr. Moxley had made protected disclosures as defined in 10 C.F.R. § 708.5, and (2) he had established a prima facie case of retaliation, because his protected disclosures could, by inference, be considered a contributing factor in WSRC's decision to reclassify Mr. Moxley to a lower salary grade level due to the temporal proximity between the protected disclosures and his reclassification. In view of WSRC's stipulations, Mr. Moxley is deemed to have met his regulatory burden in this case, thereby shifting the burden to WSRC.

B. The Contractor's Burden

The regulations require WSRC to prove by "clear and convincing" evidence that the company would have reclassified Mr. Moxley to a lower salary grade level even if he had not disclosed his allegations of violations of the FLSA. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3.

III. Analysis

A. Factual Overview

WSRC has employed Mr. Moxley at the DOE's Savannah River Site since 1988. Starting no later than August 1994 and continuing through at least the last months of 1996, Mr. Moxley made a series of disclosures to Westinghouse personnel, including his supervisors and the president of the company, concerning what he perceived to be violations of the FLSA. The gist of these allegations is that lower-paid employees, who were subject to various provisions of the FLSA, such as the right to overtime for

hours worked in excess of the standard work week, were performing the same tasks and had the same duties and responsibilities as higher-paid employees, who were in some cases also exempt from the protections of the FLSA. In his initial Complaint, Mr. Moxley listed a number of actions that he alleged WSRC had taken in retaliation for his disclosures, including his October 1996 demotion from Salary Grade Level (SGL) 31 to SGL 30. Later, at Mr. Moxley's request, the parties agreed to narrow the scope of the proceeding to this single incident of alleged retaliation. See Memorandum of Telephone Conversation between Mr. Moxley, Michael Wamsted (Attorney for WSRC), and the Hearing Officer, August 9, 1999.

WSRC considers the personnel action by which Mr. Moxley's salary grade level was changed from SGL 31 to SGL 30 a reclassification rather than a demotion. This action occurred after WSRC had completed its Professional Job Review, a lengthy personnel procedure during which approximately 5,000 professional employees' positions were reviewed and in many cases replaced with new job descriptions and salary ranges. Transcript of Hearing (Tr.) at 29-31. One result of the Professional Job Review was the modification of the "job ladder" within which Mr. Moxley was employed, that is, the group of positions through which he could be promoted. Before the Professional Job Review, SGL 31 was one of the possible salary levels at which an employee on Mr. Moxley's job ladder might have been paid. After the Professional Job Review, his job ladder was renamed "Process Computing" and the rungs on that ladder were assigned SGLs of 28, 30, 32, and 34, each of which bore a distinct job title. Exh. 72. Consequently, Mr. Moxley could no longer remain at SGL 31; he needed to be reassigned to one of the available SGLs for his job ladder. On October 1, 1996, he was reassigned to SGL 30. This reassignment, whether termed a demotion or a reclassification, is the sole incident of alleged retaliation that we considered at the hearing. Four months later, on February 1, 1997, Mr. Moxley was promoted to SGL 32.

B. Motion to Dismiss

At the start of the hearing, WSRC's attorney moved to dismiss the proceeding. He argued that a recent OHA Hearing Officer's decision dictated that I grant his motion. I denied his motion at that time, and when he renewed the motion after he had completed the presentation of WSRC's witnessed, and again at the end of the hearing. I explained to the parties that I would consider this motion when I weighed the case in its entirety.

It is well settled that a motion to dismiss in a Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. Lockheed Martin Energy Systems, Inc., 27 DOE ¶ 87,510 (1999) (Lockheed); EG&G Rocky Flats, 26 DOE ¶ 82,502 (1997). The OHA considers dismissal "the most severe sanction that we may apply," and we have rarely used it. Boeing Petroleum Services, 24 DOE ¶ 87,501 at 89,005 (1994). WSRC has not met the Lockheed standard. Moreover, the circumstances under which I may dismiss a complaint are specifically set forth at 10 C.F.R. § 708.17(c). I have reviewed each of the six enumerated bases for dismissal and it is clear that none of them applies to the present case.

WSRC argued that dismissal was appropriate because Mr. Moxley suffered no negative action as a result of his conceded disclosures. WSRC based this assertion on the fact that Mr. Moxley's compensation was never reduced, and relied on the OHA Hearing Officer's decision in Theresa G. Joyner, 27 DOE ¶ 87,526 (1999). In that decision, the Hearing Officer found that an employee's removal from a special team did not meet the regulatory definition of "retaliation" under Part 708, because it was not "an employment-related ?negative action' with respect to the employee's ?compensation, terms, conditions, or privileges of employment.' [Citation omitted.] The employee's removal from the team did not affect her pay and benefits, and there is no evidence that the employee viewed the removal as a negative action." Id. at 89,142.

I will again deny WSRC's motion to dismiss this proceeding. Unlike the circumstances in the Joyner case, the form of retaliation about which Mr. Moxley has complained is a reclassification of his position to a lower SGL. Because his salary before the reclassification fell within the range of salaries permitted at his

new level, his salary was not affected by the reclassification. However, regardless of whether it is appropriate to consider the reclassification a demotion or not, the result of the reclassification was that Mr. Moxley was in a lower position in the salary grade scale after the reclassification (SGL 30) than before it (SGL 31). Therefore, the reclassification's effect on Mr. Moxley was a negative action with respect to a term of employment. In addition, and contrary to the facts in Joyner, the employee in the present case clearly viewed the reclassification as a negative action. Consequently, the ruling in Joyner is inapplicable in this proceeding. Therefore, I deny WSRC's motion to dismiss and will now consider the substance of Mr. Moxley's Part 708 complaint.

C. Testimonial and Documentary Evidence

The evidence presented related to the business environment at the time Mr. Moxley's salary grade level was reduced from SGL 31 to SGL 30 and the processing of his Part 708 complaint. The witnesses for WSRC were Jennifer Howell, a Principal Human Resources Representative in WSRC's Compensation Department, Stephen Kilpatrick, a manager in the organization in which Mr. Moxley worked at the time of the grade reduction, and Jeannette Brooks, an investigator in WSRC's Employee Concerns Program. Mr. Moxley presented the testimony of Julie Quattlebaum, a co- worker.

Ms. Howell's testimony focused on the Professional Job Review Program, a review of the roughly 5,000 professional positions at the Savannah River Site. The Compensation Department's task was to examine those positions for grade inequities between organizations. Tr. at 29, 46. As Ms. Howell explained, there was a concern that "people might have been doing the same work but being called different things and being in different titles and grades across organizations. And it was a business decision made to take a look at all . . . the professional positions, to make decisions about meeting legal requirements such as Fair Labor Standards Act, as well as making sure that our internal equity issues were being addressed." Tr. at 29-30. The Compensation Department had conducted similar reviews of WSRC's non-professional positions and management positions in previous years. Tr. at 28. As a result of the Professional Job Review, the grade levels of 329 employees were decreased throughout the site. Tr. at 31-32. Of the 98 jobs reviewed in the organization headed by Mr. Kilpatrick, in which Mr. Moxley worked at the time of the Professional Job Review, 22 had a grade reduction; the remainder either had grade increases or no change. Tr. at 34. As of October 1, 1996, the day on which the Professional Job Review results were made effective, the salary grade levels on the Process Computing job ladder, which contained Mr. Moxley's position, were 28, 30, 32, and 34. Prior to that date, Mr. Moxley and others had been "on an odd grade progression rather than an even grade progression. . . . [H]is grade at the time was a 31. So a decision had to be made by his management as to where to place him as far as the work that he was doing, what the business decision was to place him in . . . one of the four grades on that ladder." Tr. at 41-42. See also Tr. at 47-48 (although Compensation developed the job position descriptions, it is management that decides who is placed in which position). Because of the change in grade progressions, Mr. Moxley could not remain in SGL 31. Tr. at 63, 64. The personnel documents indicate that Mr. Kilpatrick was the manager who decided to place Mr. Moxley in an position assigned an SGL of 30. Tr. at 51.

Mr. Kilpatrick's testimony about the Professional Job Review Program confirmed that of Ms. Howell. His role in the process was to assign employees in his organization to the newly created job positions, and inform each employee of his new title, position and SGL. Tr. at 134. The process of describing existing jobs to the Compensation Department and then assigning employees to the new positions that Compensation developed took place during the spring and summer of 1996. Tr. at 158, 185. The numbers of positions for each title were established before those assignments were made, based on the type and amount of work for which each work group was responsible. Tr. at 136. Mr. Kilpatrick acknowledged full responsibility for assigning specific employees to specific job titles, but made the decisions with the input of other managers and team leaders. Tr. at 134-135. At the time he assigned Mr. Moxley to a job position with SGL 30, Mr. Kilpatrick was aware that Mr. Moxley has expressed concerns about possible violations of the Fair Labor Standards Act. Tr. at 141, 165.

Every year, according to the testimony, WSRC managers must forecast the number and type of job

positions in the last quarter of one year on the basis of their perceptions of business needs in the following year. Tr. at 167-168. Such projections include the number of employees who must be promoted to higher job titles in order to meet the organization's anticipated work responsibilities. Tr. at 160. Mr. Kilpatrick had forecast Mr. Moxley's promotion to SGL 32, in November or December 1996. Tr. at 144, 157. Regarding the factors that Mr. Kilpatrick weighed in proposing Mr. Moxley's promotion, he stated, "Your management recommendation was 1. Job availability in the organization was 2. Those were the principal things that would have influenced a person to recommend somebody for promotion on a salary forecast, but particularly recommendations from your direct manager, Mr. [James B.] Johnson." Tr. at 167-168. That promotion was scheduled to take effect in April 1997. Tr. at 156-157. However, the promotion was moved forward to February 1997 during an effort to resolve Mr. Moxley's Part 708 complaint, as discussed in the paragraph below. Tr. 159-160.

Ms. Brooks testified about her role in the investigation of the Part 708 complaint that Mr. Moxley filed with the DOE. According to her records, the DOE first asked for assistance from WSRC's Employee Concerns Program on January 14, 1997. Tr. at 128. After conducting an investigation into the complaint, she concluded that WSRC had not retaliated against Mr. Moxley. Tr. at 102. WSRC did, however, attempt to resolve Mr. Moxley's complaint through mediation. Tr. at 106. One term of the proposed settlement agreement drafted by WSRC's counsel included a promotion. Tr. at 109. Ms. Brooks was aware, however, that in a salary forecast for the next year, Mr. Moxley had already been reclassified to an SGL 32 position. Id. Mr. Moxley did not sign the settlement agreement. Exh. 71.

Finally, Ms. Quattlebaum testified that she and Moxley had substantially the same job during the relevant period, Tr. at 191, and that she had filed a complaint with WSRC's Employee Concerns Program regarding her reclassification as a result of the Professional Job Review. Tr. at 196. She reported that Employee Concerns personnel had investigated her being downgraded from SGL 31 to SGL 30, and found some "inconsistencies" in the handling of her reclassification. Tr. at 197. The Employee Concerns investigator told her that she would be getting a promotion to an SGL 32 position, id., which became effective in February 1997. Tr. at 195.

D. Evaluation of Evidence

Because WSRC has conceded that Mr. Moxley made disclosures protected under Part 708 and made a prima facie showing of retaliation, the sole issue before me is whether WSRC has shown, by clear and convincing evidence, that it would have taken the same action against Mr. Moxley-- his reclassification from SGL 31 to SGL 30-- if he had not made those protected disclosures. After considering all the evidence presented in this proceeding, I conclude that WSRC has not met that burden.

It is clear that WSRC conducted a Professional Job Review, which resulted in the reclassification of Mr. Moxley's position from SGL 31 to SGL 30. The decision to place Mr. Moxley in an SGL 30 position rather than, for example, an SGL 32 position rested with Mr. Kilpatrick. At the time of his decision, Mr. Kilpatrick had knowledge of Mr. Moxley's protected disclosures, which Mr. Moxley had made on a fairly continual basis. These facts are not in dispute. However, in order to prevail, WSRC must produce evidence that convinces me that Mr. Kilpatrick's decision would have been the same if Mr. Moxley had not made his disclosures. In discussing the testimony WSRC presented at the hearing, I will address in particular the evidence that I view as essential to the company's position.

Through Ms. Howell's and Mr. Kilpatrick's testimony, WSRC established that Mr. Moxley's reclassification occurred as the result of two related business functions: the Professional Job Review, by which Mr. Moxley's position and salary level was eliminated, and new positions were developed; and his manager's judgment call regarding into which new position to place Mr. Moxley. The Professional Job Review affected the job descriptions and salary scales of some 5,000 employees. In many cases, the employees had to be reassigned to new SGLs because their current SGLs were no longer available to them within their job ladders. Throughout the Savannah River Site, 329 employees, including Mr. Moxley, suffered a lowering of their SGLs as a result. The evidence convinces me that this site-wide personnel

action was undertaken for reasons entirely unrelated to Mr. Moxley's protected disclosures.

The evidence regarding the second, related personnel action-- the decision to assign him to an SGL 30 position-- is less complete, however. Mr. Kilpatrick testified about the numerous factors, including past performance, that he would generally consider in assigning an employee to a particular job position. Tr. at 147, 150. There is evidence in the record regarding Mr. Moxley's performance evaluations and those of his co-workers, which Mr. Kilpatrick stated was one factor he considered in general. See IG Ex. 5 (Krieger Statement) (listing performance ratings for 19 SGL 31 Computer Analysts for four years). My review of those performance ratings does not convince me that an employee with Mr. Moxley's ratings would fall clearly into either the group of employees that were reclassified to SGL 30 positions or the group reclassified to SGL 32 positions. Moreover, in a related context, Mr. Kilpatrick stated that management recommendations and job availability in the organization were primary factors to consider. Tr. at 167-168 (factors considered in promoting employees). Although WSRC has presented evidence regarding the factors Mr. Kilpatrick should have considered when he reclassified Mr. Moxley to an SGL 31 position, such as recommendations and job availability, it presented no evidence of the factors that Mr. Kilpatrick did in fact consider. The only evidence presented concerning this topic was Mr. Kilpatrick's testimony, which was admittedly general in nature, and demonstrated virtually no recollection of Mr. Moxley's particular situation. Tr. at 172, 176-178. Faced with the absence of testimony or documentary evidence about what affected Mr. Kilpatrick's decision to assign Mr. Moxley to an SGL 30 position rather than an SGL 32 position effective October 1, 1996, I am not convinced that Mr. Kilpatrick would have made the same decision if Mr. Moxley had not made his protected disclosures.

Most important, the testimony of Ms. Howell and Mr. Kilpatrick as well as documentary evidence demonstrate that some similarly situated employees who were not whistleblowers were reclassified to positions with lower SGLs in the same manner as Mr. Moxley, within his own work group and throughout the Savannah River Site. However, the evidence also demonstrates that similarly situated employees were also reclassified to positions with higher SGLs as well. If the evidence had established that all employees similarly situated to Mr. Moxley had been downgraded as he was, then I could have concluded that his downgrading would have occurred even if Mr. Kilpatrick had not been aware of the protected disclosures. However, that is not the evidence here. WSRC has presented no evidence to explain why Mr. Moxley in particular was part of the group that was downgraded rather than part of the group that was promoted. This lack of evidence arises, in my opinion, from Mr. Kilpatrick's inability either to recall specifics about Mr. Moxley's reclassification or to produce documentation that supports his decision. I am not surprised at Mr. Kilpatrick's failure to recollect, particularly given the relatively ministerial nature of the decision and the great number of similar decisions he was compelled to make within a fairly short period during 1996. Nevertheless, the burden rests upon WSRC to demonstrate that Mr. Kilpatrick would have taken the same action even if he had no knowledge of Mr. Moxley's disclosures. The lack of evidence on this point must be held against the party that bears this burden, in this case, WSRC. Without documentation or at least very strong oral testimony concerning the factors that drove Mr. Kilpatrick's decision, I am not convinced that he would have made the same decision absent Mr. Moxley's protected disclosures.

After considering all the evidence presented in this proceeding, and all the arguments raised by both parties, I cannot find that WSRC has established by clear and convincing evidence that Mr. Kilpatrick, and therefore WSRC, would have reached the same decision concerning Mr. Moxley's reclassification even if he had made no disclosures protected under Part 708. Accordingly, I will grant Mr. Moxley's request for relief under 10 C.F.R. Part 708.

IV. Remedy

The Part 708 regulations provide that if the initial agency decision determines that an act of retaliation has occurred, it may order reinstatement, transfer preference, back pay, reimbursement of reasonable costs and expenses, and such other remedies as are necessary to abate the violation and provide the employee with relief. 10 C.F.R. § 708.36. I recognize that a number of these forms of relief may not apply in this case.

For example, Mr. Moxley continues to work for WSRC, so reinstatement is not relevant. However, I will permit the parties to submit briefs on the issue of remedy before I determine the appropriate remedy in this case. I direct Mr. Moxley to submit a detailed statement setting forth the precise remedy he is seeking, including explanations of any mathematical calculations, within 15 days of his receipt of this Initial Agency Decision. WSRC will then have 15 days from its receipt of Mr. Moxley's statement to respond to his remedy request. The parties are free, of course, to seek mediation regarding the issue of remedy. If they choose this course of action, I will hold the remedial phase of this case in abeyance for 30 days pending mediation on the issue.

It Is Therefore Ordered That:

(1) The request for relief submitted by Roy Leonard Moxley under 10 C.F.R. Part 708, OHA Case No. VBH-0014, is hereby granted as set for in paragraph (2) below.

(2) Within 15 days of receipt of this Initial Agency Decision, Mr. Moxley shall submit to the Office of Hearings and Appeals and to Westinghouse Savannah River Company a detailed statement setting forth the precise remedy he is seeking. Westinghouse Savannah River Company shall, within 15 days from its receipt of Mr. Moxley's statement, submit a responsive document to the Office of Hearings and Appeals and to Mr. Moxley. Should the parties elect to seek mediation to resolve the remedial phase of this case, they shall notify me immediately and I will hold this proceeding in abeyance for a period of 30 days.

(3) This is an Initial Agency Decision, which becomes the final decision of the Department of Energy unless, within 15 days of the issuance of a Supplemental Order with regard to remedy in this case, a party files a notice of appeal with the Director of the Office of Hearings and Appeals, requesting review of the Initial Agency Decision.

William M. Schwartz

Hearing Officer

Office of Hearings and Appeals

Date: December 29, 1999

(1)On March 15, 1999, the DOE published an Interim Final Rule revising the regulations governing the Contractor Employee Protection Program. See 64 Fed. Reg. 12862 (March 15, 1999) (amending 10 C.F.R. Part 708, effective April 14, 1999). Section 708.8 of the revised regulations provides that the new procedures "apply prospectively in any complaint proceeding pending on the effective date of this part." Therefore, under the revised Part 708 regulations, the DOE's Office of Hearings and Appeals (OHA) assumed investigatory jurisdiction over all pending and future complaints, including the one under consideration. Because there is a presumption against retroactivity where new rules affect substantive rights of parties, the version of 10 C.F.R. § 708.5 in effect at the time Mr. Moxley filed his complaint is applicable in this case. That version is described below.

Case No. VBH-0015

December 1, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Petitioner: Morris J. Osborne

Date of Filing: June 28, 1999

Case Number: VBH-0015

This Decision involves a complaint filed by Mr. Morris J. Osborne (hereinafter the complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The complainant contends that reprisals were taken against him after he made disclosures concerning the lack of electrical inspections at the Idaho National Engineering and Environmental Lab (INEEL). These alleged reprisals were taken by Lockheed Martin Idaho Technologies Company (Lockheed). Lockheed was the managing and operating contractor of INEEL through September 30, 1999. Bechtel assumed Lockheed's management responsibilities at INEEL on October 1, 1999.

I. The DOE Contractor Employee Protection Program

A. Regulatory Background

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensure compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). The program's primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed information that the employee reasonably and in good faith believes reveals a

substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a) (1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an investigation by an OHA investigator, a hearing and independent fact-finding by an OHA hearing officer, and an opportunity for review of the hearing officer's initial agency decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.30, 708.32.

B. Procedural History

On June 22, 1998, the complainant filed a complaint with the DOE-ID Office of Employee Concerns

against Lockheed pursuant to 10 C.F.R. Part 708. On April 16, 1999, the Office of Inspections of the DOE's Office of Inspector General transferred a number of pending complaints, including the subject complaint, to OHA. On April 26, 1999, the OHA Director appointed an investigator to examine the issues raised in the complainant. The investigator promptly conducted an investigation, and issued a Report of Investigation on June 28, 1999. (1) On that same day, the OHA Director appointed me the hearing officer in this case.

On September 14 and September 15, 1999, I convened a hearing on the complaint in Idaho Falls. The transcript of September 14 will be referred to in this decision as TR. I and the transcript of September 15 will be referred to as TR. II.

II. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.29. See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th ed. 1992).

B. The Contractor's Burden

In the event that the complainant satisfies his evidentiary burden, the regulations require Lockheed to prove by "clear and convincing" evidence that the company would have terminated the complainant if he had not made a protected disclosure. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3. In evaluating whether Lockheed has met its burden, I will consider the strength of Lockheed's evidence in support of its decision to terminate the complainant and any evidence that Lockheed takes similar actions against employees who are not whistleblowers but who are otherwise similarly situated.

III. Background

A. The Protected Disclosure

The complainant was a quality assurance (QA) inspector for 14 years at the INEEL facility. He was assigned to work primarily within the Idaho Nuclear Technology and Engineering Center, INTEC.(2) The INTEC facility is one of approximately seven sites within INEEL. Six of those sites are gated work areas.

The complainant made several disclosures concerning the lack of safety inspections at the INEEL facility. The disclosure that is relevant to the complainant's discharge was made in February 1998 to the complainant's supervisor. The complainant repeated the disclosure during a March 2, 1998, telephone conversation with the President of Lockheed. That telephone conversation led to a March 5, 1998, meeting with several Lockheed officials. During that meeting the complainant repeated his disclosure that there was a dangerous lack of safety inspections at the INEEL facility. Lockheed has stipulated that the individual's disclosures are protected by Part 708.

B. The Retaliation

During May 1998, two months after his protected disclosure, the department manager requested that Doug Bensen, hereinafter "the internal auditor," review the time card reports of the complainant and the complainant's co-worker. After reviewing the time cards the internal auditor reached the conclusion that the complainant and the complainant's co-worker were reporting the same charge codes during the same periods. TR. I at 26.

The finding that the complainant and the co-worker were charging the same charge codes suggested to the department manager that the complainant and the complainant's co-worker may have been engaging in non work related activities and therefore, may have been improperly charging their time. After discussing the matter with the internal auditor, the department manager directed the internal auditor to arrange for the INEEL security office to investigate the time card charging practices of the complainant and the complainant's co-worker.(3)

The security office investigation was conducted by a "security investigator" and covered the activities of the complainant and the complainant's co-worker for 12 weeks beginning on the date of the protected disclosure, March 2, 1998 through May 18, 1998. AR at 413. (4) The notes of the security investigator indicate that on June 4, 1998, the security investigator briefed the department manager on the information obtained during his interview with the complainant. Those notes indicate that the complainant's supervisor was not briefed on the interview. AR at 416, 419.

The security investigator issued an investigative report on June 10, 1998. AR at 413.(5) The security investigator concluded that the complainant and the complainant's co-worker acknowledge "leaving INTEC for approximately 17 hours,(6) or more each, during the above period [March 2, 1998 through May 18, 1998] to ?goof off' when they had no work to do." AR at 413.

I was convinced by the testimony at the hearing that the complainant did spend time outside the gate engaged in non work related activities. However, I believe the 17 hour estimate is excessive. The testimony at the hearing indicates that the 17 hours estimate in the security investigator's report was based on an assumption that all time outside the INTEC gate with the exception of time spent at the infirmary was not productive work time. However, testimony at the hearing indicates that some of the time outside the INTEC gate was work related.(7) Nevertheless, Lockheed has established that the complainant was outside the gate for 10 hours, during which he was not involved in activities that were related to a specific project and he was not engaged in training activities.

After the security investigator issued his report, the Employee Review Board met on June 11, 1998. Following that meeting, Lockheed's senior ethics officer asked the security investigator to conduct a second investigation to determine if "there actually had been a basis to begin the investigation in the first place." Lockheed's post hearing brief at 5. On June 18, 1998, the security investigator issued his second report of investigation. AR at 478-81.

The Employee Review Board met a second time on June 17, 1998. Complainant's Exhibit 4. During the second meeting the Employee Review Board members agreed that the complainant's activities constituted "time card fraud" and that the complainant should be discharged. Soon after that meeting the complainant was discharged.

IV. Analysis

A. Complainant's Showing

Under Part 708 a complainant must demonstrate by a preponderance of the evidence that he made a protected disclosure. In this case, as stated above, Lockheed concedes that the complainant made protected

disclosures. TR. II at 47. The complainant must also demonstrate that the protected disclosure was a contributing factor in the retaliation by the contractor. 10 C.F.R. § 708.29. In the past, we have presumed that the standard is met when the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action. Barbara Nabb, 27 DOE ¶ 87,519 (1999). In the present case I find this standard is satisfied because the protected disclosure, the investigation and discharge all occurred within four months. Indeed, Lockheed does not challenge that the disclosure and retaliation took place within a short period. However, Lockheed raises two arguments in an attempt to overcome the presumption indicating that the disclosure was a contributing factor to the complainant's discharge.

Lockheed's first argument is that the complainant made prior protected disclosures which did not result in retaliation from the department manager. Lockheed believes this indicates that the department manager "was not bent on retaliation." Lockheed's post hearing brief at 11 and 12. Lockheed has not presented any testimony or evidence which would indicate that the department manager did not retaliate or attempt to retaliate against the individual after prior disclosures. Therefore, I find there is no support for Lockheed's argument regarding the lack of prior retaliations. Furthermore, the absence of prior retaliations does not necessarily mean that the department manager did not retaliate after the current disclosure.

Lockheed's second argument is that the department manager was the only one in the disciplinary process to have a reason for retaliating against the complainant, but that the department manager was not a "principal actor in the process leading to the complainant's dismissal." Lockheed's post hearing brief at 12. I generally agree that it is likely that the department manager was the only person in the process who was motivated to retaliate against the complainant. However, I reject Lockheed's claim that the department manager was a mere passive figure in the three investigations (i.e., the internal auditor's investigation and the two investigations by the security investigator) and Employee Review Board deliberations.

During the investigations, the department manager attended all the meetings with the internal auditor and the security investigator.(8) The testimony at the hearing and the documents in the record indicate the department manager was active in characterizing the time card reporting practices and work assignments of the complainant during the investigations. He was also involved in all decisions to seek additional investigations. For instance, the internal auditor testified that he brought the fact that the complainant and the complainant's co-worker were charging the same charge number to the department manager's "attention, and then we had a discussion with Ethics, and we went from there." TR. I at 26. Similarly, the department manager testified that "he asked the investigator to check the card reader at INTEC for two specific people." Tr. I at 245. In a letter dated August 14, 1998, Lockheed's senior ethics officer confirms that the complainant's supervisor bought the matter to the attention of the department manger who "consulted with internal controls." It is clear that the department manager was actively involved in the three investigations.

The department manager was also actively involved in the two Employee Review Board meetings, and his testimony at the hearing indicates that he was an advocate for dismissal of the complainant. For example, at the hearing the department manager testified regarding the relationship of the complainant's time card reports and the time spent outside the gate on March 28, 1998. He stated:

The problem is that the time sheet shows three charge numbers, four hours of NEC/NDT, four hours on the cave . . . and two hours on the coal-fire unit. And that work should have taken place in the facility at INTEC.

TR. I at 250.

It is clear that the coal fire plant is outside of the INTEC gate so that it is not true that all of the work should have taken place inside the gate. The record indicates that this type of characterization was made to the Employee Review Board and clearly affected opinions regarding the propriety of the complainant's time charging practice. For instance, Lockheed's senior ethics officer stated in his letter of August 14,

1998, that it was determined that "there was no reason to have left INTEC." AR at 21. I believe that the only person in the Employee Review Board meeting that could have made such a statement and thereby misled Lockheed's senior ethics officer about the locations of inspections was the department manager. The fact that the department manager misled Lockheed's senior ethics officer and attempted to mislead me during the hearing indicates that he was an advocate for discharging the complainant.

Since the complainant's supervisor was not invited to attend the Employee Review Board meetings, the department manager was the only person in attendance who could comment on the time card reporting practices of QA inspectors.(9) The security investigator's report found time card irregularities while the Employee Review Board found time card fraud, a much more serious matter. In order to reach this conclusion someone at the Employee Review Board meeting must have suggested that the complainant's activities and time reporting were significantly different from other QA inspectors.(10) The only person in attendance at the Employee Review Board meetings with the information and expertise to have suggested that the complainant's time card practices were significantly different from other QA inspectors was the department manager. That fact indicates the department manager had a significant opportunity to characterize the complainant's activities and time card practices and thereby influence the understanding of the other members of the Employee Review Board. Accordingly, I find that Lockheed's argument that the department manager was not influential in the Employee Review Board meetings to be unpersuasive.

I therefore believe that Lockheed has not rebutted my initial finding that the complainant has carried his burden of showing that the time nexus between his protected disclosure and the retaliatory action demonstrates that the disclosure was a contributing factor to the complainant's dismissal.

B. Lockheed's Showing

In light of my finding that the complainant's protected disclosure was a contributing factor to his dismissal, the burden is on Lockheed to show by clear and convincing evidence that the complainant would have been dismissed for his time card reporting practices in the absence of the protected disclosure. It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both the complainant and Lockheed.

In order for Lockheed to prevail, it must submit clear and convincing evidence that it had an independent basis for terminating the complainant. This means that it needs to show that the complainant's time card reporting practices were so unusual or so different from other quality inspectors that they warranted disciplinary action. After considering the documentary information, the briefs of the parties, the testimony given at the hearing, and the parties' post-hearing submissions, I find no reason to believe the complainant's time card reporting was not similar to other QA inspectors and in accordance with the direction he received. There has been no showing that his activities during standby time were not similar to the practices followed by other QA inspectors. Therefore, Lockheed has failed to demonstrate that absent the protected disclosure the complainant would have been discharged.

Three of Lockheed's arguments can be dealt with summarily. Lockheed first contends that the investigation of the complainant was proper. The complainant has not disputed that there was a reasonable basis for Lockheed's determination to investigate him and I believe Lockheed has presented a clear and convincing showing that it would have undertaken that investigation in the absence of the protected disclosure. I also believe that Lockheed has established that it followed its normal disciplinary procedures in terminating the complainant.(11) Finally, I agree with Lockheed that most of the members of the Employee Review Board, based on the information provided to them by the department manager believed that the complainant engaged in improper time reporting, and that they believed Lockheed discharged the complainant for that behavior. However, these conclusions are not dispositive of Lockheed's ultimate burden, which is to show that it would have terminated the complainant even absent the disclosure.

The contention that the complainant was properly discharged for charging time not worked, requires some detailed examination. It is first necessary to understand the function and time card reporting practices of

QA inspectors. The testimony indicates that a QA inspector's function was to respond promptly to requests for inspections from various projects at the INEEL facility. This meant that at some times inspectors had sufficient inspection work to occupy a full workday, and sometimes they did not. Inspectors believed that their productive function was to review work to determine whether it met applicable quality standards. TR. II at 63. The testimony in this case indicates that the complainant was at all times on the grounds of the INEEL facility (either inside or outside of the gated INTEC facility), with his beeper active, and was ready and able to conduct any inspection that he was requested to perform. There was no suggestion that he ever failed to conduct an inspection or was ever unavailable to conduct an inspection. TR. II at 107, 110. The time card reporting practices that led to the dismissal dealt with the periods when the complainant did not have a pending request for an inspection.(12)

The department manager provided written guidance to approximately 15 QA inspectors as to the appropriate time card reporting codes. Complainant's Exhibit #2. In addition to inspection work, which was reported using a code for the project being inspected, the inspectors were given training codes to use to report their time during their normal duty hours when there were no inspections to perform. These instructions meant that when QA inspectors did not have inspections to perform they were to report their time using a training code. The exact definition of training was never provided. However, it clearly includes reading manuals and keeping professional certifications up to date. It also included cross training through consultation and collaboration with other inspectors. Although it is likely that there were periods during an inspector's work day when he was not actively training yet fully available to be called for duty, there was no explicit "standby" code to account for such time. Notwithstanding the lack of a training program or an effort to assist inspectors in identifying training opportunities, the group manager and Lockheed's senior ethics officer testified that Lockheed management expected that QA inspectors would be involved in training activities whenever they had no inspections to perform. Because of the lack of training guidance and oversight, and the unrealistic expectation that 100% of inspector's time would be attributable to inspection and/or training, I do not believe that their testimony regarding their expectation about training was credible.

The issue presented is whether, during those standby periods when there were no inspections to perform, taking breaks and performing nontraining tasks and reporting that time under the training code, constitute the type of time card misreporting that would normally have led to an employee's discharge.

Lockheed has failed to provide any affirmative evidence to support its position that the complainant's time reporting was unusual. For example, Lockheed could have called other QA inspectors to testify they trained continuously during all periods when they did not have inspections to perform. Under Part 708 this was clearly the firm's burden. 10 C.F.R. § 708.29. Lockheed did not call any QA inspectors to provide testimony regarding time card reporting and training practices. Nor did Lockheed present any testimony on the activities of other inspectors during their standby time. Therefore, there is no support for Lockheed's contention that the complainant's activities during the times he had no inspections to perform and his time card reports for those times were different from the activities and reports of other QA inspectors.

In an attempt to compensate for its failure to show that the complainant's time reporting was unusual, Lockheed argues that the complainant's reporting must necessarily be improper. Lockheed reasons that its failure to have a reporting category for standby time - i.e., time in which the inspectors did not engage in productive work or training - compels the conclusion that either the inspectors never had standby time or, if they did, they did not report it. This argument is flawed. The lack of a descriptive reporting category for a particular activity does not mean that the activity does not exist or that it is not reported under another category. In fact, there could be various reasons for the lack of a descriptive category for an otherwise recognized activity. In this case, Lockheed clearly had the authority to establish a code for standby time, since Lockheed controlled the time cards. Lockheed's failure to establish a standby code could have been attributable to a variety of reasons,(13) and therefore, the absence of a standby code does not mean that inspectors did not report such time under existing codes.

No matter how strongly Lockheed asserts that since there was no generally recognized standby category the training category meant an inspector was actually training, Lockheed must provide clear and convincing evidence regarding the normal practice of QA inspectors if departure from that practice is the basis for a personnel action against a whistleblower. Lockheed has failed to do so.

On the other hand, the complainant himself brought forward testimony and evidence regarding the time reporting practices of QA inspectors. The complainant's log and his testimony indicate that QA inspectors thought if they had no inspection to perform they were in a standby mode. TR. II at 52. See also letter from the complainant's co-worker dated September 11, 1998, AR at 111. The complainant's testimony indicated that inspectors thought of being on standby status as a normal activity and they believed that management had directed them to report standby time using a training code. TR. II at 28. In addition to his own testimony the complainant called his supervisor to testify. When asked to describe the activities that would be expected during standby time he indicated "the most desired activity would be to do some sort of retraining . . . [but] there's a limit to how much you can read and reread and reread." TR. II at 94. In view of the candor of his testimony and the fact that the complainant's supervisor has been promoted to supervise a larger group, I viewed this testimony to be unbiased and strong support for the proposition that Lockheed's asserted requirement that standby time could not be reported using a training code was not reasonable and was not being generally followed by QA inspectors. The testimony of the complainant's supervisor also confirmed the testimony of the complainant that there was no formal training program. TR. II at 95. His testimony also supported the complainant's position that standby time was a

generally recognized concept. TR. II at 130. The complainant's supervisor also testified that the policy of charging to training codes only during periods when a QA inspector is involved in training is generally not enforced. TR. II at 134.

In its post-hearing brief Lockheed challenges the credibility of the complainant's supervisor by indicating that his statements at the hearing and his statement to the security investigator that QA inspectors had to "charge only time worked" are inconsistent. Lockheed's post hearing brief at 23. I find these discrepancies to be caused by Lockheed's refusal to acknowledge that the complainant's supervisor recognized that standby time was time worked and a normal work-related activity. Therefore, the discrepancy perceived by Lockheed does not diminish my belief that the testimony of the complainant's supervisor was candid, and consistent with the documentary evidence.

In summary, Lockheed's maintains that the complainant's behavior was improper because he reported he was in training during ten hours of a twelve week period when he was in a standby mode and not actually doing training. However, Lockheed has not shown that any other QA inspector was ever even disciplined for such an act, much less discharged. Lockheed did not bring forth a single inspector to testify that during periods of standby it was consistent practice to constantly review manuals and train. Lockheed did not provide testimony from other inspectors that they did not behave in the same manner as the complainant. Without such evidence,Lockheed has not met its burden of showing by clear and convincing evidence that ten hours of not performing training activities during a twelve week period would normally lead to the complainant's dismissal.(14)

V. Conclusion

Based on the analysis presented above, I find that complainant has made disclosures protected under Part 708, and that Lockheed's dismissal of the complainant was an adverse personnel action that constituted a retaliatory act under Part 708. Therefore, the complainant is entitled to remedial action from Lockheed and Bechtel.

It Is Therefore Ordered That:

(1) The Request for Relief filed by the complainant under 10 C.F.R. Part 708 is hereby granted as set forth below.

(2) Bechtel shall immediately reinstate the complainant to the position of QA inspector at the salary rate calculated in Appendix A.

(3) The complainant shall produce a report that provides information on attorney's fees, litigation expenses and incremental medical costs. The complainant's report shall be calculated in accordance with Appendix A.

(4) Lockheed shall produce a report that calculates the back wages plus interest payable to the individual. Lockheed's report shall be calculated in accordance with Appendix A.

(5) Lockheed shall pay the complainant back wages plus interest, attorney's fees, litigation expenses and incremental medical costs. The amounts of each of these items shall be calculated in the two reports specified in paragraphs (3) and (4) above.

(6) Lockheed shall make retirement fund contributions in the amount calculated in the report specified in Appendix A.

(7) Lockheed shall facilitate the complainant making retirement fund contributions as calculated in its report specified in Appendix A.

(8) Lockheed shall remove all information regarding this proceeding from the complainant's personnel file. The complainant shall have the right to review his personnel file.

(9) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting the complainant relief unless, within 15 days of the date of this Order, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Thomas L. Wieker

Hearing Officer

Office of Hearings and Appeals

Date: December 1, 1999

APPENDIX A

The Part 708 regulations provide that if the initial agency decision determines that an act of retaliation has occurred, it may order: reinstatement; transfer preference; back pay; and reasonable costs and expenses, including attorney and expert-witness fees; and such other remedies as are necessary to abate the violation and provide the employee with relief. 10 C.F.R. § 708.36.

A. Findings

In the complainant's post hearing brief he requests the following relief:

1. Reinstatement to his previous job as a QA inspector.

2. Elimination of information regarding the case from his file.

3. Back wages plus interest from June 22, 1998, until reinstatement (hereinafter the unemploy- ment period).

4. Restoration of sick and annual leave that would have been earned during the unemployment period.

5. Restoration of his retirement account.

6. Payment of litigation expenses.

7. Attorney's fees and expenses.

8. The posting of finding regarding this case at INEEL.

9. Incremental medical expenses.

It is clear that the complainant is entitled to reinstatement, item 1, back wages plus interest from June 22, 1998 until reinstatement, item 3, and attorney's fees and expenses, item 7. He is also entitled to receive actual out of pocket litigation expenses, item 6, and incremental medical costs, item 9. I also believe that elimination of negative information regarding this proceeding from his personnel file is appropriate, item 2.

The complainant is not entitled to restoration of sick and annual leave that would have been accrued since June 22, 1998, item 4. It is likely that the complainant would have used that leave. Therefore, it would amount to double counting to compensate him for all the hours during the unemployment period while permitting him to accrue leave for future use. Of course when reinstated he should be credited with all leave he had accrued and not used prior to his dismissal unless he has been previously compensated for that leave.

I believe it is highly speculative to determine the earnings and the investment pattern of funds that would have been contributed by Lockheed. Therefore, I will direct Lockheed to now contribute any amounts it would have contributed during the unemployment period. In addition Lockheed shall facilitate the complainant's contribution of any amounts he would have contributed had he been employee during the unemployment period.

There is no reason to believe that posting of findings of this case, item 8, at the facility is necessary to abate the violation or provide the complainant with relief. I will therefore not order that form of relief.

B. Lockheed's Calculations

In order to calculate back wages plus interest, retirement fund contributions and leave accrued, Lockheed and/or Bechtel shall make the following calculations and provide them to the complainant within 30 days of the date of this order. (1) In the event that the exact date of reinstatement is unknown Lockheed shall make the calculations through the first pay period ending on or after March 31, 2000.

1. Calculate the number of hours of overtime the average QA inspector earned during each pay period ending during the period January 1, 1999 through June 30, 1999. In the alternative to making such a calculation, Lockheed may use four hours of overtime each week.

2. Provide for each pay period the basic pay rate per hour the complainant would have received per hour. For the period after dismissal until the date that annual pay increases are granted Lockheed shall use the hourly rate the complainant was receiving on June 22, 1998. For periods after the date of annual hourly rate change they shall increase the rate by the average increase that QA inspectors received. In the alternative to making a calculation of the average increase of QA inspectors Lockheed may use 5%.

3. Using the principles described in item 2, provide for each pay period the overtime rate the complainant would have received.

4. Determine the gross wages the individual would have earned by multiplying the basic salary rate (item

2) by forty and the overtime hourly salary rate (item 3) by the number of overtime hours (item 1).

5. Calculate the amount of interest that would have been earned on the gross wages. The interest shall be 10% annually, accrued and compounded semiannually. The calculation shall be made by accruing 5% interest on the balance of the salary accrued (item 3) and the prior interest accrued on December 31 and June 30 of each year.

6. Provide a calculation of the amount Lockheed would have contributed to any retirement account during the unemployment period.

7. Provide information on each retirement or leave benefit that is based on the length of an employee's service. For each such plan, indicate how the firm will adjust the complainant's credited service to compensate for the unemployment period.

8. Calculate the amount the complainant was eligible to contribute to retirement programs during the unemployment period. Indicate how Lockheed and Bechtel will facilitate the complainant's ability to make those contributions.

9. Calculate the amount of accrued leave the complainant will have on the date of his reinstatement.

C. Complainant's Calculation

Within 30 days of this order the complainant shall provide Lockheed the following information,

1. A calculation of the out of pocket litigation expenses and attorney's fees. In calculating attorney's fees, the complainant's counsel should estimate her hours and expenses for this calculational portion of the proceeding. In lieu of estimating her hours and costs for the calculational phase of the proceeding she may use five hours of her time and no expenses. The complainant's attorney shall provide Lockheed with sufficient information to understand how her hours and costs were determined. The complainant shall also provide reasonable information regarding his out of pocket litigation expenses.

2. Records describing the medical expenses the complainant believes would have been paid by insurance if the complainant had not been discharged. Also, the complainant should indicate any change in the complainant's medical insurance cost as a result of his discharge. The change in medical insurance cost will be an offset to the incremental medical bills or an additional recoverable expense.

D. Negotiation Period

The parties will have until sixty days from the date of this order to discuss and negotiate any disputes regarding the calculations. During that period I expect that both parties will provide reasonable information to facilitate the other party's understanding of calculations.

E. Final Report

Seventy days from the date of this order the complainant shall provide a report to Lockheed and the Office of Hearings and Appeals with a summary calculation. The complainant shall describe in detail any matters that remain in dispute. Lockheed will have 15 days from the date of that report to provide a response to that report.

F. Appeal

In the event of an appeal both parties shall follow the above negotiating and reporting steps unless those requirements are specifically stayed by an appropriate official.

(1)The Administrative Record of the OHA investigative proceeding consists of 545 pages and will be referred to as the "AR".

(2)The complainant's direct supervisor during the period was Renie Montoya, hereinafter the "complainant's supervisor." The complainant's supervisor supervised three other QA inspectors as well as several other employees. TR. II at 93. One of the other three QA inspectors is also a key figure in this proceeding. She will be referred to as the complainant's co-worker. The other individual who is a central figure in this proceeding is the supervisor of the complainant's supervisor. He will be referred to as the "department manager." His department consisted of between 28 and 35 employees. TR. I at 232.

(3)There was an intervening meeting with the department manager, the security investigator and Dennis Patterson, hereinafter "Lockheed's senior ethics officer."

(4)In order to enter or leave INTEC each person must put his security card through and electronic card reader. TR1. at ____. The electronic card reader records data which indicates the exact time that each person entered or left the INTEC area.

(5)In order to enter or leave INTEC each person must put his security card through and electronic card reader. TR1. at ____. The electronic card reader records data which indicates the exact time that each person entered or left the INTEC area.

(6)The full text of the security investigator's report is included in the AR at pages 413-82. The investigative report includes: the investigator's conclusions, six pages of investigator's notes, badge activity reports obtained from the electronic card readers, time and attendance reports for the complainant and the complainant's co-worker, a four page summary of the electronic card reader data prepared by the investigator, and weekly diaries of the complainant and the complainant's co-worker.

(7)The 17 hours seems to have been calculated by the investigator by subtracting 14 hours of time spent at the infirmary from the 31 hours spent outside the gate. However, the inspector was unable to indicate which specific hours constituted the 17 hours. After reviewing the record I am also unable to identify exactly which hours the security investigator included in the 17 hours.

(8)Testimony at the hearing indicated that some of the time outside the gate was spent going to the central facility to pick up mill test reports, TR. I at 276, and doing inspections at the coal fire plant and other facilities, TR. II at 31 (coal fire plant) & TR. II at 78 (weld shop). For instance, on March 18, 1998, the complainant and the complainant's co- worker were outside the INTEC gate for 2 hours and 26 minutes. AR at 460. On that day the complainant reports two hours on his time cards under a code for performing an inspection at the coal fire plant. That plant is outside the gate. That period outside the gate was clearly productive work time. The department manager testified at the hearing that the complainant should not have done that inspection because it was outside the INTEC gate. TR. I at 292-94, 309-12. I found that testimony of the department manger to be an attempt to justify his statements to the security investigator and the employee review board. When questioned at the hearing he could not provide any basis for his position that the complainant should not have done that inspection. This self serving and defensive testimony is an example of the department manager's pattern of evasiveness which leads me to believe the department manager did not testify honestly at the hearing.

(9)I am aware the department manager testified that he was not involved in the investigation by the internal auditor. TR. I at 246. However, I believe the internal auditor's testimony on this issue to the contrary. TR. I at 23, 24 and 26. The internal auditor was clearly more credible than the department manager whose recollections were often in error and reflected his self interest.

(10)It is clear from Lockheed's senior ethics officer's testimony that he had no familiarity with the reason a QA inspector might leave the INTEC facility. TR. I at 341.

(11)The testimony of the security investigator and his report are quite clear that he did not find time card

fraud. He clearly indicated that he only found time card inconsistencies. TR. I at 122. He also testified he was not in a position to evaluate whether those time card inconsistencies were improper. TR. I at 148, 150, 156.

(12)The internal auditor did testify that the duty of his office, Internal Controls Office, was to do floor checks, which are audits of the time reporting process. TR. I at 16, 22. This is the type of audit that normally was used to determine whether there was time card fraud. No such audit was performed. I believe that the audit was not conducted because the group manager recognized that the QA inspectors were very mobile and therefore such a audit would not provide useful information.

(13)I believe that the Employee Review Board did not understand the function and the inspection duties and normal time card reporting practices of QA inspectors. Therefore, without adequate guidance from line management, the Employee Review Board would not have been able to evaluate the time card practices of the QA inspectors.

(14)It is my sense here that by providing such a code Lockheed might have been obligated to reveal to the DOE that there were many hours when QA inspectors had no inspections and no productive training to do.

(15)One of the examples of time card impropriety presented by Lockheed was an individual that failed to show up for an entire week and came in Saturday night and filled out his time cards as if he had been present for the entire week. TR. I at 93-96. Another example dealt with an employee who showed up in the morning, left after a short period and submitted a time card indicating she was present for the entire day. TR. I at 323. These examples seem quite different from this situation in which a QA inspector took occasional walks with his beeper active so that he could return if called. In fact, Lockheed's senior ethics officer's testimony makes a distinction between fraud and occasional breaks. He testified that "things such as long breaks, an employee coming in late, those kind of issues . . . wouldn't necessarily result in a formal investigation of time card fraud or mischarging." TR.I at 318.

(1)Lockheed shall also provide the complainant's counsel with sufficient detail for her to determine how the weekly hours of overtime and wage rate increase calculations were made.

Case No. VBH-0017

July 18, 2000

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Jimmie L. Russell

Date of Filing: October 12, 1999

Case Number: VBH-0017

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Jimmie L. Russell under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his complaint, Mr. Russell contends that reprisals were taken against him after he made certain disclosures concerning mismanagement, breaches in security procedures and safety violations at the DOE's Los Alamos National Laboratory (LANL). LANL is managed and operated by the University of California (the UC). At the time that he made the alleged disclosures, Mr. Russell worked at LANL for managers who were UC employees. However, Mr. Russell was an employee of Comforce Technical Services, Inc. (Comforce), a sub- contractor of UC. Mr. Russell alleges that certain UC employees retaliated against him for making protected disclosures at LANL, and that these retaliations resulted in the termination of his work at LANL.

I. Summary of Determination

Based on my analysis of the record in this proceeding, I find that Mr. Russell made protected disclosures that were proximate in time to the adverse personnel actions taken against him by the UC and, at the UC's direction, by Comforce. Under these circumstances, the DOE's strong commitment to whistleblowers imposes the significant requirement that the UC and Comforce show by clear and convincing evidence that, in the absence of these protected disclosures, they would have taken the same negative personnel actions against Mr. Russell.

As indicated below, the evidence in the record indicates that Mr. Russell was occasionally short-tempered and argumentative in the workplace. However, I find that the UC based its decision to terminate his assignment on alleged instances of threatening behavior by Mr. Russell which lacked any substantial factual basis or, in other instances, were grossly exaggerated.

Moreover, I find that Mr. Russell's supervisor, his group leader, and his division director appear to have played a crucial role in collecting and transmitting unfounded allegations of Mr. Russell's threatening behavior. The evident willingness of these UC managers to see Mr. Russell's actions as intentionally menacing and not to reasonably evaluate these incidents raises the strong possibility that they acted with retaliatory intent. Further, I find the consensus for the immediate termination of Mr. Russell that was reached by an emergency advisory panel at LANL was substantially tainted by the selective and misleading information that it received from these UC managers.

I also conclude that the UC's decision not to hire Mr. Russell to an in-house position when it reorganized

his job function may have reflected the retaliatory intent of his UC managers. Accordingly, I find that the UC and Comforce committed reprisals against Mr. Russell, and that the UC should be required to take restitutionary action on his behalf.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations.(1)

The regulations provide, in pertinent part, that "a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a)(l), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations are entitled to receive an extensive series of protections. They may file a whistleblower complaint with the DOE. As part of the proceeding, they are entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they may request independent fact-finding and an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Procedural History: Mr. Russell's Complaint and the ROI Findings

Mr. Russell filed his Part 708 complaint with the DOE's Office of Inspector General (IG) on March 30, 1999. The investigation was pending when, on April 14, 1999, revisions to Part 708 took effect. See 64 Fed. Reg. 12,862 (March 15, 1999). Under the revised procedures, investigations are conducted by the DOE's Office of Hearings and Appeals (OHA), and the revised procedures "apply prospectively in any complaint proceeding pending on the effective date of this part." 10 C.F.R. §§ 708.8, 708.22. On April 26, 1999, OHA Director George B. Breznay appointed an OHA investigator to complete the investigation of Mr. Russell's complaint. On October 12, 1999, the OHA investigator issued his Report of Investigation (the ROI). The ROI made the following factual findings concerning Mr. Russell and his employment history at LANL which are not disputed by the parties:

(1) Russell is a certified security auditor with extensive military, academic and law enforcement experience. Russell began his employment at LANL in 1985, and worked for several LANL contractors. In April 1996, Russell was hired as a Self-Assessment Team Leader by Comforce, a sub-contractor providing staffing services to the LANL Security Division's Plans and Assessment Office (PAO). At some point in 1997, Michael Irving, a UC employee, became Russell's immediate supervisor.

(2) Russell received excellent performance evaluations with no negative comments for his

> three final years at LANL. Sometime around the beginning of 1999, the UC began the process of converting the position that Russell held as a sub-contractor employee to two positions to be staffed by employees of UC (the UC positions). As late as February 25, 1999, Russell was one of the two highest rated candidates for the UC positions.

ROI at 4. The ROI finds that Russell made many disclosures that fall within the definition of "protected disclosures" under 10 C.F.R. § 708.5. Specifically, it finds that

> Russell has been employed as a Self Assessment Team Leader in LANL's Security Division [hereafter the "S- Division"] since 1996. Russell was responsible for conducting audits and assessments of Safeguards and Security programs and preparing written reports of his findings. These reports routinely communicated the assessors' findings of security, safety and management deficiencies to the UC's management and to DOE. Accordingly, Russell made protected disclosures on a regular basis. In addition, the UC may have blamed Russell for reporting the locked door to LANL safety inspectors.

ROI at 4. With regard to Mr. Russell's allegations of retaliation, the ROI finds that Mr. Russell's complaint and supporting documentation contain numerous allegations of retaliation involving events that occurred in a time period spanning from the mid 1980's to the present. However, the ROI finds that Part 708 requires a complainant to file a complaint within 90 days of the date that he "knew or reasonably should have known, of the alleged retaliation." 10 C.F.R. § 708.14(a). It therefore finds that only the following alleged retaliations are covered by the current complaint: (1) Russell's March 5, 1999 termination for cause; (2) Russell's failure to be awarded one of the two UC positions that he interviewed for on February 26, 1999; (3) an alleged UC ban on hiring Russell for any work with or at LANL; and, (4) the UC's submission of allegedly derogatory information concerning Russell to DOE-AL Personnel Security. ROI at 4.

With respect to these alleged disclosures and retaliations, the ROI concludes that Mr. Russell made protected disclosures on a regular basis to his employers, and that many of these protected disclosures occurred in sufficient temporal proximity to the alleged retaliations to meet Mr. Russell's burden under 10 C.F.R. § 708.29 of showing that these protected disclosures were a contributing factor to the four acts of alleged retaliation listed above. ROI at 5.

Section 708.29 of the Part 708 regulations states that once a complainant has met the burden of demonstrating that conduct protected under section 708.5 was a contributing factor to the contractor's acts of retaliation, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." 10 C.F.R. § 708.29. According to the ROI, the UC believes it has met the burden with respect to the four retaliations listed above. The UC contends that it terminated Mr. Russell's work assignment at S-Division due to his threatening behavior toward fellow employees. Specifically, the UC alleges that on February 26, 1999, Mr. Russell was involved in two incidents in which he threatened and intimidated the same UC employee, and that he made additional threats in the following days. As a result, on March 3, 1999, the Director of the S-Division convened a Rapid Action Team (the RAT) to deal with Mr. Russell's alleged behavior. The RAT is a LANL group designed to convene on short notice to provide advice to managers on handling difficult human resource issues such as potential violence in the workplace. The RAT met on March 4, 1999, and, according to UC officials who were present, reached a strong and unanimous consensus that Mr. Russell should be removed from the workplace. Mr. Russell was informed on March 5, 1999, his services would no longer be needed at LANL and was not permitted to return to his office. Soon after Russell's termination, the S-Division notified DOE-AL Personnel Security officials of the RAT determination to terminate Russell's work at LANL on the grounds that he had intimidated fellow employees. See ROI at 2-3.

In its analysis of these allegations, the ROI does not find convincing evidence that Mr. Russell threatened

his fellow employees or engaged in other behavior meriting the termination of his work assignment at the S-Division. Accordingly, the ROI finds that there is not clear and convincing evidence that the UC would have taken the alleged retaliatory actions (1), (3) and (4) listed above in the absence of Mr. Russell's protected disclosures. With respect to action (2), the ROI does not make a direct finding on whether the UC has shown, by clear and convincing evidence, that it would have awarded the two UC positions to other candidates. ROI at 5-11.

C. The Addition of Comforce as a Party and Its "Settlement" with Russell

While Mr. Russell acknowledged in his complaint that he was an employee of Comforce and that Comforce had terminated his employment, he contended that Comforce took this action at the instigation of the Security Division at LANL, which is managed by UC. March 8, 1999 Complaint of Jimmie Russell at 13. The ROI makes no findings concerning Comforce's role in this matter, and does not identify Comforce as a party to Mr. Russell's Part 708 Complaint. In my initial letter to the parties, I found that both the UC and Comforce are proper parties to this proceeding. In doing so, I rejected the contention, made by the UC in its response to Mr. Russell's March 8, 1999 Complaint, that the UC is not subject to a complaint from Mr. Russell under Part 708 because Mr. Russell was never directly employed by the UC. June 18, 1999 UC Response at 9-11. As I stated in that letter:

> Part 708 applies to employees of DOE contractors, and the term "contractor" is specifically defined to include "a subcontract under a contract . . . with respect to work related to activities at DOE-owned or -leased facilities." 10 C.F.R. §§708.1-2. Mr. Russell was employed by a UC subcontractor at LANL and the UC, as the management and operating contractor at LANL, took actions which directly and negatively impacted the "terms", "conditions" and "privileges" of Mr. Russell's employment at LANL. The UC therefore bears potential liability, under Part 708, to remedy these negative actions if they ultimately are found to be "retaliations" under 10 C.F.R. §708.2.

October 20, 1999 letter to the parties at 3. I further noted that although Mr. Russell's allegations of retaliation involve determinations and actions taken by the UC, it may be necessary to require Comforce, in its capacity as Mr. Russell's direct employer, to make payments or take other actions necessary to provide Mr. Russell with appropriate relief. Accordingly, I determined that both the UC and Comforce are parties in this proceeding. Id.

In a submission dated January 13, 2000, Counsel for Mr. Russell and Counsel for Comforce requested that I execute an order dismissing Comforce from the proceeding. The submission stated that the request for dismissal was made "pursuant to a settlement of disputed claims documented in a Settlement Agreement and Mutual Release ("Agreement"), which was entered into by the parties on January 13, 2000, and which will survive the dismissal of this action." The "Order Granting Dismissal" submitted by the parties provided as follows:

> It is hereby ordered that Comforce Technical Services, Inc. is dismissed with prejudice, the parties to bear their own respective attorney's fees and costs and that Comforce agrees to employ Russell in the future for a position at LANL based upon LANL's determination to reinstate or hire Russell, and subject to his acceptance of all current terms and conditions of employment with Comforce.

In a letter to the parties dated January 21, 2000, I indicated that the Agreement between Comforce and Mr. Russell and the related request for the dismissal of Comforce as a party to this proceeding raised a significant issue concerning my authority to order relief for Mr. Russell in the event that he prevails on the merits of his complaint. I stated that if the Agreement eliminated Comforce, the subcontractor who was the actual employer of Mr. Russell, from my jurisdiction, I did not believe I would be authorized to take any

remedial action against the general contractor (UC), whose liability under Part 708 appears to be based on the "subcontract under a contract," i.e., UC's agreement with Comforce. I therefore invited Mr. Russell and Comforce to present additional information concerning their settlement agreement and its impact on my ability to order relief in this proceeding.

After receiving additional comments by these parties, I stated in a January 31, 2000 letter to the parties that I found it appropriate to proceed with a hearing. The comments indicated that the "settlement" between Mr. Russell and Comforce anticipated that this Part 708 proceeding would continue and that Comforce would remain subject to certain remedial actions that I might order. In particular, Comforce agreed to implement at least some of the Part 708 remedies sought by Mr. Russell in the event that I found that the requested remedies are warranted and appropriate.See January 27, 2000 letter from Comforce to me. Under these circumstances, I found that the settlement agreement between Comforce and Mr. Russell did not have the effect of eliminating Comforce as a party to this proceeding either for the purpose of establishing Part 708 jurisdiction or for the purpose of implementing an effective remedy. January 31, 2000 letter at 2.

Based on these findings, I denied the request of Mr. Russell and Comforce that I execute an order dismissing Comforce from this proceeding. I stated that it was inappropriate to dismiss Comforce as a party to this Part 708 proceeding when I may find it necessary to require Comforce to rehire Mr. Russell or make payments to him as part of the remedy. Id. Finally, I noted that I was not bound by any findings of fact or limitations of liability that may be contained in the "Settlement Agreement and Mutual Release" entered into between Comforce and Mr. Russell. I stated that I would make my findings of fact and of liability for any remedial actions based solely on the factual record of this proceeding and the standards for liability set forth in the Part 708 regulations. I indicated that in the event that I order Comforce to take remedial action that Comforce believes is not permitted by the terms of its settlement agreement with Mr. Russell, Comforce will have the burden of invoking the settlement agreement as a defense against compliance with my remedial directives. Id.

After a number of contacts with the parties and a conference call, I convened a hearing on Mr. Russell's Part 708 compliant in Los Alamos, New Mexico on February 15, 2000. In a submission received by me in Los Alamos on February 14, 2000, Comforce again sought dismissal as a party to this proceeding. As the basis for this request, Comforce asserted that no findings in the ROI indicated that Comforce had knowledge that Russell made protected disclosures or that Comforce knew of the reasons for his termination. Comforce stated that it "merely acted out LANL's directive to terminate Russell." Submission at 3. Comforce cited two DOE whistleblower determinations, David Ramirez, (Case No. LWA-0002), 23 DOE ¶ 87,505 (1993), aff'd., (Case No. LWA-0002), 24 DOE ¶ 87,510(1994) (Ramirez), and Daniel L. Holsinger, (Case No. VWA-0005), 25 DOE ¶ 87,503 (1995)(Holsinger), as supporting its position that the DOE could order relief against a general contractor or a successor subcontractor without the subcontractor employer of the whistleblower being a party to the proceeding. At the outset of the hearing in this matter, I denied Comforce's request for dismissal. I stated that it was not clear that I had the authority to direct relief through a party who had been dismissed. I noted that the Ramirez determination did not specifically address Part 708 jurisdictional issues. The Holsinger determination dealt with the limited issue of whether a successor subcontractor employer could be required to reinstate the whistleblower. Accordingly, the implementation of the remedy in that matter required no jurisdiction over the prior subcontractor employer. Transcript of Hearing (hereafter "Tr.") at 6.

The testimony at the hearing focused on UC's effort to show that it would have taken adverse actions (1), (3) and (4) listed above in the absence of any protected disclosures by Mr. Russell, and on Mr. Russell's efforts to show that these adverse actions and his failure to be hired to a UC position (adverse action (2)) were retaliatory acts taken in reprisal for his protected disclosures. Comforce sought to show through its witness' testimony that it played no role in the decisions leading to the adverse actions taken against Mr. Russell. At the hearing, Mr. Russell testified and called nine witnesses on his behalf. The UC called eleven witnesses, and Comforce called two witnesses. Each side was allotted ample time to question each witness. Mr. Russell submitted forty-nine numbered exhibits at the hearing. The UC introduced twenty-three lettered exhibits, and Comforce submitted one exhibit. Each of the parties submitted a post-hearing brief,

and Mr. Russell was permitted to submit an additional evidentiary exhibit. Upon receiving this additional exhibit, I closed the record of the proceeding on May 23, 2000.

III. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish

> by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.(2)

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both Mr. Russell and the contractors. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the risk of error is allocated roughly equally between both parties. Grogan v. Garner, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake).

B. The Contractor's Burden

If I find that Mr. Russell has met his threshold burden, the burden of proof shifts to the contractors. The contractors must prove by "clear and convincing" evidence that they would have taken the same personnel action against the complainant absent the protected disclosure. "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". See Hopkins, 737 F. Supp. at 1204 n.3. Thus if Mr. Russell has established that it is more likely than not that he made a protected disclosure that was a contributing factor to an adverse personnel action taken by the contractors, the contractors must convince me that they clearly would have taken this adverse action had Mr. Russell never made any communications concerning violation of security rules or regulations at LANL.

In evaluating whether the UC and Comforce have met this burden, I will consider all the evidence in the record of this proceeding. In particular, I will closely examine the strength of evidence in support of the UC's decision to terminate his work assignment at the S-Division. In a similar manner, I will consider the UC's decision not to hire Mr. Russell to one of two UC positions to which he had applied, the UC's submission of derogatory information concerning Mr. Russell to DOE Security, and Comforce's decision to terminate Mr. Russell from its employment.

IV. Analysis

A. Mr. Russell Made Protected Disclosures.

I find that the record in this proceeding supports Mr. Russell's assertion that he made protected disclosures

to the UC management and to the DOE. As discussed above, Mr. Russell was employed as a Self Assessment Team Leader in LANL's Security Division from 1996 until his termination in early 1999. In that position, he was responsible for conducting audits and assessments of security programs and preparing written reports of his findings. These reports routinely communicated the assessors' findings of security, safety and management deficiencies to Mr. Russell's UC management and to the DOE. Based on these facts, the ROI finds that Russell made protected disclosures on a regular basis. ROI at 4.

The UC argues that Mr. Russell is not entitled, "automatically", to a presumption that he engaged in protected activity as a result of his role in preparing assessments of security matters.

> Any disclosures that he made were part of a Laboratory process and were made at the request of Laboratory management which directly solicited these disclosures by assigning him the task of performing assessments. This removes the disclosures from the realm of those which are protected.

UC Post-Hearing Brief at 3. I reject this contention. The original Part 708 regulations clearly indicate that an employee who has disclosed the violation of a security rule or regulation has made a protected disclosure for purposes of Part 708, and there is no indication of any intent to exclude such a disclosure if it was made pursuant to a management assignment. The Preamble to those regulations specifically states that disclosures made pursuant to such assignments are to be considered protected disclosures.

> The DOE has determined to afford protection to employees who have made disclosures to contractors. Disclosures to contractors will include quality assurance reports and other similar reports made in the course of an employee's job responsibilities.

57 Fed. Reg. 7535 (March 3, 1992).

Mr. Russell must also prove, however, that one or more of these protected disclosures was a *contributing factor* in a personnel action taken against him. 10 C.F.R. § 708.29; see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994). A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." Ronald A Sorri, 23 DOE ¶ 87,503 at 89,010 (1993) citing McDaid v. Dep't of Hous. and Urban Dev., 90 FMSR ¶ 5551 (1990). See also Russell P. Marler, Sr., 27 DOE ¶ 87,506 at 89,056 (1998).

The record indicates that Mr. Russell's managers at LANL's S- Division were aware of the findings of security infractions contained in his security assessments and that two of these managers, S-Division Director Stanley Busboom and Group Leader Kevin Leifheit, served on the Rapid Action Team (the RAT) whose recommendation resulted in Mr. Russell's immediate termination from his position at LANL on March 5, 1999. In addition, Mr. Busboom reported the RAT's findings to the DOE's Personnel Security Program as allegedly derogatory information after Mr. Russell's termination. S-Division management was also responsible for designating Mr. Russell's termination as "for cause" and thereby preventing his reemployment at LANL for a five year period. Another manager, Michael Irving, served on the committee that rejected Mr. Russell application to be hired as a UC employee. UC Hearing Exhibit S.

The record also indicates that Mr. Russell made protected disclosures proximate in time to these alleged retaliations. In December 1998, Mr. Russell made findings in connection with an assessment of Classified Matter Protection and Control (the CMPC assessment). In connection with this assessment, the UC acknowledges that there was a dispute between Mr. Russell and his immediate supervisor, Mr. Irving, as to whether certain data should be identified as security "infractions" or security "incidents". UC Post-Hearing Brief at 17, citing Tr. at 135 (Testimony of Mr. Irving). For purposes of Part 708, however, data indicating either an infraction or an incident is sufficient to constitute the disclosure of the violation of a security rule or regulation, and is therefore protected.(3) The record indicates that Mr. Russell continued to

submit draft security assessments, presumably containing data concerning security violations, right up until his termination in early March 1999. Complaint of Mr. Russell at 11, Tr. at 137 (testimony of Mr. Irving). Accordingly, I find that Mr. Russell made protected disclosures which were proximate in time to the four alleged reprisals.

In its Post Hearing Brief, the UC argues that Mr. Russell's testimony at the hearing indicated that he believed that the alleged retaliations taken against him were based on causes other than his protected disclosures. Even if statements by Mr. Russell were to be viewed as admissions that some of his supervisors were inclined to discriminate against him for reasons unrelated to his protected disclosures, it does not follow that his protected disclosures therefore did not "contribute" to the decision of these supervisors to take the alleged adverse personnel actions that he has identified in his Part 708 complaint. Barbara Nabb, 27 DOE ¶ 87,519 at 89,118 (1999). In this regard, I note that, under questioning by his own counsel, Mr. Russell testified that with respect to his supervisor, Mr. Irving, "the root cause of our rocky relationship was directly related to the arguments we had over self-assessments." Tr. at 1164-65. Accordingly, I reject the argument that the admitted existence of other potential sources for retaliation precludes me from inferring that protected disclosures made by Mr. Russell, in close temporal proximity to adverse personnel actions taken against him, were contributing factors to the decisions to take those actions.

I therefore conclude that Mr. Russell has met his burden of showing that his disclosures of security violations at LANL constituted a contributing factor in the negative personnel actions identified as alleged reprisals in the ROI. The burden is therefore with the contractors, the UC and Comforce, to prove by clear and convincing evidence that they would have taken the same actions without Mr. Russell's disclosures.

B. The Decision to Terminate Mr. Russell's Work Assignment at S- Division Was a Reprisal.

With respect to the UC's decision to terminate Mr. Russell's work assignment at S-Division, the ROI finds that on Friday, February 26, 1999, Mr. Russell was allegedly involved in two incidents. First, Mr. Russell allegedly threatened and intimidated Mr. John Waterbury, a co-worker who was a member of the committee that was screening candidates for the UC positions. Later on that same day, Mr. Waterbury allegedly found Mr. Russell yelling, cursing and forcefully shoving a locked door in the basement of the building in which they both worked. The ROI notes that Mr. Russell asserted that he was merely yelling for help in opening the door. ROI at 2. The ROI reports that on Tuesday, March 2, 1999, Mr. Kevin Leifheit (Mr. Russell's group leader) and Mr. Irving informed the division office that Mr. Russell had threatened and intimidated other employees. Id. In particular, they reported that Mr. Russell had written a threatening statement on a whiteboard in the group office. ROI at 9.

On Wednesday, March 3, 1999, the situation was brought to the attention of Mr. Stanley Busboom, the Director of LANL's Security Division and the decision was made to convene a Rapid Action Team (the RAT). The RAT is a LANL group designed to convene on short notice to provide advice to managers on handling difficult human resource issues such as potential violence in the workplace. The RAT included Mr. Busboom, Mr. Leifheit, a member of the special projects office, a legal representative, a clinical psychologist and an employee relations specialist. On March 4, 1999, the RAT met to consider the concerns raised about Mr. Russell, and reached a strong and unanimous consensus that Russell should be removed from the workplace. ROI at 2-3.

At the Hearing, the UC presented the testimony of several of the individuals involved in these events in the effort to show that its stated reasons for terminating Mr. Russell's assignment were correct. In its Post-Hearing Brief, the UC maintained that

> the Laboratory clearly has met its burden of showing by clear and convincing evidence that Russell would have had his assignment terminated notwithstanding any alleged protected

> disclosures. . . . Further, it is clear that Waterbury, Irving, Leifheit and Busboom were convinced in good faith that Russell presented a threat.

UC Post-Hearing Brief at 35.

I do not agree. The burden of the UC in this case is to show by clear and convincing evidence that in the absence of Mr. Russell's protected disclosures, the behavior of Mr. Russell would have led to the termination of his work assignment. As discussed below, my review of the record indicates that, rather than such a clear and convincing showing supporting the UC's actions, there is convincing evidence indicating that alleged instances of threatening behavior by Mr. Russell lacked any substantial factual basis and, in other instances, were grossly exaggerated. Moreover, Mr. Russell's supervisors, Mr. Irving and Mr. Leifheit, appear to have played a crucial role in transmitting these unfounded allegations of threatening behavior to their division manager, Mr. Busboom. Mr. Leifheit and Mr. Busboom later presented these allegations to the other members of the RAT.(4) These RAT members may have been acting in good faith when they relied on the information collected by Messrs. Irving, Leifheit and Busboom, but by that point the process was already tainted by the selective and misleading information that they received. Moreover, there was no mechanism in the RAT process, a process usually reserved for instances of overt violent or threatening behavior, for the verification of the allegations being made against Mr. Russell.

In a memorandum dated March 12, 1999 [hereinafter the "Busboom Memorandum"], Mr. Busboom informed the Director of the DOE Albuquerque Operations Office's Division of Security and Safeguards that the S-Division had requested Comforce "to terminate [Mr. Russell's] services with LANL for cause." Mr. Busboom attached two summaries to his memorandum "explaining the background of the situation." The second attachment to this memorandum discussed the RAT's investigation and findings concerning Mr. Russell.(5) UC Hearing Exhibit L. The heading "Facts" appears at the top of this summary. The document states that

The panel considered the following information in making their recommendation of dismissal:

* Mr. Russell was observed by his co-workers to be under pressure from the IEO investigation. . .

* He was also under pressure as his contract position was being converted to a UC FTE position, which he had to compete for as an external candidate.

* He had a behavior history of being involved in violent confrontations. (A physical altercation some 8-10 years ago when Mr. Russell worked for the Mason & Hanger protective force was confirmed. A verbal altercation 4 years ago, resulting in Mr. Russell being let go from a contract with [LANL's Nonproliferation and International Security Division (NIS)], was also confirmed.)

* Various incidents of poorly controlled temper and strained interpersonal relationships were confirmed from Mr. Russell's tenure as a contractor with OS/FSS/S Divisions.

* It was confirmed that Mr. Russell intimidated a member of the screening committee for the job he was applying for, just hours before [his] own interview with that committee.

* It was confirmed that Mr. Russell had written a statement on a "white board" in the group office that warned employees: "you should not be concerned with the bullet with your name on it, be concerned with the one that does not have your name on it."

* The group leader recounted that his job interview with Mr. Russell for the open position had disintegrated into a complaint session about how group business was currently conducted.

* Other instances of erratic behavior were noted, and co- workers of Mr. Russell were noted

> as fearing for their personal safety, citing concerns for his unpredictable conduct, his reputation for violent outbursts, and his affinity for firearms.

Busboom Memorandum, Attachment 2, UC Hearing Exhibit L. As the following analysis indicates, the "facts" presented at the RAT by Mr. Leifheit and Mr. Busboom were relied upon by the advisory RAT members as supporting a substantial concern that Mr. Russell might commit acts of violence against his co-workers. As discussed below, I find that these "facts" contain substantial exaggerations, unfounded allegations, and other distortions that negate the validity of the RAT conclusion. Moreover, clarifying and exonerating information was readily available and yet was not sought out or presented, leading me to conclude that the actions taken against Mr. Russell were tainted by the retaliatory motives of his UC managers, and would not have been pursued in the absence of his protected disclosures.

1. Mr. Russell Does Not Have a History of Threatening and Violent Behavior.

Through its witness testimony and argument in this proceeding, the UC has broadly characterized Mr. Russell as "a worker who clearly had trouble functioning in the workplace." UC Post-hearing Brief at 12. I do not believe that Mr. Russell's overall employment record supports such a conclusion. I concur with the ROI's finding that Mr. Russell, a certified security auditor, and "has an extensive and impressive military, academic and law enforcement background." ROI at 2. Mr. Russell is now in his early sixties. From 1956 until 1980 Mr. Russell served with distinction in the United States Marine Corps. ROI Administrative Record (hereinafter "ROI AR") at 00020. From 1982 until 1985, Mr. Russell was employed at the Harris County Sheriff's Department in Houston, Texas. From 1985 until 1992, he was employed in several positions by the Mason and Hanger Protective Force at LANL (Mason and Hanger), including the positions of Training Manager, Quality Assurance Manager, and Environment, Safety and Health Manager. In 1988, he received a recommendation from the Vice President/Contract Manager of Mason and Hanger which praised his professional abilities and added that

> Jimmie is an exceptionally honest individual who is very committed to his work, family and church. He has a very friendly and outgoing personality and is frequently asked to speak to groups of all sorts.

Russell Hearing Exhibit 2. From 1993 to 1995 he was employed directly by LANL as a security consultant. Finally, from 1996 to 1999 he served as a contract employee at LANL, first through Grumman Technical Services and then through Comforce, in the capacity of Assessment Team Leader. ROI AR at 00019. The ROI notes that Mr. Russell received excellent performance evaluations with no negative comments for his three final years at LANL. ROI at 2. Accordingly, I find unpersuasive the UC's efforts to depict Mr. Russell as a marginal and troubled employee.

Nor am I convinced that Mr. Russell's "affinity for firearms" posed a legitimate source of concern for his co-workers. Busboom Memorandum, Attachment 2. The record certainly establishes that Mr. Russell, who spent a considerable part of his career in the military and in law enforcement, maintains an active and knowledgeable interest in firearms. He is a licensed gun dealer and kept a stack of gun catalogs in an accessible spot next to his office and invited co-workers to order weapons through him. There is no indication that his interest in firearms was in any way extreme for someone with his career background, and the testimony of a co-worker who shared this interest with Mr. Russell supports this conclusion. See Testimony of Thomas A. Baca, Tr. at 613. Nor is there any evidence that Mr. Russell ever used firearms in a threatening and irresponsible manner.(6) Under these circumstances, off-hand references to weapons by Mr. Russell, in and of themselves, cannot be viewed as threatening in nature, and it is unreasonable for his managers or co-workers to make such a claim.

In his memorandum to the Director of DOE Security at LANL, Mr. Busboom stated that the RAT had found that Mr. Russell "had a behavior history of being involved in violent confrontations." Two instances of behavior are cited as support for this alleged "behavior history," only one of which involved physical

violence. That event was described as a "physical altercation some 8-10 years ago when Mr. Russell worked for the Mason & Hanger protective force." In spite of this being the only known instance of physical violence in the workplace involving Mr. Russell, no one involved with the RAT proceeding attempted to ascertain the circumstances surrounding this "physical altercation." Mr. Leifheit testified that Mr. Russell had "told a lot of folks" about the incident, so it was treated by management as a "self-admission." Tr. at 100. The ROI finds that Mr. Russell was involved in a fistfight with an employee at LANL around nine years ago, and that "there is no evidence that LANL took any disciplinary action against Russell for the incident." ROI at 17. In his testimony at the Hearing, Mr. Russell related that this incident occurred at an early morning meeting where he was threatened by another Mason & Hanger employee.

> Mr. Jennings . . . unloaded on me with venomous remarks and profanity and vulgarity and really bad things. And it was so out of line that I thought at first he was kidding and it just got worse and worse and worse. And I told him that I thought he ought to shut up. . . . At a point, we were standing -- he was sitting and I was standing very close to him. And at a point there, he says to me "I'm going to kick your so and so such and such." And I said to him -- "Well, if you feel froggy, jump." And he stood up and made a movement toward me and then I hit him in the mouth.

Tr. at 863-64. Mr. Russell further testified that he was not disciplined over this action in any way by Mason & Hanger, while he was told by the General Manager of the Mason & Hanger contract that Mr. Jennings had been disciplined for his behavior by having his salary increase suspended for a period of time. Tr. at 864. Mr. Russell further testified that, other than this incident, he has never had a physical altercation in the work force, and, throughout his career at Los Alamos, he has never threatened, pushed or shoved anyone. Tr. at 865-66. I found Mr. Russell's testimony concerning these matters to be convincing, and counsel for UC and Comforce have not produced evidence of any other physical confrontations involving Mr. Russell or evidence of physical threats made by Mr. Russell during his fifteen years of employment in the LANL workforce.(7) I certainly do not see this isolated incident occurring approximately nine years ago as supporting the view that Mr. Russell had a "behavior history" of being involved in "violent confrontations."

A second incident was cited in the Busboom Memorandum as evidencing Mr. Russell's violent behavior history. Mr. Busboom reported that the RAT had "confirmed" that Mr. Russell was involved in a "verbal altercation" four years earlier, "resulting in Mr. Russell being let go from his contract with NIS." Busboom Memorandum, Attachment 2. At the Hearing, Mr. Busboom testified that he collected this information about Mr. Russell himself, during a telephone conversation with Terry Hawkins, the Director of NIS. Tr. at 535-36. As discussed below, Mr. Busboom's account of this incident contains omissions and inaccuracies highly detrimental to Mr. Russell, leading me to conclude that his collecting and transmitting of this information was tainted by retaliatory intent. Steven Fine, the ROI Investigator, conducted a telephone interview with Mr. Hawkins on September 15, 1999 concerning Mr. Russell employment at NIS. In a memorandum, Mr. Fine reported the following information from that interview:

> Mr. Hawkins recalled that Mr. Russell was a Special Security Officer (SSO) with the Mesa-Quill Program at the T-33 facility. Mesa-Quill was an Air Force funded program. When the funding for Mesa-Quill dried up, its employees, including Mr. Russell, lost their jobs. . . .Mr. Hawkins recalled that Mr. Russell had a run-in with Handel and Perrizo at NIS. But it wasn't Russell's fault. After the incident was investigated, Handel and Perrizo were found to be at fault and disciplined.

Memorandum of Telephone Interview, ROI AR at 00399. At the Hearing, Mr. Hawkins testified that Mr. Russell lost his full-time position at NIS because the project itself was canceled. Tr. at 414. He was not questioned concerning his previous comments concerning the altercation with Handel and Perrizo. I

conclude that there is substantial evidence contradicting the "confirmed" allegation reported by Mr. Busboom that Mr. Russell lost his employment at NIS due to a "verbal altercation." In fact, Mr. Hawkins is reported to have remembered Mr. Russell as a good employee who did not cause problems in his interactions with other employees.

> Mr. Hawkins remembered that Mr. Russell did a very good job at TA-33 and was a good employee with excellent technical skills. He could get a bit hot under the collar, but there were no problems with him at NIS.

Memorandum of Telephone Interview, ROI AR at 00399. Accordingly, Mr. Busboom substantially misrepresented Mr. Russell's employment history at the NIS when reported these matters to the RAT and, later, to DOE Security.

2. Mr. Russell Did Have a Bad Temper, But It Was Known and Tolerated by His Managers and Coworkers.

The RAT correctly found that Mr. Russell had a "poorly controlled temper" [Busboom Memorandum, Attachment 2], but it addressed this issue in a one-sided and inappropriate way. The ROI investigating attorney, after conducting numerous interviews with Mr. Russell's managers, co-workers and self assessment "customers", reached the following conclusions about Mr. Russell's poorly controlled temper and his management's reaction to it.

> Many of the individuals interviewed during my investigation commented that Russell appeared to have a low frustration threshold and poor anger management skills. Moreover, it is well documented that Russell verbally abused Irving on at least three occasions. . . . [T]he UC's management appears to have tolerated Russell's occasional verbal outbursts, perhaps because of Russell's positive aspects or perhaps because of the rough and tumble nature of the security environment.

ROI at 7-8. Testimony at the Hearing confirmed that Mr. Russell occasionally vented his frustrations and anger at co-workers and managers. It also confirmed that Mr. Russell received little if any feedback from management that was critical of this behavior.

At the Hearing, Mr. Russell's immediate supervisor, Mr. Irving testified that Mr. Russell lost his temper frequently when they had discussions about assessments, but that there were three occasions when he lost his temper "I would say extremely badly." Tr. at 141. These three incidents were recounted in detail by Mr. Irving during direct examination at the Hearing. Although his testimony indicated a perspective that is biased against Mr. Russell, it was nevertheless enlightening on Mr. Russell's bad tempered behavior. That testimony provides further indication that Mr. Russell's outbursts of temper, even at their most extreme, were just that - outbursts - and were not accompanied by overt threats of violence. His testimony also indicates that Mr. Russell's management tolerated these outbursts and that Mr. Russell was not disciplined for them.

Mr. Irving first recounted a 1997 incident that occurred in a vehicle outside of Building 470, where Mr. Russell "became enraged" while discussing the problems arising from an ongoing assessment. Mr. Irving related that Mr. Russell "got out of the vehicle, right in front of Building 470, screaming and cussing at me, and yelling at me. And calling me names and so forth." Tr. at 142. Mr. Irving acknowledged that following that incident, Mr. Russell approached him later and "apologized for his behavior. We shook hands." Id. In a second incident, possibly in 1998, Mr. Irving related that following a group discussion of the problems that S- Division was having with the Organizational Safeguards Security Officer program, he and Mr. Russell had a private conversation where he admonished Mr. Russell for being critical of management's approach to the problems, during which Mr. Russell

> became enraged, he doubled up his fist. He started to come out from . . . where his desk is. And he had his fist doubled up. He was kind of frothing at the mouth, red faced. And he said, "do you want to fucking take me on?" And he got close to me. Didn't get this close, but he was about this close. He says -- "you don't want to fucking take me on."
>
> And I realized, and I think somebody was down the hall. And I realized that was inappropriate. This discussion was getting out of hand. Let's go into Debbie Ewing's office and talk this thing out. And he went on and on in Debbie Ewing's office, extremely angry that I'm trying to censor him. And then my saying under no circumstances am I trying to censor you. But once a decision is made by management, we are morally bound to support the decision as long as it is a legal, moral or ethical decision.

Tr. at 143-47. Although Mr. Russell's alleged gestures and language were inappropriate, I note that Mr. Irving's response was to invite Mr. Russell into an empty, private office to continue the discussion. This is not the typical response of someone who feels physically threatened by the behavior of someone with whom he is having an argument.

The third incident recounted by Mr. Irving involved Mr. Russell's reaction to the annual performance evaluation that he received in October 1998. The evaluation was completed by Mr. Irving and signed by Mr. Tucker. At the time he completed the evaluation, Mr. Irving reported that the felt that Mr. Russell's problems with his temper

> seemed to have improved somewhat since the OSLO incident. Therefore, I rated him a 3 plus [on a scale of 1 to 5], I think, in a couple of areas ["Working with Others" and "Adaptability"]. And a 4 for attitude.

Tr. at 149.(8) Mr. Irving rated Mr. Russell outstanding (5 or 5+) in the other nine categories on the evaluation form, and made no comments under the heading "Indicate areas that need improvement." See ROI AR at 00045. Mr. Irving testified that during his discussion of the evaluation, Mr. Russell challenged the 3 plus ratings and eventually became enraged. Tr. at 151. Mr. Irving then testified that Mr. Russell scheduled an appointment with Mr. Tucker to discuss the evaluation, and invited Mr. Irving to attend. At this meeting, Mr. Irving stated that Mr. Russell again lost his temper.

> He became very irate, angry. That this was an unjust assessment of his performance. We [Mr. Tucker and Mr. Irving] were saying we felt this was a just assessment. . . . He [Mr. Russell] was attempting to impugn my integrity. Mr. Tucker is trying to tell him this was unacceptable, it is inappropriate. You can't do that without empirical evidence, etc. Then we were way up here in this heated discussion. . . . And then finally it comes down, and we're now back to . . . just a normal conversation.

Tr. at 153. Mr. Tucker agreed to review the evaluation of Mr. Russell in light of the their discussion. At that point Mr. Irving made a comment which once again enraged Mr. Russell, who, according to Mr. Irving, told him

> You're not going to talk down to me like that, your Highness. Something like that. And Mr. Tucker then stopped him right there, and said, -- you are completely out of line again. I don't know how many times he said this. And I said, Jimmie, you have concluded that my comment was condescending, which it was not. And then he said, -- well, perhaps I overacted. That was the third major incident.

Id. In a memorandum dated October 13, 1998, Mr. Tucker thanked Mr. Russell "for the opportunity to receive your verbal comments," and advised him that he had concluded that the evaluation "is appropriate for the period in question."

> Mr. Irving has advised both you and me that he observed marked improvement in your attitude and your ability to work with others. I encourage you to take Mr. Irving's constructive comments to heart and aspire to further improve your performance in these areas, as well as sustain your acknowledged superior performance in other areas.

October 13 Memorandum from John E. (Gene) Tucker to Jimmie Russell, ROI AR at 00046. This memorandum is quite revealing. Although Mr. Tucker had witnessed Mr. Russell lose his temper with Mr. Irving and himself, he evidently did not consider it of sufficient importance to warrant criticism or comment in his memorandum to Mr. Russell. Instead, Mr. Russell was informed that his ability to work with others had shown "marked improvement." Accordingly, Mr. Russell received no indication at that time, or at any time prior to his March 5, 1999 termination, that his managers considered his outbursts of temper to be a serious behavior problem.(9)

According to the Busboom Memorandum, the RAT found that "co-workers of Mr. Russell were noted as fearing for their personal safety, citing concerns for his unpredictable conduct, his reputation for violent outbursts, and his affinity for firearms." UC Hearing Exhibit L, Attachment 2. The ROI finds that the three LANL employees who expressed such concerns to the RAT were Ms. Debra Huling, Mr. Waterbury, and Mr. Irving. With respect to these individuals, the ROI Investigating Attorney concluded that "each of these individuals harbors a great deal of personal animosity against Russell. It is highly possible that one or more of the three individuals have expressed fear of Russell in order to obtain revenge against him." ROI at 10. As indicated above, I find that Mr. Irving was not physically threatened or intimidated by Mr. Russell. I will discuss Mr. Waterbury's allegations in the next section.

Ms. Huling is a LANL employee whose office was located in close proximity to Mr. Russell's until he moved to another building in the Fall of 1998. The ROI Investigator found that "upon interviewing Huling, I was left with a very strong impression that she has an intense and highly personal dislike of Russell." Id. Ms. Huling did not testify at the hearing, but her January 25, 2000 deposition in this matter confirms the ROI's findings. At the deposition (Russell Hearing Exhibit 7), she affirmed that she has an intense and highly personal dislike for Mr. Russell. Deposition at 46. She stated that she was frequently disturbed by the loud arguments and vulgar language emanating from the office area that Mr. Russell shared with a co-worker. However, she stated that "at times Mr. Russell was coaxed or encouraged" to engage in loud arguments by this co-worker and by Mr. Irving, who also raised his voice. Id. at 17-18. She also stated that "most of the comments that held the offensive language originated with [this co-worker]." Id. at 43. Although Mr. Russell's arguments with others made her very uncomfortable, she stated that at no time did she feel physically threatened by him. Id. at 33. She states that she had complained about the vulgar language to Mr. Tucker, and had mentioned feeling uncomfortable about Mr. Russell to John Waterbury and another co-worker, and to her manager, Ms. Gloria Garcia, but did not ask that any action be taken concerning the situation. Id. at 14-17.(10) She reports that during Mr. Russell's final week at LANL, she had no contact with him and did not discuss his behavior with any of her supervisors or co-workers. Id. at 24-26. Based on my review, I concur with the ROI's findings that Ms. Huling's complaints do not provide significant support for the determination to terminate Mr. Russell.

3. Mr. Russell's Behavior from February 26 through March 5, 1999 Did Not Support the Stated Reasons for His Dismissal by the UC.

As noted above, in late 1998 and early 1999, LANL's IEO investigated allegations that Mr. Russell was conducting his private gun selling business during office hours using LANL equipment. Mr. Busboom's summary of the RAT findings indicates that "Mr. Russell was observed to be under pressure from the IEO

investigation." Busboom Memorandum, Attachment 2. The basis for this finding appears to be that, after he became aware of the investigation, Mr. Russell spoke to three managers and some of his co-workers about it. Tr. at 1122. However, Mr. Russell testified that after speaking to these people and to the IEO auditor his concern was "significantly reduced."

> The impression that I got after talking to these people was that what I had done, while not right, was not a capital offense and that I might receive some type of punishment for it but it probably wouldn't be severe.

Tr. at 1122. He stated that by late February and early March, 1999, he "had almost forgotten about [it]. I think in the back of my mind, there was, you know, it was still there." Tr. at 1123. Mr. Russell's conclusion that he probably would not receive a severe punishment or termination for these violations is compatible with the recommendations of the IEO Report that was issued concerning this matter. ROI at 6. I believe Mr. Russell when he testified that his anxiety concerning this investigation had eased substantially by early March 1999. I therefore conclude that the RAT was incorrect in attributing a significant potential for threatening behavior to Mr. Russell's concern over this matter.

According to the Busboom Memorandum, the RAT also found that Mr. Russell was "under pressure as his contract position was being converted to a UC FTE position, which he had to compete for as an external candidate." UC Hearing Exhibit L, Attachment 2. There is factual support for this finding. In his testimony at the Hearing, Mr. Russell testified that, on the morning of his formal interview for the UC FTE position (February 26, 1999), he expressed anger and frustration about Mr. Irving's decision to have a formal interview process to Mr. Waterbury, who he knew was a member of the selection committee. Tr. at 990.

In a February 26 memorandum to Mr. Irving (the February 26 Memorandum), Mr. Waterbury recounted his morning conversation with Mr. Russell and a subsequent incident involving a locked door, and stated his fear that Mr. Russell could become physically violent. Because this memorandum triggered a management response that culminated in the RAT determinations, I will analyze its contents in detail. As the discussion below indicates, I do not find that the actual facts warranted Mr. Waterbury's conclusion that Mr. Russell constituted a physical threat to Mr. Irving and himself.

In the February 26 Memorandum, Mr. Waterbury recorded the insulting comments that Mr. Russell allegedly made concerning Mr. Irving's judgment in requiring him to make a formal presentation in applying for one of the UC FTE positions. He also provided the following description of his encounter with Mr. Russell at a recently locked door in their office area, after he allegedly explained to Mr. Russell that the door had been locked to establish a security perimeter.

> My attempt to clarify appeared to increase his agitation and he loudly stated, "I don't want to have to use a fucking key to get out of here. You got all the doors padlocked and you expect me to get out." . . . As I was trying to explain, he forcefully shoved the door wide open, ignored my communication, and walked off leaving the door unsecured. He acted like I personally locked the doors to complicate his life.

February 26, 1999 Memorandum from Mr. Waterbury to Mr. Irving, ROI AR at 00225. With respect to the encounter, Mr. Waterbury reported that "I felt as if he was about to strike me at any moment." Id. Mr. Waterbury concluded his memorandum to Mr. Irving with the following comments.

> Based on his comments and hostile behavior today, and personally witnessing countless past episodes where he was out of control, I have genuine fear that you personally (over any other S&S employee) are in harm's way and (God forbid) possibly your family as well. His many firearms, combat training, and under his current frame of mind his "perceived injustice" towards him, I hate to think what we might be facing at the hands of Jimmie.

Id. (emphasis in original). Based on Mr. Waterbury's account of his interactions with Mr. Russell on that date, the RAT found that Mr. Russell "intimidated a member of the screening committee for the job he was applying for." UC Hearing Exhibit L, Attachment 2. The ROI, however, is critical of the RAT's reliance on this account.

> The RAT accepted and relied upon Waterbury's account of February 26, 1999 without hearing Russell's side of the story. Moreover, Waterbury's conclusions about Russell's behavior on that day were accepted and relied upon by the RAT without any substantive analysis. While the alleged behavior attributed to Russell was unprofessional, impolitic and suggests poor self-control on Russell's part, it certainly did not suggest a propensity for violence as the RAT team concluded.

ROI at 9.

I find that the testimony at the Hearing supports the position that Mr. Russell's interactions with Mr. Waterbury on February 26 were not physically threatening to Mr. Waterbury or to Mr. Irving, and did not constitute intimidation of Mr. Waterbury.

In his testimony, Mr. Russell stated that immediately prior to his February 26 conversation with Mr. Waterbury, he had been talking to a co-worker, Pat Trujillo, who was critical of Mr. Irving's formal interview procedures for selecting the UC FTE positions. "He thought it was ridiculous and overkill and he had never seen it done that way before." Tr. at 988. Mr. Russell testified that he expressed agreement with these views and, when Mr. Waterbury visited Mr. Russell's office a few minutes later, he "started pontificating about my opinion of the process." Tr. at 990. Mr. Russell admits that he expressed anger, disgust and frustration in his comments to Mr. Waterbury, Id.., but he also testified that Mr. Waterbury's memorandum exaggerated the level of personal criticism and profanity that Mr. Russell used concerning Mr. Irving in this conversation. Tr. at 1135.(11) Mr. Russell also denies that his comments were intended to intimidate Mr. Waterbury, or to influence his decision as a member of the selection committee. Tr. at 994.

At the Hearing, Mr. Waterbury testified that at the time he had this conversation with Mr. Russell, he believed that Mr. Russell was simply venting his frustration about the interview process.

> [Waterbury] So, I went into this office at the time and said Jimmie are you all right? And without a moment's hesitation he turned around and just let loose with the fact that we knew what he could and couldn't do; didn't Mike Irving have to get permission to do an interview, the purpose of the interview. Mike Irving doesn't know what he's doing, etc. And I then thought to myself I [should] be anywhere but there. And I said okay Jimmie I just wanted to make sure that you were all right. And I walked away.
>
> Q How did you interpret that at the time?
>
> A Jimmie being Jimmie. Being -- I just let it go.

Tr. at 295. Mr. Waterbury testified that it was only in the late afternoon, following the door incident at 11:00 am and Mr. Russell's interview for the UC position at 1:30 pm, that he realized that he had been intimidated.

> As I said earlier, the morning incident in my mind was just Jimmie just being Jimmie. But sitting there working, it struck me that John Browne [the Director of LANL] has a zero

> tolerance policy to a hostile work environment. I began putting two and two together, how inappropriate that was. Well I didn't have to take that kind of abuse. And that -- what he did in the morning was inappropriate as well -- trying to have me influence Mike Irving to relieve him of giving a presentation requirement.

Tr. at 303. This change of impression by Mr. Waterbury weakens his allegation that the morning incident was an instance of intimidation by Mr. Russell. Whether one is being intimidated or not is something that one should know at the time. It is not a rational or reflective process. It also is possible that Mr. Waterbury may have been influenced by Mr. Irving, with whom he was in contact throughout the day, to alter his impression of this incident.

In his testimony concerning the February 26 door incident, Mr. Waterbury acknowledged that S-Division employee Mr. Byron McCloud was with Mr. Russell at the locked door, a fact that he had not included in his memorandum to Mr. Irving. He testified as he approached the door he could "hear animated voices on the other side. I couldn't hear what they were saying, but banging and kicking on the door." Tr. at 301. Mr. Waterbury testified that he opened the door and explained to Mr. Russell that the door has to be kept locked.

> and that's when I first thought he was -- he was going to take a swing at me. Still cussing, red faced -- I had to take a step back because -- he started to walk in. If I hadn't moved, he would have bowled me right over. So, I opened the door and it just was not very good. . . .I have no doubt in my own mind that if I hadn't moved, I would have been pushed aside, knocked over.

Tr. at 301-2. Mr. Waterbury describes this as "the first time I had concerns for my own physical safety" around Mr. Russell.

Mr. McCloud's account of this incident does not confirm or deny that Mr. Russell forced Mr. Waterbury to get out of his way as they passed through the door. However, it points out inaccuracies and exaggerations in Mr. Waterbury's account. Mr. McCloud recalls that it was he and not Mr. Russell who rattled a door handle and pushed and pulled on a locked door to try to get it to open. Tr. at 814. He recalls eventually exiting with Mr. Russell through a nearby door. Tr. at 815. He does not believe that Mr. Russell hollered through a doorway to anyone about a door being locked. Tr. at 815. He cannot recall whether Mr. Waterbury was present at the doorway. Tr. at 816.

Mr. Waterbury's allegation that Mr. Russell would have "bowled me right over" if he had not stepped out of the doorway, is the only direct allegation of actual physical intimidation made against Mr. Russell by anyone in the S-Division. Were this confirmed, or if I believed Mr. Waterbury's account, it might well be pivotal. However, the testimony of Mr. McCloud indicates that for him, there was nothing memorable about this encounter between Mr. Russell and Mr. Waterbury. Tr. at 815. Mr. Waterbury acknowledges that he stepped aside and that Mr. Russell did not verbally threaten, touch or shove him. Tr. at 301. I conclude that Mr. Russell acted rudely toward Mr. Waterbury in this encounter, but that there is no reason to believe that he intended to physically intimidate or assault Mr. Waterbury. I conclude that this incident does not provide substantial support for a finding that Mr. Russell presented a threat of violence in the workplace.

After fully reviewing the record in this matter, I find that the expressions of concern for the physical safety of Mr. Irving and others contained in Mr. Waterbury's February 26 memorandum lack any significant factual basis, and may have been motivated by Mr. Waterbury's desire to assist Mr. Irving and Mr. Leifheit in discrediting Mr. Russell. Mr. Waterbury testified that he composed this memorandum after discussing the morning incident with his supervisor, Mr. Irving (Tr. at 319) and Mr. Irving's supervisor, Mr. Leifheit (Tr. at 60). While Mr. Waterbury and Mr. Irving deny that Mr. Waterbury was asked to write the memorandum, the testimony of Mr. Leifheit is more circumspect.

> Q: Mr. Waterbury wrote a memo on the date of the 26. Did you tell Irving to have him do that?
>
> Mr. Leifheit: I did not tell him to do that.
>
> Q: Did you suggest to Irving that this series of events be documented?
>
> Mr. Leifheit: No, I didn't. We had a conversation. And in that conversation, it is not unlikely that we talked about what we needed if we needed to do something about this. At that point, it was not an issue of anything other than [Mr. Russell's] selection process. And so his actions relative to his interview and his selection with a focus that there was damage.

Tr. at 89. Mr. Waterbury admitted in his testimony that he gave Mr. Irving a draft of the memorandum to review before Mr. Waterbury put it in final form. Tr. at 304. These acknowledged discussions and interactions between Messrs. Leifheit, Irving and Waterbury raise the distinct possibility that Mr. Waterbury was influenced, either directly or indirectly, to exaggerate his concerns in order to please his managers and assist them in finding a means to retaliate against Mr. Russell.(12)

Mr. Leifheit testified that on Friday, February 26, 1999, both Mr. Waterbury and Mr. Irving approached him and discussed their concern that Mr. Russell might react violently if he was not selected for one of the UC-FTE positions. Tr. at 60-61. On Monday, March 1, Mr. Leifheit testified that he became "very concerned" about Mr. Russell's behavior after Mr. Irving reported that Mr. Russell had written a military axiom on the white board in a common office area. Mr. Busboom indicated that it was reported to the RAT that it was confirmed that Mr. Russell wrote a message on the white board "warning employees" that "you should not be concerned with the bullet with your name on it, be concerned with the one that does not have your name on it." Busboom Memorandum, Attachment 2. The ROI makes the following findings concerning this matter:

> This incident was taken out of context by the RAT. Tom Baca [a UC employee and coworker of Mr. Russell] recalled that Russell wrote this statement on the whiteboard while Russell and Baca were discussing their military experiences and training. During this conversation, their discussion turned to slogans and cadences. According to Baca, Russell wrote the statement on the whiteboard and asked Baca what he thought of it.

ROI at 9-10. The ROI concludes that it is clear that Russell did not write this slogan to warn or threaten fellow employees, and if the RAT had investigated the allegation further, it would not have "rashly" interpreted the statement as a threat. ROI at 10. The testimony at the hearing confirmed the ROI's explanation of this event. Mr. Baca testified that he was formerly employed as a firearms instructor, including sniper rifles, at the DOE's Training Academy in Albuquerque. Tr. at 612-613. He said that he and Mr. Russell would occasionally talk about guns, which was a mutual interest of theirs, and that on this occasion they were talking about sniper rifles and the differences between the military style rifles and the sniper rifles used by the DOE. Id. He then said that the conversation turned to different firearm maxims.

> The Air Force has certain terms that we use compared to the Marine Corps and the one that I told Jimmie that I used to use quite a bit as an instructor in Firearms proficiency is "Speed was fine, but accuracy is final." And it started like -- well, what about this phrase here? It just -- there was an exchange of phrases is what it was.

Tr. at 625. He testified that both he and Mr. Russell were writing phrases on the white board and erasing them, and that the maxim in question happened to be the last one written on the board during that conversation. Tr. at 626.

I find it extraordinary that this explanation was not made a RAT finding and was omitted from the Busboom Memorandum. This is especially troubling in light of Mr. Baca's testimony that he was approached by Mr. Leifheit and asked to write a memorandum confirming what Mr. Russell had written on the white board that day. See Russell Hearing Exhibit 12. Mr. Baca states positively that Mr. Leifheit never inquired into the circumstances which resulted in Mr. Russell writing the maxim.

> Mr. Baca: I was sitting in his office, and [Mr. Leifheit] goes -- Tom, did you ever see Jimmie write that memo. At the time that it was written down, I figured it was erased off the board. And I said yes, and he goes can you write me a statement saying that you saw Jimmie writing it. I said well sure. So, that's why I wrote the statement.
>
> Q: Did you tell Mr. Leifheit why it was written and how it came about to be written by Mr. Russell?
>
> Mr. Baca: He would never ask me why and I never questioned it why. I just said -- okay, if you want me to write it, I'll write it.
>
> Q: Did anyone ever -- did Mr. Irving or did Mr. Leifheit on March 4th ever ask you why that got written or what the circumstances were?
>
> Mr. Baca: No, he did not.

Tr. at 617. In his testimony at the Hearing, Mr. Leifheit states that he saw the maxim that Mr. Russell wrote on the white board and that he confirmed with Mr. Baca that Mr. Russell wrote it. He further states that he did not confirm with Mr. Baca the context and why it was written. Tr. at 102-03. However, although Mr. Baca's memo is addressed to him, Mr. Leifheit does not recall asking Mr. Baca to write it.

> I did not [ask Mr. Baca to write it]. I don't know why this was written. My guess is, and this is a guess, I don't recall having a conversation with Tommy about this. My guess is, speculation on my part, that Mr. Irving or Mr. Waterbury might have asked him to do this. Or he might have done this on his own.

Tr. at 102. Mr. Leifheit also testified that it was "one of my folks, I still think it was either John [Waterbury] or Mike [Irving], but it could have been Pat Trujillo as well, talked about a conversation that had taken place between Jimmie [Russell] and Tommy Baca about Mr. Russell buying a sniper rifle." Tr. at 115.(13) Mr. Leifheit testified that this rumor was given serious consideration at the RAT, but that no one spoke to Mr. Baca about it.

> Q: The concept of buying [a sniper rifle] was pretty important to you?
>
> Mr. Leifheit: It was a contributing factor. It was a concern, yes.
>
> Q: It's a pretty loaded phrase to be throwing around a RAT team, isn't it?
>
> Mr. Leifheit: Well, you don't buy a sniper rifle for duck hunting, so yes, I would agree.
>
> Q: Sure. Did anyone talk to Mr. Baca about the conversation that was relayed to you by someone, which you passed on to the RAT team?
>
> Mr. Leifheit: No, I did not.

Tr. at 115. He testified that, although a rumor, "I think it was equally important to all the other incidents" in convincing him that LANL needed to take action against Mr. Russell. Tr. at 116.(14)

Based on this testimony, I believe that the findings of the ROI Investigator on the "white board" issue are correct. Moreover, the decision of the UC manager, Mr. Leifheit, not to look for explanations that would have exonerated Mr. Russell from allegations that he was threatening his co-workers and contemplating violence clearly raises the strong possibility that Mr. Leifheit acted with retaliatory intent against Mr. Russell. The presentation to Mr. Busboom of these incorrect or misleading allegations, along with the exaggerated concerns for personal safety expressed by Mr. Irving and Mr. Waterbury, constituted Mr. Busboom's acknowledged basis for his determination to convene the RAT. (15)

4. The RAT Relied Solely on Mr. Busboom and Mr. Leifheit in its Evaluation of Mr. Russell.

The RAT was convened on March 4, and Mr. Busboom stated that it consisted of himself, Mr. Leifheit, a legal representative, a medical representative, an employee relations specialist, and a member of the special projects office. Id. According to Mr. Busboom, the RAT "reviewed facts presented by the group leader [Mr. Leifheit]," and made its recommendation to terminate Mr. Russell. Id. Thus in reaching their consensus that Mr. Russell should be removed from the LANL workforce, the members of the RAT were entirely dependent on the factual information and concerns presented to them by Mr. Leifheit and Mr. Busboom. Mr. J. Patrick Trujillo, who participated in the RAT as a leader of the Employee Relations Group, testified that the meeting lasted about an hour, that Mr. Russell was not present, and that all of the information provided to team members concerning Mr. Russell came from Mr. Leifheit and Mr. Busboom. Tr. at 360, 363. According to Mr. Trujillo, these managers shared concerns "that Mr. Russell possibly had a weapon on site" and that there was "some sort of altercation with a co-worker." Tr. at 360. After he received the recommendation of the RAT, Mr. Busboom immediately took steps to permanently remove Mr. Russell from the LANL workforce. On March 5, 1999, Mr. Russell was instructed to depart the laboratory after turning over his keys and security badge.

Based on the analysis set forth above, I conclude that the allegations brought forward against Mr. Russell by UC managers Irving, Leifheit, and Busboom were relied upon by the RAT in reaching its consensus for termination and cited by Mr. Busboom as grounds for removing Mr. Russell from the LANL workforce and identifying his dismissal as "for cause." In addition, I find that these allegations included incorrect facts, speculation, and exaggeration to such an extent that there is a clear possibility that they reflected the retaliatory intent of these UC managers. I believe that this retaliatory intent arose in large part from the protected disclosures made by Mr. Russell and his disputes with his UC managers concerning those disclosures, some of which occurred proximate in time to his dismissal. Under these circumstances, the UC has not shown, by clear and convincing evidence, that these managers would have taken these actions against Mr. Russell in the absence of his protected disclosures, and that the UC would have terminated Mr. Russell's work assignment at LANL as a result. Mr. Russell therefore is entitled to relief under Part 708 for this termination and for the resulting termination of his employment by Comforce. See Reeves v. Sanderson Plumbing Products, Inc., No. 99- 536, 2000 WL 743663 (U.S. June 12, 2000) (a plaintiff may win an employment discrimination case by presenting a prima facie case of discrimination and discrediting the employer's explanation for its actions).

C. S-Division's Communication to DOE Security of Unsubstantiated or Exaggerated Derogatory Information Concerning Mr. Russell Was a Reprisal.

As discussed above, I have found that many of the "Facts" listed in Attachment 2 to the Busboom Memorandum as support for the concern that Mr. Russell was a potentially violent individual are inaccurate, speculative or highly exaggerated. In the cover memorandum itself, Mr. Busboom asked DOE Security that the information in the attachments be kept confidential because "we are extremely concerned that [Mr. Russell] would use any knowledge gained in this manner to target our employees for further acts of intimidation, or potentially -- violence." Busboom Memorandum. At the Hearing, Mr. Busboom

testified that when he reported these concerns to DOE Security, he was acting pursuant to the requirements of DOE Order 472(1)(b), which directs the UC, as a DOE contractor, to report derogatory information concerning an employee to the DOE. Tr. at 507-9.

While Mr. Busboom is correct in identifying his duty to report certain derogatory information concerning an employee to the DOE, I find that the concerns that he reported to the DOE concerning Mr. Russell were inaccurate and of such a nature as to interfere with Mr. Russell's ability to obtain access authorization (a security clearance) in the future. Moreover, as discussed above, I find that the UC has failed to show that these inaccuracies would have been present absent Mr. Russell's protected disclosures. I therefore conclude that the UC should be required to take such remedial action as may be necessary to provide the DOE Safeguards and Security Division with full and accurate information concerning the derogatory allegations about Mr. Russell that were contained in the Busboom Memorandum.

D. The UC Effectively Barred Mr. Russell from further Employment at LANL.

The ROI finds that Part 708 provides the DOE with jurisdiction over Mr. Russell's allegation that, subsequent to his March 5, 1999 dismissal from the LANL workforce, the UC retaliated against him by banning him from being hired for any work with or at LANL. ROI at 4. With regard to this allegation, the ROI finds that

> The UC terminated Russell for cause. Security Division management informed at least one other division director at LANL (Terry Hawkins, Division Director of the NIS) that Russell had been terminated for cause.

ROI at 5. The ROI also refers to the Busboom Memorandum, which bears the subject heading "Derogatory Information - Dismissal for Cause." Id. The effect of a dismissal for cause is a lengthy ban on a former employee's reemployment at LANL. In its Post- Hearing Brief, the UC acknowledges that the contract between the UC and Comforce provides that Comforce

> shall not refer candidates to the University who have:
>
> 1. Been discharged for cause by the University or by any subcontractor at the Los Alamos National Laboratory within the last seven (7) years.

UC Hearing Exhibit A, Other Document Section, Appendix I, p. 26. At the Hearing, Ms. Rose Ann Casale, the Regional Manager of Comforce, testified that immediately after Mr. Russell's March 5, 1999 termination, Comforce took steps to place Mr. Russell in a new position. Tr. at 666, 679, 701. Mr. Keith Whitworth, Comforce's Senior Recruiter, testified that he would have submitted Mr. Russell's resume for subsequent LANL openings, but was told by Mr. Fred Shelly, the UC's Staffing Specialist for Contract Workers, that "he didn't want to see [Mr. Russell's] resume coming across his desk." Tr. at 743. Later, Comforce received a LANL database sheet for Mr. Russell indicating that it was prepared by Mr. Shelley and dated May 14, 1999. This database sheet indicates that effective March 5, 1999, Mr. Russell's assignment ended. Under "reason" the words "per instruction of client - for cause" are written. Comforce Hearing Exhibit 1. Mr. Whitworth testified that his understanding was that "when someone is terminated for cause, we can't get them hired back up at the Lab for a period of seven years." Tr. at 743. In his testimony, Mr. Shelly confirm that Mr. Russell's official record at LANL indicates that his assignment with S-Division was terminated "for cause" and that this information would be made available to any prospective employers of Mr. Russell at LANL. Tr. at 434-35.

I conclude that the UC placed what in effect was a ban on the rehiring of Mr. Russell at LANL following the termination of his assignment with S-Division. Mr. Shelly's statement that he didn't want to see Mr.

Russell's resume carried the strong message that Mr. Russell was unwelcome as a job applicant at LANL. The UC's designation of Mr. Russell's termination as "for cause" led officials at Comforce to believe that the UC was invoking a contract provision that placed a seven year ban on Mr. Russell's employment at LANL. In its Post-Hearing Brief, the UC makes the ingenious argument that this contract provision is inapplicable in this instance because it only refers to a "for cause" termination of "employment" and the UC was never Mr. Russell's "employer." UC Post-Hearing Brief at 31. I reject this reasoning. The phrase "for cause" in the context of employment actions carries a specific meaning that is commonly understood by Comforce and UC officials as limiting the employee's future employment rights with LANL. The UC understood how Comforce would view this designation when it was applied to the termination of Mr. Russell's work assignment at S- Division, and the UC has offered no other explanation for using the words "for cause" in Mr. Russell's official employment record. Accordingly, I conclude that the UC effectively banned Mr. Russell's reemployment at LANL.

E. Comforce Is Liable for the Termination of Mr. Russell's Employment under Part 708, But Equity Favors Placing the Remedial Actions with the UC.

In its post-hearing brief, Comforce contends that it bears no liability for any of Mr. Russell's claims because it "was unaware that Jimmie Russell made any disclosures under 10 C.F.R. § 708.9 or that Comforce terminated his employment for such disclosures." Comforce Post-Hearing Brief at 1. At the hearing, Ms. Casale testified that when the UC terminates an employee's assignment at LANL, Comforce is forced to end the employee's employment. Accordingly, Comforce ended Mr. Russell's employment on March 5, 1999. She indicated that but for the UC termination of his assignment, Comforce would still employ Mr. Russell in his position as a Self-Assessment Team Leader at LANL. Tr. at 677-78. See Comforce Post-Hearing Brief at 2-4.

Although I find that Comforce had no role in the UC's decision to terminate Mr. Russell's work assignment at LANL, Comforce admits that it terminated its employment contract with Mr. Russell because the UC ended his work assignment with LANL. As discussed above, the UC's decision to end his work assignment constituted a retaliation against Mr. Russell for activity that is protected under Part 708. Comforce therefore terminated Mr. Russell's employment as a result of Mr. Russell's protected activity, and is jointly and severally liable with the UC for the damages arising from this termination.

As noted above, Part 708 applies to employees of DOE contractors and the term "contractor" is specifically defined to include "a subcontract under a contract . . . with respect to work related to activities at DOE-owned or -leased facilities." 10 C.F.R. §§708.1- 2. Mr. Russell was employed by a UC subcontractor, Comforce, to perform a work assignment at LANL. Both the UC and Comforce took actions which directly and negatively impacted the "terms", "conditions" and "privileges" of Mr. Russell's employment at LANL. Accordingly, both the UC and Comforce bear liability to remedy these "retaliations" under 10 C.F.R. §708.2. Although Comforce has shown that it acted against Mr. Russell solely as a result of actions taken by the UC, that showing does not relieve Comforce from liability in this matter. Part 708 contains no provision exempting a subcontractor from liability under such circumstances. To create such an exemption would vitiate the protections for whistleblowers that Part 708 was intended to provide. Accordingly, I find that Comforce is jointly and severally liable, along with the UC, for the damages arising from Comforce's termination of Mr. Russell's employment on March 5, 1999.

In the present case, both the UC and Comforce have sufficient resources to compensate Mr. Russell for back pay, lost benefits, litigation costs and other expenses necessary to provide relief for his termination from the LANL workforce by the UC and the resulting termination of his employment by Comforce. Under these circumstances, it is appropriate to consider the equities of requiring the UC and Comforce to share the burden of providing these remedies, or alternatively, of assigning these remedies to one or the other party. In Daniel Holsinger (Case No. VWA-0005), 26 DOE ¶ 87,506 (1996), the Deputy Secretary encouraged the weighing of equities in a situation where the imposition of an equitable remedy (in that instance reinstatement) placed a burden on an innocent party.

> With any equitable remedy, however, an adjudicator "must draw on the 'qualities of mercy and practicality [that] have made equity the instrument for nice adjustment and reconciliation between the public interest and private needs as well as between competing private claims.'" Teamsters v. United States, 431 U.S. 324, 375 (1977) [quoting Hecht Co. v. Bowles, 321 U.S. 321, 329-330 (1944)]. "Especially when * * * an equitable remedy threatens to impinge upon the expectations of innocent parties, the [adjudicator] must "look to the practical realities and necessities inescapably involved in reconciling competing interests," in order to determine the "special blend of what is necessary, what is fair, and what is workable.'" Ibid. [quoting Lemon v. Kurtzman, 411 U.S. 192, 200-201 (1973) (plurality opinion of Burger, C.J.)].

Id. at 89,018. In the present case, Comforce has shown that it acted against Mr. Russell solely as a result of actions taken by the UC, and that it had no role in the deliberations leading to the UC's actions. Moreover, the UC's effective ban on Mr. Russell's employment at LANL after March 5, 1999 prevented Comforce from mitigating Mr. Russell's damages by seeking his employment in another contractor position at LANL. As discussed below, I find that the UC has not shown that it would not have hired Mr. Russell to an in-house position in March 1999 in the absence of his protected disclosures. Therefore, the most appropriate equitable remedy for Mr. Russell is for the UC to bring Mr. Russell back into the LANL workforce as its own employee and to provide him the wages and benefits that he would have received if he had been hired by the UC on March 6, 1999, the day after his dismissal from Comforce.(16) In light of these findings, I believe it is appropriate to hold the UC solely responsible for the repayment of Mr. Russell's lost wages and benefits, and for his litigation expenses. I will direct Comforce, as well as the UC, to delete from its employment records any reference to a "for cause" termination of Mr. Russell from the LANL workforce in March 1999.

F. The Decision by UC not to Hire Mr. Russell to a UC FTE Position Was a Reprisal.

As a contract employee in the LANL workforce, Mr. Russell is protected by Part 708 from retaliations for his protected disclosures, both by his employer, Comforce, and by his contract employer, the UC. As noted above, Mr. Russell's protected disclosures to his UC managers occurred proximate in time to his March 5, 1999 removal from the LANL workforce and dismissal from Comforce. These disclosures also occurred proximate in time to the March 1999 determination by UC management not to hire Mr. Russell for one of the two UC positions that it was creating to replace the contractor position of Self Assessment Team Leader then held by Mr. Russell. This administrative reorganization shifted Mr. Russell's job duties from a contract position with Comforce to a UC position.

Mr. Russell, as a contract employee of the UC who has made protected disclosures proximate in time to this reorganization, clearly is protected from retaliatory acts occurring during its implementation. I therefore find that the UC has not shown, by clear and convincing evidence, that it would have rejected Mr. Russell for both of the reorganized UC positions in the absence of his protected disclosures and the retaliatory intent that these disclosures engendered in his UC managers.

1. Mr. Russell was well-qualified for the UC positions.

It is not contested that Russell had the necessary training and experience required for the UC positions. At the Hearing, Mr. Waterbury testified that prior to conducting the interviews, each member of the screening committee (himself, Mr. Irving and Ms. Marcene Roybal) ranked the applicant resumes according to a matrix of qualifying characteristics and that Mr. Russell's resume ranked "within the top five." Tr. at 297. In fact, the resume ranking contained in Mr. Irving's March 8, 1999 Report (March 8 Report) to Mr. Leifheit (UC Hearing Exhibit V) indicates that Mr. Russell was tied for second place on the basis of his overall resume ranking among the 54 job applications that had been submitted. However, the top ranking candidate, Mr. David Cornely, declined an invitation to be interviewed for the S Division positions

because "he had accepted employment elsewhere." Mr. Paul Mathis, who tied with Mr. Russell for the second highest score, also accepted employment elsewhere. March 8 Report at 2-3. Accordingly, Mr. Russell was the top ranked candidate available for selection by the UC on the basis of his resume qualifications. Moreover, as noted above, Mr. Russell had consistently received overall evaluations of "Outstanding" in his annual performance evaluations from S Division managers, and these evaluations contained no negative comments. Although Mr. Irving testified extensively at the Hearing concerning his encounters and arguments with Mr. Russell in 1998 and concerning complaints that he received regarding Mr. Russell's alleged abrasiveness, Mr. Irving did not express these criticisms of Mr. Russell when he ranked Mr. Russell's resume on February 5, 1999. He awarded Mr. Russell nine out of ten points in the following categories: (i) Demonstrated competence dealing with senior management & DOE Staff; (ii) Excellent interpersonal oral and written communication skills; and (iii) Demonstrated ability to work in a team environment. UC Hearing Exhibit U. Accordingly, I concur with the ROI's finding that "Russell was among the top candidates for these positions." ROI at 8, ft. 4.

2. Russell's Conduct of his Job Interviews Does Not Furnish Clear and Convincing Evidence for his Rejection by UC.

The ROI finds that Mr. Russell's conduct of his job interview on February 26, 1999 provided a sound basis for the UC's decision not to award either of the UC positions to Russell. Specifically, the ROI finds that each of the three members of the screening committee recalled that Mr. Russell expressed some discontent with the S- Division during his presentation to the committee. ROI at 10. It also cites Mr. Russell's conversation with Mr. Waterbury on the morning of the interview and concludes that "Russell's disparaging remarks about his supervisor and open ambivalence about accepting one of the UC positions clearly justify the UC's decision to award these positions to other more enthusiastic candidates." ROI at 12.

Mr. Russell contests this finding, and argues that the facts established at the Hearing show that Mr. Russell's disclosures were a contributing factor to the UC's decision not to hire him, and weigh heavily against a finding that the UC's failure to hire Mr. Russell was by clear and convincing evidence not an act of retaliation. Russell Post-Hearing Brief at 37. I have examined the record, and conclude that UC has not made this showing. As set forth below, there is a strong indication that it was UC management's hostility towards Mr. Russell, and not his actual behavior, that resulted in its decision not to offer him a UC position.

With respect to Mr. Russell's conversation with Mr. Waterbury on the morning of February 26, I have already found that Mr. Waterbury's initial reaction to Mr. Russell's outburst was "Jimmie being Jimmie" (Tr. at 295) and that Mr. Russell was simply venting his frustration at having to make a presentation and be formally interviewed. I also found that Mr. Russell's alleged derogatory remarks about Mr. Irving contained in Mr. Waterbury's memorandum, particularly the phrase "God Damn Idiot," appear to be exaggerated, and that Mr. Waterbury's memorandum itself, written after his conversations with Mr. Irving and Mr. Leifheit, may have been intended to assist his managers in building a case against Mr. Russell. In light of these findings, the UC has not established that the complaints voiced by Mr. Russell on the morning of February 26 would not simply have been ignored if they had made by some other co-worker being required to submit to an interview under similar circumstances.

In his March 8 Report, Mr. Irving provided the following explanation for the rejection of Mr. Russell's application:

> Mr. Jimmie Russell could not demonstrate an ability to work in a team environment. Based on the results of the interview and internal issues that have been resolved, Mr. Russell is not considered a viable candidate for the position.

March 8 Report at 2. However, the UC has not established that Mr. Russell's actual conduct at his job

interviews establishes a clear and convincing basis for its refusal to hire him. In Mr. Irving's March 8 report, he indicates that the four candidates interviewed to date had been given a numerical rating (on a scale of 0 to 4) by each committee member for each of the twelve questions that they were asked. The combined ranking of the committee members for each of the four candidates is contained in Mr. Irving's report and indicates that Mr. Russell scored the lowest of the four, with a total of 57 points. The other three candidates had point totals of 75.5, 61 and 86.5. Given my previous findings that Mr. Irving and Mr. Waterbury exaggerated Mr. Russell's inappropriate conduct and reported rumors in an effort to get Mr. Russell terminated, their low ratings of Mr. Russell's responses cannot be accepted as an impartial assessment of Mr. Russell's performance. It is also possible that Ms. Roybal's rating of Mr. Russell may have been influenced by hostile opinions and attitudes expressed by Mr. Irving and Mr. Waterbury concerning Mr. Russell. The UC has not shown, by clear and convincing evidence, that their low ratings of Mr. Russell's responses were unbiased or would have occurred in the absence of Mr. Russell's protected disclosures.

In particular, I am not convinced that Mr. Russell received fair treatment when all three screening committee members rated as zero Mr. Russell's response to the question: "please describe how you work in a team environment." This is the only instance where any candidate received a zero ranking from all three screening committee members in response to a question, and this rating rendered Mr. Russell ineligible for the position. At the Hearing, Mr. Russell testified that he responded to the question using a football team analogy because he knew that Mr. Irving had been a football player. He discussed the importance of each team member attending to his assigned task while being on the lookout to help others with the objective of accomplishing the team mission. Tr. at 1004-05.

Mr. Irving's interview notes for that question indicate that wrote down the phrases "put out most and best work one can," "if someone needs help, he will help them find it," and "football team" while listening to Mr. Russell's answer. UC Hearing Exhibit S, question no. 8. (17)

At the hearing, Mr. Irving, Mr. Waterbury and Ms. Roybal each testified that Mr. Russell's response to the question was so poor that he or she was forced to rate his response a zero. However, in light of Mr. Russell's testimony and the contemporaneous notes of Mr. Irving, I find that these responses are not credible. I therefore conclude that the UC has not shown by clear and convincing evidence that Mr. Russell would have received a disqualifying mark on this question in the absence of retaliatory intent on the part of UC management.

Finally, I am not convinced that Mr. Russell's questions about the job position and the direction of S-Division provide a clear and convincing reason for the UC's decision not to hire him. Mr. Irving, Mr. Waterbury and Ms. Roybal testified that they were shocked when, at the end of the interview, he expressed reservations about "where this program is going." Tr. at 254. Ms. Roybal, for example, testified that she found it "disconcerting" when Mr. Russell stated that he wanted to know more about the job because it may not be something that he wanted to do. She said that it was not a positive remark "and to me, in an interview, you want to be positive." Tr. at 249. On March 1, 1999, Mr. Russell attended a scheduled employment interview with Mr. Leifheit. Mr. Leifheit testified that at this meeting Mr. Russell had "basically taken the same approach . . . as he had at the screen team interview. He didn't particularly know if he wanted the job. Didn't particularly like the division." Tr. at 64.(18)

Based on the reservations and lack of enthusiasm that Mr. Russell expressed to his interviewers concerning S-Division management practices and the conduct of assessments there, the ROI concluded that UC's decision to award these positions to "other more enthusiastic candidates" was clearly justified. ROI at 12. However, while the UC may have provided a clear justification for its decision not to hire Mr. Russell, that is not in itself sufficient to meet its burden of persuasion under Part 708. The provisions of Part 708 clearly indicate that in this situation, the burden is on the UC not just to show that it had a good business reason for its action, but to show, by clear and convincing evidence, "that it would have *taken that same action* without the employee's disclosure." 10 C.F.R. § 708.29 [emphasis added].

There may well have been legitimate business reasons for the UC to prefer candidates who expressed more enthusiasm for S-Division's management of the assessment program than did Mr. Russell. However, I cannot conclude that it is clear and convincing that this management decision would have been the same absent Mr. Russell's protected disclosures. Under Part 708, these protected disclosures are presumed to have influenced UC management to implement hiring criteria that would not operate to Mr. Russell's benefit. The UC has the burden of showing that its decision was not influenced by Mr. Russell's protected activities. The reservations that Mr. Russell expressed concerning S-Division's management of its assessment program and his request for reassurances concerning his role in the program are the type of questions that an incumbent candidate would normally ask and do not disqualify him for employment with that division. In light of his acknowledged qualifications for the position and his past record of achievement as an assessment team leader, the UC has not made a clear and convincing showing that, in the absence of his protected disclosures, Mr. Russell's expressions of reluctance and concern about the direction of the program at his job interviews would have precluded his being made a job offer.(19)

V. Conclusion

Based on the analysis presented above, I find that Mr. Russell has made disclosures protected under Part 708, and that these protected disclosures were a contributing factor to adverse personnel actions taken by the UC and Comforce against Mr. Russell. Furthermore, I find that the UC and Comforce have not shown by clear and convincing evidence that they would have taken these same actions in the absence of Mr. Russell's disclosures. Therefore, Mr. Russell is entitled to remedial action from the UC and Comforce. I find that this remedial action shall include his placement by the UC in a comparable task position to the Security Specialist 03, SSM-02 position for which his application for employment was rejected by the UC in March 1999. The UC shall also provide Mr. Russell with back pay and benefits for the Security Specialist 03, SSM-02 position going back to the day following the March 5, 1999 termination of his work assignment and employment by the UC and Comforce.(20) The remedial action shall also include the payment of attorney fees and litigation expenses by the UC, the removal and or correction of information concerning Mr. Russell in UC and Comforce personnel files, and the correction by the UC of information that it provided to DOE Security concerning Mr. Russell.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Mr. Jimmie Russell under 10 C.F.R. Part 708 is hereby granted as set forth below.

(2) The University of California (UC) shall immediately place Mr. Russell in the position of a full-time regular UC employee in a comparable task position to the Security Specialist 03, SSM-02 position for which his application for employment was rejected by the UC in March 1999 at the salary rate calculated in the Appendix to this decision.

(3) Mr. Russell shall produce a report that provides information on attorney's fees and litigation expenses. Mr. Russell's report shall be calculated in accordance with the Appendix.

(4) The UC shall produce a report that calculates the back wages plus interest payable to Mr. Russell. The UC's report shall be calculated in accordance with the Appendix.

(5) The UC shall pay Mr. Russell attorney's fees and litigation expenses. The amount of these payments shall be in accordance with the report specified in paragraph (3) above.

(6) The UC shall pay Mr. Russell back wages plus interest. The amount of this payment shall be in accordance with the report specified in paragraph (4) above.

(7) The UC shall make retirement fund contributions in the amount calculated in the report specified in the Appendix.

(8) The UC shall make information available and otherwise facilitate Mr. Russell making retirement fund contributions as calculated in its report specified in the Appendix.

(9) The UC and Comforce shall remove all information regarding his proceeding from Mr. Russell's personnel files, and shall eliminate any and all "for cause" designations made with regard to the March 5, 1999 termination of his work assignment at LANL and/or his employment with Comforce.

(10) The UC shall notify the Director, Safeguards and Security Division, DOE Albuquerque Operations Office, that Attachment 2 to the March 12, 1999 memorandum from Stanley L. Busboom, Director of Security to his Office entitled "Derogatory Information - Dismissal for Cause (Jimmie L. Russell)" contained information under the heading "facts" that is incorrect or exaggerated and that may have been assembled with the purpose of retaliating against Mr. Russell in violation of 10 C.F.R. Part 708. The UC shall enclose a copy of Mr. Busboom's memorandum and its attachments and a copy of this decision with its notification.

(11) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting Mr. Russell relief unless, within 15 days of the date of this Order, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Kent S. Woods

Hearing Officer

Office of Hearings and Appeals

Date: July 18, 2000

APPENDIX

The Part 708 regulations provide that if the initial agency decision determines that an act of retaliation has occurred, it may order: reinstatement; transfer preference; back pay; and reasonable attorney and expert-witness fees; and such other remedies as are necessary toabate the violation and provide the employee with relief. 10 C.F.R. § 708.36.

As discussed in my initial agency decision in this matter, Mr. Russell is entitled to remedial action from the UC and Comforce. This remedial action shall include his placement by the UC in a comparable task position to the Security Specialist 03, SSM-02 position for which his application for employment was rejected by the UC in March 1999, along with back pay and benefits for that position going back to the day following the March 5, 1999 termination of his work assignment and employment by the UC and Comforce. The remedial action shall also include the payment of attorney fees and litigation expenses, the removal and or correction of information concerning Mr. Russell in UC and Comforce personnel files, and the correction of information provided to DOE Security by the UC concerning Mr. Russell. Accordingly, in order to implement these remedies, I have here provided clarifications concerning the nature and extent of certain benefits that Mr. Russell is entitled to received. I have also directed the UC and Mr. Russell to make certain calculations and provide them to the other parties within 30 days of the date of this order. Finally, I have provided for a negotiation period between the parties and a final report on remedial calculations. In the event of an appeal, both the UC and Mr. Russell shall follow the negotiating and reporting steps set forth below unless those requirements are specifically stayed by an appropriate official.

A. Clarification Concerning Mr. Russell's Benefits

Mr. Russell is not entitled to restoration of sick and annual leave that would have been accrued since March 6, 1999. It is likely that Mr. Russell would have used that leave. Therefore, it would amount to double counting to compensate him for all the hours during the unemployment period while permitting him

to accrue leave for future use. Of course when reinstated he should be credited with all leave he had accrued and not used prior to his dismissal unless he has been previously compensated for that leave.

I believe it is highly speculative to determine the earnings and the investment pattern of funds that would have been contributed by the UC to the retirement account that it would have maintained for Mr. Russell. Therefore, I will direct the UC to now contribute any amounts it would have contributed during the unemployment period. In addition, the UC shall facilitate Mr. Russell's contribution of any retirement fund amounts he would have contributed had he been employee during the unemployment period.

B. The UC's Calculations

In order to calculate back wages plus interest, retirement fund contributions and leave accrued, The UC shall make the following calculations and provide them to Mr. Russell within 30 days of the date of this order. (21) In the event that the exact date of reinstatement to the LANL workforce is unknown, the UC shall make the calculations through the first pay period ending on or after October 31, 2000.

1. Calculate the number of hours of overtime the average Security Specialist earned during each pay period ending during the period March 1, 1999 through February 29, 2000. In the alternative to making such a calculation, the UC may use four hours of overtime each week.

2. Provide for each pay period the basic pay rate per hour Mr. Russell would have received per hour. For the period from March 6, 1999 until the date that annual pay increases are granted, the UC shall use the hourly rate Mr. Russell would have received if he had been hired to the Security Specialist 03, SSM-02 position for which his application for employment was rejected by the UC in March 1999. For periods after the date of annual hourly rate change, the UC shall increase the rate by the average increase that Security Specialists received. In the alternative to making a calculation of the average increase of Security Specialists, the UC may use 5%.

3. Using the principles described in item 2, provide for each pay period the overtime rate Mr. Russell would have received.

4. Determine the gross wages the individual would have earned by multiplying the basic salary rate (item 2) by forty and the overtime hourly salary rate (item 3) by the number of overtime hours (item 1).

5. Calculate the amount of interest that would have been earned on the gross wages. The interest shall be 10% annually, accrued and compounded semiannually. The calculation shall be made by accruing 5% interest on the balance of the salary accrued (item 3) and the prior interest accrued on December 31 and June 30 of each year.

6. Provide a calculation of the amount the UC would have contributed to any retirement account during the unemployment period.

7. Provide information on each retirement or leave benefit that is based on the length of an employee's service. For each such plan, indicate how the firm will adjust Mr. Russell's credited service to compensate for the unemployment period.

8. Calculate the amount Mr. Russell was eligible to contribute to retirement programs during the unemployment period. Indicate how the UC will facilitate Mr. Russell's ability to make those contributions.

9. Calculate the amount of accrued leave Mr. Russell will have on the date of his

reinstatement.

C. Mr. Russell's Calculations

Within 30 days of this order Mr. Russell shall provide the UC the following information,

1. A calculation of the out of pocket litigation expenses and attorney's fees. In calculating attorney's fees, Mr. Russell's counsel should estimate his hours and expenses for this calculational portion of the proceeding. Mr. Russell's attorney shall provide the UC with sufficient information to understand how his hours and costs were determined. Mr. Russell shall also provide reasonable information regarding his out of pocket litigation expenses.

2. Records describing the medical expenses Mr. Russell believes would have been paid by insurance if Mr. Russell had not been discharged. Also, Mr. Russell should indicate any change in Mr. Russell's medical insurance cost as a result of his discharge. The change in medical insurance cost will be an offset to the incremental medical bills or an additional recoverable expense.

D. Negotiation Period

The parties will have ample time up to sixty days from the date of this order to discuss and negotiate any disputes regarding the calculations. During that period I expect that both parties will provide reasonable information to facilitate the other party's understanding of calculations.

E. Final Report

Seventy days from the date of this order Mr. Russell shall provide a report to the UC and the Office of Hearings and Appeals with a summary calculation. Mr. Russell shall describe in detail any matters that remain in dispute. The UC will have 15 days from the date of that report to provide a response.

Footnotes

(1)On March 15, 1999, DOE issued an amended Part 708, effective April 14, 1999, setting forth procedural revisions and substantive clarifications that "apply prospectively in any complaint proceeding pending on the effective date of this part." 10 C.F.R. § 708.8; *see* 64 Fed. Reg. 12,862 (March 15, 1999).

(2)As Mr. Russell's complaint was pending on April 14, 1999 when the revised Part 708 regulations took effect, I will apply the language of the original version of the Part 708 regulations wherever application of the revised Part 708 would subject a party to a more stringent showing or other regulatory requirement to which it was not previously subject. To apply the revised Part 708 language in such an instance would clearly prejudice that party, contrary to the clear intent of the revisions to the regulations. See Salvatore Gionfriddo, 27 DOE ¶ 87,544 at 89,224 (1999).

(3)In its Post-Hearing Brief, the UC argues that Mr. Russell's dispute with UC management concerning his CMPC assessment cannot involve a protected disclosure in this instance because the dispute concerning this assessment apparently centered on Mr. Russell wanting to give the assessed program office a higher overall rating ("satisfactory") than did his managers ("marginal"). UC Post-Hearing Brief at 16, citing Tr. at 977. I do not agree. The dispute relates to the proper evaluation of a program area based directly on the reporting of regulatory violations that are protected disclosures under Part 708. Whether the dispute involved a more favorable or less favorable rating category is irrelevant to the fact that the data that constituted the protected disclosures were an essential element in the dispute.

(4)The evident willingness of Messrs. Irving, Leifheit and Busboom to see Mr. Russell's actions as intentionally menacing and not to look for any alternative explanation raises the strong possibility of retaliatory intent on their part.

(5)The first attachment involved information surrounding an investigation by LANL's Audits and Assessments Division Internal Evaluations Office (IEO) of a complaint that Mr. Russell was using his office and computer for personal business. The UC Post Hearing Brief asserts that "the termination [of Mr. Russell] was solely and completely linked to the reasonable perception that Russell presented a threat of violence in the workplace." UC Post Hearing Brief at 4. Accordingly, I will not consider whether the findings of the IEO audit justified the termination for cause of Mr. Russell.

(6)In fact, on February 24, 1997, while an employee of Comforce at S-Division, Mr. Russell taught a fire-arms safety course with the support of the Los Alamos Sportsmen's Club (LASC), a LANL-sponsored club under the Club 1663 program. See February 20, 2000 memo from Mr. Maxwell T. Sanford II, LASC membership chair, to Mr. Russell, attached to May 23, 2000 submission of counsel for Mr. Russell entitled "Motion to Supplement Evidentiary Record."

(7)The UC did present the testimony of Mr. Waterbury, who claimed that he felt threatened by being in Mr. Russell's path as he allegedly stormed through a door in the S-Division offices. I will discuss that incident below, but for now it is sufficient to find with respect to this incident that there is no indication either that Mr. Russell intended to make physical contact with Mr. Waterbury as he passed through the doorway, or that he actually did so.

(8)According to Mr. Irving's Memorandum of Record, dated October 13, 1998, a 3 plus rating equates to slightly above "meets the basic standards for the position held." UC Hearing Exhibit J.

(9)Mr. Irving composed a memo for his own file, dated October 13, 1998, in which he criticized Russell's behavior in this episode, and reported that "I told Tucker that I would request that Mr. Russell's services be terminated if he acted in the same manner with me again." UC Exhibit J. At the Hearing, Mr. Tucker confirmed that Mr. Irving told him this, but testified that he did not mention this comment to Mr. Russell. Tr. at 244. Mr. Irving's memo was not placed in Mr. Russell's official employment file and Mr. Russell was unaware of its existence prior to the termination of his position at S- Division. Tr. at 848-852. While Mr. Irving's memorandum describes Mr. Russell's attitude as "hostile" and "belligerent" when they were discussing his evaluation, Mr. Irving never indicates that Mr. Russell physically threatened him during these discussions.

(10)In his testimony at the Hearing, Mr. Busboom stated that in November 1998, Ms. Huling had visited his office to express a concern about "her general fear of firearms and her specific fear of firearms in the hands of Mr. Russell." Tr. at 477. Ms. Huling, however, did not report this meeting in her deposition. Instead, she stated there that she expressed her fears about Mr. Russell and his firearms to Mr. Busboom "sometime after March 5" when she expressed thanks to Mr. Busboom for letting her know on March 5, 1999 that Mr. Russell had been terminated. Huling Deposition at 29. It appears that Mr. Busboom may be mistaken in his recollection.

(11)Mr. Russell freely admitted in his testimony that he had a very low opinion of Mr. Irving's performance as a manager, considering him to be too controlling and too eager to please his superiors. He testified that when Mr. Irving had asked him "point blank" if Mr. Russell thought he was a "yes man," Mr. Russell had explained his reasons for holding that opinion. Tr. at 997-1001.

(12)Mr. Waterbury testimony at the Hearing indicates that his efforts to please his supervisors extended beyond performing the duties of his position with LANL. He acknowledged performing roof and auto repairs for Mr. Irving and helping to pour a driveway for Mr. Leifheit. Tr. at 316.

(13)In his testimony, Mr. Baca stated that at no time during their discussion of sniper rifles, did Mr. Russell express any interest in buying one. Tr. at 617-18.

(14) In addition to the incidents already discussed, Mr. Leifheit referred to a February 24, 1999 incident where Mr. Russell allegedly exhibited anger and attempted to push open a locked door in order to exit his work area (Tr. at 57-58), and to a March 1 conversation where Mr. Russell allegedly complained to a co-worker about Mr. Irving's unfair conduct of the selection process and stated that "I can play hardball, too." Tr. at 63. These incidents were discussed at the RAT as evidence of Mr. Russell's poorly controlled temper and strained interpersonal relationships. However, they do not provide significant support for the RAT's conclusion that Mr. Russell presented a physical threat to Mr. Irving or to his co-workers.

(15)On March 12, 1999, Mr. Busboom reported to DOE Security that on March 2, Mr. Irving and Mr. Leifheit met with him and discussed their concerns "that Mr. Russell may have threatened and/or intimidated other employees." Busboom Memorandum, Attachment 2. On March 3, he again met with Mr. Leifheit "and the decision was made to convene a rapid action team." Id.

(16)In the absence of any retaliatory acts by the UC and Comforce, Mr. Russell would have continued working at LANL as a contract employee for a short period after March 5, 1999, before converting over to a UC position. However, as a matter of administrative efficiency and equity, I believe it is proper to use March 6, 1999 as his first day in a UC position for purposes of calculating Part 708 relief.

(17)This page also indicates that when writing his notes concerning Mr. Russell's response to this question, Mr. Irving deliberately avoided putting any comments on the portion of the page reserved for positive remarks and headed "strengths." At the Hearing, Mr. Irving explained that he placed the comments quoted above in a neutral spot at the bottom of the page because he felt that they did not rise to the level of a "strength." Tr. at 234. However, this is the only instance in recording his interview notes where Mr. Irving did not record all of his comments in the two boxes labeled "Strengths" and "Weaknesses." It therefore indicates to me the strong possibility that Mr. Irving had decided to rate Mr. Russell a zero on this question regardless of how he answered it, and was determined to leave the "Strengths" box empty.

(18)In his testimony, Mr. Russell explained that he asked the screening committee about the direction of the program because "there were differences between the job that I had been doing and the way this one was written up in the job ad, and I was curious as to what those differences meant." Tr. at 1054. Mr. Russell also testified that at the conclusion of a very brief interview with Mr. Leifheit, he spent ten or fifteen minutes in conversation with him concerning the direction the assessment program was heading, assessment philosophy, Mr. Russell's relationship with Mr. Irving, and how assessors were treated in the field. He testified that he did most of the talking in response to Mr. Leifheit's questions and comments. Tr. at 1077-78. I do not find such questions and comments to be outside the bounds of acceptable behavior for an in-house candidate interviewing for a position.

(19)Similarly, I find that Mr. Russell's behavior toward his coworkers and managers, as discussed in the previous sections of this opinion, does not furnish a clear and convincing basis for the UC not to have hired him. Nor does the IEO report concerning his use of certain office resources for his private business.

(20)In providing this back pay and benefits, the UC is not entitled to offsets for wages and benefits earned by Mr. Russell from other sources during this period. The express terms of the regulation do not provide for any adjustments to "back pay." See Am-Pro Protective Services, Inc. (Case No. VWA-0015), 26 DOE ¶ 87,511 at 89,071 (1997).

(21)The UC shall also provide Mr. Russell's counsel with sufficient detail for him to determine how the weekly hours of overtime and wage rate increase calculations were made.

Case No. VBH-0021

February 7, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Case: Eugene J. Dreger

Date of Filing: July 14, 1999

Case Number: VBH-0021

This Initial Agency Decision addresses a whistleblower complaint filed by Eugene J. Dreger (the complainant) against his former employer, Reynolds Electrical & Engineering Co., Inc. (REECO) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. At the time of the incidents described below, Dreger worked at the DOE's Nevada Test Site as a safety inspector. REECO was a primary contractor at the Test Site until December 31, 1995. Beginning January 1, 1996, Bechtel Nevada assumed this responsibility, and it has also assumed responsibility for litigation relating to the prior period, including defending this action. For four years before his employment was terminated in September 1994, Dreger had worked for REECO. He was terminated for "Failure to perform assigned job tasks successfully." Termination Notice dated September 19, 1994. The complainant alleges that REECO retaliated against him for raising safety concerns in the course of his routine job duties. As remedies, Dreger seeks to be rehired, to have his performance appraisals corrected and to be awarded back pay, Social Security credits, and compensation for emotional stress.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations.

The regulations provide, in pertinent part, that "a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority." See 10 C.F.R. §708.5(a) (1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations are entitled to receive an extensive series of protections. They may file a whistleblower complaint with the DOE. As part of the proceeding, they are

entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they may request independent fact-finding and an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Procedural History

On February 28, 1995, approximately five months after he was discharged by REECO, Dreger filed a written complaint under Part 708 with the former DOE Office of Contractor Employee Protection (OCEP). OCEP exercised its discretion to waive the 60 day filing requirement contained in the regulations. In 1996, OCEP was absorbed into the DOE's Office of Inspector General (IG). The IG began an investigation of the allegations in the complaint, but had only sporadic contacts with Dreger over the next few years.

The investigation was pending when, on April 14, 1999, revisions to Part 708 took effect. See 64 Fed. Reg. 12,862 (March 15, 1999). Under the revised procedures, investigations on contractor employee whistleblower matters are now conducted by the DOE's OHA, and the revised procedures "apply prospectively in any complaint proceeding pending on the effective date of this part." 10 C.F.R. §§ 708.8, 708.22. The Dreger complaint was such a pending matter. On April 26, 1999, I appointed Thomas O. Mann, a Deputy Director of the Office of Hearings and Appeals, to investigate Dreger's complaint. He promptly conducted an investigation and issued a Report of Investigation on July 14, 1999. In the Report he concluded that in the course of his ordinary duties, Dreger made protected disclosures regarding safety-related matters to his employer. He also inferred that these disclosures were regularly communicated to REECO managers, and that the "cumulative effect of these disclosures was a factor contributing to the decision to terminate him". Report of Investigation, slip opinion at p. 6, Administrative Record of OHA Case No. VBI-0021 ("AR") at 00824.

The Investigator then examined whether REECO would have terminated the complainant in the absence of the protected disclosures. See 10 C.F.R. § 708.29. The Investigator cited in his Report the relatively high burden of proof the contractor has in this regard.

He concluded that REECO fired Dreger for the following reasons: (1) job performance problems, including never having mastered the computer skills that he needed to complete his reports and to use the relatively new deficiency tracking system; (2) a lack of consistency in writing up his reports and in interpreting and applying Occupational and Safety Health Administration (OSHA) standards; and (3) human relations problems, including poor communication and relations with employees at the work sites he inspected.

The Investigator found that REECO had followed its standard procedures in terminating Dreger. The Investigator also found that there was no evidence that Dreger was targeted for termination. On July 14, 1999, I appointed Bryan MacPherson, an Assistant Director of the Office of Hearings and Appeals, to be the Hearing Officer in this matter. However, Mr. MacPherson retired from federal service at the end of September, 1999. Accordingly, on October 1, 1999, as the OHA Director I elected to replace Mr. MacPherson and to act as the Hearing Officer in this matter.

After a number of contacts with the parties and conference calls, I convened a hearing on the complainant's Part 708 complaint in Las Vegas, Nevada on November 15, 1999. At the hearing, Mr. Dreger called nine witnesses to testify, and the contractor called three witnesses. Each side was allotted ample time to question each witness. Ten exhibits were introduced. I received the hearing transcript on December 8, 1999, at which time I closed the record in this case. The official transcript of the hearing will be cited in this determination as "Tr.". Exhibits introduced at the hearing are cited as "Ex.".

II. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See *Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing 2 McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See *Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

In his whistleblower complaint, Dreger sets forth a variety of allegations. A number are age-based.(1) Taken as a whole, the complaint suggests that Dreger believed he was being treated unfairly by REECO. Most importantly, he complains that the low performance evaluations he received, being placed on a Performance Improvement Plan, and his termination were reprisals for his safety-related disclosures. In the case at hand, REECO never really challenged during either the investigatory or the hearing stages of this proceeding that (1) the Complainant had made protected disclosures as defined in 10 C.F.R. § 708.5, and (2) these disclosures can be considered a factor contributing to REECO's decision to terminate the Complainant. As stated by REECO's counsel at the hearing, "his job was identifying environmental safety and health issues". Tr. at 292.

These disclosures were proximate in time to the "marginally successful" performance appraisals the complainant received in 1992 and 1993 and to his eventual termination in 1994. *Don W. Beckwith*, 27 DOE Par. 87,534 (1999). The three key REECO officials who testified at the hearing were aware of the complainant's disclosures in the period leading up to his dismissal. Accordingly, the Complainant is deemed to have met his regulatory burden in this case, thereby shifting the burden of proof to REECO.

B. The Contractor's Burden

Given the complainant's showing, the regulations require REECO to prove by "clear and convincing" evidence that the company would have terminated the complainant even if he had not disclosed safety-related information to the contractor's management officials. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See *Hopkins*, 737 F. Supp. at 1204 n.3. In evaluating whether REECO has met its burden, I will consider all the evidence in the record of this proceeding. In particular, I will closely examine the strength of evidence in support of its decision to terminate the complainant; the existence and strength of any motive to retaliate on the part of the officials who were involved in the termination decision, and any evidence that REECO has taken similar or different actions against employees who are similarly situated.

III. Analysis

It is REECO's position that the complainant was terminated "for failure to successfully perform his job". Tr. at 295. The complainant was hired by REECO on September 25, 1990, as a safety inspector at the Nevada Test Site (Test Site). REECO was the primary contractor at the site during the time when the complainant worked there. Some time prior to hiring the complainant, REECO decided to improve its safety inspections. According to Frank Spenia, the complainant's supervisor, Spenia started the compliance section in response to former Secretary of Energy Admiral James Watkins' desire that DOE facilities follow OSHA safety standards. REECO hired four individuals for this purpose, including Dreger. All of them had OSHA experience. For example, Dreger had experience at the Department of Labor and at OSHA as a safety inspector.

REECO claims that an examination of the complainant's work record shows a history of performance

problems that were documented in performance appraisals issued during the years 1992 through 1994. After this marginally successful performance, REECO implemented a performance improvement plan for Dreger in June of 1994. The plan targeted three areas of Dreger's performance in need of improvement: (1) computer skills; (2) description of deficiencies noted during investigations; and (3) communication with line personnel during investigations. REECO maintains the plan was intended to help the employee succeed. The plan imposed obligations on management as well as on the employee, mandated regular monitoring and evaluation, required interviews with contacts selected by the employee, and specified that regular meetings with the employee be held.

In essence, it extended a full opportunity to the complainant to improve his performance. It advised him "You must understand that if there is no significant improvement by August 1, 1994, disciplinary action, which could include termination, will be taken." Performance Improvement Plan dated June 1, 1994, Ex. 8 at 1.

REECO issued a final report on the plan's implementation on September 12, 1994, and a copy of that report is in the record. This report concludes that the complainant had shown little or no improvement. REECO contends that it reluctantly terminated the complainant on September 19, 1994.

The complainant's position has not changed during the entire course of this proceeding. He believes that he was an outstanding employee who regularly brought significant matters to the attention of management and work site employees. He maintains he received inadequate credit for his targeting of health and safety deficiencies. He contends that the computer-related issues about his job performance were exaggerated, and that other employees who knew his work believed him to be outstanding.

Before I delve into the testimony and other evidence relating to the complainant's work performance, I note some of the complainant's strengths. He is direct and plain speaking. He served in the Navy and has a long record of being a capable safety professional, including working at OSHA for many years.

REECO found problems with Dreger's work during virtually the entire time that the complainant worked at the Test Site. These problems have not changed over time. The first problem area is a failure to master computer skills, which he needed to write up investigations, to complete safety deficiency reports accurately and to enter material into the REECO "Automatic Deficiency Tracking System" (ADTS) system. These matters were a key part of each annual performance appraisal the complainant received. The complainant says REECO is wrong and that his computer skills were at a level comparable to those of the other safety inspectors.

None of the witnesses the complainant called to testify at the hearing had any direct knowledge of his computer skills. Certainly none of them testified that Dreger's computer skills were adequate. Nor did he submit an independent assessment of his skills, which would have been helpful to me. Nevertheless, I believe I have formed an accurate opinion in that respect. Two of the REECO witnesses testified at length at the hearing about his deficiencies in this area, and Dreger did not contradict any of the specifics of their testimony. The complainant's skill at written communication was clearly poor. Notwithstanding, he did not use skill enhancements available on computer programs - e.g. "spell check"or a grammar check program. It was clear that he did not proofread his work, which would have allowed him to make ready use of the computer to make needed corrections. A REECO official testified at the hearing that Dreger would turn off the computer in order to save a document, utilizing the back up copy, because he couldn't master the regular "save" command. Tr. at 215.

Moreover, it was also clear to me from the testimony and the record in this case that the complainant did not ever really care very much about refining or improving his computer skills. The complainant saw his primary function as a safety inspector to be making unannounced visits to work sites, performing OSHA-type investigations and finding safety- and health-related problems. It did not interest him to spend time writing up proper reports.

He never believed they were important or essential, notwithstanding the fact that they alerted those at the

work site to the problems, promoted correction by them of deficiencies, and allowed for proper monitoring and follow through by those at the work site and by management.

Dreger wanted to swoop in and "put the hammer down", and he never changed this view of his job. See the Witness Statement of Frank Spenia transcribed by the OHA Investigator dated July 8, 1999 (Spenia Witness Statement) at 2 (AR at 00803). Compare *Russell P. Marler, Sr.*, 27 DOE Par. 87,506 (1998)(*Marler*).

I have reviewed the many deficiency reports, weekly activity reports and status reports written by the complainant that are part of the record in this case. I found them commonly to have typographical errors (see e.g. the Inspection Report dated 3/23/94, AR at 00070) and to be hard to follow (in the Long Form Deficiency (LFD) Report dated 6/9/94, the following appears: ". . . The supervisor has stated; the ergonomic problems are solved, by dating and signing the LFD, that it corrected." AR at 00095). Often the reports look like a first draft, with clumsy grammar. Individual Deficiency Report dated June 4. 1993: " . . .The ladder hand rails atop both fuel tanks are not permanently afixed [sic] since they pose erratic movements." AR at 00082. The reader sometimes cannot determine the exact nature of the deficiency Dreger cites. Even the general nature of a deficiency can be elusive in these reports, and the reader must read on into the details for better understanding. *Marler* at 89,057-59.

The second area of the complainant's work deficiencies involves his interpretation of applicable safety and health rules and whether he was consistent in his reports. Management pointed to numerous problems in this regard. Performance Appraisal dated 10/13/92, Ex. 3 at 2 ("Hazards were not properly identified, improper standard used and reports not timely."), and at 3 ("on occasion SDR's and/or . . . forms had to be rewritten or rejected for improper standard cited or details in describing violation/hazard."); Performance Appraisal dated 11/10/93, Ex. 4 at 2 ("Standard interpretation in cases has been opinionated and some times overstated. Personal preferences are sometimes reflected in citations rather than accurate interpretations.") and at 4 ("In many cases calls have been received from personnel in employee's areas of responsibilities with questions on interpretations. Interpretations are not always clear and sometimes confusing."); Performance Improvement Plan Final Report dated 9/12/94 ("Final Report"), Ex. 9 at 2, 5 ("Deficiency reports are at times hard to understand. One deficiency report showed two different responsible managers. Also, found one report that was signed by the employee in the wrong place preventing us from advancing status."). Witness Spenia noted in a telephone interview that "Dreger would identify a deficiency, agree on a method of correcting it, and then he would go back and reinspect the job and tell them they should have used an entirely different approach. We also got complaints about differences in interpretation of the OSHA standards." Spenia Witness Statement at 1 (AR at 00802).

The testimony at the hearing on this issue was not at all favorable to the complainant. The witnesses he called did on occasion give favorable comments of a general nature regarding his safety inspections. See the testimony of Terrance S. Holmes ("Mr. Dreger operated the same as all the safety officers out there. I believe in a very professional manner." Tr. at 21); see also the testimony of Donald McDermott, a maintenance and well crew worker at Area 6 and Area 12 of the Test Site, who when asked by the complainant about his opinion of Dreger's inspections, said generally "You were held in high regard. You were competent, you [knew] exactly what you were doing." Tr. at 83.

However, two of the witnesses called by the complainant had very negative and detailed comments about the way he interpreted rules applicable to the workplace. Dudley Russell, an ES&H coordinator for REECO, criticized Dreger for performing misguided inspections. He testified "when issues would be brought forward we were of the opinion that those things, especially minor details could have been taken care of on the spot.

Rather than being tracked on a deficiency system and treated as something that would may have a fine attached to it." Tr. at 67. By way of example, Russell said that if they had five jars containing the same thing, like mayonnaise, and four jars had proper labels while the fifth jar, with the same contents, had no label, Dreger would "write up" the jar not labeled properly instead of just putting on a new label

indicating the contents. Russell said ". . . you just correct it with a black sharpie and go on. In many instances . . . that wasn't good enough. [Dreger] wanted a label on there that went into excruciating detail and, you know, I just didn't feel that was necessary. It didn't add any value to the project." Id.

Another witness called by the complainant, Michael Rollins, was a safety specialist for REECO who had duties similar to the complainant's. Rollins clearly believed that the way the complainant approached his job was not valuable for REECO or its employees. He testified that "our roles were different", Tr. at 52, and that Dreger "was primarily there, for lack of any other term, to play ?gotcha'" at the work site, Tr. at 53. In contrast, Rollins says he worked on building a team which was intent on making safety a daily routine. "We had an incredibly successful safety program at the test site. . . We had safety committees where we worked with the craft people to get them on board. And get them to work with us in the safety program. . . It was sort of probably a hallmark program across the nation as companies started into this thinking. . ." Tr. at 57-8.

The third problem area for REECO management officials with respect to the complainant's work performance involved his communication skills. Repeatedly, he was cited in the performance appraisals by REECO management officials as needing improvement in this area. See e.g. his very first performance appraisal for a full year (Ex. 2) dated January 29, 1992, which stated as follows in the "areas requiring development" section: "Some development in communications skills". Id. at 4. The performance appraisal dated October 13, 1992, for the period ending on September 30 of that year, states "employee . . . at times interprets in a manner that confusses [sic] the issues. Details of hazard description are not always clear which leaves responsible individuals unclear on proper corrective action." Ex. 3 at 6. See also Tr. at 128. Dreger never put in any evidence to contradict these negative reports in the performance appraisals about his interpersonal skills. His former colleague G. A. Rodriguez, also a REECO safety inspector, told the Investigator "I worked with Dreger for two years. He and I had a run-in. . . Because of the run -in . . . I tried to avoid him as much as possible. . . I heard that Dreger had problems, and that they were putting him on probation . . . Dreger brought it on himself, because of his attitude. He tried to be a know-it-all." Witness Statement of G.A. Rodriguez dated July 12, 1999 at 1, AR at 00804.

In addition, a number of employees who testified at the hearing after being called by Dreger discussed in detail what they called his communication problems. For example, Dan Gouker, general foreman of the Area 6 generator shop at the Test Site, testified about his interactions with the complainant. First, he carefully distinguished himself from management ("I'm a craft and that's what I did." Tr. at 42). His testimony was adverse to Dreger in two important respects, both on the type of inspections he made and in contrasting him with other inspectors.

The Witness: [Dreger] would sit in front of a man's toolbox and go through drawer by drawer looking for tools. I know that my crew took personal offense to it because of the fact that he questioned everything in it and why is this like this and what's this and why is that. And my men

at the time did keep one drawer in their toolbox for personal effects, wallets, et cetera, that drawer was not allowed to be looked into but obviously opened to make sure there's nothing in there to be modified; no bad tools, broken tools, et cetera. . . . I know that my men were offended by the type of inspection.

Hearing Officer [Breznay]: Is that just normal reaction to a safety inspector coming in?

The Witness: Absolutely not, absolutely not. It was the fact that he was going through their personal toolbox. We had inspections all the time. . . . So we were under constant scrutiny to make sure that we come up to both DOE requirements, REECO requirements, OSHA requirements and more importantly the National Electrical requirements. So were never offended by any inspection that came through. . . .

Hearing Officer: Can you compare what happened with Mr. Dreger and the men on site to other safety inspectors who came by? Were there similar problems or were they different?

The Witness: There weren't problems with other inspectors, they would come in and say I'm here to do

this, they would proceed on and they would do that. . . . Mr. Dreger would contact me, as a general foreman, and say I'm coming by your shop to do an inspection. . . Then my guys would have to come over and say who's that and what is he doing going through my toolbox? So, it wasn't similar at all. . . .It wasn't a matter of whether they liked it or not, it was the manner in which it was done. Without conversation with the employee whose tools are being looked at. . . . toolbox[es] had personal things in it, like wallets, like badges, in the shop the guys were allowed to work without their badge because of the fact they were bending over rotating equipment. . . . It was never a question of looking at tools, we always wanted that. In fact, I took it upon myself for my tool crib man to remove any damaged tool . . . we were never opposed to any type of an inspection to make sure that the tools were safe. It's the manner that these particular inspections were done in going through parts of the toolbox that had no tools in them. That was the problem." Tr. at 36-40.

Frank Spenia, the complainant's Section Chief, testified extensively at the hearing about Dreger's work performance. Spenia was an experienced manager for REECO, and he is currently employed by Bechtel Nevada at the Test Site. He is a certified safety professional. Spenia discussed his "performance notes" which underlie the REECO performance appraisals introduced at the hearing. The performance note dated 12/29/92 records that Dreger had improperly cited a particular work site "for failure to have MSPS for hand cream." Ex. 5 at 3. An "MSPS" is a material safety data sheet, which is typically required for chemicals on the worksite. It states the composition or formula for the particular compound. Under questioning by the complainant, witness Spenia said "I myself wouldn't require somebody to have an MSPS for hand cream. Technically speaking, you're probably correct. . . . [But] I don't think that out on the job site, . . . we would require or cite somebody for not having an MSPS for hand cream." Tr. at 221.

When I asked Dreger for clarification of his position on the matter, I said "So, you thought it was part of your concern to flag this because of the safety hazard to individuals who might be using their hand cream." Dreger responded "Yes, sir. In this specific reason it could be a health hazard." Tr. at 222; see also AR at 00021. I find that the evidence strongly supports REECO's position that Dreger's communication skills, overall judgment and behavior towards employees at the worksite fell short of normal expectations.

These performance shortcomings and other events combined in 1994 to precipitate a crisis at the workplace for the complainant. His last two performance appraisals had been "marginally successful". In addition, on December 6, 1993 Dreger was cited for failing to answer a page, an extremely serious matter.

According to a "performance note" recorded by Witness Spenia, "After looking into circumstances it was determined that Dreger was on duty and had not responded to a 900 page for approximately 2 hrs. This does not meet requirement in [occupational safety and fire protection] internal procedures - reprimand issued." Ex. 6 at 1. The complainant was the assigned duty officer for the particular weekend, and agrees that he did not respond to the page. Tr. at 154. His only comment was that he was either at a movie at Nellis Air Force Base or in a bus somewhere on the Test Site. Tr. at 225. He was properly reprimanded for dereliction of duty. He was also cited on December 12, 1993 for becoming "short" with another employee. Ex. 6 at 1. See Tr. at 156. Spenia testified that at that point, REECO management officials concluded " . . . something needed to be done. We needed to look into this." Tr. at 162.

REECO concluded that the best approach was to implement a "Performance Improvement Plan" (PIP), a vehicle that REECO had used in the past with problem employees. The PIP drafted for use in complainant's case is in the record (Ex. 8). The evaluation period was June 1 through August 1, 1994. REECO officials testified that they worked carefully on drafting the PIP, that it was implemented following regularized procedures, and that it was discussed with the complainant in detail before implementation. The testimony at the hearing was consistent on this point. I conclude that REECO utilized the PIP in a sincere effort to focus the complainant's attention on his problems and to build consensus towards improvement. See Tr. at 163 et seq. At the meeting to discuss it prior to implementation were the complainant, Spenia and Spenia's supervisor, Steve Jones, the department manager for safety and fire protection (who supervised about 60 employees). Jones testified convincingly that "the goal was to work

with employees, to identify areas that they needed to improve at so that we can get them up to a acceptable level of performance". Tr. at 261. Jones, who had 18 years of experience as an OSHA employee in the field and in Washington DC, said "It - it give[s] me no pleasure to point out to employees how they're failing to perform, if it were not for the goal of trying to improve that performance." Tr. at 264. In the PIP, the three areas of special concern were the same ones cited above. At the end of the evaluation period, the PIP states a report would be prepared, the complainant would be notified and a meeting would be held to discuss the results. The PIP warned Dreger that failure to improve would trigger disciplinary action, including a possible termination.

Dreger never fully appreciated the significance of the PIP. For example, at the meeting during which the PIP was discussed and introduced, Dreger informed Jones and Spenia that he wanted to take his summer vacation during the evaluation period and also wanted to attend an "American Society of Safety Engineers performance development conference." Tr. at 181-2. The REECO officials stressed with the complainant the importance of the PIP, and advised the complainant against taking time off as requested, but Dreger refused.

Moreover, Dreger's work performance during the evaluation period fell well short of reasonable expectations. In fact, at the end of week 1 of the evaluation period, the Final Report notes with respect to the PIP that Dreger said he "had not yet had time to read it". Ex. 9 at 2. See Tr. at 184-85. The continuing deficiencies in the complainant's work during the evaluation period are noted and discussed in detail in the Final Report. See Final Report, Ex 9 at 2-5. It was evident to me, based on testimony at the hearing, that the reporting and monitoring function required by the PIP was done carefully and seriously by management.

For example, at week 6 the Final Report notes that "Minor improvement was noticed on report test fields", and it concedes in the "conclusion" section that "Marginal improvement has been made in documenting of deficiencies and investigations." Id. at 4, 6. However, in summing up the complainant's performance during the evaluation period, the Final Report finds that "There was no noticeable improvement in computer skills. This employee has received as much training as anyone on the two programs that he uses most. The employee relies on unorganized notes to recall functions of a different programs rather than reference manuals, books, or asking others in the section for guidance. . . . Rather than retaining to memory and practicing the skills, the employee will scribble down the sequence and when the function is to be used the notes are either lost or not understandable. " Id. at 6.

The complainant's reaction at the time to management's comments and urges to improve performance was typically a denial. Or he queried "such as?". Letter (74 pages) to Hearing Officer dated November 5, 1999 ("November 5 Letter") at 50. When I directed him on several occasions prior to the hearing in this case to be prepared to address the PIP in detail, he continued typically to deny its relevance. See November 5 Letter at 43. He called the PIP "ridiculous" (id. at 44), "baloney" (at 43), "fabricated", "unbelievable", and "I don't understand" (at 48-50). He responds to the statement in the PIP that "Everything appears to him as black or white" (Final Report at 2) by saying "[Yes], if you know what you are doing, which I do". November 5 Letter at 44. As for the comment in the Final Report that he makes too many errors in his deficiency reports, his response at one point is "Who are the others who made errors?" (id. at 45). He also quibbles about semantic issues. Pointing out that the concluding section of the Final Report says he "is a very nice person", he seems to feel that it contradicts itself later when it states he "lacks diplomacy, tact and concern for others", since the definition of "nice" includes "showing tact or care". November 5 Letter at 52-3. With respect to the criticism that he viewed his function too narrowly as being there on site to "? put the hammer down' and make them do things his way," Spenia Witness Statement at 2, AR at 00803, the complainant in essence agrees. He says "Well I do have the knowledge and experience to back it up with, don't I!" November 5 Letter at 61. In the end, Dreger was convinced he was right and all others were wrong. He says "my expertize [sic] offends others because they are not as knowledgeable as I". Letter (23 pages) to Hearing Officer dated November 5, 1999 at 13.

Dreger never thought the PIP was worth more than a moment of his time. He never mentioned it in his

original whistleblower complaint, and he hardly addressed it at all in his questioning and arguments at the hearing I conducted. In fact, he never presented a serious discussion of it. At one point he called the 62 day evaluation period a "sham", "since they are out to terminate me." November 5 Letter at 42. He continues "they could not assist me since my experiences are beyond theirs." Id.

Significantly, he chose to focus at the hearing not on the poor ratings he received but on the failure to receive higher ratings in some areas. He asked both Spenia and Jones why he did not receive a rating of 3, on a scale from 1 to 3, "in some of the areas I'm very strong in . . .?" Tr. at 272. Jones replied that "if you were very strong in an area, you would have received a grade of 3. If you received a grade of 2, that means you meet the performance level specified in that criteria." Id. The complainant also complained that he got no credit for arriving at work on time, Tr. at 206, and for not using much sick leave, Tr. at 199. To the extent he addressed work-related problems directly, such as shortcomings in his computer skills, he would simply offer his disagreement, e.g., "I can't accept that." Tr. at 202.

Dreger's allegation that the whole rating process was a sham was an important matter. I devoted considerable time trying to ascertain whether there was any support for his claim. Since his "marginally successful" ratings began with the second full year performance assessment he received, in 1992, I would have to find that the REECO deception and unfairness began then, years before he was terminated. Moreover, unfairness itself would not be enough for me to find in Dreger's favor in this proceeding. The unfairness would have to be directed against him in retaliation for a protected disclosure. I am convinced this did not occur. REECO has shown that it was the complainant's work- related deficiencies that caused the REECO adverse actions.(2)

Returning to the issue of whether he was rated unfairly, I pressed Spenia, the complainant's supervisor, for more information on this issue: "Mr. Dreger's allegation is that they weren't done fairly. That you didn't give him credit for safety successes that he brought to the fore, the crimping machine . . the Hanta virus episode, where he brought up rodent contamination, that kind of thing. How do you respond to his claim that . . . the deck was stacked against him from the beginning, that this process of rating him was unfair?" Tr. at 195. In response, Spenia readily conceded that Dreger had work-related successes: "Those things that Mr. Dreger, did, as far as identifying a press needed on a crimping machine . . . that's what he was supposed to be doing. It's nothing exceptional about that.

Those things were identified in the standards . . . you're supposed to implement . . . and that's what he did." Tr. at 195-6. See also id. at 240, where Spenia says the complainant's discovery of "poor electrical grounding" at a bulk petroleum facility at the Test Site was a "good call" (AR at 00259), a phrase he also used candidly when asked about the Hanta virus episode (Tr. at 239-40). When I asked Spenia about the rating of the three other safety inspectors (Terrell, Rodriguez and Boucher), his response was "His performance was obviously less than adequate because we didn't let any of the other people go. . . Mr. Dreger was having more difficulties with our computer systems. He seemed to have problem cooperating, getting his point across to those people that were responsible for corrective actions. I wasn't experiencing that with the other employees that were in that section at that time." Id. at 196-7.

Next, I present testimony about REECO's attitude towards safety. I have accumulated a surprising amount of circumstantial evidence in this proceeding to the effect that REECO was very unlikely to have retaliated against the complainant. According to all of the witnesses called by the complainant who addressed the issue, REECO was an exceptionally safety-conscious firm. Mr. Gouker, the generator shop foreman, said "In my fifteen years working for [REECO], there was never retaliation for safety related things. . . [REECO Division Manger] Flangus, who was in charge [at Mercury] at the time made a firm commitment to us . . . that there would not be retaliation for safety infractions, or safety complaints . . . And I can assure you in my length of time out there, that never happened. . . it was the same philosophy for REECO at the Tonopah test range, that there were not complaints or retaliations for bring[ing] up safety. That's probably one of the most safety consc[ious] companies I've ever worked for." Tr. at 43; see also id. at 45.

Michael Rollins, the REECO safety specialist called to testify by Dreger, praised REECO for setting up an

employee-driven safety program on the Test Site, which was copied nationally.. Upon being asked by counsel for REECO whether he knew of any retaliation against employees for raising safety concerns, Rollins said "No, in fact, that was probably the thing that was, that was clearly put forth time and time again that made the safety committee concept work as well as it did. Because the employees were truly empowered. They were actually able to pick a representative . . . way of governing safety. . . . It became an honor to sit on these committees . . . If it was a legitimate safety concern they were given all the resources possible. I was flabbergasted frankly, that the company spent as much time and effort as they did. These men were given vehicles, they were given time, their bosses were clearly instructed to give them the resources they needed to go solve these problems. . . I haven't seen anything of its type since." Tr. at 60-61.

Dudley Russell, the ES&H coordinator for REECO called to testify by Dreger, denied that reprisals for safety-related issues ever occurred. I queried him on this: "My job is to inquire whether his disclosures resulted in a [reprisal] from management. . . like, lowered performance appraisals or ultimately termination, because he raised safety issues. Does it strike you as something that could have happened [?].

The Witness: No. I would say no, that's not what we were all about. You know, when somebody brings something of a safety issue, you know, I mean that's the safest place I ever worked. And I've been out there, I'm still there, I've been there 16 years. And I spent 10 years in the craft and when I first went out there it didn't take me long to see that's the safest place I ever worked. And we - - they were - - safety issues were brought forward, they were corrected and we went on."

Hearing Officer: "And that was in your view the high point on the safety curve, if I understand your testimony. Is that right?

The Witness: Absolutely. We did the best we could and I think we did a damn good job in the realm of safety. And I don't think anybody -- I don't think anybody -- to my knowledge there hasn't been anybody run off for bring[ing] forth safety violations. . . . And I don't deem this of being one of them." Tr. at 69-71.

As Dreger's colleague Milton Terrell said, who was also a REECO safety inspector, "Dreger had quite a few problems at REECO, and most of them were people problems, personality difficulties. He also had a big problem with interpreting the OSHA standards. Gene was very bullheaded, once he made his mind up about something. . . . No one ever retaliated against Gene for any reason. Nobody dared retaliate against any of us - we had a charter to do a safety program." Witness Statement of Milton Terrell dated July 13, 1999 at 1, AR at 00806.

On the basis of the foregoing testimony and other evidence in this proceeding, I conclude that the contractor has met its burden to show by clear and convincing evidence that it would have taken the same actions with respect to the complainant in the absence of the protected disclosures. *Diane E. Meier*, 27 DOE Par. 87,545 (1999).

IV. Conclusion

As set forth above, I have determined that the complainant has failed to establish the existence of a violation on the part of REECO for which he may be accorded relief under DOE's Contractor Employee Protection Program, 10 CFR Part 708. I find that the complainant made protected disclosures under Part 708, and that such disclosures were sufficiently close in time to his termination and to other personnel actions adverse to him to be considered potentially contributing factors to those actions. Nevertheless, I find that the evidence clearly and convincingly establishes that REECO would have taken those actions, including rating him "marginally successful" in 1992 and 1993 and terminating him in 1994, in the absence of those protected disclosures. The strength of the evidence supporting the reasonableness of the contractor's decision to terminate him is overwhelming.

I am convinced that Dreger had serious work performance deficiencies, including a lack of adequate computer skills, poor communication and other interpersonal relations problems, and deficiencies in interpreting and applying applicable safety and health rules. Two of the three other REECO safety inspectors dismissed the idea that REECO may have retaliated against him, and suggested that Dreger was himself responsible for any problems he was having at work. No evidence at all exists in the record to link his termination with his safety disclosures. Based on my observation of the witnesses' demeanor and my assessment of their credibility, I discerned no motive or intention to retaliate by REECO. Nor did I find any evidence which would indicate that REECO's treatment of Dreger was at all inconsistent with its treatment of similarly situated employees. Accordingly, I must deny his request for relief under 10 CFR Part 708.

It Is Therefore Ordered That:

(1) The complaint against Reynolds Electrical and Engineering Co., Inc., filed by Eugene J. Dreger on February 28, 1995, under 10 C.F.R. Part 708 is hereby denied.

(2) This Initial Agency Decision will become the Final Decision of the Department of Energy denying the complaint unless within fifteen days of its receipt, a party files a Notice of Appeal requesting review by the Director of the Office of Hearings and Appeals, in which case the review will be done by his designee, all in accordance with 10 C.F.R. § 708.32.

George B. Breznay

Hearing Officer

Office of Hearings and Appeals

Date: February 7, 2000

(1)The complainant had previously filed an age discrimination complaint with the State of Nevada, but it was dismissed for lack of evidence. AR at 00039. These allegations are not the proper subject of a Part 708 Complaint. Part 708 specifically excludes allegations based on issues of this type. 10 C.F.R. § 708.4(a).

(2)Dreger has never pointed to a particular disclosure which allegedly triggered REECO's retaliation. His claim is that it was all of his safety-related findings which caused REECO to retaliate against him. Based on the testimony and the other evidence in this case, I do not agree. Given the extensive testimony at the hearing about REECO's attitude toward safety, portions of which I quote infra, and testimony about Dreger himself and his work performance, I do not believe he was targeted because of his protected activities.

Case No. VBH-0023

March 31, 2000

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Stephanie A. Ashburn

Date of Filing:July 6, 1999

Case Number: VBH-0023

This Initial Agency Decision concerns a whistleblower complaint filed by Stephanie A. Ashburn, a former fellow of the Oak Ridge Institute for Science and Education (ORISE). As explained below, Ashburn's complaint is denied.

This case arises under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708, the "whistleblower" regulations. The whistleblower regulations prohibit a contractor from retaliating against a contractor employee who engages in protected conduct. Protected conduct includes disclosing information that the employee believes reveals 1) a substantial violation of a law, rule, or regulation; 2) a substantial and specific danger to employees or to public health or safety; or 3) fraud, gross mismanagement, gross waste of funds, or abuse of authority.

If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish by a preponderance of the evidence that 1) the employee made a protected disclosure; and 2) the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to prove, by clear and convincing evidence, that it would have taken the same action in the absence of the protected disclosure. If the employee prevails, the Office of Hearings and Appeals (OHA) may order employment-related relief such as reinstatement and back pay.

Background

ORISE, Ashburn's employer, performed work at the Department of Energy's site in Oak Ridge, Tennessee. As an ORISE fellow, Ashburn was assigned to a team working on the Environmental Compliance and Management Program (ECAMP). Although the people who worked on the ECAMP were based at a DOE site, the ECAMP was funded by the Department of the Air Force. LMER received a contract with the Air Force for the ECAMP, and performed work at Oak Ridge under the DOE's "Work for Others" program. LMER also entered into subcontracts with several entities, including ORISE, to supply personnel for the ECAMP.

Ashburn, an attorney, was granted a one-year fellowship by ORISE in October 1994. The terms of the fellowship are set out in a letter to Ashburn dated September 29, 1994, which states that the fellowship "will be under the direction of [the Supervisor] in the Environmental Sciences Division.... The appointment may be extended ... subject to satisfactory performance and the continued availability of funds."

Ashburn's appointment was extended several times. The last extension was announced in a letter dated November 26, 1996, which stated that her "appointment ... has been extended for up to one year beginning October 1, 1996."

Ashburn's whistleblower case concerns certain activities of her supervisor on the ECAMP team, who was an employee of LMER. In her complaint, Ashburn states that the supervisor often expressed frustration with what she perceived as LMER's "inability to support her and the Air Force sponsor's work." In August 1996, Ashburn attended a meeting with the supervisor and a representative of the Air Force. During the meeting, Ashburn was asked whether she was willing to support the supervisor's attempt to take the ECAMP contract to either a different contractor or a new firm to be formed by the supervisor.

Also in August, the supervisor began negotiating with consulting firm "A" for positions for her and others on the ECAMP team. She told Ashburn that she had arranged a salary for Ashburn with the management of "A." In September, the Air Force placed an announcement in the *Commerce Business Daily*, soliciting bids for the ECAMP contract. The announcement stated that consulting firm "A" "is the only known source with the expertise and is capable of providing services for this specialized effort." The announcement was soon withdrawn, for reasons not stated in the record, and the supervisor began negotiating with other consulting firms to hire the ECAMP staff and obtain the ECAMP contract.

In November 1996, Ashburn disclosed to LMER management that her supervisor was attempting to manipulate LMER's subcontracts involving some of the ECAMP staff. For the purposes of this Decision, I will assume, without making a finding, that Ashburn's disclosures involved abuse of authority by the supervisor, and meet the regulatory definition of a protected disclosure. *See* 10 C.F.R. § 708.5(a). Two other subcontractor employees who worked on the ECAMP, Matthew J. Rooks and Alizabeth Aramowicz Smith, filed whistleblower complaints based on facts similar to those alleged in Ashburn's complaint. *See Matthew J. Rooks*, Case No. VBH-0024, 27 DOE ¶ _____ (March 1, 2000).

Meanwhile, LMER received a letter from the Air Force, dated August 26, 1997, stating that funding for the ECAMP contract would end on September 30, 1997. This was the same day that Ashburn's fellowship was due to terminate. Ashburn received a letter in October 1997, notifying her that her fellowship had been officially terminated as of September 30, 1997. According to the letter, the termination was based on notification ORISE had received that the ECAMP project would not continue past that date.

The new contract for the ECAMP project was awarded to consulting firm "B." The supervisor, meanwhile, had resigned from LMER and accepted a position with consulting firm "B," where she worked on the ECAMP.

On November 5, 1997, Ashburn filed the present complaint against LMER. In a supplement to the complaint, dated October 4, 1999, Ashburn listed retaliatory acts which she alleges were committed by LMER.

Analysis

The Part 708 regulations provide that the employee who files a complaint has the burden of establishing by a preponderance of the evidence that her whistleblowing was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. 10 C.F.R. § 708.29. Retaliation is defined as "an action ... taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of [the whistleblowing]."

Ashburn's central claim is that the loss of her fellowship was retaliation for her whistleblowing. There is no dispute that the termination of her fellowship was a negative action with respect to her employment, and could be found to be retaliation if it was the result of a protected disclosure. 10 C.F.R. § 708.2

(definition of "retaliation"). Ashburn must show, however, not only that the termination occurred, but that her disclosure was a contributing factor to the termination.

A contributing factor is "any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision." *Luis P. Silva*, 27 DOE ¶ _____ (Case No. VWA-0039, February 25, 2000), citing *135 Cong. Rec. H747* (daily ed. March 21, 1989) (Explanatory Statement on Senate Amendment-S.20); *see also Marano v. Department of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying the "contributing factor" test in a case under the Whistleblower Protection Act, 5 U.S.C. § 1201).

The record is clear that the termination of Ashburn's fellowship was caused by LMER's loss of the ECAMP contract. Linda McCamant, ORISE's group manager for research participation programs, was responsible for administering Ashburn's fellowship. McCamant filed an affidavit in this proceeding, stating the termination of Ashburn's fellowship was based on ORISE's loss of funding from the ECAMP. McCamant states that "ORISE has no policy whereby Ms. Ashburn's appointment could have been extended - or she be paid for - the equivalent time period that she had been on leave without pay. When her appointment ended, the basis for ORISE's ability to pay her also ended."

The record also suggests that the decisive factor in the placement of the ECAMP contract was the supervisor herself. Thus, when the supervisor was apparently about to accept a position with consulting firm "A," the Air Force announced its intent in the *Commerce Business Daily* to award the ECAMP contract to the same firm. When the supervisor accepted a position with consulting firm "B," the Air Force awarded the ECAMP to that firm.

Moreover, the record indicates that the supervisor's decision to leave LMER for a new contractor was motivated by a long-standing dissatisfaction with LMER management that predated any disclosure by Ashburn. Ashburn notes in her complaint that when the supervisor first interviewed her in 1994, she expressed frustration with LMER's lack of support for the ECAMP. In March 1996, according to Ashburn, the supervisor met with Air Force personnel to express her dissatisfaction with her management and to discuss moving the ECAMP contract to another firm. In September 1996, the supervisor began negotiating for a position with consulting firm "A." It was only in November 1996, after the supervisor had taken steps to ensure that the ECAMP contract would be placed with another firm, that Ashburn made her first disclosure.

The timing of the supervisor's departure from LMER also appears to be unrelated to Ashburn's disclosure. Ashburn states in her complaint that in September 1996, the supervisor asked her to find out when she, the supervisor, would be eligible for retirement benefits from LMER. Ashburn called the LMER benefits office and found that the supervisor would be eligible on October 8, 1997. According to Ashburn, the supervisor set up her voice mail and e- mail accounts with consulting firm "B" in mid-September 1997, but did not officially resign from LMER until October 9, 1997, one day after she qualified for retirement benefits.

In summary, there is ample evidence in the record to conclude that the termination of Ashburn's employment was due to LMER's loss of the ECAMP contract, that the supervisor herself was the key factor in awarding the ECAMP contract, that LMER lost the ECAMP contract because the supervisor would be working for another firm, and that the supervisor had determined to leave LMER before Ashburn made a protected disclosure. Consequently, I find that Ashburn has failed to establish that her disclosure was a contributing factor to her termination.

Ashburn alleges a number of other retaliations. Most of them involve what she calls "threats." In these allegations, she appears to rely on the definition of retaliation at 10 C.F.R. § 708.2, to include "an action (including intimidation, threats ... or similar action) taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment)...." Ashburn has not convincingly shown that the statements she cites are actual threats of a negative personnel action, and include such trivialities

as being directed to attend a meeting where she, a woman in her twenties, was among older men who were managers. Ashburn also alleges that LMER's decision to move Rooks and Smith to off-site offices in January 1997 "served to isolate and punish me ... and interfered with my ability to adequately perform my job, as I was unable to readily work with my colleagues." However, since Ashburn went on leave without pay in January 1997 and did not return until mid-August 1997, about a month before her fellowship was terminated, it is clear that the absence of Rooks and Smith could have had no more than a minimal impact on Ashburn's job performance. I find that these allegations fail to meet the regulatory definition of retaliation, and they will accordingly be given no further consideration.

Ashburn also alleges that an LMER manager threatened her "not to accept any positions with contractors," and claims he told her that if she accepted a position with a contractor "he would not approve the required paperwork, thereby rendering the position moot." Ashburn's own statement to the investigator, however, shows that this allegation is without merit.

The manager in question is the person to whom Ashburn disclosed the supervisor's attempts to move the ECAMP contract. In her statement to the investigator, Ashburn describes how the manager was angry at the supervisor, and told Ashburn and Smith that he would protect their current positions by not approving any paperwork authorizing new LMER subcontractors for the ECAMP. While it is clear that the manager refused to meddle with LMER's existing subcontracts, Ashburn has provided no evidence that the manager made any attempt to interfere with an attempt to seek or accept a job with another employer. Thus, there is no basis on which to find that the manager threatened Ashburn or that the manager's statement constitutes retaliation within the meaning of the regulations.

Conclusion

Ashburn has failed to show that the protected disclosure she made was a contributing factor to an retaliatory action. Given the supervisor's determination to take the ECAMP contract elsewhere, the loss of Ashburn's fellowship appears to have been an inevitability before she made a disclosure. Consequently Ashburn has failed to establish by a preponderance of the evidence that her disclosure was a contributing factor to an alleged retaliation. Accordingly, her complaint will be denied. *Richard W. Gallegos*, 26 DOE ¶ 87,502 (1996).

It Is Therefore Ordered That:

(1) The complaint filed under 10 C.F.R. Part 708 by Stephanie A. Ashburn, OHA Case No. VBH-0023, is hereby denied.

(2) This is an Initial Agency Decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party's receipt of the Initial Agency Decision.

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Matthew J. Rooks

Date of Filing: July 6, 1999

Case Number: VBH-0024

This Initial Agency Decision considers a complaint filed by Matthew J. Rooks under the whistleblower protection program of the Department of Energy, 10 C.F.R. Part 708. As explained below, Rooks' complaint is denied.

Background

Rooks filed this complaint under the Part 708 regulations on November 17, 1998, and the Department's Office of the Inspector General began an investigation. While the investigation was pending, responsibility for conducting investigations of Part 708 complaints was transferred to the Office of Hearings and Appeals (OHA). 64 Fed. Reg. 12826 (March 15, 1999).

The OHA issued a Report of Investigation on July 6, 1999. The Report, which I will discuss further below, essentially found that Rooks had failed to provide enough evidence to establish that a retaliatory act occurred. In accordance with 10 C.F.R. § 708.21(a), a hearing on Rooks' complaint was scheduled. Rooks and the contractor subsequently requested that the Initial Agency Decision be issued on the basis of the existing record, without a hearing. 10 C.F.R. § 708.31.

The incidents relevant to Rooks' complaint took place at the Department's Oak Ridge National Laboratory (ORNL). The management and operating contractor at ORNL was Lockheed Martin Energy Research (LMER). LMER contracted with several firms to provide technical personnel for programs at ORNL. One such firm was Jaycor Environmental (Jaycor).

Rooks had been hired by Jaycor in 1992 as an environmental scientist and assigned to ORNL. At times relevant to this complaint, he was a member of a team working on the Environmental Compliance and Management Program (ECAMP). The ECAMP was a project of the Department of the Air Force's Air Combat Command (ACC), which contracted with LMER to carry out its duties under the ECAMP. LMER tasked one of its divisions, the Environmental Sciences Division (ESD), with responsibility for the ECAMP. The supervisor for the ECAMP team was XXXXX (the Supervisor), an employee of LMER. Besides Rooks, ECAMP team members included Alizabeth Aramowicz Smith, who was also an employee of Jaycor, and Stephanie Ashburn, an employee of ORISE. Rooks, Smith, and Ashburn have all filed similar whistleblower complaints, and I will refer to them collectively as "the complainants."

The following account of the Supervisor's actions is taken from the complainants' submissions, unless otherwise noted.

In March 1996, the Supervisor met with the complainants to discuss her frustration with LMER and ESD management. She told them she wanted to move the ECAMP contract from LMER to another firm. The record shows that the Supervisor had often expressed the same frustrations during the five years that Rooks worked with her.

In fall of 1996, the supervisor began pressuring the complainants to choose a new consulting firm for which they wanted to work. Smith and Ashburn went to Dave Shriner, a manager in the ESD, to complain about the Supervisor's pressure tactics. Shriner referred them to Jim Loar, the Supervisor' immediate supervisor. They told Shriner and Loar that the Supervisor was trying to force them to work for another subcontractor. Loar told Smith and Ashburn not to change employers, and said he would speak with the Supervisor about her behavior. Smith or Ashburn relayed this information to Rooks.

The Supervisor was upset when the complainants refused all job offers that she had helped arrange. On November 15, she told the complainants that one of them would be fired if they could not agree on a single firm from which each would accept a job offer. Ashburn immediately telephoned Loar to report the Supervisor's threat. Loar told the Supervisor immediately to stop trying to force the complainants into working for another firm, and to apologize to them for having done so. She verbally apologized and wrote a letter to Loar justifying her attempt to place the complainants with another employer.(1)

On November 25, 1996, an anonymous call was made to the Lockheed Martin Ethics Help Line. According to the Help Line Report, the caller alleged that the Supervisor "was manipulating contracts in order to create a situation where she could retire from LMER and go to work with a subcontractor working on the same job. There were other allegations also dealing with [the Supervisor's] interactions with subcontractors regarding setting salaries."

The Help Line Report relates that Steve Stow, an LMER ethics official, responded to the complaint by setting up a meeting attended by himself, the Supervisor, and the Supervisor's first and second level managers, Loar and Steve Hildebrand. When the Supervisor was questioned about the allegations, she denied manipulating subcontracts, claiming that she had no authority to move subcontracts. Based on the interview with the Supervisor, the Help Line Report concludes that "investigation did not substantiate the allegations. It is felt that they were brought by a disgruntled subcontractor, probably one whose salary requests could not be met." The Report further notes that "because of the non- specificity of the original anonymous allegation and based upon the interview with [the Supervisor] ... the conscious decision was made not to interview subcontractors individually, but to hold [a] group meeting."

In accordance with the Help Line Report, a meeting was arranged for January 14, 1997. The participants in the meeting were Ashburn, Smith, the Supervisor, Hildebrand, Stow, and Loar. Rooks was away on an ECAMP assignment when the meeting was held. However, Rooks learned of the matters discussed at the meeting and claims that as a result, he became convinced that he would soon lose his job. He began to look for new employment. In March 1997, he resigned from his job with Jaycor and accepted a position with another firm.

In April 1997, Rooks returned to the LMER site and, with the other complainants, met with Charlene Edwards. As an LMER ethics officer, Edwards initiated a new investigation. On August 21, 1997, the investigation was closed. Edwards met with the complainants and informed them that her office had reached the following findings:

1. An employee of ... LMER [*i.e.*, the Supervisor] acted in a manner that was unfair to Jaycor, some of its employees, and another individual [*i.e.*, Ashburn, an employee of ORISE]. These actions, which were not authorized or condoned by LMER management, constituted a clear violation of LMER ethical principles and policies.
2. A personal conflict of interest was identified.
3. The allegation that an LMER employee [*i.e.*, the Supervisor] was working with various subcontracting firms to establish salaries for those team members, who might go to work for them,

was not substantiated.

4. Although there is some support for the allegation that team members would lose their jobs if they did not reach a consensus and select an employer other than Jaycor, the evidence was not sufficient to substantiate the allegation.
5. The following corrective actions are being taken:

a. Letters of reference will be prepared for the non-LMER team members.

b. Efforts will be made to prevent even the perception of retaliation. A record of decision will be prepared and approved by the Environmental Sciences division manager for major decisions involving the ... ECAMP that may affect the non- LMER members of the ECAMP team.

c. Division management will prepare a written plan of action to prevent recurrence of this issue.

d. Originally the Ethics Office recommended that management review the suitability of the ECAMP work per the guidelines of the Economy Act. This is in reality a ... sponsor's decision. On September 3, 1997, notification was received from the sponsor that current funding of the ECAMP project at the Oak Ridge National laboratory would expire on September 30, 1997, and that the option to extend work in FY 1998 would not be exercised.

e. Appropriate disciplinary action will be taken.

On November 7, 1997, Rooks filed this complaint against LMER.

Analysis

1. The Part 708 Regulations

The goal of the Part 708 regulations "is simply to restore employees to the position they would have occupied but for the retaliation" committed against them for whistleblowing. 64 Fed. Reg. 12867 (March 15, 1999). To accomplish this goal, the regulations authorize a set of restitutionary remedies at 10 C.F.R. § 708.36. *Id.*

The retaliation for which employees can seek restitution is defined at 10 C.F.R. § 708.2 to mean "an action ... taken by a contractor against an employee with respect to employment (*e.g*., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment)" as a result of the employee's whistleblowing activities, which are defined at 10 C.F.R. § 708.5.

The complainant in a Part 708 proceeding has the burden of showing, by a preponderance of the evidence, that his protected disclosure was a contributing factor to a retaliatory act. 10 C.F.R. § 708.29. According to the Report of Investigation, the complainants disclosed that the Supervisor had abused her authority. Such an allegation constitutes a protected disclosure. 10 C.F.R. § 708.5(a)(3).

Rooks, however, did not make an actual disclosure about the Supervisor until the April 1997 meeting with Charlene Edwards, after he had left Jaycor. Nevertheless, the Report of Investigation concludes that "Rooks made an *indirect disclosure* to Loar [before he left Jaycor], by virtue of his close association with Ashburn and Smith, who identified Rooks as an employee adversely affected by [the Supervisor's] actions" (emphasis added).

As noted above, a complainant in this proceeding must show, by a preponderance of the evidence, that he made a protected disclosure and that the protected disclosure was a contributing factor to a retaliatory act. The issue of "indirect disclosures" is murky, and I make no finding on it in this Decision. I find, however, that Rooks has failed to show that he was subject to retaliation, as defined in the regulations, and has

therefore failed to meet his evidentiary burden.

In some whistleblower cases, the whistleblower is discharged or demoted, and there is no need to establish that there was retaliation against the whistleblower. In Rooks' case, however, he has claimed that certain acts by the LMER management forced him to resign. It is part of Rooks' burden, therefore, to show that the actions he claims as retaliation meet the regulatory definition of retaliation.

As an initial matter, it is not clear what Rooks is claiming as a retaliatory act. The Part 708 regulations require a complainant specifically to describe the alleged retaliation taken against him. 10 C.F.R. § 708.12(a)(1) (emphasis added).(2) Rooks did not specify the acts for which he sought restitution, either in his complaint or in subsequent written submission to this Office.

Nevertheless, the Report of Investigation infers from Rooks' submissions that "the adverse personnel actions affecting Rooks were Lockheed's decision to enter into a task-based contract with Jaycor beginning in early 1997, and certain statements concerning subcontractor employees made by [Hildebrand] in a meeting held on January 14, 1997, and subsequently conveyed to Rooks." On August 12, 1999, I sent Rooks a letter requesting, among other things, that he specify the negative actions with respect to employment for which he sought restitution. Rooks did not respond to this request.

Rooks' claim is essentially that these events made his job conditions so unbearable that he was forced to resign. I will therefore consider whether these two events could have reasonably caused Rooks to leave his job with Jaycor.

2. Hildebrand's Comments at the January 14 Meeting

The January 14, 1996 meeting between the complainants and a group of LMER managers occupies a central role in Rooks' complaint. First, Rooks finds it significant that the meeting was held while he was traveling on an ECAMP assignment. Although Rooks claims his absence shows that the purpose of the meeting was intimidation and harassment, I find no support for his belief. If the managers wanted to intimidate Rooks, they would have wanted him to be at the meeting with the other complainants.

There is no explanation in the record of why the meeting was held without Rooks. As noted above, at the time of the meeting Smith and Ashburn had personally come forward with complaints about the Supervisor's conduct, while Rooks had not.

Besides claiming that his exclusion from the meeting indicates retaliatory intent, Rooks asserts that the content of the meeting led him to leave his job with Jaycor. Although he missed the meeting, Rooks says that Smith, Ashburn, and Wojtowicz told him what had been said. Rooks summarizes the meeting as follows:

Alizabeth [Smith] and Stephanie [Ashburn] were told that an anonymous call had been placed with the Lockheed Martin ethics hotline. They were informed that the allegations made in that call were baseless and that this meeting was their opportunity to say anything or nothing at all about the *conclusions* of the investigation. They also listened to the division director discuss budget cutbacks and personnel layoffs in the division, and how he hoped we could continue to have a working relationship. The message was clear, and Alizabeth and Stephanie kept mum. Instead, we called Lockheed Martin's ethics hotline senior official ... to express our disgust at being railroaded by the LMER management and ethics officer, threatened with layoffs, and labeled "disgruntled subcontractors seeking revenge" without being given the opportunity to tell our side of the story during the "investigation."

S.G. Hildebrand's comments during the meeting I missed in January, as relayed to me by ... Wojtowicz, made it clear to me that it was just a matter of time, a few months or even less, before Lockheed Martin would terminate my employment. I began to look for another job. Although I would lose my benefits, I would at least guarantee income for my family. In addition, I knew that [the Supervisor] had acted unethically and perhaps illegally. I further knew that the Lockheed Martin employees who were above [the

Supervisor] in the chain of command told us that she had done nothing wrong. They were embracing her unethical, perhaps illegal behavior. I feared that under their guidance, I would be mired in even more unethical, even illegal behavior.

Rooks also gave a statement during the investigation, in which he claimed that comments made in this meeting led him to look for a new job.

I recall that I was told that Mr. Hildebrand made comments that our jobs at LMER were not long term....

Because of the situation, I knew that I would not be employed by Jaycor much longer, and I knew that I would have no future opportunities to work in a unique environmental data base development area. Although I was never expressly told by Jaycor that my funding would end at a certain time, I began to look for work elsewhere, as well as to seek alternative funding that would allow Ms. Smith and I to continue working for Jaycor. In March 1997, I received an employment offer and gave Jaycor two and one-half weeks notice. I had no real desire to leave Jaycor, but I could not take the financial risk of being unemployed.

Thus, as summarized in the Report of Investigation, "Rooks ... perceived Hildebrand's statements as a threat and they formed the basis for his decision ultimately to resign and accept a position with another firm in March 1997." The investigator concludes, however, that "I do not find that Rooks has shown by a preponderance of the evidence that Hildebrand's statements, which appear to have been merely advisory on their face, constituted a threat within the reasonable perception of those receiving the statements." I concur with the Report of Investigation in finding that the evidence does not support the conclusion that Hildebrand's comments can be reasonably construed as the type of intimidation that would reasonably cause Rooks to resign.

There is some dispute about the exact phrasing of Hildebrand's comments. Smith, Ashburn, and Wojtowicz recall Hildebrand saying that subcontracts and fellowships were not permanent careers, and that no long term expectations of employment should be held. Loar did not recall the comment. Hildebrand said his comment about not expecting permanent careers concerned only fellowships, and was a response to a question from Ashburn about whether her fellowship could be extended beyond the expiration date. Hildebrand also acknowledged telling Rooks and Smith that they may face difficulties because the downsizing of the ESD staff could affect Jaycor's work load and staffing levels.

Thus, while there is disagreement about Hildebrand's precise wording, the general nature of his comments seems clear. The question is how to interpret the comments. When considered outside any context, the words themselves are ambiguous. They may indicate nothing more than Hildebrand's expression that ESD would undergo staffing reductions in the future. Rooks, however, interprets Hildebrand's words as a threat of retaliation for blowing the whistle on the Supervisor. He claims that Hildebrand's comments made it clear to him "that it was just a matter of time, a few months or even less, before [LMER] would terminate [his] employment." I do not find that Rooks' interpretation is supported by the evidence.

The circumstances of the meeting suggest that Rooks' interpretation in inaccurate. LMER had just extended its contract with Jaycor to October 1, 1997. Immediately after the meeting described above, a "kick off" meeting was held to announce the terms of the contract extension. Thus, Rooks could not have reasonable concerns that the Jaycor's contract with LMER would end within "a few months or even less." Moreover, Rooks has not advanced a claim that LMER actually took steps to have him discharged from his job with Jaycor, and there is no indication in the record of such steps. On the contrary, Wojtowicz, the Jaycor manager in Oak Ridge, told an investigator that he had never been asked to take any adverse actions against Rooks or Smith.

Rooks asserts that it is "clear" that Hildebrand's statements meant it was "only a matter of time" before he was unemployed. On the other hand, he acknowledges that Hildebrand expressed a desire to continue working with Jaycor.

I find that Rooks' interpretation of Hildebrand's comments is unreasonable given the context in which those comments were made. As a result, I find that Rooks has failed to meet his burden of showing by a preponderance of the evidence that Hildebrand's comments were a threat for the purposes of the Part 708 regulations.

In addition to his claims about Hildebrand's statements, Rooks apparently alleges that the failure of the investigation by the LMER ethics office to substantiate charges against the Supervisor was retaliatory. I find that it is unreasonable for Rooks to contend that the charges were covered up in an attempt to intimidate the complainants. As noted above, the complainants made two complaints against the Supervisor, in November 1996 and in April 1997, that were similar to the anonymous complaint. Neither charge was made anonymously. Both charges resulted in findings against the Supervisor, which tends to show that there was no cover up. Moreover, Rooks has not brought forth any evidence to suggest that the results of the investigation into the anonymous complaint had any adverse effect on him. I therefore find that the investigation into the anonymous complaint does not constitute retaliation under the Part 708 regulations.

3. The Decision to Move Smith and Rooks Off-Site.

Rooks' second allegation involves the implementation of a management plan adopted by LMER. The plan, known as "PRO-7," was described in the Report of Investigation.

A Lockheed policy, embodied in a document known as "PRO- 7," at least ten years old, and revised and renamed as recently as December 1995, calls for subcontracting to obtain services not generally available from within Lockheed. This policy states that such subcontracting must be task-specific, that is, for a specific short-term purpose, not to obtain long-term support staff. Work performed under task-based contracts should be performed off-site to the extent possible.

The implementation of the PRO-7 plan with respect to the complainants was announced at the January 14 meeting. Rooks describes the event in his statement to the investigator.

Mr. Wojtowicz advised that both Ms. Smith and I would be required to remove our materials from the ESD office areas and work from the Jaycor facility that was off site. We were also told to put our computer accounts at ORNL in "vacation" status. Only Ms. Smith and I were instructed to make this move. At least one other Jaycor employee remained on site....

It appeared to us that LMER was retaliating against us because they believed we had filed an anonymous ethics complaint in November 1996....

Because of the situation, I firmly believed that I would not be employed by Jaycor much longer, and I knew that I would have no future opportunities to work in a unique environmental data base development area.

There are two important points about Rooks' statement. First, he does not make any claim that the move to his Jaycor office space had a negative impact on the terms or conditions of his employment. On the contrary, Ashburn and Smith indicate in their complaints that Rooks had voluntarily moved to his Jaycor office space before the January 1997 meeting so he could take advantage of better computing equipment there.

Second, Rooks' assertion that the off-site move led him to believe he would "not be employed by Jaycor much longer" is not credible. The record indicates that many subcontractors had been moved off- site under the PRO-7 plan without losing their jobs.

The extent to which the PRO-7 plan was carried out is shown by an affidavit submitted in this proceeding by Loar. It recounts that, in August 1995, Loar received a memorandum from Hildebrand that contained a list of 37 subcontractor employees in ESD. Two of the 37 were ORISE employees, and thus exempt from

PRO-7. Of the remaining thirty-five employees, only six were still working on- site after three months, four were still on-site after one year, and two were still on-site after two years.(3) In other words, of 35 subcontractor employees in ESD who were subject to PRO-7 in August 1995, 33 had been moved off-site within two years.

Loar's affidavit thus shows that PRO-7 had been broadly implemented in ESD before Rooks was included in it. Thus, Rooks was almost certainly aware of PRO-7 before the January 14 meeting. This conjecture is supported by Ashburn's and Smith's complaints, which state that the possibility that PRO-7 would be applied to Jaycor employees was discussed in October 1996, before the complainants made a protected disclosure.

Thus, I believe that Rooks knew before the January 14 meeting that the PRO-7 program might be applied to him, and that it did not mean he would lose his job. Consequently, it is not reasonable for Rooks to have believed that the move off-site meant that his job was in jeopardy. I therefore find that the implementation of the PRO-7 plan cannot be considered a retaliation under the Part 708 regulations.

Conclusion

As stated above, the complainant in a Part 708 proceeding has the burden of showing, by a preponderance of the evidence, that his protected disclosure was a contributing factor to a retaliatory act. 10 C.F.R. § 708.29. Rooks has failed to meet that burden. I will therefore deny Rooks' complaint.

It Is Therefore Ordered That:

(1) The Complaint filed by Matthew J. Rooks under 10 C.F.R. Part 708, Case No. VBH-0024, is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed with the Director of the Office of Hearings and Appeals requesting review of the Initial Agency Decision.

Warren M. Gray

Hearing Officer

Office of Hearings and Appeals

Date: March 1, 2000

(1) In his complaint, Rooks discusses at length a letter the Supervisor wrote to Loar in November 1996. He characterizes it as "a scathing letter to her immediate manager in which she proposed that he let our contracts expire (dismiss us) with the explanation that ?downsizing results in reductions in internships and subcontracts' because we had breached her trust (by reporting her unethical business conduct)." However, Rooks did not find out about the letter until April 1997, after he had resigned from Jaycor. The letter thus could have played no part in his resignation, and I will not consider it in this decision.

(2) See also 10 C.F.R. §708.6(c) in the previous version of the regulations.

(3) In addition, the impact of PRO-7 on three employees is unknown, because they held positions that were not on the ESD organization chart.

Case No. VBH-0025

June 22, 2000

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Alizabeth Aramowicz Smith

Date of Filing:July 6, 1999

Case Number: VBH-0025

This Initial Agency Decision concerns a whistleblower complaint filed by Alizabeth Aramowicz Smith, a former contractor employee at the Oak Ridge National Laboratory. As explained below, Smith's complaint should be denied.

This case arises under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708, the "whistleblower" regulations. The whistleblower regulations prohibit a contractor from retaliating against a contractor employee who engages in protected conduct. Protected conduct includes disclosing information that the employee believes reveals 1) a substantial violation of a law, rule, or regulation; 2) a substantial and specific danger to employees or to public health or safety; or 3) fraud, gross mismanagement, gross waste of funds, or abuse of authority.

If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish by a preponderance of the evidence that 1) the employee made a protected disclosure; and 2) the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to prove, by clear and convincing evidence, that it would have taken the same action in the absence of the protected disclosure. If the employee prevails, the Office of Hearings and Appeals (OHA) may order employment-related relief such as reinstatement and back pay.

Background

The following background information is taken primarily from Smith's submissions.

From March 1993 through September 1997, Smith was a full-time employee of Jaycor Environmental. She worked at the Department's Oak Ridge National Laboratory (ORNL), where Jaycor was a subcontractor to Lockheed Martin Environmental Research (LMER), the management and operating contractor for the facility. Smith was assigned to a team working on the Environmental Compliance and Management Program (ECAMP), a project of the Air Force that was being performed at ORNL under the Department's "Work for Others" program. As a member of the ECAMP team, Smith specialized in issues involving pesticide, wastewater, and drinking water management, and environmental compliance.

Smith's whistleblower complaint concerns certain actions of her supervisor on the ECAMP team. The supervisor, who was an employee of LMER, holds a doctoral degree in science and was the principal investigator for the ECAMP. Two other members of the ECAMP team filed essentially identical

whistleblower complaints concerning the supervisor. *See Matthew J. Rooks*, Case No. VBH-0024, 27 DOE ¶ _____ (March 1, 2000), and *Stephanie A. Ashburn*, Case No. VBH- 0023, 27 DOE (March 31, 2000).

In brief, the supervisor was dissatisfied with the way LMER managed the ECAMP, and actively searched for another firm that would take on the contract with the Air Force and hire herself and the other members of the ECAMP team. As early as 1994, Smith notes that the supervisor "was expressing frustration with (as she perceived it) [LMER's] inability to support her and the ... sponsor's work. [The supervisor] routinely became angry with [LMER] management and threatened to leave constantly...." Complaint at 4.

In March 1996, Smith was present on a field assessment when the supervisor learned that LMER had laid off an ECAMP team member without consulting her. The supervisor became irate, and spoke with two officials from the Air Force sponsor that she planned to remove the ECAMP contract to another consulting firm, where she would have complete control of financial and staff resources. In August 1996, Smith was present at another meeting, arranged by the supervisor and a representative from the Air Force, during which Smith and another team member were asked if they would support the supervisor's move to a new contractor.

During the next few weeks, the supervisor approached various consulting firms about taking over the ECAMP contract. I will refer to two of the consulting firms that the supervisor dealt with as consulting firms "A" and "B." The supervisor discussed with Smith and other team members the preparation of a budget for transferring the ECAMP to consulting firm "A." In September 1996, Smith learned that the Air Force had placed a notice in the *Commerce Business Daily*, which stated that consulting firm "A" "is the only known source with the expertise and is capable of providing services for this specialized effort."

Later that month, Smith met with the supervisor and Ashburn. Smith states that the supervisor was distressed because the Air Force received more than twenty bids for the ECAMP contract. The supervisor told Smith that the Air Force would either have to award the contract to the low bidder, or "find another means of moving the money to [the supervisor]." Soon after the meeting, the Air Force withdrew the solicitation for bids, and ultimately renewed its contract with LMER for another year.

At this point, it will be helpful to summarize the situation. The supervisor has been dissatisfied with LMER for several years. She has openly discussed with officials of the contracting agency her dissatisfaction with LMER's management and her intention to have the contract placed with a different firm. She entered into negotiations with at least six consulting firms to employ her and take over the ECAMP contract. In October 1996, Smith and other ECAMP team members attended employment interviews, arranged by the supervisor, with two consulting firms. The supervisor pressured the ECAMP team members to chose one firm they would all work for. In addition, the supervisor found out, through research done at her request by Ashburn, that she would be eligible for a pension from LMER on October 8, 1997. She solicited offers from a number of contractors, rejecting some because she did not want to lose her retirement benefits by leaving LMER prematurely. All of this happened before Smith made her first protected disclosure.

In November 1996, after several months of the supervisor's attempts to find a new contractor, Smith and Ashburn complained to Jim Loar, the supervisor's manager. Loar angrily ordered the supervisor to stop interfering with LMER's subcontracts, and to apologize to Smith and Ashburn. Although the supervisor apologized, her relationship with Smith became unpleasant.

In January 1997, under the provisions of the "PRO-7" plan, Smith was assigned to work in the Jaycor office space, where she did not have day-to-day contact with the supervisor. See *Rooks* for further information on the PRO-7 plan. Smith became increasingly concerned that the supervisor was giving Jaycor's work to other subcontractors, was not communicating with her and was "speaking ill" of her to other employees. Along with Ashburn and Rooks, Smith met with Charlene Edwards, an LMER ethics officer, and filed a complaint against the supervisor. Edwards conducted an investigation and issued a report in August 1997, finding that the supervisor had acted unfairly toward Ashburn, Rooks, and Smith,

and that her actions constituted a conflict of interest.

Edwards' report coincided with two other events. The Air Force notified LMER that the ECAMP contract, which expired on September 30, 1997, would not be renewed. The new contract for the ECAMP project was awarded to consulting firm "B." The supervisor, meanwhile, resigned from LMER the day after her retirement benefits vested and accepted a position with consulting firm "B," where she worked on the ECAMP.

Jaycor was not a subcontractor of consulting firm "B," and therefore had no further work to perform on the ECAMP. Smith was given part-time work. In January 1998, Smith found full-time employment outside of Jaycor, although she continued to do part- time work for Jaycor until August 1999.

On November 5, 1997, Smith filed the present complaint against LMER. The OHA issued a Report of Investigation on July 6, 1999. In accordance with 10 C.F.R. § 708.21(a), a hearing on Smith's complaint was scheduled. Smith and LMER subsequently requested that the Initial Agency Decision be issued on the basis of the existing record, without a hearing. 10 C.F.R. § 708.31.

Analysis

The Part 708 regulations provide that the employee who files a complaint has the burden of establishing by a preponderance of the evidence that her whistleblowing was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. 10 C.F.R. § 708.29. Retaliation is defined as "an action ... taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of [the whistleblowing]."

Smith's central claim is her transfer to part-time work was retaliation for her whistleblowing. There is no dispute that the reduction in her working time was a negative action with respect to her employment, and could be found to be retaliation if it was the result of a protected disclosure. 10 C.F.R. § 708.2 (definition of "retaliation"). The question remains, however, as to whether Smith's disclosures were a contributing factor in the reduction of her working time.

A contributing factor is "any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision." *Luis P. Silva*, 27 DOE ¶ _____ (Case No. VWA-0039, February 25, 2000), citing *135 Cong. Rec. H747* (daily ed. March 21, 1989) (Explanatory Statement on Senate Amendment-S.20); *see also Marano v. Department of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying the "contributing factor" test in a case under the Whistleblower Protection Act, 5 U.S.C. § 1201).

The process by which LMER lost the ECAMP contract and Smith was transferred to part-time work cannot be attributed to a retaliatory motive by the supervisor. The decisive factor in the placement of the ECAMP contract was the supervisor's attitude about LMER, which had been formed before Smith made any disclosures. For example, in August 1996, more than a year before Smith's first disclosure, the supervisor told her contacts at the Air Force about her desire to find a new firm for the ECAMP contract. When the supervisor was apparently about to accept a position with consulting firm "A," the Air Force announced its intent in the *Commerce Business Daily* to award the ECAMP contract to the same firm. Though this plan was unsuccessful, the supervisor continued to arrange for the ultimate placement of the ECAMP contract outside LMER. For much of the time that the supervisor was attempting to have the contract placed with a different firm, she was actively arranging a position for Smith with the new firm, which shows that the supervisor's plan for moving the ECAMP contract was not retaliatory against Smith.

In addition, the record indicates that the supervisor's decision to leave LMER for a new contractor was motivated by a long-standing dissatisfaction with LMER management that predated any disclosure by Smith. Smith notes in her complaint that when the supervisor first interviewed her in 1994, she expressed frustration with LMER's lack of support for the ECAMP. In March 1996, according to Smith, the

supervisor met with Air Force personnel to express her dissatisfaction with her management and to discuss moving the ECAMP contract to another firm. In September 1996, the supervisor began negotiating for a position with consulting firm "A." It was only in November 1996, after the supervisor had taken steps to ensure that the ECAMP contract would be placed with another firm, that Smith made her first disclosure.

LMER's eventual loss of the ECAMP contract followed, but was unrelated to, Smith's disclosures. Two factors, unconnected to Smith's disclosures, were responsible for the timing of the Air Force's award of the ECAMP contract to consulting firm "B." First, the contract was up for renegotiation at the end of September 1997. Second, the supervisor had ascertained, through Ashburn, that she was eligible to leave LMER with retirement benefits as of October 8, 1997. However, the supervisor had established e-mail and voice mail accounts with consulting firm "B" by September 1997, strengthening the bid of consulting firm "B" for the ECAMP contract and assuring that this attempt to move the contract would be successful. Smith's disclosures, however, had no effect on the process to place the ECAMP contract outside LMER.

In summary, there is ample evidence in the record to make the following four findings:

1) That the supervisor had determined to leave LMER before Smith made a protected disclosure;

2) That the supervisor herself was a key factor in determining the recipient of the ECAMP contract;

3) That LMER lost the ECAMP contract because the supervisor went to work for another firm: and

4} That the termination of Smith's employment was due to LMER's loss of the ECAMP contract.

Considering these four findings together, it is clear that Smith's disclosures did not affect in any way her transfer to part-time work. The supervisor would have left LMER, and Jaycor would have lost its subcontract for ECAMP work, regardless of whether Smith had made any protected disclosures. Consequently, I find that Smith's disclosures were not a contributing factor to her transfer to part-time work.

Smith alleges a number of other lesser retaliations in addition to her transfer to part-time work. For example, she claims that after January 1997, her work assignment was greatly changed so that she "went from a protocol team leader for three environmental protocols to basically clerical support." As Smith relates, preparing for, performing, and reporting on the assessments was the bulk of her work. The assessments typically involved traveling to an Air Force site. In 1994, Smith states, the ECAMP team's work load increased from ten to eighteen assessments per year. In 1997, however, there were only two ECAMP assessments, one in April and one in August. Smith was replaced on the April assessment by another team member, and took part in the August assessment. Since LMER has shown that the amount of assessment work was greatly reduced, there is clear and convincing evidence that, absent the protected disclosures, such work would not have been available to be assigned to Smith.

Smith also claims as retaliation the fact that "those [ECAMP team] employees ... who did not speak out regarding [the supervisor's] actions ... continued on with the ECAMP work through [consulting firm "B"]. Smith is apparently claiming that the supervisor committed an act of retaliation by not hiring her to work at consulting firm "B." There is no indication, however, that Smith applied for a job with consulting firm "B," nor is there any reason to believe that LMER should be held responsible for the hiring practices of consulting firm "B." Consequently, I find no evidence of retaliation in this assertion.

Conclusion

The evidence clearly establishes that Smith's disclosures were not a contributing factor in her transfer to part-time work. Given the supervisor's determination to take the ECAMP contract elsewhere, the loss of Smith's position as a subcontractor of LMER was inevitable. Accordingly, her complaint will be denied.

It Is Therefore Ordered That:

(1) The complaint filed under 10 C.F.R. Part 708 by Alizabeth Aramowicz Smith, OHA Case No. VBH-0025, is hereby denied.

(2) This is an Initial Agency Decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party's receipt of the Initial Agency Decision.

Office of Hearings and Appeals

Date: June 22, 2000

Case No. VBH-0028

April 7, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Dr. Jiunn S. Yu

Date of Filing: July 2, 1999

Case Number: VBH-0028

This decision considers a Complaint filed by Dr. Jiunn S. Yu (Dr. Yu) against the Sandia Corporation (Sandia) under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708.

I. Background

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have retaliated against an employee for such a disclosure will be directed by the DOE to provide relief to the complainant. *See* 10 C.F.R. § 708.2 (amended regulations) (definition of retaliation).

The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2, 1992, establish administrative procedures for the processing of complaints. On March 15, 1999, DOE issued an amended Part 708, effective April 14, 1999, setting forth procedural revisions and substantive clarifications that “apply prospectively in any complaint proceeding pending on the effective date of this part.” 10 C.F.R. § 708.8; *see* 64 Fed. Reg. 12,862 (March 15, 1999).

Dr. Yu was employed by Sandia in various capacities from 1979 to March 30, 1995, when he was terminated by Sandia. On April 7, 1995, Dr. Yu filed a complaint under 10 C.F.R. Part 708 with the DOE Office of Inspector General's Office of Inspections (IG). In this complaint, Dr. Yu alleged that he was retaliated against for disclosures of possible safety violations, fraud and mismanagement.

The IG began an investigation of Dr. Yu's allegations. However, during the pendency of this investigation, DOE transferred most pending whistleblower investigations to this office. On May 12, 1999, OHA Director Breznay appointed an OHA investigator to complete the investigation of Dr. Yu’s complaint. On July 2, 1999, the OHA investigator issued his Report of Investigation (the Report). The Report found that:

[T]he record strongly indicates that the Complainant disclosed to his Sandia Supervisor, Mr. Finnegan, and to other Sandia Officials on a number of occasions that there was a failure to fulfill a Quality Assurance

obligation to conduct on-site inspections of [Tiger Team Completed Actions]. . . . [H]is disclosure constituted a protected disclosure for the purposes of Part 708.

Report at 9. The Report further found that "the Complainant has met his burden of showing that his protected disclosures . . . were a contributing factor under the provisions of Part 708 to his March 30, 1995 termination from Sandia." *Id.* at 10. Accordingly, the Report concluded that the Complainant had met his burden under 10 C.F.R. § 708.29. However, the Report did not reach a conclusion as to whether Sandia had met its burden of proving, by clear and convincing evidence, that it would have terminated Dr. Yu absent his protected disclosures.

On July 2, 1999, OHA received Dr. Yu's request for a hearing and I was appointed as the Hearing Officer. A hearing was held on December 7, 8, and 9, 1999, in Albuquerque, New Mexico, in which the testimony of 10 witnesses was taken under oath. On January 18, 2000, I closed the record of the present proceeding upon receipt of both parties' written closing arguments.

The present case arises in the context of DOE's increased efforts to address environmental, health and safety concerns. Admiral James Watkins, who served as the Secretary of Energy from 1991 through 1995, ordered "Tiger Teams" to conduct thorough and sweeping inspections of DOE facilities in order to find any environmental, health and safety problems. In 1991, a Tiger Team assessed Sandia National Laboratory (SNL) and found 561 deficiencies. Tr. at 59. Sandia consulted with DOE and agreed to a series of Corrective Action Plans (CAPs). Sandia agreed to implement these CAPs and then submit documentation to DOE to show that each CAP had been satisfactorily implemented. Sandia placed the responsibility for implementing and verifying each CAP with particular line organizations (Owners). Once an Owner completed a CAP, it was supposed to summit a proposed closure package to Sandia's Appraisal Management Office (AMO). Originally, the AMO was responsible for tracking CAPs and verifying that they were sufficiently documented before they were submitted to DOE for verification and closure. The purpose of the closure package was to document that the Owner had implemented the CAP.

During his final 30 months as a Sandia employee, Dr. Yu was employed as Quality Assurance Verifier in the AMO. Dr. Yu's role was to examine proposed closure packages to see if they sufficiently verified the completion of the CAP. If Dr. Yu was satisfied that the proposed package sufficiently documented the completion of a CAP, the CAP was finalized and sent to the DOE for final approval and closure.

II. Analysis

Under the DOE's Contractor Employee Protection Regulations, "the employee who files a complaint has the burden of establishing by a preponderance of the evidence that he or she made a disclosure . . . as described under §708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employer by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure . . . ." 10 C.F.R. § 708.29.

Sandia has contended that Dr. Yu did not make any protected disclosures and therefore did not meet his burden of proof. However, the record clearly shows that Dr. Yu had made numerous protected disclosures during his final 10 months as a Sandia employee, including the protected disclosure discussed at length in the Report. For example, the record shows that:

- On June 21, 1994, Dr. Yu sent L. Jay Clise a five page summary of a 96 page package that Dr. Yu had previously submitted to Wendall Jones. This summary clearly expresses Dr. Yu's concern that his supervisor, Daniel Finnegan, had encouraged other Sandia employees to ignore the QA/QI [quality assurance/quality implementation] process.
- Dr. Yu's April 29, 1994 memorandum alleges that Sandia's Management Integration and Implementation Plan (the MIIP) was "mismanaged, confused abuses and manipulated and failed to delineate responsibility and accountability of QA management."

- Daniel G. Pellegrino stated that during Dr. Yu's last year at Sandia, Dr. Yu would call him and express concerns that he did not feel he could close out Tiger Team Action items. Memorandum of September 23, 1996 interview of Daniel G. Pellegrino.
- A June 2, 1994 Memorandum of Record authored by L.J. Clise of Sandia's Audit Center indicates that Clise was aware of Dr. Yu's concerns that (1) he was not being provided with sufficient information to conduct his verifications, and (2) additional quality control measures were needed.
- In a memorandum dated April 29, 1994, entitled "Request for Help" Dr. Yu wrote Jim Martin, Finnegan's supervisor, informing him that problems with the QA/QI processes were "recurring in a wasteful/harmful pattern. . . ."
- On February 3, 1995, Dr. Yu wrote J. Tagnelia, one of Sandia's vice-presidents, claiming that: "[1] a more cost-effective compliance with requirements of 10 C.F.R. 830.120 and 830.310 would come only with an improved understanding that the 2 codes have mutually ensuring goals; and [2] A more time efficient conformance to guidelines of DOE 5700.6C and 5480.19 would come only with an improved understanding that the 2 orders have mutually enhancing objectives."
- A March 22, 1995 memo from John P. Dickey, Sandia's Ethics Director, to Dr. Yu indicates that Sandia's Audit Center had conducted a Special Management Review (SMR) to examine Sandia's authority to close corrective actions to Tiger Team findings at Dr. Yu's request.

Based on the foregoing, I find that Dr. Yu made numerous protected disclosures during the final 10 months of his employment at Sandia.

In most whistleblower cases, it is difficult or impossible for a complainant to find a "smoking gun" that proves an employer's retaliatory intent. Therefore, Congress and the courts, recognizing this difficulty, have found that a protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993), *citing McDaid v. Department of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, the courts have found that "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F.2d at 148 (8th Cir. 1989).

Since Dr. Yu had made numerous protective disclosures during his final 10 months with Sandia, there was a temporal proximity between his protected disclosures and his termination. Moreover, it is clear that the Sandia managers who decided to terminate him had actual knowledge of this protected activity. I therefore find that he has shown by a preponderance of the evidence that his protected disclosures were a contributing factor to his March 30, 1995 termination by Sandia.

Accordingly, I find that Dr. Yu has met his burden under § 708.29, thereby shifting the burden to Sandia to prove by clear and convincing evidence that it would have taken the same actions without Dr. Yu's protected disclosures. However, I have also found that Sandia has clearly and convincingly proven that its termination of Dr. Yu was motivated by legitimate managerial considerations instead of a desire to retaliate against his protected disclosures. I am therefore denying Dr. Yu's compliant under 10 C.F.R. § 708.30(e).

Dr. Yu was obviously a highly motivated, principled, conscientious, and well intentioned employee. Dr. Yu was sincerely concerned about what he viewed as a weakening of Sandia's and the DOE's commitment to the Tiger Team process and to Total Quality Management principles. (1) The AMO hired Dr. Yu to improve the quality of the AMO's services and by the account of his first supervisor at the AMO, Richard Trager, and of the DOE Official who was then responsible for reviewing the quality of the CAPs submitted to DOE, was highly successful at this endeavor. Tr. at 304, 305. Apparently, prior to Dr Yu's assignment to the AMO, the DOE was unhappy with the quality of the CAPs it was receiving from Sandia. Tr. at 294, 296. In fact the DOE had returned the majority of CAPs Sandia submitted to it finding that they had not been sufficiently documented. The record shows that Dr. Yu had succeeded in

significantly improving DOE's confidence in Sandia's ability to implement CAPs. Tr. at 296, 297.

However, in 1993, the contract with AT&T for the Management and Operation of Sandia National Laboratory terminated. AT&T was then replaced by a subsidiary of Lockheed Martin. Lockheed Martin brought in its own management team and Trager was replaced by Daniel P. Finnegan in early June 1993. Tr. at 538. Apparently there was friction between Dr. Yu and Finnegan from the very start of their relationship. After Finnegan succeeded Trager, he began implementing changes at the AMO. (2)

Dr. Yu was extremely concerned about these changes. As a verifier, Dr. Yu was in a difficult position. He was charged with verifying the accuracy of the CAP's documentation. If he had a concern about a CAP, he needed to be able to frankly communicate that concern to each Owner. Human nature suggests that, at least on some occasions, even the most tactfully and carefully worded negative feedback is less than welcome. As Trager testified:

I think every [corrective] action team owner was objected to the action because they had to work. [sic] So it was a pain in the tail. It was an extra stop. And some of them, they considered it irrelevant. . . . And so I don't know of an action - - of an owner that was happy. They were all unhappy.

Tr. at 294.

It is clear that Finnegan had less confidence in Dr. Yu's ability to manage this difficult role than Trager had. Moreover, the two men had fundamentally conflicting viewpoints concerning Dr. Yu's responsibilities and the functions of the AMO . Dr. Yu wished to continue functioning in the same manner that he had while under Trager's supervision. On the other hand, Finnegan maintained a different vision for the AMO.

For example, Finnegan's conception of Dr. Yu's role in the process differed significantly from that of Dr. Yu. Dr. Yu believed that in order to properly verify a proposed completion package, he often needed access to additional information, including information documenting other CAPs, the completion of which were necessary for the proper implementation of the CAP at issue.

Apparently, Finnegan began receiving complaints from owners who thought that Dr. Yu needed only to consider the information contained in the proposed CAP to determine whether it was adequate. Tr. at 545. Finnegan testified that he ordered Dr. Yu to confine his verification analysis to information contained in the proposed CAP. *Id.* Dr. Yu viewed this as an attempt to prevent him from finding deficiencies in the CAP packages, and an infringement upon the independence he needed to conduct his quality assurance process.

Finnegan also sought to have Dr. Yu give the line organizations written feedback reports on their proposed CAPs. In the past, Dr. Yu had usually supplied his feedback to the line organizations verbally. Tr. at 539. Dr. Yu, contending that preparing written feedback reports was wasteful, initially resisted this new requirement, but began preparing written feedback reports as requested by Finnegan. Dr. Yu claims that Finnegan's motivation for requiring written feedback reports was to retaliate against him for protected disclosures, by setting him up for failure. Tr. at 452.

Sandia contends that Finnegan began receiving complaints about Dr. Yu's written feedback to the line organizations. Sandia accurately claims that Dr. Yu's written feedback memos were often poorly written, poorly organized, and plagued by numerous misspellings. It is clear from the content of those feedback reports that appear in the record that Dr. Yu's written communication skills were poor. Moreover, on some occasions the content of these feedback reports could reasonably be interpreted by their recipients as abusive and personally offensive. It is not clear that this was Dr. Yu's intention.

Moreover, Finnegan testified that he was concerned that Dr. Yu, in conducting his verification process, was reviewing whether the CAPs were likely to mitigate the finding of deficiencies. Tr. at 541-43. Finnegan thought that Dr. Yu should confine his analysis to sufficiency of the owners' documentation that

the CAPs previously agreed upon by Sandia and DOE had been implemented. *Id.* Dr. Yu felt he should be free to express his concerns about the effectiveness of particular CAPs. Tr. at 543. These differences in opinion soon began to escalate and led to the events that cumulated in Dr. Yu's termination by Sandia on March 30, 1995.

On June 18, 1993, just weeks after Finnegan came to the AMO, Finnegan wrote Dr. Yu, stating in pertinent part:

Your review does not include a check of how adequately the corrective action addresses the milestone or finding, or how technically sound the corrective action appears to be. The corrected actions contained in the corrective action plan have previously been accepted by the auditing agency (e.g., DOE) as technically sound and adequate to properly address the corresponding milestone/finding. As 'owner' of the finding, the line organization has the responsibility to insure that the corrective action is technically correct and appropriate. If you have concerns about the technical quality of the corrective action or how well the corrective action addresses the corresponding milestone/finding, please note your comments to the owning line organization on a separate sheet of paper (distinct from your comments to the owning line organization) and forward to me for review and follow-up.

June 18, 1993, Memo from Finnegan to Dr. Yu. Dr. Yu testified that he did not obey this guidance because he felt it violated the independence of the quality assurance process mandated by DOE Order 5700.6C. Tr. at 357-64. On August 13, 1993, Finnegan sent another quite similar memo to Dr. Yu. Tr. at 544. Finnegan testified that Dr. Yu continued to comment to line organizations on the efficacy of the corrective actions. Tr. at 545.

Finnegan testified that in April of 1994, he reviewed a feedback report that Dr. Yu had prepared to send to Wayne Cox. Tr. at 553. Finnegan was concerned that the feedback report was too convoluted and that Cox would not understand it. *Id.* He instructed Dr. Yu not to send it to Cox, but Dr. Yu sent it to Cox anyway. Tr. at 554.

On April 29, 1994, Dr. Yu wrote Jim D. Martin, Sandia's Director of Site Operations, requesting his assistance in clarifying Dr. Yu's role in the quality assurance process. Tr. at 354, 356. On May 5, 1994, Dr. Yu, Finnegan and Martin met to discuss a list of ten concerns prepared by Dr.Yu. Tr. at 180. Among these ten concerns was Dr. Yu's assertion that he needed to be allowed access to all objective evidence associated with the corrective actions he was responsible for verifying. Tr. at 185. According to Dr. Yu, Martin's response to his concerns was to inform him that Finnegan was his supervisor and that he was required to follow Finnegan's directions. Tr. at 183. Dr. Yu felt that Martin was hostile to him at this meeting and attributed this hostility to Dr. Yu's assertion, at the meeting, that Finnegan and Martin did not understand his concerns because they had not been trained in quality assurance. Tr. at 185.

According to Dr. Yu, the April 29, 1994 request and the May 5th meeting between Dr. Yu, Finnegan and Martin provoked an angry response from Finnegan. Tr. at 180. Dr. Yu contends that the day after the meeting, May 6, 1994, Finnegan came into Dr. Yu's cubicle, "stared at me with extreme anger and said, 'You asked for it! You are cutting your own throat'" and then handed him a memo. May 9, 1994 Memorandum from Dr. Yu to Martin, Tr. at 180, 366. The record shows that on May 6, 1994, Finnegan wrote Dr. Yu a memo instructing him not to send out correspondence without having it first approved by Finnegan. Finnegan testified that the May 6th memorandum was motivated by Dr. Yu's transmission of the feedback report to Cox against Finnegan's orders. Tr. at 554. Dr. Yu felt, and still strongly feels, that Finnegan was trying to suppress his freedom of speech and had no right to review his correspondence. Tr. at 367. Dr. Yu further testified that he refused to abide by those instructions given in the May 6, 1994 memorandum which he felt violated DOE's quality assurance order. Tr. at 369.

On May 24, 1994 Finnegan wrote Dr. Yu a memo instructing him to make specific changes to several feedback reports. For example, Finnegan instructed Dr. Yu to:

- "Confine both your review and your comments on the Feedback report to an objective review of the

evidence as it supports or fails to support the corrective action called for in the corresponding milestone." (Emphasis in the original).

- "Avoid any reference to the appropriateness of ownership or lack thereof."
- "Avoid any reference to your not being permitted to review entire package or evidence previously submitted and accepted. Likewise, avoid any reference to individuals . . . not providing you with additional evidence you feel you need. As we have discussed several times, your responsibility is to conduct a review of new documentation submitted, not to review evidence previously reviewed and accepted."
- "Avoid any reference to cost or budget as this is beyond the scope of your review."
- "Avoid any reference to the SCARB (Sandia Corrective Action Review Board) as their activities are also beyond the scope of your review. If you have concerns with how the SCARB conducts its activities, I will be happy to discuss these with you. If the SCARB is acting inappropriately, I will certainly bring this to the attention of Jim Martin, the SCARB chair."
- "Avoid using terms such as 'Owner's Overseeing Executive' or 'Owner's Supervising Executive."

Dr. Yu interpreted this memorandum as an attempt to discredit and destroy his quality assurance process. Tr. at 372. Dr. Yu chose to ignore those portions of this memo directing him to act in a manner he considered to be contrary to the spirit of DOE quality assurance orders. Tr. at 376-79, 563. Dr. Yu raised concerns to Sandia management about: (1) these limitations on his conduct, (2) the fact that that Sandia's verification process did not implement each of the ten quality assurance (QA) criteria set forth in DOE Order 5700.6C, and (3) the DOE's delegation to Sandia of the inspection authority for all but the highest priority CAPs. As a result, Martin requested that Sandia's Audit Services Department (Audit Services) conduct a Special Management Review (SMR) of the Tiger Team Corrective Action Verification Process. That review was promptly conducted and on June 1, 1994, Audit Services issued a report of the SMR's findings. Audit Services did not find that the delegation of inspection authority to Sandia violated any laws, rules or regulations. Audit Services also found that "DOE Order 5700.6C does not mandate the use of the ten QA criteria in every process." SMR Report at 5. However, Audit Services found that:

The verifier [Dr. Yu] should be allowed access to all objective evidence associated with the corrective action. Milestones might be independent from each other, but they are not independent from the entire corrective action. As such, it may be necessary for the verifier to review evidence from prior milestones to determine the context of the corrective action and evaluate the action accordingly.

Id.

In August of 1994, Finnegan and Dr. Yu met to discuss the results of Dr. Yu's FY94 performance review. During this review, Dr. Yu was accused of repeatedly failing to follow directions provided by Sandia Management and was told to comply with these instructions in the future. Dr. Yu was also reminded that many of his feedback reports contained comments that were not pertinent and germane to his review process and was instructed to avoid such comments in the future.

On August 19, 1994, Finnegan again wrote to Dr. Yu, ordering him to restrict his comments in feedback reports to relevant and germane issues. Tr. at 583.

On October 6, 1994, Martin wrote to Finnegan complaining about the accusatory and judgmental tone of some of Dr. Yu's comments in a feedback report that Dr. Yu had written to Martin. Tr. at 589-90.

By early 1995, the relationship between Dr. Yu and his managers had deteriorated to an intolerable level. Dr. Yu obviously distrusted his managers. Nor did he harbor an abiding respect for his managers. Instead, he felt that their actions were illegal or immoral and refused to cooperate with them. Moreover, it appears that Dr. Yu developed an unprofessional attitude towards his managers and coworkers.

In January of 1995, Finnegan and Dr. Yu met to discuss the results of Dr. Yu's FY 1995 mid-year performance review. During this review, Dr. Yu was again accused of repeatedly failing to follow

directions provided by Sandia Management and was again told to comply with these instructions in the future. Dr. Yu was reminded again that many of his feedback reports contained comments that were not pertinent and germane to his review process and was again instructed to avoid such comments in the future.

On January 24, 1995, Dr. Yu sent an owner of a corrective action, Dick Fate, a feedback report which had been reviewed and approved by Finnegan. Tr. at 605. In February 1995, Finnegan received both a written complaint and a telephone call from Fate about this report. Tr. at 606. Fate contended that the feedback report was very derogatory and inflammatory, and contained unsubstantiated accusations. Tr. at 607. Finnegan discussed Fate's concerns with Dr. Yu, indicated that he would handle the matter, and instructed Dr. Yu to refrain from further contact with Fate. Tr. at 607. Soon thereafter, Dr. Yu telephoned Fate, in direct contravention of Finnegan's instructions. Tr. at 152, 153, 607. A lengthy and heated conversation between Dr. Yu and Fate ensued. Tr. at 146, 149. At the hearing, Fate testified that Dr. Yu treated him in a highly unprofessional manner. Tr. at 151.

On February 17, 1995, Dr. Yu prepared a follow-up feedback report to Fate. This two page memo contained a substantial amount of unprofessional invective. For example, this memo states:

I had by then concluded that you were as corrupt (i.e. absence of integrity, disregarding quality processes, contemptuous of laws, regulations, commitments, —, arrogant of your SNL authority, failure as a manger [sic] or leader, no respect for the individuals you think are "below you," and so on) as Mr. Blejwas , as I had painfully experienced last year.

February 17, 1995 Memorandum from Dr. Yu to Dick Fate at 2.

Apparently this communication was intercepted by Finnegan, who prevented its delivery to Fate. Tr. at 537, 608. On February 24, 1995, Finnegan wrote to Dr. Yu about this memo, stating in pertinent part:

Much of your Feedback memo is of concern to me, but the last two paragraphs are particularly disturbing. These two paragraphs in your feedback memo to Mr. Fate are not supportable, violate the guidelines for corrective action feedback, and are clearly contrary to acceptable standards for dealing with fellow employees. I will not tolerate the further publication or transmittal of such statements from this organization and I will not allow your Feedback memo to be forwarded to Mr. Fate.

February 24, 1995 Memorandum from Finnegan to Dr. Yu.

On February 25, 1995, Martin wrote Dr. Yu, stating in pertinent part:

[I]t appears that you have used on several recent occasions verbiage which I consider accusatory, rude and insulting in your Feedback to various corrective action owners. . . . I interpret some of your comments as accusations of deliberate malfeasance or misfeasance and thus tantamount to an accusation of criminal conduct. If you believe that any such managerial actions are deliberate malfeasance or misfeasance, then I insist that you take this information to the DOE Office of Inspector General. . . .

On March 3, 1995, Dr. Yu wrote Martin, informing him that "about 07:30 today, I told Mr. Finnegan that I would be sending [the February 17, 1995 Feedback Memo] to Mr. Fate unless he shows me the basis of his self-indulged SMA [Sandia Management Authority] to suppress Sandians' human rights to communicate." Later that day, Martin wrote Dr. Yu a memo in response reminding him that the Sandia Code of Conduct prohibits the use of insulting, abusive, or offensive language.

On March 7, 1995, Dr. Yu was instructed to use a specific automated form to track and conduct follow-up on pending corrective actions. Tr. at 614. Dr. Yu expressed resentment at having to use the automated form, which he considered unnecessary and redundant, and did not use it as instructed. Tr. at 423, 614-15. At the hearing, Dr. Yu testified that he thought that the adoption of the form "was a provocation to induce me into insubordination" since the information Dr. Yu was expected to put in the form was already

available though the SIMS. Tr. at 423.

On March 10, 1995, Dr. Yu was instructed to meet with Finnegan and Martin in order to discuss the results of his performance review. Dr. Yu attended the meeting but refused to stay and listen while Martin explained the contents of a Performance Action Plan (PAP) that had been developed for Dr. Yu by Sandia management. Tr. at 213-14. Dr. Yu compared this meeting to a "lynching." Tr. at 214, 218.

On March 13, 1995, Dr. Yu was again instructed by Martin to review his PAP with Finnegan. Dr. Yu attended this meeting, but again refused to listen while Finnegan explained the PAP.

On March 15, 1995, Finnegan became aware that Dr. Yu had been regularly submitting feedback reports directly to line organizations against Finnegan's orders and the provisions of his PAP. Dr. Yu informed his management that he refused to follow Finnegan's directive requiring him to submit feedback reports to Finnegan for approval before distributing them to line organizations.

On March 21, 1995, Finnegan and Dr. Yu met to discuss Dr. Yu's PAP. At this meeting, Dr. Yu refused to accept the terms and conditions of the PAP and stated that he intended to continue sending feedback reports directly to the line organization, and to continue using his own follow-up procedures instead of the automated system implemented by Finnegan.

On March 30, 1995, Dr. Yu was terminated by Sandia for insubordination.

Dr. Yu was extremely and unambiguously insubordinate. For example, Dr. Yu flagrantly disobeyed his supervisor's orders to route his feedback reports though him. In April of 1994, Finnegan specifically prohibited Dr. Yu from sending a feedback report that Dr. Yu had prepared for Wayne Cox. Tr. at 553. Dr. Yu sent the feedback report anyway. Tr. at 554. Apparently this was not an isolated occurrence. The record shows that Dr. Yu sent a feed back report out on January 1, 1995, without routing it through Finnegan. Tr. at 603-04. On March 15, 1995, Finnegan became aware that Dr. Yu had been flagrantly disobeying his instructions to route feedback reports through him on a regular basis. Tr. at 621. As noted above, valid management reasons led Finnegan to require Dr. Yu to route his feedback reports through him. Finnegan had been receiving complaints about the feedback reports from owners, and the feedback reports contained in the record show that Dr. Yu had poor written communication skills and often did not exhibit sufficient tactfulness. Given these concerns, Finnegan was obviously justified in requiring Dr. Yu to submit feedback reports for his review.

On another occasion, in February of 1995, Finnegan specifically instructed Dr. Yu to refrain from contacting Dick Fate. Tr. at 605, 607. Clearly, Finnegan, as Dr. Yu's manager, had a right to intercede in a personality conflict between his employee and one of his organization's customers. Yet, Dr. Yu flagrantly violated Finnegan's instructions by telephoning Fate soon thereafter. Tr. at 149, 607.

In March of 1995, Dr. Yu was ordered to use a specific automated form to track and conduct follow- up on pending corrective actions. Tr. at 614. It was clearly within the purview of Sandia management's discretion to automate this tracking and control process. Yet Dr. Yu refused to comply with this order. Tr. at 423, 614-15.

Perhaps the most disturbing aspect of Dr. Yu's insubordinate conduct involved the Personnel Action Plan (PAP) that Sandia Management had prepared for Dr. Yu. A PAP is an important device used in corporate personnel relations. PAPs are typically reserved for serious personnel problems. *See* *Eugene Dreger*, OHA Case No. VBH-0021 (February 7, 2000). The PAP prepared by Sandia management was lengthy and comprehensive, but was also very reasonable in its terms. Yet, Dr. Yu refused to acknowledge or comply with the terms of his PAP. Tr. at 622-23.

Dr. Yu's repeated failure to abide by the reasonable and legitimate instructions of his managers clearly constitute insubordination. It is well settled that "an employee's insubordination towards supervisors and coworkers, even when engaged in a protected activity, is justification for termination." *Kahn v. United*

States Secretary of Labor, 64 F.3d 271, 278 (7th Cir. 1995). Given Dr. Yu's continuing insubordination, Sandia was left with no other reasonable option but to terminate his employment.

Dr. Yu contends, however, that since Sandia was acting outside of its authority, he did not have to comply with Finnegan's and Martin's orders. Tr. at 360-67. This assertion is without merit. The DOE Contractor Employee Protections Program Regulation in effect at the time of Dr. Yu's termination did not provide Dr. Yu with the right to refuse to submit his feedback reports for his supervisor's review. Nor do they excuse his failure to acknowledge and comply with the terms of his PAP. The former 10 C.F.R. § 708.5(a)(3)(i) protects those employees who "refuse to participate in an activity, policy, or practice when, (i) such participation (A) constitutes a violation of a Federal health and safety law, or (B) causes the employee to have a reasonable apprehension of serious injury . . . ." Clearly, routing his feedback reports through his supervisor and acknowledging and complying with the terms of his PAP would not have violated Federal law. Nor would it have placed him in harm's way. Instead, routing his feedback reports through his supervisor was a reasonable request on the part of Sandia management. After all, as Dr. Yu's supervisor, Finnegan was responsible for maintaining the quality of the AMO's output while preserving a good working relationship with the owners.

Dr. Yu also attempts to evade responsibility for his misconduct by attributing it to an unspecified mental condition which he claims was caused by Sandia's harassment. However, Dr. Yu failed to offer any evidence other than his own testimony in support of this assertion. In the absence of expert medical testimony in support of this theory of causation, I am disinclined to grant it any weight.

Dr. Yu also claims that Sandia management deliberately provoked his insubordination. Tr. at 124. However, he has failed to explain or support this theory and I find it is not supported by any evidence in the record. Moreover, while Part 708 protects employees from retaliation for protected activity, it does not excuse intolerable conduct on the part of an employee.

Even if an employer retaliates against an employee for making a protected disclosure, an employee should conduct himself in a professional manner. It is well settled that whistleblower laws are not meant to protect employees from their own misconduct. *Carr v. Social Security Administration*, 185 F.3d 1318, 1325 (Fed. Cir. 1999); *see also*, *Watson v. Department of Justice*, 64 F.3d 1524, 1527 n.3 (Fed. Cir. 1995) (citing cases for the proposition that whistleblowing does not shield employees who engage in wrongful conduct); *Marano v. Department of Justice*, 2 F.3d 1137, 1142 n. 5(Fed. Cir. 1993) (whistleblower protection laws are not intended to protect employees from the consequences of their own misconduct). Therefore, even if Sandia had "provoked" Dr. Yu, he should still be held accountable for his subsequent actions. Accordingly, I find that Sandia has clearly and convincingly shown that it would have terminated the employment of Dr. Yu even if he had not made protective disclosures.

III. Conclusion

Dr. Yu's decision to ignore his managers' reasonable instructions provided Sandia with good cause to terminate him. Accordingly, I find that the Sandia Corporation has proven by clear and convincing evidence that it would have terminated Dr. Jiunn S. Yu without his protected disclosures.

It Is Therefore Ordered That:

(1) The Complaint filed by Jiunn S. Yu against the Sandia Corporation, on July 2, 1999, Case No. VBH-0028, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party's receipt of the initial agency decision.

Steven L. Fine

Hearing Officer

Office of Hearings and Appeals

Date: April 7, 2000

(1)It is clear that Dr. Yu's disappointment in Sandia's response to his concerns led him to lose respect for some of his managers. Dr. Yu obviously believed that his managers lacked the moral authority to give him binding directions. It is also clear that Dr. Yu sincerely believed that there were improper motives behind some of Sandia management's decisions that affected him. Dr. Yu appropriately elevated these concerns up his line of command, to Sandia's legal department, to Sandia's ombudsman, and to Sandia's Human Resource Department. Dr. Yu was obviously disappointed in these organizations' responses to his concerns. (In the case of the caustic response provided by Sandia's legal department, quite justifiably so).

(2)Apparently, as a result of a number of factors, the emphasis on the Tiger Team Corrective Actions was somewhat reduced around this time as well.

Case No. VBH-0034

September 29, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Jennifer S. Gentry

Date of Filing: August 24, 1999

Case Number: VBH-0034

This Initial Agency Decision concerns a whistleblower complaint filed by Jennifer S. Gentry, a former employee (hereinafter the employee) of Golder Federal Services Incorporated, formerly Golder Associates, Inc. (Golder). Golder was a subcontractor for EG&G, then the managing and operating contractor at DOE's Rocky Flats site (hereinafter the term "contractors" refers to both Golder and EG&G). The employee alleges that she made protected disclosures concerning health and safety matters, and as a result, the contractors took retaliatory actions against her. For the reasons explained below, I have determined that the employee's request for relief should be denied.

I. Background

The Department of Energy (DOE) Contractor Employee Protection Program governs this matter. The DOE recently revised the regulations governing this program. See 64 Fed. Reg. 12862 (March 15, 1999) (amending 10 C.F.R. Part 708, effective April 14, 1999) (the whistleblower regulations). Under the regulations, the DOE's Office of Hearings and Appeals (OHA) conducts investigations, issues initial agency decisions, and hears appeals.

The whistleblower regulations prohibit a contractor from retaliating against a contractor employee who engages in certain protected conduct. Protected conduct includes disclosing information that the employee believes reveals a substantial violation of a law, rule, or regulation. If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish, by a preponderance of the evidence, that (1) the employee made a protected disclosure and (2) the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to prove, by clear and convincing evidence, that it would have taken the same action in the absence of the protected disclosure. If the employee prevails, the OHA may order employment-related relief such as reinstatement and back pay.

The events involved in the complaint took place during the period August 1993 through December 1993. On August 10, 1993, the employee began working for Golder in a temporary job as a "Health and Safety Specialist" at the Main Decontamination Facility at Rocky Flats. The EG&G project for which she was hired was scheduled to last through June 30, 1995. However, on November 23, 1993, the employee received a poor performance evaluation, and on December 10, 1993, her employment with Golder was terminated.

On February 3, 1994, the employee filed a Part 708 complaint with the DOE Rocky Flats Manager,

seeking relief against Golder and EG&G for alleged retaliatory acts including her termination,"poor employee evaluations, chastisement and reprimands...." The complaint does not allege any specific protected disclosures, other than "reporting to and providing information to EG&G Radiological Engineering regarding Health and Safety issues and violations." The employee's complaint sought formal written apologies from Golder and EG&G, reinstatement to her former position as an HSS at the same rate of pay, and back pay from the date of her termination to the date of reinstatement. At some point in 1994, the complaint was referred to DOE's Office of Inspector General (OIG) for investigation under Part 708. The OIG did a detailed investigation of the allegations in the complaint and the contractors' affirmative defenses. The investigative record includes 14 interviews of persons who had personal knowledge of the events involved, and nearly 40 documents.

On April 6, 1999, the DOE Assistant Inspector General for Inspections (Assistant IG) issued a "Report of Inquiry and Recommendations," based on the record compiled during the investigation of the complaint. The report concluded that the complaint was without merit. The report found that the employee did communicate concerns to contractor management officials including safety issues that were protected disclosures under Part 708. While the report did not specifically discuss whether the employee met her burden before considering the contractors' affirmative defenses, there was a "temporal proximity" between the alleged protected disclosures and the alleged acts of retaliation, and this was sufficient to shift the burden to the contractors to show that they would have taken the same actions in the absence of any protected disclosures. Based on the evidence developed during the investigation, the Assistant IG was clearly convinced that the contractors did prove that they would have taken the same actions against the employee in the absence of any protected disclosure. The report determined that the employee made significant, job-related errors that resulted in the circulation of misinformation and unnecessary confusion, and that the employee created additional problems by failing to follow established procedures. According to the report, the employee's low performance evaluation and subsequent termination were justified by the facts in evidence, and were not based on retaliation. The report advised the employee and the contractors of their rights to a hearing. None of the parties requested a hearing. Accordingly, the OHA Director appointed me to review the investigative report and issue an initial agency decision.

II. Analysis

The employee has not requested a hearing, nor submitted any evidence and arguments that would contravene the determination in the investigative report to recommend against relief under Part 708. I have carefully reviewed the report and the lengthy investigative record on which it is based. I find that the findings and conclusions in the report have a rational basis in fact, are supported by substantial evidence, and I agree that the complaint for relief under Part 708 is without merit. Therefore, based on my independent consideration of the record in this matter, I find that the disposition recommended in the report should be adopted as the initial agency decision in this matter.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by Jennifer S. Gentry, OHA Case No. VBH-0034, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party’s receipt of the initial agency decision.

Case No. VBH-0035

September 22, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Theresa G. Joyner

Date of Filing: August 24, 1999

Case Number: VBH-0035

This Initial Agency Decision concerns a whistleblower complaint filed by Theresa G. Joyner, a former employee (hereinafter the employee) of NCI Information Systems, Inc. (NCI) (hereinafter the contractor). As explained below, the employee's request for relief is denied.

I. Background

The Department of Energy (DOE) Contractor Employee Protection Program governs this matter. The DOE recently revised the regulations governing this program. See 64 Fed. Reg. 12862 (March 15, 1999) (amending 10 C.F.R. pt. 708) (the whistleblower regulations). Under the regulations, the DOE's Office of Hearings and Appeals (OHA) conducts investigations, issues initial agency decisions, and hears appeals.

The whistleblower regulations prohibit a contractor from retaliating against a contractor employee who engages in certain protected conduct. Protected conduct includes disclosing information that the employee believes reveals a substantial violation of a law, rule, or regulation. If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish, by a preponderance of the evidence, that 1) the employee made a protected disclosure and 2) the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to prove, by

clear and convincing evidence, that it would have taken the same action in the absence of the protected disclosure. If the employee prevails, the OHA may order employment-related relief such as reinstatement and backpay.

In this case, the contractor performed work for the DOE on site. The DOE funded the contract incrementally. Over the period 1995 to 1997, the DOE reduced the incremental funding, resulting in NCI layoffs in 1995, 1996, and 1997.

During the period 1995 to 1997, the employee worked in the contractor's abstracting and indexing (A&I) group, which abstracted and indexed various technical reports. In addition to the A&I work, the employee sometimes worked on other projects. As of May 1997, the employee was one of the three remaining employees in the A&I group.

In April 1997, the DOE decided not to provide any further funding under the contract for the A&I work, and the DOE notified the contractor. On May 1, 1997, the contractor sent a layoff notice, effective May

23, 1997, to the three employees. The notice cited the DOE's decision not to fund any further A&I work.

On May 12, 1997, the employee filed a Part 708 complaint, seeking relief against the DOE for its elimination of the A&I work. Specifically, the employee challenges the DOE's decision to perform A&I work in-house and through another contractor. The employee's complaint also seeks relief against the contractor for the layoff and for various matters that occurred prior to her layoff.

A DOE office investigated the complaint and issued a report. The report concluded that the complaint was not meritorious. The report addressed the two alleged retaliations for which the complaint was timely, (i) the cessation of the A&I work and the resultant layoff, and (ii) the employee's removal, two months earlier, from a committee preparing an energy quality award application. The report found that, even assuming that the employee had made a protected disclosure, the employee had not demonstrated that the protected disclosure was a contributing factor to the complained of actions. The report advised the employee and the contractor of their right to a hearing. Neither party requested a hearing. Accordingly, the OHA Director appointed me to review the investigatory report and issue an initial agency decision.

II. Analysis

The employee's principal complaint, i.e., that the DOE should have continued to fund the contractor's A&I work, is not the proper subject of a Part 708 complaint. Part 708 applies to contractor employee complaints about contractor retaliations; part 708 does not apply to contractor employee complaints about DOE decisions. See George E. Parris, IG Complaint No. HG97-0006 (October 15, 1998) (decision by Deputy Secretary affirming dismissal of complaint).

Moreover, to the extent that the employee's complaint is directed at the contractor's layoff decision, the employee is not entitled to relief. The employee herself maintains that the layoffs resulted from the DOE's elimination of the A&I work. Indeed, the term of the contract ended two months later. The employee has not argued that, in the absence of the protected disclosure, the contractor would have retained the employee despite the elimination of the A&I work. Accordingly, the contractor has met its burden of demonstrating that the layoff would have occurred in the absence of the protected disclosure.

Finally, the employee is not entitled to relief with respect to her removal from a team preparing an energy quality award application. The employee has failed to establish that her removal was a "retaliation" under part 708. Under part 708, a retaliation is an employment-related "negative action" with respect to the employee's "compensation, terms, conditions, or privileges of employment." 64 Fed. Reg. 12862, 12871 (1999) (to be codified at 10 C.F.R. § 708.2 (definition of "retaliation")); see also 10 C.F.R. § 708.4 (1999) (former definition of "discrimination"). The employee's removal from the team did not affect her pay and benefits, and there is no evidence that the employee viewed the removal as a negative action. In fact, one of the employee's complaints was that the contractor assigned her non A&I work. See Investigatory Report, Ex. A-1 at 1 & 2; Ex. A-2 at 1,3. Accordingly, the employee has not met her burden of demonstrating that her removal from the team was a retaliation under part 708.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by Theresa G. Joyner, OHA Case No. VBH-0035, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party's receipt of the initial agency decision.

Janet N. Freimuth

Hearing Officer

Office of Hearings and Appeals

Date: September 22, 1999

Case No. VBH-0036

September 23, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Complainant: XXXXXXX

Date of Filing: August 24, 1999

Case Number: VBH-0036

XXXXXXX (the complainant) filed a complaint against his employer, Fluor Daniel, Inc. (FDI), and two other DOE contractors, Duke Engineering & Services (DE&S) and TRW Environmental Safety Systems (TRW), pursuant to the DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708. In that complaint, the complainant alleges that he suffered reprisals because he had made a disclosure that is protected by Part 708.

I. Background

The Contractor Employee Protection Program was established to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those “whistleblowers” from consequential reprisals by their employers. DOE may order remedial action if a DOE contractor takes adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee made a protected disclosure. The complainant under Part 708 has the burden of establishing by a preponderance of the evidence that he or she made a protected disclosure, and that such act was a contributing factor to one or more acts of retaliation. If the complainant makes such a showing, the contractor can avoid liability by proving by clear and convincing evidence that it would have taken the same action without the employee's disclosure. 10 C.F. R. § 708.29.

The complainant moved from FDI's XXXXXXX office to XXXXXXX in August 1992 to become FDI's XXXXXXX of the Multi-Purpose Canister System (MPC) project. The XXXXXXX office was closed on October 1, 1994. Some personnel were transferred to TRW's facility in XXXXXXX. However, the complainant was not selected for the XXXXXXX office and returned to XXXXXXX in July 1995. The complainant alleges that he made a number of protected disclosures while employed on the MPC project and that it was because of these disclosures that he was not selected for transfer to XXXXXXX. As a result, he had the expense of maintaining two households and lost a 5% locality pay differential upon moving to XXXXXXX. He also complains that he was not reimbursed for certain moving expenses and that his company credit card was canceled.

The Office of Inspector General investigated the complaint and issued a Report of Inquiry and Recommendations (Report). The Report assumed for the purpose of its analysis that the

complainant had made protected disclosures and that they contributed to the alleged adverse action that was taken against him. Even with these assumptions, the Report concluded that the contractors would have taken the same action even in the absence of the assumed protected disclosures. Accordingly, the Report

found that the complaint was not meritorious.

The OHA Director appointed me the hearing officer in this case. As neither party requested a hearing, I have conducted an independent analysis and issue this initial agency decision based upon the Report and other materials in the investigative file. I shall not repeat the detailed analysis contained in the Report which is hereby incorporated by reference.

II. Analysis

The Report did not make any finding on whether the complainant had made disclosures that were protected by Part 708. I have reviewed the matter, and I find that certain disclosures do fall within the scope of Part 708. These disclosures include allegations that DE&S charged the MPC project for moving expenses and salaries for work that was not attributable to that project and that it allegedly double billed for some work. Other disclosures, however, do not appear to come within the scope of Part 708. These include allegations that certain "value engineering" should have been conducted to control costs and that the review by a supervisor of an employee's work on a procurement package constituted a conflict of interest. These are primarily management issues that are committed to management discretion. They do not the type of mismanagement necessary to bring them within the scope of Part 708.

The Report also did not make any finding on whether the protected disclosures contributed to the adverse action that was allegedly taken against the complainant. I find nothing in the record to suggest that the disclosures played any role in the matter. Moreover, as set forth in detail in the Report, and as summarized below, FDI had good reasons for the action that it took. Consequently, the complainant has not shown by a preponderance of the evidence that the disclosures contributed to the allegedly adverse actions.

Finally, the Report found that even assuming that the disclosures contributed to the adverse actions, the contractors had convincingly shown that they would have taken the same action in the absence of the disclosures. With respect to not being selected for transfer to the XXXXXXX office, the record indicates there was intense competition for the few slots available in the XXXXXXX office, and that only one FDI employee was among the nine employees to be transferred. There is substantial evidence in the record that the complainant's skills and experience did not fit the skills needed for the XXXXXXX project as well as those of other employees. I agree with the Report's conclusions in this regard. Consequently, the contractors have demonstrated that they would not have transferred the complainant to XXXXXXX even without the disclosures. Since there is no merit to the complainant's claim that he was retaliated against in not being selected for the XXXXXXX office, there is also no merit to his claim for the cost he voluntarily incurred in maintaining two households or for the loss of the pay differential.

The Report also found no merit to the complainant's claim that cancellation of his corporate credit card and non-payment of certain moving expenses ($395) constituted retaliation. The record shows that the credit card was canceled by American Express because he was delinquent in his payments. The disallowed moving expenses were beyond the $1,500 allowance under company policy for miscellaneous expenses. I agree with the Report's conclusion that FDI has shown by clear and convincing evidence that it would have taken these actions even if the complainant had not made the disclosures.

In sum, the complainant has not shown that the protected disclosures that he made contributed to any of the adverse actions that he claims were taken against him. The contractors have shown by clear and convincing evidence that they would have taken the same actions even if there had been no disclosures. Accordingly, Mr. XXXXXXX's the request for relief under Part 708 should be denied.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by XXXXXXX, OHA Case No. VBH-0036, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party's receipt of the initial agency decision.

Bryan F. MacPherson

Assistant Director

Office of Hearings and Appeals

Date: September 23, 1999

Case No. VBH-0042

March 1, 2001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Hearing Officer Decision

Name of Petitioner: Richard R. Sena

Date of Filing: February 24, 2000

Case Number: VBH-0042

This Decision involves a complaint filed by Richard R. Sena (Sena) against Sandia Corporation under the Department of Energy's Contractor Employee Protection Program. That program is codified at Part 708 of Title 10 of the Code of Federal Regulations. 10 C.F.R. Part 708. In his complaint, Sena maintains that he was retaliated against and ultimately constructively discharged for disclosing that laboratory personnel were using the Internet improperly at Sandia National Laboratories.

I. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Part 708 of Title 10 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. §§ 708.5(a)(l), (a)(3). An employee of a DOE contractor who believes he has been discriminated against in violation of the Part 708 regulations is entitled to receive an extensive series of protections. He may file a whistleblower complaint with the DOE. As part of the proceeding, he is entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). 10 C.F.R. §§ 708.21-.23. After the investigator's report on the complaint is issued, an OHA Hearing Officer will generally conduct an independent fact-finding and evidentiary hearing. 10 C.F.R. §§ 708.24-.25. The Hearing Officer issues a formal, written opinion on the complaint. 10 C.F.R. § 708.31. Finally, a party may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. § 708.32.

II. Factual Findings

Sena is a former employee of Sandia Corporation at the Sandia National Laboratories. He worked there for

more than 25 years. In 1995, he noticed that a number of employees who worked in close proximity to him were using the Internet connection in their offices to view sexually explicit materials in violation of Sandia policy. Sena reported this information to the Sandia ethics office. Sandia conducted an investigation and discovered that six people -- one Sandia employee and five contractor (subcontractor to DOE) employees -- were using the Internet connection to view sexually explicit materials on the office computers. At the time, such an offense was grounds for dismissal. A senior manager, Neil Hartwigsen, confronted each of the five contractor employees with information that Sandia computer security personnel had compiled about their access to sexually explicit web sites from Sandia offices. Each agreed with the information provided by the computer security personnel. Hartwigsen took each of their badges and told each that he was fired and that he would not be coming back to work at Sandia. Tr. at 432. At the time of discharge, Hartwigsen told them that they would not be allowed to work in the same area at Sandia again. Tr. at 442, 443. The one Sandia employee was on vacation and unreachable. When he returned, he was not fired because the policy at Sandia had changed in the interim to allow penalties less severe than termination.

At the time of this incident, Sena was told by Hartwigsen that the employees who were fired would never return to work at Sandia, so that he would have no interactions with them while at work. At the time, Hartwigsen believed that they would not return to that work environment, Tr. at 458, and that Sena would never have a working relationship or contact with these employees again. Tr. at 459-60. On the evening of the day the employees were fired, someone blew up Sena's mailbox in front of his home. This was particularly traumatic to Sena because (1) his daughter witnessed it and was extremely upset, and (2) he reasonably felt it was a threat to the safety of his family. At the time, Sena testified that a security officer suggested that he obtain a gun for protection. In addition, a number of threatening telephone calls were made to Sena at his residence.

In July 1998, two of the contractor employees discharged for viewing sexually explicit Internet sites returned to the Sandia site as employees for other contractors (hereinafter referred to as the offending employees). They were permitted access to the same general area in which Sena worked. Sena objected to this and immediately told Hartwigsen that he feared for his safety. Hartwigsen understood from their conversation that Sena feared that some or all of the dismissed employees were out for vengeance. Tr. at 438. Hartwigsen knew about the mailbox incident and some threatening phone calls because Sena had reported these incidents. *Id.* Despite this knowledge, Hartwigsen believed that many of the employees suffered in their lives and jobs because of the dismissals. Tr. at 442. Hartwigsen did not want to deprive them of a livelihood. Tr. at 456. He therefore sponsored the reinstatement of security clearances for a number of these employees so they could resume work at Sandia. Tr. at 467. Hartwigsen allowed them to continue to work at Sandia and to come back into the office space that he controlled. However, he did not allow them to have offices and computers. *Id*. Hartwigsen testified that at the time he thought that he could not prevent these people from returning as new contractor employees, but could deny them office space. Tr. at 454. He now knows that he was mistaken and that he could have prevented the offending employees from having physical access to the Lab site. Tr. at 455. However, Hartwigsen also testified that he did not seek any advice from the procurement or the legal departments at Sandia because he believed he already knew the answer to the question about whether he could remove the offending employees. Tr. at 479-80.

Sena could not accept the stress that the presence of these individuals was causing and, with the approval of Dr. Clevenger, the Sandia Medical Director, went on temporary sick leave in the middle of August 1998. During the course of this leave his condition was monitored by the Sandia Medical department. Nevertheless, Clevenger and Sena both believed that finding a suitable job and returning to Sandia was appropriate. Tr. at 382-87. Clevenger thought that Sena's symptoms had improved somewhat and that Sena wanted to continue working at Sandia. Tr. at 339. Clevenger and Sena set up what they thought was a reasonable return-to-work trial in late August 1998. Tr. at 339. However, that trial lasted just two days, after which Sena returned to sickness absence. Tr. at 340.

At that time, Dr. Clevenger spoke with Hartwigsen and told him that Sena could not work in the same environment as the five employees who were terminated. Tr. at 470. Hartwigsen looked to move Sena to another position where he would not interact with them, Tr. at 567, because at the time, Hartwigsen

believed that he could not ban the offending employees from coming to Sandia. Tr. at 568. The solution that Hartwigsen offered was to transfer Sena, first to one job and then, when Sena rejected that placement, to another, so that some distance (100 yards) was placed between Sena and the offending employees. This would also place Sena in a building where the offending employees would not have a business reason to visit. Sena rejected those two job placements, and Sandia management agreed not to move Sena.

In September 1998, Sena started to see a psychologist, Dr. Clara Farah. Dr. Clevenger had suggested to Sena that his personal physician, Dr. Best, should be consulted to see if he thought Sena should seek some psychological help. Dr. Farah first saw Sena on Sept. 2, 1998. Tr. at 107. Her first tentative diagnosis was anxiety disorder. Tr. at 108. However, shortly thereafter she believed that Post Traumatic Stress Disorder (PTSD) might be the appropriate diagnosis. Tr. at 112. Dr. Farah changed her diagnosis to PTSD by September 15, 1998. Tr. at 141. On Nov. 2, 1998 Dr. Farah wrote to Dr. Best, Sena's personal physician, stating that she believed that Sena suffers from PTSD. Tr. at 141. Dr. Clevenger concurred in that diagnosis. Tr. at 353-54.

By November 1998, all of the medical personnel involved concluded that Sena would be unable to return to work at Sandia. Dr. Clevenger believes that it is a medical probability that had the offending employees not returned to Sandia in 1998, Sena would not be suffering from PTSD. Tr. at 368. However, Hartwigsen maintains that during this period he did not know the degree of impact the presence of the offending employees had on Sena. Tr. at 445, 471, 499. While Dr. Clevenger believes that he told Hartwigsen about the severe discomfort and trauma caused Sena by the presence of the offending employees, Tr. at 365, Hartwigsen believes that conversations between them were limited to discussing whether Hartwigsen could expect Sena to return to work because work was piling up in his absence. Tr. at 588. Hartwigsen testified that: "all of the conversations that I had with Dr. Clevenger were in the vein of: We expect that at some point we'll have this situation under control and he'll be able to come back to work." Tr. at 579. Hartwigsen claims that Dr. Clevenger never told him the extent to which the presence of the two employees was hurting Sena. Tr. at 581.

On April 8, 1999, while he was still on medical absence, Sena requested that he be allowed to retire on disability. Exhibit 26. Dr. Clevenger recommended that Sena be allowed to retire on full disability in a memorandum he sent to the Employee Benefits Committee on May 4, 1999. Exhibit 28. The Employee Benefits Committee, which consisted of three Sandia managers, one of whom was Hartwigsen, approved full disability retirement for Sena. This was communicated to Sena in a letter dated June 3, 1999, from the secretary of the Committee. Exhibit 16. That retirement was effective November 2, 1999. In September 1999, Sena filed a complaint under the DOE Contractor Employee Protection Program in which he claimed that he was forced to retire from Sandia because management failed to protect him after he reported the improper use of the Internet at the laboratories.

III. Legal Standards Governing This Case

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's government-owned, contractor-operated (GOCO) facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers.

Proceedings under 10 C.F.R. Part 708 offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by providing for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the OHA Director and, when appropriate, the Secretary of Energy or his designee. *See David Ramirez*, 23 DOE ¶ 87,505, Case No. LWA-0002, *affirmed*, 24 DOE ¶ 87,510 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any action, such as discharge, demotion, or any other negative action, against any employee because that employee

has disclosed to an the contractor information that the employee in good faith believes evidences a violation of any law, rule, or regulation, or a substantial and specific danger to employees or public health or safety. 10 C.F.R. § 708.5(a)(1); *see also* *Francis M. O'Laughlin*, 24 DOE ¶ 87,505, Case No. LWA-0005 (1994), *affirmed*, 24 DOE ¶ 87,513 (1995).

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. *See* *Ronald Sorri*, 23 DOE ¶ 87,503, Case No. LWA-0001 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)).

In this case, Sena claims that the actions taken by Sandia lead to his "constructive discharge." Courts considering claims of constructive discharge have required employees to prove that their working conditions were so difficult or unpleasant that a reasonable employee in their shoes would have felt compelled to resign. *Sanchez v. Denver Public Schools*, 16 F.3d 576 (10th Cir. 1998); *Arcy v. American Sheep Indus. Assn*, 981 F.2d 1569 (10th Cir. 1992). The maintenance of an environment so hostile that it leads an employee to conclude that the only reasonable alternative is for the employee to resign may be considered an adverse personnel action for Part 708 purposes. *See* *Kensley v. Diamond Back Services, Inc*., 27 DOE ¶ 88,025, Case. No. AL—95—0009 (1999) (presumption that a resignation is voluntary may be rebutted in Part 708 proceeding by evidence which shows that it was the result of duress or coercion, i.e., a constructive discharge). This is so because "*Retaliation* means an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (*e.g*., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) . . . ." 10 C.F.R. § 708.2. The maintenance by an employer of a hostile work environment after a protected disclosure is made is certainly a negative action with respect to the terms and conditions of employment. In fact, a Hearing Officer has held that a Sandia subcontractor's management failure to resolve inter-employee conflicts may be an act of reprisal under DOE regulations. *Luis P. Silva*, 27 DOE ¶ 87,550, Case No. VWA-0039 (2000).

B. The Contractor's Burden

If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. § 708.9(d). *See* *Ronald Sorri*, 23 DOE ¶ 87,503, Case No. LWA-0001 (1993) (citing McCormick on Evidence, § 340 at 442 (4th ed. 1992)). Accordingly, in the present case if Sena establishes that he made a protected disclosure that was a contributing factor to an adverse personnel action, Sandia must convince me that it would have taken the same actions even if Sena had not raised any concerns. *Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 at 89,034-35, Case No. LWA-0006 (1994).

IV. Whether Sena Has Made A Prima Facie Case of Retaliation

Section 708.5 of the Contractor Employee Protection Program provides that a disclosure is protected if an employee discloses a substantial violation of a law, rule, or regulation; a substantial and specific danger to employees or to public health or safety; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. 10 C.F.R. § 708.5. Such a disclosure must be made to "a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, your employer, or any higher tier contractor." *Id*. In this case, there is no dispute that Sena disclosed to his employer that contractors were using the Internet connection that Sandia provided to view sexually explicit materials while at Sandia. At the time this was extremely serious, for Sandia policy

dictated that anyone doing such action should be fired. Thus this disclosure was a disclosure of a substantial violation of Sandia rules and clearly falls under § 708.5 as a protected disclosure. Sandia concedes this to be true. Post-hearing Brief of Sandia Corp. at 15.

It is also clear that the disclosure was a contributing factor to an act of retaliation. At the time Sandia management allowed the offending employees to return to the Sandia site, management clearly had in mind the disclosure of the incidents that occurred in 1995, because but for the disclosure, management would not have had to sponsor new security clearances for these individuals and would not have had to consider whether they should be allowed to return to the site.

I find that Sandia management's failure to remove the offending employees and alleviate the hostile work environment for Sena indicates an intent to harm Sena despite testimony that management had no such intent. *See Azzaro v. County of Allegheny*, 110 F.3d 968 (3rd Cir. 1997). Hartwigsen testified that when he allowed the offending employees to return to work at Sandia, he had no intent to harm Sena. I agree. There was no indication at that time that their return would cause Sena such trauma. Hartwigsen also testified that had he known that any harm would have occurred, that he "would have pursued other means to keep those people from coming on site." Tr. at 577. Dr. Clevenger, a senior management official at Sandia and its medical director, also did not know the extent of Sena's trauma in August 1998. But as September turned into October, and October turned into November, all the medical personnel involved knew how traumatic this situation was for Sena. Dr. Clevenger believes he told Hartwigsen about the extent of the trauma, but Hartwigsen denies this. However, even if there were miscommunication between senior managers at Sandia, that does not mean that Sandia should escape responsibility for not alleviating the hostile environment that it created. By early November 1998 at the latest, it should have realized the hostile work environment prevented Sena from returning to work. This is especially true because the remedy was simple and straightforward: remove the offending employees. There was nothing to "work on" or "get control of," and Sandia management, if not Hartwigsen, knew how to do this when it wanted to. *See* *Luis P. Silva*, 27 DOE ¶ 87,550, Case No. VWA-0039 (2000). Under these circumstances, I find that Sena has met his burden under the DOE's Contractor Employee Protection Program.

V. Whether Sandia Has Rebutted That Prima Facie Case

I now turn to the evidence regarding the contractor's burden. In its post-hearing brief, Sandia argues that it should not be held liable in this case because there is clear and convincing evidence that it would have taken the same measures absent the protected disclosures. However, I do not agree with its claim. After reviewing the record in this matter, I find that actions taken by Sandia management not only allowed the work environment to become hostile for Sena, but their actions, and lack of actions, allowed that hostile environment to continue until he could not longer work at Sandia.

Testimony at the hearing showed that Sandia management through their actions created a hostile work environment, although at the time they did not know how hostile the work environment would be. Hartwigsen testified that he sponsored the offending employees for security clearances so that they could return to Sandia to work. He did this deliberately because he believed they had suffered enough from their previous banishment from Sandia. Without such security clearances, the employees could not have returned to work at Sandia. But at the time, Hartwigsen did not fully realize the extent of trauma that would be inflicted on Sena upon the return of these employees.

The environment for Sena continued to be hostile despite the knowledge of Sandia management that it was affecting Sena in an extremely bad way. When Sena noticed the offending employees, he immediately contacted Hartwigsen and told him that he feared for his safety. Sena also questioned Hartwigsen as to why the offending employees were allowed to return to Sandia. Despite the voiced concerns by Sena, Hartwigsen allowed the offending employees to continue to remain on site and interact with Sena. At this particular time--late August 1998—there was no particular evidence to suggest that the presence of the offending employees would lead to an environment in which Sena ultimately could not function. I find

that Hartwigsen did not know the extent of the trauma inflicted on Sena by the presence of these employees at this time. Nor did Dr. Clevenger, the other senior Sandia management official dealing with this matter. However, for the reasons explained below, it seems clear to me that at some point in the fall of 1998 both Hartwigsen and Dr. Clevenger realized the severity of this situation.

By October or November 1998, Hartwigsen should have realized that something was terribly wrong with this situation. Sena noticed the presence of the offending employees on August 24, 1998. He immediately complained about the situation. Hartwigsen, who was Sena's supervisor's supervisor, claims that he did not grasp the severity of the situation at that time. I believe Hartwigsen when he testified to that effect. Dr. Clevenger also testified that he did not appreciate the severity of the problem in the August 1998 timeframe. However, when a long-term employee is on extended leave under the supervision of the Sandia medical department, at some point management must realize that the condition that led to the leave is severe. If a valued employee were on sick leave for more than several weeks, wouldn't most people believe that the underlying medical condition is out of the ordinary? I noted this at the hearing, where I asked Hartwigsen:

> Hearing Officer: What I'm concerned about is the time period in the fall of 1998. Clearly when someone goes on extended medical leave, you know something is hurting them.
>
> And yet, I hear from the testimony here that nothing was done in September and October to get rid of these two people, to make the workplace a little safer for Mr. Sena. And that concerns me. Is that accurate?
>
> Mr. Hartwigsen: Well, I understand your concern, especially retrospectively, you can see this. But I think at the time, that the prevailing thought was that he was having physical problems.
>
> As I said earlier, I had never heard of the term post-traumatic stress disorder until this week. So whether the doctors knew it or not, I don't know.

Tr. at 580. Hartwigsen also testified that he did not ask Dr. Clevenger about the details of Sena's medical condition because he knew from previous dealings that the Sandia medical department would not reveal that information to him due to privacy concerns.

Dr. Clevenger clearly appreciated the severity of the problem in this time period. The testimony at the hearing shows that all three health professionals, Drs. Clevenger, Best, and Farah, agreed by November 1998 that Sena would not be returning to Sandia. This was communicated to Hartwigsen. At that time, clearly Hartwigsen knew how difficult this situation was for Sena. However, for the next several months nothing was done to remove the offending employees from Sandia.

Hartwigsen testified that he thought in 1998 that he did not have the authority to ban the offending employees from the Lab site. He testified that Sandia had recently adopted a performance-based contract model and that he had been told shortly before August 1998 that he could not influence the choice of which employees a company would use to perform under such a contract. From this knowledge, Hartwigsen inferred that he could not remove an employee once he showed up at Sandia. For this reason, he did not seek advice from either the procurement or legal departments at Sandia as to whether he could remove the offending employees from the Lab site. However, Hartwigsen now realizes that he was wrong and that he had the authority to ban those employees.

In another case also arising from Sandia, a management official had no problem banning an employee from the premises. *Luis P. Silva*, 27 DOE ¶ 87,550, Case No. VWA-0039 (2000). In *Silva*, a Sandia manager became aware of a conflict between contractor employees where one employee had to take a two-week leave because of stress. While asking management of the contractor to solve the conflict, the Sandia manager testified that she realized that "it was my right under the contract to take some steps to resolve the issue of a hostile work environment." (citation omitted). That Sandia manager then consulted with both the procurement and legal departments at Sandia and directed the contractor to remove the

offending employee who she believed was causing the hostile environment. These actions in the *Silva* case occurred in August 1997, a full year before the offending employees showed up to create a hostile work environment for Sena.

Hartwigsen also realizes that he, as a senior Sandia manager, would have to resolve a hostile work environment. Hartwigsen testified: "If we have somebody who is in a hostile work environment, I believe it's our responsibility to resolve that hostile work environment. Now, if that means removing somebody, then I think they have to be removed." Tr. at 487-88. Although Hartwigsen testified that he thought the Sena matter would ultimately be worked out, this is not convincing. Hartwigsen testified that "all of the conversations that I had with Dr. Clevenger were in the vein of: We expect that at some point we'll have this situation under control and he'll be able to come back to work." Tr. at 579. Dr. Clevenger testified, however, that he believes he told Hartwigsen about the trauma facing Sena. Tr. at 365. Nevertheless, by November 1998 two senior Sandia managers knew that the trauma would prevent Sena from returning to work at Sandia. Still nothing was done, even though there was clear, simple, straightforward ways to get the situation "under control:" remove the offending employees. Hartwigsen chose not to do this.

In summary, Sandia management created the beginning of a hostile work environment when Hartwigsen sponsored the reinstatement of security clearances for the offending employees. This was done deliberately to allow them to return to work at Sandia. Upon seeing them, Sena told Sandia management that their presence was extremely hurtful. After a few days the Sandia medical director became involved. Sandia management should have realized that the environment was hostile. Exactly when this should have occurred is unclear, but certainly it is true after Sena had been on supervised medical leave for an extended period of time. Its failure to act at that time deepened and prolonged the trauma to Sena. Sandia officials knew that Sena was suffering from PTSD by late October or early November 1998. Yet even then no one at Sandia did anything to make Sandia a safe place for Sena to try to return to work. At all times during these incidents, it appears that Sandia had the right to ban the offending employees from the Sandia site, and in fact had exercised that right previously.

In *Silva*, the Hearing Officer found that the company, a Sandia subcontractor, "sacrificed" an employee to retaliate against Silva, ignoring complaints she made and thus failing to resolve her perceptions of a hostile work environment. In this case, Sandia similarly sacrificed Sena in order to provide employment at Sandia to the offending employees. The Sandia manager in *Silva* realized that it was her duty to resolve the hostile workplace there. And Hartwigsen testified in this case, as I've summarized above, that he realized that he would have to resolve a hostile work environment if it existed. Three medical professionals, including the Sandia medical director (who was also a senior Sandia manager), concluded that the environment was so hostile to Sena that he could not return to work. Yet Sandia management did little to alleviate the situation. Sandia has presented no evidence to show that it treated Sena in the same manner as other Sandia employees who found themselves in a hostile environment. Under these circumstances, I find that Sandia has failed to present clear and convincing evidence that meets its burden under the DOE Contractor Employee Protection Program. Accordingly, I conclude that Sena's complaint should be granted.

VI. Relief

The DOE Contractor Employee Protection Program provides as follows:

> If the initial or final agency decision determines that an act of retaliation has occurred, it may order:
>
> (1) Reinstatement;
>
> (2) Transfer preference;
>
> (3) Back pay;

(4) Reimbursement of your reasonable costs and expenses, including attorney and expert-witness fees reasonably incurred to prepare for and participate in proceedings leading to the initial or final agency decision; or

(5) Such other remedies as are deemed necessary to abate the violation and provide you with relief.

10 C.F.R. § 708.36(a). In the present case, Sena and Sandia have submitted calculations showing what each believes to be the relief necessary to put Sena in the same position had he worked until retirement age. Sandia claims that the amount needed to pay Sena is $342,324.77. According to Sandia, this figure consists of the present value of the difference between Sena's salary and his current disability pension for the period November 1999 through April 11, 2014 ($277,005.09), the present value of matching funds for Sena's saving plan ($21,819.68), and the forgone pension benefits ($43,500.00). Sena claims that he should receive $1,291,288.03. This figure includes what is described as the difference between the future value of Sena's retirement account and the value of the account when he retired ($971,425.63), plus lost wages ($319,862.70).

The calculations that Sandia submitted clearly utilized the correct methodology for calculating the amount of relief necessary to place Sena in the same position had the constructive discharge not occurred. Sandia has calculated the present value of the difference between Sena's retirement income and the income he would have received had he remained working at Sandia, the present value of Sandia's contribution to Sena's retirement account, and the forgone pension benefits. None of Sena's calculations attempt to take a stream of earnings over the next 15 years and calculate a present value of those streams. This is a fundamental flaw in his submission.

Two issues remain, however. First, Sena is entitled to reasonable attorneys fees and costs. *See* *C. Lawrence Cornett*, 26 DOE ¶ 87,510, Case No. VWX-0010 (1995); *David Ramirez*, 24 DOE ¶ 87,512, Case No. VWX-0001 (1995). Second, Sena believes that he should be compensated for the money he has removed from his retirement plan for living expenses from the date he retired until the present. Since I need to consider the former, and to receive evidence on that issue, I will also allow the parties to submit information about the latter. I will then issue a supplemental order establishing the total amount for which Sandia is liable. I also encourage the parties to consider settlement negotiations and thereby attempt to resolve all issues related to remedies and any other issues remaining in this case.

This decision and order has been reviewed by the National Nuclear Security Administration (NNSA), which has determined that, in the absence of an appeal or upon conclusion of an unsuccessful appeal, the decision and order shall be implemented by each affected NNSA element, official, or employee, and by each affected contractor.

It is Therefore Ordered That:

(1) The complaint for relief under 10 C.F.R. Part 708 submitted by Richard R. Sena, OHA Case No. VBH-0042, is hereby granted as set forth in paragraphs (2), (3) and (4) below.

(2) Richard R. Sena shall submit a detailed report as described in the remedy section of this decision, showing the amount of attorney fees and costs claimed, including the basis and justification for those legal and other expenses. The report shall be due 30 days after receipt of this decision, and shall be served on the attorney for Sandia Corporation.

(3) Sandia Corporation shall be permitted to submit its comments, if any, on the report described in paragraph (2) above. The comments shall be due 10 days after receipt of the report.

(4) This is an initial agency decision, which shall become the final decision of the Department of Energy granting the complaint in part unless, within 15 days of the issuance of a Supplemental Order with regard

to remedy in this case, a notice of appeal is filed with the Office of Hearings and Appeals Director, requesting review of the initial agency decision.

Case No. VBH-0056

March 6, 2001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner:Jean G. Rouse

Date of Filing:November 7, 2000

Case Number: VBH-0056

This Initial Agency Decision concerns a whistleblower complaint filed by Jean G. Rouse (the Complainant) against her current employer, Westinghouse Savannah River Company (WSRC), under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. WSRC is the management and operating contractor at the DOE's Savannah River Site in Aiken, South Carolina. The Complainant alleges that in June 2000, WSRC changed her job classification in retaliation for her having filed a whistleblower complaint against the company in 1998. As discussed below, I have determined that the Complainant is not entitled to relief because she has not met her evidentiary burden in this case.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or, fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a)(1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an investigation by an investigator from the Office of Hearings and Appeals (OHA), an independent fact-finding and a hearing by an OHA Hearing Officer, and an opportunity for review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Procedural History

In March 1998, the Complainant filed a complaint with WSRC's Office of Employee Concerns alleging that WSRC management had retaliated against her by giving her a poor performance evaluation and denying her a salary increase because she had refused to violate WSRC procedures without written orders from her supervisor. WSRC's Employee Concerns Office investigated the Complainant's allegations in April 1998, found them to be meritorious, and suggested a remedy. WSRC had not implemented its investigator's recommended remedy in May 1998 when the Complainant filed a complaint under 10 C.F.R. Part 708 with the DOE's Office of Employee Concerns at the Savannah River site (1998 Complaint). The 1998 Complaint set forth the same allegations previously advanced by the Complainant in her March 1998 complaint filed with WSRC's Office of Employee Concerns. WSRC settled the 1998 Complaint by implementing the remedy the WSRC's Employee Concerns Office had recommended after its own investigation into the Complainant's allegations. The remedy included (1) giving the Complainant a pay increase retroactive to the date of her 1998 Complaint; (2) upgrading the Complainant's performance evaluation at issue; (3) reassigning the Complainant to a different management team; and (4) purging the Complainant's personnel file of all derogatory and inappropriate information dating back to March 18, 1998. See Electronic Mail Message from Jean Rouse dated June 23, 1998 at 9:08 a.m. to Marcia Delmore, DOE Employee Concerns Manager.

On July 24, 2000, the Complainant filed another Complaint against WSRC with the DOE under 10 C.F.R. Part 708 (2000 Complaint). In her 2000 Complaint, the Complainant alleges that WSRC reclassified her Senior Administrative Assistant position from "exempt" to "Selected Overtime Position (SOP)" in retaliation for her having filed the 1998 Complaint against WSRC. On September 20, 2000, the Complainant requested that the issues raised in her Complaint be investigated by the DOE and that she be afforded a hearing on the matter.

On October 10, 2000, the Director of the Office of Hearings and Appeals (OHA) appointed an investigator to examine the issues raised in the subject Complaint. The investigator promptly conducted an investigation and issued a Report of Investigation on November 7, 2000. In her Report of Investigation, the OHA investigator concluded, inter alia, that the Complainant did not meet her burden of showing that her protected conduct was a contributing factor to a retaliation. On the same day that the OHA investigator issued her Report of Investigation, I was appointed the Hearing Officer in this case.

Shortly after my appointment as Hearing Officer, the parties exchanged discovery. Soon thereafter, the Complainant decided that she did not want to proceed to a hearing and asked that I issue an Initial Agency Decision based on all the information already submitted into the record of the case. (1) See Letter from Jean G. Rouse to Ann S. Augustyn, Hearing Officer (January 4, 2001)(January 4, 2001 Letter). WSRC agreed to forego a hearing on the complaint but requested permission to respond to comments made by the Complainant in her January 4, 2001 Letter. See Record of Telephone Conversation between Michael Wamsted, Counsel for WSRC, and Ann S. Augustyn, Hearing Officer (January 4, 2001); Letter from Michael Wamsted, Counsel for WSRC, to Ann S. Augustyn, Hearing Officer (January 12, 2001). The Complainant declined the opportunity to file a reply to WSRC's response to her January 4, 2001 Letter. See Record of Telephone Conversation between Jean G. Rouse and Ann S. Augustyn, Hearing Officer (January 16, 2001). Accordingly, on January 17, 2001, I canceled the hearing that had been scheduled in the case and advised the parties that I would issue an Initial Agency Decision within 60 days in accordance with 10 C.F.R. §§ 708.24(b) and 708.31.

II. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the Complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate as described in § 708.5, and that such act was a contributing factor to one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on

Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); McCormick on Evidence § 339 at 439 (4th Ed. 1992).

In the case at hand, WSRC stipulated at the investigatory stage of this proceeding that the Complainant made a protected disclosure as defined in 10 C.F.R. § 708.5, but denied that the protected disclosure was a contributing factor to the company's decision to reclassify the Complainant's job position.

B. The Contractor's Burden

If the Complainant meets her burden as set forth above, the burden then shifts to WSRC to prove by "clear and convincing" evidence that the company would have reclassified the Complainant's job position even if she had not made a protected disclosure in 1998. 10 C.F.R. § 708.29. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3.

III. Findings of Fact

The factual findings set forth below are based on the limited information contained in the record of this case. In a typical Part 708 case, the record is developed extensively during the hearing phase of the proceeding. Specifically, the parties can question witnesses about facts material to the case, and the Hearing Officer can assess the credibility of the witnesses by, among other things, observing their demeanor. In addition, useful insights into the working environment at the DOE facility in question and the relationship between managers and employees can often be gleaned from the testimony of witnesses. In this case, the parties elected to forego a hearing. As a consequence, this record is devoid of potentially relevant testimonial evidence, and it is difficult for me to decide what weight to accord to some of the documentary evidence without being able to probe further into statements contained in those documents. Notwithstanding these challenges, I make the following findings of fact based on the limited record before me.

The Complainant began her career at WSRC in a "non-exempt" clerical position of an unknown grade. According to the Complainant, she was promoted to an "exempt" Senior Administrative Assistant position in 1989. See Record of Telephone Conversation between Jean Rouse and Helen Mancke, OHA Investigator (October 19, 2000). It is not known what salary grade the Complainant held in 1989 and whether she received any grade promotions after that date. The record reflects, however, that in 1996 the Complainant was a Grade 30 Senior Administrative Assistant in an "exempt" pay category. See Memorandum from R. L. McQuinn, Operations Manager, Nuclear Materials Stabilization Program to Jean G. Rouse (September 16, 1996). As part of the Complainant's duties as a Grade 30 Senior Administrative Assistant in 1997, she prepared reports that tracked "safety surveillances" for certain pieces of equipment. See Record of Telephone Conversation between Helen Mancke, OHA Investigator, and Jean Rouse (October 19, 2000). In December 1997, the Complainant's management allegedly instructed her verbally to stop preparing the safety surveillance reports. The Complainant refused to comply with the directive absent written guidance because she believed that the DOE had mandated the preparation of these reports during an "Operations Readiness Review" of WSRC. Id.

On March 18, 1998, the Complainant received a low performance evaluation and was denied a salary increase. Id. The Complainant filed a Complaint against WSRC with the company's Employee Concerns Office, alleging that her supervisors rated her as low/poor performer, based not upon her actual job performance, but as "direct punishment" for her having requested written guidance before complying with instructions to violate company procedures. See Memorandum from the Complainant to Mr. Sokolo, WSRC Employee Concern Program (March 20, 1998). A subsequent investigation by WSRC confirmed the Complainant's allegations that her management had retaliated against her after she had refused to

violate established company procedures without written instructions. See Investigative Report prepared by Dennis B. Hurshman (April 8, 1998).

In May 1998, the Complainant filed a Part 708 Complaint with the DOE's Office of Employee Concerns, reiterating the allegations she had raised to WSRC's Employee Concerns Office. See Complaint dated May 20, 1998; Affirmation executed by the Complainant on May 30, 1998. Shortly thereafter (June 1998), WSRC and the Complainant settled the matter to the Complainant's satisfaction. As part of the settlement, the Complainant was assigned to work for a different management team. The Complainant's job title (Senior Administrative Assistant), grade (30), and pay category (exempt) remained unchanged, however.

In the interim, WSRC released the results of an internal audit on February 10, 1998 that concluded, among other things, that there is a risk that some WSRC employees may have been incorrectly classified as "exempt" employees under the Fair Labor Standards Act (FLSA). See Inter-Office Memorandum dated February 10, 1998 from Daniel A. Santucci to Larry L. Myers attaching "Position Classification Audit, 97137206." The internal audit recommended that WSRC perform a complete evaluation for compliance with the FLSA of all positions that had been reclassified at the site since October 1, 1996, and all future employee position reclassifications.

Accordingly, in the fall of 1999 and winter of 2000 WSRC conducted an extensive study of all the duties performed by, among others, employees in the Senior Administrative Assistant positions to determine WSRC's compliance with the FLSA. See Affidavit of Sara S. Jones, Manager, Compensation Design and Implementation, WSRC Human Resource Division at 1 (August 8, 2000) (Jones Affidavit). After the study, WSRC's Director of Human Resources reviewed the results and decided that all Senior Administrative Assistants in the Salary Grade 30, not only those who had been reclassified at the site since October 1, 1996, should be classified as non-exempt for purposes of the FLSA. Id.

The Complainant's position was among those affected by WSRC's decision to reclassify all Senior Administrative Assistants from exempt to SOP. See Inter-Office Memorandum from G.L Watters, Manager, WSRC Compensation Department, to Jean G. Rouse (May 8, 2000). Accordingly, on May 8, 2000, WSRC informed the Complainant in writing that a "review of information from all Senior Administrative Assistants showed that a majority of the work being performed was more similar to that of the Selected Overtime Position (SOP) classification," and that her job position would be reclassified from exempt to SOP. WSRC reclassified the Complainant's Grade 30 Senior Administrative Assistant position and that of 26 other Senior Administrative Assistants in the same grade from exempt to SOP effective June 1, 2000.(2) In addition, WSRC reclassified one Grade 30 Senior Administrative Assistant from exempt to SOP effective August 1, 2000.

IV. Analysis

A. Protected Conduct

As previously noted, WSRC stipulated that the Complainant engaged in protected conduct when she filed her 1998 Complaint against WSRC. As a result, the Complainant does not need to present any evidence on this point.

B. Whether the Protected Conduct Was a Contributing Factor to a Retaliation

The Complainant may prove that her protected conduct was a contributing factor to an alleged act of retaliation, i.e., her reclassification from "exempt" to SOP, by showing that "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in a personnel action." Ronald Sorri, 23 DOE 87,503 at 89,010 (1993), citing McDaid v. Dept. Of Hous. and Urban Dev., 90 FMSR ¶ 5551 (1990); see also County v. Dole, 886 F.2d 147, 148 (8th Cir. 1989) (County). Temporal proximity between a

protected disclosure and an alleged retaliation is sufficient as a matter of law to establish the final required element in a prima facie case for retaliation. See e.g. County, 886 F.2d 147, 148 (8th Cir. 1989).

After reviewing the limited evidence tendered by the Complainant, I have concluded that she has not met her burden of proof in this case for several reasons. First, it is not clear from the record that WSRC's reclassification of the Complainant's job position from exempt to SOP constituted an act of "retaliation" under Part 708. "Retaliation" under Part 708 is defined in relevant part as "an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment)." 10 C.F.R. § 708.2.

According to the record in this case, the reclassification of the Complainant's job did not result in a change in her compensation, salary grade level, benefits, work hours, job title, job description, job duties, work space, quantity and quality of assignments, supervisory chain, or advancement potential. The only discernible consequence of the Complainant's job classification is a potential monetary benefit, not a "negative action," since SOP employees are entitled to overtime pay under the FLSA while exempt employees are not. (3)

Notwithstanding the documentary evidence suggesting that no negative action flowed from WSRC's reclassification of all Senior Administrative Assistants from exempt to SOP, the Complainant contends that there is a social perception within the workplace hierarchy at DOE's Savannah River site that SOP employees are non-professionals. According to the Complainant, SOP positions are viewed as less prestigious than exempt positions at the site. WSRC has acknowledged that this perception is held by some employees at the Savannah River worksite. See Record of Telephone Conversation between Michael Wamsted, WSRC Senior Counsel, and Helen Mancke, OHA Investigator (October 23, 2000).

Whether "loss of prestige" can constitute retaliation involves a fact-bound determination. The evidence in this case is simply not developed enough for me to conclude that any "loss of prestige" the Complainant may possibly have suffered as the result of her reclassification constitutes retaliation for purposes of 10 C.F.R. Part 708. As the record stands, there appears to have been no tangible negative consequence associated with WSRC's reclassification of the Complainant's job from exempt to SOP.

The Complainant also argues that the reclassification of her job should be viewed as a demotion for purposes of Part 708. To support her position, the Complainant points to a May 8, 2000 Memorandum from G.L. Watters notifying her of her reclassification in which the following language appears:

> In 1997, the Internal Oversight Division conducted a study of employees who had been promoted from Selected Overtime Positions (SOP) to exempt positions since the latter part of 1996.

While I can understand how the Complainant can infer from the language set forth above that a change from exempt to SOP might be deemed a promotion, it is not clear from the memorandum whether the promotions referred to therein were career ladder promotions or lateral transfers. Since the Complainant did not provide any documentary or testimonial evidence to support her inference that lateral moves from SOP positions in one grade to an exempt position in the same grade constituted a promotion at WSRC, I cannot find that the converse situation is a demotion.

Finally, the Complainant speculates that WSRC's reclassification of her position from exempt to SOP is the first step toward a demotion or discharge. Since the Complainant has not submitted any documentary or testimonial evidence to support her speculation on this matter, I simply cannot conclude based on the evidence that WSRC's reclassification of the Complainant's job constituted a Part 708 retaliation.

Even assuming for the sake of argument that the Complainant's job reclassification could be considered "retaliation" for purposes of 10 C.F.R. Part 708, I find that the Complainant has provided no evidence to establish that her protected conduct was a contributing factor to her job reclassification. There is no

temporal proximity between the filing and settlement of the Complainant's 1998 Complaint and the reclassification of the Complainant's job position in 2000. Moreover, the facts reveal that the internal audit regarding WSRC's compliance with the FLSA predated even the filing of the Complainant's 1998 Complaint. The reclassifications directed by WSRC were wholesale in nature, affecting many similarly situated employees. These facts suggest to me that there was no connection between the Complainant's protected activities and her subsequent job reclassification. Furthermore, on the basis of the record before me, I cannot infer that the official at WSRC who made the reclassification decision affecting all Senior Administrative Assistants made that decision to retaliate against the Complainant for her having engaged in protected activity.(4)

Finally, even if I were to have found that the Complainant had met her burden of proving by a preponderance of evidence that her protected conduct in 1998 was a contributing factor to her 2000 reclassification, I would find that WSRC has met its burden of showing through clear and convincing evidence that it would have reclassified the Complainant's job position irrespective of her protected conduct. First, WSRC submitted documentary evidence showing that it began studying the classification structure of its workforce for purposes of the FLSA even before the Complainant had filed her 1998 Complaint. Second, WSRC has provided documentary evidence that it reclassified 26 other Senior Administrative Assistants from exempt to SOP on the same day it reclassified the Complainant. While the Complainant believes that WSRC reclassified the 26 other Senior Administrative Assistants to mask its retaliatory motive towards the Complaint, I find that the unrebutted evidence in the record does not support the Complainant's belief in this regard. (5)

V. Conclusion

As set forth above, I have determined that the Complainant has failed to meet her regulatory burden of showing by a preponderance of evidence that her 1998 protected disclosure was a contributing factor to any act of retaliation against her by WSRC. Accordingly, I conclude that the Complainant is not entitled to any relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Jean G. Rouse under 10 C.F.R. Part 708, OHA Case No. VBH-0056, be and hereby is denied.

(2) This is an Initial Agency Decision that shall become the Final Decision of the Department of Energy denying the complaint, unless a party files a notice of appeal within fifteen days after receipt of this Initial Agency Decision.

Ann S. Augustyn

Hearing Officer

Office of Hearings and Appeals

Date: March 6, 2001

(1)The Complainant stated that she decided to waive a hearing in this matter because WSRC would not provide her with the information she requested in discovery. WSRC responded that it has made a diligent effort to supply the Complainant with all the information she requested during discovery. WSRC's counsel also represented several times during the hearing phase of the case that he and WSRC's Human Resources' personnel were amenable to sitting down with the Complainant and going over any documents about which the Complainant had questions. The Complainant elected not to accept WSRC's overtures in this regard.

(2)Of the 26 Senior Administrative Assistants reclassified from a Grade 30 exempt position to a Grade 30 SOP position on June 1, 2000, four were WSRC subcontractor employees, not WSRC employees. The remaining 22 Grade 30 Senior Administrative Assistants, including the Complainant, worked for WSRC. In addition to the 26 contractor and subcontractor Senior Administrative Assistants reclassified on June 1, 2000, one other WSRC employee was reclassified from exempt to SOP on June 1, 2000 when she was demoted from a Grade 32 position to Grade 30 Senior Administrative Assistant position. Finally, WSRC provided evidence during discovery that one Grade 30 Senior Administrative Assistant was not reclassified to SOP because she received a promotion to an exempt Grade 32 position, the Executive Assistant to the President.

(3)It is conceivable that evidence showing that SOP employees are more vulnerable to reductions-in-force than exempt employees might be sufficient in some circumstances to support a claim of retaliation. However, no such evidence was presented in this case.

(4)Had a hearing occurred, the Complainant could have questioned WSRC's Director of Human Resources, for example, about whether he knew about the Complainant's previous Part 708 filing and whether it affected his decision to reclassify all Senior Administrative Assistants at WSRC. While WSRC filed an Affidavit of Sara S. Jones, a Human Resources Manager at WSRC, who attested that she had no knowledge that the Complainant had ever filed a Part 708 Complaint, the record reflects that it was the Director of Human Resources and not the Human Resources Manager who made the pivotal decision regarding reclassification.

(5)The Complainant contends that she has shown WSRC retaliated against her because WSRC reclassified one Senior Administrative Assistant on August 1, 2000. This argument ignores that 25 other Senior Administrative Assistants were reclassified on the same date as the Complainant.

Case No. VBH-0059

December 21, 2001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Hearing Officer Decision

Name of Petitioner: Janet L. Westbrook

Date of Filing: March 20, 2001

Case Number: VBH-0059

This Decision involves a complaint that Janet L. Westbrook (Westbrook) filed under the Department of Energy's Contractor Employee Protection Program against UT-Batelle, LLC, the contractor that manages the Oak Ridge National Laboratory (the Laboratory). That program is codified at Part 708 of Title 10 of the Code of Federal Regulations. 10 C.F.R. Part 708. In her complaint, Westbrook maintains that she was retaliated against and ultimately discharged for making a series of disclosures about radiation safety at the Laboratory.

I. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from any consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Part 708 of Title 10 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; a substantial and specific danger to employees or to the public health or safety; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a). An employee of a DOE contractor who believes she has been discriminated against in violation of the Part 708 regulations is entitled to receive an extensive series of protections. She may file a whistleblower complaint with the DOE. In response to such a complaint, she is entitled to an investigation by an investigator appointed by the Director of the Office of Hearings and Appeals (OHA). 10 C.F.R. §§ 708.21-.23. After the investigator's report on the complaint is issued, an OHA Hearing Officer will generally conduct an independent fact-finding and evidentiary hearing. 10 C.F.R. §§ 708.24-.25. The Hearing Officer will issue a formal, written opinion on the complaint. 10 C.F.R. § 708.31. Finally, a party may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. § 708.32.

II. Factual Background

Westbrook is a former employee at the Laboratory. She received Master of Science degrees from Purdue University in physics and nuclear engineering. Transcript of Hearing (hereinafter referred to as Tr.) at 24. After her full-time education, Westbrook worked for an engineering firm that helped design nuclear power plants. Westbrook then started working for the Laboratory in 1989 as a radiation safety engineer. She worked there for approximately 12 years until she was released as part of a widespread reduction in force on December 1, 2000.

During the 12 years she was employed at the Laboratory, Westbrook was responsible for radiation safety reviews under a principle called ALARA. “The guiding principle behind radiation protection is that radiation exposures should be kept ?As Low As Reasonably Achievable (ALARA),’ economic and social factors being taken into account. This common-sense approach means that radiation doses for both workers and the public are typically kept lower than their regulatory limits.” http://www.hps.org/publicinformation/radfactsheets/ radfact1.html.

From 1996 through 2000, Westbrook:

> disclosed on several occasions to the management of [the] Laboratory . . ., representatives of the U.S. Department of Energy, and other government agencies, her belief that ALARA radiation safety reviews were not performed in cases where [Laboratory] procedures required them, or reviews were performed, but not in accordance with the requirements of [Laboratory] procedures. During this period, Ms. Westbrook further believed and disclosed to [Laboratory] management and others that these alleged procedural violations caused a potential for unnecessary radiation exposure to workers at [the Laboratory].

Joint Stipulation at 1 (August 14, 2001).

Duringt his time period, Westbrook’s supervisor was Dr. Gloria Mei, the head of the ALARA engineering group. Dr. Mei reported to Dr. Ron Mlekodaj, and Dr. Mlekodaj in turn reported to Dr. Steve Sims, who was the Director of the Office of Radiation Protection. Dr. Sims was in that position until October 2000, when there was a general reorganization within the Environment, Safety, Health and Quality Directorate. After October 2000, Dr. Sims became the Deputy Director of the Occupational Safety Services Division of the Directorate. Ms. Carol Scott is the Director of that Division.

On June 8 and 12, 2000, Westbrook met with Ms. Scott to discuss concerns that she had about radiation safety at the lab.(1) Shortly thereafter, in August 2000, Ms. Scott and Dr. Sims decided to reduce the number of ALARA engineers from three to one. As a part of that reduction, they chose to dismiss Westbrook. On September 29, 2000, Ms. Scott provided a written response to Westbrook about the concerns she had raised in their June 2000 meetings. Westbrook’s dismissal was effective December 1, 2000.

III. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish “by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor.” 10 C.F.R. § 708.29. *See* *Ronald Sorri*, 23 DOE ¶ 87,503 (1993).

B. The Contractor's Burden

If the complainant meets her burden of proof by a preponderance of the evidence that her protected activity was a "contributing factor" to the alleged adverse actions taken against her, "the burden shifts to

the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure . . . ." 10 C.F.R. § 708.29. *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence, § 340 at 442 (4th ed. 1992)). Accordingly, in the present case, if Westbrook establishes that she made a protected disclosure that was a contributing factor to an adverse personnel action, the Laboratory must convince me that it would have taken the same actions even if Westbrook had not raised any concerns. *Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 at 89,034-35 (1994).

IV. Whether Westbrook Has Made A Prima Facie Case of Retaliation

Section 708.5 provides that a disclosure is protected if an employee reasonably believes that she is disclosing a substantial violation of a law, rule, or regulation; a substantial and specific danger to employees or to public health or safety; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. 10 C.F.R. § 708.5(a). Such a disclosure must be made to "a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, your employer, or any higher tier contractor." *Id*. In this case, Westbrook claims that Laboratory management chose her for dismissal during the reduction in force because of her long series of protected disclosures, especially the disclosures she made during her June 2000 meetings with Ms. Scott.

There is no dispute that Westbrook disclosed to her employer what she believed to be violations of Laboratory rules governing procedures to be followed when the potential exists for radiation exposure. However, the Laboratory takes the position that no reasonable person, especially a radiation engineer like Westbrook, could have reasonably believed that the problems that Westbrook noted revealed a **substantial** violation of a law, rule or regulation, or a **substantial** and specific danger to employees or the public health and safety. 10 C.F.R. § 708.5(a). The DOE investigator found that Westbrook articulated at least six concerns during her June 2000 meetings with Ms. Scott. Report of Investigation at 3. To make a prima facie case of retaliation, Westbrook must show only one disclosure that is protected under the DOE Contractor Employee Protection Program.

As an initial matter, I note that the preamble to the rule implementing the Contractor Employee Protection Program discussed the requirement that a disclosure be of a substantial nature as follows:

> The imposition of this requirement in § 708.5(a)(1) would not result in the adoption of a subjective test that a whistleblower would have to pass to qualify for protection. As noted in the preamble to the interim final rule, ??substantial violation of law'' is the same standard that is used in the Section 6006 of the Federal Acquisition Streamlining Act of 1994 (FASA), Pub. L. 103–355, codified in 41 U.S.C. 265, and implemented by the regulation found at 48 CFR part 3, Subpart 3.9, ??Whistleblower Protection for Contractor Employees.'' The interim final rule emulated the standard in the FASA because it represents a balanced approach designed to ensure that minor, insubstantial issues do not waste limited resources, so whistleblower protection is available to those workers who legitimately need it.

While DOE rules are designed to husband resources by not providing protection to persons who raise issues of a minor nature, they are not supposed to put an employee at risk that the concern raised would be deemed to be insubstantial when it relates to core DOE business. Issues of radiation safety and following procedures for conducting radiation safety reviews are at the core of DOE's business. Part 708 provides an equitable remedy for restitution to protect members of the DOE contractor workforce from reprisals. As much as Part 708 is about protecting contractor employees, it is also about protecting a culture where information flow is encouraged. Indeed, considering the statutory basis for the rule, the culture of openness is arguably the primary purpose, because it promotes health and safety, and helps check waste, fraud, and abuse.

I will now review a number of the concerns that Westbrook raised in her June 2000 meetings with Ms. Scott. First, the Laboratory cites as insubstantial Westbrook's concern that the Laboratory raised the dosage level to 5 rem(2) per hour before an ALARA review was required to be done, a level that Westbrook noted is significantly higher than one rem per hour used at other DOE facilities. The Laboratory's logic seems to be that since radiation exposure at the laboratory in the past ten years has been substantially lower than permitted, concerns about the health effects of changing individual exposure limits are insubstantial. I reject this logic. This is like saying that we do not have to be so concerned about safety because we have not had an accident in the past ten years. Testimony at the hearing supports a finding that substantial issues were involved. Ms. Scott testified that Dr. Mei (Westbrook's supervisor) raised some concerns about the effect of raising the trigger for conducting a radiation review could have on certain areas of the Laboratory. Tr. at 345. And Ms. Scott believes that it was reasonable to raise these questions and be concerned about raising the limit. *Id*.

Dr. Mlekodaj's testimony (he was Dr. Mei's supervisor) corroborates a finding that raising this concern was reasonable and disclosed a substantial health or safety issue:

> Q: Five seems to me like a lot more than 1.
>
> A: Yes, it is.
>
> Q: Okay. Just wanted to make - -
>
> A: We fought it. That's one where [Westbrook] and I were on the same page. And her boss, [Dr. Mei] and I, we fought it down to the bitter end. But out –
>
> Q: Who wanted it?
>
> A: Some of the operating groups and it appeared like some of - people in another section of Office of Radiation Protection.
>
> Q: Why?
>
> A: In my opinion just to reduce the number of reviews they had to do and the –
>
> Q: Why didn't they want to do reviews?
>
> A: Well, because they didn't – in their words now, not mine, they didn't want to deal with our people. They said that they didn't have the right experience. They slowed them down. They added no value. I don't agree with those statements, but that's –
>
> Q: No, I hear you.
>
> A: -- the things they said.
>
> Q: Were those things the sorts of concerns lobbed at [Westbrook] personally?
>
> A: Oh, I'm sure they were, yes.
>
> Q: Would it be reasonable for a person – well, you agree with her and you all had the same experience. You all think you're being reasonable in thinking that jacking it up to 5 is unreasonable?
>
> A: Yes. We fought it to the bitter end.
>
> Q: Were you worried about worker safety?

A: Sure.

Tr. at 212-13. But after reviewing information, management disagreed with staff and believes that the limit could be raised to 5 rem per hour before a radiation safety review needs to be performed. While experience certainly dictates the need for occasional changes in procedures, limits or actions, it is hard for me to understand why the Laboratory during this proceeding has deemed a professional discussion about the effects a change of that nature may have on the safety of its workers to raise insubstantial issues. Where a radiation safety engineer complains about matters that could lead to higher radiation exposures for workers at the Laboratory, and fellow engineers share her belief, substantial issues are raised. I find this issue to be based on reasonable beliefs and to raise substantial concerns about dangers to employees for purposes of the Contractor Employee Protection Program.(3)

The Laboratory also cites as insubstantial Westbrook's concern that Dr. Sims approved a waiver of Laboratory rules to implement the change from using engineers to technicians in clear violation of written Laboratory procedures. Westbrook testified about a number of separate issues surrounding this matter. First is Westbrook's concern that Dr. Sims did not follow written procedures when he granted the waiver. Second is Westbrook's concern that Dr. Sims was pressured into granting a waiver of standard Laboratory rules to a line organization and therefore circumvented normal Laboratory procedures for the approval of such waivers. And third is her concern that a change from using engineers to lower-trained technicians for certain radiation safety reviews could degrade safety.

Ms. Scott testified that it was reasonable for Westbrook to come to her, as Dr. Sims' supervisor, with her concern that he had violated Laboratory procedures when he approved the waiver. Tr. at 341. She also testified that she believes that Westbrook "truly" believed that Dr. Sims had been pressured by a line program to grant the waiver outside of normal Laboratory procedures. *Id*. The Laboratory has stipulated "Ms. Westbrook reasonably believed that the actions taken by Dr. Sims in granting the waiver violated ORNL procedures 110 and 310." Tr. at 196. However, the Laboratory downplays this action by claiming that the waiver that Dr. Sims approved – allowing safety reviews to be done by radiation technicians working for line management instead of engineers working for the safety organization – was insubstantial and thus could not affect employee health or safety in a negative way.

The Laboratory takes the position that there are no substantial issues raised by allowing radiation technicians who report to the management of line organizations to perform safety reviews instead of engineers working for a central safety organization. However, the testimony on this issue is mixed. While Ms. Scott pointed out that the radiation technicians were Certified Health Physicists who in her opinion are fully capable of doing ALARA reviews, she also noted the following:

Q: Ms. Scott, don't you think that it would be reasonable to assume that if you have a medical problem, a Doctor might be better for you than a Medical Technician?

A: It depends on the extent of your medical problem.

Tr. at 343. That answer shows that Ms. Scott knows that a fully trained doctor, as opposed to a lower trained Medical Technician, may best do the diagnosis of certain medical problems. The same seems both true and reasonable for Westbrook to believe about ALARA reviews. While technicians could reasonably be expected to be fully capable of doing a number of ALARA reviews, engineers might better do others.(4) But it seems clear that it is reasonable to believe that the switch from using engineers to technicians to perform these reviews could significantly affect employee health and safety in the appropriate case. That is not to say that management cannot review the situation and decide that it was willing to accept the risks associated with technicians doing all radiation safety reviews, and I voice no opinion as to whether this change was appropriate. Nevertheless, for purposes of the Contractor Employee Protection Program, I find this concern raises substantial health and safety concerns.

As a part of her case in chief, Westbrook must also show that any one of her disclosures was a contributing factor to her discharge or any other adverse personnel action. In this regard, an OHA Hearing

Officer has concluded:

> A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F. 2d 147, 148 (8th Cir. 1989).

Russell P. Marler, Sr., Case No. VWA-0024 (footnote omitted). It is clear in this case that there was temporal proximity between the June 2000 disclosures and the alleged act of reprisal. The evidence shows that Ms. Scott made the decision as to whom to terminate in her division during the planning phase for the December 2000 reduction in force. That decision was made in August 2000, two months after the eventful meetings between Westbrook and Scott. That two-month period is clearly a period of time within which any reasonable person could conclude that the disclosures made in June could have influenced the personnel action that Ms. Scott took in August of the same year. Thus, Westbrook has met her burden of showing that she made a protected disclosure that, because of temporal proximity, was a factor in her discharge. This showing is sufficient to establish a prima facie case of retaliatory discharge.

V. Whether the Laboratory Has Rebutted That Prima Facie Case

I now turn to the evidence regarding the contractor's burden. In its post-hearing brief, the Laboratory argues that it should not be held liable in this case because there is clear and convincing evidence that it would have discharged Westbrook even absent the protected disclosures.

Testimony at the hearing shows that Westbrook was professional and diligent in the manner in which she performed her job. Nevertheless, Dr. Sims testified that a number of individuals at the Lab called him over the course of many years to complain about Westbrook. Sims testified "[a] recurring theme seemed to be that [Westbrook] would take issues that seemed to be insignificant and continue on with them in a very tenacious manner, and just not let go of these things." Tr. at 362. Sims also received multiple complaints that individuals at the Laboratory would no longer work with her. Tr. at 365-66.

Testimony at the hearing also showed that Westbrook would have been terminated during the December 2000 reduction in force even if she has made no protected disclosures. A human resources generalist, Ronald Honeycutt, testified for the Laboratory about the practices and procedures followed at the Laboratory during a reduction in force. He testified that there were nine reductions in force during the period 1996 through 2000 and that he advised the Occupational Safety Services Division, headed by Carol Scott, about the procedures to follow for the December 2000 reduction in force. Tr. at 70. Honeycutt testified that during the previous eight reductions in force during the period 1996 through 1999, many employees in the Office of Radiation Protection, the predecessor to the Occupational Safety Services Division, were discharged and that the head of the Office, Dr. Steven Sims, would have decided whom to terminate. Tr. at 67. Dr. Sims chose no individual in the ALARA group for termination in the eight reductions in force. Tr. at 68-69. Honeycutt also testified about charts that were made purporting to show ranking factors for the ALARA engineers. Those charts purported to list the factors underlying management's decision as to which employee to let go in the December 2000 reduction in force.

> The thing that I do is to look at, once they've established a structure, looking at the peer groups of the people that would be impacted. In other words, if you have five people performing a function, and you only have funding for two people, and all these people are in a common peer group as defined by the process, work with [management] to gather the data and look at the forms they need to complete, the information they need to, you know, put on the

> forms and once they have completed that and they've filled out the forms, then my role is to become somewhat of a - - instead of assistance with them, and look at organizational development, but a devil's advocate of the data. Reviewing the data that they've recorded on individuals to see if, you know, when I read this, it means that to me, you know. Explain that to me, how do you justify the differences in that. We go through that dialogue and then take the paperwork to the review committee. This is not like we did in the morning, afternoon and the evening. It's over a time frame, and then the review committee's established. We bring outside individuals, people who have not participated at that point to review the same documentation.

Tr. at 71. The forms that were completed show that, for the three ALARA engineers in the peer group that included Westbrook, six criteria were to be considered in the retention decision: 1) Possession of Critical Skills, 2) Performance Reviews, 3) Skills for Current Position, 4) Transferability of Skills, 5) Length of Service, and 6) Time in Current Position. Admin. Record at 226. Two of the engineers were given a "low retention" rating, while one was given a "medium retention" rating. Westbrook was one of the two who was given a low retention rating. There is no apparent weight factor that was assigned to each criterion.

The two managers who were primarily responsible for the reduction in force in this area were Carol Scott and Steven Sims, and they were candid in describing how individuals were picked for retention. Both testified that Kelly Beierschmitt, Director of the Environment, Safety, Health & Quality Directorate, told them when UT-Batelle assumed responsibility for the Laboratory in April 2000 that ALARA reviews would have to move to being a service that was charged to the programs that used them. Sims testified that:

> Dr. Beierschmitt made that decision [that the Alara Engineering Group was to be a Charge-out function and not get any money from overhead].
>
> The first time that I ever saw him – again, when preparing for this, I looked at my notes, and the first time I ever met him was on February the 10th of the year 2000.
>
> He came to my office and we discussed a wide variety of things, and one of the things that he told me that day was that this would be the last year that the Alara Engineering Group would be paid from out of overhead.

Tr. at 372. Sims also noted that Laboratory management had discussed moving the ALARA Engineering Group from an overhead-based function to a charge-out function "during the ESH&Q Re-Engineering effort in 1996 and, I think, actually went on in to 1997." *Id*. Sims also testified that despite the fact that there were eight previous reductions in force between 1996 and 2000, no one in the ALARA Engineering Group was laid off. Tr. at 368. He testified that he resisted efforts in 1996 to change the ALARA Engineering Group funding from overhead to a charge-out basis because "the people would not support that at that particular time" and as a result, the employees in the ALARA Engineering Group would lose their jobs. Tr. at 372-73. He also noted that the reason there was a reduction in force in December 2000 was:

We had a new Organization that came in, and the specific thing that changed in the past year that made that different was that they were really going to cut the budget by a tremendous amount.

> The thing that really did it for the RAD [Radiation Protection] Organization was the fact that I was told by the new administration that came in very early on – actually, before they took over – that the year that we were currently in at that time would be the last year that the Alara Group was funded out of overhead.
>
> They said that they were going to be a Charge-out function.

Tr. at 369.

Beierschmitt confirmed that he had told his subordinates that he wanted to move services in the Directorate from an administrative function for budget purposes to a charge-out function. Tr. at 259. As a charge-out function, the office doing a particular project would pay for any services provided by the ALARA Engineering Group. However, Beierschmitt denied making the decision to require that ALARA engineering services be charged-out. Tr. at 259-60. Nevertheless, given the fact that Sims made contemporaneous notes of his February 2000 meeting with Beierschmitt and believed from that conversation that the ALARA Engineering Group must be funded on a charge-out basis, Tr. at 385, it seems clear that the decision to fund the ALARA Engineering Group on a charge-out basis occurred before Westbrook made her protected disclosures in the June 2000 meetings with Ms. Scott.

The Sims testimony and the Scott testimony are clear on this point. After considering historical information about the amount of time ALARA engineers had been able to charge to programs, and reflecting on their own knowledge of the engineers' work, both Scott and Sims thought that they would be able to charge to other programs the work of only two ALARA engineers, the engineer who had supervisory experience and one of the three others. In deciding which of the three ALARA engineers to keep, Scott and Sims appear to have had only one consideration in mind: who among the three would be able to charge out his cost. Westbrook was not in that category. One engineer had charged out one-third of his time that year, and the office using his services had already indicated that it would agree to pay for one-half of his time in the coming year. No office had expressed a similar willingness to pay for Westbrook's time. In fact, Sims testified that over several years line officials who had difficulties with dealing with Westbrook had contacted him with negative comments. Tr. at 361-66. *Compare* *Eugene J. Dreger*, Case No. VBH-0021 (February 7, 2000) *affirmed*, Case No. VBA-0021 (June 27, 2000). Several asked for her removal from projects. Tr. at 366. Given that history, Scott and Sims did not believe that project offices would be willing, in effect, to hire Westbrook to perform ALARA safety reviews. Thus, it was easy for Scott and Sims to focus on the one engineer for whom they already had a commitment from a project office to pay for one-half of his time. In the end, Scott and Sims decided that they would retain that engineer and dismiss the other two. Their testimony in this respect was clear and convincing. That, in a nutshell, is the reason why Westbrook was discharged. (5)

VI. Conclusion

The record convinces me that Westbrook's discharge would have happened even if she had made no protected disclosures. Her discharge occurred because (i) senior management required the cost associated with positions in her group to be charged to parts of the Laboratory that utilized their services, (ii) management believed that it might be able to charge out time associated with two ALARA engineer positions, and (iii) frictions between potential customers and Westbrook meant her time was the least likely to be able to be charged out to customers. Thus her discharge would have occurred even in the absence of any protected disclosure.

The record clearly indicates that Westbrook may at times have been a difficult person to deal with. Nevertheless, the record also shows that she sincerely believed the issues she raised could affect the safety and health of workers at the Laboratory. When she had concerns, she brought them to her line management for resolution. When that was not forthcoming, or when the response did not assuage her concerns, she brought them to the company's employee concerns program. When she was not successful there, she finally went to the DOE's employee concerns program. She allowed line management the opportunity to correct issues within their purview, and went to the company's concerns program before seeking help from DOE. That is the type of behavior that DOE policy has attempted to encourage, and it should be commended. Contractor employees should not be concerned that the company will retaliate against them for this. They are protected against this type of reprisal. In the present case, I am convinced, by the clear and convincing evidence presented during this proceeding, that Westbrook would have been terminated during the reduction in force that occurred in December 2000 even if she had made no protected disclosures.

Accordingly, I will deny Westbrook's request for relief under 10 C.F.R. Part 708.

It is Therefore Ordered That:

(1) The complaint for relief under 10 C.F.R. Part 708 submitted by Janet L. Westbrook, OHA Case No. VBH-0059, is hereby denied.

(2) This is an initial agency decision, which shall become the final decision of the Department of Energy unless, within 15 days of issuance, a notice of appeal is filed with the Office of Hearings and Appeals, in which a party requests review of this initial agency decision.

Roger Klurfeld

Hearing Officer

Office of Hearings and Appeals

Date: December 21, 2001

(1) These disclosures are described in the section of this opinion that discusses whether Westbrook has made a prima facie case of retaliatory discharge.

(2) A rem is "the dosage of an ionizing radiation that will cause the same biological effect as one roentgen of X-ray or gamma-ray exposure." http://www.m-w.com/cgi-bin/dictionary.

(3) I voice no opinion as to whether it was appropriate to raise this value to 5 rem per hour.

(4) It is also interesting to note that not all engineers could perform all reviews at the same level of competence. There was testimony that Westbrook was the only ALARA engineer who could run certain elaborate computer codes that were necessary for some of the reviews. Admin. Record at 226.

(5) Whether this comports with the rules governing reductions in force is not in issue in this proceeding, since it is not an appeal of the dismissal action.

Case No. VBH-0060

November 1, 2001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner:Robert Burd

Date of Filing:March 27, 2001

Case Number: VBH-0060

This Decision addresses the complaint filed by Robert Burd (Complainant) against his former employer, Mason and Hangar Corporation (the employer), pursuant to the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Complainant alleges that the employer wrongfully terminated him for raising safety concerns. For the reasons set forth below, the complaint will be granted.

I. Procedural History

Complainant filed his Part 708 complaint on October 13, 2000 with the DOE Albuquerque Operations Office (DOE/AOO). At all times relevant to the complaint, the employer was the primary management and operating contractor for the DOE's Pantex facility (Pantex) in Amarillo, Texas, where Complainant worked. On January 22, 2001, the DOE/AOO forwarded the complaint to the Office of Hearings and Appeals (OHA) for an investigation followed by a hearing.

On February 1, 2001, BWXT replaced the employer as the management and operating contractor at Pantex. BWXT agreed to assume the employer's defense to the allegations contained in the complaint. Unless otherwise noted herein, assertions raised by BWXT on behalf of the employer will be attributed to the employer.

On March 27, 2001, the OHA investigator issued her report of investigation. On July 26, 2001, the hearing convened. At the hearing, Complainant testified, presented 3 witnesses and submitted 24 exhibits (denoted by numbers). The employer presented 3 witnesses and submitted 11 exhibits (denoted by letters).(1)

II. Findings of Fact

From January 1998 until his termination in September 2000, Complainant worked for the employer as a radiation safety technician (rad tech) in the Non-MAA Section of the Radiation Safety Division at Pantex. The Non-MAA Section engages in activities involving nuclear weapons parts. At all times relevant to the complaint, Complainant's Operations Manager and immediate supervisor was Henry Ornelas.

Complainant and Ornelas' relationship was less than amicable. Both employees had strong personalities and were candid with their opinions. They argued with each other several times over the years. One argument, which led to the termination of both employees, forms the basis of this proceeding.

The incident occurred on Friday, September 8, 2000. At approximately 8 a.m., Complainant and two other rad techs, Kendra Bridges and Phil Franks, were seated in preparation for a meeting in the rad technicians' area. They began discussing the whereabouts of Complainant's partner, Russell West. Bridges revealed to Complainant and Franks that at that time, West was working an overtime shift and had been working for approximately 24 consecutive hours, save for a pre-dawn, 2 hour break. While they were talking, Ornelas approached. He immediately became agitated and made a statement to the effect that overtime issues were "none of their business." Complainant responded that it was unsafe to work for such a long period of time and that the handling of overtime in West's situation was "stupid." Ornelas replied, "Are you calling me stupid?" From there, the conversation quickly became heated, and Complainant's and Ornelas' voices grew louder and louder until Complainant finally told Ornelas to "shut up." Ornelas then ordered Complainant to accompany him to the office of their Department Manager, Wayburn Scott Wilson. At first, Complainant hesitated, repeatedly asking "why." After Ornelas twice reiterated the order, Complainant agreed, and they proceeded toward Wilson's office, with Ornelas following closely on Complainant's heels.

Wilson was not there, however, so Ornelas grabbed Complainant's arm to lead him to the office of their Operations Coordinator, Richard Jones. As the employees approached and entered Jones' office, they were both yelling. The cramped space in Jones' small office forced Complainant and Ornelas to stand close to each other, virtually face to face. They remained standing and continued to yell, despite Jones' request that they calm down and explain the situation. The parties dispute what happened next, but the evidence shows that Complainant stepped toward Ornelas. This action prompted Ornelas to use his chest to bump Complainant away, and in response, Complainant yelled "Don't bump me, Hank." Jones then inserted himself between the employees and again admonished them to calm down. Ornelas finally stepped aside and attempted to telephone Security, while Complainant asked him if he wanted to go to the Human Resources Office. Jones then ordered Complainant to return to the rad technicians' area. Complainant complied, and the altercation ended.

Jones later reported the altercation to Wilson. On the following Monday, September 11, 2000, Wilson and Michael Knight, Manager of the Radiation Safety Department, reported the altercation to Peter Selde, the Division Manager. As discussed below, after various consultations, the decision to terminate Complainant "rested with Mr. Selde.(2) With Selde's approval, Knight and Chris Passmore, another member of radiation management, launched an investigation into the altercation, as well as the overtime issue.

On or around September 18, 2000, Knight and Passmore presented an investigation memo to Selde (the September 18 memo). Attached to the September 18 memo were written statements from Complainant, Ornelas and Jones, summaries of oral interviews with them, and summaries of oral interviews with other rad techs who witnessed the portion of the argument that occurred in their meeting area. In their written statements, Ornelas and Jones agreed that Complainant had moved toward Ornelas before Ornelas bumped him away. However, in his written statement, Complainant made no mention of moving toward Ornelas; instead, he stated that he and Ornelas were "gripping [sic] at each other in close quarters." Exhibit (Exh.) F.

As set forth in the September 18 memo, Knight and Passmore found that (1) Complainant told Ornelas to "shut up"; (2) Complainant "approached Ornelas and got ?face to face' with him"; and (3) "Ornelas pushed Complainant off of him." Exh. F. They further concluded that Complainant and Ornelas' conduct on September 8, 2000 constituted "clear violations" of the Pantex Employee Manual ("the Manual") and Pantex Bulletin 869 (Bulletin 869). Exh. F. The Manual prohibits "general," "safety," and "security" misconduct and lists examples of each. Bulletin 869 sets forth a "zero tolerance policy" regarding physical and non-physical confrontations. The first section of Bulletin 869 provides for automatic discharge of employees who engage in physical confrontations (Bulletin 869(1)). The second section provides for discipline up to and including discharge of employees who engage in non-physical confrontations (Bulletin 869(2)).(3) The September 18 memo did not specify the type of confrontation in which Complainant or Ornelas engaged.

In the following days, Selde consulted several people regarding the appropriate course of action. First, on September 22, 2000, Selde, Knight and Passmore met with Michael Soper, a Labor Relations representative. Pantex procedures require that managers consult Labor Relations when contemplating formal discipline for an employee. During that meeting, Selde requested that Knight further investigate the duration and circumstances leading to the escalation of the confrontation between Complainant and Ornelas.

On September 25, 2000, Knight presented Selde with a second investigation memo (the September 25 memo). In the September 25 memo, which is based upon a follow-up interview with Jones, Knight concluded that (1) the confrontation in Jones' office lasted 6-8 minutes, with Complainant and Ornelas "face to face" for about 1-2 minutes; and (2) Complainant "advanced on Ornelas and got in his face," before Ornelas bumped him away. Exh. G.

Later on September 25, 2000, Selde, Jones, Wilson, Knight, and Soper met with Robert Rowe, the Human Resources Director. During that meeting, Knight, Wilson, and Jones advised Selde that Bulletin 869 did not require termination for either employee; Soper and Rowe advised that Bulletin 869 required termination for both.

Selde next consulted the general manager of Pantex at the time, Dr. Benjamin Pellegrini. Selde sought Pellegrini's position regarding Bulletin 869, since it had been issued and signed by Pellegrini's predecessor. Pellegrini advised Selde that he supported strict enforcement of the policy.

Finally, on September 27, 2000, Selde met with the Personnel Evaluation Board (PEB). Pantex procedures require the PEB to review termination decisions. The PEB consisted of 10 members, including Soper, Rowe, and representatives from the employer's Employees Concerns Office and legal department. Also present as witnesses were members of radiation management, including Jones, Wilson, Knight and Chris Cantwell. Neither Complainant, nor Ornelas attended the meeting, and besides Jones, no other witnesses to the altercation attended. PEB members had been given for review a copy of the September 18 and 25 memos and all attachments, including Complainant and Ornelas' written statements.

The PEB first discussed Ornelas. After short deliberation, Selde recommended that Ornelas be terminated, and the PEB unanimously concurred. Finding that Ornelas engaged in a physical confrontation, by chest-bumping Complainant, and insubordination, by disregarding Jones' order to settle down, the PEB agreed that Bulletin 869(1) called for Ornelas' termination. Ornelas' personnel file contained evidence of two prior disciplinary actions, including a verbal counseling and a documented warning.(4)

The PEB next discussed Complainant. After extended deliberation, Selde recommended that Complainant be terminated, and again, the PEB unanimously concurred. Finding that Complainant engaged in a non-physical confrontation with Ornelas and two acts of insubordination, once by telling Ornelas to "shut up," and again by ignoring Jones' initial order to settle down, the PEB agreed with Selde that Complainant's conduct fell within the purview of Bulletin 869(2). Although Bulletin 869(2) provides for, but does not mandate, termination, the PEB and Selde agreed that Complainant's discharge was warranted, because he was the initial aggressor in the altercation with Ornelas and repeatedly insubordinate. Complainant had no prior disciplinary actions in his personnel file. Except Selde, every radiation safety manager present at the meeting had recommended a lesser form of discipline for both employees.

The following day, September 28, 2000, Selde presented Complainant and Ornelas with draft termination statements, which restated the employer's investigatory findings regarding the September 8 incident. Given the choice between accepting the termination statements or resigning, both employees resigned.

On October 13, 2000, Complainant filed a Part 708 complaint, alleging that the employer effectively terminated him for raising safety concerns regarding overtime practices. The employer does not dispute that it effectively terminated Complainant, but posits that it would have terminated Complainant for violating Bulletin 869, regardless of whether Complainant made a protected disclosure. Complainant seeks reinstatement, back pay, reimbursement of reasonable costs and expenses and interim relief in the form of

reinstatement, pending the outcome of an appeal.

III. Applicable Legal Principles

The DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708, provides an avenue of relief for contractor employees who experience retaliations as a result of making protected disclosures. The program provides for reinstatement, back-pay, transfer preference and such other relief as may be appropriate.

Section 708.29 requires an employee to show by a preponderance of the evidence that (1) he made a protected disclosure or participated in a protected proceeding, and (2) the protected disclosure or conduct was a contributing factor to an alleged retaliation. Preponderance of the evidence is proof sufficient to persuade the finder of fact that a proposition is more likely true than not when weighed against the evidence opposed to it. *Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990).

If an employee makes the required showing under Section 708.29, then the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure. The clear and convincing standard requires a degree of persuasion higher than a preponderance of the evidence, but less than beyond a reasonable doubt. *Hopkins*, 737 F. Supp. at 1204 n.3.

IV. Analysis

A. The Complainant's Burden

1. Whether Complainant Made a Protected Disclosure

The first issue is whether Complainant made a protected disclosure for purposes of Part 708. I find that he did.

Under Section 708.5, a protected disclosure includes information conveyed by an employee to a DOE official or his employer, which the employee reasonably and in good faith believes reveals a substantial violation of a law, rule or regulation; a substantial and specific danger to employees or to public health or safety; or fraud, gross mismanagement, gross waste of funds, or abuse of authority.

Complainant made a protected disclosure on September 8, 2000 (the protected disclosure).(5) That morning, Complainant revealed information to his employer that he reasonably and in good faith believed revealed a substantial and specific danger to employees or public health or safety. More specifically, Complainant raised a concern to Ornelas that working excessive overtime was unsafe.

Although the employer maintains that Complainant was not attempting to articulate a safety concern, but rather was complaining about overtime in general, the record indicates that sincere safety concerns motivated Complainant to speak. Indeed, in recalling the September 8 incident, Ornelas twice recounted that Complainant specifically described excessive overtime practices as "unsafe.(6)

In addition, there is ample evidence that Complainant reasonably believed excessive overtime presented a substantial and specific danger. Bridges testified that the risks of contamination involved in handling nuclear weapons parts can only be exacerbated when a rad tech works while fatigued.(7) Stating his belief that Complainant raised a valid safety concern, Selde testified that employees who work more than 16 consecutive hours "are not alert, they represent an increased risk of injury to themselves or the weapons system.(8) Soper testified that he believes Complainant raised a valid safety concern.(9)

The employer contends that even if Complainant articulated a safety concern, any protected disclosure is

"preempted by his contemporaneous conduct.(10) This argument muddles the distinction between Complainant's prima facie case and the employer's affirmative defense. Complainant's conduct would not "preempt" a protected disclosure; instead, it bears upon the issue of whether the employer would have terminated Complainant absent the protected disclosure, as discussed below.

Based upon the foregoing, I find that Complainant made a protected disclosure on September 8, 2000.

2. Whether the Protected Disclosure Contributed to a Retaliation

I next examine whether Complainant has shown that the protected disclosure contributed to a retaliation. Complainant maintains that the protected disclosure contributed to his termination. As discussed below, I agree.

Section 708.12 defines "retaliation" as "an action . . . taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions, or privileges of employment) as a result of the employee's disclosure . . . ." As stated above, the employer admits that Complainant was effectively discharged, and a discharge clearly constitutes an adverse employment action.

In order for an adverse action to constitute a "retaliation," however, a complainant must show that he made a protected disclosure that contributed to that adverse action. A protected disclosure may be considered a contributing factor to an adverse action where the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure factored into such action. *Charles Barry DeLoach*, 26 DOE ¶ 87,509 (1997); *Ronald Sorri*, 23 DOE ¶ 87,503 (1993). Moreover, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989).

In this case, every person involved in the decision to terminate Complainant knew or had constructive knowledge of the protected disclosure. It is undisputed that Selde, who after consultation with other personnel, made the decision to discharge Complainant, (11) was aware of the protected disclosure.(12) In addition, every member of the PEB that decided to discharge Complainant had been given for review a copy of the September 18 memo, attached to which was Ornelas' written statement that Complainant had "mentioned that it was not safe to work all night long and then have to work the next day." I therefore find that the PEB members had constructive knowledge of the protected disclosure.

In addition, there is a close time nexus between the protected disclosure and Complainant's discharge. The employer terminated Complainant on September 28, 2000, only 20 days after the September 8 incident. The actual or constructive knowledge of the individuals involved in the decision to terminate Complainant, coupled with the temporal proximity between the protected disclosure and his discharge, is sufficient to permit a reasonable person to conclude that the protected disclosure was a contributing factor to his discharge. Therefore, Complainant has established a prima facie case of retaliation.

B. The Employer's Burden

The burden therefore shifts to the employer to show by clear and convincing evidence that it would have terminated Complainant in the absence of the protected disclosure. The employer asserts the following: (1) strict enforcement of Bulletin 869's zero tolerance policy is necessary to ensure the security of Pantex; (2) Complainant had fair notice of the policies set forth in Bulletin 869; (3) the employer conducted a fair investigation into the events of September 8, 2000; (4) the investigation revealed that Complainant engaged in two acts of insubordination and a non-physical confrontation, as prohibited under Bulletin 869; (5) given the severity of Complainant's conduct, Bulletin 869 required Complainant's termination; and (6) the employer applied Bulletin 869 fairly and without improper motives to Complainant. In response, Complainant (1) challenges the integrity of the investigation; and (2) maintains that his termination was a

form of discipline substantially disproportionate to the discipline imposed on other employees for similar conduct. As discussed below, although the employer set forth some evidence that it would have terminated Complainant absent a protected disclosure, it has not satisfied the clear and convincing standard required by Part 708.

As Complainant and the employer recognize, the determination as to whether the employer would have terminated Complainant in the absence of the protected disclosure requires an historical examination of how the employer has disciplined "similarly situated" employees, i.e., employees who have engaged in confrontations and insubordination. (13) In making that determination, I first address whether the employer fairly investigated Complainant's conduct and characterized it as confrontational and insubordinate. As discussed above, the employer relied upon Knight and Passmore's investigation in finding that Complainant engaged in a non-physical confrontation and repeated acts of insubordination. In its draft termination statement to Complainant, the employer explained:

> [T]elling your Operations Manager to "shut up" and your repeated disregard of your Operation Coordinator's direction to lower your voice and calm down, each constitute gross insubordination. Moreover, your advancement, nose-to-nose, with your Operations Manager was both blatantly disrespectful, and in clear violation of Plant work rules, including [Bulletin 869(2)].(14)

Although Complainant does not dispute that he told Ornelas to "shut up" and initially disregarded Jones' order to calm down, Complainant contends that he did not "advance nose-to-nose" toward Ornelas while in Jones' office. Complainant maintains that the confined space of Jones' office, not aggression or a motive to intimidate, forced him to stand within inches of Ornelas. Complainant believes that Jones, who was close friends with Ornelas, reported a version of the September 8 incident that was inaccurate and slanted against Complainant. He further opines that, as evidenced by their heavy reliance upon Jones' statements in their investigation, members of radiation management teamed against him to drive Selde and the PEB toward a discharge decision.(15)

I find that the employer conducted a thorough investigation and fairly characterized Complainant's behavior as confrontational and insubordinate. Knight and Passmore interviewed or obtained written statements from every essential witness to the September 8 incident before presenting their findings to Selde, and, in turn, the PEB. Their heavy reliance upon Jones' description was reasonable, because Jones was the only third party present during the height of the altercation, which occurred in his office. Complainant's argument that Jones made statements designed to protect Ornelas is unconvincing. Jones reported a version of the incident that would later result in the discharge of both employees. Moreover, the September 18 investigation memo presented to Selde and the PEB acknowledges that the "exact details of what transpired differs from person to person," and attaches Complainant's written version of the September 8 incident, as well as the written statements of Jones and Ornelas. Furthermore, regardless of whether Complainant intended to "advance" toward Ornelas in a threatening manner, several rad techs testified that both Complainant and Ornelas employed aggressive mannerisms. In short, I am convinced that the employer conducted an impartial investigation and fairly concluded that Complainant's behavior, although non-physical, was confrontational and insubordinate.

I next examine how the employer has disciplined employees for engaging in confrontations and insubordination. As discussed below, even accepting the employer's description of Complainant's behavior, the employer failed to show with clear and convincing evidence that it consistently discharged employees for similar misconduct.

Because the employer relied upon Bulletin 869 in deciding to discharge Complainant, I focus upon the employer's treatment of similarly situated employees between August 23, 1999, the effective date of Bulletin 869, and September 28, 2000, the date of Complainant's discharge. The employer produced a list entitled "All Disciplines for Misconduct" (the disciplinary list) which shows that between August 23, 1999 and September 28, 2000, the employer disciplined employees for hostile, disruptive behavior

approximately 18 times. Exh. 30.(16) As reflected on the disciplinary list, the employer utilized two forms of discipline short of discharge, which for purposes of simplicity shall be referred to, in ascending order of severity, as Level 1 and Level 2.(17)

Three of the above-described 18 employees, including Complainant, Ornelas and a third employee found to have engaged in a non-physical confrontation (the third terminated employee), were discharged. The remaining employees received either a Level 1 or Level 2.(18) Following are excerpts from written statements the employer issued to the disciplined employees.

(1) Level 1: You and a coworker were discussing pens being sold . . . . A second coworker commented, recommending the pens. You responded . . . in a repeatedly loud, profane, and abusive manner. Exh. 30 at 9.

(2) Level 2: You poked your finger in [a coworker's] chest [in an attempt to engage him in discussion]. This encounter, which you thought was a joke, was not received that way by the employee. Exh. 30 at 10.

(3) Level 2: You became verbally abusive toward [coworkers]. This included raising your voice at employees and using an obscene remark in reference to one of the individuals. Exh. 30 at 10.

(4) Level 2: You addressed [a coworker] in a loud, confrontational manner, verbally ejecting her from your office. Exh. 30 at 11.

(5) Level 2: You initiated a verbal confrontation with a coworker . . . stood over him and chastised him for approximately seven (7) minutes, during which time you shook your finger in his face and voiced profanities concerning this individual, and in comparing him to management. . . . you exacerbated this situation by challenging [the coworker after he suggested a physical action] to try to make good on it. Exh. 30 at 14.

(6) Level 2: You entered [a coworker's] office, verbally objecting to [a management decision] . . . returning repeatedly to reemphasize your protest . . . you told him to advise [another supervisor] that you would "get even," that [he] would regret his action, and you threatened his . . . removal . . . . Your actions . . . were both threatening and disrespectful to those in authority, and constitute serious misconduct. Exh. 30 at 14.

(7) Level 2: You profanely advised [another coworker] that if you were in management you would choke him. On a recent occasion, you threatened another coworker with bodily harm . . . . Exh. 30 at 14.

(8) Level 1: You verbally confronted [coworkers] with your opinions of their shortcomings. [You were instructed to meet with a supervisor later] but to drop it until then. You subsequently went to one of the coworkers' offices and pursued your issue where your tone of voice was overheard by [another individual]. The manner in which you expressed yourself was inappropriate and confrontational and your willful disregard of [a] direction to you is unacceptable. Exh. 30 at 21.

(9) Level 2: You questioned your supervisor . . . in a belligerent manner, i.e., "What's all this [expletive] about us having to do this stuff to help the guys testing the rams alarms?" . . . You continually interrupted him, exclaiming, ". . . yeah, yeah, yeah, that's [expletive]." [You again interrupted repeating the expletive two more times, and] then asserted that management just "lies." Exh. 30 at 27.

Following is an excerpt from the disciplinary statement issued to the third terminated employee:

[After your supervisor saw you take your second morning break and reminded you that the rule is one morning break, you] confronted [him] in his office. You demanded, in a loud agitated voice and pointing your finger at him, to stop "harassing" you. You [then] approached [two other coworkers] in a similar tone and manner. You [then] proceeded back to [your supervisor's] office and, still agitated, persisted in questioning him as to why he challenged your break. Exh. 30 at 21.

The employer maintains that when employees have engaged in insubordinate and confrontational conduct rising to the level of that engaged in by Complainant, they have been terminated. The employer primarily relies upon Bulletin 869(2) in justifying Complainant's termination and maintains that it applied the zero tolerance policy fairly and without discrimination to Complainant. Besides pointing to Ornelas and the third terminated employee, the employer presented evidence showing that in 1998, it terminated two security force personnel pursuant to a zero tolerance policy in effect for only the guard force at the time. Exh. C and D. That policy provided the model for Bulletin 869. The evidence shows that those employees engaged in separate, serious confrontations, one involving repeated racial epithets and the other involving a physical push and challenge to fight. The employer distinguishes Complainant from the above employees who received a Level 1 or Level 2, by maintaining that his non-physical conduct was particularly egregious. Selde testified that "because [he] felt [Complainant] was the aggressor in the case [by advancing toward Ornelas] and that he had failed to comply with Mr. Jones's direction to stop the argument that termination [was appropriate].(19) The Labor Relations representative, who was a member of the PEB, testified that Complainant's behavior differed from that of lesser disciplined employees, because he escalated the conflict with Ornelas and was repeatedly insubordinate. (20)

Complainant contends that his behavior was not unusual for the generally truculent Pantex environment. Indeed, he maintains that he did nothing wrong, was the victim of aggression not the aggressor, and should not have been terminated in any manner. To the extent his behavior was confrontational and insubordinate, he argues that the disciplinary list shows that similarly situated employees have escaped termination. He distinguishes himself from Ornelas and the third employee, both of whom had received a Level 2 prior to termination, because he had never received a formal discipline of any kind.

Complainant further argues that the disciplinary list is not exhaustive, and that numerous confrontations and acts of insubordination were handled "in-house," without even reaching Level 1. Complainant, Bridges and Franks testified that they had heard of several non-physical, verbal confrontations that, to their knowledge, went unpunished. Michael Ford, a member of the radiation safety department, testified that he personally had been involved in a verbal confrontation but received only a verbal counseling.(21) Knight, who was Ford's supervisor at the time, recognized in testimony that Ford was not formally disciplined, but stated that in his opinion, Complainant's behavior was more severe than Ford's. The Labor Relations representative testified that management should consult Labor Relations when it is contemplating formal discipline for an employee, but he further recognized that management may decide not to notify Labor Relations of certain incidents and instead handle them "in-house.(22)

Based upon the foregoing, I find that the employer has not shown by clear and convincing evidence that it would have terminated Complainant absent the protected disclosure. As an initial matter, the employer failed to show with clear and convincing evidence that it consistently invoked Bulletin 869. The employer's own descriptions of several of the above-listed offenses as "confrontational" and "disrespectful to management," indicates that those offenses should have triggered Bulletin 869, yet Selde and Soper testified that they first invoked the zero tolerance policy against Complainant and Ornelas.(23) Moreover, the record indicates that employer conflicts were a near daily occurrence at Pantex, yet several incidents escaped formal review.

The employer also failed to show that it applied Bulletin 869 in a consistent manner. The disciplinary list shows that the termination of Complainant was substantially disproportionate to discipline imposed for similar misconduct in the past. In the nearly two years following Bulletin 869's implementation, numerous employees engaged in non-physical confrontations and insubordination, but besides Complainant, only one other employee had been terminated. All others received only a Level 1 or Level 2.

The employer's attempt to distinguish Complainant from lesser disciplined employees is unconvincing. Although it may be true that Complainant's conduct differed from that of other employees, because he took a step toward Ornelas and was repeatedly insubordinate,(24) one would be hard-pressed to find any two altercations that are factually identical. There is no clear and convincing evidence showing that the general nature of Complainant's conduct is significantly distinguishable from that of other employees who

had "willfully disregarded" instructions and engaged in "verbal confrontations" but were spared termination. The record shows nothing particularly egregious about Complainant's conduct that would warrant singling him out from other employees who disobeyed, repeatedly cursed and yelled at, and threatened violence toward their supervisors or coworkers, but received lesser penalties. See *Dreis & Krump Manufacturing Co., Inc. v. NLRB*, 544 F.2d 320, 329 (7th Cir. 1976) ("communications occurring during the course of otherwise protected activity remain likewise protected unless . . . so violent or of such serious character as to render the employee unfit for further service.").

In addition, I am unpersuaded by the employer's argument that its termination of Complainant is supported by the terminations of Ornelas, the third terminated employee, and the two security force personnel. The employer's assertion that Ornelas was most similarly situated to Complainant is controverted by its own characterization of Ornelas' behavior as a "physical confrontation" and conclusion that therefore he was subject to automatic termination under Bulletin 869(1). By the employer's own reasoning, Ornelas was in an entirely different category from Complainant, who engaged in a non-physical confrontation subject to Bulletin 869(2).(25) With regard to the third terminated employee, evidence that out of numerous employees who had engaged in similar misconduct, only the third terminated employee and Complainant were discharged falls short of establishing with convincing clarity that the employer applied Bulletin 869(2) in a consistent manner. Furthermore, evidence that two security force personnel were terminated offers the employer little support for its position, since the employees were terminated under a different policy and one of the terminated employees had engaged in a physical confrontation.

Although the employer has set forth some evidence showing that it would have terminated Complainant absent the protected disclosure, the clear and convincing standard requires more. I therefore find that the employer has failed to meet its burden in this case and Complainant is entitled to relief as set forth below.

IV. Relief

Section 708.36 sets forth the types of relief that may be granted in initial agency decisions. The relief includes: (1) reinstatement; (2) transfer preference; (3) back pay; (4) reimbursement of reasonable costs and expenses, including attorneys fees reasonably incurred to prepare for and participate in proceedings leading to the initial decision; and (5) such other remedies as are deemed necessary to abate the violation [including reinstatement as] interim relief, pending the outcome of any request for review of the decision by the OHA Director. Complainant requests all of the above.(26) I have reviewed the parties' post-hearing briefs regarding damages and grant relief as follows.

a. Reinstatement and Transfer Preference

BWXT shall offer Complainant a position that is equivalent to the one he occupied when he resigned.

b. Back pay

Within 30 days of the date of this order, Complainant shall provide BWXT with a report which calculates the weekly pay he received for a 40 hour shift. The report shall calculate the back pay as the sum of that weekly pay for every week until BWXT offers him an employment position at the rate equal to the rate he would be earning if he had not been discharged. Interest shall accrue on the back pay at the rate of ½ percent per month starting December 1, 2001. Interest shall compound monthly.

c. Reasonable Costs and Expenses Associated with Prosecuting the Complaint

Complainant seeks over $7,000 for hotel and housing costs, $3,800 in moving and travel costs, and $756.81 in utility costs, all related to his job relocation. These costs are not "reasonably incurred" in bringing his Part 708 complaint, are beyond the scope of relief Part 708 was intended to grant and therefore will be denied. See *Ramirez v. Brookhaven National Laboratory*, Case No. LWA 002, 23 DOE ¶

87,505 (1994). Complainant also seeks to recover $1,883.44 in "time off." However, all of that time is subsumed in the back pay calculation. Complainant also seeks $11,020.21 in attorneys fees and expenses through July 27, 2001. BWXT stipulates that Complainant has submitted pre- billing worksheets with sufficient itemization of attorney time and expenses.

d. Interim Relief

I have determined that the circumstances do not warrant granting Complainant interim relief in the form of reinstatement. Complainant may seek back pay and other fees and expenses incurred between the date of this order and the outcome of an appeal.

V. Conclusion

As set forth above, I find that Complainant met his burden of establishing by a preponderance of the evidence that he made a protected disclosure that contributed to his termination. I further find that the employer has failed to show by clear and convincing evidence that it would have terminated Complainant absent a protected disclosure. Accordingly, under Part 708, Complainant is entitled to relief.

It Is Therefore Ordered That:

(1) The request for relief filed by Robert Burd under 10 C.F.R. Part 708, OHA Case No. VBH- 0060, is hereby granted as set forth in Paragraphs 2 through 4 below.

(2) BWXT shall reinstate Complainant, provide him with back pay, and reimburse him for the reasonable costs and expenses.

(3) Within 30 days of the date of this order, Complainant shall file a report providing a calculation for back pay. In the event there is no immediate reinstatement offer, the report shall be updated every 90 days.

(4) Within 60 days of the date of this order, BWXT shall pay Complainant attorney fees and expenses, as requested in Complainant's post-hearing brief regarding damages.

(5) This is an initial agency decision which shall become a final decision of the Department of Energy unless, within 15 days of the date of this decision, a party files a Notice of Appeal with the Director of the Office of Hearings and Appeals.

(6) This decision and order has been reviewed by the National Nuclear Security Administration (NNSA), which has determined that, in the absence of an appeal or upon conclusion of an unsuccessful appeal, the decision and order shall be implemented by each affected NNSA element, official or employee and by each affected contractor.

Helen E. Mancke

Hearing Officer

Office of Hearings and Appeals

Date: November 1, 2001

(1) In addition to live witnesses, Complainant submitted the deposition transcript of Phil Franks, and the employer submitted the deposition transcripts of Henry Ornelas and Peter Selde.

(2) Employer's post-hearing brief at 9.

(3) Bulletin 869, which was issued to all Mason & Hanger employees by W.A. Weinreich, then General Manager, on August 23, 1999, specifically states in relevant part:

> Effective immediately, I am instituting a ?zero tolerance' policy regarding confrontations on the Plant site. This means: (1) Any employee proven to have engaged in a physical confrontation with another person will be discharged; (2) Non-physical confrontations will result in appropriate disciplinary action, up to and including discharge .

Exh. 1.

(4) The verbal warning was for failure to control "horseplay" during a work-related class he attended. The documented warning was for leaving work early without permission and submitting an inaccurate time card.

(5) Complainant also maintains that he raised safety concerns to Ornelas in November 1999 and August 2000. I need not address those disclosures here, however, because I find that he made a protected disclosure on September 8, 2000 that contributed to a retaliation. The protected disclosure occurred just prior to the incident that resulted in the dismissal of Complainant.

(6) See Transcript of Ornelas deposition, Exh. K at 15 ("[Complainant said,] 'He shouldn't have been here all night. It's unsafe.'"); Ornelas' written statement to Knight, Exh. F ("[Complainant] mentioned that it was not safe to work all night long and then have to work the next day.").

(7) Hearing transcript at 146-47.

(8) Selde deposition transcript at 56, 60.

(9) Hearing transcript at 40.

(10) Employer's post-hearing brief at 6.

(11) Employer's post-hearing brief at 7.

(12) In testimony, Selde admitted that he knew Complainant had raised "safety concerns" regarding overtime. Selde deposition transcript at 56.

(13) Contrary to the employer's assertion, the relevant group of similarly situated employees is not the other rad techs who raised safety concerns.

(14) Draft termination statement from Selde to Burd, Sept. 28, 2000.

(15) Hearing transcript at 219-20.

(16) The disciplinary list is a compilation of 146 written statements issued to employees for various types of "misconduct" occurring between June 1, 1999 and June 13, 2001 (the disciplinary list). The disciplinary list details a broad range of misconduct, from sleeping on duty, to misuse of email, to violent, physical confrontations. Of the 146 incidents of misconduct, 84 occurred between August 23, 1999 and September 28, 2000, and of those 84, 18 resulted from conduct that reasonably may be characterized as confrontational in nature.

(17) The employer utilized two disciplinary tracks, one for employees considered exempt under the Fair Labor Standards Act and one for members of the Metal Trades Council (MTC) and non-bargaining, non-exempt employees. Exempt employees were subject to, in ascending order of severity, (1) a documented warning, (2) a letter of reprimand, or (3) termination. MTC members and non-bargaining, non-exempt employees, such as Complainant and Ornelas, were subject to, in ascending order of severity, (1) a written

reminder, (2) a decision-making leave, which is tantamount to a suspension (DML), and (3) termination. Because the distinction between the two tracks is irrelevant for purposes of this case, Level 1 includes documented warnings and written reminders, and Level 2 includes letters of reprimands and DMLs.

(18) The employer produced evidence showing that it discharged an employee in November 2000. However, the employer's own characterization of that incident as a physical confrontation indicates that the discharged employee engaged in conduct more severe than that engaged in by Complainant. In addition, I find the circumstances of terminations that occurred after Complainant filed his complaint more relevant than terminations that occurred before.

(19) Selde deposition transcript at 38.

(20) Hearing transcript at 21-37.

(21) Hearing transcript at 200-01.

(22) Hearing transcript at 241.

(23) Selde deposition transcript at 39.

(24) Notably, the repeated acts of insubordination at issue here occurred during a single, heated event and thus this case is distinguishable from other cases finding that repeated insubordination justified an employee's discharge, where the employees was insubordinate numerous times over several months. See *Jiunn S. Yu*, VBH-0028 (July 1999).

(25)Complainant also distinguishes himself from Ornelas and the third terminated employee, because unlike them, Complainant had a clean personnel record prior to termination. However, I find the distinction of no import. Soper, the Labor Relations representative who was a member of the PEB, credibly testified that while the existence of prior disciplinary actions in an employee's file may influence what type of action the employer will impose upon him next, the absence of a prior disciplinary action has no effect. Hearing transcript at 107. Soper's testimony is supported by the fact that most of the Level 2 disciplines cited above were issued to employees who had never received a Level 1.

(26)Complainant requested reinstatement in his prehearing brief and reiterated the remainder of his requests in a post-hearing brief regarding damages.

June 27, 2002

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Bernard F. Cowan

Date of Filing: November 27, 2001

Case Number: VBH-0061

This Initial Agency Decision involves a whistleblower complaint filed by Mr. Bernard F. Cowan under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his complaint, Mr. Cowan contends that reprisals were taken against him after he made certain disclosures concerning mismanagement and safety violations to DOE officials and to his employer, Argonne National Laboratory-West (ANL-W), a contractor for the DOE's Chicago Operations Office (DOE/CH). Mr. Cowan contends that ANL-W retaliated against him by (i) referring to him in an Occurrence Report, (ii) failing to select him for a training specialist position, (iii) including undue criticism of him on a performance evaluation, (iv) transferring him to a job that deprived him of compensation, and (v) suspending him for three days without pay.

I. Summary of Determination

Based on my analysis of the record in this proceeding, I find that Mr. Cowan made at least one protected disclosure that was proximate in time to adverse personnel actions taken against him by ANL-W. Other adverse personnel actions were taken after Mr. Cowan initiated his Part 708 complaint. Under these circumstances, the DOE's strong commitment to defending whistleblowers imposes the significant requirement that ANL-W show by clear and convincing evidence that, in the absence of these protected disclosures, it would have taken the same negative personnel actions against Mr. Cowan.

As indicated below, I find that ANL-W management's findings concerning Mr. Cowan in a June 2000 Occurrence Report did not constitute an action with respect to employment under the definition of retaliation contained in Section 708.3. I find that Mr. Cowan's failure to be selected for a training specialist position, criticism of Mr. Cowan contained in a 2000 interim performance appraisal, the June 2000 transfer of Mr. Cowan from one laboratory facility to another, and Mr. Cowan's January 2002 suspension for three days without pay were each an adverse personnel action.

After concluding that there were four adverse personnel actions that were close in time to a protected disclosure or occurred during the pendency of a Part 708 Complaint, I analyze whether ANL- W has demonstrated by clear and convincing evidence that it would have taken those personnel actions absent the protected disclosure or protected activity. I find that, with the exception of its selection for the training specialist position, ANL-W has failed to establish by clear and convincing evidence that it would have taken these negative personnel actions absent Mr. Cowan's protected disclosures.

Accordingly, I find that the ANL-W committed reprisals against Mr. Cowan, and that it should be required to take restitutionary action.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect such "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise take any adverse personnel action against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a)(l), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations are entitled to receive protections. They may file a whistleblower complaint with the DOE. As part of the proceeding, they are entitled to an investigation by an investigator appointed by the Office of Hearings and Appeals (OHA). After the investigator's report on the complaint is issued, they are entitled to an evidentiary hearing before an OHA Hearing Officer. The Hearing Officer issues a formal, written opinion on the complaint. Finally, they may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. History: Mr. Cowan's Complaint and Relevant Events Concerning his Employment at ANL-W

Mr. Cowan filed his Part 708 complaint with the Manager of Employee Concerns of the DOE's Chicago Operations Office (DOE/CH) on March August 25, 2000. On February 13, 2001, OHA Director George B. Breznay appointed an OHA Investigator to conduct an investigation of Mr. Cowan's complaint. On November 27, 2001, the OHA Investigator issued her Report of Investigation (the ROI). Mr. Cowan's employment history at ANL-W may be summarized in the following manner. In 1974, Mr. Cowan was hired as an Engineering Technician Sr. in the Operations Division (OD) at ANL-W. In 1989, he was promoted to a Training and Procedures Specialist in the Training Group of ANL-W. He later voluntarily transferred from the Training Group to the Fuel Conditioning Facility (FCF) as an Engineering Technician Sr.

The events relevant to Mr. Cowan's Part 708 complaint began on March 13, 2000, when Mr. Cowan wrote a letter to the Manager, FCF, expressing a number of workplace concerns. He had meetings with the Operations Division Director and other ANL-W managers on March 28, 2000 and April 7, 2000 to further discuss his concerns. In April 2000, Mr. Cowan and other ANL-W employees at the FCF were transferred to ANL-W's Sodium Processing Facility (SPF). Mr. Cowan immediately protested this transfer and was permitted by ANL-W management to return to the FCF.

In May of 2000, a Training Specialist position which was vacated by retirement was posted. The record reflects that Mr. Cowan, along with six others, applied for the position. He was not hired for the position.

On May 18, 2000, ANL-W management directed Mr. Cowan to "lock out, tag out" (LO/TO) certain FCF cell lighting circuit breakers.(1) During a routine inspection on June 6, 2000, some of these circuit breakers

were discovered to be locked improperly in the “on” position, although the tags indicated that they were “off”. An ANL-W occurrence report concluded that the breakers were incorrectly positioned and tagged at the time that the LO/TO was installed by Mr. Cowan. In meetings and communications with ANL-W managers, Mr. Cowan insisted that he had correctly performed the LO/TO of these circuit breakers and that he believed someone had deliberately reset them in the “on” position. He requested an investigation of the matter. On December 21, 2000, the DOE’s Argonne Area Office - West (AAO-W) requested ANL-W to investigate the alleged criminal act of someone purposefully reconfiguring the system lineup under the LO/TO performed by Mr. Cowan. In a report issued on January 31, 2001, the ANL-W concluded that, while it was possible for the alleged act to have taken place, the allegation could not be substantiated. On April 6, 2001, the AAO-W issued its investigation report concerning the LO/TO incident and reached the same conclusions.

On June 28, 2000, ANL-W management again transferred Mr. Cowan, under protest, to the SPF, where he remained until March 5, 2001 when management transferred Mr. Cowan to ANL-W’s radiological facility (FASB).

On November 21, 2000, as part of his annual performance appraisal, Mr. Cowan received an interim evaluation employee performance for the period 4/1/00 through 6/23/00. This interim evaluation gave Mr. Cowan a low rating compared to those he generally received and criticized Mr. Cowan for becoming “preoccupied with administrative problems.”

Finally, on January 7 and January 9, 2002, Mr. Cowan sent messages addressed “To: Distribution to Argonne National Laboratory employees.” ANL-W management concluded that portions of these e- mails violated laboratory policies. ANL-W management disciplined Mr. Cowan with a three day suspension, without pay, on January 10, 13, and 14, 2002.

C. The ROI’s Findings

The ROI issued on November 27, 2001 finds that in March and April, 2000, Mr. Cowan brought safety and management concerns to the attention of ANL-W management and to the DOE/CH Employee Concerns Manager. The ROI finds that it is undisputed by ANL-W management that Mr. Cowan made these disclosures and that he reasonably believed that his concerns were of the type described in Section 708.5. The ROI also finds that there was a proximity in time between the protected disclosures and the following alleged adverse personnel actions:

(1) Poor performance evaluations and minimal merit increases in performance appraisals;

(2) Denial of promotions to Mr. Cowan, and failure to select him for a Training Specialist position;

(3) Mr. Cowan’s transfer under verbal protest from the FCF to the SPF in June 2000; and

(4) ANL-W’s assignment of responsibility to Mr. Cowan in an occurrence report for failing to correctly “lock out, tag out” the FCF’s cell lighting circuit breakers on May 18, 2000.

The ROI finds that Mr. Cowan appears to have met his burden of showing that his protected disclosures were a contributing factor to these alleged acts of retaliation as required under 10 C.F.R. §§ 708.5 and 708.29. Section 708.29 of the Part 708 regulations states that once a complainant has met the burden of demonstrating that conduct protected under section 708.5 was a contributing factor to the contractor's acts of retaliation, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." 10 C.F.R. § 708.29. The ROI finds that the available evidence indicated that ANL-W had met its burden of showing by clear and convincing evidence that it would have taken the same adverse personnel actions in the absence of the protected disclosures. ROI at 11. Specifically, the ROI finds that the available evidence establishes

that the criticism of Mr. Cowan's job performance contained on one of his evaluations was reasonable and accurate; that ANL-W acted reasonably in selecting another applicant for the position of Training Specialist; that Mr. Cowan's transfer to the SPF was a reasonable exercise of managerial discretion by ANL-W; and that ANL-W's assignment of the "lock-out tag-out" error to Mr. Cowan appeared to be factually accurate and did not result in any financial loss or loss of promotion opportunity to Mr. Cowan.

Mr. Cowan and Counsel for ANL-W exchanged and submitted responses to the findings of the ROI on December 19, 2001 and January 2, 2002, respectively. In these briefs, both parties objected to findings made in the ROI. ANL-W disputes the ROI's finding that Mr. Cowan made disclosures that are protected under Part 708. Mr. Cowan's brief indicates his belief that many of the findings and conclusions in the ROI are inaccurate.(2) In a January 8, 2002 letter to the parties, I identified certain relevant areas that I believed would help to focus the issues in dispute in this proceeding. With respect to whether Mr. Cowan had made a protected disclosure, I referred to page 7 of Mr. Cowan's March 2000 memorandum to ANL-W management. I stated that Mr. Cowan's reports concerning an operator who is a HAZ-MAT responder who resists wearing a respirator appeared to be protected disclosures concerning health and safety issues. In addition, I stated that the ROI indicates that Mr. Cowan told management officials following the May 18, 2000, Lock Out/Tag Out incident, that another operator should have verified the correctness of the tags, but that no verification was done. I stated that this reporting of a violation of a safety protocol to ANL-W management and to the DOE appeared to constitute a protected disclosure under Section 708.5.

The parties also exchanged and submitted extensive documentary evidence, reply briefs, and witness lists. On March 5 and March 6, 2002, I convened an evidentiary hearing (the Hearing) at which a total of eleven witnesses presented testimony. The testimony at the hearing focused on efforts by Mr. Cowan and counsel for ANL-W to show whether the disclosures of Mr. Cowan referred to in my January 8 letter should be viewed as protected disclosures for purposes of Part 708. Mr. Cowan and counsel for ANL-W also presented testimony concerning whether ANL-W's alleged adverse personnel actions listed above, as well as its 2001 transfer of Mr. Cowan to the FASB and its three day suspension of Mr. Cowan in January 2002, were or were not adverse personnel actions and whether Mr. Cowan's alleged protected disclosures were contributing factors to these actions.

Following the receipt of post-hearing submissions by the parties, I permitted counsel for ANL-W to comment on the appropriateness of evidentiary material submitted by Mr. Cowan along with his post-hearing brief. Upon receipt of these comments on April 29, 2002, I closed the record of the proceeding.(3)

III. Legal Standards Governing This Case

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish

> by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both Mr. Cowan and ANL-W. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the

evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the risk of error is allocated roughly equally between both parties. *Grogan v. Garner*, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake).

B. The Contractor's Burden

If I find that Mr. Cowan has met his threshold burden, the burden of proof shifts to the ANL-W. ANL-W must prove by "clear and convincing" evidence that it would have taken the same personnel actions regarding Mr. Cowan absent the protected disclosure. "Clear and convincing" evidence is a more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus if Mr. Cowan has established that it is more likely than not that he made a protected disclosure that was a contributing factor to an adverse personnel action taken by ANL-W, ANL-W must convince me that it clearly would have taken this adverse action had Mr. Cowan never made any communications concerning violations of unsafe or insecure practices and procedures at the FCF.

IV. Analysis

A. Mr. Cowan Made Protected Disclosures

In its filings and through witness testimony at the hearing, counsel for ANL-W argued vigorously that Mr. Cowan has made no disclosures that should be considered protected for purposes of Part 708. I have reviewed this carefully, and find that these arguments must be rejected. As discussed below, I find that the record in this proceeding supports Mr. Cowan's assertion that he made protected disclosures to the ANL-W management and/or the DOE in March and June 2000.

1. Mr. Cowan's March 2000 statements about a Fellow Employee Raised Significant Safety Concerns.

In a memorandum dated March 28, 2000 entitled "Whistleblower Declaration - concerns", Mr. Cowan provided the following information in a section entitled "Emergency Response Team":

> While assigned to the facility system operations, date is uncertain, management informed the crew that one of the operators had a problem with wearing a respirator, and management is working with him to overcome the problem. This operator is a HAZ-MAT responder and part of the re- entry team.
>
> During a FCF evacuation this operator refused to be part of the re-entry team back up. The FAS assigned me his duty as team member.
>
> This incident is not well standing for management to place this operator in an assignment that might jeopardize his safety, team member safety, or the safe operation of a re-entry.
>
> This operator still operates in the capacity of HAZ-Mat responder and re-entry member, with responsibility of responding on back shift when assigned.

March 28, 2000 memorandum from Mr. Cowan to Mr. G. L. Lentz, Operations Division Director, ANL-W, at p. 7.

On April 12, 2000, ANL-W management organized an investigation team of ANL-W employees to investigate and evaluate the issues raised by Mr. Cowan, including this HAZ-MAT responder issue. In its Investigation Report issued on May 18, 2000, the team made the finding that the operator in question, Mr. XXXXXX, has been medically certified/qualified for HAZ-MAT and Respirator for several years (most recently in November 1999) and has no medical restrictions in this regard. The team also found that being a member of a re-entry team is voluntary for all employees on-site.

See May 18, 2000 Investigation Report at 16-17 (attached to ANL-W's February 15, 2002 submission in this proceeding). The team's other findings and recommendations are discussed below.

In its December 19, 2001 response to the ROI, ANL-W contended that Mr. Cowan never made any protected disclosure for purposes of Part 708. In a January 22, 2002 reply brief, ANL-W argued that Mr. Cowan's contentions regarding the HAZ-MAT responder were not protected disclosures because his contentions were not accurate.

> . . . Mr. Cowan's statements concerning [the HAZ-MAT responder] are not true. The individual does not and has not since the Laboratory learned of the problem, been assigned as a HAZ MAT responder, nor is he a re-entry team member. He does not have nor has he had the responsibility of responding on the back shift. Therefore there is not and never has been a substantial and specific danger to employees or to the public health and safety in order to fall under the requirements of 10 C.F.R. 708.5.

ANL-W Reply Brief at 3. In its Post-Hearing Brief, ANL-W explained why it believed that the testimony at the hearing supported its position.

> Mr. Cowan's allegation . . . involved an ANL-W employee, [Mr. XXXXXX], who was qualified as a Hazardous Material Responder, but who was claustrophobic and had trouble wearing a full face respirator for long periods of time. The Laboratory first became aware of Mr. XXXXXX's problem in September 1997 -- a fact which Mr. Cowan does not dispute. [Hearing Transcript (TR) at] page 109, lines 20- 23. Mr. Cowan testified that he waited 2.5 years to report his concerns regarding Mr. XXXXXX to Laboratory management. [TR] page 114, lines 19-23. Mr. Evans,[ANL- W's Associate Division Director for Operations for the Facility Division, with oversight responsibility for the FCF], testified that the Laboratory was already aware of Mr. XXXXXX's problem when Mr. Cowan brought it to the attention of management. [TR] page 291, lines 21-24. Mr. Evans also testified that an individual's participation on a re-entry team was completely voluntary; that the Laboratory had taken steps to ensure that Mr. XXXXXX was not required to participate on re- entries, and that in the event of a hazardous spill requiring a re-entry, it would be the INEEL Fire Department who would perform those duties. [TR] page 290, lines 16-22, page 291, lines 6-9; page 292, lines 2-7; page 293, lines 11-14. Mr. Evans also testified that Mr. XXXXXX was evaluated by the medical staff and passed respirator training. [TR] page 279, line 25; page 280, line 1. Mr. Evans testified that there are things a HAZ MAT Technician could do that did not require wearing a respirator, such as "... draining, dragging, bringing Haz Mat spill containment materials ... So you can be a HAZ MAT Technician and, and not really, and, and function as a HAZ MAT Technician and not really be required to wear a respirator..." [TR] page 228, lines 20-25, page 289, lines 1-8. Mr. [Robert] Belcher, [Operations Supervisor at FCF], also testified that participation on a re-entry team was purely voluntary. [TR] page 216, lines 20-23.

ANL-W's Post-Hearing Brief at 4-5. ANL-W concludes that disclosure of the HAZ MAT incident by Mr. Cowan was not a protected disclosure because some levels of ANL-W management knew of the situation regarding Mr. XXXXXX 2.5 years before Mr. Cowan raised his concerns, and because it believes that the evidence shows that ANL- W had dealt effectively with the issue, and there was no substantial and specific safety issue as required under 10 C.F.R. § 708.5. *Id.*, at 5.

I am not convinced by ANL-W's contentions. Section 708.5(a)(2) states that an employee is protected from retaliation when he has provided to his employer information that he reasonably believes reveals "a substantial and specific danger to employees or to public health and safety." These conditions appear to have been met with Mr. Cowan's March 2000 disclosure concerning the HAZ MAT operator. As an initial matter, I reject ANL-W's assertion that this was not a covered disclosure because ANL-W management was already aware of Mr. XXXXXX's medical condition. Mr. Cowan made his disclosure to Mr. Lentz, ANL-W's Operations Division Director. At the Hearing, Mr. Lentz testified that he first became aware of the potential problem concerning Mr. XXXXXX when Mr. Cowan included that information in his March 28, 2000 memorandum to him. TR at 473. Mr. Cowan's disclosure therefore brought Mr. XXXXXX's medical condition and its potential impact on his HAZ-MAT activities to the attention of a higher level of management than had previously been aware of this situation.

I also find that the record supports a finding that it was reasonable for Mr. Cowan to believe that Mr. XXXXXX's medical condition made his participation in HAZ-MAT reentries a substantial and specific danger to employee health and safety. In his March 28, 2000 memorandum, Mr. Cowan states that Mr. XXXXXX's problem with wearing a respirator "might jeopardize his safety, team member safety, or the safe operation of a re-entry." Memorandum at p. 7. Under questioning by ANL-W counsel at the Hearing, Mr. Cowan answered that a substantial health and safety violation existed if Mr. XXXXXX volunteered to participate in a HAZ-MAT reentry and then became claustrophobic in his respirator.

> A. Okay, the violation comes in when, when you actually call him in to, to perform a duty and he will maybe accept it, and me, as a response team member, understands that this guy's got claustrophobia. Even though he can wear a respirator, we go in and all of a sudden he loses it. He's in trouble. I'm in trouble. And this is a safety concern, and it should be addressed and brought to the point. That date [in 1997] that he [refused to participate in a re-entry] brought it to [attention] that this is a concern and it should be addressed.
>
> Q. Okay, but -- And on that date Management didn't require him to go in, did they?
>
> A. No, they didn't.
>
> Q. So --
>
> A. They were upset.
>
> Q. So they were, when they were made aware of, of, of his concern about wearing this respirator, they took appropriate safety measures by not requiring him to go in?
>
> A. I'm not going to say it was appropriate methods. He shouldn't have been there in the first place, and so inappropriate would be that they had a person qualified to an area that posed safety problems, safety to him and safety to everybody that's going in, and everything around him. That's a, that's a compromise of safety, the way I look at it.

TR at 120-121. I do not believe there can be any dispute that if someone is working as part of a team in a chemically or radioactively contaminated area, and is suddenly compelled to remove his respirator, he would pose a substantial safety risk to himself. Moreover, such an action would be dangerous to other team members who are relying on his participation and support. That it was reasonable to believe that this situation was dangerous is supported by the findings of the investigative team appointed by Director Lentz. Their May 18, 2000 Investigation Report indicates that, once Mr. XXXXXX's situation came under the scrutiny of an investigation, management determined that Mr. XXXXXX's HAZ-MAT activities should be restricted until his medical condition improved. They also removed the requirement that shift operators like Mr. XXXXXX be qualified as HAZ-MAT technicians.

> 3. On May 15 [2000], this committee was advised that the operator [Mr. XXXXXX] has been temporarily restricted from the use of a full face respirator in the event of an emergency

> response. The operator will continue full face respirator use during normal work assignments as required. When the operator advises management that this medical condition has been improved, this restriction will be re-evaluated. The operator will continue to maintain Rad Worker II qualifications which include fit testing for respirator use. HAZ-MAT technician qualifications which include fit testing for respirator use. HAZ-MAT technician qualifications are being dropped and are not required in order to function as a shift operator.

May 18, 2000 Investigation Report at 16-17 (attached to ANL-W's February 15, 2002 submission in this proceeding). These actions taken by management indicate that Mr. XXXXXX's participation as a HAZ-MAT responder was viewed as a sufficiently serious safety concern by ANL-W management at that time to warrant restricting his HAZ-MAT activities and changing the HAZ-MAT qualifications for his work as a shift operator. They therefore support a finding that in March 2000 it was reasonable for Mr. Cowan to believe that Mr. XXXXXX's continued participation in the HAZ-MAT responder program constituted a substantial safety and health concern.

While testimony at the Hearing indicates that further study of the situation, and action by management, may have substantially alleviated the safety concern in this area, this factor is not relevant to my inquiry under Part 708, which is to analyze the reasonability of Mr. Cowan's concerns when he reported them in March 2000.

Finally, I reject ANL-W's argument that there was no real danger posed by Mr. XXXXXX's condition because HAZ-MAT reentries were volunteer activities, and Mr. XXXXXX was always free to refuse to participate. Prior to Mr. XXXXXX's March 2000 disclosure, it is not clear to what extent employees were aware of the voluntary nature of this program. In its Report, the investigation team specifically recommends that

> 1. All [Nuclear Facilities Operators] should be reminded that being qualified as a HAZ-MAT responder is not a job requirement and is purely voluntary on their part.

Id. at 17. The team also felt that it was important to encourage employees to come forward and report any problems they might have in participating as a HAZ-MAT responder.

> 2. Additionally, the NFO's (or anyone else) who feels he/she may have a possible problem or concern with wearing any protective equipment should immediately advise their supervisor, and management should take whatever action (e.g., temporary removal from that area of their responsibility, referral to medical, etc.) is determined to be business-prudent to resolve the matter in a mutually satisfactory manner.

Id. These recommendations appear to address a concern that, at the time Mr. Cowan made his disclosure, some ANL-W employees felt pressured to ignore health problems and participate as HAZ-MAT responders. Moreover, it is clear from the May 18, 2000 Investigation Report that until May 2000, being a qualified HAZ-MAT technician was required in order to function as a shift operator (and receive the higher wages paid to shift operators). Report at 17. This also would have been likely to induce an employee to participate in HAZ-MAT reentries, whether or not he felt comfortable doing so. Management's May 2000 decision to remove HAZ-MAT technician qualifications for shift operators appears to acknowledge and address this problem.

Accordingly, for these reasons I find that it was reasonable for Mr. Cowan to believe, in March 2000, that Mr. XXXXXX's continued participation in the HAZ-MAT responder program constituted a substantial and specific danger to employee health and safety.

2. Mr. Cowan's Statements Concerning the Lock-out Tag- out Incident

With respect to the Lock Out/Tag Out incident, the ROI finds that on May 18, 2000, Mr. Cowan, as part of

his assigned duties, placed lockout/tagout (LO/TO) tags on the FCF's cell lighting circuit breakers. On June 6, 2000, some of these circuit breakers were later found to be locked in the "on" position and incorrectly tagged. In my January 8, 2002 letter to the parties, I stated that the ROI indicates that Mr. Cowan told management officials following the discovery of the incorrect tags, that another operator should have verified the correctness of the tags, but that no verification was done. I stated that this reporting of a violation of a safety protocol to ANL-W management and to the DOE appeared to constitute a protected disclosure under Section 708.5 and invited further discussion of this issue in the pre-hearing submissions and at the hearing. *Id.*

In his response to the ROI, Mr. Cowan asserted that at a June 6, 2000 meeting with ANL-W managers concerning the incorrect LO/TO, he

> stated and submitted signed testimony . . . that he requested verification from an operator in the control room. Both operators in the control room informed Mr. Cowan that a verifier was not required. Mr. Cowan upon receiving the information proceeded with caution in performing the process of de-energizing and/or verifying [that] the appropriate circuit breakers were in the requested position per the Lockout Tagout Authorization (LTA) form, installing locking devices, and attaching appropriate tags.

Cowan Response to ROI at item number 70. In its Reply Brief, ANL-W asserts that Mr. Cowan did not report any violations in this matter.

> After the breakers had been set, another operator, not Mr. Cowan, made the discovery that the breakers were improperly set, reported it to management, and management discovered during the following investigation that there had been no verification of the setting. Mr. Cowan cannot therefore, claim protection under 10 C.F.R. Part 708.

ANL-W Reply Brief at 3. At the Hearing, under questioning by the Hearing Officer, Mr. Cowan testified that he had not disclosed to management that there had been no verification of the LO/TO because they had already discovered that fact.

> THE HEARING OFFICER: . . . [Y]ou were aware at the time that the verification was not done. Did you report that at some point during the investigation of the incident to anyone?
>
> MR. COWAN: During the critique, or the investigation?
>
> THE HEARING OFFICER: Well, the critique or -- When was the first time you spoke about the verification?
>
> MR. COWAN: Well, the first -- This is real kind of difficult because the verification itself was identified by Management themselves.
>
> THE HEARING OFFICER: Uh-huh.
>
> MR. COWAN: Because they instructed that I, I could, and then it was found in another investigation that there were several FASs that didn't understand the red-tag verification part of it. But that was mentioned at that critique that, you know, this was a problem. I didn't do it, but they did, okay?
>
> THE HEARING OFFICER: Okay.

TR at 99. Accordingly, I conclude that Mr. Cowan made no disclosure concerning the lack of verification of the LO/TO.

However, in the context of this LO/TO incident, Mr. Cowan made other statements that could be

considered to constitute protected disclosures within the meaning of Part 708. Section 708.5(a)(1) protects employees who disclose information that they reasonably believe reveals a substantial violation of law, rule or regulation. Section 708.5(a)(2) protects disclosures regarding fraud, gross mismanagement or abuse of authority. At the June 6, 2000 meeting with management, and in later conversations with ANL-W managers and fellow employees, Mr. Cowan contended that he had performed the LO/TO correctly and that some other ANL-W supervisor or employee had deliberately reset the breakers in order to discredit him. He later contended that his abrupt transfer from FCF to SPF in June 2000 was to prevent his disclosure of evidence concerning "several employees and line managers that possibly could be involved." Cowan Response to ROI at item number 65. While ANL-W acknowledges that Mr. Cowan made these accusations beginning on June 6, 2000, it vigorously contends that there is no substantial evidence that anyone tampered with the position of the circuit breakers between the time they were locked by Mr. Cowan on May 18, 2000 and the time that they were discovered to be locked in the incorrect position on June 6, 2000.

> Mr. Cowan's allegations of sabotage or possible criminal acts have not been substantiated. The allegations are based solely upon assertions by Mr. Cowan. Therefore, the Laboratory believes that a reasonable person could not believe the allegations made by Mr. Cowan are true and they are not protected disclosures under 10 C.F.R. 708.5.

ANL-W Closing Brief at 7.

I am not convinced that Mr. Cowan's inability to substantiate his allegation that his work was sabotaged absolutely precludes me from finding that he made a protected disclosure. Rather, in making my determination on that issue, I believe that I would have to evaluate the reasonableness of Mr. Cowan's allegation in light of several factors. These would include my evaluation of Mr. Cowan's honesty and sincerity in making these assertions, Mr. Cowan's experience with circuit breakers and the configuration of the electrical panels, the likelihood that evidence would be available to Mr. Cowan had sabotage occurred, evidence of hostility toward Mr. Cowan from his managers and co-workers during the May 18 through June 6, 2000 period, and the opportunity that these managers and co-workers had to open the locks and change the position of the circuit breakers. There is abundant evidence in the record of this proceeding concerning all of these factors. However, as I have already made the finding that Mr. Cowan made a protected disclosure on March 28, 2000, it would not be administratively efficient or productive to the resolution of this complaint for me to conduct such an extensive analysis. In the event that my finding concerning Mr. Cowan's disclosure regarding the HAZ-MAT operator is reversed on appeal, this determination can be made on remand.

B. Mr. Cowan's Protected Disclosure Was a Contributing Factor to the Alleged Acts of Retaliation

Under 10 C.F.R. § 708.29, Mr. Cowan must also prove that his protected disclosure concerning the HAZ-MAT operator was a *contributing factor* with respect to any adverse personnel action taken against him. *See Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 (1994). A protected disclosure may be a contributing factor to an adverse personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) *citing McDaid v. Dep't of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990). *See also Russell P. Marler, Sr.*, 27 DOE ¶ 87,506 at 89,056 (1998).

As noted above, the ROI finds that there is close proximity in time between the protected disclosure and the four alleged instances of retaliation discussed in the ROI. ROI at 4. I agree with three of these findings. The record indicates that Mr. Cowan's managers at FCF were aware that in March 2000, Mr. Cowan had declared himself a whistleblower and submitted a memorandum detailing his concerns to Director Lentz. Three alleged retaliations - (1) his failure to be selected for a Training Specialist position; and (2) the

issuance of an occurrence report that assigned partial responsibility for LO/TO errors to Mr. Cowan; and (3) Mr. Cowan's transfer to the SPF - all occurred within three months of the date of his memorandum to Mr. Lentz. The performance evaluation at issue in this proceeding, concerning Mr. Cowan's performance at the FCF from April 1, 2000 through June 23, 2000, appears to have been completed in November 2000. This is significantly more distant in time from the protected disclosure, although it could be included as part of a pattern of alleged retaliatory activity that began in May and June 2000 and thereby found to be proximate in time to Mr. Cowan's March 2000 disclosure. However, Mr. Cowan initiated his Part 708 whistleblower complaint on August 25, 2000. This is protected conduct under Part 708. Adverse personnel actions that occur after the filing of a Part 708 complaint and during the pendency of that complaint are clearly proximate in time to that protected conduct. *See Jagdish C. Laul*, 28 DOE ¶ 87,996 at 89,049 (2000). Accordingly, Mr. Cowan has shown that his protected conduct was a contributing factor with respect to this alleged retaliation (the performance evaluation). Similarly, Mr. Cowan has made this showing with respect to other alleged retaliations that occurred during the pendency of this Part 708 complaint. These include Mr. Cowan's transfer from the SPF to the FASB on or about June 1, 2001, and Mr. Cowan's three day suspension without pay from the FASB in January 2002.

I therefore conclude that Mr. Cowan has met his burden of showing that his disclosure and/or his protected activity under Part 708 constituted contributing factors in the above-identified negative personnel actions taken by ANL-W. The burden therefore shifts to ANL-W to prove by clear and convincing evidence that it would have taken the same actions without Mr. Cowan's disclosures or protected activity.

C. ANL-W's Decision Not to Select Mr. Cowan for a Training Specialist position was not a Retaliation

The first adverse personnel action following Mr. Cowan's protected disclosure occurred in May 2000. The ROI finds that at that time, a Training Specialist position which was vacated by retirement was posted. The ROI finds that Mr. Cowan, along with six others, applied for the position, and that he was not hired for the position. The ROI made the following findings concerning ANL-W's selection process.

> The DOE/CH found that the reasons for selecting the successful applicant in this case were justifiable and well articulated. There is no other evidence in the record including interviews of management officials and other documentation submitted by Cowan that disputes DOE/CH's findings with respect to this position. I agree with the DOE/CH on this issue. Based on the foregoing, the evidence clearly and convincingly shows that the contractor would have taken the same action regarding Cowan's advancement opportunities in the absence of his protected disclosures.

ROI at 7, *citing* DOE Argonne Group's Employee Concern #ANL-W-OO-1, Final Report (December 21, 2000) at 19. Mr. Cowan disputes this part of the ROI. However, a document provided by ANL-W at the Hearing, along with the testimony of Director Lentz, confirms the findings made by the DOE Argonne Group in its Final Report. The May 18, 2000 Investigation Report of ANL-W regarding Mr. Cowan's concerns notes that in January 1999, the employee who was assigned to the position of "HFEF Training Specialist" retired and the training duties were reassigned to a Chief Technician in HFEF. At the Hearing, Director Lentz testified that this position of Training Specialist subsequently was posted, and a hiring process was conducted. He stated that there were five or six applications for the position, including one submitted by Mr. Cowan. Director Lentz testified that although no ANL-W regulations required it, the HFEF Manager developed a rating system to rank the applicants according to their qualifications. He further testified that Mr. Cowan was ranked second or third among the candidates, and that the position was awarded to the individual who had been filling it on a temporary basis. TR at 467-68. There was little other discussion of this matter at the Hearing, and neither party discussed the issue in their post-hearing brief.

I find that the evidence presented by ANL-W at the hearing demonstrates that the hiring process for the

HFEF Training Specialist position was fairly conducted by the HFEF Manager. Director Lentz testified that the HFEF Manager devised criteria that he believed were important for the position, and ranked the applicants according to their qualifications. The position was awarded to the individual who had been temporarily assigned to those job tasks for the previous year, a fact that is not surprising, since that individual's knowledge of HFEF training procedures would clearly be a great point in his favor. Mr. Cowan has made no specific allegations of unfairness concerning this hiring process or any specific charge that the winning applicant was less qualified than himself. Under these circumstances, I find that ANL-W has met its burden of showing by clear and convincing evidence that it would have selected the same applicant in the absence of Mr. Cowan's protected disclosure.

D. Portions of an Occurrence Report that Made Findings Concerning Mr. Cowan Did Not Constitute an Adverse Personnel Action

I find that Mr. Cowan has not established, by a preponderance of the evidence, that the findings made in a June 2000 occurrence report constituted an adverse personnel action against him. As noted above, on May 18, 2000, Mr. Cowan, as part of his assigned duties, placed lockout/tagout (LO/TO) tags on some of the FCF's cell lighting circuit breakers. On June 6, 2000, some of these circuit breakers were found to be locked in the "on" position and incorrectly tagged. Later on June 6, ANL-W management convened a critique, attended by Mr. Cowan, concerning the incorrectly tagged circuit breakers. Following the critique, on June 7, 2000, ANL-W issued Occurrence Report CH-AA-ANLW-FCF-2000-0006 (the Occurrence Report) concerning the incident. The following portions of this Occurrence Report discuss Mr. Cowan's involvement in this incident:

> 23. Description of Cause:
>
> . . . The direct cause of this event was improper resource allocation. The operator who positioned the breakers [Mr. Cowan] and applied the tags had declared himself a "whistleblower" and was working under additional stress caused by this declaration. Management should have evaluated assigned work responsibilities more closely.
>
> 24. Evaluation (by Facility Manager/Designee):
>
> . . . Malicious noncompliance was not found. The operator who incorrectly positioned the breakers and placed the tags felt he had correctly positioned the breakers and hung the tags. Management investigated the potential for someone repositioning the breakers. Discussions with the FAS's and investigation of how the breakers were locked and tagged showed it would be extremely difficult to reposition a breaker by one individual. The Data Acquisition Storage System (DASS) was reviewed to see if there was any indication of repositioning of the breakers (i.e., a sudden increase of current on the bus duct) and no conclusive evidence was found. All investigations led to the conclusion that the breakers were incorrectly positioned and tagged [by Mr. Cowan]. No punitive action is required.

Occurrence Report at 3-4, attached to January 29, 2001 ANL-W Investigation Report.

Mr. Cowan contends that the Occurrence Report wrongly concludes that he negligently mispositioned the circuit breakers at the time that he performed the LO/TO, and rejects the possibility that the circuit breakers were later repositioned in an effort to discredit him. Cowan Response to ROI at item 65. The ROI Investigator conducted interviews with FCF personnel concerning this issue and reviewed subsequent studies of these allegations by both ANL-W and the DOE. She concluded that there was "no solid evidence" that the circuit breakers were repositioned in an effort to discredit Mr. Cowan, rather, the evidence suggested that he merely made a mistake. She also found that he suffered no adverse consequences as a result of the conclusions reached in the Occurrence Report "because the facility area

supervisor responsible at the time incorrectly decided not to have a second operator verify the correctness of the LO/TO." ROI at 10.

I do not believe that the Occurrence Report's assignment of responsibility for a LO/TO error to Mr. Cowan constitutes an adverse personnel action against him by ANL-W. Mr. Cowan has not shown that he was harmed by the findings of the Occurrence Report. There is no indication that the Occurrence Report became part of his personnel file at ANL-W. Moreover, the Occurrence Report specifically finds that the direct cause of the error was a "management problem," not the conduct of the operator. It also states that "no punitive action is required" concerning the operator's conduct." Occurrence Report at 3-4. There is therefore no ground for me to consider relief for Mr. Cowan concerning the findings made in this Occurrence Report.

While the findings made concerning Mr. Cowan in the Occurrence Report do not constitute an adverse personnel action against him, the use of these findings by ANL-W to penalize or discriminate against Mr. Cowan certainly would. There is one instance in which the LO/TO incident was cited in a negative manner in a personnel document concerning Mr. Cowan. *See* ANL-W Performance Appraisal of Mr. Cowan for Review Cycle 4/1/00 to 6/23/00 completed by Mr. Keith Powers [hereinafter the "Final FCF Appraisal"]. However, as discussed in greater detail below, I find that ANL-W has shown that Mr. Powers' criticism of Mr. Cowan's performance during that period was not significantly affected by whether Mr. Cowan had correctly positioned the circuit breakers at the LO/TO. At the Hearing, Mr. Powers testified that he referred to the LO/TO incident "partly to show why [Mr. Cowan] was inordinately preoccupied with administrative problems." He also testified that Mr. Cowan's involvement in the LO/TO incident did not affect his overall rating on the evaluation in any way whatsoever. TR at 518. Under these circumstances, I find that the passing reference to the LO/TO incident contained in the Final FCF Appraisal does not constitute an adverse personnel action warranting further analysis under Part 708.

E. The Findings of the Final FCF Appraisal Constituted a Retaliation Against Mr. Cowan

In his Part 708 Complaint, Mr. Cowan contended that he was improperly rated on his performance evaluations, but did not cite specific years in which such allegedly improper ratings were made. The ROI considered the evaluations written subsequent to Mr. Cowan's protected disclosures. Those evaluations included three separate appraisals covering review cycles for Mr. Cowan within fiscal year 2000 (October 1, 1999 through September 30, 2000). The ROI found that it was undisputed that Mr. Cowan is a very competent Nuclear Facility Operator. On a rating scale of one to five, with five being the highest rating, Mr. Cowan received a 3+, 3-, and a 4- on the evaluations in these review cycles. ROI at 5. It should be noted that Mr. Cowan's overall evaluation for fiscal 2000 was a 3+, which is contained in an appraisal dated November 19, 2000, completed by Mr. Cowan's supervisor at the SPF, Mr. J. L. Brink.

The only performance evaluation during this period to which Mr. Cowan has made a specific objection is the Final FCF Appraisal. As noted above, this was an interim evaluation for the period April 1, 2000 through June 23, 2000, completed by Mr. Cowan's supervisor at the FCF, Mr. Powers. For this period, Mr. Cowan received a numerical rating of 3-. Under the heading "Accomplishments" on the evaluation form, Mr. Powers made comments generally critical of Mr. Cowan's performance.

> Mr. Cowan was preoccupied with administrative problems. His work was affected. He would not spend time in the Operations Office on day shift. Work assignments given to him (procedure walkdowns) were not completed on time. Adjustments to Operating Systems (air cell exhaust control set points) were turned over to others to perform. Mr. Cowan was involved in a lockout/tagout incident.
>
> Mr. Cowan maintained all required qualifications.

> Mr. Cowan did not complete assigned procedure reviews.

Under the heading "Appraiser Comments" on the evaluation form, Mr. Powers also was critical of Mr. Cowan's job performance during this period:

> Mr. Cowan allowed problems that involved administrative management to interfere with his work. His attention to detail on watch suffered. He spent more time researching Human Resources documents than he did to watch standing. His direct supervision always had to find him if he wasn't actually on the console watch. Mr. Cowan's professional ability suffered during this time period.

Final FCF Appraisal at 1, 5. Under "Employee Comments", Mr. Cowan stated that he disagreed with this evaluation, and that he had supportive documents to justify his claim. He also characterized the evaluation as "a Retaliation effort to discredit my performance." *Id.* at 5.

The ROI found that the Final FCF Appraisal score of 3- was not inconsistent with scores that Mr. Cowan had received in previous years.

> For the majority of his past ratings, the complainant has received a 4 rating. However his ratings have ranged from a 3- to a 4+ over the years, with 3 defined as acceptable performance and 4 considered above average. Given the well-documented record of the contractor's own internal evaluations of the complainant's performance records as well as the consistent accounts of management officials which I found convincing and persuasive, it is clear to me that Cowan's performance evaluations were consistent with his prior evaluations and unrelated to any protected disclosures.

ROI at 5-6. The ROI specifically finds that the rating contained in the Final FCF Appraisal was valid and that the criticism contained in that evaluation was consistent with ANL-W's usual practice.

> Even the interim appraisal in which Cowan received an overall rating of a 3-, although occurring in close proximity to his protected disclosures, appears to me to have been a consequence of his lack of proper attention to his job duties because of his whistleblower concerns. In addition, there is no evidence in the investigatory file that suggests that Cowan's performance appraisals at issue negatively affected any merit increases or promotion potential for him. Rather, his evaluations were, as is often the case, used as a developmental tool to praise Cowan for his strengths, but also to suggest areas that could be improved upon. The relevant inquiry in this case is whether, in the absence of protected disclosures, the contractor would have taken the same action that followed the protected disclosures. I believe ANL-W has provided clear and convincing evidence that it would have taken the same actions with regard to the complainant's performance appraisals.

ROI at 6. In his response to the ROI, Mr. Cowan did not specifically challenge any of these findings. At the Hearing, Counsel for ANL-W presented witness testimony to support the ROI's findings regarding the Final FCF Appraisal. Mr. Powers testified that following the LO/TO critique and the Occurrence Report, Mr. Cowan

> spent an inordinate amount of time delving into Argonne National Lab Policy and Procedure Manuals trying to show where he was right and we were wrong and/or illegal in what we had done.

TR at 517. He testified that an example of his work assignments not being completed on time occurred when he was assigned to "walk down" some new procedures "step by step, [to] make sure they work." TR at 518. He stated that Mr. Cowan was assigned to perform this task over a weekend, when he was working 12-hour days, and that he did not complete the task. *Id.* Under questioning from Mr. Cowan, he further stated that he could not identify the exact procedures that were involved in this "walk down" because he

had received this information in writing from Mr. Robert Belcher, Mr. Cowan's immediate supervisor. Mr. Powers stated that he generally relied on immediate supervisors and their input in writing his performance evaluations, and that in this case Mr. Belcher gave him "almost 100 percent input." TR at 536-37. Mr. Powers testified that he had noticed on several occasions during this period that Mr. Cowan was absent from the FCF Control Room. TR at 534. Mr. Powers explained that this was Mr. Cowan's assigned workplace.

> His assigned work space or work location is the Control Room for the facility operators, which also has the console in it. When they're not actively on the console they're required to be in that area so they can be found for any other tasks that are needed in the facility.
>
> . . . If [Mr. Cowan] wasn't [operating] the console, he didn't spend much time in there. . . . one of the places we would find him would have been in the Ops Base using the computer that's in there, or searching other documents. If we needed him, we had to page him to find him.

TR at 519-520. Under questioning from ANL-W counsel, Mr. Powers stated that he believed the performance evaluation was a fair estimate of Mr. Cowan's performance for the period, and that it was not retaliation. TR at 520.

I cannot concur with the ROI's conclusion that ANL-W has met Part 708's clear and convincing evidentiary standard with regard to its Final FCF Appraisal. My judgment on this question has been informed by additional evidence that was not before the Investigator. As an initial matter, the Final FCF Appraisal is strikingly different in tone from the other two appraisals received by Mr. Cowan for fiscal 2000. While the other two appraisals contain only complimentary comments concerning Mr. Cowan's performance, the comments in the Final FCF Appraisal are almost entirely critical in nature. Through its witness testimony, I find that ANL-W has provided anecdotal evidence that appears to indicate that Mr. Cowan's overall work performance declined slightly during this period due to his preoccupation with other matters. However, under the standard set forth at Section 708.29, ANL-W must show by clear and convincing evidence that it would have *taken the same action* without the employee's disclosure, *i.e.*, that when similar performance problems had previously occurred, Mr. Cowan and his co- workers received such criticism. As I stated in my December 3, 2001 letter to the parties:

> In determining whether ANL-W has shown that it would have evaluated and transferred Mr. Cowan in the same manner in the absence of his protected activities, it will be necessary for me to consider whether ANL-W's treatment of Mr. Cowan was consistent with its treatment of other, similarly situated employees. Such consideration of ANL- W's general employment practices is fully consistent with OHA precedent in this area. See Thomas Dwyer, 27 DOE ¶ 87,560 at 89,337 (2000); Roy Leonard Moxley, 27 DOE ¶ 87,546 at 89,241 (1999); and Morris J. Osborne, 27 DOE ¶ 87,542 at 89,209 (1999). As indicated in those determinations, the standard in the clear and convincing area is not whether it was *reasonable* for ANL-W to have taken its adverse personnel actions regarding Mr. Cowan. The standard is whether the ANL-W *actually would have taken* these actions absent his protected disclosures.

December 3, 2001 Letter at 4. This is a very difficult standard to meet when dealing with a highly subjective process such as an employee evaluation. For example, while ANL-W has identified an instance where Mr. Cowan did not complete an assigned procedure review on time during the relevant rating period, it has not provided convincing testimony that Mr. Powers would have been likely to have placed such emphasis on this event in a Final Performance Appraisal of Mr. Cowan in the absence of Mr. Cowan's protected disclosure.

In addition to a lack of convincing evidence in support of ANL-W's position, I find that testimony at the Hearing indicates that a significant level of hostility existed toward Mr. Cowan from his managers and co-workers as a result of his protected activity, and that this hostility was likely to have influenced the Final

FCF Appraisal. At the Hearing, I asked Mr. Powers if Mr. Cowan's immediate supervisor, Mr. Belcher, was upset concerning Mr. Cowan's allegations of safety concerns about the HAZ-MAT responder, Mr. XXXXXX. He replied that Mr. Belcher was not pleased that the issue had been raised. He said that "none of us [at FCF] believed it was an issue. . . . To have brought it up later to say it was an issue, yeah, we were a little tight about it." TR at 552-53.

Although in the Final FCF Appraisal and in his initial testimony, Mr. Powers was critical of Mr. Cowan's frequent absences from the FCF Control Room, subsequent testimony indicates that his co- workers and supervisor were happy about his absence. He testified that when he would ask the console operators where Mr. Cowan was, several times the answer was "We hope anywhere but here." He also noted that Mr. Belcher tolerated his absence.

> I asked Bob Belcher, "Why, why are you allowing [Mr. Cowan] to stay out of the Control Room? He is on there? For better and worse, and I lived with this decision out there. He said it was less disruptive to the Control Room if Ben would stay out doing these things. You've got to remember, not only was it the lockout/tagout incident that he was busy researching documentation for. This also had to do with his transfer to and from SPF.

TR at 552.(4) The Hearing also revealed that there existed a personal friendship between Mr. Belcher and Mr. XXXXXX, the HAZ-MAT responder, that naturally would make Mr. Belcher antagonistic to Mr. Cowan for making an accusation concerning Mr. XXXXXX's suitability as a HAZ-MAT responder. In his testimony, Mr. Belcher testified that he and Mr. XXXXXX were close personal friends, and that they car-pooled together almost every day. TR at 221.

As discussed above, the record indicates that the Final FCF Appraisal was written by Mr. Powers based largely on input from Mr. Belcher. Under these circumstances, I find that ANL-W has not shown by clear and convincing evidence that this critical appraisal of Mr. Cowan would have been issued in substantially identical form in the absence of his protected disclosure. Accordingly, I will direct ANL-W to remove this appraisal from Mr. Cowan's personnel file.

There is also an issue of whether the Final FCF Appraisal affected the raises and bonus pay that Mr. Cowan received for his work in fiscal 2000. It does not appear that the Final FCF Appraisal's interim rating of 3- lowered Mr. Cowan's overall rating in fiscal 2000. The interim rating made for the period 10/1/99 through 3/31/00 was 3+. The ratings given to Mr. Cowan by Appraiser J. L. Brink for specific work responsibilities at the SPF from 6/24/00 through 9/30/00 were two 4- ratings and two 3+ ratings. This would result in an overall rating for fiscal 2000 of 3+, which is what Mr. Cowan received. At the Hearing, ANL-W introduced a listing of pay raises received by facility operators for fiscal 2000. This listing indicates that Mr. Cowan's pay raise for fiscal 2000 was completely consistent with other facility operators who received a 3+ rating. *See* testimony of Michael F. Janeczko, ANL-W Manager of Human Resources, TR at 571-576. Nor did the Final FCF Rating affect Mr. Cowan's bonus pay in fiscal 2000. At the Hearing, Mr. Powers testified that a minimum annual rating of 4- is necessary to qualify for a bonus, if bonuses are available in a particular year. TR at 542. Even in the complete absence of the Final FCF Appraisal, Mr. Cowan's rating of 3+ would not qualify him for a bonus. Accordingly, I find no evidence of any recent adverse personnel actions against Mr. Cowan with respect to raises and bonuses.

Finally, a comment appears on Mr. Cowan's interim performance evaluation for his work at FASB during the period 3/5/00 through 9/30/01 (the FASB Appraisal) that Mr. Cowan alleges is retaliatory in nature. The following statement appears under Appraiser Comments:

> Ben's familiarity with the various ANL-W safety rules and policies would prove beneficial to FASB operations if Ben remembered his responsibility to promptly notify his supervisor of his findings instead of compiling his concerns and complaints in the form of a letter that is given wide distribution.

FASB Appraisal at 5. The FASB Appraisal is otherwise complimentary of Mr. Cowan's performance, and

there is no indication that this particular comment affected any of the ratings given for specific responsibilities, or affected the appraisal's overall rating of 3. Under these circumstances, I view this comment as a reminder and a suggestion to Mr. Cowan, rather than a criticism, and find that it does not constitute an adverse personnel action for purposes of Part 708.

F. Mr. Cowan's Involuntary Transfer to the SPF in June 2000 was a Retaliatory Act

As noted above, Mr. Cowan has been transferred three times since he made his protected disclosure in March 2000. On April 10, 2000, Mr. Cowan and other employees at the FCF were transferred to ANL-W's Sodium Processing Facility (SPF). Mr. Cowan immediately protested this transfer and was permitted by ANL-W management to return to the FCF after only half a day at SPF. Testimony of Gary Tarbet, Manager of FCF, TR at 508. On June 28, 2000, ANL-W management again transferred Mr. Cowan, under protest, to the SPF, where he remained for about one year until management transferred Mr. Cowan to ANL-W's radiological facility (FASB).

Although Mr. Cowan contends that his selection for the April 2000 transfer constituted a retaliation by ANL-W management, I find that he has not established that any substantial harm resulted from this brief transfer. If ANL-W's action was retaliatory, it remedied the situation when it acceded to his protest and immediately returned him to the FCF. There is no indication that Mr. Cowan suffered any significant loss of pay as a result of this very brief transfer. Accordingly, I do not believe that it would be appropriate under Part 708 to conduct an extensive analysis to determine whether, under the standard of clear and convincing evidence, that ANL-W has shown that it would have initiated this transfer of Mr. Cowan in the absence of his protected disclosure. I therefore will make no finding concerning this transfer.

With respect to Mr. Cowan's June 2000 transfer to the SPF, the ROI finds the following:

> this transfer was initiated in an effort to ease the tension in the complainant's division, perhaps brought on by his focus on his whistleblower activities. Aside from the complainant's contention, I do not find evidence in the record that would suggest that complainant's transfers were initiated in retaliation for making protected disclosures. Rather, these transfers appear to be part of the laboratory's routine personnel actions. Based on the record, it is clear that laboratory employees had to move where the work was located and where their skills were most needed. I find that ANL-W has provided clear and convincing evidence that it would have taken the same actions in the absence of the complainant's protected disclosures.

ROI at 8.

I cannot concur with the ROI's conclusion that ANL-W has met Part 708's clear and convincing evidentiary standard with regard to its June 2000 transfer of Mr. Cowan. I agree with the ROI's finding that this transfer was made to relieve tension at the FCF between Mr. Cowan and his managers and co-workers. However, in its submissions and witness testimony, ANL-W has provided only anecdotal evidence indicating that Mr. Cowan's activities in the FCF in June 2000 aggravated others at the FCF. Under the standard set forth at Section 708.29, ANL-W must show by clear and convincing evidence that it would have *taken the same action* without the employee's disclosure, *i.e.*, that ANL-W management decision to transfer Mr. Cowan was consistent with the treatment of other, similarly situated employees, not just that it was *reasonable* for ANL-W to have taken this adverse personnel action regarding Mr. Cowan. As discussed below, there is no indication that ANL-W routinely transferred employees from one facility to another to resolve employee conflicts or ease workplace tension. Moreover, the ANL-W manager who ordered Mr. Cowan's transfer relied on recommendations made by individuals who, as discussed in the previous section, were likely to have been prejudiced against Mr. Cowan as a result of his protected disclosure. ANL-W has not shown that similar activity by another individual at FCF would have resulted in the same recommendation that he be transferred to another facility.

In its submissions and at the Hearing, ANL-W presented no information concerning whether it had ever transferred an employee other than Mr. Cowan from one facility to another as a result of tension in the workplace or a dispute with a supervisor. Moreover, under questioning by the Hearing Officer, Mr. Belcher testified that his request to have Mr. Cowan transferred for creating a hostile atmosphere at FCF was highly unusual.

> Q. Can you remember other examples of people being transferred because of an atmosphere that was created, or hostility between one or more people?
>
> A. No I can't. Again, when I was an Operator there was a Technician, but he was fired. He was coming in inebriated; on drugs. He was coming in late. And he had been given time off without pay, warned, and he was finally dismissed.
>
> Q. So in your experience at Argonne this is an unusual situation.
>
> A. Yes, very unusual.

TR at 260-261. The record indicates that Mr. Belcher has been a supervisor at FCF since 1992 (TR at 257), and yet he could recall no instance in which a personality conflict resulted in a person being transferred out of the facility. Accordingly, the available evidence indicates that at least with respect to employees at the FCF, Mr. Cowan's transfer was a highly unusual personnel action.

The individual who made the final decision to transfer Mr. Cowan to the SPF in June 2000 was Dr. John Sackett, the Deputy Associate Laboratory Director for ANL-W. At the Hearing, Dr. Sackett explained his reasons for directing the Mr. Cowan be transferred.

> The issue of the lockout/tagout, and Ben's concern that he had been wrongly accused of missetting the breakers, and his carrying that concern forward, resulted in a situation where people felt either directly or indirectly accused of having set Ben up in that manner.
>
> You can imagine that this caused a great deal of [inaudible][(5)], I will say, among the people in the facility. And I became aware of that more strongly in discussions with the Director of the Operations Division [Mr. Lentz] at the time.
>
> I was made aware of two different letters, items of correspondence from individual technicians on the point, and so I became very concerned in my role as the person responsible for nuclear safety and radiological safety at the site, that I could not allow that kind of dissension to continue in a radiological facility.

TR at 612-613. Dr. Sackett stated that he then met with Mr. Cowan, and when Mr. Cowan refused to voluntarily transfer to the SPF, he told him "Well, in that case, I must direct that transfer." TR at 613. Dr. Sackett clearly relied on information supplied to him by Mr. Lentz in forming his opinion that a high degree of dissension had been created at the FPF as a result of Mr. Cowan's activities. In his testimony, Mr. Lentz stated that between April and early June, the FCF Manager [Mr. Gary Tarbet] and several supervisors voiced concerns to him about their increasing inability to work with and supervise Mr. Cowan.

> They were to the point where they were afraid every time they did something Ben would say, "You're retaliating against me," or that they were going to be written up. They felt they had insufficient supervisory control of Ben doing the jobs.

TR at 450. He testified that in June 2000, he received several letters and an anonymous complaint, all leading him to the conclusion that there was a deterioration in the environment of the FCF and that it would not be wise to leave Mr. Cowan in the facility because "it put both Ben and everybody else under strain that I didn't think was necessary." He therefore recommended to Dr. Sackett that Mr. Cowan be

removed from the FCF. TR at 451.

In his testimony at the Hearing, Mr. Belcher stated that he initiated the effort to have Mr. Cowan transferred from the FCF. He testified that he decided to go to Mr. Tarbet's office and urge that Mr. Cowan be transferred out of the FCF following a conversation that he had with Mr. Cowan. He stated that in that conversation, Mr. Cowan

> approached me and told me to get whoever had set [Mr. Cowan] up [on the lockout/tagout] to come and talk to [Mr. Cowan] in private and [Mr. Cowan] would drop the issue. That was the straw that broke the back, when I went up and I requested that [Mr. Cowan] be taken out of the facility.

TR at 225.

I find that this testimony does not meet ANL-W's burden of proof on this issue. As discussed above, the standard in the clear and convincing area is not whether it was *reasonable* for ANL-W to have transferred Mr. Cowan to SPF in order to alleviate a tense atmosphere at FCF. *See Janet L. Westbrook*, 28 DOE ¶ 87,021 (2002) (mere plausibility and reasonability not adequate to meet the contractor's clear and convincing standard of proof). The standard is whether the ANL-W has shown by clear and convincing evidence that it *actually would have* transferred Mr. Cowan in the absence of his protected disclosures. There is no dispute in the record that Mr. Cowan was actively pursuing his investigation of the lockout/tagout incident and making inappropriate, speculative and possibly accusatory statements to his managers and co-workers concerning the incident. However, I do not believe that ANL-W has established by clear and convincing evidence that, in the absence of his disclosure, Mr. Cowan's activities and statements would have resulted in the decision to transfer him out of the FCF. There is no indication that ANL-W management employed such transfers as a disciplinary or corrective option in responding to instances of inappropriate or accusatory behavior by employees. Nor is there evidence indicating that Mr. Cowan posed any direct safety risk to other employees. While Dr. Sackett referred to the safety risks that could arise from dissension in a radiological facility, ANL-W has made no showing that transferring Mr. Cowan out of FCF was a necessary means to address that problem. Accordingly, I find that ANL-W has not met its evidentiary burden concerning this issue.

As I noted above, there is evidence that Mr. Belcher was upset about Mr. Cowan's protected disclosure concerning Mr. XXXXXX. With respect to the transfer, Mr. Belcher acknowledges that he initiated the action to have Mr. Cowan transferred from the FPF. One of the letters critical of Mr. Cowan that Mr. Belcher conveyed to Mr. Tarbet and Mr. Lentz was written by Mr. XXXXXX. *See* undated note from J. L. XXXXXX submitted as an ANL-W Hearing Exhibit. Under these circumstances, ANL-W clearly has not shown that Mr. Belcher would have reacted to Mr. Cowan's behavior by initiating action to have him transferred out of FCF in the absence of Mr. Cowan's protected disclosure. Accordingly, I find that ANL-W has not shown by clear and convincing evidence that it would have transferred Mr. Cowan to the SPF in June 2000 in the absence of his protected disclosure.(6)

I therefore will direct ANL-W to return Mr. Cowan to the shift position that he occupied at the time of his removal from the FCF and to compensate him for any lost overtime and premium pay that resulted from this transfer out of the FCF. In this regard, the record indicates that Mr. Cowan was working as a shift technician at the FCF at the time of his June 2000 transfer to the SPF. At the Hearing, Director Lentz testified that beginning in April 2000, when Mr. Cowan's initial transfer to the SPF was canceled at his request, ANL-W management placed him in a rotating shift schedule, which permitted him to earn more money through additional overtime and premium pay. TR at 438, 440. Director Lentz also testified that at the SPF, where Mr. Cowan was transferred in June 2000, the ultimate goal was to put everyone on a 24 hour day shift rotation, that would have provided Mr. Cowan the same opportunity to earn overtime and premium pay as he had at the FCF. TR at 440, 459. However, it is not clear that this goal of placing all SPF workers in a shift rotation was realized for the entire period that Mr. Cowan worked at the SPF. Moreover, on March 5, 2001, Mr. Cowan was transferred from the SPF to the FASB, and there is no

evidence in the record that shift rotation work was or is available at that facility. In his December 27, 2001 submission entitled "Requested Relief," Mr. Cowan also claims that all overtime above the normal scheduled shift overtime accrued by Mr. Cowan's replacement on the FCF shift was "a real and actual loss of income to Mr. Cowan." Mr. Cowan is correct. Under these circumstances, I will require ANL-W to calculate the gross salary, including overtime and premium pay, that it would have paid to Mr. Cowan if he had remained in his shift position at the FCF, including additional overtime worked by his replacement on that shift. If this amount is in excess of Mr. Cowan's gross salary since his June 2000 transfer to the FCF, I will direct ANL-W to pay him the difference.

G. Mr. Cowan's Three Day Suspension Without Pay in January 2001 Was a Retaliation

On January 7, 2002, Mr. Cowan sent an e-mail message addressed "To: Distribution to Argonne National Laboratory employees." In this e- mail message, Mr. Cowan expressed great frustration concerning his efforts to have the DOE investigate his allegations of mismanagement and safety violations at ANL-W. In particular, he was critical of the "DOE Employee Concerns Organization" and the employee concerns officer who was his contact in that organization. On January 9, 2002, Mr. Cowan sent another e-mail to all ANL-W employees in which he purportedly quoted an unnamed ANL-W supervisor who sent Mr. Cowan a harsh response to his January 7 e- mail. In a January 9, 2002 memorandum, Dr. Sackett informed Mr. Cowan that his e-mails were in violation of laboratory policies and suspended him without pay until further notice. In this memorandum, Dr. Sackett described ANL-W's concerns with Mr. Cowan's e-mails:

> Your e-mail transmissions of January 7 and 9, 2002 to ANL-W employees violate Laboratory policies. These transmittals also do not reflect the views of the Laboratory and could subject the Laboratory to possible legal action. Additionally, your transmittals are in direct disregard of the instructions given to you by the Laboratory Director, Dr. Grunder, in a letter dated September 10, 2001, which stated, in part: ". . . We strongly believe in the process that we are engaged and that it is the proper forum for these issues to be resolved. Any action outside this forum should be held in abeyance until such process is completed. . . ."

January 9, 2002 memorandum from Dr. Sackett to Mr. Cowan, included in ANL-W hearing exhibits. ANL-W management ultimately disciplined Mr. Cowan with a three day suspension, without pay, on January 10, 13, and 14, 2002.

In its Post-Hearing brief, ANL-W contends that it has established that ANL-W did not retaliate against Mr. Cowan by suspending him for three days without pay. It cites the finding in Dr. Sackett's memorandum that Mr. Cowan violated laboratory policy, and testimony at the Hearing which affirmed this finding and which indicated that other ANL-W employees have been suspended for violating Laboratory policies. ANL-W Post Hearing Brief at 10.

I find that ANL-W has failed to meet its burden under Part 708 to show that it would have taken the step of suspending Mr. Cowan without pay in the absence of his Part 708 protected activity. I agree with ANL-W that Mr. Cowan's use of ANL-W e-mail to express his opinions and experiences concerning the whistleblower process to all ANL-W employees violates the company's policy concerning the use of its networking resources. Moreover, I find that Mr. Cowan was sufficiently informed concerning this policy and ANL-W's views regarding the dissemination of his Part 708 concerns, that he should have been aware that ANL-W would not sanction these e-mails. In March 2000, Mr. Cowan acknowledged and signed an ANL-W policy document entitled "Use of Information Resources at Argonne National Laboratory." This document states in part that it is Laboratory Policy "to prevent the use of Laboratory-owned computing and networking resources for unauthorized purposes." It further states that

> It is your responsibility to comply with this policy. Whenever you utilize any of the Laboratory's Information Resources you are expected to conduct your activities within

> reasonable standards of professionalism and in accordance with the Argonne Code of Ethics. . . .
>
> Argonne's information resources are provided solely for the purpose of carrying out Laboratory work (including authorized work for its customers). Laboratory work primarily consists of assigned technical and management activities, but may also include professional development, training, and other Laboratory approved activities undertaken with the knowledge and approval of management. . . .

Document entitled "Use of Information Resources at Argonne National Laboratory", signed by Mr. Cowan on March 26, 2000, included in ANL-W's Hearing exhibits.(7) This document clearly indicates that the "knowledge and approval of management" is required for any use of ANL-W networking resources by employees for any uses other than "assigned technical and management activities." *Id.* Further guidance was given to Mr. Cowan in the September 10, 2001 letter from Dr. Grunder to Mr. Cowan that Dr. Sackett specifically cited in his January 9, 2002 memorandum. In his September 10 letter, Dr. Grunder stated that it was "inappropriate" for Mr. Cowan to distribute to certain ANL-W employees a report concerning some of the concerns raised in his Part 708 complaint. Mr. Cowan was advised by Dr. Grunder that "any action outside [the Part 708 proceeding before OHA] should be held in abeyance before such process is completed." September 10, 2001 letter from Director Grunder to Mr. Cowan, included in ANL-W Hearing exhibits. I conclude that, on the basis of the policy statement and Grunder letter, Mr. Cowan should have been aware that he was violating ANL- W policy when he sent the e-mails. At the Hearing, Mr. Cowan asserted that he specifically asked counsel for ANL-W for advice on a number of issues in the summer of 2001, including use of ANL-W e- mail, and when he received no response, he assumed that he had approval. TR at 632-635. I find no basis for his supposition that ANL-W tacitly approved his use of laboratory e-mail to disseminate his Part 708 complaint concerns. Dr. Grunder's letter clearly refutes such a conclusion. I therefore reject Mr. Cowan's assertion about advice of counsel.

However, with respect to its three day suspension of Mr. Cowan without pay, I find that ANL-W has not met its Section 708.29 burden of proof. As discussed above, the standard in the clear and convincing area is not whether it was *reasonable* for ANL-W to have taken this adverse disciplinary action against Mr. Cowan. The standard is whether the ANL-W has shown by clear and convincing evidence that, in the absence of his Part 708 protected activity, ANL-W *actually would have* suspended Mr. Cowan in this manner for improper use of the Laboratory's e-mail. I do not believe that ANL-W has clearly and convincingly shown this. The available evidence does not indicate that a three day suspension without pay was commonly used to discipline employees for improper e-mail use or any other violations of ANL-W policy. Mr. Janeczko, ANL-W's Human Resources Manager from 1983 until November 2001, testified that over the years ANL-W had taken disciplinary action for cases involving sexual harassment, theft, violation of safety rules, and attendance and punctuality. TR at 567. However, he did not testify whether ANL-W had any criteria or standards for determining the appropriate disciplinary action in a particular instance. He cited only one specific instance of a three day suspension being imposed by ANL-W as a disciplinary action.

> Q. Have you ever taken disciplinary action with regard to any other individual for improper use of the information system?
>
> A. Well, now that you mention it, we have. We did suspend someone three days for downloading some pornographic material off the Internet about two years ago.

TR at 567. This single instance of a three day suspension does not indicate that ANL-W's normal practice was to impose three day suspensions on employees who improperly used the Laboratory's information system. In fact, Mr. Janeczko testified that in arriving at an "appropriate" disciplinary action in Mr. Cowan's case, ANL-W considered a wide range of possibilities.

> Well, we talked about anything from doing nothing to termination of employment. The end

result of those discussions was it was decided that suspension was the way to go.

TR at 570. In light of its admission that it considered a wide range of possible responses, ANL-W has not convincingly demonstrated that it would have rejected the option of merely issuing a warning to Mr. Cowan, or taken some lesser disciplinary action, had Mr. Cowan not been a participatant in a Part 708 proceeding. Accordingly, I find that ANL-W has not met its evidentiary burden concerning this issue. I will direct ANL-W to compensate Mr. Cowan for his three day suspension, and to alter his personnel record to replace references to this suspension with a warning not to repeat his improper use of Laboratory e-mail.

V. Conclusion

Based on the analysis presented above, I find that Mr. Cowan made a disclosure protected under Part 708, and that this protected disclosure was a contributing factor to adverse personnel actions taken by ANL-W against him. Furthermore, I find that ANL-W has not shown by clear and convincing evidence that it would have criticized Mr. Cowan's work performance on his Final FCF Appraisal, transferred Mr. Cowan to the SPF in June 2000, and suspended Mr. Cowan for three days without pay in January 2002 in the absence of his disclosure and/or his participation in this proceeding. Therefore, Mr. Cowan is entitled to remedial action from ANL-W. I find that this remedial action shall include the removal of the Final FCF Appraisal from his personnel file, his reinstatement as a shift operator at the FCF, the payment of any lost wages or other compensation that resulted from his transfer out of the FCF, the payment of compensation lost as a result of this three day suspension in January 2002, and the removal of any reference to that disciplinary action from his personnel file.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Mr. Bernard F. Cowan under 10 C.F.R. Part 708 is hereby granted as set forth below, and denied in all other respects.

(2) The Argonne National Laboratory - West (ANL-W) shall immediately return Mr. Cowan to the position at its Fuel Conditioning Facility (FCF) from which he was transferred in June 2000. Mr. Cowan shall be afforded the same opportunity to work as a shift technician at the FCF, and thereby receive overtime and premium pay, as is normally and customarily afforded to other qualified technicians at the FCF. Mr. Cowan also shall be afforded the same opportunities to earn extra overtime pay as other technicians at the FCF.

(3) Mr. Cowan shall produce a report that provides information on his litigation expenses. Mr. Cowan's report shall be calculated in accordance with the Appendix.

(4) The ANL-W shall produce a report that calculates any lost wages wages plus interest payable to Mr. Cowan. The ANL-W's report shall be calculated in accordance with the Appendix.

(5) The ANL-W shall pay Mr. Cowan's litigation expenses. The amount of this payment shall be in accordance with the report specified in paragraph (3) above.

(6) The ANL-W shall pay Mr. Cowan any lost wages plus interest. The amount of this payment shall be in accordance with the report specified in paragraph (4) above.

(7) The ANL-W shall remove from Mr. Cowan's personnel file the ANL- W Performance Appraisal for Mr. Cowan completed by Mr. K. E. Powers for the Review Cycle 4/1/00 to 6/23/00. The ANL-W also shall remove from Mr. Cowan's personnel files any and all references to his being suspended without pay on January 10, 13, and 14, 2002. The ANL-W may replace such references with a warning that Mr. Cowan's January 7 and January 9, 2002 e-mails to all ANL-W employees were in violation of ANL-W's

policy concerning the use of Laboratory information resources.

(8) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting Mr. Cowan relief unless, within 15 days of receiving this decision, a Notice of Appeal is filed with the Office of Hearings and Appeals Director, requesting review of the Initial Agency Decision.

Kent S. Woods
Hearing Officer
Office of Hearings and Appeals

Date: June 27, 2002

(1) LO/TO is a system governing the operation of control devices such as electrical circuit breakers, and is intended to guard against injury to personnel or damage to plant equipment. ROI at 9. In this LO/TO, Mr. Cowan was required to go to several electrical panels located at the FCF and and switch particular circuit breakers in those panels to the "off" position. He was then required to insert a lock securing the individual circuit breaker in the "off" position and affix a tag to the lock certifying that the circuit breaker was "locked out."

(2) In addition to the issues discussed later in this decision, Mr. Cowan disagreed with the ROI Investigator's decision to exclude, as irrelevant, certain incidents of alleged retaliation that occurred before March 2000, some of which date back to 1993. *See* ROI at p. 4, ftnt. 2 and p. 10-11. In light of the findings made in this decision, I believe that the Investigator acted correctly in this regard. Section 708.14(a) clearly provides that a contractor employee "must file [his] complaint by the 90th day after the date [he] knew, or reasonably should have known, of the alleged retaliation." There is no indication that Mr. Cowan lacked any knowledge concerning these earlier incidents. Accordingly, any alleged retaliations occurring before April 2000 cannot be remedied in this proceeding. In some Part 708 proceedings, information concerning earlier alleged retaliations could be relevant for evidentiary purposes in determining whether a contractor has met its burden of proof pursuant to Section 708.29. As discussed in this decision, I find that without regard to any actions taken by ANL-W concerning Mr. Cowan prior to March 2000, ANL-W has failed to make its required evidentiary showing under Section 708.29.

(3) In a letter to the parties dated April 30, 2002, I declined to include in the record of this proceeding the documents e- mailed to me along with Mr. Cowan's post hearing brief.

(4) The "transfer to and from SPF" occurred in April 2000, when Mr. Cowan and several other FCF workers were transferred by ANL-W management to the SPF. Mr. Cowan protested the transfer and ANL-W management immediately permitted him to return to FCF, transferring another FCF worker in his place. As discussed below, Mr. Cowan contends that his initial inclusion by ANL-W in the group being transferred to the SPF was a retaliation for his whistleblower disclosures.

(5) The word in the transcript is "autonomy", which does not convey a reasonable meaning in the context of Dr. Sackett's remarks.

(6) At the Hearing, Mr. Cowan also contended that his March 2001 transfer from the SPF to FASB was retaliatory in nature. TR at 630-631. As I have already determined that he should be reinstated at the FCF, and will calculate his lost benefits for the entire period since his June 2000 transfer from the FCF, I do not believe it is necessary to me to address the circumstances of his transfer to FASB and make a Part 708 determination concerning that transfer.

(7) This document also directs the signatory to "retain a copy of this form for your future reference."

August 23, 2002
DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Sue Rice Gossett

Date of Filing: May 25, 2001

Case Number: VBH-0062

This Initial Agency Decision concerns a whistleblower complaint filed by Sue Rice Gossett (Gossett) against her former employer, the Safety and Ecology Corporation (SEC), under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. SEC is a sub-contractor of Bechtel Jacobs Corporation (BJC), the DOE's Managing Contractor at the Portsmouth Site in Piketon, Ohio (Portsmouth). In an Interlocutory Decision dated May 8, 2002, I determined that SEC had retaliated against Gossett for engaging in protected activity and that therefore Gossett is entitled to relief. Accordingly, the Interlocutory Decision states:

> Within 30 days of receipt of this Interlocutory Decision, Sue Rice Gossett shall submit to the Office of Hearings and to the Safety and Ecology Corporation, a detailed statement setting forth the precise remedies she is seeking as well as supporting documentation. The Safety and Ecology Corporation shall, within 30 days from its receipt of Sue Rice Gossett's statement, submit a responsive document to the Office of Hearings and Appeals and to Sue Rice Gossett.

Interlocutory Decision at 16.

On June 7, 2002, Gossett submitted a detailed statement (Gossett's June 7, 2002 Statement) setting forth the precise remedies she is seeking as well as supporting documentation. In her statement, Gossett seeks the following remedies: reinstatement, back pay, reimbursement of litigation costs and expenses including attorney's fees, and expungement of information from her personnel file. On July 8, 2002, SEC submitted its response to Gossett's June 7, 2002 statement (SEC's July 8, 2002, Response). On July 17, 2002, Gossett submitted a rebuttal to SEC's July 8, 2002, Response (Gossett's Rebuttal).

The remedies for retaliation available under the DOE Whistleblower Protection Regulations are set forth at 10 C.F.R. § 708.36, which provides:

> (a) *General remedies*. If the initial or final agency decision determines that an act of retaliation has occurred, it may order:
> (1) Reinstatement;
> (2) Transfer preference;
> (3) Back pay;
> (4) Reimbursement of [the complainant's] reasonable costs and expenses, including attorney and expert-witness fees reasonably incurred to prepare for and participate in proceedings leading to the initial or final agency decision; or
> (5) Such other remedies as are deemed necessary to abate the violation and provide [the complainant] with relief.
>
> (b) *Interim relief*. If an initial agency decision contains a determination that an act of retaliation occurred, the decision may order the contractor to provide [the complainant] with appropriate interim relief (including reinstatement) pending the outcome of any request for review of the decision by the OHA Director. Such interim relief will not include payment of any money.

REINSTATEMENT

Since I have found that Gossett's termination was a retaliatory act on the part of SEC, it is clear that reinstatement is an appropriate remedy. SEC recognizes this fact. However, SEC contends that Gossett must be fully re-trained and re-qualified before she can be reinstated. Obviously, it is reasonable to expect that Gossett must have all of the safety, hazardous materials and radiological training required of a radiation control technician (RCT) at the Portsmouth site. Accordingly, I find that Gossett should receive such training and qualification at SEC's expense and while included on SEC's payroll as a senior RCT.

Moreover, it is reasonable to expect that Gossett be required to successfully complete such training and receive passing scores on a re-qualification examination. Accordingly, I find SEC may administer a re-qualification examination to Gossett after Gossett has been reinstated for at least 180 days. If Gossett does not receive a passing score on this exam, she should be administered another re-qualification examination after 30 days and continue her employment as a Senior RCT as well as her training, until this second re-qualification examination is administered to her and the results made available. If Gossett does not receive a passing score on this second re-qualification examination, SEC may place Gossett on leave without pay until she is able to receive a passing score on a re-qualification examination.

Once Gossett has re-qualified, she shall be afforded the same opportunity to work as a senior RCT, and thereby receive overtime and premium pay, as is normally and customarily afforded to other qualified senior RCTs at the Portsmouth Site.

BACK PAY

Gossett has requested $85,930.35 of compensation for lost back pay including interest. Gossett's June 7, 2002 Statement at 4. SEC notes that its concerns about Gossett's calculation of her total back pay are ". . . not significant enough to merit disagreement." SEC's July 8, 2002 Response at 2. 10 C.F.R. § 708.36(a)(3) clearly indicates that compensation for lost back pay is an appropriate remedy for retaliation. Accordingly, I have determined that Gossett's request for $85,930.35 in back pay compensation and interest shall be granted.

REIMBURSEMENT OF COSTS AND EXPENSES

Gossett has requested a total of $127,283.04 of compensation for costs and expenses incurred in pursuing her remedies under 10 C.F.R. § 708. Gossett's June 7, 2002 Statement at 5. The $127,283.04 figure includes $123,082.50 of requested attorney's fees, $125 for out-of-pocket expenses, and $4,075.54 of "standard" expenses (travel, telephone, postage, overnight delivery and photocopying). *Id.* SEC, in turn, contends that Gossett's request for attorney's fees is excessive, her request for expenses inadequately documented, and that her request includes non-reimbursable items.

Attorney's Fees

10 C.F.R. § 708.36(4) specifically provides for the award of attorney's fees for a prevailing complainant. Attorney's fees in Part 708 cases have generally been calculated by the use of the "lodestar" approach described by the U.S. Supreme Court in *Blanchard v. Bergeron*, 489 U.S. 87 (1989) (*Blanchard*). *See, e.g., Ronald A. Sorri*, 23 DOE & 87,503 (1993), *affirmed as modified*, 24 DOE ¶ 87,509 (1994). Under the "lodestar" methodology, the "starting point for determining the amount of a reasonable fee is the number of hours reasonably expended on the litigation multiplied by a reasonable hourly rate." *Hensley v. Eckerhart*, 103 S. Ct. 1933, 1939 (1983); *Burlington v. Dague*, 112 S. Ct. 2638, 2640 (1992) (*Dague*); *Pennsylvania v. Delaware Valley Citizens' Council for Clean Air*, 106 S. Ct. 3088, 3098 (1986) (*Delaware Valley I*). The amount to be awarded depends on the unique facts of each case. *Hensley*, 103 S. Ct. at 1937. The party seeking an award of fees bears the burden of submitting evidence supporting the hours worked and the rates claimed. *Webb v. Board of Education of Dyer County, Tennessee*, 105 S. Ct. 1923, 1928 (1985). There is a strong presumption that the lodestar calculation results in a reasonable fee. *Dague*, 112 S. Ct. at 2641; *Delaware Valley I*, 106 S. Ct. at 3098.

Gossett requests a total of $123,082.50 of attorney's fees. Gossett asserts that this figure was determined by using the standard "lodestar" calculation. SEC does not dispute Gossett's reliance upon the lodestar calculation, but rather claims that Gossett's calculation of attorney's fees is excessively high because it uses an unreasonably high rate and an excessive number of hours. SEC's July 8, 2002, Response at 2-3.

The fee applicant has the burden of producing satisfactory evidence that his requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation. *See Blum v. Stenson*, 104 S. Ct. 1541(1984). Therefore,

"a reasonable hourly rate" must be "calculated on the basis of rates and practices prevailing in the relevant market." *Missouri v. Jenkins*, 109 S. Ct. 2463, 2470 (1989); *Blanchard, supra*; *Riverside v. Rivera*, 106 S. Ct. 2686 (1986).

In support of her contention that $300 is a reasonable hourly rate for the services of her attorney, Charles J. Fitzpatrick, Gossett has submitted the declaration of Ann Lugbill, an attorney with considerable litigation experience in the Southern District of Ohio as well as substantial experience in the fee application process. 1/ Lugbill's declaration asserts:

> In my opinion, in a case of this type, an hourly rate of $250 to $300 per hour for Mr. Fitzpatrick, an experienced lawyer in a very specialized field, is exceedingly reasonable, if not below the rates normally charged by most attorneys of comparable experience who regularly and successfully practice in this area of hotly-contested whistleblower litigation involving DOE nuclear sites.

Lugbill Declaration at 8. SEC claims that the Lugbill Declaration fails to satisfy Gossett's burden of showing that $300 is a reasonable rate. SEC's July 8, 2002, Response at 2. SEC has articulated a number of arguments in support of this claim.

First, SEC contends that no other complainant in a whistleblower protection proceeding before the Office of Hearings and Appeals (OHA) has received more than $175 an hour in attorney's fees. *Id.* at 6. This contention is without merit. In *C. Lawrence Cornett*, Case No. VWX-0010 (1997) (*Cornett*), an OHA Hearing Officer specifically approved the use of a rate of $265 per hour in calculating a whistleblower complainant's compensation for attorney's fees using the lodestar methodology. *Cornett*, at 2. Moreover, only a handful of OHA decisions have considered the awarding of attorney's fees in proceedings under Part 708, and none of these cases has sought to establish a nationwide ceiling on attorney's fees. Instead, the cases have clearly established that reasonable rates for attorney's fees are to determined on a case-by-case basis after due consideration of whether the rates requested are comparable to those currently prevailing in the local community for similar services by lawyers of reasonably comparable skill, experience, and reputation.

Second, SEC contends that "Counsel for SEC has been unable to locate any decision of the Southern District of Ohio published on Lexis which has awarded $300 per hour in any *contested* fee decision." SEC's July 8, 2002 Response at 6-7 (emphasis supplied). This self-serving assertion by SEC's counsel, who has not claimed to be an expert in the area of attorney's fees, has no evidentiary weight and therefore fails to rebut the Lugbill Declaration.

Third, SEC claims that Lugbill's attorney's fee expertise is limited to *Qui Tam* actions and that therefore her opinion should not be relied upon in a whistleblower forum because she lacks sufficient experience in such proceedings. SEC's July 8, 2002 Response at 7. There is no evidence in the

---

1/ In addition, Lugbill has co-authored and updated chapters on attorney's fee law in a West Group publication entitled *Litigating Wrongful Discharge Claims*. She is also the co-author of *Representing the Terminated Employee in Ohio*.

record supporting this assertion. I note that Lugbill's declaration specifically indicates that her practice has focused upon whistleblower litigation and employment law. Lugbill Declaration at 2. Moreover, Lugbill's experience in the subject matter is further supported by her publication history.

Fourth, SEC cites, as evidence that $150 an hour would constitute a reasonable lodestar rate, a recent case in which the Federal District Court for Southern District of Ohio rejected a prevailing party's request for a lodestar rate of $250 an hour and instead calculated the lodestar using a rate of $150 an hour. *Tinch v. Dayton*, 199 F. Supp. 758 (S.D. Ohio 2002). That determination was based upon prevailing rates in civil rights cases in the local community. The determination of a reasonable lodestar rate is made on a case-by-case basis and must take into account the rates prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation. *See Blum v. Stenson*, 104 S. Ct. 1541(1984). In the present case, there is ample evidence that an attorney of comparable skill, experience, reputation and willingness to take the case was not available in the local community. Affidavit of Sue Rice Gossett at 2-4; Lugbill Declaration at 6-8; Affidavit of Charles J. Fitzpatrick at 2-3. In such circumstances, it is clear that a complainant must pay a substantial premium in order to obtain competent counsel. Accordingly, I find that the *Tinch* decision neither reflects the local market for the services of DOE whistleblower proceeding counsel nor requires that we use only the local market to determine a reasonable rate for attorney's fees.

Finally, SEC contends that the rate should be adjusted downward to reflect the relative ease in which whistleblower complainants can, SEC alleges, prevail in actions under 10 C.F.R. Part 708. 2/ This contention is based upon a flawed assumption, i.e. that success in the DOE's whistleblower protection program does not require skilled, determined and experienced counsel. Our experience has shown that the contrary is true.

Departmental policy favors the protection of the rights of alleged whistleblower under Part 708, and reasonable fees should be awarded to encourage attorneys to take these cases. *See Ronald Sorri* (Case No. LWA-0001), 23 DOE ¶ 87,503 at 89,018 (1993), and cases cited therein. Downward adjustment of the hourly rate on the basis of the SEC's contentions would clearly be inconsistent with this Departmental policy.

Gossett has requested that her lodestar be calculated using a total of 407.5 hours for Charles J. Fitzpatrick, Esq. and 6.9 hours for Lori Borski, Esq. SEC contends that Gossett's request for hours is excessive. Specifically, SEC contends that: (1) Gossett improperly requests attorney fees for 16.3 hours of travel by her attorney, (2) Gossett's hours should be capped at 12 per day during the period beginning on October 21, 2002, and continuing through October 25, 2002, 3/ and (3) 6.9 hours of attorney fees claimed for Lori Borski should be disallowed because it is insufficiently documented.

2/ Experience has shown that the majority of whistleblower complainants are unable to prevail in actions under 10 C.F.R. Part 708.

3/ The hearing took place on October 22, 23 and 24 of 2002.

Gossett claims a total of 14.3 hours for Fitzpatrick's services on October 21, 2002, the day that Fitzpatrick traveled from San Antonio, Texas, to the Piketon, Ohio area where the hearing took place. Fitzpatrick's invoice indicates that 9.5 hours of that time was spent traveling to Columbus and Chillicothe and working on Gossett's case. Egan and Associates Invoice at 4. SEC claims that it is inappropriate to bill for travel time. However, both the billing invoice itself and a July 17, 2002 letter from Fitzpatrick indicate that Fitzpatrick was working on Gossett's case while he was traveling. Successful whistleblower complainants are entitled to be compensated for fees charged for legal work performed while their attorneys are in transit. *Ronald A. Sorri* (Case No. LWX-0014) (1994). Therefore, I find SEC's objections concerning attorney travel time to be without merit.

SEC correctly notes that Fitzpatrick's invoice claims that 84.4 hours can be attributed to one five day period, October 21, 2001 through October 21, 2001. While it is true that Fitzpatrick's invoice claims an average of 17 hours a day for this five day period, it must also be borne in mind that this five day period began one day before and concluded one day after a 3 day hearing. Competent counsel are always well prepared for trial-type proceedings, and the high degree of preparedness exhibited by Mr. Fitzpatrick at the hearing, as well as his exceptional success in the proceeding, constitute more than sufficient evidence of his long hours of preparation.

Gossett has also requested to be reimbursed for the services of an attorney, Lori Borski, for 6.9 hours at the rate of $110 an hour. SEC has objected to this request claiming it is insufficiently documented. SEC's July 8, 2002 Response at 8 n.4. I agree. Gossett has not submitted any evidence that the rate of $110 requested for Borski's services is reasonable, and I will not approve those fees.

Based upon my review of Gossett's Statement and the supporting Affidavit and attachments, I have decided to approve the majority of her request for attorney's fees. As indicated above, she has sufficiently documented 407.5 hours of work performed on her case and has affirmed that $300 is a reasonable hourly billing rate. Accordingly, I have concluded that Gossett should be awarded attorney's fees of $122,250, useing the "lodestar" approach.

Other Costs and Expenses

Gossett has requested reimbursement for $125 of out-of-pocket expenses she incurred in pursuing her whistleblower remedy. Apparently, SEC does not object to this request. *See* SEC's July 8, 2002, Response at 10. I therefore will direct SEC to reimburse Gossett for these $125 worth of out-of-pocket expenses she incurred.

Gossett has also requested reimbursement totaling $4,075.54 for travel, telephone, postage, overnight delivery, and copying expenses incurred by Fitzpatrick in representing Gossett. SEC has objected to several aspects of Gossett's request for these expenses. Specifically, SEC contends that Gossett (1) failed to indicate the dates on which many of the claimed expenses occurred, (2) failed to itemize claimed travel expenses, (3) exceeded DOE guidelines for photocopying charges, (4) requested reimbursement for fax transmission and long distance phone calls which are actually "overhead" charges, and (5) charged a reproduction fee of $740.17 in connection with the preparation of a reply brief.

SEC's July 8, 2002 Response correctly notes that Gossett has failed to sufficiently document many of the expenses incurred on her behalf by her attorney. Since the burden of proof is on Gossett to show that she incurred such expenses, I must reject Gossett's request for reimbursement for most of those expenses incurred on her behalf by her attorney. Accordingly, I am rejecting all but $302.02 of Gossett's request for reimbursement of those expenses incurred on her behalf by her attorney. I am granting Gossett's request for reimbursement of those services listed in the June 2, 2002 invoice that are dated and sufficiently described.

Therefore, I will approve a total of $427.02 of Gossett's request for reimbursement of "other costs" and expenses.

OTHER REMEDIES

Gossett's June 7, 2002 Statement requests "that SEC be required to remove from her personnel file all information pertaining to her repeated reassignments within the SEC workforce during the time of her employment prior to her termination on January 19, 2001." Gossett's June 7, 2002 Statement at 5. However, SEC asserts that Gossett's personnel file "never contained any document concerning her transfers." SEC's July 8, 2002 Response at 3. Since SEC has affirmed that Gossett's personnel file does not contain any documents relating to her reassignments, there is no need for me to grant this request. Gossett's June 7, 2002 Statement also requests that a memo from her former supervisor, Joseph Shuman, to her be removed from her personnel file. SEC's July 8, 2002 Response affirms that the Shuman memo is not included in her personnel file. SEC's July 8, 2002 Response at 3.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Sue Rice Gossett under 10 C.F.R. Part 708 is hereby granted as set forth below, and denied in all other respects.

(2) Safety and Ecology Corporation shall immediately return Sue Rice Gossett to her position as a Senior Radiation Control Technician from which she was terminated in January 2001, in accordance with the instructions set forth above.

(3) Safety and Ecology Corporation shall pay Sue Rice Gossett $86,055.35 in compensation for her in violation of 10 C.F.R. Part 708.

(4) Safety and Ecology Corporation shall pay Charles J. Fitzpatrick, Esq. $122,677.02 as attorney's fees incurred while representing Sue Rice Gossett in this Part 708 proceeding.

(5) Safety and Ecology Corporation shall pay the above amounts to Sue Rice Gossett and Charles J. Fitzpatrick and reinstate Sue Rice Gossett as a senior radiation technician within 20 days of the date of this Order.

(6) This is an Initial Agency Decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after receipt of the decision.

Steven L. Fine
Hearing Officer

Date: August 23, 2002

July 15, 2002
DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Hearing Officer Decision

Name of Petitioner: Ronald D. White

Date of Filing: October 27, 2000

Case Number: VBH-0068

This Decision involves a complaint filed by Ronald D. White (White or "Complainant") under the Department of Energy (DOE) Contractor Employee Protection Program, codified at 10 C.F.R. Part 708. Complainant is a former employee of a DOE contractor, Midwest Research Institute (the contractor or MRI), the management and operating contractor of DOE's National Renewable Energy Laboratory (NREL), located in Golden, Colorado. According to White, the contractor made him the subject of reprisals because he made protected disclosures to DOE and the contractor in January 1999 and May 2000. In his complaint, White alleges that the contractor then took negative personnel actions against him, culminating in his dismissal in August 2000. On the basis of the hearing that was conducted and the record before me, I have concluded that White is not entitled to relief under 10 C.F.R. Part 708.

I. Background

A. The Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure, or participating in a related proceeding, will be directed by the DOE to provide relief to the complainant.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The regulations provide, in pertinent part, that a DOE contractor may not retaliate against any employee because that employee has disclosed to a DOE official or to a DOE contractor, information that the employee reasonably believes to evidence, among other things, a substantial violation of a law, rule, or regulation. *See* 10 C.F.R. §§ 708.5 (a)(1). Employees of DOE contractors who believe they have been retaliated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE. In response to such a complaint, the employee is entitled to an investigation by an investigator appointed by the Director of the Office of Hearings and Appeals (OHA). 10 C.F.R. §§ 708.21-.23. After the investigator's report on the complaint is issued, an OHA Hearing Officer will generally conduct an independent fact-finding and evidentiary hearing. 10 C.F.R. §§ 708.24-.25. The Hearing Officer will issue a formal, written opinion on the complaint. 10 C.F.R. § 708.31. Finally, a party may request review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. § 708.32.

B. The Present Proceeding

1. Procedural History

On October 27, 2000, White filed a complaint with the Office of Hearings and Appeals, requesting an investigation and hearing. The OHA Director appointed an investigator and on May 21, 2001, the investigator issued a report setting forth the results of her investigation of the complaint. *See Report of Investigation*, VBI-0068 (May 21, 2001). The investigator found that White made a protected disclosure, and that proximity in time between the disclosure and the initiation of the alleged negative personnel action raised a Part 708 inference that the protected disclosure was a contributing factor to the alleged retaliation. However, according to the investigation, the contractor also demonstrated a reasonable basis for dismissing the complainant and demonstrated that it followed its normal procedures for terminating an employee. Nonetheless, the investigator was unable to conclude that the contractor met its burden of proving by clear and convincing evidence that it would have dismissed White despite his protected disclosures.

On May 21, 2001, I was appointed hearing officer in this case. The parties participated in discovery, and the hearing was held from February 25 through February 28, 2002 in Denver, Colorado. I received the transcript of the hearing on March 21, 2002, thereby closing the record in this case. Sixteen witnesses testified at the hearing, one via videotaped deposition. The individual presented 80 exhibits, and the contractor presented 225 exhibits. The official transcript of that hearing shall be cited as "Tr." and pertinent documents, received into evidence as hearing exhibits, cited as "Ex."

2. Factual Overview

Ronald Dee White received a bachelor's degree from Texas Christian University (TCU) in 1969 and a Masters Degree from TCU in 1970. Tr. at 46. From 1976 to 1980, he was an energy economist at the Federal Energy Administration (predecessor of DOE), and then spent one year as an energy economist at the US Agency for International Development (US AID). Exhibit K; Tr. at 46-47. White then became Assistant Commissioner of Agriculture for Regulatory

Programs in Texas from 1982 to 1984. After leaving that position, he formed a consulting group specializing in rural energy in developing countries. In December 1990 he joined the Solar Energy Research Institute (SERI), predecessor to NREL, as an international market analyst, a position he held until his termination in August 2000. Tr. at 47.

a. Early NREL Career (1990-1997)

White was first employed by SERI in 1990 as an international market analyst, tasked to perform basic economic analysis of the market conditions for renewable energy technologies. Tr. at 50. White's performance appraisals were satisfactory through 1992 and did not note any significant problems. Ex. A-C. However, in late 1992, White delivered a draft report four months late and then repeatedly missed commitments to deliver the final report (the APEC Compendium). Ex. 3. White promised a final draft by January 1993 so that the APEC Compendium could be issued in February; however he had not submitted his input as of February 3, 1993. *Id.* NREL staffers and DOE employees in Washington, DC then requested that White be removed from his position as editor of the APEC Compendium. Ex. C, Tr. at 244-246. In 1993, White began to report to Walter Short, a branch manager. White's appraisal for calendar year 1993, signed by Short, stated that White needed "immediate improvement" in completing projects and that White needed to improve relationships with the NREL Washington, DC office because those relationships had "gradually deteriorated." Ex. C. Notwithstanding this appraisal, White received a satisfactory rating and a raise. In May 1994, White asked for a promotion but Short refused, instead advising White that he should "start delivering a solid performance at [White's] current grade level." Ex. 6. In June 1994, White and Short agreed to have more formal and frequent performance reviews. Ex. 9. In August 1994, White missed a deadline to review country profiles. Ex. 10-12. Nonetheless, White's calendar year 1994 appraisal stated that White had a successful year. Ex. D. In that appraisal, White agreed to a developmental objective to produce a "significant, quality NREL technical report" in 1995. *Id.*

During 1995, White and a few other employees created NREL's international program in order to allow NREL to maximize international opportunities. In July 1995, White was detailed to the World Bank (Bank), i.e. NREL continued to pay his salary while he worked at the Bank. Tr. at 51. Short testified that he believed the assignment to be a good fit for White because it involved skills like imparting knowledge of renewable energy to World Bank officials, something White was very good at, but did not require a written product. Tr. at 1167. White continued to report to Short officially, but reported on an informal basis to a senior colleague in Washington, Sam Baldwin. Tr. at 51. White traveled with World Bank teams to develop renewable energy projects for World Bank funding. Tr. at 52. At the Bank, White was nominated for a staff "Excellence Award" for his work on photovoltaic energy. Tr. at 377, 665, 842.

On January 8, 1996, Bob Westby, a contractor manager, sent Short an email recognizing White's invaluable assistance at the Bank and explaining how White's activities helped NREL and its subcontractors. Ex. P. In February 1996, Bob Westby became White's manager as the result of a reorganization at MRI. However, Westby soon found White to be unresponsive to his requests for information about White's assignment. Westby testified that in 1996 he repeatedly requested

that White submit performance objectives, but never received them. Tr. at 531. White testified that he submitted the performance objectives through a senior colleague, Sam Baldwin. Tr. at 376. Neither Westby or Short ever received a major report from White regarding his Bank detail. [1] Tr. at 400, 1172.

b. NREL Career After World Bank Assignment (1997-1999)

In August 1997, the World Bank assignment concluded and White returned to NREL where he was placed on overhead until a funded project could be located for him. Tr. at 257. He began reporting to Barbara Goodman, MRI Director, in October 1997, and his team leader at that time was Roger Taylor. Tr. at 659, 1200. Taylor was White's first level supervisor and managed White's daily activities. White began to work on some proposals for energy projects in the Philippines. Tr. at 53.

In September 1998, US AID authorized a project, developed by White and his colleagues, to be funded at $1.4 million from December 1998 to December 2000. Ex. 29, Tr. at 56. The project, Philippines Renewable Energy Project (PREP), was designed for US AID in Manila to assist the country's rural electrification program. Tr. at 56, Ex. 29. This occurred at the same time that White again began to report to Bob Westby, Center Director, who had responsibility for the international program then and was his manager throughout the remainder of his tenure at NREL. Tr. at 55. PREP consisted of approximately 10 tasks, and White was responsible for the market assessment task. White testified that PREP was NREL's first attempt to develop a comprehensive program for a country for rural electrification. Tr. at 57. Roger Taylor was the PREP project manager and very well versed in White's work. Tr. at 60. Westby, on the other hand, testified that he did not understand White's work and Taylor testified that Westby was not very interested in PREP. Tr. at 402.

While working on the PREP project, White made the first of his alleged disclosures. In December, 1998, White received an email that he believed described the misuse of funds on the Technology Cooperation Agreement Pilot Program (TCAPP) and PREP projects. Ex. V. White suspected that staff members were using money from TCAPP to begin PREP activities before the PREP funding was allocated.[2] On January 6, 1999, White called the DOE Office of Inspector General (IG) hotline and complained of the possible misuse of funds. Tr. at 68-69.

On January 13, 1999, Barbara Goodman held an offsite meeting regarding the performance of the employees in her group. The managers that reported to her, including Walter Short, Roger Taylor and Bob Westby, attended this meeting. Tr. at 1200. During the meeting, Goodman asked each manager to describe the strengths and weaknesses of their subordinates, and then all

[1] White testified that he published a professional paper while at the Bank. Tr. at 370.

[2] TCAPP was initiated in August 1997 as a mechanism to implement Article 4.5 of the Framework Convention on Climate Change. DOE, AID, and the Environmental Protection Agency support TCAPP. TCAPP focuses attention and effort on achieving technology transfer from the US to developing countries. Tr. at 67, Ex. 31. NREL implements TCAPP for DOE.

of the managers present ranked that employee according to the work that the employee actually produced, without regard for the employee's current job title. Tr. at 1203, Ex. 35. If the managers ranked an employee in a lower position than that employee's current job, that employee was identified by the group as possibly needing a performance plan. Tr. at 1205. As described below, the managers identified White as having performance problems. At the meeting, White was rated a "3" (fully satisfactory) as a Senior Project Leader Program Manager 1; however, his actual job title was Senior International Market Analyst, a higher-level position. Tr. at 1218, Ex. X. The managers commented that White needed to focus on tangible results and "send the message without sending the irritation," a reference to his sometimes rocky relationships with colleagues. Ex. 35, Tr. at 1204. The minutes of the meeting identified White as possibly needing a performance plan. Ex. 35. Taylor reviewed White's 1998 appraisal with White in early 1999, and advised White to "focus on tangible results due to perceived deficiencies in submitting deliverables." Ex. X, Tr. at 732.

White turned in a PREP work plan on February 1, 1999, earlier than the other PREP staff. Tr. at 495. White's task was Task One, and it was approved in March 1999 on his first trip to Manila, in the amount of $250,000, the highest level of funding for all of the PREP tasks.

On March 2, 1999, the IG informed DOE's Golden Field Office of the complaint about the possible misuse of funds in the PREP and TCAPP programs and asked Golden to take appropriate action. Tr. at 343, Ex. 37. On March 12, 1999, Westby convened a meeting of the PREP and TCAPP staff in order to discuss project funding. Ex. 39. Taylor suspected that White made the complaint, and testified that at some point he told Westby of his suspicions. Tr. at 693. On March 15, 1999, Westby met with Chris Leavitt, Acting Director of Human Resources, and discussed White's performance problems. Tr. at 969-971, Ex. Z.

c. Initiation of the Informal Corrective Action Plan (CAP) (April 1999-May 2000)

On April 27, 1999, White met with Westby and Taylor at Westby's request. Ex. 44. Westby asked White to meet with him every other week for four months and present a one-page summary of specific performance objectives with deliverables and timelines. This document would become part of White's performance self-assessment. Westby considered this an "informal corrective action plan," but never specifically labeled the meetings as such in any conversation or correspondence with White or Taylor. [3] Tr. at 699. Taylor testified that he thought the meetings were established to enable a new manager (Westby) to learn about the work of a subordinate. Tr. at 699. Taylor also said that Westby never directly announced in the meetings that White's performance was an issue. Tr. at 724. Three of White's deliverables and his work plan were submitted ahead of schedule in 1999. Tr. at 12.

[3] The informal CAP is the negative personnel action described in White's whistleblower complaint.

White performed well in the PREP project in 1999. During 1999, White traveled to the Philippines for PREP three to four times for approximately three to four weeks at a time. Tr. at 674. White often helped out when customers visited NREL in Colorado by arranging ad hoc tours and meetings at DOE's request. Tr. at 676, Ex. KKK. During all of the time that White worked on PREP, his customer (the government of the Philippines) never complained about his work. Tr. at 456. In fact, the customer provided favorable feedback on White's work on PREP. Ex. 88. There is no evidence that White missed any major deliverables from December 1998 through most of 1999. In fact, on December 1, 1999, Westby was prepared to reduce the frequency of the regular meetings from bi-monthly to monthly. Ex. NN.

However, problems with timeliness arose later that month. On December 21, 1999, Kelli Anderson asked White and several of his colleagues to provide input to her in early January for her use in compiling an AID Quarterly Report. Ex. 58. Anderson was the administrative assistant to Ron Benioff, the manager responsible for coordinating the report, a quarterly report of progress on AID projects. Deposition of Ron Benioff at 57, Tr. at 456. Each employee was to submit a paragraph or two summarizing their progress on AID projects for the past quarter. *Id.* at 60. NREL was delinquent in producing these required reports for AID, and had been requested to begin submitting the reports on a regular basis. Deposition of Ron Benioff at 58. White did not submit his input in January.

White also began to demonstrate defiance of his manager's requests. On February 3, 2000, Westby asked White to provide a progress report on all of his scheduled deliverables by the end of the following day. Ex. 61. On February 4, White sent Westby and Human Resources an e-mail stating that his computer had crashed and that he had no access to his files. That evening, the computer was repaired and White promised to work on the report the following day, a Saturday, prior to a trip to the Philippines. Ex. 62. White failed to submit the report prior to leaving for, and even after his arrival in Manila. Westby had not received the document by February 14, and sent White a fax in the Philippines asking for its submission. Ex. 63.

White continued to exhibit the procrastination that marked his early NREL career. Anderson asked White again for his input to the AID Quarterly Report on February 14th. On February 17th, Westby asked White to send his material to Anderson. Ex. 63. On February 20th, White told Westby that Ron Benioff had not contacted White about the report, even though White knew that Anderson reported to Benioff. *Id*. On March 17, 2000, White sent an email to Anderson asking her for a schedule of 2000 due dates for input to the Quarterly Report and a description of the format for that input. Ex. 85. On April 19, 2000, Anderson repeated her request for White's input for the Report by May 5, 2002. White asked Anderson again on April 24 for a schedule and she responded the same day. *Id.*

In White's performance appraisal for calendar year 1999, Westby noted that White failed to meet two deliverable deadlines in December 1999 and that White needed improvement in working relationships. Ex. XXX. Westby rated White as a "2" (needs improvement). White then wrote to Westby's manager and complained that Westby was retaliating against him. White also requested that NREL retain a mediator to investigate and mediate the dispute. Ex. TT.

d. Progression to a Formal Corrective Action Plan and Termination (May-August 2000)

Not only did White miss the May 5 deadline for the Quarterly Report input, he also did not respond to Anderson's request until after May 15. By way of explanation, White wrote in an email to Westby that he had requested a schedule of report input dates from Anderson in March 2000 in order to plan his work, but never received such a schedule. Ex. 85. White stated that this "was a problem waiting to happen." *Id.*

Chris Leavitt, then Acting Director of Human Resources, began sitting in on the meetings with Westby in May 2000 after Roger Taylor, White's team leader, declined to attend further, and she testified that White often challenged Westby's directions to White. Tr. at 975-977, 1006, 1046. Taylor had attended the meetings from April 1999 to May 2000. Tr. at 696. However, Taylor testified that the meetings became unproductive and he stopped attending in May 2000 when it became clear to him that the meetings were not being used to communicate the substance of White's work but rather seemed punitive in nature. Tr. at 701, 743. Taylor informed Westby that he no longer desired to be a team leader if that position required Taylor to participate in meetings that Taylor viewed as unproductive and subjected White to a higher level of scrutiny than other employees. Ex. BBB. The meetings became increasingly tense and White advised Human Resources that he disapproved of Westby's management style and that Westby was trying to intimidate White. Ex. 75. Westby also expressed displeasure with White in the meetings, at one point leaving a meeting abruptly. Ex. LLL.

On May 17, 2000, Westby's manager, Jon Pietruszkiewicz, denied White's request for mediation, stating that it was not NREL's policy to provide outside mediation for disputes that could be resolved "with existing resources, policies and procedures." Ex. 92. He informed White that he would be placed under a formal corrective action plan, which White received on May 22. Ex. AAA. At the end of 60 days, NREL management planned to assess his performance and determine what further action would be required. Ex. AAA. Judy Marshall, new Director of Human Resources, refused to meet with White to discuss his formal corrective action plan or allegations of retaliation. Tr. at 1138.

White again procrastinated in meeting deadlines for submitting a written report. On May 22, he committed to submit the AID Quarterly Report information to Anderson on May 23 by close of business. However, by May 24th, Anderson had not received the requested input from White. Ex. 97.

White made allegations of retaliation during a meeting with the Golden Field Office on June 1, 2000. Ex. 109. Westby sent White a Written Reprimand for missing a meeting that was scheduled for that day. Ex. DDD. During a subsequent performance meeting, White committed to producing a deliverable for Westby on Wednesday, July 5, 2000. Ex. 114. He did not meet that deadline. Instead, in a July 5th email, White explained to Westby that White missed the deadline because White's personal computer failed on Thursday, June 29. *Id.* White stated that after visiting Westby's office on June 29 and finding that Westby was absent, White did not

know how to get in touch with Westby. Ex. 114. White sent the deliverable to Westby on July 10. *Id.*

On August 8, 2000, White was terminated. Ex. 64 . He filed a complaint with OHA on October 27, 2000, and requested an investigation followed by a hearing. Ex. MMM. OHA investigated the case and issued a report on May 21, 2001. The report of investigation (ROI) concluded that White made a protected disclosure, that the protected disclosure was a contributing factor to his dismissal, and that the contractor had a reasonable basis for dismissing White. Ex. NNN. The investigator was not, however, able to find clear and convincing evidence that NREL would have dismissed White in spite of his protected disclosures. *Id.*

II. Legal Standards Governing This Case

A. The Complainant's Burden

The regulations describe the burdens of proof in a whistleblower proceeding as follows:

> The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. § 708.9 (d); *see Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (*Sorri*). "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F.Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th ed. 1992). As a result, White has the burden of proving by evidence sufficient to "tilt the scales" in his favor that he disclosed information which he believed evidenced a substantial violation of a law, rule, or regulation. 10 C.F.R. § 708.5(a)(1). If the complainant does not meet this threshold burden, he has failed to make a prima facie case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a *contributing factor* in the personnel actions taken against him, in this case the imposition of an informal corrective action plan that culminated in his termination in August 2000. 10 C.F.R. § 708.29; s*ee Marano v. Dep't of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying "contributing factor" test). Temporal proximity is sufficient to establish the final required element in a prima facie case of retaliation. *See Sorri*, 23 DOE ¶ 87,503 (1993); *County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989). *See also* ROI at 3-4.

B. The Contractor's Burden

If White makes a prima facie case, the regulations require NREL to prove by "clear and

convincing" evidence that the company would have terminated White even if he had not made protected disclosures. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F.Supp. at 1204 n. 3. In evaluating whether NREL has met its burden, I will consider: (1) the strength of the contractor's evidence in support of its decision to terminate White; and (2) any evidence that the contractor takes similar actions against employees who are not whistleblowers but who are otherwise similarly situated. *See Carr v. Social Security Administration*, 185 F.3d 1318, 1323 (Fed. Cir. 1999) (quoting *Geyer v. Dep't of Justice*, 70 M.S.P.R. 682, 688 (1996), *aff'd*, 116 F.3d 1497 (Fed. Cir. 1997)) (*Carr*).

III. Analysis

I have carefully reviewed the record in this proceeding, including the testimony of the witnesses at the hearing and the exhibits submitted into evidence by both parties. For the reasons set forth below, I find that although White made a disclosure that is protected under 10 C.F.R. § 708.5(a)(1), and that disclosure was a contributing factor in an adverse personnel action taken against him, MRI has proven by clear and convincing evidence that it would have taken the same action absent the complainant's disclosure.

A. The Alleged Protected Disclosures

In his complaint, White alleges that he made four protected disclosures to DOE. The first disclosure was White's telephone call to the IG Hotline on January 6, 1999, reporting possible misuse of funds in the PREP and TCAPP projects. The three additional disclosures are: (2) a complaint to NREL that an NREL employee had intentionally undermined Complainant's efforts to obtain funding from the United Nations Development Program for a project in the Philippines; (3) a May 3, 1999 complaint to NREL that a colleague tried to subvert White's efforts to hire a summer intern; and (4) a March 22, 2000, response to a performance appraisal that White alleged was a form of retaliation against him for making the May 1999 disclosures. Ex. 88, Ex. EE. Counsel for NREL did not dispute the fact that Disclosure 1 (the IG complaint) is protected under Part 708. Prehearing Statement of NREL at 2 (February 20, 2002). To make a prima facie case of retaliation, White need only show one disclosure that was protected under Part 708. *See Janet L. Westbrook*, 28 DOE ¶ 87,018 (2001). I therefore find that White has met his threshold showing under Part 708 that he engaged in an activity protected under Part 708. [4]

B. White's Disclosures Were a Contributing Factor in His Termination

A finding of "temporal proximity," i.e., a finding that "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action," is sufficient to show that a protected disclosure was a contributing factor in a personnel action. *See Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993) *citing McDaid v. Department of Hous. and Urban Dev.*, 90

[4] NREL argued that the other three alleged disclosures are not protected activities under Part 708 and I agree. There is no evidence that they allege or demonstrate what White believed to be a substantial violation of a law, rule or regulation. 10 C.F.R. Section 708.5(a)(1).

FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989).

White made the complaint to the DOE IG on January 6, 1999. The IG sent NREL a letter advising NREL of the complaint on March 2, 1999. NREL asked Westby to investigate, since he was the manager in charge of TCAPP and PREP. Tr. at 419. On March 10, 1999, Westby informed his staff that he would hold a meeting about the complaint on March 12, 1999. Taylor testified that he sent White an email from his personal email account stating that management was very upset about the IG complaint. Tr. at 695

Westby, the manager responsible for putting White on the informal corrective action plan, denies actual or constructive knowledge of the disclosure to the IG prior to placing White on the informal corrective action plan on April 27, 1999. In fact, Westby stated during his deposition that he discovered White was the source of the complaint only after White's termination in August 2000. Tr. at 438. However, there is evidence in the record to dispute this statement and Westby's testimony that he was unaware of any IG involvement. Tr. at 445. Westby's testimony on when he learned that White was the source of disclosures conflicts with the testimony of other witnesses. At the hearing Westby was not clear about the time when he actually found out that White was responsible for the complaint. Tr. at 438-445. There was also evidence in the record that other employees had discussed White as the possible source of the complaint. Taylor quickly suspected that White was the source of the IG complaint, and testified that he informed Westby of his suspicion "at some point." Tr. at 694. White's former manager Walter Short testified that he learned of the complaint around 1999 from Westby, prior to the time that Westby claims he learned that White was the source of the disclosure. Tr. at 1175-1177, 1196. Westby's manager testified at his deposition that he told Westby that White was the source in May 2000, well before White was terminated. Deposition of Jon Pietruszkiewicz at 17-19, 66-68. Finally, Judy Marshall, MRI Director of Human Resources, testified that she discussed the complaint and allegations of retaliation with Westby prior to White's termination. Tr. at 1130.

I find temporal proximity between White's disclosure in January 1999 about the alleged misuse of funds in the TCAPP and PREP projects and the initiation of the informal CAP in April 1999. The disclosures occurred within six months of the date when Westby began the informal CAP. *See, e.g., Frank E. Isbill*, 27 DOE ¶ 87,513 (1999) (six months between disclosure and alleged retaliatory action); *Barbara Nabb*, 27 DOE ¶ 87,519 (1999) (eight months); *Russell Marler*, 27 DOE ¶ 87,506 (1998) (three months to four years). This temporal proximity gives rise to a Part 708 inference that the January 1999 disclosure was a contributing factor in the negative personnel action that NREL took against White in April 1999, i.e., placing him on an informal corrective action plan.

Based on the above, I find that White has established a prima facie case that his protected disclosure was a contributing factor to the alleged retaliatory action. The burden now shifts to NREL to prove by clear and convincing evidence that it would have terminated White despite his protected disclosures.

C. Evidence That NREL Would Have Taken The Same Action Against White Absent His Protected Disclosure

NREL argues that it would have terminated White despite his disclosures to DOE employees based on: (1) his history of performance problems; and (2) his poor working relationships with co-workers. After reviewing the record, I find that the contractor has shown by clear and convincing evidence that it would have terminated White notwithstanding his protected disclosures.

(1) Evidence in Support of Complainant's Termination

NREL argues that White was terminated because of (1) a history of performance problems and (2) poor working relationships with colleagues. I agree with the DOE investigator that NREL has presented credible evidence to support its argument that White was terminated because of a history of performance problems. Ex. NNN (ROI) at 4. However, NREL's argument that the termination was justified by White's poor working relationships is not persuasive, and is countered by credible evidence that White was generally well regarded by his peers and by some managers. Because the first argument is substantiated, as explained below, I need not reach the arguments NREL puts forth regarding White's relationships with his co-workers.[5]

a. Timeliness and Production of Deliverables

Based on a review of the record and my observations during four days of testimony, it is clear that White was an experienced, capable economist with a creative approach to his work and a flair for working with his counterparts in developing countries. White ably promoted his projects and NREL's mission in the developing world. White's PREP customer, the government of the Philippines, never complained about his work, and he was able to broker some important projects in the Philippines while working for NREL. Even Westby acknowledged the creativity of White's work and his value to NREL. Tr. at 539. However, it is also clear that as much as White loved certain aspects of his job (i.e., making deals, creating projects, visiting counterparts in foreign countries, meeting people), White disliked and avoided other aspects, especially writing about his job and producing the deliverables requested by his manager. In December 1998 he found himself reporting to a manager who, based on past experience as White's supervisor, demanded that White produce tangible results of his work in the field on a regular basis.

White's problem with timeliness first became evident in the record in late 1992 when he missed an important due date that was reported to his then manager, Walter Short. White delivered a draft late, and repeatedly missed a deadline on the paper that was to be presented at a conference. This was reflected in a comment on the complainant's 1993 performance appraisal

[5] I note that the Notice of Termination never determined that White failed to comply with Requirement 6, the requirement to follow NREL's policies and procedures in resolving workplace concerns. Ex. III.

that he needed "immediate improvement" in his deliverables. Short testified that White never finished a major written project for a client during the time that White worked for Short, from late 1992 through 1995. Tr. at 1162. In a staffing analysis, White's second level manager Tom Bath wrote that from 1992 to 1994, White was not assigned to "any projects with long-term milestones because of a history of inability to deal with project planning and the completion of deliverables." Ex. 27. Bath continued that White had not completed any major reports or publications from 1990 to 1994. *Id*. Short testified that he identified these performance problems and tried to work them out informally with White and Bath. Tr. at 1179. Short also testified that White made an effort to improve, and Short gave White a performance objective in 1995 to complete a major technical paper. Ex. D. However, White was assigned to the World Bank in August 1995. Short testified that White did not resolve the performance problem--the World Bank assignment did not require the delivery of a tangible product. Tr. at 1180-1183. White never produced a major project paper, thus not meeting his 1995 performance objectives. Ex. D.

While still at the Bank, White began to report to Westby in February 1996. Westby testified that he asked White repeatedly for updated performance objectives and White never delivered them, thus putting Westby on alert for potential performance problems. [6] There is evidence in the record, however, that White did send performance objectives to Westby. [7] First, there is a brief memo from White describing his performance goals that was sent to Sam Baldwin (White's informal supervisor while working at the Bank) in 1997 for his review, and Baldwin testified that the memo was probably sent to Westby also. Ex. Q, R. Second, the record contains a memo in June 1996 entitled "Brief Overview of Past Activities and Proposed Plan for 1997." I also note that in the memo White states "Bob [Westby] has asked for my performance goals *again*," and notes that he (White) is at fault for not engaging his management in discussions about his performance goals. *Id*. Thus, White acknowledges that Westby asked for the information more than once, and that White should have actively pursued the topic with Westby.

After White returned from the World Bank assignment in August 1997, his reviews were satisfactory. His 1998 appraisal noted, however, that he "needs to focus on tangible results (reports, workshops, subcontracts)." Ex. X. Problems with timeliness were noted in the manager's meeting on January 13, 1999, but these problems do not appear in the record again until later in 1999. In fact, in February 1999, White was the first of his colleagues to submit his PREP Work Plan. Further, Westby himself testified that White had not missed any deliverable deadlines from the time Westby began supervising White in December 1998, to March 15, 1999, the date of Westby's meeting with Chris Leavitt, Acting Director of Human Resources, to

[6] Westby admitted that he did not properly manage White during his World Bank assignment because he did not correct this problem when he encountered it in 1996. Tr. at 53. Instead of confronting White and attempting to resolve this problem informally, Westby took a formal, inflexible approach and used White's unresponsiveness in 1996 (along with the consensus at the 1999 manager's meeting that White may have needed a performance plan) as the basis for the informal CAP--without White even knowing that his performance was at issue.

[7] Performance objectives are professional goals for the next performance appraisal period.

discuss White's performance problems. Tr. at 434-437. Westby admitted during the hearing that he placed White on an informal corrective action plan based solely on White's history of performance problems, not based on anything Westby had observed since becoming White's manager again in December 1998. Tr. at 435.

Despite regular performance meetings with Westby, White missed key deadlines for deliverables in 2000. In early February, White missed a deadline for submitting a progress report to Westby, explaining that his computer had crashed on the due date of the report. White did not reply to repeated requests from Anderson in early 2000 to submit input for the AID Report, even after Westby intervened. *See* Section I.B.2.c., *supra*. In fact, on February 20th White wrote Westby that he was surprised to hear from Westby because Ron Benioff (Anderson's manager) had never contacted White about the report. White wrote "If I knew what was wanted and what the reporting schedule is, this would not happen." Ex. 58.

Notwithstanding the previous statement, White was late again with input for the next AID Quarterly report. Ex. 85. On April 19, 2000, Anderson asked White and his colleagues for input by the close of business on May 5, 2000. Ex. 85. Despite several reminders, White had not submitted his input by May 24. *Id.* White's actions demonstrate his cavalier attitude toward a reasonable workplace request. Even after Anderson gave White the information he had asked for, he thumbed his nose at her request by refusing to respond to her until ten days after the deadline, and then failed to send the data by May 23 as he had promised. Ex. 85. NREL could not remain a viable entity if all of its employees adopted White's contempt for deadlines. His uncooperative behavior justified Westby's next step in the progressive discipline, which was to place White on a formal CAP on May 22, 2000. That document stated, in pertinent part:

> You are to inform me, prior to its deadline, when you will need to miss a deliverable. In addition, you are to include with such communication an acceptable justification and a date certain for the completion of the deliverable. This recognizes that the nature of your work may reasonably require adjustments in deliverables and deadlines.

Ex. AAA. Rather than attempt to comply with this condition, which does not appear unreasonable, White challenged its language and used this as an excuse for missing deadlines during the 60-day period that the CAP was in force. Even though this passage is unambiguous, he testified at the hearing that the words "acceptable justification," and "date certain" are "vague" and "likely to cause problems in complying with [the CAP], in terms of dealing with Bob Westby over deliverables…." Tr. at 208. This displays an uncooperative nature and supports NREL's contention that White did not accept Westby's direction.

Even in the face of formal notification that his performance was deficient, White ignored the requirements of the formal CAP. He continued to ignore deadlines and set forth weak excuses for not doing his job. For example, on May 24th, Ron Benioff left a voice mail message for Westby stating that he and Anderson continued to have difficulty in getting the AID data from White, and that requests for input turned into "heated dialog." In response to Westby's inquiry

about the delays, White replied that for two months he had been trying to get an answer to his request for a schedule and format. He characterized Benioff's phone call as "rude" and stated:

> I have no problem with your asking me to have something to Ron/Kelli by the time I leave work tonight. I am sorry that you had to do it, however. . . . If Ron had responded to my March 21 email in anything like a timely fashion, he could have avoided being rude to a colleague, he could have avoided the misuse of your time on this matter, and he could have had the proper information for his deliverable to AID on time. But he did not. . . . As you can see I did my dead level best to avoid this result.

Ex. 85.

White's performance continued to deteriorate in 2000 and he became more brazen in ignoring the CAP requirements. He missed another important deadline the following month – a deliverable that he promised to Westby on June 30. White testified that his hard drive failed on June 29. On Wednesday, July 5, Westby again asked White to send him the deliverable and to leave a voice mail on its completion, and said he would follow up with White on his return to the office on Monday, July 10. However, White showed his disdain for Westby's direction when he replied via email on July 5 that "any fair person who was here in the last few days would have concluded that I was focused on the task and doing all that was humanly possible to meet the delivery deadline." *Id*. He emailed Westby on July 10 that he would submit the document that day. Ex. FFF. At the hearing, White explained his failure to follow Westby's direction as follows:

> Q. Why didn't you leave the voice mail on July 5?
>
> A. Well, because I knew that he wouldn't be back until Monday, and there wasn't any point in leaving three or four emails with pieces of messages of pieces of information. That by Sunday I knew that we'd have a report for him, and tell him the bad news, but tell him the whole story. . ..

Tr. at 162. This exchange reveals White's attitude toward taking Westby's direction and his attitude toward the CAP. White simply refused to do what Westby asked him to do. He clearly did not take the terms of the CAP seriously because he continued to miss deadlines without notifying Westby in advance. Rather than follow Westby's instructions and notify Westby before July 5 that a date would slip, White waited until the deadline to even communicate with Westby. Despite this, White insisted that he was doing everything possible to make his deadline. That is not credible--he did not attempt to recreate the report from memory or existing documents, he did not attempt to renegotiate the deadline, and he never left a voicemail relating the status of his project.

The record supports the NREL argument that White was terminated because of performance problems. White seems to have made minimal effort to meet his manager's demands after being placed on a formal CAP in May 2000. Even assuming, *arguendo*, that White did not know that he was on an informal CAP in April 1999, he should have realized that Westby had a more than passing interest in the reports that Westby requested at the biweekly meetings. Most employees in White's situation would have completed the assignments in order to comply with the CAP and avoid any negative repercussions. Even Taylor, who was very supportive of White, stated that White could have produced the reports, but did not want to. Ex. NNN (ROI) at 9. Rather, White argued with Westby during the performance meetings about the meaning of Westby's memos and whether or not he was required to produce these reports. Tr. at 977-978.

At the hearing, White rationalized his non-performance by blaming his manager, other employees, and his personal computer for his late submissions. When White missed AID deadlines, he blamed Anderson and Benioff for not providing him with a schedule, even though Anderson had done so in April. When he did not meet his February 4, 2000 or July 5, 2000 due dates, he blamed a hard drive failure. I do not doubt that White's hard drive failed on February 4 and June 29. However, an employee on the 35th day of a 60-day formal CAP should have gone to great lengths to turn in the report on time. *See Eugene J. Dreger*, 27 DOE ¶ 87,549 (2000) (upholding the credibility of a performance plan despite whistleblower's refusal to comply with its terms). Since his computer had crashed in February, by June he should have learned the importance of having backup data. In addition, White had almost a week to complete the July report after he found out that his computer had crashed--further evidence of the level of procrastination in his work. Finally, it is ludicrous to attribute his failure to submit a progress report to his lack of a schedule or format. He could have asked another colleague who contributed to the AID Report what format they used, and then submit something similar. When questioned about placing the blame for missing two deadlines on a computer failure, White testified:

A. It's true that I had a Toshiba computer, and that there's a class-action suit against Toshiba for the machines' failure. And I did have, in fact, documented failures of that machine.

Q. So do you believe that somehow, your inability to comply with item 2 of the formal corrective action plan was caused by the fact that you had a crummy Toshiba computer?

A. That was an issue from time to time. It certainly was.

Q. Well, the fact that you didn't like your Toshiba computer didn't prevent you from contacting Mr. Westby by telephone, though, did it?

A. You are correct that I could have contacted him by telephone. My commonsense

judgment led me to believe I should notify him before he came back.

Tr. at 214. White's behavior in this incident does not display "commonsense judgment," and the record shows that he did not comply with the formal CAP. In an email message, White complained of Westby's "hostile and prejudiced reaction to the AID Quarterly report and hard drive failure." Ex. 129. Westby was justified in having a negative reaction to this parade of weak excuses and failure to take his direction. Therefore, I find that the evidence supports NREL's argument that White did not produce deliverables in a timely manner.

b. Conclusion

NREL management identified problems with White's timeliness and production of work as early as 1993. The record also contains evidence, set forth above, that White's relationship with his manager verged on insubordination. These problems improved for a while, but then worsened in 2000, even after formal notification that his performance was under scrutiny. Based on this record, which shows White's repeated failure to meet key deadlines, produce timely deliverables, and take direction from his manager, I find that NREL was justified in terminating White.

(2) Evidence That NREL Followed Its Normal Termination Procedures

In order to ascertain whether NREL has presented clear and convincing evidence that White was terminated despite his protected disclosure, I have examined whether there is evidence that NREL followed its customary termination procedures. I find substantial evidence in the record to support NREL's argument that it followed standard procedure in terminating White.

White's termination was preceded by many discussions that included the director of the laboratory, human resources personnel, and legal personnel. Tr. at 984. NREL's termination procedure, which was extensively described in the ROI, is as follows: the employee is placed on an informal CAP, followed by a formal CAP, culminating in a termination if the conditions of the formal CAP are not met. Ex. NNN (ROI) at 10. The contractor submitted for the record 13 formal CAPs issued between 1997 and 2002, and I reviewed each document.[8] Nine are 60-day plans, two are 90-day plans and two are less than 45 days. Ex. 143. In each example, the employee's manager, the employee, a human resources (HR) representative, and team leader signed the formal CAPs. Five dealt with the issue of timeliness and four dealt with interactions with co-workers. Each formal CAP required regular meetings and a review at the end of a specified time period with HR, the employee and his or her manager.[9]

White's termination followed the steps set forth above. He was given 60 days to improve, and nine of the 13 CAPs also had 60-day terms. In addition, based on my review, NREL regularly

[8] NREL's Director of Human Resources (HR) testified that each year three to five employees are on formal CAPs. Tr. at 975.

[9] The terms of White's formal CAP appeared to be reasonable. Ex. AAA.

dealt with problems of employee timeliness by placing those employees on a CAP. Five of the 13 CAPs dealt with the issue of timeliness, thus supporting NREL's contention that placing White on a CAP was a normal personnel procedure when faced with a performance problem. I do, however, find an abnormality in White's case as regards the informal CAP. Both White and Taylor testified that they were not aware that White's performance was an issue when Westby started the regular meetings in April 1999. Although this does not taint the entire termination process, it is not an effective way to manage an employee with a performance problem. Westby should have been forthright and informed White from the start that his performance was not up to par. Notwithstanding this omission, the terms of the informal CAP were clear and White knew that his performance was an issue months prior to the implementation of the formal CAP.

NREL also presented evidence on the terminations of other employees.[10] The Director of HR testified that there was at least one termination per year at NREL. Tr. at 983. Three termination notices, with formal 60-day CAPs attached, are in evidence. Ex. 142. Each of these notices is similar to the termination notice, with attachments, that White received. However, two aspects of White's termination are troubling: (1) the refusal of the contractor's personnel managers to meet with White regarding his allegation of retaliation, and (2) NREL's initial denial of White's request for mediation.

Judy Marshall, the new HR Director in June 2000, refused to meet with White regarding his CAP because she felt that her role was merely to monitor the discipline and termination process, not to question the decision to place White on a CAP. Tr. at 1110. [11] Marshall and other HR officials testified that they had no knowledge of White's retaliation claim until the summer of 2000. Tr. at 1116. At that time, the Human Resources Department did not investigate the allegation of retaliation, or examine how Westby disciplined other employees in his group. Tr. at 996. The HR officials stated that because they considered White's performance problems to be substantiated, they did not investigate the retaliation claim further. Tr. at 1038-1040.

White requested mediation in his dispute with Westby in March 2000. Westby's manager denied the request in May 2000. [12] White then made a complaint of retaliation to DOE's Golden Field Office under the DOE Employee Concerns Program (ECP) on June 1, 2000. Ex. 109. The Golden Field Office referred the concern to NREL to ensure that NREL utilized informal dispute resolution prior to engaging in the ECP process. *Id.* DOE was aware of NREL's refusal to mediate, and reminded NREL that DOE favors informal means of resolving workplace disputes. *Id.* In July 2000, NREL replied that there was an ongoing investigation into White's concern at

---

[10] According to the testimony of Chris Leavitt, Director of HR, terminations were rare because most employees on a formal CAP either improved their performance or resigned from NREL. Tr. at 1039.

[11] Marshall joined NREL in June 2000, and was only employed there for ten weeks. Tr. at 1107-1108.

[12] NREL declined to mediate for two reasons: (1) company policy that mediation is not appropriate for performance problems, and (2) an internal decision that NREL had expended sufficient resources on the White case. Deposition of Jon Pietruszkiewicz at 23, Ex. OOO.

the time of his complaint and that the investigation was still active. Ex. 116. NREL further stated that its management determined the need for mediation on a case-by-case basis, and asked for time to pursue its internal process. Ex. 116. Nonetheless, NREL did make a last minute attempt at pursuing mediation. On August 4, 2000 (four days prior to White's termination), the contractor initiated a teleconference between NREL legal, NREL human resources, a representative from the DOE Golden Field Office, and the DOE Headquarters Office of Dispute Resolution in order to determine whether any aspects of White's termination could be reviewed by an outside mediator. Ex. JJJ at 2. The participants ended the conversation "with a general recognition that Mr. White's termination would be performance based and that there were no aspects of the termination appropriate for intervention by an external mediator." *Id.*

I find that NREL followed its standard procedures regarding White's termination. The record contains documentation on the contractor's disciplinary procedures and sample CAPs and termination notices. After following the normal process and denying White's initial request for mediation, NREL contacted DOE immediately prior to termination in order to determine whether any part of the termination process could be mediated. DOE personnel appear to have concurred with the decision that no aspects of the termination process were appropriate for mediation. Ex. JJJ. This information, coupled with testimony at the hearing and other evidence already in the record, supports the contractor's action in terminating White.

(3) NREL's Treatment of Similarly Situated Employees

In addition to proving that NREL followed its standard procedures in terminating White, the contractor must also show that it did not discriminate against White for making a protected disclosure to the IG in January 1999. After reviewing the record, I find that NREL has presented credible evidence that White was not singled out for discipline and termination due to his whistleblowing. White, on the other hand, did not offer any substantiated evidence that NREL treated him differently than similarly situated employees. The definition of a "similarly situated employee" is key to my finding in this case.

It is clear from the record that many of White's colleagues submitted at least one, and often more than one, late deliverable. Ex. MM, QQ. However, only White was disciplined, only White was terminated, and most important, only White was a whistleblower. In fact, White is the only employee that Westby has every put on a performance plan or terminated while he was a manager at NREL. Tr. at.568-569. These facts require me to closely scrutinize the contractor's historic treatment of similarly situated employees who were not whistleblowers. *See Robert Burd*, 28 DOE ¶ 87,017 (2001).

NREL argues that it would have terminated White in spite of his protected disclosures. White, however, contends that other employees also submitted their deliverables late and that those employees were not disciplined or terminated. He has presented evidence that other PREP staff members (namely Peter Lilienthal, Roger Taylor, Laura Vimmerstedt, Ralph Overend, Paul Denne and Gary Nakarado) submitted late deliverables and were not disciplined, let alone

terminated.[13] Ex. 73. Moreover, there is evidence in the record that management had recognized that employees other than White had a problem with timeliness. For instance, Westby and his manager complained that Nakarado was not responsive or timely while on a special assignment. The notes of the 1999 manager's meeting stated that Devon Heckman, Blair Sweezy and Gary Nakarado also had problems with timeliness. Ex. 35, Tr. at 632. Taylor testified that he often did not submit his reports on time, and that his work would not hold up to the scrutiny Westby applied to White. White argues that he was treated differently and placed on the informal CAP as retaliation for making a protective disclosure.

There are, however, marked differences in the overall performance of these employees when compared with White. Sweezy and Lilienthal, for instance, were ranked as top performers who were also identified at the managers meeting as ready for promotion. Taylor was a team leader. Sweezy submitted some reports late, but he was the leading developer of products (analyses) and completed a significant number of quality documents that have been placed on NREL's website. Tr. at 1172. White, on the other hand, did not produce any major reports in his first seven years at NREL, and completed few, if any, during his final three years there. The other PREP employees were not singled out at the managers meeting as performance problems.

To be considered similarly situated, it must be shown that the conduct and circumstances surrounding the conduct of the comparison employees are similar to those of the disciplined individual. *See Carr*, 185 F.3d at 1324. *See also Robert Burd*, 28 DOE Para. 87,017 (2001). In the instant case, I find that White's conduct is dissimilar to the conduct of the comparison employees. There is no evidence in the record that other employees had such pronounced problems with timeliness. *See Yunus v. Department of Veterans Affairs*, 242 F.2d 1367, 1372 (Fed. Cir. 2001) (holding that employees are not similarly situated if there is not evidence of a similar level of culpability on the part of both individuals); *Padron v. BellSouth Communications*, 196 F.Supp.2d 1250 (S.D. Fl. 2002) (holding that under Florida Whistleblower Act the quantity and quality of the comparator's misconduct must be nearly identical to prevent courts from second-guessing employers reasonable decisions). The record shows that White repeatedly missed deadlines even after being formally notified that management was monitoring his performance. *See* Section III.C.1.a., *supra*. This indicates to me a lack of professionalism on White's part that is reckless and verges on insubordination. White's problems with timeliness were first identified in 1993, and are well documented over the next seven years. The record contains numerous examples of his flagrant disregard for reasonable requests. White's testimony at the hearing regarding his performance vis-à-vis that of his colleagues is enlightening:

> Q. Sir, as you sit here today, do you believe that any deficiencies in your own

[13] The opinion in the *Carr* case states that employees with different supervisors or in a different chain of command are not similarly situated. *See Carr*, 185 F.3d at 1326. However, even though Westby testified that he was not responsible for the evaluations of all members of PREP, I have included them all in this analysis because Westby was responsible for the project. Tr. at 501-502.

performance played any role whatsoever in the decision to terminate you?

A. In the sense that they provided a pretext for this, yes, they did. In the sense that the things that they found as deficient in my performance could have been found in the performance of everybody else in the building – you see my point.

Q. So it's your point that each of the items that we've talked about, about deficient performance, were pretext to cover up the true scheme to retaliate against you.

A. Yes. In general, I think that's true. I'm not trying to say that there were no problems with me not meeting deliverables or something like that. What I'm saying is that if you look at the performance of my peers, you would find similar – had they been placed under this sort of an ever-tightening noose around my neck, that their performance frankly would have been a lot like mine, if they lasted that long.

Tr. at 360-361. I do not agree with White. As set forth above, I have examined the performance of his peers, and there are obvious differences. Nowhere in the record did I observe any other employee who exhibited a similar level of tardiness, nonchalance in the face of progressive discipline, or outright refusal to take direction from a manager. One of the key factors that influenced my decision that White was not similarly situated to any of his colleagues was the minutes of the January 13, 1999 performance review meeting. Ex. 35. Out of over 100 employees under the supervision of Barbara Goodman, only two were identified at the meeting as possibly needing a performance plan – and White was one of the two so identified. [14] Tr. at 1211. This supports NREL's argument that White's termination was not related to his protected disclosure. NREL managers had identified his performance problems and placed him in a different category than his colleagues, based on that performance, well before NREL was notified of the complaint in March 1999. Those problems had become so severe by August 2000 that his dismissal was inevitable. In conclusion, I find that NREL has presented clear and convincing evidence that it would have terminated White despite his protected disclosure.

IV. Conclusion

After reviewing the record, I find that the respondent contractor has met its burden of proving by clear and convincing evidence that it would have taken negative personnel actions against White, culminating in his termination, despite White's whistleblowing activity. It is true that White was

[14] The other employee later resigned from NREL.

a whistleblower, and to his credit was outspoken when he perceived an alleged unethical, wasteful, or irregular activity being performed with the taxpayer's money. It also is clear that Westby placed a high priority on receiving reports that White simply considered irrelevant to his work. However, Westby was not unreasonable in requesting these deliverables, and in many documented instances White refused to take Westby's direction. Even though White made a protected disclosure to DOE officials, his termination was a reasonable business decision based on White's non-compliance with a formal corrective action plan. White did not prove that he was treated differently because of his whistleblowing activity. Rather, White did not meet the terms of the formal corrective action plan, and NREL's decision to terminate him after notice and an opportunity to improve his performance was in my view clearly warranted. Accordingly, I will deny White's request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Ronald D. White under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed requesting review of the Initial Agency Decision by the Director of the Office of Hearings and Appeals with the Office of Hearings and Appeals, 1000 Independence Avenue, S.W., Washington, D.C. 20585-0107, telephone number (202) 287-1566, fax number (202) 287-1415.

Date: July 15, 2002

April 22, 2002

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Names of Petitioners: Raymond Gallegos; Andrew Sanchez

Date of Filing: July 3, 2001

Case Numbers: VBH-0070; VBH-0071

This Initial Agency Decision concerns a whistleblower complaint filed by Raymond Gallegos and Andrew Sanchez (the Complainants) against their previous employer, Business Environments (BE), under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. BE is a subcontractor that provides office furniture to the DOE's Los Alamos National Laboratory (LANL) in Los Alamos, New Mexico. The complainants worked as furniture installers for BE until they were both terminated on December 11, 2000. The complainants allege that BE terminated them in retaliation for their refusing to work without proper paperwork.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government- owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes reveals a substantial violation of a law, rule, or regulation; or, fraud, gross mismanagement, gross waste of funds, or abuse of authority. *See* 10 C.F.R. § 708.5(a)(1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an independent fact-finding by an investigator from the Office of Hearings and Appeals (OHA), a hearing by an OHA Hearing Officer, and an opportunity for review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

B. Factual Background

Prior to their termination, the Complainants worked for BE in Los Alamos. Their direct supervisor, James Daniel, worked at BE's office in Albuquerque, New Mexico. They communicated by cellular telephone and facsimile machines. Hearing Transcript (Tr.) at 161-62. The Complainants version of the events

leading to their termination differs from that of BE, offered through Mr. Daniel. On December 1, 2000, Mr. Daniel asserts that he received a telephone call from LANL, asking that furniture be moved immediately. *Id.* at 165. BE had previously installed the furniture. Mr. Daniel called the Complainants to inform them of the request. *Id*. The Complainants told Mr. Daniel that they did not have the correct paperwork to perform the job onsite. Since the office machines, including its facsimile machine, had recently been removed, Mr. Daniel could not FAX the correct paperwork to the Complainants. Therefore, he told them to use the paperwork they had used that morning at a prior job at LANL. *Id.* at 166. He directed them to copy the old form and "white-out" the data on those forms. The correct information could then be written into what would then be a blank form. Mr. Daniel told the Complainants to take the completed forms and have them signed by the appropriate authorities. *Id.* at 46, 132, 165. The Complainants resisted. For the most part, the Complainants agreed with Mr. Daniel's version of the facts of December 1, 2000. They disagree with whether his request would violate the health or safety regulations of LANL – a matter I will discuss later.

Mr. Gallegos claims that in his telephone conversation with Mr. Daniel, he explained that he believed it would be fraudulent to use the old paperwork. Mr. Sanchez testified that they were expecting a delivery at the BE Los Alamos warehouse and could not leave to move the furniture at LANL. Tr. at 21. He further stated that Mr. Daniel suggested that one of them go move the furniture and the other wait for the delivery. *Id.* However, Mr. Gallegos could not drive the truck and Mr. Sanchez who could drive the truck was not site- specific trained(1) for the area at LANL where the move was to occur. *Id.* Both Complainants stated affirmatively that Mr. Daniel told them to have the "whited-out" paperwork signed by the proper LANL employee. The furniture was not moved on December 1, 2000.

Mr. Daniel received a call on December 7, 2000, complaining that the furniture had not yet been moved. Tr. at 168. On December 8, 2000, he called the Complainants and asked why the job had not been completed. Once again, the Complainants claim they told Mr. Daniel they did not have the proper paperwork and refused to "white-out" old paperwork. After terminating the telephone call, Mr. Daniel decided to drive to Los Alamos and deal with the problem.

Mr. Daniel's recollection of the events of December 8, 2000, differs from the Complainants' recollections. Mr. Daniel testified that he arrived at the warehouse around 12:30 p.m. Neither of the Complainants were present, and the company truck was missing. Tr. at 169. Mr. Daniel stated that he left the warehouse to get some lunch, and then he started calling Mr. Sanchez' cellular telephone, Mr. Gallegos' pager, and Mr. Gallegos' father. *Id.* He called the Albuquerque office to determine if there were any messages for him there. There were not. He called Mr. Baird Brandow, who had escorted the Complainants at their morning job, and asked if he knew where they were. Mr. Brandow indicated he did not know where they were. *Id.*

The Complainants disagree with Mr. Daniel's recollection of the facts. Mr. Sanchez stated in testimony at the hearing in this case that he became ill around lunchtime and left. Tr. at 23. When he arrived home, he says he passed out for five to six hours and had a fever of 102 degrees. *Id.* Mr. Sanchez stated that he tried to call Mr. Daniel to tell him he was leaving because he was ill, but Mr. Daniel did not answer his cellular telephone and his voice mail was not activated. *Id.* at 24. Mr. Sanchez stated that he was too sick to call the Albuquerque office of BE. *Id.* at 36. As for Mr. Gallegos, he indicated that, after returning to the warehouse, he stayed until 2 p.m. and then left the warehouse. He tried to call Mr. Daniel and got no response. *Id.* at 106. Mr. Gallegos indicated that he took the company vehicle, although he did not have a driver's license, because he car pooled to work and his car pool had already left. Both the Complainants stated that it was understood that when they finished their assigned work for the day, they could leave – even if it was not yet quitting time.

On the evening of December 8, 2000, BE decided to terminate the Complainants for leaving their jobs early on that day without proper authorization and for taking the company truck. This was officially communicated to the Complainants on December 11, 2000, during a meeting between the Complainants and Mr. Daniel at the Los Alamos warehouse. At that time, Mr. Daniel determined that Mr. Gallegos had taken the truck, not Mr. Sanchez. When notified of his termination by BE, Mr. Sanchez attempted to give

Mr. Daniel a doctor's note.

C. Procedural History

After being terminated on December 11, 2000, the Complainants filed this action with the Albuquerque Operations Office of DOE under Part 708. Pursuant to the Part 708 Regulations, the matter was referred to the Office of Hearings and Appeals for an investigation on March 8, 2001. The Report of Investigation was issued on July 3, 2001, at which time I was appointed the Hearing Officer in this matter. A Hearing was held on December 10, 2001. At the Hearing, the Complainants were given the opportunity to introduce evidence that their refusal to perform the work requested of them led to their termination by BE. Conversely, BE had the opportunity to defend itself and show by clear and convincing evidence that it would have terminated the Complainants absent their refusal to perform the requested work.

II. Legal Standards Governing This Case

A. The Complainant's Burden

In the present case, it is the burden of the Complainants under Part 708 to establish by a preponderance of the evidence that they refused to participate in an activity that they believed would have constituted a violation of federal health or safety laws or caused them to have a reasonably fear of serious injury to themselves or others, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. (2) 10 C.F.R. § 708.29. *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993).

Although the regulations do not specifically state that a complainant must have a "reasonable" belief that an activity would violated federal health or safety laws, amendments to this section were made in 1999 that were intended to exclude trivial disclosures. *See* 64 Fed. Reg. at 12866 (March 15, 1999). Thus, it is consistent with these changes to deem that the Complainants must have had a "reasonable" belief that using "whited-out" paperwork would have violated a health or safety regulation.

B. The Contractor's Burden

If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against her, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure." 10 C.F.R. § 708.29. *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence, § 340 at 442 (4th ed. 1992)). Accordingly, in the present case, if Messrs. Gallegos and Sanchez establish that they refused to participate in an action covered by section 708.5 and that refusal was a contributing factor to an adverse personnel action, BE must convince me that it would have taken the same actions even if the Complainants had not refused to participate in an action. *Helen Gaidine Oglesbee*, 24 DOE ¶ 87,507 at 89,034-35 (1994).

III. Whether the Complainants Have Made A Prima Facie Case of Retaliation

The Complainants have not alleged that they feared serious injury by following Mr. Daniel's instructions. Therefore, the initial question before me is whether they reasonably believed following the instructions to use "whited-out" paperwork would violate a federal health or safety law. 10 C.F.R. § 708.5(c)(1). After

reviewing the record, I find the Complainants did not have a reasonable belief that presenting"whited-out" paperwork to LANL officials in order to enter the site would violate a health or safety regulation at LANL.

There is no dispute that if the Complainants had performed the work without the proper paperwork, it would have violated health or safety regulation at LANL. The paperwork that was necessary to enter the area where the furniture was to be moved included an Environmental, Safety, and Health form. This form lists the hazards to which those entering the particular work area might be exposed. Such exposure could lead to later health or safety issues. The paperwork is required under the health and safety regulations at LANL. Thus, the dispute hinges on whether the Complainants could have reasonably believed use of "whited-out" paperwork would violate the safety and health regulations at LANL.

The record developed before me indicates that the Complainants had not gone forward with the work because of several reasons, none of them related to a concern about violating the health or safety regulations of LANL. I find that their belief that the action requested of them would violate the health or safety regulations of LANL originated only after they were terminated, in an attempt to be covered by the Part 708 regulations.

The Complainants testified as follows about the paperwork at issue. They both stated at the hearing that it was not their job to prepare paperwork. Tr. at 47, 48, 50, 130. During a hearing before the State of New Mexico Department of Labor regarding Mr. Gallegos' unemployment compensation, Mr. Gallegos stated under oath that once the Los Alamos office was closed, he felt all the work was piling up on him. Also during that hearing, it was alleged that Mr. Daniel called late on December 1, 2000, to assign the work to them and the Complainants would be required to work overtime. BE Ex. No. 16 at 33. Apparently, neither of them wished to do that, so they stated that they refused to "white-out" the paperwork. Both Complainants also claimed they did not have the correct paperwork in the warehouse to copy. Mr. Sanchez also stated that he was not site-specific trained in the area where the furniture was to be moved and Mr. Gallegos could not drive the truck, so they could not separate to do two jobs.(3) As is evident, the Complainants have given conflicting reasons for not completing the paperwork.

Another argument the Complainants have advanced is that Mr. Daniel told them to violate the regulations. At times during the hearing, both Complainants claimed they could not remember if Mr. Daniel had asked them to enter without first getting permission; yet at other times, they affirmed that he told them to have the "white-out" paperwork signed. Given the evidence before me, I do not believe that the Complaints were asked to perform the work without getting the "whited-out" paperwork signed by proper LANL officials or to try to enter the LANL facility without getting permission from LANL authorities. I conclude that Mr. Daniel did not ask the Complainants to mislead LANL officials about whether the form was new or "whited-out.(4)

After reviewing the record in this case, I cannot find that the Complainants had a reasonable belief based on the preponderance of the evidence presented that entering the site with "whited-out" paperwork would violate a health and safety regulation at LANL. First, there is evidence that Mr. Gallegos had entered the site based on "whited-out" paperwork previously. Further, I do not think that there is any reasonable basis for thinking a "whited-out" form would be any different from a blank form. Also, any difficulties that might arise would be resolved when the paperwork was taken for the LANL authority's signature. Finally, I believe from the evidence presented to me at both the Hearing and in exhibits that the Complainants attempted to rely on Part 708 after they were terminated as a means to recover damages or their employment. I do not believe the record shows that they believed, at the time they were asked to complete the work, that the use of the "whited-out" paperwork would violate a health or safety regulation of LANL. The Complainants made many conflicting statements about what occurred on December 8, 2000, both at the hearing, before the investigator, in their complaint letters, and in other accounts.(5) Because these conflicts remain unresolved, I cannot credit their story of why they did not complete the work Mr. Daniel requested. Consequently, I find that the failure of the Complainants to do what Mr. Daniel asked of them on December 1, 2000, and again on December 8, 2000, is not a "refusal to participate" protected under Part

708.

IV. Whether BE Would Have Terminated the Complainants in Absence of their Conduct

If I had found that the Complainants' refusal was a protected activity, BE would need to show that it would have terminated the Complainants even if they had not refused to perform the job on December 1, and 8, 2000.(6) As a result of my review of the record, I also find that BE has made that showing. I believe that BE would have terminated both Mr. Gallegos and Mr. Sanchez, absent their refusal. I will discuss them separately.

During the hearing held in this case, Mr. Gallegos admitted in his testimony that BE had cause to terminate him for taking the company truck on December 8, 2000, without proper authority. Mr. Gallegos was not permitted to drive the company vehicles because of prior driving violations and the fact that his license had been revoked. Mr. Gallegos stated during his testimony that he had no license at that time and that was the reason he car pooled. Tr. at 106. Nevertheless, Mr. Gallegos misappropriated and drove the company vehicle. Further, BE submitted evidence that it had previously terminated employees for unexcused absences. Mr. Gallegos admitted that he left work at 2 p.m., without contacting Mr. Daniel or the Albuquerque office of BE. I believe that BE would have terminated Mr. Gallegos for misappropriation of the company vehicle and his unexcused absence, notwithstanding his alleged protected refusal to perform the requested work.

Mr. Sanchez claims that he left at lunchtime on December 8, 2000, because he was ill. BE maintains that Mr. Sanchez was fired for an unexcused absence. In response, Mr. Sanchez argues that the absence should be considered properly excused because he attempted to contact Mr. Daniel to let him know he was ill and leaving early. At the hearing, he stated that he tried to call Mr. Daniel's cellular telephone but did not get an answer or voice mail. He stated that he went home and slept for six or seven hours. However, after reviewing the evidence presented, I do not believe Mr. Sanchez' absence from work on December 8, 2000, was an excused absence. There is no evidence to support his assertion that Mr. Sanchez attempted to contact Mr. Daniel. In fact, there is evidence to the contrary. Mr. Sanchez' cellular telephone bill does not show a call to Mr. Daniel's cellular telephone.(7) Nor does Mr. Daniel's telephone bill show any incoming telephone call from Mr. Sanchez. Further, despite Mr. Sanchez' testimony that he did not receive voice mail when he called Mr. Daniel, there was testimony that his brother had reached Mr. Daniel's voice mail on that telephone prior to December 8, 2000. Also, the bill for Mr. Daniel's cellular telephone shows that voice mail was available. Further, Mr. Daniel's bill shows one minute telephone calls to Mr. Sanchez' cellular telephone at 1:05 p.m., 1: 20 p.m., 1:43 p.m., and 2:05 p.m. Mr. Sanchez' bill shows corresponding voice mail retrieval on his cellular telephone.

The record before me, therefore, casts significant doubt as to Mr. Sanchez' account as to why he left the warehouse early and whether he attempted to contact BE to inform him he was leaving. I believe that Mr. Sanchez tried to construct an explanation for his absence after he found out that evening that he was going to be terminated at BE. My belief is based on the following. His co-worker Gallegos provided no support for Mr. Sanchez' account of his illness. At no time prior to the hearing did Mr. Gallegos state that Mr. Sanchez told him he was ill on December 8, 2000. Mr. Sanchez claimed that he was vomiting that day, something that Mr. Gallegos would have noticed since they worked closely together.(8) Further, Mr. Sanchez' story has been inconsistent. He has stated that he visited the doctor on December 8, directly from work. He did not. He stated that Mr. Gallegos drove him home. He drove himself home. His doctor's note is dated December 9, 2000, after he had been informed that he would be terminated because he left work early on December 8.

Both Mr. Gallegos and Mr. Sanchez have also tried to claim that they were permitted to leave work early if they had completed their assigned tasks for the day. I do not believe that is the case. Mr. Gallegos was

disciplined on September 13, 2000, for leaving work early without informing Mr. Daniel. Also, the Complainants' prior time sheets do not show that either Complainant had left work early at any time before December 8, thereby disputing their claim that it was permitted. Both Mr. Gallegos and Mr. Sanchez admit that they would normally inform Mr. Daniel that they were leaving early for the day. Given the inconsistencies in Mr. Sanchez' story and the fact that the only support for his contention that he was sick was obtained after he found out he was to be terminated, I find that BE has shown, by clear and convincing evidence, that Mr. Sanchez' absence was unexcused and that BE had cause to terminate(9) Mr. Sanchez for reasons independent of his refusal to perform the requested work.

V. Conclusion

The record convinces me that the failure of the Complainants to complete the work asked of them on December 1, 2000, and again on December 8, 2000, is not a "refusal to participate" protected under Part 708. I do not believe the Complainants had a reasonable belief based on the preponderance of the evidence presented that entering the site with "whited-out" paperwork, with the proper signatures, would violate a health and safety regulation at LANL. Further, the record shows that BE has proven by clear and convincing evidence that the Complainants' discharge would have happened notwithstanding their refusal to performed the requested work. Mr. Gallegos' termination occurred because he took the company truck without authority and without a driver's license and because he left work early without informing his direct supervisor. Mr. Sanchez' termination occurred because he left work early without informing his direct supervisor. Thus, their discharge would have occurred even in the absence of the refusal to perform the work.

Accordingly, I will deny Mr. Gallegos and Mr. Sanchez' requests for relief under 10 C.F.R. Part 708.

It is Therefore Ordered That:

(1) The complaints for relief under 10 C.F.R. Part 708 submitted by Raymond Gallegos, OHA Case No. VBH-0070, and Andrew Sanchez, OHA Case No. VBH-0071, are hereby denied.

(2) This is an initial agency decision, which shall become the final decision of the Department of Energy unless, within 15 days of issuance, a notice of appeal is filed with the Office of Hearings and Appeals, in which a party requests review of this initial agency decision.

Janet R. H. Fishman
Hearing Officer
Office of Hearings and Appeals

Date: **April 22, 2002**

(1)Site-specific training would have allowed him to go into the area by himself to move the furniture. Without the site-specific training, he had to be escorted or accompanied by someone who had site-specific training.

(2)The pertinent part of Section 708.5 provides that an employee of a contractor may file a complaint against his employer alleging retaliation if the employee "refus[ed] to participate in an activity, policy, or practice [he] believe[d] . . . would – (1) constitute a violation of a federal health or safety law; or (2) cause [the employee] to have a reasonable fear of serious injury to [himself], other employees, or member of the public." 10 C.F.R. § 708.5(c).

(3) At the hearing, Mr. Sanchez alleged that there was no way for them to do the work, because they were waiting for a truck to make a delivery. He stated that Mr. Daniel told them to split up. He implied that they could not because he was not site-specific trained and Mr. Gallegos could not drive the truck. I agree that

Mr. Gallegos could not drive the truck; however, at the Hearing, I questioned Mr. Noble, the facility coordinator at the site where the work was requested, if it would be permissible for one of the Complainants to enter the area with an escort such as Mr. Brandow. Tr. at 101. He stated that it would. Therefore, Mr. Sanchez could have contacted Mr. Brandow and asked him to escort him into the area.

(4) At the Hearing, I asked Mr. Daniel if he had ever used such paperwork previously. He stated that he had. Mr. Larry Noble, facility coordinator for LANL at the site where the work was requested, stated that he did not see a problem with using a form where old information had been "whited-out." Mr. Mike Daniel, Mr. James Daniel's brother and supervisor at BE, testified that the "white-out" procedure is still being used and submitted to me, as evidence at the Hearing, a form from October 9, 2001, as an example. Tr. at 155. In addition, an example of Form 1694 entitled Activity Hazard Analysis submitted by BE appears to have been "whited-out" previously and authorized Mr. Gallegos to perform work at LANL. Form 1694 was one of the forms Mr. Daniel requested the Complainants to "white-out." Therefore, it is apparent that Mr. Gallegos had used "white-out" forms previously and should have known or inferred that it was permissible to do so as long as the proper signatures were obtained.

(5) BE has submitted a copy of the transcript of Mr. Gallegos' hearing before the New Mexico Department of Labor Unemployment Compensation Officer. Statements made at that hearing conflict with other statements Mr. Gallegos has made about the facts of this case. Be Ex. No. 16.

(6) To facilitate any potential appeal of my opinion, I will review the issue of whether BE would have terminated the Complainants notwithstanding their refusal to "white-out" the paperwork.

(7) After the hearing, I kept the record open to receive a copy of Mr. Sanchez' cellular telephone bill, which would show whether he attempted to call Mr. Daniel on December 8, 2000. There is one call to Mr. Daniel on December 8 at 7:54 a.m. There are no other calls shown to Mr. Daniel's cellular telephone number or to the BE office in Albuquerque. In fact, the bill seems to belie Mr. Sanchez' claim that he left work around noon on December 8, 2000, and "passed out." The bill shows voice mail retrieval at 1:05 p.m., 1:21 p.m., 1:30 p.m., 1:43 p.m., 1:56 p.m. 2:05 p.m., 2:16 p.m., 4:18 p.m., 4:20 p.m., 5:36 p.m., 7:04 p.m., 7:11 p.m., and 8:13 p.m. The longest period is between 2:16 p.m. and 4:18 p.m., a time of two hours, not the six or seven hours Mr. Sanchez claims during which he slept or passed out.

(8) At the hearing, Mr. Gallegos stated that Mr. Sanchez asked him if it was okay for him to leave because he was sick. Tr. at 125. Mr. Gallegos then stated that as of the morning of December 8, 2000, he knew Mr. Sanchez was sick because of the way he sounded when he spoke. *Id.* However, Mr. Gallegos admitted that he never mentioned Mr. Sanchez' illness in either his written statement or in the interview with the OHA Investigator. *Id.* at 126. He claimed he didn't believe it was important at the time. *Id.* Even if Mr. Sanchez was ill, both he and Mr. Gallegos knew that they needed to contact Mr. Daniel, or if he was unavailable his brother, if they needed to leave early. In fact, Mr. Gallegos had been disciplined in October 2000 for leaving work sick without contacting Mr. Daniel. Tr. at 163-64; BE Ex. No. 23 at 5.

(9) BE submitted evidence showing that at least two previous employees had been terminated for being absent without authorization. BE Ex. No. 27.

August 5, 2002
DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: William Cor

Date of Filing: February 1, 2002

Case Number: VBH-0079

This Decision involves a whistleblower complaint filed by William Cor under the Department of Energy's (DOE) Contractor Employee Protection Program. From August 1998 to September 2001, Mr. Cor was employed as a glovebox systems engineer at Los Alamos National Laboratory (LANL), one of three national laboratories operated by the University of California (UC) for the DOE. Mr. Cor alleges that LANL management retaliated against him for activity protected under the DOE Contractor Employee Protection Program.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10 Part 708 of the Code of Federal Regulations.

B. Procedural History

On August 1, 2001, Mr. Cor filed a complaint with the DOE's Albuquerque Operations Office (DOE/AL). After attempts at informal resolution were not successful, DOE/AL referred the complaint to the DOE's Office of Hearings and Appeals (OHA) for a hearing without an investigation. Memorandum from Michelle Rodriguez de Varela, Employee Concerns Program Manager, DOE/AL, to George B. Breznay, Director, OHA (January 23, 2002). On February 1, 2002, the OHA Director appointed me hearing officer in this matter. I convened a hearing held at Los

Alamos, New Mexico on April 10-12, 2002. The OHA received post-hearing submissions from the parties and closed the record on June 7, 2002.

II. Analysis

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." 10 C.F.R. § 708.29. Accordingly, in the present case, if Mr. Cor establishes that a protected disclosure, participation, or refusal was a factor contributing to his termination, UC must convince me that it would have taken the action even if Mr. Cor had not engaged in any activity protected under Part 708.

After considering the record established in the investigation by the parties' submissions and the testimony presented at the hearing, for the reasons stated below I have concluded that Mr. Cor has met his burden of proving by a preponderance of the evidence that he engaged in protected activity that contributed to certain actions taken against him, including his termination. However, I find that UC has shown by clear and convincing evidence that it would have taken these same actions absent Mr. Cor's protected activity.

A. Whether Mr. Cor Engaged in Activities Protected Under 10 C.F.R. § 708.5

Mr. Cor worked for the Nuclear Materials Technology (NMT) division of LANL as an engineer responsible for gloveboxes in Technical Area 55 (TA 55) of the lab. Mr. Cor was a member of the TA 55 Facility Operations Group (NMT-8).

> TA-55, among other things, is involved with the handling of nuclear and other hazardous materials, and one of the ways in which those things are handled is in a special facility, and within that special facility there are . . . approximately 300 gloveboxes . . . .
>
> Gloveboxes come in all different sizes and all different configurations, and they're just like they sound: they're big or somewhat smaller boxes, you stick your hands inside in gloves and you manipulate materials.
>
> . . . .
>
> A glovebox is basically a simple structure in concept. It's made up of mostly stainless steel, glass and rubber sealing materials, but there's a lot that can go wrong

> with them and there's also a lot of penetration that can be made in and out of, including electrical connections, piping, utility connections. There are locks to transfer materials in and out, back ports, so on, so there's a lot of accouterments and sub-assemblies that are often attached to and become part of the structure.

Transcript of Hearing (Tr.) at 13, 22.

In March 2000, there was an accident in the PF 4 facility of TA 55, in which a worker inadvertently jiggled a loose fitting on a pipe leading to a glovebox, causing a leak of plutonium. "Because of the exposure to workers, the accident was considered a serious one. The DOE convened a Type A Accident Investigation Board that converged on TA 55 with selected experts to determine the cause of the accident and impose corrective actions." Respondent's Post-Hearing Brief at 5.

Mr. Cor alleges that a number of activities in which he engaged are protected under Part 708. The Part 708 regulations states that the following conduct by an contractor employee is protected from reprisal by his employer:

> (a) Disclosing to a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, your employer, or any higher tier contractor, information that you reasonably believe reveals--
>
> (1) A substantial violation of a law, rule, or regulation;
>
> (2) A substantial and specific danger to employees or to public health or safety; or
>
> (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority; or
>
> (b) Participating in a Congressional proceeding or an administrative proceeding conducted under this regulation; or
>
> (c) Subject to § 708.7 of this subpart, refusing to participate in an activity, policy, or practice if you believe participation would --
>
> (1) Constitute a violation of a federal health or safety law; or
>
> (2) Cause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public.

10 C.F.R. § 708.5. I address each of Mr. Cor's alleged protected activities below, in chronological order, and find that Mr. Cor engaged in protected activity on three occasions.

1. March 1999 - Initiated Pressure Testing for Glovebox Utility Piping

Mr. Cor states that in March 1999, he initiated a "policy to pressure test new and modified glovebox utility piping to [a] higher degree prior to certification for service." Complainant's Exhibit 0.2. The complainant presents an April 2000 e-mail message in which he refers to the fact that "we have been requiring much higher pressures in leak tests of most of the new and modified piping to gloveboxes and equipment." Complainant's Exhibit 2.-.[1] He contends that the initiation of the new policy was protected activity under 10 C.F.R. § 708.5(a)(2). Complainant's Exhibit 0.2. I disagree. Mr. Cor has not demonstrated that he made a disclosure of any safety concern in conjunction with this action, let alone that he made a disclosure of a "substantial and specific danger to employees or to public health or safety" protected under Part 708. 10 C.F.R. § 708.5(a)(2).

2. May 1999 "Request for Work"

On May 17, 1999, Mr. Cor submitted a standard LANL form entitled "TA 55 Request for Work," in which he initiated a work order to "[d]evelop and implement methods for safe maintenance access and restraints on top of gloveboxes, trolley tunnels, and upper level gloveport locations, . . ." Complainant's Exhibit 1.1. Mr. Cor contends that this action was also protected activity under 10 C.F.R. § 708.5(a)(2). Complainant's Exhibit 0.2. Again, however, Mr. Cor raised no safety concern in this work order. For example, the work order does not indicate that there was a safety problem with gloveboxes, but rather proposes "to verify that each can support the live load of workers on top" and "to verify support capability of inside/outside restraints for heavy equipment." Complainant's Exhibit 1.1. Attached to the form are minutes from a March 24, 1999 meeting of Mr. Cor, his co-worker Curtis Sandoval, and two employees of Johnson Controls Northern New Mexico (JCNNM). The minutes refer to a discussion of "developing methods for safe access to perform maintenance on top of gloveboxes," "safe maintenance access issues," and the possibility of "permanent installation of some safe access features." However, nothing in the documents refers to what could be called a "substantial and specific danger to . . . health or safety." 10 C.F.R. § 708.5(a)(2).

3. June - September 2000 Input to DOE Type A Accident Investigation

As discussed above, in the summer of 2000 a DOE Type A Accident Investigation Board conducted an on-site investigation in the aftermath of a plutonium leak in the PF 4 facility of TA 55. Mr. Cor contends that he offered input to the investigators through his line management, and that this input constitutes a disclosure protected under 10 C.F.R. § 708.5(a)(2). However, Mr. Cor points to no information that he provided to the investigation board (or to his line management with the intent

---

1/ Mr. Cor marked his exhibits to correspond to a numbered listing of allegations of protected activity and retaliation. Complainant's Exhibit 0.2. Thus, the first exhibit relating to his first allegation was labeled Exhibit 1.1, the second exhibit related to the first allegation was labeled Exhibit 1.2, etc. This pattern was generally followed for the remaining allegations, except that in some cases, later-added exhibits were not assigned a number to the right of the decimal point. For example, Exhibit 2.1 is followed by Exhibit 2.-.

that it be presented to investigators) that discloses a "substantial and specific danger" to health or safety.

4. October 2000 Appointment to Chair Glovebox Specifications Committee

In an October 12, 2000 memorandum, the NMT Division Director, Tim George, announced the formation of a working group to respond to one of the "Judgments of Need" identified by the DOE Type A investigation, specifically the need "to develop and implement a process to assure that effective quality assurance practices are in place to verify that existing glovebox and airlock auxiliary systems (such as argon and dry vacuum) are in compliance with applicable codes and requirements." Complainant's Exhibit 5.1. NMT management appointed Mr. Cor to chair this working group (referred to often in the record as the "glovebox committee"). *Id.* Mr. Cor points to his participation in this group as protected activity under sections 708.5(a)(2) and 708.5(b) of the Part 708 regulations. I find no evidence that Mr. Cor made any disclosures during his work with the group that revealed a substantial and specific danger to health or safety, the type of disclosure that is protected under section 708.5(a)(2). In addition, his participation was not part of "a Congressional proceeding or an administrative proceeding conducted under this regulation" and therefore is not protected under section 708.5(b).

5. November 2000 Request for Additional Resources

The complainant states that in early November 2000 he met with the TA 55 Facility Manager and NMT-8 Group Leader "to request time, staff and computer support for added duties responding to [the] DOE judgments of need." Complainant's Exhibit 0.2. He also cites a memorandum to his team leader in which he states,

> I would like you to help us stress at every opportunity, that we are spread very thin in terms of staff, software, and training, in order to handle the tasks before us. We will make every effort to reach milestones, but have not obtained sufficient support over the past year to feel at all comfortable with the mission.

Complainant's Exhibit 6.1. Mr. Cor claims that these communications were protected activity under sections 708.5(a)(2) and 708.5(b) of the Part 708 regulations. First, nowhere in the memorandum quoted above, or in Mr. Cor's description of his November 2000 meeting with management, is there any mention of a health or safety issue. And these communications clearly were not part of "a Congressional proceeding or an administrative proceeding conducted under this regulation" and therefore are not protected under section 708.5(b).

6. December 2000 AM111 Employee Complaint

On December 11, 2000, Mr. Cor filed an employee grievance under LANL policy AM111. In the AM111 complaint, Mr. Cor notes, "Even though the attention was not sparked by a glovebox failure, the DOE declared a number of glovebox related judgments of need in July 2000. NMT committed

to corrective actions with dates certain, . . .” Complainant’s Exhibit 8.1 at 2. Mr. Cor stated that the job of chairing the glovebox specifications committee “and many other new tasks were delegated to the same individual . . . .” *Id.* He contended that “NMT reorganized in a way that multiplied the supervision of the glovebox systems engineer for NMT-8,” and after listing those to whom he reported, Mr. Cor asserted, “This is simply too much direction for one individual, or even a small team.” *Id.*

Describing NMT’s corrective action plan as going “beyond the current state of the art,” Mr. Cor concluded

> Although the systems engineer has the capability to manage the changing needs, in an area where subject matter experts are rare, this results in a workload that is too demanding for the current staff and resources. Requests for additional staff and resources over a year have been met with the consistent response that no budget is available. Requests for additional time have been refused because of DOE urgency. Placement within an individual facilities group is proving to be inappropriate for the high level of interest and scrutiny. LANL should instead open an office of glovebox technology, reporting to the director’s office, and appoint the NMT-8 glovebox engineer to manage the office.

Id. at 3.

Mr. Cor also proposed that he receive a 25% increase in salary. *Id.* Mr. Cor contends that his AM111 complaint was a protected disclosure revealing a “substantial and specific danger to employees or to public health or safety” and “gross mismanagement . . . .” 10 C.F.R. § 708.5(a)(2), (a)(3). I do not agree. Mr. Cor’s complaint never refers to health or safety issues. Neither does the complaint reveal what Mr. Cor could reasonably believe was “gross mismanagement.”

> “Gross mismanagement” is more than de minimis wrongdoing or negligence. *Embree v. Department of Treasury*, 70 M.S.P.R. 79, 85 (1996). It does not include management decisions that are merely debatable, nor does it mean action or inaction which constitutes simple negligence or wrongdoing. Id. There must be an element of blatancy. Therefore gross mismanagement means a management action or inaction that creates a substantial risk of significant adverse impact upon the agency’s ability to accomplish its mission. Id.

Roger H. Hardwick, 27 DOE ¶ 87,539, Case No. VBA-0032 (1999). Mr. Cor’s AM111 complaint faults NMT management for saddling him with “a workload that is too demanding,” subjecting him to “too much direction,” and not providing him with sufficient staff and resources. Though seeming to recognize the time constraints imposed by “DOE urgency,” he implies that less strict deadlines could have been negotiated, stating that “NMT and LANL must negotiate with the DOE at arms length in the area of glovebox systems, with reasonable expectations of costs, time, and quality of

services."[2] However, while the complaint suggests that Mr. Cor was personally suffering what he felt was an adverse impact due to management's action (or inaction), the complaint does not reveal "a substantial risk of significant adverse impact upon" NMT or LANL's "ability to accomplish its mission." Thus, I find that the AM111 complaint does not reveal "gross mismanagement," and Mr. Cor has articulated no basis for reasonably believing that his complaint revealed such information.

Mr. Cor also asserts that his AM111 complaint is protected as a refusal "to participate in an activity, policy, or practice if you believe participation would . . . [c]ause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public." 10 C.F.R. § 708.5(c)(2). However, since Mr. Cor's complaint never references any refusal by him to participate in any activity, the complaint cannot be so protected.

7. January 2001 "Walk-Around" Database Entry

On January 11, 2001, Mr. Cor submitted an on-line form for entrance into a "walk-around" database, a system for the reporting of safety problems observed by employees. In this form, he contends the DOE's Type A accident investigation was

> fundamentally flawed. The investigators did not interview the current glovebox systems engineer, . . . Yet the report identifies several broad areas of glovebox related needs . . . . This disconnect has caused great confusion in attempting to plan and implement corrective actions. For example, in one case the DOE appears to have been unaware of the quality assurance process for glovebox and auxiliary systems that NMT has had in place for years. In the confusion of attempting to respond to this need, it was assumed until recently that DOE was aware of the existing process and was not satisfied. As a result, plans were laid to go beyond the state of the art in glovebox specification, in an unreasonably short period of time. Even if the misunderstanding is resolved, the time allowed to respond may still not be adequate or appropriate.

2/ When asked at the hearing about the need to negotiate with DOE "at arms length," Mr. Cor provided the following explanation:

> A . . . . My view of this relationship between the laboratory and the DOE is that the Department of Energy represents the owner of the institution and the laboratory is a contractor or a building manager for the facility; there's a contractual relationship between the two and they shouldn't be confused and merged together such that the owner's interests necessarily become what the contractor agrees to perform.
>
> Q So are you saying then that the lab shouldn't always do what the DOE tells it to do?
>
> A The lab must comply with the mission of the DOE but at the same time there has to be a recognition that the resources and the budgets and the conditions of the work are negotiated on a periodic or even a continuing basis, particularly in light of a emergency -- or not an emergency but a serious accident such as occurred in 2000.

> NMT is rushing to respond to several of the glovebox related needs, relying on limited engineering resources, and apparently resisting long-standing requests for additional support and time. This is dangerous because of the obvious risks of miscommunication combined with inadequate support in responding to such serious findings.
>
> In the meantime the findings of the Type A investigation have diverted attention and resources from addressing an even greater glovebox safety hazard than those which led to the March 16, 2000 multiple intake. *The greater safety hazard is by the crafts and technicians in attempting to gain access to the top and sides of PF-4 gloveboxes for construction, maintenance, and surveillance. In many cases it is not possible to place adequate lifts, tie-off points or scaffolding for glovebox systems access, yet the access may be required for compelling reasons. The gloveboxes have either not been structurally analyzed to accommodate the activity and weight, or design of built-in scaffolding has not been initiated. Stress and activity upon relatively fragile glovebox structures, whether in use or isolated, could result in deflections sufficient to cause surprising release and exposure to hazardous materials.* NMT management has been aware of this hazardous condition since well before the Type A investigation.

Complainant's Exhibits 11.1, 11.-.

The above excerpt summarizes what appears to be the crux of Mr. Cor's complaints. I find that Mr. Cor's entry of this information into the "walk-around" database is a disclosure to his employer protected under Part 708 since it contained information that Mr. Cor reasonably believed revealed a substantial and specific danger to employees or to public health or safety. 10 C.F.R. § 710.5(a)(2).

UC argues that no incidents such as that posited by Mr. Cor in his complaint ever occurred, that there were existing systems to avoid such an incident, that the issue had been known to management for some time, and that Mr. Cor did nothing to actively pursue this issue from the time he submitted the May 1999 work order discussed above, until he again raised the issue in the January 2001 walk-around database entry. Respondent's Post-Hearing Brief at 4-5.

I am not persuaded by UC's arguments. First, the fact that no such incident as that posited by Mr. Cor has yet occurred does not logically rule out the possibility of a future occurrence; nor does it necessarily make unreasonable a belief that there is a substantial and specific risk of such an occurrence. *Rosie L. Beckham*, 27 DOE ¶ 87,557, Case No. VBA-0044 (2000) ("[F]or purposes of Part 708, it does not matter whether the information a putative whistleblower disclosed is ultimately factually substantiated."). Second, regarding the adequacy of existing systems to address this issue, UC points to "the use of on-site scaffolding, rails and ladders or other portable platforms that allowed the desired access." However, a reasonable question as to the adequacy of these systems is raised by the following testimony of the former deputy group leader of NMT-8, Tom Blum:

Q Let me go back, then, to what you've already discussed about the access to glovebox upper reaches, shall we say, by both -- well, initially this came about from the crafts representing Johnson Controls maintenance workers. Is that correct?

A Yes. It's Johnson Control crafts people.

Q Okay. Is it fair to say that the gloveboxes in the PF-4 facility are fairly congested?

A You mean they have a lot of surfaces that go to them? Is that what --

Q Well, in addition to that, but there is just a lot of clutter in the area, limited space for all of the work that's going on in there?

A Well, the rooms have a lot of equipment in it. I don't -- I think we do a good job of keeping the aisleways clear between the boxes. There's certainly a lot of surfaces that go to the boxes, there's a lot of surfaces above the boxes. But --

Q Is it possible that there are some or many instances where it's so congested that it's not possible to bring scaffolding and ladders to bear on the surface that needs to be accessed?

A There are -- no. I will say that the boxes against the walls of the laboratories are -- the rear of the boxes are pretty much inaccessible, very difficult to get to. But in other cases, I think -- it's a requirement that the corridor, if you will, or the spaces between the boxes be clear so that you can move a box in and out of the room once it's decommissioned.

Q Well, so --

A I mean, that's always been one of the requirements, that you have a -- I don't know what that spacing is. I don't remember. But --

Q Well, so was it your understanding, then, that the complaint or the concern of these crafts was more to the inconvenience of having to bring in temporary scaffolding and bringing it to bear on the surface rather than the inability to access certain parts even with scaffolding?

A A little bit of both. Part of it is, it delayed -- or it was time consuming to erect scaffolding, to get that scheduled and in place, as well as, once the job is done, to take it down. A lot of work was going on, and scaffolding would have to be moved and located in other areas of the facility. In addition to that, I don't want to say

> inaccessible because they were working on ladders, as well. But in many cases a ladder wasn't adequate, as you well know.
>
> Q Okay.
>
> A There were places in -- to finish answering your question, there are places that are fairly inaccessible, and most of those deal with boxes that are up against the walls of the laboratory rooms.

Tr. at 350-52. Clearly, there was a disagreement between Mr. Cor and others as to whether existing systems were in fact sufficient to address the concern Mr. Cor raised. The fact that Mr. Cor initiated a work order in 1999 indicates that he believed something needed to be done at that time. The fact that the proposed work was never approved indicates that LANL did not consider to be a high enough priority. While the ultimate merits of Mr. Cor's concern is not at issue in this case, the evidence in the record leaves room for reasonable disagreement as to whether the situation then existing presented a legitimate safety concern.

Third, this office has rejected an interpretation of the word "disclosing" that would only encompass providing information not already known by management. *META, Inc.*, 26 DOE ¶ 87,504, Case No. VWZ-0007 (1996) ("Imposing the interpretation [respondent] suggests would require an employee to first ascertain whether his or her information is unknown to DOE or the contractor in order to assure his or her protected status and that process could be an elaborate and difficult one. In any case, it would tend to inhibit employees from freely coming forward with sensitive information and concerns.").

8. January 2001 Submission of List of Roles and Responsibilities

On January 5, 2001, the NMT-8 systems engineering team leader, Stuart McKernan, directed the members of his team, including Mr. Cor, to "work up a draft list of what you feel your roles and responsibilities are. Submit these to me via e-mail by Friday the 19th. The idea is to formalize job content for our positions." Complainant's Exhibit 10.-. On January 18, 2001, Mr. Cor provided to Mr. McKernan a "draft for glovebox engineering, in Excel format." Mr. Cor contends that his response to Mr. McKernan's directive was protected under 708.5(b) of the Part 708 regulations. However, since this submission was clearly not part of "a Congressional proceeding or an administrative proceeding conducted under this regulation," it is not protected activity under section 708.5(b).

9. February 2001 E-Mail Rebuttal to Management's Response to AM111 Complaint

On February 6, 2001, Mr. Cor submitted to a LANL Human Resources employee a rebuttal to NMT's response to his December 2000 AM111 complaint. As did the original AM111 complaint, the rebuttal focuses on what Mr. Cor alleged was his "excessive" workload, and criticizes NMT's "efforts to bring more resources to glovebox engineering" as reflecting "an intent to micromanage

the priorities and activities of the glovebox manager." Complainant's Exhibit 15.1. Mr. Cor maintains that this rebuttal constitutes protected activity under section 708.5(a)(2) and 708.5(b). However, the rebuttal only mentions safety in a vague reference to "a glovebox safety concern" and the lack of resources available to address the issue. Thus, the rebuttal did not reveal a substantial and specific danger to employees or to public health or safety, and therefore is not protected under section 708.5(a)(2). And, again, since this submission was not part of "a Congressional proceeding or an administrative proceeding conducted under this regulation," it is not protected activity under section 708.5(b).

10. February 2001 Request for Family and Medical Leave

On February 20, 2001, Mr. Cor submitted to his employer a request for Family and Medical Leave. Complainant's Exhibit 16.1. The complainant contends that this request is protected as a refusal "to participate in an activity, policy, or practice if you believe participation would . . . [c]ause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public." 10 C.F.R. § 708.5(c)(2). Mr. Cor contends that his request was related to a "concern of injury to self." However, given several choices on the form for indicating the purpose of the leave, Mr. Cor chose "Care for parent, child under age 18 (or age 18 or older if incapable of self-care because of a mental or physical disability), or spouse with serious health condition." He did *not* choose "Your own serious health condition that makes you unable to perform the functions of your job." In a March 19, 2001 e-mail to the Systems Engineering team leader, Mr. Cor states, "Due to some current family issues, combined with stress of office workload, I plan to be taking some intermittent leave under FMLA, beginning March 20th." Complainant's Exhibit 16.-. Even if I were to determine that "the stress of office workload" was the primary basis for Mr. Cor's leave request, I cannot equate the need to alleviate stress with a fear of injury to self, let alone a fear of serious injury. Thus, I reject the contention that this request constitutes activity protected under Part 708.

11. February 2001 Request for Decision on AM111 Complaint

After NMT management declined the opportunity for informal resolution of Mr. Cor's AM111 complaint, discussed above, Mr. Cor, on February 21, 2001, requested that a decision on his complaint be made by "the next higher-level manager in the chain of command," Steven Younger. Complainant's Exhibit 17.1. Mr. Younger was LANL's Associate Director for Weapons. Mr. Cor claims that this request is protected activity under section 708.5(a)(2) and 708.5(b) of the Part 708 regulations. I reject this contention for the same reasons I found above that Mr. Cor's rebuttal of NMT management's response to the complaint was not protected under these provisions.

12. March 2001 Notification of Medical Condition

In a March 21, 2001 e-mail to his systems engineering team leader, Stuart McKernan, Mr. Cor stated, "The purpose of [my family and medical] leave has gotten more complicated in the meantime. ESH-2 recently ran some tests as part of my annual physical, and found some problem with my blood. They say it suggests cancer, but I don't think it is that serious at this point. More tests will tell."

Complainant's Exhibit 19.1. Mr. Cor contends that this notification is activity protected as a refusal "to participate in an activity, policy, or practice if you believe participation would . . . [c]ause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public." 10 C.F.R. § 708.5(c)(2). I disagree, as this notification simply provides further basis for his family and medical leave, and nowhere does the notification mention that Mr. Cor was taking leave to avoid serious injury to himself in the workplace.

13. May 2001 Attempt at Mediation of AM111 Complaint

According to his contemporaneous records, Mr. Cor met with the NMT Division Director, Tim George, and the NMT-8 Group Leader, Ray Wallace, as part of an effort to mediate his AM111 complaint. Mr. Cor noted in his calendar for May 14, 2001,

> Mediation effort this afternoon with NMT went badly, as I was afraid it would. Tim George, Ray Wallace seemed determined to agree to nothing I proposed, and only insisted on micromanaging me as a solution. Went on for two hours, and I thought both were very arrogant, dishonest and manipulative. The mediators appeared intimidated by them also. No doubt that I will need to proceed with formal complaint resolution.

Complainant's Exhibit 21.1. As he does regarding his February 2001 rebuttal to NMT's response to the AM111 complaint, Mr. Cor characterizes this as activity protected under 10 C.F.R. § 708.5(a)(2), (b). I disagree for the same reasons I found above that Mr. Cor's original AM111 complaint and his rebuttal of NMT management's response to the complaint were not protected under these provisions.

14. May 2001 Amendment of FMLA Request and June 2001 Return to Work

On May 16, 2001, Mr. Cor submitted to his employer a revised request for Family and Medical Leave. Complainant's Exhibit 24.1. In this request, from the choices on the form for indicating the purpose of the leave, Mr. Cor chose "Your own serious health condition that makes you unable to perform the functions of your job." *Id.* Also submitted was a "Certification of Health Care Provider" signed by a physician, describing Mr. Cor's "fatigue, emotional distress, medical evaluation of anemia." Complainant's Exhibit 24.2. On June 21, 2001, Mr. Cor "returned to work on [a] limited schedule." Complainant's Exhibit 0.2. Mr. Cor contends that this request and return to work is activity protected as a refusal "to participate in an activity, policy, or practice if you believe participation would . . . [c]ause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public." 10 C.F.R. § 708.5(c)(2). I disagree, as this notification simply provides further basis for his family and medical leave, and nowhere does the notification mention that Mr. Cor was taking leave to avoid serious injury to himself in the workplace. And clearly, his return to work on June 21, 2001, was not a refusal to participate in any activity.

15. June 2001 Participation in American Glovebox Society Conference

In June 2001, Mr. Cor made plans to participate as a presenter at the American Glovebox Society (AGS) Annual Conference. Complainant's Exhibit 26.1. The planned presentation was titled "Insuring Proper Installation & Testing of Piping Systems; Use of Teflon Seated Valves in Nuclear Applications." *Id.* Although Mr. Cor ultimately did not attend this conference (discussed as an alleged retaliation below), he states that he nonetheless engaged in protected activity under Part 708 in connection with the conference, specifically sections 708.5(a)(2) and 708.5(b). However, Mr. Cor has not shown that he made any kind of disclosure in this regard. Even if he had presented at the conference, there is no reason to believe his presentation would have contained information that revealed a "substantial and specific danger to employees or to public health or safety." And his participation in the conference would not have been part of "a Congressional proceeding or an administrative proceeding conducted under this regulation," and therefore would not have been protected activity under section 708.5(b).

16. July 2001 Complaint of Retaliation for Filing AM111 Complaint

In a July 3, 2001 e-mail to LANL human resources personnel, Mr. Cor cites "many instances of retaliation, abuse of authority, slander and bad faith on the part of some of my line management in recent month, . . ." Complainant's Exhibit 28.1. Mr. Cor contends that this e-mail is a disclosure of information revealing "abuse of authority" by LANL management. In response, UC argues that "disputes over grievances are not evidence of mismanagement or evidence of an abuse of authority" and that there "was no capricious exercise of power that would have adversely affected some right that Mr. Cor had or that would have resulted in personal gain to his supervisors in this instance." Respondent's Post-Hearing Brief at 29.

It is important to note here that to determine whether this communication by Mr. Cor contained protected disclosures does not require a determination as to whether LANL management *in fact* abused its authority. The question is whether Mr. Cor believed the information he was conveying revealed an abuse of authority, and whether that belief was reasonable. 10 C.F.R. § 708.5(a)(3). An abuse of authority occurs when there is an "arbitrary or capricious exercise of power by a federal official or employee that adversely affects the rights of any person or that results in personal gain or advantage to himself or to preferred other persons." *D'Elia v. Department of the Treasury*, 60 M.S.P.R. 226, 232 (1993) (interpreting Whistleblower Protection Act). Among the allegations leveled in Mr. Cor's e-mail was that there "has been such a climate of fear fostered by the NMT-8 group leader, that one of my witnesses to the fact finder [appointed to investigate Mr. Cor's AM111 complaint] has asked to be excused from being interviewed." Complainant's Exhibit 28.1. I conclude that Mr. Cor's e-mail reflects his genuine belief as to the events that were occurring. His allegation of a "climate of fear" resulting in the intimidation of witnesses reveals what is at least arguably an "arbitrary or capricious exercise of power . . . that adversely affects the rights of" Mr.

Cor. Thus, while venturing no opinion as to the truth of Mr. Cor's allegations, I find that the allegation was a disclosure protected under Part 708.[3]

17. August 2001 Filing of Part 708 Complaint

On August 1, 2001, Mr. Cor filed his Part 708 complaint with the DOE's Albuquerque Operations Office. There is no question, and UC does not dispute, that the filing of a Part 708 complaint, and therefore participation in "an administrative proceeding conducted under this regulation," is conduct protected under the Part 708 regulations. 10 C.F.R. § 708.5(b).

In summary, I find that Mr. Cor engaged in activity protected under Part 708 on the following three occasions: (1) his January 11, 2001 entry into the Walk-Around Database; (2) his July 3, 2001 e-mail to LANL human resources, and (3) the filing of his Part 708 complaint on August 1, 2001. I will next review Mr. Cor's allegations of retaliation.

B. Whether Mr. Cor's Protected Activity Was a Factor Contributing to Retaliation

Under the Part 708 regulations,

> Retaliation means an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities described in § 708.5 of this subpart.

10 C.F.R. § 708.2.

Mr. Cor alleges many instances of retaliation. Complainant's Exhibit 0.2. As an initial matter, I will not consider any allegation of retaliation occurring prior to January 11, 2001, the date of what I found above to be Mr. Cor's first protected disclosure. I will now address the remaining allegations in chronological order to determine whether they are actions of the type described in the definition of retaliation above. I find below that two of the alleged instances of retaliation are actions of the type described in the definition of retaliation, and that Mr. Cor's protected activities were contributing factors in both of these actions.

3/ I disagree with UC's contention that *Thomas Dwyer*, 27 DOE ¶ 87,560, Case No. VBH-0005, stands for the general proposition that "disputes over grievances are not evidence of mismanagement or evidence of an abuse of authority." In *Thomas Dwyer*, I made a finding specific to that case that the grievances at issue did "not contain disclosures that evidence mismanagement or abuse of authority."

1. January 2001 Response to Walk-Around Database Entry

Mr. Cor contends that in late January 2001 the NMT Division Leader, Tim George, "closed out [my] entry in Management Walk Around Database, without addressing any merits and indicating to [the] employee that entry was inappropriate." Complainant's Exhibit 0.2. The complainant relies on an e-mail response from Mr. George in which he states,

> Some of the issues you raise in your finding certainly bear further investigation. However, I don't believe that the management walkaround system is the appropriate venue for raising or resolving these issues. We are already actively evaluating most of these issues as part of your recent [AM111 complaint], and expect to be in a position to address these concerns by January 31.

Complainant's Exhibit 12.1. The e-mail then goes on to address the merits of Mr. Cor's concern, precisely what Mr. Cor claims Mr. George did not do. *Id.* No sanction was applied to Mr. Cor. I find no basis for an argument that Mr. George's action in his e-mail response or in closing out the concern was "an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment)." 10 C.F.R. § 708.2. Therefore, this action cannot be retaliation as defined in Part 708.

2. February 1, 2001 Memo from NMT Division Leader

In January 2001, Mr. Cor submitted a draft memo to his supervisors entitled "Establishing Requirements for Glovebox Auxiliary System Configuration, LANL TA-55 Corrective Action Plan Item CAP05076." Complainant's Exhibit 13.-. On February 1, 2001, Tim George issued a revision of that memorandum. Complainant's Exhibit 13.2. Mr. Cor complains that Mr. George made "minor changes to content," "removed employee's name entirely from document, issued the memo under his own name, and did not even copy the employee on distribution." Complainant's Exhibit 0.2. However, Mr. George testified that it was not uncommon for him to issue memoranda, even though drafted by subordinates, under his own name, and to not include the subordinate on the memorandum's distribution list. In any event, the act alleged here by Mr. Cor clearly is not in the category of a "negative action with respect to the employee's compensation, terms, conditions or privileges of employment." This action therefore cannot be retaliation as defined in Part 708.

3. NMT's January 2001 Response to AM111 Complaint

On January 30, 2001, the NMT-8 Group Leader issued a memorandum responding to Mr. Cor's AM111 complaint. Mr. Cor contends that this response contained "false and misleading statements" and constitutes retaliation against him. First, I note that I found above that Mr. Cor's AM111 complaint did not contain disclosures protected under Part 708. In any event, I need not address the factual accuracy of NMT's response in order to find that the response does not constitute a "negative

action with respect to the employee's compensation, terms, conditions or privileges of employment." And even though the response finds unwarranted Mr. Cor's request to be made director of a LANL-wide glovebox technology office and to receive a 25% increase in salary, I would need to stretch the definition of "retaliation" too far to bring within its scope NMT's refusal to agree to what was by all appearances an extraordinary request.

4. LANL Management's Request for Fact Finder on AM111 Complaint

As discussed above, in February 2001, Mr. Cor requested that a decision on his AM111 complaint be made by "the next higher-level manager in the chain of command," Steven Younger. Complainant's Exhibit 17.1. The memorandum from LANL human resources relaying this request states that management or Mr. Cor could request that the issues be submitted to a "neutral Fact Finder . . ." Mr. Cor did not ask for the appointment of a fact finder. LANL management, however, did, and one was appointed. Complainant's Exhibit 18.1. Mr. Cor characterizes the request by LANL management for a neutral fact finder, "with no provision of intermediate relief," to be retaliation. Complainant's Exhibit 0.2. I disagree, and find nothing in LANL's request that could be accurately described as a negative action with respect to Mr. Cor's employment.

5. April 2001 Refusal to Allow Work at Home

Mr. Cor states that, in April 2001, NMT management refused his "offer to work at home, and threatened to disallow time already worked at home, even with prior notification to supervisor." However, without some evidence that his management treated Mr. Cor differently from any similarly situated employees in this regard, I cannot find that NMT's failure to approve Mr. Cor's work from home is a negative action with respect to his employment.

6. May 2001 Work Load Management Memorandum

As discussed above, on May 14, 2001, Mr. Cor met with the NMT Division Director, Tim George, and the NMT-8 Group Leader, Ray Wallace, as part of an effort to mediate his AM111 complaint. On May 16, 2001, Mr. George issued a memorandum stating,

> Pursuant to my meeting on May 14, 2001 with Mr. William Cor, one of the issues he faces is a large number of competing demands on his time. I told him that this issue could be resolved best by having his Team Leader set all priorities for his work.
>
> I hereby direct that the NMT-8 Systems Engineering Team Leader [Stuart McKernan] review with Mr. Cor all of the work demands that he faces, and make a decision on which work requirements Mr. Cor will respond to and accomplish each week. Mr. Cor will not work on any tasks not set by his Team Leader.

Complainant's Exhibit 23.1. Mr. Cor contends that the issuance of the memorandum was an act of retaliation, though he testified that the solution proposed in the memorandum was never

implemented. Complainant's Exhibit 0.1; Tr. at 296-97. Nonetheless, the memorandum itself is an action by Mr. Cor's employer with respect to the terms and conditions of his employment, and therefore is the type of action described in Part 708 definition of retaliation. 10 C.F.R. § 708.2.

7. Failure to Authorize Attendance at Conference

As noted above, in June 2001, Mr. Cor made plans to participate as a presenter at the American Glovebox Society (AGS) Annual Conference. Complainant's Exhibit 26.1. The NMT Group Leader, Ray Wallace, testified regarding his decision whether to approve Mr. Cor's travel to the conference.

> I got a travel request from Mr. Cor to attend it, and I signed it. And as I was putting it into my out box, I realized that this went for five days, Monday through -- you know, Monday to Friday, leave Monday and come back Friday.
>
> At the time, under the FMLA, he was working only three days. Well, the Occupational Health & Safety rules at the lab are pretty strict. If they say three days, that's all you best be doing.
>
> So he at the time was out, he was home. I called and left a voice mail message on his phone, saying, Hey, I -- you know, this is for five days. I need to talk to you about this. You're only authorized three. Let's discuss it.

Tr. at 458-59. Mr. Cor returned Mr. Wallace's phone call and left a voice mail message. On Friday, June 29, 2001, Mr. Wallace sent an e-mail to Mr. Cor stating, "Bill, I got your voice mail re: attending the AGS conference. Please see me Monday morning." Mr. Cor responded as follows by e-mail on Monday, July 2, 2001:

> I understood through Larry that you gave prior approval for this some time ago. Upon that condition I agreed to take part in the presentation for the AGS training seminar.
>
> As I explained on the phone this is not a factor in my limited working hours, if they are still in place at that time.

Complainant's Exhibit 27.-. About one hour later, Mr. Wallace responded with an e-mail stating, "come talk to me, please." *Id.* Mr. Cor responded by e-mail approximately one and one-half hours later:

> Ray -
>
> You need to understand that I have long since been advised not to meet on short notice in your office in a peremptory way, without taking certain precautions. Under

> present circumstances I must take this position with my line management, not just yourself. Most people are content to communicate with me without force, and that is the way it should be at a national laboratory.
>
> I would like to work out whatever your concerns may be, so I invite you to choose between phone, e-mail, or coming by my office when I am in. If we really need to meet in your office, then we could also arrange an appointment with sufficient advance notice and agenda that I may invite my representative.
>
> Sorry if this is inconvenient for you.
>
> - Bill Cor

Id. After receiving this e-mail, Mr. Wallace

> called Pat Trujillo, the Chief of Staff, and said, This is what just transpired. You know, I've never had this happen before. Give me some advice.
>
> And he said, This is management of the group. This is not disciplinary. He said, If a person under lab policy is being disciplined for something, he or she rates having a representative there of their choice. But this isn't discipline, this is just regular operation of the group.[4] That's [not applicable]. Thank you.
>
> So I called Mr. Cor back and said, Come down and see me, and told him basically that, You don't rate a representative. We're talking just general group operations. He wouldn't come.
>
> And so I invited him to go tell that to the Chief of Staff. He did, and subsequently left the lab.

Tr. at 460-61. Mr. Cor describes what happened next:

> What followed immediately after that, as I did go to Mr. Trujillo's office, he insisted that the orders should stand, that I should go without delay to Mr. Wallace's or suffer a possible charge of insubordination or being AWOL. And I tried to explain my concerns again with Mr. Trujillo, to no avail.

4/ To support his contention that he was entitled to have a representative while meeting with Mr. Wallace, Mr. Cor relies on a LANL memorandum stating that "managers and supervisors must allow employees, on request, to have a representative with them in meetings or interviews of an investigative nature . . . when a purpose of the interview is to obtain facts which could lead to disciplinary action that is probable or that is seriously considered." Complainant's Exhibit 27.-. Mr. Cor has not shown, and I do not find, that the LANL memorandum entitled Mr. Cor to have a representative present with discussing his travel request with Mr. Wallace.

Tr. at 91-92. Following this meeting, Mr. Cor left the work site, and never returned. Tr. at 463.

Mr. Cor contends that Mr. Wallace's refusal to approve his travel, as well as Mr. Wallace's insistence that Mr. Cor go to his office, was retaliation. What the documentation produced by Mr. Cor indicates, however, is that while Mr. Wallace was certainly considering disapproving the travel, he wanted to speak to Mr. Cor before making the decision. Once Mr. Cor left the lab on July 2, 2001, and did not return, whether NMT would approve his travel to the conference obviously became a moot point. Thus, while a decision to not allow Mr. Cor to attend the conference arguably is the kind of action described in the Part 708 definition of retaliation, such a decision apparently was never made. Moreover, I do not find that Mr. Wallace's insistence that Mr. Cor report to his office to talk is an action with respect to Mr. Cor's compensation, terms, conditions or privileges of employment, and therefore falls outside the definition of retaliation. 10 C.F.R. § 708.2.

8. September 2001 Termination

As will be discussed in more detail below, Mr. Cor was terminated from employment on September 21, 2001. Clearly, termination is an action with respect to Mr. Cor's employment, and therefore would fall within the Part 708 definition of retaliation.

I have therefore identified above two actions by NMT management that are the type of actions defined as retaliation in the Part 708 regulation, the proposal by Tim George in his May 2001 memorandum regarding managing Mr. Cor's workload, and Mr. Cor's September 2001 termination.[5] The next question is whether any of the following activities by Mr. Cor (already found above to be protected under Part 708) was a contributing factor to either Mr. George's memorandum or Mr. Cor's termination: (1) his January 11, 2001 entry into the Walk-Around Database; (2) his July 3, 2001 e-mail to LANL human resources, and (3) the filing of his Part 708 complaint on August 1, 2001.

In prior decisions of the Office of Hearings and Appeals, we have established that,

> A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action."

5/ Mr. Cor also contends that LANL retaliated against him by "refusing to respond to [his] Part 708 complaint" and by finding, in a December 11, 2001 letter from LANL Human Resources, no "evidence to support your claim that NMT management's actions toward you constituted retaliation." Complainant's Exhibit 0.2. However, in this regard, Mr. Cor makes no allegation that LANL took any action with respect to his employment. Indeed, the first allegation concerns a "non-action" and the second a letter issued by LANL after Mr. Cor had already been terminated.

Charles Barry DeLoach, 26 DOE ¶ 87,509 at 89,053-54 (1997) (quoting *Ronald Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993)); *Ronny J. Escamilla*, 26 DOE ¶ 87,508 at 89,046 (1996).

After reviewing the events from the time of Mr. Cor's first protected activity on January 11, 2001, through Mr. Cor's termination some eight months later, I conclude that there is close enough temporal proximity to find, under the circumstances, that Mr. Cor's January 2001 protected activity was a contributing factor in the proposal in Tim George's May 2001 memorandum regarding Mr. Cor's workload. For the same reason, I also find that all three of Mr. Cor's protected actions (in January, July, and August 2001) were contributing factors in the September 2001 decision to terminate Mr. Cor.[6] Looked at in context, all of the relevant events, both protected activities and alleged retaliation, were not isolated occurrences, but instead were part of a continuing and growing dispute between Mr. Cor and his management over an eight month period.

Notwithstanding these findings, it is clear that a large part of the dispute had nothing to do with Mr. Cor's protected activities. Moreover, as I discuss below, UC has proven by clear and convincing evidence that Mr. George would have issued the May 2001 memorandum and LANL would have terminated Mr. Cor in the absence of Mr. Cor's protected activities.

C. Whether LANL Would Have Take the Alleged Retaliatory Actions Absent Mr. Cor's Protected Activities

The primary issue of contention between Mr. Cor and his management, throughout the last eight months of his employment, appears to have been related to workload, i.e., Mr. Cor's contention that there was too much work and not enough resources, and that the deadlines for the completion of work were unrealistic. Variations on this theme can be found in Mr. Cor's AM111 complaint, his walk-around database entry, and his requests for FMLA leave due in part to stress at work. However, as I found above, Mr. Cor's communications and actions related to this issue are not protected under 10 C.F.R. § 708.5. Nonetheless, I have also found that Mr. Cor made protected disclosures related to a safety issue in his January 2001 walk-around database entry.

The temporal proximity between this disclosure and Mr. George's May 2001 memorandum regarding managing Mr. Cor's workload is such that I cannot rule out his January 2001 protected disclosure as a factor in the decision to issue the memorandum. But it is abundantly clear to me that Mr. George would have issued this same memorandum even if Mr. Cor had made no protected

---

6/ The record indicates that Mr. George, the individual responsible for both the May 2001 memorandum and Mr. Cor's termination, had the requisite knowledge of Mr. Cor's protected activities. As discussed above, Mr. George responded to Mr. Cor's January 2001 walk-around database entry. And, prior to making his decision to terminate Mr. Cor, Mr. George was provided, among other relevant documentation, a copy of messages authored by Mr. Cor. One of those messages contained his July 2001 protected disclosure, and another referred to the fact that he had filed a complaint under Part 708. Respondent's Exhibit 138.

disclosure. The genesis of the memorandum was Mr. Cor's AM111 complaint, which I have already found was related primarily to the workload issue and contained no protected disclosures. It was in the context of attempting to mediate the AM111 complaint that Mr. Cor met with Mr. George and Ray Wallace, the NMT-8 Group Leader. Not surprisingly, in his memorandum Mr. George states that one of the issues discussed was "a large number of competing demands on his time. I told him that this issue could be resolved best by having his Team Leader set all priorities for his work." Complainant's Exhibit 23.1. Mr. George testified credibly at the hearing that he issued the memorandum in an attempt to "pinpoint the actual specific duties that were amounting to this inordinate workload." Tr. at 650. Because I find that it was the "workload" issue that prompted Mr. George's memorandum, I am convinced that the memorandum would have been issued even if Mr. Cor had raised no safety issues in his January 2001 walk-around database entry.

What is even more clear to me is that Mr. Cor would have been terminated from his job in September 2001, his protected activities notwithstanding. As noted above, Mr. Cor left the workplace on July 2, 2001, after refusing to report to his Group Leader's office.

> MR. GOERING: Okay. As I understand, July 2, 2001, Mr. Wallace says, Come to my office. You refuse to go. You go to -- Mr. Wallace says, Okay, go to Mr. Trujillo's office.
>
> You go to Mr. Trujillo's office. Mr. Trujillo says, you know, You've got to go -- if Mr. Wallace asks you to go to his office, you've got to go to his office. And you, I guess believing that was wrong, left the workplace on July 2 and never returned. Is that right?
>
> THE WITNESS: That's correct.
>
> MR. GOERING: What I'm trying to understand is, what was it about the request to meet with Mr. Wallace that precluded you from showing up to work? Why couldn't you show up to work even though there was this pending request to see Mr. Wallace?
>
> THE WITNESS: Well, my understanding from Mr. Trujillo that the mere refusal to meet with Mr. Wallace was the source of their contention that I was insubordinate, if I --
>
> Since I was still under this Family Medical Leave Act and still had an iron deficiency, I could -- it appeared to me like I could invoke that, go home, and rely on that as a means of possibly ameliorating the situation, whereas if I had simply remained in the office and refused to meet under these circumstances, it would have been increasingly uncomfortable and confrontational.

MR. GOERING: Okay. As I understand it, though, as of July 2, the medical recommendation was that you could -- obviously, you know, that he couldn't foresee what happened on July 2. But the diagnosis was -- the recommendation was that you could return to work three days a week?

THE WITNESS: (No audible response.)

MR. GOERING: Okay.

THE WITNESS: This was the first day of the week.

MR. GOERING: Okay. Now, once you -- you indicated in a later exhibit, or in a later E-mail, which I think is Item 27, that -- yes -- 27.2, which doesn't seem to have a date as to when you wrote this. But -- or actually, no. I'm sorry. I'm talking about the part you wrote, which is August 12.

And you say that it may be you've exhausted your legal allowance of unpaid leave under FMLA.

My question is, once you had exhausted your FMLA leave, then, what did you think would be the effect of continuing not to go to work?

THE WITNESS: Well, I had hoped for some intervening relief or action through either some combination of Human Resources, the fact-finder, DOE, or some other authority above Mr. Wallace in the intervening time. I was going on hope here.

And at the same time, I was trying to make do with the situation as I had become enmeshed in at that point of trying to support the family. I continued to try to do what I could outside of the office, including responding to phone messages. And I was making contributions and not getting paid for them at this point.

But I didn't have an answer for what I could rely on at the expiration of my FMLA leave. But it's clear that I wasn't being offered any olive branch.

MR. GOERING: Right. But if -- and I'm not trying -- I don't mean to sound like I'm dismissing your concerns, but I'm just looking at it from the side of management.

If management says, We want you to come back to work, and then you've exhausted all your legal ability to be out of work, you realize you're at the end of that rope, I understand that you hoped for something that would intervene.

But at the point where your FMLA leave expired, it would seem to me that you might think, Well, I could really endanger my job if I don't go back to work when I'm supposed to go back to work and my leave has expired.

Isn't it reasonable for management to think, Well, he is AWOL if he doesn't show up and he doesn't have any reason -- he has no leave, he's not showing up to work?

THE WITNESS: Well, I think -- under the circumstances, I don't think that's a reasonable position for the management to take, given what they knew or appeared to be conveniently forgetting about the reasons for how this all came about, going over, as we've gone over here, a period of a couple of years at least.

MR. GOERING: But it sounds like the precipitating event on July 2 was Mr. Wallace wanted you to meet with him in his office. That's what caused you to leave on July 2?

THE WITNESS: Yes.

MR. GOERING: And then you said that you -- I asked you why that prevented you from coming to work, and you said, well, you figured you could use your FMLA leave and it might ameliorate the situation.

Once your FMLA leave is gone, then, what keeps you from, you know, maintaining your dispute, you know, and claiming to be in the right, understandably --

THE WITNESS: Yes.

MR. GOERING: -- but going to work and saying, you know, I'm going to --

THE WITNESS: Well, as a practical matter, I was already in South Carolina, nearly 2,000 miles away at that point, upon the expiration of my FMLA leave.

MR. GOERING: Okay. And so you couldn't go back?

THE WITNESS: Well, as a practical matter, I couldn't --

MR. GOERING: Okay.

THE WITNESS: -- at least not immediately.

Tr. at 260-64. Mr. Cor was in South Carolina by August 2001 because he had moved to accept employment with another firm. In the meantime, on August 6, 2001, Ray Wallace sent a certified letter to Mr. Cor, informing him that he was required to report to work by August 13, 2001, or else Mr. Wallace would "consider that you have abandoned your position and we will proceed with appropriate administrative action." Respondent's Exhibit 138 at Attachment D. In an August 12, 2001 e-mail to Ray Wallace, Mr. Cor stated that he

> cannot allow the false impression to foster or linger that I have abandoned my employment. It may be that I have exhausted my legal allowance of unpaid leave under FMLA, but in the meantime you are well aware that the primary cause for my absence has shifted due to your abusive and retaliatory actions manifested up to July 3rd, and continuing to date.

Complainant's Exhibit 27.2. Mr. Wallace responded by e-mail and regular mail, stating,

> Since you have failed to provide a legitimate basis for being absent from work, the Laboratory has determined you to be absent without leave and is following the procedures set forth in Laboratory policy AM 319 Absence Without Leave. Application of this policy could result in termination of your employment. If you have a legitimate reason for being absent from your work you should contact me immediately with that information so that it can be considered in light of the Laboratory's application of AM 319.

Id.

NMT management then referred the matter to a Case Review Board, an "advisory body to advise the cognizant manager on the appropriate managerial response to whatever situation there is." Tr. at 721. Philip Kruger, LANL's deputy director for human resources and group leader for staff relations, sat on the board. Mr. Kruger testified at the hearing and described the board's conclusion regarding the case of Mr. Cor.

> The case review board was unanimous that this was insubordination. This was a situation in which management was telling Mr. Cor to return to work, was telling him if he had a medical reason, to send that through the medical folks.
>
> Basically, the reason that he was giving was that he felt he was being mistreated by his supervisor and would not work for this man and would not even meet to talk about anything with this person without a representative there.
>
> He was told on repeated occasions that he didn't have that option; that there were ways he could complain about treatment and so forth, but to simply say, No, I'm

not going to go to work because I will not report to this man, was in fact insubordination and that we wouldn't live with it. And that went on for several weeks.

Mr. Kruger was questioned regarding LANL's policy and practice in cases of insubordination.

Q Is insubordination in fact an offense that's taken seriously by the Laboratory?

A We take it extremely seriously. We have --

Q And why?

A Well, as any operation would, people have to -- managers have to be able to maintain order in their workplace. People have jobs to do. Somebody has to oversee that. And in that sense, we're not -- we're no different than any other place.

But when you look at the Laboratory here, we have enormous safety and security -- there are enormous safety and security implications with virtually everything that we do. We cannot have a situation where people feel that, Well, I'll follow the orders that I want or I'll work for the people I want and if I don't like the orders or I don't like the people, I'm not going to do it.

If we have work that is unsafe or we have work that is not secure, people have the right to stop work. But they don't have the right to stop work simply because they don't particularly like the person they're working for.

Q Other employees have been terminated from the Laboratory for insubordination?

A I would -- there are lots of ways of characterizing any particular case. I would say absolutely, there are other employees who have been terminated for insubordination. When you look at records, you may see something -- for example, we just recently had one where it would be insubordination and performance.

In Mr. Cor's case, we'd probably describe it as insubordination and absent without leave, so forth. Generally speaking, this is, in my short tenure at the Laboratory, the first case I have come across where an employee basically has said, Yes, I understand the order. I'm supposed to go into work and meet with this -- with my supervisor, and I'm not going to do it.

> And having been told, You put your job at risk if you don't do it, do you understand we will fire you if you continue along this path, and the person still continues along the path, in fact, in the some 25 years that I've been doing this kind of work, this is kind of unique that way. I have not run across many cases like that.
>
> Q This was a clear-cut case is what you're saying?
>
> A No doubt in my mind.

Tr. at 726-27. It is clear to me that the driving force behind Mr. Cor's termination was his refusal to report to work. Even if Mr. Cor had engaged in no protected activity, I am convinced that events would have transpired almost precisely as they did, resulting in Mr. Cor's termination. In sum, I find that with regard to both Mr. George's May 2001 memorandum and Mr. Cor's termination, UC has met its burden of proving "by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." 10 C.F.R. § 708.29.

IV. Conclusion

As set forth above, I have found that the complainant has met his burden of proof of establishing by a preponderance of the evidence that he engaged in activity protected under 10 C.F.R. Part 708. I also have determined that the complainant's activity was a contributing factor in actions taken against him, including his termination. However, I found that UC has proven by clear and convincing evidence that it would have taken the same action absent his disclosures. Accordingly, I conclude that the complainant has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted.

It Is Therefore Ordered That:

(1) The request for relief filed by William Cor under 10 C.F.R. Part 708 is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after receipt of the decision.

Steven J. Goering
Hearing Officer
Office of Hearings and Appeals

Date: August 5, 2002

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: S.R. Davis

Date of Filing: August 7, 2003

Case Number: VBH-0083

S.R. Davis (the Employee) filed a complaint against her former employer, Fluor Fernald, Inc. (the Contractor) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The Employee alleges that she engaged in protected activity and that the Contractor retaliated by subjecting her to two disciplinary actions, a job transfer, and ultimately a separation pursuant to an involuntary separation program. The Employee seeks relief including reinstatement and back-pay. As the decision below indicates, I have concluded that the Contractor would have taken the same actions in the absence of the protected activity and, therefore, the Employee is not entitled to relief.

I. Background

A. The DOE's Contractor Employee Protection Program

The DOE Contractor Employee Protection Program is set forth at 10 C.F.R. Part 708. Part 708 prohibits contractors from retaliating against contractor employees who engage in protected activity. Protected activity includes disclosing information that an employee believes reveals a substantial violation of a law, rule, or regulation or gross fraud, waste, or abuse of authority. Protected activity also includes participating in a Part 708 proceeding. If a contractor retaliates against an employee for protected activity, the employee may file a complaint. The employee must establish, by a preponderance of the evidence, that the employee engaged in protected activity and that the activity was a contributing factor to an alleged retaliation. If the employee makes the required showings, the burden shifts to the contractor to establish by clear and convincing evidence that it

would have taken the same action in the absence of the employee's protected activity. If the employee prevails, the OHA may order employment-related relief such as reinstatement and backpay.

B. Procedural History

In June 2001, the Employee filed her complaint. The complaint alleges that she made protected disclosures and that the Contractor retaliated with two disciplinary actions and a job transfer. In June 2002, the local employee concerns office referred the matter to OHA for an investigation and hearing, and the OHA Director appointed an investigator (the Investigator). In July 2003, as the Investigator was preparing his report, the Contractor terminated the Employee as part of an involuntary separation program. In August 2003, the Investigator issued his report, and the OHA Director appointed me to serve as the hearing officer. OHA provided a copy of the investigatory file to both parties.

During the pre-hearing phase, I required written submissions and conducted telephone conferences. Through a series of letters to the parties, 1/ I ruled on the scope of the proceeding, identified the disputed issues for the hearing, and discussed possible evidence on the issues.

The Employee requested that the alleged retaliations to be considered in this case include her July 2003 involuntary separation. I granted this request.

I tentatively determined that the Employee had alleged four Part 708 retaliations: the two disciplinary actions, the job transfer, and the involuntary separation. The Employee objected. She alleged that, over the course of her employment, she had made protected disclosures that resulted in the Contractor's failure to promote her and that the Contractor's current refusal to correct this situation was itself a retaliation. I ruled that these allegations were not part of the complaint and, in any event, were untimely.

I tentatively determined that the Employee had met her burden with respect to the two disciplinary actions and the job transfer. I identified two alleged protected disclosures, and I stated that it

---

1/ These letters were issued on August 14, 2003, September 9, 2003, September 24, 2003, November 12, 2003, and December 1, 2003.

appeared that the Contractor did not dispute that she made the disclosures or that they were protected. 2/ I also stated that under our precedent the circumstances permitted a reasonable inference that the disclosures contributed to the three actions. The Contractor did not object and, therefore, I determined that the Employee had met her burden with respect to the two disciplinary actions and the job transfer.

I also tentatively determined that the Employee had met her burden with respect to the involuntary separation. I noted that the Employee's participation in this proceeding is protected activity and that under our precedent the Employee's involuntary separation during the proceeding permits a reasonable inference that the participation contributed to the separation. The Contractor did not object and, therefore, I determined that the Employee had met her burden with respect to the involuntary separation.

Because the Employee met her burden with respect to the four alleged retaliations, I limited the hearing to the issue whether the Contractor would have taken the same actions in the absence of the protected activity. I stated that the clear and convincing standard applicable to contractors was a difficult standard to meet and that the Contractor should consider this high standard in determining what documents and witnesses to present. In order to permit the Employee a full opportunity to challenge the Contractor's evidence, I required that the Contractor produce the documents used to select who would be separated. I invited the Employee to review the documents and to identify any employee who she believed should have been separated in her place.

The hearing was held on four days in December of 2003. Both parties submitted exhibit books. The Contractor numbered his exhibits, and they are cited as "Ex. [number]." The Employee numbered the pages of her exhibits, and they are cited as "Ex. P-[page number]." The Contractor presented a wide range of witnesses, including the Employee's management chain, human resources (HR) and employee relations officials and staff, and several co-workers. The Employee's counsel cross-examined these witnesses extensively, and she presented witnesses, including a co-worker and a worker in another department, to testify about the

---

2/ The two disclosures related to business ethics rules concerning the acceptance of gratuities from vendors and the documentation of potential conflicts of interest.

Employee's performance and conduct. The Employee also testified. Post-hearing briefing was completed on February 23, 2004.

II. General Background

The Fernald site is scheduled to close. Because of the planned closure of the site, the Contractor has implemented a series of voluntary and involuntary separation programs. These are commonly referred to as VSPs and ISPs. The programs relevant to the instant case are a 2001 VSP, a Spring 2003 VSP, a July 2003 ISP, and an October 2003 ISP.

The Employee worked in the Contractor's Information Management (IM) department. Prior to the June 2003 ISP, the IM department consisted of five managers: the department head and four division managers. Two of the divisions were "network" divisions and two were "programmer" divisions. As part of the July 2003 involuntary separation program, the Contractor separated the IM head and a programmer division manager; the Contractor then promoted one of the programmer managers to be department head, leaving two divisions - a network division and a programmer division. The remaining network manager will be referred to as the Network Manager; the remaining programmer manager will be referred to as the Programmer Manager.

From 1998 to June 2001, the Employee reported to the Network Manager. In late June 2001, the IM department head reassigned the Employee to the Programmer Manager. The Employee reported to the Programmer Manager for the next two years, until she was separated in the July 2003 ISP.

During her tenure with the Network Manager, the Employee held the title of "Supervisor Information Management." Until approximately the beginning of May 2001, she was one of three team leaders. In August 2001, two months after she was reassigned to the Programmer Manager, the IM department eliminated the title "Supervisor Information Management." The seven employees who held that title, including the Employee, had their title downgraded to "Information Management Analyst III." Ex. 67. Another employee's title was downgraded from "Manager Information Management" to "Senior Information Management Analyst." *Id.*

III. The Disciplinary Actions and Job Transfer

A. Introduction

The two disciplinary actions and the job transfer occurred in the first six months of 2001, during the Employee's tenure with the Network Manager. The first disciplinary action was a March 21, 2001 written reminder, citing inconsistent work hours, failure to follow management direction, and unprofessional communication style. The second action was a May 31, 2001 "decision making leave," citing failure to establish and maintain backups and unprofessional communication style. In a "decision making leave," the Contractor places an employee on administrative leave for the rest of the day so that the employee can make a decision about whether or not the employee wishes to remain employed. The June 25, 2001 job transfer to the Programmer Manager cited, inter alia, the Programmer Manager's need for the Employee's skills.

As explained below, the Contractor has presented clear and convincing evidence that it would have taken the same actions in the absence of the protected disclosures. The record indicates that, over the course of her tenure with the Network Manager, the Employee had a number of conflicts with subordinates, co-workers, and managers, in which the Employee made inflammatory and disrespectful statements to, and about, others. Although the Employee states that her conflicts were limited to those about whom she made protected disclosures, the record indicates that her conflicts were not so limited and instead involved a variety of people and a variety of topics. Some of them are discussed below.

B. The Employee's Conflicts with Subordinates, Co-Workers, and her Managers

1. The Period 1999 to 2000

In August 1999, the Employee objected to her supervisor's reversal of her decision to rescind a subordinate's computer access. The Employee e-mailed the Network Manager that she "was not happy" with his actions and that their impact "calls into question the true nature of our work relationship." She continued that they "are typical of your tendency to act on the word of those with less experience and other agendas." Ex. 11 at 2. As an example of the impact of his actions, she referred to another team leader as making "demeaning, condescending, off-handed remarks" about the Employee "usually in the presence of others." *Id.*

In August 2000, another subordinate complained to the Employee and the IM department head about the way she treated him. The subordinate cited the following e-mail exchange, which began after he recommended a software product.

> [The Employee:] ... I find it very disappointing and disconcerting in what I perceive as your unwillingness to be flexible when there is something you want or don't want to do. I find this to be just one of a few negatives about your tenure here. This situation is an example, the other is/was your problem with . . . your desktop. Being paged when your systems go down is another example.
>
> Another negative is your tendency to be highly opinionated on just about every subject. I'm not going to discard software or computers based on the opinion of someone who may not be around in a few months. . . .
>
> [The Subordinate:] . . . I was doing nothing more than what you asked - further investigating the problem at hand . . . . I would have just as agreeably dropped the topic if that is what you had asked me to do.
>
> [The Employee]: I guess you couldn't figure out that my last e-mail was rhetorical in nature. It would have been much better if you simply took it under advisement.
>
> . . .
>
> I think you need to realize that I am your supervisor and your customer – - you can't OFFEND and won't be offending me.

Ex. 13. The subordinate e-mailed the Employee and the IM department head, stating that he would be leaving and referred to the e-mail exchange as "why." 3/ *Id.* After the Employee received

---

3/ In a subsequent e-mail to his employer, the subordinate explained his feelings:

> Unfortunately, after months of shrugging off statements that also appeared to be rude, I reached the point where I just wasn't going to take it any more, so I gave notice. . . .
>
> . . . [She] has some issues with how she presents criticisms/comments/etc. that unfortunately offend people who like myself don't just confront her for fear of offending her/hurting her feelings. To that end, if I were to have stayed, I would have had to expect grating presentation of comments to continue. Although I like

(continued...)

the subordinate's complaint, she limited his computer access. Ex. 14. When the Network Manager overrode that decision, the Employee complained to the HR department head about the "Situation In Information Management:"

> [N]either [the Network Manager or the IM department head] has any authority to tell me when or how to handle an irate or exiting employee's computer access.

Ex. P-21. The Employee further stated that people in the IM department did not like her, specifically another team leader and three of the team leader's subordinates. Ex. P-24. 4/ Over a week after her manager's instruction to restore the subordinate's access, the Employee's manager e-mailed her, stating that the subordinate still did not have access to certain systems and that the subordinate needed the access for tasks the manager had assigned to him. The Employee responded by objecting to the manager's assignment of tasks to her subordinate and stated that "it is my call about access to computers for those under my supervision." Ex. P-324.

3/(...continued)

> [her] as a person (and I do), working for her has been difficult at times, and I think that [the Network Manager] needed to know that also. I truly hope my outburst won't hurt her career, or get her in any trouble. I just needed to end the series of what I perceived as snide verbal criticisms.

Ex. 14.

4/ The Employee offered the following example:

> I corrected [one of the team leader's subordinates], who is also on my First Responder team, about an action he took during the last Tornado warning. During last week's Safety Meeting, he made a snide remark in reference to that correction.

Ex. P-24.

In September 2000, when the Employee learned from a third party that the IM department head had extended the subordinate's contract, she objected to her managers:

> Gentlemen:
>
> While this is news to me, although not unexpected, I have a new employee I am expecting on October 16, 2000. [The subordinate] will have to be out of the cubicle he now occupies, leaving all computer hardware in place, by that date.

Ex. 15. The Employee then forwarded her e-mail to the HR department head, stating that her managers' failure to tell her of the extension indicated that they "don't have to respond to me, as a manager or supervisor or anything else" and the "two of them have been 'sneaking' around for the past few weeks orchestrating this extension" and "didn't even have the decency to show me the courtesy of telling me that I was no longer to sign his timesheet." *Id.* The Network Manager responded that the subordinate would not be using his current cubicle and equipment, and he referred to the IM department head's inquiry about different equipment. *Id.* The Employee responded to him and the IM department head:

> I figured as much, but neither of you could be honest about even that. It was merely a safety walk through and equipment we didn't want to get lost.
>
> I'd prefer not to hear anything about Clinton, or any other politicians from either of you. You got nothing on them.
>
> I hope [the subordinate] is naive enough, not to pick up any of these traits.

Id. The IM department head forwarded the message to the HR department head, stating:

> Thought you might like to see this. I thought we were making progress with [the Employee] but old habits die hard. I will address her disrespect, but not through EMAIL. She is again making an assumption about something that is not true. Frankly I'm getting tired of this.

Id. In his notes of an October 4, 2000 conversation with the Employee, the IM department head stated that he told the Employee

that her e-mail was inaccurate. Ex. 16; *see also* Tr. at 331-332. His notes also stated that he objected to the e-mail's "inflammatory" tone and stated that this had happened in the past. Ex. 16.

In his notes of a November 6, 2000 meeting, the IM department head stated that the Employee (i) objected to her managers' evaluation of her on a Meyers-Briggs survey, and (ii) complained about the Network Manager. Ex. 16; *see also* Tr. at 332-334. The notes state that the IM department head told her that he attributed their differences to (i) her constant questioning of authority, (ii) her view of her own authority as higher than it is, and (iii) her inconsistent work habits and attendance - different hours. *Id.*

2. The First Six Months of 2001

From November 2000 to January 2001, the Employee, the Network Manager, and the HR department head spent considerable time addressing her objections to the process for, and the content of, her November 2000 performance appraisal. As a result of those discussions, the Employee's rating was raised. One of the Employee's objections concerned the Network Manager's negative view of some e-mails that she had written, see Ex. P-410-424.

In January 2001, the Employee e-mailed the HR department, stating that she did not want to work for the Network Manager:

> You witnessed the ultimate reason I don't wish to work for [the Network Manager] in this meeting today. In a nutshell, I have screamed and hollered, ranted and raved to convince him we need what security we have and then he sits there and takes credit for my work, with no acknowledgment to me at all.

Ex. 19. The HR department head e-mailed the Employee, stating that he told the employee relations department head that he wanted a beneficial resolution of her concern. *Id.* Shortly thereafter, the IM department head and the employee relations department head discussed options for reassigning the Employee. Ex. P-64.

In the beginning of February 2001, the Employee objected to the IM department head's decision to terminate the contract for an employee on another team leader's staff. The Employee stated that the contract for a different member of that staff should be terminated:

> After thinking about this over the weekend, I'm going to insist that it's [the second staff member] whose contract should be terminated.
>
> You know the reason why, but if not, I refresh your memory. When I asked him to work on Internet monitoring, he devised a routine to usurp the monitoring, passed it around, then lied about it - he told you that it was a routine. For this reason, he is damaged goods, as far as I'm concerned, i.e., not enough integrity to work on the security of this site.
>
> Of course, it's just my opinion, but if this were my IM Dept. I would not be protecting those who demonstrate a lack of integrity over someone who has not. . . .

Ex. 22. The IM department head replied, "I appreciate your input, but my decision stands." The Employee responded:

> Fine, but I don't want [the second staff member] working on any aspect of this site's security, including internet monitoring.

Id. This message somehow arrived in the second staff member's inbox, and he showed it to his team leader. The team leader in turn wrote to the IM department head, defending the second staff member. On February 6, 2001, when the IM department head expressed his concern about the e-mail to the Employee, she stated that someone must have tampered with her machine and redirected the e-mail to the second staff member. Ex. 23. On the same date, the Employee sent a memorandum to the employee relations department head, explaining why she believed that someone had tampered with her computer. Ex. 24. Ten days later, she followed up with a second memorandum. Ex. 27.

On February 13, 2001, in the early afternoon, the Network Manager e-mailed the Employee, asking her to prepare a plan to train a specified staff member as a backup for the firewall and intrusion detection. Ex. 25. The Network Manager stated that he would like to discuss the matter at the next morning's cyber security meeting and to have a plan ready the day after that. *Id.* The Employee missed the meeting; in the late morning she e-mailed the Network Manager, objecting to the short notice:

> Mandatory, last minutes meetings, arranged especially in an environment when people are on various schedules, and are seen

> and taken as ways of excluding differenting, though more experienced opinions. Especially, since we all have pagers. As I was assisting another Fernald employee until well after 9 P.M. last night, something I didn't have to do, but I'm already four or five hours into this workday.
>
> . . .
>
> This autocratic style of management doesn't work for most intelligent experienced people - it certainly doesn't work for me - I'm working on several solutions to this problem, so please bear with me.

Ex. 26.

On March 27, 2001, the IM department head issued written reminders to the Network Manager and the Employee. The written reminder to the Network Manager cited "using poor judgment in difficult situations" and his "communication style." Ex. 79. The written reminder to the Employee cited "failing to maintain a regular work schedule, failing to follow management direction, and communicating unprofessionally with your management and peers." Ex. 28.

Later that day, the Employee e-mailed her supervisors that she would "no longer be available evenings or weekends." Ex. 30. In an April 17, 2001 memorandum to the HR department head, she confirmed that she had told her supervisors that she would "not be available after hours or on weekends." Ex. 32. The next day, the employee relations department head met with the IM department to consider options for moving the Employee to a position that did not require on-call duties. On April 20, 2001, the Employee e-mailed the employee relations department head, citing health and religious reasons as bases for relieving her of after hours duties.

On April 26, 2001, the employee relations department head responded to the Employee's April 20, 2001 e-mail. Ex. 36. The employee relations department head stated that the Employee's job required that she be available for after hours work and that this was not a new requirement. She stated that the Contractor had no record of any health issues that would preclude the Employee from working after hours and that the Employee could "swap out" her responsibilities during her Sabbath. The Employee did not accept that solution, and on May 1 and May 2, the IM department head and the employee relations department head considered alternative assignments within IM. Exs. 38, 39. They discussed the

possibility of moving the Employee from the Network Manager to the Programmer Manager to do Oracle database work, which would not require after hours work. At some point at the end of April or early May, the Employee's subordinates were reassigned. Ex. P-114-116.

On May 3, 2001, the Employee presented a VSP application to her supervisor, who signed it that day. Ex. 56 at 4. Under the terms of the VSP, an employee had to separate by June 29, 2001.

On May 22, 2001, the Employee complained to her managers that she was being required to suggest her replacement. The Employee stated:

> For various reasons, technical and otherwise, which I will not specify here, there is no one currently working in the Systems Administration or Information Management who is qualified to take over responsibility for Internet Security at Fernald. . . .
>
> It is my plan to get the Intrusion Detection, etc. up and running before my departure, if I depart.

Ex. 41. The Network Manager forwarded the e-mail to HR, stating:

> This is the results of a very brief (1 min) meeting that I had with [the Employee] this afternoon. . . . I asked her to identify who would take over the work and to have that person involved in the next implementation of elron (internet monitoring). She said she would have to think about it. This is the same request I have made of her in the past and received the same response.

Id. The Network Manager and the Employee then had the following e-mail exchange:

> [Network Manager]: I would like for you to start training [a specified employee] in Elron. . . . I am not aware of any pressing task that would prevent either of you from starting the training this afternoon. I would like the training completed in two weeks . . . .
>
> After you have completed the training of [the employee] in Elron, I would like for you to begin training of [two other

> employees] in how to maintain and update the firewall. . . . I would like their training completed by June 29.
>
> [Employee]: As neither you or [the IM department head] have ever had or shown any appreciation for my experience, it is not unexpected that you would believe that I can transfer twenty-four years experience to novices in less than two months.
>
> . . .
>
> Do we have any training dollars for this effort?
>
> [Network Manager]: Are you saving (sic) can not or will not train these individuals?
>
> [Employee]: Do you think you can allow me to be the Security Project Leader? You tend to manage (as opposed to lead) where you are not needed.
>
> I am saying that beyond reading articles, etc. and pulling out and trying to use buzzwords, you lack the technical ability to know what you are asking and therefore are making an unreasonable request.

Ex. 42. The Employee then met with the IM department head and objected to the Network Manager's management style, specifically his instruction to train the employees. Ex. 44.

On May 23, 2001, the Employee objected to a co-worker's inquiry to the Network Manager on another project. Ex. 43. The Employee e-mailed her supervisors: "Who is running this project? You, [the co-worker], or me?" *Id.*

On May 24, 2001, the Employee e-mailed the Network Manager, stating that he had not answered her May 22 inquiry about

> "how to proceed, i.e., how do I supply the background these people need to understand the training so that they are effective?"

Ex 46. He replied:

> I would like for you to train backup personnel for network monitoring and the firewalls irregardless whether you take the

> **[VSP] or not. We have been discussing this for over two years.**
>
> **I would like for you to train these personnel in how to operate the systems. I would like for the backup personnel to be able to operate the software and answer questions in your absence. We do not normally hire individuals who have prior knowledge of the applications and in the current downsizing environment we do not plan on hiring people with specialized skills. What this means is that we have to take individuals with other skills and transfer knowledge from our senior personnel. You are correct in that you can not transfer twenty five years of knowledge to these individuals. What I am asking you to do is transfer the knowledge that you have in running these two specific applications.**
>
> **. . .**
>
> **If any one of the individuals needs [access privileges or passwords] please set up the individuals and document it. The objective is to have each one of the individuals fully capable of maintaining the application. The individuals running the firewall need not be expected to be Solaris experts.**
>
> **If you need additional help from [other named employees] to provide training in Solaris or NT I am sure they will oblige.**
>
> **We will not be sending [the individuals designated for training] to formal training outside of the company.**
>
> **The individuals named are aware that they do not possess all the skills required to run these applications but all of them feel that you have the ability to fill in the blanks. I would like for [a named employee] to be trained in Elron first with the firewall training to begin when [another named employee] finishes his portal work.**
>
> **Thanks for your help.**

Ex. 46 at 2. The Employee responded that she did have backups: for the firewall she cited an individual who had moved to another project; for internet monitoring she cited another individual although she indicated that that person could not analyze reports. Ex. 46 at 1. The Employee then questioned whether the Network Manager had identified the best individuals to be trained.

> For the most part, there is more to these applications than just running them and that is where their backgrounds come into play. I have been very busy especially today but I plan to sit down and decide what background each of these people need prior to what training I give them. If [named employees] or whomever wants to teach those background courses they can. However, I don't think all of that can happen by the end of June. Somehow the people you identify to back me up have to get the background or they will not understand what I'm trying to explain to them.

Id. On May 24, 2001, the employee to be trained in internet monitoring e-mailed the Network Manager, stating that the Employee had "laid out her plans for training me:"

> I spoke with [the Employee] yesterday afternoon and she laid out her plans for training me. She said she would give me my marching orders today so I could get started. She is going to give me a list of what she considers to be baseline knowledge requirements for installing and administering Elron. She made it clear that she expects me to acquire the knowledge in any areas in which I may be lacking. She said she will not bring me up to speed and that it is my responsibility to get myself up to speed. I may misquote her here, but I believe that she stated that if I don't demonstrate the baseline knowledge required, she is going to recommend that I not be trained. I told her that was fine with me.

Ex. 45. The Network Manager forwarded this e-mail to the IM department head, who forwarded it to HR, stating "Here's the latest on our attempt to get [the Employee] to train her backups. I'll have the Network Manager talk to [the named employee]."

On May 31, 2001, the Contractor issued the decision making leave to the Employee. Ex. 48. The document cited the Employee's failure to have backups and her "unacceptable communications style in recent e-mails" to the Network Manager.

In the morning of June 1, 2001, a meeting to followup on the decision making leave was convened. Ex. 51. The senior security official discussed the need for backups. The Network Manager presented the Employee with a transition schedule, changing the individuals to be trained on the firewall. The Employee questioned the suitability of those individuals.

On June 11, 2001, the Employee e-mailed the Network Manager, complaining about another team leader and one of her staff. She questioned the integrity of the staff member and then stated:

> I am dismayed that I can NEVER ask [the team leader and staff member] generally for anything and have them comply.

Ex. 53. The Network Manager responded that the Employee's comments about the two individuals were "totally inappropriate, uncalled for and inaccurate." *Id.* At the hearing, the team leader described the Employee's relationship with her and some other employees as "confrontational." Tr. at 668-674.

On June 25, 2001, the Employee withdrew her VSP application. Ex. 56. On the same day, the IM department head transferred her to the Programmer Manager. Ex. 57.

3. The Summer of 2001

During the summer of 2001, the Employee continued to have conflicts with the network division. *See* Exs. 61-66; Ex. P-229-246. The network division requested that she turn in various materials associated with her former responsibilities; she maintained that the Network Manager had already removed some of these materials from her file cabinet. In addition, when a member of the network division staff sought access to information from a software provider, she refused the provider's request that she authorize such access, citing the ongoing investigation of her disclosures. Although these specific matters were resolved, the Employee continued to have conflicts with the network division staff over the next two years. *See, e.g.*, Ex. P-246-265.

C. Findings of Fact and Analysis

As mentioned above, the Contractor has the burden of establishing, by clear and convincing evidence, that it would have taken the same actions in the absence of the protected activity. The Contractor has provided extensive documentary and testimonial support for the actions. Although the Employee attributes the actions to her protected activity, the Employee has not cast doubt on the Contractor's strong showing. I find that the Employee's testimony was not reliable. In some instances, her version of events conflicted with her contemporaneous e-mails of those events; in other instances, her testimony itself was contradictory. In still other instances, her version of events did not justify her conduct,

which included failure to take direction from her managers and communicate in a professional manner. Accordingly, after considering the entire record - all of the documents submitted, and testimony presented, in this case - I find that the Contractor has met its burden.

1. Whether there were non-retaliatory reasons for the actions

a. The March 27, 2001 written reminder

The written reminder to the Employee cited "failing to maintain a regular work schedule, failing to follow management direction, and communicating unprofessionally with your management and peers." Ex. 28.

The Employee agrees that she did not maintain a regular work schedule, but she contends that her schedule was nonetheless proper. Tr. at 870-874, 1060-63. She testified that staff members sometimes had to work after hours, either on a scheduled project or in response to an unexpected problem. Tr. at 873-874. She testified that the staff member could adjust his schedule so long as he notified his supervisor in advance. Tr. at 870-872, 1060-1062. *See also* Ex. 20. The Employee maintained that she always notified her supervisor, generally by voice mail or e-mail. Tr. at 871-875, 1062-1063. Finally, she testified that her manager's approval of her time sheet indicated approval of her schedule. Tr. at 871-872.

As an initial matter, the record supports the Employee's position that IM staff sometimes had to work after hours, that employees sometimes offset that time against their regularly scheduled hours, and that they were required to notify their supervisor if they wanted such an offset. The record also indicates, however, that the Employee abused this flexibility.

Although the Employee's testimony gives the impression that her managers never objected to her late arrivals, she never directly so testified. Instead, she testified that her managers approved her time sheets. The record indicates that, prior to the written reminder, the Employee's managers had objected to her late arrivals. The IM department head's November 6, 2000 daybook entry, and his testimony, indicates that he told the Employee of her manager's objection to her "inconsistent work schedule," Ex. 16;

Tr. at 332. In another context, the Employee confirmed the November 6, 2000 meeting, although she did not address this statement.

Moreover, the record indicates that the Employee's late arrivals did not always involve required work or notice to her manager. Although the Employee has a record of her e-mails, 5/ the Employee did not submit any documents to support her position that, prior to the written reminder, her late arrivals followed notification to her manager of necessary after hours work. The only evidence in the record about a late arrival is her February 13, 2001 e-mail, which indicates that her after hours work was discretionary and that she did not notify her supervisor of the work or her expected late arrival. Ex. 25. Finally, even if she notified her manager of an expected late arrival, her testimony indicated that she did not tell him when she expected to arrive. The Employee testified that when she scheduled after hours work, she gave general notice to users that the system would be down and that this general notice was notice to her supervisor. Tr. at 872-874. She further testified that when she had unscheduled after hours work, she notified her supervisor that she would be in late the next day and "usually" gave him "some idea of what time" she would arrive but "kind of backed off of that." *Id.* at 873. Accordingly, based on the entire record, I conclude that the Employee did not maintain a proper work schedule.

The written reminder also cited failing to follow management direction: repeatedly questioning her manager's decisions, disregarding his authority, being argumentative and insubordinate and, in some cases, disrupting the work and the morale of others. Ex. 28 at 2. The Employee attributes her conflicts with her managers to the fact that she made disclosures about personnel in the IM department, including her managers. The evidence is contrary to her claim.

The Employee failed to follow management direction. Examples are (i) her stated opinion that her supervisors did not have the authority to reverse her decision limiting a subordinate's computer access, Ex. 13, and (ii) her failure to follow management direction to restore the subordinate's access. Ex. 13; Ex. P-324. As discussed in subpart b below, a third example is her failure to comply with her managers' requests that she establish and maintain

---

5/ Ex. 77; Tr. at 1256-58.

backups. The fact that the Employee made disclosures concerning her management did not remove her from their supervision or justify insubordinate conduct.

Finally, the written reminder cited the Employee's communication style as "unprofessional" and creating "a tension filled atmosphere where teamwork is difficult to achieve." Although the Employee testified that, prior to the written reminder, no one had ever complained about her e-mails, see Tr. at 891, she acknowledged at least one instance in which she was cautioned about her e-mails. *See, e.g.,* Tr. at 855-859 (Ex. P-410-424). In any event, the Employee denies that her communication was unprofessional. Again, the evidence is contrary to her claim.

The Employee's communication style was unprofessional and created a tension filled atmosphere. The Employee's e-mails would springboard from a given issue into an attack on a person. The August 9, 2000 e-mails to a subordinate are an example. Ex. 13. From her disagreement with the subordinate's recommendation on a computer-related matter, she launched into a discussion of the "negatives" of his tenure with the Contractor, prompting him to complain about the message to the IM department head. Other co-workers complained about her conduct. *See, e.g.,* Tr. at 668-674; Ex. 17. Accordingly, the record supports the written reminder's statement that the Employee's communication style was unprofessional and created a tension filled atmosphere.

b. The May 31, 2001 decision making leave

The decision making leave cited the Employee's failure to establish and maintain backups. The Employee maintains that she had backups and that she was in the process of complying with the Network Manager's May 24, 2001 request to train others.

The decision making leave accurately cites the failure to have backups. Despite her assertion that she had backups, the Employee's May 24, 2001 e-mail to her managers indicated that she did not have backups for internet monitoring and the firewall: the individual identified for internet monitoring could not analyze reports, and the individual identified for the firewall had left. Ex. 46. *See also* Tr. at 1101-1110 (inadequacy of another employee as firewall backup). The Employee's protests about the difficulty of training anyone in IM for internet monitoring and the firewall confirm the lack of trained personnel. Ex. 46. The Employee's assertion that she was in the process of complying with her

manager's May 24, 2001 request, even if correct, does not change the fact that she did not have backups and that she might not have them by the time of her departure. 6/ Furthermore, her e-mails indicate that the Employee failed to follow specific management direction and improperly tried to establish preconditions before she would follow specific direction.

The decision making leave also cited the Employee's "unacceptable communications style" in recent e-mails to the Network Manager. The Employee denies that these e-mails had an unacceptable communication style.

The Employee's e-mails to the Network Manager had an "unacceptable communications style." Her May 23, 2001 statement that "You tend to manage (as opposed to lead) where you are not needed" is an example. Ex. 42. Her statement that "beyond reading articles, etc. and pulling out and trying to use buzzwords, you lack the technical ability to know what you are asking and therefore are making an unreasonable request" is another example. *Id.* Her May 24, 2001 statement "Who is running this project? You, [a co-worker] or me?" is a third example. Ex. 43. Accordingly, the decision making leave correctly cited recent e-mails to her manager as having an "unacceptable communications style."

c. The job transfer

The job transfer cited the Employee's withdrawal of her VSP application, the training of individuals to take her place, and the need for the Employee's skills in the Programmer Manager's area. Ex. 57. The Employee argues that other IM employees who rescinded their VSP application were able to stay in the same jobs.

The Contractor had strong reasons for the transfer. The facts recited in the transfer letter are accurate - there were individuals trained to take the Employee's place and the Programmer Manager had a need for the Employee's skills.

6/ As an example, on May 24, 2001, the individual to be trained for internet monitoring e-mailed the Network Manager that the Employee had "laid out her plans for training me;" that he needed to acquire certain background information on his own or she would "recommend that I not be trained." Ex. 46. *See also* Ex. 44 (Employee's objection to individual designated for training on the firewall).

Moreover, the record indicates that the job transfer was largely the result of the Employee's ongoing conflict with the Network Manager, including her repeated statements that she did not want to report to him, and her stated refusal to work after hours. As discussed earlier, the IM department head had begun considering alternative assignments in early 2001, *see, e.g.,* Exs. 19, P-64, and the Employee's April 2001 refusal to work after hours prompted the employee relations department head to conclude that she should be moved to a job that did not require her to be on call, Ex. P-108, 110; *see also* Ex. P-97, P-100, P-113 (discussions about transferring the Employee). Accordingly, I find that the Contractor would have transferred her to a different position in the absence of the protected disclosure and that the designated position accommodated both the Employee's refusal to be on call and her desire not to work with the Network Manager. Accordingly, the record amply supports the Contractor's position that it had strong, non-retaliatory reasons for transferring the Employee.

2. Whether the Contractor Would Haven Taken the Same Actions in the Absence of the Protected Activity

The Contractor has also demonstrated, by clear and convincing evidence, that it would taken the same actions in the absence of the protected disclosures. As explained above, the Contractor has demonstrated that it had strong reasons for the two disciplinary actions. The Employee's failure to follow a proper work schedule, her refusal to accept her managers' authority and follow their direction, her harsh style of communication, her refusal to be on-call, and her failure to train backups for the security systems are inconsistent with a productive work environment. Moreover, the Contractor has submitted evidence of disciplinary actions involving other employees, including one against the Network Manager. Ex. 79. The actions cover a variety of behavior including tardiness, absences, and communication style. Although the Employee maintains that any inappropriate conduct on her part is attributable to her disclosures, this argument is not persuasive. First, the inappropriate conduct extended to unrelated matters, such as the August 2000 situation with a subordinate. More importantly, employee disclosures do not insulate the employee from the consequences of unacceptable behavior. As for the job transfer, the Employee's repeated objection to reporting to the Network Manager and her refusal to be on-call necessitated the transfer. Accordingly, the evidence is clear and convincing that the contractor would have taken the same actions in the absence of the protected disclosures.

IV. The July 2003 Involuntary Separation

A. Background

The Employee reported to the Programmer Manager from June 25, 2001, the date of her transfer, until her involuntary separation on July 7, 2003. The Employee got along better with the Programmer Manager and her staff, although there were specific instances in which others objected to her behavior as "inappropriate" or "harsh." *See, e.g.*, Tr. at 1155 (a co-worker) & Tr. 1233-1234 (the Employee); Tr. at 754-758, 781 (the Programmer Manager); Ex. 72. Some of these instances are discussed below, in connection with the Employee's challenges to her separation.

On April 24, 2003, the Contractor announced a planned reduction of 77 positions. Ex. 74. The Contractor arrived at that number through its Management Planning System. Ex. 4. The Contractor used that system to determine the number of employees that it needed in various job classifications.

For job classifications in which it had excess employees, the Contractor used a standardized process for identifying which employees would be separated. Ex. 5. The Contractor established "core skills" that were applicable to all employees. They were "initiative," "communication skills," "quality of work," and "work habits." The Contractor established "job-specific essential skills" for each job classification or sub-classification. The Contractor used a standard form that provided a rating scale from "1" to "5" (with "1" being the highest). The form also contained two additional blocks: one for "Education/Certification" and one for "Skills Transferability." These two blocks provided for the identification of relevant material and comments, but did not provide for a rating.

A number of teams and offices participated in the ISP process. Ex. 5. The HR department was responsible for coordinating the process. A senior management team, consisting of the highest level management, oversaw the process. For each job classification, a functional job review team determined whether sub-classifications were appropriate and established the job-specific essential skills and weighting factors. Supervisors, without knowing the weighting factors, evaluated their employees against the criteria. The functional job review team then reviewed the evaluations and forwarded them to the HR department, which calculated the employee ratings and prepared a ranking list. The functional job review

team and then the senior management team reviewed the evaluation and ranking forms.

The IM department managers and staff fell into two job classifications: Information Systems Manager (hereinafter IM managers) and Information Systems Representative (hereinafter IM staff members). Ex. 6. The IM department had five managers and 29 staff members. The Contractor determined that it needed three IM managers and 21 staff, giving the IM department an excess of two managers and eight staff members.

The functional job review team for the staff members - the information systems representatives - consisted of the HR department head and the Administration head. Ex. 7. Those two officials identified two sub-classifications in the "information systems representatives" classification: a network group and a programmer group. With input from a former IM manager, the team developed job-specific essential skills for each group. The team also met with the IM division managers to identify the number of employees to be retained in each group. The managers determined that they needed a minimum of six employees in the network group. Since there were eight employees in that group, the managers determined that two employees would be separated from the network group, leaving six employees to be separated from 21 person programmer group.

Each IM division manager evaluated the employees under his or her supervision. Ex. 7. The two network managers consulted each other to assure the consistency of the ratings for the employees in their group; the two programmer managers did the same for the employees in the programmer group. The IM department head and the functional job review team reviewed the evaluations (which used a scale of 1 to 5 with 1 being the highest), and for each group the HR department calculated the employee ratings and ranking, reversing the scale so that 5 was the highest score.

For the network group, the ratings ranged from 4.75 to 1.95. Ex. P-499. The six retained employees had ratings from 4.75 to 3.00; the two separated employees had ratings of 2.50 and 1.95.

For the programmer group, the ratings ranged from 4.55 to 2.05. Ex. P-529 to P-531. The top 15 ratings ranged from 4.55 to 3.10. The bottom six ratings were 3.05, 3.00, 2.95, 2.75, 2.55, and 2.05. The Employee's rating was 2.75. The Contractor separated five of

those employees; the employee with the 2.95 was separated three months later, in October 2003. 7/

B. Findings of Fact and Analysis

At the outset, it is clear that the Contractor's decision to conduct the June 2003 ISP had nothing to do with the Employee. Rather, it was one of a series of voluntary and involuntary separation programs associated with the upcoming site closure. Moreover, the Contractor's determination that it had an excess number of employees in the IM department had nothing to do with the Employee. Finally, the Contractor's decision to create two groups for IM staff members had nothing to do with the Employee.

The Employee has not challenged any of the foregoing. The Employee's main argument is that the Contractor should have evaluated her according to the network group criteria. In the alternative, the Employee challenges her rating in the programmer group as too low.

1. Whether the Employee Belonged in the Programmer Group

In support of her position that she should have been evaluated according to the network group criteria, the Employee cites notes of manager discussions recognizing that some employees had skills in both the network and the programmer area and the "skills transferability" column on the evaluation form.

The recognition of diverse skills, either in management discussions or on the evaluation form, did not affect whether an employee was evaluated in the network group or the programmer group. The network group consisted of the staff members in the two network divisions; the programmer group consisted of the staff members in the two programmer division. Each division manager evaluated the staff members in his division. Consistent with this, the Employee, who was in a programmer division, was in the programmer group and evaluated by her manager. Accordingly, the Contractor's treatment of the Employee was consistent with its treatment of the other IM employees.

7/ The Contractor contemporaneously documented that the person with the 2.95 rating was being "skipped" because he had unique knowledge on a project that would be completed in October 2003.

The Employee further maintains that, even if she properly belonged in the programmer group under the ISP structure, she should not have been included in that group. The Employee reasons that she would not have been in that group if she had not engaged in protected activity. She points to her June 2001 job transfer, which she maintains was the result of protected activity.

As explained above, the Contractor has demonstrated, by clear and convincing evidence, that it would have transferred the Employee in the absence of the protected activity. Accordingly, there is no merit to this contention.

2. Whether the Employee Deserved a Higher Rating in the Programmer Group

The Programmer Manager testified in detail about why she assigned the ratings that she did. She stated that she evaluated the employees against the rating factors and relative to each other. She discussed her comments, and she gave examples. The Programmer Manager's testimony was highly credible. Based on her demeanor and the even-handed explanations that she gave, I believe that she was testifying honestly and candidly. Moreover, many of her comments and examples were corroborated by documents, including e-mails from the Employee and the testimony of others.

Although the Employee generally maintains that her rating was too low, the Employee did not specify what she thought her rating should have been or who she believes should have been separated in her place. Instead, the Employee objected to the rating in two ways.

First, she argued that the rating was inconsistent with her November 2002 performance appraisal. She sought to draw analogies between the criteria and rating scales for the performance appraisal and those for the ISP rating.

The November 2002 performance appraisal does not cast doubt on the accuracy of the ISP rating. The two are simply not analogous. The first rated performance during the last half of 2002; the second considered skills based on criteria and rating scales that were not coextensive with the performance appraisal.

Second, the Employee objected to the written comments on her evaluation. She viewed them as inaccurate or as understatements of her skills.

As an initial matter, I find that the written comments were not intended to be an all inclusive statement of the basis for the rating. They were a relatively small block on the evaluation form. Accordingly, arguments that the written comments do not reflect the full range of an employee's skills do not themselves cast doubt on the rating.

The Employee objected to the written comment for "initiative." 8/ The Programmer Manager rated the Employee a "4" ("occasionally fails to meet some standards and expectations"), with the following comment:

> Has not taken initiative to learn software development tools or our data/work processes that we support. This limits work that can be assigned from the remediation systems group.

Ex. P-605. At the hearing, the Programmer Manager cited the leachate system and the meteorological data system as examples. 9/

8/ Initiative was defined as follows:

> The extent to which the employee takes independent action, suggests work improvements and is able to achieve project requirements consistent with the current mission: Makes active attempts to influence events to achieve goals; self-starting rather than waiting to be told what to do; takes action to achieve goals beyond what is required; constantly looks for incremental improvements in work processes and results.

Ex. P-605.

9/ The Programmer Manager stated:

> When someone is introduced to a new area, you just don't throw the whole thing at them. I give her the first part, and then you expect that to take over.
>
> And the leachate system, for example, that could have been just do it, take the whole thing. Just do it. And that didn't happen. So we had some of those cases where things aren't being taken over.

Tr. at 799.

The Employee has not cast doubt on the rating. Although the Employee cited learning Winbatch, the Programmer Manager testified that the Employee learned that as the result of an assignment, not on her own initiative. Tr. at 820. Similarly, although the Employee cites learning JAVA and volunteering to use that skill for the portal project, that initiative did not involve remediation systems, the work done in her division. Tr. at 764. Finally, the Employee's statement that she had a lot of free time, Tr. at 961-962, generally supports the Programmer Manager's statement that she did not take the initiative to learn the tools and data/work processes that the group supported.

The second core skill was "communication skills." 10/ The Programmer Manager rated the Employee as a "4" ("occasionally fails to meet some standards and expectations), with the following comment:

> [The Employee's] statements that she is the best qualified in IM, the only one qualified to run it, her inflammatory emails and her questioning of others' competence and honesty make effective team work difficult. She does write and speak well.

Em. Ex. P-605. The Programmer Manager testified about the Employee's communication skills:

> [T]he way [the Employee] talked to people and worked with people, impacted our ability to do work well. It doesn't mean that she was mean or rude all the time.
>
> It means that there ... were cases in which she would be harsh. [She]'s very sensitive to anything other people would

---

10/Communication skills is defined as follows:

> The extent to which the employee communicates clearly and effectively and seeks to listen to and understand others: Expresses idea effectively in individual or team situations; adjusts language or terminology to the needs of the receivers uses proper grammar, organization and structure in written communications; listens to and acknowledges feelings, concerns, opinions, and ideas of others.

Em. P-605.

> say ... but not as sensitive to how other people would take harsh words.
>
> And assuming – questioning people's motives on some small things makes it difficult for those people to work. If you've been yelled at by someone at work, even once by someone, it impacts that.
>
> If someone speaks harshly to you in public, even if they're nice to you the rest of the time, that's just natural that people are going to have some problems with that.
>
> And I think it's just the core of the problems, is those kind of – that harshness, occasionally.

Tr. at 754-55. As an example, the Programmer Manager stated that one day she received a call from a first responder team member trying to get in touch with the Employee. When the Programmer Manager later asked the Employee if the team member had reached her, the Employee "yelled" at the Programmer Manager in front of others, stating "it wasn't any of [the Programmer Manager's] business." Tr. at 781. 11/ With respect to the Employee's

---

11/ The Employee apparently viewed the question as an affront to her authority on her first responders team. She later e-mailed the Programmer Manager:

> Apparently you were unable or unwilling to hear what I was trying to tell you regarding [the] phone call to you. As I see it, someone, whomever, called my boss and otherwise created a big uproar this morning, as if I am some kind of non-responsive, non-performing employee. Why? Because they wanted a thermometer. I didn't and don't appreciate it, especially when they weren't using or used to using the proper procedure.
>
> I also don't like or enjoy the middle-man arrangement of communication used too often here at Fernald. I'm used to taking care of issues myself.
>
> As with all my responsibilities over the last twenty-five years since becoming a professional employee, I have made arrangements for my absence, including First Responders, when necessary, such as during my recent 2-week vacation.
>
> Nice welcome home.

Ex. 72.

statement that she was the "only one qualified to run" the IM department, the Programmer Manager cited the Employee's November 19, 2002 letter to her, in which the Employee stated:

> I know who I am, what I have contributed, what I am capable of and where I am going. Only the envious and intimidated have tried and will try to deter me. Both they and I know who they are. Ultimately, I'm the one person in the department with the capabilities to run the whole operation, but I'm also the most under-valued.

Tr. at 755 (quoting Ex. 73). As for the e-mails, the Programmer Manager cited an incident in which the Employee did not want to give the network division access to her computer to install security software. Tr. at 756. The Programmer described the latter situation as follows:

> [I]t became a big thing, involved the management and HR and a lot of things. And really when you think about it, it was just, we need to install this on your computer like we installed on everybody's on the whole site's, you know? The president of the company, I assume got it. So that's what I mean.

Tr. at 758 (referring to Ex. 68 and 70). The Programmer Manager also cited a situation in which the Employee attributed her inability to access the Contractor's intranet to improper interference by others, but it turned out to be a technical glitch created by software that the Employee had installed on her computer. Tr. at 755-56; *see* Ex. 71.

The Employee's letter, her e-mails, and her testimony support the Programmer Manager's rating of her communication skills. Although the Employee testified that the purpose of her letter was to ask for additional work, Tr. at 977, the letter does not make any such request. Instead, it complains about the lack of promotion and

refers to "those who have repeatedly displayed a lack of integrity." If, as the Employee testified, her purpose was to ask for work, she did not communicate that purpose. The e-mails document other incidents, which turned routine matters into attacks on IM staff integrity and motives. Exs. 70, 71, 72. Finally, the Employee's striking indifference to how her communications are received by others supports the rating. The Employee testified:

> Q: Had [the Programmer Manager] ever counseled you on any e-mails that you wrote that she thought were improper?
>
> A: I don't know about improper. She didn't necessarily like a couple that I had written. But I felt like, number one, if I was – if in an e-mail I was complaining about somebody, the e-mail was not directed at them, okay? It was an attempt to address issues.
>
> Q: Did [the Programmer Manager] ever refer to any e-mails that you wrote as inflammatory?
>
> No, not that – use the word, inflammatory, no. I think one of them she said something about hostile, maybe. But I'm not sure I know what inflammatory means.
>
> My idea of inflammatory, to me that means how somebody else reacted to it. Not that any – I really can't control anybody else's reaction. Most people don't like to be criticized or corrected or anything.

Tr. at 977-78. Accordingly, the Employee has not cast doubt on the Programmer Manager's assessment of her communication skills.

The third core skill was "quality of work." 12/ The Programmer Manager rated the Employee as a "3" ("consistently meets all standards and expectations)" with the following comment:

> Does good job of developing working real time data loaders. She has performed all tasks directly requested but does not step up to take ownership.

Ex. P-605. The Programmer Manager testified:

> Again, you have to look at it related to the other people. In order to make a good system in the environment we're working in – we're not a big commercial software company.
>
> We work with our customers and deliver things they need, which sometimes they're not sure what they need. We have to be part of the process. So to be good you have to be able to deliver something useful to the people who are keeping us employed.
>
> And so you need that technical ability to make – which she did do, but then you also need to be able to go back and forth with customers. Go back and forth and make sure that this is the final, good product. That's the way we all work in both of the application areas.

Tr. at 761.

The Employee has not cast doubt on the accuracy of this rating. It is undisputed that, in general, the Employee did not work with the end-users, as did the other employees with higher ratings. Because the evaluation was based on demonstrated skills, the "why" is not relevant to the rating. Moreover, the Employee has not asserted that the Programmer Manager treated her differently than similarly situated employees in terms of allowing access to customers: she

---

12/ "Quality of work" was defined as:

> The extent to which the employee's work is accurate, well organized, thorough, and complete: Provides accurate information in an useable form to others that need to act on it; follows policies and procedures correctly; anticipates and prepares for problems that may interfere with desired outcomes.

attributed the difference to fact that the others had long tenures in the programmer division. Tr. at 980. Accordingly, the record indicates that the Programmer Manager properly rated the Employee as "consistently meets all standards and expectations."

The Programmer Group had three job-specific essential skills. 13/ The first skill was defined as follows:

> Skill and ability to write/code programming language with emphasis on Oracle, Power Builder, JAVA, JSP, ACCESS, and GIS.

Ex. P-606. The Programmer Manager rated the Employee a "3" with the following comment:

> Knows Oracle DBA, PL/SQL, SQL well. Learning JAVA. No Forms, Reports on Oracle. Knows WINBatch very well & Has NT/2000 Knowledge which is useful to developers.

The second essential skill was defined as follows:

> Ability to analyze and solve technical problems as demonstrated by application of skills via problem solving and high level of productivity.

Ex. P-606. The Programmer rated the Employee with a "3" with the following comment:

> Is very good at trouble shooting at a technical level, programming level but does not address data/functionality.

The third essential skill was defined as follows:

13/ Job-specific essential skills are defined generally as follows:

> The extent to which the employee's skills, knowledge and abilities apply to the required scope of work. Identify specific skills required to perform work in the job category that are essential to performing work to be done in the future. List most important skills (preferably 3-5).

Ex. P-606.

> Knowledge of user community data and functions to demonstrate application of skills and knowledge providing customer support.

Ex. P-606. The Programmer Manager rated the Employee as a "4" with the following comment:

> Does not know our customer work processes or database structure to a level sufficient to help in troubleshooting actual functionality or user issues to provide analysis for new user business needs.

Id.

The Employee has not cast doubt on the accuracy of the job-specific skills ratings. The Employee asserts that first comment understated her skills by stating that (i) she was "learning" when she had completed a course, (ii) she "has NT/2000 knowledge," and (iii) she did not know Oracle forms and reports. These asserted understatements are insignificant. The statement "learning JAVA" was accurate in that the Employee was just completing a course and had yet to demonstrate her knowledge on a project; the Programmer Manager testified that the division did not use NT/2000 knowledge or Oracle reports and, therefore, those skills would not have affected her rating. Tr. at 762-768. For the second skill, the Employee did not argue that she had a high level of productivity, and any such statement would be inconsistent with her statement about idle time. For the third skill, the Employee concedes its accuracy and has not alleged that the Programmer Manager treated her differently than similarly situated employees in terms of access to customers.

Aside from the core and job-specific skills, the Employee challenges the portion of the evaluation listing "Education/Certification." The Employee cites the use of an acronym, with two letters transposed, to describe "Microsoft Certified Systems Engineer," i.e., "MSCE" instead of "MCSE." The Employee also cites the Programmer Manager's failure to attach an e-mail message that she was completing a JAVA course.

These objections do not cast doubt on the accuracy of the Employee's rating. First, the "Education/Certification" was not part of the rating; even if it could serve as a tiebreaker, there was no tie to break in this case. *See, e.g.,* Ex. 9; Tr. at 92, 165. In any event, there is no evidence to indicate that the

transposed acronym would confuse anyone, and the evaluation clearly recognized her JAVA training in the skills comments. Accordingly, for the foregoing reasons, the omissions do not cast doubt on the rating.

The Employee argues that her "Skills Transferability" should have placed her in the group of retained employees. The Programmer Manager commented that the Employee knew "network and security related issues." The Employee maintains that her range of skills made her more valuable to the Contractor, and she notes that the other employees with a similar range of skills were not separated.

These objections do not cast doubt on the rating or the Employee's separation. The evaluation form did not provide for a rating for "Skills Transferability;" the "transferability" is to "other functional groups" and is intended to identify skills that might allow a person to be transferred to a job opening in another area. *See, e.g.,* Ex. 9; , Tr. at 42-45, 70, 73, 92-94.

Finally, the Employee submitted a matrix of the knowledge, skills, education, and certifications, of all the employees in both groups; for hers, she added information that was not on her evaluation form. Ex. P-617; Tr. at 1234-1235. Based on this chart, she concludes that she should have been retained.

As indicated above, the Contractor did not evaluate people according to whatever knowledge they might have. Instead, the Contractor evaluated employees according to their demonstration of core skills and the essential job-specific skills for their job classification or sub-classification. I find that the Programmer Manager evaluated the Employee against the relevant specified criteria honestly and fairly, notwithstanding the Employee's objections. Accordingly, I have concluded that the Contractor would have taken the same action in the absence of the protected disclosure.

V. Conclusion

As indicated above, the Contractor had the burden of demonstrating, by clear and convincing evidence, that it would have taken the same action in the absence of the protected activity. As also indicated above, the Contractor met that burden. For that reason, the employee is not entitled to relief.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by S.R. Davis, OHA Case No. VBH-0083, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless, by the 15th day after receiving the initial agency decision, a party files a notice of appeal with the Director of the Office of Hearings and Appeals.

Janet N. Freimuth

Office of Hearings and Appeals

Date: April 21, 2004

May 20, 2003

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Steven F. Collier

Date of Filing: July 1, 2002

Case Number: VBH-0084

This Decision involves a whistleblower complaint that Steven F. Collier filed under the Department of Energy's (DOE) Contractor Employee Protection Program. From December 1994 through February 2002, Mr. Collier was employed by Coleman Research Corporation (CRC), a subcontractor of Fluor Fernald, Inc. (FFI), at the DOE's Fernald, Ohio site. Mr. Collier alleges that CRC and FFI management retaliated against him for activity protected under the DOE Contractor Employee Protection Program.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10 Part 708 of the Code of Federal Regulations.

B. Procedural History

On March 26, 2002, Mr. Collier filed a complaint with the DOE's Fernald Environmental Management Project. The Fernald project forwarded the complaint to the DOE's Ohio Field Office (DOE/OFO). After accepting jurisdiction of the complaint, DOE/OFO referred the complaint to the DOE's Office of Hearings and Appeals (OHA) for a hearing without an investigation. Letter from Anthony C. Eitreim, Chief

Counsel, DOE/OFO, to George B. Breznay, Director, OHA (July 1, 2002). On July 2, 2002, the OHA Director appointed me as the hearing officer in this matter. I convened a hearing held at Cincinnati, Ohio, on September 26-27, 2002, which was continued by telephone on October 3, 2002. The OHA received post-hearing submissions from the parties and closed the record on October 22, 2002.

II. Analysis

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." 10 C.F.R. § 708.29. Accordingly, in the present case, if Mr. Collier establishes that a protected disclosure, participation, or refusal was a factor contributing to a decision to deny him training or to his termination, CRC and FFI must convince me that they would have taken the actions even if Mr. Collier had not engaged in any activity protected under Part 708.

After considering the record established in the investigation by the parties' submissions and the testimony presented at the hearing, for the reasons stated below I have assumed that all fourteen of the disclosures of safety concerns that Mr. Collier alleges he made between October 10, 2000, and February 7, 2002, constitute protected activity under Part 708. I have concluded that Mr. Colllier has met the burden of proving by a preponderance of the evidence that many of these disclosures contributed to his termination, and I have assumed, for analytical purposes, that nearly all of the remaining disclosures were contributing factors as well. However, I find that CRC has shown by clear and convincing evidence that it would have taken the same action absent Mr. Collier's protected disclosures.

A. Whether Mr. Collier Engaged in Activities Protected Under 10 C.F.R. § 708.5

Mr. Collier worked for CRC as a "Senior Operations Specialist," one of five employed at the Fernald site. With a background in nuclear safety, Mr. Collier was hired in December 1994 to review the conduct of operations at Fernald. His responsibilities included identifying and reporting operations or conditions that were not in compliance with the many statutes, regulations and policies that govern the activities conducted at Fernald. *See, e.g.*, Transcript of Hearing (Tr.) at 56-57.

Mr. Collier alleges that he engaged in fourteen discrete activities that are protected under Part 708. The Part 708 regulations states that the following conduct by an contractor employee is protected from reprisal by his employer:

(a) Disclosing to a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, your employer, or any higher tier contractor, information that you reasonably believe reveals--

(1) A substantial violation of a law, rule, or regulation;

(2) A substantial and specific danger to employees or to public health or safety; or

(3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority; or

(b) Participating in a Congressional proceeding or an administrative proceeding conducted under this regulation; or

(c) Subject to § 708.7 of this subpart, refusing to participate in an activity, policy, or practice if you believe participation would --

(1) Constitute a violation of a federal health or safety law; or

(2) Cause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public.

10 C.F.R. § 708.5.

Mr. Collier alleges that he made fourteen disclosures between October 10, 2000, and February 7, 2002, that meet the criteria of the above regulation. Although he states that most of the disclosures related to subsections (a)(1), (a)(2), and (a)(3) of section 708.5, a few related to only one or two of those subsections. *See* Complainant's "Summary Table of Details of Protected Activities" (submitted as an attachment to his August 21, 2002 cover letter to the Hearing Officer) (Summary Table). He does not allege that he engaged in any activities protected from reprisal by subsections (b) or (c). Solely for the purpose of analyzing Mr. Collier's complaint, I will assume that he made all fourteen disclosures "to a DOE official, . . . [his] employer, or any higher tier contractor," and that each disclosure contained information that he reasonably believed revealed "[a] substantial violation of a law, rule, or regulation; [a] substantial and specific danger to employees or to public health or safety; or [f]raud, gross mismanagement, gross waste of funds, or abuse of authority." 10 C.F.R.§ 708.5(a). Because no report of investigation was produced in this proceeding, it is important to catalog the fourteen disclosures in this document. After describing each of the disclosures below, I will describe and analyze each of the acts of retaliation that Mr. Collier alleges in his complaint, and from that discussion reach a conclusion as to the relative merits of the positions of the parties.

Mr. Collier's fourteen disclosures can be grouped into six categories, according to the substance of the information revealed in them. I will describe the disclosures in these groups.

1. Waste Pits Remedial Action Project

On October 10, 2000, Mr. Collier delivered a written memorandum to William Previty, the CRC manager at the Fernald site, with a six-page analysis attached. This document appears in the record as Complainant's Exhibit 1, and appears on Mr. Collier's Summary Table as Protected Activity 1. The document catalogs and analyzes "events and occurrences" of dangerous or potentially dangerous activities that occurred from September 1999 through September 2000 at the Waste Pits Remedial Action Project (WPRAP). All the events and occurrences he reviewed had been reported and stored in appropriate databases, which were the sources of the information Mr. Collier presented in his memorandum and analysis. The analysis breaks down the events and occurrences by type, e.g., radioactive contamination, poor design, human error, chemical leak, and points out that the frequency of the events and occurrences after the WPRAP temporarily ceased operation in March 2000 was about the same as while it was operating.

Mr. Collier made oral disclosures regarding his concerns about nuclear safety at the WPRAP as well. On April 26, 2001, he spoke with Brinley Varchol, Fluor Fernald's Quality Assurance Manager at Fernald. This conversation is identified on his Summary Table as Protected Activity 3. In his complaint, Mr. Collier contends that he raised "significant safety and health and environmental hazards brought on by the operations at the WPRAP project, and in particular, my belief that the central source of the problem was the knowing and willful violation of nuclear safety rules by the WPRAP subcontractor project manager." Complainant's Letter to Hearing Officer, August 21, 2002 (August 21 Submission) at 5. At the hearing, Mr. Varchol recalled that the conversation concerned safety issues, Tr. at 155, and "the way the IT [International Technologies Group] manager was managing the work, and that some of the issues that you were bringing to his attention were not being taken seriously enough." Tr. at 154. Mr. Varchol must have felt the concerns were significant, because he spoke to Dennis Carr, FFI's Senior Project Director, about them, and reported the result of that conversation back to Mr. Collier. Tr. at 156. Mr. Collier contends that he raised similar concerns, though in less detail, when he met with Randy Morgan, a CRC vice president, on May 30, 2001. August 21 Submission at 6. This conversation is identified on Mr. Collier's Summary Table as Protected Activity 4. Mr. Morgan testified that he recalled that Mr. Collier had discussed safety issues with him concerning the WPRAP project, but was not clear about the details. Tr. at 276.

In a 66-page letter dated June 5, 2001, Mr. Collier informed Keith Christopher, the director of the DOE's Office of Price-Anderson Enforcement, about his belief that knowing and willful violations of nuclear safety rules were occurring at the WPRAP project. This document appears in the record as Complainant's Exhibit 2, and appears on Mr. Collier's Summary Table as Protected Activity 5. In his letter, Mr. Collier alleged that the IT manager of the project knowingly and willingly, through acts and omissions, violated DOE regulations "to the detriment of operator safety, and possibly public and environmental safety," and

requested that the DOE conduct an investigation of the violations he alleged. Complainant's Exhibit (Ex.) 2 at 1. Mr. Collier then went on to recount in great detail the history of the WPRAP project, listing reported and unreported safety problems, and explaining his role in providing oversight of the conduct of operations, his contention that the IT manager largely ignored the concerns he raised, and his ultimate removal from the project.

On the basis of Mr. Collier's letter, Mr. Christopher directed that an investigation be conducted of the WPRAP program. *See* Complainant's Ex. 3c. Dennis Riley and Tulanda Brown, DOE Price-Anderson Act Coordinators for the Fernald site and for the Ohio Operations Office, respectively, conducted a review of the issues Mr. Collier raised, and in September 2001 produced a report of their activities and conclusions. Mr. Christopher forwarded a copy of the report to Mr. Collier. Mr. Collier took issue with the results of the investigation, and on October 26, 2001, wrote again to Mr. Christopher, to advise him that the investigation was flawed. This letter appears in the record as Complainant's Exhibit 3d, and appears on his Summary Table as Protected Activity 12. In his letter, Mr. Collier expressed his disappointment that the review team felt constrained to investigate his issues solely in the limited context of the Price-Anderson Act, and reiterated that significant problems, including nuclear safety problems, had riddled the project.

2. Respirator Issuance Program

On April 26, 2001, Mr. Collier sent by e-mail to James Barber, a Duratek employee at Fernald, a review he had prepared concerning the procedures for issuing respirators to workers at the Fernald site. The review document appears in the record as Complainant's Exhibit 8b, and appears on Mr. Collier's Summary Table as Protected Activity 2. This review contained comments and recommendations for improving or correcting two distinct documents in use at the site: the Respirator Issuance Procedure (SH-0017) and the Respirator Protection Requirements Manual (RM-0007). Mr. Barber was responsible for the most recent revision of SH-0017, and after reviewing the comments told Mr. Collier that his "comments and questions [pertaining to that document] were unfounded based on the fact [Mr. Collier] hadn't had the training" in the area of respirator issuance. Tr. at 114 (testimony of Mr. Barber). However, because Mr. Barber was not the subject matter expert for RM-0007, he asked Mr. Collier's permission to forward the review to those who were responsible for the regulatory requirements that RM-0007 set in place. Mr. Collier assented, and Mr. Barber sent Mr. Collier's review to Tony Renk and Bob Cullison, and discussed the review orally with Walt Mingle, the subject matter expert for respiratory protection. Tr. at 117-19, 147. These gentlemen all appear to be FFI employees. In time, William Previty and Ronald Houchins, CRC employees, as well as other FFI employees became aware that Mr. Collier had prepared and released this review. Finally, Mr. Collier produced a contemporaneous diary entry that indicates that on July 25, 2001, he spoke with Dennis Riley of the DOE about his concerns regarding the respirator issuance program. Complainant's Ex. 12 at 50. This conversation appears on his Summary Table as Protected Activity 8.

3. Nuclear Project Startup

Mr. Collier was a member of a sub-team formed to provide information to FFI's Integrated Task Team (Team) regarding the proposed reduction or elimination of the Standard Startup Review (SSR) program, which verified the readiness to start or restart nuclear projects at the Fernald site. After the sub-team provided its response to the Team, Mr. Collier prepared and, on June 26, 2001, delivered to the Team a package of materials that amounted to a dissenting opinion concerning the SSR process. The package appears in the record as Complainant's Exhibit 17, and appears on Mr. Collier's Summary Table as Protected Activity 6. Mr. Collier apparently prepared this package because he felt that the SSR program was essential to the safe conduct of nuclear operations and that the Team needed to be aware of his opinion. The package contains e-mail from supporters of the program, dissenting opinions to the proposal to eliminate the SSR, the results of an informal survey Mr. Collier conducted in which he sought the opinions of site managers on this issue, and an historical background of the program with discussion of problems from Mr. Collier's perspective. Mr. Collier produced a contemporaneous diary entry that indicates that on July 2, 2001, he met with Terry Hagen, FFI's Vice President for Site Closure, and contends that he disclosed the same information to Mr. Hagen as was contained in his package. Complainant's Ex. 12 at 47. This conversation appears on Mr. Collier's Summary Table as Protected Activity 7. Mr. Previty's testimony supports Mr. Collier's contention that the meeting had taken place, because Mr. Previty "followed up" on Mr. Collier's discussion with Mr. Hagen and "gave him a briefing and strongly supported that we keep the program." Tr. at 178.

4. "Smoking Train"

Mr. Collier contends that on three occasions he disclosed his concerns regarding the possibility that pyrophoric matter– spontaneously combustible substances, including radioactive material– were being loaded onto trains at the WPRAP facility and shipped across country for disposal in Utah. His concerns were that a small number of fires caused by pyrophoric matter had been reported at the Fernald site, and that the public safety would be threatened by radioactive smoke emanating from such a fire were it to occur once the train left the site, as he set out in his August 21, 2002 letter to the Hearing Officer. Mr. Collier first raised these concerns with Dennis Riley of the DOE on October 19, 2001, according to his diary entry for that date. *See* Complainant's Ex. 12 at 59. This conversation appears on his Summary Table as Protected Activity 9. In a second meeting with Mr. Riley, on October 29, 2001, Mr. Riley responded to Mr. Collier's concerns on the basis of information he had acquired from FFI, but Mr. Collier apparently contends that he expressed doubt that the information Mr. Riley had received was accurate. The occurrence of this second conversation is again noted in a diary entry, and appears on his Summary Table as Protected Activity 10. Between the two meetings with Mr. Riley, on October 25, 2001, Mr. Collier spoke with Mr. Previty, the highest ranked CRC employee at the Fernald site, about the same concerns. Mr. Previty testified that he remembered this conversation, though he did not join in those concerns because his "opinion was that the project had taken corrective action to fix our plans and procedures." Tr. at 559. This conversation appears on Mr. Collier's Summary Table as Protected Activity 11.

5. Chemical Management

Mr. Collier was a member of the Chemical Management Assessment Team, a team that was created by FFI's Independent Safety Review Committee to perform a site-wide assessment of chemical management at Fernald. The areas he reviewed were compliance with contractual requirements for chemical management by FFI's subcontractors, and compliance with the annual reporting requirements of the Superfund Amendments and Reauthorization Act. *See* August 21 Submission at 17-18. Mr. Collier contends that on October 30, 2001, he discussed potential violations of the Superfund reporting requirements and "apparent failure of FFI to properly enforce its contractual requirements of on-site subcontractors related to chemical inventory management" with James Curry, Sr., the team leader of the Chemical Management Assessment Team. *Id.* at 17. Mr. Curry testified that he had asked Mr. Collier to join the team because of his assessment experience, and that Mr. Collier's investigation uncovered wildly incorrect quantities of chemicals recorded in the database from which the Superfund reports were generated. Tr. at 481-82. This disclosure appears on Mr. Collier's Summary Table as Protected Activity 13. (Although Mr. Collier stated in his August 21 Submission that his diary entry for October 30, 2001, supports this disclosure, it does not. *See* Complainant's Ex. 12 at 60. Consequently, the date for this disclosure cannot be established, but Mr. Curry's testimony demonstrates that a disclosure was indeed made.)

6. Silos Project

Mr. Collier contends that on February 7, 2002, he spoke with Linda England, an FFI employee who was charged with revising and producing a document entitled the Integrated Project Execution Plan (IPEP) for the Silos Project at Fernald. He alleges that he pointed out to Ms. England a number of errors in the IPEP, first in conversation, then by e-mail at her request. He maintains that his comments disclosed matters of gross mismanagement. August 21 Submission at 19. This disclosure appears on Mr. Collier's Summary Table as Protected Activity 14. When shown a copy of Mr. Collier's e-mailed comments at the hearing, Ms. England testified that she must have received them, because the e-mail indicated she had responded to them. Tr. at 76; Item #6 produced by FFI at request of Mr. Collier. Nevertheless, Ms. England testified that she did not recall the content of any conversation she might have had with Mr. Collier on February 7, 2002. Tr. at 77.

In summary, Mr. Collier alleges that he made fourteen disclosures to CRC, FFI or the DOE related to six distinct concerns that he had about events that occurred at the Fernald site. He contends that each of these disclosures is protected under 10 C.F.R. Part 708 because it was the type of disclosure described in section 708.5(a). He also contends that each of them was a contributing factor in the two alleged retaliatory acts in which CRC and FFI engaged. The evidence presented in the record, as described above, clearly shows that most of these disclosures, particularly those reduced to writing, took place. Regarding other disclosures, specifically those Mr. Collier contends he made to Dennis Riley of the DOE and has labeled Protected Activities 8, 9, and 10, the only evidence in the record that Mr. Collier actually made the disclosures at all consists of the reproductions of his contemporaneous diary entries in which he

recorded his disclosures. Weak evidence though these may be, CRC and FFI have not argued that these events did not take place. In any event, as stated above, I will assume for the purpose of analysis that all fourteen of Mr. Collier's disclosures are protected under 10 C.F.R. § 708.5(a), and will move on to consider Mr. Collier's allegations of retaliation.

B. The Alleged Acts of Retaliation

Under the Part 708 regulations,

> Retaliation means an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other negative action with respect to the employee's compensation, terms, conditions or privileges of employment) as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities described in § 708.5 of this subpart.

10 C.F.R. § 708.2.

Mr. Collier alleges two instances of retaliation. They are (1) that on November 8, 2001, Joel Bradburne, the FFI manager of the Silos Project, where Mr. Collier was currently assigned, informed him that his request to attend Plant Automation Equipment training had been denied, and (2) that on February 28, 2002, his employment with CRC was terminated. Complainant's Ex. 6 (Complaint) at 5.

1. Denial of Training

As an initial matter, I must determine whether the first alleged retaliation can properly be considered in this proceeding. After the DOE's Ohio Field Office received Mr. Collier's complaint, it issued a jurisdictional decision in which it stated, "Your 708 complaint is not timely with regard to the denial of training that occurred on November 8, 2001, because the complaint was filed more than 90 days after you learned of this alleged retaliatory action. *See* 10 C.F.R. § 708.14(a)." Letter from Jack R. Craig, Acting Manager, Ohio Field Office, to Steven F. Collier, June 5, 2002. That provision states: "You must file your complaint by the 90th day after the date you knew, or reasonably should have known, of the alleged retaliation." 10 C.F.R. § 708.14(a). In a letter to Mr. Craig requesting a hearing with this Office, Mr. Collier argued that he did not know that the denial of training was a retaliatory act until some time in January 2002, so his complaint was in fact made within the 90-day period established in the regulations. Mr. Collier reiterated his position in his closing argument following the hearing:

> It wasn't until the sudden notification that my performance was somehow deficient, as told to me by Joel Bradburne on January 14, 2002, (when I knew my performance for him had to date been the best I could give), that I put together two and two and first KNEW that the earlier training cancellation must have been for retaliatory reasons.

Closing Argument of Steven F. Collier, October 14, 2002 at 13 (emphasis in original). Giving Mr. Collier the broadest possible latitude with respect to this argument, I thought it appropriate to receive and weigh evidence on this issue. After considering the evidence in the record, as discussed below, I have reached the same conclusion that DOE/OFO did– that the denial of Mr. Collier's request for training is not an act of retaliation that I may consider in this proceeding, because it occurred more than 90 days before the complaint was filed.

The crux of Mr. Collier's argument in favor of considering this alleged retaliation as part of the complaint he filed on March 26, 2002 is as follows. Mr. Collier states that the date on which Joel Bradburne told him he would not be permitted to attend the training was November 8, 2001. He contends, however, that the date on which he knew that Mr. Bradburne's action constituted retaliation was January 14, 2002. If I regard November 8, 2001, as the date on which Mr. Collier "knew, or reasonably should have known, of the alleged retaliation," then the complaint is clearly not timely with respect to this alleged retaliation. If, however, I accept Mr. Collier's contention and deem January 14, 2002, as the date on which he "knew, or reasonably should have known, of the alleged retaliation," then the complaint is timely with respect to this alleged retaliation. To resolve this issue, I will first consider the language of the governing regulation, 10 C.F.R. § 708.14(a). On its face the language is unclear. One interpretation is that an individual must file his complaint by the 90th day after he was aware of an action (here, Mr. Bradburne informing Mr. Collier that he would not be sent to training) that, upon further contemplation, he perceived to be an alleged retaliation. Under this interpretation, the critical date in this case would be November 8, 2001, the date on which Mr. Collier heard those words. A second interpretation is that the individual must file his complaint by the 90th day after he became aware that an alleged retaliation had transpired. Under this second interpretation, the critical date would be January 14, 2002, because, according to Mr. Collier, that is when he first perceived the November 8 action to be a form of retaliation. From a policy standpoint, neither interpretation is entirely satisfactory. On one hand, we want to encourage complainants to raise their allegations soon after retaliatory actions occur (or as soon as they learn that the retaliatory actions occurred, in those situations where complainants lacked contemporaneous knowledge of the actions having occurred), so that the allegations may be investigated promptly, and so that employers need not fear open-ended exposure to liability from complainants that perceive retaliation years after the alleged retaliatory actions occurred. On the other hand, we do not want to bar complainants from raising allegations of retaliatory actions that cannot be recognized as such until a pattern of behavior establishes itself. The latter is the position upon which Mr. Collier's argument relies. Without resolving which interpretation of section 708.14(a) is correct, I will adopt the interpretation that is more in Mr. Collier's favor, for the purpose of analysis in this proceeding. Even under that interpretation, it is my opinion that the alleged retaliation of November 8, 2001, nevertheless falls outside the scope of this proceeding.

I find that, at least in theory, an employer could conceivably engage in conduct that might not be perceived at the time to be retaliatory, but might later turn out to have been. Such a situation might occur when an employer engages in a personnel action of little import– perhaps an involuntary lateral transfer– but follows this action with a series of progressively more adverse actions that form a pattern of conduct that a complainant might perceive to be retaliatory. Under such circumstances, the complainant should not be

barred from alleging that the first, apparently innocent, personnel action was itself retaliatory merely because too much time passed between the date of that action and filing of the complaint. Rather, the complainant should be allowed some time to recognize the retaliatory action for what it is. The evidence in the record of this proceeding, however, indicates that such are not the circumstances in this case.

Mr. Collier asserts that he did not know that FFI's decision not to send him to the training program he desired was retaliation at the time Joel Bradburne so informed him, on November 8, 2001. The record reflects, however, that by the fall of 2001, Mr. Collier had already formed the perception that FFI and CRC were engaging in retaliation against him for protected disclosures. In his complaint, Mr. Collier enumerated a series of alleged disclosures and retaliation that predated the protected disclosures he asserts in this proceeding. Complainant Ex. 6 at 5-8. In addition, he admitted at the hearing that "as far back as September 2000 . . . I did have reason to believe that there was retaliation against me for some things that are not a part of my [present] complaint." Tr. at 53. As of October 24, 2000, when he filled out his portion of his performance evaluation, he "already had reason to believe that retaliatory events were headed my way. . . . I cannot separate whether it was Fluor or Coleman, I only knew that retaliation had already occurred [about] some issues which are not the subject of this case, and I foresaw the possibility of more in the future." Tr. at 528. Moreover, his diary entry for November 8, 2001, states in part:

> Joel [Bradburne] told me this morning that he was not going to send me to the Siemens PCS-7 training he had previously scheduled me for. Reason was vague– something about inability for subcontractors to travel on Fluor money. (I know Bill Previty was recently traveling on Fluor money.) Joel said he thought I was the best person for the job, but the fact that I was a subcontractor limited his ability to send me. . . . I think the timing of Joel's cancelling this training for me, the best person for the job (along with Bruce Ledbetter, also scheduled to go) is fishy, particularly after my meeting yesterday afternoon with Dennis Riley [about the "smoking train" issue]. To get to Riley's office, I have to walk through the Admin building where all the top Fluor offices are located, so it's not unreasonable to assume they've seen me travel that path a lot lately and put two and two together, as they prepare for their Nov 14 Enforcement Conference in Washington on the WPRAP issues. And Joel is closely related to one of the top company officials (son of the company Chairman of the Board). . . .

Complainant's Ex. 12 at 61. Given this evidence, in particular the diary entry that Mr. Collier maintains was made contemporaneously, it is difficult for me to conclude that Mr. Collier did not perceive the alleged retaliatory nature of FFI's decision until January 14, 2002. Apart from his own assertions to that effect, the record establishes that he was suspicious that retaliations were being taken against him, and was specifically suspicious that FFI "top officials" made the decision to deny him training in retaliation for his discussing WPRAP safety issues with the DOE's Mr. Riley. Although Mr. Collier may not have known with certainty on November 8, 2001, that the training decision was a retaliatory action, such certainty is not required. In fact, if complainants did not raise Part 708 concerns until they were certain of their allegations, they might never be in a position to do so. In light of the record in this case, I find that Mr.

Collier has not met his burden of establishing that he did not know, or could not reasonably have known, that the November 8, 2001 decision not to send him to training manifested retaliation until January 2002. I place the date of his knowledge of the retaliatory act at November 8, 2001, which is considerably more than 90 days before the date of his Part 708 complaint. I therefore uphold the Ohio Field Office's jurisdictional decision, and will not consider this alleged retaliation in this proceeding.1/

2. Termination

As will be discussed in more detail below, Mr. Collier was terminated from employment on February 28, 2002. Clearly, termination is an action with respect to Mr. Collier's employment, and therefore would fall within the Part 708 definition of retaliation. Moreover, Mr. Collier clearly met the regulatory time constraints by filing his complaint on March 26, 2002, within 90 days of this alleged retaliatory action. The next question is whether any of Mr. Collier's fourteen disclosures (assumed above to be protected under Part 708) was a contributing factor to his termination.

C. Whether Mr. Collier's Protected Activity Was a Factor Contributing to Retaliation

In prior decisions of the Office of Hearings and Appeals, we have established that,

> A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action."

Charles Barry DeLoach, 26 DOE ¶ 87,509 at 89,053-54 (1997) (quoting *Ronald Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993)); *Ronny J. Escamilla*, 26 DOE ¶ 87,508 at 89,046 (1996).

1/ Even if I were to consider this alleged retaliation in this proceeding, I would find that FFI met its burden of establishing, by clear and convincing evidence, that it would have taken the same action absent Mr. Collier's protected activities. Mr. Previty, the manager of CRC operations at Fernald, Mr. Carr, FFI's senior project director at Fernald, and Mr. Bradburne, Mr. Collier's FFI supervisor at the Silos project, all testified that the reason Mr. Collier's training was cancelled was that FFI was not willing to pay for the training of subcontractors during a period of staff reductions. Tr. at 189-90 (testimony of Previty), 410 (testimony of Carr), 443 (testimony of Bradburne). Mr. Carr also testified that FFI wanted to create job opportunities for its own employees, and that this training was regarded as a step in that direction. Tr. at 410. Mr. Bradburne testified that he recalled telling Mr. Collier that if CRC would pay for his training, FFI would be happy to send him. Tr. at 444-45. Based on this evidence, even if Mr. Collier had not made his protected disclosures, it appears to me that FFI would not have paid for his training and, unless CRC paid for it, would not have sent him to the training he requested. (Mr. Collier contends that FFI's policy of not paying for the training of subcontractors was not applied consistently. He points to a trip to Virginia that Mr. Previty took at FFI's expense. The record reflects, however, that Mr. Previty was heading a team of FFI employees at FFI's request, and that no training was involved. Tr. at 210, 229-31.)

The retaliatory action remaining to be analyzed is that of Mr. Collier's termination from employment at CRC on February 28, 2002. The parties have stipulated that Mr. Collier's termination occurred in response to a business decision by FFI to reduce the size of the workforce at the Fernald site. On January 11, 2002, FFI notified CRC that it was reducing the estimated number of hours of "Senior Operations Specialist" work it would be requiring of CRC by 2400 hours, or the equivalent of two positions. *See* First Stipulation of Steven F. Collier and Fluor Fernald, Inc. As stated above, Mr. Collier was one of five senior operations specialists, out of total of seven CRC employees working at the Fernald site. The "official taking the action," the individual who notified Mr. Collier by letter of his termination, was Raymond Ross, Executive Vice President/General Manager of Coleman Federal. Complainant's Ex. 5. Although Mr. Ross was the signatory of Mr. Collier's termination letter, the record is clear that Mr. Previty was instrumental in developing and applying the criteria that were used in selecting which CRC employees would be terminated as a result of the required downsizing of personnel. Tr. at 212. There is considerable evidence that Mr. Previty had knowledge of several of Mr. Collier's protected disclosures: his October 10, 2000 WPRAP memorandum, Complainant's Ex. 1; the April 26, 2001 e-mail about the respirator issuance program, Tr. at 173; the May 30, 2001 discussion between Mr. Collier and Mr. Morgan, Tr. at 175; his June 26, 2001 dissenting opinion concerning nuclear project startup requirements, Tr. at 177, and his July 2, 2001 meeting with Terry Hagen of FFI on the same issue, Tr. at 178; and his October 25, 2001 discussion with Mr. Previty about the "smoking train" issues, Tr. at 559. In addition, he was aware of Mr. Collier's concerns about the chemical management program. Tr. at 182. In sum, Mr. Previty had knowledge of seven of Mr. Collier's fourteen protected disclosures before he submitted his proposal for terminating the employment of Mr. Collier and one other senior operations specialist to CRC headquarters for approval, on February 2, 2002. *See* Tr. at 561. (Of the seven disclosures of which he was not aware, six concerned the same issues and concerns as those raised in the seven disclosures known to Mr. Previty. The seventh disclosure unknown to Mr. Previty related to the Silos Project and was made to Linda England of FFI on February 7, 2002, after Mr. Previty had completed his decisionmaking process regarding Mr. Collier's termination.)

It is also clear that Randy Morgan, the CRC vice president to whom Mr. Previty reported, had knowledge of at least one of Mr. Collier's protected disclosures, the one made directly to him on May 30, 2001. The evidence is clear that he was involved in the development of the termination assessment criteria. Tr. at 212.

In addition, many FFI managers contributed their comments and observations to the assessment process itself. These individuals did not partake in the development of the criteria by which each CRC employee would be evaluated, nor did they rate or rank the CRC employees. Tr. at 253. Those tasks fell to Mr. Previty. But Mr. Previty continually sought feedback from the FFI managers, such as Joel Bradburne, to whose projects his CRC employees had been assigned. Tr. at 248-51. Consequently, even though FFI in no direct way issued the termination letter that Mr. Collier alleges is a retaliatory action, their input into the assessment process, through discussions with Mr. Previty, could have influenced the result. Any knowledge they had of Mr. Collier's protected disclosures could also have contributed to a retaliatory action carried out on their behalf, wittingly or not, by Mr. Previty.

After reviewing the events from the time of the first protected disclosure Mr. Collier alleges in his complaint, his October 10, 2000 memorandum about nuclear safety issues at WPRAP, through his termination some sixteen months later, I conclude that there is close enough temporal proximity to find that many of Mr. Collier's protected disclosures– those disclosures of which Mr. Previty had knowledge at the time of his decision to recommend Mr. Collier's termination– were contributing factors in the February 2002 decision to terminate Mr. Collier. Looked at in context, virtually all of the relevant events, both protected disclosures and alleged retaliation, were not isolated occurrences, but instead were part of a pattern of frustration and poor communication between Mr. Collier and his management, both FFI and CRC. For example, although his first protected disclosure occurred more than a year before his termination, Mr. Collier continued through May 30, 2001, to revisit the same issues (with Randy Morgan of CRC), and Mr. Previty had requisite knowledge of that discussion. Moreover, concerning those few protected disclosures of which Mr. Previty disavows any contemporaneous knowledge, such as those made to Keith Christopher of the DOE, I will assume, solely for the purpose of analysis, that they too were contributing factors in Mr. Collier's alleged retaliatory termination. I do not, however, find that Mr. Collier's last protected disclosure, to Linda England of FFI on February 7, 2002, was a contributing factor in his termination on February 25, 2002. First of all, Mr. Previty testified that he had no knowledge of this disclosure. Tr. at 560-61. Moreover, although this disclosure occurred before the date of CRC's letter officially informing Mr. Collier that he had been terminated, Mr. Previty had completed his evaluation of his employees and submitted his recommendations for termination to CRC management and human relations staff on February 2, 2002, five days before the disclosure took place. *See* CRC Ex. at 000001.

Notwithstanding these findings, it is clear to me that a large part of the mutual frustration and dissatisfaction had nothing to do with Mr. Collier's protected disclosures. Moreover, as I discuss below, CRC has proven by clear and convincing evidence that it would have terminated Mr. Collier in the absence of Mr. Collier's protected activities.

D. Whether CRC Would Have Taken the Alleged Retaliatory Action of Termination Absent Mr. Collier's Protected Activities

The nature of Mr. Collier's role as a consultant at Fernald required his monitoring of safety at the Fernald site and his occasional delivering "bad news" of noncompliance with safety requirements to managers of site operations. There is no dispute that much of Mr. Collier's work product would qualify as protected disclosures. Moreover, though many of the protected disclosures enumerated in Mr. Collier's complaint concern practices at Fernald that lay beyond the scope of his assigned posts, the parties have conceded that he was entitled to make those disclosures. Because I have concluded that most of Mr. Collier's protected disclosures were contributing factors in his termination, the burden now falls to CRC to prove by clear and convincing evidence that it would have terminated Mr. Collier in the absence of his protected disclosures. *See* 10 C.F.R. § 708.29. The contractor's burden is clearly heavier than that of the complainant, but meeting this burden effectively defeats the allegation of retaliation for whistleblowing conduct, despite evidence that its action appears to have been taken, at least in part, in response to the complainant's protected conduct. Therefore, CRC's burden is to demonstrate independent bases for its

decision to select Mr. Collier for termination, to such a degree that I am convinced that it would have reached the same decision had he made no protected disclosures.

The essence of Mr. Collier's position is that CRC retaliated against him by orchestrating several sequential acts. He contends that Mr. Previty retaliated against him for making protected disclosures beginning in October 2000, by giving him lower ratings than in previous years on his Performance Appraisals for October 1999 through September 2000 (CRC Ex. at 000021-25) (2000 Performance Appraisal) and for October 2000 through September 2001 (CRC Ex. at 000026-30) (2001 Performance Appraisal). (Although the 2000 Performance Appraisal covered a period preceding the first protected disclosure he listed in his complaint, Mr. Collier notes that the appraisal was signed in November 2000, by which time Mr. Previty had knowledge of that disclosure.) Mr. Collier then argues that Mr. Previty developed the employee evaluation process, by which he ranked his employees and recommended to CRC management which two employees should be let go, with the intent of assuring that the result of the process would support his selection of Mr. Collier as one of the two.

I note that, though the record contains references to prior reductions in force taken by CRC under its contract with FFI, *see* Tr. at 217-18, 232-33, the parties did not provide any evidence of how those reductions were conducted. Consequently, I cannot compare the process Mr. Previty developed for the 2002 staff reduction with others in which Mr. Collier was not selected. (I note that Mr. Collier has not advanced any argument that the 2002 downsizing differed in any material respect from previous staff reductions.) I have, however, considered to what extent the evidence demonstrates that the process was developed to meet legitimate business needs rather than to assure an outcome adverse to Mr. Collier in particular. To this end, I find the following. The procedures for the staff reduction were specified in advance. Mr. Previty's "Termination Selection Process" was submitted to and approved by CRC's management, including Randy Morgan. In his February 2, 2002 memorandum to Mr. Morgan, Mr. Previty set out the assessment process he developed.

> The assessment process is a multi-step process selected and conducted by the CRC Ohio Field Office Manager [Mr. Previty] to determine which two of the five assigned Senior Operations Specialists would be recommended for involuntary reduction. Steps included:
>
> Step 1: Determine core skills and job specific skills for individual employee evaluation
> Step 2: Perform the individual employee assessments
> Step 3: Rank the individual employees
> Step 4: Provide recommendations to CRC for approval.

CRC Ex. at 00004. The "Core Skills" identified were communications skills, teamwork, quality of work, and work habits. The "Job Specific Skills" were job/technical knowledge, skills applicability, skills transferability, and customer satisfaction. *Id.* at 000005. Although my understanding of the service CRC provided to FFI at Fernald is imprecise, the eight skills Mr. Previty identified to be assessed appear to me

to be correctly identified as critical qualities for CRC employees working under that contract. 2/ Moreover, I am convinced that, generally speaking, the assessment process, of which skills identification and ratings were a part, was properly developed to address the present and future business needs of CRC rather than as a means of terminating Mr. Collier's employment.

In performing the assessments of the five individuals, Mr. Previty wrote that he considered the last three annual performance appraisals for those employees who had worked that long, but two of the five were new employees for which no annual performance appraisals were available. *Id.* at 000006. Mr. Previty testified that, in addition to the annual performance appraisals, he also assessed the employees' performance for the most recent four months (for which no performance appraisals had been made) by seeking the comments of the FFI managers to whose project the CRC personnel had been assigned and reflecting on his own observations. Tr. at 204. It is unclear the degree to which Mr. Previty relied on the ratings on annual performance appraisals in reaching the score he arrived at in his assessments, rather than his contemporaneous observations or the comments of FFI managers. Tr. at 206. 3/ Under these circumstances and in view of the nature of performance appraisals in general, I must conclude that the assessments performed through this process were to some degree subjective in their nature.

Nevertheless, the assessment Mr. Collier was given appears to be reasonable and well supported by fact. Of the eight skills that were evaluated, Mr. Collier's scores were the lowest of the five assessed employees in the areas of quality of work, communication skills, teamwork, and customer satisfaction. I will focus on these areas, as did the parties. Mr. Previty testified that in the past few years Mr. Collier had fallen below the levels of the other employees in these skills, and the scores Mr. Previty assigned both in the annual performance appraisals for 2000 and 2001 and in the assessment reflected his opinions. Although it is possible that Mr. Collier's protected disclosures influenced Mr. Previty's evaluations of him, Mr. Previty impressed me as taking a realistic view of Mr. Collier's performance on the job and performing his

---

2/ Rather than assigning each of the skills equal weight in the scoring process, Mr. Previty doubled the weight of two skills in the assessment, skills applicability and customer satisfaction. I have no reason to question whether those two skills were so critical to CRC's success that the scores an employee received in those areas should have been given twice their values. I will note, though, that even if those scores had not been doubled, Mr. Collier's overall score still would have been the lowest of the five employees. *See id.* at 000008 (summary scoring chart).

3/ It is also unclear why Mr. Previty chose to consider only the past three years of annual personnel appraisals rather than all that had been made, which in Mr. Collier's case was seven years' worth. Mr. Collier contends that not considering all seven appraisals is evidence that Mr. Previty designed the process to work against him. I cannot agree with Mr. Collier in this regard. The decision to consider three years of appraisals has a logical basis, because it placed the three long-term employees on equal footing. Reviewing any more than three years of appraisals would have been impractical because only two of the five employees had been on staff for more than three years. CRC Ex. at 000015. As stated above, to place all five employees on even ground with respect to prior performance appraisals would have required considering none of the appraisals, as the remaining two employees were recent hires and had none. Moreover, three years of appraisals included at least one appraisal that was issued before the date of any of the protected disclosures listed in the complaint.

evaluation based on a broad range of issues. For example, when questioned at the hearing about the drop in Mr. Collier's annual performance appraisal scores from 1999 to 2000, Mr. Previty stated,

> In the year 2000, I spent two and a half months concurrently with you on [the WPRAP] project. . . . So, I saw first-hand what you were doing out [at] the project. I interfaced with you over the next couple of months, probably in January, February time frame on an infrequent basis on what you were doing out [at] the project. I separately visited the project. In March, I was fully assigned to that project to help the recovery process. It was very obvious to me that your strained relationship with all the senior managers assigned to the project was really a factor in your effectiveness in helping them. I was very concerned about your communications problems. I was concerned about your ability in team work, and you didn't fit in the team anymore. There were too many senior managers that you couldn't work with to get the job done, and your inability at that time to pull this team together, address the issues and fix the problems, I felt that your effectiveness as a Coleman employee had been seriously reduced after the project.
>
> Then when we went onto the issues of communications, personally, with me in April in a heated exchange of e-mail, I have to tell you to stop. I get back in the fall and you still have another big issue on the standing orders. I was very concerned that you weren't doing as well as you had always done before. You were one of our best employees previously. This year you were not. Your communications were down. Your team work was down and they certainly affected your overall performance, and those are the areas that I focused on in this evaluation in 2000. You were lower. I didn't give you an unsatisfactory grade which is a 1; I gave you a 2 in communications. I lowered you in your team work category from a 4 to a 3. I lowered you in the corporate culture category from a 4 to a 3 because your attitude and your inability to work as a team, it affected the whole Coleman reputation on the site, and I lowered your grade [in] customer orientation because you no longer had a happy customer, and that's why you had a significant drop because of your performance in those areas.

Tr. at 214-16. I note that the categories on which he was evaluated in his 2000 performance appraisal had been unchanged for many years, and Mr. Collier does not contend that the process used in 2000 was unfair. That unfairness argument applies only to the evaluation procedure developed for termination purposes, and I have addressed that argument above. Mr. Previty also testified about the low score in communication skills he gave Mr. Collier on his rating form in the termination selection process. When asked to explain his stated rationale for that score, as it appeared at CRC Ex. at 000010, Mr. Previty responded,

> You're the only employee in Coleman that's ever had problems in this area with our job. I have never had to counsel anyone else about their performance in communications. You had difficulty early on in dealing with the fact that you were not in charge. . . . You were

> not in charge of any project. You made recommendations. You weren't in charge. I'll go back to early events that you had with Mr. Paige. Your verbal discussions with him and e-mails were so controversial that I was called to the Deputy Director of the site and [told] if I could not get the Coleman people in order and act professionally, we'd be out of here, specifically, the individual. [That was in] Ninety-six, '97, I don't know. You asked a question about your history [in] communications. When I went out to the WPRAP project in . . . late August, September, October, 2000, I met with the Project Director, the Deputy Project Director, the Operations Oversight Manager, the Project Engineer [at] Fluor . . . and Con Murphy in the IT project who was their project manager. Your relationship with those people was extremely stressful. They had great difficulty in doing business with you. I was out there and I made my own observations and I sensed that your relationship . . . with Mr. Murphy was poor.
>
> As we moved on I have e-mails when you were . . . reassigned from the project [and] not included in something. I had to send you e-mails to stop sending me e-mails about your performance. I didn't question your performance. You refused until I sent you formal, an e-mail that said stop discussing these performance matters; it's not professional.
>
> I come back from a week's vacation, later that year, I get an e-mail where you've been involved in some discussion about standing orders from IT that you wanted over in the Silos project with a personal note on it from the project manager. "You should please consider firing this employee."
>
> Steve, you had numerous problems communicating, and you would go through periods with . . . few problems to [periods with] very, very serious problems, and I gave you every opportunity. [On] your own personal evaluations that you submitted . . . [y]ou cite your own difficulty in dealing with issues like this.

Tr. at 207-09.

The record also supports finding that Mr. Previty's evaluation was based on input from FFI managers in addition to his own observations. For example, Joel Bradburne's testimony establishes that he, as the FFI manager on whose Silos project Mr. Collier had most recently consulted, conferred with Mr. Previty frequently. Mr. Collier had spoken with Mr. Previty several times about his sense that he was given little work at the Silos project, and Mr. Previty testified that he had responded: "I suggested to you to use your initiative to figure out where you could add value to the customer and do everything you could to help make them be successful. We always had that discussion." Tr. at 196. Nevertheless, Mr. Bradburne explained that his opinion of Mr. Collier's work declined after they began working together on the Silos project in 2001 and 2002, and he reported that he told the following to Mr. Collier about his mediocre performance. Tr. at 430.

> Previous interaction before, you know, I always thought, my estimation [was that you had] great talent, great attitude and what caused the mediocre performance . . . as we worked through the Silos, to me it was great talent, disinterest in some of the things that we were doing, [because] there was not . . . a lot of field activities going on, but a lot of administrative activities which nobody really jumps up and down about doing . . .

Tr. at 431. Mr. Bradburne testified as follows regarding communicating his concerns about Mr. Collier to Mr. Previty:

> I don't do a formal performance [assessment] on you or any of the other subcontractors that work for me or have at the time, but Bill [Previty] as the Coleman rep would . . . ask me about performance and I did relay to him . . . we had talked and I thought your performance was mediocre.

Tr. at 437.

In my role as hearing officer, I am called upon to judge the credibility of the witnesses who appeared before me at the hearing. Were I to believe any witness to be less than fully credible, I would assign less weight to his or her testimony. The lesser weight of that witness's testimony could well affect my making a factual finding that in turn could affect a conclusion of law, such as whether a party had met its burden. In this case, however, I find that the major witnesses were all highly credible. I must therefore consider the weight of the evidence presented in determining whether CRC has shown, clearly and convincingly, that it would have terminated Mr. Collier even if he had not made his protected disclosures. The crux of CRC's position is set forth above. Evidence demonstrating that Mr. Collier did not merit his lower ratings is highly circumstantial. For example, his annual performance appraisals for years before 1999 were relatively consistent to that of 1999, the first year included for consideration in the termination assessment criteria and, like 1999, higher than his 2000 and 2001 appraisals. The range of overall scores for all seven years of appraisals, however, is relatively small: 3.42 to 4.43 on a scale of 5. In addition, Mr. Collier produced three farewell electronic mail messages that praised his work at Fernald. While these messages show that at least some of his coworkers did not share CRC management's opinion of Mr. Collier's ability to perform well at his assignments, they do not challenge the weight and specificity of the evidence that supports CRC's decision.

Having considered the entirety of the record in this case, the weight of the evidence convinces me that the CRC employee assessment process was fairly developed and administered, that Mr. Collier was fairly rated as the lowest of the employees, and that CRC clearly would have terminated Mr. Collier's employment even if he had not made the protected disclosures he described in his complaint. 4/

4/ In his closing argument, Mr. Collier articulates a number of reasons that CRC might have been biased against him when evaluating which two of its employees to terminate. He contends that these biases illustrate that the decision to terminate him was founded in retaliation for his protected disclosures. These biases, however, instead demonstrate

(continued...)

III. Conclusion

As set forth above, I have presumed that the complainant has met his burden of proof of establishing by a preponderance of the evidence that he engaged in activity protected under 10 C.F.R. Part 708. In this regard, I have construed some of the evidence in a manner most favorable to the complainant. I also have determined, based on temporal proximity, that the complainant's activity was a contributing factor in one action taken against him, the termination of his employment with Coleman Research Corporation. However, I found that CRC has proven by clear and convincing evidence that it would have taken the same action absent his disclosures. Accordingly, I conclude that the complainant has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted.

It Is Therefore Ordered That:

(1) The request for relief filed by Steven F. Collier under 10 C.F.R. Part 708 is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after receipt of the decision.

William M. Schwartz
Hearing Officer
Office of Hearings and Appeals

Date: May 20, 2003

4/ (...continued)
that CRC had numerous reasons, unrelated to his protected disclosures, to select him for termination. He points to Joel Bradburne's testimony in which Mr. Bradburne specifically requested the assistance of Eric Harper and Thomas Woodroffe, two CRC co-workers of Mr. Collier's, on his project. Tr. at 458-59; Complainant's Closing Argument at 15. He also contends that while he and Roger Hiss, the other CRC employee whom Mr. Previty selected for termination, had been hired by Mr. Previty's predecessor, the three not selected had been hired by Mr. Previty himself. *Id.* In addition, he contends that Mr. Previty had a bias in favor of selecting for termination the employees who had worked for CRC the longest, and therefore, he believes, were more highly paid. *Id.* I note that no evidence was taken on the two latter allegations of bias. Nevertheless, if we accept any of these allegations of bias by Mr. Collier, they furnish independent, if unfair, bases for Mr. Previty's decision to terminate Mr. Collier's employment. Those bases support, if anything, a finding that the decision to terminate Mr. Collier would have been taken even if he had not made his protected disclosures.

June 25, 2003
DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Elaine M. Blakely

Date of Filing: September 30, 2002

Case Number: VBH-0086

This Decision involves a whistleblower complaint that Elaine M. Blakely filed under the Department of Energy's (DOE) Contractor Employee Protection Program. From 1986 to April 2002, Ms. Blakely was employed at the DOE's Fernald, Ohio site, most recently by Fluor Fernald, Inc. (FFI). Ms. Blakely alleges that FFI management retaliated against her for activity protected under the DOE Contractor Employee Protection Program.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10 Part 708 of the Code of Federal Regulations.

B. Procedural History

On February 21, 2001, Ms. Blakely filed a complaint with the Manager of DOE's Ohio Field Office (DOE/OFO). In that complaint, Ms. Blakely alleged that she had made a safety-related disclosure to FFI in September 1998, that this disclosure was protected under Part 708, and that in retaliation for the disclosure, FFI assigned her in March 1999 to a different project at the site. On March 14, 2002, the DOE/OFO manager dismissed Ms. Blakely's complaint for lack of jurisdiction, noting that Ms. Blakely did not file the complaint until 23 months after the alleged retaliation. *See* 10 C.F.R. § 708.14 ("You must file your complaint by the 90th day after the date you knew, or reasonably should have known, of the alleged retaliation."). Ms. Blakely appealed the dismissal of her

complaint to the Director of DOE's Office of Hearings and Appeals (OHA). 10 C.F.R. § 708.18. The OHA Director denied Ms. Blakely's appeal on April 3, 2002.

On April 4, 2002, FFI laid off Ms. Blakely, along with 60 other FFI employees, as part of ongoing downsizing at the Fernald site. On April 9, 2002, Ms. Blakely filed a new Part 708 complaint with the Manager of DOE/OFO, alleging that her termination was a retaliatory action. She claims she was terminated "because I challenged the safety basis for the Waste Pits Remedial Action (WPRAP); I requested the Office of Inspector General to investigate; and I filed a previous 10 CFR 708 complaint for retaliation." Administrative Record of Investigative File, VBI-0086 (hereinafter "AR") at 14. DOE/OFO forwarded this complaint to the OHA, and the OHA Director appointed a staff attorney to investigate the complaint. After the investigator issued his report on September 30, 2002, the OHA Director appointed me as hearing officer in this case. I convened a hearing held at Cincinnati, Ohio, on December 10-12, 2002. The OHA received post-hearing submissions from the parties and closed the record on March 27, 2003.

II. Analysis

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal." *Id.* Accordingly, in the present case, if Ms. Blakely establishes that a protected disclosure, participation, or refusal was a factor contributing to her termination, she is entitled to relief unless FFI convinces me that it would have terminated her even if she had not engaged in any activity protected under Part 708.

After considering the record established by the parties' submissions and the testimony presented at the hearing, for the reasons stated below I find that Ms. Blakely engaged in protected activity under Part 708 beginning in October 2000 with communications to her employer and the DOE Office of Inspector General (DOE/IG), and continuing with the filing of her first Part 708 complaint in February 2001. However, I have concluded that Ms. Blakely has not met the burden of proving by a preponderance of the evidence that her protected activities contributed to her termination. Even assuming that Ms. Blakely's protected activities contributed to her termination, I find that FFI has shown by clear and convincing evidence that it would have terminated Ms. Blakely absent those activities.

A. Whether Ms. Blakely Engaged in Activity Protected Under 10 C.F.R. § 708.5

Ms. Blakely alleges in her present complaint that she was terminated "because I challenged the safety basis for the Waste Pits Remedial Action (WPRAP); I requested the Office of Inspector General to investigate; and I filed a previous 10 CFR 708 complaint for retaliation." Letter from Elaine M. Blakely to Susan Brechbill, DOE/OFO (April 9, 2002).[1]

The Part 708 regulations states that the following conduct by an contractor employee is protected from reprisal by his employer:

> (a) Disclosing to a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, your employer, or any higher tier contractor, information that you reasonably believe reveals--
>
> (1) A substantial violation of a law, rule, or regulation;
>
> (2) A substantial and specific danger to employees or to public health or safety; or
>
> (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority; or
>
> (b) Participating in a Congressional proceeding or an administrative proceeding conducted under this regulation; or

---

1. The report of investigation in this case stated, *inter alia*, that because "the complaint that Blakely filed in February 2001 was dismissed," the "only issue to be considered in this investigation is whether the termination of Blakely's employment in April 2002 was retaliation for her pursuit of a Part 708 claim." Report of Investigation (ROI) at 2 & n.1. The investigation therefore did not consider whether the termination was retaliation for her earlier alleged protected activities, i.e. her disclosures related to WPRAP in September 1998 and her disclosures to the DOE Inspector General, which took place in the fall of 2000.

   I believe the investigation framed the issue in this case too narrowly. Clearly, the fact that Ms. Blakely's February 2001 complaint was dismissed as time-barred precludes her from raising in a new complaint allegations of retaliation that formed the basis of her earlier complaint. For example, as Ms. Blakely was barred in February 2001 from complaining of her March 1999 transfer, she surely is barred from raising the same issue in her April 2002 complaint now before this office. Thus, I agree with the investigation's finding that the only allegation of retaliation not time-barred is her termination. However, while the regulations clearly bar allegations of retaliation that occur more than 90 days before the filing of a complaint, they just as clearly do not bar allegations of protected conduct, no matter when they occurred, so long as they are alleged to have contributed to a retaliatory action taken within the 90 days preceding the filing of the complaint. Thus, I determined prior to the hearing that Ms. Blakely should be allowed to argue that protected conduct aside from the filing of her February 2001 complaint were contributing factors in Fluor Fernald's decision to terminate her. Electronic Mail from Steven Goering, OHA, to Mark Sucher, FFI, and Elaine Blakely (November 21, 2002).

(c) Subject to § 708.7 of this subpart, refusing to participate in an activity, policy, or practice if you believe participation would --

(1) Constitute a violation of a federal health or safety law; or

(2) Cause you to have a reasonable fear of serious injury to yourself, other employees, or members of the public.

10 C.F.R. § 708.5.

1. Disclosures Prior to October 2000

I will first examine evidence of disclosures that predate Ms. Blakely's later communications with DOE/IG and her employer in October 2000, the protected status of which will be discussed further below. I find that Ms. Blakely has not proven by a preponderance of the evidence that these earlier disclosures constitute activity protected under Part 708. Ms. Blakely refers to a number of documents in an attempt to prove that she engaged in activity protected under Part 708 when she "challenged the WPRAP safety basis." Complainant's Post-Hearing Brief at 1-3. However, only one of them predates her October 2000 disclosures.[2] This document is a handwritten note to the WPRAP project manager, Bob Fellman, dated October 9, 1998, "Re: Revised Hazard Category Calculations submitted for blue sheet review on 10/09/98." It states:

---

2. Ms. Blakely indicated prior to the hearing in this matter that some documentary evidence of her disclosures might be missing. "I did assemble several 'safety basis development' files so someone could recreate the thought process from the [sic] pre-Sept. 18, 2002. However, the record which I left was altered by the Records Custodian, by his own admission. Whether those documents survived his editing of the Administrative Record or not, I do not know." Electronic Mail from Elaine Blakely to Steven Goering, OHA (November 25, 2002).

FFI argues that Ms. Blakely's allegation regarding "editing of the Administrative Record" by an FFI records custodian is "unfounded and should be disregarded. First, Ms. Blakely never identified a single specific document that she believed to be missing. Second, Ms. Blakely never requested the production of any such records so that she could review them. Third, her own exhibits include the exchange of e-mail messages involving Ms. Blakely and the records custodian that demonstrates the lack of foundation for her allegation. In this exchange, the records custodian makes it clear that he destroyed only duplicate copies of certain documents. Where he had a question about whether the documents should be in the record, *he returned the documents to Ms. Blakely for review*. Fourth, Ms. Blakely's exhibits also include an evaluation by the OFO (in response to Ms. Blakely's OIG complaint) concluding that the Fluor Fernald records custodians complied with applicable procedures. There is no basis for Ms. Blakely's implication in her OIG complaint and at various points during the hearing that there would be written documentation supporting her allegations but for some misconduct by other Fluor Fernald personnel. Indeed, Thurle Moss indicated in his testimony that six boxes of records left behind in WPRAP by Ms. Blakely were available for review, but Ms. Blakely made no request to review the documents." Respondent's Post-Hearing Brief at 5 (citations omitted).

I agree with FFI. Ms. Blakely may not escape her burden of proof in this proceeding by making unsubstantiated allegations of improper document destruction.

> I regret that I cannot support you in this matter. I have asked you not to put me in a position where I would be compelled to disobey a direct order. I understand that by not supporting you in this review, I am placing my almost 12 years of employment at the Fernald site in jeopardy.
>
> I cannot act contrary to my conscience. I have faith that my actions are the right actions to take in this matter.

Respondent's Exhibit R.

There is simply nothing in this cryptic communication that one could reasonably believe reveals a substantial violation of a law, rule, or regulation; a substantial and specific danger to employees or to public health or safety; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. This note is therefore not a disclosure protected under Part 708.

Ms. Blakely acknowledges that there is "little in writing to document that I challenged [the WPRAP safety basis]; my discussions with Mr. Fellman were verbal, there were one or two hand-written notes from me to him." Electronic Mail from Elaine Blakely to Steven Goering, OHA (November 25, 2002). Thus, the complainant points to Mr. Fellman's hearing testimony to support her contention that she made a protected disclosure. Complainant's Post-Hearing Brief at 2. However, Mr. Fellman's recollection of Ms. Blakely's communication is similarly devoid of any information the disclosure of which is protected under Part 708:

> A My recollection of this is that you stated either that you had moral or ethical objections and that is as far as it went, that for whatever those reasons were, you could not participate any further in the activities that we had now embarked upon using Doug Daniels as well as that database, which had been basically signed off on -- at least in my opinion, and I think there is a document somewhere on that, but anyway, the deal is, yes, you told me that you had ethical or -- I don't remember the words -- moral objection.
>
> Q You don't recall if I had explained them.
>
> A You did not explain them to my recollection.
>
> Q And did you ask for an explanation?
>
> A No.

Transcript of Hearing (hereinafter "Tr.") at 298.

Ms. Blakely also cites the testimony of another FFI manager to whom she reported at WPRAP, Thurle Moss. Complainant's Post-Hearing Brief at 2. However, Mr. Moss's testimony merely confirms that Ms. Blakely never explained in any more detail the basis for the concern set forth in the October 9, 1998 handwritten note quoted above. Tr. at 755.

Thus, while there is evidence that Ms. Blakely raised "moral or ethical objections" to participation on the WPRAP project, there is no evidence that she ever specified what those objections were in a way that could possibly bring her disclosures under the protection of 10 C.F.R. § 708.5.[3]

As such, Ms. Blakely has not met her burden to prove by a preponderance of the evidence that she made any disclosures related to WPRAP, or engaged in any other activity protected under Part 708, prior to her communications to DOE/IG and FFI management beginning in October 2000, which I will address next.

2. Disclosures Beginning in October 2000

On October 24, 2000, Ms. Blakely sent a memorandum to FFI management, a copy of which she provided to DOE/IG on October 25, 2000. In this memorandum, Ms. Blakely's disclosures begin to focus specifically on questions of safety at WPRAP, and thus move into territory protected under Part 708. For example, the memorandum contains the following:

> In September 1998, I withdrew my support for completion of the safety basis documentation because I considered the direction [of] the Project, Safety Analysis Team, and Independent Safety Review Committee to be inconsistent with my knowledge of the waste pit material characteristics, my best judgement as a mechanical engineer, and my best judgement as a safety analyst.
>
> . . . .
>
> I knew that if I was correct, then the Project would have continuing problems with safety issues. There would be nonconformance reports, incident reports, change proposals and project delays. These would not be immediate problems, but appear as the project progressed. These events have since occurred and are a matter of record.

Memorandum from Elaine Blakely to Lynn Macenko (October 24, 2000). FFI contends that this disclosure "still fails to articulate information that discloses a reasonable belief that one of the specified problems listed in Section 708.5(a) had occurred." Respondent's Post-Hearing Brief at 14.

---

3. In its post-hearing brief, FFI notes two other written communications not cited by the complainant. Respondent's Post-Hearing Brief at 12-13. The first is a document authored by Ms. Blakely and dated February 9, 2000. In it, she relates that she "withdrew as the designated project engineer for safety analysis in September 1998 because, in my opinion, the WPRAP Project Manager and Engineering Manager expected me to perform and support activities [that] I considered unethical." Complainant's Exhibit 1. The second is a July 18, 2000 electronic mail authored by Ms. Blakely, in which she contends that "WPRAP released me because I would not support an activity I considered unethical. . . . I had become a continuous reminder that someone knowledgeable in safety analysis did not approve of the direction the project was taking with respect to establishing their safety basis." *Id.* I agree with FFI that neither of these communications reveals the type of information required to make them protected disclosures under Part 708. While both mention safety in general, neither reveals a "substantial and specific danger to employees or to public health or safety." 10 C.F.R. § 708.5.

I find the above disclosure protected under Part 708. While the statements in her memorandum are general in nature, they must be understood in context. The purpose of WPRAP is to remediate the contents of waste pits containing low-level radioactive waste byproducts of uranium and thorium processing generated at the Fernald site.[4] To allege "continuing problems with safety issues" that "have occurred and are a matter of record" at a hazardous waste site such as WPRAP certainly reveals a "substantial and specific danger to employees or to public health or safety."

The same can be said of a December 6, 2000 electronic mail message Ms. Blakely addressed to the recipients of her October 2000 memorandum (DOE/IG and FFI management personnel). In this message she states, "It is my contention that the data used to determine the [WPRAP] hazard category determination were manipulated to achieve a pre-conceived answer. . . . There are also worker safety issues if the process used to identify and evaluate potential hazards is flawed." Electronic Mail from Elaine Blakely to Ray Madden, DOE/IG (December 6, 2000). Ms. Blakely was apparently of the opinion that the data and the process used to identify and evaluate potential hazards on the WPRAP project were flawed and had been manipulated to achieve a preconceived answer. Again, given the nature of WPRAP, it is not at all unreasonable to conclude that such a situation, if true, would pose a substantial and specific danger to employees or to public health or safety.

FFI raises a fair question as to whether Ms. Blakely could have reasonably believed that the "direction" of the WPRAP project in fact had negative safety implications. Respondent's Post-Hearing Brief at 11-12. FFI offered persuasive testimony that the change in the assumptions as to the contents of the waste pits resulted in a more conservative analysis of the dangers posed in the remediation process. *See, e.g.*, Tr. at 612. It appears, however, that Ms. Blakely's concerns were not focussed on the merits of the new methodology as much as on the way in which the old methodology for analyzing the contents of the waste pits was discarded. She testified,

> There was no attempt on the part of those who came in September 1998 to understand what built the methodology that we used. There were a lot of things in there. It wasn't just that these were the numbers that were -- the upper confidence level. There were reasons why we chose those numbers and the reasons for that choice were never explored. There was a presumption on the part of the leadership team that it was done for this reason. There was no attempt to go back and understand why.

Tr. at 457-58.

In her October 2000 memorandum, Ms. Blakely made clear her opinion that the "direction" taken by WPRAP would lead to "continuing problems with safety issues." In December 2000, she warned of an impact on "worker safety" caused by a "flawed" methodology. She has explained the basis for her beliefs, i.e., that going forward with a new methodology without fully understanding the old has negative safety implications. In this instance, she may have been wrong, but I am not prepared to

---

4. "Waste Pits Remedial Action Project," http://www.fernald.gov/Cleanup/wpits.htm.

find that Ms. Blakely's concerns were so baseless that they are outside the zone of reasonable belief. I therefore conclude that both of these communications are protected disclosures under Part 708.

3. February 2001 Part 708 Complaint

There is no dispute that by filing her first Part 708 complaint in February 2001, Ms. Blakely was "participating in . . . an administrative proceeding conducted under this regulation" and therefore her filing was activity protected under Part 708. 10 C.F.R. § 708.5(b); *see* Electronic Mail from Mark Sucher, FFI, to Steven Goering, OHA (November 21, 2002).

B. Whether Ms. Blakely's Protected Activity Was a Contributing Factor in Her Termination

As will be discussed in more detail below, Ms. Blakely was terminated from employment on April 4, 2002. Clearly, termination is an action with respect to Ms. Blakely's employment, and therefore would fall within the Part 708 definition of retaliation. 10 C.F.R. § 708.2. Moreover, Ms. Blakely clearly met the regulatory time constraints by filing her complaint on April 9, 2002, within 90 days of this alleged retaliatory action. 10 C.F.R. § 708.14. The next question is whether Ms. Blakely's protected activity was a contributing factor in her termination.

In prior decisions of the Office of Hearings and Appeals, we have established that,

> A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action."

Charles Barry DeLoach, 26 DOE ¶ 87,509 at 89,053-54 (1997) (quoting *Ronald Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993)); *Ronny J. Escamilla*, 26 DOE ¶ 87,508 at 89,046 (1996).

1. The Official Taking the Action Was Ms. Blakely's Supervisor, Shelby Blankenship

In the present case, Ms. Blakely's termination was part of an ongoing process of downsizing at the Fernald site. Tr. at 385-95. In this process, several rounds of layoffs have occurred. *Id.* Ms. Blakely has not alleged that the ongoing downsizing, or the particular layoffs that occurred on April 4, 2002, in which Blakely and 60 other FFI employees were terminated, was motivated in any way by her protected activity. I would, in any event, find such an allegation implausible on its face.

As part of the Involuntary Separation Process (ISP) that preceded the April 4, 2002 layoffs, at least 25 different job categories were targeted for reductions in personnel, including Ms. Blakely's category of Engineer. Respondent's Exhibit K. In the Engineer category, FFI management set a target reduction of five positions. *Id.* Because two engineers voluntarily separated prior to the April 4 layoffs, only three engineers were involuntarily separated, i.e. terminated. *Id.* Again, Ms. Blakely

has not alleged that FFI management's decision to reduce the number of Engineer positions by five was motivated by a desire to terminate her. Moreover, I find it highly unlikely that Ms. Blakely's protected activity could have led to, or in any way contributed to, a decision by FFI to layoff four of Ms. Blakely's fellow engineers as a pretext to also terminate Ms. Blakely.

There being no plausible connection between Ms. Blakely's disclosures and the April 4 layoffs in general, or the decision to reduce the number of engineers by five, "the official taking the action" in the present case would by necessity be the official(s) whose decisions resulted in Ms. Blakely being one of the three engineers who were laid off on April 4, 2002. After examining the details of the ISP process, I conclude below that "the official taking the action" in this case was Ms. Blakely's supervisor at the time of her termination, Shelby Blankenship.

For each potentially affected employee, the ISP process required the employee's supervisor to fill out an "Individual Employee Rating Form." Mr. Blankenship completed Ms. Blakely's form in February 2002. Respondent's Exhibit L. As was the case with 22 other engineers, Ms. Blakely was rated in six categories, "Initiative," "Communication Skills," "Quality of Work," "Work Habits," "Technical Knowledge," and "Skills Applicability." *Id.* On a five-point scale, Ms. Blakely scored the next to lowest rating in five of the six categories, and scored a "3" in one category, "Work Habits." *Id.* For purposes of comparing ratings, each employee's ratings were averaged for the six categories (assigning 1 point for the lowest rating and 5 points for the highest), using the following weighting:

		Ms. Blakely's Rating
Initiative	20%	2
Communication Skills	20%	2
Quality of Work	10%	2
Work Habits	15%	3
Technical Knowledge	15%	2
Skills Applicability	20%	2

Respondent's Exhibit H. Thus, Ms. Blakely's weighted average rating was 2.15, on a scale from 1 (worst) to 5 (best). Respondent's Exhibit J. Compared against the 22 other employees in the Engineer job category, Ms. Blakely ranked last, the next highest average score being 2.55, held by both the second and third lowest ranked employees. Combining these ratings with the need to reduce the number of Engineers by three, FFI chose to terminate the three lowest rated employees. This process was followed in other job categories as well, such that there is no evidence that FFI chose a particular process for terminating engineers in an attempt to retaliate against Ms. Blakely. Tr. at 504. Ms. Blakely admits as much. Tr. at 667-69.

The method for ranking engineers differed from other job categories only in the weights that were assigned to each skill category. Looking at Ms. Blakely's rating in each category, and to the weights assigned each category, I cannot conclude that the weighting of one category versus another

contributed to Ms. Blakely's last place ranking. For example, Ms. Blakely's "strongest" category, "Work Habits," was assigned a 15% weight. But even had that category been given the heaviest weight of 20%, Ms. Blakely's weighted average would have increased only slightly, from 2.15 to 2.3.

Thus, put simply, the FFI official whose decision resulted in Ms. Blakely's termination was the person who filled out her Individual Employee Rating Form, her supervisor Shelby Blankenship.[5]

2. Whether Mr. Blankenship Had Actual or Constructive Knowledge of Ms. Blakely's Protected Activity

Mr. Blankenship testified at the hearing in this case, and was asked specifically whether he was aware of Ms. Blakely's disclosures to DOE/IG or her February 2001 Part 708 complaint. With respect to her Part 708 complaint, Mr. Blankenship testified as follows.

> THE HEARING OFFICER: Did you become aware that she filed a Part 708 complaint with the Department of Energy in February 2001?
>
> THE WITNESS: I don't know if I was aware of this in that time frame or not.

Tr. at 860. Aside from this testimony, there is no evidence in the record that sheds any light on whether Mr. Blankenship was aware of Ms. Blakely's February 2001 Part 708 complaint.[6] Given this lack of evidence, and the fact that Ms. Blakely bears the burden of proving that her protected activity contributed to her termination, I cannot conclude that Mr. Blankenship was aware of her February 2001 complaint. However, Mr. Blankenship's testified that in December 2000 or January 2001, Ms. Blakely informed him of her communications with DOE/IG. Tr. at 859-60.

3. Whether Mr. Blankenship Acted Within Such a Period of Time that a Reasonable Person Could Conclude that the Ms. Blakely's Disclosures to DOE/IG were a Factor in Her Termination

Mr. Blankenship testified that Ms. Blakely told him of "complaints" to DOE/IG in either December 2000 or January 2001, shortly after he became her supervisor. The action taken by Mr. Blankenship

---

5. Ms. Blakely alleges that the "system used by [FFI] Human Resources (HR) to ensure that skills assessments were performed uniformly either failed or were [sic] not applied to my case." However, Ms. Blakely cites testimony that merely describes the processes used by FFI HR as they are applied to all employees, not only Ms. Blakely. Complainant's Post-Hearing Brief at 5 (citing Tr. at 698-700, 831-34, 871, 873-877). Thus, this testimony is not evidence that a non-uniform application of the skills assessment process played a role in Ms. Blakely's termination.

6. In the absence of actual or constructive knowledge of protected activity, such knowledge has been imputed to the person alleged to have engaged in retaliatory action, upon a showing "that the person was influenced by the negative opinions of those with knowledge of the protected conduct." *Janet Benson*, OHA Case No. VBA-0082 (August 21, 2002). Because Ms. Blakely has made no such showing, I will not impute others' knowledge of her protected conduct to Mr. Blankenship.

that caused Ms. Blakely's termination, his completion of her Individual Employee Rating Form, took place in February 2002. Thus, Mr. Blankenship filled out the rating form 14 months after Ms. Blakely's December 2000 communications to DOE/IG, and approximately 13 months after Mr. Blankenship recalls being informed of these communications.

Based on this period of intervening time (13 months), would a reasonable person conclude that Ms. Blakely's disclosures to DOE/IG were a factor in the ratings Mr. Blankenship gave Ms. Blakely on the Individual Employee Rating Form? While there certainly can be no mathematical formula to make this determination, I note that decisions in prior Part 708 cases have relied on closer temporal proximity in reaching a conclusion that a protected activity contributed to an adverse personnel action. Those decisions range from cases where adverse action came the same day as protected activity, *Timothy E. Barton*, OHA Case No. VWA-0017 (April 13, 1998), or where a series of protected activities are interspersed with adverse actions, *e.g.*, *John Gretencord*, OHA Case No. VWA-0033 (November 4, 1999), to a case where the adverse action took place 9 months after the protected activity, *Luis P. Silva*, OHA Case No. VWA-0039 (February 25, 2000). On the other hand, a protected disclosure was found not to be a contributing factor in an adverse action that took place 24 months later. *Jean G. Rouse*, OHA Case No. VBH-0056 (March 6, 2001).

Thus, there is no precedent in Part 708 cases for finding that a period of 13 months is sufficiently short to infer a connection between a protected activity and an adverse personnel action. Of course, "[a]pplying a reasonable-person standard to this issue requires considering the circumstances of each case." *Barbara Nabb*, OHA Case No. VBA-0033 (April 5, 2000). For example, in the *Nabb* case, "although more than seven months passed between the two events, it is reasonable to conclude that contractor officials did not forget about Ms. Nabb or her disclosures in the interim, particularly in light of the ample evidence of Ms. Nabb's outspoken nature and the number and variety of situations in which she had made her disclosures." *Id.* By contrast, in the present case, Mr. Blankenship's knowledge of Ms. Blakely's protected activity was limited to her disclosures to DOE/IG in the fall of 2000. Nor is there any evidence that Mr. Blankenship would have been reminded of these disclosures any time after Ms. Blakely informed him of them in December 2000 or January 2001. Although it may be appropriate under more compelling circumstances, the present case is not one that calls for stretching the outer limits of sufficient temporal proximity to 13 or more months.

4. Other Circumstantial Evidence Cited by Ms. Blakely

The "temporal proximity" analysis discussed above is one way to support an argument that protected activity was a contributing factor in alleged retaliation. But the Part 708 regulations do not limit a complainant to only this means of meeting her burden of proof, and Ms. Blakely cites other evidence in contending that she has met her burden. Complainant's Post-Hearing Brief at 5-6. However, I conclude below that the evidence to which she refers does not prove that her protected conduct contributed to her termination.

Ms. Blakely cites instances where she "was reassigned to groups who stated that they had no work for me," the "system used by [FFI] to ensure that skills assessments were performed uniformly either

failed or were [sic] not applied to my case," and her "work assignments often involved tasks which were limited by my work restrictions." She also notes that she was labeled as "disruptive" and "difficult." Complainant's Post-Hearing Brief at 5-6.

It is important to reiterate here, as discussed above, that Ms. Blakely's first protected activity occurred on October 24, 2000, with her memo to FFI management. Thus, any actions allegedly taken against her prior to that date could not have been in retaliation for protected activity. Ms. Blakely's reassignments are a case in point. Ms. Blakely was assigned three different jobs after she left WPRAP in March 1999, and before she began to work for Shelby Blankenship in January 2001. However, these three assignments began, respectively, in March 1999, February 2000, and June 2000. *See* Tr. at 226. Similarly, while Ms. Blakely notes that her "work assignments often involved tasks which were limited by my work restrictions," she refers to assignments given her prior to any of her protected activities. As a result, none of these reassignments, or the way in which they were handled, could possibly have been in retaliation for her protected activities, since no protected activities had yet occurred.[7]

Ms. Blakely's reassignment to Mr. Blankenship's organization, occurring in late 2000 or early 2001, did take place after she had engaged in protected activity. However, responding to questions posed by Ms. Blakely, Mark Cherry, the FFI official responsible for making the reassignment, testified credibly that he simply transferred Ms. Blakely to where there was an opening he believed matched her qualifications.

> Q [By Ms. Blakely]: Do you recall towards the end of the year 2000 I had brought up an issue with Walt Fick?
>
> A Yes.
>
> Q Can you describe from your memory what that was?
>
> A I'm not sure what the specific issue was. I know that near that time -- I know that you and Walt had some real differences, I guess, between you two, as far as the work environment went and that's what I remember.
>
> Q Do you remember me describing it as a hostile work situation?
>
> A You may have.
>
> Q From the time when we had these discussions on the work situation with Walt Fick that it was not particularly workable for me at that time, when was the decision made to reassign me?

---

7. In her post-hearing brief, the complainant also raises anew an allegation that she had complained concerning her treatment by FFI medical personnel, but that the complaint was not addressed or resolved. Complainant's Post-Hearing Brief at 6. This allegation concerns events that took place in April 1999, *see* Tr. at 807, prior to her first protected activity on October 24, 2000, and therefore could not have been connected to her protected activities.

> A If you are looking for a discrete time period, I don't know. I think it was rather quickly.... But basically, openings were made available within facility engineering, I believe, and at that point, obviously your technical background was more suited to facility engineering . . . , something more technical towards the engineering field, and that it was supported by the openings that were available in Shelby [Blankenship]'s operation. . . .
>
> . . . .
>
> Q And this occurred shortly before or shortly after this Walt Fick situation.
>
> A About the same time.
>
> Q About the same time as Walt Fick, things started coming up. When you were discussing with Bob Nichols or whoever else in that organization, trying to find a place for me, were you presenting me as a general engineer or as a mechanical engineer or as an engineer of whatever classification?
>
> A Basically, I provided your resume at that time and that was pretty much the way it was presented with -- that was the way it was presented.

Tr. at 175-77. It is even difficult to describe this transfer as a negative action toward Ms. Blakely. There is no dispute that Ms. Blakely had a strained relationship with her supervisor prior to the transfer, Walt Fick, under whom she claimed to have been subject to a "hostile work situation."[8] Viewed in this context, moving Ms. Blakely to a different job looks to be an attempt to do something positive for her.

Ms. Blakely also contends that, once she was in Mr. Blankenship's group, he "excluded me from staff meetings with the engineers that I worked with; Mr. Blankenship did not have regular contact with me nor did he respond to my requests for technical direction; and Mr. Blankenship was aware that I had contacted the Office of Inspector General." Complainant's Post-Hearing Brief at 5. However, each of these contentions are either not supported by the record, or are not evidence of any retaliatory intent on the part of FFI or Mr. Blankenship.

First, the testimony of one of Ms. Blakely's co-workers under Mr. Blankenship supports Ms. Blakely's contention that regular meetings were held by Mr. Blankenship with engineers who worked in the same building as he did, and that these meetings did not include Ms. Blakely, who worked in another building. Tr. at 235-36. However, another of Ms. Blakely's co-workers testified that there were no such meetings, as did Mr. Blankenship. Tr. at 102-03, 866, 868-69. Moreover, even if there were such meetings and Ms. Blakely did not attend, I could conclude from those facts

---

8. Ms. Blakely does not claim that this allegedly "hostile work situation" was in retaliation for her protected activity. It would, in any event, be difficult to make such a connection. Ms. Blakely began working for Mr. Fick in the summer of 2000, several months before her first protected disclosure in October 2000, and worked for him until she transferred to Mr. Blankenship's group in January 2001. Mr. Fick's testimony indicates that the relationship between the two was strained from the outset, *see, e.g.*, Tr. at 257-58, and that Mr. Fick had no knowledge of Ms. Blakely's issues, whether they were raised during her time at WPRAP or in her protected disclosures to FFI management and the IG. Tr. at 278-79.

alone that she was excluded from the meetings. And there is no other evidence in the record that would lead me to that conclusion. Finally, even if Mr. Blankenship chose to hold certain meetings with only the engineers in his building, this is not on its face a negative action against Ms. Blakely.

Second, the record does not support Ms. Blakely's contention that Mr. Blankenship did not have regular contact with her. Mr. Blankenship testified that, when Ms. Blakely first began working for him, he held one-on-one meetings with her

> every week or every other week. Perhaps less frequently than that, but no more often than once a week, I don't believe.
>
> BY MS. BLAKELY:
>
> Q Okay. What were the purpose of those meetings?
>
> A Just to -- just to provide you some support and some -- kind of get you kicked off and get you moving on your work.
>
> Q Why were they discontinued?
>
> A I'm unable to provide that level of one-on-one support over a long period of time.

Tr. at 895. Ms. Blakely also cites numerous e-mail exchanges between her and Mr. Blankenship. These e-mails indicate that, in fact, there was regular contact between Ms. Blakely and Mr. Blankenship, albeit electronically. Although Ms. Blakely contends that Mr. Blankenship did not respond to the requests for guidance submitted by e-mail, Mr. Blankenship provides a reasonable explanation for this in his testimony.

> Q Okay. As a manager, you have engineering -- engineers reporting to you. Those engineers communicate back and forth by e-mail for whatever reason. At some point -- the gist of those e-mails is a request for a response. It is a repetitive request for a response that's not closing. At what point as a manager do you decide, let's cease the e-mails back and forth and have a sit-down discussion?
>
> A Well, we did that on numerous occasions and that didn't -- that didn't produce a resolution. It just generated another series of questions. So that -- in my -- in my mind, that became an unproductive process and I didn't have time to support it.

Tr. at 896.

Finally, Ms. Blakely cites to testimony by people outside of Mr. Blankenship's group describing her as "difficult" and "disruptive." Complainant's Post-Hearing Brief at 6 (citing Tr. at 188, 201-03, 259, 260-61). However, there is no evidence that Mr. Blankenship's opinion of Ms. Blakely was in any way influenced by those of others with whom she had worked. Mr. Blankenship credibly testified at the hearing in this matter as to why, from first-hand experience, *he* found Ms. Blakely difficult to supervise. Nothing in that testimony indicates that his opinion was in any way based on Ms. Blakely's protected activities. Rather, Mr. Blankenship stated that Ms. Blakely "required a high

level of supervision. You required an awful lot of interaction in order to get things done whereas I was accustomed to giving engineers work and they -- they performed it without much direction." Tr. at 911; *see infra* pp. 18-20 (discussing basis for Mr. Blankenship's opinion that Ms. Blakely was relatively unproductive, needed too much supervision, and tended to be argumentative).

Based on the above, I find that Ms. Blakely has not met her burden of proving by a preponderance of the evidence that her disclosures to DOE/IG were a contributing factor in Mr. Blankenship's low ratings of Ms. Blakely that led to her termination. Moreover, as I discuss in the following section, even if I were to assume that Ms. Blakely's protected activities were contributing factors in her termination, I would find that FFI has proven by clear and convincing evidence that it would have terminated Ms. Blakely had she engaged in no activity protected under Part 708.

C. Whether FFI Would Have Terminated Ms. Blakely Absent Her Protected Activities

As discussed above, Ms. Blakely's termination in April 2002 was a result of the low ratings Shelby Blankenship gave her on an Individual Employee Rating Form he completed in February 2002. Below I discuss whether Ms. Blakely would have received these low ratings, or at least ratings low enough to rank her among the bottom three in the Engineer job category, had she made no protected disclosures to DOE/IG and FFI beginning in October 2000 nor filed a Part 708 complaint in February 2001.

Again, the fact that Ms. Blakely's first protected activity occurred on October 24, 2000 is an important piece of the analysis. Obviously, any actions allegedly taken against her prior to that date clearly reflect events as they would have occurred had Ms. Blakely engaged in no activity protected under Part 708.

Thus, Ms. Blakely's experience working in the WPRAP project, which she left in March 1999, provides a good example of how she fared in the absence of protected activity. It also, in my opinion, is the key to understanding why Ms. Blakely found herself without a job after the April 2002 ISP. Ms. Blakely describes the circumstances which led to her departure from WPRAP as follows:

> I say that WPRAP released me because I would not support an activity I considered unethical. I was the same employee then as I had been the two previous years. The project liked me well enough to offer me a full time position and even had my responsibilities delineated in their Project Execution Plan. The difference was that now I had become a continuous reminder that someone knowledgeable in safety analysis did not approve of the direction the project was taking with respect to establishing their safety basis. This disapproval was so great that I refused to support the activity, withdrew from it, and diverted my energies to closing some outstanding reports.

AR at 153.

Essentially, Ms. Blakely refused to do the work that she was assigned. As FFI points out, "While another company might well have disciplined or terminated Ms. Blakely for her insubordination, Fluor Fernald went out of its way to attempt to find other meaningful work for her; this is hardly an act of retaliation." Respondent's Post-Hearing Brief at 21. Had FFI taken such action, it would not have run afoul of Part 708, as Ms. Blakely had not yet engaged in any conduct protected under the regulations.[9] Disagreement with management alone is not a basis for affording protection to an employee under Part 708. *Narish C. Mehta v. Universities Research Association*, 24 DOE ¶ 87,514 at 89,065 (1995). In any event, the hearing testimony of the WPRAP project director describes the steps he took to find her new work.

> Q Can you describe the process that used to ultimately find me a place outside of WPRAP to work? My subsequent assignment?
>
> . . . .
>
> A . . . The first thing I did was to try to accommodate you through the new operating regime, which was unacceptable to you.
>
> Q Which -- to clarify, was Doug Daniel's inclusion.
>
> A That is correct.
>
> Q Okay.
>
> A The next thing I did was I talked to others to see if there was some kind of job that we could give to you within the organization that frankly saved your participation. I considered your participation to be net positive, Elaine. There was never an issue like that. I was dismayed that you were unable to accept Doug's primacy in that particular role. So, I went around and I said well, what can we do internally? Would could I do to try to find a spot for you?

---

9. The Part 708 regulations do prohibit retaliation, under certain specified circumstances, against a contractor employee "refusing to participate in an activity, policy, or practice . . ." 10 C.F.R. § 708.5(c). In the present case, it is not necessary to determine whether the circumstances surrounding Ms. Blakely's refusal meet the criteria set forth in that section, since another section of the regulations states,

> You may file a complaint for retaliation for refusing to participate in an activity, policy, or practice only if:
>
> (a) Before refusing to participate in the activity, policy, or practice, you asked your employer to correct the violation or remove the danger, and your employer refused to take such action; and
>
> (b) By the 30th day after you refused to participate, you reported the violation or dangerous activity, policy, or practice to a DOE official, a member of Congress, another government official with responsibility for the oversight of the conduct of operations at the DOE site, your employer, or any higher tier contractor, and stated your reasons for refusing to participate.

10 C.F.R. § 708.7. There is no evidence in the record that Ms. Blakely took either of the two actions required to bring her refusal to participate within the protection of Part 708.

> THE HEARING OFFICER: Let me just clarify. Internally, you mean within --
>
> THE WITNESS: Within the project, within my own project. What could we do? I couldn't find something that made a lot sense. Then I prepared and I submitted to Dennis a statement of potential participation -- a statement of work, a job description, if you will, wherein you might have a role to support our legal team, because they were very often getting -- you were really knowledgeable about process knowledge, where data sources resided, the various information that we had and I thought, well, I know that there are inquiries going on within legal, specifically through Dan Yeager, who is part of the legal staff here and through Rene Holmes, also who was part of the legal staff, that you could be an assistant to them.
>
> So, I discussed this with Carr and he said that he didn't see that as being a fit for you and moreover, there was opportunities, there was a demand for help in the WAO [FFI's Waste Acceptance Organization] area.

Tr. at 311-13.

Thus began a pattern wherein Ms. Blakely was moved from one job to another. As discussed above, three of these moves (including her transfer out of WPRAP) took place before Ms. Blakely engaged in any protected activity, and so each clearly would have taken place in the absence of that activity. I have also found above that there is no evidence that Ms. Blakely's last transfer, in January 2001 to Mr. Blankenship's group, was tainted in any way by her protected disclosures, and in fact appeared to be an helpful attempt to get Ms. Blakely out of what she considered a "hostile work situation."

This last transfer, though by all appearances well-intentioned, did not result in a good fit between Ms. Blakely and Mr. Blankenship's group. Mr. Blankenship testified credibly at the hearing as to what the source of the difficulties was, and I am convinced that the same problems would have arisen in the absence of any protected conduct by Ms. Blakely. The three principal issues seem to have been Mr. Blankenship's opinion that Ms. Blakely was relatively unproductive, needed too much supervision, and tended to be argumentative.

According to Mr. Blankenship, when Ms. Blakely first came to his organization, "the project that we felt was best fitted to her skill mix was the development of some engineering standards that we had been talking about establishing and hadn't had time to do. And that was the assignment that we made to her." Tr. at 843.

> [H]er job was to coordinate that information, pull it together, and get it produced in whatever form we -- we felt was appropriate.
>
> Q How successful was she in accomplishing this task?
>
> A Not very. To my recollection, the original list of I think about two dozen things, and we may have -- we may have struck some of those off during the

process. My recollection is that -- that two or three of those got completed during her tenure.

Tr. at 844; *See also* Tr. at 916 ("You had worked on some of it for 14 months and had, you know, had 14 percent of it done. In my mind, I felt like that was a job that -- that probably could have been completed in three months or so.").

Mr. Blankenship also testified that Ms. Blakely "required a high level of supervision. You required an awful lot of interaction in order to get things done whereas I was accustomed to giving engineers work and they -- they performed it without much direction." Tr. at 911.

> MS. BLAKELY: Okay. The question is, we -- we have the question of the amount of time that had to be devoted to me being one of the issues which made me difficult to supervise. We have established that it is a normal expectation when a new employee joins a group that there is more time necessary to bring that individual on board than it would be to manage folks that have been there for a long time.
>
> THE HEARING OFFICER: Mm-hmm.
>
> MS. BLAKELY: I'm trying to establish how long this getting me on board process took and whether that is included in his description that I was a difficult employee, since it seems to be a time-related thing.
>
> THE WITNESS: It took 14 months and we never achieved it.
>
> MS. BLAKELY: Okay.
>
> THE HEARING OFFICER: How long do you think it should take?
>
> THE WITNESS: I would have thought two or three months.

Tr. at 912-13; *see also* Tr. at 887 ("The fact that -- that you had an awful lot of trouble, you know, manipulating this and you required a tremendous amount of -- of interaction and direction I think places your level of competency below that of the other people in the peer group . . . .")

Finally, Mr. Blankenship described Ms. Blakely as argumentative. When asked by Ms. Blakely at the hearing, he explained why.

> A Well, we -- we frequently had -- had contests. There would be disagreement over what a procedure meant or where -- we had an argument at one juncture where some calculations belonged. And I -- you know, in several of those instances, you were arguing with the subject matter expert.
>
> Q Okay. Question: What is the difference between arguing with a subject matter expert versus requesting clarification from the subject matter expert?
>
> A I think the difference is that when you're provided direction and you don't follow it.
>
> Q But what if the individual has questions on the direction? Is that being argumentative if one asks for further clarification?
>
> A At some juncture that becomes argumentative, yes.

Tr. at 914-15; *see also* Tr. at 853 ("I found Ms. Blakely to be a little difficult to work with. You know, I've worked with a lot of -- a lot of engineers, and I found her to be difficult to function with.").

My assessment of Mr. Blankenship's testimony is that his were honest opinions, arrived at from first-hand experience with Ms. Blakely, that he would have held whether or not he knew she had engaged in any protected activity. In light of these opinions, it is not at all surprising that Mr. Blankenship gave Ms. Blakely the low ratings he did on the Individual Employee Rating Form, in which his comments included observations that Ms. Blakely "[d]emonstrates frequent need for direction in order to sustain progress on work," "is frequently argumentative," and "has demonstrated a limited amount of fully complete work." FFI Exhibit L. Because, as discussed above, it is these low ratings that led to Ms. Blakely's dismissal, I find clear and convincing evidence that Ms. Blakely would have been one of the three employees in the Engineer category who were involuntarily separated, whether or not she had engaged in activity protected under Part 708.

III. Conclusion

As set forth above, I have concluded that the complainant has met her burden of proof of establishing by a preponderance of the evidence that he engaged in activity protected under 10 C.F.R. Part 708. However, I have also determined that Ms. Blakely has not met her burden of proving that her protected activity was a contributing factor in her termination from FFI. Even assuming that Ms. Blakely had met her burden in this regard, I found that FFI has proven by clear and convincing evidence that it would have taken the same action absent his disclosures. Accordingly, I conclude that the complainant has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted.

It Is Therefore Ordered That:

(1) The request for relief filed by Elaine M. Blakely under 10 C.F.R. Part 708 is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after receipt of the decision.

Case No. VBI-0045

June 22, 2000

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Decision and Order

Name of Case: Joseph P. Carson

Date of Filing: March 14, 2000

Case Number: VBI-0045

On March 14, 2000, Joseph P. Carson (Carson) filed a "Whistleblower Reprisal Complaint per section 3164 of the NNSA Authorization Act for FY 2000." Carson is employed by the Department of Energy (DOE) as a Safety Engineer, nominally assigned to the Office of Oversight, Planning and Analysis, Office of the Deputy Assistant Secretary for Oversight, Office of Assistant Secretary for Environment, Safety and Health (EH), but he is currently stationed in Oak Ridge, Tennessee. In the March 14, 2000 complaint, Carson alleges that in 1999 he made a number of protected disclosures about Glenn Podonsky, a senior National Nuclear Security Administration (NNSA) official, to the DOE Office of Inspector General (IG) and Congress, "related to Podonsky's five year long campaign of reprisal against me." Carson alleges that Podonsky and "his subordinate managers" retaliated against him by not offering Carson a position in DOE's Oak Ridge Operations Office (DOE/OR) after the Department eliminated the EH Office of Site Residents Program. Carson had worked for that program in Oak Ridge before his "directed reassignment" to the EH Office of Oversight, located at DOE Headquarters (DOE/HQ) in Germantown, Maryland.

Background

The statute which Carson cites in his complaint is section 3164 of the National Defense Authorization Act for Fiscal Year 2000 (the Act). The present complaint is the first of its type to be filed with the DOE Office of Hearings and Appeals (OHA). Carson seeks remedies afforded under the "Whistleblower Protection Program" mandated by section 3164. According to the Conference Report on the Act, section 3164 has a very narrow purpose: it requires the Secretary of Energy to establish a program to protect covered individuals from reprisal for disclosing "information relating to the protection of classified information" which the employee reasonably believes to provide direct and specific evidence of a violation of federal law or regulation, gross mismanagement, a gross waste of funds, abuse of authority, or a false statement to Congress on an issue of material fact. H.R. Rep. No. 301, 106th Cong., 1st Sess. at 919-20 (1999) (emphasis added). Reprisals based on anything else are not covered by section 3164. "Covered individuals" are defined in section 3164(b) as DOE employees and contractor employees who are "engaged in the defense activities of the Department." Sections 3164(f) and (g) establish special procedures to safeguard the security of the information disclosed, and to restrict the disclosure of that information to persons and governmental entities who are authorized to receive it. In other words, the statute not only provides protection for specific employees but also established approved mechanisms which those employees must use in order to make disclosures which are entitled to protection. Section 3164(l), entitled "Relationship To Other Laws," states that "The protections provided by this section are independent of, and not subject to any limitations that may be provided in, the Whistleblower Protection Act of 1989 (Public Law 101-512) or any other law that may provide protection for disclosures of

information by employees of the Department of Energy or of a contractor of the Department."

Section 3164(i) states that a covered individual who believes he has been discriminated against as a reprisal "for making a protected disclosure under this section" may submit a complaint to the OHA Director. (Emphasis added.) Under section 3164(j)(1), the OHA Director must first determine whether the complaint is frivolous. If the OHA Director determines the complaint is not frivolous, he will conduct an investigation of the complaint. For the reasons explained below, I have determined that (i) the present complaint is "frivolous" because it fails to state a claim for relief under section 3164, (ii) no investigation is warranted, and (iii) the complaint should be dismissed.

Analysis

Carson's three-page complaint does not mention the protection of classified information or refer to classified information in any way. Carson submitted 41 separate attachments in support of the complaint. OHA's review of the lengthy compilation of attachments to Carson's complaint confirmed the impression gleaned from the complaint itself that neither the alleged protected disclosures nor the alleged retaliation appear to have any connection to the disclosure of classified or other information relating to the protection of classified information. We also found that none of the information Carson allegedly disclosed requires the type of special security protection prescribed in section 3164. Quite to the contrary, the attachments contain statements like "I hold a ?Q' security clearance, but my work has almost never involved classified information," (June 7, 1999 letter from Carson addressed to U.S. Congressional Committee Chairmen Sensenbrenner, Burton & Bliley), and "I cannot point to a specific danger to the safeguards and security of America's nuclear stockpile" (May 11, 1997 letter from Carson addressed to President Clinton).

In addition, it appears that Carson is not raising a new reprisal claim under section 3164, but merely referencing other complaints he previously filed against DOE in other fora before the effective date of section 3164, seeking enforcement of prior rulings in those cases, or a "global" settlement of all his claims against DOE. For this reason as well, section 3164 does not appear to be germane to his present complaint. Nor did any of those previous complaints relate to the specific subject matter jurisdiction of section 3164. For example, his disclosures in the pending Office of Special Counsel (OSC) complaint proceeding before the Merit Systems Protection Board (MSPB) mentioned below concern the alleged abuse of the DOE security clearance process to suspend Carson's "Q" clearance. According to Carson, a "Q" clearance is a qualification for his job because it enables him to enter secure facilities. Carson's clearance was restored, and he is now claiming that it was questioned in retaliation against his prior "whistleblowing activities." Although they relate to Carson's security clearance, these alleged disclosures do not involve classified or other information relating to the protection of classified information, and thus do not fall within the narrow scope of section 3164.

Other parts of his complaint are likewise unrelated to disclosures relating to the protection of classified information. Carson's complaint further states that "this matter. . . is also being considered by OSC" and that he anticipates "filing another petition for enforcement with MSPB in the next week as it has not responded to my previous one." March 14, 2000 Complaint, page 2 (citations omitted). An excerpt from an Office of Personnel Management (OPM) background investigation report Carson filed with the OSC states that "His work as a safety inspector is not classified work. Safety is public information. He did not appear to have violated security regulations or to have divulged any classified information." (Exhibit 6 to August 25, 1999 OSC Complaint, at page 39.) On April 1, 2000, Carson sent OHA an e-mail message which included a copy of a new filing he made on March 31, 2000 with the MSPB, styled as a "Motion for Initiation of an Addendum Proceeding to Determine Consequential Damages." This appears to be the petition he refers to above. While it mentions section 3164, that motion does not refer to the disclosure of classified or other information relating to the protection of classified information.

Based on the review and conclusions described above, an OHA Deputy Director wrote a letter to Carson on April 28, 2000, advising him that OHA had tentatively determined the complaint was frivolous:

your complaint does not appear to involve reprisals by the DOE against you for the disclosure of "classified or other information relating to the protection of classified information," which the Congress intended to cover in section 3164. It therefore appears that your present complaint is frivolous under section 3164(j)(1), and does not warrant an investigation. However, on behalf of the OHA Director I will give you an opportunity to show cause why your present complaint should not be dismissed as frivolous for failure to state a claim that falls within the purview of section 3164. Your written statement showing cause why your present complaint should not be dismissed for the reasons explained in this letter should be received by the OHA by May 19, 2000.

April 18, 2000 "show cause" letter from Thomas O. Mann to Carson at 2.

Carson took full advantage of the opportunity offered in the April 18, 2000 "show cause" letter. On May 11, 2000, at Carson's request, the OHA Deputy Director held a telephone conference with Carson and his attorney, during which they discussed DOE's interpretation of the statute based on the Conference Report. They also discussed the reasons why Carson believes his disclosures and the alleged retaliatory acts by Podonsky fall within the purview of the statute, specifically regarding their connection to the "protection of classified information." Following the telephone conference, OHA faxed the relevant portion of the Conference Report to Carson and to his attorney. Memorandum of Telephone Call between Mann, Carson and Michael Kator, Attorney for Carson (May 11, 2000). Finally, on May 17, 2000, Carson submitted a four-page letter, responding to OHA's April 18, 2000 "show cause" letter. We next consider Carson's arguments that good cause exists why his complaint should not be dismissed as frivolous within the meaning of section 3164.

As noted above, Carson's March 14, 2000 complaint under section 3164 alleges that Podonsky and "his subordinate managers" retaliated against Carson by not offering him a new position in Oak Ridge after the Department eliminated the EH Office of Site Residents Program for which Carson had worked in Oak Ridge before his "directed reassignment." In his May 17, 2000 response to OHA's "show cause" letter, Carson alleges specifically that DOE/OR failed to allow him to compete for two positions in late 1999, and one in early 2000, and that DOE/OR's failure to select (and promote) Carson for one of those positions constitutes a reprisal within the meaning of section 3164(a). In addition, Carson asserts that he could be considered a "covered employee" under section 3164(b) because he holds a DOE "Q" security clearance. For purposes of this analysis, I will assume that Carson's present complaint satisfies the requirements of sections 3164(a) and (b).

However, for the reasons explained below, I have determined that Carson's present complaint, even as augmented by his May 17, 2000 response to OHA's "show cause" letter, fails to show that he has made a "protected disclosure" as that term is defined in section 3164(c). In his response, Carson cites section 3164(c):

PROTECTED DISCLOSURES.—For purposes of this section, a

protected disclosure is a disclosure—

(1) made by a covered individual who takes appropriate

steps to protect the security of the information in accordance

with guidance provided under this section;

(2) made to a person or entity specified in subsection (d); and

(3) of classified or other information that the covered individual

reasonably believes to provide direct and specific evidence

of any of the following:

(A) A violation of law or Federal regulation.

(B) Gross mismanagement, a gross waste of funds,

or abuse of authority.

(C) A false statement to Congress on an issue of material

fact.

According to Carson, his disclosures about "the suitability of Podonsky to hold a security clearance and/or hold the key position he does for the protection for all classified information and material in DOE" should be protected under section 3164, even though they are not themselves classified. Carson's May 17, 2000 response at 2. Carson reasons that DOE's personnel security program is part of the agency's overall program for the safeguards and security of classified information and materials. Based on that premise, Carson argues that a protected disclosure "that otherwise meets the statutory definition" can be about the suitability of an individual holding a security clearance and having access to classified information and/or materials. He further asserts that "it seems clear to me that the intent of Congress in passing this law includes offering protection from reprisal to people who report evidence of spying or other information relating to the suitability of an individual to hold a clearance in DOE." Id. Carson's argument on this critical point concludes with the claim that his protected disclosures "are reasonable and based on direct and specific evidence that Glenn Podonsky violated a law or Federal regulation; is blameworthy for gross mismanagement, a gross waste of funds, or abuse of authority; or made a false statement to Congress on an issue of material fact." Id.

It is clear from the facts alleged in this case, from the statutory language itself, and from the legislative history in the Conference Report, that the disclosures forming the basis for Carson's March 14, 2000 complaint were not made under section 3164(c), and they do not qualify for the protection of the statute. None of them was made by an individual "who takes appropriate steps to protect the security of the information in accordance with guidance provided under this section," as specified in section 3164(c). Carson's disclosures about Podonsky's alleged role in Carson's 1997 directed reassignment were made before the effective date of the statute. They concern actions occurring before the effective date of the statute, and they did not involve classified or other information "relating to the protection of classified information" as specified in the Conference Report. The logic of Carson's reasoning in his May 17, 2000 response, about why his alleged disclosures relate to the protection of classified information, is strained and unconvincing. The mere fact that Podonsky holds a DOE security clearance and some of his official duties involve the oversight of security functions within the Department does not mean that Carson's allegations about Podonsky's "fitness" for his job necessarily relate to the protection of classified information. In fact, there is no apparent connection between Carson's alleged disclosures about Podonsky and the protection of classified information. Carson's attempt to analogize his allegations about Podonsky to a covered employee who reports "evidence of spying" is both inappropriate and incredible. Moreover, there is no basis for Carson's allegation that Podonsky "perjured himself" about his role in ordering the Carson reassignment. No perjury charges have ever been brought against Podonsky, nor is there any evidence to support Carson's serious accusations against Podonsky. Finally, there is no connection between Podonsky's alleged involvement in an attempt to revoke Carson's security clearance and "the protection of classified information" within the meaning of the Act. This alleged reprisal also took place years before the enactment of section 3164 so it could not have possibly concerned "protected disclosures" under the statute.

Carson's May 17, 2000 response next claims that he made his alleged protected disclosures to persons and entities enumerated in section 3164(d), including members of Congress, employees of Congress, and the OSC. According to Carson, his disclosure to the OSC is, in effect, a disclosure to the DOE Inspector General (IG), another one of the persons listed in section 3164(d). Carson claims he also made disclosures

directly to the DOE IG. In view of my finding above that Carson's disclosures were not made under section 3164, and thus fail to qualify for protected status under the Act, it makes no difference that they were made to persons and entities enumerated in section 3164(d). Likewise, it is irrelevant for purposes of the present analysis whether the disclosures alleged in Carson's March 14, 2000 complaint under section 3164 were a contributing factor to any alleged reprisals, since Carson has failed to meet the jurisdictional requirements of the statute.

For the reasons set forth above, I have concluded that Carson's present complaint is frivolous for purposes of section 3164(j), and that no investigation is warranted. It should be noted, however, that this determination does not mean Carson is left without a remedy for the alleged reprisals mentioned in his March 14, 2000 complaint. As stated in section 3164(l), the whistleblower protections provided by section 3164 are meant to be independent of Carson's rights under the Whistleblower Protection Act of 1989 (WPA) or any other laws that may provide protection for disclosures of information by DOE employees. Carson is already pursuing the same claims under the WPA. Section 3164 is a very specific statute, designed to deal with a specific type of disclosure. In this determination I simply conclude that Carson has failed to show that his alleged disclosures were made under the statute, and thus, he has failed to show they qualify for protection under section 3164. Carson's March 14, 2000 complaint under section 3164 will therefore be dismissed.

IT IS THEREFORE ORDERED THAT:

(1) The March 14, 2000 complaint filed by Joseph P. Carson under section 3164 of the National Defense Authorization Act for Fiscal Year 2000 is hereby dismissed.

(2) This is a final order of the Department of Energy.

Office of Hearings and Appeals

Date: June 22, 2000

Case No. VBR-0002

January 24, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Supplemental Order

Name of Petitioner: Westinghouse Savannah River Company

Date of Filing: November 12, 1999

Case Number: VBR-0002

This supplemental order concerns a Motion for Reconsideration (Case No. VBR-0002) filed by Westinghouse Savannah River Company (WSRC) on November 12, 1999. The reconsideration motion relates to an Initial Agency Decision issued by the Office of Hearings and Appeals (OHA) of the Department of Energy (DOE) on November 2, 1999 (Case No. VBH-0002). In the Initial Agency Decision, I granted relief to the Complainant on the whistleblower complaint he had filed against WSRC under 10 C.F.R. Part 708.(1) I found that WSRC had failed to prove by "clear and convincing" evidence that it would have terminated the Complainant absent his protected disclosure. In its reconsideration motion, WSRC contends that met its evidentiary burden in this case, and urges me to deny the relief to the Complainant.

I. Background

The facts pertaining to the Complainant's whistleblower complaint are fully set forth in the Initial Agency Decision, Don W. Beckwith, 27 DOE ¶ 87, 534 (1999), and will not be reiterated here. For purposes of the reconsideration request, the following procedural information is relevant. WSRC stipulated at both the investigatory and hearing stages of the Part 708 proceeding that (1) the Complainant had made a protected disclosure as defined in 10 C.F.R. § 708.5, and (2) the Complainant's protected disclosure can be considered a contributing factor to WSRC's decision to terminate the Complainant because of the temporal proximity that existed between the protected disclosure and the Complainant's termination. Decision at 3. In view of WSRC's stipulations, the Complainant was deemed to have met his regulatory burden of proving "by a preponderance of evidence that there was a disclosure . . . described under § 708.5, and that such act was a contributing

factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). The burden then shifted to WSRC to prove "by clear and convincing" evidence that the company would have terminated the Complainant even if he had not disclosed information about alleged misconduct by a WSRC management official.

WSRC's entire case rested on its assertion that it terminated the Complainant because he allegedly violated WSRC's short-term disability policy. To support its position, WSRC stated that two of its managers observed the Complainant at a construction site working while the Complainant was drawing 100% disability pay under WSRC's short-term disability policy. WSRC maintained that it was a violation of its disability policy to work while drawing disability pay. Alternatively, WSRC argued that it terminated the Complainant for lying at a meeting.

II. The Initial Agency Decision

After reviewing all the documentary and testimonial evidence in the case, I held in the Initial Agency Decision that the unresolved conflicting testimony in the record made it impossible to know with any confidence whether the Complainant was working at the construction site on the days in question, as alleged by the WSRC managers.

I also found that WSRC had failed to provide the most probative evidence of the Complainant's alleged violation of WSRC's short-term disability policy, namely the policy itself. Moreover, I determined that the evidence submitted by WSRC did not clearly and convincingly demonstrate that the company consistently terminates employees who violate the terms of WSRC's short-term disability policy.

In addition, I was not convinced by WSRC's alternative purported justification for terminating the Complainant, i.e., that the Complainant had lied in a meeting. I pointed out in the Decision that the WSRC Disciplinary Committee had recommended that the Complainant be terminated one day before the meeting in question had occurred. Moreover, I found that the evidence did not necessarily support WSRC's position that the Complainant had "lied" in the meeting in question.

III. Motion for Reconsideration

In its reconsideration request, WSRC maintains that it produced its entire short-term disability policy prior to the hearing, contrary to a finding set forth in the Initial Agency Decision. Request at 1. WSRC acknowledges that it did not submit its entire Disability Benefits Book but maintains that the two-page document it did provide constituted the company's entire short-term disability policy.

WSRC next highlights a sentence in its short-term disability policy that states, in relevant part, as follows: "[I]f you are disabled and **unable to work** . . ." (emphasis added by WSRC) a worker can qualify for short-term disability benefits. It is WSRC's contention that the short-term disability policy is unequivocal in that "unable" means "incapable." WSRC then reasons that the Complainant clearly was capable of working, as he admitted at the hearing that he had climbed on a homeowner's roof to inspect work that his subcontractors had completed while he was on short-term disability.

In response, the Complainant objects to WSRC's motion on the ground that it is not provided for under the Part 708 regulations and is designed to delay the resolution of the case. Complainant's Objection to Motion (November 18, 1999). It is WSRC's position, however, that while a request for reconsideration is an extraordinary remedy, it is appropriate in circumstances where an error must be rectified.

As an initial matter, the Complainant is correct that the filing of motions for reconsideration is not specifically enumerated by the Part 708 regulations. Nevertheless, Hearing Officers have all the powers necessary to regulate the conduct of proceedings which would include ruling on requests such as the one before me. See 10 C.F.R. § 708.28(b). Since WSRC is suggesting I made an error in reviewing the evidence, I deem it appropriate at this juncture to examine that issue.

WSRC's Short-Term Disability Policy

Prior to the hearing, WSRC submitted a two-page document (numbered as pages 2 and 3) bearing no title but having the heading mid-way down the first page "How the Plans Work" and a subtitle, "Short-Term Disability." See Exhibit 23a. At the hearing, WSRC's Policy Representative testified that she implemented all of WSRC's Human Resource policies from 1994 through 1998 and ensured, among other things, that WSRC's recommendations regarding disciplinary actions and termination were consistent throughout the site. Hearing Transcript (Tr.) at 210. In this regard, she testified that WSRC's "disability policy requires an employee to be at home, be available at any point in time for management or medical to get in touch with

him. Our disability policy does not allow any other type of work." Id. at 221. The two-page document WSRC submitted as Exhibit 23a, however, did not contain any language to support the WSRC's Policy Representative's testimony. Therefore, at the hearing I questioned the WSRC Policy Representative about a reference she had made in her earlier testimony to a 20-page disability policy:

Q.: . . . you mentioned that there's a 20-page written policy that details an employee's obligations when they're on short-term disability; is that correct?

A.: Um-hum [yes]

Q: . . . I want to hand you what we've marked as Document 23a . . . is that two-page document a part of this 20-page brochure that you're referring to?

A: It's just a short glimpse of the policy. This is in a handbook, benefits handbook that's given to the employee when they're employed out at Westinghouse.

Q: Can you take a minute to look at that and see where, if anywhere, it mentions the employee's obligations?

A: In this two-page, I do not see --[it].

Tr. at 232. From the testimony of WSRC's own policy representative recounted above, I inferred that there must be more to WSRC's short-term disability policy than the two-page document the company submitted. Otherwise, the WSRC Policy Representative's testimony regarding the restrictions placed on employees drawing short-term disability and the employee's obligations under WSRC's short-term disability policy made no sense to me.

On December 9, 1999, WSRC submitted a 14-page document entitled, "Disability, WSRC & BSRI" (2) that describes the three programs comprising WSRC/BSRI's disability benefits. The three programs mentioned in the 14-page document are Short-Term Disability, Total and Permanent Disability, and Special Benefits. Of particular note is the section entitled, "Short-Term Disability" which appears to be identical to Exhibit 23a. Assuming the 14-page document submitted by WSRC after the hearing was the disability policy in effect at the time the Complainant was employed by WSRC, it now appears that Exhibit 23a constituted the company's entire short-term disability policy. If I accept Exhibit 23a as WSRC's complete short-term disability policy then I must reject as unfounded the WSRC Policy Representative's testimony regarding the contents of that policy. The policy, by its own terms, simply does not support her assertions as recounted at the hearing.

I turn now to WSRC's assertion in its reconsideration request that Exhibit 23a prevented the Complainant from "working" while on short-term disability. WSRC points out that its policy states that "[I]f you are disabled and **unable to work** . . . (emphasis added by WSRC)," an employee may obtain short-term disability. According to WSRC, there is no qualifier, and it is clear from the context that "unable" means "incapable." Furthermore, WSRC contends that the fact the Complainant admitted at the hearing that he climbed up the ladder on a Saturday to inspect his subcontractors' work means he was capable of working. I disagree.

I find it curious that WSRC fails to mention the bolded definition of "disabled" in its short-term disability policy. The definition states in its entirety as follows:

"Disabled" under Short-Term Disability means that you are unable to perform the normal duties of your own job and are not at work. Medical evidence of disability may be required.

In the 14-page document WSRC submitted on December 9, 1999, there is a table entitled, "Disability Benefits at a Glance" that highlights, among other things, the key provisions in WSRC's Short-Term Disability program, its Total and Permanent Disability program, its Special Benefits' program, and its

Incapability Benefit program. Under the short-term disability column, it is stated, "Must be unable to perform your **own** job." The policy highlights the word "own." In contrast, in the Total and Permanent Disability column, it is stated, "Must not be able to perform **any** job." The policy highlights the word "any."

Since the Complainant was drawing short-term disability at all times relevant to this proceeding, the focus must be on whether the Complainant was able to perform his own job at WSRC, not whether he was incapable of working at any job. At the time he was placed on short-term disability, the record reflects that the Complainant was employed as a tritium maintenance mechanic. Exhibit 2b, Tr. at 73. The Complainant's medical records reflect that he has a long history of chronic back pain and suffers from degenerative arthritis of the spine. Exhibits 2b, 2d, 2f, 2g and 2h. According to medical documentation in the record, a WSRC physician opined in January 1998 that the Complainant was unable to perform his normal work assignment because he had difficulty sitting or standing for a long period and lifting over 40 pounds. Exhibit 2a. The Complainant's first-line supervisor testified at the hearing that tritium maintenance mechanics work on valves and pumps, are required to lift up to 50 pounds of weight, and use torquing wrenches that require twisting and turning. Tr. at 73-74. It seems reasonable to conclude from the evidence in the record, namely the documentation about the Complainant's medical condition and the medical opinion that the Complainant was unable to perform the duties of a tritium maintenance mechanic, that the Complainant was properly placed on short-term disability.

Next, I must look at what restrictions, if any, were placed on the Complainant by the terms of WSRC's short-term disability policy. After reviewing the policy, it appears that there were no restrictions placed on him. That having been said, it is only logical that if the Complainant were working at a construction site performing the same functions expected of him as a tritium maintenance mechanic, i.e., twisting and turning, and lifting 50 pounds of weight, that he should have been working in his position at WSRC. However, the evidence in the record that I deemed credible does not demonstrate that the Complainant was performing physical labor of the same kind required of him in his tritium maintenance mechanic position.

To be sure, there is the Complainant's own testimony that he hobbled up a ladder at the construction site to inspect the roof work his subcontractors had performed for a homeowner. (3) I am not convinced, however, from the evidence submitted by WSRC that the Complainant's actions in this regard were inconsistent with his short-term disability status. I therefore will not disturb my finding in the Initial Agency Decision that WSRC has failed to prove by clear and convincing evidence that it would have terminated the Complainant for having violated WSRC's short-term disability policy.

In conclusion, the new evidence submitted by WSRC supports its position that WSRC had submitted its entire short-term disability policy into the record of the proceeding prior to the hearing. Since it is now clear that Exhibit 23a constitutes WSRC's complete short-term disability policy, I must find that the testimony of the WSRC Policy Representative regarding the content of WSRC's short-term disability policy is unfounded and entitled to no weight. I make this finding because the WSRC Policy Representative's assertions about the restrictions placed on those drawing short-term disability are not supported by the terms of the policy itself or by any other credible evidence presented in this proceeding. I find further that WSRC has not presented "clear and convincing" evidence that it terminated the Complainant for his violation of the short-term disability policy or any other credible reason except for his protected disclosure.

It Is Therefore Ordered That:

(1) The Motion for Reconsideration filed by Westinghouse Savannah River Company on November 12, 1999, Case No. VBR-0002, be and hereby is granted as set forth in paragraph (2) below and denied in all other respects.

(2) The Initial Agency Decision issued on November 2, 1999, Case No. VBH-0002, be and hereby is modified to reflect as follows: (1) Westinghouse Savannah River Company (WSRC) submitted its entire

short-term disability policy prior to the hearing; (2) the contents of the short-term disability policy do not support the testimony of the WSRC Policy Representative; (3) the testimony of the WSRC Policy Representative regarding the contents of WSRC's short-term disability policy appears to be unfounded and hence will be accorded no weight; (4) the terms of WSRC's short-term disability policy did not place any restrictions on outside employment; and (5) WSRC has not presented "clear and convincing" evidence that the Complainant, Don W. Beckwith, violated the terms of its short-term disability policy.

(3) This is a final Order of the Department of Energy.

Ann S. Augustyn

Hearing Officer

Office of Hearings and Appeals

Date: January 24, 2000

(1)The regulations codified at 10 C.F.R. Part 708 govern the DOE's Contractor Employee Protection Program, a program established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government- owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). The Program's primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers.

(2)It is unclear to me what the initials "BSRI" stand for, or the interrelationship between WSRC and BSRI. It is also not clear to me whether the 14-page document submitted by WSRC on December 9, 1999 is a part of the 20-page Disability brochure the WSRC Policy Representative alluded to in her hearing testimony, whether the 20-page document is another Disability Policy WSRC has, or whether the WSRC Policy Representative was mistaken as to the length of WSRC's Disability Policy. On December 10, 1999, WSRC tendered some documents relating to the remedial phase of this proceeding. Among the documents it submitted was a 14-page document entitled, "Disability WSRC & BSRI" and a 15-page document entitled, " General Information, WSRC & BSRI." The 14-page document WSRC submitted on December 10 is almost identical to the 14-page document it tendered on December 9. However, the version WSRC submitted on December 10 does not contain one page that is included in the December 9 version. The page in question contains a chart entitled, "Disability Benefits at a Glance."

(3)I point out that the Complainant's admission in this regard does not support WSRC's contention that the Complainant lied about working at the construction site on two other days. It is not even clear to me that the individual's act of hobbling up a ladder should be considered work in the sense of "physical labor."

Case No. VBU-0016

September 15, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Appeal

Name of Petitioner:Gary Roybal

Date of Filing:June 23, 1999

Case Number:VBU-0016

On October 6, 1998, Gary Roybal (Roybal) filed a complaint under the Department of Energy (DOE) Contractor Employee Protection Program, codified at 10 C.F.R. Part 708. The regulations governing the program were revised in a new interim final rule that took effect on April 14, 1999. Along with other procedural changes, the interim final rule reassigned the investigative function to the Office of Hearings and Appeals. All of the pending whistleblower cases in the investigative stage, including Roybal's case, were then transferred to OHA.

The OHA investigator assigned to the case dismissed Roybal's complaint on June 11, 1999. On June 23, 1999, Roybal filed this Appeal of the dismissal with the Director of OHA. In the Appeal, Roybal requests that OHA reverse the dismissal and reinstate his complaint. 10 C.F.R. § 708.18.

I. Background

Roybal was formerly employed by Johnson Controls World Services, Inc. (Johnson) at the Los Alamos National Laboratory in Los Alamos, New Mexico. Roybal alleges that he disclosed information regarding safety issues and mismanagement to his employer while employed by Johnson. On July 10, 1998, Roybal's employment was terminated. On this ground, Roybal filed a whistleblower complaint under Part 708 with DOE's Albuquerque Operations Office.

The Part 708 regulations in effect at the time of filing allowed an employee 60 days after the alleged retaliation to file a complaint. 10 C.F.R. § 708.6 (1992). Roybal, however, filed his complaint after the 60-day time period had expired since his July 10, 1998 termination from Johnson. Nonetheless, the complaint was not dismissed by DOE, and was still pending on April 14, 1999, when the interim final rule went into effect. The interim final rule increased the maximum time period for filing a complaint to 90 days after the date of the alleged retaliation. 10 C.F.R. § 708.14 (a). Roybal's complaint was filed within the 90 day time limit.

As noted above, in April 1999, after the effective date of the interim final rule, Roybal's complaint was transferred to the OHA for investigation. The investigator assigned to Roybal's complaint noted that the complaint was filed under the old regulations (which had the 60 day limit) and asked him to provide a reason for the late filing. When Roybal did not provide a reason for filing beyond the 60 day limit, the investigator dismissed his complaint on June 11, 1999. Roybal filed this Appeal on June 23, 1999, requesting that we reverse the dismissal. In his Appeal, he explained that he believed that the last act of alleged retaliation occurred on or about September 28, 1998 (when he was not re-hired by Johnson and

other allegedly less qualified individuals were hired), not on July 10, 1998, when his employment was terminated. Roybal, who is not represented by counsel in this matter, maintains that the regulations mean that retaliation could occur by omission (e.g., not being re-hired for an appropriate vacancy).(1)

II. Analysis

We find that the complaint was timely filed. This complaint was still pending and had not been dismissed by DOE prior to the effective date of the new interim final rule (April 14, 1999). The interim final rule provides an employee 90 days after the date of the alleged retaliation to file a complaint. § 708.14. According to the new regulations, "[t]he procedures in this part apply prospectively in any complaint proceeding pending on the effective date of this part." 10 C.F.R. § 708.8. Therefore, because Roybal's complaint was pending on the effective date of the interim final rule, we find that the 90 day deadline in the interim final rule applies to this case. Section 708.8 was added to the interim final rule in order to explicitly state DOE' s intention that the revised procedures shall apply in any complaint proceeding pending at the investigative stage on the effective date of the rule. 64 Fed. Reg. 12,865 (1999). Roybal filed his complaint 88 days after his termination, which is within the 90 day deadline. The case shall be reinstated and processed in accordance with Part 708.

It Is Therefore Ordered That:

(1) The Appeal filed by Gary Roybal, Case No. VBU-0016, is hereby granted, as set forth in Paragraph (2) below.

(2) This matter is hereby reinstated and the complaint shall be investigated under 10 C.F.R. Part 708.

George B. Breznay

Director

Office of Hearings and Appeals

Date: September 15, 1999

(1)/ The regulations clearly state that retaliation is "an *action* . . . taken by a contractor against an employee with respect to employment . . . as a result of [a protected disclosure] . . . ." 10 C.F.R. § 708.2 (emphasis added).

Case No. VBU-0039

November 30, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Decision of the Director

Name of Case: Edward J. Seawalt

Date of Filing: November 2, 1999

Case Number: VBU-0039

Edward J. Seawalt (the complainant) appeals the dismissal of his complaint against Contract Associates, Inc. (the Contractor) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The program prohibits a DOE contractor from retaliating against an employee for disclosing certain information (a protected disclosure). As explained below, I have determined that Mr. Seawalt's appeal should be granted in part and his complaint remanded for further processing.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE Contractor Employee Protection Program is set forth at 10 C.F.R. Part 708. The DOE recently revised the program. 64 Fed. Reg. 12,862 (March 15, 1999).

Part 708 prohibits contractors from retaliating against contractor employees who engage in protected conduct. Protected conduct includes disclosing information that the employee believes reveals a violation of a law, rule, or regulation. If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish, by a preponderance of the evidence, that the employee made a protected disclosure and the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to establish by clear and convincing evidence that it would have taken the same action in the absence of the employee's disclosure. If the employee

prevails, the OHA may order employment-related relief such as reinstatement and back pay.

Under Part 708, the office initially receiving the complaint may dismiss the complaint for lack of jurisdiction or other good cause. 10 C.F.R. § 708.17. The complainant may appeal such a dismissal to the OHA Director. 10 C.F.R. § 708.18.

B. Factual Background

The complainant was an employee of the Contractor. The Contractor, in turn, was a subcontractor to the University of California, the managing and operating contractor for the DOE's Los Alamos National Laboratory (LANL).

Prior to February 1, 1999, the complainant reported to a LANL official safety concerns about a product that the Contractor was installing at LANL. On February 1, 1999, the complainant resigned his position with the Contractor.

On May 6, 1999, the Contractor filed a state court action against the complainant, based, in part, on what the Contractor alleged were his wrongful disclosures to LANL. On June 11, 1999, the complainant filed a counterclaim, including one for retaliatory constructive discharge.

C. The Part 708 Complaint

The complainant filed his Part 708 complaint on August 3, 1999. In his complaint, he alleges that the Contractor retaliated against him for his disclosures. He maintains that these alleged retaliations gave him no choice but to resign. Accordingly, he claims that he was constructively discharged. In addition, the complainant cites the Contractor's May 1999 state court action against him as a retaliation.

The complainant seeks various types of relief. The complainant seeks employment-related relief in the form of any differential between his prior pay and benefits and his current pay and benefits at his new job. The complainant also seeks damages for emotional distress and the costs of defending the state court action. Finally, the complainant seeks to have the DOE seek relief against the Contractor for the alleged delay in the project attributable to the safety concerns.

D. The Dismissal

On October 19, 1999, the DOE employee concerns office at Albuquerque dismissed the complaint, based on lack of jurisdiction. The office found that the complainant's state court counterclaims constituted pursuit of a remedy under state law and, therefore, precluded consideration of his Part 708 complaint. Dismissal letter at 1 (citing 10 C.F.R. § 708.17(c)(3)). The office also opined that Part 708 could not provide relief with respect to the Contractor's pending state court action against the complainant, and that the complaint was untimely with respect to the constructive discharge claim.

E. The Appeal

On November 2, 1999, the OHA received the complainant's appeal. The complainant contends that the DOE employee concerns office erred in dismissing his appeal. The Contractor filed comments opposing the appeal, essentially arguing that the dismissal letter was correct.

II. Analysis

It is undisputed that if a complainant is pursuing a "complaint" under state law, the complainant may not pursue a Part 708 complaint. Section 708.17, which provides for dismissals of complaints, provides in relevant part:

(c) Dismissal for lack of jurisdiction or other good cause is appropriate if:

. . . .

(3) You filed a complaint under State or other applicable law with respect to the same facts as alleged in a complaint under this part: or . . . .

10 C.F.R. § 708.17(c)(3). The dispute on appeal is whether the complainant's counterclaims are "complaints" under state law within the meaning of Section 708.17.

Although Part 708 does not define the word "complaint," Section 708.15 describes what constitutes the

pursuit of a remedy under state or other applicable law. Section 708.15, entitled "What happens if an employee files a complaint under this part and also pursues a remedy under State or other applicable law? " provides in relevant part:

(a) You may not file a complaint under this part if, with respect to the same facts, you choose to pursue a remedy under State or other applicable law, including final and binding grievance-arbitration procedures, unless:

. . . .

(c) You are considered to have filed a complaint under State or other applicable law if you file a complaint, or other pleading, with respect to the same facts in a proceeding established or mandated by State or other applicable law, whether you file such a complaint before, concurrently with, or after you file a complaint under this part.

. . . .

10 C.F.R. § 708.15(a), (c) (emphasis added). As explained below, I have concluded that Section 708.15 does not preclude a Part 708 complaint where the complainant is pursuing a counterclaim in another forum.

Initially, I note that the word "complaint" is not further defined in the regulations. In other words, the regulations do not specify that the word "complaint" includes a counterclaim. A counterclaim is different from a complaint, especially because it does not have the element of voluntariness. Section 708.15(a) indicates that only a voluntary pursuit of a remedy in another forum bars a Part 708 complaint: Section 708.15(a) states that a Part 708 complaint is barred where the complainant "choose[s] to pursue" a remedy in another forum. In this case, the complainant did not "choose" to pursue a remedy in state court; rather, the complainant was forced into that forum by the Contractor's action against him. Accordingly, the complainant's counterclaims do not preclude a Part 708 complaint.

In reaching this conclusion, I have considered and rejected the Contractor's contention that a counterclaim is a "complaint, or other pleading" within the meaning of Section 708.15(c). The Contractor cites Section 708.15(c), which states that a complaint includes "a complaint or other pleading, with respect to the same facts in a proceeding established or mandated by State or applicable law." The Contractor argues that the word "mandated" indicates that a pleading need not be voluntary in order to bar a Part 708 complaint. The word "mandated," however, refers to a "proceeding," not a "pleading," and, therefore, does not mean that a counterclaim is a pleading precluding consideration of a Part 708 complaint. Moreover, the Contractor's interpretation of Section 708.15(c) is inconsistent with Section 708.15(a), which, as indicated above, precludes a Part 708 complaint where the complainant "choose[s] to pursue" a remedy elsewhere. The Contractor has not even attempted to reconcile its interpretation of Section 708.15(c) with the language of Section 708.15(a), which clearly contemplates that a complainant's pursuit of another remedy be voluntary. Finally, the Contractor's concern that, at some future point, the impact of one proceeding on the other might need be considered, does not provide a basis for concluding that the Part 708 complaint should be dismissed.

The conclusion that the complainant's state court counterclaims do not warrant dismissal of his Part 708 complaint is consistent with the purpose of Part 708, which is to protect contractor employees who make protected disclosures. If a contractor could file a state court action against an employee based on the employee's protected disclosures and then cite the employee's response as the basis for dismissal of a Part 708 complaint, a contractor could easily negate an employee's Part 708 protections. Indeed, such a rule would encourage retaliatory lawsuits - retaliations than can have a far greater impact on an employee than employment-related retaliation such as demotion or discharge. This would give too much power to the contractor. Accordingly, it would be contrary to the purpose of Part 708 to preclude Part 708 jurisdiction based on a complainant's state court counterclaims.

Having concluded that the complainant's state court counterclaims do not warrant dismissal of his Part 708 complaint, I address the two other issues mentioned in the dismissal letter, i.e., that Part 708 could not provide a remedy to the employee with respect to the Contractor's state court action and that the complaint was untimely with respect to the constructive discharge claim.

The dismissal letter correctly concluded that Part 708 could not provide a remedy for a retaliatory state court action against an employee. Part 708 provides for employment-related relief and the recovery of the costs of pursuing a Part 708 complaint. Part 708 does not provide remedies for other negative actions that an employer can take. For example, Part 708 would not protect an employee against a fraud action brought by the employer. Indeed, much of the complainant's requested relief is beyond the scope of Part 708 (damages for emotional distress, repayment of the cost of defending the state court lawsuit, and a DOE action against the Contractor for the delay in the project).

Although the dismissal letter correctly concluded that the complaint was filed over 90 days after the February 1, 1999 alleged constructive discharge, it is not clear that the complaint should be dismissed for this reason. Section 708.14(d) provides in relevant part:

If you do not file your complaint during the 90-day period, the Head of the Field Element or EC Director (as applicable) will give you an opportunity to show any good reason you may have for not filing within that period, and the official may, in his or her discretion, accept your complaint for processing.

10 C.F.R. § 708.14(d). Accordingly, Part 708 provides for consideration of whether the employee had "good reason" for not filing within the 90 period and permits discretionary acceptance of the complaint.

On appeal, the complainant contends that he had good reason for not filing a complaint within 90 days of the constructive discharge. The complainant contends that he did not know, until the Contractor's filing of the state action, of the full extent of the alleged contractor retaliation. The complainant's contention, in essence, is that the highly negative impact of the Contractor's court action, and its close proximity to the alleged constructive discharge, provides good reason for allowing him to pursue his untimely constructive discharge claim. In addition, the complaint suggests that health considerations may have been a factor in the delay.

I have concluded that the dismissal should be remanded to the DOE employee concerns office for full consideration of the issue whether the constructive discharge claim should be accepted despite its untimeliness. As indicated above, Section 708.14(d) provides that the complainant show "any good reason" for untimeliness to the office where he files his complaint, and for that office's "discretion" in determining whether to accept the untimely complaint. The dismissal letter does not directly consider whether good reason existed for the untimeliness; indeed, it is unclear whether the complainant raised that issue to the office. Accordingly, it is appropriate to remand the issue to the DOE employee concerns office so that it can request any additional information it deems appropriate and consider whether good reason exists for the untimeliness.

III. Conclusion

As indicated above, I have ruled that the complainant's counterclaims in the Contractor's state court action do not bar his Part 708 complaint. In addition, I have concluded that the complaint should be remanded to the DOE employee concerns office for its consideration of the complainant's contention that he has presented good reason for the acceptance of his untimely constructive discharge claim.

It Is Therefore Ordered That:

(1) The appeal filed by Edward J. Seawalt is hereby granted in part and his Part 708 complaint is hereby remanded to the DOE employee concerns office for further processing consistent with this decision and order.

(2) This decision is the final decision of the Department of Energy unless, by the 30th day after receiving the appeal decision, a party files a petition for Secretarial review.

George B. Breznay

Director

Office of Hearings and Appeals

Case No. VBU-0047

April 17, 2000

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Decision of the Director

Name of Case: Edward J. Seawalt

Date of Filing: March 20, 2000

Case Number: VBU-0047

Edward J. Seawalt (the Complainant) appeals the second dismissal of his whistleblower complaint. In a prior decision, I remanded the first dismissal for consideration of whether good reason existed for the Complainant's late filing of his complaint. Edward J. Seawalt, 27 DOE ¶ ____ (1999) (Seawalt). As explained below, I have determined that the Complainant has shown good reason for the late filing of his complaint and, therefore, that the complaint should be remanded for further processing.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE Contractor Employee Protection Program is set forth at 10 C.F.R. Part 708. The DOE's new Part 708 regulations are set forth at 64 Fed. Reg. 12862 (1999) (interim final rule), amended, 64 Fed Reg. 37396 (1999), amended and finalized, 65 Fed. Reg. 6314 (2000). See also 65 Fed. Reg. 9201 (2000) (technical correction). Under those regulations, the DOE's Office of Hearings and Appeals (OHA) is responsible for investigating complaints, conducting hearings, and considering appeals on these matters. A copy of the regulations, as well as OHA decisions, can be found at the OHA's web site <http://www.oha.doe.gov>.

Part 708 prohibits contractors from retaliating against contractor employees who engage in protected conduct. Protected conduct includes disclosing information that the employee believes reveals a substantial and specific danger to employees (a protected disclosure). If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish, by a preponderance of the evidence, that the employee made a protected disclosure and the disclosure was a contributing factor to the alleged retaliation. If the employee makes the required showings, the burden shifts to the contractor to establish by clear and convincing evidence that it would have taken the same action in the absence of the employee's disclosure. If the employee prevails, the OHA may order employment-related relief such as reinstatement and back pay.

Under Part 708, the DOE office initially receiving the complaint may dismiss the complaint for lack of jurisdiction or other good cause. 10 C.F.R. § 708.17. The complainant may appeal such a dismissal to the OHA Director. 10 C.F.R. § 708.18.

B. Factual Background

The Complainant was an employee of Contract Associates, Inc. (the Contractor). The Contractor, in turn, was a subcontractor to the University of California, the managing and operating contractor for the DOE's Los Alamos National Laboratory (LANL).

Prior to February 1999, the Complainant reported to a LANL official safety concerns about a product that the Contractor was installing at LANL. On February 1, 1999, the Complainant resigned his position with the Contractor.

On May 6, 1999, the Contractor filed a state court action against the Complainant, based, in part, on what the Contractor alleged were his defamatory disclosures to LANL. The Contractor also alleged that the Complainant refused to recognize his status as an employee and engaged in various actions that ultimately resulted in the Contractor's loss of its LANL contract to a competitor. In June 1999, the Complainant filed counterclaims, including one for retaliatory constructive discharge.

C. Procedural History

On August 3, 1999, the Complainant filed his Part 708 complaint with the cognizant DOE employee concerns office (the DOE Office). The Complainant alleges that his February 1999 resignation was a constructive discharge. In addition, the Complainant alleges that the Contractor's May 1999 state court action was a further retaliation. The Complainant seeks employment-related relief in the form of any differential between his prior pay and benefits and his current pay and benefits at his new job. The Complainant also seeks other relief that is beyond the scope of Part 708. Seawalt, 27 DOE at ____ (Part 708 does not include damages for emotional distress, repayment of the cost of defending the state court action, and DOE action against the Contractor for delay in the project).

In October 1999, the DOE Office dismissed the complaint, based on lack of jurisdiction. The DOE Office found that the Complainant's state court counterclaims constituted pursuit of a remedy under state law and, therefore, precluded consideration of his Part 708 complaint. The DOE Office also opined that Part 708 could not provide relief with respect to the Contractor's pending state court action against the Complainant, and that the complaint was untimely with respect to the constructive discharge claim.

The Complainant appealed the October 1999 dismissal to the OHA. The Complainant argued that (i) his state court counterclaims did not preclude a Part 708 complaint, (ii) his complaint was timely because it was filed within 90 days of the Contractor's state court action against him, and (iii) if his complaint was untimely he had good reason for the late filing.

In November 1999, I issued the Seawalt decision, granting the appeal in part. Seawalt held that the Complainant's filing of the state court counterclaims did not preclude his Part 708 complaint. However, Seawalt agreed with the DOE office that the complaint was untimely, because the state court action was not a retaliation within the meaning of Part 708 and because the complaint was filed more than 90 days after the February 1999 alleged constructive discharge. Nonetheless, Seawalt noted that, on appeal, the Complainant had argued that the Contractor's filing of the state court action provided good reason for his late filing. Seawalt stated:

On appeal, the complainant contends that he had good reason for not filing a complaint within 90 days of the constructive discharge. The complainant contends that he did not know, until the Contractor's filing of the state action, of the full extent of the alleged contractor retaliation. The complainant's contention, in essence, is that the highly negative impact of the Contractor's court action, and its close proximity to the alleged constructive discharge, provides good reason for allowing him to pursue his untimely constructive discharge claim. In addition, the complaint suggests that health considerations may have been a factor in the delay.

Seawalt, 27 DOE at ____. Accordingly, Seawalt remanded the complaint so that the DOE Office could have an opportunity to consider the Complainant's assertion that good reason existed for the late filing of

the complaint.

On remand, the DOE Office received comments from the parties on the issue of whether good reason existed for the late filing. On March 7, 2000, the DOE Office dismissed the complaint a second time, stating that in its judgment no good reason existed to warrant accepting the late filing. On March 20, 2000, the Complainant filed the instant appeal. The Contractor filed comments, arguing that the appeal is untimely and, in any event, without merit.

II. Analysis

A. Whether The Instant Appeal Is Timely

The Contractor argues that the appeal is untimely because it was filed 11 days after the Complainant's receipt of the DOE office's dismissal letter. The Contractor correctly notes that under the regulations, a complainant has 10 days from receipt of the dismissal to file an appeal. See 10 C.F.R. § 708.18(a).

The Complainant's appeal is timely. The Complainant received the DOE Office dismissal letter on March 9, 2000. Because the tenth day after receipt was Sunday, March 19, 2000, the appeal was due the next day, Monday, March 20, 2000. See 10 C.F.R. § 1003.5(a)(1) (if last day of time period falls on weekend day or federal holiday, submission is due on the next day that is not a weekend day or federal holiday). The appeal was filed on Monday, March 20, and, therefore, is timely.

B. Whether Good Reason Exists for the Late Filing of the Complaint

It is undisputed that the DOE may accept an untimely complaint for processing if the complainant establishes "good reason" for the late filing. It is also undisputed that the Contractor's state court action is based, in part, on the alleged protected disclosures. As explained below, the filing of such an action provides "good reason" for the late filing.

The issue in this appeal is one of first impression. The revised Part 708 regulations contain a new provision with respect to the timeliness of complaints, which provides as follows:

If you do not file your complaint during the 90-day period, the Head of the Field Element or EC Director (as applicable) will give you an opportunity to show any good reason you may have for not filing within that period, and the official may, in his or her discretion, accept your complaint for processing.

10 C.F.R. § 708.14(d). Because this regulation is new, there are no cases interpreting it. The prior Part 708 rule on timeliness did not expressly provide for a "good reason" or "good cause" exception, but the Deputy Secretary decisions recognized the possibility of such an exception. See Therese A. Quintana-Doolittle, 27 DOE ¶ 88,035 (1999); Susan W. Hyer, 27 DOE ¶ 88,032 (1999); Matthew J. Sollender, 27 DOE ¶ 88,031 (1999). Those decisions upheld the dismissal of the complaints involved, but none involved the unusual situation presented in this case – a contractor's filing of a state court action against a former employee. Accordingly, I now turn to an analysis of whether the situation presented in this case provides good reason to accept the late Part 708 complaint.

An employee's decision whether to file a Part 708 complaint depends in part on the extent of the negative consequences flowing from a disclosure. A state court action against an employee based on the employee's disclosures has immediate negative consequences (in the sense that the employee must prepare to defend against the action) and potential future negative consequences (e.g., the payment of damages to the contractor). For this reason, when such an action is filed reasonably promptly after the deadline for filing a Part 708 complaint, the action may provide good reason for accepting a late complaint. Such an action is akin to a "changed circumstance" that can warrant reconsideration of a prior order. See generally 10 C.F.R. § 1003.55(b)(2)(iii).(1)

In this case, the Contractor's state court action provides good reason for accepting the Complainant's untimely constructive discharge complaint. It is undisputed that the Contractor's state court action is based in part on the employee's disclosures, and that the action was filed less than a week after the due date for the Complainant's Part 708 complaint. It is also undisputed that the Complainant filed his Part 708 complaint within 90 days of the filing of the state court action. Under these circumstances, good reason exists for the late filing, and the complaint is being remanded to the DOE Office for further processing.

III. Conclusion

As indicated above, I have ruled that the filing of the state court action in this matter provides good reason for the late filing of the complaint. Accordingly, I have concluded that the complaint should be remanded to the DOE Office for further consideration.

It Is Therefore Ordered That:

(1) The appeal filed by Edward J. Seawalt is hereby granted and his Part 708 complaint is hereby remanded to the DOE's employee concerns office for further processing consistent with this decision and order.

(2) This decision is the final decision of the Department of Energy unless, by the 30th day after receiving the appeal decision, a party files a petition for Secretarial review.

George B. Breznay

Director

Office of Hearings and Appeals

Date: April 17, 2000

(1)Although the contractor may believe that its court action is meritorious and that the Part 708 complaint is not meritorious, consideration of any such arguments is not appropriate in the preliminary procedural context of determining if good cause exists for a late filing. In this decision, I address only whether a state court action based in part on alleged protected disclosures can constitute good reason for extending the time to file a Part 708 complaint.

Date of Filing: May 30, 2000

Case Number: VBU-0050

Darryl H. Shadel (the complainant) appeals the dismissal of his whistleblower complaint under 10 C.F.R. Part 708, the DOE Contractor Employee Protection Program. As explained below, I have determined that the complaint was improperly dismissed, and that further processing should be accorded.

I. Background

A. The DOE Contractor Employee Protection Program

Part 708 prohibits contractors from retaliating against contractor employees who engage in protected conduct. Protected conduct includes disclosing information that the employee believes reveals a substantial and specific danger to employees (a protected disclosure). If a contractor retaliates against an employee for making a protected disclosure, the employee can file a complaint. The employee must establish by a preponderance of the evidence that he made a protected disclosure, and the disclosure was a contributing factor to the alleged retaliation. If the employee makes the required showings, the burden shifts to the contractor to establish by clear and convincing evidence that it would have taken the same action in the absence of the employee's disclosure. If the employee prevails, the Office of Hearings and Appeals (OHA) may order employment-related relief such as reinstatement and back pay. 10 C.F.R. § 708.29.

Under Part 708, the DOE office initially receiving the complaint may dismiss the complaint for lack of jurisdiction or other good cause. 10 C.F.R. § 708.17. The complainant may appeal such a dismissal to the OHA Director. 10 C.F.R. § 708.18

.

B. Factual Background

The complainant was an employee of Comforce Technical Services, Inc. (Comforce). Comforce, in turn, was a subcontractor to the University of California, the managing and operating contractor for the DOE's Los Alamos National Laboratory (LANL).

The complainant was assigned by Comforce to the Los Alamos Neutron Scattering Center (LANSCE) from May 1, 1995 until December 10, 1999, when his assignment was terminated. LANSCE is a division of LANL.

The complainant states that he disclosed safety concerns in November 1999. These concerns related to the allegedly improper performance of work done on a high energy electrical device with a high initial hazard rating. The complainant maintains that he was fired on December 10, 1999, on the pretense that he had threatened another employee in the workplace.

C. Procedural History

On February 8, 2000, the complainant filed his Part 708 complaint with the cognizant DOE employee concerns office (the DOE Office). He seeks the following relief: (i) back pay since his termination; (ii) return of his licensing badge; (iii) compensation for long distance telephone calls that he made to DOE offices in connection with the reprisal; (iv) a letter of apology from those who claimed that he made threats to other employees; (v) a hearing concerning the reprisal and the "circumstances existing in LANSCE since December 1998;" (vi) compensatory damages resulting from mental distress, loss of professional reputation, exclusion from work- related meetings and other similar circumstances. (1)

On May 16, 2000, the DOE Office dismissed the complaint, based on lack of jurisdiction. The DOE Office gave the following reasons for this action: (i) the complainant filed his complaint of retaliation against LANSCE, rather than against Comforce, his actual employer (Section 708.5); (ii) the complainant failed to demonstrate a connection between the protected disclosure and the alleged retaliation (Section 708.29); (iii) the complainant failed to ask Comforce to correct the violation prior to filing the complaint (Section 708.7); and (iv) the complainant failed to exhaust all applicable grievance-arbitration procedures (Section 708.13).

On May 30, 2000, the complainant filed the instant appeal of that dismissal. Comforce and LANL filed comments supporting the determination of the DOE Office. Comforce maintains that the complainant failed to comply with Section 708.7, by neglecting to ask it for assistance in correcting the alleged LANSCE safety violation. Comforce also contends that it should be dismissed from this proceeding because it is not a required party, it had no knowledge of the protected disclosure, and it had no involvement in the termination. Finally, Comforce states that because the complainant did not invoke the firm's appeal process, he failed to exhaust all applicable grievance-arbitration procedures. In its comments, LANL supports the dismissal on the grounds that the complainant failed to exhaust his employer's appeal process. LANL further states that complainant was terminated as a result of his own willful misconduct. In this regard, LANL cites Section 708.4(b), which provides in relevant part that an employee may not file a complaint against his employer if "[t]he complaint involves misconduct that [the complainant] acting without direction from [his] employer deliberately caused, or in which [he] knowingly participated."

II. Analysis

Part 708 enunciates the circumstances under which a DOE Head of Field Element or Employee Concerns (EC) Director may dismiss a complaint of retaliation. 10 C.F.R. §§ 708.13(b); 708.15(d) and 708.17(c). These sections set forth several procedural bases for dismissal. For example, a complaint may be dismissed if a complainant fails to show that he has exhausted all applicable grievance or arbitration procedures. 10 C.F.R. § 708.13(b). He may also face dismissal if he files his complaint in an untimely manner. 10 C.F.R. § 708.17(c)(1). Part 708 also permits dismissal on substantive grounds, including the filing of a frivolous complaint, or a complaint that is substantially resolved. 10 C.F.R. § 708.17(c)(4),(5).

The dismissal in the present case is based on both procedural and substantive grounds. As discussed below, I find the reasoning set forth in the DOE Office's determination to be unconvincing and ultimately without merit. The comments filed by LANSCE and Comforce are similarly unpersuasive and indicate a misunderstanding of the relevant regulations.

A. The Complainant Failed to Name his Employer

Section 708.5 provides that an employee of a DOE contractor (including a DOE subcontractor) may file a complaint against his employer alleging retaliation. In this case, the complainant named only LANSCE as the entity that subjected him to retaliation. Given the complainant's failure to name his actual employer, Comforce, the complaint as originally filed was deficient. However, the complainant states in his appeal that in addition to LANSCE, he now also names Comforce as the subject of his complaint. This amendment is sufficient to correct the deficiency. Furthermore, allowing this correction at this point in the proceeding creates no particular burden on Comforce, since it has been well aware of this complaint of retaliation and has participated in this proceeding from the outset. See Darryl Shadel (Case No. VBI-0048)(dismissed on other grounds, April 28, 2000). Even though the firm was not named in the original complaint, it was afforded an opportunity to comment on the complaint, and in fact did so in Case No. VBI-0048. As stated above, it has also filed comments in the instant proceeding. Accordingly, I find that this filing requirement has been satisfied, and there is no basis for dismissal on the grounds of failure to name the proper respondent.

In its response filed in connection with this appeal, Comforce states that it is not a proper party to this proceeding, and that it had no knowledge of the complainant's protected disclosures or of the reasons for LANL's termination of the complainant. Comforce therefore maintains that it should be dismissed from the proceeding. I will not make a determination on this issue at this point. This is an issue that should be fully considered after an investigation and hearing. It would be premature to dismiss Comforce at this early stage.

B. Failure to Demonstrate a Connection Between the Protected Disclosure and the Alleged Retaliation

According to Section 708.29, an employee who files a complaint of retaliation has the burden of establishing that he made a protected disclosure and that such act was a contributing factor in an act of retaliation by his contractor employer. In its determination, the DOE Office states that LANL indicates that it terminated the complainant because he posed a threat of physical violence and not because of a protected disclosure. The DOE Office therefore concluded that the complainant had failed to demonstrate that the protected disclosure contributed to the retaliation.

This determination precipitously reaches an issue which is at the heart of this case. In deciding this issue adversely to the complainant, the DOE Office dismissal prematurely ends this entire proceeding. That determination may not stand. The complainant has never been afforded an opportunity to present evidence on a pivotal issue in this case, or rebut LANSCE's claims. The complainant contends he was terminated because of the disclosure. The reason for the termination is therefore key in this proceeding, and is still in dispute. In fact, this is the very type of issue that the OHA is charged with investigating under Section 708.22 and considering through the hearing process described at Section 708.28. As a rule, a DOE Office may not dismiss a case by reaching this type of substantive determination under the provisions of Section 708.17, unless the facts do not present issues for which relief can be granted under Part 708, or the complaint is frivolous on its face. 10 C.F.R. § 708.17(c)(2) and (4). I find that the claims raised here present issues for which relief can be granted and which are not frivolous. Accordingly, I find that this determination by the DOE Office was incorrect.

In this regard, I believe a response to LANL's reference to Section 708.4(b) is warranted at this point. As stated above, that Section precludes an employee from filing a complaint "involving" his own deliberate misconduct. I find LANL's reference to Section 708.4(b) in this regard to be inapt. This Section was designed to prevent an employee who intentionally engages in misconduct from shielding himself by reporting that very same misconduct under the guise of a protected disclosure. For example, if an employee intentionally created a safety hazard, and then reported the hazard as a safety concern, his disclosure would not be protected under Part 708, because he deliberately engaged in the conduct that created the concern. In the instant case, the complainant's disclosure admittedly involved some safety concerns. However, the misconduct for which he was purportedly fired involved his allegedly violent

behavior towards other employees in the workplace. This is clearly unrelated to the protected disclosure at issue here. His complaint does not "involve" his own deliberate misconduct within the meaning of Section 708.4(b).

C. The Complainant's Failure to Request that his Employer Correct the Violation

Part 708 provides protection to an employee who refuses to participate in an activity if he reasonably believes that participation would be in violation of a federal health or safety law or cause him or others serious injury. 10 C.F.R. § 708.5(c). This protection is accorded only if the complainant has, prior to the refusal to participate, asked his employer to correct the violation or remove the danger, and the employer has refused to do so. 10 C.F.R. § 708.7. However, this section does not apply to a complainant who discloses a health or safety danger, but does not refuse to participate in an activity based on the perceived fear of injury or violation of law.

In the instant case I see no allegation by the contractors or any other evidence that the complainant ever refused to participate in any work-related activity based on his belief that it constituted a safety or health threat. The record suggests that the complainant simply alerted LANSCE to the existence of a hazard. I note in this regard that LANSCE's basis for terminating the complainant was his alleged threatening behavior, and not that he refused to perform his responsibilities. Thus, Section 708.7 does not appear applicable in this case. Accordingly, the DOE Office erred in dismissing this complaint on the grounds that the complainant failed to request that his employer correct the violation.

D. The Complainant's Failure to Show Exhaustion of Grievance- Arbitration Procedures

Section 708.13 generally requires that a complainant exhaust all "applicable grievance-arbitration" procedures prior to filing a complaint. The complainant must affirm in his complaint that he has completed all applicable grievance or arbitration procedures. 10 C.F.R. § 708.12(d). If he does not do so, his complaint may be dismissed for lack of jurisdiction. 10 C.F.R. § 708.13(d).

In the instant case, the complainant has admittedly failed to pursue an appeal process that Comforce has set out in its Employee Handbook. The relevant portion of the Handbook provides:

EMPLOYEE APPEAL

Employees who believe that they have been disciplined unfairly, too harshly, or inappropriately, may appeal the discipline within 10 working days by filing a written complaint with their COMFORCE TECHNICAL SERVICES, INC. supervisor or organizational manager.

Employee Handbook at 17.

In their filings with the DOE Office, both Comforce and LANL argue that the grievance-arbitration procedures referred to in Section 708.13 include the Comforce appeal process, and that since the complainant failed to use this appeal process, he is barred from filing a Part 708 complaint. The DOE Office adopted this reasoning in dismissing the complaint. Comforce and LANL continue to press this position in the current appeal phase of this case. I do not agree with the Comforce and LANL reasoning or the DOE Office's determination.

The term "applicable grievance-arbitration procedure" is not defined in Part 708. However, the expansive reading that the DOE Office has given this term is in my view unjustified. A more limited reading is called for. As stated in the 1998 Notice of Proposed Rulemaking, it was the intent of the DOE to continue a policy that bargaining unit employees must use available negotiated procedures to resolve their complaints of retaliation. 63 Fed. Reg. 373, 378 (January 5, 1998). I believe that in the context of the Part 708 rules,

"applicable grievance-arbitration procedure" is intended to cover negotiated grievance procedures available to bargaining unit employees, and similar procedures leading to determinations under binding arbitration pursuant to a bargaining unit agreement. This requirement was included in order to ensure that the remedies offered by Part 708 did not permit or encourage employees to bypass procedures set forth in negotiated labor agreements. The Comforce "Employee Appeal" procedure is obviously very different. It is more akin to a reconsideration procedure. I do not find that it is covered by Section 708.13.

I therefore conclude that the term "grievance-arbitration procedure" used in the context of Part 708 has a specialized meaning related to procedures negotiated by employees and management. It should thus not be considered to include every unilaterally-created appeal process offered by an employer. Accordingly, I will not sustain the determination of the DOE Office on this point.

III. Conclusion

As indicated by the foregoing, I find that the DOE Office incorrectly dismissed the complaint filed by Darryl Shadel. Accordingly, the complaint should be accepted for further consideration.

It Is Therefore Ordered That:

The Appeal filed by Darryl Shadel (Case No. VBU-0050) is hereby granted and his Part 708 complaint is hereby remanded to the DOE Employee Concerns Program Office located in Albuquerque, New Mexico, for further processing as set forth at 10 C.F.R. § 708.21.

George B. Breznay

Director

Office of Hearings and Appeals

Date: June 15, 2000

(1) Even if the complainant is successful overall, he is not likely to prevail on his request for compensatory damages for emotional distress or on his claim for an apology, since these are beyond the scope of Part 708. Edward J. Seawalt, 27 DOE ¶ 87,558 (1999)(Case No. VBU-0039)(Part 708 does not allow damages for emotional distress). Since the dismissal at issue here will be overruled, the complainant is entitled to have a hearing regarding the circumstances of his own termination, but he is not entitled to have a hearing concerning the overall work environment at LANL. This is a matter between LANL and the DOE, and no relevant remedy is permitted under Part 708.

Case No. VBU-0077

October 25, 2001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Decision of the Director

Name of Petitioner: Ronald E. Timm

Date of Filing: September 25, 2001

Case Number: VBU-0077

Ronald E. Timm (the Complainant), the President of RETA Security, a Department of Energy (DOE) subcontractor, appeals the dismissal of his whistleblower complaint filed under 10 C.F.R. Part 708, the DOE Contractor Employee Protection Program. On September 10, 2001, the Employee Concerns Program Manager at the DOE's Albuquerque Operations Office dismissed the Complainant's complaint for lack of jurisdiction. As explained below, I uphold the dismissal of the subject complaint.

I. Background

A. The DOE Contractor Employee Protection Program

The regulations governing the DOE Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. See 64 Fed. Reg. 12862 (1999) (interim final rule), amended, 64 Fed. Reg. 37396 (1999), amended and finalized, 65 Fed. Reg. 6314 (2000). See also 65 Fed. Reg. 9201 (2000) (technical correction). Part 708 prohibits contractors from retaliating against contractor employees who engage in protected conduct. Protected conduct includes disclosing information that an employee reasonably and in good faith believes reveals a substantial and specific danger to employees or to the public health or safety. 10 C.F.R. § 708.5 (a)(2). The employee must establish, by a preponderance of evidence, that the employee made a protected disclosure and the disclosure was a contributing factor to any alleged retaliation. 10 C.F.R. § 708.29. If the employee makes the required showings, the burden shifts to the contractor to establish by clear and convincing evidence that the contractor would have taken the same action in the absence of the employee's disclosure. Id. If the employee prevails, the DOE's Office of Hearings and Appeals (OHA) may order the contractor to provide appropriate relief. 10 C.F.R. § 708.36.

Under Part 708, the DOE office initially receiving the complaint may dismiss the complaint for lack of jurisdiction or other good cause. 10 C.F.R. § 708.17. The complainant may appeal such a dismissal to the OHA Director. 10 C.F.R. § 708.18.

B. Factual Background

The Complainant is the President of RETA Security, a company that provides technical support services to the DOE's Office of Safeguards and Security (OSS) pursuant to a subcontract with Science Applications International Corporation (SAIC).

Among the tasks assigned to RETA Security beginning in 1997 was the review and verification of the

DOE's "Site Safeguards and Security Planning Process (SSSP)(1) at certain DOE sites. Between 1997 and 1999, the Complainant claims that RETA Security identified serious security issues at various DOE sites as part of its support role associated with evaluating the DOE's SSSP. The Complainant charges that in 1999 he suffered systemic retaliation and retribution by DOE officials for raising those security concerns.

On January 5, 2000, the Complainant sent a letter to a senior DOE official in which he voiced concerns about a number of matters, including his perception that he had been retaliated against for raising security concerns. The senior DOE official immediately forwarded the Complainant's letter to the DOE's Inspector General (IG) for appropriate action. The IG initiated an inspection that spanned nine months and issued a Report in September 2000 (IG Report). The IG Report examined all of the Complainant's allegations in detail, ultimately concluding that there was no evidence that the Complainant had suffered any retaliation from DOE officials.

C. Procedural History

On February 16, 2001, the Complainant filed his Part 708 complaint with the cognizant DOE Employee Concerns Office. The complaint was subsequently transferred in July 2001 to the Albuquerque Operations Office for processing.

On September 10, 2001, the Employee Concerns Program Manager at the DOE's Albuquerque Operations Office dismissed the subject complaint for lack of jurisdiction. In the dismissal letter, the Employee Concerns Program Manager explained that there was no nexus between any retaliation the Complainant may have suffered and any action taken by his employer, SAIC.

On September 25, 2001, the Complainant filed an appeal of the dismissal of his Part 708 complaint. In his appeal, the Complainant clarifies that his Part 708 complaint is filed against the DOE, not SAIC. Appeal at 1. The Complainant subsequently confirmed his position that it was the DOE and not SAIC that retaliated against him. See Record of Telephone Conversation between Ronald E. Timm and Ann S. Augustyn, OHA Attorney (September 27, 2001).

II. Analysis

The threshold issue in this case is a novel one, whether a DOE subcontractor can file a complaint against the DOE under the Contractor Employee Protection Program, 10 C.F.R. Part 708. In deciding this jurisdictional question, I first examine the purpose of the program. I then turn to the plain language of the program's implementing regulations.

The purpose of the Contractor Employee Protection Program is set forth in Part 708 as follows:

> This part provides procedures for processing complaints by employees of DOE contractors alleging retaliation by their employers for disclosure of information concerning danger to public or worker health or safety, substantial violations of law, or gross mismanagement; for participation in Congressional proceedings; or for refusal to participate in dangerous activities.

10 C.F.R. § 708.1. As a result, the clear focus of the program is upon DOE contractors and their employees.

The regulations also describe the kinds of conduct for which an employee of a contractor may file a Part 708 complaint against his/her employer. 10 C.F.R.§ 708.5. While the term "employer" is not defined in the Part 708 regulations, I find that it is reasonable to interpret "employer" as meaning an entity in the contractor chain, not the DOE. Several references in the Part 708 regulations and elsewhere support this interpretation.

First, the term "retaliation" is defined, in relevant part, as "an action (including intimidation, threats,

restraint, coercion or similar action) taken by a *contractor* against an employee with respect to employment . . . as a result of the employee's disclosure of information . . ." 10 C.F.R. § 708.2 (emphasis added). Second, in describing the burden of proof ascribed to each party, Part 708 states that "[o]nce the employee has met this burden, the burden shifts to the *contractor* to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal" (emphasis added). 10 C.F.R. § 708.29. Third, with regard to remedies for retaliation, Part 708 states that if an initial agency decision contains a determination that an act of retaliation occurred, the decision may order the *contractor* to provide [the employee] with appropriate interim relief. See 10 C.F.R. §708.36(b). Further, in the section of the regulations addressing the issue of how a final agency decision is implemented, Part 708 indicates that the DOE element having jurisdiction over the contract under which the employee is employed will forward the decision to the *contractor, or subcontractor* involved. See 10 C.F.R. § 708.38(a). Finally, Part 708 states that "[a] *contractor's failure* or refusal to comply with a final agency decision and order under this regulation may result in a contracting officer's decision to disallow certain costs or terminate the contract for default." (emphasis added) 10 C.F.R. § 708.38(b).

In addition, the preamble to Part 708 indicates that retaliation against contractor employees may also lead to the imposition of penalties under the Price Anderson Amendments Act of 1988 (Pub. L. 110-49)(August 20, 1988), implemented under 10 C.F.R. Part 820. 64 Fed. Reg. 12862 (March 15, 1999). That preamble also states that an act of *retaliation by a DOE contractor* may be subject to the investigatory and adjudicatory procedures of both Part 820 and Part 708(emphasis added). Id.

The DOE has consistently articulated the scope of Part 708 as including actions by DOE contractors only. The agency's treatment over time of issues arising under Part 708 is entirely consistent with the foregoing interpretation. When the DOE issued its Notice of Proposed Rulemaking in connection with Part 820 in 1992, the DOE addressed the relationship between 10 C.F.R. Part 708 and 820, stating in relevant part as follows: "Part 708 deals with *reprisals by DOE contractors* against contractor employees. . ." 57 Fed. Reg. 20796, 20797 (May 15, 1992)(emphasis added). "To the extent a *reprisal by a DOE contractor* results from an employee's involvement in matters of nuclear safety in connection with a DOE Nuclear Safety activity, the reprisal would constitute a violation of a DOE Nuclear Safety Requirement if proposed part 820 is adopted as a final rule." (emphasis added). Id.

Moreover, nowhere in Part 708, its history, or its preamble is the DOE mentioned as a potential litigant. In fact, were OHA to allow this proceeding to go forward with the DOE as a party and were OHA to find in favor of the complainant, OHA would lack the authority to order the DOE to do anything with regard to remedy in this case.

For all the reasons set forth above, I find that OHA is not the proper forum to consider the Complainant's allegations. Simply put, OHA lacks jurisdiction under 10 C.F.R. Part 708 to proceed further with the processing of the Complainant's complaint. Accordingly, I must affirm the decision made by the Employee Concerns Program Manager at the DOE's Albuquerque Operations Office to dismiss the subject complaint.

III. Conclusion

As indicated above, I have determined that the plain language of the Part 708 regulations precludes OHA from accepting jurisdiction in this matter. For this reason, I uphold the decision made by the Employee Concerns Program Manager at the DOE's Albuquerque Operations Office to dismiss the Complainant's Part 708 complaint.

It Is Therefore Ordered That:

(1) The appeal filed by Ronald E. Timm on September 25, 2001, Case No. VBU-0077, be and hereby is denied and his Part 708 complaint is dismissed.

(2) Within 30 days after his receipt of this Decision, the Complainant may file a petition for Secretarial Review with the Office of Hearings and Appeals.

March 2, 2004
DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Decision of the Director

Name of Petitioner: S. R. Davis

Date of Filing: February 6, 2004

Case Number: VBU-0083

S. R. Davis, a former employee of Fluor Fernald, Inc. (Fluor), a Department of Energy (DOE) contractor, appeals the DOE Ohio Field Office's (OFO) dismissal of the whistleblower complaint against Fluor she filed under 10 C.F.R. Part 708, the DOE Contractor Employee Protection Program. As explained below, I am affirming OFO's dismissal of the subject complaint.

I. BACKGROUND

A. The DOE's Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10 Part 708 of the Code of Federal Regulations.

Under Part 708, the DOE office initially receiving a complaint may dismiss the complaint for lack of jurisdiction or other good cause. 10 C.F.R. § 708.17. The complainant may appeal such a dismissal to the OHA Director. 10 C.F.R. § 708.18.

B. The Procedural History

On June 21, 2001, the Complainant filed her original whistleblower complaint with OFO. 1/ On May 31, 2002, OFO issued a letter which granted jurisdiction and attempted to refine the issues set forth

---

1/ The June 21, 2001 Complaint is not at issue in the present case.

in the Complaint (the May 31, 2002 Letter). On June 14, 2002, the Complainant wrote to OFO. The June 14th letter attempted to clarify the Complaint and requested that the Compliant be forwarded to this office for an investigation and hearing. The June 14th letter further indicated that, in addition to the allegations set forth in OFO's May 31, 2002 Letter, the Complainant was also alleging: "over the years, my disclosures to [Fluor] and DOE management have caused me to be demoted and/or passed over for promotions." June 14th letter at 3. Apparently, there was no further correspondence between the OFO and the Complainant before I appointed an OHA Staff Attorney to investigate the allegations contained in the Complaint. A Report of Investigation (ROI) was issued by this office on August 7, 2003. After the ROI was issued, I appointed a Hearing Officer, and the case proceeded to the hearing stage. During the preliminary stages of the Hearing proceeding, however, the Hearing Officer issued two letters indicating that the Complainant's allegations that she was demoted or passed over for promotions would not be considered. These letters are dated September 24, 2003 and November 12, 2003.

After the Hearing Officer issued her first letter indicating that she would not consider the Complainant's allegations that she was demoted or passed over for promotions, the Complainant filed with OFO a second complaint (the November 10th Complaint) which contained these allegations. It is this November 10th Complaint which is at issue in the present case.

On January 22, 2004, OFO issued a Jurisdictional Decision dismissing the November 10th Complaint. The Jurisdictional Decision was based on OFO's determination that November 10th Complaint had not been filed in a timely matter. On February 6, 2004, the Complainant filed the present appeal.

II. ANALYSIS

10 C.F.R. § 708.17 sets forth those circumstances under which a complaint may be dismissed for lack of jurisdiction or for other good cause. 10 C.F.R. § 708.17(c)(1) provides: "Dismissal for lack of jurisdiction or other good cause is appropriate if: Your complaint is untimely." OFO's January 22, 2004 Jurisdictional Decision cites § 708.14(a)(1) as the basis for its dismissal of the November 10th Complaint. Section 708.14(a)(1) states: "You must file your compliant by the 90th day after the date you knew, or reasonably should have known, of the alleged retaliation."

The November 10th Complaint clearly sought relief from the Hearing Officer's ruling that certain allegations would not be considered at the hearing stage of the proceeding. 2/ However, OFO could not have properly considered the November 10th Complaint. The DOE's whistleblower regulations do not provide for interlocutory relief from Hearing Officer's rulings, nor allow for review of a Hearing Officer's ruling by a DOE field office. The only appeal of a Hearing Officer's ruling provided by the regulations is set forth at 10 C.F.R. § 708.32. Section 708.32 allows a party who is dissatisfied with the Hearing Officer's *"initial agency decision"* to appeal that decision to the

---

2/ There is no indication that OFO was aware of the Hearing Officer's rulings when it decided to dismiss the 2nd Complaint. However, the 2nd Complaint asked that the issues raised in the 2nd Complaint be considered in the same proceeding as the issues in the Original Complaint, and that fact should have led OFO to consult with OHA.

Director of the Office of Hearings and Appeals. 10 C.F.R. § 708.32(a) (emphasis supplied). OFO does not have the regulatory authority to review an OHA Hearing Officer's ruling, therefore OFO should have dismissed the complaint filed by S. R. Davis on November 10, 2003. Since the Hearing Officer has not yet issued a initial agency decision, the Hearing Officer's ruling that certain allegations would not be considered is not yet ripe for appeal. Since this matter is not yet ripe for appeal, I will not consider it at this time. Moreover, I note that the interests of fairness and efficiency would be poorly served by allowing a party to appeal a Hearing Officer's ruling to DOE field offices or by allowing for interlocutory appeals, except in extraordinary circumstances.

III. Conclusion

As indicated by the foregoing, I find that the DOE Ohio Field Office correctly dismissed the complaint filed by S. R. Davis on November 10, 2003. However, OFO dismissed the November 10th Complaint for the wrong reason. Since the November 10th Complaint was not yet ripe for review and OFO did not have jurisdiction to consider a matter that was before a Hearing Officer, OFO should have dismissed the November 10th Complaint on those bases rather than by ruling on the timeliness of the allegations contained in that compliant. Accordingly, the present appeal should be denied. However, if the Complainant remains dissatisfied with the Hearing Officer's ruling after the issuance of the initial agency decision, she may appeal that issue under the provisions set forth at 10 C.F.R. § 708.32.

It Is Therefore Ordered That:

The Appeal filed by S. R. Davis (Case No. VBU-0083) is hereby denied.

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Supplemental Order

Name of Case: Roy Leonard Moxley

Date of Filing:January 10, 2000

Case Number: VBX-0014

This Decision supplements an Initial Agency Decision, dated December 29, 1999, that I issued as the Hearing Officer in a case involving a "whistleblower" complaint. The complaint was filed by Roy Leonard Moxley under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. See Roy Leonard Moxley, 27 DOE ¶ 87,546 (1999) (the Initial Agency Decision). In that Decision, I found that Westinghouse Savannah River Company (WSRC), a DOE contractor, had violated the provisions of 10 C.F.R. § 708.5 by reducing Mr. Moxley's salary grade level (SGL) from SGL 31 to SGL 30 on October 1, 1996, in reprisal for his making protected disclosures related to mismanagement. The Decision further determined that Mr. Moxley was entitled to relief as provided for in Part 708, directed him to supplement the record with a statement of the relief he was seeking, and permitted WSRC to file a response to Mr. Moxley's claim. Mr. Moxley submitted this information on January 10, 2000. WSRC submitted a response to the January 10 submission on January 24, 2000. This Supplemental Order requires WSRC to correct Mr. Moxley's personnel file to reflect that he was reclassified to SGL 32 as of October 1, 1996.

I. The Submissions

A. Mr. Moxley's Claim

In his January 10 submission, Mr. Moxley listed a total of 16 remedies that he felt would restore him to a status that he would now occupy had no retaliations occurred. These proposed remedies may be characterized into two groups. The first three remedies concern reclassification to a higher grade level and monetary compensation based on that reclassification. The remaining 13 remedies would require WSRC to take additional personnel or administrative action that go beyond mere compensation for its prohibited acts.

Mr. Moxley's first three proposed remedies relate to compensation. He asks that I order WSRC to reclassify his current salary grade level from SGL 32, to which he was promoted on February 1, 1997, to SGL 35, which is what his peers in his current position earn. He then specifies that his salary as an SGL 35 employee should be $7750 per month, effective January 1, 2000. Finally, he calculates that the total monetary compensation due him is $375,580, composed of two figures: (1)

the difference in pay between the salary he received at SGL 30 rather than at SGL 32 for the period of October 1996 (when he was reclassified from SGL 31 to SGL 30) through January 1997 (when he was reclassified to SGL 32); and (2) the difference in pay between the salary he now receives at SGL 32 and

what he contends he should receive at SGL 35 for the period January 2000 through the date of his retirement 13 years from now.

The remaining 13 proposed remedies can themselves be broken down into categories. Three concern ordering WSRC to permit Mr. Moxley to place various documents related to this case in his permanent employment record. Three more would order WSRC employees to issue written statements to him either acknowledging that WSRC engaged in retaliatory action against him or apologizing for such behavior. Two proposed remedies would require the on-site ethics office to investigate the decision process that resulted in Mr. Moxley being reclassified from SGL 31 to SGL 30 and to investigate WSRC's Employee Concerns Office and one of its employees. The remaining five proposed remedies would all require WSRC to make promises regarding future action: that it never again retaliate against Mr. Moxley; that it not reassign him to any other work location; that it not reassign him to work "under the management span" of two specified managers; that one of those managers never again manage employees on the site; and that it guarantee Mr. Moxley a Monday-through-Thursday 10-hour-day schedule.

B. WSRC's Response

WSRC responded to Mr. Moxley's claims by stating generally that his remedies do not address the retaliation that was taken against him, but rather seek a monetary windfall, a promotion, and sanctions against numerous employees. WSRC also focused on the regulatory intent of the remedy provisions as a measure against which to consider each of Mr. Moxley's claims. After analyzing each of the 16 proposed remedies, WSRC concluded that none was appropriate, and that the correct and complete remedy would be modifying his official WSRC personnel file to reflect that he was reclassified up to SGL 32 on October 1, 1996, rather than to SGL 30.

II. Discussion

A. Forms of Relief Provided by Part 708

As both parties have pointed out in their respective submissions, Part 708 clearly defines the forms of relief that a hearing officer may order if he determines that an act of retaliation has occurred. They are:

(1) Reinstatement;

(2) Transfer preference;

(3) Back pay;

(4) Reimbursement of your reasonable costs and expenses, including attorney and expert- witness fees . . .; [and]

(5) Such other remedies as are deemed necessary to abate the violation and provide you with relief.

10 C.F.R. § 708.36(a).

In discussing the comments it received when it proposed changes to Part 708 in 1999, DOE stated that the remedies "are intended to correct unwarranted employment actions. The goal of this regulation is simply to restore employees to the position they would have occupied but for the retaliation." 64 Fed. Reg. 12862, 12867. With that goal in mind, I will now consider each remedy claim that Mr. Moxley has requested.

B. Monetary Claims

The first three of Mr. Moxley's claims relate to adjustment of pay, both back pay and future pay, as

remediation for the retaliatory act of reclassifying him in October 1996 from SGL 31 to SGL 30. The back pay aspect of these claims is the request for SGL 32 pay for the four-month period from October 1996 until February 1, 1997, when he was promoted to an SGL 32 position and given a raise of $295 per month. Although the Initial Agency Decision determined that reclassifying Mr. Moxley to SGL 30 rather than to SGL 32 in October 1996 was an act of retaliation, it did not consider his failure to receive a raise at that time, and Mr. Moxley has not shown that he should have received such a raise. The fact that he received both a promotion to an SGL 32 position and an accompanying raise in February 1997 does not support Mr. Moxley's claim for back pay, because the February 1997 personnel action was taken for reasons independent of the October 1997 reclassification. See Roy Leonard Moxley, 27 DOE at 89,239 (Initial Agency Decision at 6). Moreover, in its response, WSRC points out, and substantiates through contemporaneous records, that during the massive reclassification in October 1996, many employees who were reclassified up one SGL did not receive raises, though some did. Of the 98 employees under Mr. Kilpatrick's management, 24 were reclassified up one SGL at that time, but only six of them received pay raises as well. The remaining 18 received the same pay despite the SGL increase. From this evidence, it is clear that SGL reclassifications were not necessarily linked to raises. There is simply no evidence in the record that demonstrates that had Mr. Moxley been reclassified to SGL 32 in October 1996, he would have received an accompanying raise at that time. Therefore, I will not grant his claim for back pay.

Calculations of Mr. Moxley's remaining monetary claims are predicated upon my ordering WSRC to reclassify Mr. Moxley to SGL 35, effective January 1, 2000. In his submission, he gives the following justification for this claim:

The mind set of WSRC management against me because I made protective disclosures caused me to be demoted in October 1996. This demotion and mind set has carried over and has caused future raises and promotions to be delayed or non- existent. I should be classified as a SLG 35 as others in my present job assignment. My present SGL 32 and not a SGL 35 are a result of the 1996 retaliation.

In this case the retaliation, as limited by Mr. Moxley before the hearing, was WSRC's reclassification of Mr. Moxley to SGL 30 rather than to SGL 32. The appropriate remedy for this retaliation would therefore be reclassification at SGL 32 as of October 1, 1996. Although it is logically possible that WSRC's "mind set" is still set against Mr. Moxley because he made disclosures protected by Part 708, it would be extremely speculative to conclude from the record that this "mind set" is the reason that Mr. Moxley has not received all the promotions and raises that he feels he has deserved. More than three years have passed since the October 1996 retaliation took place. In the intervening period, Mr. Moxley has received a promotion and a raise, and has transferred to an organization not under the direction of Mr. Kilpatrick, the manager who approved the retaliatory personnel action. There is no evidence in the record that demonstrates that Mr. Moxley would have received a promotion to SGL 35 by January 2000 had the retaliation not occurred. Under these circumstances, to attribute the course of Mr. Moxley's employment history since then to continued retaliation for his protected disclosures goes well beyond the scope of the complaint in this case, which Mr. Moxley himself limited to the October 1996 reclassification. Consequently, I will not order that Mr. Moxley be reclassified at SGL 35.

C. Non-Monetary Claims

Mr. Moxley also requests as remedies that WSRC be ordered to take or refrain from a number of personnel-related actions in the future. He contends that each of these proposed remedies would "abate the violation and provide relief" as permitted in 10 C.F.R. § 708.36(a)(5). I have described them in section I.A. above. After considering each of these claims, I reject them as being beyond the scope of relief appropriate in this case. None of these remedies, if granted, would further the goal of the regulations by restoring Mr. Moxley to the position he would have occupied but for the retaliation. Some of these, such as dictating the terms of Mr. Moxley's future employment, would instead provide him with extraordinary protections that he would not have obtained under any normal circumstances. Part 708 protection is not intended to insulate the whistleblower from all future actions that his employer might take. Other remedies Mr. Moxley proposes, such as demoting Mr. Kilpatrick from his management position, and requiring the

Ethics Office to investigate the Employee Concerns Office, would not only not restore Mr. Moxley to his pre-retaliation position but appear to be punitive. Remedies that require apologies for and acknowledgments of the retaliation and remedies that order placement of documents related to this proceeding in Mr. Moxley's official personnel file would not "abate the violation and provide relief," but would merely memorialize that the retaliation occurred, and that relief has already been provided in the Initial Agency Decision.

For similar reasons, I need not order WSRC to promise that it will not retaliate against Mr. Moxley in the future. The intent of Part 708 is to prevent retaliation against whistleblowers by defining protected conduct and establishing remedies, and the regulations plainly state that DOE contractors have an affirmative duty not to retaliate. See 10 C.F.R. § 708.43. The regulations thus provide the assurance that Mr. Moxley seeks. Therefore, I will not order WSRC to promise that it will not retaliate against Mr. Moxley in the future. If Mr. Moxley feels he is retaliated against in the future, because of protected conduct or disclosures, he may pursue Part 708 protection once again.

III. Conclusion

Based on the entire record in this proceeding, including the submissions filed by Mr. Moxley and WSRC concerning the remedy issues at stake, I find that the sole appropriate remedy for WSRC's reclassification of Mr. Moxley from SGL 31 to SGL 30 on October 1, 1996, is to require WSRC to correct Mr. Moxley's official personnel file to reflect that he was reclassified to SGL 32 on that date.

It Is Therefore Ordered That:

(1) Westinghouse Savannah River Company shall modify its official personnel file on Roy Leonard Moxley to reflect that he was reclassified to SGL 32 on October 1, 1996.

(2) This is a Supplemental Order to the Initial Agency Decision issued on December 29, 1999. This Order, together with the Initial Agency Decision, shall become the final decision of the Department of Energy unless, within 15 days of the receipt of this Order, a party files a notice of appeal with the Director of the Office of Hearings and Appeals, requesting review of this Order or the Initial Agency Decision or both.

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Supplemental Order

Name of Case: Richard R. Sena

Date of Filing: April 3, 2001

Case Number: VBX-0042

This Decision supplements an Initial Agency Decision, dated March 1, 2001, in which I found that Sandia Corporation had retaliated against Richard R. Sena in violation of Title 10, Part 708 of the Code of Federal Regulations. 10 CFR Part 708; http://www.oha.energy.gov/cases/whistle/vbh0042.htm. That determination found that Sandia should be required to compensate Sena in the amount of $342,324.77. In addition, the Decision noted that Sena is entitled to reasonable attorneys fees and costs, and that Sena claims that he should be compensated for the amount he has removed from his retirement plan for living expenses while this matter has been pending. The Decision required that Sena submit a report as to the amount claimed within 30 days after receipt of the Decision, and that Sandia provide comments or objections within 10 days of the Sena filing, after which I would issue a supplemental order establishing Sandia's total liability in this matter.

On March 30, 2001, counsel for Mr. Sena submitted an affidavit along with supporting schedules requesting $22,663 in fees. Those fees cover 160 hours of work at rates of $140 and $160 an hour. In addition, counsel submitted bills for expenses totaling $2,682.92. These expenses include $700.93 for court reporter fees for depositions, $1,819.99 for expert witness fees, and $162.00 for copying costs. Copies of bills for the expert witnesses and court reporter fees have been submitted.

On April 17, 2001, Sandia Corporation submitted comments on the March 30th submission. In its comments, Sandia points out discrepancies between the time records submitted and the stated total amount of attorney fees requested. Sandia notes that pursuant to its calculations the actual amount is $18,768 for attorney fees through March 2001 rather than the $22,663 requested.

In response to Sandia's comments, counsel for Sena submitted new billing records indicating that the total amount of fees earned is $22,086. The difference between the first set of billings and the second set appears to be mainly the result of one week of billings, right before the hearing, that was omitted from the first set of billing records.

As a result of Sandia's comments, I have reviewed the materials submitted in support of the request for fees and costs. Sandia's analysis appears to be correct. However, the newly submitted billing supports an award of $22,086 in legal fees. As for the costs requested, there appears to be an overstatement of $5.00 for the cost of court reporting services. I will therefore approve $2,677.92 in costs.

With respect to the issue of compensation for withdrawals from retirement accounts, Sena has provided two submissions indicating that he has in fact made withdrawals from his retirement accounts while this matter has been pending. The March 9th and 14th submissions neither indicate nor suggest that Mr. Sena

suffered any loss, such as adverse tax consequences or the payment of penalties, when he made withdrawals from his retirement accounts. The amount I indicated I would require Sandia Corporation to remit to Mr. Sena includes funds that cover the period in question and can be used to replenish those retirement accounts. To make an award on the withdrawal of funds from these accounts as well would be double counting the amount of loss that Mr. Sena experienced during this period.

This decision and order has been reviewed by the National Nuclear Security Administration (NNSA), which has determined that, in the absence of an appeal or upon conclusion of an unsuccessful appeal, the decision and order shall be implemented by each affected NNSA element, official, or employee, and by each affected contractor.

It Is Therefore Ordered That:

(1)Sandia Corporation shall pay Richard R. Sena $367,088.69 within 30 days of the date of this order.

(2) This is a Supplemental Order to the Initial Agency Decision issued on March 1, 2001, in the matter of Richard R. Sena and shall be subject to review by the Director of the Office of Hearings and Appeals.

Roger Klurfeld

Hearing Officer

Office of Hearings and Appeals

Date: April 20, 2001

October 3, 2002
DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Supplemental Order

Name of Case: Janet L. Westbrook

Date of Filing: June 17, 2002

Case Number: VBX-0059

Janet Westbrook (Westbrook or Complainant) filed a Complaint of Retaliation alleging that her former employer, UT-Battelle, LLC (Battelle or the Company), the DOE contractor that manages the Oak Ridge National Laboratory (the Laboratory or ORNL), terminated her as part of a reduction in force (RIF) as a retaliation for making disclosures that are protected under 10 C.F.R. Part 708. On May 9, 2002, the Office of Hearings and Appeals (OHA) of the Department of Energy issued a Decision and Order granting relief to Westbrook in connection with that complaint. *Janet L. Westbrook*, 28 DOE ¶ 87,021 (Case No. VBA-0059 (2002) (*Westbrook*). 1/ In *Westbrook* we noted that the Complainant was eligible for relief including reinstatement, back pay, costs and attorney fees. The instant decision will determine the amount and type of relief that Westbrook will be accorded.

We asked the Complainant to file a detailed statement showing the relief she is claiming, including a justification for any expenses claimed. She submitted a request for reinstatement, back pay of $171,190.91, and attorney fees of $27,439.39. The Company filed its own calculation of appropriate back pay for Westbrook, which it believed should total $69,814. The Company also claimed that the $200 per hour rate charged by Westbrook's attorney for her services in this proceeding was excessive for this type of case and recommended that Westbrook's attorney be allowed no more than $150 per hour.

1/ *Westbrook* was an appeal to the Director of the Office of Hearings and Appeals of an Initial Agency Determination (IAD) of an OHA Hearing Officer. The IAD found that Westbrook was not entitled to relief. *Janet L. Westbrook* (Case No. VBH-0059), 28 DOE ¶ 87,018 (2001). *Westbrook* reversed that determination and granted the Complainant relief.

Calculation of Back Pay Relief

We have now had extensive briefings from the parties in connection with making a final calculation of the level of back pay appropriate for Westbrook. Battelle calculated Westbrook's basic back pay as $6,484 per month, including a three percent upward adjustment made retroactive to October 2000. The Complainant did not dispute that figure. We also considered a number of issues involving what types of offsets should be deducted from Westbrook's back pay, and what allowances for benefits should be included as part of the relief. A summary of our conclusions in that regard is set out below.

1. Offset for Company Pension Payments to Westbrook: Westbrook's pension payments of $350.51 per month from the Company should be offset against the monetary relief in this case. Westbrook is not entitled to receive back pay and a pension for the same period.

2. Offset for "Payments in Lieu of Notice" and Severance Pay: As part of the RIF program, the Company offered affected employees pay in lieu of notice for a period of 60 days. 2/ The Complainant worked for four days after the date she received notice of termination and received payment in lieu of notice for 56 days. Both parties agree that the offset for both the severance and "in lieu" payments is appropriate. However, a key area of disagreement between the parties was how the offset should be accounted for. It was the difference in manner calculation of this offset that was in large measure responsible for the great discrepancy between calculation of back pay relief by the two parties. The Complainant believed that the offset for these payments should be made as a lump sum deduction from the total back pay amount for the entire relief period. Battelle believed that the deductions for these payments should be made on a "running" basis for each month of the relief period. We find the Company's calculation to produce a more nearly accurate result, since Westbrook received these payments as a lump sum when she was terminated in December 2000, i.e., at the beginning of the relief period. 3/

2/ The Company's reduction in force program included a commitment to provide notice to employees who were being terminated, or pay-in-lieu-of-notice for a period of 60 days.

3/ In fact, it would have been more precise to deduct those payments as a lump sum offset in December 2000, the month in which they were received. However, if we had taken this approach, Westbrook would have had a number of months of a

(continued...)

3. Health Insurance, Dental Insurance and Battelle Pension Contribution Offsets: Both parties agree that such offsets should not be included.

4. Westbrook's Teaching Salary and Benefits: During the period December 5, 2001 through July 19, 2002, Westbrook was employed by the University of Tennessee (UT). Both parties agree that offsets for UT salary and benefits are appropriate. However, Westbrook's relief calculation deducted her total salary from UT as a lump sum from total back pay, whereas Battelle's calculation deducted the monthly UT salary as an offset in each month. Since Westbrook received her UT salary on a monthly basis, we will adopt Battelle's approach, and deduct Westbrook's UT salary on a running basis from each month's back pay total. This approach yields a more accurate result, since the offset is deducted in the month in which the salary payment was received. See Note 3 above. The Company also states that Westbrook voluntarily ended her employment with UT effective July 19. Battelle claims that Westbrook has a duty to mitigate damages, and that the amount of her potential UT earnings for the relief period after she left her UT employment should be offset against back pay amounts for the months of July and August 2002. We do not agree that Westbrook is required to keep her employment with UT based on the duty to mitigate theory. Accordingly, this offset was not included in back pay calculations.

5. Offset for Hearing Delay: Battelle contends that Westbrook's relief should be reduced because it was she who requested that the hearing be delayed. Given that the delay was only one month and therefore not unreasonable, we do not find that a reduction on this basis is warranted.

3/ (...continued)
negative total entitlement, before her back pay balance would have turned positive. This methodology would have significantly lowered her total back pay, by reducing the accrual of interest. Battelle's methodology, the one we have adopted, although technically somewhat less accurate, is less harsh to Westbrook. Yet, it still respects to some degree ordinary cash flow principles.

6. Relief Period: The Complainant asserts that relief should be provided through September 30, 2002. However, we find that the Company's calculation of relief, which runs through August 31, 2002, provides a reasonable and appropriate relief period in this case.

The Company has been especially helpful and accommodating in producing numerous corrected relief calculations in this case. It has used its own records when it was necessary. After reviewing the Company's most recent relief calculation, we find it to be reasonable, correct, and consistent with the principles enunciated above. See September 23, 2002 Battelle Revised Exhibits. Accordingly, we will award Westbrook back pay in the amount of $79,929, as calculated by Battelle. 4/ The Complainant did not file any objections to the Company's last calculation, although she was given the opportunity to do so.

Attorney Fees

As stated above, Westbrook's attorney requested fees based on an hourly rate of $200. The Company believes that hourly rate is excessive. Westbrook's attorney has asserted that the fees for employment law attorneys in the city where she practices, Knoxville Tennessee, range from $150 per hour for beginning attorneys to $250 per hour for attorneys with more than 10 years experience. Westbrook's attorney asserts that since she has five years of experience in this area, she is entitled to an hourly fee in the middle of that range. We agree. Westbrook's attorney has requested additional fees in connection with preparation of a response regarding a Petition for Secretarial Review in this proceeding. We find she is entitled to be compensated for these additional services, and that she should receive her total requested fee of $36,691.39.

Reinstatement

Our May 9 Order indicated that Westbrook is eligible for reinstatement as part of the relief in this case. She has indicated that she would like reinstatement to her former position

---

4/ This amount includes interest calculated at the Treasury Department short term interest rate plus two percentage points, compounded quarterly. *Lawrence C. Cornett* (Case No. VWX-0010), 26 DOE ¶ 87,510 (1997).

or to a substantially equivalent position at ORNL. Accordingly, Battelle shall take appropriate steps to reinstate Westbrook.

It Is Therefore Ordered That:

(1) Within 30 days of the date of this Order, UT-Battelle, LLC shall pay Janet L. Westbrook the amount of $79,929 for lost salary and benefits during the period December 2000 through August 2002.
(2) Within 30 days of the date of this Order, UT-Battelle shall pay Westbrook $36,691.39 in attorney fees incurred in this proceeding for services of her attorney, Margaret Beebe Held.

(3) UT-Battelle shall immediately reinstate Westbrook to the position she held at the time of her termination or to a substantially equivalent position at Battelle at ORNL in Oak Ridge, Tennessee.

(4) An appeal of any of the determinations made in this Order may be made by filing a supplemental submission in the petition for Secretarial review proceeding that is currently pending with respect to Westbrook's Part 708 complaint (Case No. VBB-0059). A party must file this submission within 10 days of receipt of this Decision and Order.

George B. Breznay
Director
Office of Hearings and Appeals

Date: October 3, 2002

March 28, 2003
DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Supplemental Order

Name of Petitioner: Robert Burd

Date of Filing: March 13, 2003

Case Number: VBX-0060

On November 16, 2001, BWXT Pantex, as successor to Mason & Hanger Corporation (M&H) (collectively referred to as "the contractor"), filed an appeal of an Initial Agency Decision (IAD) issued by an Office of Hearings and Appeals (OHA) Hearing Officer under the Department of Energy (DOE) Contractor Employee Protection Program, 10 CFR Part 708. *Robert Burd*, 28 DOE ¶ 87,017 (2001). The IAD found that the contractor terminated Robert Burd (the complainant), a former employee at the DOE's Pantex nuclear weapons plant, in retaliation for making disclosures protected under Part 708. The IAD ordered the contractor to reinstate Burd, provide him with back pay, and reimburse him for the reasonable costs and expenses of prosecuting his complaint. *Id*. at 89,113. It further directed the complainant to file a report providing a calculation for back pay, and if there is no immediate reinstatement offer, to update that back pay report every 90 days. *Id*.

On August 5, 2002, I issued an Appeal Decision affirming the IAD in part, and reversing the IAD in part. *Robert Burd*, 28 DOE ¶ 87,025 (2002). 1/ Specifically, the Appeal Decision modified the IAD in two respects: (1) ordering that the contractor pay restitution to the complainant for all travel, lodging, and relocation expenses incurred as a result of the complainant's having to move to Los Alamos, New Mexico to find comparable employment after being wrongfully terminated in September 2000, and (2) ruling that the contractor not be required to offer reinstatement to the complainant at the Pantex Plant. The Appeal Decision also awarded the complainant $3,477.12 for lost holiday pay, based on the Complainant's Damages Brief submitted in response to the IAD, and awarded the complainant $2,318.08 in "back pay without any offsets from the date of

1/ The DOE's National Nuclear Security Administration (NNSA) reviewed both decisions, pursuant to a Memorandum of Understanding (MOU) by which NNSA authorized OHA to adjudicate for NNSA whistleblower complaints brought by employees of NNSA contractors under 10 CFR Part 708. Under the MOU, NNSA is responsible for implementing a final decision issued under Part 708.

discharge, September 29 through October 20, 2000, which corresponds to the period during which he was out of work after being terminated by the contractor" (hereinafter referred to as "period one"). Appeal Decision at 12, 28 DOE ¶ 87,025 at 89,199. In addition, the Appeal Decision directed the parties to confer with each other and agree upon a proper calculation of back pay for the period from October 20, 2000 through the date of the Appeal Decision, taking into account the average number of overtime hours worked by radiation control technicians at the Pantex Plant during that period (hereinafter referred to as "period two"). The Appeal Decision also directed the complainant's attorney to submit an updated, itemized statement, and confer with the contractor to agree upon a proper amount of attorneys fees and expenses. Finally, the Appeal Decision order the contractor to pay interest "at the rate specified in the IAD, one-half percent per month, on all monies paid to the complainant." *Id.* at 13. Neither party challenged this interest rate during the course of the appeal.

The parties have conferred at length and reached agreement on all but two of the remedy issues remanded to them by the Appeal Decision. *See* February 14, 2003 Letter from Richard Thamer, Attorney for BWXT Pantex, to Michael A. Warner, Attorney for Robert Burd and Thomas O. Mann, OHA Deputy Director; February 17, 2003 E-Mail Message from Warner to Thamer and Mann; February 19, 2003 Letter from Thamer to Warner and Mann. The items on which the parties were able to agree are set forth in the stipulation below. OHA is issuing this Supplemental Order to resolve the remaining remedy issues in this case.

I. Areas of Agreement

The complainant and contractor have stipulated to the following facts for purposes of calculating the remedies in this case. *See* February 14, 2003 Letter from Thamer to Warner and Mann. 2/

1. Back Pay from discharge through Oct. 20, 2000 (period one)
   $2,318.08

2. Time off work for Travel
   $1,883.44

3. Attorney's Fees
   $23,510.22

4. Medical Insurance
   $3,449.08

2/ While the parties have reached agreement on the numbers in their stipulation, they retain the right to seek further administrative or judicial review of the final order issued by the OHA Director in this appeal. See 10 CFR §§ 708.34,35.

5. Incidental Expenses
   $23,438.12

II. Areas of Disagreement

First, the parties cannot agree on the holiday pay calculation. Complainant submitted a damages brief seeking $3,477.12, representing that he lost pay for the following 24 days: Nov. 10, 2000; Nov. 23-24, 2000; Dec. 25, 2000 through January 1, 2001; January 15, 2001; February 19, 2001; May 28, 2001; and July 4, 2001. The Appeal Decision adopted this figure from the Complainant's Damages Brief without discussion.

The contractor challenges the amount of lost holiday pay stated in the Appeal Decision for the reason that M&H did not provide 24 paid holidays. Instead, the contractor claims that M&H paid for 10 holidays between the time Burd was discharged and OHA issued the IAD: Oct. 16, 2000; Nov. 23 and 24, 2000; Dec. 25, 2000; Jan. 1, 2001; Apr. 6, 2001; May 28, 2001; July 4, 2001; Sep. 3, 2001; and Oct. 15, 2001, for a total of $1,448.80. The contractor is the best source of information about the number of paid holidays it gave its employees. Moreover, the complainant has not submitted any new evidence to contravene the latest information from the contractor on the number of paid holidays lost by Burd during the period concerned. The complainant no longer worked at Pantex during that period, and the numbers in his damages brief appear to be incorrect. For example, the dates listed in the complainant's damages brief do not add up to 24 days. Accordingly, I will rule for the contractor on lost holiday pay, and reduce the amount of damages awarded for that item from $3,477.12 to $1,448.80.

Second, the parties cannot agree on what they call "the lost overtime offset" for period two. The parties have reached agreement on the amount of overtime that the complainant would have earned at Pantex and the amount of compensation he has earned at his subsequent employer, both in his base salary and in overtime pay. But they have not been able to agree whether or to what extent the contractor is entitled to offset these subsequent earnings against the compensation the complainant could have earned at his old job. 3/

The disagreement has arisen because the complainant earns a higher base salary at his new job than he did at Pantex. Standing alone, this disparity would mean that the complainant would not be awarded any back pay for the period after he began his new job. *See Ronald Sorri (Sorri)*, 23 DOE ¶ 87,503 (1993). However, the complainant maintained that the back pay calculation for period two should take into account the amount of overtime pay he would have earned at Pantex, which, when added to his Pantex base salary, would exceed his new base salary. The complainant

---

3/ We understand that the contractor does not seek to offset any subsequent compensation earned by the complainant in period two–after he began his new job–against the amount of back pay awarded "without offset" for period one. Thus, the back pay award for period one–from Burd's termination on September 29 through October 20, 2000 when he began his new job–is not in contention.

asserts that the back pay calculation for period two should not include the amount of overtime he earned at his new job.

The contractor argues that the amount of back pay for period two after the complainant began his new job should be determined by comparing his total compensation (base salary plus overtime) at his new job to the total compensation he would have earned from his old job. According to the contractor, "back pay is an equitable remedy subject to offset by subsequent earnings, including overtime, and Burd's subsequent earnings exceed his [Pantex] earnings." February 14, 2003 Letter from Thamer at 2.

As authority for their respective positions, each party cites decisions issued by the Merit Systems Protection Board (MSPB) dealing with damages awarded to Federal employees for retaliation under the Whistleblower Protection Act of 1989 (WPA), Pub. L. No. 101-12, 103 Stat. 16 (1989) (codified at scattered sections of 5 U.S.C.), as amended. One case is directly on point. In *Deskin v. United States Postal Service*, **http://www.mspb.gov/decisions/1999/ch342rdo.html,** the MSPB held that "overtime pay in interim employment can be deducted from a back pay award, if and to the extent that the overtime pay replaced compensation that would have been earned in the desired position." Applying that principle to the present case, I agree that the overtime pay Burd earned at his new job should be taken into account in determining whether he should be awarded back pay after he started his new job, because it replaced the overtime pay he would have earned at his old job. I take notice of the fact that radiation control technicians who work for DOE contractors at both Pantex and Los Alamos routinely earn a substantial amount of overtime pay. Thus, to be equitable, a comparison of Burd's compensation at his new job with the compensation he would have earned had he remained at his old job must compare the total amount earned from base salary plus overtime under both scenarios. Since Burd's total compensation at his new job is greater than the compensation he would have earned had he not been terminated at Pantex, he should not receive a damage award for back pay covering the time after he began his new job. This result is consistent with prior OHA decisions on back pay. *See Ronald Sorri (Sorri)*, 23 DOE ¶ 87,503 (1993) (no back pay awarded for period two–after Sorri's new job began).

The complainant interprets *Deskin* to mean that Burd may use his current base salary to offset any overtime compensation that he would have earned at Pantex, but the overtime from his current employer should not be included in the offset "because it is not overtime compensation that would have been earned in the desired position." February 17, 2003 E-Mail Message from Warner. I reject this view. The complainant's interpretation runs counter to the principle of comparability applied in *Deskin*, since the overtime pay Burd earned on his new job replaced the overtime pay he would have earned at his old job.

III. Conclusion

After considering the joint stipulation of the parties on the damage items remanded to them by the Appeal Decision, and considering their respective arguments on the two items remaining in

dispute, I will direct the contractor to pay the complainant and his attorney the sum of $56,047.74, representing back pay, restitution for other reasonably foreseeable monetary damages incurred by the complainant as result of his termination, and attorneys fees and costs. The amount of each item included in that sum is set forth in the ordering paragraphs below. The contractor shall pay interest on that amount calculated at the rate of one-half percent per month.

It Is Therefore Ordered That:

(1) BWXT Pantex and Mason & Hanger Corporation (collectively referred to as "the contractor") shall pay to Robert Burd the following amounts as restitution for actions taken against him in violation of 10 C.F.R.§ 708.5:

(a) $2,318.08 for back pay without offset from Burd's discharge on September 29, 2002 through the beginning of his employment with Duratek on Oct. 20, 2000;

(b) $1,883.44 for time off work for travel reasonably incurred to bring his complaint under Part 708;

(c) $3,449.08 for replacement of medical insurance and related benefits lost as a result of his discharge by complainant;

(d) $23,438.12 for reasonably foreseeable incidental expenses to mitigate his damages incurred as a result of his discharge by complainant;

(e) $1,448.80 for holiday pay lost as a result of his discharge by complainant;

(f) $23,510.22 for attorney's fees for services rendered by Michael A. Warner to bring Burd's complaint under Part 708; and .

(g) the contractor shall pay interest on those amounts calculated at the rate of one-half percent per month.

(2) This is the final agency decision unless a party files a petition for Secretarial review by the 30th day after receiving this supplemental order.

(3) This Supplemental Order and the Appeal Decision issued on August 5, 2002, *Robert Burd*, 28 DOE ¶ 87,025 (2001), have been reviewed by the National Nuclear Security Administration (NNSA), which has determined that, in the absence of a petition for Secretarial review or upon conclusion of an unsuccessful petition for Secretarial review, the Appeal Decision as modified by

this Supplemental Order shall be implemented by each affected NNSA element, official or employee and by each affected contractor.

DEPARTMENT OF ENERGY
OFFICE OF HEARINGS AND APPEALS

Supplemental Order

Name of Case: Janet Benson

Date of Filing: September 26, 2002

Case Number: VBX-0082

Janet Benson (Benson or Complainant) filed a Complaint of Retaliation alleging that her former employer, Lawrence Livermore National Laboratory (LLNL or the Laboratory), retaliated against her for engaging in activity that is protected by 10 C.F.R. Part 708, the Department of Energy's Contractor Employee Protection Program. On August 21, 2002, the Office of Hearings and Appeals (OHA) of the Department of Energy issued a Decision and Order granting relief to Benson in connection with that complaint. *Janet K. Benson*, 28 DOE ¶ 87,027 (2002) (*Benson*). In *Benson* we found that LLNL had not shown by clear and convincing evidence that it would have given Benson a "less than satisfactory" performance evaluation in the absence of her protected disclosures. Since the Complainant was successful on this issue, we found she was eligible for relief, which included removal of the performance evaluation from her personnel file, and attorney fees and costs. 1/ The instant decision will determine the amount of attorney fees and costs that should be awarded in this case.

We asked the attorney to file a statement showing the fees and costs she is claiming, including a justification for any expenses claimed. She submitted a request for attorney fees of $80,693 and costs of $1,012.36. The attorney fees were calculated as follows. The hourly rate applied was $310. The attorney calculated that she worked a total of 457.5 hours on this proceeding. At the hourly rate of $310, she would be entitled to receive a total of $141,685, if she were reimbursed for all hours spent on this case. However, she points out that she did not prevail on the issue covered in the

---

1/ We did not find that LLNL had retaliated against Benson by (i) assigning her to work on a different project; (ii) assigning her to work in a different building; or (iii) terminating her employment.

second hearing held in this case, which considered Benson's claim that she was improperly terminated by LLNL. The attorney therefore subtracted all professional hours associated with this second hearing (197.2)and requested fees in the amount of $80,693 based on 260.3 hours at $310 per hour. The $1,012.36 in costs were in large part associated with expenses incurred in connection with attending the first hearing in this proceeding.

LLNL filed a response to the fee request in which it contends that the fees should be further reduced because Benson prevailed on only one out of three remaining alleged retaliations by the Laboratory that were the subject of the first hearing. LLNL believes that the attorney should receive only one third of the total $80,693. LLNL further contends that the attorney costs should be denied in full because (i) they are not substantiated by documentation, such as receipts; and (ii) they are not the types of costs ordinarily allowed. LLNL maintains that allowable costs are those such as docket fees, expert witness fees, court reporter and printing costs.

Attorney Fees

We are inclined to agree with LLNL that a further reduction in fees is warranted in this case. We believe that the fees awarded should in some measure reflect the degree of success achieved by counsel. However, while the attorney only prevailed on one out of four issues, we do not think that means she should receive only one fourth of the total possible fees. For example, the issue on which she prevailed may have required more research or other services than the ones on which she did not prevail. Moreover, much research in litigation is general in nature. We do not believe that each professional hour spent can be discretely assigned to an issue on which the attorney prevailed or to an issue that she lost. There are certainly some overlapping hours that apply to all issues of the case, whether they were won or lost. For example, the attorney needed to read documents submitted to her by her client, filings of LLNL and other LLNL material in order to familiarize herself with this case, and decide which issues to pursue and what approach to take. She is entitled to be fully paid for that time. It would be unreasonably burdensome, if not impossible, to dissect all the hours spent and determine precisely which merit a fee award, based on the one issue in which Benson prevailed. Accordingly, after reviewing all the activities and services outlined by the attorney in Appendices A and B of her fee request, we find that $58,000 is a reasonable award. This represents about 40 percent of the asserted total fees of $141,685.

Attorney Costs

As an initial matter, we do not agree with LLNL's position that the attorney costs should be fully denied because they are not typically the types of costs that are reimbursed, such as witness fees and printing and filing costs. The attorney has asked for and is certainly entitled to be reimbursed for her expenses associated with attending the hearing. We would award her those costs whether she included them as part of her fees in this case, or, as she has done here, designated them as costs. After reviewing each of those costs, we find them to be utterly reasonable. The hearing lasted from February 1 to February 3. For these three days, the attorney requested, for example, hotel expenses of $241, airfare of $167 (from Seattle, WA to Oakland, CA), rental car costs of $201 and meal costs of $90. All of these types of costs are entirely ordinary expenses to be expected in attending a hearing. Further, the amounts requested are moderate and well within the norm. Therefore, we will not require the attorney to provide specific documentation for those costs.

This Supplemental Order has been reviewed by the National Nuclear Security Administration (NNSA), which has not objected to the above determinations, provided any substantive comments, or specified any changes. Accordingly, in the absence of an appeal or upon conclusion of an unsuccessful appeal, the Supplemental Order shall be implemented by each affected NNSA element, official or employee, and by each affected contractor.

It Is Therefore Ordered That:

(1) Lawrence Livermore National Laboratory shall pay A. Alene Anderson the amount of $58,000 for attorney fees and $1,012.36 for costs incurred in this proceeding.

(2) Interest shall begin to accrue on that amount at the rate of 2/3 of one percent per month compounded monthly, beginning on February 1, 2003.

(3) The obligation to make the payment to Ms. Anderson shall be stayed pending the outcome of the Petition for Secretarial review (Case No. VBB-0082) that is currently pending with respect to Janet Benson's Part 708 complaint.

(4) An appeal of any of the determinations made in this Order may be made by filing a supplemental submission in the petition for Secretarial review proceeding referred to in Paragraph (3) above. A party must file this submission within 10 days of receipt of this Decision and Order.

Case No. VBZ-0003

June 21, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner:Carl J. Blier

Date of Filing:May 11, 1999

Case Number: VBZ-0003

This determination will consider a request to dismiss filed by Oak Ridge Associated Universities (ORAU) on May 11, 1999. ORAU seeks dismissal of the underlying complaint filed by Carl J. Blier under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. This matter is before me as the investigator assigned to investigate Mr. Blier's complaint.

I. Background

Mr. Blier's Part 708 complaint arises from his employment with ORAU. In his complaint, Mr. Blier alleges that in April 1996 he became aware of possible irregularities regarding the approval of higher cost air-fares by ORAU officials to permit employees to upgrade their airline tickets to first class. Mr. Blier subsequently informed the ORAU Ethics Officer and the DOE Office of the Inspector General (OIG). Mr. Blier alleges that as a result of his disclosure, OIG conducted an audit of travel expenditures at Oak Ridge.

In his complaint, Mr. Blier asserts that, in early 1996, he became the subject of reprisals for making his disclosure to the OIG. Specifically, Mr. Blier claims that his contacts with outside clients were significantly reduced and he was denied an opportunity to participate in a 6 month fellowship with Representative Zach Wamp. He further alleges that in March 1998 his supervisor became very upset with him when he was absent while taking an early lunch and criticized him in front of a co-worker. During a conversation afterwards, Mr. Blier accused the supervisor of trying to reduce his role at work to just "punching a clock." Mr. Blier alleges that the supervisor responded "You know your options." Mr. Blier interpreted that phrase to mean that he could resign and did so. On April 30, 1998, Mr. Blier filed a Part 708 complaint with the DOE's Oak Ridge Operations Office alleging constructive dismissal because of his disclosures concerning possible irregularities regarding air- fares. Subsequently, on August 28, 1998, Mr. Blier filed a complaint under the Americans with Disabilities Act (ADA) and the Rehabilitation Act of 1973 (RA). In this complaint, Mr. Blier alleged that he had experienced reprisals because of his prior disclosure to ORAU officials that he had an illness.

In its Motion, ORAU asserts that the exact same acts of retaliation form the basis of both the ADA/RA claim and the Part 708 claims. In this regard, ORAU notes that the language describing the alleged reprisals are in some instances identical. ORAU further asserts that Mr. Blier's ADA/RA complaint has been investigated by the Department of Labor's Office of Federal Contract Compliance Programs (OFCCP) and that OFCCP found that Mr. Blier had not suffered any discrimination, harassment or retaliation by ORAU.(1) ORAU argues that the Part 708 complaint should be dismissed pursuant to 10 C.F.R. §§ 708.15 and 708.17 because he has pursued another remedy under federal law based upon the

same facts that underlie his Part 708 claim. ORAU asserts that to allow further proceedings under Part 708 would essentially reopen allegations that have been already been subject to a finding by the OFCCP. ORAU argues that the Part 708 regulations indicate that deference should be given to a determination made under other applicable laws when a complainant pursues another remedy based upon the same facts.

II. Analysis

Section 708.15 of the Part 708 regulations states in pertinent part:

(a) You may not file a complaint under this part if, with respect to the same facts, you choose to pursue a remedy under State or other applicable law . . . .

. . . .

(c) You are considered to have filed a complaint under State or other applicable law if you file a complaint or other pleading, with respect to the same facts in a proceeding established or mandated by State or other applicable law, whether you file such complaint before, concurrently with, or after you file a complaint under this part.

(d) If you file a complaint under State or other applicable law after filing a complaint under this part, your complaint under this regulation will be dismissed under § 708.17(c)(2).

Section 708.17(c)(2), (3) goes on to state:

(c) Dismissal for lack of jurisdiction or other good cause is appropriate if:

. . . .

(2) The facts, as alleged in your complaint, do not present issues for which relief can be granted under this part; or

(3) You filed a complaint under State or other applicable law with respect to the same facts as a complaint under this part; . . . .

I will assume, for purposes of this analysis only, that a complaint under the ADA/RA may be considered as "other applicable law" under Section 708.17(c)(3) and that the facts regarding the reprisals that Mr. Blier alleged in each complaint are identical. However, even with these assumptions, I do not find that Section 708.17(c)(3) mandates that Mr. Blier's complaint be dismissed.

Section 708.17(c)(3) would require dismissal of Mr. Blier's Part 708 complaint if his ADA/RA complaint was based on the same facts. While the alleged reprisals to which he refers are the same in both complaints, the complaints differ significantly as to the cause for the reprisals. In Mr. Blier's ADA/RA complaints, a necessary factual requirement to establish a prima facie case is that he suffered adverse employment consequences because of a physical or psychological condition. See Stradley v. Lafourche Communications, Inc., 869 F. Supp. 442 (E.D. La. 1994) (under the ADA a plaintiff must prove that he suffers from a disability, that he is a qualified individual, and that he suffered adverse employment action because of his disability); Guterriero v. Schultz, 557 F. Supp. 511 (D. D.C. 1983) (under RA, elements of a cause of action are: plaintiff possesses a handicap, is qualified for a position and is excluded from the position solely by reason of a handicap). The pleading and underlying facts which would support this type of claim are very different from those which would underlie a complaint filed under Part 708, the DOE contractor employee whistleblower protection program. For Mr. Blier's Part 708 to prevail on his complaint, the alleged reprisals must have been motivated by his disclosures to the Ethics Officer or OIG. See 10 C.F.R. §§ 708.5, 708.5(a) (Part 708 complaint may be filed if individual has been "subject to retaliation for: (a) Disclosing to . . . your employer . . . information that you reasonably and in good faith

believe reveals - . . . (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority"). It is evident that these regulatory schemes are very different in each complaint. Because the factual motivation alleged to have caused ORAU to take adverse action against Mr. Blier differs in the Part 708 and the ADA/RA complaints, I do not find the complaints to be based upon the "same facts" for section 708.17(c)(3) purposes.

With regard to ORAU's arguments as to the preclusive effect of the OFCCP report, I find that the report's investigative findings are not binding upon us for purposes of making a determination on Mr. Blier's Part 708 claim. As an initial matter, the OFCCP report is not an formal adjudication which requires us to apply the doctrine of collateral estoppel. ORAU argues that the provisions of Part 708, such as section 708.17(c)(3), mandate deference to the OFCCP report. However, I believe these provisions at most only mandate deference to State or other law determinations regarding reprisals specifically resulting from a protected disclosure of the type described in section 708.5(a).(2) Nevertheless, any information which OFCCP uncovered which led it to its conclusion that Mr. Blier did not suffer any retaliation from ORAU would be relevant to my investigation and will be considered if submitted. Consequently, ORAU's Motion to Dismiss should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Oak Ridge Associated Universities on May 11, 1999 is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the hearing officer on the merits of the complaint.

Richard A. Cronin, Jr.

Staff Attorney/Investigator

Office of Hearings and Appeals

Date: June 21, 1999

(1) OFCCP issued a report on March 5, 1999, entitled "Notification of Results of Investigation," regarding its investigation of Mr. Blier's ADA/RA complaint.

(2)Section 708.5(a) prohibits retaliation against employees who reasonably and in good faith disclose to officials information relating to: a substantial violation of a law, rule or regulation, a substantial and specific danger to employees or to public health and safety or fraud, gross mismanagement, gross waste of funds or abuse of authority. See 10 C.F.R. § 708.5(a).

Case No. VBZ-0005

October 4, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: Fluor Daniel Fernald

Date of Filing: September 7, 1999

Case Number: VBZ-0005

This decision will consider a Motion to Dismiss Fluor Daniel Fernald (FDF) filed on September 7, 1999. FDF moves to dismiss a Complaint filed by Thomas W. Dwyer under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Mr. Dwyer's Complaint has been assigned Office of Hearings and Appeals (OHA) Case No. VBH-0005.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. Criteria and Procedures for DOE Contractor Employee Protection Program, 57 Fed. Reg. 7533 (1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against its employee on the basis of certain activities by the employee, including certain disclosures by the “to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), . . .” 10 C.F.R. § 708.5(a)(1).

Mr. Dwyer worked for FDF from January 15, 1996, to October 16, 1997, when FDF terminated his employment. The Complainant alleges that he raised safety concerns with his employer in April 1996 and September 1997, and that he suffered retaliation, including his termination, as a result of these disclosures. On June 23, 1999, an OHA investigator issued a Report of Investigation on Mr. Dwyer's complaint, and I was subsequently assigned as the Hearing Officer in this matter.

After his October 1997 termination, Mr. Dwyer's labor union, the Fernald Atomic Trades and Labor Council, AFL-CIO, hereinafter referred to as the “Union,” filed a grievance alleging that FDF violated the applicable collective bargaining agreement between the Union and FDF by terminating Mr. Dwyer without just cause. A hearing was held before an arbitrator on May 18, 1999, and the arbitrator issued his “opinion and award” on August 17, 1999, in which he found that FDF “did not violate the applicable contract and that it discharged the grievant for cause.” Arbitrator's Opinion and Award at 47. Under the collective bargaining agreement, the arbitrator's decision is “final and binding” on both parties. Id. at 4.

On September 7, 1999, FDF filed the present Motion, arguing that the “arbitrator considered the same issues and facts under a collective bargaining agreement with employee protections virtually identical to

those in the [Contractor Employee Protection Program]. The Secretary should defer to the arbitrator's opinion and award." Motion to Dismiss at 1. FDF specifically cites a provision of the Part 708 regulations stating that a complaint may not be filed if a complainant has chosen "to pursue a remedy under State or other applicable law, including final and binding grievance-arbitration procedures, unless" the complainant has "exhausted grievance-arbitration procedures . . . and issues related to alleged retaliation for conduct protected under [Part 708] remain." 10 C.F.R. § 708.15(a)(3). FDF argues that, in light of the arbitrator's decision, no issues remain. Motion to Dismiss at 5.

A Motion to Dismiss should only be granted where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See M&M Minerals Corp., 10 DOE ¶ 84,021 (1982). The OHA considers dismissal "the most severe sanction that we may apply," and has stated that it will be used sparingly. See Boeing Petroleum Services, 24 DOE ¶ 87,501 at 89,005 (1994). For the reasons discussed below, I do not find the grounds for dismissal in this case are clear and convincing, and therefore will deny the present Motion.

II. Analysis

A. Application of Recent Revisions to Part 708

FDF is correct that the current Part 708 regulations effectively bar a complaint where the complainant has pursued binding grievance-arbitration procedures and no issues related to alleged retaliation for protected conduct remain. However, this provision of the regulations has only been in effect since recent revisions to Part 708 took effect on April 14, 1999. Criteria and Procedures for DOE Contractor Employee Protection Program, 64 Fed. Reg. 12862, 12863 (March 15, 1999). Prior to the revisions, the regulations had no similar provision and, while barring complaints from those who had "with respect to the same facts, pursued a remedy available under State or other applicable law," specifically stated that the "pursuit of a remedy under a negotiated collective bargaining agreement will be considered the pursuit of a remedy through internal company grievance procedures and not the pursuit of a remedy under State or other applicable law." 57 Fed. Reg. at 7542 (1992).

The threshold issue, therefore, is the extent to which the provisions of the new regulations should be applied to Mr. Dwyer's complaint, which was pending when the recent revisions took effect. The revised regulations state that the "procedures in this part apply prospectively in any complaint proceeding pending on the effective date of this part." 10 C.F.R. § 708.8 (1999). The preamble to the revised regulations explains,

It is well established in the law that an agency may apply new procedural rules in pending proceedings as long as their application does not impair the rights of, or otherwise cause injury or prejudice to, a party. DOE will apply the revised procedures to pending cases consistent with the case law.

64 Fed. Reg. 12862, 12865 (citing Landgraf v. USI Film Products, 511 U.S. 244, 275 (1994), Lindh v. Murphy, 117 S. Ct. 2059, 2063-64 (1997); Natural Resources Defense Council, Inc. v. NRC, 680 F.2d 810, 817 n.17 (D.C. Cir. 1982) (citing Pacific Molasses Co. v. FTC, 356 F.2d 386 (5th Cir. 1966))).

Thus, the intent of the drafters of the Part 708 revisions seems quite clear that the revised regulations apply to pending cases only "as long as their application does not impair the rights of, or otherwise cause injury or prejudice to, a party." This interpretation is consistent with the case law the drafters cited. Specifically, in Landgraf, the Supreme Court states,

When a case implicates a federal statute enacted after the events in suit, the court's first task is to determine whether Congress has expressly prescribed the statute's proper reach. If Congress has done so, of course, there is no need to resort to judicial default rules. When, however, the statute contains no such express command, the court must determine whether the new statute would have retroactive effect, i.e.,

whether it would impair rights a party possessed when he acted, increase a party's liability for past conduct, or impose new duties with respect to transactions already completed. If the statute would operate retroactively, our traditional presumption teaches that it does not govern absent clear congressional intent favoring such a result.

Landgraf, 511 U.S. at 280 (emphasis added).

In the present case, I find that the application of the new regulations, specifically 10 C.F.R. § 708.15(a)(3), would effectively bar a complaint that Mr. Dwyer had a right to file under the previous regulations. Thus, I conclude that it would be inconsistent with the intent of the drafters and the case law to apply this provision of the new regulations to Mr. Dwyer's complaint.

B. Application of the Prior Regulations

Accordingly, rather than applying regulations that mandate deference to final and binding arbitration decisions, I must apply regulations that are silent on the effect such prior decisions should be given in a Part 708 proceeding. This could arguably lead to the same result, since there is nothing in the prior regulations that would prohibit me from doing what the new regulations would require, i.e. affording the opinion of the arbitrator in the present case the traditional “deference given to final and binding arbitration decisions issued under collective bargaining agreements.” 64 Fed. Reg. 12862, 12864.

I am not convinced, however, that this would be the appropriate method of applying regulations designed to protect whistleblowers. “While courts should defer to an arbitral decision where the employee's claim is based on rights arising out of the collective-bargaining agreement, different considerations apply where the employee's claim is based on rights arising out of a statute designed to provide minimum substantive guarantees to individual workers.” Barrentine v. Arkansas-Best Freight System, 450 U.S. 728, 737 (1981). Thus, the Supreme Court has rejected the notion that an individual gives up his “independent statutory right” to file a lawsuit under the Fair Labor Standards Act, Barrentine, and Title VII of the Civil Rights Act, Alexander v. Gardner-Denver Co., 415 U.S. 36 (1974), as a result of “seek[ing] to vindicate his contractual right under a collective-bargaining agreement. . . . The distinctly separate nature of these contractual and statutory rights is not vitiated merely because both were violated as a result of the same factual occurrence.” Id. at 49-50.

As noted above, prior to their recent revision, the Part 708 regulations explicitly provided a right to pursue a remedy independent of any available to a DOE contractor employee under a collective bargaining agreement. Thus I conclude that considerations similar to those cited by the Court in Barrentine and Gardner-Denver apply to the present case, and militate against the necessary finding of clear and convincing grounds for dismissal. This does not mean, however, that I will accord no weight to the findings of the arbitrator regarding the grievance filed on behalf of Mr. Dwyer.

It is wrong for courts to . . . allow the Secretary [of Labor, in enforcing the whistleblower protection provision of the Surface Transportation Assistance Act] to ignore arbitral proceedings without even examining the proceedings in question. At the same time, 'we adopt no standards as to the weight to be accorded an arbitral decision, since this must be determined in the [Secretary's] discretion with regard to the facts and circumstances of each case.'

Roadway Express, Inc. v. Brock, 830 F.2d 179 (11th Cir. 1987) (quoting Gardner-Denver, 415 U.S. at 60 n.21; Barrentine, 450 U.S. at 743 n.22). Thus, while I will consider as part of the record of this proceeding the arbitrator's findings and accord them appropriate weight, I do not agree with FDF that those findings preclude Mr. Dwyer's right under the Part 708 regulations (prior to their recent revision) to proceed to a hearing in this matter. The Motion to Dismiss will therefore be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Fluor Daniel Fernald on September 7, 1999, Case No. VBZ-0005, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Names of Petitioners:Sandia Corporation

Roy F. Weston, Inc.

Dates of Filings:June 22, 1999

July 15, 1999

Case Number: VBZ-0014

VBZ-0013

This determination will consider a Motion to Dismiss that Sandia Corporation (Sandia) completed filing on June 22, 1999 and a request Roy F. Weston, Inc. (Weston) submitted on July 15, 1999. Sandia seeks its dismissal as a party against whom relief may be awarded pursuant to the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708, in the matter concerning Luis Silva. Weston also contends that it is not a proper party in this same matter.

I. Background

On October 2, 1997, Mr. Silva filed a Part 708 complaint with the DOE's Albuquerque Operations Office. Mr. Silva's Part 708 complaint arises from his employment with GTS Duratek. In his complaint, Mr. Silva alleges that in 1997 (1) he reported to the Director of the Occupational Safety and Health Division at the Albuquerque Operations Office six safety/health concerns regarding material handling operations at Sandia's Radioactive Mixed Waste Management Facility (RMWMF); (2) he anonymously submitted two Personnel Safety Concern forms to GTS Duratek management regarding radiation exposure and ramp danger and also reported these concerns to Sandia's Director of Environment, Safety, and Health; and (3) he submitted a Personnel Safety Concern form to GTS Duratek management concerning a lightning danger. Mr. Silva alleges that as a result of his disclosures concerning safety problems, GTS Duratek laid him off from his employment.

A. The Sandia Motion

In its Motion, Sandia asserts that the DOE violated its own rules set forth in 10 C.F.R. Section 708.6(e) (1992) (amended effective April 14, 1999) when it failed to give Sandia timely notice that it was considered a party in the Silva complaint, and that without timely notice, Sandia has been prejudiced because it is unable to provide a complete defense to its position. Sandia contends that it was not notified that it might be considered a party in this matter until the DOE Office of Inspector General issued its Report of Inquiry and Recommendations (OIG Report) on April 27, 1999. The OIG issued its Report more

than 18 months from the date Mr. Silva filed his complaint with the DOE. Sandia argues that between the time that the investigation of Mr. Silva's complaint began and the date of the issuance of the OIG Report, Sandia may have destroyed relevant records in the ordinary course of its business that are necessary to its defense in this matter and that it would not have destroyed these records had Sandia received timely notice from DOE that it considered Sandia a party in this proceeding.

B. The Weston Request

Following the expiration of GTS Duratek's contract with Sandia in March 1998, Weston succeeded GTS Duratek as a subcontractor at Sandia's RMWMF. Weston contends that it is not a party to this action because (1) it has not been named in the proceeding; (2) the regulations apply only to complaints employees file against their employers and Mr. Silva has never been an employee of Weston; and (3) it was never properly notified, as required under the applicable regulations, of the underlying complaint. Finally, Weston contends that even if the governing regulations apply to non-employees of Weston, Mr. Silva has not fulfilled the regulatory prerequisite for proceeding with a claim against Weston: exhaustion of Weston's internal complaint procedures.

II. Analysis

Section 708.6(e) of the Part 708 regulations in effect at the time of the complaint stated,

(e) Within 15 days of receipt of a complaint filed pursuant to paragraph (a) of this section, the Head of Field Element or designee shall notify

(1) the contractor, person, or persons named in the complaint, and

(2) the Director, of the filing of the complaint.

A copy of the complaint shall be forwarded to the Director.

10 C.F.R. Section 708.6(e) (1992) (amended effective April 14, 1999). Although neither Sandia nor Weston received notification of the Silva complaint at the time it was filed, neither party has sufficiently demonstrated that it has been prejudiced by not receiving notification of the complaint until the time of the issuance of the OIG Report. As stated above, Sandia contends that between the time when the investigation of Mr. Silva's complaint began and the date of the issuance of the OIG Report, Sandia, in the normal course of its business operations, destroyed records. These destroyed records were in the files of an employee named Barbara Boyle (then Barbara Botsford) and included calendars, E-mail files, periodic status reports, correspondence regarding discussions with GTS Duratek management, notes from staff and contractors regarding safety concerns, copies of presentations discussing safety responsibility issues and policies, and handwritten notes relating to discussions with GTS Duratek management on personnel matters. Sandia contends that these destroyed records may have included items necessary to its defense in this matter. Furthermore, Sandia states that it would not have destroyed these records had Sandia received timely notice from DOE that it considered Sandia a party in this proceeding. However, Sandia states in its Motion that the records it destroyed are only "potentially" relevant to this proceeding.

Sandia has not pointed to any particular document or documents it destroyed that it claims are necessary to a proper defense in this matter. While it would have been ideal for Sandia to have received earlier notification of the complaint, Sandia's arguments are too speculative to find prejudice. Without further evidence detailing how specific documents are relevant and germane to this proceeding and an explanation showing how Sandia has been prejudiced through the loss of these documents, I find that Sandia's arguments that it has been prejudiced are conjectural and premature. Accordingly, I do not find that there is good cause to dismiss Sandia as a party in this proceeding. However, Sandia may submit additional evidence prior to the hearing that specifically demonstrates how the loss of certain documents has

prejudiced it. Similarly, Weston has also failed to show how its formal notification of the filing of the complaint at the completion of the investigative phase of this proceeding is prejudicial to it.(1)

As stated above, Weston also contends that it has not been named as a proper party to this proceeding and that the regulations only apply to complaints employees file against their employers. I do not agree with these arguments. The applicable regulations apply to succeeding contractors, such as Weston, in cases involving a complainant who worked for a previous contractor (in this case GTS Duratek) when the complainant alleges that the succeeding contractor would have hired him but for an act of retaliation. Furthermore, where reinstatement of an employee is necessary to restore the employee to the position that he or she would have occupied absent the acts of reprisal, the DOE clearly possesses authority under Part 708 to order such reinstatement by a succeeding contractor, even where the succeeding contractor did not participate in any way in the acts of reprisal. Daniel L. Holsinger, 25 DOE ¶ 87,503 at 89,015 (1996).(2) In this case, the OIG Report found by a preponderance of the available evidence that the complainant's prior employment termination and protected disclosures contributed to Weston not hiring him and that this constituted an act of reprisal. Under these circumstances, I do not find that good cause exists to remove Weston as a party in this proceeding.(3) Finally, I note that since Mr. Silva was never an employee of Weston, the regulations do not require that Mr. Silva exhaust Weston's internal complaint procedures. See 10 C.F.R. Section 708.6 (1992) (amended effective April 14, 1999). However, even at this juncture in time, nothing precludes Weston from attempting to resolve issues between Weston and Mr. Silva using internal company greivance procedures.

It Is Therefore Ordered That:

(1) The Motion to Dismiss Sandia Corporation filed on June 22, 1999 is hereby denied.

(2) The request Roy F. Weston, Inc. filed on July 15, 1999 to remove it as a party in this proceeding is hereby denied.

(3) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the hearing officer on the merits of the complaint.

Leonard M. Tao

Hearing Officer

Office of Hearings and Appeals

Date: August 23, 1999

(1)Weston had informal notice of the complaint. In fact, Weston's employees cooperated with the DOE during the investigation. Thus, I believe it is safe to assume that Weston's management had notice of the complaint.

(2)For those cases in which discrimination against an employee in reprisal for a protected disclosure is found to have occurred, the preamble to this version of Part 708 states that the goal of the DOE regulations is to restore the employee to the position to which he or she would otherwise have been absent the acts of reprisal, in a manner similar to other whistleblower protection schemes. 57 Fed. Reg. at 7539; see, e.g., Energy Reorganization Act of 1974, 42 U.S.C. § 5851; Whistleblower Protection Act of 1989, 5 U.S.C. § 1214(b)(4)(B). Section 708.10(c)(3) (1992) (amended effective April 14, 1999) of this version of the regulations provides that the Initial Agency Decision may contain an order for interim relief, "including but not limited to reinstatement, pending the outcome of any request for review."

(3)My findings in this case would not be any different if I had considered the issues both parties raised under the regulations that went into effect in April 1999.

Case No. VBZ-0028

October 12, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: Sandia Corporation

Date of Filing: August 24, 1999

Case Number: VBZ-0028

This decision considers a “Motion to Dismiss” filed by the Sandia Corporation (Sandia) on August 24, 1999. In its Motion, Sandia seeks judgment on the record of Complaint filed by Dr. Jiunn Yu (Yu) under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. Yu’s Complaint under 10 C.F.R. Part 708 has been assigned Office of Hearings and Appeals (OHA) Case No. VBH-0028. The present Motion has been assigned Case No. VBZ-0028.

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The criteria and procedures for Part 708 were amended in an Interim Final Rule effective April 14, 1999. 64 F. R. 12862. The Interim Final Rule provides that its amended procedures will apply prospectively to any complaint pending on April 14, 1999. Part 708's primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against an employee on the basis of certain activities by the employee, including certain disclosures by the employee to "a DOE official, a member of Congress, any other government official who has responsibility or oversight of the conduct of operations at a DOE site, [an] employer or any higher tier contractor, . . .” 10 C.F.R. § 708.5(a).

Yu was employed by Sandia as a Quality Assurance Verifier from 1993, when Sandia became the Management and Operations Contractor (the M&O Contractor) for the Sandia National Laboratory, to March 30, 1995 when Sandia terminated his employment. On April 4, 1995, Yu filed a complaint under 10 C.F.R. Part 708 with the DOE Office of Inspector General's Office of Inspections (IG). In this complaint, Yu alleged that he was retaliated against for disclosures of possible safety violations, fraud and mismanagement.

On May 5, 1999, pursuant to the Interim Final Rule, the complaint was transferred to the DOE’s Office of Hearings and Appeals (OHA) for investigation. On May 12, 1999, the OHA Director appointed an OHA Investigator. After conducting an investigation of Yu's allegations, the Investigator issued a Report of Investigation (the Report) on July 2, 1999. The Report found that: "[Yu] has met his burden of showing that his protected disclosures . . . were a contributing factor under the provisions of Part 708 to his March 30, 1995 termination from Sandia." *Report* at 10. The Report further states: "Whether in fact Sandia can show by clear and convincing evidence that [Yu’s] disclosure played no role in the actions leading to his

being laid off is an issue best resolved by a hearing officer after receiving the testimony of Sandia officials, [Yu], and other relevant witnesses concerning these disputed issues " *Id.* at 14.

Sandia's motion to dismiss urges that Yu's Complaint "be dismissed on the grounds that the Record of Investigation has established by clear and convincing evidence that the adverse personnel action taken against [D]r. Yu by Sandia was not made in retaliation for any protected disclosures that may have been made by [D]r. Yu under the auspices of 10 C.F.R. part 708." Motion to Dismiss at 1. Sandia further contends that: "the record, developed by [the] Investigator . . . overwhelmingly establishes that Sandia did not engage in retaliation against [D]r. Yu within the meaning of Part 708." *Id.* at 4. If the motion were granted, judgment would be entered in favor of Sandia without providing Yu with an opportunity to conduct discovery or to present the sworn testimony of relevant witnesses at a hearing.

It is well settled that a Motion to Dismiss in a 10 C.F.R. Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. *Lockheed Martin Energy Systems, Inc.*, 27 DOE ¶ 87,510 (1999) (*Lockheed*); *EG&G Rocky Flats*, 26 DOE ¶ 82,502 (1997)(*EG&G*). The OHA considers dismissal "the most severe sanction that we may apply," and we have rarely used it. *Boeing Petroleum Services*, 24 DOE ¶ 87,501 at 89,005 (1994). Sandia has not met the *Lockheed* standard. Moreover, the circumstances under which I may dismiss a complaint are specifically set forth at 10 C.F.R. § 708.17(c). I have reviewed each of the six enumerated bases for dismissal and it is clear that none of them applies to the present case. Therefore, I find that Yu should be given an opportunity to further develop his case though discovery and by the presentation of relevant testimony under oath at a hearing. Accordingly, the Motion to Dismiss filed by the Sandia Corporation on August 24, 1999 should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by the Sandia Corporation on August 24, 1999, Case No. VBZ- 0028, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

Steven L. Fine

Hearing Officer

Office of Hearings and Appeals

Date: October 12, 1999

Case No. VBZ-0047

August 30, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Summary Judgment

Name of Case: Edward J. Seawalt

Date of Filing: August 23, 2000

Case Number: VBZ-0047

This decision will consider a Motion for Summary Judgment that Contract Associates, Inc., ("the contractor") filed on August 23, 2000. The contractor moves to deny a complaint filed by Edward J. Seawalt ("Mr. Seawalt" or "the complainant") under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Mr. Seawalt's complaint has been set for a hearing under Office of Hearings and Appeals (OHA) Case No. VBH-0047.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. Criteria and Procedures for DOE Contractor Employee Protection Program, 57 Fed. Reg. 7533 (1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against its employee because the employee has engaged in certain protected activity, including when the employee has

> (1) Disclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences—
>
> (i) A violation of any law, rule, or regulation;
>
> (ii) A substantial and specific danger to employees or public health or safety; or
>
> (iii) Fraud, mismanagement, gross waste of funds, or abuse of authority;

57 Fed. Reg. at 7542 (1992).(1)

The complainant was an employee of the contractor, which was a subcontractor to the University of California, the managing and operating contractor for the DOE's Los Alamos National Laboratory (LANL). From May 1998 to February 1999, the complainant worked onsite at LANL, on a special project

in a high security area involving the upgrade of furniture in interior offices to meet strict safety standards that required a reduction in the amount of exposed combustible material in the offices. The complainant alleges that during this time he engaged in activity protected under Part 708. On February 1, 1999, the complainant resigned his position with the contractor.

II. The Contractor's Motion for Summary Judgment

In its motion, the contractor argues that

> Seawalt's complaint fails for each of the following reasons:
>
> 1. Seawalt did not make a disclosure regarding safety concerns.
> 2. Seawalt did not reasonably believe the safety concerns represent specific and substantial dangers.
> 3. Contract Associates did not retaliate against Seawalt.
> 4. Seawalt has not been damaged by Contract Associates.
>
> Accordingly, Contract Associates is entitled to summary judgment against Seawalt dismissing his complaint.

Motion at 1.

The Part 708 regulations do not include procedures and standards governing summary judgment motions. I note that the Federal Rules of Civil Procedure provide that such a motion shall be granted "if the pleadings, depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." Fed. R. Civ. P. 56(c). Though the Federal Rules do not govern this proceeding, they may be used for analogous support, and Rule 56 presents a logical framework for evaluating the motion before me. Thus, I will not grant the motion absent a showing by the contractor that, upon the undisputed facts in the record, it is entitled to prevail as a matter of law.

In addition, prior cases of this office instruct that such a motion should only be granted if it is supported by "clear and convincing" evidence. Fluor Daniel Fernald, 27 DOE ¶ 87,532 at 89,163 (1999) (motion to dismiss should only be granted where there are clear and convincing grounds for dismissal); see also Boeing Petroleum Services, 24 DOE ¶ 87,501 at 89,005 (1994) (dismissal is "the most severe sanction that we may apply" and should be used sparingly). For the reasons discussed below, because I do not find clear and convincing evidence that the contractor is entitled at this point in the proceeding to prevail as a matter of law, I will deny the motion for summary judgment.

A. Whether Mr. Seawalt Did Not Engage in Activity Protected Under Part 708

The contractor contends in its motion that to "prevail on his 708 complaint, Seawalt must first prove he disclosed safety problems to LANL. Seawalt cannot do so. Contrary to the allegations of his complaint, Seawalt's testimony establishes that it was LANL who first reported safety concerns with the [office furniture] to Seawalt." Motion at 8. The contractor cites a July 11, 2000 deposition taken of Mr. Seawalt.

It is true that the July 11 deposition contains testimony by Mr. Seawalt that contradicts certain facts alleged in his complaint. For example, in his complaint Mr. Seawalt states, "I discovered that some of the product had warning labels which stated 'do not stack over 53 inches.'" Complaint at 3. In the excerpt of the July 11 deposition provided by the contractor, Mr. Seawalt testified that LANL personnel had seen the warning labels before he did. Transcript of July 11 Deposition at 76. However, Mr. Seawalt's complaint does not allege that he disclosed the existence of the warning labels to LANL. Moreover, there are at least

several other potentially protected activities alleged in Mr. Seawalt's complaint.

For example, Mr. Seawalt alleges that he "reported to Contract Associates that they had not followed the plans and specifications for the [furniture], . . ." Complaint at 3. He also alleges that he advised a LANL official that he was instructed by the president of Contract Associates to complete paperwork necessary to escort the president and another individual into a secure area at LANL, but to conceal from LANL the true reason for entering the secure area. Id. Mr. Seawalt states he was concerned that this was a violation of security regulations. Id.

In addition, in a November 30, 1998 letter to a LANL official, Mr. Seawalt opined that Haworth, the manufacturer of the office furniture,

> should have assembled the mock up at the factory and discovered the problem and not ship it to the client for possible injury and then 'cover up' a problem that was discovered during the installation. . . . . It's my recommendation that the existing 'prototype' furniture is removed from [LANL] and Haworth considers it a gift that [LANL] does not pursue the liability issue. . . . I truly feel that Haworth and Contract Associates have been dishonest in presenting this solution to both the DOE and [LANL] and have placed it in our facility in hopes we will accept the cost of them developing a prototype that they will profit from.

I make no finding here that these or any of Mr. Seawalt's other activities were protected under Part 708, as that is not the purpose of this decision. It is sufficient here to note only that I do not find undisputed facts upon which I can conclude that Mr. Seawalt did not engage in any protected activity.(2)

B. Whether Contract Associates Did Not Retaliate Against Mr. Seawalt

Part 708 prohibits reprisals by DOE contractors, specifically stating that a contractor "may not discharge or in any manner demote, reduce in pay, coerce, restrain, threaten, intimidate, or otherwise discriminate against any employee" because the employee has engaged in protected activity. 57 Fed. Reg. at 7542.

The contractor argues that it "did not take any action against Seawalt to force [his] resignation, such as using intimidation, threats, or coercion." Motion at 9. The contractor cites Mr. Seawalt's February 4, 1999 resignation letter, in which he states, "To be blamed for the failure of the project by the company that I represented gave me no choice but to remove myself from [Contract Associates] immediately." Letter from Edward J. Seawalt to Karen Ruben, Contract Associates, Inc. (February 4, 1999). The contractor also cites portions of Mr. Seawalt's July 11, 2000 deposition in which he describes in more detail the circumstances under which he felt he had been unfairly blamed. Transcript of July 11 Deposition at 196, 204, 206. The contractor concludes that Mr. Seawalt's "resignation was prompted merely by the president of Contract Associates criticizing his job performance in a conversation with the LANL contract administrator . . . . Absent other action, an employee's decision to resign because he objects to comments made by his employer does not establish retaliation." Motion at 10 (citing Matthew J. Rooks, 27 DOE ¶ 87,511 (2000)).

First, I do not find support in the Rooks decision for the proposition set forth by the contractor. The Hearing Officer in Rooks found that "the evidence does not support the conclusion that [the employer's] comments can be reasonably construed as the type of intimidation that would reasonably cause [the complainant] to resign." Rooks, 27 DOE at 89,278. The finding of the Hearing Officer was clearly based on the evidence presented in that case, and contrary to the contention of the contractor, implicitly allowed for the possibility as a general proposition that an employer's comments can be reasonably construed as the type of intimidation that would reasonably cause an employee to resign.

Moreover, the evidence highlighted by the contractor arguably shows only that Mr. Seawalt considered being unfairly blamed for the failure of a project to be the "last straw" that caused him to resign. This

interpretation is supported by the investigator's notes of her interview with Mr. Seawalt, in which he recounted a number of other events leading to his resignation. Investigator's Notes of June 15, 2000 Telephone Interview with Edward Seawalt. Again, I do not conclude here that the contractor took actions that forced Mr. Seawalt to resign. I simply cannot find that undisputed facts support a conclusion that the contractor did not retaliate against Mr. Seawalt, and therefore the contractor's motion cannot be granted on that basis.

C. Whether Mr. Seawalt Has Not Been Damaged by Contract Associates

Finally, the contractor contends that "Seawalt cannot establish that he is entitled to any relief from Contract Associates because he is unable to show that he was damaged by the alleged retaliation." Motion at 10. The contractor cites determinations by the OHA Director in decisions on two jurisdictional appeals filed by the complainant. Edward J. Seawalt, 27 DOE ¶ 87,541 (1999); Edward J. Seawalt, 27 DOE ¶ 87,558 (2000). In the first decision, the OHA Director described Mr. Seawalt as seeking

> employment-related relief in the form of any differential between his prior pay and benefits and his current pay and benefits at his new job. The complainant also seeks damages for emotional distress and the costs of defending the state court action. Finally, the complainant seeks to have the DOE seek relief against the Contractor for the alleged delay in the project attributable to the safety concerns.
>
> . . . .
>
> . . . [Part 708 does not] provide a remedy for a retaliatory state court action against an employee. Part 708 provides for employment-related relief and the recovery of the costs of pursuing a Part 708 complaint. Part 708 does not provide remedies for other negative actions that an employer can take. For example, Part 708 would not protect an employee against a fraud action brought by the employer. Indeed, much of the complainant's requested relief is beyond the scope of Part 708 (damages for emotional distress, repayment of the cost of defending the state court lawsuit, and a DOE action against the Contractor for the delay in the project).

Edward J. Seawalt, 27 DOE ¶ 87,541 at 89,199, 89,201; see also Edward J. Seawalt, 27 DOE ¶ 87,558 at 89,323 (Mr. Seawalt seeks "relief that is beyond the scope of Part 708.").

Regarding relief in the form of any differential between Mr. Seawalt's prior pay and benefits and his pay and benefits at his new job, the contractor presents persuasive evidence that the complainant suffered no loss in pay due to his resignation from Contract Associates. In the July 11, 2000 deposition, Mr. Seawalt testified that his new employer matched the salary that he was making at Contract Associates, and made his hiring "retroactive and picked up the missing days that I would have been unemployed." Transcript of July 11 Deposition at 179, 181.

However, as the contractor notes in its motion, Mr. Seawalt claims that he suffered two weeks of lost pay at his new job because he had to undergo surgery and had not accumulated the necessary medical leave. Motion at 11. But the contractor points to testimony that Mr. Seawalt's annual salary increased by $2,000 in June 1999, and argues that this increase "is more than enough to cover the lost two weeks of pay." I disagree with this argument's unstated premise. The contractor offers no logical reason why the complainant's salary increase should be used to offset his other damages, and I cannot find one based upon the facts before me. Thus, the extent of potential damages suffered by the complaint due to alleged retaliation is an issue of fact that clearly remains in dispute.

For the reasons stated above, I do not find undisputed facts in the record upon which I can conclude that

the contractor is entitled to prevail as a matter of law. I will therefore deny the present motion.

It Is Therefore Ordered That:

(1) The Motion for Summary Judgment filed by Contract Associates on August 23, 2000, Case No. VBZ-0047, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

Steven Goering

Staff Attorney

Office of Hearings and Appeals

Date: August 30, 2000

(1) Revisions to Part 708 took effect on April 14, 1999, including substantive changes to the scope of activity protected under 10 C.F.R. § 708.5. Criteria and Procedures for DOE Contractor Employee Protection Program, 64 Fed. Reg. 12862, 12863 (March 15, 1999). However, because the complainant's alleged protected activity and the retaliation alleged by the complainant took place prior to these revisions, I will apply the prior version of section 708.5 to this case. Linda D. Gass, 27 DOE ¶ 87,525 at 89,140-41 (1999) ("[T]o the extent that 10 C.F.R. § 708.5 defines the scope of employee disclosures that are protected from contractor retaliation, Part 708 clearly regulates the 'primary conduct' and affects the 'substantive rights' of the parties, and is thus subject to the presumption against retroactivity under well-established case law."); cf. Salvatore Gionfriddo, 27 DOE ¶ 87,544 at 89,224 (1999); Fluor Daniel Fernald, 27 DOE ¶ 87,532 at 89,164 (1999).

(2) I do not need to address the contractor's second argument in support of its motion, that Seawalt did not reasonably believe his safety concerns represented specific and substantial dangers, Motion at 8-9, because as a basis for summary judgment the argument is premised on the assumption that the only protected activity alleged by the complainant was a disclosure of a "substantial and specific danger to employees or public health or safety." 10 C.F.R. § 708.5(a)(1)(ii). In fact, other disclosures alleged by the complainant arguably fall under subsections (i) and (iii) of 10 C.F.R. § 708.5(a)(1).

Case No. VBZ-0057

November 1, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motions to Dismiss

Name of Petitioner: Janet K. Benson

Date of Filings: April 6, 2000

August 7, 2000

Case Numbers: VBZ-0057

VBZ-0058

This determination considers Motions to Dismiss(1) filed by Lawrence Livermore National Laboratory (Laboratory)(2) under the Department of Energy's (DOE's) Contractor Employee Protection Program, 10 C.F.R. Part 708. In these Motions, the Laboratory contends that the claims asserted by Janet Benson in OHA Case No. VWA-0044 are defective as a matter of law and should not be determined on the merits.(3)

The Laboratory makes the following arguments in support of these Motions:

> (1) The Laboratory cannot be held liable for any acts of reprisal that occurred prior to September 23, 1994, the date it agreed to comply with Part 708 (OHA Case No. VBZ-0057);
>
> (2) Because the United States District Court for the Northern District of California entered summary judgment in favor of the Laboratory on claims filed by Ms. Benson under Title VII of the Civil Rights Act of 1964, 42 U.S.C. §§ 2000e et. seq. (Title VII), and the Americans with Disabilities Act, 42 U.S.C. §§ 12203 et. seq. (ADA), the doctrine of collateral estoppel precludes Ms. Benson from litigating her claims under Part 708 (OHA Case No.VBZ-0057); and
>
> (3) Ms. Benson's claims concerning protected activities involving Building 415 must be dismissed because these claims were not filed timely or filed in the form that is required by the regulations (OHA Case No. VBZ-0058).

For the reasons detailed below, the Laboratory's Motions will be granted in part and denied in part.

I. THE CONTRACTOR EMPLOYEE PROTECTION PROGRAM

The Contractor Employee Protection Program was designed to protect the employees of DOE contractors who have made good faith disclosures about health, safety or management problems or who have refused to participate in work-related illegal or dangerous activities from acts of reprisal by their employers. See 57 Fed. Reg. 7533 (March 3, 1992).(4)

Part 708 prohibits a covered DOE contractor from discharging, demoting, reducing in pay, coercing, restraining, threatening, intimidating, or otherwise discriminating against an employee because he or she has engaged in activities that are protected under the regulations. 10 C.F.R. § 708.5. Part 708 protects an employee of a DOE contractor who engages in one of three different types of activities. Section 708.5(a)(1) protects an employee of a DOE contractor who discloses information to a DOE official, a member of Congress, or to the contractor (including any higher tier contractor) that the employee believes evidences (a) a violation of any law, rule or regulation, (b) a substantial and specific danger to employees or public health or safety, or (c) fraud, mismanagement, gross waste of funds or abuse of authority.

Section 708.5(a)(2) protects an employee who participates in a congressional proceeding or in a proceeding under Part 708.

Section 708.5(a)(3) protects an employee who refuses to participate in an activity when the employee's participation would constitute a violation of a Federal health or safety law, and, under certain circumstances, when the employee has a reasonable apprehension of serious injury to himself or others and the employee is not required to participate because of the nature of his or her employment responsibilities.

Section 708.9 sets forth the burden of proof for the employee and the employer. In order to prevail under Part 708, an employee must establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). If the complainant meets this burden, under Part 708 the burden shifts to the contractor "to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure. . . ." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993), citing McCormick on Evidence § 340 at 442 (4th ed. 1992).

The scope of Part 708 is limited. Section 708.5(b) provides that Part 708 will protect an employee of a DOE contractor only if the employee's actions relate to work performed by the contractor for DOE. Moreover, Part 708 does not protect contractor employees from acts of reprisal that result from discrimination on the basis of race, color, religion, sex, age, national origin, or other related reason. 10 C.F.R. § 708.2(b). Additionally, under § 708.2(a), for matters that do not involve health or safety, a contractor is not required to comply with the provisions of Part 708 unless it has signed a contract with DOE in which it has agreed to comply with the DOE Contractor Employee Protection Program. Mehta v. Universities Research Association, 24 DOE ¶ 87,514 (1995).

II. BACKGROUND

On August 4, 1986, the Laboratory hired Ms. Benson to work as a Senior Human Resources Specialist in the Personnel Operations Division of the Human Resources Department. In September of 1989, Ms. Benson transferred to the Education Program Division of the Human Resources Department (Education Division). OIG Exhibit 8.(5) After her transfer to the Education Division, Ms. Benson's office was located in the Almond Avenue School Office. OIG Report.

In 1991, Ms. Benson, working with the Director of the Education Division, obtained a grant from the National Science Foundation (NSF) to fund the National Physics Educational Program Collaboration (NPEPC Program). The NPEPC Program was designed to help retain and increase the number of minority students who were majoring in physics. The Laboratory and the California State University at Hayward (CSUH) jointly administered the NPEPC Program. Ms. Benson was appointed to serve as a "co-principal investigator" of the Program. OIG Report; OIG Exhibit 8.

On May 3, 1994, Ms. Benson filed a Part 708 complaint with DOE's Office of Contractor Employee Protection (OCEP).(6) In this complaint, Ms. Benson indicated that she had made disclosures about possible fraud and mismanagement in the administration of the NPEPC Program, and also alleged that the

Laboratory had retaliated against her for making these protected disclosures by removing her from the position of co-principal investigator of the program.(7) OIG Exhibit 1. At the time that Ms. Benson filed this complaint, the Laboratory had not yet agreed to comply with the provisions of Part 708. OIG Exhibit 3.

On July 13, 1994, Sandra Schneider, the Director of OCEP, sent a letter and a copy of Ms. Benson's Part 708 complaint to Robert W. Kuckuck, Ph.D., a Special Assistant to the President of the University of California. In this letter, Ms. Schneider asked the University to agree to be subject to the provisions of Part 708 in Ms. Benson's case. OIG Exhibit 3.

On September 1, 1994, Dr. Kuckuck indicated that the University would not agree to be subject to the provisions of Part 708 until the contract between the University and DOE had been amended, and that after the amendment of the contract, the University would not agree to the retroactive application of Part 708. OIG Exhibit 4. Soon thereafter, OCEP dismissed Ms. Benson's Part 708 complaint on the grounds that the Laboratory was not subject to the provisions of Part 708. OIG Report.

On September 23, 1994, the Laboratory modified its contract with DOE and agreed to comply with the provisions of Part 708. OIG Exhibit 61.

On or about October 12, 1994, Ms. Benson filed a second complaint under Part 708 with OCEP. In this complaint, Ms. Benson re-alleged the matters that she had raised in the complaint that had been filed in May of 1994, and also claimed that the Laboratory had retaliated against her by re- assigning and demoting her on September 23, 1994, and giving her an unsatisfactory performance appraisal on September 27, 1994.(8) OIG Report; OIG Exhibit 5.

In February of 1995, the Education Division moved from the Almond Avenue School Office to Building 415. Building 415 had been remodeled, and new carpeting was installed. Ms. Benson had a history of allergy problems and had a severe allergic reaction to the new carpets in Building 415. Because of her allergies, Ms. Benson told numerous Laboratory and DOE officials that she was unable to move into the building. For a substantial period of time, the Laboratory's medical staff restricted Ms. Benson from entering Building 415, and the Education Division permitted Ms. Benson to work in an office in a nearby trailer. OIG Report.

On November 29, 1995, at the Laboratory's request, Ms. Benson was evaluated by Abba Terr, M.D., an outside allergist. On December 27, 1995, Dr. Terr issued a report in which he concluded that Ms. Benson would not be able to enter Building 415 without becoming subjectively ill. This conclusion was based on Ms. Benson's severe reaction to Building 415, and Dr. Terr's inability to find objective evidence that Ms. Benson had a medical condition. OIG Exhibit 40.

On June 26, 1995, the management of the Education Division informed Ms. Benson that she was "released from work" and not expected to return because the Education Department was unable to reasonably accommodate her medical restrictions. Whether this action was with or without pay is unclear. OIG Exhibit 34. The management of the Education Division expressed concern that Ms. Benson's health would be at risk if she worked in Building 415 or any place else in the Laboratory, and that the Laboratory would be liable if Ms. Benson became seriously ill. OIG Exhibit 14.

Almost immediately, Ms. Benson reported her release from work to OCEP and to Mark Barnes, the official who served as the Part 708 Coordinator for the DOE Operations Office at Oakland. Ms. Benson told Mr. Barnes that she believed that she was being terminated because she was a whistleblower. In July of 1995, in an effort to investigate Ms. Benson's allegations, Mr. Barnes met with the management of the Education Division and other Laboratory officials. During this meeting, Mr. Barnes commented that Ms. Benson had filed a whistleblower complaint with DOE. OIG Exhibit 71.

By letter dated July 27, 1995, the management of the Laboratory informed Ms. Benson that she had not been terminated, but had been placed on leave with pay. Ms. Benson was also informed that if the

Laboratory was not able to reasonably accommodate her medical restrictions, it was possible that she could be medically separated from the Laboratory. OIG Exhibit 36.

On July 28, 1995, Ms. Benson filed a lawsuit in United States District Court for the Northern District of California in which she complained that she had been discriminated against because of her race. Employer's Post-Hearing Brief.

By letter dated August 25, 1995, the management of the Laboratory informed Ms. Benson that she would be on leave without pay until September 17, 1995, when she was scheduled to see a Laboratory physician to determine whether it would be necessary to continue the restriction from entering Building 415. Ms. Benson was again informed that if the Laboratory was not able to reasonably accommodate her medical restrictions, it was possible that she could be medically separated from the Laboratory. OIG Exhibit 37.

On September 10, 1995, Ms. Benson wrote a letter to Hazel O'Leary, the Secretary of DOE, stating that she was a whistleblower, and that the Laboratory had retaliated against her for making protected disclosures by requiring her to work in an environment that contained chemicals and toxins to which she was allergic. Ms. Benson also stated that the Laboratory had released her from her work assignments, placed her on leave, and strongly suggested that she leave on disability or the Laboratory could medically separate her from her employment. Ms. Benson expressed concern that she would lose her job because she was unable to work in this environment. Ms. Benson asked Secretary O'Leary to intercede on her behalf, and to prevent the Laboratory from putting forth any further acts of retaliation. OIG Exhibit 7.

On January 31, 1996, the management of the Education Division asked the Laboratory's Human Resources Department to medically separate Ms. Benson on the grounds that she was permanently restricted from entering Building 415 and no longer able to perform the essential assigned functions of her job. OIG Exhibit 44.

In March of 1996, the Laboratory terminated Ms. Benson's employment based on her "inability to perform essential, assigned functions fully" because of her medical condition. OIG Exhibit 49.

On March 6, 1996, Ms. Benson filed a lawsuit in state court in which she alleged that the Laboratory had terminated her employment in violation of the ADA. The Laboratory removed this action to Federal court, and these claims were subsequently consolidated with the Title VII action Ms. Benson filed and that was pending in the United States District Court for the Northern District of California. Employer's Post-Hearing Brief.

On July 25, 1996, Sandra Schneider, the Director of OCEP, wrote a letter to the Director of the Laboratory in which she stated that OCEP would be investigating the Part 708 complaint that had been filed by Ms. Benson. Ms. Schneider indicated that OCEP's investigation would focus on Ms. Benson's 1993 disclosures about possible fraud and mismanagement by the Laboratory in the administration of the NPEPC Program and Ms. Benson's refusal to participate in these activities, and the Laboratory's alleged acts of reprisal against Ms. Benson for making these protected disclosures. Employer's Post-Hearing Brief, Exhibit A.

Ms. Schneider specifically informed the Laboratory that the following matters would be investigated:

(1) The propriety of the Laboratory's reassignment of Ms. Benson on September 23, 1994;

(2)The propriety of the performance appraisal that was given to Ms. Benson on or about September 26, 1994;

(3) Whether the Laboratory intentionally exposed Ms. Benson to various chemicals to which she was allergic when they re-assigned her to new office space;

(4)The propriety of the Laboratory's refusal to provide reasonable accommodation regarding Ms. Benson's allergies; and

> (5) The propriety of the Laboratory's termination of Ms. Benson's employment based on health reasons in early 1996.

Id.

In this letter, Ms. Schneider also stated that "[i]t is possible that information gathered during the investigative process may result in the identification of additional issues to be investigated." Id.

On October 14, 1997, the United States District Court for the Northern District of California entered summary judgment in favor of the Laboratory on the claims filed by Ms. Benson under Title VII and the ADA, and vacated the proceedings. Employer's Post-Hearing Brief, Exhibit C.

On April 13, 1999, the Office of the Inspector General(9) issued the OIG Report in response to Ms. Benson's complaint under Part 708. The OIG Report reflects the comprehensive investigation conducted by OCEP and the Office of the Inspector General, and concludes that Ms. Benson's request for relief should be denied. The Office of the Inspector General sent copies of the OIG Report to Ms. Benson and the Laboratory. Ms. Benson's letter to Secretary O'Leary was appended as an exhibit to the OIG Report.

Subsequently, under 10 C.F.R. § 708.9, Ms. Benson requested that the Office of Hearings and Appeals (OHA) convene a hearing to adjudicate the issues that had been raised in her Part 708 complaint. In response to this request, a hearing was held before the undersigned Hearing Officer. During the hearing, both the Laboratory and Ms. Benson presented evidence concerning Ms. Benson's inability to enter Building 415, and the statements that Ms. Benson made to Laboratory management and DOE officials concerning her inability to enter the building because of her allergies. Both parties also introduced evidence of the circumstances surrounding Ms. Benson's termination for medical reasons.

After the hearing, both counsel filed post-hearing submissions. Because these submissions did not address several significant legal issues, counsel were asked to brief the following issues:

> (1) Whether Ms. Benson engaged in protected activity under § 708.5(a)(3) by refusing to work in Building 415, and whether the Laboratory retaliated against Ms. Benson for engaging in this activity;
>
> (2) Whether Ms. Benson made disclosures that were protected under § 708.5(a)(1) when she informed several DOE officials and Laboratory employees that she believed it was unsafe for her to enter certain buildings at the Laboratory, and whether the Laboratory retaliated against Ms. Benson for making these statements; and
>
> (3) Whether Ms. Benson is precluded from raising these claims because she failed to file a formal complaint under § 708.6, and failed to raise these issues at an earlier time.

In her supplemental submission, Ms. Benson alleged that she had engaged in protected activity under § 708.5(a)(3) by refusing to work in Building 415, and had made protected disclosures under § 708.5(a)(1) by informing several DOE and Laboratory employees that it was unsafe for her to enter certain buildings at the Laboratory. Ms. Benson also argued that OHA has jurisdiction to adjudicate these claims. In its supplemental submission, the Laboratory argued that these claims must be dismissed because they were not filed on time or in the form required by the regulations.

III. ANALYSIS

A. Liability For Events that Occurred Prior to September 23, 1994

The Laboratory contends that many of Ms. Benson's claims under Part 708 are invalid because the alleged

protected disclosures and many of the alleged acts of retaliation occurred before September 23, 1994, the date that the Laboratory agreed to be bound by the provisions of Part 708. The Laboratory argues that Ms. Benson is seeking to make Part 708 retroactively effective by attempting to hold it legally responsible for "protected activities" that were not legally protected when they occurred and acts of reprisal committed by the Laboratory before the date that it agreed to be bound by the provisions of Part 708. For the reasons detailed below, I have determined that the Laboratory is partially correct.

Under § 708.2, Part 708 did not automatically become applicable to all DOE contractors on the date that the regulations became effective. Rather, after the effective date of the regulations, Part 708 only became applicable "to complaints of reprisal . . . that stem from disclosures, participation, or refusals involving health and safety matters, if the underlying procurement contract . . . contain[ed] a clause requiring compliance with all applicable safety and health regulations and requirements of DOE (48 CFR 970.5204-2)." For complaints of reprisal that did not involve health and safety matters, Part 708 was "applicable to acts of reprisal . . . **if the underlying procurement contract . . . contain[ed] a clause requiring compliance with this part**." 10 C.F.R. § 708.2. (Emphasis added.)

Ms. Benson's statements about the NPEPC program did not involve matters of health and safety. Part 708 may thus only be invoked to protect Ms. Benson for making these statements if the procurement contract between DOE and the Laboratory contained a clause requiring compliance with Part 708 at the time that the Laboratory engaged in the alleged acts of reprisal. As the Laboratory did not sign such a contract until September 23, 1994, Ms. Benson may not seek redress under Part 708 for acts of reprisal that the Laboratory committed prior to the date. Mehta v. Universities Research Ass'n, 24 DOE ¶ 87,514 (1995). However, under the plain language of Section 708.2, the Laboratory is legally responsible for acts of reprisal that it committed after September 23, 1994, the date it agreed to comply with the provisions of Part 708, and the date that the employee engaged in the protected conduct that precipitated the act of reprisal is irrelevant. See Richard W. Gallegos, 26 DOE ¶ 87,502 (1996); See also Caminetti v. United States, 242 U.S. 470, 485 (1917)("the meaning of a statute must, in the first instance, be sought in the language in which the act is framed, and if that is plain, . . . the sole function of the courts is to enforce it according to its terms.")

The Laboratory argues that this construction of Part 708 imposes retroactive liability upon it because the Laboratory would be liable for acts of reprisal committed against Ms. Benson for engaging in protected activities before the Laboratory agreed to be bound by the regulations. This argument must be rejected. The Laboratory is only liable under Part 708 for actions that were taken after the regulations became effective and the Laboratory agreed to comply with the regulations. In other words, the Laboratory did not become liable under Part 708 until it had actual knowledge of its contractual and regulatory obligations, and could prospectively avoid liability by complying with the regulations. It is clear that this construction of Part 708 does not impose retroactive liability on the Laboratory.

As the Supreme Court recognized in Landgraf v. USI Film Products, 511 U.S. 244 (1994):

> While statutory retroactivity has long been disfavored, deciding when a statute operates "retroactively" is not always a simple or mechanical task. . . . A statute does not operate "retrospectively" merely because it is applied in a case arising from conduct antedating the statute's enactment . . . or upsets expectations based in prior law. Rather, the court must ask whether the new provision attaches new legal consequences to events completed before its enactment. The conclusion that a particular rule operates "retroactively" comes at the end of a process of judgment concerning the nature and extent of the change in the law and the degree of connection between the operation of the new rule and a relevant past event.

Id., at 268-269.

The Court further explains that, in order to determine whether a statute imposes retroactive liability, it is necessary to ascertain whether the statute:

> would impair rights a party possessed when he acted, increase a party's liability for past conduct, or impose new duties with respect to transactions already completed.

Id., at 280.

Here, holding the Laboratory responsible for the acts of reprisal it committed against Ms. Benson after September 23, 1994 would not impair the rights that the Laboratory possessed when it acted, increase its liability for past conduct or impose new obligations for transactions that have been completed.

As this construction of Part 708 does not impose retroactive liability upon the Laboratory, I hold that the Laboratory is responsible for acts of reprisal committed after September 23, 1994, even if such acts were committed in response to activities that occurred before September 23, 1994. I also hold that OHA has jurisdiction to adjudicate the following matters that involve protected activities that occurred before the Laboratory agreed to comply with Part 708:

> 1)Whether Ms. Benson's disclosures about the NPEPC program were a contributing factor in the Laboratory's decision in September of 1994 to assign Ms. Benson to work in the Laboratory's Apprenticeship Program;
>
> 2)Whether Ms. Benson's disclosures about the NPEPC program were a contributing factor in the "less than satisfactory" performance appraisal that Ms, Benson received on September 27, 1994; and
>
> 3)Whether Ms. Benson's disclosures about the NPEPC program were a contributing factor in the Laboratory's decision to terminate Ms. Benson's employment because she was unable to enter Building 415.

B. Collateral Estoppel

The Laboratory also contends that the doctrine of collateral estoppel mandates the dismissal of Ms. Benson's claims under Part 708. More specifically, the Laboratory alleges that Ms. Benson should be estopped from litigating her claims under Part 708 because the United States District Court for the Northern District of California entered summary judgment in favor of the Laboratory on Ms. Benson's claims that the Laboratory violated Title VII and the ADA by changing her work assignments and terminating her employment in February of 1996. Benson v. Lawrence Livermore National Laboratory, No. C95-2746 FMS (October 14, 1997).(10) This argument lacks merit.

In general, collateral estoppel bars re-litigation of issues in a subsequent proceeding when: (1) the party against whom the doctrine is asserted was a party to the earlier proceeding; (2) the issue was actually litigated and decided on the merits; (3) the issues are identical; and (4) the party against whom the earlier decision is asserted had a "full and fair" opportunity to litigate the claim or issue. Duncan v. Clements, 744 F.2d 48 (8th Cir. 1984).

Here, collateral estoppel will not bar Ms. Benson's claims under Part 708 for several reasons. First, Ms. Benson's did not file a claim under Part 708 in the United States District Court for the Northern District of California. As a result, Ms. Benson's claims under Part 708 were not actually litigated and decided in that proceeding.

Second, Ms. Benson is not precluded from litigating her Part 708 claims because the District Court did not decide any of the issues that must be determined in this proceeding. In terms of Ms. Benson's claims under the ADA, the Court granted summary judgment for the Laboratory because it found that Ms. Benson's ADA claim failed "as a matter of law because she does not have a ?disability' as defined by the statute." Memorandum Opinion at 10.(11) Clearly, the District Court's finding that Ms. Benson does not have a disability as that term is defined in the ADA is irrelevant to the issues that must be determined in a

Part 708 proceeding, and will not preclude Ms. Benson from pursuing her claims in this forum.

In terms of the Title VII claims, the District Court entered summary judgment in favor of the Laboratory because it found that the Laboratory offered a legitimate non-discriminatory reason for changing Ms. Benson's work assignments and for terminating her employment at the Laboratory, and also found that Ms. Benson had failed to produce evidence that the Laboratory's explanation was a pretext for discriminatory or retaliatory behavior.(12) The Laboratory contends that Ms. Benson is precluded from contesting the legitimacy of the Laboratory's proffered reasons for changing her work assignments or for terminating her employment because these matters were conclusively determined by the Federal Court's grant of summary judgment in favor of the Laboratory. The Laboratory's argument is not persuasive.

An action under Title VII is very different from an action under Part 708. Title VII and Part 708 protect different interests. Title VII makes it unlawful for an employer to discriminate against any employee on the basis of race, color, religion, sex or national origin, or to retaliate against an employee who has engaged in activity that is protected under that statute. Title VII of the Civil Rights Act of 1964, 42 U.S.C. §§ 2000e et. seq. On the other hand, Part 708 prohibits a DOE contractor from retaliating against an employee who "blows the whistle" about problems at the workplace.

Moreover, Part 708 and Title VII use different standards and varying burdens of proof to evaluate the propriety of an employer's actions. To prevail in a proceeding under Part 708, an employee must establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). Under Part 708, if the employee meets this burden, then the government contractor must prove by "clear and convincing evidence" that the same personnel action would have been taken absent the complainant's disclosure. 10 C.F.R. § 708.9(d). Under Title VII, after an employee has made a prima facie case of disparate treatment or retaliatory action, the burden shifts to the employer to articulate a legitimate non- retaliatory motive for its action. See Fisher v. Vassar College, 114 F.3rd 1332 (2d Cir. 1997). The standards imposed upon the employer as well as the employer's burden of proof in a Title VII suit is much less demanding than the contractor's burden of proof under part 708.(13) Accordingly, the issues determined by the United States District Court for the Northern District of California were not the same as the issues that must be determined in this action, and Ms. Benson is not precluded from disputing the Laboratory's proffered reasons for changing Ms. Benson's work assignments or for terminating her employment.

Finally, as Ms. Benson had not exhausted the administrative procedures set forth in Part 708 at the time that her case was pending in Federal court, she could not yet have filed her claims under Part 708 in the United States District Court. Ms. Benson therefore did not have a "full and fair opportunity" to litigate her claims under Part 708 in the earlier proceeding. For all of these reasons, the doctrine of collateral estoppel will not preclude Ms. Benson from litigating her claims under Part 708. See also Carl J. Blier, 27 DOE ¶ 87,514 (1999).

C. Ms. Benson's Claims Concerning Building 415

The Laboratory argues that OHA does not have jurisdiction to determine Ms. Benson's claims concerning Building 415. Here, the Laboratory contends that Ms. Benson failed to properly allege that she was discharged because she had made protected disclosures about the NPEPC program, and not because of her inability to enter Building 415. The Laboratory also requests the dismissal of Ms. Benson's claims that she engaged in protected activities under Sections 708.5(a)(1) and 708.5(a)(3) when she complained about, and refused to enter, Building 415 because these claims were not raised until after the hearing was held, and not filed in the form required by the regulations.

1. Ms. Benson's claim of retaliatory termination

OHA has jurisdiction to adjudicate Ms. Benson's claim that she was terminated in retaliation for making protected disclosures about the NPEPC program. First, Ms. Benson has alleged that, from the time that she first made disclosures about the NPEPC program, the Laboratory has continuously attempted to violate her rights under Part 708. Courts have long held that a plaintiff's time to file a complaint is extended when a defendant has continuously attempted to violate rights that are protected by federal law. See Schlei & Grossman, Employment Discrimination Law. Second, as set forth in the Factual Background, OCEP treated Ms. Benson's claim of retaliatory termination as if it had been properly filed, and OCEP's determination concerning such matters is entitled to "great deference." See Udall v. Tallman, 380 U.S. 1 (1965). Third, the Laboratory will not be prejudiced if Ms. Benson's claim of retaliatory termination is decided on the merits. As set forth in the Factual Background, the Laboratory had long been aware that Ms. Benson was claiming that she was terminated in retaliation for making protected disclosures. On July 25, 1996, the Director of OCEP told the Laboratory that Ms. Benson's claims of retaliatory termination were being investigated, and, after the completion of the investigation, the Laboratory was fully informed of the results of this investigation.

2. Ms. Benson's claims of protected activity

The Laboratory requests the dismissal of Ms. Benson's claims that she engaged in protected activities under Sections 708.5(a)(1) and 708.5(3) when she complained about, and refused to enter, Building 415 because these claims were not raised until after the hearing was held, and not filed in the form required by the regulations. The Laboratory's argument concerning Ms. Benson's claim that she made protected statements about Building 415 under Section 708.5(a)(1) is not persuasive. The Laboratory will not be prejudiced if the claim under Section 708.5(a)(1) is adjudicated on the merits. The Laboratory was well aware that Ms. Benson had complained to Laboratory and DOE officials that she had been unable to enter Building 415 because of her health. The Laboratory also knew that Ms. Benson had claimed that her "medical separation" was an act of reprisal by the Laboratory for making protected disclosures. During the hearing, the Laboratory presented substantial evidence concerning these issues. The fact that Ms. Benson is now contending that her statements about Building 415 are themselves protected disclosures does not prejudice the Laboratory or require it to present any additional evidence.(14) Accordingly, Ms. Benson's statements about Building 415 will be treated as protected disclosures under Section 708.5(a)(1).(15)

However, because the evidence required to prove a prima facie case under Section 708.5(a)(3) is very different from the evidence required to prove a prima facie case under Section 708.5(a)(1), the Laboratory will be prejudiced if it is not allowed to present any additional evidence or make legal arguments to rebut Ms. Benson's claim that she engaged in protected activity under Section 708.5(a)(3) by refusing to enter Building 415. Thus, the record in this case will be reopened for the limited purpose of permitting the Laboratory to supplement the record by presenting its defenses to Ms. Benson's claim that her refusal to enter Building 415 was a protected activity under Section 708.5(a)(3) that contributed to the Laboratory's decision to terminate her employment.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Lawrence Livermore National Laboratory on April 6, 2000, in Case No. VBZ-0057 is granted in part and denied in part as set forth in Paragraphs (3) and (4) below. In all other respects, this Motions is denied.

(2) The Motion to Dismiss filed by Lawrence Livermore National Laboratory on August 7, 2000, in Case No. VBZ-0058 is granted in part and denied in part as set forth in Paragraphs (5) and (6) below. In all other respects, this Motions is denied.

(3) As the Laboratory cannot be held liable for any acts of reprisal that occurred prior to September 23, 1994, all claims based on acts of reprisal that occurred before this date must be dismissed.

(4) Janet Benson is not "collaterally estopped" from litigating her claims under Part 708 because the

United States District Court for the Northern District of California entered summary judgment in favor of the Laboratory on claims that she filed under Title VII of the Civil Rights Act of 1964, 42 U.S.C. §§ 2000e et. seq. (Title VII), and the Americans with Disabilities Act, 42 U.S.C. §§ 12203 et. seq. (the ADA).

(5) OHA has jurisdiction to determine Ms. Benson's claims that she was terminated in retaliation for making protected disclosures about the National Physics Educational Program Collaboration;

(6) Although OHA has jurisdiction to determine Ms. Benson's claims that she made protected disclosures about Building 415 under Section 708.5(a)(1) and engaged in protected activity under Section 708.5(a)(3) when she refused to enter Building 415, the record in this case will be reopened for the limited purpose of permitting the Laboratory to supplement the record and present a complete defense to Ms. Benson's claim under Section 708.5(a)(3).

(7) This is an Interlocutory Order of the Department of Energy.

Linda Lazarus

Hearing Officer

Office of Hearings and Appeals

Date: November 1, 2000

(1)Notwithstanding the fact that the Laboratory made these arguments in post-hearing submissions, they are properly treated as motions to dismiss because the Laboratory requested the dismissal of Ms. Benson's claims as a matter of law. The arguments contained in the post-hearing submission filed on April 6, 2000, are designated as Case No. VBZ-0057. The arguments contained in the post-hearing submission filed on August 7, 2000, are designated as Case No. VBZ-0058.

(2)The Laboratory is a facility of the University of California. Any reference to the Laboratory in this decision is intended to refer to the University of California and the Regents of the University of California.

(3)Ms. Benson has alleged that the Laboratory violated the provisions of Part 708 by instituting adverse actions against her because she made protected disclosures about the Laboratory's involvement in the administration of the National Physics Education Program Collaboration (NPEPC Program). Ms. Benson also alleges that the Laboratory violated Part 708 when it terminated her employment because she refused to work in an office that endangered her health. Ms. Benson further contends that the reasons proffered by the Laboratory for the adverse actions taken against her are pretextual, and also asserts that she is the only person who has been "medically separated" from the Laboratory because of allergies in the last twenty years.

(4)On April 14, 1999, an "Interim Final Rule" that revised the procedures and criteria for Part 708 became effective. 64 Fed. Reg. 12,862 (March 15, 1999). As Ms. Benson's complaint was filed before the effective date of the Interim Final Rule, this matter must be adjudicated in accordance with the substantive standards set forth in the original version of Part 708. See Linda D. Gass, 27 DOE ¶ 87,525 (1999). Accordingly, unless otherwise indicated, all references to Part 708 or the regulations contained in Part 708, refer to the provisions of Part 708 that were in effect before April 14, 1999.

(5)On April 13, 1999, the Office of the Inspector General issued a Report of Inquiry and Recommendations in response to Ms. Benson's Part 708 complaint (OIG Report). The exhibits appended to the OIG Report are referred to as "OIG Exhibits."

(6)Ms. Benson sent a copy of this complaint to Mark Barnes, a DOE official who served as the Contractor Industrial Relations Specialist and Part 708 Coordinator for the DOE Operations Office in Oakland. OIG

Exhibit 1.

(7)Ms. Benson also made other allegations in this complaint.

(8)Ms. Benson also made other allegations in this complaint.

(9)While this investigation was pending, the Office of the Inspector General became responsible for conducting investigations under Part 708.

(10)Ms. Benson also filed claims under the California Fair Housing and Employment Act (FEHA) in the District Court. However, except for two footnotes which indicated that California courts generally rely upon federal interpretations of the ADA and Title VII to interpret analogous provisions of the FEHA, the District Court did not address the claims that Ms. Benson had filed under FEHA. Employer's Post-Hearing Brief, Exhibit C.

(11)In entering summary judgment for the Laboratory on the ADA claims, the District Court failed to address the issues of whether Ms. Benson was qualified to perform the essential functions of her job, or whether the Laboratory terminated her because of her disability. Memorandum Opinion at 6-10.

(12) It appears that the Court was unable to determine whether Ms. Benson had made a prima facie case of disparate treatment under Title VII. The Court also found that Ms. Benson could not show a causal link between the filing of her EEOC complaint on March 15, 1994, and her discharge on March 22, 1996. Memorandum Opinion at 10-14.

(13)Our cases make it clear that the contractor in a Part 708 proceeding has a much heavier burden of proof than the employee. We have held that this burden of proof may be met if a contractor demonstrates that it treated similarly situated employees in the same manner as the employee who made the protected disclosure, and that it followed its own internal procedures when taking adverse actions against an employee who made protected disclosures. See Linda D. Gass, 27 DOE ¶ 87,523 (1999) (Granting petitioner's motion for discovery of layoff procedures and information regarding employees who were situated similarly to the employee who had made protected disclosures).

(14)The Laboratory has argued that Ms. Benson's statements about her inability to enter Building 415 do not rise to the level of a protected disclosure under the regulations because §708.5(a)(1)(ii) requires that a protected disclosures involve "substantial and specific danger to employees or public health and safety," and Ms. Benson only complained about her own health. This argument is without merit. Part 708 is remedial in nature, and should not be construed in an overly technical manner to the detriment of the individuals who that the regulations were designed to protect. See Sandia National Laboratories, 23 DOE ¶ 87,501 (1993) (Sandia).

(15)The Laboratory claims that it has been prejudiced by allowing Ms. Benson to go forward on this issue because Ms. Benson's original complaint under Part 708 did not arise from protected disclosures involving matters of health and safety. This argument is not persuasive. The Laboratory was aware of the general nature of this claim, and employees filing complaints under Part 708 must not be held to the strictest standard of technical pleading. See Sandia.

May 8, 2002

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Interlocutory Decision

Name of Petitioner: Sue Rice Gossett

Date of Filing: May 25, 2001

Case Number: VBZ-0062

This Initial Agency Decision concerns a whistleblower complaint filed by Sue Rice Gossett (Gossett) against her former employer, the Safety and Ecology Corporation (SEC), under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. SEC is a sub-contractor of Bechtel Jacobs Corporation (BJC), the DOE's Managing Contractor at the Portsmouth Site in Piketon, Ohio (Portsmouth). Gossett alleges that she engaged in activity protected by Part 708 and, as a result, was retaliated against by SEC. As discussed below, I have determined that Gossett is entitled to relief.

The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard public and employee health and safety; ensure compliance with applicable laws, rules, and regulations; and to prevent fraud, mismanagement, waste and abuse at DOE's government-owned, contractor-operated facilities by encouraging contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices. 57 Fed. Reg. 7533 (March 3, 1992). In order to achieve these objectives, the regulations protect whistleblowers from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10, Part 708 of the Code of Federal Regulations. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed, to a DOE official or to a DOE contractor, information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation; or fraud, gross mismanagement, gross waste of funds, or abuse of authority. *See* 10 C.F.R. §§ 708.5(a)(1), (3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to an investigation by an investigator from the Office of Hearings and Appeals (OHA), an independent fact-finding and a hearing by an OHA Hearing Officer, and an opportunity for review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

Procedural History

Gossett filed a whistleblower complaint with the DOE's Oak Ridge Operations Office on January 23, 2001. By a memorandum dated February 13, 2001, the Oak Ridge Operations Office forwarded it to the OHA. This complaint was received by the OHA on February 22, 2001 and OHA Attorney Kent Woods was appointed as the Complaint Investigator on February 23, 2001. (1) Mr. Woods conducted an investigation of the allegations in the Complaint and on May 24, 2001, issued a Report of Investigation (the ROI). The ROI found that Gossett had made several protected disclosures and had suffered an adverse

employment action, her January 19, 2001 termination. Citing both the temporal proximity between some of the protected disclosures and her termination as well as evidence reflecting manifest hostility on the part of SEC managers to Gossett's protected activity, the ROI found that Gossett's protected activities were a contributing factor to SEC's decision to terminate her employment. The ROI accordingly concluded that the evidence in the record of the investigation was sufficient to shift the burden from Gossett to SEC to prove by clear and convincing evidence that it would have terminated her even if she had not engaged in protected activity. The ROI further concluded that, at that stage, SEC had not met this burden.

Pursuant to 10 C.F.R. § 708.21(a)(2), the case proceeded to a hearing. On May 24, 2001, I was appointed as Hearing Officer by the Director of the Office of Hearings and Appeals. My appointment as Hearing Officer was followed by a period in which the parties engaged in discovery. A hearing was held on October 23, 24, and 25, 2001, in Piketon, Ohio. The hearing was followed by an exchange of briefs, and the Record of this proceeding was closed on February 15, 2002, when OHA received Gossett's Reply to SEC's Post Hearing Brief.

Background

The Complainant, Sue Rice Gossett began working for the Portsmouth Site's radiation control program in February 1996. (2) Although Gossett had a Bachelors Degree in Sociology and an Associates Degree in Health Physics, she was originally employed as an office clerk at the Portsmouth Site. While in this position she attended a six week night course which trained her for the position of Radiation Control Technician (RCT). There were two examinations in this course, one for core academic material and one for site specific material. She successfully passed these exams in August and September 1997 and was hired as an RCT at the Portsmouth Site on October 3, 1997. She was hired by Bartlett Nuclear Services, the subcontractor which supplied RCTs to the Portsmouth Site at that time.

In March 1999, SEC took over the contract for RCT services at the Portsmouth Site. Gossett was interviewed and hired for a junior RCT position with SEC in that month. In June 2000, while Mr. Phil Borris was SEC's Manager at the Portsmouth Site, Gossett was subsequently promoted to the position of senior RCT. During her three years as an RCT at Portsmouth, Gossett's performance was consistently evaluated as at least satisfactory.

DOE guidelines require that RCTs receive continuing education in radiation control. According to DOE guidelines, RCTs should be re-qualified every 24 months in order to document this continuing education process. Gossett took her first re-qualification examination on December 22, 2000. The examination consisted of a total of 100 questions. In order to pass the examination a score of at least 80 percent was required. Gossett received a score of 74 percent on her first examination. On January 8, 2001, Gossett took a second re-qualification examination. Again the examination consisted of a total of 100 questions and required a score of at least 80 percent to pass. Gossett received a score of 73 percent on this second examination. On January 12, 2001, Gossett was informed by SEC management that she would be terminated if she failed to obtain a passing score on her third examination. On January 19, 2001, Gossett was administered a third examination. Immediately after she finished taking the third examination, it was assigned a grade of 74 percent. Within 4 hours of completing the third examination, Gossett's employment with SEC was terminated.

The Complainant contends that SEC used her failure to pass this third examination as a pretext in order to obscure its true motivation: retaliation against the Complainant for her whistleblowing activities. (3) SEC maintains it terminated Gossett because, upon her failure of a third re-qualification examination, she was no longer qualified to work as an RCT at the Portsmouth site and SEC did not have any other open positions for which she was qualified.

It is the burden of the Complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate as described in § 708.5,

and that such act was a contributing factor to one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. *See Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); McCormick on Evidence § 339 at 439 (4th Ed. 1992). (4)

Gossett's Protected Disclosures

In the present case, it is clear, as indicated by the evidence set forth in the appendix to this decision, that Gossett made numerous protected disclosures between March 1, 1999, and January 19, 2001, the period in which she was employed as an SEC RCT at the Portsmouth Site. (5) The significance of the evidence set forth in the appendix is threefold. First, it clearly shows that Gossett made numerous protected disclosures during her tenure with SEC. Second, it shows that Gossett's disclosures led to embarrassment and friction at the Portsmouth Site. Third, its shows a recurring pattern under which Gossett would make protected disclosures and then be reassigned to a different part of the Portsmouth Site.

Adverse Personnel Actions

Adverse personnel actions were taken by SEC employees against Gossett during her tenure with SEC as an RCT. The information set forth in the appendix reveals that Gossett was repeatedly taken off projects soon after she reported health or safety issues. This pattern of repeated reassignments constitutes an adverse personnel action, since it served to intimidate and harass Gossett as well as undermine her authority and stature as an RCT. More importantly, Gossett was fired on January 19, 2001. A termination clearly constitutes an adverse personnel action.

Gossett's Protected Disclosures Were a Contributing Factor to Several Adverse Personnel Actions

Having established, by a preponderance of evidence, that she (1) had made protected disclosures under 10 C.F.R. § 708.5, and (2) incurred several adverse personnel actions, Gossett must also show, by a preponderance of evidence, that her protected disclosures were a contributing factor to her adverse personnel actions. Gossett has met this burden. Specifically, the record contains evidence of a recurring pattern of hostility towards Gossett on the part of various managers at the Portsmouth Site that appears to be directly related to her whistleblowing. The record also establishes temporal proximity between Gossett's protected disclosures and the adverse personnel actions.

A Pattern of Hostility

Gossett's protected disclosures inspired hostility on the part of Gossett's co-workers and managers. For example, a July 18, 2000 report issued by Bonnie Spencer, BJC's Quality Engineer, entitled "Investigation of possible HF Exposure in the L-Cage" states in pertinent part: " This is not the first incident involving a disagreement between [Gossett] and the L-Cage supervisor. There have been personality clashes between them in the past, and also between [Gossett] and Waste Management personnel in other facilities."

A September 8, 2000 e-mail from SEC's then site manager Dave Hall to Gossett's supervisor Delores Stowe reflects the hostility of some of Gossett's co-workers to her whistleblowing, while showing that SEC's past management was appropriately supportive of her protected activities. Hall's e-mail states in pertinent part:

> I did not get a chance to talk to Sue [Gossett]. Please provide her with the following

> information.
>
> The PACE employees on the job she is supporting have commented to BJC regarding the note taking that Sue is doing. They expressed comment that the note taking might be directed at their performance. Neither BJC or SEC have any concern over the note taking. BJC is going to discuss the situation with the PACE workers. If there are any actions taken by anyone directed toward her, please let us know and we will address it through BJC.

September 8, 2000 E-mail from Dave Hall to Delores Stowe.

Apparently, Gossett's whistleblowing activities were of great concern to Dave Hall's successor as SEC's Portsmouth Site Manager, Joseph Shuman. After a November 17, 2000 meeting between Gossett and another SEC employee with a BJC official, Michael J. Eversole, Shuman wrote the SEC employees a memo in which he stated:

> It has come to my attention that you spent approximately 1.5 hours in a meeting this afternoon with Mike Eversole. I can only assume that a meeting for this length of time, with both of you in attendance, must involve a relatively significant issue that crosses the line of industrial and radiological safety.
>
> I expect that issues of this nature be brought to my attention immediately. I also expect that Angie Peterson and Delores Stowe, since they are in the RCT supervisory chain, would be informed immediately. I further expect that a lengthy meeting with the BJC PHP, Mike Eversole, regarding such issues would be attended by myself, Angie Peterson, and Delores Stowe.
>
> In the future, you are directed to contact me, in writing, of the nature of this meeting and its applicability to a project or activity in order for me to validate the time on your time sheets. Without this information, I cannot sign off for reimbursement from BJC. . . .

November 17, 2000 Memorandum from Joseph Shuman, SEC Senior Site Manager, to Rodney Gossett and Susan Rice [now Susan Gossett]. Shuman was well aware of, and clearly displeased by, Gossett's whistleblowing activities at the time that he wrote this memorandum. In that context, it is clear that this memorandum was an overt warning against further whistleblowing. Shuman's testimony at the OHA hearing strongly supports this inference. 10-24-01 Tr. at 149. At the hearing, Shuman admitted that he suspected that Gossett was discussing health and safety issues with Mr. Eversole. *Id.* at 147. Shuman then further admitted that he didn't ask other employees to provide written justifications for participation in meetings. *Id.* at 148.

Shuman's testimony at the hearing further revealed the discomfort Gossett's whistleblowing activities caused him. Shuman testified that he told Gossett [and another SEC employee, her soon-to-be husband, Rodney Gossett] that if he had their concerns he would not express them or handle them in the same way, and that if he had felt the way they did, he would leave the site and find another job. *Id.* at 150-151. Shuman further testified:

> . . . I did not agree with their perspective that the health and safety was that significantly compromised and, although I respect their rights under the law, and I respect the existence of what are called whistle blower standards in the law, in the nuclear industry and other industries, it is not a standard that, in my own personal mind set, I would ever use because I feel that it is my responsibility, as an employee with an organization is [sic] to do whatever I can do within the organization and with the other organizations on-site to resolve the issues in a timely and efficient manner. And if I feel strongly enough about an issue and if I feel that I cannot work with my – the company I'm employed with or the other companies on-site to resolve those issues, then I would terminate my employment because I don't believe that going through the whistleblower standard is going to create any more efficiency or cause the

> company to respond in any better way than if I put forth my best effort with them as an employee or even as a subcontractor.

Id. at 151-152. During his testimony, Shuman even admitted that he warned the Gossetts that if they were to continue going "behind his back," it could cause conflict with him. *Id.* at 152. Shuman also testified that the DOE Manager for the Portsmouth site, Sharon Robinson, wanted to put a stop to the Gossetts' whistleblowing activities. *Id.* at 160.

In his (1) testimony at the hearing, (2) comments to OHA investigator Woods and (3) post-examination review of Gossett's performance on her re-qualification examinations, Brad Andrie, an SEC manager who was on temporary detail to the Portsmouth Site at the time of Gossett's termination, exhibited a remarkable antipathy towards Gossett. This antipathy seems especially inappropriate, since Andrie testified that he had only conversed with Gossett on one occasion, and then for only a few minutes. At the hearing, he contended that Gossett failed the three re-qualification examinations because she lacked theoretical, radiological, and mathematics training. 10-25-01 Tr. at 120. Andrie also attributed Gossett's test scores to a lack of operational experience. *Id.* He then claimed to have examined her resume and transcripts and found that she had no technical training. *Id.* at 121. In his interview with Mr. Woods, Andrie claimed that Gossett had never been through a formal program of health physics and theory. Memorandum of May 9, 2001 Interview of Brad Andrie by Kent Woods at 5. Andrie further claimed that "Gossett was given training credit from Shawnee State Community College as if she were in a related field, when actually she took dance and sculpture and art, and there were no mathematics or health physics courses listed on her transcript." *Id.* Andrie's claims were unfounded. The record shows that Gossett had both a Bachelor's Degree in Sociology and an Associate's Degree in Health Physics. 10-25-01 Tr. at 126; Preliminary Statement of Susan Rice-Gossett to State of Ohio Unemployment Compensation Review Commission at 4. It appears that Andrie's antipathy towards Gossett may have resulted from one of her protected disclosures. At the hearing, Andrie testified that Gossett's concerns about potential radiological contamination in an area resulted in that area's being posted as contaminated, which in his view was unnecessary. 10-25-01 Tr. at 101-02. Andrie described this posting as ". . . a major thorn, I guess, in the side of many of the other technicians." *Id.* Andrie also testified, ". . . I literally tried to get that area unposted, had it surveyed completely, and it was completely clean and my customers said we can't do that, we can't unpost it because a precedence has been set, and there's a potential." *Id.* Andrie's testimony is yet another example of how Gossett's whistleblowing angered her management. The evidence discussed above reveals a pattern of hostility towards Gossett because of her protected activities. It also confirms that Gossett's protected disclosures were a contributing factor to her frequent re-assignments and termination.

Temporal Proximity

In most whistleblower cases, it is difficult or impossible for a complainant to point to or find a "smoking gun" that proves an employer's retaliatory intent. Therefore, Congress and the courts, recognizing this difficulty, have found that a protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993), *citing McDaid v. Department of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, the courts have found that "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F.2d at 148.

Since Gossett made numerous protective disclosures during her year and a half tenure with SEC, there was temporal proximity between her protected disclosures and her re-assignments and her termination. Moreover, it is clear that the SEC managers who decided to terminate her had actual knowledge of her protected activity and were bothered by it. (6) Therefore, the temporal proximity between Gossett's protected disclosures and the adverse personnel actions taken against her is sufficient to establish, by a

preponderance of the evidence, that her protected disclosures were a contributing factor to her re-assignments and eventual termination by SEC. The pattern of hostility discussed above and the temporal proximity between the protected disclosures and adverse personnel actions each meet Gossett's burden of proof to show that protected disclosures were a contributing factor to the adverse personnel actions taken against her.

Whether SEC Would Have Taken Adverse Personnel Actions Against Gossett in the Absence of Her Protected Activities

I have found that the Complainant has shown, by a preponderance of evidence, that (1) she made protected disclosures, and (2) these protected disclosures were a contributing factor to her re-assignments and termination. Therefore, the burden has been shifted to SEC to prove by clear and convincing evidence that the company would have continually reassigned and eventually terminated her even if she had not made protected disclosures. 10 C.F.R. § 708.29. Clear and convincing evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F. Supp. at 1204 n.3. For the reasons set forth below, I find that SEC has not met this burden.

SEC offers no explanation for Gossett's continual reassignments. It is evident from the record that these reassignments reflected SEC management's desire to avoid further conflict. However, this pattern of repeated reassignments constitutes an adverse personnel action since it served to intimidate and harass Gossett as well as undermine her authority and stature as an RCT. 10 C.F.R. Part 708 exists to protect DOE contractor employees' right to engage in protected activity and to ensure that DOE contractor employees do not suffer any adverse consequences as a result of engaging in protected activities. Accordingly, SEC violated 10 C.F.R. Part 708 by consistently reassigning Gossett when she made protected disclosures.

SEC contends that the sole reason it terminated Gossett was her failure "to achieve a passing score on any of three different ?re-qualification' examinations." SEC Post-hearing Brief at 3. According to SEC, it has an established policy under which an RCT is only allowed three attempts at passing a re-qualification exam (the three strikes rule). *Id.* at 8. If SEC had been able to show that it had an established three strikes rule and that it had applied that policy on a consistent basis, it might have met its burden of clearly and convincingly showing that it would have terminated Gossett regardless of her whistleblowing activities.

However, the Record does not support SEC's assertion that the three strikes rule was established company policy at the time of Gossett's termination. First, SEC has never documented the three strikes rule in writing. Second, SEC produced no reliable evidence that this "oral" policy had ever been implemented by SEC before. Third, the SEC employees who testified at the hearing contradicted each other and could not provide a consistent or cohesive account of how the three strikes policy came into being. Fourth, the three strikes rule was not "cast in bronze." SEC bears the burden of proving by clear and convincing evidence that the three strikes rule on which it relies was its existing policy at the Portsmouth Site at the time of Gossett's termination. SEC has not met this burden.

Despite SEC's claims that the three strikes policy was established company policy at the Portsmouth Site, it has not produced any written documentation of that policy. (7) A high ranking SEC official, Brad Andrie, testified that the company maintains an official procedures and personnel manual known as "the Whitebook." 10-25-01 Tr. at 8. The three strikes rule does not appear in the Whitebook. *Id.* at 99. In fact, SEC admits that the three strikes rule has not been documented in writing. Transcript of May 14, 2001 Unemployment Compensation Hearing at 9; 10-24-01 Tr. at 9, 137.

Nor is there any reliable evidence in the record that the three strikes rule had ever been applied to any SEC employee before. In fact, the testimony of present and former SEC employees at the hearing indicates that Gossett was the only SEC employee ever fired under the three strikes rule. 10-24-01 Tr. at 237, 279, 286, 292. Moreover, at least three other SEC RCTs at the Portsmouth Site failed two re-qualification (or

qualification) exams, yet there is no credible evidence that any of these three other SEC RCTs were warned that a failure on a third re-qualification examination would result in their termination. The record indicates that Rhonda Christopher, Delores Stowe, and Lou Ann Riggs each failed their first two re-qualification examinations. (8) SEC claims that Christopher, Stowe, and Riggs were each warned that they would be terminated if they failed their third examination. However, SEC has presented no direct evidence in support of these assertions.

No SEC employee testified to personal knowledge of Rhonda Christopher's being informed that she would be terminated if she failed a third re-qualification examination. Nor does the record contain any written documentation that Christopher was so warned. At a hearing before the State of Ohio's Unemployment Compensation Commission concerning Gossett's eligibility to receive unemployment benefits (the Unemployment Hearing), Andrew Henderson, SEC's Corporate Director of Human Resources testified that Rhonda Christopher had been informed of the three strikes rule after she failed her second re-qualification examination. Transcript of May 14, 2001, Unemployment Compensation Hearing at 11. However, Henderson did not testify that he had personal knowledge of any particular verbal communication of a warning to Christopher at the Portsmouth Plant and it is unlikely that Henderson would have had such personal knowledge, since Henderson was employed at SEC's corporate offices in Tennessee, not at Portsmouth. At the Unemployment Hearing, Billie Childers, SEC's RTC training coordinator, testified that Bruce Manninen, then SEC's acting site manager at Portsmouth, warned Christopher of the three strikes rule. Transcript of May 14, 2001 Unemployment Compensation Hearing at 20-21. Interestingly, although he testified at both hearings, Manninen himself never testified that he warned Christopher about the three strikes rule. In fact, Manninen's testimony at the OHA hearing was that he did *not* discuss the three strikes rule with Christopher. 10-23-01 Tr. at 154. At the Unemployment Hearing, SEC's former site manager, Phil Borris testified that he was not aware of Christopher being warned about the three strikes rule. Transcript of May 14, 2001, Unemployment Compensation Hearing at 89-90.

No SEC employee testified that they had personal knowledge of Lou Ann Riggs' being informed that she would be terminated if she failed a third re-qualification examination. Childers testified that Riggs was warned about the three strikes rule, but could not identify who informed Riggs of the policy. 10–24-01 Tr. at 9.

No SEC employee testified to personal knowledge of Delores Stowe's being informed that she would be terminated if she failed a third re-qualification examination. Bruce Manninen testified that he did not recall warning Stowe of the three strikes rule before her third re-qualification examination. 10-23-01 Tr. at 168. Childers would not have warned her of the three strikes rule, since he repeatedly testified he was unaware that it was Stowe's third re-qualification examination at the time. 10-23-01 Tr. at 205; 10-24-01 Tr. at 12-13. Michele Britt, SEC's Corporate Personnel Manager, testified that she was unaware of any attempt to warn Stowe about the three strikes rule. 10-24-01 Tr. at 253. SEC attempts to show that Stowe was warned of the three strikes rule by claiming that Phil Borris' testimony during the OHA hearing indicates that Stowe knew of the three strikes rule at the time she took her third re-qualification examination. SEC's Post Hearing Brief at 10-11. A careful reading of the hearing transcript, however, shows that SEC's claim is without merit. Borris testified that Stowe came to him complaining "that she was going to lose her job." 10-23-01 Tr. at 108. Borris then testified that:

> I told her that I thought the system was fair and I told her just to hang in there and things would probably work their way out of the system. She was in tears when she showed up at my office. She had just failed the test for the third [time] and she said quote unquote ?I'm going to have to quit because I just can't take it anymore. That damn Billie is out to get me.' That what she said. She was in tears.

10-23-01 Tr. at 108. Borris' account of Stowe's comments clearly indicate that she was thinking of quitting her job because of the examination's difficulty rather than indicating that she thought she would be fired under the three strikes rule. Borris, SEC's former Site Manager at Portsmouth at this time, further

testified that prior to Gossett's termination, he had never heard of the three strikes rule. Accordingly, it appears that Gossett was warned about the three strikes rule after failing two re-qualification examinations while the three other SEC RCTs who found themselves in a similar situation were not.

The past and present SEC employees who testified at the hearing provided conflicting accounts of how SEC's management developed and implemented the three strikes rule. Brad Andrie testified that the three strikes rule was a well known company policy and an industry standard known by all of SEC's RCTs. 10-25-01 Tr. at 103-04. Andrie then testified that Stanley Waligora made the ultimate decision to apply the three strikes rule and that Waligora communicated this decision to Childers. *Id.* at 103. However, Stan Waligora testified that SEC had no established or written three strikes rule. 10-24-01 Tr. at 201-02. Instead, Waligora testified that SEC had a flexible policy under which an RCT with a close exam score would get another try or "continued patience." 10-24-01 Tr. at 212-13.

Childers testified that Shuman requested that Childers ask Waligora about the existence and origin of the three strikes rule. 10-24-01 Tr. at 13-14. (9) Childers testified that he told Shuman about the three strikes rule and that it had been created by Manninen after Christopher had failed her second qualification examination. 10-24-01 Tr. at 13, 15.

Michele Britt testified that Shuman asked her to contact Waligora in order to ask about the rules concerning failures of RCT re-qualification examinations. 10-24-01 Tr. at 236-37. According to Britt, Waligora told her that SEC was giving RCTs three tries to pass re-qualification examinations. 10-24-01 Tr. at 239-40. Britt's account is at odds with Waligora's recollection. Nor did Shuman indicate that he had consulted with Britt about the three strikes rule.

Joseph Shuman, however, admitted that he did not know where or how the three strikes policy originated. 10-24-01 Tr. at 137. Shuman testified that, immediately after Shuman was told that Gossett had failed her third re-qualification examination, he asked Billie Childers to contact Stanley Waligora in order to ascertain SEC's policy on re-qualification examinations . 10-24-01 Tr. at 121-22, 131. Shuman then testified that after Childers contacted Waligora, Childers reported to him that the three strikes rule was SEC's corporate policy. (10) *Id.* at 121. Shuman also claimed that he had determined that the three strikes rule was SEC's preexisting policy by consulting with Bruce Manninen and the site managers of SEC's Paducah and Oak Ridge sites. 10-24-01 Tr. at 137-38, 168.

Although Shuman claimed he had learned about the three strikes rule by consulting Bruce Manninen and Childers, Childers claimed Manninen created the three strikes rule. Manninen, in turn, testified that SEC did not have an existing three strikes rule at the time that Christopher failed her second re-qualification examination. 10-23-01 Tr. at 153. (11) Manninen further testified that it was not his intent to create the three strikes rule by letting Christopher take a third qualification examination. 10-23-01 Tr. at 153.

SEC contends that once Gossett had failed her third re-qualification examination, she was no longer fully qualified to continue working as an RCT at Portsmouth until she passed a re-qualification examination. Since she was not qualified to continue working as an RCT, SEC contends, it checked to see if it had any other positions that she could fill at the Portsmouth Site. Having found no such positions, SEC contends, it had no choice but to terminate her employment. 10-24-01 Tr. at 137, 166, 168. However, the record shows that SEC could have taken less drastic action than termination in response to Gossett's failure to pass the third re-qualification examination. The testimony of Stanley Waligora indicates that he had advised SEC management that the three strikes rule was "not cast in bronze." 10-24-0-1 at 200-01. Waligora further testified that SEC had a flexible policy under which a RCT with a close exam score would get another try or "continued patience." 10-24-01 Tr. at 212-13. In fact, the record also contains evidence showing that SEC retained the services of a number of RCTs whose qualifications or training had temporarily lapsed. Moreover, SEC admits that its former Portsmouth site manager, Phil Borris, had a policy of remediation for RCTs whose qualifications had lapsed. SEC Post Hearing Brief at 11. It is clear that Gossett could have been placed on leave without pay or could have continued to perform her functions under the supervision of a qualified RCT until she re-qualified.

There is considerable evidence in the record indicating that terminating an educated, experienced, and competent RCT like Gossett was contrary to SEC's own business interests. Several witnesses acknowledged that SEC was experiencing difficulty in recruiting and retaining RCTs at the time of her termination. At least two of these witnesses noted that it would most likely have saved SEC money to have retained and retrained Gossett until she was able to pass a re-qualification test, instead of terminating her. 10-24-01 Tr. at 167; 10-25-01 Tr. at 88.

The evidence in the record has convinced me that SEC's decision to terminate her was instead based, in significant part, on its desire to end her whistleblowing activities. This conclusion is supported by noting the difference between the rigid manner in which SEC handled Gossett's case and the flexible manner in which SEC handled a similar case, that of its RCT Supervisor, Delores Stowe. Stowe, like Gossett, failed her first two re-qualification examinations. Stowe was then administered a third re-qualification examination. When Stowe's third re-qualification examination was first corrected, it appeared that she had missed 24 out of 100 questions. Since Stowe needed to have 80% correct in order to pass this re-qualification examination, a SEC health physicist, Bruce Manninen, reviewed the 24 questions Stowe missed. 10 -23-01 Tr. at 162-63. Manninen's review originally resulted in his identification of approximately eight questions that he believed to be "questionable or unreasonable." *Id.* at 163-64. At least four of these questions were brought to the attention of Stanley Waligora, a consultant who was ultimately responsible for the content and scoring of RCT re-qualification examinations. After a series of conversations and e-mail exchanges, which took place over a number of days, Stowe received credit for four of the 24 questions that had originally been found to be answered incorrectly by Stowe, thus raising her score to 80% and allowing her to pass this third re-qualification examination. Stowe is currently employed by SEC as its supervisor of RCTs at the Portsmouth Site.

Gossett, like Stowe, also failed her first two re-qualification examinations. On January 12, 2001, after Gossett had failed her second re-qualification examination, Gossett was informed that she would be fired if she did not pass her third re-qualification examination. There is no credible evidence in the record showing that Stowe was provided with a similar warning. Gossett was then administered a third re-qualification examination, on January 19, 2001. According to SEC, when Gossett's third re-qualification examination was first corrected, it appeared that she had missed 26 out of 100 questions. (12) Within 4 hours after she had finished taking her third re-qualification examination, Gossett's employment with SEC was terminated.

Moreover, the record shows that SEC clearly gave Stowe the benefit of the doubt when it re-scored her third re-qualification examination, while it assigned the review of Gossett's third re-qualification examination to an individual, Brad Andrie, who was highly biased against her and who apparently let his malice towards Gossett affect his analysis of her third re-qualification examination. The record shows that Stowe's score was adjusted upwards by four points as a result of SEC's post examination review. Originally, SEC found that Stowe had missed question numbers 6, 8, 19 and 26. However, as a result of SEC's post-examination review of Stowe's third re-qualification examination, SEC eventually gave Stowe credit for each of these question thus raising her score from a failing grade of 76% to the lowest possible passing grade of 80%. A close analysis reveals that SEC's post-examination review of Stowe's third re-qualification examination was generous to Stowe.

On question number 6, Stowe picked answer A, while the answer key originally used to score her test provided that the correct answer was B. However, Stanley Waligora, the consultant who was SEC's ultimate arbiter of the re-qualification exam contents, convincingly testified that the answer key was incorrect and that the correct answer was actually A. 10-24-01 Tr. at 188. Accordingly, SEC's awarding of a point to Stowe for her answer to question number 6 was perfectly appropriate and should have been expected under any circumstances.

On question number 8, Stowe again picked answer A, even though the answer key originally used to score her test again provided that the correct answer was B. SEC also found that the answer key to question number 8 was incorrect and gave credit to Stowe for question number 8. Apparently, the answer key was

corrected prior to Gossett's second re-qualification examination, since Gossett answered question 8 by picking answer A and was immediately given credit for it. Accordingly, SEC's awarding of a point to Stowe for her answer to question number 8 was perfectly appropriate and should have been expected under any circumstances.

On question number 19, Stowe again picked answer A, even though the answer key originally used to score her test again provided that the correct answer was D. However, the record shows that due to a typographical error (fixed by the time Gossett took her second re-qualification examination) the answer key originally used to score Stowe's third re-qualification examination was not accurate. Stowe should not have lost credit for picking answer A, since the typographical error rendered answer D incorrect. However, answer A was not correct either. (13)

On question number 26, Stowe's answer was D, while the answer key indicated that the correct answer was A. Apparently, Manninen contended that Stowe should get credit for her answer and she eventually did. However, the question and its answer key were never corrected and exactly the same question was given to Gossett in her second re-qualification examination. Gossett chose answer A and was given credit for it. Stanley Waligora, the consultant who was ultimately responsible for the content and scoring of RCT re-qualification examinations, testified that answer A was the correct answer and that answer D was an incorrect answer. 10-24-01 Tr. at 189-90. Thus, SEC gave Stowe the benefit of the doubt in order to allow her to pass her third re-qualification examination.

The record shows that SEC's reaction to Stowe's potential failure of her third re-qualification examination was markedly different than SEC's reaction to Gossett's potential failure of her third re-qualification examination. SEC implicitly acknowledges the significant discrepancy between its handling of Gossett and Stowe's third re-qualification examinations, since it offers a number of explanations for these discrepancies. Specifically, SEC contends that these discrepancies were the result of (1) a change in SEC's management, (2) Stowe's taking the initiative to challenge four questions as opposed to Gossett's failure to challenge any questions, and (3) SEC management's preliminary review of Gossett's third re-qualification examination which revealed that only four of the questions Gossett missed could reasonably be challenged, while SEC's preliminary management review of Stowe's third re-qualification examination showed that there were enough questions at issue to affect the outcome of the examination.

At the time of Stowe's third re-qualification examination and the post-examination review that ultimately raised her score from 76 percent to 80 percent, Phil Borris was SEC's Portsmouth Site Manager. However, Borris was subsequently demoted. When Gossett took her third re-qualification examination on January 19, 2001, Joseph Shuman was SEC's top manager at the Portsmouth site. It was Shuman who ultimately decided to terminate Gossett. SEC contends that the discrepancy between its handling of Gossett and Stowe's third re-qualification examinations can be explained by this change in management. SEC Post-hearing Brief at 11. (14) Simply put, the change in management does not relieve SEC of its burden to show by clear and convincing evidence that it would have terminated Gossett even if she had not made protected disclosures. Moreover, SEC's contention is internally inconsistent with SEC's own assertions since SEC, in order to show that the three strikes rule was a longstanding and established policy, attempts to argue that Stowe was aware of and affected by the three strikes rule. SEC's Post Hearing Brief at 10-11.

SEC also claims that the disparity in treatment resulted from a legitimate difference in the manner in which Stowe and Gossett handled the grading of their respective third re-qualification examinations. SEC claims that Stowe challenged four answers to her test, while Gossett did not challenge the grading of her exam. SEC's claim is without merit, however, since even if the distinction is relevant, SEC has failed to convincingly show that Stowe actually challenged these questions on her exam.

SEC attempts to explain the difference in the way Gossett and Stowe were treated by noting that although its post examination review of both tests found four questions were potentially graded wrong, four points were not enough to make a difference in Gossett's case while four points were sufficient to provide Stowe with a passing score. This contention is without merit. First, it fails to address the obvious discrepancy

between SEC's handling of Stowe, who got the benefit of the doubt for at least one point, and Gossett, whose termination appears to have occurred even before SEC completed its evaluation of her test. (Andrie testified that he had not even completed his evaluation of Gossett's examination at the time of her termination). 10-25-01 Tr. at 19. Second, SEC has failed to support the factual underpinnings of this contention. SEC could not even identify which four questions missed by Gossett were potentially graded wrong.

Conclusion

The Complainant, Sue Rice Gossett has met her burden of proving that she made protected disclosures, and that these protected disclosures were a contributing factor to adverse personnel actions taken against her by the Contractor, Safety and Ecology Corporation. The Contractor has failed to meet its burden of showing that it would have taken these actions in the absence of the Complainant's protected disclosures. Accordingly, I find in the Complainant's behavior on the issue of liability and will issue a Supplemental Order determining the appropriate remedies.

The Part 708 regulations provide that if a hearing officer determines that an act of retaliation has occurred, the hearing officer may order reinstatement, transfer preference, back pay, reimbursement of reasonable costs and expenses, and such other remedies as are necessary to abate the violation and provide the employee with relief. 10 C.F.R. § 708.36. Accordingly, I direct the Complainant to submit a detailed statement setting forth the precise remedies she is seeking, including supporting documentation, within 30 days of her receipt of this Decision. The Contractor will then have 30 days from its receipt of the Complainant's statement to respond to her remedy requests and to submit evidence contradicting or explaining the Complainant's proffered supporting documentation.

It Is Therefore Ordered That:

(1) The Complaint filed by Sue Rice Gossett under 10 C.F.R. Part 708, OHA Case No. VBZ-0062, is hereby granted.

(2) Within 30 days of receipt of this Interlocutory Decision, Sue Rice Gossett shall submit to the Office of Hearings and to the Safety and Ecology Corporation, a detailed statement setting forth the precise remedies she is seeking as well as supporting documentation. The Safety and Ecology Corporation shall, within 30 days from its receipt of Sue Rice Gossett's statement, submit a responsive document to the Office of Hearings and Appeals and to Sue Rice Gossett.

(3) This is an Interlocutory Decision which will become an Initial Agency Decision upon the issuance of a Supplemental Order determining the appropriate remedies for Safety and Ecology Corporation's violations of 10 C.F.R. Subpart 708. The present decision may not be appealed by either party until it becomes an Initial Agency Decision.

Steven L. Fine
Hearing Officer
Office of Hearings and Appeals

Date: May 8, 2002

Appendix

The record strongly supports Gossett's assertions that she made numerous protected disclosures during her employment with SEC. SEC does not dispute that Gossett made protected disclosures. An extensive, yet incomplete, listing of protected disclosures and reassignments follows:

- In July 2000, Gossett and nine other Portsmouth Site employees met with Congressman Ted Strickland. During this meeting, Gossett expressed her concerns about the destruction of medical specimens and other uncorrected safety problems. 10-23-01 Tr. at 58-9.
- On July 13, 2000, Gossett submitted a written "employee concern" expressing her concerns that (1) she had been exposed to Hydrogen Fluoride (HF) gas and (2) the site's medical personnel had not been responsive to her concerns about this exposure.
- On July 17, 2000, Gossett submitted an employee concern expressing her perception of a lack of responsiveness on the part of occupational health and safety personnel at Portsmouth.
- On October 19, 2000, Gossett and three other individuals employed at the Portsmouth Site met with Dr. David Michaels, who at the time was DOE's Assistant Secretary for Environment, Safety and Health, to express their concerns about health, safety and management issues at the Portsmouth Site. 10- 23-01 Tr. at 59-63, 70, 74.
- On October 23, 2000, and November 1, 2000, Gossett submitted an employee concern to the Oak Ridge Operations Office alleging that she had been retaliated against for engaging in protected activity.
- On November 1, 2000, Gossett submitted a memorandum to Rufus H. Smith, Diversity Programs and Employee Concerns Manager, Oak Ridge Operations Office. In this memorandum, Gossett asserts that DOE failed to fully investigate an earlier employee concern. The November 1, 2000 Gossett submission further asserted:

- While she was assigned to perform radiological control coverage for the Waste Management Program in the X-7725 Area, she reported "frequent accounts of eating, smoking and chewing in radiologically controlled areas, . . . unsafe work practices and near miss failures of the existing systems of safety." *Id.* at 2. She was reassigned to the X-745 Cylinder Lot Program as a consequence of these disclosures. *Id.*

- While she was assigned to the X-745 Cylinder Lot Program, she reported "frequent accounts of smoking in radiologically controlled areas." *Id.* She was reassigned to the X-744G Program as a consequence of these disclosures. *Id.*
- While she was assigned to the X-326 "I" Cage she reported "personnel contamination of two persons . . . and multiple ISMS violations that led to personnel HF exposures." *Id.*
- While she was assigned to the X-744G Program she reported "issues including disposing of trap materials in a ?burnables' container, lack of documentation of asbestos sampling and the absence of a Safety and Health Officer." *Id.*
- While she was assigned to work as a "rover" she "reported several accounts of smoking in radiologically-controlled area, requested a safety evaluation of an arriving load when the shipment driver expressed concerns, reported the presence of suspect soil on the bottom of incoming Hanford containers and reported that a Lock Out/Tag Out (LOTO) Permit was not available for review prior to the job even after it was requested [and] . . . successive accounts of elevated work without fall protection." *Id.*

· A memorandum dated November 2, 2000, from Gossett to her supervisor, Delores Stowe, as well as an Alliance Condition Report authored by Gossett on November 3, 2000, document Gossett's concern about the possibility that work had been inappropriately performed at Portsmouth without health physics coverage.

- In mid-November 2000, Gossett and other employees met with Leah Dever, the Manager of DOE's Oak Ridge Operations Office and Sharon Robinson, the DOE Manager of the Portsmouth Site, to discuss the employees' health, safety and management concerns. 10-23-01 Tr. at 58, 66.
- An undated memorandum from Gossett to her supervisor, Delores Stowe, and a Memorandum from Gossett to Stowe, dated November 15, 2000, as well as an Alliance Condition Report authored by Gossett on November 15, 2000, document Gossett's concerns about a number of bulging and rusting drums in the radio-material storage area at X7745R. Gossett's memo to Stowe also reports that a site employee, Greg Sowards, had expressed concerns to her about both the lack of health physics coverage at a plant operation and the actions of other site employees who had discouraged him from

reporting the lack of health physics coverage.
- A memorandum dated November 28, 2000, from Gossett to Stowe, states in pertinent part:

During requested follow-up drum count for Bechtel-Jacobs' subcontractor, WASTREN, Inc. on November 22, 2000, technicians discovered a bulging drum which had breached the lid area. Initial surveys revealed no contamination present. The condition was reported to supervision. During these discussions it was learned that there were other known breached containers in the same area.

· In an April 4, 2001 memorandum from Gossett to Kent Woods, Attorney-Investigator, Office of Hearings and Appeals, Gossett alleges:

- On February 27, 1999, she filed a Problem Report documenting a violation of a radiological work permit at the X326L area. April 4, 2001 memorandum from Gossett to Kent Woods at 1.

- On December 1, 1999, she filed a Problem Report asserting that a worker prohibited her from posting identified contamination in his area. *Id.*
- On January 6, 2000, she issued a Stop Work Problem Report documenting a Leaking (RAM-Tagged) poly bottle repaired without notification to health physics contractor. *Id.*
- On January 24, 2000, she issued a Stop Work Problem Report in which she reported a shipment lacking radiological release papers. *Id.*
- On February 9, 2000, she reported that the radiation background from a contamination area was too high for personnel. *Id.*
- On May 24, 2000, she filed a Problem Report in which she reported exposed contamination. *Id.*
- On October 11, 2000 Gossett issued a Stop Work Problem Report in which she reported gas fumes, insufficient lighting, and the presence of snakes at a job site. *Id. at 2.*
- On October 13, 2000 Gossett reported to SEC's Health and Safety Manager that a forklift operator substituted a handkerchief for a mask. *Id.*

Endnotes

(1) On March 6, 2001, at the request of Gossett and the SEC, the OHA Director permitted Gossett's request for an investigation to be held in abeyance for a period of thirty days in order to afford the parties an opportunity to reach an informal resolution of her complaint. The parties were unable to reach an informal resolution of the complaint and OHA's investigation resumed.

(2) During her employment at Portsmouth, Gossett's last name was Rice. Subsequent to her employment at Portsmouth, Gossett was married and her last name changed to Gossett.

(3) The Complainant also contends that SEC manipulated the testing process to ensure her failure.

(4) Once the Complainant has met this burden, the burden shifts to the Contractor, which then must show, by clear and convincing evidence, that it would have taken the alleged act of retaliation in the absence of the Complainant's protected activity.

(5) In the investigatory stage of this proceeding, SEC conceded that Gossett had made at least two protected disclosures. ROI at 8.

(6) The Record clearly shows that Gossett's whistleblowing activities were well known to her fellow employees at the Portsmouth Site as well as to SEC management in Portsmouth and Oak Ridge. 10-24-01 Tr. at 236.

(7) The only documented SEC policy concerning RCT's who score less than 80% on a test (or who miss a training meeting) is an SEC RADCON Alliance Training Program Work Instruction dated July 21, 2000, which indicates that "remedies" for these occurrences should be provided within 30 days. SEC RADCON

Alliance Training Program Work Instruction dated July 21, 2000 at 5. There is no suggestion that termination is a contemplated remedy.

(8) Rhonda Christopher had previously worked at Portsmouth for other contractors. She was hired by SEC and was required to undergo SEC's RCT training and then to qualify as a SEC Portsmouth RCT. There is some dispute between the parties as to whether Christopher was attempting to qualify or re-qualify when she took these examinations. However, I find that I need not resolve this issue since the distinction would have no effect on my ultimate decision in the instant case.

(9) Childers also testified that he did not remember asking Waligora about the three strikes rule, claiming that he did not need to ask Waligora since he already knew the policy. 10-24-01 Tr. at 15.

(10) Interestingly, Gossett had been warned, at Shuman's request, about the three strikes rule days earlier, on January 12, 2001.

(11) Manninen was SEC's acting site manager at Portsmouth when Christopher failed her second qualification examination.

(12) Brad Andrie testified that he had not completed his evaluation of the validity and accuracy of Gossett's test at the time of her termination. 10-25-01 Tr. at 19.

(13) Gossett answered (the corrected version of) question 19 by picking answers A, B, and C.

(14) SEC attempts to bolster this argument by citing *Radue v. Kimberly-Clark Corp.*, 219 F.3d 612 (7th Cir. 2000) and *Stanback v. Best Diversified Products, Inc.*, 180 F.3d 903, 910 (8th Cir. 1999) which in the context of non-whistleblower employment discrimination actions hold that employees subject to different supervisors are not similarly situated. SEC Post-hearing Brief at 11. SEC's reliance on this case law is misplaced however. The cases cited by SEC, while holding that decisions made by different decision makers are rarely similarly situated in all respects, apply only to those discriminatory discharge cases which apply the burden shifting framework articulated in *McDonnell Douglas Corp. v. Green*, 93 S.Ct. 1817 (1973) (*McDonnell*). The present proceeding utilizes the burden shifting framework set forth in 10 C.F.R. § 708.29 rather than the burden shifting framework used in the cases cited by SEC. Under 10 C.F.R. § 708.29, once the complainant shows that she made protected disclosures and that these protected disclosures were a contributing factor to adverse personnel actions (as the complainant in the present proceeding has done) the burden shifts to the contractor who must then show by *clear and convincing evidence* that it would have taken the adverse actions in the absence of the protected disclosures. Therefore, under 10 C.F.R. § 708.29, a complaint is not required to show that she is similarly situated to a non-protected individual who was not subject to the adverse personnel action in order to establish a prima facie case.

September 24, 2003

DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Interlocutory Order

Name of Petitioner: Steven F. Collier

Date of Filing: June 11, 2003

Case Number: VBZ-0084

This Decision considers an Appeal of an Initial Agency Decision (IAD) issued on May 20, 2003, involving a Complaint filed by Steven F. Collier (Collier or the Complainant) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his Complaint, Collier claims that Fluor Fernald, Inc. (FFI), the prime contractor operating the DOE's Fernald, Ohio site and his former direct employer, Coleman Research Corporation (CRC), an FFI subcontractor, terminated him in retaliation for making disclosures that are protected under Part 708. The termination came as part of a site-wide reduction in force (RIF) conducted by FFI. In the IAD, the Hearing Officer determined that CRC had shown that it would have terminated the Complainant, even in the absence of the protected disclosures. Collier filed a Statement setting forth the issues he believes should be considered in this review. CRC and FFI filed responses to the Collier Statement of Issues.

As set forth in this decision, I disagree with the IAD and have tentatively decided that the contractors have not made the requisite showing. However, as discussed below, I will allow the contractors to provide comments on this preliminary determination. I will also reopen the hearing to accept additional testimonial evidence, if the contractors convince me that such an unusual step would be productive. Because of this unusual approach, the instant determination is being issued as an Interlocutory Order.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices by protecting those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have retaliated against an employee for such a disclosure, will be directed by the DOE to provide relief to the complainant. See 10 C.F.R. § 708.2 (definition of retaliation).

The DOE Contractor Employee Protection Program regulations establish administrative procedures for the processing of complaints. Under these regulations, review of an Initial Agency Decision, as requested by Collier in the present Appeal, is performed by the Director of the Office of Hearings and Appeals (OHA). 10 C.F.R. § 708.32.

B. History of the Complaint Proceeding

The events leading to the filing of Collier's Complaint are fully set forth in the IAD. *Steven F. Collier*, 28 DOE ¶ 87,036 (2003)(*Collier*). I will not reiterate all the details of that case here. For purposes of the instant appeal, the relevant facts are as follows.

Collier worked for CRC as a Senior Operations Specialist, one of five employed at the Fernald site. With a background in nuclear safety, Collier was hired in December 1994 to monitor the conduct of operations at Fernald. His responsibilities included identifying and reporting operations or conditions that were not in compliance with the many statues, regulations and policies that govern the activities conducted at Fernald. Collier claimed that between October 10, 2000 and February 7, 2002, he made fourteen disclosures that are protected under Part 708. Collier also alleges that there were two retaliatory actions against him: (i) on November 8, 2001, FFI recanted on a previous approval for him to receive training and (ii) on February 28, 2002, CRC terminated his employment through a Reduction in Force (RIF).

Collier filed a Complaint under Part 708 which was transmitted to the DOE's Ohio Field Office (DOE/OFO). The DOE/OFO accepted overall jurisdiction of the complaint. 1/ The complainant rejected the option that he had under 10 C.F.R. §§ 708.21 and .22 for an investigation of his allegations. Instead, he requested that a hearing be scheduled without an investigation. 10 C.F.R. § 708.22(a). Accordingly, an OHA Hearing Officer conducted a hearing on this matter. Including the complainant, there were 15 witnesses who provided testimony during a hearing that lasted three days. After considering the testimony at the hearing and other relevant evidence, the Hearing Officer issued the IAD that is the subject of the instant appeal.

C. The Initial Agency Decision

The IAD cited the burdens of proof under the Contractor Employee Protection Regulations. They are as follows:

> The employee who files a complaint has the burden of establishing by a preponderance of the evidence that he or she made a disclosure. . . and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure. . . .

10 C.F.R. § 708.29.

As the IAD further noted, Section 708.5(a) provides that a disclosure is protected if an employee reasonably believes that he is disclosing a substantial violation of a law, rule, or regulation; a substantial and specific danger to employees or to public health or safety or fraud, gross mismanagement, gross waste of funds or abuse of authority. 2/

1/ The DOE/OFO found that the training denial claim was untimely filed. This finding was reconsidered in the hearing phase.

2/ The regulation provides: "If you are an employee of a contractor, you may file a complaint against your employer alleging that you have ben subject to retaliation for: (a) Disclosing to a DOE official, a member of Congress, or any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, your

(continued...)

The IAD then noted that Collier claimed that he made fourteen disclosures related to Section 708.5(a). The IAD found that the disclosures could be grouped into six categories: (i) Waste Pits Remedial Action Project (WPRAP); (ii) Respirator Issuance Program; (iii) Nuclear Project Startup; (iv) "Smoking Train;" (v) Chemical Management; and (vi) Silos Project. The IAD named the person to whom Collier purportedly made the disclosures and described in detail the nature of the health and safety concerns that were allegedly involved in these disclosures. 3/ The IAD then found that most of the disclosures clearly took place as described. The IAD did not specifically analyze whether the nature of the disclosures themselves made them protected for purposes of Part 708. Rather the IAD "assumed" for purposes of analysis that the disclosures were protected. The IAD then proceeded to consider the alleged retaliations. *Collier,* slip op. at 8.

The IAD noted that Collier alleged two instances of retaliation that took place as a result of his protected disclosures: (i) on November 8, 2001, Joel Bradburne, the FFI manager of the Silos project, to which Collier was then assigned, informed him that his request to attend Plant Automation Equipment training had been denied; and (ii) on February 8, 2002, his employment with CRC was terminated.

In considering the denial of training claim, the IAD pointed out that Section 708.14(a) requires that complainants file their complaint "by the 90th day after the date [they] new or should have known of the alleged retaliation." The IAD indicated that Collier did not file his complaint of retaliation until March 26, 2002, more than 120 days after the denial. Collier stated that it was not until January 14, 2002, when Bradburne "suddenly" told him that his performance was deficient, that he realized that the training denial was retaliatory. The IAD noted that Collier made a notation

---

2/ (...continued)
employer, or any higher tier contractor, information that you reasonably believe reveals--(1) A substantial violation of a law, rule, or regulation; (2) A substantial and specific danger to employees or to public health or safety; or (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority." 10 C.F.R. § 708.5(a)(1), (2) and (3).

3/ It will serve no purpose to recount the specific nature of each of those concerns. The nature of the concerns and whether they fall within the purview of Part 708 is not at issue here.

in his diary on November 8 that he thought the timing of the training denial was "fishy." The IAD therefore concluded that Collier actually realized at that point that the training denial was retaliatory. Accordingly, the IAD found that Collier had waited too long to file the complaint regarding this alleged retaliation.

The IAD determined that Collier met the regulatory time frame in filing his Complaint regarding the termination of employment and that this termination fell within the Part 708 definition of retaliation. The IAD further found that several CRC managers were aware of Collier's protected disclosures and that the termination took place in close enough temporal proximity to the protected disclosures to permit the conclusion that the protected disclosures were a contributing factor to the termination.

The IAD next considered whether CRC had shown that it would have terminated Collier in the absence of the protected disclosures. In this regard, the IAD reviewed the RIF process through which Collier was terminated. The IAD found the performance assessment he was given was reasonable and factually supported. The IAD stated that of the eight skills that were evaluated, Collier's scores were the lowest of the five assessed employees in the areas of quality of work, communication skills, teamwork and customer satisfaction. The IAD gave detailed consideration to the testimony of CRC manager William Previty, who worked directly with Collier and performed the assessments. The IAD noted Previty's testimony that Collier had fallen below the levels of the other employees in these skills. The IAD considered this testimony regarding Collier and that of FFI managers to be highly credible. The IAD concluded that the weight of the evidence was convincing that "the CRC employee assessment process was fairly developed and administered and that Mr. Collier was fairly rated as the lowest of the employees, and that CRC clearly would have terminated Mr. Collier's employment even if he had not made the protected disclosures. . . ." *Collier*, slip op. at 18.

II. The Collier Statement of Issues and the CRC and FFI Responses

A. Collier Statement of Issues

1. Denial of Training

The Statement objects to the finding in the IAD that Collier knew or should have known before January 14, 2002, that the denial was retaliatory. The Statement indicates that in November 2001, when the training was canceled, Collier weighed the possible reasons for

the cancellation and came to the incorrect determination at the time that it was not retaliatory, based on "ill-placed" faith in Joel Bradburne, his Silos project boss. The Statement further indicates that previously all of the retaliatory indicators had come from FFI or CRC management or people related to the WPRAP project, not from individuals associated with the Silos project. The Statement therefore contends that Collier did not "know" that the denial was a retaliation. The Statement points out that Section 708.14(a) requires that a Complaint be filed by the 90th day after "you knew or reasonably should have known of the alleged retaliation." The Statement argues that Collier simply did not "know" that there was a retaliation, even though he may have suspected it. The Statement maintains that a Complainant is not obligated to report "suspected" acts of retaliation. The Statement maintains that in November 2001, Collier's suspicions did not yet rise to the level of "knew or reasonably should have known."

2. Collier's Termination Through Reduction in Force

The Statement makes the following assertions about the RIF and cites the following errors in the IAD leading to the determination that Collier would have been terminated absent the protected disclosures:

(a) The IAD incorrectly found that disagreements between Collier and CRC were unrelated to his protected disclosures and were caused by dissatisfaction with his communication style. To the contrary, the Statement argues that the disagreements were solely the result of CRC dissatisfaction with Collier's continued protected disclosures.

(b) The Statement contends that the highly developed RIF criteria were simply a means to deflect the focus away from what was really controlling the RIF process: FFI's interest in terminating Collier because he was a whistleblower. Furthermore, according to the Statement, the testimony of the key witness, Previty, is vague and evasive on why two CRC RIFs were handled differently. The Statement goes on to argue that if the two RIFs were handled similarly, CRC and FFI would have submitted evidence to support that fact.

(c) It was predetermined for Collier to be fired, even before the preparation of the termination procedures. The Statement cites to testimony by Previty that an FFI Silos project manager sent him a note stating "you should please consider firing this employee." The Statement dates this note to late in the year 2000. *See* Transcript of Hearing (Tr.) at 209.

(d) The IAD did not sufficiently consider the extent to which testimony by CRC and FFI witnesses was evasive. Examples include Previty's failure to be forthright and to indicate that Collier's protected activities were in line with CRC corporate ethics policy. Collier maintains that "Mr. Previty was upset with me. . . on a professional level because he was concerned about the affect (sic) my protected disclosures would have on the future of the CRC contract with FFI if I did not shut up." Statement at 21. The Statement also maintains that Bradburne's testimony about Collier's mediocre performance was vague, uncertain and evasive.

(e) The selection process was unfair to Collier, since it was entirely due to his protected activities that he was given a lower rating.

(f) The IAD incorrectly stated that Collier did not contend that the performance appraisal process used to rate him in 2000 was unfair. The Statement cites to evidence in the record that allegedly shows Collier did believe his performance appraisal for the year 2000 was not fair.

(g) The IAD give no weight to the animus shown towards Collier by FFI and CRC. In this regard, the Statement mentions that FFI and CRC purportedly did not give Collier appropriate, challenging work assignments. The Statement claims that Previty was offended by Collier's comments regarding inadequate safety measures.

B. The CRC and FFI Responses

1. CRC Response

CRC did not address the denial of training issue since it did not participate in that matter. CRC generally argues that the Statement of Issues failed to show that the factual determinations of the IAD were erroneous. Accordingly, CRC maintains that the decisions of the IAD should not be disturbed.

2. FFI Response

With respect to the denial of training issue, FFI claims that Collier's own contemporaneous diary shows that on November 8, 2001, he had formed a suspicion that the cancellation might be retaliatory. Accordingly, FFI argues that he should have filed the complaint of retaliation within 90 days of that time. While FFI does not believe that the cancellation of training actually was an act of retaliation, it does believe that for purposes of invoking the 90 day filing provision of Section 708.14(a), the "suspicion"

indicates that Collier "reasonably should have known" that the cancellation was possibly an act of retaliation.

With respect to the termination issue, FFI makes the following responses. FFI rejects the Statement's assertion that Collier was pre-selected for termination in late 2000 by an FFI manager. FFI claims that a request from a project manager to "please consider firing this employee" cannot be equated to a direction from FFI to CRC to fire Collier. If that had been the case, FFI argues that CRC would have taken more immediate action and would not have waited more than one year.

FFI rejects the assertion that Previty and Bradburne were evasive witnesses. FFI argues that Collier's inept questioning of the witnesses led to unclear responses. FFI addressed the assertion in the Statement that the CRC process used to select Collier for termination was unfair because it considered his lowered performance rating that was caused by his protected disclosures. FFI's response was that Collier had not presented any evidence that the problems that he was having with FFI managers were in any way related to his disclosures.

FFI also claims that virtually all of Collier's alleged protected disclosures occurred after his 2000 performance appraisal, and that Collier's 2001 performance appraisal reflected higher ratings. FFI argues that this is inconsistent with Collier's allegations of continuing retaliation.

With respect to the Statement's allegation of animus by Previty, FFI argues that Collier did not provide evidence that even if Previty was "offended" by Collier and biased against Collier, the animus was related to protected disclosures.

III. Analysis

Before beginning my evaluation of this case, I believe that a discussion of the factual development of the proceeding case is in order. As I indicated above, after the DOE/OFO accepted jurisdiction of his Complaint of Retaliation, Collier opted to proceed immediately to a hearing, and skip the normal route of having an investigation of his complaint. This approach, while authorized by the regulations, is, except in the most unusual cases, not one which will lead to a prompt resolution of a Complaint of Retaliation. For almost all cases, Part 708 envisions a four-prong development of these complaints: a jurisdictional phase, which is undertaken by a DOE field office; an investigation by an OHA investigator; a hearing by an OHA hearing officer; and,

through appeal, a review by the Director of the Office of Hearings and Appeals. 4/ Our experience indicates that each step in this process narrows and focuses the contested issues, each successive step building in an orderly, logical fashion upon the prior step. We believe that this process produces a final determination sooner than opting for a process that shortcuts or combines some of the steps.

Under Part 708, the first level of inquiry at OHA is the investigation. 10 C.F.R. § §708.21,.22, .23. At this level, an OHA investigator interviews individuals who have information about the complaint. The investigator develops information regarding the nature of the alleged protected disclosures/activities, and when they were made. He finds out the nature of the retaliation that the complainant is claiming. He interviews contractor management officials regarding the retaliation to find out their reasons for taking the personnel action about which the employee has made a complaint. The investigation is neither comprehensive or protracted.

The investigator writes up a report providing his findings and conclusions. The report of investigation sets out whether it appears that (i) the complainant has established by a preponderance of evidence that he made any disclosures that are protected or engaged in any protected activity under Part 708; (ii) the complainant has shown that he was subject to a negative personnel action which constitutes retaliation as defined in Section 708.2; (iii) the complainant has shown that the protected disclosures/activity contributed to the retaliation; and (iv) contractor officials have shown by clear and convincing evidence that they would have taken the negative action absent the protected disclosure/activity.

The Report is helpful in identifying the key issues for the hearing phase of the proceeding. For example, the Report may indicate that the complainant has made the requisite showing with respect to a protected disclosure or disclosures that were a contributing factor to an act or acts of retaliation. Based on a review of the Report, the contractor and the complainant will often agree with many of the findings of fact made by the investigator. This makes it possible for the hearing officer to focus the hearing on the issues

---

4/ A fifth prong, a review by the Secretary of Energy, is reserved for cases involving only the most extraordinary circumstances. 10 C.F.R. § 708.35. To date, the Secretary has never accepted a case to review under this section.

that remain in dispute. At this point, the contractor may be willing to stipulate that a protected disclosure or disclosures have been made. *E.g. Gary Vander Boegh*, 28 DOE ¶ 87,040 (2003); *Ronald White*, 28 DOE 87,029 (2002); *Lucy Smith*, 28 DOE ¶ 87,001 (2000); *Morris J. Osborne*, 28 DOE ¶ 87,542 (1999); *Roy Moxley*, 27 DOE ¶ 87,546 (1999). The Report can also alert the complainant and/or the contractor to matters where considerably more effort is required on their part to convince the Hearing Officer.

The investigation and the resulting Report of Investigation play a vital role in the Part 708 scheme: they enable the Hearing Officer and the parties to more closely focus the issues and to direct their energy to important contested issues in the case. At the hearing phase, the hearing officer is able to build upon and refine the tentative information on disputed issues developed by the investigator in the investigatory phase.

In the instant case, in which no investigation was performed, it was the hearing officer who had to undertake this initial identification and evaluation of what events took place, which events were important, what disclosures had been made, what retaliations took place and what the parties' positions were. Many of these determinations were made through taking evidence at the hearing itself. As it turned out, the hearing and the IAD devoted considerable attention to consideration of what the protected disclosures were. Yet, ultimately, these have turned out not to be an area of controversy. After all, it was Collier's job to monitor operations and compliance at the site. I am convinced that this entire Part 708 process could have been streamlined had Collier opted for an investigation. Had there been an investigation, I believe that it would have been quite evident that Collier made protected disclosures and there would have been very little need to focus attention on them at the hearing. It then would not have been necessary for the hearing and the IAD to devote such effort to identify and examine the nature of the disclosures.

The fact that the parties expended so much energy on the protected disclosures had an effect beyond consuming extra time. It meant that they devoted less time than necessary to determine the validity of the contractors' showing: that Collier would have been terminated in the absence of the disclosures. I believe that the hearing officer did a commendable job, given this rather unruly case involving 14 protected disclosures. But it is also clear that the evidence in this case would have been more fully developed had Collier elected to proceed with the normal development envisioned by Part 708, which includes the investigatory phase. Collier did himself and this proceeding a disservice by failing to request an

investigation. It resulted overall in an inadequate record, as explained below, with respect to the contractors' showing. Avoiding the investigation stage ultimately saved neither time nor effort here because, ultimately, as discussed below, I will ask the contractors for their comments as to why the IAD should not be reversed, and I intend to issue a new determination on the complaint after considering the comments. Further, I will provide them with an opportunity to show that the hearing should be reopened to take additional testimonial evidence about the critical issue of whether Collier's performance of his duties was deficient.

As is now evident from the Statement of Issues and the Responses, there are two main issues left in this case: (i) whether Collier should reasonably have known prior to January 14, 2002 that the November 8, 2001 denial of training was a retaliation; and (ii) whether FFI and CRC have clearly and convincingly shown that Collier would have been terminated in the absence of his protected disclosures.

A. Denial of Training

Collier argues that he did not know until January 14, 2002, when Bradburne told him that his performance was deficient, that the training cancellation was retaliatory. This is simply unconvincing. Collier was not a naive employee, unfamiliar with the whistleblowing process. As he indicates in his Statement: "my purpose in writing the November 8 diary entry was to weigh and document the evidence in favor of the act being retaliatory so that I would have the documentation to support a retaliation charge were I eventually to make one." Statement at 2. Thus, he was a sophisticated employee who was on the look-out for retaliations. I believe he thought that this cancellation was a retaliation and that his diary entry was designed to support that contention at some later date.

Moreover, he admitted in his diary that he was very suspicious. He stated in the diary entry: "I think the timing of [Bradburne's] canceling this training for me. . . is fishy, particularly after my meeting yesterday afternoon with Dennis Riley [about the smoking train issue]. To get to Riley's office, I have to walk through Admin building where all the top Fluor offices are located, so it's not unreasonable to assume they've seen me travel that path a lot lately and put two and two together, as they prepare for their Nov 14 enforcement conference in Washington on the WPRAP issues." Complainant's Ex 12 at 61. Thus, it is obvious that Collier was

more than suspicious. He actually linked up in his own mind the cancellation and his whistleblower activity.

Collier now suggests that there was a reason for him not to believe the action was a retaliation: Bradburne was his friend, whereas previous "retaliatory indicators" came from senior FFI or CRC managers. This seems to me a rather belated rationalization. The fact that there existed a possibility, however small, that the cancellation may not have been a retaliation is not sufficient here. The rule Collier would have us apply--a subjective test based entirely on what he believed--would violate one purpose of the regulation. Section 708.14(a), which requires filing of a complaint promptly, i.e. within 90 days of when the complainant knew or should have known of the alleged retaliation, is intended to alert the parties that a dispute exists, so that they can identify and preserve evidence at a time as close to the events as possible. The totally subjective rule that Collier advances would defeat this purpose.

In any event, based on Collier's own words in his diary, which was prepared with whistleblower litigation in mind, I am convinced that he concluded that there was a relationship between the cancellation and his disclosures. Thus, I believe at the time Collier wrote the November 8 diary entry, he did have a reasonable belief that the cancellation was retaliatory, and his 90 day filing period began on that date. Accordingly, raising the issue for the first time in his March 26, 2002 complaint of retaliation was untimely. The training cancellation claim is therefore denied.

B. Termination of Employment

As the IAD indicated, Collier's position is that CRC retaliated against him beginning in October 2000, by giving him lower performance ratings than in previous years on his appraisals for October 1999 through September 2001. Previty considered the last three annual performance appraisals in the RIF process for those employees who had worked that long. 5/ Further, Previty testified that in addition to the annual performance appraisals, he

---

5/ In this case, there is no question that the overall RIF was site-wide and not designed to target Collier. Further, given that FFI reduced its own personnel at the site by about 33 percent, the decision that CRC's staff of five employees should be reduced by two does not raise any red flags. *See* Stipulation of Steven F. Collier and Fluor Fernald, Inc; CRC Ex at 1-2; Tr. at 395-400.

also assessed for the RIF process the employees' performance for the most recent four months (for which no performance appraisals had been made) by seeking the comments of the FFI managers to whose project the CRC personnel had been assigned and by reflecting on his own observations. Tr. at 204. *Collier,* slip op. at 15.

The RIF procedures themselves involved a determination of core skills and job specific skills for individual employee evaluation. The core skills identified were communication skills, teamwork, quality of work, and work habits. The job specific skills were job technical knowledge, skills applicability, skills transferability and customer satisfaction. CRC Ex, at 00005. The IAD noted that of the eight skills identified, Collier's scores were the lowest of the five assessed employees in the areas of quality of work, communication skills, teamwork and customer satisfaction. The IAD found credible Previty's testimony regarding how the scoring on these elements was performed. In this regard, the IAD cites Previty's testimony about why Collier's performance appraisal for the year 2000 was lower than in previous years. Previty stated that "there were too many senior managers that Collier could not work with," and that Collier could not "pull this team together." Previty testified: "your communications were down. Your team work was down. . . . I lowered your grade [in] customer orientation because you no longer had a happy customer, and that's why you had a significant drop because of your performance in those areas." Tr. at 214-16; *Collier,* slip op. at 16.

With respect to Collier's communication skills, Previty testified: "I'll go back to early events that you had with Mr. Paige. Your verbal discussion with him and e-mails were so controversial that I was called to the Deputy Director of the site and [told] if I could not get the Coleman people in order and act professionally, we'd be out of here, specifically the individual. [That was in] ninety-six, '97, I don't know. In August, September, October 2000, I met with the [WPRAP] project director, the operations oversight Manager, the Project Engineer at Fluor. . . and Con Murphy in the IT project who was their project manager. Your relationship with those people was extremely stressful. They had great difficulty in doing business with you. I was out there and I made my own observations and I sensed that your relationship . . . with Mr. Murphy was poor." Tr. at 207-09. *Collier,* slip op. at 17.

The Hearing Officer was convinced by this testimony and found evidence to the contrary to be circumstantial. He cited several farewell electronic mail messages that praised Collier's work at Fernald. The Hearing Officer also pointed out that Collier's ratings for years prior to 1999 were somewhat higher than 1999-

2001, the years which were included in the RIF consideration. However, the Hearing Officer concluded that the overall range was relatively small: 3.42 to 4.43 on a scale of 5. *Collier,* slip op. at 18.

After reviewing this matter, I find that the record regarding Collier's allegedly deficient performance is not well supported. Even though the Hearing Officer was convinced by Previty's testimony that Collier had lower effectiveness in communication, teamwork and customer satisfaction, the testimony was both hearsay and very general, for the most part. 6/

With respect to communication issues, Previty cited an exchange of E-mails between himself and Collier that he believed demonstrated poor communication. Tr. at 215. But the thrust of Previty's testimony seemed to be that he downgraded Collier because Collier's allegedly poor communications resulted in an unhappy customer: FFI. In this regard, Previty cited two examples. He referred to one incident in 1996 or 1997 with Mr. Paige. That incident seems to me to be too far in the past to be relevant here. Mr. Previty also refers to a specific FFI IT manager, Con Murphy. Previty stated that he made his own observations and "sensed" that the relationship between Collier and Murphy was poor. Tr. at 208. Previty stated that Collier was the only person who had a "personality conflict" with Murphy. Tr. at 192.

However, there was testimonial evidence that suggests that other employees had difficulty relating to Murphy. Dennis Carr, FFI senior projects director, testified that Murphy "has a very strong personality" and a "very aggravating personality," and "quite a few of us had a personality conflict with Con Murphy from the beginning, including me." Tr. at 317. Tim Huey, FFI operations manager for the Silos Project, testified that he saw other people who had difficulties working and dealing with Murphy. Tr. at 263. Mark Cherry, FFI employee project director for WPRAP, stated that he saw other employees who had "personality conflicts" with Murphy. Tr. at 304. Thus, this particular allegedly bad relationship between Collier and Murphy does not seem to me to be an especially convincing reason on which to base the "poor communication skills," "poor customer satisfaction," or "poor teamwork" assessment, since

---

6/ Hearsay testimony is admissible in Part 708 hearings. 10 C.F.R. § 708.28(a)(4). However, it still suffers from its usual infirmity of inherent unreliability. Therefore, hearsay evidence must be carefully weighed and accorded the utmost scrutiny.

there were other employees who encountered similar difficulties with Murphy. The contractors did not provide testimony from Murphy as to whether he believed the complainant was a poor communicator. Providing such testimony to the Hearing Officer in support of the contractors' position is one of the key reasons for holding an evidentiary hearing.

Previty also testified that "it was very obvious to me that your strained relationship with all the senior managers assigned to the project was really a factor in your effectiveness in helping them." Tr. at 214. Previty further stated "there were too many senior managers that [Collier] couldn't work with." Tr. at 215. However, there was no solid testimony from those managers to support these assertions. This assessment by Previty is one that the contractor should have supported with testimony from the individuals that he was referring to. Yet, supporting testimony on this key point is thin. One person who did testify was not helpful. CRC Vice President Randy Morgan responded as follows to a question about what he had heard from FFI management about Collier's performance: "I think they thought your technical expertise was excellent and again that was pretty consistent in terms of commentary we had heard throughout the site. Comments were made I think more about--I don't want to say, I don't know if it's communication skills or a more combative nature in terms of interpersonal skills and interaction, that's about the extent I can remember." Tr. at 287. This hesitating and rather unspecific hearsay evidence does not provide clear, solid support for the position of CRC and FFI regarding Collier's allegedly deficient communication skills.

Other testimony from FFI and CRC witnesses who worked directly with Collier also does not support the Previty assessment regarding Collier's communication skills. For example, FFI employee Michele Miller testified about attending a meeting with Collier. She recounted that Collier wanted to state a difference of opinion and that he had a valid point. Miller did not suggest that Collier delivered his divergent opinion in an inappropriate manner, that his demeanor was unprofessional, or that his style of communication was poor. Tr. at 97-99. FFI Quality Assurance Manager Brinley Varchol testified about a meeting during which Collier made protected disclosures to him. Even though the meeting could have been heated and unpleasant, Varchol never offered any recollection at the hearing that Collier's communication style was poor or in any way inappropriate. Tr. at 153-172. 7/

7/ While it is true that Varchol was never specifically asked about Collier's communication, one might expect that

(continued...)

Joel Bradburne, an FFI project manager who worked directly with Collier on the Silos project, was a witness who testified directly about Collier's work. When asked about Collier's performance, Bradburne never mentioned communication problems. He saw work quality problems in Collier's performance. On the subject of Collier's performance, Bradburne testified as follows:

(1) "My surmise of your performance was mediocre." Tr. at 430.

(2) "For example, when we were doing a lot of graphics work basically, and again that's, you're not, you know a huge challenge I know, but you seemed to enjoy it and you did a good job and I appreciated the work, and once that kind of died down we got into the, you know, preparation review of things relative to operations within the projects safety basis stuff and it just seems like--To me it appeared that you knew we'd go through and --You know some of the assignments that I asked you to do, at least I thought I asked you to do just, you know, it wasn't timely on completion and from my estimation, you know it just didn't seem like something that you were that interested in doing, but and hence mediocre performance I guess from what I had seen in the past." Tr. at 432.

(3) "Well, basically in regards to the Silo 3 stuff, I mean you had pretty good knowledge of the Silo 3 proposed design and operation." Tr. at 435.

Thus, while Previty believed that Collier's failings related to communication, teamwork and customer satisfaction, Bradburne's view was that Collier's work was mediocre and untimely. In contrast, for the years 1995 through 2001, Collier's performance evaluations consistently show strength in the areas of job knowledge, quality and quantity of work and planning and communications. 8/

7/ (...continued)
Varchol would have mentioned inappropriate demeanor if it had been demonstrated, and that FFI would have asked questions about it had there been some negative actions that Varchol could report. Collier should have probed this issue on cross examination. I attribute Collier's failure to press this point to a reluctance to ask the witness questions about himself (Collier), or perhaps to his own inexperience in examination and cross examination of witnesses.

8/ Collier's quality of work was rated as a 4 out of 5 on his RIF form. This is hardly "mediocre." This was defined on

(continued...)

Further, as discussed above, there was at least one other witness, CRC Vice president Randy Morgan, who stated that he had heard from FFI managers that Collier's substantive skills were excellent and that he had a fine reputation throughout the site. Thus, Bradburne's negative testimony about Collier's performance is rather puzzling. It is self-contradictory in that while Bradburne claims that Collier's work was "mediocre," he also states that Collier did "a good job," had "good knowledge," and that Bradburne "appreciated the work." Moreover, the negative Bradburne testimony was contravened by other testimony and documentary evidence.

As indicated above, it has been the position of CRC and FFI that Collier was RIFed because he was difficult to work with, his communication skills were lacking and he was poor in teamwork and customer satisfaction. I am not persuaded on these points. Because, for the reasons explained above, it was difficult to focus the hearing on these critical issues, there was little direct evidence on these points. The testimony of Previty, Morgan and Bradburne, while of some weight, does not sufficiently support the FFI and CRC position.

I find that FFI and CRC did not provide testimony from their managers that specifically describes their dissatisfaction with Collier's performance in these areas. Further, they failed to provide testimony from Collier's co-workers who were in a position to support the managers' views of why they were dissatisfied with him. I therefore cannot find the evidence regarding Collier's performance in the areas of communication, teamwork and customer satisfaction meets the rigorous standard of proof required in this case.

In sum, it was the burden of FFI and CRC to provide clear and convincing evidence to support their position that they would have terminated Collier absent the protected disclosures. They attempted to show, mainly through the testimony of Previty, that Collier was the least able performer in the areas of communication, teamwork and customer satisfaction. I recognize that the Hearing Officer found Previty a dependable and convincing witness. Nevertheless, in a Part 708 proceeding there is an inherent risk in relying extensively on one or two key witnesses who have a significant stake in the outcome of a proceeding, and therefore an

---

8/ (...continued)
the RIF sheet as "occasionally exceeds standards and expectations." CRC Ex at 11.

interest in not being completely candid and forthcoming in their testimony.

In this case, Collier complains of a retaliation for protected disclosures made to the very same person who has rated his performance. Collier also contends that Previty was motivated by his lack of objectivity and personal animus towards Collier for making those disclosures because they resulted in the dissatisfaction of FFI. Under these circumstances and given the fact that the contractors' burden of proof is a rigorous one in Part 708 proceedings, the contractors should have provided supporting evidence from objective witnesses who had specific knowledge of the purported Collier performance deficiencies. The contractors should have supported their positions with evidence from witnesses that had direct contact with the complainant and who could testify from their own experience about these very matters. *Janet Westbrook*, 28 DOE ¶ 87,021 (2002). 9/

The companies were certainly in a position to call as witnesses employees who worked with Collier. They also could have presented witnesses to provide their own observations about Collier's ability to work with others. FFI and CRC have simply not provided clear and convincing evidence for their position. In order to meet the clear and convincing standard, a contractor in a Part 708 proceeding must do more than merely articulate a plausible reason for a termination. It must support that position. One method would be by providing testimony from co-workers and supervisors who are directly familiar with the issues. *Westbrook*, slip op. at 15.

In order to provide clear and convincing evidence, CRC and FFI should have established that the allegedly poor communications that they saw as the crux of Collier's work-related deficiencies were not the very same communications that are protected under Part 708. 10/ The contractors should have pinpointed through

---

9/ There is also some evidence in the record that the three CRC employees who were retained had some unique skills, and that it would be unacceptable to FFI if CRC would terminate any of those three individuals and retain either of the two terminated employees. CRC Ex. at 8.

10/ However, the contractors could have shown that the manner in which Collier delivered the disclosures was in some way inappropriate or unprofessional, and that this was the basis for the lowered ratings. This testimony should have been given by witnesses who have direct knowledge of the specific incidents involved.

direct testimony what the specific communications, teamwork and customer satisfaction incidents were that brought on the low ratings.

IV. CONCLUSION

As indicated by the above discussion, it is no longer disputed that Collier made health and safety-related protected disclosures. These disclosures were followed sufficiently quickly by CRC's termination of Collier to demonstrate that they were a contributing factor to that termination. I believe that the record sufficiently establishes these points. It was therefore the burden of CRC and FFI to show by clear and convincing evidence that Collier would have been terminated absent the protected disclosures. CRC and FFI offered a plausible explanation for the termination, i.e., that due to the site-wide RIF, CRC was forced to terminate two of its five employees. However, the Company failed to bring forth adequate substantiation to support its position that Collier merited his score as the lowest of the employees in the RIF process. Mere plausibility and reasonability are simply inadequate to meet the rigorous "clear and convincing evidence" standard applicable here.

Based on my review of the record, I found little evidence has been presented to support the companies' position that Collier had problems in communication, teamwork and customer satisfaction. Further, there is even some evidence that does not support the position that Collier had deficiencies in those areas.

Accordingly, I find that the result reached in the IAD is not sufficiently supported. However, I am reluctant to summarily reverse the IAD, due to the unusual history of this case. Accordingly, the above determination is only a tentative one. FFI and CRC may file comments regarding this decision within 30 days of the date of issuance. Collier may file a response within 10 days after receiving the contractors' comments.

Further, I am willing to consider whether it would be useful to take some additional testimonial evidence, especially from CRC and FFI, on the issue of Collier's performance. As a rule, I am not in favor of reconvening a hearing to receive additional evidence. I believe that parties in Part 708 proceedings should be well aware of the burdens of proof and are responsible for determining in

advance what information is necessary to present at the hearing to meet their burdens. In particular, contractors are on notice in the contracts that they sign of the applicability of Part 708 to protected activities. They should by now be familiar with what types of information they need to provide to support their positions. In this regard, parties are certainly able to discuss with the hearing officer at a prehearing conference what testimony might be important. They are also easily able to access our case law in order to determine what types of information hearing officers have considered in prior cases.

However, as I stated above, this case came for hearing with no investigation. In my view, selection of that option had a negative effect on the overall complaint process, because there was not an appropriate opportunity for factual and issue development regarding Collier's performance. Consequently, given that it was the complainant who opted to proceed immediately to a hearing, I believe that it is not unreasonable or unfair to consider providing the contractors with an opportunity for some additional development of their position here.

Accordingly, FFI and CRC may request that a new hearing be convened for the purpose of taking additional evidence of the type discussed above. However, I will direct that a new hearing be convened only if I am persuaded that it would serve an important purpose. Consequently, the firms will have to establish that they have some significant new testimony to provide about Collier in connection with his performance appraisal. They will have to state who the witnesses are and what <u>specific</u> incidents they will testify about that will support the deficient RIF ratings in the areas of customer satisfaction, teamwork and communications.

The contractors should be prepared to call Collier's co-workers as well as his supervisors to testify on these issues. Furthermore, each primary potential witness will be required to submit a signed statement describing what he will testify about, including the dates and places of contact with Collier. Each witness shall include in his written statement a detailed description of what he heard Collier say and what he saw Collier do that relates to the issues of deficient communication, teamwork and customer satisfaction. The contractor hearing submissions and witness statements should be filed at the same time as the contractor comments discussed above.

I recognize that it is very uncommon in a Part 708 proceeding to require potential witnesses to provide an advance written statement of the testimony they expect to provide. However, I believe this

unusual approach is warranted here to insure that if a new hearing is convened, there is new relevant evidence to be heard. The statements of primary witnesses should be sufficiently detailed to permit me to gauge whether a new hearing is warranted. Further, if a new hearing is convened, these witness statements will provide Collier with an opportunity to prepare appropriate questions on cross examination for the witnesses, as well as enable him to offer appropriate response witnesses. All in all, I believe that this approach will lead to a much more productive hearing, if one should be convened.

It Is Therefore Ordered That:

(1) The June 11, 2003 Appeal filed by Steven Collier of the Initial Agency Decision issued on May 20, 2003, is hereby granted as follows.

(2) Within 30 days of the date of this Decision, Coleman Research Corporation (CRC) and Fluor Fernald, Inc. (FFI) may file comments with respect to the above preliminary determination, as well as witness statements, as described in this determination. Collier may file a response within 10 days after receiving the CRC and FFI comments and witness statements.

(3) This is an interlocutory order of the Department of Energy.

George B. Breznay

Date: September 24, 2003

Case No. VWA-0004

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Richard W. Gallegos

Date of Filing: June 27, 1994

Case Number: VWA-0004

This Decision involves a whistleblower complaint filed by Richard W. Gallegos (Gallegos) under the Department of Energy's (DOE) Contractor Employee Protection Program. Since 1957, Gallegos has been employed at DOE's Sandia National Laboratory (Sandia). At present, Lockheed Martin Corporation (Contractor) is the management and operating contractor at Sandia. Gallegos is employed as a Staff Technical Assistant, whose job is to facilitate and expedite the purchase of printed circuit boards for projects at Sandia. Gallegos alleges that the Contractor retaliated against him for making disclosures about mismanagement to various managers at Sandia, an auditor at Sandia, the ombudsperson at Sandia, and the DOE's Office of Inspector General.

I. Legal Standards Governing This Case

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's government-owned, contractor-operated (GOCO) facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers.

Proceedings under 10 C.F.R. Part 708 offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by providing for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee. *See David Ramirez*, 23 DOE & 87,505, *affirmed,* 24 DOE & 87,510 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has "[d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences [a] violation of any law, rule, or regulation [or] a substantial and specific danger to employees or public health or safety." 10 C.F.R. ' 708.5(a)(1); *see also Francis M. O'Laughlin*, 24 DOE & 87,505 (1994).

The Part 708 regulations were not self-executing. Rather, the DOE stated that the provisions of Part 708 would become operative after they were incorporated into each prime contract that the DOE maintains to operate its GOCO facilities. In the case of health and safety disclosures, incorporation into the contracts was immediate, since all existing contracts required contractors to adhere to health and safety requirements that the DOE promulgated. However, in the case of disclosures concerning waste, fraud and abuse, the Part 708 protections became operative only after the Part was incorporated by reference into a specific contract. Therefore, the Part 708 regulations do not apply to complaints that arise from disclosures that do

not concern health or safety where such alleged acts occurred before the underlying contract was amended to require compliance with Part 708 by the contractor. *Mehta v. Universities Research Ass'n*, 24 DOE ¶ 87,514 (1995). Furthermore, in *Mehta* the Deputy Secretary of Energy held that an extended leave of absence that spanned the effective date of the regulatory protections for the contractor did not bring that leave of absence under the purview of the regulations, since the retaliatory act occurred prior to amendment of the underlying contract when the contractor sent a letter to the complainant advising him of its decision to proceed with his termination. *Id*. at 89,065.

In the present case, Gallegos made disclosures related only to mismanagement. The Part 708 protections therefore did not operate until they were incorporated into the contract between the Department of Energy and the Sandia Corporation. The record is clear that those contractual provisions were adopted in the relevant contract on October 1, 1993. Therefore, Part 708 protections in this case apply only to alleged acts of reprisal that occurred after October 1, 1993.

Gallegos alleges that a number of reprisals were taken against him prior to October 1, 1993. Since these acts occurred prior to the start of Part 708 protections, I will not consider or discuss them here. However, Gallegos also has set forth a number of alleged reprisals that occurred after October 1, 1993:

Gallegos was placed on a performance action plan (PAP) on October 22, 1993 for a period of one year.

In October 1993 Gallegos was denied an opportunity to apply for a vacant position.

1 In October 1993 Gallegos was not given any work to perform.

In November 1993 Gallegos requested permission to attend a conference, but that permission was denied.

1In March 1994 Sandia improperly released documents related to him in response to a subpoena in a court proceeding.

In December 1995 Gallegos was improperly denied medical leave.

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under ' 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. ' 708.9(d). *See Ronald Sorri*, 23 DOE & 87,503 (1993) (citing McCormick on Evidence ' 339 at 439 (4th ed. 1992)). In the present case Gallegos must make two showings. First, he must demonstrate that he made a disclosure to a DOE official or to the Contractor that he believed evidences mismanagement. Second, he must show that the disclosure was a contributing factor to an adverse personnel action taken against him.

B. The Contractor's Burden

If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. ' 708.9(d). *See Ronald Sorri*, 23 DOE & 87,503 (1993) (citing McCormick on Evidence, ' 340 at 442 (4th ed. 1992)). Accordingly, in the present case if Gallegos establishes that he made a protected disclosure that was a contributing factor to an act of reprisal, Sandia must convince me by clear and convincing evidence that it would have taken the action even if Gallegos had not raised any concerns. *Helen Gaidine Oglesbee*, 24 DOE & 87,507, at 89,034-35 (1994).

Factual Background

Gallegos started working at Sandia in 1957. Transcript of Hearing at 15 (hereinafter cited as Tr.). He moved to his current position in approximately 1985, when he started working as an expediter. Tr. at 17. Gallegos was a designated buyer for services purchased from L & L Electronics (L&L). L&L and Sandia maintained a contract whereby L&L supplied Sandia with circuit boards which it designed to Sandia's specifications. The contract allowed work to be sent to L&L without the need to competitively bid each circuit board that was needed by the engineering staff at Sandia. Gallegos believes that he had a good working relationship with L&L between 1985 and 1990, at which time the firm moved from California to Albuquerque, New Mexico. Tr. at 17-18. Shortly thereafter, Gallegos' son-in-law started working for L&L as a designer. Tr. at 19. In June 1990, Gallegos filed a conflict of interest form with Sandia and did not disclose that his son-in-law worked for L&L.

In 1991, the prices L&L charged increased substantially. Tr. at 20. Engineers for whom work was being done at L&L complained to Gallegos, who in turn raised the issue with L&L. Tr. at 20. As a result, Gallegos started seeking bids from multiple suppliers rather than giving jobs to L&L under the sole source contract maintained between Sandia and L&L. Tr. at 22. Sometimes Gallegos would initiate the bidding process, and other times Sandia engineers for whom the work was being done would ask Gallegos to use a bid process. Tr. at 23.

In June 1992 L&L fired Gallegos' son-in-law after discovering that Gallegos' daughter had started a design company that directly competed with L&L. She then hired her husband as a designer. In discussions with engineers he served, Gallegos told them about his daughter's company and said that it could bid on design jobs. Although L&L complained to Sandia about Gallegos' behavior, his manager investigated and concluded that Gallegos was not diverting business away from L&L to the company owned by his daughter. Tr. at 327. Indeed, the manager testified at the hearing that part of Gallegos' job was "to make certain engineers have available to them the best and most reasonable company to do the work," and that Gallegos telling engineers about his daughter's company was proper. Tr. at 325.

In 1992 it came to the attention of Sandia management that Gallegos had failed to disclose on financial disclosure forms that his son-in-law worked for L&L between 1990 and 1992. This matter was referred to the Disciplinary Review Committee, along with allegations that Gallegos had disparaged L&L to another outside firm, and that Gallegos had told a supplier that bids that it telephoned into Sandia could be heard by anyone passing the answering machine that accepted the bids, because the machine broadcast messages to anyone in its immediate vicinity. Tr. at 436-37. The Committee recommended to Gallegos' management that he be given a 30-day suspension, forfeit non-base compensation for one year, and be placed on a performance action plan that would prevent him from further conflicts of interest for a one year period. Tr. at 540-47. Sandia management implemented these actions between August and October 1993. The only action implemented after October 1, 1993 was the imposition of the performance action plan.

On November 15, 1993, Gallegos filed a complaint pursuant to the DOE's Contractor Employee Protection Program. 10 C.F.R. Part 708. The DOE's Office of Contractor Employee Protection conducted an on-site investigation of Gallegos' allegations of reprisal in September 1994. It issued a Report of Investigation and Findings on July 18, 1995, in which it concluded that Gallegos' disclosures did not contribute to any of the retaliatory acts which he claims were taken against him. Gallegos requested a hearing, and I held a hearing in this case on February 6 and 7, 1996, in Albuquerque, New Mexico. Post-hearing briefs were accepted through April 10, 1996.

III. Analysis

In the present case, Gallegos claims that he disclosed numerous events of mismanagement at Sandia over the course of approximately five years. Under 10 C.F.R. Part 708, Gallegos has to show two things with respect to each disclosure. First, he has the burden of establishing that he "[d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor) information that [he] in good faith believes evidences a violation of any law, rule or regulation [or]. . . a substantial and

specific danger to employees or public heath and safety." 10 C.F.R. ' 708.5(a)(1)(i) and (ii). *See Francis M. O'Laughlin*, 24 DOE & 87,505 (1994). This disclosure must be to a DOE official, a member of Congress, or to the contractor; a disclosure to a supplier of a contractor does not qualify for protection. Second, he has the burden of showing that the disclosure was a contributing factor to an adverse action that was taken against him. Each of these burdens may be shown by a preponderance of the evidence. I will go through each claimed disclosure in chronological order.

A. Alleged Disclosure in the Summer of 1989

Gallegos claims that in the summer of 1989, he informed his former supervisor of a co-worker's alleged misconduct. Tr. at 32. That misconduct involved the co-worker's allegedly excessive trips to a supplier in California and the co-worker's claim for overtime pay. However, assuming that the events occurred, there is no evidence, and Gallegos does not claim, that his information had any effect on any adverse action that was taken against him. The supervisor to whom Gallegos made the report retired prior to any alleged retaliation that occurred after October 1993, and there is no evidence that he communicated Gallegos' claims to anyone at Sandia. With respect to this disclosure, Gallegos has failed to meet his burden of showing the existence of a disclosure that contributed to an adverse action against him.

B. Alleged Disclosure in the Fall of 1991

In the fall of 1991, Gallegos informed his former supervisor and a lab buyer that a contractor was charging significantly higher prices for work. While Gallegos characterizes this as evidence of mismanagement, I do not believe that that is a fair characterization. That higher prices were being charged at the time by the contractor appears to have been a well known fact at Sandia. In fact, Gallegos notified the engineers for whom he expedited work that the contractor's prices had increased. Gallegos talked to the contractor about the increase in prices. There is no suggestion that these price increases were somehow illegal or not appropriate under the contract between Sandia and the contractor. At the time there were a number of other firms who were providing similar work to Sandia and who could supply competing bids. Nevertheless, Gallegos himself continued to do business with the firm and placed substantial orders with the firm after it had raised its prices. Under these circumstances, there is no evidence that disclosure of these higher prices relates to waste, fraud, or mismanagement. 10 C.F.R. ' 708.5(a)(1). Accordingly, this disclosure does not raise any concerns that are protected by the DOE's Contractor Employee Protection Program.

C. Alleged Disclosure in October 1992

In October 1992, Gallegos claims that he reported to David Barnes, a supervisor at Sandia, that a contractor had provided work of a shoddy nature. In the summer of 1993, Gallegos reiterated this statement to the Sandia ombudsperson. Tr. at 27-32. At the hearing that I held in February 1996, Mr. Barnes testified that he was already aware of the low quality of that particular job when Mr. Gallegos brought it to his attention. Tr. at 421. While Mr. Barnes was surprised at the low quality work because of the reputation for quality that the contractor enjoyed, Tr. at 421, he was not alarmed by it. Tr. at 422. Mr. Barnes testified that it was not unheard of for Sandia to reject a particular piece of work and to require the contractor to redo the project. That was what occurred in this case. Gallegos has not claimed the Barnes testimony on this issue to be incorrect. In any event, there is no suggestion that management at Sandia tried to cover up this episode or treat it in a manner that would otherwise evidence waste, fraud or mismanagement. Gallegos has therefore failed to show that these disclosures qualify for protection under of DOE's Contractor Employee Protection Program.

D. Alleged Disclosures in Fall of 1993

In the fall of 1993, Gallegos reported to the Sandia ombudsperson and A. T. Schwyzer, the Audit Services Manager at Sandia, possible violations of Sandia travel policies. Gallegos stated that Mr. Barnes and an

aide traveled from 1990 to 1993 about once a month to visit contractors in California and New Jersey. He stated that first class airline accommodations were used on these trips and that the aide should not have accompanied Mr. Barnes. In response to these disclosures, Sandia investigated and determined that no action was appropriate because there were no records that could corroborate Gallegos' allegations. Gallegos also reiterated his 1989 claim about a co-worker's alleged improprieties in 1992 and 1993.

Gallegos has failed to show how these disclosures about alleged travel improprieties and actions of a co-worker were contributing factors to any adverse action taken by Sandia. The only alleged reprisals that occurred after these disclosures are the March 1994 release of documents that Gallegos believes do not respond to a subpoena, and a refusal by Sandia to grant Gallegos medical leave in December 1995. Gallegos has not attempted to provide any factual basis on which I might conclude that these disclosures were a cause of these actions. With respect to the medical leave, as noted below, Sandia medical personnel received additional medical records while the hearing in this matter was occurring and approved the medical leave. At the hearing, the medical director of Sandia explained why the documentation previously provided by Gallegos was inadequate and what additional information was necessary. Tr. at 590-630. There is no information in the record which would lead me to believe that the medical leave had been improperly withheld by Sandia. With respect to the subpoena, the evidence shows that the attorney in charge of responding to the subpoena may not have been as attentive as he should have been to the precise requirements of the subpoena. Moreover, Gallegos has not shown that he was adversely affected by the release of these documents. He has therefore failed to convince me that these disclosures were a contributing factor to an adverse action taken by Sandia.

E. Alleged Disclosure in November of 1993

In November 1993, Gallegos informed the Sandia ombudsman that the son of a buyer of printed circuit boards for Sandia worked for a company with which the buyer placed business. While this disclosure evidences a conflict of interest that should be reported, the record indicates that management at Sandia took responsive action upon learning about the conflict. It reprimanded the employee concerned in September 1993 for failing to disclose that his son worked for a supplier. Thus, there does not appear to be any suggestion of waste, fraud, or mismanagement in this matter. Gallegos has therefore failed to show that these disclosures qualify for protection under of DOE's Contractor Employee Protection Program.

F. Alleged Disclosure in the Spring of 1994

In the spring of 1994, Gallegos informed the Office of Inspector General at the Department of Energy of possible contracting irregularities at Sandia. To take a reprisal action against Gallegos for this disclosure, Sandia would have to have known about it. However, there is no evidence that the Office of Inspector General notified anyone at Sandia that they had been contacted. Indeed, only one alleged act of retaliation occurred after the Spring of 1994 – the alleged denial of medical leave in December 1995. Gallegos alleged for the first time at the hearing that he had been denied medical leave in December 1995 as part of Sandia's ongoing retaliation toward him. However, while the hearing was in progress, Gallegos supplied additional information to Sandia, and Sandia granted Gallegos' request. As noted above, there is no information in the record which would lead me to believe that the requested medical leave had been improperly withheld by Sandia. Under these circumstances, Gallegos has failed to show that this disclosure qualifies for protection under of DOE's Contractor Employee Protection Program.

IV. Conclusion

Much of this proceeding was consumed by Gallegos attempting to show that the discipline that was imposed on him prior to October 1993 pursuant to the Disciplinary Review Committee recommendations was excessive and that there was a pattern of "negative" events in which Sandia did not treat him appropriately. However, this is not an appellate proceeding where the focus might be in the

appropriateness of the discipline Gallegos received. The burden in this proceeding is on the employee to show that he disclosed to an official of DOE, to a member of Congress, or to the contractor information that he in good faith believes evidences waste, fraud, or mismanagement. 10 C.F.R. § 708.5(a)(1)(i) and (ii). He also has the burden of showing that the disclosure was a contributing factor to an adverse action that was taken against him. Despite what I may think about the manner in which Sandia treated Gallegos, for the reasons set forth above I have concluded that Gallegos has not shown by a preponderance of the evidence that he made disclosures that are protected by 10 C.F.R. Part 708, or that, if they are protected disclosures, that they contributed to adverse actions taken against him after October 1, 1993. Furthermore, Gallegos has failed to establish that the alleged reprisals resulted from his disclosures. I therefore find that no violation of 10 C.F.R. ' 708.5 has occurred.

It Is Therefore Ordered That:

(1) The request for relief filed by Richard W. Gallegos under 10 C.F.R. Part 708 is denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Assistant Inspector General for Assessments.

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Initial Agency Decision

Names of Petitioners:Daniel L. Holsinger

K-Ray Security, Inc.

Date of Filing:December 6, 1995

Case Numbers: VWA-0005

VWA-0009

I. Introduction

This Decision involves a complaint filed by Daniel L. Holsinger (Holsinger) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In his complaint, Holsinger contends that certain reprisals were taken against him after he raised concerns relating to the possible theft of government property from the DOE's Morgantown Energy Technology Center (METC). These reprisals allegedly were taken by Watkins Security Agency, Inc. (WSA), a DOE contractor that employed Holsinger as a security guard at the METC. The reprisals alleged by Holsinger included a one-day suspension on September 2, 1994, announcement of his prospective rescheduling to the midnight guard shift (12-8 a.m.) on September 18, 1994, a three-day suspension on September 19, 1994, and a three-day suspension on September 29, 1994. Because this last suspension was his third suspension within a period of six months, Holsinger's employment was terminated pursuant to WSA policy effective October 2, 1994. The DOE's Office of Contractor Employee Protection (OCEP) investigated the complaint and issued a Report of Investigation & Proposed Disposition (the Report) on November 9, 1995. In the Report, OCEP found that Holsinger had made a protected disclosure and that this disclosure contributed to Holsinger's September 19, 1994 suspension and his resulting termination of employment by WSA. Accordingly, OCEP proposed that WSA pay Holsinger back pay and benefits (minus any earned income and benefits), as well as certain other fees and expenses). OCEP also included the current METC security operations contractor, K-Ray Security, Inc. (K-Ray) as a party to the proceeding, and proposed that K-Ray should reinstate Holsinger to his former position as a security guard or to a comparable position.

In response to OCEP's Report, Holsinger, WSA and K-Ray all requested a hearing before the Office of Hearings and Appeals (OHA) under 10 C.F.R. § 708.9(a). The

hearing in this case was held on February 28, 1996 at the METC facility in Morgantown, West Virginia. After consideration of OCEP's Report of Investigation, the briefs of the parties and the testimony given at the hearing, I find that WSA committed an act of reprisal against Holsinger prohibited under 10 C.F.R. § 708.5, and that Holsinger is entitled to reinstatement by K-Ray.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established for the purpose of "safeguarding public and employee health and safety; ensuring compliance with applicable laws, rules, and regulations; and preventing fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, the DOE will direct contractors to provide relief to complainants who are found to have been discriminated against for making such disclosures. The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2, 1992, establish administrative procedures for processing complaints of this nature.

Before Part 708 was promulgated, contractor employee protection at DOE's government-owned, contractor-operated (GOCO) facilities was governed by DOE Order 5483.1A (6-22-83) ("Occupational Safety and Health Program for DOE Contractor Employees at Government-Owned Contractor-Operated Facilities"). As with Part 708, the Order prohibited contractors from taking reprisals against whistleblowers. However, no formal procedures existed under Order 5483.1A. The Part 708 regulations were adopted to improve the process of resolving whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee.

B. Factual Background

1. The Findings of the OCEP Report

On October 7, 1994, Holsinger filed a complaint pursuant to Part 708 with the OCEP. In the following months, OCEP personnel investigated Holsinger's complaint by conducting interviews with Holsinger, WSA officials, other security officers, and certain DOE employees at METC. They also collected relevant documentary evidence. This information and OCEP's analysis of this information is presented in its November 9, 1995 Report and the Report's accompanying exhibits. The Report finds that Holsinger was hired as a part-time security officer for the security contractor at the METC on January 10, 1990. When WSA began performance of the METC security contract in March 1990, Holsinger was retained in that status. In his May 1995 statement to the OCEP interviewer, Holsinger asserts that he had not received any performance appraisals or any disciplinary actions prior to September 1994. OCEP Report Exhibit 1 at 1. However, OCEP finds that Holsinger was suspended for three days in December 1990 for "[f]ailure to properly respond to an emergency situation" and two days in March 1991 for "[u]nauthorized use of government property." OCEP Report Exhibit 21. In its Report, OCEP summarized Holsinger's assertions of protected disclosures and his allegations of retaliation by WSA in 1994 as follows:

Mr. Holsinger alleges that in March 1994, Fred Munz, the security force Captain, held a meeting during which he advised the security staff that personal calls were to be kept to a minimum and no long distance calls were allowed from the site. Because Mr. Holsinger was not present at this staff meeting, Captain Munz explained the policy to Mr. Holsinger the day after the staff meeting. [Exhibit 1].

In July or August 1994, Mr. Holsinger allegedly advised Captain Munz that a security XXXXX [hereafter referred to as "the Accused Individual"], was wrongfully removing unspecified items from the site. [The Accused Individual] was reportedly removing the items in five gallon buckets covered with rags. Mr. Holsinger reportedly believed that [the Accused Individual] may have been "stealing" DOE property. Id. He also contacted Deborah Purkey, DOE-METC, Contracting Officer's Representative, to report the alleged possible thefts. Exhibit 12.

On August 18, 1994, James H. Watkins, President, WSA, issued a memorandum advising the security force that only Captain Munz could speak with DOE-METC security representatives regarding "company

matters." Exhibit 10.

On August 31, 1994, Mr. Holsinger sent an anonymous letter to DOE reporting the alleged thefts by [the Accused Individual] and alleging that WSA management had chosen to do nothing about the alleged thefts. Exhibit 12.

On September 2, 1994, Mr. Holsinger was notified that he would receive a one-day suspension for a 44 minute telephone call that he made on July 29, 1994. Exhibit 21.

On September 18, 1994, Captain Munz rescheduled Mr. Holsinger from the evening shift (3-11 p.m.) to the midnight shift (12-8 a.m.). This change in shift allegedly interfered with Mr. Holsinger's part-time position with the local Kingwood Police. Exhibit 1.

Mr. Holsinger received a three-day suspension on September 19, 1994 for failure to follow instructions. Mr. Holsinger reportedly took a cup of coffee on patrol after being informed by [the Accused Individual] that it was a violation of "post orders" to have food or beverages on patrol. Exhibit 21.

On September 29, 1994, Mr. Holsinger received a three-day suspension for excessive personal use of the telephone on August 18, 19, 25, 28 and September 1, 1994. Because this was his third suspension within a period of six months, Mr. Holsinger's employment was terminated pursuant to WSA policy effective October 2, 1994. Exhibit 21.

OCEP Report at 2-3. In the Report, OCEP finds insufficient evidentiary support to confirm that Holsinger made an oral disclosure to Captain Munz in July or August 1994. It does find that Holsinger's August 31 anonymous letter constituted a protected disclosure under Part 708 and that this disclosure contributed to Holsinger's September 19, 1994 suspension for failure to follow instructions. It therefore found that his termination of employment by WSA for receiving three suspensions in a six month period also was a retaliatory action. The Report finds insufficient evidence that WSA's disciplinary actions against Holsinger for excessive personal use of the telephone were retaliatory acts.

The Report's proposed disposition requires WSA to pay Holsinger back pay and benefits (minus any earned income and benefits), as well as certain other fees and expenses. The Report also requires the current METC security operations contractor, K-Ray, to reinstate Holsinger to his former position as a security guard or to a comparable position. Report at 27.

2. The Contentions of the Complainant and the Contractors

In letters to the OCEP dated December 4, November 28 and November 29, 1995, respectively, Holsinger, WSA and K-Ray all requested a hearing concerning the Report's findings and preliminary disposition. The OCEP forwarded these requests to the OHA, and I was appointed the Hearing Officer in this matter on December 18, 1995. I received a complete copy of the OCEP Complaint File on January 3, 1996, and by letter of that date established a filing schedule for the parties' pre-hearing briefs and a hearing date of February 28, 1996. See 10 C.F.R. § 708.9(b).

In his February 9, 1996 brief, Holsinger maintained that his transfer to the midnight shift on September 18, his suspensions by WSA on September 2, September 19 and September 29, and his termination of employment by WSA are all acts of retaliation for his efforts to disclose possible wrongdoing by certain members of the METC security force.

In its February 9, 1996 brief, WSA argued that the disciplinary actions taken against Holsinger were the normal and customary disciplinary measures which would be taken by WSA with respect to any employee who presented the types of employee disciplinary problems presented by Holsinger. It maintained that Holsinger's termination of employment was the result of his violation of WSA policies and the fact that he received three suspensions for these violations within a six-month period. It therefore concluded that this case shows no discriminatory treatment by WSA or any retaliatory action taken by WSA, and that

Holsinger's complaint should be dismissed.

In its February 5, 1996 brief, K-Ray contended that it is not in a position to either agree with or disagree with the analysis set forth in the Report, because it had no involvement nor knowledge of any such activities or actions. It notes that the Report contains no allegation or factual findings that K-Ray violated any federal regulations or discriminated against any employees. It argues that the Report's proposal that K-Ray reinstate Holsinger to his former position as a security guard or to a comparable position creates a hardship upon K-Ray and is totally unwarranted by the facts. It contends that if it is required to hire Holsinger, it must terminate one of its own employees. K-Ray therefore requests that the Report's proposed disposition be modified so as not to require K-Ray to hire Holsinger or to impose any other penalty or requirement upon K-Ray.

3. Holsinger's Settlement with WSA

On February 27, 1996, this Hearing Officer received telephone calls from the counsels for Holsinger and WSA. They announced that Holsinger and WSA were attempting to reach a monetary settlement concerning the claims by Holsinger against WSA for the actions covered in his complaint against WSA. This settlement would cover the Report's proposed requirement that WSA pay Holsinger back pay and benefits (minus any earned income and benefits), as well as certain other fees and expenses. The contemplated settlement contained no admissions by either party concerning Holsinger's alleged disclosures and the other events discussed in the Report. As a result of this settlement, counsel for WSA announced that WSA would drop its challenge to the Report and request to be dismissed as a party to the proceeding. Counsel for Holsinger stated that Holsinger would continue to assert his position that the Report was correct in finding that he was wrongfully terminated from his position as a security guard by WSA and that he should be reinstated as a security guard by K-Ray.

4. Issues and Participants at the Hearing

Accordingly, on February 28, 1996, I convened a hearing in this matter at the DOE's METC facility in Morgantown, West Virginia. At the outset of the hearing, counsel for Holsinger announced that Holsinger and WSA had reached a settlement. He stated that the settlement constituted a full release by Holsinger of all liability by WSA for all of the alleged retaliatory actions against Holsinger discussed in the OCEP Report. He stated that neither party had made factual admissions concerning any of the events discussed in the Report. Transcript of February 28, 1996 Hearing (hereinafter "Tr.") at 11. Counsel for Holsinger asserted that his client continued to support the Report's proposed requirement that K-Ray reinstate Holsinger to his former position.

I think the equities in this situation mandate that Mr. Holsinger be returned to his position that he held previous to his unlawful termination, and request that the Office of Hearings [and] Appeal[s] and you, particularly, order that K-Ray Security take Mr. Holsinger back.

Tr. at 10. No representative of WSA was present at the hearing.

In response to this information, counsel for K-Ray requested that I not proceed any further regarding the consideration of any matters involving the Report's proposal that K-Ray reinstate Holsinger. I responded by noting that the OCEP Report and its proposed requirement that K-Ray reinstate Holsinger remained in effect and that the hearing was K-Ray's opportunity to present its factual and legal challenges to that proposal. Counsel for K-Ray then restated the position taken in its February 5, 1996 brief that it was inappropriate for the Report to propose that K-Ray reinstate Holsinger because K-Ray was not a party to any actions that took place between Holsinger and WSA, and was not influenced by WSA when K-Ray hired security guards pursuant to its contract with METC. K-Ray then requested that the proceeding be dismissed on these grounds. I stated that I would respond fully to K-Ray's objections to the OCEP Report in the Initial Agency Decision issued in this matter, but that it would be inappropriate to dismiss the matter at this time.

The hearing proceeded with the presentation of witnesses by K-Ray and Holsinger, and focused on the appropriateness of the Report's proposal that Holsinger be reinstated by K-Ray. Counsel for K-Ray presented the testimony of Diane Lewis and Kenneth Jackson, officials of K-Ray involved in obtaining the DOE contract for guard services at METC and in hiring guards pursuant to that contract. He also presented the testimony of Ms. Purkey, the DOE's Contracting Officer and Technical Representative with respect to K-Ray's hiring practices and staffing constraints under its contract at METC. Counsel for Holsinger presented the testimony of Holsinger and of John Kisner, a security guard at METC currently employed by K-Ray.

5. Post-hearing Briefs and the Dismissal of WSA

At the close of the hearing, this Hearing Officer permitted post-hearing briefs from Holsinger and K-Ray concerning the legal and factual issues raised at the hearing. Post-hearing briefs were submitted by K-Ray and Holsinger on April 12 and April 17, 1996. In his post-hearing brief, Holsinger asserts that he was improperly discharged for making a protected disclosure, and that the equities of the situation favor an order for his reinstatement by K-Ray pursuant to Part 708's support for full protection of contractor employees who have been wrongfully discharged as a result of protected disclosures. In its post-hearing brief, K-Ray asserts that OHA holdings in Part 708 proceedings support its position that it would be inequitable to require K-Ray to perform any action, including reinstatement, to provide relief to Holsinger for actions taken against him by WSA.

At the hearing, Holsinger and K-Ray received notice that WSA had entered into a settlement with Holsinger and had ended its participation in this proceeding. This information constituted constructive notice to show cause why WSA should not be dismissed as a party to this proceeding. See 10 C.F.R. § 708.9(j). The post-hearing briefs of both Holsinger and K-Ray acknowledge Holsinger's settlement with WSA and the fact that the validity and appropriateness of the OCEP Report's proposed restitutionary actions for WSA are no longer at issue in this proceeding. Neither brief contended that WSA should remain a party to this proceeding, and I did not believe it necessary to maintain WSA as a party. See K-Ray Post-Hearing Brief at 2-3, Holsinger Post-Hearing Brief at 2. Accordingly, in a letter to the parties dated April 18, 1996, I ordered that WSA be dismissed as a party to this proceeding.

III. Analysis

Proceedings under 10 C.F.R. Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee. See David Ramirez, 23 DOE ¶ 87,505 (1994).

The settlement between Holsinger and WSA has significantly narrowed the factual matters at issue in this proceeding. In his pre-hearing brief submitted prior to the settlement, Holsinger objected to the OCEP Report's findings that certain of his allegations were not supported by sufficient evidence. However, Holsinger's monetary settlement with WSA rendered his objections irrelevant to the issue of compensation, and, at the hearing, counsel for Holsinger offered no argument or testimony concerning Holsinger's objections to any of the Report's findings. Instead, he indicated that his client intended to rely completely on the factual record and findings of the OCEP Report as support for the Report's proposed requirement that K-Ray reinstate Holsinger as a security guard. Tr. at 8-10. In his post-hearing brief, counsel for Holsinger reiterates this position:

We respectively pray that the Court adopt the findings and recommendations of the Report of Investigation and Proposed Disposition.

Holsinger Brief at 7. WSA and K-Ray never have objected to the Report's findings that certain allegations of Holsinger are not sufficiently supported by factual evidence. Accordingly, I will not review the Report's findings in those instances where OCEP found insufficient evidence to support Holsinger's allegations that he made protected disclosures or that specific actions of WSA were retaliatory acts for his disclosures.

Rather, I will confine my review to the Report's findings relevant to its proposed requirement that K-Ray reinstate Holsinger, and to the evidence and argument presented by the parties with regard to those findings and the reinstatement proposal. As discussed in more detail below, in order for me to uphold the OCEP Report's proposed reinstatement order, the evidence in the record must be sufficient to support its findings that (1) Holsinger made a protected disclosure, (2) this disclosure was a contributing factor to Holsinger's dismissal by WSA, and (3) reinstatement of Holsinger by K-Ray is an appropriate remedy in this instance.

As previously noted, WSA did not present any argument or witness testimony at the hearing, and K-Ray confined its argument and testimony to the equities of reinstatement as an appropriate remedy in this matter. Therefore, with regard to the first two OCEP findings listed above, the entire evidentiary record consists of the OCEP Report and complaint file, and the general objections contained in WSA's February 9 brief.

A. Legal Standards Governing Findings of Protected Disclosures and Adverse Actions in this Case

The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has " . . . *[d]isclosed* to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), *information that the employee in good faith believes evidences . . . a violation of any law, rule, or regulation* . . . [or] *[f]raud, mismanagement, gross waste of funds, or abuse of authority*." 10 C.F.R. § 708.5 (emphasis added).

1. The Complainant's Burden

The regulations describe the burdens of proof in a whistleblower proceeding as follows:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. § 708.9(d).

It is the task of the finder of fact to weigh the sufficiency of the evidence presented by both parties at trial. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F.Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the risk of error is allocated roughly equally between both parties. Grogan v. Garner, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). Holsinger has the burden of proving by evidence sufficient to "tilt the scales" in his favor that when he communicated the concerns discussed above, he *disclosed information which evidenced* his belief in good faith that there was *a violation of law, rule, or regulation* or an instance of *mismanagement or abuse of authority*. 10 C.F.R. § 708.5(a)(1)(i) and (iii). If this threshold burden is not met, Holsinger has failed to make a *prima facie* case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a *contributing factor* in a personnel action taken against the complainant. 10 C.F.R. § 708.9(d); see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994).

2. The Contractor's Burden

If the complainant has met his burden, the burden shifts to the contractor. The contractor must prove by "clear and convincing" evidence that it would have taken the same personnel action against the complainant absent the protected disclosure. "Clear and convincing" evidence is a much more stringent

standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". See Hopkins, 737 F. Supp. at 1204 n.3. Thus if Holsinger has established that it is more likely than not that he made protected disclosures that were a contributing factor to WSA's decision to discipline and eventually dismiss him, WSA or K-Ray must convince us that WSA would have taken these actions even if Holsinger had never made any communications concerning possible thefts of DOE property by an employee of WSA.

B. The Complainant's Allegation Was a Protected Disclosure

In its Report, OCEP conducted an extensive analysis of whether Holsinger's suspensions, shift rescheduling, and employment termination are to be considered acts of reprisal for a protected disclosure under Part 708. As an initial matter, OCEP found that Holsinger had failed to establish by a preponderance of the evidence that he had made a verbal disclosure to Captain Munz, sometime in July or August 1994, that the Accused Individual was apparently "stealing" government property, or that he had telephoned Ms. Purkey at her home and reported the alleged thefts. OCEP Report at 6-8. However, OCEP found that a preponderance of the evidence indicates that Holsinger wrote and sent the August 31, 1994 anonymous letter to Tom Bechtel, Director, DOE-METC. The letter indicated the WSA management had been informed that the Accused Individual was committing "thievery" and that WSA management had done nothing about the alleged thefts. OCEP makes the following findings regarding this letter:

Available information indicates that Mr. Holsinger is the only individual taking responsibility for writing the letter. The record also indicates that one or more members of the guard force were aware that Mr. Holsinger intended to write an anonymous letter to DOE-METC regarding the alleged thefts. The record further indicates that a number of security officers believed that [the Accused Individual] may have been committing theft and that WSA management was not taking appropriate action. Therefore, the record indicates that the letter was written under a good faith belief that the Accused Individual possibly had committed thefts and that WSA management had not properly addressed the issue of the alleged thefts. Under the circumstances, a preponderance of the evidence indicates that Mr. Holsinger wrote and sent the anonymous letter to DOE-METC and that the letter made "good faith" disclosures regarding possible thefts.

Report at 9. The OCEP Report concludes that sometime after September 7, 1994, when he had a conversation with Ms. Purkey concerning the August 31, 1994 anonymous letter, Captain Munz was probably convinced that Mr. Holsinger authored that letter. Report at 13, citing Exhibits 6 and 13.

After reviewing the Report and its supporting material concerning this issue, I conclude that the record in this proceeding supports OCEP's finding that Holsinger wrote and sent the anonymous letter to DOE-METC. The reports of OCEP's investigative interviews with two of Holsinger's co-workers indicate that they and others were aware that Holsinger wrote the anonymous letter. See Report Exhibits 5 and 10. I also conclude that Holsinger had a good faith belief that the allegations of misappropriation of government property contained in this letter were true. In this regard, I believe that the reports of OCEP's investigative interviews with three of Holsinger's co-workers (Report Exhibit 8, 9, and 10) provide independent support for Holsinger's allegation that the Accused Individual may have improperly removed certain items of DOE property to her home and that WSA management had not properly addressed the issue. I therefore hold that Holsinger's disclosure was protected by 10 C.F.R. § 708.5(a)(1)(i) and (iii).

C. Certain WSA Actions Constituted Retaliation

Based on its finding that Holsinger made a single, protected disclosure to the DOE on August 31, 1994, the OCEP Report proceeds to evaluate Holsinger's allegations of retaliatory actions by WSA. In this regard, it finds that Holsinger failed to meet his burden of establishing by a preponderance of the evidence that the anonymous letter contributed to his one-day suspension on September 2 and his three day suspension on September 29 for excessive personal use of the telephone. OCEP finds that in both instances the evidence is "clear and convincing" that, absent any knowledge of the anonymous letter, WSA still

would have suspended Mr. Holsinger for excessive personal telephone use. Report at 13 and 24. With respect to the September 18, 1994 announcement by Captain Munz that Holsinger would soon be placed on the midnight shift, OCEP concluded that "a preponderance of available evidence may indicate that the anonymous letter contributed to the shift change." However, OCEP finds that "the issue lost real significance" when Mr. Holsinger's employment was terminated on October 2, prior to the implementation of the shift change. Report at 25.

OCEP finds that Holsinger's three day suspension on September 20, 1994 was probably a retaliatory act by WSA. Holsinger was suspended because on September 11, 1994, he ignored an advisement by the Accused Individual that it was a violation of Post Orders to carry his cup of coffee while on his tour of the site. OCEP presented the following explanation for its finding that this suspension was probably related to discontent with Holsinger's disclosure to the DOE:

Mr. Holsinger was subjected to a suspension within fairly close proximity to when Captain Munz had reason to believe that he made a protected disclosure. [The Accused Individual], the individual who made the report that resulted in Mr. Holsinger's three-day suspension, was the subject of Mr. Holsinger's disclosure. [The Accused Individual] was given only a "counseling," for a similar breach of site rules. Given that [the Accused Individual] had reported Mr. Holsinger for the same breach, [the Accused Individual] clearly had knowledge of the applicable site rule. Additionally, there is also evidence . . . that WSA upper management and Captain Munz had concerns that the security force was reporting problems directly to DOE and that Captain Munz cited the anonymous letter as a communication with DOE that could lead to disciplinary action against anyone who made such a report in the future. Under the circumstances of this case, a preponderance of the evidence in the record supports the finding that the anonymous letter contributed, at least partially, to the three day-suspension [of Holsinger] for "failure to follow instructions." Accordingly, WSA must establish by clear and convincing evidence that it would have taken the action absent the protected disclosure.

Report at 15-16, quoting from WSA disciplinary action reports at Exhibits 20 and 21. The Report further concludes that WSA has not shown that its suspension of Holsinger would have occurred absent the disclosure. In this regard, the Report notes that interviews with the Accused Individual and others indicate that Holsinger was singled out for discipline in the enforcement of the rule against taking a beverage on a site tour. Report at 17. The Report notes that WSA procedures prescribe a policy of "progressive discipline" for repeated infractions of WSA rules of employee conduct. However, OCEP could find no support for Holsinger's treatment when it examined the record of disciplinary actions taken with regard to other WSA security guards.

The record indicates that some individuals were given more than one verbal warning when the second offense was different from the offense cited for the first warning. The record also indicates that no one else received more than a one-day suspension for any offense cited. [Exhibit 20] No one, except Mr. Holsinger, was cited for either a "failure to follow instructions" or insubordination.

Report at 19. OCEP also found that other employees received less severe disciplinary actions from WSA for what appeared to be more serious conduct infractions, i.e., a one-day suspension for taking milk without permission from the child day-care center, and a documented verbal warning for "falsifying information on an incident report". Report at 19-20. The OCEP concluded that the available evidence is not clear and convincing that WSA normally would have issued a three-day suspension or, indeed, any type of suspension, for the type of violation committed by Holsinger. Report at 21.

I agree with OCEP that the available evidence supports its finding that Holsinger's anonymous letter contributed to the WSA's decision to suspend him as a result of the "coffee carrying" incident. Although WSA was warranted in taking some form of corrective action for Holsinger's failure to respond to the Accused Individual's reminder concerning Post Orders, a three-day suspension is far more severe than any other employee disciplinary actions taken by WSA with respect to similar or even more serious offenses. Given the disparity between this suspension and other disciplinary actions of WSA security guards, I

reject WSA's argument that the actions against Holsinger were the normal and customary disciplinary measures which would be taken by WSA with respect to any employee who presented the types of employee disciplinary problems presented by Holsinger. WSA brief at 1. Furthermore, this severe act of discipline coincided closely in time with the identification of Holsinger by Captain Munz as the probable author of the anonymous letter to the DOE.<1> There also is strong evidence in the record that Captain Munz and WSA management considered the anonymous letter a serious breach of WSA policy. In their statements to the OCEP investigator, two of Holsinger's co-workers indicated that during the September 1994 staff meeting, Captain Munz informed the security force concerning the anonymous letter and advised that, in future, all issues were to be brought to Captain Munz and taken through the chain of command, or the offending employee would be disciplined. Report Exhibits 8 and 10. I therefore agree with OCEP that the record indicates that Captain Munz was concerned that the anonymous letter had been sent to DOE and advised his security force to interpret previous directives concerning WSA's chain of command in a restrictive manner. That advice restricted protected activity by the security forces. Report at 20.

Under these circumstances, I conclude that the record in this proceeding indicates that Holsinger's disclosures in his anonymous letter to the DOE were a contributing factor to his three-day suspension by WSA on September 20, 1994 and his subsequent dismissal by WSA (for incurring three suspensions in a six month period) on October 2, 1994. WSA has failed to show by clear and convincing evidence that it would have disciplined Holsinger in the same, severe manner if the disclosures had not occurred.

D. Reinstatement Is a Proper Remedy

Having concluded that a violation of Part 708 has occurred, I now turn to the remedy. As discussed above, Holsinger and WSA have entered into a settlement regarding the OCEP Report's proposals for remedial action by WSA. These provisions therefore are no longer at issue in this proceeding. However, the OCEP Report also finds that it is an appropriate remedial action to require K-Ray to reinstate Holsinger in his former position as a security guard. In this regard, the Report finds:

Information provided to OCEP by K-Ray indicates that all of the employees working for WSA at the time that K-Ray became security contractor at METC were retained as employees of K-Ray. Under the circumstances, OCEP finds that Mr. Holsinger would have been retained by K-Ray had his employment not been terminated in violation of Part 708 by WSA. Accordingly, OCEP proposes that Mr. Holsinger be reinstated to his former position as an employee of K-Ray and that his shift scheduling be done in an equitable manner. The payment of back pay, lost benefits, costs and fees will remain the responsibility of WSA.

Report at 26. K-Ray vigorously opposes the Report's proposed requirement that it reinstate Holsinger to his former position as a security guard at METC. Its objections to this requirement fall into the following general categories: (1) K-Ray had no role in any of the retaliatory actions taken by WSA against Holsinger, and the DOE cannot require it to redress those actions; (2) it is inequitable and inappropriate to require K-Ray to reinstate Holsinger when K-Ray was not a participant in the adverse actions taken against him by WSA; (3) reinstating Holsinger will place an undue hardship on K-Ray's other employees at the METC site. For the reasons discussed below, I conclude that it is appropriate to require K-Ray to reinstate Holsinger to a security guard position at METC.

1.The DOE Possesses Authority to Order Reinstatement by a Successor Contractor

In its Post-Hearing Brief, K-Ray asserts that there is absolutely no connection whatsoever between K-Ray and WSA.

[T]hey are two entirely distinct and separate entities and K-Ray did not purchase any of the assets of Watkins and no corporate nexus exists between the two companies.

It therefore concludes that K-Ray cannot be held liable for WSA's discriminatory acts on the grounds that

it essentially constitutes a continuation of WSA. See Kolosky v. Anchor Hocking Corp., 585 F. Supp. 746 (W.D. Pa. 1983).

The existence of a corporate nexus between K-Ray and WSA is not required to support the reinstatement order proposed by OCEP. The remedial provisions of Part 708 are applicable to all DOE contractors where they are necessary to effect equitable relief. Part 708's general policy provision indicates that the DOE may provide an "appropriate administrative remedy" to contractor employees who establish they have been subjected to discriminatory acts. 10 C.F.R. § 708.3. Section 708.10(c)(3) provides that the Initial Agency Decision may contain an order for interim relief, "including but not limited to reinstatement, pending the outcome of any request for review." Finally, Part 708 indicates that relief ordered by the Secretary in a final decision and order

... may include reinstatement, transfer preference, back pay, and reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses ... reasonably incurred by the complainant in bringing the complaint upon which the decision was issued or such other relief as is necessary to abate the violation and provide the complainant with relief.

10 C.F.R. §708.11(c). For those cases in which discrimination against an employee in reprisal for a protected disclosure is found to have occurred, the preamble to Part 708 states that the goal of the DOE regulations is to restore the employee to the position to which he or she would otherwise have been absent the acts of reprisal, in a manner similar to other whistleblower protection schemes. 57 Fed. Reg. at 7539; see, e.g., Energy Reorganization Act of 1974, 42 U.S.C. § 5851; Whistleblower Protection Act of 1989, 5 U.S.C. § 1214(b)(4)(B).

Where reinstatement of an employee is necessary to restore the employee to the position that he or she would have occupied absent the acts of reprisal, the DOE clearly possesses authority under Part 708 to order such reinstatement by a succeeding contractor, even where the succeeding contractor did not participate in any way in the acts of reprisal. The DOE procurement contracts executed after the effective date of Part 708 generally incorporate a provision requiring full compliance with all pertinent health and safety regulations, including Part 708. In fact, K-Ray signed a contract of this type when it agreed to provide security services for the DOE-METC. K-Ray furnishes these services as a subcontractor to the U.S. Small Business Administration (SBA), the prime contractor to the DOE in this matter. See copy of Contract DE-AC21-95MC-32163 (SBA Subcontract No.0390-95-2-00018), hereafter referred to as the "K-Ray Contract", in the OCEP complaint file. With regard to Part 708, the K-Ray Contract specifically provides as follows at Part II, Section I.118:

(a) The Contractor shall comply with the requirements of the "DOE Contractor Employee Protection Program" at 10 C.F.R. Part 708.

(b) The Contractor shall insert or have inserted the substance of this clause, including this paragraph (b), in subcontracts, at all tiers, with respect to work performed on-site at a DOE-owned or -leased facility, as provided for at 10 C.F.R. Part 708.

Clearly, then, K-Ray is on notice that pursuant to the terms of its agreement with the DOE, it is subject to all of the requirements of Part 708, and these requirements include actions necessary to restore an employee's position that has been negatively impacted by acts of reprisal. One type of action necessary to restore an employee's rights is reinstatement by a subsequent contractor if such reinstatement actually is necessary to restore the employee to the position to which he or she otherwise would have occupied absent the acts of reprisal by the former contractor. Boeing Petroleum Services, Inc.; Dyn McDermot Petroleum Operations Company, 24 DOE ¶ 87,501 (1994)(Boeing).

2.Reinstatement of Holsinger by K-Ray is a Necessary Remedial Action in this Instance

In its Post-Hearing brief, K-Ray contends that reinstatement in a situation involving a subsequent contractor should not be viewed as a necessary or desirable remedy by the DOE. K-Ray cites two court

decisions, Holley v. Northrop Worldwide Aircraft Services, Inc., 835 F.2d 1375 (11th Cir. 1988)(Holley) and Blackburn v. Martin, 982 F.2d 125 (4th Cir. 1992)(Blackburn), where the remedy of reinstatement was deemed inappropriate. In Holley, the court noted that "not every employee recommended [by the former contractor] was hired by the new company," and that there was insufficient factual data to overturn the district judge's ruling that reinstatement was an inappropriate remedy. 835 F.2d at 1377. In Blackburn, the court held that the evidence in the record supported the Secretary of Labor's finding that in this instance the liability of the contractor ended when the contract under which the wrongfully discharged employee worked was terminated. It noted that in this instance all of the other employees working under the contract received reduction in force notices when the contract project ended. It also found that there was no evidence in the record to support the complainant's assertions that (I) the contractor routinely rehired its former employees for other projects or that (ii) the contractor had interfered with his ability to obtain other employment by blacklisting him. 982 F.2d at 129-130.

Holley and Blackburn clearly do not stand for the proposition that reinstatement by a successor contractor is never an appropriate remedy. In both of these cases, the available evidence clearly indicated that reinstatement was not necessary to restore the complainant to the position he would have occupied absent the acts of reprisal by his former employer. Blackburn specifically refers with approval to the Supreme Court's holding in Albemarle Paper Co. v. Moody, 422 U.S. 405 (1975)(Albemarle), that the goal of remedial actions in the employment discrimination context is to make the victim of discrimination whole and restore him to the position that he would have occupied were it not for the unlawful discrimination. 982 F.2d at 129, citing 422 U.S. at 421. In Albemarle, the Supreme Court finds where a legal injury is of an economic character,

The injured party is to be placed, as near as may be, in the situation he would have occupied if the wrong had not been committed.

Albemarle, 422 U.S. at 418-19, quoting Wicker v. Hoppock, 6 Wall. 94, 99, 18 L.Ed. 752 (1867). It further states that back pay, reinstatement and other remedies are discretionary powers vested in the courts "to make possible the fashioning of the most complete relief possible." 422 U.S. at 421. Accordingly, if I find in this proceeding that it is likely that Holsinger would have been hired by K-Ray had he remained an employee of WSA, reinstatement would constitute an appropriate remedy.

In its Report, OCEP found that K-Ray hired all thirteen of the WSA security personnel employed at DOE-METC when it began to furnish security services at the METC site in June, 1995. K-Ray admits that this was in fact the case. K-Ray Post-Hearing Brief at 2. At the hearing, however, K-Ray asserted that it was not required by its agreement with the DOE to hire any of the WSA security personnel, and that it conducted an independent application and screening process prior to hiring these individuals. K-Ray contends that it is inappropriate for the DOE to require it to reinstate Holsinger under these circumstances. K-Ray contends that its position is supported by the following language from the OHA Hearing Officer's interlocutory order in Boeing:

Thus, as a general matter, we do not believe that reinstatement is an appropriate remedy under Part 708 where, as here, there is a new M&O contractor that has no connection with the firm actually employing the complainant or the circumstances surrounding the discharge of the complainant, and the retention of employees by the new contractor is not directly influenced by the former contractor but merely a condition of assuming the M&O contract.

K-Ray Post-Hearing Brief at 6-7, citing Boeing 24 DOE at 89,007.

I believe that K-Ray's reliance on Boeing is misplaced. The language immediately following this quotation clearly indicates that, as discussed above, the remedy of reinstatement by a successor contractor is equitable in nature and may be necessary to fully protect a whistleblower.

Nonetheless, we remain keenly aware of the strong policy dictates underlying Part 708, favoring full protection of contractor of contractor employees that have been wrongfully discharged as a result of a

protected disclosure. Therefore, we might exercise our equitable authority under Part 708 to order the reinstatement of a wrongfully discharged party under particular circumstances.

Boeing at 89,007. Nor is the holding in Boeing applicable to the facts of this case. The Hearing Officer in Boeing evaluated reinstatement in relation to an alternative remedy proposed by the Complainant, i.e., reimbursement for future lost wages and benefits. The Hearing Officer decided that the alternative remedy proposed by the Complainant would be more appropriate and ordered the dismissal of the successor contractor from the proceeding. Boeing at 89,007-8. In this instance, Holsinger has not argued that an alternative to reinstatement is an appropriate remedy. Moreover, as discussed below, the facts in this proceeding indicate that reinstatement is necessary and appropriate because it is reasonable to conclude that Holsinger would have been hired by K-Ray along with all of the other WSA security personnel at METC if he had been an employee of WSA at the time that K-Ray hired its security personnel.

The testimony at the hearing strongly indicates the willingness of K-Ray's executives to rehire all of the WSA security personnel. During his testimony, Kenneth Jackson, the President of K-Ray, related that Captain Munz of WSA provided K-Ray with information concerning the entire pool of WSA employees at METC prior to their interviews with K-Ray personnel.

Mr. Jackson: Mr. Munz did not make recommendations as far as who to hire. Mr. Munz supplied us with the -- more or less the records that he had as far as his employees and any information that we requested. So Mr. Munz was very helpful in that regard, and we conducted interviews, ...

Tr. at 76. Mr. Jackson stated that Diane Lewis, the contract administrator at K-Ray, interviewed each of the thirteen WSA employees at METC and brought back her recommendations to Mr. Jackson, who made the final hiring decisions. Tr. at 77. In describing his decision to hire all thirteen WSA employees and no one else, Mr. Jackson stated that on-the-job experience and continuity of operation were major considerations.

Mr. Jackson: The thing that influenced us with it is, you know, these are experienced people that, you know, have good track records that even someone that may have better credentials such as a degree in criminal justice, you know, didn't look as good as an experienced person, you know, to me. These people are experienced, they're on the job, and they were hard to replace.

Hearing Officer: Was continuity of operation a factor in this as well?

Mr. Jackson: It definitely played a part, you know; everything was working. And I have solid procedure that if the system's not broke, I'm not going to try to fix it, if the system was not broke.

Tr. at 76.

Based on this testimony in the record and on the fact that K-Ray filled every one of its positions at METC with a current WSA employee, I find that it is likely that, had Holsinger remained an employee of WSA, he would have been hired by K-Ray in June 1995. I therefore conclude that reinstatement of Holsinger by K-Ray is necessary to restore him to the position he would have occupied absent the acts of reprisal by WSA.

3.Reinstatement Will Not Cause Undue Hardship to K-Ray

Because reinstatement is an equitable remedy, it is appropriate to consider not only whether reinstatement is necessary to provide relief to the complainant, but also whether it would impose an undue hardship on others. At the Hearing and in its Post-Hearing Brief, K-Ray asserts that reinstatement is inappropriate in this instance because it will place an undue hardship on the other K-Ray employees working at METC. In this regard, K-Ray contends that if it is required to hire Holsinger, it will have to fire one of its current employees in order to comply with DOE hiring limitations. K-Ray also argues that the special requirements of Holsinger regarding the scheduling of his work shifts will place a hardship on K-Ray and

its employees. As discussed below, I find that these contentions do not raise concerns sufficient to outweigh the DOE's policy favoring full protection of whistleblowers.

According to K-Ray, one of the original thirteen WSA employees hired by K-Ray resigned in January, 1996. The individual who resigned was a part-time employee. K-Ray states that it has not replaced that employee because the DOE has informed K-Ray that it cannot hire any additional employees due to the personnel cutbacks being implemented at the METC site. K-Ray states that it has been forced to operate with eight full-time employees and four part-time employees. These twelve employees have had to assume the duties and hours of the thirteenth position. The four part-time employees now work an average of approximately 32 hours per week. Testimony of Ms. Lewis, Tr. at 32-34. K-Ray concludes that since it was not allowed to replace the part-time employee who resigned, the DOE would not permit it to reinstate Mr. Holsinger without firing someone else.

If K-Ray were forced to hire Holsinger by this Board that would require the termination of an innocent employee, independently selected by K-Ray.

K-Ray Post-Hearing Brief at 3.

As an initial matter, I am not convinced that the available evidence fully supports K-Ray's conclusion that the DOE will require it to terminate an employee if it is required to reinstate Holsinger. Testimony at the Hearing indicates that METC currently is using a hiring freeze coupled with attrition to reduce its work force. At the Hearing, Ms. Purkey of DOE-METC testified that K-Ray could not hire a new security guard because the METC has had "a hiring freeze for well over a year now." Tr. at 67. She also stated that METC had not taken steps to dismiss any of its employees as a result of budget concerns.

We are -- at this point right now, we are letting it trickle down with attrition without actually having to lay people off. We do not want to lay people off at this point, but it could come to that.

Tr. at 66. Nevertheless, Ms. Purkey concludes that the DOE will require K-Ray to dismiss one of its employees if Holsinger is reinstated. Her conclusion is based on her belief that METC management will not allow K-Ray to have more than twelve employees.

Well, as far as my management's position is, the twelve - - that's the limit they [K-Ray] are now. They'll either go below that; they will not go above that - - that twelve number of people.

Tr. at 66.

Certainly the remedy of reinstatement does not fully comport with the goals of an organization attempting to downsize its work force through employee attrition and a freeze on hiring. In this instance, however, the issue of whether K-Ray has twelve or thirteen employees at the METC site is of marginal significance to the DOE's cost-cutting efforts. K-Ray is paid a fixed sum for providing security services to the DOE. An additional part-time security guard on its payroll does not represent an additional cost to the DOE, and the number of hours of security services provided by K-Ray to the DOE is not increased. In this situation, it would be anomalous for METC to abandon its policy of attrition and require K-Ray to fire one of its employees.

However, even if the DOE requires K-Ray to terminate an "innocent employee" to maintain a security force no larger than twelve, this potential harm does not provide a basis for denying reinstatement to Holsinger. Holsinger too, is an "innocent employee" who but for the improper actions of WSA currently would be an employee of K-Ray. To deny him reinstatement on the basis of DOE hiring ceiling requirements would effectively single him out for discriminatory treatment in comparison to the other security personnel working at METC. Holsinger should be reinstated by K-Ray and thereafter be subjected to the same risks of downsizing as his fellow employees.

K-Ray also contends that Holsinger's demands regarding his reinstatement as a part-time employee are

unreasonable and would impose an unfair hardship on K-Ray and its current employees.

Holsinger is not only requesting that he be reinstated and hired by K-Ray in a part-time capacity, but that he also be able to dictate the days, hours and shift he would be able to work because he is currently employed on a full-time basis as a Deputy Sheriff by the Monongalia County Sheriff's Department. Holsinger works Thursday through Monday 3:00 p.m. to 11:00 p.m., and also works part-time as a police officer for the City of Kingwood. If K-Ray were forced to hire Holsinger it would result in a total restructuring of the hours and shifts worked by [K-Ray's] part-time employees and possibly its full-time employees just to accommodate the demands of Holsinger which would affect the performance, morale and harmony of the remaining 11 employees and be detrimental to the overall security services provided to DOE.

Post-Hearing Brief at 4. I reject K-Ray's assertion that Holsinger is attempting to dictate the days, hours and shift he will be able to work. At the Hearing, Holsinger testified that he had a full-time job (40 hours a week) at the Monongalia County Sheriff's Department. He also stated that he was working part-time as a police officer for the City of Kingwood, but that he was willing to terminate this part-time job if he were reinstated with K-Ray. Tr. at 86. While he stated that he preferred to work "a day or two a week" for K-Ray, he testified that he was able and willing to work up to four days a week (32 hours) to meet K-Ray's requirements. Tr. at 94. In his Post-Hearing Brief, Counsel for Holsinger reiterates his client's willingness to meet K-Ray's requirements.

[Holsinger] has expressed that although he would be unavailable for one shift from 3:00 to 11:00 p.m., he would be available for all remaining shifts, as well as all three shifts on Tuesday and Wednesday, his days off. Holsinger further testified that in the event that a real emergency occurred he would be able to take vacation days from his employment at the Sheriff's Department to fulfill any responsibilities which may be expected by him as a part-time employee at K-Ray.

Holsinger Post-Hearing Brief at 4. These assertions demonstrate that Holsinger is aware that he cannot dictate the days and hours of his work as a security guard at METC. If Holsinger is reinstated at METC, he will be required to meet the scheduling requirements of K-Ray in exactly the same manner as other security personnel. Similarly, K-Ray will be required to accommodate his scheduling conflicts only to the extent that it would accommodate its other employees.

The chief potential problem cited by K-Ray for scheduling Holsinger's part-time guard duty is working around his full-time position at the Monongalia County Sheriff's Department. However, testimony has established that another part-time employee of K-Ray, Mr. John Kisner, has been a full-time employee of the Monongalia County Sheriff's Department for several years, and that K-Ray has successfully accommodated the time requirements of his full-time position when scheduling his part-time guard duty at METC. Tr. at 106-11. Accordingly, if Holsinger is reinstated, K-Ray is not being required to accommodate potential scheduling problems that are more serious than those raised by another of its part-time employees. Nor is Holsinger requesting more in the way of schedule accommodation than K-Ray is already providing to another of its part-time employees.

Finally, K-Ray argues that it can accommodate Mr. Kisner because its three other part-time security guards have more flexible schedules. It contends that if it is required to replace one of these flexible, part-time guards with Holsinger, the resulting scheduling problems will be highly disruptive to its employees. Tr. at 112-113. This assertion is speculative and unsupported by the available evidence. In this regard, it should be noted that Mr. Kisner and Mr. Holsinger work different hours at the Monongalia Sheriff's Department and have different days off from that employment. Tr. at 107. Accordingly, there is reason to believe that it will be possible to reach an equitable resolution of Holsinger's shift scheduling that will not unduly inconvenience his fellow employees.

Based on these considerations, I find that reinstatement is a necessary and appropriate remedy in this instance.

IV. Conclusion

For the reasons set forth above, I have concluded that Holsinger has proven by a preponderance of the evidence that he engaged in protected activity under 10 C.F.R. Part 708 and that this activity was a contributing factor to his September 20, 1994 suspension and his October 2, 1994 dismissal by WSA. WSA and K-Ray have failed to prove by clear and convincing evidence that WSA would have taken these adverse personnel actions absent Holsinger's protected activity. I therefore find that a violation of 10 C.F.R. § 708.5 has occurred. I also find that reinstatement of Holsinger by K-Ray is a necessary and appropriate action to effect full relief for Holsinger. In light of WSA's settlement with Holsinger and its February 27, 1996 Stipulation of Dismissal with Holsinger, I find that no further remedial action by WSA is required in this matter.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 of Daniel L. Holsinger (OHA Case Number VWA-0005) is hereby granted as set forth in this Decision and denied in all other aspects.

(2) The request for relief under 10 C.F.R. Part 708 of K-Ray Security, Inc. (K-Ray) (OHA Case Number VWA-0009) is hereby denied.

(3) K-Ray shall reinstate Daniel Holsinger to his former position as a part-time security guard at the Department of Energy Morgantown Energy Technology Center or to a comparable position at that facility. K-Ray shall perform his shift scheduling in an equitable manner.

(4) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director of the Office of Contractor Employee Protection.

Kent S. Woods

Hearing Officer

Office of Hearings and Appeals

Date:

<1>/ Ms. Purkey reported to the OCEP interviewer that sometime after she concluded her investigation of the allegations in the anonymous letter, she had a conversation with Captain Munz and that they agreed that the author was probably Holsinger. Report, Exhibit 6. Ms. Purkey concluded her investigation on September 7, 1994. Captain Munz issued the three-day suspension to Holsinger on September 20, 1994.

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Names of Petitioners: META, Inc.

Logistics Applications, Inc.

Dates of Filing:April 22, 1996

May 22, 1996

Case Numbers: VWA-0006

VWA-0013

This Decision involves a whistleblower complaint filed by Mr. Eugene Greer under the Department of Energy's Contractor Employee Protection Program, codified at 10 C.F.R. Part 708. Until his employment was terminated on November 4, 1993, Mr. Greer was an audio-visual operator at DOE Headquarters employed by two DOE contractors, Omega, Inc., and its successor META, Inc. During Omega's tenure, the Office of Inspector General (IG) interviewed Mr. Greer in connection with an investigation of misuse of government property by two DOE employees responsible for supervising the audio-visual contract. Ultimately, one of the DOE employees was reprimanded. META succeeded to the Omega contract, hired Mr. Greer and later released him on November 4, 1993. Mr. Greer alleges that he lost his job because of retaliation through META by the two DOE employees who were the subject of the IG investigation.

On November 12, 1993, Mr. Greer filed a Complaint under Part 708 with the DOE's Office of Contractor Employee Protection (OCEP). OCEP investigated Mr. Greer's complaint and issued a Proposed Disposition on March 27, 1996. The Proposed Disposition concludes that Mr. Greer was retaliated against because of his cooperation with the IG investigation, and recommends that Mr. Greer receive compensatory back pay from META and be rehired by Logistics Applications, Inc. (LAI), the present audio-visual contractor. Both META and LAI filed requests with OCEP for a hearing on the Greer complaint under 10 C.F.R. § 708.9(a). OCEP transmitted META and LAI's requests to the Office of Hearings and Appeals (OHA) on April 22, 1996 and May 22, 1996, respectively, and I was appointed the hearing officer. The parties submitted additional material for the record, and sworn testimony was taken at a hearing held on July 9, 1996. META and LAI also made post-hearing submissions. On the basis of all this material and testimony, I find insufficient basis for the claim that termination of Mr. Greer's employment resulted from his cooperation in the IG investigation. The relief he requested shall therefore be denied.

I. The Whistleblower Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste, and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. These regulations provide that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has "[d]isclosed to an official of DOE, to a member of

Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences a violation of any law, rule, or regulation, [or] . . . a substantial and specific danger to employees or public health and safety." 10 C.F.R. § 708.5(a)(1); see also Francis M. O'Laughlin, 24 DOE ¶ 87,505 (1994).

Proceedings under 10 C.F.R. Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an impartial OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee. See David Ramirez, 23 DOE ¶ 87,505 (1994). The complainant under Part 708 has the burden of establishing "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." If the complainant makes such a showing, the contractor can avoid liability only by proving "by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993). As a practical matter, the application of these standards means that to prevail, Mr. Greer must establish that it is more likely than not that his disclosure to the IG contributed to his discharge.

II. Background

Mr. Greer alleges that he lost his job because of his involvement in the IG investigation. Specifically, Mr. Greer claims (i) there was a marked change in attitude towards him on the part of one of the DOE officials, Mr. Raymond Brown, and (ii) certain limitations were placed on Mr. Greer's duties in the wake of the IG investigation. These factors appear to be the main bases for Mr. Greer's complaint.

META claims that Mr. Greer's termination was part of a reorganization designed to remedy certain deficiencies in META's management of the audio-visual contract. According to META, the decision to terminate Mr. Greer's employment was made by Mr. Charles Craven, vice-president of the firm, with some input by Mr. Jackson Reavill. According to these two META officials, to remedy the management problems the firm decided to replace the on-site manager of the contract. META states that it did not dismiss the manager being replaced, but retained the manager in a lesser position at reduced pay. To remain within the contract's staffing and salary ceilings, META stated it believed it needed to take additional steps to reduce costs, and it released Mr. Greer, the highest paid audio-visual operator. META states that Mr. Greer's discharge yielded the required salary savings and that his release had nothing to do with his quality of work or the IG investigation. Transcript of Hearing at 23-24, 28-31, 133-34 (July 9, 1996) (hereinafter cited as Transcript).

The OCEP Proposed Disposition finds that Mr. Greer's discharge appears related, at least in part, to cooperation with the IG investigation. According to the Proposed Disposition, the two DOE officials who were the subjects of the IG investigation (Messrs. Branca and Brown) orchestrated Mr. Greer's dismissal by making negative comments about his work to META officials. However, nothing in the OCEP Proposed Disposition suggests that META intentionally did anything improper or even knew of the details of the IG investigation that took place while the contract was being administered by Omega, META's predecessor.

The conclusion of the Proposed Deposition is based largely upon inference. I must examine whether that inference is warranted. In doing so, I will review the circumstantial evidence upon which OCEP apparently relied. The proposed disposition relied primarily upon circumstantial evidence that (1) the two DOE officials knew that Mr. Greer cooperated with the IG investigation, (2) META was aware that one of the DOE Officials had a low opinion of Mr. Greer, (3) a notation was made on Mr. Greer's termination letter implying that DOE employees had some input to Mr. Greer's dismissal, and (4) terminating Mr. Greer was not the most logical option available to META.<1>

III. Analysis

In whistleblower cases it is often impossible for the complainant to find a "smoking gun" that proves an employer's retaliatory intent. Thus complainants must generally meet their burden of proof through circumstantial evidence. A retaliatory intent has been found, for example, where the retaliatory action took place within such a brief period of time from the date of the disclosure that a reasonable person could conclude that the disclosure must have been a factor in the personnel action. See Ronald A. Sorri, 23 DOE ¶ 87,502 at 89,010 (1993); David Ramirez, 23 DOE ¶ 87,505 at 89,029 (1994). Furthermore, I recognize that the testimony of contractor officials who have been accused of retaliating must be viewed with some skepticism and must generally be supported by corroborative evidence if it is to be relied upon in these proceedings. However, this does not mean that the testimony of contractor officials should be ignored. The weight to give circumstantial evidence and the testimony presented at the hearing must depend upon the circumstances of each case and the hearing officer's view of the value of the evidence and the credibility of the witnesses.

Based upon the record, including testimony received at the hearing held in this case, there is no doubt that Mr. Greer perceived a change in Mr. Brown's attitude towards him during the period leading to his dismissal.<2> Nor is there any doubt that Mr. Greer sincerely believes that DOE officials communicated their opinions of him to META and thereby contributed to his dismissal.<3> Transcript at 19-21, 155-61; Exhibit 6. However, there is simply no evidence to support that belief. As explained below, I am unwilling to find it sufficient that Mr. Greer was discharged following his cooperation with the IG investigation. Mr. Greer was discharged in November 1993, while his last interview with the IG was in November 1991 and Mr. Branca received a reprimand in the Fall of 1992. Thus, Greer's discharge occurred two years after he was interviewed by the IG and one year after Mr. Branca was reprimanded. While the delay between the disclosure and the retaliatory action alleged in this case does not necessarily rule out a connection, it does significantly reduce the value of this circumstantial evidence.

META's evidence in this case was presented primarily through the sworn testimony of Messrs. Craven and Reavill, the two META officials who made the personnel decision. In evaluating their testimony, I must emphasize that neither META nor its officials are alleged to have intentionally retaliated against Mr. Greer. It is alleged only that META was manipulated by the two DOE officials allegedly involved, Messrs. Brown and Branca. META should therefore have an excellent claim for reimbursement from DOE if Mr. Greer were awarded back pay. Under these circumstances, Messrs. Craven and Reavill would have no reason to distort their testimony out of fear of an adverse financial impact on their employer. These META officials presented consistent testimony and nothing in their demeanor leads me to question their veracity. Consequently, I find the testimony of Messrs. Craven and Reavill to be generally reliable.

These two META officials, as well as the two DOE officials allegedly involved, Messrs. Brown and Branca — all testified under oath that, except with respect to one incident discussed below, there had been no communications between DOE and META officials concerning Mr. Greer. Transcript at 48, 57-59, 69, 123-27, 130-32, 148; see also Exhibits 11 & 19. Nor is there any evidence in the record of such communications, subtle or otherwise.<4> Under the circumstances it is not possible to conclude that the DOE officials swayed META's thinking concerning Mr. Greer's employment. I therefore must reject the Proposed Disposition as well as Mr. Greer's request for relief.

A brief review of this case and of the factors relied upon in the Proposed Disposition will be useful. I certainly agree with OCEP's finding that the DOE officials must have at least assumed that Mr. Greer had been interviewed by the IG, as the matter under investigation involved matters for which Mr. Greer was responsible.

The Proposed Disposition found that META was aware that Mr. Brown had a low opinion of Mr. Greer. The basis for this finding was in connection with an incident in which Mr. Greer apparently attempted to choke another employee (no injuries resulted). Mr. Brown told Mr. Craven that he thought Greer should have been disciplined more strongly. Transcript at 27-28, 69. This incident was a potentially serious matter

about which Mr. Brown had a legitimate reason for concern, and I am unwilling to attribute any improper motive to his comments concerning it. According to the record, this was the only time in which either DOE official expressed any opinion concerning Mr. Greer to either META official involved in the 1993 personnel decision to release him. Since the chocking incident would have been an excellent pretext for discharging Mr. Greer, the fact that META did not do so at that time indicates that the firm was not looking for an excuse to terminate his employment.

The conclusion of the Proposed Disposition, i.e., that the DOE officials influenced META, is based largely upon the following handwritten notation that Mr. Craven made on Mr. Greer's termination letter: "NOTE/ADDENDUM: Mr. Greer will provide information regarding DOE's evaluation of his performance that contributed to this action. I will reconsider this action after I receive this Information." Exhibit 33. OCEP construed this to be an admission by Mr. Craven that he was influenced by DOE personnel. However, Mr. Craven has explained that when he told Mr. Greer that he would be dismissed, Greer argued that the real reason for his dismissal was the IG investigation. Mr. Craven states that he was taken aback by this comment which raised the specter of a new IG investigation and allegations by Mr. Greer of reprisal. Mr. Craven explained that while he did not think there was anything to the allegation, he wrote the notation on the letter and told Mr. Greer to "write me a letter, and tell me exactly what DOE official and how this reprisal came about." Transcript at 33. Mr. Craven also testified that he did not intend this notation to mean that he accepted Mr. Greer's contention that his dismissal had anything to do with the IG investigation. Transcript at 33, 60. It appears to me that Mr. Craven would have had no reason to ask Mr. Greer to explain his allegation if he believed there was any merit to it. I therefore find Mr. Craven's explanation of the notation, rather than the inference of the Proposed Disposition, to be reasonable and credible.

The Proposed Disposition also finds that it might have been more logical for META to have discharged some other employee, and infers improper influence because Mr. Greer was selected for dismissal.<5> According to the Proposed Disposition, META could have discharged a higher paid employee who was performing different functions, or a lower paid employee performing the same functions (but who was not so highly rated) and then reduced Greer's pay to obtain the desired cost savings. Also noted is the fact that Mr. Greer was not rehired six months later, when Mr. Henderson retired and META hired a different individual in Mr. Greer's job classification at a higher salary.

At the hearing, Mr. Craven explained the personnel decisions that he made as follows: (1) Discharging an employee in another job classification would not have been appropriate because only in the audio-visual operator classification was there an excess employee. (2) Downgrading Mr. Greer and discharging another employee would have simply increased the number of dissatisfied META employees, because then both the discharged employee and Mr. Greer (because of his downgrading) would have been unhappy. (3) Although the audio-visual operator META hired in April 1994 worked in the same job classification as Mr. Greer, she had additional skills which were needed because of changing requirements under the contract and which warranted a higher salary. Transcript at 49, 63-66, 71-72; see also Exhibits 11, 19, 29 & 30. I find this testimony believable and a reasonable response to the speculation in the Proposed Disposition on this issue.

Another matter raised in the Proposed Disposition concerns a statement made to the OCEP investigator in this case by the DOE Contracting Officer. The statement is that the Contracting Officer could not "understand" why Mr. Greer was selected for termination based upon economic considerations. During his testimony, the DOE Contracting Officer explained that he meant only that he did not know why Mr. Greer had been selected to be dismissed, and that he did not mean to suggest — as the Proposed Disposition infers — that META's rationale was invalid. Transcript at 84.

IV. Conclusion

In summary, the circumstantial evidence relied upon by OCEP is outweighed by the sworn testimony of

the two META officials responsible for terminating Mr. Greer's employment that no DOE official had any say at all in that decision. Both of these individuals, Messrs. Craven and Reavill, testified that their decision had nothing to do with Mr. Greer's performance, but was based solely upon the need to cut one person as part of a reorganization, and that terminating Mr. Greer yielded the desired cost savings. I find this testimony convincing and reasonable. They also testified that while the DOE officials communicated with them concerning the performance of the project manager, they seldom discussed other META employees. The only time in which either discussed Mr. Greer was in connection with the choking incident. Mr. Brown had legitimate reasons underlying his concern about that incident and no improper motive can be attributed to Mr. Brown's comments concerning it. I find their testimony to be credible. Affirming this testimony, both DOE officials independently also testified that they had no direct say in the decision to terminate Mr. Greer's employment.

Consequently, the weight of the evidence in this case is that Mr. Greer's discharge was the result of a reorganization by META of its audio-visual contract operation and that DOE personnel played no role in that decision. Accordingly, I find Mr. Greer has not proven, by a preponderance of the evidence, that his dismissal resulted in any way from his cooperation with the IG investigation. I therefore cannot find that a violation of 10 C.F.R. § 708 has occurred. The Proposed Disposition issued by OCEP in this case is therefore not accepted.<6>

It Is Therefore Ordered That:

(1) The request for review filed by META, Inc., (Case No. VWA-0006) is hereby granted as set forth in Paragraph (2) below.

(2) Eugene Greer's request for relief under 10 C.F.R. Part 708 is hereby denied.

(3) The request for review filed by Logistics Applications, Inc., (Case No. VWA-0013) is hereby dismissed.

(4) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting the complaint in part unless within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Director of the Office of Contractor Employee Protection.

Richard T. Tedrow

Hearing Officer

Office of Hearings and Appeals

Date:

<1>It is undisputed that even though Mr. Greer did not initiate the IG investigation, his cooperation in it constituted a protected disclosure under 10 C.F.R. § 708(5)(a)(1). Transcript at 8. Nonetheless, it is not certain that there is jurisdiction in this case. See id. § 708.2(b). However, the parties did not brief the issue of jurisdiction, and in view of my decision on the merits, it is not necessary to reach the issue.

<2>Evidence concerning whether there was in fact a change in Mr. Brown's attitude toward Mr. Greer is conflicting. See Exhibits 12 & 20. I also note that even if there were a change in attitude, it could have resulted from factors other than Mr. Greer's role in the IG investigation.

<3>OCEP also investigated other acts of alleged discrimination, including restrictions placed on Mr. Greer's duties and counseling him for tardiness. The Proposed Disposition found that there were reasonable business reasons for these actions and that they could not be traced to Mr. Greer's cooperation

with the IG investigation. Little evidence was offered on these actions at the hearing, and I fully agree with the Proposed Disposition's conclusions concerning them. Transcript at 45-47.

<4>The DOE officials may have discussed Mr. Greer's performance with Mr. Henderson, but the only matter concerning Mr. Greer that Henderson raised with Messrs. Craven and Reavill was a minor tardiness issues that was never a significant problem. Transcript at 57.

<5>OCEP also found that META was mistaken about the need under the contract to eliminate a position to bring on a new project manager. This may well be correct. There is some evidence that META might have been able to retain Mr. Greer. However, it is clear that an extra employee was not needed to perform the work required by the contract. Under these circumstances, I cannot attribute any improper motive to META's decision to discharge an employee. Transcript at 82-86.

<6>In view of this determination, it is not necessary for me to address the arguments raised by LAI as to why, in the event Mr. Greer had been wrongfully discharged, it should not be required to reinstate him.

Case Nos. VWA-0007 and VWA-0008

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Names of Petitioners: C. Lawrence Cornett, Maria Elena Torano Associates, Inc.

Date of Filing: May 9, 1996

Case Numbers: VWA-0007, VWA-0008

This Decision involves a complaint filed by C. Lawrence Cornett (Complainant) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. Complainant contends that various types of reprisals were taken against him by his employer, Maria Elena Torano Associates, Inc. (META), after he raised public health and safety concerns regarding the Programmatic Environmental Impact Statement (PEIS).(1) At the time of Complainant's hiring in November 1992, META was under contract to the DOE to review and revise draft materials for the PEIS including the performance of data analysis. See DOE Contract No. DE-AC01-91EM40002, Attachment B.(2)

The Office of Contractor Employee Protection (OCEP) conducted an investigation of Complainant's allegations and issued a Report of Investigation and Proposed Order (Report) on April 17, 1996. OCEP, in the Report, found that the available evidence supported Complainant's allegations and proposed that he be granted relief, though not as much as Complainant felt he was entitled to. Both Complainant and META requested a hearing before an Office of Hearings and Appeals (OHA) Hearing Officer under 10 C.F.R. 708.9(a). The hearing in this case was held on October 29-31, 1996 at DOE Headquarters in Washington, D.C.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE Contractor Employee Protection Program became effective on April 2, 1992. 57 Fed. Reg. 7533 (March 3, 1992). Its purpose is to encourage contractor employees performing work at DOE facilities to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers. 10 C.F.R. 708.1.

The Part 708 regulations were adopted to improve the prior, informal process of resolving whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee.

B. Factual Background

The following summary of the facts and allegations in this case is primarily based on the testimony of witnesses at the October 29-31 hearing and the OCEP investigation.(3) In November 1992, Complainant was hired as a Senior Environmental Scientist by META. Complainant was initially employed to provide analysis in the field of human health risk assessment with regard to various waste management options to be reviewed in the PEIS. See Complainant's (Plaintiff's) Exhibit (hereinafter Pl. Ex.) 3. META subsequently designated Complainant as one of its "key personnel" with regard to the PEIS contract. See

OCEP Ex. 59. Almost immediately upon beginning work at META, Complainant reviewed the text of the Draft Implementation Plan for the PEIS. The draft text stated that the role of risk assessment in environmental remedial action decision-making had been significantly decreased since the Comprehensive Environmental Response Compensation Liability Act (CERCLA) was passed.(4) Complainant believed that these statements were incorrect and notified XXXXX, Chief Scientist, Louis A. Berger Associates (Berger),(5) regarding his opinion that the text of the Implementation Plan should be changed. OCEP Ex. 1 (Complainant's Sworn Statement) at 3. Complainant subsequently wrote memoranda to management officials outlining his position, providing examples of the role of risk assessment in various Environmental Protection Agency (EPA) regulations and orders, and suggesting changes to the text. Id.; see also Pl. Ex. 9. Despite Complainant's attempts to influence management, XXXXX declined to change the text of the Implementation Plan in the manner proposed by the Complainant. On or about December 20, 1992, Complainant had a meeting with XXXXX who informed him that he could go along with the text of the Implementation Plan or "quit and picket." OCEP Ex. 1 at 3, Tr. at 66; see also OCEP Ex. 33 (XXXXX Interview Summary). Complainant then contacted Bob Morgan (Morgan), President of META, and informed him that the language in the Draft Implementation Plan regarding the importance of risk assessment was erroneous. According to Complainant, Morgan then assigned him to rewrite the section of the Implementation Plan dealing with the role of risk assessment and CERCLA. See OCEP Ex. 1 at 3. Complainant alleges that XXXXX appeared to resent Complainant going over his head to Morgan and subsequently refused to communicate with him or provide him with needed information, thus minimizing his participation in some project activities and reducing his responsibilities.

While reviewing data and other PEIS materials, Complainant would send reports to his supervisors such as Dave McGuire (McGuire), Project Manager of the Waste Management Section of the PEIS Project, and Frank Skidmore (Skidmore), Deputy Project Manager for Waste Management, reporting on the work he accomplished and detailing his opinions and concerns regarding matters affecting the PEIS. For example, in January 1993, Complainant sent a memo to Skidmore and McGuire detailing his opinions regarding the types of information which the DOE national laboratories should include in their analyses of human health risk assessments along with his opinion that the use of "time discounting" methods should not be employed to estimate risk to future generations.(6) See OCEP Ex. 44. Also included in that memo was an evaluation of High Level Waste (HLW) risk assessment reports submitted by Oak Ridge National Laboratory (ORNL) and ANL. Complainant continued to send reports and memos to META/Berger management officials throughout 1993 and early 1994 detailing his concerns about deficiencies in the draft PEIS materials.

In the summer of 1993, Peter Astor (Astor) became Director of Hazardous Waste Studies for the PEIS project. Complainant thereafter performed his risk assessment work under Astor's supervision. In the fall of 1993, Complainant became concerned with data about the West Valley Demonstration Project (WVDP). Specifically, Complainant believed that the data indicated that full scale treatment of HLW at the WVDP would result in a significantly higher cancer rate among the general public than treatment of all of DOE's HLW at all other sites combined. Complainant alleges that he contacted officials at META/Berger, ORNL and Pacific National Laboratory regarding this finding. Complainant then expressed his concerns regarding the WVDP during a meeting in November 1993. He alleges that he subsequently was informed by someone in META/Berger management that the WVDP data was in error, although Complainant was unable to find confirmation of that fact. OCEP Ex. 1 at 4. Subsequently, Complainant was removed from having primary responsibility for summarizing the impacts of waste management and was given duties involving less responsibility. Id. at 4-5. Complainant alleges that he contacted Bob Lee (Lee), Director of Federal Services at Berger, about his diminished responsibilities and exclusion from certain technical meetings, and was informed that he shouldn't be concerned since there was still important work for him to perform, but that DOE personnel did not want him to attend the meetings. Id. at 5, 15. According to Lee, DOE and ORNL employees had complained about the Complainant's tendency to refuse to let subjects drop, thus interfering with the progress of meetings, and some had requested that Complainant not attend meetings. OCEP Ex. 29 (Lee Interview Summary).

In mid-December 1993, Albert Tardiff (Tardiff) became the manager for the PEIS project.[(7)] A few weeks later, Dr. Sharon Segal (Segal; "Siegel" in the hearing transcript), was hired to be the lead person on the Human Health Risk section and became Complainant's immediate supervisor. During the period from January through the first week of March 1994, Complainant identified concerns he had regarding changes to the text he wrote for the PEIS about radionuclide impacts. Complainant believed that the changes produced a misleading impression regarding the seriousness of the human health impacts from radionuclides. Additionally, Complainant was concerned that the edited text omitted information regarding airborne radon at DOE's Fernald Environmental Management Project (Fernald) and that the health effects of contaminated game and fish at the DOE's Savannah River Site (SRS) were not being considered in assessing risks at that site. Complainant sent a Progress Report, dated January 10, 1994, to META/Berger management officials detailing these concerns. OCEP Ex. 3. Complainant alleges that on the same day he distributed the January 10 Progress Report, he was called to a meeting with Tardiff, who told him to "back off" and that META's job was to make DOE "look as good as possible." OCEP Ex. 1 at 12. Tardiff does not recall having a meeting with Complainant on January 10, 1994. Tr. at 432. Complainant subsequently sent a memo and Progress Report on January 14, 1994, in which he reiterated his concerns and asked why radiation exposure data at Fernald and SRS was deleted and misrepresented in the most recent draft of the Affected Environment section of the draft PEIS. See OCEP Exs. 5, 6. Complainant alleges that Tardiff met with him later that day and criticized him for his disclosure pertaining to radionuclide data and threatened to take him off the PEIS project once Segal no longer needed his input. OCEP Ex. 1 at 12. Tardiff denies that this meeting occurred. Tr. at 432-33. In another memo, dated February 15, 1994, Complainant expressed his concerns that necessary chemical exposure data was not being incorporated into the Affected Environment section of the PEIS. OCEP Ex. 9.

According to Complainant, Tardiff summoned him to his office on March 8, 1994, and informed him that his employment was being terminated effective March 22, 1994. OCEP Ex. 1 at 14. Tardiff states that at a meeting he attended in Tucson, Arizona in late February 1994, Glen Sjoblom (Sjoblom), a special assistant to the Assistant Secretary for Environmental Management at DOE, informed him that META/Berger should layoff a total of 10 employees. Tr. at 403. Tardiff states that he determined that Complainant could be released after consulting with Lee, Segal and Skidmore and being informed by them that Segal could perform the work previously performed by Complainant. Tr. at 407-8, 417. Tardiff denies this action was taken in retaliation for Complainant's expressing his concerns about the PEIS process to META and DOE. Tr. at 434.

C. Procedural History of the Case

On March 9, 1994, Complainant filed a complaint pursuant to 10 C.F.R. Part 708. As indicated above, OCEP conducted an investigation of Complainant's allegations and issued its Report on April 17, 1996. In the Report, OCEP concluded that Complainant had made protected disclosures regarding health and safety issues and that it had jurisdiction over his complaint. Further, OCEP concluded that a preponderance of the evidence supported a finding that Complainant's protected disclosures contributed to his selection by META to be terminated and that META had failed to show by clear and convincing evidence that Complainant would have been terminated absent his protected disclosures. OCEP proposed that Complainant be awarded back pay and benefits, minus any earned income and associated benefits, from the time his employment was terminated until the date of the issuance of the Draft PEIS in September 1995, as well as reasonable costs and expenses, including attorney fees, that he incurred in bringing his complaint.

In a submission to OCEP dated April 30, 1996, Complainant asked for a hearing under 10 C.F.R. 708.9.[(8)] On May 1, 1996, META also submitted a hearing request to OCEP. On May 9, 1996, OCEP transmitted these requests to OHA together with the Report, the complaint file, and a request that a Hearing Officer be appointed.[(9)] On May 13, 1996, I was appointed Hearing Officer in this matter.

META filed a Motion to Dismiss Complainant's Part 708 complaint on May 21, 1996. In its Motion, META argued that DOE did not have jurisdiction to hear the complaint since Part 708 applies only to

employees of DOE contractors who perform work at DOE-owned or DOE-leased facilities. META asserted that, with the exception of a limited number of visits to DOE sites to perform work ancillary to the primary purposes of the PEIS contract, it did not perform work at DOE sites. Because of the factual issues raised by META's Motion and the subsequent submissions by the parties on this matter, I issued an Order to Show Cause providing for a hearing on this jurisdictional matter. See C. Lawrence Cornett, 25 DOE 87,504 (1996) (Case No VWX-0009).(10) That hearing was held on July 31, 1996. In an Interlocutory Order dated August 22, 1996, I denied META's Motion because I found that META employees had in fact performed activities on DOE sites that could not be considered merely ancillary to the primary purposes of the PEIS contract. See META, Inc., 26 DOE 87,501 (1996) (Case No. VWZ-0006).

On October 4, 1996, META submitted a Motion to Dismiss the complaint for failure to state an actionable claim. META asserted that Complainant had not made a "disclosure" pursuant to Part 708 since DOE and META officials already knew the information in the claimed disclosures. Further, META asserted that Complainant's alleged disclosures did not involve a substantial and specific threat to any person's health and safety as required by Part 708. In an October 23, 1996 Decision, I denied META's October 4 Motion. META, Inc., 26 DOE 87,504 (1996)(Case No. VWZ-0007). In this Decision, I found that there is no requirement in Part 708 that a protected disclosure must contain unique information not known to the DOE or contractor. Additionally, I found that because the regulations only require that an individual in good faith believe that his disclosure concerns a substantial and specific danger and Complainant's good faith belief is a factual issue, it would be inappropriate to grant META's Motion.

Pre-Hearing Submissions were filed by both parties by telecopier on October 11, 1996. I conducted a pre-hearing conference call with the attorneys for the parties on October 17, 1996. At the October 29-31 hearing the following witnesses testified in addition to Complainant: McGuire, Tardiff, Sjoblom, Dr. Thomas Hale, and Dr. Jane Rose. The transcript of the October 29-31 hearing was received by OHA on November 7, 1996, and the record upon which I have based this Initial Agency Decision was closed at that time.

II. Discussion

A. The Complainant's Burden

It is the burden of a complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under section 708.5, and that such an act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. 708.9(d). Thus, in order to meet his burden under this section Complainant must prove by a preponderance of the evidence that it is more probable than not, see 2 McCormick on Evidence 339 at 439 (4th ed. 1992), that he was engaged in a protected activity that was a "contributing factor" in his termination.

The standard of proof adopted in Section 708.9(d) is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C. 1221(e)(1), and the 1992 amendment to 210 (now 211) of the Energy Reorganization Act of 1974 (ERA), 42 U.S.C. 5851. In explaining the "contributing factor" test in the WPA, the Senate floor managers, with the approval/concurrence of the legislation's chief House sponsors, stated:

The words "a contributing factor", ... mean any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision. This test is specifically intended to overrule existing case law, which requires a whistleblower to prove that his protected conduct was a "significant", "motivating", or "predominant" factor in a personnel action in order to overturn that action.

135 Cong. Rec. H747 (daily ed. March 21, 1989) (Explanatory Statement on Senate Amendment-S.20). See Marano v. Dep't of Justice, 2 F.3d 1137 (Fed. Cir. 1993) (Marano) (applying "contributing factor" test).

In addition, "temporal proximity" between a protected disclosure and an alleged reprisal has been held to be "sufficient as a matter of law to establish the final required element in a prima facie case of retaliatory discharge." County v. Dole, 886 F.2d 147, 148 (8th Cir. 1989).

Applying these standards to the present case, I find that Complainant has met his burden under Part 708 of proving by a preponderance of the evidence that his health and safety disclosures were contributing factors in his termination by META.

1. Were there "Protected Disclosures"?

In its Report, OCEP chronologically listed 17 categories of alleged disclosures that Complainant made during his employment at META. OCEP concluded that these disclosures constituted "protected disclosures" without individually analyzing any of them. This conclusion has been vigorously contested by META, which has argued that none of the statements made by Complainant related to the preparation of the PEIS meet the regulatory requirements of a protected disclosure that are asserted to be applicable in this case, namely, that the employee disclosed to an official of DOE or the contractor information which the employee in good faith believes evidences a substantial and specific danger to employee or public health and safety. See 10 C.F.R. 708.5(a)(1)(ii). As discussed below, I find that META's general arguments regarding the nature of Complainant's disclosures are without merit. Further, I find that Complainant did indeed make protected disclosures. (11)

a. META's Arguments

META has argued that it, DOE and the public were already aware of all of the matters communicated by Complainant pertaining to the PEIS and thus Complainant did not make any "disclosures." Tr. at 573 (closing argument). As indicated above, in my Decision denying META's October 4 Motion to Dismiss, I rejected META's interpretation of the word "disclose" and found that information does not have to be unique to the recipient in order to be considered a disclosure for the purposes of Part 708. Moreover, Complainant's disclosures consisted not only of information that was communicated, but the manner in which that information was selected and presented. He was selecting certain information from a large body of material and using that information to argue that data or methodologies should or should not be included in the PEIS.

META also argues that Complainant's communications were not motivated by a desire to warn anyone of impending threats to health and safety but were instead motivated by an intention to prevent DOE and the contractor from embarrassment and to have decisions decided in his favor. E.g., Tr. at 575 (closing argument). Thus, META concludes that Complainant's communications were not based upon a good faith belief that they pertained to a specific and substantial threat to health and safety. In support of this position, META has pointed out, inter alia, the following excerpts from the Complaint:

Failure to include this [a discussion of radiation effects] will give persons commenting on the PEIS an opportunity to grandstand about the effects that the PEIS is not disclosing. . . .

* * *

Stakeholders reading the report would see this as a brazen attempt at a coverup. . . .

* * *

If the PEIS did not contain information on site impacts that were documented in site environmental reports stakeholders could bring this out in hearings and the media to embarrass DOE.

META's Motion to Dismiss for Failure to State an Actionable Claim at 7 (quoting from OCEP Ex. 1 at 8, 11-12).

META also notes that in his January 10, 1994 Progress Report, Complainant remarks:

Discrepancies or missing information that could lead to gross underestimates of impacts could undercut Hazel O'Leary's work establishing a good reputation for DOE concerning disclosure to the public of impacts. . . .

* * * *

I pointed out that the PEIS should take care not to undercut Hazel O'Leary's work establishing a good reputation for DOE concerning full disclosure, rather than taking a short term approach to this and trying to not bring attention to DOE problems, which the public and stakeholder groups are aware of (many of which are documented in Site Environmental Reports) and will drag into the open if DOE doesn't come forth with them first.

Id. (quoting from OCEP Ex. 3).

Complainant has testified that he used the "embarrassment" argument as a tool to motivate Tardiff who he felt would not respond to arguments relating to public health and safety. Tr. at 244-45, 280-282. In its cross examination of Complainant, META challenged Complainant's explanation especially in light of the fact that Complainant's supervisors had extensive experience in environmental matters and presumably would not need such a pretext to make appropriate decisions.

While Complainant used the "embarrassment" argument on occasion, I find that his disclosures were also motivated by a good faith belief that the information that he communicated evidenced a substantial and specific danger to public health and safety. This finding is significantly supported by the testimony of McGuire regarding Complainant's attitude when discussing PEIS issues in various meetings:

Yes, Larry [Cornett] is exceptionally articulate about the points of view he advances. . . . [H]e has a regard for the ultimate end for which we were all working; that is . . . he understood in a visceral way the fact that we were talking about actions which could conceivably harm or kill people over a period of time, and that therefore that was a serious responsibility.

. . . [W]ith Larry, it was visceral and honestly felt, and, so, he had a strong motivation more than as a technocrat to carry on and advocate his point of view.

Tr. at 207-08.

Moreover, the statements cited by META constitute a very small percentage of the voluminous communications by Complainant in the record. The vast majority of those communications refer to health effects either expressly or indirectly through reference to CERCLA and other environmental laws and regulations.(12) Consequently, there is no basis for finding that Complainant's sole motivation in making his communications was to prevent DOE from embarrassment. Further, Part 708 does not require that a concern about a substantial and specific danger to public health be the sole motivating force in order for an individual to make a protected disclosure. Accordingly, to the extent that motivation is relevant to a finding of good faith belief, I find that Complainant's disclosures were motivated by his genuine concern that a methodologically flawed PEIS would have an adverse impact on human health.

META has also argued that none of Complainant's communications involved a substantial and specific danger to public health and safety. E.g., Tr. at 575 (closing argument). Specifically, META asserts that almost all of the concerns by Complainant were in fact disagreements on technical policy issues regarding risk assessment methodology. Such disagreements, META asserts, are most appropriately settled in peer review journals. To buttress this argument, META has submitted a report from an Ad-Hoc Independent Work Group (AHWG Report) from the EPA which found that most of the allegations of inadequate risk assessment raised by Complainant were "technical policy issues."(13) META Hearing Ex. 11 at 1.

I do not believe that all of Complainant's communications involved only policy matters. However, even assuming arguendo that all of Complainant's disclosures concerned only technical policy issues that fact would not defeat his Part 708 complaint. Part 708 only requires that an individual have a good faith belief that the information he or she discloses evidences a substantial and specific danger to public health and safety. See 10 C.F.R. 708.5(a)(1)(ii); META, Inc., 26 DOE 87,504 (1996). The fact that all of Complainant's concerns could be considered as "policy concerns" would not foreclose his having a sincere and reasonable belief that those concerns involve substantial and specific dangers to health and safety. The record supports a finding that the Complainant had such a belief. The record also shows that the human health risk concerns raised by Complainant related to radioactive and other toxic waste at the nation's largest nuclear facilities. The subject matter of Complainant's disclosures is therefore precisely the type of disclosure that the Part 708 regulations were designed to protect. As the Secretary of Energy has stated, "[W]e have important environmental cleanup, national security and research missions that must be effectively and efficiently discharged. Maintaining a climate that allows for concerns to be raised without retaliation is critical to this task." Department of Energy, Energy Department Accelerates Whistleblower Reforms (DOE Press Release, March 26, 1996) <http://apollo.osti.gov/doe/whatsnew/pressrel/pr96038.html> (visited December 16, 1996). Compare Mehta v. Universities Research Association, 24 DOE 87,514 at 89,065 (1995) (Part 708 not intended to protect claim of "mismanagement" if it involves only a disagreement within the area of traditional management prerogatives). Moreover, as shown by the quote from McGuire above and as will be discussed below, the record clearly supports a finding that the Complainant had a good faith belief that certain changes were necessary in the PEIS in order to protect the public from increased risks of cancer and other adverse health effects.

b. Specific Disclosures

While Complainant's communications regarding the draft PEIS involved many issues, I shall only evaluate those major disclosures about which there is sufficient information in the record for me to make a finding that they meet the Section 708.5(a)(1)(ii) protected disclosure criteria.

i. Acceptable Level of Risk

As indicated in the Factual Background section, supra, Complainant pointed out to XXXXX that the Draft Implementation Plan was incorrect when it stated that the role of risk assessment had been reduced since the enactment of Superfund. He specifically objected to the statement in the plan that a one percent risk of cancer (10^{-2}) for an individual was an acceptable risk and proposed instead alternatives involving risk based objectives of 10^{-4}, 10^{-5}, or 10^{-6}. (14) Pl. Exs. 8, 9; Tr. at 63-65. I find that the disclosures Complainant made regarding the PEIS Draft Implementation Plan were protected disclosures. The PEIS was designed to be a nationwide study examining the environmental impacts of managing various types of radioactive and other hazardous wastes. See Draft Waste Management Programmatic Environmental Impact Statement Summary, Vol.1 at 2 (Pl. Ex. 130). The PEIS is to be used as a tool to assist DOE in deciding where to locate additional treatment, storage and disposal capacity for such wastes. Id. Given this function, the determination of what is the standard for assessing permissible risk directly impacts on the health and safety of individuals who may be located near a particular site. Further, Complainant's testimony at the hearing convinced me that his disclosures were based on a good faith belief that the risk levels initially proposed for the PEIS would have a direct adverse impact on public health and safety. See Tr. at 66-67, 348.

ii. Time Discounting

I also find that the memoranda regarding the issue of time discounting that Complainant provided to META/Berger management were protected disclosures. See Pl. Exs. 16, 25, 58, 85, 86. In these memoranda, Complainant stated his view that in general time discounting is an inappropriate technique for use in human health risk assessment in the PEIS since it could introduce large systematic errors that would understate human health risk calculations and make it harder for decision makers to understand risk issues,

thus adversely affecting waste management decisions based on the PEIS. See Pl. Exs. 25 at 3; 58 at 2. I am convinced by both the Complainant's memoranda and testimony that his memoranda regarding time discounting indicate a concern over what he believed was a specific and substantial danger to public health. See Tr. at 85-89. Moreover, the reasonableness of Complainant's concern is supported by the fact that time discounting was eventually not included in the Draft PEIS.

iii. Methodological Problems Regarding the PEIS

Complainant submitted numerous memoranda regarding methodological problems he believed existed in the risk assessments conducted by DOE national laboratories. Examples of these concerns are listed below:

Lack of analysis regarding the biases in various mathematical modeling methodologies which were to be employed in risk estimation for the PEIS. See, e.g., Pl. Exs. 15, 85, 87.

The failure to include the calculated uncertainties in various risk estimation figures. See, e.g., Pl. Exs. 52, 60, 69.

These disclosures involved possible errors in assessing the risk to human health implicated by various waste treatment options. After reviewing the memoranda and listening to Complainant's testimony about these methodological issues at the hearing, see Tr. at 72-74, I am convinced that the concerns raised in the memoranda evidence Complainant's good faith belief that without further analysis, unknown biases and lack of revealed uncertainties could produce a substantial and specific risk to public health and safety.

iv. High Level Waste Treatment at the WVDP

I further find that in November 1993 Complainant made protected disclosures concerning the potential threat to public health if WVDP were utilized to process high level nuclear waste. According to data from ORNL, cancer rates among the general public resulting from HLW treatment at the WVDP would be significantly higher than at other DOE facilities. META, however, argues that Complainant's communications regarding the WVDP did not involve a substantial and specific danger to public health and safety since they were based on data that assumed that the vitrification plant at West Valley would be completed without using the most efficient filters. Tr. at 576 (closing argument). Thus, given the hypothetical nature of the data upon which Complainant's communications were based, META contends that they were not protected disclosures. I disagree. Complainant's disclosures concerned an increased risk of cancer to the local population if the WVDP were fully utilized to treat HLW with the High Efficiency Particulate (HEPA) filters in use at the time the relevant risk assessment data were collected. As the Complainant stated at the hearing:

They [ORNL] were predicting killing six or seven people from cancer and causing cancer in about 23 people, and they got a pretty high impact on the most exposed individual, about three in 10,000, which is in excess of what's normally accepted for a level that would declare a place a Super Fund site.

Tr. at 91. See also Tr. at 243-46

As the Complainant acknowledged, the HLW treatment was not scheduled to begin at West Valley until 1996, and other more efficient filters existed. Tr. at 91-92, 245. However, the fact that a danger may not materialize if other options are taken does not mean that the Complainant did not have a good faith belief that a specific and substantial danger to public health existed. Here the record clearly shows that the Complainant had such a belief.

v. Exposure of Game at DOE Sites to Radionuclides

As indicated above, on January 10, 1994, Complainant submitted a Progress Report to META/Berger officials criticizing the fact that ORNL's risk assessment methods and site environmental reports did not take in account the possible adverse health effects from radionuclide exposure that might be experienced

by persons who consumed animal meat or fish obtained from SRS. See OCEP Ex. 3. This Progress Report and other communications addressing this issue, as well as Complainant's testimony at the hearing, see, e.g., Tr. at 99-100, 345, demonstrate that this concern was sincerely held by Complainant. Moreover, the reasonableness of Complainant's concern about the possible health effects has been acknowledged by META officials who were otherwise critical or complacent. See, e.g., OCEP Ex. 26 at 3 (Interview Summary of Ronald Feit (Feit), Chapter Leader for PEIS Affected Environment Section). Thus, Complainant had a good faith belief that the exclusion of the radionuclide exposure information involving game and fish posed a substantial and specific threat to public health, and his communications about this issue were protected disclosures.

vi. Airborne Radon at Fernald

In the same January 10, 1994 Progress Report in which he detailed deficiencies regarding contaminated game and fish, Complainant noted that radiation exposure data from airborne radon at Fernald had been excluded from the appendix to the Affected Environment section of the Draft PEIS and that the appendix failed to state that radon had been excluded. OCEP Ex. 3. Complainant raised this issue in two other memoranda a few days later. See OCEP Exs. 5, 6.(15) At the hearing, Complainant testified regarding his concern that radon exposure at Fernald implicated an approximate one percent risk of cancer to the most exposed individual in the surrounding community, which he calculated would probably result in more than 20 cases of cancer. Tr. at 101, 346-47. According to Dr. Rose, this concern was shared by Fernald management:

They [radon emissions] were very high, and I -- I can't remember how high, but I was at Fernald, and they showed me where this waste was stored that was emitting the radon. They knew it was a problem, and it's definitely a problem.

Tr. at 532. Given this testimony and the likelihood that nondisclosure of this data could impact decision-making based on the PEIS, I find that Complainant had a good faith belief that the information that he disclosed regarding radon evidenced a specific and substantial threat to public health and safety. Accordingly, I conclude that these disclosures were protected under Section 708.5(a)(1)(ii).

2. Did the Protected Disclosures Contribute to the Decision to Terminate Complainant?

The one alleged reprisal for which Complainant requests relief is his termination from employment in March 1994. META does not dispute that Complainant's termination is a "personnel action . . . against the complainant," as that term is used in Section 708.9(d). META does, however, strongly dispute Complainant's claim, and OCEP's finding, that Complainant's disclosures contributed to the decision to terminate his employment. In support of this position, META points out that his termination occurred more than 15 months after his first alleged disclosure (regarding the acceptable risk discussion in the Draft Implementation Plan for the PEIS). In this regard, META notes that Complainant was an employee at will and could have been terminated at any time.

On the basis of the entire record, I find that Complainant has established by a preponderance of the evidence that he was terminated in early March 1994 at least in part as a result of his protected disclosures. I am not persuaded by META's argument regarding the length of time Complainant was employed prior to the termination for two reasons. First, during that period prior to 1994, Complainant was subject to a number of reprisals by META.(16) The broad definition of reprisal which is set forth in Section 708.5(a), states that a DOE contractor "may not discharge or in any manner demote, reduce in pay, coerce, restrain, threaten, intimidate, or otherwise discriminate against" an employee who makes a protected disclosure. 10 C.F.R. 708.5(a) (emphasis added). Under this broad definition, there is sufficient evidence in the record for me to find that the following actions constituted reprisals:

- In response to his disclosure regarding the Draft Implementation Plan, XXXXX began to withhold information Complainant needed to perform his job and prevented him from participating in a

portion of the PEIS project.

- Complainant was barred from meetings which he should have normally attended.
- Complainant was removed as lead for risk assessment when Astor was hired.
- In response to his disclosure regarding the WVDP, Complaint was removed from having primary responsibility for summarizing the impacts of waste management.

Second, and more importantly, a significant organizational change occurred in December 1993 when Tardiff became PEIS project manager. Complainant continued to make protected disclosures, and, based on the evidence, Tardiff swiftly responded in a manner adverse to Complainant.

As indicated above, on January 10, 1994, Complainant sent a Progress Report to META/Berger managers in which he noted his concern that the draft appendix to the Affected Environment section of the Draft PEIS did not contain data regarding radon exposure at Fernald and radionuclide exposure from contaminated game and fish at SRS. OCEP Ex. 3.The managers to whom the Report was addressed included Lee, Skidmore and Segal, but not Tardiff. However, Complainant states that later that day he was summoned by Tardiff who told him to back off from his position on the deletion of Fernald and SRS exposure data. (17) Tr. at 100-01; see also Tr. at 279-82. While Tardiff testified that he did not recall this meeting, Tr. at 432, I find that Complainant's testimony is more credible on this point. It is supported by a written report which Complainant states was prepared right after the meeting and it appears from the contents that this is so. See Tr. at 278-80, 283; OCEP Ex. 3 (1/10/94 Contact by Larry Cornett). (18) Moreover, in view of Tardiff's testimony about the meetings which he does remember, I find his failure to recall the January 10 meeting to be convenient, but not credible. Specifically, Tardiff testified that he had attended 12 meetings in which the Complainant was in attendance and that at none of these meetings did he notice the Complainant being insistent in making his view known. Tr. at 390. In contrast, other persons working on the PEIS project uniformly describe the Complainant in meetings as being unduly persistent in raising issues. See, e.g., Tr. at 205-07 (McGuire), OCEP Ex. 29 at 2 (Lee Interview Summary), OCEP Ex. 28 at 1 (Interview Summary of Mary Hassell, Environmental Scientist), OCEP Ex. 23 at 2 (Astor Interview Summary), OCEP Ex. 26 at 3 (Feit Interview Summary). OCEP Ex. 33 at 1 (XXXXX Interview Summary), OCEP Ex. 47 (Interview Summary of Kenneth Cornelius, ANL).

Subsequently, on January 14, 1994, Complainant sent a Progress Report to Segal in which he stated that he undertook to discover who was responsible for the deletions and misrepresentations concerning radiation exposure in the Affected Environment section of the PEIS. OCEP Ex. 6. On that same day, Complainant sent a memorandum to Lee and other META/Berger managers reiterating his objections to the exclusion of radon exposure and contaminated game data at Fernald and SRS, respectively, and requesting that the Affected Environment section be corrected. OCEP Ex. 5. Complainant testified that later that day he was summoned by Tardiff, who demanded to know who had appointed him as the "ombudsman" on PEIS issues and threatened to take him off the PEIS program as soon as Segal indicated that she no longer needed him. Tr. at 103-04, 296, 299-301, 325. Although Tardiff denies that this meeting occurred, Tr. at 432-33, for the reasons set forth in the previous paragraph I find his testimony not to be credible. Moreover, here again Complainant's testimony is supported by notes which appear to have been prepared right after the meeting. See Pl. Ex. 138. In his notes, as in his testimony about the January 14 meeting, Complainant states that Tardiff indicated that he would be phased into a META contract involving an EPA enforcement project. This is consistent with Tardiff's testimony regarding his intention to place Complainant in an EPA project around January or February of 1994 if META obtained the contract. Tr. at 422-24.

Complainant continued to send Progress Reports containing protected disclosures to Segal during

the seven weeks following the January 14 meeting. See OCEP Exs. 7 (January 31), 8 (February 14), 9 (February 15), 10 (February 18), 11 (March 3). All but one (Ex. 10) were copied to Lee, Skidmore and other META/Berger officials, and Complainant began including Tardiff on his distribution list with the February 14 Progress Report. As indicated above, Complainant was terminated from his employment at META on March 8. It is undisputed that this decision was made by Tardiff. See Tr. at 389. According to Tardiff, he made this decision after consulting Lee, Skidmore and Segal. Tr. at 417.

Significantly, the decision to terminate Complainant's employment was made less than two months after the two meetings in which Tardiff indicated his displeasure with Complainant for making certain protected disclosures. Given this relatively short time period, I find that the Complainant's protected disclosures were a contributing factor in his selection to be laid off by META. Cf. David Ramirez, 23 DOE 87,505, aff'd, 24 DOE 87,510 (1994) (Ramirez); Ronald A. Sorri, 23 DOE 87,503 (1993), aff'd, 24 DOE 87,509 (1994) (Sorri).

B. The Contractor's Burden

Subsection 708.9(d) provides that, once the complainant has met his or her burden under that subsection, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure. . . . " 10 C.F.R. 708.9. The "clear and convincing evidence" standard of proof is more stringent than the "preponderance of the evidence" standard applied to complainants, but not as high as the "beyond a reasonable doubt" standard used in criminal cases. See 2 McCormick on Evidence 340 at 442 (4th ed. 1992). It has been described as that quanta of evidence sufficient to persuade a trier of fact that the truth of a contested fact is "highly probable." Id. For the reasons set forth below, I have concluded that META has not met this stringent standard.

META has strongly asserted that it would have terminated Complainant notwithstanding any alleged disclosures he made. In support of this assertion META has put forth the following arguments:

- The individual who made the decision to terminate Complainant, Tardiff, testified that his decision was not based on anything Complainant had said or written.
- Complainant was just one of the employees META selected to eliminate from the PEIS project in accordance with Sjoblom's instructions to reduce its staffing on the PEIS project by 10 persons for financial reasons.
- By March 1994, the risk assessment work which still remained could be adequately performed by other employees who were as qualified or more qualified that Complainant.
- The fact that META considered Complainant for employment on possible META projects for the EPA and the Agency for International Development (AID) in the Philippines demonstrates that META had no intention to retaliate against Complainant.
- The fact that the PEIS was changed in response to the Complainant's disclosures demonstrates that Complainant's opinions were respected and that he would not have been terminated absent financial necessity.

I am not persuaded by these and similar arguments for the reasons discussed below.

Since Tardiff made the decision to terminate Complainant, his testimony is crucial in this case. After observing and listening to Tardiff at the hearing and reviewing the transcript, I am unable to accept as credible his denial that Complainant's protected disclosures were a factor in the decision to terminate his employment. Tardiff's testimony was characterized by evasiveness and contradictions as he tried to portray Complainant as one of ten individuals who happened to be selected for

termination for financial considerations. It is clear that other considerations also played a part, and Tardiff's testimony does not convince me that Complainant would have been selected absent his protected disclosures.

One way that Tardiff attempted to justify his selection of Complainant was by downplaying the importance of risk assessment work on the project in general and Complainant's role in that process in particular. For example, after testifying that during the period from September 1993 through early March 1994, META tripled its personnel on the PEIS project (from around 25-30 to about 85), Tardiff was asked by Complainant's counsel how many new META or Berger employees performed risk assessment. He initially stated "one" (Borghe), but after considerable evasiveness, he acknowledged that at least four other employees hired in the months prior to Complainant's termination had risk assessment responsibilities:

Q. Okay. Who else was brought on in that period of time who was working in the area of risk assessment?

A. I don't understand the question.

Q. Who else was brought on in that six-month time period who was working in the area of risk assessment on this contract?

A. I said Mr. Borghe.

Q. I just wanted to make certain of that.

* * *

Q. Was Sharon Siegel brought on in that period of time?

A. Yes.

Q. What was her field of responsibilities or responsibility?

A. Human health risks.

Q. Did she -- and was that risk assessment, a phase of it?

A. It was the core.

Q. So, in fact, there were at least two people then in the build-up period who were brought on in risk assessment?

A. Yes.

Tr. at 396-97 (emphasis added). After further questioning by Complainant's counsel, Tardiff acknowledged that John DeMarzio, Carmine Smedira and Lynn Fairobent were new employees who also had risk assessment responsibilities. Tr. at 396-99.

Tardiff's evasiveness and attempt to minimize the build up in risk assessment work just prior to Complainant's termination can be contrasted with the forthright testimony of McGuire:

Q. Okay. And was there an enlargement of staff at Berger occurring in late '93 or early 1994?

A. There -- you're asking the question about Berger. I can talk to you about META/Berger and the PEIS. Is that what you mean?

Q. Let's talk about -- yes, please.

A. Yes, a number of additional persons were hired around that time, maybe a little later.

Q. Were they hired in respect to areas of risk assessment?

A. Yes, some of those persons hired were competent in the area of risk assessment and were hired for that purpose.

Q. And why was there perceived a need to enlarge -- or why was there perceived a need to hire people in risk assessment at that time?

A. The obvious -- the most obvious reason was that the workload connected with calculating the risk assessment factors and coming to conclusions about them and given the various alternatives that were being advanced by the Department of Energy that it wished us to study and given practical problems of lack of the total data for everything that people would like to know, the workload had become extremely large and burdensome. So, we needed more people to do it.

Tr. at 200-01.

Despite this increased need to perform risk assessment work, Tardiff tried to minimize the need for Complainant's risk assessment activities as the following excerpt from the transcript shows:

Q. Let me ask you this. In the end, Ms. Siegel -- Dr. Siegel was performing some risk assessment work. She took over Larry Cornett's?

A. No.

Q. She did not?

A. No.

Q. Who, if anybody, took over the work Mr. Cornett was performing?

A. Dr. Siegel continued in that area. I don't believe she picked up anything he was doing.

Q. No. Did she pick up some of it?

A. She would have to.

Q. Approximately how much?

A. I have no idea.

Q. So, who picked up the rest?

A. It wasn't -- it was assessed that we didn't need everything he was doing.

Q. It was?

A. That's my understanding.

Tr. at 405.

Yet Tardiff acknowledged that prior to the hiring of additional persons with risk assessment responsibilities in the September 1993-early March 1994 period, Complainant was one of only two

persons working full time on risk assessment. Tr. at 436. Moreover, Complainant had been designated by META as one of the "key" personnel on the PEIS project. The work done by "key" personnel was work essential to the project. As explained by Tardiff:

Generally, key personnel clauses required for those individuals on a -- on a project are essential to the continuing scope of that particular project, and if one of those individuals were to leave or be replaced, he would have to be replaced by an equivalent, if necessary.

Tr. at 385. In addition, the importance of the contributions Complainant made to the PEIS risk assessment process was recognized by officials on the project, including those who were perturbed by the manner in which Complainant made his disclosures, such as McGuire, Tr. at 215-16; Lee, OCEP Ex. 29; Astor, Ex. 23. Complainant's contributions were also recognized by a 1993 year-end cash bonus that he received from META. See Pl. Ex. 144.

While Tardiff has claimed that there was no performance-based reason why Complainant was terminated, see, e.g., Tr. at 394, the record does not support his assertion. By performance, I refer not to Complainant's scientific accomplishments, but his interactions with others on the PEIS project. According to the OCEP Interview Summary, Tardiff stated that Complainant's relationship with ORNL indirectly affected his decision to lay off Complainant. OCEP Ex. 38 at 2. At the hearing, Tardiff denied that he had made this statement and denied that Complainant's relationship with ORNL affected his decision to lay Complainant off. Tr. at 389, 450. Nevertheless, as can be seen from the transcript excerpt below, shortly before he made his decision, Tardiff was aware that Complainant's supervisors felt that Complainant was unable to get along with others on the project, particularly personnel at ANL and ORNL:

Q. Mr. Tardiff, I'd like to turn your attention to [OCEP] Exhibit 38, which is the April 6th memo, turn to the first page, the first sentence of the fourth full paragraph. "Tardiff became aware that peers from Argonne National Lab did not want to work with him", meaning the Complainant. Do you see that?

A. Yes.

Q. Is that -- whether or not you said it then, is that correct at this point in time?

A. Today?

Q. Yes. There -- let me -- well, actually, let me rephrase this.

Was it correct as of the time you gave this statement?

A. Yes.

Q. And from whom did you become aware?

A. From his supervisors.

Q. Dr. Siegel?

A. Could have been her.

Q. Okay. The next sentence said, "Siegel had to take over all contacts with scientists at Oak Ridge National Lab."

A. Yes.

Q. Was that -- whether or not you said it at that point in time, was that statement correct as of the

time that statement was made?

A. I believe so.

Q. And that would have been something you would have heard from Ms. Siegel? Dr. Siegel?

A. Most likely.

Q. Now, what I'd like to do is take you to the next page of that document, Page 2, the last full sentence states, "Oak Ridge National Lab could not work with him", meaning Complainant, "and he could have a negative future impact on DOE projects."

* * *

Q. [W]as it at the time, this statement as recorded, to your knowledge correct, that ORNL could not work with Complainant?

A. I did not have firsthand knowledge of that.

Q. But that knowledge was conveyed to you by someone else?

A. Not in that form. This is reversed.

Q. Okay. Would you tell us what you would do to -- to make that a correct statement?

A. It's coupled with the second part of the sentence. If -- if ORNL could not work with him, he could have a negative impact.

Q. That's why I separated the two. Was it your knowledge -- was it a correct statement as of April of '95, just the part that ORNL could not work with Complainant? Was that a correct statement, to your knowledge, at that point in time?

A. I -- it's like a rumor that I heard. I was aware that there was a problem in that area, but I could not say for sure that ORNL, which is a big, couldn't work with Dr. Cornett.

Q. Okay. But you had information --

A. But I was aware that there was problems in that area.

Q. Okay. And -- and do you recall, did Dr. Siegel -- did she convey any information to that effect?

A. Yes.

Q. Okay. The next part, "and Complainant could have a negative future impact on DOE projects", was information to that effect also conveyed to you?

A. I don't recall referring to any DOE projects, other than this project, the PEIS.

Tr. 423, 453-456.

On the basis of the above testimony, and the statements to the OCEP investigators made by the three supervisors that Tardiff stated he consulted prior to his termination decision (Lee, Skidmore and Siegel), I find that Complainant's relationship with persons working on the PEIS project, particularly persons at ANL and ORNL, was a factor in Tardiff's decision to lay off Complainant rather than someone with less seniority on the PEIS project. Moreover, in my view, the conduct of Complainant that so annoyed some personnel at those national laboratories and META/Berger was inextricably

intertwined with his protected disclosures. Thus, the fact that he annoyed some personnel would not justify his termination under Section 708.9. (19) Cf. Ramirez, 23 DOE at 89,034-35 (citing Mackowiak v. University Nuclear Systems, Inc., 735 F.2d 1159 (9th Cir. 1984)). And while at least one supervisor, Feit, described Complainant as "disruptive" in meetings, OCEP Ex. 26, I find credible McGuire's description that Complainant conducted himself at meetings "without personal rancor or animosity. When I say that he was determined and persistent and so on, he -- he is not standing on the tables and pounding and screaming or yelling. Not that at all." Tr. at 208.

I am thus not convinced by META's claim that, absent the protected disclosures, Complainant would still have been selected for termination because the remaining individuals left to perform risk assessment work were more qualified than he and the amount of risk assessment work was decreasing. In view of the hiring of four persons to do risk assessment work in the months immediately preceding Complainant's termination, I give no credence to META's assertion that risk assessment work was decreasing.(20) As indicated above, Tardiff testified that his decision to lay off Complainant was made after his consultation with several senior management officials and supervisors who informed him that Complainant could be terminated without any effect on the project. However, META did not call any of those persons to testify, and their statements to the OCEP investigators appear inconsistent with Tardiff's testimony. For example, Tardiff stated that in making the decision to terminate Complainant, he relied on Lee's recommendation. Tr. at 408. According to the Lee Interview Summary, however, "Tardiff talked to Lee after the decision was made. Lee had no input in the firing decision." OCEP Ex. 29 at 1.(21) Similarly, contrary to Tardiff's testimony, Tr. at 417, "Segal denied having any input in the decision to terminate the Complainant from employment, nor was she consulted about the decision." OCEP Ex. 35 at 2 (Segal Interview Summary). A third person that Tardiff stated he consulted, Skidmore (see Tr. at 417), related that he told Lee (not Tardiff) that he felt that Segal was more valuable to the project than Complainant. OCEP Ex. 37 (Skidmore Interview Summary). It is clear from their statements, however, that these three supervisors had negative opinions about Complainant based upon the manner in which he made his protected disclosures. Thus, even if Tardiff's decision was based on conversations he had with Lee, Skidmore and/or Segal, I am not convinced that it would have been made absent those disclosures.

Other reasons exist supporting my finding that META has not met its burden of proof in this case. If reducing monthly expenditures on personnel was the reason for the lay off, as Tardiff testified, Tr. at 403-04, it would seem that some consideration would have been given to terminating Segal, whose salary was considerably higher than Complainant's.(22) However, from Tardiff's non-responsive answers to questions put to him by Complainant's counsel, it is clear that he did not consider salary differentials when he decided to retain Segal and lay off Complainant. See Tr. at 406-09. Nor is there any evidence that salary differentials played any part in Tardiff's decision to retain other persons in risk assessment that had less seniority than Complainant. Instead Tardiff stated that he relied on the opinion of Lee and other others that Complainant was expendable, and that the other persons doing risk assessment work were assigned to different tasks on the PEIS project than Complainant. Tr. at 395-99, 407-08. However, on the basis of information in the record regarding Complainant's experience and qualifications, it appears to me that he was fully capable of performing those tasks.

I am also not persuaded by META's argument that absence of discriminatory intent is evidenced by the fact that changes were made in the PEIS consistent with Complainant's disclosures. Some or all of these decisions may have been made in response to recommendations from others. Moreover, even if these changes were made in response to Complainant's disclosures, that would not convince me that there was no reprisal. See Sorri, 23 DOE at 89,006 (changes made by contractor to alleviate health and safety problems disclosed by complainant not treated as evidence of no reprisal, but as support for finding that the disclosures involved bona fide danger to safety).

Furthermore, neither the stated intention to transfer Complainant to a position on a META/EPA contract nor the putative AID job offer made to Complainant after his termination convinces me that META's termination of Complainant was not in reprisal for his disclosures. Given the account of the January 14 meeting provided by Complainant in his testimony and in his notes, summarized above, it is hard to believe that Tardiff's proposal to move Complainant to the EPA contract was anything other than a reprisal itself. Cf. Marano (Drug Enforcement Administration agent reassigned as a result of a reorganization inextricably intertwined with his disclosure).

The post-termination offer of possible employment with AID in the Philippines also does not provide any evidence of the absence of a retaliatory motive behind Complainant's termination. It is undisputed that this did not involve an actual job offer. According to Tardiff, AID issued a "task" to contractors who had a presence in Manila, including META, for the services of a health risk person, and someone in META's main office in the Washington, D.C. area (the Arlington office) asked him to see whether the Complainant was interested.(23) Tr. at 415. Moreover, the contrast between this vague potential offer and the treatment of the nine other META/Berger employees who were allegedly terminated for the same financial reasons as Complainant is revealing. (24) At the hearing, Tardiff testified that two of the nine, one META employee and one Berger employee. were later re-employed by META/Berger on the PEIS project, Tr. at 409-10, four other Berger employees were reassigned by Berger to other projects, Tr. at 412, and of the remaining three META employees, one was reassigned to the Arlington office, id., one was brought back for part time work on a separate contract, Tr. at 413, and one (Reife) was given a special status as available for work. Id. While Reife did not receive any pay or benefits, Tardiff indicated that he was given that status because META wanted him to be available in case certain work with the Nuclear Regulatory Commission or EG&G materialized. Tr. at 413-14. No such arrangement was made with Complainant vis a vis the possibility of the AID job or any other position.

In sum, I am unpersuaded by these and other arguments that META has presented in support of its claim that it had no retaliatory motive in terminating Complainant. I also find that META has failed to present clear and convincing evidence to demonstrate that it would have terminated Complainant absent his protected disclosures.

C. Remedy

In his October 11, 1996 Pre-Hearing Submission, Complainant requested the following relief: (i) back pay throughout the time that he would have remained employed at META, (ii) reimbursement for out of pocket expenses incurred in pursuing his complaint including printing, postage, travel, depositions, and telephone bills, (iii) attorneys fees, (iv) restitution for the 10 percent tax penalty for his early withdrawal of $32,050 from his Individual Retirement Account (IRA) and the lost interest on that money, and (v) front pay for a period of five years.

Subsection 708.10(c) provides that "[t]he initial agency decision may include an award of reinstatement, transfer preference, back pay, and ... all reasonable costs and expenses (including attorney and expert-witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision [is] based." In accordance with this provision, I find that Complainant is entitled to relief as described below.

1. Back Pay

Given the above findings, there can be no doubt that back pay is appropriate in this case. See Howard W. Spaletta, 24 DOE 87,511 at 89,058 (1995). OCEP proposed that back pay and benefits (less earned income and associated benefits) be awarded for the period from the last day for which Complainant was paid by META until September 1995, the month that the draft PEIS was issued. Complainant contends that he should receive additional back pay since he would have likely remained employed at META past that date and he has had no other employment. Pre-Hearing

Submission at 6; Tr. at 110. In support of his position, he has stated that he has the expertise needed to analyze the comments on the Draft PEIS in connection with the preparation of the Final PEIS. Tr. at 110-11. He has further asserted that Lou Borghi (Borghi; "Borghe" in the hearing transcript except as quoted supra) continues to work on the PEIS project, albeit as an employee of a META subcontractor.(25) Id. META disputes that Complainant would have remained employed until September 1995, contending that in view of his allegedly narrow set of skills, there would have been no need for him on the PEIS project long before that date. According to META, Segal left her position on the PEIS project in January 1995, and no one worked full time on risk assessment thereafter. Tr. at 580 (closing argument). META also notes that Complainant's employment history is marked by relatively brief job tenures, and suggests that he would have voluntarily left the PEIS project.

There is no way to know with certainty how long Complainant would have remained employed by META if he had not been terminated in March 1994. However, I believe that December 31, 1995 is a reasonable ending date for a back pay award in this case. I recognize that there were reductions in total employment on the PEIS project in late 1994 and throughout 1995. However, risk assessment continued to be an essential part of the PEIS project and Complainant had the experience and ability to perform that work. Although Borghi was selected in January 1995 to replace Segal as the PEIS key person for health risk issues, that determination was made by the same management person responsible for the reprisal termination of Complainant. To justify Borghi's selection, META told OCEP that Borghi was already working on risk assessment issues on the PEIS project and had developed a close working relationship with ORNL. OCEP Ex. 75 (META's March 15, 1996 Response to OCEP Request for Information # 12). However, if Complainant had not been unlawfully terminated in March 1994, he most likely would have still been working on the PEIS project at the time Segal left.(26) And, as indicated above, Complainant's purported poor relationship with ORNL was inextricably intertwined with his protected disclosures and the unlawful termination of his employment.

Furthermore, although it can be reasonably assumed that META's analytical work on the Draft PEIS was completed by the end of August 1995, neither META's role in the PEIS project nor the need for risk assessment expertise ended at that point. On September 13, 1995, the DOE issued a notice that announced the commencement of a 90-day public comment period on the Draft PEIS. 60 Fed. Reg. 49264 (September 22, 1995) (Notice of Draft PEIS Availability). For a few months after the issuance of the Draft PEIS, Borghi continued to work on the project, see Tr. at 430 (Tardiff), and in December 1995 some former META employees (Feit and Charles-Kondokov) were brought back temporarily to assist the comment response team. OCEP Ex. 75 (META's March 15, 1996 Response to OCEP's Request for Information # 9).

Under the above circumstances, I find that Complainant would have been employed until December 31, 1995. I reject, however, Complainant's contention that he is entitled to back pay after December 1995. While the comment response process did continue after that month and the Final PEIS has not yet been issued, by that point in time META's responsibilities on the PEIS project had apparently wound down considerably. In January 1996, for example there were only two people at META working on the project. See OCEP Ex. 74 at 11 (META Response to OCEP Letter dated January 24, 1996). It thus appears evident that Complainant would not have been employed by META under any circumstances after December 1995. Nor is there any evidence that the PEIS comment response work that has been done by Borghi or other contractor employees since January 1996 amounts to full time or even regular part time work.

Reviewing the entire record, I also find that Complainant has made diligent efforts to find work similar to his position at META. Accordingly, I find that Complainant is entitled to back pay and related benefits for the period from March 22, 1994 through December 31, 1995.

According to the information that META provided to OCEP, at the time that he was terminated,

Complainant's salary was $70,000 per annum and the value of the benefits provided by META was $21,000 per annum. Thus Complainant's back pay award will be calculated on the basis of $91,000 per annum plus any firm wide cost of living increases that META may have given during the March 1994-December 1995 period. Complainant's counsel will be directed to calculate the amount of back pay on a quarterly basis, less the amount earned by Complainant during the one very brief period that he stated he worked.(27) META should provide to Complainant's counsel any additional information they need in order to make these calculations. This will not preclude META from objecting to the relevance or appropriateness of that information in the calculation of the back pay award.

As part of his back pay, Complainant is entitled to receive interest to compensate him for the time value of money lost. In prior cases, the DOE has followed the practice of the Merit System Protections Board (MSPB) under the WPA in determining the rate of interest that should be applied to the back pay award to a contractor employee under Subsection 708.10(c). See, e.g., Howard W. Spaletta, 25 DOE 87,502 (1996) (Spaletta). The MSPB awards interest on back pay under the Office of Personnel Management regulation found at 5 C.F.R. 550.806(d). That regulation in turns refers to the "overpayment rate" established by the Secretary of the Treasury under 26 U.S.C. 6621 (a)(1). The overpayment rate is the Federal short-term rate plus two percentage points. The Federal short-term rate for a particular calendar quarter is the short-term rate for the first month of the preceding calendar quarter, rounded to the nearest whole percent.

2. Reasonable Costs and Expenses

In order for me to determine whether the more than $6,000 claimed by Complainant for costs and expenses (other than attorney fees) was actually spent and was (i) reasonable and (ii) reasonably incurred in bringing the complaint, Complainant will be required to submit a full, documented accounting for these expenses. However, reimbursement for costs relating to seeking employment is not provided for in Section 708.10(c). See Ramirez, 23 DOE at 89,037 n. 24. Consequently, I will not grant Complainant's request for such costs, with one exception. Since I have indicated that the back pay award should be offset by any income earned by Complainant, I believe it is reasonable to reduce the amount of that income by any costs reasonably related to the obtaining of that employment.

3. Attorney Fees.

I intend to follow other DOE whistleblower cases by applying the "lodestar approach" to determine the amount of attorney fees in this case. See, e.g., Spaletta, 25 DOE at 89,003 (citing Blanchard v. Bergeron, 489 U.S. 87 (1989)). Under this approach, a reasonable attorney fee is the product of reasonable hours times a reasonable rate. Interpreting the phrase "reasonably incurred" in this manner recognizes the public interest nature of whistleblower representation in Part 708 cases and encourages attorneys to take these cases. The fee applicant has the burden of producing satisfactory evidence that the requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonable comparable skill, experience or reputation. See Blum v. Stenson, 465 U.S. 886 (1984). Therefore, counsel for Complainant should submit appropriate evidence to show what is a reasonable hourly rate for them to receive in this case.

4. IRA Tax Penalty and Lost Interest Income

This portion of Complainant's claim is denied. In my view, these items do not meet the Section 710.10(c) standard of "reasonable costs and expenses . . . reasonably incurred by the complainant in bringing the complaint upon which the [initial agency] decision was issued." Cf. David Ramirez, 24 DOE 87,504 at 89,016 (1994), aff'd, 24 DOE 87,510 (1994). As Complainant's testimony makes clear, he needed the funds withdrawn from his IRA primarily to meet his living expenses. Tr. at 122. However, even if some of these funds were used for litigation expenses, I do not believe it is

reasonable to reimburse the individual for the expense of the tax penalty and the lost interest income. These items appear to be too remote from the type of litigation-related costs and expenses for which reimbursement is provided by Section 708.10(c). (28)

5. Front Pay

Complainant has also requested that he be awarded five years of front pay in light of the damage to his professional reputation that has resulted form META's actions. In his Pre-Hearing Submission, Complainant cited two cases, Simmons, v. Florida Power Corp., 89-ERA-28 (ALJ Dec. 13, 1989) (Simmons), and McNeil v. Economics Lab, Inc., 800 F.2d 111 (7th Cir. 1986) (McNeil), which hold that front pay be may an appropriate remedy in certain employee protection cases. These two cases are inapposite since relief in each case was granted under a broadly worded statutory remedy which has been construed to authorize remedies such as front pay. See 29 U.S.C. 626(b) (remedy provision of the Age Discrimination in Employment Act of 1967, 29 U.S.C. 621 et seq., applied in McNeil); 42 U.S.C. 5851(b)(2)(B) (remedy provision of ERA applied in Simmons). In contrast, Section 710.10(c) does not authorize a hearing officer to award front pay. Consequently, I deny Complainant's request for front pay.(29)

III. Conclusion

For the reasons discussed above, I find that Complainant has met his burden of proof of establishing by a preponderance of the evidence that he made health and safety disclosures protected by 10 C.F.R. Part 708. I also find that these disclosures were a contributing factor in his termination. Furthermore, I find that META has not proven by clear and convincing evidence that it would have terminated Complainant absent his disclosures. Accordingly, I conclude that a violation of Part 708 has occurred and that Complainant should be awarded back pay (including benefits) plus interest as a result of the reprisal taken against him, as well as all costs and expenses reasonably incurred by him in bringing the present complaint. After the parties have provided the information and comments referred to in the Order below, I will issue a Supplemental Order specifying the exact amount to be awarded to Complainant.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by C. Lawrence Cornett (Cornett) , OHA Case No. VWA-0007, is hereby granted as set forth in Paragraph (3) below and is denied in all other respects.

(2) The objections to Cornett's request for relief submitted by Maria Elena Torano Associates, Inc. (META), OHA Case No. VWA-0008, are hereby denied for the reasons set forth in the foregoing Decision.

(3) META shall pay to Cornett an amount to be determined based on the information provided pursuant to Paragraphs (4) and (5) in compensation for lost salary and benefits, and interest thereon, and for all costs and expenses, including attorney fees reasonably incurred by Cornett in bringing his complaint under Part 708.

(4) Counsel for Cornett shall, no later than 30 days after service of this Decision by the Assistant Inspector General for Assessments, the successor to the Director of the Office of Contractor Employee Protection, submit to the undersigned Hearing Officer and to counsel for META the following information:

(a) A schedule estimating the salary and other benefits that Cornett would have earned from his employment at META for each calendar quarter from the second quarter of 1994 through the fourth quarter of 1995. (30) This submission should specify the assumptions upon which it is based and any

information that is not in the record or which META has not voluntarily provided which is necessary for a more accurate calculation.

(b) A quarterly schedule of any income and benefits that Cornett earned during the period from April 1, 1994 through December 30, 1995, and any expenses reasonably incurred in the obtaining of the employment generating this income.

(c) Copies of Cornett's Federal Income Tax Return Form 1040 for 1994 and 1995.

(d) A detailed and itemized list of each and every expense incurred in bringing the complaint, the dates incurred and the provider of the good and service provided.

(e) Documentation for each requested expense such as bills, invoices, receipts or affidavits.

(f) For any attorney fee claimed, the identity of each attorney providing such service and the date, time, duration and nature of the service provided.

(g) For any attorney who provided services on behalf of Cornett, evidence that the hourly rate for services incurred is comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation.

(5) Counsel for META shall, no later than 15 days after receipt of a copy of the submission referred to in paragraph (4), submit to the Hearing Officer and counsel for Cornett:

(a) The information specified by Cornett's counsel as necessary for a more accurate calculation of back pay and benefits.

(b) A response to the submission by Cornett's counsel that is limited to the reasonableness and accuracy of the calculations set forth in that submission, including the assumptions underlying those calculations.

(6) Counsel for Cornett shall, no later than seven days after receipt of a copy of the submission referred to in Paragraph (5), submit to the Hearing Officer and counsel for META either a response to that submission or notification that they do not intend to respond.

(7) This is an Initial Agency Decision that shall become the Final Decision of the Department of Energy unless, within five days of its receipt, a written request for review of this Decision and/or the Interlocutory Decisions issued under Case Nos. VWZ-0006 and VWZ-0007 by the Secretary of Energy or her designee is filed with the Assistant Inspector General for Assessments.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date:

1. 1/ The purpose of the PEIS was, inter alia, to evaluate alternatives for the treatment, storage and disposal of radioactive and other hazardous wastes and explain the policy decisions of the DOE's Office of Environmental Restoration and Waste Management. See DOE Contract No. DE-AC01-91EM40002, Attachment B; META, Inc., 26 DOE 87,501 (1996) (Motion to Dismiss).

2. 2/ In October 1993, the University of Chicago, the contractor which operates Argonne National Laboratory (ANL), a DOE facility, contracted with META to continue to provide technical support regarding the development of the PEIS. See ANL Contract No. 34006426.

3. 3/ The OCEP investigation included the acquisition and analysis of relevant documents and the conducting of on-site and telephone interviews. Summaries of the interviews are contained in the OCEP Report.

4. CERCLA is often referred to as Superfund.

5. 5/ Berger was a principal subcontractor on the PEIS project and its employees performed essentially the same types of work as META employees. In some cases Berger employees supervised META employees and in some cases META employees supervised Berger employees. See Transcript of October 29-31, 1996 Hearing (Tr.) at 379-80; OCEP Ex. 18E.

6. Time discounting is a mathematical methodology in which calculated risks to future generations of individuals are reduced.

7. Tardiff was employed on the PEIS project by META beginning in September of 1993. Tr. at 394.

8. 8/ Although not indicated in the April 30 submission, Complainant requested the hearing to contest the level of relief proposed in the OCEP Report. See Complainant's Pre-Hearing Submission at 6-7 (October 11, 1996).

9. 9/ Cornett's hearing request was assigned OHA Case No. VWA-0007 and META's request was assigned Case No. VWA-0008.

10. 10/ Although the interlocutory proceedings in this case have been assigned separate OHA case numbers, all submissions and determinations are part of the record of Complainant's whistleblower complaint case.

11. In accordance with the Part 708 regulations, in arriving at this finding, it was not necessary for me to make any determination on the validity of Complainant's arguments concerning the data or methodologies that should be included in the PEIS and I have not made any such determination.

12. In its Report, OCEP did not make any finding as to whether Complainant's disclosures involved a violation of any law, rule or regulation under Section 708.5(a)(1)(i). See Report at 7-8. In his Pre-Hearing Submission, Complainant did not take issue with OCEP's limiting its disclosure finding to Section 708.5(a)(1)(ii) (danger to public health or safety). Nevertheless, the record is replete with communications in which Complainant either alleges violations of environmental laws and regulations or proposes methodologies to bring the PEIS process within what he believed to be the requirements of those laws and regulations. See, e.g., Pl. Exs. 9, 10.These laws and regulations are directly related to public health and safety. See, e.g., 42 U.S.C. 6901 (b) (Congressional findings with respect to the environment and health in the Resource Conservation Recovery Act (RCRA)).

13. Although the AHWG Report reviewed allegations made by Complainant after his termination, the allegations by and large involved the subject matter of his alleged disclosures.

14. 10^{-4} is a scientific notation representing 1×10^{-4} or 0.0001. Likewise, 10^{-5} represents 1×10^{-5} or 0.00001 and so forth.

15. Although OCEP Ex. 5 is dated January 14, 1993, it clearly was prepared in 1994.

16. In view of the fact that META was responsible for overall management of the PEIS project and that there was no operational distinction between META and Berger employees, see supra note 5, I find that META is responsible for reprisals against the Complainant made by Berger managers and supervisors.

17. Although Complainant testified on direct examination that the meeting occurred "about January 8," on

cross examination he was more specific and stated "January 10," a date for which there is considerable support in the record.

18. Although the "Contact" report is included in the same exhibit as the January 10, 1994 Progress Report, it is a totally separate document.

19. In a post hearing submission, counsel for META asserts that the "regulation in question does not prohibit firing an employee for monopolizing discussions [or] having bad manners . . . ." This may be true, but irrelevant since throughout this proceeding META has never claimed that Complainant was terminated for those reasons. A fortiori, META has not made a clear and convincing showing that Complainant would have been terminated for those reasons in the absence of his protected disclosures.

20. META has also not convinced me that the other 60 or so persons hired in the six months prior to Complainant's termination were better qualified to work on the PEIS project than Complainant.

21. Statements quoted from the OCEP Report are from the investigator's account of oral statements made by the persons interviewed and are not direct quotes from the interviewee.

22. META has also not explained why, if Complainant was laid off solely as part of a plan to reduce personnel out of financial considerations, its overall personnel numbers on the PEIS project appear substantially the same for months after the decision was made to terminate 10 employees on the PEIS project. While the firm's full time equivalents (FTE) calculations for the PEIS project show a decrease in the two months after the Tucson meeting (March and April 1994), from May through July, the FTE calculation exceeded the February figure and remained at or slightly below the February figure during the following three months. See OCEP Ex. 75 (Schedule of PEIS Monthly Expenditures).

23. Complainant testified that he tried without success to learn more about the possible job from META's Arlington office. Tr. at 128-29

24. While Complainant has alleged that the termination of the other nine META/Berger employees was a mere pretext to disguise the real reason for his termination, I find no evidence substantiating this assertion.

25. It is unclear from Complainant's testimony whether his information about Borghi was current as of the date of the hearing or as of the spring of 1996.

26. As indicated above, neither the EPA nor the AID contracts came through, and, according to META, the firm had no contracts other than the PEIS one that required Complainant's expertise. OCEP Ex. 74 at 10 (META's Response to OCEP's January 24, 1996 Request for Information # 6c). Although META suggests that Complainant may have been affected by PEIS staff reductions in 1994, id. at 11, the record indicates that the vast majority of the reductions occurred in 1995, after Segal left. See OCEP Ex. 75 (PEIS Monthly Expenditures). In view of Complainant's interest in the PEIS project there is also no basis for finding that Complainant would have voluntarily left META before December 1995.

27. As I indicated at the hearing, Complainant will have to verify his statement that he has had no regular income since his termination from META.

28. At the hearing, Complainant also stated that he had borrowed money from his father to pay for his living expenses and requested compensation for the loss of interest income that his father incurred as a result. Tr. at 122, 124-25. For the reasons stated above, I also will deny this claim.

29. I note however that the Secretary of Energy's authority to grant relief under Part 708 appears more extensive than that granted to a hearing officer. See 10 C.F.R. 708.11(c) (the Secretary may grant "such other relief as is necessary to abate the violation and provide the complainant with relief").

30. To simplify the calculation of interest, this schedule should be based on the assumption that Cornett

would have been paid for the last 10 days of March 1994 in April, but payment for the period ending December 31, 1995 would have been on that date.

Case No. VWA-0012

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Ronny J. Escamilla

Date of Filing: June 13, 1996

Case Number: VWA-0012

This Decision involves a whistleblower complaint filed by Ronny J. Escamilla (Escamilla) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. For a three-month period in 1993, Escamilla was employed by Systems Engineering & Management Associates, Inc. (SEMA), a DOE subcontractor, at DOE's Rocky Flats Plant (Rocky Flats). During his brief tenure at SEMA, Escamilla alleges that he made disclosures of waste and mismanagement to various managers at Rocky Flats. Escamilla contends that these disclosures resulted in his being harassed in the workplace and ultimately terminated.

I. **Background**

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed to a DOE official or to a DOE contractor, information that the employee in good faith believes evidences, among other things, fraud, mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. 708.5(a)(1)(iii). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or her designee. See David Ramirez, 23 DOE 87,505, aff'd, 24 DOE 87,510 (1994).

B. **Factual Findings**

Many of the facts in this case are contested. My findings of fact set forth below are based on (1) the entire record developed in the case, including the Office of Contractor Employee Protection (OCEP) investigative file, all pleadings submitted by the parties and the transcript of the September 24, 1996 hearing, and (2) my observations of the witnesses' demeanor at the hearing and my concomitant determinations regarding those witnesses' credibility.

In October 1992, EG&G Rocky Flats, Inc. (EG&G), then the prime management and operating contractor at Rocky Flats, conducted a study of three computer systems to determine which system best met Rocky Flats' engineering needs in view of that facility's mission change from production to environmental clean-up and restoration. See Exhibit (Ex.) 1 to the Report of Investigation.(1) After an extensive analysis of these computer system options, EG&G management concluded that ComputerVision (CV) would best meet the functional requirements of its Engineering & Technical Services (E&T) Group. Id.

To assist the E&T Group in making the transition to the CV system, EG&G turned to SEMA, one of its subcontractors that was tasked with providing skilled computer support personnel to EG&G. See Transcript of September 24, 1996 Hearing at 32-33 (hereinafter Tr.). SEMA, in turn, placed a newspaper advertisement seeking, inter alia, a "CAD/CAM Engineer/Technician" who could provide "user training and support, productivity tool development and file translation" from AC to CV. See Ex. 2. The advertisement specified that applicants must have experience with ComputerVision. Id.

Mr. Escamilla responded to and was selected for the advertised position described above. See Ex. 5. Escamilla's qualifications for the position were set forth on his résumé as: two Bachelor of Science (B.S.) degrees, one in mathematics and the other in psychology; and experience with both AC and CV systems. See Ex. 3. When Escamilla reported to work at Rocky Flats on August 10, 1993, (2) he was required to fill out a number of forms, including an Application for Employment and a Verification of Degree form. Escamilla completed the employment application, certified to the veracity of all the information contained in that document, and signed an acknowledgment that any false and misleading information given on his application or in his interview may result in discharge. Ex. 6. As Escamilla was completing the degree verification form, however, he orally advised Larry Dyer, the hiring official at SEMA, that he did not have a college degree. Ex. 43, 44. Dyer was apparently unconcerned about Escamilla's revelation because he knew SEMA could hire an applicant for the computer position who did not possess a college degree provided the applicant had sufficient prior relevant job experience. See Ex. 43 at 2. Dyer claims he never reviewed the paperwork Escamilla completed on August 10, 1993 but simply sent the documents to SEMA's corporate offices in Virginia for further processing. Id.

Almost immediately after Escamilla assumed his new position at SEMA, issues related to his work performance began to surface. During Escamilla's first two weeks on the job, the CV system failed. Ex. 46 at 2. When Escamilla was approached by EG&G management to explain why he was sitting by idly in the computer room instead of rebooting the CV system, he claimed at first that he was the AC person, not the CV person. Id. Escamilla subsequently admitted to EG&G management that he simply did not know how to reboot the CV system. Id.

As the weeks went on, EG&G personnel who had daily contact with Escamilla commented that Escamilla refused to perform many of his assigned day-to-day systems administration duties. See Ex. 42, 46, 51. Those co-workers who offered assistance to Escamilla during these times found Escamilla to be very defensive and unwilling to admit he needed help. Id., Finally, Mary Ann Gaug, the EG&G Manager to whom Escamilla reported, determined that Escamilla "had no knowledge of CV and was unable to do the general CV support tasks he was hired to do." Ex. 46. In an effort to find something for Escamilla to do to earn his pay, Gaug assigned him the task of writing a manual to document CV systems procedures. Id.

Meanwhile at staff meetings and in one-on-one conversations, Escamilla was openly challenging EG&G's decision to implement CV for its E&T Group. Ex. 44, 46, 47, 49, 51, and 54. Escamilla constantly argued that AC was a better system than CV, citing AC's less expensive cost as sole support for his contention. Id. During his employment with SEMA, Escamilla never offered any facts or data to support his preference for AC or explained how AC could meet the EG&G's engineering needs more effectively than CV. Ex. 52.(3) When Escamilla raised his views regarding AC directly to EG&G and SEMA management, both responded in a similar manner. Both advised him that (1) EG&G management had selected CV after a careful in-depth analysis of other computer systems; (2) he was hired to support CV, not reopen the debate about which computer system best suited EG&G's engineering needs; and (3) the matter was not open for further discussion. Ex. 43, 46. Without any other indicators, Escamilla construed these comments as

validating his perception of waste and mismanagement associated with the implementation of the CV system, concluding that management would not be asking him to refrain from discussing his concern if nothing were awry. Ex. 19 at 3.

Eventually, Escamilla's unyielding advocacy for the AC system and relentless attack on CV caused his co-workers to view him as an arrogant, opinionated person who (1) had no regard for those whose views differed from his own, (2) possessed limited knowledge about CV and consequently could not intelligently discuss the differences between AC and CV, and (3) supported AC because it was the only system he knew well. Ex. 42, 46, 47, 51, 52. As a consequence, many of Escamilla's co-workers avoided him and ignored his opinions. Ex. 52. Conversely, Escamilla viewed his co-workers as combative and attributed their seemingly negative attitude towards him as a direct result of his revelations of waste. See Ex. 21 at 1; see also Ex. 44 at 3.

Escamilla's manner of communicating his views regarding CV also led to conflict in the workplace. Only five weeks into Escamilla's employment, Escamilla and another SEMA employee, Michael Glanert, became embroiled in an altercation related, in part, to Escamilla's views on CV. Ex. 19, 43, 54. The altercation culminated in Glanert accusing Escamilla of acting unprofessionally and using obscene language and Escamilla accusing Glanert of using racial slurs against him. Ex. 54. Ultimately, this incident formed the basis of an internal Equal Employment Opportunity (EEO) Complaint that Escamilla filed with SEMA.[(4)] It was during the course of this internal EEO investigation that SEMA's corporate headquarters in Virginia discovered for the first time that Escamilla had falsified his résumé and his employment application.[(5)] Ex. 54 at 3.

In the weeks that followed, Escamilla's work performance failed to improve. Those who reviewed Escamilla's drafts of the CV systems procedures manual opined that the drafts were written poorly from a grammatical standpoint and were technically inaccurate, jumbled, and confusing. See Ex. 51, 46, 42, 43, Tr. at 177. Both Larry Dyer, a SEMA Manager, and Maryann Gaug, an EG&G Manager, had discussions with Escamilla concerning his poor work performance. Ex. 43, 46.

On November 2, 1993, Dyer allegedly gave Escamilla a memorandum which reiterated Escamilla's job responsibilities and advised that if he were unwilling or unable to perform these responsibilities his services were no longer necessary. Ex. 18. According to Dyer, Escamilla responded by threatening that he would not go quietly. Ex. 18 at 7. Escamilla claims he was never given a copy of that memorandum. Ex. 44.

Escamilla filed a whistleblower complaint under Part 708 sometime between November 3 and 16, 1993.[(6)]

SEMA terminated Escamilla on November 19, 1993, citing two principal reasons: falsification of his educational credentials and poor work performance.

C. Procedural History

OCEP conducted an investigation into the allegations contained in Escamilla's Complaint and issued a Report of Investigation and Proposed Disposition on May 28, 1996. OCEP concluded in its Report that Escamilla had not met his regulatory burden as required by Part 708 and, as a consequence, was entitled to no relief.

On June 10, 1996, Escamilla submitted his request for a hearing under 10 C.F.R. 708.9 to OCEP. OCEP transmitted that request to OHA on June 13, 1996 and I was appointed hearing officer in this case on June 26, 1996.

Escamilla and SEMA filed pre-hearing briefs on July 31, 1996 and September 3, 1996, respectively. On September 24, 1996, I held the hearing in this case at the Rocky Flats Site in Golden, Colorado. At the conclusion of the hearing, I directed Escamilla and SEMA to file post-hearing materials to clarify certain

matters raised at the hearing. Escamilla submitted his post-hearing document on October 2, 1996; SEMA tendered its post-hearing statement on November 20, 1996. With the filing of SEMA's statement, I closed the record in this case.

II. Legal Standards Governing This Case

As noted above, the regulations set forth in 10 C.F.R. Part 708 provide an administrative mechanism for the resolution of whistleblower complaints filed by employees of DOE contractors. The regulations specifically describe the respective burdens imposed on the complainant and the contractor with regard to their allegations and defenses and prescribe the criteria for reviewing and analyzing the allegations and defenses advanced.

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. 708.9(d). See Ronald Sorri, 23 DOE 87,503 (1993) (citing McCormick on Evidence 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F.Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence 339 at 439 (4th Ed. 1992). Under this standard, the risk of error is allocated roughly equally between both parties. Grogan v. Garner, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). In the present case, Escamilla must make two showings. First, Escamilla must demonstrate that he disclosed information to DOE, to SEMA, or to EG&G which he in good faith believed evidences gross waste or mismanagement. Escamilla can also show that he communicated to management his intention to file a Part 708 complaint. If Escamilla fails to meet this threshold burden, his claim must be denied. If Escamilla meets this burden, he must next prove that his disclosure was a contributing factor to his being harassed in the workplace and ultimately terminated. 10 C.F.R. 708.9(d); see Helen Gaidine Oglesbee, 24 DOE 87,507 (1994).

B. The Contractor's Burden

If Escamilla meets his regulatory burden as set forth above, the burden then shifts to SEMA. The regulations require SEMA to prove by "clear and convincing" evidence that the company would have terminated Escamilla even if Escamilla had not advanced his views regarding waste and mismanagement or announced that he had filed a complaint with DOE. "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n. 3

III. Analysis

Escamilla contends that he made a series of disclosures related to EG&G's selection of the CV system for use at Rocky Flats. His disclosures fall into two categories: (1) those related to his allegations of waste and mismanagement, and (2) those announcing that he had filed a complaint. After reviewing the entire record in this case, and considering the credibility of the witnesses who testified at the hearing, I conclude as follows:

- Escamilla **has failed** to show by a preponderance of evidence that he disclosed information which he in good faith believed evidenced mismanagement or waste associated with the computer system he was hired to support;
- Escamilla **has shown** by a preponderance of evidence that he disclosed to SEMA the fact he had filed a complaint with DOE. Escamilla **has also proven** that the disclosure relating to the filing of his complaint was a contributing factor to his termination;

- SEMA **has proven** by clear and convincing evidence that it would have terminated Escamilla even if Escamilla had not disclosed to SEMA that he had filed a complaint with DOE.

Accordingly, I find that Escamilla is entitled to no relief under 10 C.F.R. Part 708.

A. Alleged Disclosures of Waste and Mismanagement

It is uncontested that Escamilla frequently voiced his opinion that EG&G's decision to implement the CV system was a faulty one, citing his belief that the AC system was a superior system. As discussed below, I find that Escamilla's vague allegations of mismanagement and waste associated with the CV computer system do not rise to the level of protected disclosures under Part 708.

1. Mismanagement

EG&G management decided to implement the CV system for its engineering needs after undertaking an examination and analysis of alternative computer systems. The reasons for management's decision are well documented in its extensive computer study. In fact, Escamilla's job existed only to facilitate the implementation of CV at Rocky Flats and for no other reason. In addition, Escamilla knew when he applied for and accepted the job with SEMA that his job would involve supporting the CV system, not any other system. (7) During his employment with SEMA, Escamilla implied, through his constant criticism of the CV system, that EG&G's selection and implementation of that system constituted mismanagement. There is not one scintilla of evidence in the record which supports a finding that Escamilla disclosed information which he, in good faith, believed constituted mismanagement.

I am convinced from the record that Escamilla's communications to management regarding the CV system simply reflected his disagreement with EG&G's decision to acquire and implement CV and nothing more. It is not disputed that Escamilla was more familiar with AC than CV and that he strongly preferred the AC system. The weight of the evidence in the record indicates that Escamilla was not as technically proficient in the use of CV as he should have been to perform the duties for which he was hired. His inability to reboot the CV system when it faltered, his inability to draft a technically correct CV manual, and his inability to perform his day-to-day systems administration duties support this finding. It is difficult for me to imagine how someone who could not perform his day-to-day computer support activities in a competent fashion could carefully evaluate and reject the multiple factors considered by EG&G management in deciding which computer system to utilize for its engineering division. While Escamilla would like me to believe that he was an expert in CV and hence able to opine intelligently about the virtues of all computer systems, I find the weight of evidence to suggest otherwise. Moreover, I find that EG&G's selection of the CV system was a reasonable exercise of its discretion. My decision to defer to EG&G on its selection of the CV system is also bolstered by the Deputy Secretary of Energy's determination in Mehta v. Universities Ass'n, 24 DOE 87,514 (1995)(Mehta). In the Mehta decision, the Deputy Secretary reversed the Initial Agency Decision which involved a complainant who made alleged protected disclosures of mismanagement. Particularly, the complainant alleged that procedures governing his access to a computer should be changed. The Deputy Secretary held that:

Equating a particular type of disagreement to "mismanagement" as contemplated by the "whistleblower" regulations demands a careful balancing lest the term encompass all disagreements between a contractor and its employees. While a conclusion with respect to the merits of a particular claim of mismanagement may not be required in all cases, there must be some assessment as to whether the nature of the disagreement evidences the type of disclosure of mismanagement that the regulation was designed to protect, at the same time granting appropriate deference to traditional management prerogatives needed to conduct an organization through teamwork.

Id. at 89,065. For all the foregoing reasons, I find that Escamilla's disagreement with EG&G management's decision about the kind of computer system EG&G's engineering group would utilize does not rise to the level of a protected disclosure regarding mismanagement as contemplated by the Part 708 regulations.

2. Waste

Escamilla's criticism of the CV system focused on the purported waste inherent in EG&G's intended use of a computer system which was, in Escamilla's opinion, more expensive than the AC system. However, Escamilla's charges of waste were, at all times, general and unsubstantiated. He never, for example, articulated why AC better suited EG&G's engineering needs, or why he believed the use of the CV system constituted a gross waste of funds. Ex. 52. At the hearing, Escamilla was given the opportunity to clarify precisely why he believed his claims regarding the CV system rose to the level of gross waste. His testimony on this issue centered again on his general assertions that the AC system was cheaper and more efficient than CV. Tr. at 349 and 350. When asked to explain some of the benefits of utilizing the CV system, Escamilla responded " as far as cost goes, I can prove to you that Autocad is a lot cheaper and efficient." Id. However, he failed to communicate any fact to support his general assertion of waste.

Assertions of waste in the most general sense do not satisfy the regulatory standard set forth in Part 708. See Francis M. O'Laughlin, 24 DOE 87,505 (1994). The regulations provide, in relevant part, that:

A DOE contractor covered by this part may not discharge or in any manner demote, reduce in pay, coerce, restrain, threaten, intimidate, or otherwise discriminate against any employee because the employee . . . has [d]isclosed . . . information that the employee in **good faith** believes **evidences** . . . gross waste of funds . . .

10 C.F.R. 708.5(a)(1)(iii) (emphasis added). Based on the record and my serious reservations about Escamilla's credibility, I find that Escamilla's vague allegations of waste based simply on his ethereal opinion do not rise to the level of a protected disclosure. In this regard, I am unable to conclude that Escamilla disclosed information which he in good faith believed evidenced gross waste of funds. The concept of good faith is closely linked to one's honesty. In this case, Escamilla's honesty is highly questionable. First, he impugned his own integrity by knowingly and willingly falsifying his educational qualifications. Then, at the hearing he continued to undermine his credibility by refusing to acknowledge that his falsifications and misrepresentations were serious matters. Instead, he attempted to divert focus from his actions by providing evasive responses and non-sequiturs to questions relating to his falsifications. The following excerpts from the transcript highlight my concern in this regard:

Q: . . . the Record reflects that you erroneously stated on a number of documents, including your resume and your application . . . that you had . . . two Bachelor of Science degrees. I'd like you to address that issue.

A: I have one. Do you want to see it?

Q: You have a Bachelor of Science degree?

A: I have a Degree. It doesn't say "Bachelor of Science," it says

"equivalence of."

Q: . . . Did you . . .put anything in writing which said, "the equivalent of?"

A: It was never during the interview process, the mention with Larry Dyer where I have the degree never became an issue.

Tr. at 286-87. I find equally as troubling other hearing testimony where Escamilla provided conflicting statements. For example, Escamilla implied at one point that Larry Dyer told him to state on his employment forms that he had a B.S. degree because Dyer knew he was working towards a degree. Id. at 290. In response to the direct inquiry whether Dyer told him to misrepresent his educational credentials, Escamilla responded, "He said, 'Go ahead and put it down, You're going to be working on it. It doesn't matter.'" Id. When asked more pointedly whether Dyer told him to lie, Escamilla responded, " He didn't

say, he said, 'Put that you're working toward one down.'" Id. at 316-17. In addition, under questioning, Escamilla revealed that he had misstated facts in Exhibit 14 relating to an incident with his colleague, Glanert. Id. at 321. Escamilla's explanation for the misleading statements was that he was emotionally upset when he wrote the subject document to his supervisor and, as a result, could not "think straight." Id. In addition, I find it significant that Escamilla lied about other matters at the hearing. When I asked him why he stated on his résumé and employment application that he had a B.S. degree, Escamilla responded "I didn't put it on the Application." Id. at 287. The employment application, on its face, reveals that Escamilla represented he had a B.S. degree from Metro State College. See Ex. 3. Another instance that demonstrates Escamilla's lack of candor involved his representation that SEMA hired him to support the AC system. Tr. at 21. The advertisement to which Escamilla responded, on its face, undermines Escamilla's testimony concerning this matter, as do other statements by management officials to Escamilla regarding his position description. See Ex.2; Ex. 46 at 3; Ex. 18; Ex. 43 at 1, 7, 10.

In addition, as noted in footnote 3 supra, I refused to entertain other contentions Escamilla raised during the proceeding because I determined that he never raised them during the course of his employment with SEMA, despite his argument to the contrary. Finally, Escamilla confused the record in this case by interjecting allegations of waste and mismanagement stemming from his disagreements in 1990-91 with L&M, a former DOE subcontractor at Rocky Flats that has no relationship with SEMA. Tr. at 19-20, 237, 275. At various times during the hearing, I explained to Escamilla that the 1990-91 issues were not relevant to this proceeding and attempted to refocus his line of argument. Id. at 20, 240-42, 258. Escamilla refused to accept my direction and continued to attribute to SEMA allegations of waste and mismanagement that Escamilla allegedly witnessed two years earlier as an employee of L&M. Id. at 275. Escamilla exclaimed at one point during the hearing, "I won't let them do to me what they did before." Id. This comment and others like it caused me to consider that the anger and hostility Escamilla was exhibiting and the allegations he was advancing might be misplaced. In conclusion, my observations of Escamilla during the 10-hour hearing and the record in this proceeding convince me that Escamilla was not acting in good faith when he raised his general assertions of waste against SEMA.

For all the reasons set forth above, I find that Escamilla has not met his threshold burden of establishing by a preponderance of evidence that he disclosed information which evidenced his belief in good faith that there was an instance of gross waste of funds.

B. Alleged Disclosure of Complaint Filing

1. Prima Facie Case

Escamilla alleges that on November 16, 1993, he advised Larry Dyer, his SEMA Manager, that he "was frightened by the hostile work environment and [he] felt the appropriate thing to do was to file an OCEP complaint with DOE." Ex. 44. Escamilla contends he told Dyer on that date that he believed his problems in the work environment stemmed from his disclosures of waste and mismanagement. Id. Dyer recalls that during the November 16, 1993 meeting Escamilla told him he had filed a harassment complaint with DOE. Ex. 43. According to Dyer, after the November 16 meeting, Dyer called SEMA's corporate office to tell them about, among other things, Escamilla's filing of a complaint. Id. at 8. Immediately thereafter Dyer called Gaug, however, he does not recall if he told her about Escamilla's complaint filing. Id. Gaug stated that she believes Escamilla told her directly that he had filed a complaint with DOE concerning waste or harassment. Ex. 46. Gaug added that she was not surprised because Escamilla had asked her for an OCEP brochure. Id.

The filing of a Part 708 complaint constitutes a protected disclosure pursuant to 10 C.F.R. 708.5(a)(2). The regulations specifically provide as follows:

A DOE contractor covered by this part may not discharge or in any manner demote, reduce in pay, coerce, restrain, threaten, intimidate, or otherwise discriminate against any employee because the employee (or any person acting pursuant to a request of the employee) has -

(2) Participated . . . in a proceeding conducted

pursuant to this part;

10 C.F.R. 708.5(a)(2). Even if this provision did not apply to Escamilla's disclosure, the OCEP Director had the discretion to accept the complaint for processing under 10 C.F.R. 708.2(c). See Report of Investigation at 13, n.12.

The weight of the evidence in this case indicates that prior to his termination, Escamilla had communicated to SEMA that he had filed a Part 708 complaint with the DOE. Therefore, I find that Escamilla has established a prima facie case that he made a protected disclosure to a DOE contractor. I turn now to whether Escamilla has proven that this protected disclosure was a contributing factor to his being terminated.

2. Contributing Factor

A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." Ronald A. Sorri, 23 DOE 87,503 (1993) citing McDaid v. Dept't of Hous. and Urban Dev., 90 FMSR 5551 (1990); see also County v. Dole, 886 F.2d 147, 148 (8th Cir. 1989) (County). In addition, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." County, 886 F. 2d 147, 148 (8th Cir. 1989).

Applying these standards to the present case, I find that all three persons in Escamilla's management chain, i.e., Gaug, the on-site EG&G Manager; Dyer, the on-site SEMA Manager; and Anderson, SEMA's Senior Vice-President, had actual or constructive knowledge that Escamilla filed a Part 708 complaint with the DOE prior to his termination on November 19, 1993. Gaug stated that she knew in early November 1993 that Escamilla had complained to DOE about either waste in connection with a computer system and/or engineering practices or harassment. Ex. 46. She stated she was not surprised Escamilla complained to DOE because he had asked her for an OCEP brochure earlier. Id. Dyer admits that Escamilla told him on November 16 that he had filed a harassment complaint with the DOE and that he spoke with Gaug immediately thereafter. This fact, combined with Dyer's frequent communications with Gaug prior to and on November 16, persuades me that Dyer had at least constructive knowledge that Escamilla had filed a Part 708 action. As for Anderson, the ultimate decision maker with respect to SEMA terminations, he told OCEP investigators that he heard Escamilla had filed a complaint with DOE regarding harassment and waste relating to some sort of software prior to Escamilla's termination. Ex. 40 at 3. At the hearing, however, Anderson testified he did not know about Escamilla's Part 708 filing until after he had terminated him. Regardless of which version of Anderson's recollection is accurate, I find he had either actual or constructive knowledge that Escamilla had filed a Part 708 action.[(8)]

I find that a reasonable person could conclude that Escamilla's protected disclosure, i.e., that he had filed a complaint, was a contributing factor to his termination in view of management's knowledge of Escamilla's complaint filing and the temporal proximity between Escamilla's revelation of his complaint filing and his termination. For this reason, I have determined that the burden shifts to SEMA to prove by clear and convincing evidence that it would have terminated Escamilla even if Escamilla had not disclosed that he filed a Part 708 complaint.

C. SEMA's Burden

SEMA maintains that it based its decision to terminate Escamilla on two principal facts: (1) he falsified employment documents and (2) he performed poorly on the job. There is no dispute that Escamilla knowingly falsified his resume and employment documents and that he knew he could be terminated for so doing. Escamilla's varied attempts to negate the import of these falsifications has no impact on my

ultimate determination that his falsifications constituted an independent ground for his termination. For example, I was not swayed by Escamilla's attempts to minimize his falsification by offering excuses for his action at the hearing. See Tr. at 286-302. As for Escamilla's oral statement to Dyer regarding his lack of a degree, I observe that Escamilla was still in possession of the falsified documents at the time he made his revelation to Dyer and yet made no attempt to correct the falsified documents. Further, I observe that Escamilla continued to compound his falsification during and even after his term of employment by trying to perpetuate the myth that he held two college degrees. Ex. 14, Complainant's Pre-hearing Submission; see also note 4. Finally, I also note that SEMA's corporate policy is to terminate persons who are found to have falsified employment documents. In fact, in the only other situation involving an employee who falsified his educational credentials, SEMA was preparing to implement its policy when the employee quit. Tr. at 46; Ex. 54 at 4; Ex. 39. For all these reasons, I am convinced that one of the chief reasons SEMA terminated Escamilla was his falsification.

I am also convinced by the evidence in the record that Escamilla's work performance would have been an independent ground for terminating him. The record is replete with evidence from EG&G and SEMA management officials and co-workers that Escamilla lacked the ability to perform his job at the technical level expected of him. Ex. 46, 50, 51, 42. For example, Escamilla was unable to reboot the system for which he was hired to support and was unable to write a quality procedures manual. These duties were basic requirements for the job for which Escamilla was hired. The record indicates that management gave Escamilla several opportunities to prove himself in the workplace after orally advising him that his job performance was not satisfactory. For example, Gaug decided Escamilla was not capable of performing basic CV support skills; however, she assigned him to draft a manual outlining system administration procedures. Escamilla failed dismally at this task as well. Moreover, Escamilla was a probationary employee during his brief tenure with SEMA. SEMA's company manual, a copy of which Escamilla placed into evidence at the hearing, advises employees that they are on probation for six months and that SEMA can terminate them at its discretion without notice during this period. Escamilla Hearing Exhibit 3. SEMA has convinced me that Escamilla's poor job performance during his probationary period would have resulted in the company discharging Escamilla under the terms of its corporate policy.

Based on the foregoing, I have determined that SEMA has proven by clear and convincing evidence that it would have terminated Escamilla even if he had not advanced his communications that he filed a Part 708 complaint. Therefore, I find Escamilla is entitled to no relief under Part 708.

IV. Conclusion

As set forth above, I determined with respect to Escamilla's allegations of waste and mismanagement, that he has not met his regulatory burden as required by 10 C.F.R. Part 708.5. Thus, I did not analyze whether those disclosures were contributing factors to the alleged harassment Escamilla purportedly experienced and to his termination. However, with respect to Escamilla's allegation that he was terminated for communicating to management that he had filed a Part 708 complaint, I determined that he has met his burden of proof of establishing by a preponderance of the evidence that this was a disclosure protected under 10 C.F.R. Part 708. I also found that Escamilla's disclosure was a contributing factor in his termination. However, I found that SEMA has proven by clear and convincing evidence that it would have terminated Escamilla absent his disclosure. Accordingly, I conclude that Escamilla has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted under 708.10.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Ronny J. Escamilla under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Assistant Inspector General for

Assessments, Office of the Inspector General, Department of Energy.

Ann S. Augustyn

Hearing Officer

Office of Hearings and Appeals

Date:

1. The three computer systems EG&G management examined in detail were the following: Computer-Assisted Three-dimensional Interactive Application (CATIA); ComputerVison (CV); and AutoCAD (AC). Exhibits 1, 46.

2. For the record, Escamilla was employed from 1990-1991 at Rocky Flats by another DOE subcontractor, L&M Technologies, Inc. (L&M) Ex. 3. According to Escamilla, L&M terminated him for voicing his disagreement with the CATIA computer system. Ex. 44

3. In his Statement to OCEP investigators 16 months after his termination, Escamilla advanced eight reasons why AC was an economical computer system which was efficient and adaptable to EG&G's future use. Ex. 44 at 5. There is no evidence in the record to indicate Escamilla ever discussed AC as being efficient and adaptable to EG&G's future use or articulated any of these eight reasons to anyone during the term of his employment with SEMA. I will therefore accord no weight in this Decision to these belated contentions.

Similarly, I will not consider Escamilla's unsupported assertion that he challenged the CV system because of safety concerns. During the hearing, Escamilla claimed for the first time that he advocated the use of AC instead of CV out of concern for the safety of workers at Rocky Flats . Tr. at 339-348. When asked at the hearing why he never articulated that concern orally or in writing previously, Escamilla responded, " Okay, is it wise to put all of your eggs in one basket?. . . am I going to tell you everything that I'm going to do? I mean, would that be wise?" Tr. at 340. Based on this response and my reservations about Escamilla's credibility at the hearing, I do not believe Escamilla ever raised the safety issue during the course of his employment with SEMA.

4. SEMA investigated the EEO complaint and found no evidence of discriminatory behavior, harassment, or improper conduct by Glanert or any other SEMA employee against Escamilla. Ex. 17. SEMA memorialized its findings in a letter dated October 5, 1993 to Escamilla. Id.

5. The altercation between Escamilla and Glanert also involved Escamilla's refusal to take direction from Glanert. Ex. 43 at 5. Escamilla advised Fredericka Wall, the Human Resources Manager at SEMA who conducted the internal EEO investigation, that Glanert should not be supervising him as Escamilla had "a good education and lots of experience." Ex. 54 at 2. It was these remarks that prompted Ms. Wall to review both Escamilla and Glanert's personnel files. Wall learned from the files that Glanert had a Master's Degree while Escamilla did not possess a college degree. Id.

6. The record is unclear regarding the exact date Escamilla filed his Part 708 Complaint. Escamilla maintains he filed the Complaint on November 3, 1993. Barbara Wade, the Manager of the Rocky Flats Whistleblower Program during the period in question, advised OCEP investigators that Escamilla filed his Complaint with her office shortly after his termination on November 19, 1993. Ex. 53 at 2. At the hearing, Wade stated that the OCEP statement accurately reflected her recollection of dates at the time. Tr. at 200. However, she also testified that Escamilla "was terminated real close or after submitting the complaint," suggesting the possibility that Escamilla might have given her the whistleblower complaint prior to his termination. Id. at 199. Unfortunately, the Rocky Flats Whistleblower office did not maintain a system to log in complaints as they were received. Id. at 204-205. Consequently, Rocky Flats cannot confirm the date of filing for Escamilla's complaint.

Other evidence in the record persuades me, however, that Escamilla filed his complaint sometime between November 3 and November 16, 1993. Larry Dyer, Escamilla's Manager at SEMA, acknowledged that Escamilla told him on November 16, 1993 that he **had filed** a harassment complaint with DOE. Ex. 43 at 8. Gaug, Escamilla's EG&G Manager, stated that "**in early November, Escamilla complained** to DOE about either waste of government money in regards to the computer system and/or unsound engineering practices or harassment because of his ethnicity." Ex. 46 (emphasis added). She further stated that she believed Escamilla complained to DOE because he had asked for an OCEP brochure earlier. Id. In addition, Wall recounts that on the day Escamilla was fired, he called her and stated his view that he was fired because he **had filed** a complaint with DOE.

7. Curiously, on numerous occasions, Escamilla asserts that he was hired to support AC not CV. These assertions are simply false.

8. If Anderson's earlier recollection of events is accurate then he had actual knowledge of the complaint filing. If his hearing testimony is accurate, then Anderson had constructive knowledge through Dyer, the person whom Anderson entrusted with overseeing SEMA's Rocky Flats operations.

Case No. VWA-0014

February 5, 1997

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner:Charles Barry DeLoach

Date of Filing:November 1, 1996

Case Number: VWA-0014

This Decision involves a whistleblower complaint filed by Charles Barry DeLoach (DeLoach) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. For a four year period, DeLoach was employed by Westinghouse Savannah River Company (WSRC), a DOE management and operating contractor, at DOE's Savannah River site (Savannah River). DeLoach alleges that during his tenure at WSRC, he made disclosures regarding health and safety issues to various supervisors or managers at Savannah River. On March 19, 1993, DeLoach was fired after an investigation by Wackenhut Services, Inc. (Wackenhut), a subcontractor at Savannah River, revealed that DeLoach had stolen government property with an estimated value of approximately $48,000. DeLoach contends that his safety and health disclosures were the true cause of his termination.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed to a DOE official or to a DOE contractor, information that the employee believes in good faith evidences, among other things, substantial and specific danger to employees or public health or safety. See 10 C.F.R. § 708.5(a)(1)(ii). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with

the DOE. The regulations entitle these employees to independent fact-finding and a hearing before an Office of Hearings and Appeals (OHA) Hearing Officer, followed by an opportunity for review of their case by the Secretary of Energy or his designee. See David Ramirez, 23 DOE ¶ 87,505, aff'd, 24 DOE ¶ 87,510 (1994).

B. Factual Background

In 1981, DeLoach began working at Savannah River. In April 1989, WSRC became the prime management and operating contractor at the site. During his employment with WSRC, DeLoach made various Quality Improvement Safety Suggestions between 1990 and 1993. He also alleges that during that same time period, he made several other disclosures relating to safety and health concerns. These issues pertained to the following items: (1) leaking oil drums; (2) excessive radiation in his work area allegedly causing him to have high cesium levels in his whole body counts; (3) the lack of a fire extinguisher in the welding area; (4) being required to weld around combustible materials; (5) dirty drinking water; (6) excessive noise in his work area; (7) faulty welds and the use of uncertified welders; (8) misinformation allegedly provided by an official at a safety class regarding the cause of an earlier safety incident; (9) an accident in which a cabinet fell on him; and (10) his alleged exposure to asbestos and WSRC's resulting refusal to include a report of that incident in his medical files. DeLoach contends that all of these incidents caused him to be labeled as a "troublemaker," which in his view, resulted in his eventual termination.

On February 25, 1993, an anonymous person, who identified himself only as a WSRC management official, telephoned WSRC's Employee Concerns Office to report that he had overheard another employee in his carpool state that DeLoach had been stealing tools from the Savannah River site and possessed at his residence "orange tools," i.e., tools that had been exposed to radiation. See Ex. 6 (interview with Employee Concerns employee who took call); Ex. 25 (Notice of Employee Concern).(1) On March 8, 1993, the concern was forwarded to Wackenhut which began an investigation. DeLoach was informed of the investigation on March 12, 1993 and gave permission for Wackenhut and state police to search his home. Pursuant to that search, approximately $12,000 of suspected DOE equipment was seized. When a second search was conducted at DeLoach's house, $36,000 worth of additional equipment was seized. Although serial numbers had been removed from many of the tools, Wackenhut was able to determine that most of these tools were government property. DeLoach admitted having stolen much of the property.(2)

Upon hearing of the results of the investigation, WSRC President Ambrose Schwallie, based on the recommendation of a WSRC committee, decided to fire DeLoach. That termination occurred on March 19, 1993. Subsequently, DeLoach met with the WSRC Employee Concerns Office regarding some of the issues he claims were protected disclosures concerning health and safety at Savannah River. That office conducted an investigation of the complaints raised by DeLoach at that meeting and reported its findings to him in a letter dated May 24, 1993. Ex. 22. DeLoach then filed his whistleblower complaint dated February 26, 1994.

C. Procedural History

The DOE's Office of Contractor Employee Protection (OCEP)(3) conducted an investigation into the allegations contained in DeLoach's complaint and issued a Report of Investigation and Proposed Disposition on September 30, 1996. OCEP concluded in its Report that DeLoach had not met his burden as required by Part 708 and, as a consequence, was not entitled to any relief. Specifically, OCEP found that although DeLoach had shown that he made protected disclosures to officials at WSRC, he had failed to show that those disclosures were a contributing factor to any adverse personnel action taken against him by WSRC. It further found that there was clear and convincing evidence that, even in the absence of the disclosures, WSRC would have terminated DeLoach.

On October 8, 1996, DeLoach submitted his request for a hearing under 10 C.F.R. § 708.9 to OCEP. OCEP transmitted that request to OHA on November 1, 1996 and I was appointed hearing officer in this case on November 6, 1996. On December 17, 1996, I held the hearing in this case in Aiken, South Carolina. DeLoach testified for himself and WSRC presented the following witnesses: Meredith Metz, Manager of the Employee Concerns Office, WSRC; Betty Brunson, Human Resources Representative, WSRC; Mack Underwood, Chief Investigator, Wackenhut; Ambrose Schwallie, President, WSRC; Gary Cooper, Supervisor, WSRC; Benny Jackson, Maintenance Manager, WSRC; and Barry McDougal,

Maintenance/Work Control Liaison, WSRC. After the hearing, I directed WSRC to submit several documents in order to clarify certain matters raised at the hearing. WSRC submitted the last of these documents on January 6, 1997. With that filing, I closed the record in this case.

II. Legal Standards Governing This Case

As noted above, the regulations set forth in 10 C.F.R. Part 708 provide an administrative mechanism for the resolution of whistleblower complaints filed by employees of DOE contractors. The regulations specifically describe the respective burdens imposed on the complainant and the contractor with regard to their allegations and defenses and prescribe the criteria for reviewing and analyzing the allegations and defenses advanced.

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 at 89,009 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)) (Sorri). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F.Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

In the present case, DeLoach must make two showings. First, DeLoach must demonstrate that he disclosed information to an official of DOE or to WSRC that he believed in good faith evidenced a substantial and specific danger to employees or public health or safety. See 10 C.F.R. § 708.5(a)(1)(ii); 10 C.F.R. § 708.9(d). If DeLoach fails to meet this threshold burden, his claim must be denied. If DeLoach meets this burden, he must next prove that his disclosure was a contributing factor to his termination. 10 C.F.R. § 708.9(d); see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994) (Oglesbee).

B. The Contractor's Burden

If DeLoach meets his burden as set forth above, the burden then shifts to WSRC. The regulations require WSRC to prove by "clear and convincing" evidence that the company would have terminated DeLoach even if DeLoach had not made protected disclosures. "Clear and convincing" evidence is a much more stringent standard than "a preponderance of the evidence"; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3.

III. Analysis

The parties contest many of the facts in this case. My findings of fact set forth below are based on (1) the entire record developed in the case, including the OCEP investigative file, all documents submitted by the parties and the transcript of the December 17, 1996 hearing and (2) my observations of the witnesses' demeanor at the hearing and my determinations regarding those witnesses' credibility.

After reviewing the entire record in this case, and considering the credibility of the witnesses who testified at the hearing, I conclude that DeLoach has shown by a preponderance of evidence that he disclosed information that he believed in good faith evidenced substantial and specific dangers to health and safety. I further conclude, however, that WSRC has proven by clear and convincing evidence that it would have terminated DeLoach even if DeLoach had not made protected disclosures to WSRC. Accordingly, I find that DeLoach is not entitled to relief under 10 C.F.R. Part 708.

A. Alleged Disclosures

As mentioned earlier, DeLoach alleges that he made a number of disclosures to WSRC officials between the time that WSRC assumed the contract to manage Savannah River in April 1989 and his termination in March 1993. DeLoach also made sixteen Quality Improvement Safety Suggestions (QISS), some of which relate to the same matters he contends were protected disclosures. Hearing Ex. 7.(4) One of the QISSs relates to DeLoach's complaint in 1990 that oil drums were leaking onto the ground. DeLoach testified that when building facility manager Wyatt Clark refused to address the problem, he called the state Department of Health and Environmental Control, which he said ordered WSRC to fix the problem. See Hearing Tr. at 16, 22-27. According to DeLoach, Clark then implemented DeLoach's suggestion to prevent the oil drums from leaking. DeLoach's allegation of having made this disclosure is confirmed by the record of his report to the WSRC Employee Concerns Office and by records of his QISS. See Hearing Exs. 6 and 7.

DeLoach also alleges that he complained several times during his employment with WSRC that a work assignment requiring welding on a cesium removal column caused him to have abnormal levels of cesium in his whole body count between 1989 and 1993. Hearing Tr. at 68-71, 76. He testified that in 1993, he was asked for three urine samples in two days and told he needed to be "chelated" to remove cesium from his body, although this procedure did not take place. Hearing Tr. at 73-76. He states that he complained about these cesium levels to supervisor Gary Cooper and managers Benny Jackson and Barry McDougal, as well as an unnamed Health Protection supervisor. Hearing Tr. at 70-71, 74. According to DeLoach, various WSRC employees told him that eating venison from the Savannah River area caused his high cesium levels. See also Ex. 22 (Report of WSRC investigation). He also claims that he was told that cesium was not detected in his body at the time of his termination. Hearing Tr. at 71. However, according to the WSRC Employee Concerns Office, cesium was detected in his whole body count at the time of his out-processing, as well as throughout his employment at Savannah River, but was considered by WSRC's Health Protection Office to be not an unusual level and consistent with the levels of other venison eaters from the Savannah River area. Ex. 22. at 11.

DeLoach stated that in 1990 he disclosed that there was no fire extinguisher in the welding area and complained about this to building facility manager Clark, who rejected his suggestion. Hearing Tr. at 17-18, 23. DeLoach also made a QISS regarding this matter and his suggestion to install a fire extinguisher was adopted. Hearing Ex. 7. DeLoach also noted that in October 1992, as well as several other times, he complained to a building facility manager, Ken Powell, about being assigned a job welding within fifty feet of combustible materials in an area where he and other employees could be injured. According to DeLoach, he refused to do the welding jobs until the combustible materials were removed. Hearing Tr. at 46-49.

DeLoach also alleges that at some time during his employment at the facility he complained to a building custodian, Burt Lancaster, about muddy drinking water at his worksite. Hearing Tr. at 28- 31. He also alleges that he complained to his supervisor (whose name he could not remember) and Lancaster regarding the level of noise in an area called the "cell" where he was required to work sometimes. Hearing Tr. at 34-36. According to DeLoach, the drinking water problem was corrected after two or three months. Hearing Tr. at 30. Eventually actions were also taken to abate the noise level in the "cell." Hearing Tr. at 35.(5)

DeLoach further alleges that he complained to Ken Powell, supervisor Ken Paradise, and manager Todd Wright that WSRC's use of uncertified welders was creating faults in the welds. Hearing Tr. at 39-42; Exhibit 1 at 6. He also asserts that in late 1992, a number of WSRC management employees, including Gary Cooper and Benny Jackson, were present when he corrected an instructor who gave what DeLoach believed to be incorrect information as to how a particular accident had happened at the plant sometime in the 1980's. Hearing Tr. at 62-64, 67.

DeLoach also notes that in either October or November of 1992, a storage cabinet fell on top of him when he opened one of the drawers. Hearing Tr. at 52. He stated that his supervisors, Gary Cooper and Ken Paradise, were immediately made aware of the accident. Hearing Tr. at 55-56. DeLoach claims that it occurred because the cabinet was not anchored to the wall or to other cabinets as required by safety rules and the cabinet's manufacturer. Hearing Tr. at 51. He stated that one day after the accident, the cabinet was anchored. Hearing Tr. at 58. The record indicates that DeLoach told Cooper and Paradise immediately after the accident that he was not injured and that none of them reported the incident as required by WSRC rules. He believes both Cooper and Paradise were reprimanded for their failure to report the incident and that this accident was therefore a further cause of resentment of DeLoach among WSRC management. Hearing Tr. at 60. WSRC's investigation that took place after DeLoach's termination concluded that Cooper, Paradise and DeLoach all improperly failed to report the incident. See Ex. 22 at 12.

DeLoach alleges that the last of his disclosures triggered his firing three months later. See Hearing Tr. at 135. The record indicates that in the evening of December 22, 1992, DeLoach entered building 241-58H in order to obtain welding rods to perform a job elsewhere on the site. While in the building, he saw three other employees working on a pipe and upon further inspection, believed there to be asbestos present on the pipe. Id. at 78.(6) DeLoach claims that he told the other employees and their manager, "Smitty" Smith, that he thought it was asbestos, and that it should be tested. DeLoach then left the area to complete his work shift. Id. at 80-81, 87-88. When he came back after completing his shift the following morning, he found the area roped off and was told that asbestos had been found.

According to DeLoach, he was told that morning by his supervisor, Gary Cooper, that he should remove all of his clothes in order for them to be destroyed, as a precautionary safety measure. Id. at 83. DeLoach also states that he told Cooper that morning that everyone present in the building since the previous night should be given nasal smears as tests for asbestos exposure. Id. at 90. He also claims that he informed Cooper, as well as Benny Jackson (Cooper's supervisor), Gerald Busbee, Maintenance Manager for H-Area (Waste Management), and Dr. E.R. Herman, the H-Area physician, that he wanted a report of the incident placed in his medical records. During the WSRC investigation of DeLoach's complaints after his termination, Dr. Herman confirmed that DeLoach requested this addition to his medical records.(7) See Ex. 22 at 12. DeLoach claims that a week or two after he requested the addition (and a week or two prior to his termination), he informed Jackson that if a report of the incident was not included in his medical records by April 1, 1993 he would inform the local newspapers of the incident. Hearing Tr. at 86-87, 95, 305.

DeLoach contends that all of these incidents caused him to be labeled as a "troublemaker" and a "big mouth." See Hearing Tr. at 31, 39. He believes that his complaining was probably discussed among supervisors at the plant and that it contributed to his eventual termination. Hearing Tr. at 73. He does not know who made the anonymous phone call leading to the Wackenhut investigation, but suspects that it was one of the supervisors with whom he had frequent contact, and that it was made in retaliation for his complaining so much. DeLoach stated, however, that he does not believe his immediate supervisor during the latter part of his employment, Gary Cooper, made the anonymous phone call. Hearing Tr. at 134. He is also unable to state with any certainty which supervisors or managers may have been involved in the decision to terminate him. See Hearing Tr. at 39, 122-23.

None of the three WSRC management employees who testified, Jackson, McDougal and Cooper, could recall DeLoach making any of the disclosures described above. Hearing Tr. at 260-65, 289, 300-01, 304-05, 307. This failure to remember DeLoach's complaints may be due in part to the long period of time that has elapsed since the alleged disclosures. I also believe that these supervisors do not remember DeLoach's alleged disclosures because they did not take them seriously or consider them significant at the time they were made. The record reveals that DeLoach complained often to many people about many matters. Benny Jackson said that DeLoach "like[d] to talk a lot and carry on." Hearing Tr. at 304. Barry McDougal said that DeLoach would "run his mouth all day long" and "kept something going all the time." Hearing Tr. at 286-87. It is therefore possible that the particular incidents DeLoach recalls were of more significance to

him than to the employees to whom he complained.

Nevertheless, I believe DeLoach has shown by a preponderance of the evidence that he made complaints to a number of WSRC supervisory employees and management officials on a number of different safety and health issues. Whether the complaints were considered valid and significant by WSRC management is not the critical question. If DeLoach made complaints to WSRC employees regarding what he believed to be substantial and specific dangers to safety or health, they qualify as protected disclosures.(8) I believe DeLoach's complaints were made in good faith and WSRC has not provided evidence to the contrary. Compare Ronny J. Escamilla, 26 DOE ¶ 87,508 (1996) (complaints found not to be in good faith). My finding that DeLoach made these complaints and acted in good faith as required by 10 C.F.R. § 708.5(a)(1)(ii) is supported by the fact that DeLoach received monetary bonuses for some of his QISSs and that some of the health and safety matters he raised were addressed and corrected. In several of the incidents DeLoach refers to, the matter was promptly investigated and if a serious health or safety problem existed, it was corrected. I therefore find that DeLoach made protected disclosures as contemplated by Part 708.

B. Contributing Factor

A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." Sorri, 23 DOE at 89,010; see also Couty v. Dole, 886 F.2d 147, 148 (8th Cir. 1989) (Couty). In addition, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." Couty, 886 F. 2d at 148.

In this case, there is clearly temporal proximity between DeLoach's disclosures regarding the discovery of asbestos, his requests for the incident to be included in his medical records, his threat to go the local newspapers and his termination. Under Sorri, if the deciding official in this case, WSRC President Ambrose Schwallie, had actual or constructive knowledge of the disclosures, in conjunction with the temporal proximity, DeLoach will have met his burden.

In both his statements to the OCEP investigator and in his sworn testimony before me, Schwallie has stated explicitly that he knew nothing about any health or safety complaints made by DeLoach, and that he terminated DeLoach solely on the basis of his theft of government property. Hearing Tr. at 243; Ex. 13. The record indicates that the decision to discharge DeLoach was made by Schwallie, based on the recommendation of a committee. According to Schwallie and Betty Brunson, WSRC Human Resources Representative, in cases involving the possible termination of an employee, WSRC's normal procedure is to form an ad hoc committee to recommend to Schwallie the action to be taken. The committee is usually composed of representatives from the Human Resources Office, the General Counsel's Office, the Equal Employment Opportunity Office, the employee's line management and Wackenhut if criminal activity is involved. Hearing Tr. at 241, 243, 252. The record indicates that in this case there was such a committee which met with Schwallie regarding the action to be taken with respect to DeLoach. Hearing Tr. at 241; Exs. 8 (interview with Findley), 13 (interview with Schwallie). However, Schwallie could not recall who served on the committee in this case. Hearing Tr. at 241, 243.(9) Both Schwallie and William "Dean" Findley, a consultant to the WSRC Human Resources Office who participated on the committee, have stated that there was no mention made during the committee meeting of any disclosures or complaints by DeLoach regarding health or safety. Hearing Tr. at 243 (Schwallie's testimony); Ex. 8 (interview with Findley).(10)

From the record, it is impossible to determine whether any of the managers DeLoach has identified as having first-hand knowledge of his disclosures had any input into the decision to terminate him. Nor is it possible to determine that the member(s) of line management who may have served on the committee or had input into the termination decision had no actual or constructive knowledge of DeLoach's disclosures.

However, it is not necessary for me to decide whether DeLoach has met this part of his burden, because WSRC has demonstrated by clear and convincing evidence that it would have terminated DeLoach even if DeLoach had not made any protected disclosures.

C. Justification for DeLoach's Termination

WSRC's policy was to terminate employees in all cases of proven theft, i.e., where there is conclusive evidence of intent to steal. Hearing Tr. at 241; see also Ex. 10 (report of Office of Personnel Management investigator). In this case, Wackenhut discovered approximately $48,000 worth of DOE property at DeLoach's home and DeLoach admitted prior to termination that he stole government property. Hearing Tr. at 214. It is clear to me, and DeLoach agrees, that WSRC was justified in terminating him, and would have done so even if he had not made disclosures. See Hearing Tr. at 103-04, 129-130.

Nevertheless, DeLoach argues that when he was fired for theft of government property, he was treated differently from other WSRC employees whom he considered to be similarly situated. DeLoach named two other employees of WSRC who he believes were treated differently (Employee One and Employee Two). These examples do not support DeLoach's position. The case of Employee One involved the discovery of seven tools, valued at $20 total, in the employee's vehicle as he was leaving the site. The employee claimed that he had not intended to steal the tools and there was no conclusive evidence of intent to steal.(11) The employee was therefore not fired but instead suspended for two weeks and placed on probation. Employee Two was observed taking 50 pounds of grass seed (valued at $35.00) from a government-owned vehicle and placing it into his own vehicle. Employee Two admitted taking the grass seed for personal use and since the intent to steal was clear, the employee was fired. Ex. 16 (review of Wackenhut investigation).

These examples do not demonstrate that WSRC treated DeLoach, or anyone else, inconsistently. In Employee One's case, there was no conclusive evidence of intent to steal, whereas in Employee Two's case there was such proof.(12) Furthermore, both of these cases involved property of relatively small value, and are therefore not similar situations to DeLoach's theft involving property valued at nearly $50,000.

Moreover, even if DeLoach had identified an isolated case involving theft of government property from WSRC where the employee was not terminated, this would not be sufficient to demonstrate that DeLoach was terminated in retaliation for his alleged disclosures. It is clear to me from the record that WSRC attempted to implement consistently its policy of terminating employees where there was conclusive evidence that they intended to steal government property. This is supported by a finding in the OCEP investigation that in the four cases in 1993, including DeLoach's, in which there was conclusive evidence of theft of government property, each employee was terminated. Ex. 16 (review of Wackenhut investigation). Further, WSRC has submitted evidence showing in each of the two cases in 1996 in which there was conclusive evidence of theft of government property, each employee was terminated. Memorandum of December 9, 1996 Pre-Hearing Telephone Conference; see Hearing Exs. 1, 5. In addition, the Wackenhut investigator testified that in the four major theft cases, including DeLoach's, that have occurred during WSRC's tenure at Savannah River (all involving theft of comparable magnitude to DeLoach's), the employees were terminated. Hearing Tr. at 218-221. He also testified that, based on his eleven years of experience, the decision to terminate DeLoach was justified and DeLoach was not treated differently from any other employees where there was clear evidence of intent to steal government property. Hearing Tr. at 222. This testimony is uncontroverted. I am therefore satisfied that DeLoach was not differentially treated by WSRC, and that he would have been terminated even if he had not made protected disclosures. See also Oglesbee, 24 DOE at 89,043.

IV. Conclusion

As set forth above, I have determined that DeLoach made protected disclosures of specific and substantial dangers to health and safety. I have also found, however, that WSRC has proven by clear and convincing

evidence that it would have terminated DeLoach absent his disclosures. Accordingly, I conclude that DeLoach has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted under § 708.10.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Charles Barry DeLoach, Case No. VWA-0014, under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments, IG-44, Office of the Inspector General, Department of Energy, 1000 Independence Avenue, S.W., Washington, D.C. 20585-0102, telephone number (202) 586-8289, fax number, (202) 586-3548.

Richard W. Dugan

Hearing Officer

Office of Hearings and Appeals

Date: February 5, 1997

(1) In this Decision, the OCEP investigative file exhibits will be cited as "Ex.," the transcript of the hearing will be cited as "Hearing Tr.," and the exhibits submitted directly to OHA by the parties will be cited as "Hearing Ex." The Hearing exhibits and OCEP exhibits are numbered separately.

(2)Ultimately, in 1993, DeLoach pled guilty in South Carolina state court to the charge of Grand Larceny and was sentenced to three years probation, suspended upon eighteen months of supervised probation and ten days of public service work.

(3)That office is now part of the Office of Inspector General and its director is the Assistant Inspector General for Assessments.

(4)In a prehearing submission, WSRC disputed that QISSs could be considered protected disclosures because they were part of a company suggestions system. See Letter from L.W. McCormack, Assistant General Counsel, WSRC, to Richard W. Dugan, Hearing Officer, OHA at 2 (December 3, 1996). I disagree. Nothing in the Part 708 regulations precludes QISSs from being deemed protected disclosures.

(5)DeLoach was unable to recall, and it is unclear from the record, whether these two incidents took place before or after April 1, 1989, the date WSRC took over the management of Savannah River site. Hearing Tr. at 33-34, 36-37.

(6)According to DeLoach the asbestos was present on a pipe. Hearing Tr. at 85. WSRC's investigation found it was only present on a gasket on a pipe flange. Ex. 22 at 9.

(7)According to the WSRC investigation, the Industrial Hygiene Office tested the air in the building the evening the asbestos fibers were found. That night, the air samples tested negative for asbestos. During the cleanup activities the next day, air samples were found to contain .007 and .072 fibers per CC which, according to the Industrial Hygiene Office, was considered well below any level requiring remedial action. Ex. 22 at 9-10.

(8)There is more evidence for some of these complaints being considered protected disclosures than there is for other complaints. However, there is sufficient evidence to find that at least three of the complaints, the leaking oil drums, the discovery of asbestos, and the failure to include a report of the asbestos incident

in DeLoach's medical records, qualify as protected disclosures.

(9)If DeLoach's line management was represented on the committee in this case, the representative would have probably been a management official at least three levels above DeLoach, because both DeLoach's immediate supervisor, Cooper, and Cooper's supervisor, Jackson, testified that they did not serve on such a committee and had no input whatsoever into the decision to terminate DeLoach. Hearing Tr. at 266-67, 297-98, 308-09.

(10)In addition, Findley stated that it would not have been unusual for the committee meeting to have been very brief, in view of the fact that Wackenhut had confirmed unauthorized possession of government property. Ex. 28 at 1 (letter from Findley).

(11)DeLoach asserted in a letter to OCEP that there had been a search of the employee's home and additional DOE tools were found. Ex. 4 at 4. OCEP's investigation found no evidence to confirm that assertion, see Ex. 16 (review of Wackenhut investigation), and no further evidence has been provided to me regarding the incident.

(12)At the hearing, DeLoach also mentioned a case of an employee (referred to here as Employee Three) who, according to DeLoach, stole some DOE tools and was terminated but was allowed to return to work at the site a year after termination. Hearing Tr. at 110-112, 324. When DeLoach first referred to this case in a letter to OCEP, he stated that it took place in approximately 1987. See Ex. 4 at 4. Because that date would place the incident prior to WSRC's tenure, this case was not investigated by OCEP or the WSRC Employee Concerns Office. At the hearing, DeLoach claimed that this incident took place after April 1, 1989, but he presented no evidence to support that claim. Hearing Tr. at 109. Nor did he in any way substantiate his account of the facts of Employee Three's case. I therefore have no basis to find that Employee Three and DeLoach were treated differently by WSRC.

Case No. VWA-0015

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Am-Pro Protective Services, Inc.

Date of Filing: October 15, 1996

Case Number: VWA-0015

This Initial Agency Decision concerns a whistleblower complaint filed by Barry Stutts, a former security officer for Am-Pro Protective Services, Inc. (Am-Pro). It is undisputed that:

- Mr. Stutts and a fellow security officer, Michael Wolfe, made a protected disclosure, i.e., that their supervisors did not prepare an "incident report" concerning an open top secret safe.
- Two weeks after the protected disclosure, Am-Pro terminated Mr. Wolfe, who had worked at the DOE for 16 years.
- Eight weeks after the protected disclosure, Am-Pro terminated Mr. Stutts, who had worked at the DOE for almost two years.

As explained below, Am-Pro has failed to demonstrate by clear and convincing evidence that Mr. Stutts would have been terminated in the absence of the protected disclosure. Accordingly, under the DOE whistleblower regulations, Mr. Stutts is entitled to relief.

As I was finalizing this Initial Agency Decision,(1)Am-Pro notified me that it had filed a Chapter 11 bankruptcy petition. Although Am-Pro contended that the instant proceeding should be stayed, Am-Pro did not provide any specific citations in support of that position, or explain why DOE whistleblower proceedings do not fall within a specific bankruptcy provision which permits the continuation of proceedings to enforce a governmental unit's regulatory power. 11 U.S.C. § 362(b)(4). See Board of Governors v. Mcorp Financial, 112 S. Ct. 459 (1991). This Initial Agency Decision does not impose any obligation on the parties: I have stayed any obligation to file a request for review or otherwise respond for such period as is necessary to determine the impact of the Chapter 11 proceeding on this case.

I. Background

A. Regulatory

The Department of Energy Contractor Employee Protection Program governs this matter. The applicable regulations are set forth at 10 C.F.R. Part 708 (the whistleblower regulations).

The whistleblower regulations protect contractor employees who make what are referred to as "protected disclosures." A protected disclosure involves information that the employee in good faith, believes evidences -

(i) A violation of any law, rule, or regulation;

(ii) A substantial and specific danger to employees or public health or safety; or

(iii) fraud, mismanagement, gross waste of funds, or abuse of authority.

10 C.F.R. § 708.5. The whistleblower regulations prohibit a contractor from making reprisals against an employee for such a disclosure. Id.

The whistleblower regulations provide an employee with an avenue to seek relief for a reprisal. Id. § 708.6 et seq. Under the regulations, a complainant must make two showings. The complainant must establish "by a preponderance of the evidence" that 1) there was a protected disclosure and 2) the disclosure was a contributing factor in a personnel action. 10 C.F.R. § 708.9(d). If the complainant makes the two showings referred to above, the regulations shift the burden to the contractor. In that event, the contractor must "prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure." 10 C.F.R. § 708.9(d).

B. Procedural

This proceeding began when Mr. Stutts filed a whistleblower complaint. The Office of Contractor Employee Protection (OCEP)(2)investigated the complaint and issued a Report of Investigation and Proposed Disposition (ROI/PD).

In the ROI/PD, OCEP found Mr. Stutts' complaint to be meritorious. Upon receipt of the ROI/PD, Am-Pro requested a hearing. OCEP forwarded that request to the Office of Hearings and Appeals.(3)

In its pre-hearing brief, Am-Pro did not challenge the ROI/PD's conclusion that Mr. Stutts made a protected disclosure. Instead, Am-Pro contended that it would have terminated Messrs. Wolfe and Stutts in the absence of the protected disclosure. A hearing was held on February 12, 13, and 14, 1997. Subsequent to the hearing, each of the parties submitted additional information and briefing.

II. Analysis

A. Whether Mr. Stutts Established That He Made a Protected Disclosure

As stated above, Am-Pro does not dispute that Mr. Stutts made a protected disclosure on June 4, 1994. Am-Pro does not dispute that

- security rules require the preparation of an incident report for an open top secret safe,
- Messrs. Stutts and Wolfe discovered an open top secret safe and informed their supervisors, Lts. Sean Foster and Wade Joy,
- Lts. Foster and Joy did not prepare an incident report, and
- Messrs. Stutts and Wolfe disclosed to another Am-Pro supervisor the failure of Lts. Foster and Joy to prepare an incident report.

Similarly, Am-Pro does not dispute that the disclosure of the foregoing was protected under the whistleblower regulations.

I adopt the finding in the ROI/PD that the disclosure of the failure to prepare an incident report was protected. As just indicated, it is undisputed that security rules required the preparation of an incident report.(4)

The Order provides that "[a]ny person who discovers that classified information has been, or may have been, compromised shall take immediate action to secure the classified information and report the discovery to the security office." Order at 15. (5) The regulations protect the disclosure of information that

an employee "in good faith believes evidences ...[a] violation of any law, rule, or regulation ... or mismanagement." 10 C.F.R. § 708.5(a)(1). The preamble to the regulations specifically includes references to security violations. 42 Fed. Reg. 7533, 7535-6. The preamble provides in relevant part:

4. Disclosures Regarding Security Violations. Comment was received inquiring whether the protections afforded by the rule would extend to employees disclosing information respecting improper adherence to security requirements. Since the rule protects employees disclosing information pertaining to violations of laws, rules, or regulations, an employee disclosing a security matter evidencing a violation of law, rule, or regulation would be covered by the rule. The DOE believes the rule does not require amendment in this regard.

Id. at 7536. The inclusion of disclosures concerning security violations is consistent with the purpose of the DOE whistleblower regulations, which is to "involve DOE and contractor employees in an aggressive partnership to identify problems and seek their solution." Id. at 7533. Proper security at DOE's facilities is imperative and, therefore, information that rules are not being followed is vitally important to management.

Although not disputing the existence of a protected disclosure, Am-Pro argues that the supervisors acted properly in not preparing an incident report because they were following the instructions of a DOE security specialist. Who was ultimately responsible for the failure to prepare an incident report or whether the failure was justified is a management issue that is outside the scope of this proceeding.**(6)**It is sufficient that Mr. Stutts "in good faith believes" that the failure to prepare an incident report "evidences a "violation of any law, rule, or regulation" or "mismanagement." 10 C.F.R. § 708.5.

Once there is a protected disclosure under the DOE whistleblower regulations, as there is here, any reprisal for the disclosure is expressly prohibited. 10 C.F.R. § 708.5 ("Prohibition against reprisals"). The DOE has a frequently cited policy of "zero tolerance" for reprisals.

B.Whether Mr. Stutts Established That the Protected Disclosure Was a Contributing Factor in his Termination

In support of his position that the protected disclosure was a contributing factor in his termination, Mr. Stutts cites the termination of Mr. Wolfe two weeks after the disclosure and his own termination only six weeks after that. Mr. Stutts maintains that subsequent to the protected disclosure, Lts. Foster and Joy engaged in a pattern of harassment that ultimately provoked the conduct that Am-Pro cites as the basis for Mr. Stutts' termination.

Am-Pro maintains that, even if Mr. Stutts' contentions concerning Lts. Foster and Joy are true, the protected disclosure could not have been a contributing factor to Mr. Stutts' termination. Am-Pro maintains that the General Manager of the DOE contract (the General Manager) had no knowledge of the protected disclosure at the time he signed the July 28, 1994 memorandum terminating Mr. Stutts.

Whether or not the General Manager had actual knowledge of the protected disclosure is not determinative of whether Mr. Stutts has met his burden under Section 708.9(d). A complainant filing a whistleblower complaint is generally not in a position to present evidence concerning the knowledge of those making personnel decisions. Thus, a complainant can meet his burden under Section 708.9(d) by submitting sufficient evidence to permit a reasonable person to infer that the protected disclosure was a contributing factor to the determination. Couty v. Dole, 886 F.2d 147, 148 (8th Cir. 1989).

Mr. Stutts has met his burden under Section 708.9(d). It is undisputed that three Am-Pro supervisors, Lts. Foster and Joy, and Major Dolores Ellison, knew of the protected disclosure on the date it was made. It is also undisputed that the three individuals, beginning on the same date, took various actions, including the following:

·June 4, 1994, the date of the protected disclosure:

Lt. Foster, in the presence of Lt. Joy and Major Ellison, reprimanded Messrs. Stutts and Wolfe for making the protected disclosure.

·June 18, 1994, two weeks after the protected disclosure:

Lt. Joy reported Mr. Wolfe for conduct that resulted in his termination on June 21, 1994.

·July 27, 1994, eight weeks after the protected disclosure:

Lt. Foster reported Mr. Stutts for conduct that resulted in his termination on July 28, 1994.

The knowledge of Lts. Foster and Joy and Major Ellison, coupled with the temporal proximity between the protected disclosure and the reprimand and terminations, is more than sufficient to permit a reasonable person to conclude that the protected disclosure was a contributing factor within the meaning of Section 708.9(d). Accordingly, under that section, the burden shifts to Am-Pro to establish by clear and convincing evidence that it would have terminated Mr. Stutts in the absence of the protected disclosure.

C.Whether Am-Pro Has Proved That It Would Have Terminated Mr. Stutts in the Absence of the Protected Disclosure

Am-Pro contends that the termination of Messrs. Wolfe and Stutts within eight weeks of the protected disclosure was merely coincidental. Am-Pro contends that both individuals engaged in conduct that would have resulted in their termination, even in the absence of the protected disclosure.

1. Mr. Wolfe's Termination

Lt. Joy reported the conduct cited by Am-Pro as the basis for Mr. Wolfe's termination. Lt. Joy reported that Mr. Wolfe had "pre-signed" SF702s ("Security Container Checksheets") for two rooms. The SF702 is the form on which security officers document the particular point in time that they check a security container, which can be either a room or a safe.(7) Mr. Wolfe had entered the time at which he was supposed to check the doors to the rooms, even though he had checked the doors over an hour earlier. Lt. Joy also reported that Mr. Wolfe had not locked three office doors in a separate wing of the building.

The Am-Pro memorandum terminating Mr. Wolfe cited falsification of official documents. Hrg. Ex. 5. The memorandum cited the pre-signing of the SF702s. The memorandum also cited the failure to lock the three office doors in a separate wing.

Mr. Wolfe did not file a whistleblower complaint. Although Mr. Wolfe viewed the termination as a reprisal for the protected disclosure, he believed that he could not file a whistleblower complaint since he had engaged in the conduct cited in the termination memorandum. ROI/PD, Ex. 4.

Although Mr. Wolfe did not file a whistleblower complaint, the circumstances surrounding his termination are obviously relevant to Mr. Stutts' complaint. They were both terminated within eight weeks of the date that they made the protected disclosure. Unless Am-Pro can establish that it "would have" terminated Mr. Wolfe in the absence of the protected disclosure, Mr. Wolfe's termination lends strong support to Mr. Stutts' complaint. Although Am-Pro's evidence concerning the reasons cited for Mr. Wolfe's termination is certainly relevant, the best evidence concerns how Am-Pro disciplined other employees engaging in similar conduct, taking into account any other relevant circumstances.

Am-Pro has not identified any instance in which it terminated an employee for pre-signing an SF702. Moreover, it is clear that Am-Pro suspended, rather than terminated, two other employees that pre-signed SF702s. During the hearing, in response to questions by Mr. Stutts' counsel, an Am-Pro lieutenant

reluctantly testified concerning his limited, second hand knowledge of those situations.(8)The General Manager, who testified subsequently, confirmed the existence of these suspensions.

The General Manager, in his testimony, sought to distinguish Mr. Wolfe's termination from the two suspensions. The General Manager testified that Mr. Wolfe was not terminated solely because he pre-signed SF702's. Instead, he testified, Mr. Wolfe was terminated because he also left three office doors unlocked.

Keeping in mind that Am-Pro has the burden of persuasion with respect to the General Manager's argument, I find that Am-Pro has failed to meet that burden. Am-Pro has not established that the three unlocked doors account for the disparity in discipline between Mr. Wolfe and the other officers. First, Am-Pro has not argued, or offered evidence to the effect, that it would have terminated or even suspended Mr. Wolfe or any other employee based on the three unlocked doors alone. The three doors were not entrances to security containers; the only reason that Mr. Wolfe was supposed to lock the doors was because the occupants had left them locked. ROI/PD, Ex. 49, at 3.4(9)Second, Am-Pro has not explained how the combination of the two offenses together resulted in a compromise of security. The pre-signing of the SF702s occurred on the "B" and "C" wings; the unlocked office doors occurred on the "A" wing. Third, even if the presence of the three unlocked doors was a cumulative factor, Am-Pro has not established that Mr. Wolfe's case, when viewed in its totality, warranted more serious discipline than the situations with the other officers, when viewed in their totality. Am-Pro has not provided information concerning the extent, or circumstances, of the pre-signing by the other individuals, nor has Am-Pro provided information concerning their service at DOE. Thus, there is no basis upon which to conclude that Mr. Wolfe, who was a good employee at the Germantown facility for 16 years, warranted more severe discipline than the suspended employees. Because Am-Pro has failed to explain the disparity in the treatment of Mr. Wolfe and the other officers, Am-Pro has failed to demonstrate that it would have terminated Mr. Wolfe in the absence of the protected disclosure.

2. Mr. Stutts' Termination

In support of its contention that it would have terminated Mr. Stutts in the absence of the protected disclosure, Am-Pro first denies Mr. Stutts' assertions of harassment. Am-Pro further maintains that Mr. Stutts' conduct on July 27, 1994 was insubordinate and disorderly and that Am-Pro terminates individuals who engage in such conduct.

a. Events leading up to the termination

It is undisputed that Lt. Foster reprimanded Mr. Stutts for making the protected disclosure. Lt. Foster maintains that Messrs. Wolfe and Stutts violated the chain of command, because they made the disclosure to another lieutenant and did not tell Lt. Foster. It is clear, however, that the whistleblower protections are not limited only to disclosures made through the chain of command. Accordingly, as the ROI/PD found, the reprimand itself was a reprisal in violation of the whistleblower regulations. ROI/PD at 7-8.

The remainder of Mr. Stutts' allegations of harassment by Lt. Foster relates to Lt. Foster's responsibility for Mr. Stutts' work schedule. Mr. Stutts maintains that Am-Pro supervisors generally resolved scheduling problems by notifying employees and relying on volunteers. Mr. Stutts maintains that prior to the protected disclosure, he did not have conflicts with Lt. Foster over his work schedule with the exception of one instance. Mr. Stutts maintains that after the protected disclosure, Lt. Foster refused his offers to work overtime and intentionally scheduled him in a manner that conflicted with his military reserve obligation and personal plans.(10)

Am-Pro contends that the record does not support Mr. Stutts' claim of harassment. Am-Pro contends that Mr. Stutts worked approximately the same number of hours before and after the protected disclosure. Am-Pro also contends that Lt. Foster scheduled Mr. Stutts in the same manner as he scheduled other

employees.

Am-Pro has not demonstrated that the post-disclosure schedule conflicts were unrelated to the protected disclosure. Am-Pro has not demonstrated that there was any problem with Mr. Stutts' attendance prior to the protected disclosure. In fact, the record indicates that Mr. Stutts received quarterly bonuses for good attendance prior to the protected disclosure. Stutts 5/5/97 Submission at 2. The only conflict, identified by Mr. Stutts, concerned his submission of his military drill schedule. Moreover, the fact that Mr. Stutts may have worked the same number of hours before and after the protected disclosure, as Am-Pro contends, does not address Mr. Stutts' allegation that after the protected disclosure, Lt. Foster refused to accord Mr. Stutts the same notice and flexibility accorded others. Indeed, as discussed below, the evidence submitted in this proceeding lends support to Mr. Stutts' allegation.

It is undisputed that on July 8, 1994, Lt. Foster refused to grant Mr. Stutts military leave for weekend drill duty.(11)Lt. Foster contends that Mr. Stutts did not give adequate notice, but this assertion is not convincing. First, Lt. Foster does not explain why he did not consult Mr. Stutts' drill schedule, which appears to have been standard practice.(12)Second, the circumstances strongly suggest that Lt. Foster would have known Mr. Stutts' once-a-month weekend drill schedule without referring to the written schedule. Mr. Stutts was the only member of the night shift who had military duty, and his monthly weekend drill schedule was simple.(13)Third, it is undisputed that prior to the protected disclosure Mr. Stutts did not have any difficulty, with the exception of one month, in obtaining the leave that he needed for his monthly weekend drill. (14)

It is also undisputed that (i) on July 20, 1994, Lt. Foster told Mr. Stutts that he would have to work overtime on Friday, July 22, 1994 and (ii) on July 27, 1994, Lt. Foster told Mr. Stutts that he would have to work overtime on Saturday, July 30, 1994. At this time, Mr. Stutts had Friday and Saturday nights off because he was working the "front end" of the night shift.(15)Lt. Foster contends that Mr. Stutts would have been ordered to work overtime based on the "low man" rule. Under that rule, if no security officers volunteer for overtime, the "low man," i.e., the officer with the lowest number of overtime hours, has to work the overtime. The record indicates that, except in emergencies, Am-Pro's practice of assigning overtime was based on notice and volunteers.(16) Although Lt. Foster made a general assertion of a shortage of personnel, that assertion still does not explain why he did not follow the "notice and volunteer" practice when he assigned the overtime.

Despite the foregoing, Am-Pro cites a memorandum prepared by Lt. Foster as evidence of Lt. Foster's asserted even-handedness toward Mr. Stutts. The memorandum concerned the fact that, with respect to the July 10 and July 22 incidents discussed above, Mr. Stutts had "called off." In the memorandum, Lt. Foster stated that he was not sure that disciplinary action was appropriate because other supervisors had excused the absences. Contrary to Am-Pro's characterization of the memorandum as indicating Lt. Foster's even-handedness, when it is put in proper perspective the memorandum could be interpreted to support Mr. Stutts' claim of disparate treatment. On July 27, 1994, the same date that Lt. Foster concluded in the memorandum that disciplinary action might not be appropriate, Lt. Foster told Mr. Stutts that he would have to work overtime on Saturday, July 30, which provoked the very conduct cited as the basis for Mr. Stutts' termination.

As indicated above, Lt. Foster's treatment of Mr. Stutts was not consistent with Am-Pro's general practice of flexible scheduling based on notice and volunteers. Thus, even assuming that there was a shortage of personnel during that period, as Am-Pro contends, there is no explanation for Lt. Foster's failure to follow that practice in these instances. Accordingly, Am-Pro has failed to meet its burden of explaining the disparate treatment of Lt. Foster.

b.Mr. Stutts' July 27, 1994 conduct and his July 28, 1994 termination

As stated above, on Wednesday, July 27, 1994, Lt. Foster told Mr. Stutts that he would have to work overtime on Saturday, July 30. Am-Pro has argued that, even if Lt. Foster had harassed Mr. Stutts as

discussed above, Mr. Stutts' subsequent conduct on July 27 warranted termination.

It is undisputed that on July 27, 1994, shortly after beginning his 6PM to midnight shift, Mr. Stutts telephoned Lt. Foster and volunteered to work overtime from midnight to 6AM Thursday morning. Lt. Foster told Mr. Stutts that the overtime was already taken by a lieutenant. Mr. Stutts objected, stating that Am-Pro policy required that overtime be offered to security officers first. Lt. Foster then told Mr. Stutts that he would have to work overtime on Saturday, July 30. Mr. Stutts objected, stating that he had made plans to be out of town with his family. Mr. Stutts told Lt. Foster that Lt. Foster was intentionally (i) refusing his offers to work overtime and (ii) assigning him overtime when Lt. Foster knew he had plans. Lt. Foster told Mr. Stutts that Lt. Foster would not engage in a "pissing match." Mr. Stutts responded that he would show Lt. Foster the same degree of respect Lt. Foster was showing him, put down the phone, and returned to his station. Shortly thereafter, Lt. Jacques Thompson relieved Mr. Stutts of duty and told him to go to the arms room to turn in his equipment.

It is undisputed that Mr. Stutts did not immediately proceed to the arms room as instructed, but waited for another security officer to accompany him. As the two security officers approached the arms room, they encountered the shift supervisor, Lt. Deatherage, and told him what had happened. Lt. Deatherage told Mr. Stutts to turn in his equipment and that he could talk to Major Ellison the next day. Lt. Deatherage then entered his office, which was across the hall from the arms room and adjacent to the Central Alarm System room (CAS). As Lt. Deatherage entered his office, Lt. Foster appeared in the CAS doorway and may have stepped into the hall.(17)Mr. Stutts complained about being relieved of duty, and Lt. Foster told Mr. Stutts to turn in his equipment. Mr. Stutts held out his keys and, when Lt. Foster did not take the keys, Mr. Stutts dropped them and they hit Lt. Foster's duty belt. Lt. Thompson stepped in between the two, and Mr. Stutts walked into the arms room and turned in his equipment. As Mr. Stutts left the arms room, Lt. Foster was still in the CAS doorway or the hall.(18) Mr. Stutts told Lt. Foster that Lt. Foster was not a professional or a good supervisor, and then left the building.

Mr. Stutts was terminated in a memorandum dated the next day. The memorandum was prepared either by Lt. Foster or Major Ellison, for the signature of the General Manager. The memorandum described Mr. Stutts as argumentative and disruptive. The memorandum described Mr. Stutts as having "stepped in front of Lt. Foster in a threatening manner."

The General Manager testified that he did not hear Mr. Stutts' version of events prior to signing the memorandum.(19)Nonetheless, the General Manager testified that even if he had heard Mr. Stutts' complaints of harassment and determined them to be true, he still would have terminated Mr. Stutts.

c. Am-Pro disciplinary practices

Am-Pro cites its employee handbook which permits termination for a first offense of insubordination or disorderly conduct. Am-Pro argues that it is a paramilitary organization responsible for safeguarding DOE facilities and, therefore, discipline is of utmost importance.

Under the whistleblower regulations, it is not enough for a contractor to demonstrate that it "could have" taken the same action against the employee for the cited conduct. Instead, the regulations require that the contractor demonstrate that it "would have" taken the same action in the absence of the protected disclosure. Although the Am-Pro handbook permits termination for a first offense of insubordination or disorderly conduct, the General Manager testified that Am-Pro may impose a lesser punishment based on extenuating circumstances. Thus, this decision considers whether Am-Pro has established "by clear and convincing evidence" that it "would have" terminated Mr. Stutts in the absence of the protected disclosure.

The General Manager's statement that he would have terminated Mr. Stutts regardless of the existence of any extenuating circumstances is not convincing. The General Manager testified that, as a general disciplinary matter, he holds lieutenants to a higher standard than he holds security officers. Hrg. Tr. II-1 at 177-78. Lt. Foster knew that the shift supervisor was handling Mr. Stutts' departure. Hrg. Tr. II-1 at

204-07. Yet, Lt. Foster chose to escalate the situation with Mr. Stutts. Thus, given the General Manager's stated practice of holding lieutenants to a higher standard, Am-Pro has not satisfactorily explained why Lt. Foster's conduct would not be an extenuating circumstance.

Moreover, Am-Pro's attempted analogies to other employee terminations are not convincing. Am-Pro has cited a January 1994 termination as analogous, but it clearly is not. In that case, the employee refused an order to leave his post, after he expressed a disagreement with his break schedule by "[getting] in [the lieutenant's] face and shout[ing] ?You're Crazy.'" Hrg. Ex. 11. The employee had a lengthy history of disciplinary problems, spanning the employee's tenure from 1990 to 1994. They included four instances of "improper conduct," 17 "unexcused lates," and violations of various other disciplinary rules. Id. Similarly, Am-Pro's attempted analogies to other terminations are unconvincing. In those situations, employees had compromised the safety of the facility,(20)cursed,(21)and/or flatly refused to obey an order.(22)Mr. Stutts' offense was of a lesser degree: he picked up a witness before going to the arms room, and he allowed himself to be provoked by Lt. Foster's presence. Moreover, there is no evidence in the record to support a conclusion that those employees, like Mr. Stutts, had good employment records.

The fact that the cited examples involve more serious conduct than that present here does not itself warrant a conclusion that Am-Pro would not have terminated Mr. Stutts. As Am-Pro indicates, it may not be possible for a contractor to identify a fact pattern closely analogous to that presented by the whistleblower. Nonetheless, the regulations place the burden on the contractor to establish by "clear and convincing evidence" that it would have terminated the employee in the absence of the protected disclosure. As discussed above, Am-Pro has not met that standard.

In concluding that Am-Pro has not demonstrated by "clear and convincing evidence" that it would have terminated Mr. Stutts in the absence of the protected disclosure, I have fully considered Am-Pro's argument about the need for discipline in the DOE's security force. There is no doubt that strict discipline is essential, but Am-Pro's citation of the need for discipline is selective. Part of discipline is following the agency's regulations. Lt. Foster did not follow those regulations when he reprimanded Messrs. Stutts and Wolfe for the protected disclosure. Am-Pro has not disciplined Lt. Foster or Major Ellison, who was present during the reprimand. In any event, it is fundamental that the whistleblower regulations do not allow a contractor to justify the termination of a whistleblower based on discipline unless it can demonstrate that the termination would have occurred in the absence of the protected disclosure. See Marano v. DOJ, 2 F.3d 1137 (Fed. Cir. 1993) (whistleblower is protected from adverse action based on investigation prompted by his protected disclosure, unless agency can demonstrate that the same personnel action would have occurred in the absence of the protected disclosure).

D. The Appropriate Remedy

Two provisions of the DOE regulations discuss the appropriate remedy in whistleblower cases. Section 708.10(c) governs initial decisions; Section 708.11(c) governs final decisions. Both regulations state that relief may include reinstatement, back pay, and all reasonable costs and expenses in bringing the complaint. Section 708.11(c) contains an additional provision authorizing "such other relief as is necessary to abate the violation and provide the complainant with relief." 10 C.F.R. § 708.11(c). As explained below, I find that Mr. Stutts is entitled to reinstatement, back pay, and reasonable costs and expenses.

As the ROI/PD concluded, reinstatement is an appropriate remedy for a termination. If Mr. Stutts decides not to accept reinstatement, he is free to decline that aspect of the relief.

With respect to back pay, there is general agreement between Am-Pro and Mr. Stutts that back pay, in theory, consists of the amount that Mr. Stutts would have received from Am-Pro had he not been terminated. Mr. Stutts has claimed regular pay, overtime pay, bonuses, a monetary benefit provided in lieu of health and life insurance, and a uniform allowance. The disagreements over the calculation of total back pay concern overtime and bonuses, but they are not the primary area of dispute.

The primary area of dispute concerns whether Mr. Stutts' total back pay should be adjusted to reflect his post-termination earnings and associated child care expenses. During his employment at Am-Pro, Mr. Stutts worked nights and cared for his children during the day while his wife worked. After his termination, Mr. Stutts was unable to obtain a comparably paying nighttime job. He accepted a daytime job, which meant that he could no longer care for his children during the day. The family adjusted to this change by obtaining day care for one child and having Mrs. Stutts leave work one-half hour earlier each day to pick up their other child at school. With respect to the foregoing, Am-Pro argues for an offset for post-termination earnings, citing common law cases limiting back pay to that necessary to make the victim "whole." On the other hand, Am-Pro opposes any adjustment for child care expenses or Mrs. Stutts' lost earnings on the ground that they are not specifically mentioned under Part 708.

As just indicated, Am-Pro shifts back and forth between the regulatory language and the principle of making a party "whole," depending upon which produces the lower amount of relief. This selective application of the principle of making a party whole, if accepted, would limit a complainant's relief to less than he would receive under either (i) a strict reading of the regulation or (ii) a consistent application of the principle of making him whole.

There is simply no logic or authority supporting a selective application of the doctrine of making a party whole. Either the express terms of the regulation govern, in which a party is entitled to "back pay" without any upward or downward adjustment, or the phrase "back pay" is given an interpretative gloss, pursuant to which the overriding standard is making the party "whole."

I rely on the express terms of the regulation, which does not provide for any adjustments to "back pay." The reason is simple. Rules of construction favor reliance on the express terms of statutory or regulatory provisions. Under this literal application of the regulations, Mr. Stutts would be entitled to $83,768.99 plus interest. The calculation of this amount is set forth in Appendix A and shows the amounts included for overtime and bonuses.

If, however, the regulation is interpreted to mean that Mr. Stutts should be made "whole", a source of guidance concerning the meaning of that provision is the Whistleblower Protection Act of 1989 as amended (the WPA). The regulatory preamble to the DOE whistleblower regulations makes a comment to the effect that the aim of the remedy provision is to make a party whole "in a manner similar to other whistleblower protection rules." 42 Fed. Reg. 7533, 7539 (March 3, 1992). The WPA, which is the statute generally applicable to federal government employees, provides as follows:

corrective action may include -

(1) that the individual be placed, as nearly as possible, in the position the individual would have been had the prohibited personnel practice not occurred; and

(2) reimbursement of attorney's fees, back pay and related benefits, medical costs incurred, travel expenses, and any other reasonable and foreseeable consequential damages.

5 U.S.C. § 1214(g). The legislative history of this provision indicates that its purpose is to make the complainant whole. Senate Report No. 103-358 at 11, 1994 U.S. Code Cong. & Admin. News 3549, 3559.(23) In any event, the Secretary has the authority under the regulations to order "such other relief as is necessary" to "provide the complainant with relief." 10 C.F.R. § 708.11(c). A remedy designed to make Mr. Stutts whole would entail consideration of Mr. Stutts' post-termination circumstances including alternative employment, child care expenses, his wife's lost earnings, and any other relevant matters. Under this theory, based on available data, Mr. Stutts would be entitled to $25,550.20 plus interest. The calculation of this amount is set forth in Appendix B.

The issues raised by the foregoing discussion have not been addressed in prior OHA whistleblower decisions in a comprehensive fashion. See Cornett, 26 DOE ¶ 87,507 (1996); Spaletta, 24 DOE ¶ 87,511 (1995); Ramirez, 24 DOE ¶ 87,504 (1994); Sorri, 23 DOE ¶ 87,503 (1994). Accordingly, the parties will

be given a further opportunity to brief the issues identified above, as well as (i) the accuracy of the calculations in Appendices A and B and (ii) the determination of reasonable costs and expenses in bringing the complaint, including attorneys fees.

III. Conclusion

As indicated above, Mr. Stutts made a protected disclosure on June 3, 1994 and has established that the protected disclosure was a contributing factor in his termination eight weeks later. Am-Pro has failed to establish by clear and convincing evidence that it would have terminated Mr. Stutts in the absence of the protected disclosure. Accordingly, under the regulations, Mr. Stutts is entitled to relief. Alternate calculations of relief are provided in Appendices A and B. Further briefing will be permitted on the remedy issue, including the reasonable costs and expenses of bringing the complaint.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by Barry Stutts, OHA Case No. VWA-0015, is hereby granted as set forth in Paragraphs (2) through (5) below.

(2) Am-Pro shall reinstate Mr. Stutts and reimburse him for back pay and the reasonable costs and expenses to be determined in a Supplemental Order.

(3) Counsel for Mr. Stutts shall submit to the undersigned Hearing Officer and to counsel for Am-Pro (i) a quarterly schedule of the amounts Mr. Stutts would have earned had he remained in Am-Pro's employ, and (ii) a list of all reasonable costs and expenses claimed by Mr. Stutts including attorneys fees. Counsel for Mr. Stutts shall also submit, for purposes of an alternative calculation, quarterly schedules of (i) Mr. Stutts' earnings since his termination and (ii) child care costs, Mrs. Stutts' lost earnings and any consequential damages. Counsel for Am-Pro will have an opportunity to file a response.

(4) This is an Initial Agency Decision that, in the absence of a stay, becomes the Final Decision of the Department of Energy unless a written request for review by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments within five calendar days of receipt of the Initial Agency Decision.

(5) Any requirement to take any action pursuant to Paragraphs (3) and (4) above is stayed for such period of time as is necessary to permit a determination of the impact of Am-Pro's Chapter 11 bankruptcy on this proceeding.

Janet N. Freimuth

Hearing Officer

Office of Hearings and Appeals

Date: June 13, 1997

APPENDIX A

Calculation of Back Pay

1994 Biweekly Pay = Regular Pay + Overtime Pay +Health & Uniform Benefit

Regular Pay $ 868.22 ($10.52 per hour x 82.53 regular hours)(24)

Overtime Pay $ 69.59 ($15.78 per hour x 4.41 overtime hours)(25)

Health &

Uniform Benefit $ 75.20

Total: $1,013.01

Biweekly Pay Periods

1994 (07/29/94 - 12/29/94):11

1995 (12/30/94 - 12/28/95):26

1996 (12/29/95 - 12/26/96):26

1997 (12/27/96 - 06/26/97):13

Bonuses

per calendar quarter: $172.77

1994: 1 quarter

1995: 4 quarters

1996: 4 quarters

1997: 1 quarter as of 03/31/97

Total Back Pay assuming 3% increase each January 1

1994: ($1,013.01 x 11 pay periods) + $172.77 (1qtr.) = $12,674.43

1995: ($1043.40 x 26 pay periods) + $711.80 (4 qtrs.) = $27,840.20

1996: ($1,074.70 x 26 pay periods) + $733.15 (4 qtrs) = $28,675.35

1997: ($1,106.94 x 13 pay periods) + $188.79 (2 qtrs) = $14,579.01

TOTAL BACK PAY: $83,768.99

APPENDIX B

Calculation of Back Pay with Adjustments

Back Pay With Adjustments = Back Pay - (Post-termination earnings - wife’s lost earnings - child care expenses)

1994: $12,674.43 - $ 6,029.35 ($ 8,987.10 - $ 636.75 - $2,321) = $ 6,645.08

1995: $27,840.20 - $16,885.06 ($24,469.76 - $1,602.70 - $5,982) = $10,955.14

1996: $28,675.35 - $18,933.25 ($25,287.20 - $ 223.95 - $6,130) = $ 6,742.10

1997: $14,579.01 - $ 1,667.88 ($ 3,067.88(26) - $ 0 - $1400)(27) = $ 1,437.88

TOTAL BACK PAY WITH ADJUSTMENTS: $ 25,550.20

Notes

(1)The DOE regulations require that I issue a decision within 30 days of the conclusion of post-hearing briefing. 10 C.F.R. § 708.10(b).

(2)OCEP has since been abolished and its functions transferred to the Assistant Inspector General for Assessments.

(3)Although Mr. Stutts questioned whether the request was filed within 15 days of service of the ROI/PD, Mr. Stutts did not pursue the matter. The record indicates that the request was timely; in any event, at most the request could have been four days late, a de minimis delay for which an extension is appropriate. 10 C.F.R. § 708.15.

(4)The record contains a memorandum from a DOE Office of Safeguards and Security (DOE Security) official who investigated the failure to prepare an incident report. ROI/PD, Ex. 40. He stated that security rules require that security infractions be documented, and he cited DOE Order 5639.1, “Information Security Program (10/19/92),” which is also in the record, see ROI/PD, Ex. 49.

(5)See also ROI/PD, Exs. 48 (DOE HQ General Order-010, “Safe Checks”) and Ex. 2 (Am-Pro Protective Agency, Inc. “Performance Test 62.7").

(6)The DOE security specialist was himself (i) the custodian of the open safe and (ii) the specialist to whom Am-Pro reported and sent incident reports. When DOE Security learned of the DOE security specialist’s instruction not to prepare an incident report, DOE Security admonished him for giving such an instruction and cited him with a security infraction for leaving his safe open. ROI/PD, Ex. 40.

(7)If the security container is a safe, the SF702 is located on the safe; if the security container is a room, the SF702 is located on the door outside the room.

(8)The lieutenant also testified that he had received a suspension for failing to do the required quality review of the SF702s, i.e., to review 25 percent of them to assure that the security officers were making the required checks.

(9)Those rooms contained safes, which were the security containers and, therefore, had SF702s attached. Am-Pro does not claim that Mr. Wolfe failed to check the safes or enter the correct time on the attached SF702s.

(10)The ROI/PD concluded that Mr. Stutts had not demonstrated that the schedule conflicts were reprisals for the protected disclosure. Am-Pro contended that Mr. Stutts’ failure to request a hearing barred any further consideration of those conflicts. Issues of the schedule conflicts are relevant to an assessment of Am-Pro’s argument that the termination was unrelated to the protected disclosure, and I am not bound by the ROI/PD. 10 C.F.R. § 708.10(b).

(11)Lt. Foster initially advised Mr. Stutts that he would have to work his entire shift beginning on Sunday, July 10, at 6PM, and ending on Monday, July 11, at 6AM, despite the fact that Mr. Stutts’ drill duty lasted until midnight Sunday night. According to Lt. Foster, he then compromised and advised Mr. Stutts that he would only require him to work half of the shift. Mr. Stutts “called-off,” citing his military duty, and received an excused absence (based on military duty) from another lieutenant who was unaware of his conversation with Lt. Foster.

(12)Another lieutenant testified that the drill schedules were kept on file and that he consulted them when preparing schedules. Hrg. Tr. I-1 at 228. Thus, the lieutenant testified, in the absence of a mistake, the

schedule, as initially prepared, would reflect military leave. Id. 228-29.

(13)Mr. Stutts' drill occurred the first weekend of each month, unless that weekend included a holiday in which case the drill was the second weekend of the month. Stutts 5/24/97 Submission.

(14)In May 1994, Lt. Foster refused to grant Mr. Stutts leave for his drill weekend; Mr. Stutts fulfilled his Am-Pro duty, received an unexcused absence from weekend drill, and provided a second copy of his drill schedule.

(15)The front end of the night shift worked from 6PM on Sunday, Monday, and Tuesday nights until 6AM the next morning, and from 6PM to midnight on Wednesday night. The back end of the night shift worked from midnight Wednesday night to 6AM Thursday morning, and from 6PM Thursday, Friday, and Saturday nights to 6AM the next morning. Approximately every three months, Am-Pro rotated employees so that all employees would have opportunities for weekends off.

(16)Many officers wanted overtime and usually agreed among themselves who would take it. Hrg. Tr. I-1 at 189 (former Security Officer Bonzano), 223-24 (Lt. Deatherage), II-1 at 23-25 (former Security Officer Stutts), II-1 at 366-67 (Security Officer Asmussen).

(17) Lt. Foster maintains that he stayed in the doorway; Mr. Stutts maintains that Lt. Foster stepped into the hall, in violation of security rules, and into Mr. Stutts' path to the arms room.

(18)See note 16 supra.

(19)The General Manager testified that it was his general practice to hear from all sides prior to taking disciplinary action. The General Manager testified that he attempted to contact Mr. Stutts, although the record indicates that such attempts occurred after the General Manager signed the termination memorandum and in response to Mr. Stutts' request for a meeting.

(20)The memorandum of the March 3, 1993 termination stated that the facility commander was about to interview and suspend a receptionist for insubordination when she quit without notice, leaving Am-Pro "in an extreme situation nearly having an open post." ROI/PD, Ex. 27.

(21)The memorandum of the April 20, 1995 termination stated that a security officer refused to resign his name on a post log, used "loud and abusive language," and "started cursing and questioning [his supervisor] as to why he could not have brought the document to [his] post." ROI/PD, Ex. 27.

(22)The termination memoranda described the conduct as follows:

A security officer (i) refused to report to the facility commander for a counseling session (April 2, 1993 report), (ii) refused to provide documentation concerning a "no call no show" absence and was "extremely hostile and vulgar" (January 3, 1995 memorandum), and (iii) refused to report to a particular post, used "verbal threats to harm," and engaged in "belligerent and abusive" conduct toward a lieutenant (April 11, 1995 letter). ROI/PD, Ex. 27.

(23)A different statute, the Energy Reorganization Act, prohibits certain conduct with respect to employees of Nuclear Regulatory Commission licensees and provides for back pay and "compensatory damages." 42 U.S.C. § 5851. See Blackburn v. Martin, 982 F.2d 123 (4th Cir. 1992) (case remanded for proper determination of amount of compensatory damages for mental and emotional distress).

(24)The number of regular and overtime hours represents the average number of such hours worked by Mr. Stutts during the pay periods in 1994 for which information was available. Mr. Stutts did not file pay information for the pay period 03/10/94 to 03/25/94.

(25)See note 1 supra.

(26)Post-termination earnings through March 13, 1997.

(27)Child care expenses through March 14, 1997.

Case No. VWA-0017

April 13, 1998

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Timothy E. Barton

Date of Filing: June 27, 1994

Case Number: VWA-0017

This Decision involves a whistleblower complaint filed by Timothy E. Barton under the Department of Energy's (DOE) Contractor Employee Protection Program. From June to September 1994, Barton was employed as a Quality Assurance/Safety Manager by R.E. Schweitzer Construction Company (RESCC), which was awarded a contract by the Fernald Environmental Restoration Management Corporation (FERMCO) to perform construction work on the Vitrification Pilot Plant at the DOE's Fernald site. Barton alleges that RESCC retaliated against him by terminating his employment for taking certain actions and making health and safety disclosures.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor- operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to independent fact-finding by the Assistant Inspector General for Assessments and a hearing before a Hearing Officer from the Office of Hearings and Appeals (OHA), followed by an opportunity for review by the Secretary of Energy or her designee. See David Ramirez, 23 DOE ¶ 87,505, aff'd, 24 DOE ¶ 87,510 (1994).

B. Procedural History of the Case

On December 31, 1994, Barton filed a complaint with the U.S. Department of Labor which was referred to the Department of Energy's Ohio Field Office on January 13, 1995. The Ohio Field Office was unable to resolve the complaint and forwarded it to DOE Headquarters. The Assistant Inspector General for Assessments investigated Barton's complaint and issued a Report of Inquiry and Proposed Order (hereinafter "ROI") on June 3, 1997.

The Assistant Inspector General found that Barton had made protected disclosures and engaged in protected actions that contributed to the termination of his employment with RESCC, and that RESCC had not provided clear and convincing evidence that it would have terminated Barton's employment at the time it took the action absent his protected disclosure and protected activity. Accordingly, the Assistant Inspector General proposed that the complainant "be awarded backpay and benefits, minus any earned income and associated benefits, from the time that his employment was terminated until the completion of the RESCC project to which he had been assigned, and during which RESCC had replacement employees assigned to perform the duties he had performed," as well as "payment of reasonable costs and expenses, including attorney fees, incurred in bringing this complaint." ROI at 22.

On June 10, 1997, RESCC sent a letter to the Assistant Inspector General, in which it requested a hearing under 10 C.F.R. § 708.9. The OHA received RESCC's request from the Assistant Inspector General on June 27, 1994. On July 22, 1997, the Director of the OHA appointed me as Hearing Officer. A pre-hearing conference was conducted via telephone on December 23, 1997. The hearing was held at Fernald, Ohio on January 8-9, 1998. At the conclusion of the hearing on January 9, the parties elected to forego oral argument, and requested permission to file post-hearing briefs. The OHA received parties' post-hearing briefs on March 13, 1998.

C. Factual Background

The following summary is based on the investigative file of the Assistant Inspector General for Assessments, the hearing transcript (hereinafter "Tr."), and the submissions of the parties. Except as indicated below, the facts set forth below are uncontroverted.

On June 16, 1994, FERMCO awarded a contract to RESCC to perform construction work on the Vitrification Pilot Plant at DOE's Fernald Plant. Tr. at 92. On or about June 19, 1994, RESCC hired Barton. ROI at 3; Tr. at 131. The contract between FERMCO and RESCC required RESCC to designate an onsite Quality Assurance Representative and Safety Representative, and RESCC designated Barton for both positions. ROI at 3; Tr. at 94. During the course of his employment, Barton maintained daily health and safety logs and daily quality assurance reports which he regularly submitted to RESCC management. See ROI Exhibits 4C, 4D. Barton was also responsible for reporting deficiencies through non-conformance reports that were to be submitted to, among others, FERMCO's Construction Contracts Manager. ROI Exhibit 9.

Shortly before or on September 12, 1994, RESCC discovered that it would need to cut certain steel reinforcement bars in an area at the Vitrification Pilot Plant construction site where a concrete foundation wall was to be poured. On September 12, 1994, an RESCC foreman ordered a worker to go into the area to cut the bars with a gasoline-powered saw. As the worker was cutting the bars, a FERMCO employee saw the worker and, because there was inadequate ventilation in the area, ordered that the work be stopped due to the risk that the worker would inhale excess amounts of carbon monoxide from the exhaust of the saw. Barton was at the Fernald Plant that day, but was not present at the construction site when the worked was stopped. FERMCO categorized the event as an "unusual occurrence" and reported it to the DOE as required by the relevant DOE Order then in effect.(1) In its report on the event, FERMCO stated, "It has been determined that use of the gas powered ?cut-off saw' in the enclosed area was inappropriate. The ? cut-off saw' should only be used in an open air situation, or in an enclosed area with ventilation." ROI Exhibit 4I.

On September 14, 1994, prior to pouring the concrete wall, RESCC installed waterstop in the area where the September 12, 1994 unusual occurrence took place. Waterstop is a material made of polyvinylchloride designed to prevent the passage of water through concrete foundation walls at construction and expansion joints. In order to install waterstop in a right-angled corner, the material must be cut and the ends fused together in place with a heat source. Tr. at 175. Barton, who was at the construction site, believed that the area where the waterstop was to be installed was a "permit- required confined space" as defined in FERMCO's Environmental Safety and Health Manual, and that RESCC would need to obtain a permit

before the waterstop could be fused. See Complainant's Exhibit 3; Tr. at 186. He therefore called a safety technician from FERMCO's Industrial Hygiene Department to the scene in order to obtain a permit. Tr. at 188. The safety technician arrived, assessed the situation, and told Barton that a permit would not be required and that the work could proceed. Id. Barton told the safety technician that he did not agree with the safety technician's assessment, and asked the safety technician to call a manager from Industrial Hygiene to the job site. Id. at 189. Upon arriving at the site, the Industrial Hygiene manager stated that he agreed with the safety technician that a permit was not required prior to fusing the waterstop. Id. Barton again expressed his disagreement and requested that Industrial Hygiene issue a written determination that a permit was not required. Id. at 190. After Industrial Hygiene had given its oral opinion that no permit was required, the RESCC Project Manager proceeded to install the waterstop. Tr. at 191, 396. FERMCO issued a letter to RESCC dated September 15, 1994, stating in part that, "FERMCO considers the space between the forms [where the waterstop was installed] as an enclosed space but not a confined space." ROI Exhibit 4K.

On September 15, 1994, RESCC terminated Barton's employment. There is a sharp factual dispute as to whether and when Barton made disclosures to RESCC and/or took actions that would be protected under the Part 708 regulations, and whether such disclosures or actions led to his termination. I will discuss Barton's alleged disclosures and actions in detail in the analysis below.

II. Analysis

It is the burden of the Complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence, § 340 at 442 (4th ed. 1992)). Accordingly, in the present case if Barton establishes that a protected disclosure, participation, or refusal was a factor contributing to his termination, RESCC must convince me that it would have taken the action even if Barton had not engaged in any activity protected under Part 708. Helen Gaidine Oglesbee, 24 DOE ¶ 87,507, at 89,034-35 (1994).

After considering the record established in the Assistant Inspector General's investigation, the parties' submissions, the testimony presented at the hearing, and the post-hearing briefs, for the reasons stated below I have concluded that Barton has met his burden of proving by a preponderance of the evidence that he made protected disclosures concerning health or safety that contributed to his termination. However, I have concluded that RESCC has shown by clear and convincing evidence that it would have terminated Barton absent these disclosures.

A. Whether Barton's Activities Are Protected Under 10 C.F.R. § 708.5.

The Part 708 regulations prohibit discrimination by a DOE contractor against its employee on the basis of certain activities by the employee, described as follows in 10 C.F.R. § 708.5(a).

(1) Disclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences--

(i) A violation of any law, rule, or regulation;

(ii) A substantial and specific danger to employees or public health or safety; or

(iii) Fraud, mismanagement, gross waste of funds, or abuse of authority;

(2) Participated in a Congressional proceeding or in a proceeding conducted pursuant to this part; or

(3) Refused to participate in an activity, policy, or practice when--

(i) Such participation--

(A) Constitutes a violation of a Federal health or safety law; or

(B) Causes the employee to have a reasonable apprehension of serious injury to the employee, other employees, or the public due to such participation, and the activity, policy, or practice causing the employee's apprehension of such injury--

(1) Is of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude there is a bona fide danger of an accident, injury, or serious impairment of health or safety resulting from participation in the activity, policy, or practice; and

(2) The employee is not required to participate in such dangerous activity, policy, or practice because of the nature of his or her employment responsibilities;

(ii) The employee, before refusing to participate in an activity, policy, or practice has sought from the contractor and has been unable to obtain a correction of the violation or dangerous activity, policy, or practice; and

(iii) The employee, within 30 days following such refusal, discloses to an official of DOE, a member of Congress, or the contractor, information regarding the violation or dangerous activity, policy, or practice, and explaining why he has refused to participate in the activity.

The Assistant Inspector General's ROI found that "during the course of his employment, the Complainant made safety disclosures that are protected pursuant to Part 708.5." ROI at 10. In addition, the Assistant Inspector General determined that the Complainant's actions "in identifying the potential safety problem, halting the work and seeking approvals" regarding the installation of waterstop on September 14, 1994, "were protected under Part 708." ROI at 13. Finally, the ROI found that the Complainant faxed a letter to the President of RESCC on September 15, 1994, prior to his termination that day, and that this letter "constituted a disclosure protected under Part 708." ROI at 15.

1. Barton's Disclosures Through September 8, 1994

From July 18, 1994 through September 6, 1994, Barton completed health and safety logs and quality assurance reports which he regularly submitted to RESCC. See ROI Exhibits 4C, 4D.(2) As one would expect in documents of this type, I find a number of entries related to employee health and safety, such as the discovery of contaminated soil at the work site, the danger to workers of impalement from exposed concrete reinforcement bars, and injuries resulting from workers not wearing proper protective gear. Thus, after reviewing these documents, I find that they contain disclosures that the Complainant in good faith believed evidenced a substantial and specific danger to employees or public health or safety, and therefore are protected under 10 C.F.R. § 708.5(a)(1)(ii).(3)

In addition, the Complainant alleges that "probably three or four weeks" prior to his termination he addressed safety concerns in a meeting with RESCC President Ron Schweitzer. Tr. at 156. In a sworn statement provided to the Assistant Inspector General, Barton described an August 31, 1994 meeting in which he "complained that [the RESCC Project Manager] was not requiring men to adhere to safety and quality requirements, and observed that [the RESCC Project Manager] was emphasizing productivity at the expense of safety and quality." ROI Exhibit 2. The RESCC President testified that such a meeting "may

have" taken place, but that he had no specific recollection of it. Tr. at 503-04, 525. I found the Complainant's testimony regarding this meeting to be credible, and note that his recollection is corroborated by an entry in the August 31, 1994 health and safety log submitted by the Complainant stating, "I went to our office this afternoon to talk to Ron S. Didn't accomplish much." ROI Exhibit 4-C. In the absence of any testimony specifically denying that such a meeting took place, I conclude that the meeting probably took place.(4) Because 10 C.F.R. § 708.5(a)(1)(i) protects any disclosure of what the Complainant in good faith believed was a "violation of any law, rule, or regulation," I find that Barton's expressed belief that RESCC workers were not complying with safety requirements is a protected disclosure under Part 708.

Barton also testified at the hearing that he orally communicated safety concerns to the RESCC Project Manager throughout this period. Tr. at 153, 155. However, Barton's testimony describing these conversations provides only a vague reference to safety concerns in general. Thus, he has failed to show that information disclosed in those conversations evidenced a substantial and specific danger to employees or public health and safety. The Complainant also contends that he submitted a non-conformance report to the RESCC Project Manager on August 17, 1994. Tr. at 205; ROI Exhibit 2. Yet, there is no information in this report that evidences a safety concern, a violation of any law, rule, or regulation, or fraud, mismanagement, gross waste of funds, or abuse of authority. ROI Exhibit 4-F. Thus, the Complainant has not met his burden of showing that either his oral or written communications to the RESCC Project Manager contained disclosures protected under Part 708.

On September 8, 1994, Barton sent a letter to the RESCC President in which he primarily refers to scheduling matters related to the ongoing construction project. ROI Exhibit 4-H. This letter contains no references to health or safety matters or violations of any law, rule, or regulation protected under 10 C.F.R. § 708.5(a)(1)(i) or (ii). I do note that the letter states, "We should evaluate the effectiveness of some of the craftspeople on the project to determine if they are truly going to assist us in the successful completion of this project or just suck on the payroll." Id. However, a complaint that workers may not be earning their keep is not evidence of "[f]raud, mismanagement, gross waste of funds, or abuse of authority," the disclosure of which is protected under 10 C.F.R. § 708.5(a)(1)(iii). I therefore find that this letter contains no protected disclosure under 10 C.F.R. § 708.5(a)(1).

2. Barton's Activities Between the September 12, 1994 Unusual Occurrence and his Termination on September 15, 1994

a. Barton's Disclosure of the Unusual Occurrence

After the September 12, 1994 incident described in section I.C above, when RESCC's work was halted by FERMCO and RESCC was cited for an unusual occurrence, Barton alleges that he called the RESCC President and notified him of the incident. Tr. at 163. There is also in the record a document that RESCC had submitted to the Assistant Inspector General, that Barton testified he faxed to RESCC on September 13, 1994, and on which is a handwritten note from Barton to the RESCC President dated "9/13." ROI Exhibit 4-I; Tr. at 164. This document contained the report FERMCO issued regarding the September 12, 1994 unusual occurrence.

The RESCC President, on the other hand, testified that he first heard of the September 12 incident from either the RESCC Project Manager or FERMCO. Tr. at 504. The RESCC President does not believe he received the unusual occurrence report with the handwritten note from Barton on September 13, 1994, Tr. at 539, but is not certain whether he saw this document prior to terminating Barton. Tr. at 544. There is no dispute, however, that Barton and the RESCC President discussed the incident at some point after the event and prior to Barton's termination. See Tr. at 504-05.

With regard to this alleged disclosure, RESCC argues,

Whether or not the Complainant advised [RESCC President] Ron Schweitzer of the September 12, 1994

incident, it would not make any sense to classify it as a protected disclosure. The Complainant was not the first one to disclose the incident to Ron Schweitzer nor did he discover it. It was discovered by FERMCO and it was inevitable that Ron Schweitzer would learn of it. It would not make sense to permit an employee to achieve protected status as a whistleblower for simply repeating a safety concern that was a matter of general knowledge by the time the employee disclosed it.

Respondent's Post-Hearing Brief at 6.

However, the stated policy underlying Part 708 is that contractor employees "should be able to provide information . . . without fear of employer reprisal." 10 C.F.R. § 708.3. This policy would hardly be furthered by a construction of the regulations that would in essence require an employee to discern the knowledge of an employer before providing information to that employer, lest the employee's action go unprotected under Part 708. Nor would it further the purposes of Part 708 if an employee must be the one who discovers a safety problem for his disclosure to be protected. To convey to the appropriate authority an unsafe condition discovered by another employee can be just as valuable to the purpose of ensuring that DOE facilities are "operated in a manner that does not expose the workers or the public to needless risks or threats to health and safety." 57 Fed. Reg. 7533 (March 3, 1992). Thus, I find that Barton, by relating the facts of the September 12, 1994 unusual occurrence to the RESCC President, whether orally or by fax, disclosed information that he in good faith believed evidence a violation of safety regulations, and thereby made a disclosure protected under 10 C.F.R. § 708.5(a)(1)(i). See META, Inc., 26 DOE ¶ 87,504 (1996) (no requirement in Part 708 that a protected disclosure must contain unique information not known to the DOE or contractor).

b. Barton's Activities on September 14, 1994

As described above in section I.C of this decision, on September 14, 1994, Barton sought to prevent the installation of waterstop at the Vitrification Pilot Plant construction site in order to obtain a permit to perform the work. The Complainant testified that he believed at the time, and still believes, that a permit was required before installing the waterstop, and that to proceed with the installation without the permit would have been in violation of safety regulations, and specifically the requirements set forth in FERMCO's Environmental Safety and Health Manual. See Tr. at 186. Barton therefore sought the opinion of a safety technician from FERMCO's Industrial Hygiene Department (IH), and later that of an IH manager. Though FERMCO personnel were of the opinion that a permit was not required, it is clear that Barton believed otherwise, and thus his expression of that opinion to FERMCO constituted a disclosure of what Barton in good faith believed was information evidencing a violation of applicable safety rules and regulations. Accordingly, these disclosures are protected under 10 C.F.R. § 708.5(a)(1)(i).

I do not find, however, that Barton's refusal to approve the installation of the waterstop while awaiting the oral opinion of FERMCO personnel and subsequently requesting that FERMCO provide a written opinion constitutes an activity protected under Part 708. Section 708.5(a)(3) prohibits discrimination against a DOE contractor employee because the employee has

(3) Refused to participate in an activity, policy, or practice when--

(i) Such participation--

(A) Constitutes a violation of a Federal health or safety law; or

(B) Causes the employee to have a reasonable apprehension of serious injury to the employee, other employees, or the public due to such participation, and the activity, policy, or practice causing the employee's apprehension of such injury--

(1) Is of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude there is a bona fide danger of an accident, injury, or serious impairment of health or

safety resulting from participation in the activity, policy, or practice; and

(2) The employee is not required to participate in such dangerous activity, policy, or practice because of the nature of his or her employment responsibilities;

(ii) The employee, before refusing to participate in an activity, policy, or practice has sought from the contractor and has been unable to obtain a correction of the violation or dangerous activity, policy, or practice; and

(iii) The employee, within 30 days following such refusal, discloses to an official of DOE, a member of Congress, or the contractor, information regarding the violation or dangerous activity, policy, or practice, and explaining why he has refused to participate in the activity.

There are significant differences between the protection afforded disclosures under 10 C.F.R. § 708.5(a)(1), and that provided for refusals to participate under 10 C.F.R. § 708.5(a)(3). Under section 708.5(a)(1), an employee need only have a good faith belief that the information he provides evidences a violation of law or a danger to safety. By contrast, for a refusal to participate to be protected under section 708.5(a)(3)(i)(A), the participation must *in fact* violate Federal health and safety law, and to be protected under 708.5(a)(3)(i)(B), the participation must evoke a *reasonable* apprehension of serious injury and be of such a nature that a *reasonable person*, under the circumstances then confronting the employee, *would conclude* there is a bona fide danger of an accident, injury, or serious impairment of health or safety.

Bearing this in mind, and the fact that the burden is on the Complainant to show that his actions fell within the scope of those protected under Part 708, I find that Barton has not met this burden with respect to his refusal to approve the installation of waterstop on September 14, 1994. The Complainant has not shown by a preponderance of the evidence that the impending installation of the waterstop without a permit (1) would have constituted a violation of Federal health or safety law; (2) caused him to have an apprehension of serious injury to himself, other employees, or the public, or that such apprehension would have been reasonable; or (3) was an action of such a nature that a reasonable person, under the circumstances then confronting the Complainant, would conclude there is a bona fide danger of an accident, injury, or serious impairment of health or safety.

First, while the Complainant contends that installation of the waterstop without a permit would have violated applicable health or safety regulations, the weight of the evidence in the record supports the opposite conclusion. Barton's contention rests on his assertion that the space where the waterstop was to be installed was a "permit-required confined space" as defined in FERMCO's Environmental Safety and Health Manual. Barton presented little if any evidence to support this position, stating that he relied at the time

primarily on my own knowledge of what a non-permit as opposed to a permit require confined space is.

And secondly, the all too obvious ramifications of doing it on [September] 12th [when RESCC was cited for an unusual occurrence] and when Pete McCarthy went in on the 12th and changed the atmosphere of that confined space, making it a permit required confined space.

Tr at 186-87. However, the September 13, 1994 unusual occurrence report FERMCO issued refers four times to the area in question not as a "confined space" but as an "enclosed area." ROI Exhibit 4-I. FERMCO's opinion was reinforced by the September 15, 1994 written determination it issued to RESCC which states that "FERMCO considers the space between the forms as an enclosed space but not a confined space." ROI Exhibit 4-K. Thus, I cannot find that the Complainant has proven by a preponderance of the evidence that installation of the waterstop without a permit would have constituted a violation of a Federal health or safety law.

Second, though the Complainant testified that he believed the fusing of the waterstop would have produced toxic fumes, Tr. at 176, 177, his concerns regarding installation of the waterstop seemed to have

been primarily focused on his belief that the installation would have violated permitting requirements, not on an apprehension that the installation would have caused serious injury to himself, other employees, or the public. See, e.g., Tr. at 187-88 ("the reason was that we had guidelines that we had to perform this work by and as long as I was aware that it was taking place, I was going to make sure that we were going to abide by those guidelines, or those regulations"). That Barton had any apprehension of serious injury to anyone resulting from the waterstop installation is also contradicted by the fact that he was willing to go ahead with the installation if FERMCO provided a written determination that no permit was required. The following portion of Barton's testimony, describing his reaction to the FERMCO oral opinion that a permit was not required, illustrates this point.

So the [FERMCO IH] technician called . . . Craighead. And Jack came down to the job site. And he said that he agreed with his technician. And I said, well, I vehemently disagree with you. I said but you are the -- you know, you're the power out here. I mean you're the guys, your department is who determines what is a permit as opposed to a non-permit required confined space.

So. I'm just going to have to ask you to give it to me in writing. I said just for no other reason than to cover my ass. I said because I can see the handwriting on the wall. Some other individual is going to see what's going on, going to shut the job down just like they did on the 12th and we're going to have another unusual occurrence on our hands. And I'm not going to be responsible for that. I'm going to be -- I'm going to be sure that if in fact it's going to happen, it's going to be your responsibility as the guy who said that it could happen, that it could take place.

Tr. at 189-90.

Even assuming, arguendo, that Barton did have an apprehension that serious injury to himself, other employees, or the public, would result from the waterstop installation, I find that the Complainant has not shown by a preponderance of the evidence that such an apprehension would have been reasonable under the circumstances. Section 708.5(a)(3) requires that the Complainant's apprehension of serious injury be reasonable, 10 C.F.R. § 708.5(a)(3)(i)(B), and also that the activity, policy, or practice in which the Complainant refuses to participate is "of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude there is a bona fide danger of an accident, injury, or serious impairment of health or safety resulting from participation in the activity, policy, or practice." 10 C.F.R. § 708.5(a)(3)(i)(B)(1). I conclude that a reasonable person under the circumstances would not have concluded that there was a bona fide danger resulting from the installation of the waterstop.

The opinion of a reasonable person under the circumstances of September 14, 1994, is exemplified by the position FERMCO took that the waterstop could be installed without a permit. The testimony of the Complainant and others indicates that if FERMCO could ever be characterized as being unreasonable in its safety determinations, it is because it tends to err on the side of caution. Barton testified to the Fernald Site's "high standard for safety and quality. And when I say high standard, I mean an extremely high standard with regard to safety and quality." Tr. at 129. One of the Complainant's witnesses called by the Complainant, a fellow RESCC employee, testified that

Fernald is the safest place I've ever worked, period. There's no comparison. . . . I think safety is more important than production. I really believe that here. . . . [H]ere, if you ever saw a dust particle in the air, you can report it and you can guarantee you'd be in full-face respirator within hours.

Tr. at 45, 46. This witness also stated, "One thing you don't do at Fernald is defy the authorities . . . . Especially about your health and safety. Because that will get you fired and run off faster than anything else." Tr. at 58. Accordingly, though reasonable persons can obviously disagree in evaluating the danger of an activity, I find that Barton has not shown by a preponderance of the evidence that he had a reasonable basis for believing that serious injury or a bona fide danger of an accident, injury, or serious impairment of health or safety would result from the installation of waterstop.(5)

Finally, Barton testified at the hearing that in a regular meeting between RESCC employees with

FERMCO officials on September 14, FERMCO requested a special meeting with RESCC, including the RESCC President and Project Manager, "to specifically discuss schedule and the events that had taken place that had led up to that period of time, which was poor quality, poor safety and schedule slippage." Tr. at 244, 245. Barton stated that, sometime between this regular meeting and his termination on September 15, he discussed the requested meeting with the RESCC President, who asked, as related by the Complainant,

[W]hat are we going to be talking about? What do they want us to talk about? And I said, well, basically, Ron [Schweitzer, RESCC President], everything that we've encountered. They perceive there being big problems with what's going on in the field and they're not listening to Ray [the RESCC Project Manager] and I. You know, they want to hear it from you.

And, you know, I said, well, basically, up till now, you know, I've been trying to work with Ray on this and try to resolve these issues and get him to be safe, get him to be quality conscious, but I mean when we go into this meeting, you know, I mean they know what I'm up against. I'll have to come clean, I'll have to tell them the truth.

. . . .

[The truth being that] I got no cooperation in those issues -- on those issues, the safety, quality. Cooperation, you know, with Ray and his manpower regarding those issues.

Tr. at 250. Assuming this conversation took place as the Complainant related in his hearing testimony, the information conveyed by Barton that he was not getting cooperation from the RESCC Project Manager and others on safety issues would constitute a protected disclosure under 10 C.F.R. § 708.5(a)(1)(ii), just as the same information conveyed in the Complainant's late August or early September meeting with the RESCC President was similarly protected, as discussed above in section II.A.1.(6) However, unlike the Complainant's earlier meeting with the RESCC President, this latter conversation to which Barton testified is not corroborated by any contemporaneous documentation. Nor is there any mention of this conversation, as there was with the earlier meeting, in the sworn statement the Complainant gave to the Assistant Inspector General. See ROI Exhibit 2. I therefore do not find that Barton has proved by a preponderance of the evidence that this conversation took place.

I therefore conclude regarding the Complainant's activities on September 14, 1994, that his disclosures of information to FERMCO that he in good faith believed evidenced a violation of the applicable health and safety regulations were protected under 10 C.F.R. § 708.5(a)(1)(i), but that his refusal to approve the installation of the waterstop on this date does not qualify as a protected action under Part 708. Nor can I find that Barton's request to FERMCO personnel that it issue a written determination falls into any category of protected disclosure, participation, or refusal set forth in 10 C.F.R. § 708.5(a).

c. Barton's Disclosures on September 15, 1994

Barton alleges that on September 15, 1994, prior to his termination from RESCC, he sent two faxes to the RESCC President, one from home at approximately 5:00 A.M. and one from the construction site at approximately 2:00 or 2:30 P.M. Tr. at 196, 201; ROI Exhibits 4-F, 4-L. Barton's testimony regarding the fax he sent in the early morning is corroborated by his wife, who testified at the hearing that she recalled being awake in the middle of the night with her husband, prior to his termination, and the Complainant writing a letter which he faxed to the RESCC President sometime between 2:00 and 5:30 A.M. Tr. at 230-33.

The RESCC President testified that he did not receive either of the faxes the Complainant transmitted until the morning of September 16, 1994, the day after Barton was fired. Tr. at 514, 570. Tr. at 261. The RESCC President's son, who worked at the RESCC office, testified that on September 16 either he or a secretary found two faxes on the fax machine that morning, and that he gave the two faxes to his father.

Tr. at 262. He also testified that he was the last person to leave the office on September 15 and that before he left he checked the fax machine for incoming faxes and found none. Tr. at 261. The testimony of the RESCC President and his son is undermined, however, by a handwritten notation on the fax that the Complainant alleges he transmitted on the afternoon of September 15. This notation, which the RESCC President testifies he wrote, states "RCVD 9-15- 94." ROI Exhibit 4-F. When asked when he wrote the notation, the RESCC President testified,

I have no idea. I would assume it was done sometime after -- there was a suit filed and we were, I guess, requested to get documents together and we were trying to gather all the documents.

. . . .

Because I know I received these after I fired him, so I couldn't have already put the 15th on there.

Tr. at 515. I do not believe this RESCC President's testimony provides a sufficient explanation for the "RCVD 9-15-94" notation. Because I find that the credibility of the testimony of the RESCC President and his son is weakened by the notation on one of the documents, I put more faith in the relatively convincing testimony of the Complainant and his wife on this issue, and therefore conclude that the Complainant has shown by a preponderance of the evidence that both faxes were sent to the RESCC President prior to the Complainant's termination.(7) The next issue, then, concerns whether these faxes contained disclosures protected under Part 708.

One of the fax transmissions contained a cover sheet from Barton to the RESCC President stating, "According to P.O. VIII of the R.E.S.C.C. Quality Assurance Program, ?The Quality Assurance Manager will perform inspections which will be documented by utilizing the attached documents.' Please see attached documents." ROI Exhibit 4-F. Attached to the cover sheet were two non- conformance reports that Barton completed which were dated August 17, 1994, and September 15, 1994. I have reviewed these two reports and, as I have already found with respect to the August 17, 1994 report in section II.A.1 above, I find no information in either report evidencing a safety concern, a violation of any law, rule, or regulation, or fraud, mismanagement, gross waste of funds, or abuse of authority. Accordingly, I find nothing in this fax transmission that qualifies as a protected disclosure under 10 C.F.R. § 708.5(a)(1).

The other fax transmitted was a letter from Barton to the RESCC President dated September 15, 1994. This letter refers, among other things, to "a total lack of teamwork and an unwillingness to comply with safety requirements" and cites as an example the installation of the waterstop without a permit on September 14. ROI Exhibit 4-L. Section 708.5(a)(1)(i) protects disclosures of information that an employee in good faith believes evidences a violation of any law, rule, or regulation. I find that Barton believed in good faith, correctly or not, that installing the waterstop without a permit would violate safety rules, and that therefore this fax contains information protected disclosure under 10 C.F.R. § 708.5(a)(1)(i).

Barton also testified that on September 15, 1994, he handed to a FERMCO construction manager overseeing the RESCC contract a copy of the September 15, 1994 letter he had faxed to the RESCC President, along with the September 8, 1994 letter from Barton to the RESCC President discussed in section II.A.1 above. Tr. at 200. While I found above that the Barton's September 8 letter did not contain disclosures protected under Part 708, his September 15 letter did contain information evidencing what Barton in good faith believed was a violation of safety rules. However, the FERMCO construction manager to whom Barton alleges he gave the letters testified that he has no recollection of receiving them. Tr. at 366. Thus, I cannot find that the Complainant has proven by a preponderance of the evidence that he made a protected disclosure to the FERMCO construction manager.

3. Summary of Disclosures by Barton Found to be Protected Under Part 708

As detailed above, I find the following disclosures by Barton to be protected under 10 C.F.R. §

708.5(a)(1).

(1) information contained in the health and safety logs and quality assurance reports submitted by the Complainant to RESCC from July 18, 1994 through September 6, 1994;

(2) information Barton conveyed to the RESCC President in a meeting in late August or early September 1994 that the RESCC Project Manager was not requiring workers to adhere to safety and quality requirements;

(3) facts regarding the September 12, 1994, unusual occurrence conveyed by Barton to the RESCC President after this incident but prior to his termination;

(4) Barton's expression of his opinion to FERMCO personnel on September 14, 1994, that installation of waterstop without a permit would be in violation of application health and safety requirements; and

(5) information contained in a letter faxed from Barton to the RESCC office on September 15, 1994, in which Barton complained about the unwillingness of RESCC employees to adhere to safety requirements.

B. Whether Barton's Protected Disclosures Were Factors Contributing to his Termination

In prior decisions of the Office of Hearings and Appeals, we have established that,

A protected disclosure may be a contributing factor in a personnel action where ?the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action.'

Charles Barry DeLoach, 26 DOE ¶ 87,509 at 89,053-54 (1997) (quoting Ronald Sorri, 23 DOE ¶ 87,503 at 89,010 (1993)); Ronny J. Escamilla, 26 DOE ¶ 87,508 at 89,046 (1996).

In this case, there is clearly temporal proximity between Barton's protected disclosures, the first made on July 26, 1994 and the last on September 15, 1994, and his termination on September 15, 1994. As explained below, I also find that the deciding official in this case, RESCC President Ron Schweitzer, had actual or constructive knowledge of each of Barton's protected disclosures.

First, RESCC President confirmed in an April 10, 1996 sworn statement he gave to the Assistant Inspector General that he had received health and safety logs and quality assurance reports from Barton on a weekly basis, ROI Exhibit 15, and the logs and records which were found above to contain protected disclosures were submitted to the Assistant Inspector General by RESCC. ROI Exhibits 4-C, 4-D. I therefore find that the RESCC President had actual knowledge of these disclosures. Second, the RESCC President obviously had actual knowledge of the protected disclosures conveyed by Barton when the two met in late August or early September 1994, and in conversations between the two relating to the September 12 unusual occurrence. Third, the RESCC President testified at the hearing that, prior to terminating the Complainant, he was aware of the September 14, 1994 disagreement between Barton and FERMCO IH personnel over the need for a permit to install waterstop, and therefore the RESCC had actual knowledge of Barton's protected disclosures to FERMCO that day. Finally, there is no proof that the RESCC President had actual knowledge of the letter from Barton to the RESCC President found above to have been faxed to the RESCC office on September 15, 1994. However, because Barton has proved by a preponderance of the evidence that he faxed the letter to the RESCC office prior to his termination that day, because the fax cover sheet and letter was addressed to the RESCC President, and because there is no dispute that the RESCC President was in his office on September 15, 1994, I conclude that there is sufficient evidence to find that the RESCC President had at least constructive knowledge of the information contained in that letter.

I therefore conclude that the Complainant had met his burden of establishing by a preponderance of the evidence that he made disclosures described under 10 C.F.R. § 708.5, and that these disclosures were a contributing factor in his termination. Therefore, the burden shifts to RESCC to prove by clear and convincing evidence that it would have terminated the Complainant absent his protected disclosures. 10 C.F.R. § 708.9(d).

C. Whether RESCC Would Have Terminated Barton Absent His Protected Disclosures

For the reasons set forth below, I find based on my review of the record in this case clear and convincing evidence that RESCC would have terminated Barton absent the protected disclosures described in section II.A above. My conclusion is based on the compelling evidence in the record pointing to two primary motivations behind the RESCC President's decision to fire Barton.

The first clearly apparent motivation was a disagreement between the RESCC President and the Complainant regarding the scope of the Complainant's duties. Though the precise genesis of this dispute is not clear from the record, it is clear that the RESCC President held the Complainant at least partially responsible for not preventing the September 12, 1994 incident that FERMCO subsequently categorized as an unusual occurrence, and that the Complainant's response to the RESCC President was that the primary responsibility for the incident instead rested with the RESCC Project Manager. The following excerpts from the hearing testimony illustrate this point. The first excerpt is from the testimony of the RESCC President.

Q Now, were you angry with Mr. Barton after this gas powered saw incident on September 12?

A Sure, I was upset. He wasn't on the job. Like I said, why weren't you there, Tim? You could have prevented that. And he said, he wasn't there because he had to -- he was just over there in the administration building on site.

Q Are you saying that the incident was all his fault?

A The gas powered?

Q Right. Or were there other people responsible, too?

A No, I couldn't say it was all his fault.

Q Okay, but you felt that he should have been there to prevent it, even though --

A On site, the primary responsibility for safety rested with Mr. Barton. And it was a safety problem.

Tr. at 507. The next excerpt is from the Complainant's testimony.

Q Did you ever have a discussion with Ron Schweitzer about that [unusual occurrence] report or the incident beyond that?

A Yes. And, you know, basically Ron said, well, you know, that's what I hired you for was to make sure that these things are prevented. And I in turn responded that I can't make Ray [the RESCC Project Manager] be safe. I mean Ray has got to take his own initiative to keep him and his people safe. I mean I can't lead him by the hand with every task and say, okay, now Ray, are you going to be safe on this task? Or, you know, do I need to stay here?

The existence of an ongoing dispute between the RESCC President and the Complainant over the scope of the Complainant's duties was corroborated by the hearing testimony of a FERMCO construction manager.

I was trying to oversee their [RESCC's] contract to get it done and they were supposed to provide quality assurance and quality control inspection, the whole gamut.

But I was aware also that [the Complainant] had this ongoing philosophical discussion with [the RESCC President] that that wasn't really what he had hired him for. That's [the Complainant] relating to me. That's not why he hired me. He hired me for the programmatic side of this stuff. I'm not supposed to be the quality control inspector type thing.

Tr. at 118.

The RESCC President testified that after the September 12 unusual occurrence he wasn't ready to fire Barton. "I wasn't happy with his performance. I wasn't ready to fire him." Tr. at 510. Asked what put him "over the edge," the RESCC President testified that "it was the incident of September 14th." Id. This is the second clearly apparent motivation for Barton's termination. September 14, 1994, was the day that Barton refused to approve the installation of waterstop without a permit, and both parties agree that the incidents of that day played a pivotal role in the RESCC President's decision to terminate Barton.

[RESCC President] ***Schweitzer expressly admitted that it was the incident of September 14, 1994 (the waterstop incident) which brought him to the point of firing Barton***. Specifically, Schweitzer was unhappy that Barton had requested Industrial Hygiene's position in writing because "[t]hat made us look foolish. . . ." Schweitzer considered the incident ***"the straw that broke the camel's back."***

Complainant's Post-Hearing Brief at 13 (citing Tr. at 510, 511, 563) (citations omitted) (emphasis in original). While both RESCC and the Complainant do not dispute the importance of the events of September 14, 1994, the Complainant contends that Barton's actions that day were protected under Part 708, while RESCC maintains they were not. See id. at 2; Respondent's Post-Hearing Brief at 2-3. For the reasons explained in section II.A.2, I have already found that while Barton's expression of opinion to FERMCO personnel that a permit was required prior to installation of the waterstop was a protected disclosure under 10 C.F.R. § 708.5(a)(1)(i), Barton's refusal to approve the installation of the waterstop and his request to FERMCO that it put its opinion on the matter in writing are not protected activities under the Part 708 regulations.

The critical issue here, then, is which of Barton's actions on September 14, 1994 precipitated his termination. I find clear and convincing evidence that it was not Barton's disclosures to FERMCO that day that upset his boss. As the Complainant states in his post-hearing brief, it was specifically Barton's request for a written determination from FERMCO that brought the RESCC President to the point of firing Barton. Tr. at 510; Complainant's Post-Hearing at 13. At the hearing, the RESCC President described Barton's request as

really unreasonable. That was not -- that was unnecessary. That made us look foolish and was just an unnecessary request I thought.

. . . .

Requiring a written authorization was not proper. That was not a proper decision. There was no reason we should say [to FERMCO IH manager] Craighead, I don't trust what you're telling me. Put it in writing for me so that I can let this work go ahead.

Tr. at 511, 564.

I therefore conclude that there is clear and convincing evidence in the record that the RESCC President's decision to terminate the Complainant was primarily motivated by a disagreement over the scope of the Complainant's duties, which manifested itself in the RESCC's President opinion that Barton bore a large amount of responsibility for the unusual occurrence of September 12, 1994, and Barton's refusal to approve the installation of waterstop on September 14, 1994, without first receiving a written

determination from FERMCO. Because I find that these were the reasons for the action taken by the RESCC President, I conclude that Barton would have been terminated absent his protected disclosures.

III. Conclusion

As set forth above, I have found that the Complainant has met his burden of proof of establishing by a preponderance of the evidence that this he made disclosures protected under 10 C.F.R. Part 708. I also have determined that the Complainant's disclosures were contributing factors in his termination. However, I found that RESCC has proven by clear and convincing evidence that it would have terminated the Complainant absent his disclosures. This result does not diminish the protection afforded the Complainant's health and safety disclosures. Part 708 unmistakably prohibited RESCC from taking any action in reprisal for these disclosures. But these regulations do not constrain an employer from taking what it sees as appropriate action in response to a employee's failure to perform his duties as envisioned by the employer, or in response to conduct that is outside that protected by Part 708. Accordingly, I conclude that the Complainant has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted under § 708.10.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Timothy E. Barton under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or her designee is filed with the Assistant Inspector General for Assessments, Office of the Inspector General, Department of Energy.

Appendix - Case No. VWA-0017

Disclosures by Complainant in Health and Safety Logs and Quality Assurance Reports

Health and Safety Logs

Log Date Log Entry

7/26/94"FERMCO sprayed Dursban insecticide on our work area the A.M. This product is toxic! How about soil contamination after spraying?"

7/27/94"We discovered contaminated soil first rattle out of the box today."

8/10/94"I instructed Ray to have the vertical rebar covered with something to protect workers from impalement hazard."

8/11/94"I had to keep on the men about keeping their goggles or face shields on while placeing [sic] concrete. I have serious reservations regarding keeping the worker safe from concrete skin injuries as opposed to the hazard of impaired vision with the protection on."

8/15/94"I . . . instructed laborers to make sure all rebar ends are covered to protect workers from impalement."

8/17/94"James Stanley hit knee with small piece of board. See accident report in rear of log."

8/29/94"I conducted a safety meeting today about [Material Safety Data Sheets], the mud being a slip hazard and responsibility to read all [Material Safety Data Sheets]."

9/1/94 "James Stanley was trying to drive a nail through rebar when his hammer hit the rebar, bounce onto his nose. He incurred minor laceration on the bridge of his nose. SEE FILE."

9/6/94 "Yolanda Miller hit her finger with a hammer, caused laceration. SEE 1st Report of Injury (FILE)."

"Ms. Miller . . . did not have her leather palmed gloves on when she should have."

Quality Assurance Reports

Log Date Log Entry

7/27/94"Crew began excavation @ the lowest elevation and was planning on working uphill. But they encountered contaminated soil the first bucket of soil excavated. . . . Crew moved to uphill location until determination is made . . . by Rad. Safety."

"RESCC encountered contaminated soil today."

8/2/94 "Crew performing layout, notified Rick S. that "LASER" warning sign needed to be on the tripod."

8/8/94 "[E]xcavation was caution taped off as a secondary barrier per req."

8/9/94 "There were 2 deficiencies with safety found today during walk thru. Rebar caps on form pins and boards over extension cords @ walkway."

8/10/94"Wise guys are using P.V.C. cement without [Material Safety Data Sheet]."

8/24/94"I instructed crew to be aware of unprotected protruding rebar and to cover the ends with something to prevent impalement."

8/31/94"Crew was observing using improper picking devices for EFCO forms. Deficiency was corrected by utilizing shake out hooks instead of eye bolts."

9/1/94 "James Stanley hit himself on his nose with his hammer today. (SEE 1st Report of Injury)."

9/6/94 "Yolanda Miller hit her hand with a hammer today. SEE 1st Report of Injury."

(1)DOE Order 5000.3B, in effect from February 22, 1993, to October 30, 1995, defines an "unusual occurrence" as a "non-emergency occurrence that has significant impact or potential for impact on safety, environment, health, security, or operations" and provides that

[o]ral notification to DOE of unusual occurrences shall be as soon as sufficient information is obtained to indicate the general nature and extent of the occurrence but, in all cases, within 2 hours of categorization. However, oral notification to DOE should be accomplished as soon as possible for those occurrences judiciously determined to likely generate external interest. A Notification Report shall be prepared and submitted before the close of the next business day from the time of categorization (not to exceed 80 hours).

DOE Order 5000.3B (January 19, 1993).

(2)The Complainant notes that the Assistant Inspector General found in the ROI that the Complainant "reported a number of safety and quality issues in his daily safety and quality assurance logs which qualified as protected disclosures under Part 708" and contends that the "fact that Barton made these specific reports went unchallenged at hearing." Complainant's Post-Hearing Brief at 16. The Complainant therefore argues that I should adopt the findings of the Assistant Inspector General regarding these disclosures. Id. Though I agree with the Complainant that RESCC does not dispute the content of the health and safety logs and quality assurance reports submitted by Barton, RESCC has never conceded that the concerns reported in those logs and reports qualify as protected disclosures under Part 708. I therefore must determine whether, as found by the ROI, these logs and reports contain disclosures protected under 10 C.F.R. § 708.5(a)(1). See 10 C.F.R. § 708.10(b) ("[T]he Hearing Officer may rely upon, but shall not be bound by, the findings contained in the Report of Investigation.").

(3)In an appendix to this decision, I have set forth the specific log and report entries that I find are disclosures protected under 10 C.F.R. § 708.5(a)(1)(ii). I find that all other entries in the health and safety logs and quality assurance reports were either not related to safety or, if safety related, did not appear to be information that Barton in good faith believed evidenced a *substantial and specific* danger to employees or public health or safety. See Francis M. O'Laughlin, 24 DOE ¶ 87,505 (1994) ("Evidence that safety in the most general sense was referred to does not satisfy the regulatory standard of the complainant having actually disclosed information which in good faith is believed to evidence a substantial and specific danger, that applies to protected health and safety disclosures.")

(4)I am aware that Barton testified at the hearing that this meeting took place on a Saturday, Tr. at 156, while August 31, 1994, fell on a Wednesday. See ROI Exhibit 4-C. This seeming inconsistency, which is somewhat understandable given the passage of time since the events in question, is of little significance because by either account the meeting would have taken place prior to Barton's termination.

(5)In his testimony, Barton referred to portions of a Material Safety Data Sheet for "Specification Grade PVC Waterstop" which state that "P.V.C. involves Hydrogen Chloride, carbon monoxide and other toxic gases when burned," that "[f]umes from Molten Plastic should not be breathed unnecessarily," that a "self-contained breathing apparatus [should be used] if fusion welding in non-ventilated confined area," and that there should be "[v]entilat[ion] when fabricating (fusion welding) in confined area." ROI Exhibit 4-J; Tr. at 176-78. This document clearly points to the dangers of fusing waterstop in a *confined area* without ventilation or appropriate safety gear. But, as noted above, a preponderance of the evidence does not support a finding contrary to that of FERMCO that the area in question on September 14, 1994, was a confined area.

(6)I do not believe that the Complainant's statement that he intended in the future to disclose information in an upcoming meeting with FERMCO can be classified as a disclosure protected under Part 708.

(7)Both faxes contain date stamps generated by a fax machine, and both read September 13, 1994. However, since the parties agree that the faxes were not transmitted on that day, I find that the date stamps provide no evidence that helps resolve the factual dispute between the parties as to the time of the fax transmissions.

Case No. VWA-0018

May 21, 1998

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner:Thomas T. Tiller

Date of Filing:November 17, 1997

Case Number: VWA-0018

This Decision concerns two whistleblower complaints filed by Thomas T. Tiller (Tiller) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. At all times relevant to this proceeding, Tiller was employed by Wackenhut Services, Incorporated (Wackenhut), a DOE contractor that provides paramilitary security support services at the DOE's Savannah River Site in Aiken, South Carolina. Tiller contends in his first complaint that Wackenhut demoted him after he alleged that a senior level manager at Wackenhut had engaged in unethical and possible criminal conduct. In his second complaint, Tiller charges that Wackenhut retaliated against him after learning he had filed a Part 708 complaint.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to independent fact-finding by the DOE's Assistant Inspector General for Assessments (Assistant IG), a hearing before a Hearing Officer from the DOE's Office of Hearings and Appeals (OHA), and an opportunity for review of the Hearing Officer's Decision by the Secretary of Energy or his designee. See David Ramirez, 23 DOE ¶ 87,505, aff'd, 24 DOE ¶ 87,510 (1994).

B. Procedural History

On August 31, 1994, Tiller filed his first complaint pursuant to 10 C.F.R. Part 708. Tiller submitted a second Part 708 complaint to the DOE on April 18, 1996. The Assistant IG conducted an investigation into the allegations contained in Tiller's two complaints and issued a Report of Inquiry (ROI) and Proposed

Disposition on September 30, 1997. In the ROI, the Assistant IG concluded that Tiller had proven by a preponderance of evidence that he had made a protected disclosure and had participated in a protected activity. She found, however, that Tiller had failed to meet his regulatory burden of demonstrating that either the protected disclosure or participation in the Part 708 process was a contributing factor to any alleged adverse action taken against him by Wackenhut. As a consequence, the Assistant IG determined that Tiller was not entitled to any relief under the Part 708 regulations.

On October 28, 1997, Tiller submitted to the Assistant IG a request for a hearing under 10 C.F.R. § 708.9. The Assistant IG, in turn, transmitted the hearing request to OHA on November 17, 1997. The OHA Director appointed me as the hearing officer in this case on December 3, 1997.

Tiller filed a pre-hearing brief in this case on January 6, 1998, and amended that document twice, on January 20, 1998 and January 27, 1998. On February 6, 1998, Wackenhut tendered its pre- hearing submission in the case. On February 24 and 25, 1998, I convened a 22-hour hearing on the complaint in Aiken, South Carolina. At the conclusion of the hearing, I granted the parties' requests to file their closing arguments in written form and to submit post-hearing materials. With the filing of the last post-hearing submission on April 21, 1998, I closed the record in this case.

C. Factual Background

The record in this case is substantial and contains a plethora of material not relevant to the ultimate issues before me. The following summary focuses, therefore, only on those facts necessary for me to reach findings with respect to the issues defined by 10 C.F.R. Part 708. The relevant facts set forth below are extracted from the entire record developed in this case, including the investigative file generated by the Assistant IG, the submissions of the parties, and the transcript of the February 24 and 25, 1998 hearing (hereinafter Tr.).

In April 1991, Thomas Tiller accepted the position of Labor Relations Officer with Wackenhut at the DOE's Savannah River Site. Tiller quickly rose through the ranks in the labor relations field, assuming the position of Labor Relations Manager at the Site by 1992. As Wackenhut's Labor Relations Manager, Tiller served as a member of the management team that negotiated contracts with Wackenhut's guard union, the United Plant Guard Workers of America (UPGWA).

In April 1992 and February 1993, Tiller executed a Conflict of Interest Statement for Wackenhut, certifying, among other things that (1) neither he, nor any immediate family member had engaged, directly or indirectly, in any activity which created a conflict of interest, (2) he had read Wackenhut's Conflict of Interest Policy, and (3) he would immediately disclose any situation in the future that may possibly be interpreted as involving a Conflict of Interest. Exs. 39, 40. Wackenhut's Conflict of Interest Policy defines a conflict of interest, in relevant part, as follows:

any activity in which an employee . . . may participate that may conflict or may reasonably be interpreted to conflict with proper performance of their duty and responsibility to the Company, or with respect to transactions between the employee, the Company and other business interests . . .

Ex. 118 at 2. Among the examples cited in Wackenhut's Conflict of Interest Policy as activities that constitute a conflict of interest is a loan to or from any person or organization having any dealings with the Company.

In August 1993, Mr. Tiller encountered financial difficulties, leaving him unable to pay his bills. Ex. 9 at 26. Knowing that the local UPGWA union representative had assisted another employee during a time of financial need, Tiller asked the union representative for a $900 loan. Id. The union representative's wife advanced the $900 interest-free loan to Tiller; Tiller's wife repaid the loan two weeks thereafter. Id. Unknown to Tiller at the time, the local union representative photocopied the $900 check before giving it to Tiller and then showed a copy of the check to at least one UPGWA member. Tr. at 321-22. According

to a national UPGWA official and a senior Wackenhut official, the local union representative who loaned Tiller the $900 bragged, “I have Tiller in my pocket now and can get any information from him I want.” Tr. at 333, 545.

Senior managers at Wackenhut expressed disbelief when they first learned of Tiller’s loan during contract negotiations between the company and the UPGWA in October 1993. On or about October 12, 1993, two of Tiller’s fellow members on the contract negotiating team confronted Tiller about the loan. Wackenhut Hearing Ex.8; Ex. 19. Tiller confirmed that he had solicited and accepted the loan. Exs. 9, 19. Shortly thereafter, Wackenhut management removed Tiller from the negotiating team, orally advising him that he had compromised his position and damaged his credibility with the negotiating team. Wackenhut Hearing Ex. 8, Exs. 19, 23. When Tiller reportedly questioned whether he could be terminated for accepting the loan in question, a senior Wackenhut management official

responded affirmatively. Wackenhut Hearing Ex. 8.

Perplexed, Tiller queried why Wackenhut would punish him so harshly for a loan that he had already repaid when a senior Wackenhut management official had done something worse without any apparent adverse repercussion. Tiller then made the allegation that is at the heart of this case. Specifically, he disclosed to a Wackenhut manager that a senior management official at Wackenhut had (1) accepted a substantial quantity of stolen telephone wire from the same person who had lent Tiller $900 and (2) permitted that same person to install the telephone wire free of charge in the management official’s house. Tr. at 191. Tiller claims he acquired knowledge of the senior management official’s alleged questionable conduct sometime during the period of May to July 1993. Ex. 9. According to Tiller, at the conclusion of a labor relations meeting one Friday during that time period, Tiller overheard the local union representative offer to supply telephone wire to a senior Wackenhut management official and to install that wire free of charge in that official’s home that weekend. Id. Tiller alleges he saw the two parties to the alleged transaction wink and shake hands. Id. Tiller further claims he heard the local union official declare that the amount of material and labor at issue was $3,500. Id. The next Monday, according to Tiller, the local union official arrived at work looking tired and left work early that day as well. Id.; Ex. 1; Ex. 9 at 5. These observations led Tiller to conclude that the local union official had actually installed the telephone wire during the weekend. Tiller also asserts that the local union representative told him privately that he had obtained the telephone wire from his wife, a Southern Bell Telephone Company employee. Id. Tiller further relates that the local union representative implied to him that he had assisted in the installation of the telephone wire. Id.

The Wackenhut manager to whom Tiller disclosed the allegations regarding the “telephone wire transaction” dismissed Tiller’s allegations as baseless, believing them instead to be a thinly veiled attempt to justify his own error in accepting the loan. Wackenhut Hearing Ex. 8; Tr. at 177. It was a common belief, however, among UPGWA members that the local union representative had provided some telephone wiring to the senior Wackenhut management official in question. See Tr. at 302; 337; 385-87; 440.

In the days following Tiller’s admission that he had accepted the loan, Wackenhut management discussed Tiller’s fate with the company. During this time, Tiller lobbied to keep his job. Tiller pleaded with at least two managers to be retained with the company in any job, citing his need to support his family. Wackenhut Hearing Exs. 7& 8; Tr. at 192. Some urged that Tiller be terminated, an action sanctioned by the company’s Conflict of Interest Policy. Wackenhut Hearing Exs. 7 & 8; Ex. 23. One senior Wackenhut manager, however, persuaded the others that while Tiller may have damaged his labor relations career beyond repair, he was an otherwise loyal employee who had made valuable contributions to the company. Tr. at 192-93. Wackenhut ultimately decided to give Tiller a second chance with another division of the company.

In a memorandum dated October 25, 1993 entitled, “Management Direct Placement Reassignment,” Wackenhut first informed Tiller that he was being removed from his position as Labor Relations Manager

because he had violated Wackenhut's Conflict of Interest Policy. Ex. 44. Wackenhut then advised Tiller in the memorandum that it would offer him placement in the position of Personnel Security Supervisor, a position with a salary almost $20,000 per year less than the one from which he was being removed. The memorandum recited that if Tiller accepted the new position, Wackenhut would maintain Tiller at his higher salary for a period of time, after which the company would adjust his pay downward. The memorandum concluded by advising Tiller that if he chose to decline Wackenhut's offer of reassignment, he would be terminated immediately. Id. Tiller accepted the offer in writing. Id.

Tiller's transition to his new job position in the personnel security field can be best described as difficult and fraught with frustration. He received no formal training in his new field. Tr. at 381-383; 413. Instead, he was asked to review materials and ask others if he had questions. In addition, Tiller's lack of computer proficiency and poor typing skills compounded his frustration in acclimating to his new work environment. Moreover, since Tiller lacked substantive expertise in the personnel security field, it was challenging for him to supervise the two employees who looked to him for guidance in this area. Ex. 10, Tr. at 450, 456-57. Tiller's supervisor, however, believed Tiller was not making an effort to learn the responsibilities of his new job. Ex. 28. He believed that a person with Tiller's educational background (B.A. and J.D. degrees) and professional experience could develop a fairly sophisticated degree of expertise in the Personnel Security area through self- study.

Eight months after agreeing to accept the reassignment to the personnel security division, on June 12, 1994, Tiller filed a complaint with DOE's Office of Employee Concerns at the Savannah River Site. Two months later, in August 1994,(1) Tiller filed a Part 708 Whistleblower Complaint (1994 Whistleblower Complaint). In this complaint, Tiller claims that Wackenhut demoted him from Labor Relations Manager to a position for which he was not trained in retaliation for disclosing that a senior Wackenhut management official had engaged in unethical and possible criminal conduct.

In the months following the filing of his 1994 Whistleblower Complaint, Tiller alleges that Wackenhut retaliated against him for filing the Part 708 action in the following ways:

Wackenhut issued him a disciplinary letter on April 13, 1995;

Wackenhut officials treated him differently than other employees;

Wackenhut reduced his pay in 1995 and denied him merit increases;

Wackenhut gave him a poor performance evaluation in January 1996;

Wackenhut selected his personnel security supervisor's position for elimination in January 1996;

Wackenhut warned him in February 1996 of a possible further salary reduction and the elimination of his "exempt" status;

Wackenhut excluded him from supervisory training in March 1996;

Wackenhut managers criticized him for using the site medical facilities;

Wackenhut decertified him from its Human Reliability Program for alleged aberrent behavior and humiliated him in front of others while decertifying him.

On April 18, 1996, Tiller filed a second Whistleblower Complaint under 10 C.F.R. Part 708 in which he chronicles in specific detail the alleged acts of reprisal set forth immediately above (1996 Whistleblower Complaint). In his second Complaint, Tiller contends that Wackenhut initiated adverse personnel actions in retaliation for his filing the 1994 Whistleblower Complaint.

II. Legal Standards Governing This Case

As noted above, the regulations set forth in 10 C.F.R. Part 708 provide an administrative mechanism for the resolution of whistleblower complaints filed by employees of DOE contractors. The regulations specifically describe the respective burdens imposed on the complainant and the contractor with regard to their allegations and defenses and prescribe the criteria for reviewing and analyzing the allegations and defenses advanced.

A. The Complainant's Burden

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F.Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the burden of persuasion is allocated roughly equally between both parties. See Grogan v. Garner, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). In the present case, Tiller must make two showings in connection with his 1994 Whistleblower Complaint. He must demonstrate at the outset that he disclosed information to Wackenhut which he in good faith believed evidences a violation of a law, rule or regulation. If Tiller fails to meet this threshold burden, his claim must be denied. If Tiller meets this burden, he must next prove that his disclosure was a contributing factor to his demotion and reassignment and its ancillary consequences, i.e., reduction in pay, damaged reputation, and exclusion from semi-annual bonus program. 10 C.F.R. § 708.9(d); see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994). With respect to Tiller's 1996 Whistleblower Complaint, he must show that he participated in a Part 708 proceeding and that his participation was a contributing factor in the actions Wackenhut allegedly took or intended to take against him.

B. The Contractor's Burden

If Tiller meets his regulatory burden as set forth above, the burden then shifts to Wackenhut. The regulations require Wackenhut to prove by "clear and convincing" evidence that the company would have demoted or reassigned Tiller and taken other personnel actions against him even if Tiller had (1) not disclosed information about alleged unethical and criminal conduct by a senior Wackenhut official and (2) not filed his 1994 Whistleblower Complaint. "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n. 3

III. Analysis

I have thoroughly reviewed the extensive record in this proceeding, including the submissions tendered by the parties, the investigative file developed by the Assistant IG, and the testimony of the 33 witnesses presented at the hearing. After due deliberation, I conclude that Tiller is not entitled to any relief under 10 C.F.R. Part 708 on either of the two Whistleblower Complaints he filed against Wackenhut. The specific findings I make in support of my determination are discussed below.

A. The August 1994 Whistleblower Complaint

1. Tiller's Disclosure Regarding A Senior Management Official's Conduct

The regulations codified at 10 C.F.R. Part 708 provide, in pertinent part, as follows:

A DOE contractor covered by this part may not discharge or in any manner demote, reduce in pay . . . or otherwise discriminate against any employee because the employee . . . has (1) **disclosed to . . . the contractor information that the employee in good faith believes evidences a violation of any law, rule or regulation . . .**

10 C.F.R. §708.5(a)(1)(i)(emphasis added). It is Tiller's contention that he made a protected disclosure as defined above when he told a Wackenhut manager that a senior Wackenhut management official had accepted stolen goods (telephone wire) and services valued at $3,500 from the local union representative. The record indicates that Tiller disclosed this allegation to a Wackenhut manager prior to his demotion and reassignment to the Personnel Security Department. Specifically, Tiller communicated the information about the senior Wackenhut official either immediately after he was removed from the negotiating team on October 12, 1993 or shortly thereafter. Tr. at 173. According to Tiller, the senior Wackenhut management official's conduct violated Wackenhut's Conflict of Interest Policy which prohibits the receipt of services, gratuities, or gifts of more than nominal value. Ex. 118. In addition, Tiller believed that the telephone wire given by the local union official to the senior Wackenhut management official was stolen from the telephone company where the local union representative's wife worked.

Whether Tiller's beliefs as set forth above were factually accurate is irrelevant for purposes of Part 708. The focus instead is whether Tiller had a good faith belief that the senior Wackenhut management official's conduct in question violated a law, rule, or regulation. After reviewing the record, I am convinced that Tiller had a "good faith belief" that the senior Wackenhut management official's conduct in question (1) violated Wackenhut's Conflict of Interest Policy and (2) possibly constituted criminal activity. First, Tiller formed his "good faith" belief when he overheard the local union representative offer to supply and install telephone wire in the senior Wackenhut management official's house that was under construction at the time. Second, Tiller heard the local union representative state that he could save the senior Wackenhut management official $3,500 if the official accepted his offer of goods and services. Third, Tiller observed the two parties shake hands and wink, from which he inferred a consummation of the "deal." Fourth, Tiller's observations of the local union official's abbreviated work schedule and seeming fatigue on the Monday following the Friday Tiller overheard the "wire transaction" discussion fueled his belief that the transaction had occurred. Fifth, several union members testified that they had heard at the time in question that the local union official had supplied and/or installed telephone wire in the senior Wackenhut management official's home. Id. at 286-88; 302; 337-38; 385-89.

With respect to Tiller's contention that the local union official had implied to him that he had installed the wire into the senior management official's home, I noted with interest the testimony of a Wackenhut manager who characterized the local union representative as "a person who knew how to manipulate situations." Wackenhut Hearing Ex. 8; Tr. at 168. While that same manager questioned the factual accuracy of Tiller's charge, the manager admitted that it was possible that the local union representative did tell Tiller that he had done some work on the senior management official's home. Id. The manager also opined that Tiller accepted things at face value without double- checking the accuracy of the information conveyed to him. Id. The suggestion of Tiller's gullibility only serves to reinforce my view that Tiller earnestly believed the information he conveyed regarding what he perceived to be improprieties on the part of a senior Wackenhut management official. (2)

In sum, the substance of what Tiller overheard in discussions between the local union representative and the senior Wackenhut management official, the general observations Tiller made of the two parties to the alleged "telephone wire" transaction, and other persons' corroborating testimony about the transaction at issue establish Tiller's good faith belief that the information he communicated to a Wackenhut manager evidenced a violation of a law, rule or regulation. Accordingly, I find that Tiller made a protected disclosure as defined by 10 C.F.R. Part 708.

2. Contributing Factor

A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." Ronald A. Sorri, 23 DOE ¶ 87,503 (1993) citing McDaid v. Dept't of Hous. and Urban Dev., 90 FMSR ¶ 5551 (1990); see also County v. Dole, 886 F.2d 147, 148 (8th Cir. 1989) (County). In addition, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." County, 886 F. 2d 147, 148 (8th Cir. 1989).

Applying these standards to the present case, I find that there is clearly temporal proximity between Tiller's protected disclosure on or about October 12, 1993 and Tiller's subsequent demotion and reassignment on October 25, 1993. While there is conflicting testimony in the record as to how many Wackenhut senior officials knew of Tiller's protected disclosure, it is clear that at least one Wackenhut manager had actual knowledge of Tiller's disclosure. That manager is the one to whom Tiller made the disclosure around October 12, 1993, and is the same manager who persuaded others at Wackenhut to reassign Tiller instead of firing him.

Based on the foregoing, I find Tiller has established a prima facie case that his protected disclosure was a contributing factor to his demotion and reassignment. The burden now shifts to Wackenhut to prove by clear and convincing evidence that it would have demoted and reassigned Tiller absent his protected disclosure. 10 C.F.R. § 708.9(d).

3. Justification for Tiller's Demotion and Reassignment

Wackenhut asserts that it removed Tiller from his Labor Relations position and reassigned him to the Personnel Security Department solely because he had violated Wackenhut's Conflict of Interest Policy. Wackenhut explained that Tiller's acceptance of a loan from the local union representative's wife clearly constituted a conflict of interest as defined in Exhibit 118, and potentially subjected him to blackmail. Wackenhut Ex. 8; Hearing Tr. at 124 and 154. Wackenhut elicited testimony at the hearing from a national UPGWA official and a senior Wackenhut official who recounted the local union official's expression of glee, "I have Tiller in my pocket and can get any information from him that I want." Tr. at 333, 545. (3) Other evidence shows that the local union official photocopied the $900 check and showed the copy to at least one UPGWA member. These facts support Wackenhut's position that Tiller's acceptance of the $900 loan destroyed not only the arms-length labor management relationship required by the National Labor Relations Act but also Wackenhut's trust in Tiller's judgment as a Labor Relations Manager. Wackenhut Closing Statement at 3.

The record is clear, and Tiller now admits,(4) that Wackenhut would have been justified in terminating him for violating the company's Conflict-of-Interest policy. In fact, even before Tiller made his protected disclosure, a Wackenhut manager told Tiller that he could be terminated for having solicited and accepted the loan from the local union official. Wackenhut Hearing Ex. 8. But instead of firing him, Wackenhut responded to Tiller's plea to keep him employed in any job. The record shows that after Wackenhut decided to retain Tiller, it looked for vacant management positions with an eye toward minimizing any salary decrease resulting from the reassignment. Tr. at 179. The only position available at the time was the one to which Tiller was ultimately reassigned. Wackenhut supplied evidence that there had been five or six other cases where managers had encountered some "difficulties," and the company retained them in non-management positions. There is absolutely nothing in the record to suggest that Wackenhut reassigned Tiller in retaliation for making a protected disclosure.

In conclusion, the totality of the evidence convinces me that Wackenhut had clear and independent grounds for reassigning Tiller to the Personnel Security Supervisor position. It appears that Wackenhut was seeking a just solution to an unfortunate situation when it demoted and reassigned him. I therefore find that Wackenhut has met its burden of showing by clear and convincing evidence that it would have

demoted and reassigned Tiller even absent his protected disclosure. In addition, I find that the other acts of reprisal about which Tiller complains, i.e., reduction in pay, damaged reputation, exclusion from management semi-annual bonus, are simply natural consequences of the reassignment. I conclude, therefore, that Wackenhut has met its evidentiary burden on these allegations as well.

B. Tiller's 1996 Whistleblower Complaint

1. Protected Activity

The regulations set forth at 10 C.F.R. § 708.5(a)(2) state, in relevant part, that an employee's participation ". . . in a proceeding conducted pursuant to this part" is considered a protected activity. It is uncontested that Tiller filed a Part 708 Complaint on August 31, 1994 and that officials in Tiller's management chain knew he had filed that complaint. Exs. 1, 12, 24, 27, 63. The preponderance of evidence demonstrates, therefore, that Tiller engaged in an activity protected under 10 C.F.R. Part 708.

2. Contributing Factor

According to Tiller, after he filed his 1994 Whistleblower Complaint, Wackenhut began a "systematic, military" campaign to "undermine, harass, intimidate" and otherwise discriminate against him in violation of 10 C.F.R. § 708.5(a). Ex. 2; Tiller's Closing Brief at 1; Tiller's Post- Hearing Brief at 1. Specifically, Tiller charges that Wackenhut engaged in a pattern of discriminatory acts which were motivated by a retaliatory animus stemming from his filing of the 1994 Whistleblower Complaint. To support his position in this regard, he highlights a number of incidents in his 1996 Whistleblower Complaint which he characterizes as retaliatory.

The record demonstrates unequivocally that Wackenhut management had actual knowledge of Tiller's complaint filing, and that Tiller alluded to his 1994 Whistleblower Complaint in the workplace. When viewing each alleged discriminatory incident in isolation, it is not readily apparent that there is "temporal proximity" between those alleged incidents and the filing of his 1994 Whistleblower Complaint. However, the record shows that beginning in the fall of 1994, Tiller's supervisor met with him to discuss concerns about his performance in the personnel security department. Tr. at 424. This fall meeting occurred close in time to Tiller's complaint filing on August 31, 1994. If I view all the alleged discriminatory acts that are the subject of his 1996 Whistleblower Complaint in their totality, and in conjunction with entire record in this case, I find that a reasonable person could conclude that Tiller's filing of his 1994 Whistleblower Complaint contributed to the overall pattern of alleged discriminatory acts of which he complains. See Ronald Sorri, 23 DOE ¶ 87,503 at 89,010 (1993).

3. Wackenhut's Justification for its Various Actions

As noted in Section II. B. above, once Tiller has met his burden under 10 C.F.R. § 708.9(d), the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the personnel actions against Tiller absent Tiller's protected activity. While it is arguable that some of the alleged incidents of which Tiller complains may not technically be considered "personnel actions," I have elected to analyze all of the alleged discriminatory acts set forth in Tiller's 1996 Whistleblower Complaint.

a. Disciplinary Letter

Tiller complains that Wackenhut issued him a disciplinary letter on April 13, 1995, citing his absence from work on April 6, 1995 as its justification. Ex. 2. On April 6, 1995, the Personnel Security Department was scheduled to undergo an audit. Tiller was told that his presence was required at the audit, as he was the supervisor of the department subject to the inspection. Ex. 73. Tiller failed to report to work on the day of the audit and neglected to inform Wackenhut of his absence. Tiller testified that he was ill on the day in

question and failed to notify Wackenhut of his absence because he had over-medicated himself. Tr. at 84; Ex. 9.

Testimony in the record establishes that Tiller's supervisors were extremely dismayed at his dereliction of duty in not advising them of his illness on the day of the audit. Several persons testified that Tiller's absence placed an unwarranted burden on others to ensure the audit went smoothly. Tiller's immediate supervisor testified that he had advocated a harsher form of punishment than the disciplinary letter, but that more senior Wackenhut officials decided on the less severe disciplinary action. Tr. at 497.

The weight of the evidence demonstrates, to my satisfaction, that the reasons Wackenhut issued Tiller a disciplinary letter on April 13, 1995 were that Tiller had failed to report to work for the audit and had neglected to call in sick on that day. I find, therefore, that Wackenhut has proven by clear and convincing evidence that it would have issued Tiller the subject disciplinary letter absent Tiller's filing of his 1994 Whistleblower Complaint.

b. Differential Treatment by Management

Tiller asserts that he was treated differently than other employees after he filed his 1994 Whistleblower Complaint. Specifically, he alleges that his supervisors required him to report to senior management officials' offices for discussions, and that they escorted him there. Ex. 9.

On March 21, 1995, Tiller claims he was escorted by his supervisor to a senior manager's office where he was told that his position of Personnel Security Supervisor would be eliminated as the result of a restructuring proposal. Tr. at 44. Tiller viewed the manner in which he was escorted to this meeting as well as the fact that two managers were present throughout the meeting as intimidating and retaliatory. Id., Tr. at 45. The evidence in the record reflects, however, that the senior manager who requested the March 21, 1995 meeting, did so as a matter of Wackenhut policy, which provides that a director "advise affected employees in person of the potential effects of the restructuring." Wackenhut Ex. 24. According to the senior manager who called the meeting, Tiller's supervisor and the manager of Tiller's department were present because the senior manager wanted them to "witness the meeting and know the status of the restructuring proposals." Id. The record contains no further evidence that would give merit to Tiller's claim that this meeting was an act of retaliation.

Tiller further relates that he was summoned to meet with a senior manager on February 29, 1996 at which time a senior manager reprimanded him for discussing labor relations issues with the Union president. Tiller also viewed this meeting as intimidating and another act of retaliation. The evidence in the record reflects that the senior manager requested the meeting only after information surfaced during a Wackenhut law enforcement investigation that Tiller had engaged in labor relation discussions with a union official. Wackenhut Hearing Ex. 8. The record reveals nothing sinister about this meeting. It was appropriate for Tiller's line managers to advise him of the prohibition on his participation in labor relation matters. I conclude, therefore, that there was nothing even remotely retaliatory about the February 29 meeting.

Finally, Tiller complains that when he received the April 13, 1995 disciplinary letter referenced in Section III.B.3.a. above, several managers in his supervisory chain were present. Ex. 9. As mentioned above, Wackenhut had a valid reason for issuing a disciplinary letter to Tiller on April 13, 1995 in light of his failure to call in sick on the day of a scheduled audit. While Tiller may have felt uncomfortable with the presence of the managers during the meeting, I find that Wackenhut was justified in having several managers present to discuss this serious personnel action.

In all of the meetings discussed above, I find that Wackenhut managers had valid reasons to meet with Tiller and that these meetings would have occurred even if Tiller had not filed his 1994 Whistleblower Complaint.

c. Reduction in Pay in 1995 and Denial of Merit Increases

Tiller asserts that in April 1995, Wackenhut reduced his pay by approximately $18,000. Ex. 9. He further maintains that Wackenhut denied him at least two merit increases. Ex. 2 and 9. There is simply no evidence in the record to support Tiller's claim that his reduction in pay was a retaliatory act. As discussed above in Section III.A.3 above, Tiller's salary was reduced as a consequence of his demotion and reassignment to the position of Personnel Security Supervisor on October 23, 1993. Therefore, I will not analyze this claim further.

In addition, a review of the record does not support Tiller's claim that his filing of his complaint contributed, in any way, to his being denied two merit increases in 1994 and 1995. According to the evidence in the record, Tiller did not receive an annual performance review for 1994. Wackenhut considered this year as a "learning period" for Tiller to adjust and familiarize himself to his new position. Tr. at 491. Moreover, the record reflects that Tiller's salary had not yet been reduced during 1994, so his salary exceeded the top salary level of his new position as Personnel Security Supervisor. Tr. at 157. Thus, Tiller would not have been eligible to receive a merit pay increase for 1994. As for 1995, the evidence in the record indicates that Tiller received a poor performance review for that year, a rating that I determine below to be supported by the evidence in the record. Ex. 36. Thus, Wackenhut has met its burden by showing that there were independent, non-retaliatory reasons why Tiller would not have been eligible to receive a merit pay increase for 1994 and 1995.

d. Poor Performance Evaluation for the year 1995

Tiller relates that he received a poor performance evaluation in January 1996 for the period covering the year 1995. Ex. 9 at 22. According to Tiller, he lodged his disagreement with the evaluation at the time he received it, complaining that he was unfairly judged on only three projects during the 12- month period and that he had received no constructive criticism of his work prior to his receipt of the performance evaluation. See Ex. 37. It is Tiller's contention that the performance appraisal was given in retaliation for the filing his 1994 Whistleblower Complaint.

There is not a scintilla of evidence to support Tiller's contention that the performance evaluation in question was linked to Tiller's 1994 Whistleblower Complaint. To the contrary, the record contains overwhelming evidence that Tiller's performance in the Personnel Security Program was deficient in many respects. The following comment appears on the evaluation in question: "Mr. Tiller has been with the department two years and is still not thoroughly fimiliar [sic] with the elements of the Personnel Security Program. He needs to improve his job knowledge, commence tasks in a timely manner, [a]nd utlilize [sic] better judgement in prioritizing his task[s]." Ex. 36. Additional comments appended to the evaluation detail deficiencies in Tiller's work product on three projects. At the hearing, Tiller's supervisor related that he approached Tiller several times during 1995 to address concerns about Tiller's work. Tr. at 501. On each occasion, according to the supervisor, Tiller responded, "you're harassing me, you'll hear from my lawyer." Id. The supervisor also pointed to Exhibit 77, a memorandum he had written to Tiller in May 1995, as evidence that he had tried to address his concerns in writing. The memorandum outlined the specific responsibilities of the Personnel Security Supervisor's Position. The supervisor testified that he had written the memorandum after he uncovered a number of problems with Tiller's performance including, among other things, Tiller's failure to notify individuals about restrictions placed on them regarding their use of weapons, and his failure to notify the DOE promptly in cases where persons were decertified from Wackenhut's Human Reliability Program. Tr. at 502-506. The supervisor also cited Tiller's failure to report to work on April 6, 1995, knowing that a scheduled audit of his department was to occur, as evidence of marginal job performance. Id. at 494-498. Finally, there is evidence that Tiller was absent from work with some frequency during 1995. Id. at 452,455; Ex. 27.

Based on the foregoing, I find that the weight of the evidence conclusively demonstrates that Wackenhut has met its burden with respect to the performance evaluation at issue.

e. Elimination of Tiller's Supervisory Responsibilities

Tiller charges that Wackenhut eliminated the supervisory component of his Personnel Security position in January 1996 in retaliation for his filing the 1994 Whistleblower Complaint. Ex. 9 at 21- 22. The record shows, however, that the DOE criticized Wackenhut for its supervisor-to-subordinate ratio during the period in question and that the company tried to be responsive to that criticism. Tr. at 158. The record further reflects that there were several divisions in the company, including the Personnel Security Division, where supervisors supervised only one or two people. Id. As a consequence, beginning in 1996, Wackenhut began to flatten its organizational structure. Wackenhut Hearing Ex. 11. Many departments at Wackenhut were affected by the restructuring. Id. In the Personnel Security Department, Wackenhut eliminated four of five supervisory positions, including the one occupied by Tiller. There is simply no evidence to suggest that Wackenhut targeted Tiller's supervisory position during the restructuring process in retaliation for the filing of his 1994 Whistleblower Complaint. Like others affected by the restructuring, Tiller maintained his job and pay level after his supervisory responsibilities disappeared. After reviewing the record, I find that Wackenhut has proven by clear and convincing evidence that it would have eliminated Tiller's supervisory responsibilities absent the filing of his 1994 Whistleblower Complaint.

f. Warning of Potential Salary Reduction and Elimination of "Exempt" Status

Tiller alleges that in February 1996 Wackenhut warned him of a possible further salary reduction and the potential elimination of his "exempt" status pending the results of a "HAY job study" of his newly reorganized position. Ex. 2. This charge is inextricably intertwined with the allegation discussed in Section III.B.3.e. above which I found to be without merit. I will, therefore, not analyze this issue further.

g. Exclusion from Supervisory Training

Tiller complains further that he was excluded from attending supervisory training in March 1996. He maintains that this action constituted retaliation for his filing his 1994 Whistleblower Complaint. As discussed in Section III.B.3.e. above, I found that Wackenhut had independent, non-retaliatory justifications for the reorganization that led to Tiller's loss of supervisory responsibilities. It is only reasonable that Tiller would not participate in supervisory training once he lost his supervisory status. My finding in Section III.B.2.e. above dictates my finding here that Wackenhut has met its burden.

h. Criticism of Tiller's Use of Medical Facilities

Tiller states that his personal physician provided documentation to Wackenhut requesting that Tiller have his blood pressure taken three times each day. Ex. 9 at 20. According to Tiller, beginning in December 1995 or January 1996, his immediate supervisor questioned the length of time he was absent from the office to have his pressure readings taken at the medical facility on site. Id. Eventually, Tiller's second-line supervisor suggested that Tiller consider having his blood pressure monitored at the fitness facility instead of the medical facility on site as the fitness facility was closer to Tiller's office than the on-site medical facility. Id. at 21. Tiller alleged that Wackenhut's attempts to prevent his use of the on-site medical facility stemmed from the filing of his 1994 Whistleblower Complaint.

The record is clear that no manager at Wackenhut ever denied Tiller access to any medical facilities. Tr. at 585-86; 589. While two managers testified that they suggested Tiller use a site closer to his work to have his blood pressure checked, Wackenhut did not mandate that course of action.(5) Further, Wackenhut suggested that Tiller use the closer facility only to minimize the amount of time he was absent from the workplace. Id. at 589-590. I find that Wackenhut was justified in making the suggestion that Tiller use a closer facility and therefore met its burden on this issue.

i. Tiller's Temporary Decertification from the Human Reliability Program and the Humiliation He Suffered as a Consequence of that Action.

Tiller claims that his decertification from the Human Reliability Program (HRP)(6)on March 14, 1996 and the consequential humiliation he suffered during the decertification process was intimately connected with his filing of the 1994 Whistleblower Complaint. He points to the fact that the DOE and Wackenhut approved the reinstatement of his HRP certification within a short period after the decertification process as evidence that Wackenhut decertified him in retaliation for his filing of the 1994 Whistleblower Complaint.

The DOE is extremely sensitive to charges of irregularities in any process involving special reliability certification or access authorization imposed by DOE or its contractors as a condition of employment. Prior to the hearing in this case, I was concerned that the Wackenhut's decertification of Tiller was suspect. Therefore, I advised both parties that I would carefully examine the circumstances surrounding Tiller's temporary decertification from the HRP and suggested that both parties focus on this issue at the hearing.

Tiller's decertification from the HRP stemmed from a letter he authored on March 8, 1996 and sent to a senior Wackenhut manager. Relevant excerpts of the letter are set forth below:

. . . As a professing Christian, how can you allow yourself to be entangled with the unrighteous management cover-up. . . you know that upper management has used me as a "scapegoat" and [three senior Wackenhut managers] are guilty as sin. As a man of God, you are going to witness the move of Almighty God on my behalf like you have never seen. If any of these management personnel involved in this conspiracy are to be released, they are going to have to step forward and confess their mis-management cover-up actions. . .

Ex. 95. On the same day, Tiller wrote a second letter to the addressee of the letter described above. Ex. 96. In the second letter, Tiller complained about his hostile work environment and expressed his belief that he was being singled out for "blowing the whistle" on the senior Wackenhut management official's unethical conduct.

The Wackenhut manager who received Tiller's March 8, 1996 letters claimed he felt threatened by the language contained in the letters and, as a result, contacted an official in the company's Personnel Security Department. Wackenhut Hearing Ex. 8; Tr. at 160, 221. The Personnel Security Department official, in turn, took the letters to the Site Medical Director and a staff psychologist. Id. Both professionals agreed that the language contained in one of the letters could be considered a veiled threat and that Tiller should be evaluated by a competent medical professional to determine his mental state. Id. at 201-02, 210, 212. Based on the concerns expressed by the two professionals, Wackenhut decided to decertify Tiller from its HRP, citing his "aberrant behavior" as justification. Ex. 102.

Wackenhut informed Tiller of the company's decision to suspend him with pay and decertify him from the HRP on March 14, 1996 when they summoned him back from a luncheon engagement. Ex. 9 at 25. After completing the decertification paperwork in a conference room, two Wackenhut officials and an armed security protection officer escorted Tiller to his office. Wackenhut then searched Tiller's office before escorting Tiller to his car. Tiller maintains his co-workers were observing all this activity which was very embarrassing for him. Next, Tiller's car was searched for weapons. As Tiller was driving to leave the site, a security officer followed Tiller's car to the exit barricade where the car was stopped and searched again. The second search was for sensitive documents or Wackenhut materials. Wackenhut confiscated several documents.

As required, Tiller subsequently underwent an evaluation by a clinical psychologist who opined that while Tiller was under stress, he was neither a danger to anyone nor required any psychological treatment. Ex. 107. Wackenhut, with permission from the DOE, recertified Tiller based on the findings of the clinical psychologist.

Testimony from most of those involved in the decertification process has convinced me that Wackenhut's

decision to decertify Tiller and the manner in which it executed that decertification was

not in retaliation for Tiller's filing of the 1994 Whistleblower Complaint. At the hearing, officials from Wackenhut's Personnel Security Department emphasized that they are not medical experts, and that they always defer to medical experts in cases where there is potential employee violence, such as this one. Tr. at 221. There is ample testimonial and documentary evidence that Wackenhut consulted with medical and psychological authorities for opinions before they initiated the decertification and suspension actions. See Exs. 13, 99, 100; Tr. at 149-195; 208-213. While it is unfortunate that the medical experts neither spoke to Tiller before they rendered their opinions, nor realized that he was the same person with whom they dealt on a routine basis on HRP matters, it is uncontested that the medical experts expressed concern about the content of the letters after reviewing them. The experts' concern was sufficient under Wackenhut policy to allow the appropriate officials in Wackenhut's Personnel Security Department to label Tiller's conduct "aberrant behavior" and to commence the decertification process. See Ex. 136. Moreover, the armed security escorts and the searches conducted of Tiller's office and car appear to comply with Wackenhut's established company procedure in cases where there is a concern about employee violence. Id. While Tiller is adamant that a second search of his car at the exit barricade was unreasonable and designed to further humiliate him, I do not agree. Testimonial evidence indicates someone observed Tiller carrying documents to his car and that the first search of his car was for weapons only. It was certainly reasonable, therefore, for Wackenhut to re-search the car for proprietary documents. Moreover, since Tiller occupied a position in the Personnel Security Department where he had access to confidential, sensitive documents, Wackenhut had an interest in ensuring no such documents were in Tiller's possession during the time of his suspension. It is also significant, in my opinion, that Wackenhut did, in fact, confiscate some materials from Tiller at the exit barricade.

In sum, I find that Wackenhut had a legitimate business-related reason for decertifying Tiller from Wackenhut's HRP, and complied fully with its established company procedures in the decertification process. Accordingly, I conclude that Wackenhut has proven by clear and convincing evidence that it would have decertified Tiller from the HRP even if he had not filed his 1994 Whistleblower Complaint.

IV. Conclusion

As set forth above, I have determined that Tiller made one protected disclosure and has proven by a preponderance of evidence that the protected disclosure was a contributing factor to his demotion and reassignment. I determined, however, that Wackenhut has provided clear and convincing evidence to demonstrate that it would have demoted and reassigned Tiller even if he had not made his protected disclosure.

I also determined that Tiller participated in a protected activity when he filed his Part 708 Complaint in August 1994. I further determined that Tiller's 1994 complaint filing contributed to the pattern of alleged discriminatory acts set forth in his 1996 Whistleblower Complaint. I determined, however, that Wackenhut has proven by clear and convincing evidence that it would have taken the actions enumerated in Tiller's 1996 Whistleblower Complaint even if Tiller had not filed his 1994 Whistleblower Complaint.

In summary, I find that Tiller has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program for which relief is warranted under § 708.10. While it is apparent to me that Tiller has experienced much personal and professional frustration since his demotion and reassignment and that he genuinely views Wackenhut's actions in a conspiratorial, retaliatory light, there is simply no recourse for him within the confines of a Part 708 proceeding.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Thomas T. Tiller under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of

Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments, Office of the Inspector General, Department of Energy.

Ann S. Augustyn

Hearing Officer

Office of Hearings and Appeals

Date: May 21, 1998

(1)The record is unclear whether Tiller attempted to resolve his dispute through an internal company grievance procedure, thereby tolling the 60-day deadline for filing complaints pursuant to 10 C.F.R. § 708.6(d). I note that in his Complaint, Tiller attests that "he made numerous attempts to resolve this complaint since December 1993 by mutual means without success." Ex. 2. Since the Assistant IG accepted the Complaint for processing pursuant to 10 C.F.R. § 708.8, I will presume the action was timely filed.

(2)Wackenhut argues that no reasonable person could believe that the alleged "telephone wire" transaction occurred. See Wackenhut Pre-Hearing Brief at 2. As an initial matter, the Part 708 regulations as currently written apply a "good faith belief" standard, not a reasonable belief standard. I note that the Part 708 regulations are currently being revised; however, any proposed revisions do not apply here. See generally 62 Fed. Reg. 245 (1997) (to be codified at 10 C.F.R. pt. 708) (proposed Dec. 22, 1997) (proposed rule would further define the nature of the "disclosure" under Section 708.5(a)(1), requiring that the employee's disclosure involves information he or she "reasonably and in good faith believes" is true.). Interestingly, the senior management official admitted at the hearing that he had indeed accepted a small quantity of telephone wire allegedly of nominal value from the local union official, but returned that wire almost one year later. Tr. at 116-117; 593. This admission reinforces my finding that Tiller had a "good faith belief" that the wire transaction had occurred and would even lend support to a finding that Tiller had a reasonable belief that the wire transaction had occurred.

(3)The local union official denied he made the statement in question. Tr. at 355. I have reservations about the local union official's credibility, however. Some of his responses at the hearing appeared to be evasive (Tr. at 351, 354), others directly contradicted testimony I find to be compelling (compare Tr. at 326 with Tr. at 351). Finally, I am mindful of the testimony of a Wackenhut manager who characterized the local union official as someone who knew how to manipulate situations. At the hearing, I also asked a union member for his opinion as to whether the local union official was an honest and credible individual in his dealings with the union membership. Id. at 399. The response was "sometimes." Id. All these factors lead me to disbelieve the local union official's denial of his statement that he had Tiller "in his pocket."

(4)At one point in the proceeding, Tiller tried to justify his actions by stating he thought he was borrowing money from a friend. My review of Wackenhut's policy reveals no exception based on friendship. Even if such an exception were in Wackenhut's policy, I am skeptical that a friendship of any substance existed between Tiller and the local union representative. I think it is highly unusual that a true friend would brag that he had his friend in his pocket and could get any information from him that he wanted. I note, also, that the local union official made no mention in his hearing testimony that the loan was motivated by friendship.

(5)I noted with interest that while Tiller complains about being asked to use a facility closer to his work site to monitor his blood pressure, he apparently did not appreciate that Wackenhut accommodated his medical condition by permitting him to work half days for a period of time because of his hypertension. Id. at 590. During the period he worked half days, he easily could have monitored his blood pressure on his own time before and after work.

(6)"The Wackenhut Human Reliability Program was developed to impose safeguards against employee

complicity in nuclear theft, sabotage, or compromises in security." Ex. 136. The program, along with others, "is designed for early recognition of potential problems associated with employee mental or physical behavior that could threaten DOE security interests." Id. "The program monitors each individual's behavior, judgement, trustworthiness, attitude, and overall reliability, while performing nuclear and transportational-related duties on a day-to-day basis." Id.

Case No. VWA-0021

June 1, 1998

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Carlos M. Castillo

Date of Filing: February 2, 1998

Case Number: VWA-0021

This Decision involves a complaint filed by Carlos M. Castillo (Castillo or “the complainant”) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Castillo is the former employee of a DOE contractor, Kiewit Construction Company (Kiewit), and alleges in his complaint that during that employment certain reprisals were taken against him by Kiewit as a result of his raising a concern related to safety. These alleged reprisals include the complainant’s wrongful termination from employment and, after he had been rehired, being improperly selected for a company layoff. After a preliminary investigation of this matter by the DOE Office of Inspector General, Castillo and Kiewit exercised their option for an expedited hearing under 10 C.F.R. § 708.9. On the basis of the hearing that was conducted and the record before me, I have concluded that Castillo is not entitled to relief under 10 C.F.R. Part 708.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure will be directed by the DOE to provide relief to the complainant. The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2,

1992, establish administrative procedures for processing complaints of this nature. These procedures typically include independent fact-finding by the DOE Office of Inspector General (IG), and a hearing before a Hearing Officer assigned by the Office of Hearings and Appeals (OHA), pursuant to which the Hearing Officer renders an Initial Agency Decision, followed by an opportunity for review by the Secretary of Energy or his designee. *See* 10 C.F.R. §§ 708.8-708.10. As explained in the succeeding section of this Decision, however, the pre-hearing investigative stage of the proceeding, generally conducted by the IG, was partially dispensed with in this case based upon the agreement of the parties.

B. The Present Proceeding

(1) Procedural History

In his complaint, Castillo claims that Kiewit took reprisals against him, first in the form of his wrongful termination from employment on October 19, 1994. Following this alleged reprisal, Castillo filed complaints with the State of Nevada Department of Industrial Relations, Health and Safety Division, and with the National Labor Relations Board (NLRB). However, Castillo's complaint before the State agency was dismissed for lack of jurisdiction, and the NLRB ultimately dismissed his complaint after he was rehired by Kiewit on November 21, 1994, under a negotiated settlement between the company and the complainant's union. On December 7, 1994, shortly after he was reinstated, Castillo filed a statement of safety concerns with the DOE Office of Civilian Radioactive Waste Management (OCRWM), Quality Concerns Program. At that time, OCRWM advised Castillo that his claim that he was terminated in connection with reporting a safety matter should be referred to the DOE Office of Contractor Employee Protection (OCEP), later reorganized into the DOE Office of Inspector General (IG), for review under 10 C.F.R. Part 708. Castillo accordingly filed a complaint, 10 C.F.R. § 708.6, that was received by the IG on December 17, 1994.

OCRWM then initiated an investigation into the safety matters raised by the complainant which allegedly resulted in his October 19, 1994 termination. Pursuant to that investigation, OCRWM issued a final report on February 24, 1995, in which it concluded that "[t]he site visit revealed there were no serious health or safety issues existing . . . [and] the expression of a safety concern played no part in the decision to terminate the employee." Thereafter, on May 31, 1995, Kiewit laid off the complainant under a reduction in force necessitated by budget cuts. Castillo then filed a second complaint with the NLRB; however, Castillo withdrew that complaint with the approval of the NLRB in June 1995.

On September 10, 1996, the IG agreed to accept jurisdiction of the "whistleblower" complaint filed by Castillo. *See* 10 C.F.R. § 708.8. Following its assessment that attempts at informal resolution of the matter were unavailing, the IG advised the complainant and Kiewit by letter dated February 11, 1997, that an on-site review and investigation of the complaint would be conducted. However, prior to issuing a formal Report of Investigation, 10 C.F.R. § 708.8(f), the IG offered the parties the option to proceed to a hearing before the Office of Hearings and Appeals (OHA), under 10 C.F.R. § 708.9, in order to expedite the agency's adjudication of this matter. That option was accepted by mutual agreement of the parties in letters received by the IG from Kiewit and Castillo, on December 12 and 15, 1997, respectively. Pursuant to that agreement, the case file was transmitted to OHA on February 2, 1998, and I was appointed as Hearing Officer, 10 C.F.R. § 708.9(b), on February 6, 1998. Unlike conventional proceedings conducted under Part 708, the absence of a Report of Investigation under the expedited procedure required substantially greater factual development of the record at the prehearing and hearing stages.(1) Thus, after numerous contacts with the parties in the form of written correspondence and conference calls, I scheduled a hearing in this proceeding, which was conducted on April 15-16, 1998. The official transcript of that hearing shall be cited in this determination as "Tr." and pertinent documents, received into evidence as hearing exhibits, cited as "Exh."

(2) Factual Background

The following summary is based upon the hearing testimony, the partial IG investigative file and submissions of the parties. Except as indicated below, the facts set forth below are uncontroverted.

The complainant is an ironworker, now retired, who was referred to Kiewit by the Ironworkers Union in March 1994, for employment in connection with construction work being performed at the Nevada Test Site, Yucca Mountain Project (YMP). Exh. 18 (Castillo Statement to IG, July 9, 1997) at 1. At that time, Kiewit was the subcontractor on the YMP under the prime contractor, Reynolds Electric & Engineering Company (REECO). Initially, there was a small crew of various construction craftsmen retained by Kiewit

to begin construction of the YMP tunnel portal (Portal). Castillo was one of only two ironworkers hired initially by Kiewit, along with Mr. Don Reed, although others were hired later. At that time, the Ironworkers Union business agent, Mr. Frank Caine, advised Kiewit that Don Reed would serve as foreman (Ironworkers Foreman) and Castillo would serve as ironworkers union steward. Tr. at 322, 347-48.

Kiewit is a company which is commonly acknowledged by all concerned, including the complainant, as being very safety conscious. Tr. at 263. Kiewit has a commendable safety record and utilizes the extraordinary measure of conducting a safety meeting at the outset of each work day. Tr. at 146-47. These meetings generally proceeded according to an agenda determined by management; however, all employees are encouraged to raise safety matters relating to the YMP work environment. Tr. at 54. Although safety was the primary focus, these assemblies were sometimes used as a convenient forum to discuss other matters of mutual concern, such as work assignments, usually before or after the meeting was called to order. Tr. at 73, 99-100, 353.

During the initial months while working at the YMP Portal, Castillo raised a number of safety matters both in and outside of safety meetings. One of the matters that Castillo raised concerned the placing of protector caps on steel concrete form stakes. Tr. at 56. These stakes were used to hold concrete pads in place during pouring. During the initial stages of work at the Portal, steel rebar (approximately 7/8th inch diameter) instead of conventional concrete stakes was used for this purpose. Tr. at 122. The rebar was cut and hammered into place leaving the top protruding approximately one foot above the surface of the concrete pad. Castillo was one of the most vocal workers at the site with respect to safety and other matters, discussed below, and he was perhaps the first to stress the capping of these rebar stakes as a safety precaution. Tr. at 51, 100, 183. The complainant and others reminded the work crew about the capping of stakes if the caps were forgotten or inadvertently knocked off. Tr. at 331, 374. The management and supervisory personnel agreed that the capping of stakes was a good idea and encouraged this practice. Tr. at 172, 323.

However, in his capacity as ironworkers union steward, the complainant was also very vocal to Kiewit management about a number of matters not related to safety. Tr. at 210-11. These matters sometimes related to ironworkers' pay but very often related to what Castillo believed to be improper work assignments by Kiewit supervisory personnel. Tr. at 113. For instance, the complainant was adamant that only ironworkers, and not miners working at the site, should be used to cut the steel rebar used as concrete stakes. Tr. at 58-59. Castillo often raised these types of union matters at inopportune times and disrupted safety meetings on several occasions. Tr. at 201, 323. As noted above, this daily gathering was often used as a convenient time to discuss issues not related to safety both before and after the safety meeting. However, in certain instances, Castillo would continue to voice his objections on union/work assignment issues sometimes in a loud and abrasive tone during the actual safety meeting, although he was warned to discontinue the discussion by his Kiewit supervisor. Tr. at 144, 210. Castillo was warned to desist in this behavior not only by Kiewit supervisory personnel, but by the Ironworkers Foreman and on two occasions, over the telephone and in person, by Frank Caine, the Ironworkers Union business agent who sent Castillo to the YMP and appointed him as union steward. Tr. at 212, 324-25.

Due to the sporadic nature of the work at the Portal, Castillo and other workers were laid off for brief periods during the initial months of the YMP. However, in late June 1994, Castillo was laid off once again and did not return to the YMP until September 1994. Exh. 18 at 2; Tr. at 210. At that time, the complainant was assigned to work at a YMP location referred to as the Precast Yard, a site several miles away from the Portal, which had recently been erected for the purpose of fabricating concrete slabs for the YMP tunnel. The supervisor of the Precast Yard was Mr. E.Z. Manos (Precast Yard Supervisor). Exh. 18 at 2. While working at the Precast Yard, the complainant continued to raise various safety matters. According to the complainant, the capping of concrete stakes was among the matters which he emphasized to the Precast Yard Supervisor. Tr. at 260-62. Although conventional concrete stakes rather than rebar were used at the Precast Yard, the complainant asserts that the stakes were not always capped. In addition, apart from these safety issues, Castillo continued to voice concerns on union/work assignment

issues in his capacity as union steward. Despite the warnings he had received while working at the Portal, the complainant continued to use safety meetings as a forum to address union/work assignment concerns. Tr. at 196-97, 201. The Precast Yard Supervisor complained to Kiewit management personnel that on a few occasions, Castillo impeded the start of safety meetings by persisting with union matters even when told to cease the discussion. Tr. at 326, 396- 97.

The burgeoning conflict between the Precast Yard Supervisor and the complainant came to a head on the morning of October 19, 1994, prior to the start of the daily safety meeting. At that time, the Precast Yard Supervisor announced a new procedure for transporting certain workers from the Precast Yard to the Portal, specifically that due to differing work-day schedules, the ironworkers, electricians and carpenters would ride a van to be driven by him, as opposed to a bus previously used to transport all workers. Exh. 2 (Castillo NLRB Affidavit, October 25, 1994) at 9; Tr. at 253-55. Castillo strongly objected to this new procedure on the basis that as a Kiewit management official, the Precast Yard Supervisor could not transport workers but instead a member of the Teamsters Union must be utilized for this purpose. *Id.*; Tr. at 173. A heated argument ensued between the complainant and the Precast Yard Supervisor, with loud exchanges lasting for about 15 minutes. Tr. at 74, 374-76. The Precast Yard Supervisor told Castillo to end the discussion in order to begin the safety meeting, but Castillo refused stating that he would seek resolution of the van matter from higher Kiewit management. Tr. at 174. The complainant abruptly left the Precast Yard and began walking to the Portal area where the Kiewit on-site offices were located. Upon arriving at the Portal area, Castillo was told by Mr. Jim Morris, the Construction Manager, that based upon the recommendation of the Precast Yard Supervisor who had phoned him, the complainant had been fired. Tr. at 213.

On the basis of an agreement negotiated by the Ironworkers Union business agent and the Kiewit YMP Project Manager, Castillo returned to work for Kiewit at the YMP in November 1994. Tr. at 216. A principal condition of Kiewit agreeing to rehire Castillo, recommended by the Ironworkers Union, was that Castillo would no longer serve as union steward. After his return, Castillo did not repeat the practices that led to his firing. The Precast Yard Supervisor who had initiated the complainant's termination left the company shortly after his return. Tr. at 29. Although Castillo continued to make safety recommendations, he was not obtrusive in doing so and the complainant maintained good working relations with his coworkers, the Ironworkers Foreman and the succeeding Precast Yard supervisors. Tr. at 89, 273, 276, 360-61.

In May 1995, the decision was made by Kiewit to lay off approximately 75% of the workers at the Precast Yard due to YMP budget cutbacks and because there was already a large inventory of concrete slab segments produced at the Precast Yard. Tr. at 217. The Ironworkers Foreman was told that he must lay off all but a minimum crew of the ironworkers. Tr. at 177. Under this direction and since there were no union seniority rights applicable at the YMP, the Ironworkers Foreman followed a straightforward selection process. Tr. at 182. Besides himself, the Ironworkers Foreman decided to retain two individuals, Mr. Pete Robles, who filled in as foreman in his absence and was considered to be a top worker, and Mr. Floyd Cooper, who then was the ironworkers union steward. Exh. 18 at 6; Tr. at 330. The remaining four Precast Yard ironworkers, including Castillo, were selected for layoff. This selection process was approved by the Mr. Jeff Moore, who was then supervisor of the Precast Yard, and by Kiewit management. Tr. at 191-92, 218. Thus, on May 31, 1995, the complainant was laid off by Kiewit. Although Kiewit designated Castillo "eligible for rehire" at the time of the layoff, the determination whether to return him to work at the YMP as ironworker positions became available was not in Kiewit's control but a matter between the Ironworkers Union and the complainant. Tr. at 177, 283-84. For reasons beyond the scope of this proceeding, the Ironworkers Union never referred Castillo to Kiewit for rehire at the YMP after he was laid off on May 31, 1995. The complainant retired in June 1996. Exh. 18 at 1.

II. Legal Standards Governing This Case

In 10 C.F.R. Part 708, we find the rule applicable to the review and hearing of allegations of reprisal based

on protected disclosures made by an employee of a Department of Energy (DOE) contractor. Proceedings under Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or his designee. *See David Ramirez*, 23 DOE ¶ 87,505 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has " . . . [d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences . . . a substantial and specific danger to employees or public health or safety." 10 C.F.R. § 708.5 (emphasis added). In the present case, Castillo claims in his complaint that adverse personnel actions were taken against him by Kiewit, including the initial October 1994 termination and a subsequent layoff, as a result of his disclosing to Kiewit management personnel an unsafe working condition relating to the absence of safety caps on steel stakes used in the pouring of concrete slabs.(2)

A. The Complainant's Burden

The regulations describe the burdens of proof in a whistleblower proceeding as follows:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. § 708.9(d); *see Ronald Sorri*, 23 DOE ¶ 87,503 (1993). "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the burden of persuasion is allocated roughly equally between both parties. *Grogan v. Garner*, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). As a result, Castillo has the burden of proving by evidence sufficient to "tilt the scales" in his favor that he disclosed information, in this case uncapped concrete stakes, which he in good faith believed evidenced a substantial and specific danger to employees or public safety. 10 C.F.R. § 708.5(a)(1)(ii). If the complainant does not meet this threshold burden, he has failed to make a *prima facie* case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a *contributing factor* in the personnel actions taken against him, specifically his termination on October 19, 1994, and later layoff on May 31, 1995, after the complainant was rehired. 10 C.F.R. § 708.9(d); *see Helen Gaidine Oglesbee,* 24 DOE ¶ 87,507 (1994); *Universities Research Association, Inc.*, 23 DOE ¶ 87,506 (1993). This standard of proof is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C. § 1221(e)(1), and the 1992 amendment to § 210 (now § 211) of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. In explaining the "contributing factor" test in the WPA, the Senate floor managers, with the approval/concurrence of the legislation's chief House sponsors, stated: “The words ?a contributing factor’, ... mean any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision.” 135 Cong. Rec. H747 (daily ed. March 21, 1989)(Explanatory Statement on Senate Amendment-S.20). *See Marano v. Dep't of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying "contributing factor" test).

B. The Contractor's Burden

If the complainant meets his burden, the burden shifts to the contractor. The contractor must prove by "clear and convincing" evidence that it would have taken the same personnel action against the complainant absent the protected disclosure. "Clear and convincing" evidence is a much more stringent

standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus, if Castillo has established that it is more likely than not that he made a protected disclosure that was a contributing factor to his termination and subsequent layoff, Kiewit must convince us that it would have taken these actions despite the safety matter communicated by the complainant.

III. Analysis

I have carefully reviewed the record in this proceeding, including the testimony of the witnesses at the hearing and the exhibits submitted into evidence by Castillo and by Kiewit. For the reasons set forth below, I find that although the complainant made a disclosure that is protected under 10 C.F.R. § 708.5(a)(1), he has failed to show by a preponderance of the evidence that this disclosure was a contributing factor in his October 19, 1994 termination or his subsequent layoff. I will therefore deny Castillo's request for relief under 10 C.F.R. Part 708.

A. Castillo's Disclosure

A protected disclosure for purposes of the Contractor Employee Protection Program is one that consists of "information that the employee in good faith believes evidences . . . (ii) a substantial and specific danger to employees or public health or safety." 10 C.F.R. §¡708.5(a)(1). It is essentially uncontroverted that on more than one occasion, the complainant brought to the attention of Kiewit management that certain partially embedded steel bars used to reinforce concrete did not have protective covers, or caps, thereby exposing their sometimes sharp or jagged ends to the construction workers. Tr. at 262. I am also convinced that Castillo harbored a good faith belief that this condition constituted a "substantial and specific danger" to his fellow construction workers.(3) I reach this conclusion because the complainant raised this issue on several occasions, Tr. at 262, 284, and because he had personal knowledge of an injury to at least one fellow construction worker caused by contact with an uncapped bar. Exh. 2, NLRB Aff. at 3.(4) I therefore find that the complainant made a protected disclosure for purposes of section 708.5(a)(1).

B. Was Castillo's Disclosure a Contributing Factor in Personnel Actions?

In most cases it is impossible for a complainant to find a "smoking gun" that proves an employer's retaliatory intent. Thus, the complainant in these proceedings must usually meet his burden of proof through circumstantial evidence. For example, a protected disclosure has been found to be a "contributing factor" in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald L. Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993) (*Sorri*) *quoting McDaid v. Dep't of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990). In this case, however, I find insufficient evidence, either circumstantial or direct, that Castillo's disclosure was a contributing factor in the personnel actions taken against him.

1. The October 19, 1994 Termination

At the hearing, Castillo testified that he initially stated his concern regarding the uncapped stakes in "March or April" 1994, and that he raised the issue again on October 18, 1994, the day before he was fired, in one of Kiewit's daily safety meetings. Tr. at 262. In all, the complainant stated that he raised the uncapped stakes issue with Kiewit management "3 or 4 times prior to October 19, 1994." Exh. 18, July 29, 1997 Statement to IG, at 4. Whether he actually raised it on October 18 is unclear.(5) Castillo also presented the testimony of George Christakis, a fellow construction worker at the Yucca Mountain site, in support of his contention that his October 19 termination was in retaliation for his safety disclosure. Mr. Christakis testified that he had heard, from unidentified fellow ironworkers at the union hall and from

Frank Caine, the Ironworkers Union business agent, that Castillo had been fired because of safety disclosures. Tr. at 157, 161. Castillo has provided no other direct evidence connecting his disclosure with his firing. For the reasons below, I find that the complainant has failed to carry his burden to show that his safety disclosure was a contributing factor in his October 19, 1994 termination.

I initially find Mr. Christakis' testimony to be of little probative value. Mr. Christakis was not hired as a construction worker at the Yucca Mountain site until December 8, 1994, almost two months after Castillo's initial termination in October 1994. Tr. at 159. He therefore had no direct knowledge of the termination or the events that led up to it. His claims that he had heard from fellow ironworkers at the union hall and from Mr. Caine, the Ironworkers Union business agent, that the complainant had been dismissed for making unspecified safety disclosures are hearsay on top of hearsay, and in the absence of corroborating evidence, are entitled to little weight. Furthermore, this assertion runs contrary to a statement given by Frank Caine, taken and summarized by the IG during its investigation, which recounts in pertinent part:

Caine said that [Kiewit] terminated Castillo for insubordination in October 1994 . . . . Caine said that had he been in the [Precast Yard Supervisor's] place, he would have fired Castillo "on the spot." Caine said that Castillo's conduct was improper . . . . Furthermore, Caine stated that he had advised Castillo in the past not to discuss union issues during safety meetings and not to get in confrontation with [Kiewit] management.

Statement of Frank Caine, Business Agent, Ironworkers Union Local 416, to IG, April 21, 1997, at 3. I note that it was Frank Caine who negotiated with Kiewit management to rehire Castillo three weeks later in November 1994, on conditions that the complainant would receive no back pay and would no longer serve as union steward. According to the Ironworkers Foreman, Caine would never have agreed to these conditions if he believed that Castillo had been fired for making a safety disclosure rather than for insubordination. Tr. at 328. I find his testimony convincing on this issue.

I recognize that the timing of the complainant's October 19, 1994 dismissal, coming as it did one day after Castillo purportedly reiterated his observation about the uncapped stakes during Kiewit's daily safety meeting, could lead to an inference that the two events were related. *See Sorri, supra*. Despite this proximity in time, however, several factors lead me to believe that the complainant's disclosure cannot reasonably be found to have contributed to his termination. As an initial matter, Castillo first relayed his concern about uncapped stakes in "March or April" 1994 and complained of this condition to Kiewit management on at least one other occasion prior to October 18, 1994. However, Castillo does not allege that any retaliatory actions occurred immediately after these earlier disclosures.

Moreover, several witnesses at the hearing testified that Kiewit took safety considerations very seriously. Tr. at 145, 197, 320. Indeed, Castillo himself admitted that the company was "very conscientious about safety." Tr. at 263. Kiewit's Employee Safety Handbook expressly requires that employees "[r]eport unsafe equipment, hazardous conditions, and unsafe acts to [their] supervisor at once." Exh. 28 at 5. The company held daily safety meetings for the purpose of affording employees an opportunity to raise safety related issues and consistent with this policy, the record contains a number of examples of other safety matters that were raised by the complainant and others.(6) I therefore find it difficult to believe that Kiewit would retaliate against the complainant for providing the very safety-related input that the company constantly sought and in this case received a number of times without any complaint prior to October 19, 1994.

Finally, no less than seven of the witnesses at the hearing testified that Castillo's termination was not related to any safety disclosure, but was instead the direct result of the complainant's practice of inappropriately raising issues related to his duties as shop steward at the safety meetings. This persistent behavior culminated in a loud, heated argument on October 19 between Castillo and the Precast Yard Supervisor over the latter's decision to transport certain workers on the site rather than using a Teamster.(7) In this regard, I find the testimony of five witnesses, Phillip Fey, Joseph Roach, James

Morris, Don Reed (Ironworkers Foreman), and Floyd Cooper (succeeding Ironworkers Steward) to be particularly significant. Mr. Fey and Mr. Roach, a carpenter and an operating engineer at the YMP who were present at the October 19 safety meeting and were called as witnesses by Castillo, testified that the complainant's dismissal was not due to his safety disclosures, but was instead the result of a "personality clash" between Castillo and the Precast Yard Supervisor regarding union-related issues. Tr. at 74, 109, 116, 119. James Morris was the Kiewit Construction Manager who made the decision to fire Castillo. He stated that he had previously instructed the complainant to stop raising union-related matters at safety meetings. Tr. at 212. He further testified that on October 19 he received a call from the Precast Yard Supervisor who described the occurrences at that morning's safety meeting and recommended that Castillo be terminated for insubordination. Tr. at 213. Mr. Morris also stated that although he had been made aware of the uncapped stakes, he did not know who had raised the issue, and it had nothing to do with the complainant's dismissal. Tr. at 214, 216.

The Ironworkers Foreman was also present at the October 19 meeting and witnessed the heated exchange between Castillo and the Precast Yard Supervisor. In discussing the complainant's termination, he stated that the Precast Yard Supervisor "didn't have any choice" but to recommend dismissal because the complainant was "undermining a supervisor's authority in front of the men." Tr. at 327. He further testified that he would have sought to fire Castillo too, adding that "I don't think safety had one thing to do with it." Tr. at 361.(8) Similarly, Floyd Cooper, the complainant's fellow ironworker who ultimately succeeded him as steward, who was also at the October 19 meeting, was of the same opinion that the Precast Yard Supervisor had no choice but to have Castillo fired, stating that the complainant's conduct was "disrespectful" to the degree that the Precast Yard Supervisor had to "take appropriate action . . . in order to keep the respect for himself from the other men that observed this." Tr. at 378.

I therefore conclude that the complainant has failed to show, by a preponderance of the evidence, that his safety disclosure was a contributing factor in his October 19, 1994 termination. The capping of concrete stakes was a safety practice advocated and asserted as a safety reminder by the complainant and other workers in the context of countless safety measures promoted regularly at daily safety meetings. The evidence presented in the record is overwhelming in support of the finding that Castillo was disruptive of safety meetings and confrontational with Kiewit management over union/work jurisdiction issues despite repeated warnings from Kiewit and his own union to desist in this behavior. It was that behavior that directly produced the firing. Irrespective of Castillo's present claim that he asserted the matter of caps on stakes the day before his firing, it is unreasonable to conclude that this purported disclosure was a contributing factor in that personnel action. Under the circumstances evidenced in the record, to exalt the caps on stakes issue to the level of a "contributing factor" would be tantamount to the tail wagging the dog.

2. The May 31, 1995 Layoff

The procedures utilized in the May 31, 1995 layoff were thoroughly addressed in the testimony of the Ironworkers Foreman and Jeff Moore, who was the supervisor of the Precast Yard at that time. Due to budget cutbacks and a large inventory of concrete slabs in stock, the determination was made to lay off approximately 75% of the workers at the Precast Yard in all construction crafts. Tr. at 217. The Ironworkers Foreman testified that he was instructed to lay off a given number of ironworkers, such that only three would be retained. Tr. at 329-330. As required by union regulations, he retained himself, as foreman, and Floyd Cooper, who had succeeded Castillo as the ironworkers shop steward. As the third retainee, he chose Pete Robles because Mr. Robles was the alternate foreman, who assumed Ironworkers Foreman's duties when he was absent. *Id.*

I find the record to be devoid of any indication that Castillo's safety cap disclosure was a contributing factor in his layoff. I note initially that after the complainant was rehired in November 1994, he had no further difficulties with Kiewit management or supervisors. Shortly after Castillo's return, the Precast Yard Supervisor who took action to terminate him left Kiewit due to personal family reasons. The Ironworkers Foreman, the complainant, his coworkers and subsequent supervisors all concur that the

complainant got along well and was a good worker from the time he was rehired until the layoff. Tr. at 89, 176, 273. 329. In this regard, I note that the complainant was laid off with the notation that he was "eligible for rehire." This meant that the Ironworkers Foreman had been satisfied with the job that the complainant had done, and that he was eligible for further employment as an ironworker with Kiewit. Tr. at 361. I think it very unlikely that this provision would be applied to someone who had been the victim of a retaliatory personnel action.(9)

Moreover, the criteria employed by the Ironworkers Foreman in determining who was to be retained in May 1995 were largely objective and do not reflect a retaliatory intent. Indeed, Castillo himself stated that he believed the layoff procedure to be fair. Tr. at 282.(10) Furthermore, I find it difficult to believe, and I do not conclude, that the Ironworkers Foreman, as a union member himself, would retaliate against a fellow union member for raising issues having to do with worker safety. For these reasons, I find that Castillo has failed to prove by a preponderance of the evidence that his disclosure was a contributing factor in the May 31, 1995 reduction in force.

IV. Conclusion

As set forth above, I have determined that the complainant has failed to establish the existence of a violation on the part of Kiewit for which he may be accorded relief under DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708. Although Castillo made a protected disclosure, he has failed to demonstrate that the disclosure was a "contributing factor" in either the October 19, 1994 termination or the May 31, 1995 reduction in force, within the meaning of 10 C.F.R. § 708.9(d). Moreover, even if the record supported his belief that his disclosure was a contributing factor, I find clear and convincing evidence that Kiewit would have taken these actions even in the absence of the disclosure. Despite being instructed on more than one occasion by Kiewit management and his own union to refrain from raising non-safety related, union issues in safety meetings, the complainant continued this practice, culminating in the October 19 meeting, at which Castillo became involved in a loud, heated argument with his supervisor over a work assignment matter. Virtually all of the witnesses who were in attendance at that meeting, including those called by Castillo, testified that they too would have fired the complainant based upon his conduct; indeed, under the circumstances he had left the Kiewit supervisor and management with no other choice. The Part 708 regulations were never intended as a means to insulate contractor employees from the consequences of insubordinate behavior going beyond reasonable limits of toleration. *See* *Timothy E. Barton,* 27 DOE ¶ 87,501 at 89,013 (1998) (determination to terminate contractor employee primarily motivated by employee's aggravated refusal to follow work directive of company manager). With respect to the May 31, 1995 reduction in force, there is simply nothing in the record to indicate that the decision to include Castillo among those laid off would have been any different had it not been for his disclosure.

Accordingly, I will deny Castillo's request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Carlos M. Castillo under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments, Office of the Inspector General, Department of Energy.

Fred L. Brown

Hearing Officer

Office of Hearings and Appeals

Date: June 1, 1998

(1)The expedited procedure that was offered to the parties by the IG in this and other cases was a precursor to changes that have been proposed by DOE in the regulations governing the Contractor Employee Protection Program, 10 C.F.R. Part 708. *See* Notice of Proposed Rulemaking (NOPR), Criteria and Procedures for DOE Contractor Employee Protection Program, 10 C.F.R. Part 708, 63 Fed. Reg. 374 (January 5, 1998). Unlike the present regulations, where both parties must agree to the expedited procedure, under the proposed regulations, after the IG has accepted jurisdiction over a complaint and attempts of informal resolution have proven unavailing, a complainant is afforded two avenues for proceeding directly to the hearing stage absent an IG investigation and Report of Inquiry (previously a "Report of Investigation"): (1) the complainant may elect to have the complaint submitted directly to the Office of Hearings and Appeals for a hearing, bypassing the inquiry stage, NOPR § 708.7(b)(3); or (2) the complainant may request a hearing in the event a Report of Inquiry has not been issued by the IG within 240 days of being notified that informal resolution of the complaint was not reached, NOPR § 708.8(f). Under either alternative, without an IG investigation of the complaint and Report of Inquiry, the Hearing Officer must develop the factual record at the hearing stage of the proceeding. NOPR § 708.9. In this regard, it should be noted that the proposed rules provide that the Hearing Officer may order reasonable discovery upon the request of a party. NOPR § 708.9(c)(1).

(2)The specific disclosure and alleged retaliatory actions were determined by the IG in accepting jurisdiction over Castillo's Part 708 complaint in this matter, and initiating a preliminary investigation. *See* Letter from Sandra L. Schneider, Assistant Inspector General for Assessments, IG, to Carlos M. Castillo, February 11, 1997. These matters were principally gleaned by the IG from documents relating to Castillo's NLRB action, particularly his affidavit taken in that proceeding, which was forwarded to the IG by Castillo on December 17, 1994, and deemed by IG to contain sufficient information to constitute a Part 708 complaint.

(3)I note in this regard that a disclosure need not be correct in order to be protected under Part 708. In the Final Agency Decision recently issued in *C. Lawrence Cornett v. Maria Elena Torano Associates, Inc.*, 27 DOE ¶ 87,502 at 89,017 (1998), the Deputy Secretary emphasized that: "Whether [the complainant] was correct or not - which is not the issue here . . ., so long as it was both reasonable and in good faith, plainly is the sort of disclosure meant to be protected by the regulations . . . ." In the present case, I find and Kiewit does not dispute that Castillo was both reasonable and in good faith in raising the matter of capping stakes. *See* Tr. at 18.

(4)In the October 25, 1994 NLRB Affidavit, Castillo asserts that he brought up the matter of uncapped stakes to the Precast Yard supervisor "around October 11, 1994" and "[l]ater that day, Andy [Quintana], cement finisher, cut his arm on the stake." Exh. 2 at 3. However, an engineer who worked at the site testified that his recollection of the incident was that Andy Quintana cut his arm on a stake while trying to pull the stake out of the concrete, after removing the cap. Tr. at 199.

(5)Evidence regarding the timing of Castillo's stated concerns about protective caps on stakes is by no means conclusive. Several witnesses that testified at the hearing confirmed that Castillo raised the matter of uncapped stakes at one or more safety meetings during the period May through June 1994, while the pouring of slabs took place at the YMP Portal area and cut rebar was being used as concrete stakes. *See, e.g.*,Tr. at 56, 100, 183, 322. However, no one corroborated Castillo's present assertion that he brought it up in the morning safety meeting on October 18, 1994, just one day before the firing. Indeed, Castillo's memory of this matter appears to be faulty. In his NLRB affidavit taken just one week after the firing, he stated that on October 17 or 18, he noticed that duct tape instead of actual caps was being used on the stakes and, "I may have mentioned it at the safety meeting the following morning." Exh. 2 at 3. In his IG statement, taken July 29, 1997, Castillo states that he raised the matter of capping of stakes 3 or 4 times prior to October 19, 1994, but "I can't recall the specific dates." Exh. 18 at 4.

(6)For instance, the complainant's coworkers recall him and others raising safety issues relating to the use

of flagmen to direct trucks onto the site, Tr. at 88, a forklift spewing toxic fumes, Tr. at 105, safe operation of tarp rolling equipment, Tr. at 107-08, safe driving speed of construction equipment, Tr. at 112, and trucks unsafely loaded, Tr. at 114-15. However, it is not alleged that raising any of these matters resulted in a retaliatory response. The Ironworkers Foreman explained that employees raised safety matters "[c]onstantly, from signaling operators and equipment to back up bells on equipment, things like that. Everything relating to construction constantly came up because that was a big project." Tr. at 323. Amid this volume of safety reminders, the Ironworkers Foreman characterized the complainant's revelation concerning steel stakes as "no big issue." *Id.*

(7)In a number of instances, the complainant not only raised work-related issues relevant to the Ironworkers Union which he represented, but also raised matters on behalf of other craft workers which he did not officially represent. This penchant for assuming representation of workers outside of his union gained the complainant a reputation as what is referred to as a "bull steward." Tr. at 49-50; Exh. 2 at 3.

(8)The Ironworkers Foreman corroborated the testimony of the Construction Manager that Castillo had been previously admonished to stop disrupting safety meetings with union/work jurisdiction issues. Indeed, he stated that when the Ironworkers Union business agent who installed Castillo as steward found out about the complainant's behavior, the business agent chastised Castillo and directed him to stop these disruptions of safety meetings. Tr. at 324- 25, 342. Nonetheless, the complainant continued this behavior. According to the Ironworkers Foreman, sometimes Castillo was "representing Carlos Castillo and not the people." Tr. at 344-45.

(9)Although Castillo never returned to work for Kiewit at the YMP, the decision not to rehire him was not under the authority of Kiewit but a matter between Castillo and the Ironworkers Union which administered the work assignments of its members. Tr. at 283-84, 367-68.

(10)In his statement to the IG, Castillo expressed no surprise at the layoff selection:

There were 2 ironworkers that were not laid off. They were Floyd Cooper and Pete Robles. I understand why they were not laid off. Cooper was the union steward and he would be the last to get laid off because of his position. Robles was not laid off because he filled-in as foreman during Reed's absence. There was no seniority system at YMP.

Exh. 18 at 6.

December 9, 1998
DECISION AND ORDER OF
THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Russell P. Marler, Sr.
Date of Filing: August 31, 1998
Case Number: VWA-0024

This Decision involves a complaint filed by Russell P. Marler, Sr. (Marler or "the complainant") under the Department of Energy (DOE) Contractor Employee Protection Program, codified at 10 C.F.R. Part 708. Marler is a former employee of a DOE contractor, DynMcDermott Petroleum Operations Company (DM), and alleges in his complaint that certain reprisals were taken against him by DM, including a poor performance evaluation and selection for termination under a Reduction-in-Force (RIF), as a result of his participating in an act protected under Part 708. More specifically, Marler alleges that these adverse personnel actions were improperly taken against him in retaliation for his serving as a witness in another proceeding brought under Part 708, and therefore seeks appropriate redress. On the basis of the hearing that was conducted and the record before me, I have concluded that Marler is not entitled to relief under 10 C.F.R. Part 708.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure, or participating in related proceeding, will be directed by the DOE to provide relief to the complainant.

The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2, 1992, establish administrative procedures for the processing of complaints. These procedures typically include independent fact-finding by the DOE Office of Inspector General (IG), followed by the issuance of a Report of Investigation setting forth the IG's findings and recommendations on the merits of the complaint. 10 C.F.R. § 708.8. Thereafter, the complainant may request a hearing before a Hearing Officer assigned by the DOE Office of Hearings and Appeals (OHA), pursuant to which the Hearing Officer renders an Initial Agency Decision, followed by an opportunity for further review by the Secretary of Energy or his designee. *See* 10 C.F.R. §§ 708.9-708.10.

B. The Present Proceeding

(1) Procedural History

Marler was terminated from employment by DM on September 22, 1994, and filed the present complaint under Part 708 with DOE on November 1, 1994. In his complaint, Marler alleges that his termination, under a company RIF, and a preceding poor performance evaluation, were the result of his participation as a witness in another proceeding brought under Part 708. The IG accepted jurisdiction over the complaint and conducted an on-site investigation of Marler's claims during the period September 24-27, 1996. The IG completed all of its investigative activity in the case on October 15, 1997.

Following its review of the summary of statements and documentary evidence assembled during its investigation, the IG issued a Report of Inquiry and Recommendations (ROI) in this matter on June 26, 1998. In the ROI, IG found that although Marler's participation as a witness in the collateral Part 708 proceeding was a contributing factor in the adverse personnel actions taken against him by DM, its investigation established clear and convincing evidence that DM would have taken the same actions against him even in the absence of such participation. Accordingly, IG recommends in the ROI that Marler be denied relief under Part 708.

In a letter received by the IG on July 28, 1998, the complainant exercised his right under Part 708 to request a hearing in this matter. 10 C.F.R. § 708.9(a). On August 31, 1998, the complainant's hearing request along with the ROI and supporting investigatory exhibits were forwarded to OHA. On September 4, 1998, I was appointed as Hearing Officer in this case. 10 C.F.R. § 708.9(b). After a number of contacts with the parties in the form of written correspondence and conference calls, I convened a hearing in this proceeding on October 28-29, 1998. The official transcript of that hearing will be cited in this determination as "Tr.". Pertinent documents that were attached to the ROI as exhibits will be cited as "Exh.".

(2) Factual Background

The following summary is based upon the hearing testimony, the ROI investigative file and the submissions of the parties. Except as indicated, the facts set forth below are uncontroverted.

Marler, the complainant, was hired in 1985 by Boeing Petroleum Services, Inc. (Boeing), the management and operating (M&O) contractor of DOE's Strategic Petroleum Reserve (SPR), until Boeing was succeeded by DM on April 1, 1993. Tr., vol. II at 70; Exh. 54. Subject to certain management and supervisory changes, discussed below, Marler served as a parts provisioner in the Integrated Logistics System (ILS) division under both Boeing and DM. The general function of the ILS is to ensure that there is an adequate inventory of parts, in terms of type and quantity, to maintain the equipment and machinery located at the various SPR sites. The ILS is essentially comprised of two functions, Provisioning and Cataloging. The complainant's primary area of provisioning related to parts for instrumentation control, site security and electrical maintenance. Tr., vol. II at 88.

During his first years of employment with Boeing, Marler's supervisor was Francis M. O'Laughlin (O'Laughlin), then the ILS Manager. Pursuant to a reorganization instituted by Boeing in May 1991, however, David M. Ryan (Ryan) was selected as Logistics Manager in the newly created Material Directorate, and O'Laughlin became Ryan's subordinate. This change was made in order to improve the performance of the ILS group and remedy a provisioning backlog that had developed under O'Laughlin. Tr., vol. II at 228. This realignment and demotion in authority ultimately led O'Laughlin to file an action under Part 708, on April 1, 1992, and later to resign from Boeing on May 15, 1992. At that time, Ryan became the complainant's supervisor.

By all accounts of ILS personnel, Ryan demonstrated a tougher, more "hands-on" management style than his predecessor, O'Laughlin, and immediately instituted changes to enhance the performance of the provisioning function in ILS. Tr., vol. II at 86, 173-74, 190-91. Most significantly, it was Boeing's desire and Ryan's mission to automate the provisioning function. Previously, the complainant determined the parts provisioning list through visits to SPR field sites and contacts with maintenance personnel and vendors; he then gave the list to a data entry clerk for entry into the ILS database. Tr., vol. II at 67-68. According to the complainant, he had absolutely no personal contact with the computer for his first seven years as an ILS provisioner. Tr., vol. II at 69. However, in 1992, Ryan instituted a new system which entailed an engineer determining the parts provisioning list and the three ILS provisioners, Marler, Crystal Verges (Verges) and Amelie Breaux (Breaux), providing computer support with ILS data entry and analysis. Tr., vol. II at 11-12. Ryan assigned Louise Wade (Wade), then the Cataloging supervisor, to also supervise the provisioners in implementing this change in operating procedure. Tr., vol. II at 12-13.

According to Wade, the provisioners were not immediately receptive to the new automated operating procedure requiring substantial use of the computer. Tr., vol. II at 23. She noted that the complainant was least able in use of the computer among the provisioners and, in her observation, frequently required the assistance of his colleagues. Tr., vol. II at 25-26. In this regard, Wade testified that there were often errors in Marler's work due to his inability to analyze and input data using the proper codes into the ILS database. Tr., vol. II at 14-18. The complainant's fellow provisioners stated that although the complainant was slow at data entry and sometimes needed assistance in accessing segments of the ILS database, they never had to do his work and the complainant was a good worker. Tr., vol. II at 169-70, 199- 200.

Beginning in 1992, many of Marler's coworkers noticed that a strained relationship had developed between Marler and Ryan, who was then the complainant's second line supervisor. Tr., vol. II at 176, 190. According to Verges and Breaux, the complainant and Ryan were previously friendly toward one another and were commonly known to go on fishing trips together, until an incident which occurred on a fishing trip in early 1992. *Id.* Marler relayed an account to them and to other persons in the organization, that in the course of the fishing outing, he and Ryan engaged in a conversation concerning the demotion and resignation of O'Laughlin. As recounted by Marler, he accused Ryan of betraying O'Laughlin for supporting Boeing and then assuming O'Laughlin's management position, since O'Laughlin had previously been Ryan's friend and had indeed helped Ryan to secure a job with Boeing. Tr., vol. II at 81-82. Marler stated that prior to the fishing trip confrontation, his relationship with Ryan "was great" but after the incident Ryan became: "Very cold. He ceased talking to me. . . . And it was obvious. Everybody in the department saw it." Tr., vol. II at 84-85.(1) Marler says Ryan became very "nitpicking" of his work following the fishing trip. Tr., vol. II at 86. Some time later after the fishing trip, Marler states that he was told by another ILS manager that Ryan was out to get him. Tr., vol. II at 156-58.

On April 1, 1993, DM succeeded Boeing as the M&O contractor of the SPR. Under conditions of its contract with DOE, DM was directed to hire all of Boeing's employees but to reduce the total number of employees, then approximately 1050, to less than 970 by fiscal year 1995, beginning October 1994. Tr., vol. I at 127-28, 204. In addition, the new DM management was made aware of DOE's continuing dissatisfaction with the performance of the ILS provisioning function. Tr., vol. I at 97-100. Under DM's proposal, the company agreed to make more extensive use of computers in the ILS. Tr., vol. I at 130. The determination was made by Ryan's superiors, including Ronald Jacobs (Jacobs), Manager, Maintenance and Material Department, and his boss, Robert McGough (McGough), Director, Operations and Maintenance Directorate, that the ILS provisioning group might function better by increasing the number of engineers, pairing one engineer with each provisioning analyst. Tr., vol. I at 133, 210- 11, 377.

In May 1993, following a confrontation with Wade, his supervisor, Marler received a Corrective Action Memorandum (CAM), a disciplinary personnel action placed in his employee file. During this time period, Wade remained dissatisfied with Marler's slow progress in acquiring the computer skills necessary to perform the automated provisioning function, stating that Marler was sometimes untimely in completing his assigned tasks, made errors and did not follow proper procedures. Tr., vol. II at 25-34, 49-51. While her yearly Performance Review, dated January 7, 1993, was not very critical, it admonished Marler to concentrate on "expanding PC skills and grasping the technical aspects of his job." Exh. 44. Wade clarified, however, that her issuance of the CAM was not specifically related to performance but to Marler's uncooperative behavior and disrespectful tone in responding to her request for a completion date for one of Marler's assigned provisioning projects. Tr., vol. II at 39-42. Ryan had nothing to do with Marler receiving the CAM, although Ryan supported Wade in her decision to issue the CAM. Tr., vol. II at 58-59.

By the fall of 1993, it became clear to DM management and the firm's Human Resources division, that DM would not be able to meet through attrition the personnel levels required by October 1994 under the DOE contract, and DM began to plan for a possible RIF. Tr., vol. I at 132, 186-87. Jacobs instructed his underlying managers, including Ryan, to provide the names of their two lowest performers. Tr., vol. I at 101. Ryan provided the names of three individuals for possible RIF, including two ILS provisioners, Marler and Breaux. Tr., vol. I at 102. Jacobs decided to target the ILS for layoffs since in his view the ILS would operate more efficiently with a smaller staff, with more "degreed" engineers and fewer analysts. Tr., vol. I at 133-34. Jacobs then had a meeting with the ILS managers, including Ryan, to review the tentative RIF

list. Those managers familiar with Marler's work supported Marler being included on the list. Tr., vol. I at 134; Tr., vol. II at 227, 240. Word of a potential RIF filtered to the ILS employees and during an ILS staff meeting, Breaux and Marler confronted Ryan, and Marler directly accused Ryan of trying to get rid of him, which Ryan denied. Tr., vol. II at 198, 213.

In December of 1993, Marler went to Jacobs, complaining that he had received no merit pay bonus and that Ryan had failed to give him a plausible explanation. Tr., vol. I at 80-81, vol. II at 103-04. Jacobs explained that merit pay bonuses that year were determined based upon a performance "totem" handed down by Boeing, that Marler was near the bottom of the totem and, in fact, even high ranking employees had received a substantially reduced bonus. Tr., vol. I at 93, 274. Marler then decided to discuss other matters with Jacobs. The complainant informed Jacobs of the strained relationship that had developed between him and Ryan following his expression of support for O'Laughlin on the fishing trip. Tr., vol. I at 92, vol. II at 106. Jacobs responded by informing Marler that a RIF was coming and his name had in fact "bubbled up" on the tentative RIF list. Tr., vol. I at 81; Exh. 26 (Jacobs' contemporaneous notes of meeting). Marler recalled the conversation as follows: "[Jacobs] said, I've got an iron worker and housewives doing provisioning work over there. And I said, how about eight years of provisioning, on-hands experience? And he said don't make no difference. He said if I had to make a cut today, I would cut you." Tr., vol. II at 105.(2)

In April 1994, Wade ceased to be Marler's direct supervisor as the result of an ILS realignment, and Ryan once again became the complainant's direct supervisor. Tr., vol. II at 54. Also in April 1994, McGough made the determination to move forward with the RIF downsizing plan required under terms of the DOE contract. Exh. 10.

On May 18-19, 1994, a hearing was conducted at the SPR offices in reference to the complaint brought by O'Laughlin against Boeing under Part 708. *Francis M. O'Laughlin*, OHA Case No. LWA-0005. Marler and Ryan were among the witnesses called to testify at the hearing although neither was aware that he would be called until a short time before the hearing. Tr., vol. I at 364, vol. II at 143-44. According to Marler, upon being notified that he would be called as a witness, Ryan approached him and threatened that Marler's future hinged on his testimony. Tr., vol. II at 113. Ryan stated that he only advised Marler that he should be careful about his testimony in terms of accuracy. Tr., vol. I at 364. Nonetheless, Marler informed in-house counsel for DM and a DOE official that he was fearful of possible retaliation by Ryan. Tr., vol. II at 113-14. Ryan stated that he had no direct knowledge of the content of Marler's testimony at the hearing, but following the hearing Jerry Siemers, a former Boeing manager, informed him "that [Marler] was very upset and asked what I had done to get him so mad." Tr., vol. I at 365.

Following the hearing, the already poor relationship between Marler and Ryan deteriorated even further in the view of many ILS workers. Tr., vol. I at 176, vol. II at 167. Wade, Marler's previous supervisor, stated that following the hearing, the rumors that Ryan was going to get rid of Marler became common. Tr., vol. II at 61. Pete Kelly, an engineer who was temporarily brought in to work in ILS during this time frame, testified that Ryan was "bitter" about Marler serving as a witness, and following the hearing became unduly critical of Marler's work, stating: "It was evident that [Marler] was being harassed heavily." Tr., vol. I at 167. Indeed, Kelly stated that on several occasions following the hearing, Ryan stated during private conversations in Ryan's office that he was going to get rid of Marler. Tr., vol. I at 155-56.

In a letter dated July 28, 1994, DM informed DOE of its proposed staffing changes under the RIF in the Operations and Maintenance Directorate, and the complainant's position was one of six proposed for deletion at DM's New Orleans, LA, site. Exh. 31. In deciding to include Marler, Ryan testified that he was directed by Jacobs to lay off an employee and he had only the three ILS provisioners, Verges, Breaux and Marler, to choose from. Tr., vol. I at 372. Ryan stated that he chose Marler because, based upon the position skill requirements to maintain the ILS database and do reports, Marler was "the most expendable of the three." Tr., vol. I at 373.

On August 16, 1994, Marler received his annual Performance Evaluation rating from Ryan, who gave the complainant an unfavorable overall rating of "Marginal." Exh. 43. Wade, who was Marler's direct

supervisor for a portion of the rating period, until April 1994, had only conversational input into this Performance Evaluation of Marler. Tr., vol. I at 371, vol. II at 38.

In a letter dated August 17, 1994, DM informed DOE of its determination to RIF twelve DM employees from its field sites and four from the New Orleans site, including the complainant. Tr., vol. I at 277; Exh. 33. By letter dated September 22, 1994, Marler was advised by DM that his employment was being terminated through involuntary RIF, effective that day. Exh. 35.

Within a few days of receiving notice of the RIF, several of Marler's coworkers, including Verges, Breaux and Henry Haskell, then an ILS engineer, went to McGough's office to express their view that Marler was productive and was unfairly selected for the RIF. Tr., vol. I at 195, vol. II at 171, 208-09. Although McGough does not recall, Verges and Breaux testified that the matter of possible retaliation was raised. Tr., vol. I at 196, vol. II at 209. Notwithstanding, McGough determined after conferring with Jacobs to let the selection of Marler for the RIF to stand. Tr., vol. I at 196.

Following the September 22, 1994 RIF, there were additional personnel changes in ILS Provisioning. Jacobs decided to bring in another engineer from the field, Larry Evans, to work in ILS to replace Henry Haskell, who retired. Tr., vol. I at 145-46. After the beginning of the 1995 fiscal year, McGough received permission from DOE to increase staff and, in November 1994, DM hired Cahn Tran, an electrical engineer, to work in ILS. Tr., vol. I at 211. Cahn Tran, coupled with a provisioning analyst, performed some of the same but more extensive duties than those previously performed by Marler. Tr., vol. II at 178-79. Timothy Hewitt, DM Operations Manager, testified that this system of pairing a degreed engineer with a provisioning analyst, long sought by Jacobs, has made ILS Provisioning much more effective. Tr., vol. II at 236-37.

II. Legal Standards Governing This Case

In 10 C.F.R. Part 708, we find the rule applicable to the review and hearing of allegations of reprisal based on protected disclosures made by an employee of a Department of Energy (DOE) contractor. Proceedings under Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Secretary of Energy or his designee. *See*David Ramirez, 23 DOE ¶ 87,505 (1994). The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action, such as discharge, demotion, coercion or threat, against any employee because that employee has "[p]articipated in . . . a proceeding conducted pursuant to this part." 10 C.F.R. § 708.5(a)(2). In the present case, Marler claims in his complaint that adverse personnel actions were taken against him by DM, including being selected for layoff under a company RIF and receiving an unfair Performance Evaluation, as a result of his participating as a witness in *Francis M. O'Laughlin*, OHA Case No. LWA- 0005 (*O'Laughlin*), a proceeding brought under Part 708 against Boeing, DM's predecessor M&O contractor.

A. The Complainant's Burden

The regulations describe the burdens of proof in a whistleblower proceeding as follows:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. § 708.9(d); *see* Ronald Sorri, 23 DOE ¶ 87,503 (1993). "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when

weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse,* 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the burden of persuasion is allocated roughly equally between both parties. *Grogan v. Garner*, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). As a result, Marler has the burden of proving by evidence sufficient to "tilt the scales" in his favor that he participated in a proceeding protected under Part 708. 10 C.F.R. § 708.5(a)(2). If the complainant does not meet this threshold burden, he has failed to make a *prima facie* case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a "contributing factor" in the personnel actions taken against him, specifically his low Performance Evaluation received August 16, 1994, and selection for the RIF, ultimately conducted on September 22, 1994. 10 C.F.R. § 708.9(d); *see Helen Gaidine Oglesbee,* 24 DOE ¶ 87,507 (1994); *Universities Research Association, Inc.*, 23 DOE ¶ 87,506 (1993). This standard of proof is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C. § 1221(e)(1), and the 1992 amendment to § 210 (now § 211) of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. In explaining the "contributing factor" test in the WPA, the Senate floor managers, with the approval/concurrence of the legislation's chief House sponsors, stated: “The words ?a contributing factor’, ... mean any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision.” 135 Cong. Rec. H747 (daily ed. March 21, 1989)(Explanatory Statement on Senate Amendment-S.20). *See Marano v. Dep't of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying "contributing factor" test).

B. The Contractor's Burden

If the complainant meets his burden, the burden shifts to the contractor. The contractor must prove by "clear and convincing" evidence that it would have taken the same personnel action against the complainant absent the protected disclosure. "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F. Supp. at 1204 n.3. Thus, if Marler has established that it is more likely than not that his participation in a protected activity was a contributing factor in his selection for RIF and poor Performance Evaluation, DM must convince me that it would have taken these actions despite such participation by the complainant.

III. Analysis

I have carefully reviewed the record in this proceeding, including the testimony of the witnesses at the hearing and the exhibits presented in the record. For the reasons set forth below, I find that the complainant’s participation as a witness in a Part 708 proceeding was protected under 10 C.F.R. § 708.5(a)(2), and that the complainant has shown by a preponderance of the evidence that such participation was a contributing factor in his selection for the RIF and receiving a poor Performance Evaluation. However, I have further determined that DM has established clear and convincing evidence that the firm would have taken the same personnel actions against the complainant even in the absence of such participation. I will therefore deny Marler’s request for relief under 10 C.F.R. Part 708.

A. Complainant’s Participation

At the outset of the hearing, the parties stipulated that a hearing was conducted under Part 708 on May 18-19, 1994, in *O’Laughlin*, and Marler served as a witness on behalf of O’Laughlin in that proceeding. Tr., vol. I at 9. The record is also clear that DM was aware of Marler’s participation as a witness in that proceeding. Although the*O’Laughlin* proceeding involved the predecessor contractor, Boeing(3), DM was put on notice since a number of DM employees were called as witnesses, as former employees of Boeing. Further, the record shows that Ryan, Marler’s direct supervisor at that time, approached Marler a few days before the hearing to discuss Marler’s participation as a witness in the proceeding, although there is disagreement as to whether Ryan’s comments at that time were threatening or merely advisory. Tr., vol. I at 364, vol. II at 113.

I therefore find that the complainant has met his threshold showing under section 708.9(d), that he engaged in an activity protected under Part 708, *viz.* participating as a witness in a collateral Part 708 proceeding, and that DM had knowledge of such participation.

B. Contributing Factor

A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993) *citing McDaid v. Dept't of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (County). In addition, "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F. 2d 147, 148 (8th Cir. 1989).(4)

Applying these standards to the present case, I find that there is clearly temporal proximity between Marler's serving as a witness in the *O'Laughlin* hearing on May 18-19, 1994, and both the placement of Marler's position on the RIF list proposed to DOE in a letter dated July 28, 1994*, and the complainant receiving an unfavorable Performance Evaluation from Ryan, his supervisor, on August 16, 1994. The record shows that although Ryan did not have specific knowledge of Marler's testimony in the *O'Laughlin* hearing, Ryan was approached by a former Boeing manager present at the hearing who asked Ryan what he had done to make Marler so mad. Tr., vol. I at 365. In addition, there is ample testimony that following the hearing, the already poor relationship between Marler and Ryan grew worse, and the rumors of Ryan's threats to get rid of Marler more prevalent.

Based on the foregoing, I find Marler has established a *prima facie* case that his protected disclosure was a contributing factor to his being selected for the RIF and receiving a poor Performance Evaluation. The burden now shifts to DM to prove by clear and convincing evidence that it would have chosen Marler for the RIF and the complainant would have received a poor Performance Evaluation absent his protected disclosure. 10 C.F.R. § 708.9(d).

C. Contractor's Actions Absent Complainant's Participation

I have carefully weighed the evidence presented in the record of this case and I am led to conclude, on the basis of clear and convincing evidence, that DM would have taken the same adverse personnel actions against the complainant even in the absence of his serving as a witness in the *O'Laughlin* hearing. While I am not comfortable with the role that personal animosity between Marler and Ryan may have played in these matters, it is evident that this poor relationship predated the *O'Laughlin* hearing. More importantly, I am convinced that other objective factors beyond Ryan's control, including operating changes within ILS that diminished Marler's value to the organization and DOE contractual mandates that made a RIF necessary, would have resulted in the same adverse personnel actions being taken against Marler. These factors are discussed in greater detail below.

The evolution of circumstances leading to the adverse actions against Marler stemmed from certain commitments made to DOE by DM upon assuming the M&O contract in April 1993. First, there was a perception shared by DM management and DOE that the ILS was failing to adequately perform parts provisioning for the SPR sites, evidenced by the existence of a substantial parts provisioning backlog. Tr., vol. I at 97- 100, vol. II. at 228. Hewitt, Operations Manager, testified that the ILS was viewed to be "over strength" and "under performing" and Ryan was installed as ILS manager to correct this situation. Tr., vol. II at 228-29.(5) Thus a commitment was made by DM to improve the ILS provisioning function through

* This decision, as issued, contained a typographical error specifying the date of the RIF list letter as July 28, 1998. However, the correct date of the RIF letter was July 28, 1994, as accurately stated in the Factual Background (page 4) of the decision.

increased use of computers. Tr., vol. I at 130. The second commitment made by DM was to reduce overall staff levels at headquarters and field sites from approximately 1050 on board, to 970, by fiscal year 1995, beginning October 1994. Tr., vol. I at 127-28, 204. As explained below, the convergence of these commitments worked to the disadvantage of the complainant, setting aside any animus existing between the complainant and Ryan.

DM management believed that ILS productivity would be increased through greater reliance on automation and pairing an engineer with a provisioning analyst, with the latter performing computer input and analysis of the ILS database. Tr., vol. I at 130, 133-34, 210-11, 337. This new operating procedure radically changed the nature of Marler's work responsibilities, who had previously performed his provisioning duties in hard copy which he then gave to a data input entry clerk. Tr., vol. II at 66-67. Marler conceded that prior to the change in his provisioning duties, his skill level on the computer was "none whatsoever." Tr., vol. II at 70. Wade, who was brought in by Ryan as supervisor to facilitate automation, testified that none of the provisioners (Marler, Verges and Breaux) was receptive at first, but Marler was the least able to adapt. This comes as no surprise since Verges had functional computer skills from previous employment and indeed had been a data entry clerk before rising to become a provisioner. Tr., vol. II at 168. Similarly, Breaux had substantial prior data input experience through her position with a previous contractor. Tr., vol. at 206. Marler, on the other hand, had never been introduced to the use of a computer in any work or educational environment. Although the complainant made progress, he stated: "I am not computer literate. I learned to do what I had to do and that was it. I can get in and out and do my thing, but I don't type fast. I get by. I am slow." Tr., vol. II at 93. When asked whether his computer skills were as good as either Verges or Breaux, the complainant replied: "Not hardly.(6) Thus, Wade testified that the complainant often had problems with timeliness in completing his assigned projects related to use of the computer, and frequently required the assistance of Verges and Breaux. Tr., vol. II at 16-17, 22, 26-27, 29, 46-47, 49-50.

It is in this backdrop that it became clear in October 1993, that DM would likely be unable to meet the workforce reductions required under the DOE contract through attrition, and DM management began contingency planning for a possible RIF. Jacobs, Ryan's superior, requested all of his subordinate managers to identify their two lowest performers. Tr., vol. I at 101. Ryan responded by identifying three individuals, Paul Simon, who worked under Ryan as a logistics analyst, and Marler and Breaux from ILS Provisioning. Tr., vol. I at 101-02. When Marler's name was presented as a RIF candidate, there was no objection raised by any of the managers assembled at meeting by Jacobs to review the list. Tr., vol. I at 33. Marler was viewed as the most expendable from the provisioning group by other managers familiar with the nature and level of his work. Tr., vol. II at 227, 240. I am aware that many of the negative impressions of Marler on the part of upper level DM management (Jacobs and McGough) were drawn from Ryan, who may have had personal reasons to dislike Marler. Tr., vol. I at 74-75, 193-94. However, I find significant the testimony of Wade who was the complainant's immediate supervisor for nearly two years, ending in April 1994, who had a good personal relationship with Marler according to both Wade and Marler. Tr., vol. II at 9-10, 120. When asked which of the provisioners she would have selected for the RIF if it had been her decision, she responded: "[Marler] would have been the chosen individual because he was the weakest individual of the three there." Tr., vol. II at 53.

Thus, Marler's name was on the screen as a likely candidate for RIF approximately five months before DM management had any knowledge that Marler would be called to serve as a witness in the *O'Laughlin* hearing.(7) Based upon the circumstances confronting DM management, I find nothing which would arouse suspicion in its determination to target ILS Provisioning for downsizing and realignment, nor in the fact that Marler was deemed to be the lowest performer, in view of the new ILS operating procedure. Furthermore, the record indicates that McGough decided to go forward with the RIF in April 1994, at a time when he had no knowledge that Marler would be called to testify in the *O'Laughlin* proceeding. Exh. 10. Although the *O'Laughlin* hearing took place before DM actually notified DOE of its RIF selections in a letter dated July 28, 1994 (Exh. 31), the complainant's participation as a witness cannot reasonably be deemed to have had any impact upon a RIF selection process that had already been set in motion.

Furthermore, I find no "smoking gun" in the poor Performance Evaluation which Ryan gave to the complainant on August 16, 1994, one month prior to Marler receiving notice that he had been selected for the RIF on September 22, 1994.(8) In the August 1994 Performance Evaluation, Ryan gave Marler a rating of “Marginal.” Exh. 43. During the hearing, Ryan fully explained his position on Marler’s deficiencies with respect to all of the performance elements comprising this rating. Tr., vol. I at 294-330. I found this testimony persuasive, and reasonably supportive of the “Marginal” rating given to Marler on the descending scale of “Excellent,” “Above Expectations,” “Fully Satisfactory,” “Marginal,” and “Unsatisfactory.” Exh. 43. Indeed, a higher rating of “Fully Satisfactory” would have been inconsistent with the assessment of Marler’s work provided by Wade, who supervised the complainant for the first half of the rating period.(9)

Finally, I find nothing duplicitous in DM’s subsequent decision to hire an electrical engineer in ILS Provisioning, in November 1994, who performed many tasks previously performed by the complainant. McGough testified that DM was only able to increase its staffing level to allow for this position during the succeeding fiscal year 1995, beginning in October 1994, after receiving permission from DOE. Tr., vol. I at 211. From his testimony, I detected no intention by DM to delay asking DOE for this authority until after the RIF of Marler. Further, the determination to add a degreed electrical engineer to augment the provisioning function was always the goal of DM management. Tr., vol. I at 133, 210-11, 377, vol. II at 236-37.

For the reasons above, I have concluded that DM has carried its burden to prove by clear and convincing evidence that the firm would have taken the same adverse personnel actions against the complainant even the absence of his participation as a witness in the collateral Part 708 proceeding.

IV. Conclusion

As set forth above, I have determined that the complainant has failed to establish the existence of a violation on the part of DM for which he may be accorded relief under DOE’s Contractor Employee Protection Program, 10 C.F.R. Part 708. The record shows that Marler engaged in a protected activity by serving as a witness in the *O’Laughlin* proceeding brought under Part 708, and I am persuaded that Marler’s participation was a “contributing factor” in the adverse personnel actions taken against him by DM, including his selection for termination under a DM RIF and receiving a poor Performance Evaluation. Notwithstanding, I have determined that DM has carried its burden to show by clear and convincing evidence that the firm would have taken the same action even in the absence of Marler’s protected activity. In reaching this determination, I do not pass judgment on whether Ryan was in part motivated by personal bias in selecting Marler for termination. In the end, Marler was the unfortunate victim of DM’s plans to automate and restructure ILS Provisioning, which worked to devaluate his skills and experience. The record convinces me that the process of events leading to the adverse personnel actions began long before Marler’s serving as a witness in the collateral proceeding, continued apart from his participation as a witness, and would have occurred even in the absence of such participation.

Accordingly, I will deny Marler’s request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Russell P. Marler, Sr. under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments, Office of the Inspector General, Department of Energy.

Fred L. Brown

Hearing Officer

Office of Hearings and Appeals

Date: December 9, 1998

(1)Ryan asserted that he has no recollection of the conversation with Marler regarding O'Laughlin, although he recalls going fishing with Marler on one occasion. Tr., vol. I at 222; Exh. 13 (IG Summary of Ryan Interview). Verges and Breaux both knew about the fishing incident, but based only upon what Marler had told them. Tr., vol. II at 176, 190. Ryan conceded, however, that he and Marler had an "interpersonal problem." Tr., vol. I at 321.

(2)At this point, there is a factual divergence regarding further discussion at the meeting. According to Jacobs, he explained to Marler that his skills and background in construction were not well suited to provisioning and that Marler might want to consider taking a supervisory position at one of the SPR field sites, but Marler declined. Tr., vol. I at 125-26. Both McGough, Jacob's superior, and Ryan testified as to their belief that Jacobs had offered Marler a field position which Marler refused. Tr., vol. I at 188, 253. The complainant's provisioning coworker, Breaux, recalled that Marler told her that he and Jacobs had discussed a possible field position. Tr., vol. II at 217. Marler testified at the hearing, however, that Jacobs never mentioned anything about a field job during their meeting, and if Jacobs had he would have jumped at the opportunity. Tr., vol. II at 107-110.

(3)The parties further stipulated that DM was dismissed as a party early in the *O'Laughlin* proceeding. Tr., vol. I at 9; *see* *DynMcDermott Petroleum Operations Co.*, Case No. LWZ- 0027, 24 DOE ¶ 87,501 (1994).

(4)Recently, in a case involving a protected disclosure by a whistleblower, the Court of Appeals for the Federal Circuit stated:

If a whistleblower demonstrates both that the deciding official knew of the disclosure and that the removal action was initiated within a reasonable time of that disclosure, no further nexus need be shown, and no countervailing evidence may negate the petitioner's showing. The burden of persuasion thus shifts to the agency to prove by clear and convincing evidence, a higher standard, that it would have taken the action even in the absence of the protected disclosure.

Kewley v. Dept. of Health and Human Services, 153 F.3d 1357, 1362 (Fed. Cir., 1998).

(5)Breaux, one of the provisioners who worked with Marler, testified that from the time that the Material Directorate was formed under Boeing, and Ryan took over as ILS Manager, "we always felt that we were being watched all the time." Tr., vol. II at 207.

(6)"To Marler's credit, both Verges and Breaux testified that although they assisted Marler on the computer, Marler was much more adept at reading equipment diagrams for purposes of determining parts to be provisioned. Tr., vol. II at 134-35, 169-70, 200. However, as clarified by Wade, this skill became less valuable since under the new regimen, the engineer assigned to the provisioner was charged with making this kind of parts determination. Tr., vol. II at 31-34.

(7)As noted above, Marler had no knowledge that he would be called as a witness in the *O'Laughlin* hearing until shortly before the hearing, nor had he been contacted by O'Laughlin who left DM in May 1992. Tr., vol. I at 23-24, vol. II at 144. Ultimately, O'Laughlin's complaint under Part 708, based upon a purported health and safety disclosure, was found to be without merit by the agency. *Francis M. O'Laughlin*, 24 DOE ¶ 87,505 (1994), *affirmed*, 24 DOE ¶ 87,513 (1995).

(8)Although the RIF list had been finalized by this time, DM informed DOE in a letter dated August 17, 1994, that as a security precaution, selected employees would not be notified until the effective date, September 22, 1994, and would be "out processed the effective date of the reduction in force." Exh. 33.

(9)Moreover, Ryan had a reputation for being a tough evaluator among other ILS employees he rated, apart from Marler. Tr., vol. II at 174, 203-04.

Case No. VWA-0026

February 17, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Hearing Officer Decision

Name of Petitioner: Joseph Carson

Date of Filing: October 26, 1998

Case Number: VWA-0026

This Decision involves the referral of a whistleblower matter involving Joseph Carson (Carson), a Department of Energy (DOE) employee. Pursuant to an order of an administrative judge of the United States Merit Systems Protection Board (http://www.mspb.gov) (MSPB) that implemented a settlement agreement between the DOE and Carson, Carson was permitted to submit documents to the Office of Hearings and Appeals regarding six instances of retaliation that he claims occurred because of certain protected disclosures that he made. The DOE was also permitted to submit documents at the same time. Both parties were permitted to submit replies to the initial submissions of documents. No provision for personal appearances or oral testimony was made. The agreement (hereinafter referred to as "the settlement agreement") calls for an OHA Hearing Officer to evaluate whether there is merit to Carson's claims that DOE management took any of those six actions in reprisal for activities protected under the Whistleblower Protection Act of 1989 (WPA) (hereinafter referred to as protected disclosures). This Decision is that evaluation.

I. Introduction

Carson is a former site representative at Oak Ridge, Tennessee, for the Office of Environment, Safety and Health Residents (its most current name) within the Office of the Assistant Secretary for Environment, Safety and Health (http://www.eh.doe.gov) (EH). He worked as a site representative from 1990 through August 1993, when he was reassigned to another office within EH. Carson alleges that DOE management, including his supervisor, his second line supervisor, and a number of DOE managers, retaliated against him for making disclosures about safety and fraud concerns. During the time in question, Mr. William T. Cooper, Jr. was Carson's supervisor, Mr. Bernard Michael Hillman, the Director of the Site Representatives Program, was Carson's second level supervisor, and Mr. Joseph E. Fitzgerald, Jr. was the Deputy Assistant Secretary for Safety and Quality Assurance who supervised Mr. Hillman.

Carson has been fighting this fight for many years. Carson has filed multiple claims that the DOE retaliated against him for making protected disclosures. Carson has filed these claims, among other

places, with the U.S. Office of Special Counsel (http://www.osc.gov) (OSC) and the MSPB. OSC's primary mission is to safeguard the federal employee merit system by protecting federal employees and applicants from prohibited personnel practices. It does this by investigating claims of reprisal for whistleblowing and prosecuting them before the MSPB.

The record is voluminous. Carson has submitted 415 exhibits for my review--the record before the MSPB

with Exhibits labeled Exhibit A through Exhibit MA (339 exhibits) and 76 additional exhibits. I have read all of them. I will not summarize them, the factual background in this matter, or the procedural history in this determination because this is a process limited by the original MSPB order, and a number of the exhibits are not germane to my evaluation. Furthermore, the MSPB order establishing this process requires my evaluation to be based upon the law that the MSPB would follow in determining whether any of Carson's claims are meritorious. As a result, the record of evidence should be limited to those materials that Carson submitted to the OSC in support of his complaints that he made protected disclosures for which he was retaliated against.

In reviewing [a whistleblower's] claim, the Board is limited to review of only those materials submitted to the OSC. The rationale behind submitting the claim first to the OSC is to enable the OSC to remedy any wrongdoing it finds without involving the Board. See Ward, 981 F.2d at 526. The exhaustion requirement would be rendered meaningless if a claimant were permitted to submit evidence of protected disclosures to the Board that was not submitted to the OSC. In Ellison, we stated that a failure to explicitly raise disclosures a claimant believes are protected with the OSC precludes consideration of these issues by the Board. See Ellison, 7 F.3d at 1037.

Willis v. Department of Agriculture, 141 F.3d 1139, 1144 (Fed. Cir. 1998). Nevertheless, this evaluation procedure is significantly different from the process that would have occurred before the MSPB because there is no provision for the presentation of oral testimony at a hearing. Oral testimony would have been useful in clearing up some ambiguities in the documentary evidence. Oral testimony also would have allowed me to gauge the credibility of witnesses. This omission has hindered my evaluation process, because there are a number of factual issues as to whether Carson's view or his supervisors' views are accurate. However, the MSPB order established the procedures I am to follow, and my review of the entire record gives me some additional insight into the interchanges between Carson and his colleagues, supervisors, and managers.

In a case involving allegations that personnel actions were taken against a federal employee in retaliation for making disclosures protected under the Whistleblower Protection Act of 1989, the analysis can be stated quite simply. The employee must show that he or she made a protected disclosure and that the disclosure was a contributing factor in the agency's personnel action. The employee makes a prima facie case if he shows that the official taking the personnel action knew of the protected disclosure and that the action occurred within a reasonable time of that disclosure. *Kewley v. Department of Health and Human Services*, 153 F.3d 1357 (Fed. Cir. 1998). If the disclosure were a contributing factor, the burden of proof shifts to the agency, which in order to prevail, must prove by clear and convincing evidence that it would have taken the same personnel action in the absence of the disclosure.

II. The Alleged Disclosures

Carson claims to have made a number of protected disclosures beginning in December 1991. First, he alleges that in that month he spoke with his supervisor about his concern that a former site representative who had recently resigned had been hired as a consultant for the program. Carson also complained about other aspects of the use of consultants. He complained to his supervisor that a particular consultant was charging for time that Carson considered to be nonproductive. (Carson characterized this as fraud.) He also claims that he was concerned that consultants were being hired who his second line manager liked on a personal basis.

Carson also states that in December 1991 he called a hotline maintained by the DOE's Office of Inspector General (hereinafter referred to as OIG) and "voiced concerns about the use of consultants in my program . . . ." Exhibit 1 at page numbered 5.

Carson also maintains that in April 1992 he alleged to the assistant to his second level manager that Carson's supervisor Cooper had falsified Cooper's time and attendance reporting because Cooper had not accounted for all hours that he was on sick leave. Carson also claims in one sentence to have made the

same allegation to the OIG, and then in the next sentence he says he thinks he also informed the OIG. Exhibit 1 at page numbered 6.

Carson also claims that allegations against his supervisors in grievances he filed in response to reprimands and performance evaluations were protected disclosures. Carson claims that a certification in his 1991 performance plan had been falsified, possibly by his second level supervisor. Carson also claims that he notified the OIG of what he characterized as threatening conversations with a DOE Deputy Assistant Secretary and a DOE Labor Relations Specialist.

In May 1993, Carson alleges that he told his supervisor of "specific instances indicative of widespread fear or retaliation for identifying and reporting inadequate safety programs in DOE and DOE contractor safety organizations." Exhibit 1 at page numbered 7. In July 1993, Carson claims to have complained to his supervisor that safety deficiencies he had uncovered were not included in a report that he had drafted. After he did not receive a response to that claim, Carson states that he wrote to the Secretary of Energy and the Manager of the DOE Oak Ridge Operations Office to disclose his concerns.

III. The Alleged Retaliation

Under the settlement agreement, the issues to be addressed here are whether there is merit to Carson's claims that DOE management took the following actions against Carson for making disclosures protected under the Whistleblower Protection Act of 1989:

1. The 1991 performance appraisal of Fully Successful signed by the Reviewing Official on August 9, 1992;
2. A written reprimand that Carson received on August 19, 1992;
3. An unacceptable performance evaluation that Carson received on September 29, 1992;
4. A marginal performance evaluation that Carson received on January 28, 1993;
5. The denial of a within grade step increase as a result of the unacceptable and marginal performance evaluations, as well as Carson's failure to receive notification of the denial of a within grade step increase after the marginal performance evaluation in January 1993; and
6. The unacceptable advisory rating that Carson received on October 14, 1993.

In making those determinations, the settlement agreement states that I will use "applicable legal precedents related to allegations of whistleblower reprisal, primarily those found in decisions issued by the Merit Systems Protection Board." Stipulation of Settlement and Dismissal, *Carson v. Department of Energy*, No. SL-1221-94-0179-B-1, Attachment A at 1 (MSPB Oct. 20, 1998). In other words, the issue here is whether any of these actions would be found under MSPB law to be unlawful retaliation for the making of a protected disclosure.

IV. Procedural History

The procedural history of the disputes between Carson and his management is long and complex. Since this evaluation is focused on a small part of the overall picture, it is not necessary to go into much detail about the larger disputes; the parties know the procedural history all too well. This evaluation process began when an administrative judge at the MSPB signed an order on October 20, 1998, approving a settlement agreement between Carson and the DOE. That agreement provides that "[t]he allegations of whistleblower reprisal made by Mr. Carson in this appeal will be evaluated by the process . . . before the Office of Hearings and Appeals ("OHA") to determine whether they were meritorious." Stipulation of Settlement and Dismissal, *Carson v. Department of Energy*, No. SL-1221-94-0179-B-1, at 2 (MSPB Oct. 20, 1998). The agreement provides for the submission of documents during the OHA evaluation process and a determination whether DOE management took any of six actions in reprisal for whistleblower activities. The evaluation is supposed to be governed by the criteria used by the MSPB in evaluating whistleblower complaints.

Under the rules governing this type of action at the MSPB, a person who claims to have been retaliated against for making a protected disclosure must first file a complaint with the U.S. Office of Special Counsel. That office will investigate the claim and either prosecute it before the MSPB or close its processing of the complaint without any action. If the OSC stops processing a complaint without any action, an individual can prosecute his claim by starting an "Individual Right of Action" at the MSPB. The MSPB has held that an individual's cause of action at the Board is restricted to the actions that the OSC investigated. In other words, an individual may not raise at the Board in the first instance a disclosure or personnel action that he did not call to the attention of the OSC. *Willis v. Department of Agriculture*, 141 F.3d 1139 (Fed. Cir. 1998).

The Office of Special Counsel issued three letters to Carson about his complaints, one dated June 2, 1992 (Exhibit BO but listed in the index as Exhibit BP), one dated October 26, 1993 (Exhibit 46), and one dated February 24, 1994 (Exhibit 50). In his first complaint to the OSC, Carson had alleged that the lowering of his 1991 annual performance appraisal from the previous year was because of his whistleblowing activity. Specifically, Carson alleged that he told his supervisor and the OIG about his concerns that the hiring of a former government employee as a consultant in the same program violated government rules. Carson also alleged that his second level supervisor was "hiring contractors based on his personal relationship with the contractors rather than adhering to government regulations." Exhibit BO. The Office of Special Counsel stated that it would not inquire further into this matter because the information reported to Carson's supervisor and the IG did not constitute a disclosure protected by the Whistleblower Protection Act of 1989. Furthermore, the OSC stated that Carson had not provided any evidence to support his belief that his second level supervisor was not following government regulations when hiring consultants. *Id*.

In its October 26, 1993 letter, the OSC found that with the exception of a disclosure alleging the misreporting of sick leave by his supervisor, it was not clear that the MSPB would find any of the other disclosures protected by the Whistleblower Protection Act of 1989. Those disclosures were (1) a disclosure to Carson's supervisor and OIG that a former site representative had been hired as a consultant in possible violation of DOE regulations, (2) a disclosure in December 1991 that Carson characterized as possible fraud among consultants in his program, (3) a disclosure about a concern that consultants were being hired based on their personal relationship with DOE management, (4) a disclosure to other site representatives about Carson's concerns about possible fraud among the consultants in the program, and (5) a disclosure that Carson's supervisor was misreporting his time and attendance. The OSC also concluded that the "personnel actions at issue were based on legitimate management concerns and not because of your disclosures or grievances." Exhibit 46 at 2.

The February 24, 1994 letter from the Office of Special Counsel found no basis for further inquiry into the marginal performance rating that Carson received in January 1993 and a subsequent denial of a within grade increase of salary in February 1993. The Office of Special Counsel found that it would not consider Carson's allegation of receipt of an unacceptable advisory performance rating in October 1993 because an advisory performance rating is not considered a personnel action that may form the basis of a whistleblower complaint. Exhibit 50.

V. Whether Carson Had Made A Prima Facie Case Of Retaliation

In order to establish a case on which the MSPB might grant relief, Carson needs to show that he has exhausted his remedies at the OSC. Exhibit 1 clearly shows that he did. He also needs to show that he made a protected disclosure under 5 U.S.C. § 2302(b)(8), that he was subjected to a "personnel action" within the meaning of 5 U.S.C. § 2302(a)(2), and that the disclosure was a contributing factor in the agency's personnel action. At the outset of my analysis, I want to make clear that I view the findings of the OSC in these matters to be evidence but not at all dispositive or binding on the issue of whether there is merit to Carson's positions. The findings are simply the OSC's views given the information and arguments presented to it. I will now turn to a discussion of Carson's disclosures.

Carson has made a number of allegations concerning the hiring and use of consultants in the Site Representatives program. He first alleged that he had concerns about the hiring of a former employee as a consultant in the same program. Carson has stated in the index to his exhibits:

6. Copy of pages of book on Federal Retirement that mentions "post-employment restrictions." Carson bases his concern about the rehiring of Myers as a consultant in a program in which he had been a manager based on what he read in this book.

Exhibit 6 is a portion of a booklet entitled **Your Retirement – How to Prepare for It, How to Enjoy It**. It was written by Bill Olcheski and published by Federal Employees News Digest Inc. of Reston, Virginia (http://www.clubfed.com/fedforce/fedforce.html). It is not an official government publication. Carson has provided in Exhibit 6 two pages of Chapter 11 that deals with Post-Retirement Employment. The discussion of post retirement restrictions on working as a consultant for a contractor to the federal government starts by saying that the rules are "long and involved . . . ." Exhibit 6. Then the author writes a very general summary of the restrictions that is three paragraphs long.

No reasonable person could read these passages and conclude that the hiring of a former government employee as a consultant is against government rules. The material that Carson claims is the basis for his knowledge and concern itself says that the rules are "long and involved and read like the small print on an insurance policy." Exhibit 6. While this would put people on notice that an issue exists when hiring a former government employee as a consultant, it is a leap to say that these passages indicate that the hiring of a former government employee is a violation of government rules. In a memorandum dated in July 1992, Carson said that he "was concerned that hiring Myers back so soon was a breach of regulations." Exhibit CE at 2. Yet, this concern rapidly shifted to the latter position, that hiring Myers was in fact a violation of regulations. The rules for hiring any federal employee are long and involved; the rules for letting any government contract are long and involved. This does not mean that merely pointing out that someone has been hired, or that a government contract has been let, constitutes a disclosure of wrongdoing.

Carson claims that he made this disclosure to both his supervisor and the OIG. The record in this case is unclear about what he disclosed to the OIG. Carson maintains that in December 1991 he called the OIG hotline and "voiced concerns about the use of consultants in my program . . . ." Exhibit 1 at page numbered 5. Nothing in the record shows what those concerns were. This characterization by Carson is in stark contrast to the lengthy explanation that he wrote about the concerns raised to his supervisors at the same time, and without further evidence causes me to question what transpired in the call to the OIG hotline, if it happened at all. Nevertheless, it appears that Carson did indeed raise this concern to the OIG. The record indicates that the OIG brought this issue to the attention of the DOE, and the DOE Office of General Counsel responded about this issue. Exhibits FI and GA. Nevertheless, the fact that an issue exists does not evidence a violation of law or an abuse of authority, and such a disclosure is not protected under the Whistleblower Protection Act of 1989. To hold otherwise would allow any question about federal employment or a federal contract to be a protected disclosure.

Indeed, the record indicates that DOE management was well aware that this issue existed. In a deposition given on January 24, 1994, Joseph Edward Fitzgerald, Jr., Deputy Assistant Secretary for Safety and Quality Assurance at DOE, testified as follows:

Q During that meeting did Mr. Carson bring up his concerns of - - [sic] about consultants and their use?

A Yes, I believe that was one of the issues that he had expressed.

Q What was your reply when he brought that up?

A I had indicated I had understood that - - [sic] that his concern had been relayed to me by [his second level supervisor] Mr. Hillman, and that we had, in fact, went through and reverified, if you may, that, in fact, all of the procedures were being satisfied, there was no conflict of interest from our standpoint, which

we had done.

Exhibit 54 at 14-15. This comment clearly points out that DOE management took steps to assure that government regulations were followed in the hiring of this consultant. The WPA, in 5 U.S.C. § 2302(b)(8), states in part that a protected disclosure must evidence a violation of law or regulations. Based on the record before me, I find that Carson's disclosure that he had a concern about the hiring of a former employee as a consultant in the Site Representatives Program, whether made to his supervisor or the OIG, is not such a disclosure, and it is not protected under the WPA.

Carson also alleged that contractors were charging time for which Carson believed was not productive. He also claims to have alleged fraud in the use of contractors in his program. With respect to the former claim, Carson apparently believes that time he spent with one consultant in particular was not productive. Five U.S.C. § 2302(b)(8) states that a protected disclosure must evidence a violation of law or regulations, or evidence "gross mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety." Disclosing that several interactions with a particular contractor may have been less than ideally efficient hardly rises to the level of a protected disclosure evidencing a gross waste of funds.

Evidence that Carson submitted in this proceeding undercuts his position. In a December 3, 1998 memorandum that Carson asked him to write, Ari Krasopoulos, a site representative from 1989 to the present, stated his experience with consultants thusly:

Regarding my observations on the use of support contractors during the 91-93-time period: I worked with a lot of support contractors over the years and my experience has been overwhelmingly positive (with a couple of exceptions). That includes the time period you are interested in. The support contractors that I worked with all were professionals with good work ethic, they were good at what they were doing and yes with strong opinions and often with big egos. I guess if you are good at what you do, you can have the luxury of a big ego and strong opinion. For the most part I did not mind that because it did not interfere with what I did.

Although overall I have been pleased by the contractors performance and professional behavior not all of my experiences with contractors were great. Once I had a bad experience with one individual support contractor (near the time frame you are interested in). That fellow did not know his position in the organization and as a result I made sure he did not work for me or with me again. My supervisor at the time (Hillman) did not interfere with my decision not to have that fellow on my team again. Also there was another contractor who worked on my team once that I did not think he was being very productive. I made sure that he was not on my teams after that.

Memorandum Dated December 3, 1998, to Joseph Carson from Ari Krasopoulos regarding Response to Your Letter Dated Nov. 23, 1998 Requesting My Views at 2. It is a tautology to say that upon reflection not all time is spent being the most productive one can be. Statements about that do not evidence gross mismanagement or a gross waste of funds.

Carson also alleges that in April 1992 he told Carol Peabody, as assistant to the Deputy Assistant Secretary, that his supervisor reported his time and attendance inaccurately. As noted above, he also states that he notified the OIG of this matter, then in the next sentence says "I think I also informed the DOE IG of these allegations." Exhibit 1 at page numbered 6. These statements were included in an Appeal Form that Carson filed with the MSPB. The form is signed by Carson and dated December 20, 1993. Exhibit 1.

While further development of evidence might confirm these disclosures, there is no evidence in the record before me to support these allegations. Carson's conflicting statements about whether he informed the OIG of this concern in April 1992 cast doubt as to whether Carson in fact relayed these concerns to the Inspector General. Although Carson has submitted the deposition testimony of 15 people associated with the events here, Ms. Peabody's testimony is absent, even though she was available. Exhibit 52 at 2. There is no evidence to show what Carson said to Ms. Peabody, if indeed he said anything to her about Cooper's

reporting of his attendance. This lack of evidence is more compelling because the OSC informed Carson in its letter dated October 26, 1993, that one alleged action that the MSPB would likely consider a protected disclosure was his disclosure that his supervisor has falsified his time and attendance reporting. Exhibit 46. All of the depositions Carson has entered into the record before me took place in January 1994, approximately three months after the OSC letter and one month after he filed his appeal with the MSPB. Exhibits 51 through 65. Yet nowhere in those depositions is this disclosure mentioned. Indeed, Carson alleged that he also told his supervisor and his second level manager about his concerns. Exhibit 46. Nevertheless, the deposition of his supervisor, Exhibit 51, and his second level manager, Exhibit 52, are silent about this issue. Based on this record, Carson has failed to make a prima facie case that he made this protected disclosure.

Nevertheless, there is evidence in the record that he made similar disclosures to the OIG on July 8, 1992. Exhibit CF purports to be an unsigned memorandum from Carson to the OIG alleging that Carson's supervisor filed inaccurate time and attendance records. DOE has not challenged the authenticity of this document. While the July 1992 memorandum states that Carson has spoken to the OIG on a previous occasion, nowhere is it mentioned that the issue of time and attendance reporting came up. This lends support to my conclusion above that Carson had not in fact made a disclosure of this matter to the OIG in April 1992.

Carson also states that he disclosed safety lapses that his management deleted from drafts of reports that his office issued. The record indicates that he complained to his supervisor and management that safety lapses he uncovered had been later deleted from reports that he had drafted. When his supervisors were not receptive to reincorporating these matters into the final reports issued by the Site Representatives Program, Carson disclosed them to the Secretary of Energy and the Manager of DOE's Oak Ridge Operations Office.

In *Willis v. Department of Agriculture*, 141 F.3d 1139 (Fed. Cir. 1998), the United States Court of Appeals for the Federal Circuit dealt with an issue similar to this. There, an employee argued that his supervisors reversed six findings that farms were not in compliance with approved soil conservation plans. Willis argued that his complaints to supervisors regarding the reversal of his findings constitute protected disclosures. In rejecting this position, the Court stated that:

Willis's complaints to supervisors are not disclosures of the type the WPA was designed to encourage and protect. Discussion and even disagreement with supervisors over job-related activities is a normal part of most occupations. It is entirely ordinary for an employee to fairly and reasonably disagree with a supervisor who overturns the employee's decision. In complaining to his supervisors, Willis has done no more than voice his dissatisfaction with his superiors' decision.

Id. at 1143. This holding applies in this matter as well. Carson complained to his supervisor and second level manager about the changes they made to reports that he drafted. He was particularly angered by items that were deleted from his drafts as his supervisor and second level manager made changes to conform his drafts to their ideas of quality. But as the *Willis* court held, these types of complaints are not disclosures protected by the Whistleblower Protection Act of 1989.

Carson further alleges that when his supervisors did nothing to include the matters that he thought should be in the report, he notified the Secretary of Energy and the Manager of DOE's Oak Ridge Operations Office of his concerns. Evidence in the record confirms these disclosures. See Exhibits 28 and FW. A DOE employee should be free to disclose safety concerns to high-level DOE officials without the fear of retaliation. While a disclosure that he disagreed with how his supervisors edited his reports would not be a protected disclosure, the allegation made to senior DOE officials—the Secretary of Energy and the Manager of DOE's Oak Ridge Operations Office—that safety concerns were not making it up the chain of command are the types of disclosures that are covered by the Whistleblower Protection Act of 1989.

In summary, the evidence shows that Carson did notify the OIG that he suspected that his supervisor was

reporting time and attendance inaccurately in July 1992. In addition, his disclosure to the Secretary of Energy and the Manager of the Oak Ridge Operations Office in July 1993 that safety deficiencies were deleted from reports was a disclosure protected by the WPA. I also find that the other disclosures that Carson has identified are not disclosures protected by the WPA.

After a finding that an employee has shown that he or she made a protected disclosure, the employee must show that the disclosure was a contributing factor in the agency's personnel action. The employee makes a prima facie case if he shows that the official taking the personnel action knew of the protected disclosure and that the action occurred within a reasonable time of that disclosure. The first issue to be analyzed is whether the actions complained about are personnel actions for purposes of the WPA.

As noted before, this evaluation focuses on whether any of six actions were taken against Carson in reprisal for activities protected under the WPA. Those activities include:

1. The 1991 performance appraisal of Fully Successful signed by the Reviewing Official on August 9, 1992;
2. A written reprimand Carson received on August 19, 1992;
3. An unacceptable performance evaluation the Carson received on September 29, 1992;
4. A marginal performance evaluation that Carson received on January 28, 1993;
5. The denial of a within grade step increase as a result of the unacceptable and marginal performance evaluations, as well as Carson's failure to receive notification of the denial of a within grade step increase after the marginal performance evaluation in January 1993; and
6. The unacceptable advisory rating that Carson received on October 14, 1993.

Clearly a formal performance evaluation or appraisal (items 1, 3, and 4 above) is a personnel action for purposes of the WPA. 5 U.S.C. § 2302(a)(2)(A)(viii). The remaining items on the list above are as follows: Item 2 is a written reprimand. Item 5 is a denial of a salary increase based on poor performance evaluations. Carson also complains that he did not receive notification of the denial of the salary increase. Item 6 is an unacceptable advisory rating that Carson received from his former supervisor after he was transferred to another program.

The reprimand Carson received is also a personnel action for purposes of the WPA. *McVay v. Arkansas National Guard*, 80 MSPR 120 (1998); *Gonzales v. Department of Housing & Urban Development*, 64 MSPR 314, 319 (1994). However, it presents some different considerations. By its terms, the August 1992 reprimand was to remain in Carson's personnel file for one year and be withdrawn from there after one year. Exhibit CY. A settlement agreement between Carson and the DOE dated February 25, 1994, stated that "all negative materials will be expunged from Mr. Carson's files. That is, any references to the matters contained in the 1991 or 1992 ratings and other derogatory references to him or to his work will not be maintained by the agency . . . ." Exhibit 14. The MSPB has held that "[w]hen an appellant cannot obtain effective relief before the Board, even if his [Individual Right of Action, namely whistleblower] appeal is within the Board's jurisdiction and he shows that he was subjected to a retaliatory personnel action, the appeal should be dismissed for failure to state a claim upon which relief can be granted." *McVay v. Arkansas National Guard*, 80 MSPR 120 (1998). As the MSPB has stated:

Under 5 U.S.C. § 1221(g), as corrective action, the Board is authorized to order "that the individual be placed, as nearly as possible, in the position the individual would have been in had the prohibited personnel practice not occurred," including "back pay and related benefits, medical costs incurred, travel expenses, and other reasonable and foreseeable consequential changes." Here, the appellant has lost no pay or benefits as a result of his oral reprimands and he has not alleged that he incurred medical costs, travel expenses, or other reasonable and foreseeable changes. Moreover, because there is no allegation and no evidence that the oral reprimands are a matter of record, there is no relief that the Board can fashion to return the appellant to the status quo ante; there is no file that the Board can order expunged and there is no action that the Board can order canceled. Indeed, we can conceive of no remedy at all. Under these circumstances, even assuming that the Board has jurisdiction over this appeal with respect to the three oral

reprimands, the appellant has failed to state a claim for which relief can be granted, and his appeal must be dismissed.

McGowen v. Department of the Air Force, 72 MSPR 601, 607 (1996). That reasoning applies here. By its terms the August 1992 reprimand remained in Carson's personnel file for one year. The February 1994 agreement between Carson and DOE confirmed that any derogatory references to Carson's work during the 1991 and 1992 period would be expunged from his personnel file. There is no evidence in the record that this has not occurred. Accordingly, with respect to the August 1992 reprimand, under the Board's precedents Carson has failed to state a claim for which relief can be granted. This portion of his submission should therefore be dismissed.

Other actions that Carson complains about are not personnel actions for which relief may be granted. While a denial of salary increase is a personnel action because it affects terms of employment, 5 U.S.C. § 2302(a)(2)(A)(ix), the lack of receipt of notification of the denial of a salary increase is not a personnel action that can sustain a whistleblower complaint. Nor is an advisory performance rating a personnel action for purposes of the WPA. *King v. Department of Health and Human Services*, 133 F.3d 1450 (Fed. Cir. 1998).

In summary, the following events are "personnel actions" within the meaning of 5 U.S.C. § 2302(a)(2)(A) for which Carson might receive relief:

1. The 1991 performance appraisal of Fully Successful signed by the Reviewing Official on August 9, 1992;
2. An unacceptable performance evaluation the Carson received on September 29, 1992 (Exhibit 9);
3. A marginal performance evaluation that Carson received on January 28, 1993 (Exhibit 11);
4. The denial of a within grade step increase because of the unacceptable and marginal performance evaluations.

In making a prima facie case of whistleblower retaliation, individuals generally show that disclosures were a contributing factor to agency personnel actions "by establishing circumstantial evidence of knowledge of the protected disclosure and a reasonable relationship between the time of the protected disclosure and the time of the personnel action." *Wojcicki v. Department of the Air Force*, 72 MSPR 628, 636 (1996). I have found that Carson has shown that he made protected disclosures in July 1992 and July 1993. The disclosures in July 1993 cannot constitute protected disclosures for purposes of this proceeding because they occurred after the four personnel actions listed above. *See Willis v. Department of Agriculture*, 141 F.3d 1139 (Fed. Cir. 1998). I have also found that Carson has provided no evidence to support his allegation that another protected disclosure—that his supervisor was misreporting leave—was a contributing factor to personnel actions. Indeed, the depositions of people who would have been in a position to take action on that matter are silent on this issue. Exhibits 52 and 54. There is no evidence in the record that suggests that his supervisor or anyone in his management chain knew that Carson had reported his suspicions about his supervisor's reporting of time and attendance to the OIG. A disclosure to the OIG that is not communicated to agency personnel that had responsible for taking personnel actions against Carson may not form a basis for a whistleblower action. *Brewer v. Department of the Interior*, 76 MSPR 363 (1997). Thus, Carson has failed to show that a protected disclosure was a contributing factor to personnel actions covered by the WPA.

VI. Evidence Concerning Personnel Actions

Even if Carson had shown that a protected disclosure was a contributing factor to an adverse personnel action, clear and convincing evidence in the record indicates that DOE would have taken the same personnel actions in the absence of any disclosures. For this part of the analysis, I will assume that Carson had been able to show that he made a protected disclosure that was known to his supervisors who took the personnel actions. Since its appears from the record that the personnel actions occurred over a short period of several months, and the criticism of Carson's work was very much the same, I will analyze as one issue

whether the record supports a finding that the agency has shown by clear and convincing evidence that it would have taken the same personnel actions.

After reading the entire record, I must say that at the bottom of this case seems to be a dispute between an employee and his management about what should be contained in official reports of the Site Representatives Program. Throughout the record are discussions between Carson and his supervisor and management about the analytic framework and focus of official reports to be issued from the Site Representatives Program. There is a general recognition by everyone that the focus of the reports changed when Michael Hillman became the director of the program. Mr. Hillman's supervisor, Mr. Fitzgerald, testified during his January 1994 deposition that:

I know that the adequacy of preparation of reports was an issue. In fact, I, personally, in terms of charging the objectives of the site representative program in terms of mission and functions, was asking for more comprehensive, more validated assessment reports as a going in proposition. I know there was a transition period by which we were asking that these reports be prepared with more validation, more evidence of facts, and more clearly stated conclusions, and that we were helping a number of site representatives achieve that.

Exhibit 54 at 9.

My summary of the voluminous evidence submitted by Carson is that he did not change the focus of the drafts he submitted and that this was the major contention between Carson, on the one hand, and his supervisor and management on the other. In his January 1994 deposition, Mr. Hillman, who was the director of the Site Representatives Program at the time in question, testified that both he and Carson's supervisor "were frustrated with trying to get Mr. Carson to write reports in accordance with the EH's instructions." Exhibit 52 at 16. Mr. Hillman testified that Mr. Humphries, someone familiar with Carson's work, told him that Carson had identified lots of specific instances of non-compliance with safety rules, but that his work failed to document management processes to carry out the safety programs. It was also disjointed and pejorative in nature. Exhibit 52 at 20. Mr. Hillman also testified that Ron Wright told him the same thing about Carson's work. *Id*. at 22. These comments reflect the same message that is contained in Carson's performance evaluations. *Id*. at 20 and 22. Rather than accept that there may be some truth to these evaluations, Carson's reaction was to challenge his supervisors and tell them why his work was good and correct.

Carson's performance standards for 1992 are instructive. The standards were formally adopted on March 19, 1992, and by their terms were effective for the 1992 calendar year. Exhibit 9 at 2. They contained six performance elements that were described at the marginal, fully successful, and outstanding levels. From my long experience in the DOE, they appear to me to be written very much like other standards with which I am familiar. Carson attached a comment at that time indicating that his supervisor had agreed to define what was expected of Carson at the fully successful level for each performance element. Id. at 3. Carson's supervisor did this in a memorandum dated April 8, 1992. Exhibit AN (listed as Exhibit AO in Carson's index). In an April 16, 1992 memo entitled "Meeting to Discuss Performance," Carson's supervisor said:

. . . I have some concerns with the writing style presented, the number of comments I am having to ask regarding the content. As Hillman would say, there have been several questions that begged to be asked. Also, I haven't seen your incorporation of my comments for those portions of the report you submitted to me on 4/8. 4/9. and 4/13. At the meeting on Monday, I would like to see all of the pieces of the Y-12 report assembled on one package so that I can review the entire report, and not review on portion at a time.

Exhibit AO. Carson's supervisor also stated that he had not seen the assessment guide that Carson was using, even though one week earlier he has told Carson that, as part of the fully successful level on Element 1 of his performance standards: "I should not have to come to you to request a status on your

current assessment activity." Exhibit AN at 1.

Carson's supervisor criticized his work product in a series of memoranda dated April 21, 1992 (Exhibit AR) and April 27, 1992 (Exhibit AT). Carson's reaction to this criticism was that one of his supervisors was "engaged in a process of discrediting me," Exhibit AS, or that he simply could not understand what changes he should make or what was expected of him. Exhibit AV. This is difficult to accept. Carson is a GS-14 General Engineer. He has earned the right to call himself a Professional Engineer. Nevertheless, Carson's work product clearly did not meet the standards of his supervisor and management. The Director of the Site Representatives Program routinely reviewed Carson's work. The director saw reports from all site representatives, and there was no indication that he did not understand the quality of work and the general quantitative range on which Carson's performance ratings were based.

Carson work was rated in September 1992 as unsatisfactory. Apart from the standard "check the boxes" evaluation, Carson's supervisor wrote a nine-page detailed evaluation covering each of the six performance elements in place. Exhibit 9. Carson's reaction, as reflected in comments he attached to the evaluation, was that the performance review was "further evidence of the concerted campaign EH management has been engaged in since December 1991 to retaliate against me for openly voicing concerns about possible abuses of consultant labor in this program." Id. at 11. (It is important to remember at this point that I have found that Carson's concerns in December 1991 are not disclosures that are protected by the WPA and that the DOE Office of General Counsel concluded that there was no violation of post-employment restrictions, as Carson suggested might have occurred.)

As a result of the September 1992 unsatisfactory rating, Carson was placed on a performance improvement plan. Exhibit 10. A progress report was given to Carson; it is dated December 15, 1992. Exhibit 12 at 7. The report notes where Carson is not performing at the fully successful level and states with specificity why his supervisor believes that and what actions Carson needs to take to achieve fully successful performance. His supervisor also notes successes that Carson has had as well as improvements since the performance improvement plan was implemented. Yes Carson's response, as recorded in comments that appear to be dated January 11, 1993, starts by saying: "This is little but misrepresentation and distortions . . . ." Exhibit 12 at 12. Carson's supervisor then gave him a performance evaluation at the end of the performance improvement plan. The rating he gave him was better than the rating in December, although still at the overall rating of marginal. Exhibit 11. In addition to the usual check box evaluation, Carson's supervisor wrote a 10-page evaluation justifying the level of the evaluation with respect to each performance standard. At this point, Carson simply disagrees with his supervisor's, and his second level supervisor's, evaluation.

Carson also argues that his performance standards and evaluation were stricter than other site representatives and suggests that this was done in reprisal for his disclosures. Carson offers the work product of other site representatives and asks that I compare that work product to his in order to confirm his position. This argument is also not persuasive. As has been pointed out to Carson many times by DOE personnel specialists, his performance rating is not done by comparing his work product to the work product of other site representatives. Rather, the rating is made by comparing his work to the performance standards in place for him.

VII. Conclusion

This evaluation proceeding started with an October 19, 1998 settlement agreement by Carson and the DOE to refer Carson's allegations of whistleblower retaliation to a hearing officer at the Office of Hearings and Appeals. Both parties were permitted to file documents in support of their positions; however, no provision was made for oral testimony. Carson has submitted more than 400 exhibits in support of his position.

My evaluation of the record indicates that Carson has failed to make a prima facie case that he made a disclosure protected by the Whistleblower Protection Act of 1989 that was a contributing factor to a

personnel action as defined in that Act. In any event, the record further shows that the DOE would have taken the actions it took even if Carson were able to show that a protected disclosure was a contributing factor to a personnel action.

It is Therefore Ordered That:

Having made the evaluation required by the order of the administrative judge of the U. S. Merit Systems Protection Board issued on October 20, 1998 in *Carson v. Department of Energy*, No. SL-1221-94-0179-B-1 (MSPB 1998), this matter is closed.

Case No. VWA-0031

August 6, 1999

UNITED STATES OF AMERICA

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Petitioner: Barbara Nabb

Date of Filing: February 25, 1999

Case Number: VWA-0031

I. Introduction

This Decision involves a complaint filed by Mrs. Barbara Nabb under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. In her complaint, Mrs. Nabb contends that reprisals were taken against her after she made certain disclosures concerning possible health and safety violations and mismanagement at the Rocky Flats Environmental Technology Site (Rocky Flats). These reprisals allegedly were taken by EG&G Rocky Flats, Inc. (EG&G) and by Kaiser-Hill Company, LLC (Kaiser Hill). EG&G was the managing and operating contractor of Rocky Flats beginning in December 1989. On April 4, 1995, Kaiser-Hill was awarded a contract to succeed EG&G as managing and integration contractor at Rocky Flats. Kaiser-Hill assumed EG&G's management responsibilities at Rocky Flats on July 1, 1995.

From January 1990 until October 1993, Mrs. Nabb held the position of Machinist. In October 1993, her job title was changed to Production Specialist. In November 1994, as a result of a Reduction in Force, she chose to "bump" into the position of Radiological Control Technician or RCT. On September 30, 1994, Mrs. Nabb provided information regarding her Part 708 complaint pursuant to the DOE Rocky Flats Field Office's Employee Concerns Manager. She completed the filing of her Part 708 complaint with a signed affirmation on January 12, 1995.

Acting on Mrs. Nabb's complaint, the DOE's Office of the Inspector General investigated this matter and on January 20, 1999, the Inspector General's Office of Inspections issued its findings in a Report of Inquiry and Recommendations (the RIR). The RIR found that Mrs. Nabb made several disclosures that constitute protected disclosures pursuant to Part 708. However, with respect to the alleged reprisals, the RIR found that Mrs. Nabb has failed to prove by a preponderance of the evidence that the alleged reprisals

involving temporary reassignments were the result of her protected activity. The RIR also found with respect to management's decision to terminate Mrs. Nabb's training for the position of Radiological Control Technician (RCT), that there is clear and convincing evidence that management's decision was not retaliatory pursuant to Part 708. As a result of these findings, the RIR recommends that Mrs. Nabb's request for relief be denied.

In response to the Office of Inspections' RIR, Mrs. Nabb requested a hearing before the Office of Hearings

and Appeals (OHA) under 10 C.F.R. § 708.9(a) concerning the findings of the RIR and additional allegations of reprisals. Both EG&G and Kaiser Hill also participated fully as parties in the OHA proceeding. The hearing in this case was held on April 28 and 29, 1999 at Rocky Flats. After consideration of the RIR, the briefs of the parties, the testimony given at the hearing, and the parties' post-hearing submissions, I find that EG&G and Kaiser Hill took acts of reprisal against Mrs. Nabb prohibited under 10 C.F.R. § 708.5, and that Mrs. Nabb is entitled to remedial action from these contractors.

II. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices by protecting those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure will be directed by the DOE to provide relief to the complainant. The DOE Contractor Employee Protection Program regulations, which are codified as Part 708 of Title 10 of the Code of Federal Regulations and became effective on April 2, 1992, establish administrative procedures for processing complaints of this nature.

B. Factual Background

1. The Findings of the RIR

The Office of Inspections investigated Mrs. Nabb's Part 708 complaint by conducting interviews with Mrs. Nabb, EG&G officials, and certain of Mrs. Nabb's co-workers at Rocky Flats. It also collected relevant documentary evidence. This information and the Office of Inspections' analysis of this information is presented in the RIR and its accompanying exhibits. The RIR finds that Mrs. Nabb made several disclosures that constitute protected disclosures pursuant to Part 708. In this regard, the RIR finds that:

(1) Mrs. Nabb's refusal to sign allegedly fraudulent travel documentation ("travelers") for hazardous waste drums during the period June to September 1993 constituted engaging in protected activity;

(2) Mrs. Nabb made allegations of waste drum "traveler" fraud to her supervisors and managers from September 1993 through December 1994 and these allegations constituted protected disclosures;

(3) Mrs. Nabb made allegations in May 1994 to EG&G managers concerning time card fraud that constituted protected disclosures; and

(4) Mrs. Nabb's statements to DOE official Marcy Nicks in December 1994 and to a management official in November 1995 concerning the contractors' alleged misuse of "3161 money" (funds specifically allocated for the retraining of certain employees) constituted protected disclosures.

RIR at pp. 4-9. In her original Part 708 Complaint, Mrs. Nabb alleged that several reprisals were taken against her by management officials of EG&G and Kaiser-Hill as a consequence of her making these disclosures. In this regard, the RIR finds that Mrs. Nabb's claims of reprisals included the following:

(1) In May 1994, EG&G refused to credit the time off that she took to attend the funeral of her brother-in-law as special "funeral leave" and instead required her to use her regular vacation leave for this purpose;

(2) During the summer of 1994, she was assigned, along with two or three other employees, to Warehouse

031 to clean equipment, an assignment that she considered to be undesirable;

(3) From August 1994, for a period of two or three months, she asserts that she was assigned to Property Utilization and Disposal (PU&D), which she regarded as an undesirable assignment;

(4) During the winter months of 1995, while undergoing RCT training, she was assigned by Mr. Kevin Konzen, Radiological Operations Compliance Section Manager, to what she considered to be an undesirable outside work assignment at "Ponds/Pads" (she was shortly moved to Building 776); and

(5) In 1995, shortly after Kaiser-Hill succeeded EG&G as managing contractor, she was informed by management that she would not be provided with the opportunity to complete her RCT training and thereby qualify for an RCT II job classification at a pay level of 16.

RIR at pp. 9-18. With respect to these alleged reprisals, the RIR found that Mrs. Nabb had failed to prove by a preponderance of the evidence that the denial of "funeral leave", her temporary reassignment to Warehouse 031, her reassignment from Building 460 to the PU&D, and her assignment to "Ponds/Pads" were the result of her protected activity. The RIR also found that there is clear and convincing evidence that management's decision to terminate Mrs. Nabb's RCT training was not retaliatory pursuant to Part 708. As a result of these findings, the RIR recommended that Mrs. Nabb's request for relief be denied.

2. The Contentions of the Complainant and the Contractors

In letter to the Office of Inspections dated February 10, 1999, Mrs. Nabb requested a hearing concerning the RIR's findings and preliminary disposition. The Office of Inspections forwarded this request to the OHA, and I was appointed the Hearing Officer in this matter on March 1, 1999. By a letter of March 3, 1999, I established a filing schedule for the parties' pre-hearing briefs and hearing dates of April 28 and April 29, 1999.

In submissions that she made to the parties in March 1999, Mrs. Nabb stated that she would not pursue her allegation that her employer's alleged decision to deny her "funeral leave" constituted a Part 708 reprisal. However, she contested the RIR's findings and conclusions concerning the other alleged acts of retaliation by EG&G and Kaiser-Hill. In addition, she made allegations of reprisal that were not discussed in the RIR. Specifically, she claimed that in about October 1994, certain contractor employees deliberately placed an acid in the liquid coolant of a lathe that she operated, causing her severe burns. She also claimed that Kaiser-Hill took certain actions in 1995 with the intention of getting her access authorization revoked. In a letter dated April 20, 1999, I dismissed Mrs. Nabb's claims for relief regarding these alleged retaliations, finding that Part 708 did not authorize the requested relief for these alleged retaliations. However, I permitted testimony at the hearing concerning the issue of the burns for the sole purpose of allowing Mrs. Nabb to attempt to establish a pattern of hostile activity toward her by EG&G personnel.(1) April 20, 1999 letter from Kent S. Woods, Hearing Officer, OHA, to Mrs. Nabb.

In its pre-hearing submission dated April 22, 1999, EG&G did not raise specific factual or legal objections to the RIR's findings concerning Mrs. Nabb's alleged protected disclosures and the alleged reprisals taken against her. With respect to the protected disclosures, EG&G stated that "[t]o the extent the Hearing Officer has already drawn conclusions regarding the legal sufficiency of these disclosures, Respondent EG&G must object, and reserves the right to examine Mrs. Nabb and other witnesses regarding these alleged disclosures, as well as introduce documentary evidence as necessary to address these issues." Similarly, with respect to the alleged reprisals, EG&G reserved the right to examine Mrs. Nabb and to present witness testimony and documentary evidence on these issues. In its pre-hearing submission dated April 29, 1999, Kaiser-Hill did not address the RIR's findings concerning the allegations of protected disclosures made by Mrs. Nabb. With respect to Mrs. Nabb's allegations of reprisals, Kaiser-Hill stated the following:

It is Kaiser-Hill's position that Mrs. Nabb suffered no retaliation of any sort from Kaiser-Hill as a

consequence of any allegation she may have raised while an employee of EG&G. The actions which were taken regarding Mrs. Nabb and her RCT training were the result of legitimate business reasons in the management of the RCT program.

April 29, 1999 Kaiser-Hill submission at 2.

3. Issues and Participants at the Hearing

Accordingly, on April 28 and 29, 1999, I convened a hearing in this matter at Rocky Flats. The hearing proceeded with the presentation of testimony by Mrs. Nabb and eleven other witnesses. At the outset of the hearing, Mrs. Nabb presented the parties with a letter that specified her claim for relief, including a claim for waste management "crew leader pay" that she had not raised previously. In addition to her own testimony, Mrs. Nabb presented the testimony of a co-worker and union representative, her supervisor at the time she was attending RCT training, a union steward, and two co-workers. Kaiser-Hill presented the testimony of the radiological control manager for Rocky Flats at the time of Mrs. Nabb's RCT training, as well as the testimony of the radiological operations manager who worked under him. EG&G presented the testimony of Mrs. Nabb's supervisor prior to the beginning of her RCT training, and of two EG&G operations officials who directed his activities.

4. Post-hearing Submissions

At the close of the hearing, I permitted post-hearing briefs from the parties concerning the factual and legal issues raised at the hearing. On May 25, 1999, Kaiser-Hill supplemented the record with additional correspondence and documents concerning the budget situation with respect to Mrs. Nabb's RCT training and concerning the July 24, 1995 directive to end the RCT training program. Post- hearing briefs were filed by Mrs. Nabb on May 27, 1999, by Kaiser- Hill on June 4, 1999, and by EG&G on June 8, 1999. In her post- hearing brief, Mrs. Nabb asserts that she was improperly denied the opportunity to complete her RCT training, and that the equities of the situation favor an order granting her relief under Part 708 that includes back pay and overtime pay that she would have received if she had completed that training. In its post-hearing brief, Kaiser-Hill asserts that its determination to terminate the RCT training program was made for reasons unrelated to the disclosures made by Mrs. Nabb, and that it would be both inequitable and contrary to Kaiser-Hill's contractual agreement with EG&G, for the DOE to require Kaiser-Hill to provide any remedial payments or actions for any retaliatory actions that EG&G personnel may have taken against Mrs. Nabb. In its post-hearing brief, EG&G maintains that, "although the fact that Mrs. Nabb made certain Part 708-protected disclosures has not been disputed," she has "failed to establish that her disclosures were a ?contributing factor' in the acts of retaliation alleged." EG&G post-hearing brief at 3.

III. Analysis

Proceedings under 10 C.F.R. Part 708 are intended to offer employees of DOE contractors a mechanism for resolution of whistleblower complaints by establishing procedures for independent fact-finding and a hearing before an OHA Hearing Officer leading to an initial agency decision, followed by an opportunity for an appeal of that decision to the OHA Director. If circumstances warrant, the employee or the DOE contractor may seek review of the OHA Director's decision by the Secretary of Energy or his designee. 10 C.F.R. §§708.32 and 35.

A. Legal Standards Governing Findings of Protected Disclosure and Adverse Action in this Case

The regulations provide, in pertinent part, that a DOE contractor may not take any adverse action against any employee for "[d]isclosing to a DOE official, . . . or [the individual's] employer, or any higher tier contractor, information that [the individual] reasonably and in good faith believe[s] reveals-

(1) A substantial violation of a law, rule, or regulation; [or]

(2) A substantial and specific danger to employees or to public health or safety; . . .

10 C.F.R. § 708.5(a).

1. The Complainant's Burden

The regulations describe the evidentiary burdens in a whistleblower proceeding as follows:

The employee who files a complaint has the burden of establishing by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure, participation, or refusal.

10 C.F.R. § 708.29.

It is my task, as the finder of fact in this Part 708 proceeding, to weigh the sufficiency of the evidence that has been presented by both Mrs. Nabb and the contractors. "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992). Under this standard, the risk of error is allocated roughly equally between both parties. Grogan v. Garner, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). Mrs. Nabb has the burden of proving by evidence sufficient to "tilt the scales" in her favor that when she communicated one or more of the specific concerns described above, she disclosed information which evidenced her reasonable and good faith belief that there was (I) a substantial violation of a law, rule, or regulation; or (ii) a substantial and specific danger to employees or to public health or safety. 10 C.F.R. § 708.5(a). If this threshold burden is not met, Mrs. Nabb has failed to make a *prima facie* case and her claim must therefore be denied. If the complainant meets her burden, she must then prove that the disclosure was a *contributing factor* in a personnel action taken against her. 10 C.F.R. § 708.29; see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994). A protected disclosure is likely to be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." Ronald A Sorri, 23 DOE ¶ 87,503 at 89,010 (1993) citing McDaid v. Dep't of Hous. and Urban Dev., 90 FMSR ¶ 5551 (1990). See also Russell P. Marler, Sr., 27 DOE ¶ 87,506 at 89,056 (1998).

2. The Contractor's Burden

If I find that Mrs. Nabb has met her threshold burden, the burden of proof shifts to the contractors. The contractors must prove by "clear and convincing" evidence that they would have taken the same personnel action against the complainant absent the protected disclosure. "Clear and convincing" evidence is a much more stringent standard; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt". See Hopkins, 737 F. Supp. at 1204 n.3. Thus if Mrs. Nabb has established that it is more likely than not that she made a protected disclosure that was a contributing factor to an adverse personnel action taken by the contractors, the contractors must convince me that they clearly would have taken this adverse action had Mrs. Nabb never made any communications concerning possible statutory or health and safety violations by EG&G.

B. The Complainant Made a Protected Disclosure

In the RIR, the Office of Inspections conducted an extensive analysis of whether certain statements and actions made by Mrs. Nabb constituted protected disclosures under Part 708. As noted above, Kaiser-Hill did not present any argument or witness testimony in this proceeding concerning Mrs. Nabb's alleged protected disclosures, and EG&G has acknowledged that "the fact that Mrs. Nabb made certain Part 708-protected disclosures has not been disputed . . . ." EG&G Post-Hearing Brief at 3. If I find that Mrs. Nabb's disclosures were protected under Part 708 and were proximate in time to the alleged reprisals, those findings are sufficient to establish her protected position under the regulations and to place the burden of proof on her employers to show that the alleged reprisals did not occur. As discussed below, I find that Mrs. Nabb did make protected disclosures that occurred proximate in time to the reprisals alleged in this proceeding.

As noted above, the RIR found that Mrs. Nabb made allegations of waste drum "traveler" fraud to her supervisors and managers from September 1993 through December 1994 and these allegations constituted protected disclosures. Specifically, the RIR found that at some time in the summer of 1993, she was told by Mr. Ernie Bentson, an EG&G waste management compliance specialist, to alter the travel documentation ("travelers") on 29 waste drums by marking them as containing "dry" waste rather than liquid or "wet" waste. RIR at 4. Mrs. Nabb explained to the Office of Inspections investigator that she was told that the barrels contained "sucker pigs" (sacks filled with material like cat litter and used to soak up oil, transmission fluid, machine lubrication, and cutting fluids) or "floor dry" or "kemwipes", and that these materials contained sufficient waste liquid to create "liquid depth" in some of the barrels. Mrs. Nabb refused to make the requested changes because she believed they would falsify the "travelers." RIR Exhibit 10 at 2.

The RIR indicates that beginning in September 1993, Mrs. Nabb shared her concerns regarding the mislabeling of hazardous waste drums with a number of individuals in addition to her immediate supervisor, Mr. Bentson. These individuals included Wilma Padron, Shift Manager, Safe Sites of Colorado; Dale H. Nichols, Shift Manager, Safe Sites of Colorado; Mr. D. Foster, Environmental Coordination; Lawrence Kwei, General Engineer, DOE Safeguards and Security Group; and Paul Golan, Team Leader of Mission Advocacy, DOE Rocky Flats. RIR at 4-5, citing Exhibits 12, 32, 29, and 24.

While most of these contacts appear to have occurred in late 1993, the RIR finds that in May and June of 1994, Paul Golan, Team Leader of Mission Advocacy, DOE Rocky Flats, met with Mrs. Nabb at the request of Anson Burlingame, former President, EG&G, Rocky Flats, to discuss several of the concerns that she had raised. RIR at 5, citing Exhibit 50. However, in a submission in this proceeding received on April 19, 1999, Mrs. Nabb asserted that "I only talked to him on the steps about silicone hardener being improperly disposed of which I did not turn in [as an alleged disclosure]." Mrs. Nabb's April 19 submission at 4. Mrs. Nabb repeated this assertion at the Hearing, but later recalled a brief meeting with Mr. Golan where at least one of her alleged disclosures was discussed. Hearing Tr., Vol. 2 at 599-608. It appears from a post meeting memorandum written by Mr. Golan that the issue of the waste drum travelers was at least briefly raised at this meeting. Exhibit 50.

Finally, in December 1994, Mrs. Nabb met with several EG&G management officials and Marcy Nicks, Employee Concerns Coordinator, DOE Rocky Flats. According to Ms. Nicks, the meeting was organized to allow EG&G management and Nicks to come to an understanding regarding the issues that Mrs. Nabb was raising in her Part 708 complaint. See Memorandum of Interview with Marcy Nicks, Exhibit 30. Ms. Nicks' notes of that meeting indicate that Mrs. Nabb raised the issue of the improper disposal of liquid waste at that meeting. A section of her notes is headed "sucker pig ground water loss" and one of the complaint disclosures she lists is described as "[i]llegal dumping of oil - wanted her to sign paperwork." Exhibit 113. Mark Spears, at that time the Radiological Control Manager for EG&G, attended this meeting and also recalls that Mrs. Nabb made allegations of illegal dumping and improper disposition of fluid from cleaning machines.(2)

After reviewing the record, I concur with the RIR's conclusion that Mrs. Nabb engaged in protected

activity pursuant to Part 708 when she disclosed the alleged mislabeling of hazardous waste drum "travelers". It is clear that Mrs. Nabb came forward with allegations concerning the "travelers" beginning in September 1993, and that she continued to report this information to her supervisors and management officials up to December 6, 1994. As discussed below, I find that Mrs. Nabb's disclosures in this regard are also proximate in time to Part 708 "retaliations" taken by the contractors. Accordingly, under these circumstances there is no reason for me to evaluate any of the other alleged disclosures made by Mrs. Nabb that were identified in the RIR.

C. Mrs. Nabb's Allegations of Contractor Reprisal

1. Mrs. Nabb Has Met the Contributing Factor Showing

As noted above, a protected disclosure has been found to be a contributing factor in a personnel action where the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action. As discussed above, the factual record established by the RIR and its supporting exhibits indicates that Mrs. Nabb disclosed her concerns regarding the labeling and disposal of liquid wastes to her supervisors and to other contractor and DOE officials on a number of occasions during the period from September 1993 through December 6, 1994. All of the alleged reprisals contained in the RIR occurred within eight months of one of these instances of disclosure.

In its post-hearing brief, EG&G contends that at the hearing, Mrs. Nabb failed to establish a credible "time line" of significant incidents. It cites several instances at the hearing where Mrs. Nabb was unable to say when a particular incident or conversation occurred, or suggested contradictory dates. EG&G Post-Hearing Brief at 3-4. It is true that Mrs. Nabb was consistently vague in her testimony concerning the precise timing of some of the events at issue. However, I find that there is ample support in the RIR and its supporting documents to establish accurate dates for the series of disclosures that I have discussed above. Mrs. Nabb's lack of specificity at the hearing is most likely owing to the

passage of time from these events, and does not negate this other evidence. With respect to the specific instances of alleged retaliation that are discussed below, the RIR and the information submitted by the hearing by Kaiser-Hill accurately identify the timing of these events. Accordingly, I reject EG&G's contention in this regard.

EG&G also argues that no legitimate inference of "contributing causation" may be drawn in this case, because Mrs. Nabb has testified that she has been the victim of adverse treatment at Rocky Flats for over a decade for reasons (gender discrimination, age discrimination, anti-union bias, etc.) that are completely unrelated to her Part 708 disclosures.

Taking her own testimony and that of her witnesses at face value, contractor "adverse actions" did not *begin* at some point in time after her disclosures; rather they appear to have *continued* after them. Under these circumstances, the Sorri and Ramirez rationale may not properly be applied to infer that Mrs. Nabb's complained- of "adverse" job circumstances were at all the result of contractor retaliation for her Part 708 disclosures.

EG&G Post-Hearing Brief at 4-5. I reject this argument. A protected disclosure made proximate in time to an adverse personnel action should be viewed as a contributing factor to that action, regardless of whether the employer possessed other discriminatory motivations for its action. While Mrs. Nabb and her witnesses have indicated that some of her supervisors were inclined to discriminate against her for reasons unrelated to her protected disclosures, the protected disclosures still "contributed" to the alleged discriminatory acts that she has identified in her Part 708 complaint. In order to show under this argument that the protected disclosures were not contributory, EG&G would have to present evidence to establish that its supervisory and management officials were so prejudiced against Mrs. Nabb for one of these other reasons, that they would have discriminated against her regardless of whether or not she made the

protected disclosures. EG&G has not attempted to make such a showing. Accordingly, I find no merit in EG&G's assertions in this regard.

In its post-hearing brief, Kaiser-Hill argues that all of the alleged protected disclosures at issue in this proceeding were made while Mrs. Nabb was an employee of EG&G, and that therefore Kaiser- Hill cannot be considered accountable under Part 708 for any adverse personnel actions that Mrs. Nabb may have experienced after it succeeded EG&G as the managing contractor at Rocky Flats. Kaiser-Hill Post-Hearing Brief at 2. I reject this position. Many of the same supervisors and officials who managed Rocky Flats for EG&G continued to perform the same operations under Kaiser-Hill. The Part 708 regulations do not exempt a contractor from accountability for acts of reprisal taken by its managers because the underlying protected disclosure was made to those managers while they were employed under a previous contract. Such a result would completely undermine the purposes for which the Part 708 regulations were enacted. Where an adverse personnel action against an employee in reprisal for a protected disclosure is found to have occurred, the goal of DOE's Part 708 regulations is to restore the employee to the position in which he or she would otherwise have been absent the acts of reprisal, in a manner similar to other whistleblower protection schemes. See, e.g., Energy Reorganization Act of 1974, 42 U.S.C. § 5851; Whistleblower Protection Act of 1989, 5 U.S.C. § 1214(b)(4)(B).

I therefore find that officials of EG&G and Kaiser-Hill had actual or constructive knowledge of these disclosures and that the disclosures were proximate in time to the alleged acts of reprisal. Accordingly, I conclude that Mrs. Nabb has met her burden of showing that her disclosures concerning the alleged mislabeling of liquid wastes constituted a contributing factor in the negative personnel actions identified as alleged reprisals in the RIR. The burden is therefore with the contractors, EG&G and Kaiser-Hill, to prove by clear and convincing evidence that they would have taken the same actions without Mrs. Nabb's disclosures.

2. Evaluating Alleged Reprisals in the Context of Part 708 Relief

In a Part 708 proceeding, a complainant may allege numerous acts of reprisal by a DOE contractor. Where multiple allegations of reprisal are made, it may not be necessary to conduct a detailed factual analysis and make legal conclusions concerning the merits of each allegation. This is particularly true in instances where the Hearing Officer has already found that the complainant has suffered a reprisal prohibited by Part 708 and the finding of additional reprisals would have little or no impact on the relief that will be awarded to the complainant. Accordingly, in analyzing the reprisals that Mrs. Nabb has alleged were taken against her, I will focus on allegations of reprisal for which relief is authorized and available under the Part 708 regulations. In the preamble to the recent amendments to Part 708, the DOE discussed the extent of the relief that it can provide in a Part 708 proceeding. In these comments, the DOE clearly indicated that Part 708 remedies are limited in scope, and *do not* provide "compensatory damages, including damages for mental anguish, pain and suffering, and emotional distress resulting from a contractor's wrongful actions." The DOE described Part 708 remedies as follows:

The restitutionary remedies authorized under [Part 708] are intended to correct unwarranted employment actions. The goal of this regulation is simply to restore employees to the position they would have occupied but for the retaliation. Part 708 exists to provide an alternative to filing a lawsuit in which a broad range of compensatory relief may be available, but it is not intended to suspend that option or duplicate the remedies that may be available in litigation. Before choosing a forum for seeking redress of an unwarranted employment action, contractor employees should compare Part 708 with other available remedies.

64 Fed. Reg. 12867-68 (March 15, 1999). In other words, if I find that Mrs. Nabb suffered retaliation as a result of making protected disclosures, I can provide her with relief aimed at restoring her position in the workplace to what it would have been if these retaliations had not taken place. These remedies could include the opportunity to complete job training, her placement in a job position that she would have

occupied but for the retaliatory acts, and an award of any pay differential between that position and her current position (back pay).(3)

Viewed in this context, Mrs. Nabb's allegation of reprisal concerning her inability to complete her RCT training is the most significant. If it occurred, the reprisal resulted in the loss of job training, job placement, and salary benefits, for which Part 708 relief is available. Accordingly, I will focus my analysis on this allegation of reprisal.

3. Actions Taken Regarding Mrs. Nabb's RCT Training Were Reprisals

In the Fall of 1994, Mrs. Nabb was permitted to "bump" into the RCT I job classification along with more than one hundred other individuals as a consequence of the shut down of machining operations in Rocky Flats Building 460, where she previously worked. Kaiser-Hill Hearing Exhibits F and Q. The RCT I position was a training position, and Mrs. Nabb was required to complete an extensive training and testing program in order to meet the requirements of the RCT II level job classification. Kaiser-Hill took over the administration of this program from EG&G on July 1, 1995. Along with many other displaced employees, Mrs. Nabb was provided with special academic training to assist her in passing the required course of training and tests to meet the requirements of an RCT Level II. She successfully completed this academic training. Beginning in late November 1994, she took an extensive series of mini-courses and tests as part of her RCT II training. While most of the other RCT I trainees completed their testing in June and early July, 1995 (see Kaiser-Hill Hearing Exhibit R) and qualified as RCT II's, Mrs. Nabb and several others had not completed the testing as of July 24, 1995. Citing the exhaustion of funding for the RCT training program, Kaiser-Hill officials decided to curtail the training program as of that date. Mrs. Nabb was therefore unable to complete her training to qualify as an RCT II (salary level 16). As a result, when all RCT I employees were laid off on September 29, 1995, she "bumped" into the position of Process Specialist (salary level 15). Kaiser-Hill Hearing Exhibits F and G.

The RIR makes the following findings based on the evidence that it assembled concerning this issue:

The Complainant has shown that one manager, Mr. Spears, who had supervisory responsibility over the RCT program, learned of the Complainant's protected activities in December 1994. . . . Mr. Spear's knowledge of the Complainant's disclosure, and the proximity between gaining that knowledge and the training termination decision may constitute a preponderance of the evidence that the decision was retaliatory; the record, however, contains no other information that supports Complainant's assertion that her protected disclosures were a motivating factor behind that decision. Moreover, the contractor has, by clear and convincing evidence, shown that it had a good business reason (a projected over- expenditure of more than $1 million (Exhibit 62, p. 1)) to terminate training of the Complainant and other employees. Accordingly, we find that the termination of the Complainant's RCT training was not a retaliatory act within the meaning of Part 708.

RIR at 18. In her March 7, 1999 submission in this proceeding, Mrs. Nabb contested this aspect of the RIR's findings. She asserted that the RCT trainers deliberately delayed her testing so that they could provide testing and training to other employees:

Dennis Scherock (one of the instructors) told me point blank that "there are other people we want to get through" when I told him he had made me sit for 9 days, refusing to allow me to test out on the daily walk downs and I wanted [to be] tested or told why. When given the chance to test with Mr. Fox I finished 8 tests in one day.

March 7, 1999 submission at 1-2. She also questioned Kaiser-Hill's position that budget over-runs forced it to cancel her training. "About running out of money - there was quite a large class [of RCT trainees] after me." Submission dated April 15, 1999, handwritten attachment at 3.

The burden of the contractors in this case is to show by clear and convincing evidence that Mrs. Nabb was

offered the same opportunities for training and testing as the other employees in the RCT II training program. This could permit them to establish that other causes of a non-retaliatory nature accounted for Mrs. Nabb's failure to complete her training. In this way they could show that in the absence of any protected disclosures, this adverse result still would have occurred. Such non-retaliatory causes could include a prolonged absence from the workplace by Mrs. Nabb, or a demonstrated inability on her part to achieve a passing grade on the testing portion of the training program.

The contractors have failed to meet this evidentiary burden. Based on my review of the record, rather than making such a clear and convincing showing, convincing evidence indicates that Mrs. Nabb's failure to complete her RCT training prior to the termination of the training program was due in part to undue delays in the scheduling of her training and testing. Mrs. Nabb claims that the contractors were responsible for these delays and the evidentiary record discussed below convinces me that the contractors have failed to show that these delays were not deliberate.

Mrs. Nabb's assertions that she waited an undue amount of time for training and testing are supported by the testimony of Maurice Brown, her supervisor for most of the period when she was training for the RCT II position. Tr. at 190. Mr. Brown currently works for Kaiser-Hill as a manager in Building 779 at Rocky Flats. Tr. at 180. Mr. Brown initially testified that as her supervisor, he remembers being concerned that Mrs. Nabb was not being scheduled for RCT training in a consistent and timely manner.

I questioned why you [Mrs. Nabb] weren't sent to Rad. Con. [training], and I never did get -- I think you heard me on the phone a couple times. I never did get a straight answer, as to why you were not sent to Rad. Con. Nobody ever did tell me that you were untrainable. No. And my personal belief is I don't think you were [untrainable]. You always did everything that I ever asked.

Tr. at 180. Mrs. Nabb also questioned Mr. Brown concerning a conversation that she remembered that they had with Ms. Sherrie L. Olguin. Ms. Olguin worked as the RCT Training Coordinator for EG&G and, subsequently, for Kaiser-Hill. The following exchange took place:

Q And one day we were sitting in the office, about five or ten minutes before time to go, and she came running in with the training schedules, and you looked through [them]. You turned around and asked her when the training for me was going to be. What was her first answer?

A I don't even remember, Barb. I --

Q She ignored you. When you asked her the second time, what was the answer?

A The only thing I -- I don't remember exactly what answers were given. I can't -- you know, I'm sorry that I can't remember that, but I know that I really never did get a straight answer that stuck in my mind, as to why you weren't on the schedule for training.

Tr. at 182. During cross examination by counsel for Kaiser-Hill, Mr. Brown reviewed the detailed RCT training record for Mrs. Nabb (Kaiser-Hill Hearing Exhibit H). Under questioning, he indicated that he generally was aware of when one of the employees that he supervised was in RCT training.

Q Would you necessarily have known that she was in the classroom on 1/19/95, taking that test?

A Yes. They usually hand out training slips that we would give to the RCTs and send them to class.

Tr. at 198. Mr. Brown then acknowledged that it was possible that he was unaware of some of the RCT training that Mrs. Nabb received because in 1995, there was a period when he was not working in the same location as Mrs. Nabb. However, at the same time, he reiterated his perception that she had received less scheduled RCT training than his other employees.

I'm going to tell you what I know, and I've stated that before. I know that when I called to ask about

Barb's training -- okay, when she was under my direct supervision -- I never did get a straight answer as to why she didn't go back. Okay? I see all this training in writing. Okay. I'm not saying that she didn't go.

Tr. at 200. Accordingly, I find that Mr. Brown's testimony strongly supports Mrs. Nabb's allegation that she did not receive scheduled training in a timely manner.

Although the RCT Training Coordinator, Ms. Olguin, did not testify at the hearing, she appears to have tacitly acknowledged that there were delays in scheduling Mrs. Nabb's training during a 1996 interview with an Office of Inspections investigator.

Olguin said that the Complainant seemed to be out sick a lot and she missed a lot of training. According to Olguin, the foreman did not know where the Complainant was a lot of the time.

April 23, 1996 Memorandum of Interview, RIR Exhibit 31. The reasons that Ms. Olguin provided for the scheduling delays, absences and lax supervision, are not substantiated elsewhere in the record. Other than one period of sick leave lasting about two and one half weeks(4), Mrs. Nabb does not acknowledge taking an unusual amount of sick leave during the approximately eight month period of her RCT training, and the contractors have submitted no evidence indicating such a pattern of absences. Ms. Olguin's assertion that she was unable to contact Mrs. Nabb through Mrs. Nabb's foremen is similarly unsupported, and appears to conflict with the testimony of Mr. Brown, who states that he actively contacted Ms. Olguin in order to obtain scheduled training for Mrs. Nabb.

The documentary evidence provided by Kaiser-Hill concerning Mrs. Nabb's RCT training does not refute her allegations of delay. The schedule of RCT training for Mrs. Nabb provided by Kaiser-Hill indicates that Mrs. Nabb received an extensive amount of RCT testing and training from November 28, 1994 through July 13, 1995. However, this record does not indicate that the testing and training occurred on a daily basis. In the months of December, 1994 and in January, February and early March, 1995, there are numerous periods of six to twelve days in length when no testing or training appears to has taken place. Most significantly, in the period from June 22 through the "cut-off date(5) for RCT training of July 24, 1995, the record indicates that Mrs. Nabb received RCT training only on July 13, 1995, when she passed a "Remediation/Tutorial" for the "RCT Core Comprehensive test." Kaiser-Hill Hearing Exhibit H at 5. During this same June 22 to July 24 period, the training records indicate that seventeen of her fellow trainees were able to complete the "oral board" portion of their RCT testing. Kaiser-Hill Hearing Exhibit R. Accordingly, it appears that Mrs. Nabb's training record supports her allegations of delays in the scheduling of training and testing.

Nor does the training record presented by EG&G and Kaiser-Hill indicate that Mrs. Nabb lacked the ability to complete her RCT training. Her training record indicates that, like many other trainees in the RCT program, she had to repeat some segments of her RCT training and be retested on those segments. However, she successfully completed the tests in all of the training "mods" in which she was scheduled for training and testing by her employer. Kaiser-Hill Hearing Exhibit I. This record therefore agrees with the previously quoted testimony of her supervisor, Mr. Brown, indicating that he believed that she could be trained as an RCT II. Under these circumstances, I conclude that Mrs. Nabb has presented evidence indicating that her failure to complete her RCT training and thereby qualify for the RCT II job classification was due, at least in part, to unusual delays in the scheduling of her RCT training and testing. I further conclude that EG&G and Kaiser-Hill have not refuted her evidence, or shown, by clear and convincing evidence, that the failure to provide training to Mrs. Nabb resulted from reasons unrelated to her December 1994 protected disclosure, which occurred proximate in time to this activity. Accordingly, quite apart from a determination on the issue of what evidence Kaiser-Hill has presented that it would have terminated training on July 24, 1995, I find that adverse actions taken by both EG&G and Kaiser-Hill in not permitting Mrs. Nabb to attend RCT training in 1994 and 1995 constitute retaliatory actions under Part 708.

As noted above, the RIR acknowledged the proximity in time between Mrs. Nabb's December 6, 1994

protected disclosure (observed by Mr. Spears, the Manager with responsibility for the RCT training program) and Kaiser-Hill's decision to halt Mrs. Nabb's RCT training on July 24, 1995. However, this proximity was outweighed by the RIR's finding that there was clear and convincing evidence that Kaiser-Hill "had a good business reason (a projected over- expenditure of more than $1 million) . . . to terminate training for the Complainant and other employees." Based on these findings, the RIR concluded that the termination of Mrs. Nabb's RCT training "was not a retaliatory act within the meaning of Part 708." RIR at 18. I do not believe that this determination subjects Kaiser- Hill's decision to the full level of scrutiny required by Part 708. The provisions of Part 708 clearly indicate that in this situation, the burden is on the contractor not just to show that it had a good business reason for its action, but to show, by clear and convincing evidence, "that it would have *taken the same action* without the employee's disclosure . . ." 10 C.F.R. § 708.29 [emphasis added].

Through the extensive testimony of Kaiser-Hill officials at the hearing, and through the submission of documentary evidence, Kaiser-Hill has sought to establish that it had good business reasons to terminate its RCT training program in July 1995. It has also made an effort to show that it would have structured the termination of RCT training in a manner that prohibited Mrs. Nabb and a few other employees from completing their training. Kaiser- Hill's contentions in this regard are presented in its post-hearing brief.

The evidence is clear and undisputed that the § 3161 workforce restructuring funding used to train Mrs. Nabb had become exhausted. Mr. Dondelinger, who was in the Human Resource group, was charged by EG&G [and its successor, Kaiser-Hill] to manage that program and ordered a halt to training. Consequently, it is Kaiser- Hill's position that Mr. Dondelinger was the person who made the ultimate personnel decision in this case. There was no evidence that Mr. Dondelinger was ever aware of Mrs. Nabb's status as a whistleblower or was aware of her protected activities. After receiving a Stop Work directive from Mr. Dondelinger, Mark Spears and James Wood made the collateral decision to halt training at the point where only the RCT oral boards were left to be taken. Persons who had progressed to that point were allowed to take the oral boards. Mrs. Nabb had yet to complete the final RCT Site Comprehensive written examination and therefore was not qualified to take the final RCT oral board at the time funding was canceled. As a consequence, Mrs. Nabb and six or seven others who were similarly situated to Mrs. Nabb could not complete the RCT training. The only person in the chain of decisions made regarding this training who was aware of Mrs. Nabb's allegations was Mark Spears . . . . Mr. Spears testified that Mrs. Nabb's allegations had nothing to do with Mr. Spear's management responsibilities, and it was simply by virtue of the fact that Mr. Spears was in charge of the radiological program that he was even involved in the meeting. These facts make it clear that no "reasonable person" could conclude that the personnel actions taken were the result of Mrs. Nabb's earlier whistleblower activities.

Kaiser-Hill Post-Hearing Brief at 3-4. I do not agree. The cancellation of the training program was not neutral with respect to Mrs. Nabb. Kaiser-Hill admits that following Mr. Dondelinger's decision to halt the training, Mr. Spears and Mr. Wood made the "collateral decision" to divide the remaining RCT trainees into two groups consisting of those who would be allowed to complete their RCT training and those who would not. This indicates that, in spite of cost over-runs, Kaiser-Hill managers retained the ability to spend additional resources to continue the training of RCTs. Their decision to structure the termination of the training program in a particular way was a discretionary decision that impacted adversely on Mrs. Nabb and "six or seven others" out of an original pool of over 100 RCT trainees. Management decisions that impact negatively on a small group of employees that includes a whistleblower must be viewed as inherently suspect in a Part 708 analysis. Although there may well have been sound economic reasons for Kaiser-Hill to continue training only for those employees who had completed everything except their RCT oral boards, the contractors have not shown clearly and convincingly that this precise management decision was made *solely* for economic reasons when the decision clearly had an adverse impact on Mrs. Nabb and a few others. Under Part 708, Mrs. Nabb's standing as a known whistleblower is presumed to have influenced Mr. Spears and Mr. Wood in developing procedures for the termination of RCT training that would not operate to her benefit. The contractor has the burden of showing that it was not related. In this regard, there is evidence in the record that when the training termination procedures were developed, the managers were aware of the training status of each affected employee, including Mrs. Nabb.

The Hearing Officer (to Mr. Dondelinger): So people below you in the organization, people who were teaching Ms. Nabb, didn't really have an input in just how you were going to structure the cut-off.

Mr. Dondelinger: Well, Mr. Wood certainly would have been involved in discussions, because he was the subordinate manager to me, who ran the training and operations group, so he certainly -- in fact he was involved in the discussions.

And I also believe that the workforce restructuring folks were involved in the discussion. Again, it was a business decision, and I'm sure we probably discussed the status of each and every student who remained in the course, although I have no specific recollections of the conversations.

To come to a rational answer, we would have had to have gone through each and every case, and say, Okay, where do we draw the line; what makes sense for the company from an expenditure of funds, or do we stop everything right now.

Tr. at 447. This testimony strongly indicates that the "structuring of the cut-off" of the RCT training was a discretionary decision by Kaiser-Hill managers and was made with an awareness of the potential impact on each affected employee. Under these circumstances, I find that Kaiser-Hill has not established, by clear and convincing evidence, that it would have structured its cut-off of the RCT training in this particular manner if Mrs. Nabb had not made a protected disclosure.(6) Accordingly, I find that Kaiser-Hill's structuring of its cut-off of RCT training in a manner that prevented Mrs. Nabb from completing that training constituted a retaliatory act for purposes of Part 708.

4. Mrs. Nabb's Alleged Denial of "Crew Leader Pay"

As discussed above, the other alleged reprisals reported by Mrs. Nabb include being temporarily assigned to undesirable work locations, working on a machine that resulted in acid burns, and having her security clearance revoked. The Part 708 regulations do not provide independent, potential remedies for these allegations, since they do not relate to Mrs. Nabb's current work situation or to salary issues. Since I have already determined that Kaiser-Hill and EG&G retaliated against Mrs. Nabb with respect to her RCT training, it is not necessary for me to evaluate these other allegations, which have no impact on Mrs. Nabb's Part 708 remedies. However, Mrs. Nabb has made one claim for back pay based on treatment that she received in the summer of 1993 when she was working as a Waste Coordinator for EG&G. In a letter submitted to the parties at the hearing, Mrs. Nabb states that she is entitled to the following:

The crew leader pay at 2 labor grades [that] I was promised and Karl E. Scott pushed me out of for 1 and a half months (when I told Mr. Hoover I would do no more trash when the attempt to force me to falsify documents and break the ground water laws happened).

April 27, 1999 Letter from Mrs. Nabb.

The factual record concerning this matter does not support this claim. In her interview with the Office of Inspections investigator, Mrs. Nabb indicated that when she volunteered to train as a waste coordinator, she expected to receive "crew leader pay while I worked with the waste." RIR Exhibit 10 at 2. However, the record indicates that following the incident in which she refused to label waste barrels containing "sucker pigs" as dry waste, she voluntarily quit her training and her work assignment as a waste coordinator. In her interview, she stated that a few days after this incident she spoke to Mr. Hoover, the manager of the waste program.

At that time, I also informed Mr. Hoover that "I would not do any trash" (packing or disposal of toxic waste). . . . I knew the consequences that could result from incorrectly annotating the "travelers," and I decided I would not work "the waste." I would forego the crew leader's pay and possible salary position because I will not break the law or knowingly disregard the rules as trained.

RIR Exhibit 10 at 3-4. This statement clearly indicates that Mrs. Nabb made the decision to stop working as a waste coordinator. There is no evidence that this personal decision to stop working as a waste coordinator resulted from Part 708 retaliatory activity by EG&G. 10 C.F.R. § 708.2 defines a "retaliation" as "an action (including intimidation, threats, restraint, coercion or similar action) taken by a contractor . . . as the result of the employee's disclosure of information . . . ." Mrs. Nabb's apprehension that she might be asked to do something improper in the future cannot be attributed to any "retaliatory" action by EG&G. Accordingly, Part 708 remedies do not apply to her decision to "forego the crew leaders pay," and her request for relief in this regard must be denied.(7)

5. Conclusion

Based on the analysis presented above, I find that Mrs. Nabb made disclosures protected under Part 708, and that both Kaiser-Hill and EG&G took adverse personnel actions with respect to Mrs. Nabb's RCT training that constituted retaliatory acts under Part 708. Accordingly, I find that these contractors should be held jointly and severally liable for the remedial actions ordered below.

D. Remedy

10 C.F.R. § 708.36 provides that if the initial agency decision determines that an act of retaliation has occurred, it may order: (1) Reinstatement; (2) Transfer preference; (3) Back pay; (4) Reimbursement of reasonable costs and expenses; and (5) Such other remedies as are deemed necessary to abate the violation and provide relief to the complainant. In her post-hearing brief, Mrs. Nabb asks that we refer to her April 27, 1999 letter wherein she presents her request for relief aimed at "replacing me to the position that I was in." Mrs. Nabb's Post-Hearing Brief at 4. In this April 27, 1999 letter, Mrs. Nabb requests that she be given back pay for the differential in salary between her current Process Specialist position (grade level 15) and the RCT II position (grade level 16) that she would have been paid if she had completed her RCT Training in 1995. She estimates that this pay differential amounts to $3.60 per week. She also requests back pay for lost overtime that she claims she would have been permitted to earn if she had been working as an RCT II in 1996, 1997 and 1998. She estimates that the average overtime for an RCT worker is 450 hours per year, and asks to receive time and a half pay for a total of 1,350 hours.

I believe that it is appropriate to award Mrs. Nabb a back pay differential and back pay for overtime, based on the average amount of overtime performed by RCT II employees. I have no basis for disputing the salary and labor hour figures that she has submitted, and EG&G and Kaiser-Hill have not submitted information on these issues. However, I believe that it is inappropriate to provide these back pay awards to Mrs. Nabb for the time periods that she has requested.

Mrs. Nabb requests that both back pay requests be calculated from a starting date of January 1, 1996. She may have selected this date in order to simplify her back pay and lost overtime calculations. However, in light of my finding that there are indications that her RCT training was delayed, I believe that an earlier starting date for these awards is appropriate. I will assume, for purposes of calculating relief, that, had she received scheduled training and testing in a timely manner, she would have completed her RCT training no later than August 31, 1995, and qualified for the RCT II salary level as of September 1, 1995. I believe that it is also appropriate to calculate lost overtime pay from that date. In addition, the record indicates that in a letter dated November 6, 1997, Mrs. Nabb was offered the opportunity to be recalled as an RCT I and receive the training necessary to qualify as an RCT II. The letter indicates that this training period is not to exceed 264 hours in duration. Kaiser-Hill Hearing Exhibit C. On February 24, 1998, Mrs. Nabb stated on a form that "I do not accept the recall." Kaiser-Hill Hearing Exhibit D. Mrs. Nabb's acceptance of this recall would have enabled her to complete her RCT training and allowed Kaiser-Hill to reduce the damages that she suffered as a result of the Part 708 retaliations by Kaiser-Hill and EG&G.(8) Her failure to accept this recall means that Kaiser- Hill is no longer responsible for any damages subsequent to the time that she would have completed this training. Given the 264 hour time limit, I believe it is reasonable to estimate this training period at no more than two months. Accordingly, I find that after April 30, 1998, the

contractors should no longer be held responsible for the accrual of damages arising from their Part 708 retaliations. I will therefore base the back pay relief for Mrs. Nabb on the time period from September 1, 1995 to April 30, 1998, a period of thirty-two months.

Based on the salary figures provided by Mrs. Nabb, I find that she is entitled to a salary differential back pay award of $498.24 ($3.60 per week for 138.4 weeks) and overtime back pay award of $36,897.53 ($13,871.25 per year for 2.66 years). The award of back pay therefore totals $37,395.77. As part of her back pay, Mrs. Nabb is entitled to receive interest to compensate her for the time value of money lost. Interest shall be calculated from January 1, 1997, the midpoint of the injury period, through the date of payment. Interest shall accrue at eight percent per year, compounded yearly. If either contractor seeks a technical correction concerning the back pay awards (i.e., based upon different information concerning hourly wage rates or average overtime worked by RCT II employees), they may petition me for such an adjustment.

In addition, Mrs. Nabb states that her "out of pocket expenses" in this proceeding "have totaled approx. $1,200 (rounded low)." Mrs. Nabb has not itemized these costs, but the figure appears on its face to be reasonable. Since Mrs. Nabb began to accrue these costs prior to the filing of her complaint with the Office of Inspections in January 1995, I believe it is appropriate to calculate interest on this sum in the manner I have described for the back pay award. If the contractors wish for an itemization of these costs so that they can examine and verify particular expenses, they may file such a request with me. Otherwise, they may simply accept her estimate.

In her April 29, 1999 letter, Mrs. Nabb requested that she be left in the position that she now holds (Process Specialist) "with the labor grade raise to 16 rather than the 15 that I had dropped to." In her post-hearing brief she adds the following request:

For the job protection that I was promised and the replacement of my status on the RCT seniority I would request that the companies make arrangements for me to be [taught] the RCT program . . . .

Mrs. Nabb's Post-Hearing Brief at 4. To the extent that these somewhat conflicting statements can be viewed as a request to remain in her current position at the salary that she would have received as an RCT II, I believe that such a request is inappropriate. As noted above, the goal of Part 708 relief is "simply to restore employees to the position they would have occupied but for the retaliation." 64 Fed. Reg. 12868-69 (March 15, 1999). The relief I provide must be aimed at restoring her position in the workplace to what it would have been if the Part 708 retaliations had not taken place. Accordingly, if Mrs. Nabb wants the salary benefits that she would have received if she had been permitted to complete her RCT Training, she must accept the training requirements and job duties of the RCT II classification. She cannot be awarded those benefits while remaining in her current position, which is classified at a lower grade. I will therefore direct Kaiser-Hill to offer Mrs. Nabb the opportunity for RCT training that would qualify her for the RCT II position. If she elects to remain in her current position, she will have to accept the salary level and other levels of benefit attached to that position. However, her decision in this regard does not affect the awards for back pay and reasonable costs that are discussed above.

Finally, Mrs. Nabb states in her April 27, 1999 letter that she would like to receive letters of apology from certain Kaiser-Hill managers. I cannot grant this request, as it does not fall within the relief available under Part 708.

Accordingly, I have concluded that Mrs. Nabb should receive a total monetary award of $38,595.77, plus accrued interest, and the opportunity to retrain for the RCT II position at Rocky Flats.

Although I find Kaiser-Hill and EG&G jointly and severally liable for the remedies discussed above, I believe that it is appropriate to direct Kaiser-Hill to provide this Part 708 relief to Mrs. Nabb. Kaiser-Hill was the managing contractor at Rocky Flats at the time that a substantial portion of the retaliation took place with respect to curtailing Mrs. Nabb's RCT training. Moreover, it is the party that can provide her with the opportunity to retrain for an RCT II position. In its Post-Hearing Brief, Kaiser-Hill argues that on

June 30, 1995, Kaiser-Hill, EG&G and the DOE signed a three-party transition agreement providing that "EG&G shall maintain responsibility for the defense, management and resolution of all actions filed against it pursuant to DOE's ?whistleblower' regulations." Clearly, this agreement does not require the DOE to seek relief exclusively from EG&G for retaliatory actions committed by individuals at a time when they were employed by Kaiser-Hill. Nor can such an agreement limit the relief available to Mrs. Nabb under Part 708, some of which (the opportunity to retrain for the RCT II position) only Kaiser-Hill can provide. Accordingly, Kaiser-Hill's contentions in this regard must be rejected.

IT IS THEREFORE ORDERED THAT:

(1) The request for relief under 10 C.F.R. Part 708 submitted by Barbara Nabb (Mrs. Nabb), OHA Case No. VWA-0031, is hereby granted as set forth in Paragraph (3) below and is denied in all other respects.

(2) The objections to Mrs. Nabb's requests for relief specified in Paragraph (3) below that were submitted by EG&G Rocky Flats, Inc. (EG&G) and Kaiser-Hill Company, LLC (Kaiser-Hill) in the above-captioned proceeding are hereby denied for the reasons set forth in the foregoing Decision. EG&G and Kaiser-Hill shall be jointly and severally liable for the relief specified in Paragraph (3) below.

(3) Kaiser-Hill Company, LLC (Kaiser-Hill) shall pay to Mrs. Nabb the following amounts in compensation for actions taken against her in violation of 10 C.F.R. Part 708:

(i) $498.24 for lost salary for the period September 1, 1995 through April 30, 1998;

(ii) $36,897.53 for lost overtime pay for the period September 1, 1995 through April 30, 1998;

(iii) $1,200 for reasonable costs and expenses incurred by Mrs. Nabb since the filing of her Part 708 Complaint on January 12, 1995; and

(iv) interest on these amounts, calculated from January 1, 1997 through the date of payment. Interest shall accrue at eight percent per year, compounded yearly.

(4) Kaiser-Hill shall offer Mrs. Nabb the opportunity to receive the training necessary to qualify her for the RCT II job classification, and shall offer Mrs. Nabb a position as an RCT II at the time that she completes the required training.

(5) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting in part the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed with the OHA Director, requesting review of the initial agency decision.

Kent S. Woods

Hearing Officer

Office of Hearings and Appeals

Date: August 6, 1999

(1) I did not permit any testimony at the hearing concerning the extent of Mrs. Nabb's injuries from the burns, as such testimony and evidence would go to the issue of damages and relief not covered by Part 708 and therefore not relevant to this inquiry.

(2)Mr. Spears also identifies the date of this meeting as December 6, 1994. Exhibit 35. The RIR mistakenly identifies the meeting as taking place on December 12, 1994. RIR at 5.

(3)If I find that there was a retaliation against her, I can also award her attorney fees and other expenses

that she incurred in bringing this administrative action.

(4)At the hearing, Mrs. Nabb acknowledged that she was on sick leave for about two and one half weeks, from the end of April to about May 15, 1995, for extensive oral surgery. Tr. at 202-03.

(5)”As discussed below, not all RCT training was stopped on that date.

(6)Kaiser-Hill argues that there is no indication that Mr. Spears or other Kaiser-Hill managers had any animus toward Mrs. Nabb for her protected disclosures, since “her allegations had nothing to do with Mr. Spears management responsibilities.” However, it is not necessary in a Part 708 proceeding for the employee to establish that a protected disclosure was likely to produce an adverse reaction in a particular manager. As clearly indicated by the burden of proof rules at 10 C.F.R. § 708.29, that an adverse reaction may ensue is a basic presumption underlying the entire whistleblower protection program.

(7)Her request for crew leader pay also is factually deficient. She does not explain why one and one half months of this pay is appropriate as a remedy.

(8)The Part 708 regulations encourage contractors to take actions that reduce or eliminate the damages being suffered by complainants. Section 708.17(c)(6) provides for the dismissal of complaints where the contractor employer has made a formal offer to provide the remedy requested or a remedy that the DOE considers to be equivalent to what could be provided as a remedy under Part 708.

Case No. VWA-0032

July 6, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Roger W. Hardwick

Date of Filing: March 8, 1999

Case Number: VWA-0032

This Decision involves a complaint of reprisal filed by Roger W. Hardwick (also referred to as the Complainant) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Mr. Hardwick was employed by KenRob and Associates, Inc. and worked as a subcontractor on a contract that the DOE awarded to Science Applications International Corporation (SAIC). Mr. Hardwick contends that in January 1994, he made a protected disclosure to the DOE concerning the manner in which SAIC was performing its DOE contract. Hardwick states that he was terminated from the subcontract two weeks after the disclosure and that KenRob terminated his employment in August 1994, when his contract with KenRob expired.

I. Background

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government- owned, contractor-operated facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. (1) The regulations provide, in pertinent part, that a DOE contractor may not discharge or otherwise discriminate against any employee because that employee has disclosed to a DOE official or to a DOE contractor, information that the employee in good faith believes evidences, fraud, gross mismanagement, gross waste of funds, or abuse of authority. See 10 C.F.R. § 708.5(a)(3). Employees of DOE contractors who believe they have been discriminated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE and are entitled to independent fact-finding and a hearing before an OHA Hearing Officer, followed by an opportunity for review by the Director of the Office of Hearings and Appeals. 10 C.F.R. § 708.32.

The following information is not contested. In January 1992, Mr. Hardwick was an employee of KenRob and Associates, Inc. He was Telecommunications Manager at the firm's Las Vegas, Nevada Office, and his mission was to develop a base for new business in the western United States, with a primary emphasis on telecommunications and computer technical support services.

During 1993, Science Applications International Corporation (SAIC) was the prime contractor with the

DOE for a Technical and Management Support Services Contract for the Yucca Mountain Site Characterization Project (YMP). Under this contract SAIC was required to perform a wide range of scientific, technical management and administrative support services, including provision of computer support services to both DOE's Las Vegas Office, and DOE's Yucca Mountain Site office, located about 100 miles from the Las Vegas office. On December 6, 1993, SAIC awarded a contract to KenRob, which was staffed solely by Mr. Hardwick. Mr. Hardwick was named as telecommunications specialist, and his role was to provide computer support services (also referred to as information technology or IT) at the Yucca Mountain Site Office (YMSO). The performance period for this contract was from December 6, 1993, through March 31, 1994.

In January 1994 Mr. Hardwick met with John Gandi, DOE Team Leader for Information Resources Management at the Yucca Mountain office and offered his view that improvements in IT support at the YMSO were necessary. Mr. Hardwick prepared a draft letter outlining his concerns, and presented the draft to Winfred Wilson, then site manager of the YMSO.

Mr. Wilson adopted Mr. Hardwick's draft virtually without change, structured it as a memo from himself to Mr. Gandi, and sent it to Mr. Gandi. The memorandum as drafted seemed to indicate that Mr. Gandi should consider improvements in providing IT support to the YMSO. Copies of the memorandum, which was dated January 18, 1994, were sent to five SAIC employees and three DOE employees, who were located at the Yucca Mountain Site. Approximately two weeks later, Mr. Harold Brocklesby, a SAIC manager who received a copy of the memo, told Mr. Hardwick that his duties under the SAIC subcontract were over. On May 23, 1994, KenRob was awarded a contract by the DOE's Office of Civilian Radioactive Waste Management (OCRWM) to provide communications network and computer facilities support at Las Vegas, Nevada and Washington, D.C. locations. Mr. Hardwick was not offered any position under that contract. On July 13, 1994, KenRob issued a letter to Mr. Hardwick advising him that his employment would be terminated in 30 days. His employment was terminated on August 12, 1994.

On August 30, 1994, Mr. Hardwick submitted a letter to the DOE's Nevada Operations Office claiming retaliation for a protected disclosure. He alleged that facts disclosed in the January 18 memo constituted a protected disclosure, and that his removal from the SAIC subcontract, the failure of KenRob to offer him a position under the OCRWM contract and his ultimate termination all constituted retaliation for the disclosure. He submitted a formal Complaint to the Office of Contractor Employee Protection on December 23, 1994 raising the same allegations. The matter was investigated by the DOE's Office of the Assistant Inspector General for Inspections (OIG), which issued a Report of Inquiry and Recommendations on February 19, 1999. That report found that Mr. Hardwick made a protected disclosure under 10 C.F.R. Part 708, and that the disclosure was a contributing factor to his removal from the SAIC contract, and to his failure to be appointed to any position under the OCRWM contract. The OIG Report further found that SAIC and KenRob failed to provide clear and convincing evidence that these personnel actions would have been taken in the absence of the protected disclosure.

On March 3, 1999, KenRob submitted a request for a hearing under 10 C.F.R. § 708.9 to the Office of Contractor Employee Protection. That Office transmitted the request to OHA on March 8, 1999, and I was appointed hearing officer in this case on March 10, 1999. SAIC submitted its request to participate in the hearing on March 18, 1999.

Hardwick, SAIC, and KenRob filed pre-hearing briefs on May 10, 1999.(2) SAIC and KenRob filed Motions for Summary Judgment on May 25, 1999 and Hardwick filed his opposition to those Motions on May 28, 1999. I issued a letter on May 28, 1999, denying the Motions. On June 1, 1999, the contractors took Mr. Hardwick's deposition. On June 8, 1999, I held the hearing in this case at the DOE's Las Vegas, Nevada Office. I terminated the hearing after all evidence concerning the nature of Mr. Hardwick's disclosure had been received. I announced to the parties at that time that I believed Mr. Hardwick had failed to show by a preponderance of evidence that the disclosure he made in the January 18, 1994 memo was protected under 10 C.F.R. Part 708. Accordingly, I saw no need to proceed with a presentation of evidence concerning whether SAIC and KenRob would have terminated Mr. Hardwick in the absence of

the disclosure. I told the parties that I would provide a detailed explanation of the reasons for my conclusions in an Initial Agency Decision. I indicated to Mr. Hardwick that he would be able to appeal to the Director of the Office of Hearings and Appeals my determination that he had not made a protected disclosure. 10 C.F.R. §§ 708.30, 708.32, 708.33.

II. Legal Standards Governing This Case: The Complainant's Burden

It is the burden of a complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure. . . as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990); 2 McCormick on Evidence § 339 at 439 (4th Ed. 1992).

The Contractor Employee Protection Program does not provide protection to employees for every disclosure. Part 708 enumerates the specific types of disclosures for which employment retaliation is prohibited. Generally, protected disclosures are those which reveal information concerning gross waste, fraud, abuse, gross mismanagement, substantial violations of law and substantial dangers to employees or to public health and safety. 10 C.F.R. § 708.5. Given the facts of the present case, Hardwick must, at the outset, demonstrate that he disclosed information to DOE, to SAIC or to KenRob which indicates gross waste, mismanagement, fraud or abuse. (3)

III. Evidence Regarding the Disclosure

A. Documentary Evidence and Discovery

Mr. Hardwick contends that he made a protected disclosure in a written document dated January 18, 1994 (OIG Exhibit 28). As stated above, that document is a memorandum from Winfred A. Wilson to John Gandi. Mr. Hardwick contends that he drafted most of this memorandum.

The memorandum describes the status of computer support services at the YMSO. It states that the primary area of concern is the coordination and communication of the Las Vegas computer support staff and the computer support staff at the YMSO. The memorandum contends that in several instances the YMSO did not receive prompt technical assistance because the Las Vegas support staff was busy. The memorandum alleges employees had experienced a "significant degradation of service" of the Local Area Network (LAN) at YMSO. The memorandum goes on to assert that the field operations have a lower priority than Las Vegas operations. In addition, the memorandum states that "[a]n additional concern is the lack of documentation and policies and procedures relative to the IS (information systems) operations and configurations at the YMSO."

These disclosures do not obviously fall within in any of the areas of protected disclosures set forth in 10 C.F.R. § 708.5. The facts alleged in the memorandum do not anywhere suggest, nor can they be read to indicate, a substantial violation of law, a substantial and specific danger to employees or to public health or safety, any fraud, gross waste of funds, abuse of authority, or mismanagement.(4) I do believe that on its face this memorandum raises areas in which Mr. Wilson believed that there was some room for improvement by Mr. Gandi in overseeing the provision of IT services.

In order to ensure that I was construing the memorandum properly, I consulted other evidence in the record of this proceeding. For example, I looked at the Complaint that Mr. Hardwick filed with Sara

Rhoades of the DOE's Nevada Operations Office. In that document, dated August 30, 1994, Mr. Hardwick stated that he had "identified several work areas that were not being done, even though SAIC had a contract to provide those services and were supposedly providing them." He further alleges that the January 18 memorandum "identified and reported Waste Fraud and Abuse by a major DOE/YMP contractor team. . . ." However, beyond these rather broad charges, this Complaint document provides no additional insight into the nature of why DOE's or SAIC's failure to provide better IT services at YMSO constituted waste, fraud, abuse or mismanagement. He did not explain how the facts described in the memo supported his claim that SAIC had committed gross waste, fraud, or mismanagement, assuming that it had in fact failed to provide those services.

I also reviewed the March 11, 1997 statement made by Mr. Hardwick to a DOE/IG investigator during the investigation phase of this proceeding. In that interview Mr. Hardwick described his January meeting with Mr. Gandi as follows. "I explained to him my belief that SAIC was not providing support that they were required to under the terms of their contract. I pointed out that SAIC was not providing necessary equipment and staffing to remedy a problem we were having with the network bogging down and not meeting user expectations or needs. I also pointed out that we were not receiving planning support for anticipated expansion of the network in new facilities." Thus, in the interview, Mr. Hardwick focused on the failure to provide adequate IT service at YMSO, and did not explicitly explain why he believed the failure to provide these services was covered by Part 708, or state the nature of the improper contractor activity. He seemed to be alleging non- performance of the contract, although his assertions could be construed to cover mismanagement issues. In any event, he did not explain to the investigator how and why the alleged failure to provide the services amounted to mismanagement, gross waste, abuse or fraud.

Thus, after reviewing all of the preliminary documents regarding the substance of the alleged protected disclosure, the January 18 memorandum, Mr. Hardwick's Part 708 Complaint filed with the DOE, and his statement to the OIG investigator, I still could not determine how the disclosed inadequate computer support constituted a revelation of gross waste, mismanagement, fraud, abuse or any other criterion mentioned in Section 708.5. The memorandum did not on its face point to any of the regulatory criteria, and none of the related documents clarified in what way SAIC's actions could have amounted to gross waste, fraud, abuse or mismanagement.

Accordingly, during the pre-hearing phase of this proceeding, I indicated to Mr. Hardwick that it was important that he provide me with additional information to support his position that the facts concerning inadequate computer support disclosed the types of concerns set forth in Section 708.5, and therefore rise to the level of a protected disclosure. I specifically discussed this issue in a May 17 letter, and during our May 19 prehearing telephone conference. I again referred to this issue in a letter of May 20.

In order to clarify whether the disclosure was protected, I allowed the contractors, SAIC and KenRob, to file Motions for Summary Judgment and briefs on whether the allegations concerning the improvements needed in IT support, as set out in the January 18 memorandum, qualified as protected disclosures under Part 708. Upon receiving those Motions, I sent a letter to Mr. Hardwick's attorney asking Mr. Hardwick to supply specific information concerning the reason he believed that the disclosed facts demonstrated serious mismanagement, gross waste, fraud or abuse. I asked him to indicate which statements in the January 18 memorandum Mr. Hardwick believed in good faith revealed serious mismanagement, gross waste or fraud. I asked Mr. Hardwick to indicate exactly what he in good faith thought the mismanagement, gross waste or fraud was. I stated that vague, general assertions that a contractor was not performing the work it was hired to do are not sufficiently specific to permit an analysis of whether Mr. Hardwick in good faith believed the information disclosed revealed gross mismanagement, gross waste, abuse or fraud. I stated that Mr. Hardwick must include what work he believed the contractor was improperly failing to perform and why this alleged failure constituted serious mismanagement, gross waste or fraud. Letter of May 26, 1999.

In a response to the Motion, Mr. Hardwick filed an affidavit describing in more detail the level of computer support at YMSO, and laying out what he believed the IT problems at the YMSO were. He

cited that the necessary equipment and personnel were not being provided by SAIC, and that repairs "took weeks." He stated the SAIC's project manager, Harold Brocklesby, refused to provide the additional personnel and support. He alleged in the affidavit that Brocklesby made a "conscious decision" to "allow the IT contract at the YMSO to go unperformed." Hardwick indicated that prior to drafting the memorandum he had a meeting with Mr. Wilson and Mr. Gandi to discuss the IT problems at YMSO. According to the Complainant, the additional allegations regarding Mr. Brocklesby's purported failure to perform the contract did not appear in the memo because Mr. Hardwick says he wrote it in a "non-threatening" manner. He indicated that he did not wish to provoke SAIC.

Mr. Hardwick did not provide an adequate response to my question concerning why he believes the information he revealed constitutes a protected disclosure. Nevertheless, based on the minimal information he supplied, and construing that information in a manner most favorable to the Complainant, as I am required to do in connection with a Motion for Summary Judgement, I denied the Motions, and I allowed him to proceed to the hearing.

In a letter of May 28, I noted the following evidentiary issues that I believed Mr. Hardwick should be permitted to develop at the hearing:

1. Whether in his discussions with Winfred Wilson and John Gandi prior to the drafting of Exhibit 28, Mr. Hardwick disclosed information that Mr. Hardwick in good faith believed revealed contract fraud or gross mismanagement. The testimony of Mr. Hardwick, Mr. Wilson and Mr. Gandi is obviously critical to that contention.

2. Mr. Hardwick has contended that operations at the Yucca Mountain project were being "derailed" as a result of the failure of Science Applications International Corporation (SAIC) to properly allocate computer resources. This seems to be a claim in the nature of gross mismanagement. Mr. Hardwick will be permitted to testify as to what the ill-effects of the alleged mismanagement were, what he thought the seriousness of this problem was, and exactly how it affected YMSO operations. Mr. Hardwick must show that his beliefs on this matter were in good faith. It will therefore be useful to test Mr. Hardwick's good faith in this disclosure and consider what other knowledgeable witnesses thought Mr. Hardwick believed in this regard.

3. With respect to his claim that SAIC was committing (contract) fraud, Mr. Hardwick should also be permitted to testify about what he thought the fraud was and how he thought it was being committed. We should also have testimony concerning the good faith of his beliefs on this issue.

Letter of May 28, 1999.

Further, in order to advance the development of the issue of whether the information that Mr. Hardwick revealed rises to the level of a protected disclosure, I permitted the contractors to take the deposition of Mr. Hardwick. At the deposition, the contractors were to specifically question Mr. Hardwick about the basis for his claim that the facts he revealed disclosed serious mismanagement, gross waste, fraud and abuse. I believed that if I and all parties were able to review the transcript of the deposition prior to the hearing, we would all be better able to understand the nature of Mr. Hardwick's contentions.

The contractors' attorneys questioned Mr. Hardwick very closely. They asked him about what if any fraud he believed SAIC committed, and what if any services SAIC did not provide but was paid for. Mr. Hardwick indicated that he did not have any knowledge of SAIC's billing practices. He simply believed that since the firm was hired to provide IT support and since, in his view, it was not providing full support, that this constituted contract fraud. Transcript of June 1, 1999 Deposition (Tr.) at 43-47. Mr. Hardwick reiterated his position that by failing to provide what he considered to be appropriate computer support at the YMSO, Mr. Brocklesby engaged in mismanagement, and his use of "his management authority to block resources to be provided to the Nevada Test Site" constituted a form of abuse. Tr. 48-49. Mr. Hardwick could point to no specific waste that was committed by SAIC under the contract, although he

raised some rather broad generalizations on this point. Tr. at 49.

Mr. Hardwick raised a new claim during the deposition. In various formulations, he contended that SAIC's failure to provide adequate IT support jeopardized the entire Yucca Mountain project. He contended that because Mr. Brocklesby was not providing appropriate support at the Nevada Test Site "the future of the staff management and the documents records center and all the other activity at the Test Site were in jeopardy unless we could get Harold [Brocklesby] to do something." Tr. at 115. Mr. Hardwick stated that he told Mr. Gandi that he feared for the "future ability of the Test Site to go forward and continue its characterization work. . . and that if we didn't document these issues as they came up. . . it could have to do with licensing, it could have to do with the integrity of the core samples, the implications could be far reaching." Tr. at 115-116.

Mr. Hardwick also claimed that he had indicated to Mr. Gandi that "SAIC was charging for support at the test site and you're not getting any support." Tr. at 120. He made the claim that "the entire $14.5 million SAIC contract was wasted and endangered" as a result of what he saw at the Yucca Mountain Site. Tr. at 190. He explained that "the licensing support system is the critical piece and the sample management facility data that was being collected without a license, you couldn't open a repository and you had to have some sort of licensing support system when you made your application at the NRC." Tr. at 191. Overall, Mr. Hardwick believed that "Brocklesby wouldn't provide any support,. . . wouldn't provide the staff, wouldn't provide the equipment, . . .that it was derailing the project, it was not able to go forward." Tr. at 267.

The information provided at the deposition does little to advance Mr. Hardwick's position that he had revealed to Mr. Gandi information which disclosed gross waste, fraud, abuse, or serious mismanagement. His support for his position amounted to no more than broad generalizations, and highly speculative assertions. At the deposition Mr. Hardwick did not provide the underlying specifics to support his claims.

In sum, as of the date of the hearing, Mr. Hardwick had made numerous, general claims, but had yet to state with specificity how the failure to provide what he believed to be the correct level of support at YMSO would result in gross waste, fraud, abuse, or serious mismanagement. In fact, he admitted at the deposition that he did not actually have any information from which he could reasonably conclude that contract fraud had occurred. Tr. at 42- 47. Overall, during the deposition, he had pointed to no specific instances of failure to provide computer support services that resulted in gross waste, fraud, abuse, or serious mismanagement.

B. The June 8, 1999 Hearing(5)

Four witnesses testified at the hearing: (i) Mr. Hardwick, (ii) Mary Ann Jones, a DOE computer specialist and Mr. Gandi's deputy, (iii) Mr. Gandi, and (iv) Mr. Wilson.

(1) Mr. Hardwick's Testimony

At the hearing Mr. Hardwick admitted that the January 18 memorandum did not on its face allege any gross waste, fraud, abuse or gross mismanagement. He further stated that he did not have any specific knowledge of any contract fraud related to the SAIC contract to provide IT support. He acknowledged that he had no information that would have led him to believe that SAIC was being paid for work that it did not do, other than his previously stated general assertion that SAIC was supposed to provide IT support to the YMSO, and he believed that its priorities were directed to the Las Vegas Office.

With respect to the January 18 memo, he claimed that he intentionally softened his assertions, believing that this was a more appropriate way of achieving his goal of obtaining more IT support for YMSO. However, he maintained that in the meeting with John Gandi prior to the drafting of the memo he specifically voiced all of his underlying concerns regarding waste, fraud, abuse and mismanagement. He stated that Mr. Gandi's testimony would support this assertion. He said that he did not believe that Ms.

Jones was present at the meeting.

At the hearing Mr. Hardwick produced two new documents. The first, dated May 17, 1994, was a memorandum to Mr. Wilson from Mr. Gandi, which, according to Mr. Hardwick, outlines some steps that SAIC took to address the "escalating need for services" at YMSO. Mr. Hardwick contended that the improvements noted in the memorandum reflect the full extent of the discussions that he had with Mr. Gandi at their January meeting and support his contention the discussions covered areas such as mismanagement, gross waste, fraud and abuse.

The May 17 memorandum refers to upgrading the communications line from a 56 Kb line to a 256Kb line, which would allow for an increased capacity of telecommunications traffic and improved user response time. It describes the creation of a Novell-based LAN test bed for testing by selected YMSO members. It cites the construction of a new communications equipment room with new power conditioning equipment. It mentions the installation of new laser jet printers. The memorandum also announces plans to assign additional personnel at the YMSO and implementation of a "Hotline" service. Finally, it refers to the publication of SAIC procedures, policies and work orders that the Information Systems Department will adhere to in supporting the YMSO. These policies related to logging in and tracking of "Hotline" calls, as well as developing appropriate statistics about the nature of the calls. Mr. Hardwick discussed these items in some detail, testified that the implementation of these improvements came about as a result of the January 18 memorandum, and asserted that the May 17 memo supports his overall claim that he discussed his concerns regarding serious mismanagement, gross waste, fraud and abuse with Mr. Gandi at the meeting prior to the drafting of that memorandum.

The other document that Mr. Hardwick introduced was a memorandum dated August 30, 1994, in which Ms. Rhoades described a conversation with Mr. Hardwick. She asked him to clarify for the record what areas SAIC was not performing and "if there were specific areas of concern, i.e., fraud, waste, abuse, safety, health, security, etc." She indicated that according to Mr. Hardwick, "the areas of concern dealt with not adhering to policy and procedures for the operation of the Information Systems Program at YMT (disaster plan, daily backup of information, communication within the organization, no backup of files, etc.)" Mr. Hardwick contended that this document further supports his position that the facts he disclosed in the January memo raised issues of serious mismanagement, gross waste, fraud and abuse.

(2) Ms. Jones' Testimony

Ms. Jones' testimony did not support Mr. Hardwick. (6) She did not believe that there was a significant IT problem at the YMSO. She stated that when additional computer support was necessary at YMSO, she could be out at the site in one and one-half hours from her Las Vegas location, and that she frequently went to the YMSO to assist in computer repairs and maintenance. She indicated that she was usually at the site several times a week in any event, and could provide needed assistance at that time. She indicated that some of the items referred to in the May 17 memo were discussed at the January meeting with Mr. Gandi and Mr. Hardwick. However, she did not believe that any of these items reflected gross waste, fraud, abuse or mismanagement. She testified that she was responsible for reviewing SAIC's requests for payment under the contract, and that she never had any reason to believe that SAIC requested or received payment for services that it did not perform.

She did not believe that in discussing possible areas of IT improvement at the January meeting, Mr. Hardwick intended to disclose concerns of waste, fraud, abuse or mismanagement. She believed that during 1993, when the YMSO operation was beginning to expand significantly, additional IT funds were needed as a rather routine matter to support the increased level of operation at the site. She testified that the purpose of the January 18 memorandum was to provide a document that would support a request from Mr. Wilson to the DOE for additional funding.

(3) Mr. Gandi's Testimony

Mr. Gandi's testimony was similar to that of Ms. Jones, although he expressed a stronger belief that additional IT services were necessary at the YMSO during the relevant period. He agreed with Mr. Hardwick that SAIC did not provide some IT services that would have been useful. He testified that he thought that obtaining additional support was a "serious" issue. However, he stated that he did not see the January 18 memo as "negative." He saw it as pointing out areas which could use some improvement. Like Ms. Jones, he testified that YMSO was an expanding operation in 1993 and 1994, and it was a matter of obtaining additional funding for IT services at that location. He believed that the purpose of the January 18 memorandum was to support a request for more funds. He did not vividly recall the May 17 memorandum, although he testified that some of the items included in that memo might well have been discussed at their meeting. He testified that he did not believe that SAIC had committed any gross waste, fraud, abuse or mismanagement, and that he did not believe that Mr. Hardwick intended to reveal any acts of that nature in the January 1994 meeting.

(4) Mr. Wilson's Testimony

Mr. Wilson confirmed the prior testimony that he did not participate in the discussion between Mr. Hardwick, Ms. Jones and Mr. Gandi. (7) According to Mr. Wilson, after that discussion took place, a conference call was placed to inform him of the discussion and ask his opinion as to how to proceed. Mr. Wilson stated that he recommended that Mr. Hardwick draft a memorandum reflecting his concerns about IT services.

Mr. Wilson agreed with Mr. Hardwick that more IT support was needed at YMSO, and believed that YMSO was given a lower priority than the Las Vegas Office in the provision of IT support. He stated that the effect of this lower priority was that it "sometimes it took a day to get people" to come out to YMSO and make necessary repairs. He attributed this to limited funds, and thought that there should be additional funding provided for YMSO. Like Ms. Jones and Mr. Gandi, he believed that the purpose of the January 18 memo was to convince the DOE to provide this additional funding.

Mr. Wilson also commented specifically on the portion of the January 18 memo citing the "lack of documentation and policies and procedures related to the IT systems operations and configurations at the YMSO." He testified that he was the DOE employee who would have had an interest in such documentation, but that he did not see this lack of documentation as a serious concern, or one that would have any important implications for the YMSO project. He stated that as a manager, he simply would have liked to be able to point to a complete set of policy documents. Overall, it was his testimony that SAIC had not committed any gross waste, fraud, abuse or mismanagement, and he did not believe that the January memorandum intended to convey acts of that nature.

IV. Analysis

As stated above, the Part 708 regulations in relevant part provide that a "protected disclosure" is one which reveals "fraud, gross mismanagement, gross waste of funds, or abuse of authority." § 708.5(a). Ordinarily, if a complainant states that he has made a protected disclosure in written form, I would look to the four corners of that document to determine whether it confirms that he revealed information raising a concern of that nature.

In the present case, the relevant document, the January 18 memorandum, does not specifically allege any action from which I can conclude that Mr. Hardwick revealed gross waste, fraud, abuse or mismanagement. Although he stated in a number of documents submitted in this case that he made disclosures of that nature, at no time did he ever describe in sufficient detail how the alleged deficiencies he reported, i.e., "problem of priorities" or "lack of support" specifically affected YMSO operations and caused concerns that are covered by Section 708.5 (8) Nor had he specified a particular safety hazard, violation of law or fraudulent incident. Up to the point of the hearing itself, Mr. Hardwick had not made what I considered to be a well-articulated statement of how the information he disclosed to Mr. Gandi fell

within the coverage of that section. This caused me to suspect that he did not in good faith believe that his disclosure was covered by Part 708. Even though he had yet to advance a rationale for why his disclosure was protected, in order to be scrupulously fair to Mr. Hardwick, I believed that it was important that he be given the opportunity to develop his case further through the presentation of witnesses at a hearing.

I will therefore consider whether any testimony at the hearing supports his view that he made a protected disclosure. At the hearing, Mr. Hardwick himself could point to no gross waste of funds, or fraud that arose as a result of the lesser prioritization of IT services to YMSO. He did not provide the type of testimony I referred to in my May 26 letter, noted above, in which I drew particular attention to the parties to the fact that I was seeking to hear about his beliefs and the actual and specific ill-effects of the alleged failure to provide IT services. (9)

Apart from his own repeated assertions as to his belief, which have been discussed above, there is virtually no support for his position. I cannot find that the belatedly introduced May 17 memorandum from Mr. Gandi to Mr. Wilson establishes that Mr. Hardwick disclosed acts that raised concerns regarding gross waste, fraud, mismanagement and abuse at the January meeting. This document talks of improvements that had been made, and Ms. Jones did confirm that some of the improvements were previously discussed at the January meeting. These areas included upgrading various computer-related systems. The witnesses generally believed that such additional services would be useful.

I cannot conclude, however, that the improvements mentioned, either individually or in the aggregate, suggest that there were concerns rising to the level of serious mismanagement, gross waste, fraud or abuse. Rather, they appear to be areas for possible improvement, subjects which employees and managers regularly discuss in order adjust resource allocation and to establish appropriate work priorities. Employees and managers may well disagree as to how and when to implement change, as Mr. Hardwick and Mr. Brocklesby purportedly did, but this, too, is part of the normal operational discussion and give-and-take between employees and management. Ultimately, decisions on these types of issues are a matter of management discretion. Ronny Escamilla, 26 DOE ¶ 87,508 (1996). Such discussions do not rise to the level of protected disclosures.

In sum, I believe that the May 17 memo referred to areas in which improvements and upgrades were made. I can accept that Mr. Hardwick, Ms. Jones and Mr. Gandi previously discussed these areas as ones in which IT enhancements could be useful, and that these areas represented priorities for improvement. However, the fact that such discussions of legitimate areas for improvement took place does not mean that Mr. Hardwick had made a disclosure that the DOE or SAIC engaged in mismanagement, gross waste, fraud, or abuse.

My conclusions about the nature of the May 17 memorandum and the January discussion are supported by the testimony of the witnesses Ms. Jones, Mr. Gandi and Mr. Wilson. Each individual was specifically asked whether he or she believed that SAIC's provision of IT services at YMSO in the relevant period amounted to gross waste, fraud, abuse or mismanagement. All the witnesses unequivocally stated that they did not believe that SAIC's oversight of the project raised concerns of that nature. Although they had an opportunity to do so, none of these three witnesses described any specific instance in which failure to provide IT services resulted in any significant problems for the YMSO. For example, no witness provided any support for Mr. Hardwick's broad, speculative claim in his deposition that "it [lack of IT services] could have to do with the integrity of the core samples," or that "all other activity at the test site [was] in jeopardy." Tr. at 115. Although these were among the most serious possible consequences cited by Mr. Hardwick, the witnesses provided no support for believing that effects of that nature were at all likely at the time, or even suggested by anyone. I simply cannot accept that Mr. Hardwick in good faith believed that the level of IT service provided at YMSO could jeopardize the entire activity at the site.

Further, all three witnesses firmly stated that they believed that in their January discussions and the January 18 memo, Mr. Hardwick did not intend to raise concerns regarding gross waste, fraud, abuse or mismanagement. They believed that the focus of their discussion was how to achieve an increase in

funding for IT at YMSO.

I also note that some testimony as to the seriousness of the IT problem at YMSO does not support Mr. Hardwick's contentions. Mr. Wilson indicated that computer repairs might take a day to accomplish. Ms. Jones testified that since she frequently visited the YMSO site, there was no repair backlog. Based on this testimony, Mr. Hardwick's assertion in his May 27 affidavit that "repairs took weeks" seems exaggerated, and causes me to question the good faith and overall truthfulness of his assertions.

Thus, Mr. Hardwick has presented no substantial evidence to support his position that the information he disclosed raised concerns that were protected under Part 708. Neither the documentary evidence nor the testimony of witnesses supports this claim. Given this fact, I expected Mr. Hardwick to explain and support how and why he in good faith held a belief that was so radically different from the testimonial evidence of the three other witnesses at the hearing. He did not provide such an explanation, although I alerted him to the opportunity to do so at the hearing. (10)

Finally, as a matter of law, I cannot conclude that the information disclosed here, that some reprioritization of the IT support at YMSO was necessary, rises to the level of a protected disclosure. I find that there is information to support that the Complainant genuinely, and with some legitimacy, believed that there were areas in which improvement was necessary. However, with nothing more, this certainly does not rise to the level of mismanagement, much less serious or gross mismanagement. (11) Mismanagement does not include a difference of opinion on decisions that are debatable. The mismanagement that is covered by Part 708 involves action or inaction that creates a substantial risk of significant adverse impact upon the agency's ability to accomplish its mission. See Carolyn v. Dep't of the Interior, 63 M.S.P.B. 684 (1994). The Complainant here cannot, through broad, speculative and unsupported assertions about possible ill-effects of limited IT services, bootstrap his discussion regarding IT improvements into a protected disclosure of serious mismanagement. There is no indication of mismanagement of any kind here.

Based on all the evidence, I believe that there were some differing views on the level of service necessary for the IT systems at the YMSO. Some areas needing improvement were identified and agreed upon. Several of these improvements were implemented. However, the fact that SAIC's prioritization scheme was subject to improvement or reevaluation does not in my view mean that SAIC was responsible for mismanagement of any kind. The speed at which the increased IT services could be implemented could well have been subject to budgetary constraints or other limitations. Informing DOE officials that SAIC should provide additional IT services at YMSO and that some IT services were not running as smoothly as Mr. Hardwick believed they should, does not in my view constitute a disclosure of gross waste, fraud, abuse, or serious mismanagement, as contemplated by the Deputy Secretary in Mehta and Holsinger.

V. CONCLUSION

I have therefore concluded that Mr. Hardwick has failed to show by a preponderance of evidence that he revealed information that he in good faith believed disclosed gross waste, fraud, abuse or serious mismanagement. Accordingly, his request for relief under 10 C.F.R. Part 708 will be denied.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Roger Hardwick under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed with the OHA Director, requesting review of the initial agency decision.

Virginia A. Lipton

Hearing Officer

Office of Hearings and Appeals

Date: July 6, 1999

(1)On March 15, 1999, the DOE published as an Interim Final Rule a revised regulation governing the Contractor Employee Protection Program. 64 Fed. Reg. 12862 (March 15, 1999). It became effective on April 14, 1999. Section 708.8 of the new rule provides that the new procedures "apply prospectively in any complaint proceeding pending on the effective date of this part." Thus, the Interim Final Rule is generally applicable to the instant case.

(2)In their briefs the contractors argued that Mr. Hardwick's Complaint was not filed with the appropriate DOE Field Office within the 60 day regulatory filing period set forth in the prior regulations. 10 C.F.R. §708.6. They also raised several other procedural defects in the Complaint. In view of my ultimate conclusion that Mr. Hardwick has not shown that he made a protected disclosure, I will not rule on the merits of the procedural challenges.

(3)If Hardwick meets this burden, he must next prove that his disclosure was a contributing factor to his being discharged. 10 C.F.R. § 708.29; see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994). If Hardwick meets the regulatory burden as set forth above, the burden then shifts to SAIC and KenRob. The regulations require the contractor to prove by "clear and convincing" evidence that it would have taken the same action against the complainant even if he had not made a protected disclosure. 10 C.F.R. § 708.29. In view of the fact that I find no protected disclosure in this case, I will give these additional requirements no further consideration.

(4) The Interim Rule covers disclosures of "gross mismanagement," whereas the prior regulation referred to a disclosure involving "mismanagement." Mr. Hardwick's attorney takes the position that Mr. Hardwick need only show that there was "mismanagement," and not "gross mismanagement." He contends that it would be unfair to retroactively apply the new Interim Rule, which he claims adopts a more rigorous standard. I do not agree with this contention. I indicated during our May 19 prehearing telephone conference and in my May 20 letter to all parties that the Interim Rule did not adopt a totally new standard with respect to "mismanagement." I stated that under well- established case law, the standard requires that the alleged mismanagement involve serious matters, and not just disagreements between managers and employees. Holsinger v. K-Ray, Inc., 26 DOE ¶ 87,506 (1996)(Holsinger); Mehta v. Universities Research Assoc., 24 DOE ¶ 87,514 (1995) (Mehta). Accordingly, I believe that I must consider whether allegations of mismanagement raised by Mr. Hardwick rise to the higher level set forth by the Deputy Secretary in Mehta. Since the Deputy Secretary did not actually use the term "gross mismanagement," in this Decision, I will refer to that level as "serious mismanagement."

(5)In a letter of June 15, I informed all the parties that I had learned that the court reporter's car was burglarized, and all the tapes made of the hearing were stolen. These tapes recorded testimony, comments of counsel and my comments at the hearing. No transcript of the hearing exists, nor can one be made. Accordingly, as I stated in my June 15 letter, my discussion of the hearing in this Initial Agency Decision will be based on my best recollection of the testimony. I have also referred to some notes that I made during the hearing.

(6)Mr. Hardwick testified that Ms. Jones was not present at the January meeting. Ms. Jones had no doubt that she was present. Given Ms. Jones' detailed and specific recollections of the discussion that took place, I believe that she was present at the meeting, and I found her testimony to be wholly credible.

(7)Mr. Wilson did not believe that the May 17 memo was written as a reply to the January 18 memo. Since he did not participate in the discussion that took place between Mr. Gandi, Ms. Jones and Mr. Hardwick, he could not testify as to whether Mr. Hardwick had raised any of the points in the May 17 memo during the January discussion.

(8)See e.g., Complaint, Opposition to Motion for Summary Judgment and Transcript of June 1, 1999 deposition.

(9)I recognize that the current regulations require that a complainant establish that he disclosed information that he "reasonably and in good faith" reveals gross waste, fraud, abuse or gross mismanagement, whereas the prior regulation required only that the employee disclose information that he "in good faith" believes evidences those types of concerns. 10 C.F.R. § 708.5. Reasonability is assessed objectively. The employee must show that the matter described was one that a reasonable person in his position with his level of experience would believe evidenced gross waste, fraud, abuse or gross mismanagement. Berkley v. Dept. of the Army, 71 M.S.P.R. 341, 347 (1996). A good faith standard is a subjective one, referring to what the individual himself honestly believed. In the present case, the Complainant argues that the more stringent standard of the Interim Final Rule, requiring a reasonable belief, should not be used. He asserts that this would be a retroactive application of the stricter standard and would be unfair. He asks me to judge his disclosure using only the good faith standard of the prior regulation. Even if I do so, I cannot find that Mr. Hardwick has met his burden of proof.

(10)Each time a witness stated that he or she did not believe that Mr. Hardwick intended to raise concerns of gross waste, fraud, abuse or serious mismanagement, I indicated to Mr. Hardwick that he would have an opportunity to challenge that testimony. At the end of the hearing I asked Mr. Hardwick specifically if he wished to enter any further testimony into the record. He declined to do so.

(11)In his testimony at the deposition and at the hearing, Mr. Hardwick virtually admitted that he had no support whatsoever for his claims of gross waste, and fraud. E.g., Tr. at 43-49. His claim of abuse is frivolous on its face. The only claim that might have some validity is that of mismanagement.

Case No. VWA-0033

November 4, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioners:Gretencord v. West Valley Nuclear Services Co., Inc.

Date of Filing: March 19, 1999

Case Number: VWA-0033

This decision considers a Complaint filed by John L. Gretencord (Gretencord) against West Valley Nuclear Services, Inc. (West Valley) under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. Mr. Gretencord requested a hearing on his Complaint under 10 C.F.R. Part 708 on March 19, 1999.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The criteria and procedures for Part 708 were amended in an Interim Final Rule effective April 14, 1999. 64 Fed. Reg. 12862. The Interim Final Rule provides that its amended procedures will apply prospectively to any complaint pending on April 14, 1999. Part 708's primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against an employee on the basis of certain activities by the employee, including certain disclosures by the employee to "a DOE official, a member of Congress, any other government official who has responsibility or oversight of the conduct of operations at a DOE site, [an] employer or any higher tier contractor, . . .” 10 C.F.R. § 708.5(a).

Gretencord was employed by West Valley as a Senior Quality Control/Quality Assurance Engineer from January 15, 1990 to March 18, 1997. On March 26, 1997, Gretencord filed a complaint under 10 C.F.R. Part 708 with the DOE Office of Inspector General's Office of Inspections (IG). In this complaint, Gretencord alleged that he was retaliated against for disclosures of possible safety violations, fraud and mismanagement.

After conducting an investigation of Gretencord's allegations, the IG issued a Report of Investigation (the Report) on February 11, 1999. The Report found that: "[A] preponderance of the available evidence supports a finding that during his employment and work in quality assurance, [Gretencord] disclosed various concerns to [West Valley] officials and to DOE about possible safety violations and incidents of possible rule infractions." Report at 5. However, the Report further found that: "[A] preponderance of the available evidence does not indicate that the substance of [Gretencord's] 'good faith' concerns contributed to actions that were taken against him." *Id.* at 6. The Report further states: "It is the conclusion of this

inquiry, based upon information obtained through interviews of [West Valley] employees and supporting documents, that the evidence is clear and convincing that [Gretencord] was terminated for reasons other than his protected disclosures." *Id.* at 8. On March 8, 1999, DOE received Gretencord's request for a hearing and I was appointed as the Hearing Officer.

II. Analysis

Under the DOE's Contractor Employee Protection Regulations, "the employee who files a complaint has the burden of establishing by a preponderance of the evidence that he or she made a disclosure . . . as described under §708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employer by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee's disclosure . . . ." 10 C.F.R. § 708.29.

West Valley admits that Gretencord made at least 14 protected disclosures while employed at West Valley. Moreover, the record shows that a number of negative personal actions occurred during Gretencord's tenure with West Valley. These negative personal actions include several letters of reprimand, poor performance evaluations, a suspension, and eventually an involuntary termination.

In most whistleblower cases, it is difficult or impossible for a complainant to find a "smoking gun" that proves an employer's retaliatory intent. Therefore, Congress and the courts, recognizing this difficulty, have found that a protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993), *citing McDaid v. Department of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, the courts have found that "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F.2d at 148 (8th Cir. 1989).

Gretencord's protected disclosures were interspersed throughout his tenure at West Valley, as were the negative personnel actions taken against him. (1) Applying the above principles to the present case, I find that Gretencord has met his initial burdens under § 708.29 thereby shifting the burden to West Valley to prove by clear and convincing evidence that it would have taken the same actions without Gretencord's protected disclosures. However, I have also found that West Valley has clearly and convincingly proven that each of the personnel actions it took against Gretencord were motivated by legitimate managerial considerations instead of a desire to retaliate against Gretencord for his protected disclosures. Accordingly, I am denying Gretencord's compliant under 10 C.F.R. § 708.30(e).

Simply put, the record developed during the hearing I conducted, shows that Gretencord has, from the very beginning to the end of his tenure with West Valley, frequently engaged in unprofessional and socially inappropriate behavior. To some extent, Gretencord's behavior was merely eccentric, unusual or socially awkward. However, the record indicates that Gretencord would often engage in behaviors that compromised his effectiveness and interfered with the operation of West Valley's day- to-day business operations. (2)

As explained below, during Gretencord's eight years with West Valley, he had an extraordinary number of personality conflicts, confrontations, and arguments with other members of West Valley's workforce. Moreover, he repeatedly failed to control his temper, issued threats to fellow employees, and made bizarre and disturbing statements in the presence of co-workers.

Gretencord attributes these conflicts to an alleged conspiracy on the part of West Valley's management to cover up safety, financial and management deficiencies. Gretencord claims that his efforts to expose safety concerns and corruption at West Valley threatened management and that they responded by harassing him,

interfering with his ability to do his job and trumping up allegations about his behavior. Gretencord, however, failed to present any evidence in support of these allegations. In contrast, West Valley has clearly and convincingly rebutted these allegations by submitting Gretencord's personnel file and by presenting the testimony of co-workers, which show that Gretencord's actions provided West Valley with legitimate justification for taking negative personnel actions against him.

I find the evidence submitted by West Valley concerning Gretencord's behavior and conduct to be credible since, for the most part, Gretencord does not deny that he made the statements or performed the behaviors attributed to him and because of the sheer number of similar reported occurrences.

Gretencord's personnel file contains voluminous documentation of his unacceptable behavior and statements. My review of Gretencord's personnel file has convinced me that he frequently exhibited poor self-control and repeatedly treated his fellow employees in an abusive manner. The personnel file also documents that Gretencord's actions and statements insulted and frightened fellow West Valley employees. Moreover, Gretencord did not respond to any of West Valley's proactive attempts to help Gretencord modify his behavior.

Gretencord's personnel file shows that on March 14, 1990, a secretary complained to West Valley management that Gretencord had made public comments disparaging secretaries. Gretencord's supervisor at the time, David Crouthamel, indicated that he had discussed this incident with Gretencord. Gretencord has not denied that this incident occurred.

On February 6, 1991, two West Valley employees reported to Crouthamel that they witnessed Gretencord harassing a co-worker over a work order. Crouthamel spoke with Gretencord about this incident, but Gretencord denied it had occurred.

On or about March 18, 1991, a West Valley engineer complained to Crouthamel about Gretencord's behavior and refused to work with Gretencord in the future. Crouthamel indicated that he raised the matter with Gretencord. Gretencord responded by losing his temper, stating that he would leave West Valley if he "had to deal with personalities" and storming out. Gretencord has not denied that these incidents occurred.

On March 23, 1991, West Valley received another complaint from a secretary that Gretencord had been rude to her. After being informed of this complaint, Crouthamel counseled Gretencord to "work with people, not against them." Gretencord has not denied that this incident occurred.

On August 2, 1991, Crouthamel issued a memo to Gretencord's personnel file documenting his concerns about "Gretencord's abusiveness and lack of professionalism in inter-personal relations."

On September 19, 1991, David Shugars issued a memo to Gretencord's personnel file concerning Gretencord's verbal intimidation of an employee. Shugars counseled Gretencord about this incident, suggesting that Gretencord should attend interpersonal skills training. Apparently, Gretencord did not heed this advice.

On March 20, 1992, West Valley issued a reprimand letter to Gretencord in response to an incident in which Gretencord displayed unprofessional and abusive behavior towards a co-worker. That letter warned Gretencord that future behavior of this kind could result in his discharge.

On May 14, 1992, West Valley received a complaint from two cafeteria workers that Gretencord had been rude to them. The workers reported that Gretencord had stated that "women are beneath him." Crouthamel discussed this incident with Gretencord, who indicated that his statements were misinterpreted.

On May 19, 1993, a co-worker submitted a memo complaining about an incident in which she alleges Gretencord's behavior made her feel threatened. Gretencord has not denied that this incident occurred.

On October 27, 1993, a West Valley manager communicated the fact that he was concerned that

Gretencord presented a threat to his personal safety. In response, West Valley's Employee Assistance Program (EAP) was consulted. The EAP recommended that Gretencord should receive professional counseling. Apparently, Gretencord did not accept this offer of assistance.

On November 16, 1995, Dave Dempster and Jack Hummel met with Gretencord to discuss his behavior. During this meeting, Gretencord was told that his frequent outbursts would no longer be tolerated and he was informed that his employer was concerned about "his continued inability to interface with his co-workers in a professional or even a civil manner." In response, Gretencord allegedly threatened to report West Valley for incompetence and a cover-up. Gretencord has not denied that this incident occurred.

On December 21, 1995, a memo was placed in Gretencord's personnel file indicating that he had been instructed to seek help from the EAP because of his abusive language and inability to get along with co-workers. Gretencord has not denied that this incident occurred. Nor is there any indication that Gretencord took advantage of this offer of assistance from the EAP.

On February 17, 1997, a memo was placed in Gretencord's personnel file indicating that a co-worker had asked Gretencord to "watch his filthy mouth." The co-worker reported that Gretencord responded by becoming aggressive. Gretencord has not denied that this incident occurred.

On February 20, 1997, the Supervisor of West Valley's Electrical Department, Bruce Covert, encountered Gretencord engaged in a conversation in the Electrical Department's offices. Covert asked Gretencord why he was there. Gretencord informed Covert that he was assigned to conduct a surveillance of that department. Gretencord then asked to see some documents. Covert then telephoned Gretencord's supervisor, who informed Covert that Gretencord had not been assigned to conduct a surveillance of the electrical area. Gretencord then became angry. Covert reported that Gretencord said " I am coming back to write you up on paperwork issues and I am going to [West Valley] and DOE with this as you must be hiding something." A co-worker reported that he overheard Gretencord say "I just love doing that sort of thing." Another co-worker reported that Gretencord made a similar statement the next day.

On February 25, 1997, Gretencord met with Tom Crisler of West Valley's Human Resources Department. Crisler recounted that, during this meeting, Gretencord expressed his belief that direct, aggressive and disrespectful conduct was acceptable for a Quality Assurance Engineer. At this meeting, Gretencord was informed that he was being suspended pending an investigation into his conduct.

On February 27, 1997, Gretencord again met with Crisler. Crisler informed Gretencord that his employment with West Valley was being terminated because of his lack of respect for his co- workers. During this meeting, Crisler alleges, Gretencord held out his left arm. Allegedly, Gretencord noted that his arm was very steady and that enabled him to be good at aiming a gun. Crisler further alleged that Gretencord then said he needed to think about becoming a whistleblower.

The testimony presented at the hearing buttressed the impression that I formed from reviewing Gretencord's personnel file. A number of Gretencord's co-workers testified that they or other co- workers personally feared him. Transcript at 359, 603, 671-672, 818-19, 825-26, 830, 951, 1422-24, 1435. Moreover, a number of Gretencord's co-workers testified that they witnessed Gretencord engaged in disturbing behaviors. Thomas J. Holden testified that he had witnessed Gretencord engaged in loud and threatening confrontations on a few occasions. Tr. at 65-66, 80-81. Vitto Riggi testified that he witnessed Gretencord have violent outbursts on at least two occasions. Tr. at 201-04. Linda Baker testified that she saw Gretencord in a local mall. When Baker asked why he was at the mall he indicated that he was there to bump into little kids or to trip them. Tr. at 362, 424, 432. Baker also testified that she witnessed Gretencord get mad at people and yell and scream at them. Tr. at 423. Jerome E. Hager recounted an incident where Gretencord provoked a fellow employee to slap him by refusing to stop singing a song about that employee. (This song was sung by Gretencord to the tune of the Gilligan's Island theme song). Tr. at 470. Jack Gerber testified that Gretencord joked about stepping on little children's toes in the mall. Tr. at 652. Phil O'Brien testified that Gretencord had told him that he had a vendetta against Bruce Covert.

Tr. at 781. Dave Crouthamel testified that Gretencord had talked about poisoning and shooting "little Halloween kids." Tr. at 1150, 1214-15, 1240-42.

The actions and statements attributed to Gretencord in his personnel file and by the testimony of his co-workers provide an extraordinarily strong basis for any negative personnel actions taken against him, including his termination. Since Gretencord did not even attempt to specifically rebut the veracity of most of these allegations, I assume they happened as they were recounted in the record.

III. Conclusion

The documentation contained in Gretencord's personnel file and the testimony of his co-workers and managers show that while employed at West Valley, Gretencord frequently exhibited behaviors and made statements that understandably disturbed and frightened those around him. Moreover, Gretencord's unacceptable and unprofessional behavior unnecessarily interfered with West Valley's legitimate business operations. Accordingly, I find that West Valley Nuclear Services, Inc. has proven by clear and convincing evidence that it would have taken each of the negative actions it took against John L. Gretencord without his protected disclosures.

It Is Therefore Ordered That:

(1) The Complaint filed by John L. Gretencord against West Valley Nuclear Services Co., Inc., on March 19, 1999, Case No. VWA-0033, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after the party’s receipt of the initial agency decision.

Steven L. Fine

Hearing Officer

Office of Hearings and Appeals

Date: November 4, 1999

(1)For example, in late 1996 Gretencord disclosed a concern about radiation exposure readings to West Valley and the DOE and on February 21, 1997, Gretencord informed West Valley of his plans to take an "employee concern" to the DOE. Both of these disclosures occurred in sufficient temporal proximity to Gretencord's February 1997 suspension and termination to establish a prima facie case, thereby shifting the burden of proof to West Valley.

(2)The record also shows that West Valley’s management attempted to help Gretencord by counseling him, recommending professional counseling and detailing him to a position where social skills were less important.

Case No. VWA-0034

September 27, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Frank E. Isbill

Date of Filing: March 29, 1999

Case Number: VWA-0034

This Decision concerns a whistleblower complaint filed by Frank E. Isbill (the complainant), a former employee of NCI Communications, Inc. (the contractor) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. For almost two years, the complainant was employed by the contractor at DOE's Oak Ridge, Tennessee site (Oak Ridge). The complainant alleges that while employed by the contractor, he made protected disclosures concerning a potential abuse of authority by a DOE employee whose wife worked for a rival contractor.(1) The complainant contends that his subsequent demotion and lay off were retaliatory acts, but the contractor disagrees. (2) In this Decision, I find that the complainant made protected disclosures and that these contributed to the lay off and the demotion. Although I find that the complainant would have been laid off despite his disclosures, I also find that the contractor failed to prove clearly and convincingly that it would have demoted him even had he not made disclosures. I therefore find that the complainant prevailed on that issue and order appropriate relief accordingly.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequent reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The DOE recently issued revised Part 708 regulations that were published in the Federal Register on March 15, 1999. See 64 Fed. Reg. 12,862 (March 15, 1999) and by their terms, apply to all cases which were pending as of the date they became effective, April 14, 1999, including the instant case. 10 C.F.R. § 708.8. The regulations provide, in pertinent part, that a DOE contractor may not retaliate against any employee because that employee has disclosed to a DOE official or to a DOE contractor, information that the employee reasonably and in good faith believes to evidence, among other things, an abuse of authority. See 10 C.F.R. §§ 708.5(a)(1) and (3).(3) Employees of DOE contractors who believe they have been retaliated against in violation of the Part 708 regulations may file a whistleblower complaint with the

DOE. The regulations entitle these employees to independent fact-finding and a hearing before an Office of Hearings and Appeals (OHA) Hearing Officer.

B. Factual Background

In 1987, the complainant began working at the Oak Ridge site doing abstracting and indexing tasks. In July 1995, the contractor took over the information technology contract at that site and hired the complainant. During his employment with the contractor, the complainant made alleged protected disclosures concerning the potential abuse of authority by a DOE task monitor whose wife worked for another contractor performing the same work. The complainant contends that his disclosures were contributing factors to his demotion and eventual lay off.

C. Procedural History

The complainant filed his whistleblower complaint on March 17, 1997, which he amended following his lay off about two months later. The Office of Inspector General (OIG) conducted an investigation into the allegations contained in the complaint and issued a Report of Inquiry and Recommendations on March 2, 1999. The OIG concluded that the complainant was not entitled to any relief.(4)

On March 22, 1999, the complainant submitted his request for a hearing under 10 C.F.R. § 708.9 (1998) to the OIG. The OIG transmitted that request to OHA on March 29, 1999 and I was appointed Hearing Officer in this case on March 30, 1999. On June 16, 1999, I held the hearing in this case in Oak Ridge, Tennessee. The complainant testified on his own behalf and he called as witnesses two of his supervisors, the contractor's Program Director Hunter Foreman and the contractor's Deputy Program Director Shirley Hembree. The complainant also called the following DOE employees: the task monitor, the Information Security Specialist Russ Morel, and Ken Williams. The contractor called as witnesses DOE supervisory information management specialist Judy Gilmore and DOE Contracting Officer's Representative Brian Hitson. I permitted the parties to submit post-hearing briefs. The complainant submitted the latter of these briefs on August 5, 1999. With that filing, I closed the record in this case. (5)

II. Legal Standards Governing This Case

As noted above, the regulations set forth in 10 C.F.R. Part 708 provide an administrative mechanism for the resolution of whistleblower complaints filed by employees of DOE contractors. The regulations specifically describe the respective burdens imposed on the complainant and the contractor with regard to their allegations and defenses and prescribe the criteria for reviewing and analyzing the allegations and defenses advanced.

It is the burden of the complainant under Part 708 to establish by a preponderance of the evidence that there was a disclosure, participation, or refusal described under 10 C.F.R. § 708.5, and that such act was a contributing factor in a retaliatory action taken against the complainant. 10 C.F.R. § 708.29. The term "preponderance of the evidence" means proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); 2 McCormick on Evidence § 339 at 439 (4th ed. 1992).

In the present case, the complainant must make two showings. First, he must demonstrate that he disclosed information to an official of DOE or to the contractor that he believed in good faith evidenced one of the items enumerated in 10 C.F.R. § 708.5. If the complainant meets this burden, he must next demonstrate that his disclosure was a contributing factor to his termination. 10 C.F.R. § 708.29; see Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994) (Oglesbee).

If the complainant meets his burden as set forth above, the burden then shifts to the contractor. The

regulations require the contractor to prove by "clear and convincing" evidence that the contractor would have taken the retaliatory action even if the complainant had not made the disclosure. "Clear and convincing" evidence is a much more stringent standard than "a preponderance of the evidence"; it requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3.

III. Analysis

The parties contest many of the facts in this case. My findings of fact set forth below are based on (1) the entire record developed in the case, including the OIG investigative file, all documents submitted by the parties and the transcript of the June 16, 1999 hearing and (2) my observations of the witnesses' demeanor at the hearing and my determinations regarding those witnesses' credibility.

After reviewing the entire record in this case, and considering the credibility of the witnesses who testified at the hearing, I conclude that the complainant has shown by a preponderance of evidence that he disclosed information that he believed in good faith evidenced an abuse of authority. I also find that these disclosures contributed to retaliatory actions taken by the contractor. I further conclude, however, that the contractor has proven by clear and convincing evidence that it would have laid off the complainant even if the complainant had not made protected disclosures. I also find that the contractor has failed to show by clear and convincing evidence that it would have removed the complainant's supervisory duties had he not made disclosures. Accordingly, I find that the complainant is entitled to relief under 10 C.F.R. Part 708.

A. Alleged Disclosures

The hearing focused on the complainant's disclosures that the DOE employee who was the task monitor for the complainant's abstracting and indexing (A and I) group was married to an employee of another contractor receiving A and I work.(6) Tr. at 43. The complainant saw two primary problems with this situation. First, he believed that the task monitor was steering work to his wife's company. Second, the complainant believed that the task monitor was treating the contractor's A and I group unfairly, in an effort to help his wife's company, e.g., by informing DOE about the contractor's allegedly poor productivity. See Tr. at 49-50, 194. Two supervisors, Ms. Hembree and Mr. Foreman, conceded that he had made a disclosure of his beliefs to each of them. Tr. at 82, 89, 111-112, 116-117. These disclosures appear to have been made during November 1996. Tr. at 43, 82; see Tr. at 112, 160; see also Ex. A-6 at 2 (supervisor Hembree thought the disclosure had been in January 1997).

These disclosures provide evidence of a potential abuse of authority. An abuse of authority occurs when there is an "arbitrary or capricious exercise of power by a federal official or employee that adversely affects the rights of any person or that results in personal gain or advantage to himself or to preferred other persons." D'Elia v. Department of the Treasury, 60 M.S.P.R. 226, 232 (1993) (interpreting Whistleblower Protection Act). Certainly if the DOE task monitor either improperly directed additional work to his wife's company or harmed the contractor's interests with DOE to benefit his wife's company, those acts would be considered an abuse of authority.

Next, the complainant must show that he reasonably and in good faith believed his disclosures revealed an abuse of authority. A good faith standard is a subjective one, referring to what the individual himself honestly believed. Roger W. Hardwick, 27 DOE ¶ 87,517 at n. 9 (1999). Both of the witnesses who testified that the complainant had made these disclosures to them testified that they thought that the complainant honestly believed that the facts he relayed to them were true. Tr. at 89, 124. However, the contractor argued that if the complainant was truly making good faith disclosures of wrongdoing, he would have made the conflict of interest disclosure much earlier, when the DOE task monitor's wife previously worked for NCI. Thus, the contractor contended that the complainant was more concerned with his company's interest than in stopping conflicts of interest and therefore, his disclosures were not in good faith. Tr. at 34-36, 196, 199.

Good faith does not require either the absence of self-interest in making a disclosure or that a complainant make a disclosure as soon as he or she is aware of a problem. Cf. Frederick v. Dept. of Justice, 65 M.S.P.R. 517, 531, rev'd on other grounds 73 F.3rd 349 (Fed. Cir. 1996) (holding under the Whistleblower Protection Act that personal motivation to blow whistle does not make belief non-genuine). As explained above, both supervisors indicated that the complainant believed that a true conflict of interest existed. I therefore believe that the complainant has sufficiently demonstrated that these disclosures were made in good faith.(7)

The complainant must also show that he reasonably believed his disclosures to reveal an abuse of authority. In contrast to good faith, reasonability is assessed objectively. In this case, the complainant must show that the matter described was one that a reasonable person in his position with his level of experience could believe evidenced an abuse of authority. There was some dispute at the hearing as to whether the complainant's disclosures met this requirement. The NCI Program Director, Hunter Foreman, thought that the disclosures were reasonable. Tr. at 89. However, the NCI Deputy Program Director Shirley Hembree did not think that the disclosures were reasonable, since to her knowledge, the task monitor was not sending additional work to his wife's company and his wife did not perform A and I work. Tr. at 124-26; see also Tr. at 97-98, 159-161, 192.

However, whether the complainant's disclosures turned out to be true is irrelevant to the question of whether they are protected.(8) See META, Inc., 26 DOE ¶ 87,504 at 89,015 (1999) (actual health risk unimportant to determining whether disclosure is protected); cf. Rogers v. McCall, 488 F. Supp. 689, 697 (D.D.C. 1980) (civil rights case).(9) I find that a reasonable person in the complainant's position could have found the facts he understood to constitute a potential abuse of authority. For these reasons, I conclude that the complainant has shown by a preponderance of the evidence that he had a reasonable belief his disclosures evidenced an abuse of authority. Therefore, the complainant has shown that he made protected disclosures.

B. Contributing Factor

One way to show that a protected disclosure was a contributing factor in a personnel action is to show "temporal proximity" between a protected disclosure and an alleged reprisal. In this case, there is temporal proximity between the complainant's disclosures regarding the DOE task monitor and his termination. Since the disclosures occurred six months or less before the allegedly retaliatory actions, I believe that the complainant has met his burden to show that his disclosures were a contributing factor to the allegedly retaliatory actions. Barbara Nabb, 27 DOE ¶ 87,519 (1999) (eight months found to be proximate).

C. Justification for the Complainant's Lay off

The contractor presented evidence at the hearing that it would have laid off the complainant even had he not made disclosures, because the DOE had decided to no longer fund the contractor's performance of the A and I task. Tr. at 69-70(10) DOE officials had decided to proactively take steps to cut the Office of Scientific and Technical Information (OSTI) budget, since they anticipated a shortfall of approximately $800,000 in the coming fiscal year. Tr. at 139, 164. OSTI officials met in April 1997 to decide how to make up this shortfall. Tr. at 163-164. The officials made eighteen decisions, one of them being to no longer fund the contractor's performance of the A and I task, and to direct the A and I work to other contractors. See Tr. at 164; Ex. B-39 at 4.

OSTI notified the contractor verbally of its decision and then cut the money from the contractor's budget. Tr. at 178-79; Contractor's Ex. C-21. When the contractor received this news, it determined that it had no other work for these three remaining employees of the A and I group, which included the complainant, to perform, and therefore decided to lay them off in May 1997. Tr. at 63, 81. Evidence indicates that the complainant was not treated differently from other similarly situated employees. Between September 1995 and the remaining A and I group's lay off in May 1997, the contractor laid off 55 employees out of the

original 82 employees working on the contract due to DOE cuts. Tr. at 73, 182; Ex. A-6 at 3; Ex. A-7 at 1. The prior lay offs included A and I employees.(11) There was evidence confirming that when DOE told NCI to cut an entire task, as occurred in this case, all the NCI employees performing that task were laid off. Tr. at 92.(12)

Notwithstanding the contractor's arguments, the complainant states that his lay off would not have happened except for his disclosures. The complainant believes that because of his disclosures, the contractor refused to accept his suggestions in February 1997 as to how the A and I group could become more cost-competitive, which caused DOE to cut the contractor's funding for this task. See Tr. at 50-51, 114. However, this chain of events is extremely speculative. Moreover, even if the contractor had immediately implemented the complainant's suggestions, they would have been too late to affect DOE's decision-making since DOE started analyzing the contractor's cost- competitiveness that same month. Tr. at 138.

In addition, the complainant argues that one particular document is a "smoking gun" which proves, in his view, the retaliatory nature of the contractor's actions. This document states that a DOE employee reported to the OIG in April 1997 a rumor he had heard that the complainant was going to be fired because he had filed complaints with the OIG. See Ex. FI-6 at 2. Further, this DOE employee believed that DOE employee Williams had been meeting with the contractor's management to arrange for the complainant's termination. Id.

However, not only are these assertions unsupported by any evidence, they are irrelevant. (13)Even if the management contractor disliked the complainant intensely and wanted to fire him because of his disclosures, that scenario would not alone overcome the other evidence that the contractor would have fired him anyway. Once the contractor received notice that its A and I work would no longer be funded, it had no other work for him to do, and the decision to lay him off was unavoidable. The complainant has not suggested that there was other work for him to perform for the contractor at the time of the lay off. I am therefore satisfied that the complainant was not differentially treated by the contractor, and that the contractor has presented clear and convincing evidence that the complainant would have been terminated even if he had not made protected disclosures.(14)

D. Demotion

The complainant maintains that the removal of his supervisory duties in February 1997 was another retaliatory act.(15)This occurred less than three months after the complainant's disclosures, and therefore I find that the disclosures were a contributing factor to the personnel action. Thus, the burden shifts to the contractor to demonstrate that it would have demoted the complainant even in the absence of disclosures.

Mr. Foreman explained that DOE employee Hitson had told him earlier that month that according to the DOE statistics, it appeared that the other contractors were more cost-competitive than NCI. The contractor was not producing enough reports to make it cost-competitive, and further was charging a great deal of time in the "other" category used to account for supervisor's time spent doing supervisory tasks, among other things. Tr. at 51-52. In addition, the "other" category included such things as time taken for breaks, training, meetings, and computer down time. Tr. at 53. Mr. Foreman testified that to improve productivity and reduce the charges in the "other" category, he decided to have the complainant concentrate exclusively on abstracting and indexing, and not supervisory tasks. Tr. at 84-85. Following this action, NCI's time charged in the "other" category decreased from an average of 28 percent to sixteen percent of its total bills. Tr. at 86-87.

In response, the complainant has charged that the "other" category decreased at that time for reasons other than his demotion. First, the A and I group received a new DOE project to work on (causing its non-"other" hours to increase), second, the group had settled into its new location after two moves and third, the A and I group had completed their training on new computers. See Tr. at 54; Complainant's Post-Hearing Brief at 4 (August 5, 1999). It appears clear that there were many sources of the time spent in the

"other" category and there were therefore many different ways to decrease this time. In view of the number of ways to decrease the "other" time, the contractor appears to have had many other options aside from taking away the complainant's supervisory duties. I therefore find that the contractor has failed to prove clearly and convincingly that it would have taken this action even in the absence of the complainant's disclosures.

IV. Remedy

Section 708.36 provides that if the initial agency decision determines that an act of retaliation has occurred, the Hearing Officer may order: (1) reinstatement; (2) transfer preference; (3) back pay; (4) reimbursement of reasonable costs and expenses; and (5) such other remedies as are deemed necessary to abate the violation and provide relief to the complainant. Although no loss of pay resulted from the complainant's demotion, I will order the contractor to pay the complainant's reasonable costs and expenses incurred in bringing this Part 708 complaint. These costs would include the complainant's costs for photocopies, faxes, postage, telephone bills, transportation costs to and from the hearing, service of subpoenas, and any professional services retained.

V. Conclusion

As set forth above, I have determined that the complainant made protected disclosures regarding a potential abuse of authority. Further, the complainant has shown that the disclosures were a contributing factor to his lay off. I have also found, however, that the contractor has proven by clear and convincing evidence that it would have laid off the complainant absent his disclosures. Nevertheless, the contractor failed to prove by clear and convincing evidence that it would have demoted the complainant even in the absence of his disclosures. Accordingly, I conclude that there has been a violation of the DOE's Contractor Employee Protection Program for which relief is warranted under § 708.30 (d).

It Is Therefore Ordered That:

(1) The Request for Relief filed by Frank E. Isbill, Case No. VWA-0034, under 10 C.F.R. Part 708 is hereby granted to the extent set forth in paragraph (2) below and is denied in all other respects.

(2) NCI shall pay to Mr. Isbill an amount to be determined based on the information provided pursuant to Paragraph (3) in compensation for all costs and expenses reasonably incurred by Mr. Isbill in bringing his complaint under Part 708.

(3) Mr. Isbill shall, no later than 30 days after receipt of this Decision, submit to the undersigned Hearing Officer and to counsel for NCI a detailed and itemized list of each and every direct and reasonable expense incurred in bringing the complaint, the dates incurred and the provider of the good and service provided.

(4) Counsel for NCI shall, no later than fourteen days after receipt of a copy of the submission referred to in Paragraph (3), either submit to Mr. Isbill payment in the amount requested (and notify the Hearing Officer that they have done so) or submit to Mr. Isbill and the Hearing Officer an objection to that amount based on either reasonableness or accuracy.

(5) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy granting in part the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed requesting review of the initial agency decision by the Director of the Office of Hearings and Appeals with the Office of Hearings and Appeals, 1000 Independence Avenue, S.W., Washington, D.C. 20585-0107, telephone number (202) 426-1566, fax number, (202) 426-1415.

Dawn L. Goldstein

Hearing Officer

Office of Hearings and Appeals

Date: September 27, 1999

(1)

(2)

(3)The complainant alleged other retaliatory acts as well. Since I have decided that the complainant has prevailed regarding the demotion (and as a result will recover his litigation costs), and because the complainant has requested no remedy for these other retaliations, see Email from Complainant to Hearing Officer (April 21, 1999), nor can I think of a likely one, it is not necessary to address these other retaliations. See Barbara Nabb, 27 DOE ¶ 87,519 (1999).

(4)This standard now specifies in its text that the employee must have reasonably believed that his disclosures revealed one of a list of enumerated items, including an abuse of authority. Compare 10 C.F.R. § 708.5(a)(1)(1998) with 10 C.F.R. § 708.5. I had informed the parties prior to the hearing that I believed it would be unfair to apply the new definition to a complaint filed under the old regulations. However, upon further reflection since the hearing, I do not believe that a substantive change has taken place in this standard since it is highly unlikely that this Office would have found a disclosure that was unreasonably believed by the complainant to reveal one of the items described in 10 C.F.R. § 708.5 to be protected. Therefore, I have used the new standard to evaluate the instant case. I note that the issue of the reasonableness of the complainant's belief was fully explored at the hearing. See infra.

(5)Specifically, OIG assumed that the complainant had made protected disclosures, but found that he had failed to show that those disclosures were a contributing factor to any adverse personnel action taken against him by the contractor. It further found that there was clear and convincing evidence that, even in the absence of the disclosures, the contractor would have taken the same allegedly retaliatory acts, including the lay off.

(6)The citations to exhibits in this Report are based on the list of documents compiled by the OIG. The exhibits submitted by the complainant are cited as "FI-" and the contractor's exhibits utilized the OIG's numbering system. The transcript of this case is cited as "Tr."

(7)The task monitor would, among other duties, inform the contractor of the tasks that DOE wished to have the contractor perform. Tr. at 187.

(8)The contractor also argued that the disclosures were in bad faith because the complainant failed to sufficiently investigate the subject matter of his disclosures prior to making them. Tr. at 201-202. As indicated above, no one has doubted that the complainant believed the facts he relayed to his supervisors and that these facts created a possible abuse of authority. Part 708 does not require that whistleblowers conduct full-scale factual and legal investigations prior to making their disclosures. In this case, the complainant meets the requirement of the regulations by reporting the facts as he understood them.

(9)With the obvious exception that if the complainant knew the disclosures to be false at the time he made them, the disclosures would not have been made in good faith.

(10)For the same reason, evidence that the contractor presented regarding whether the task monitor had met the legal requirement to disclose his wife's employer is irrelevant.

(11)The complainant believes that DOE and the contractor entered into a "conspiracy" to lay him off. However, I informed the parties at the hearing that Part 708 only covers retaliation by contractors, not DOE. I stated that only evidence relating to a judgment by the contractor to take a retaliatory action would

be considered relevant to this hearing and conversely, evidence relating to DOE motivation would not be considered relevant. See Tr. at 22-23, 177; 10 C.F.R. § 708.1 (referring to the regulation's goal as preventing retaliation by complainants' employers, DOE contractors); see also Decision by Deputy Secretary Affirming Summary Dismissal of Complaint of George E. Parris, Ph.D., IG Complaint No. HQ97-0006 (October 15, 1998, unpublished) ("Part 708 is specifically limited to covered contractor employees and nowhere extends to DOE or DOE officials. Part 708 . . . plainly does not encompass decisions within the legitimate discretion of DOE officials to reduce or stop funding for a project.").

(12)After earlier DOE cuts, the contractor had earlier laid off two A and I group employees in September 1995 and May 1996, and one A and I employee left the contractor's employment after being told she would be laid off in April 1996. Tr. at 73, 99.

(13)In some cases where the entire task was not cut, the contractor was able to hire back five employees in low paying, low-skilled jobs (unlike the complainant's position). Tr. at 90-91; Ex. A-6 at 3-4. Other employees were brought back if DOE added some funds back in, but that did not happen with the A and I task. Tr. at 108.

(14)The DOE employee who came forward to the OIG was not a witness at the hearing.

(15)The complainant has claimed that openings existed prior to the lay offs which were filled with retired DOE employees. Complainant's Post-Hearing Brief at 5 (August 5, 1999). However, the complainant has made no showing that he was qualified for such openings, that such openings existed during the lay off, or that the workload at the time of the lay offs justified retaining the A and I employees.

(16)Although the complainant received no loss of pay with this demotion, I believe this action affected the complainant's terms and conditions of employment. See 10 C.F.R. § 708.2.

Case No. VWA-0036

November 8, 1999

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Robert Gardner

Date of Filing: April 20, 1999

Case Number: VWA-0036

This Decision involves a complaint filed by Robert Gardner (Gardner or "Complainant") under the Department of Energy (DOE) Contractor Employee Protection Program, codified at 10 C.F.R. Part 708. Gardner is a former employee of a DOE contractor, Rust GeoTech (Rust). He alleges that certain reprisals were taken against him by Rust, including denial of a merit pay increase in 1996 and interference with his prospects for future employment in retaliation for his protected disclosures to DOE management and public officials. On the basis of the hearing that was conducted and the record before me, I have concluded that Gardner is not entitled to relief under 10 C.F.R. Part 708.

I. Background

A. The Contractor Employee Protection Program

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. Thus, contractors found to have discriminated against an employee for such a disclosure, or participating in a related proceeding, will be directed by the DOE to provide relief to the complainant.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The DOE recently issued revised Part 708 regulations that apply to all cases which were pending as of April 14, 1999, the date the regulations became effective. 64 Fed. Reg. 12,862 (March 15, 1999). The regulations provide, in pertinent part, that a DOE contractor may not retaliate against any employee because that employee has disclosed to a DOE official or to a DOE

contractor, information that the employee reasonably believes to evidence, among other things, a substantial violation of a law, rule, or regulation. *See* 10 C.F.R. §§ 708.5 (a)(1). Employees of DOE contractors who believe they have been retaliated against in violation of the Part 708 regulations may file a whistleblower complaint with the DOE. The regulations entitle these employees to an independent fact-finding and a hearing before an Office of Hearings and Appeals (OHA) Hearing Officer.

B. The Present Proceeding

1. Procedural History

Gardner alleges that his employer, DOE contractor Rust Geotech (Rust) took reprisals against him for several protected disclosures. The denial of his merit increase in 1996 was one of the alleged reprisals contained in his complaint. As a result of the reprisals, he filed a Part 708 claim on July 10, 1996. DOE's Office of the Inspector General (IG) investigated Gardner's complaint, and pursuant to that investigation, issued a final report concluding that the complainant had disclosed protected concerns. *See* IG Report of Investigation (March 31, 1999) (ROI). The IG also found that Rust was unable to establish by clear and convincing evidence that it would have denied Gardner's merit increase notwithstanding his protected disclosures. ROI at 13. The IG recommended that Rust pay the complainant back pay and the reasonable costs that he incurred in bringing this complaint. ROI at 14.

In April 1999, this case was transferred to the Office of Hearings and Appeals (OHA) under the revised Part 708 regulations, and I was appointed as hearing officer. 10 C.F.R. Part 708. I scheduled a hearing which was conducted on June 29 and 30, 1999. The official transcript of that hearing shall be cited as "Tr." and pertinent documents, received into evidence as hearing exhibits, cited as "Ex." Exhibits to the ROI are cited as "IG."

Prior to the hearing, the parties agreed that presentation of evidence would be limited to two issues: (1) whether evidence in the record establishes that in early 1996, Rust would have awarded a pay increase to Complainant were it not for his protected disclosures; and (2) whether Rust interfered with Complainant's future employment, and if so whether the action would have been taken anyway in the absence of alleged protected activity. Memorandum from John Shunk, Counsel for Rust and Alan Hassler, Counsel for Complainant to Hearing Officer, OHA (June 23, 1999). The parties also stipulated to several findings of the IG ROI. *Id*. Upon receipt of a post-hearing submission from Rust on September 9, 1999, I closed the record in this case.

2. Factual Overview

The facts in this case are uncontroverted. Rust provided environmental cleanup and other management services to DOE under a 10 year management and operating contract at DOE's Grand Junction, Colorado site beginning on October 1, 1986. IG 4 at 2. Rust hired Complainant in 1989 as a senior technical manager at the Grand Junction Project Office (GJPO). Ex. A, Att. B. In 1992, David Van Leuven (Van Leuven) became president of Rust. Van Leuven assigned Gardner, who had extensive political contacts in Colorado and at DOE headquarters, to report directly to him. Tr. at 87. Shortly after Van Leuven became president, he made Gardner responsible for strategic planning, including securing new work for Rust at the site and nationwide, and also working with Colorado politicians at the local, state, and national level, to further Rust's interests. Tr. at 88, 104, 172. In 1994, Gardner became Senior Planner Principal, at salary grade 22, responsible for directing strategic planning and program development activities in support of GJPO. Ex. A, Att. B. He also served as the company's inter-governmental liaison, due to his extensive political connections at all levels of Colorado government. IG 29.

In 1994, DOE notified Rust that the contract would be re-competed as two small business contracts, and Rust would not qualify to bid. Tr. at 88, 172. With no future business opportunities on the contract, Rust began to "wind down" its operations at GJPO, in preparation for a reduction-in-force (RIF) and the termination of its operations at the site. Tr. at 88, 105. Beginning in the spring of 1994, Gardner raised concerns to Rust management, DOE management and Colorado politicians, that the GJPO workforce restructuring was in violation of Section 3161 of the National Defense Authorization Act of 1993. Tr. at 174, 199. (1) Gardner expressed his concerns to the following DOE/GJPO managers: Jon Sink, Project Manager; Jim Lampley, Director; and Robert Ivey, Contract Officer. ROI at 3. He also contacted the office of the Governor of Colorado and Congressman Scott McInnis to get them involved in the matter and to support the application of Section 3161 to the GJPO. *Id.*

Gardner received an outstanding performance appraisal in December 1994. ROI at 7. Later that month, Rust submitted a request to DOE for reimbursement of employee salary actions over $80,000. IG 27. This annual approval was required by DOE procurement regulations. Tr. at 71. The request listed recommended merit increases for certain employees, including Gardner, based on their performance for the calendar year 1994. Tr. at 38-45; IG 27.

In February 1995, DOE denied Rust's request to be reimbursed for Complainant's salary. IG 27. DOE found that Gardner's job description, as written, was not reimbursable under the contract, and notified Rust that it would not pay Gardner's salary because his performance objectives and duties did not appear to benefit the contract. IG 34; Tr. at 74-75. DOE felt that Gardner's work benefitted Rust and not the DOE mission. Tr. at 74-75. Rust then submitted an amended job description, and the DOE approved reimbursement of Gardner's new salary in August 1995, retroactive to February 1995. IG 28; IG 47.

In mid-summer 1995, the complainant was appointed to a three-man Rust team that was formed to deal with the human resource aspects of the contract close-out, including examining the issues of severance, 401(k), pension, and benefits for displaced workers. IG 1 at 3; Tr. at 88, 104-105, 152. Van Leuven advised Gardner that because there was no opportunity for new business under the contract, Gardner should focus his activities on the close-out matters. Tr. at 87-88. According to Gardner, he spent the majority of his time on these activities. Tr. at 177. According to Rust, these activities took up only about 20% of Gardner's time. Tr. at 237.

Around this time, DOE management and employees at GJPO and the Albuquerque Operations Office began expressing their disapproval of Gardner to Rust management. DOE employees complained to Rust management about the aggressiveness of the three-man team in pursuing the interests of Rust employees. Tr. at 106, 154, 158. Gardner further antagonized DOE management by faxing a copy of a controversial petition about the GJPO workforce restructuring to the office of the governor of Colorado in March 1996. IG 48; ROI at 7. The petition had been placed in public areas in the Rust offices, and DOE management accused Gardner of trying to embarrass DOE by circulating the petition. Ex. C of IG 1; IG 3, 6. Gardner denied being the author of the petition. IG 3. As a result of the controversy, Van Leuven notified all Rust employees to remove any copies of the petition from the site. IG 37. The three-man committee tasked with looking into RIF benefits was disbanded, and replaced by one senior level Rust manager. IG 6.

On June 6, 1996, Gardner wrote to Van Leuven requesting a merit increase in view of his above average performance for calendar 1995. Claimant's Ex. 4. One week later, Van Leuven sent Gardner a memo denying Gardner's request for a merit increase. Claimant's Ex. 5. Shortly thereafter, on June 17, 1996, Van Leuven told Gardner that the strategic planning position was no longer required, due to the imminent termination of the contract. Tr. at 87. Van Leuven then removed Gardner from the strategic planning position and reassigned Gardner, effective that day, to a lower-level manager who was responsible for education programs. Tr. at 88; 200. Van Leuven distributed news of Gardner's reassignment to all Rust employees via electronic mail, a deviation from procedures in the Rust personnel manual. Tr. at 171, 187. Notice of employee reassignments was usually limited to those with a "need to know," and new jobs were posted prior to being filled. IG 1 at 4-5. On June 27, 1996, Gardner was removed from his position as management advisor to the Employees Association, and he filed this complaint on July 10, 1996. IG 3 at 2; ROI at 11. As of September 4, 1996, Rust had no employees at the Grand Junction site. IG 4 at 4. Complainant was among those permanently separated from the company on that date. Gardner applied for a job with the new contractors, but was not hired. ROI at 11, 18.

II. Legal Standards Governing This Case

A. The Complainant's Burden

The regulations describe the burdens of proof in an whistleblower proceeding as follows:

The complainant shall have the burden of establishing by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant. Once the complainant has met this burden, the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure, participation, or refusal.

10 C.F.R. § 708.9 (d); *see Ronald Sorri*, 23 DOE ¶ 87,503 (1993) (*Sorri*). "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse*, 737 F.Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence § 339 at 439 (4th ed. 1992). As a result, Gardner has the burden of proving by evidence sufficient to "tilt the scales" in his favor that he disclosed information, in this case concerns regarding the workforce restructuring at GJPO, which he believed evidenced a substantial violation of a law, rule, or regulation. 10 C.F.R. § 708.5(a)(1). If the complainant does not meet this threshold burden, he has failed to make a prima facie case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a *contributing factor* in the personnel actions taken against him, specifically the denial of his merit increase in 1996 and interference with his prospects for future employment. 10 C.F.R. § 708.29; s*ee Marano v. Dep't of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying "contributing factor" test). Temporal proximity between a protected disclosure and an alleged reprisal shows that a protected disclosure was a contributing factor in a personnel action. *See Sorri*, 23 DOE ¶ 87,503 (1993); *County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989).

B. The Contractor's Burden

In the event that Gardner makes a prima facie case, the regulations require Rust to prove by "clear and convincing" evidence that the company would have denied Complainant's merit increase even if he had not made protected disclosures. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F.Supp. At 1204 n. 3. In evaluating whether Rust has met its burden, I will consider the following factors: (1) the strength of Rust's evidence in support of its decision to deny Gardner's 1996 merit increase; (2) the existence and strength of any motive to retaliate on the part of the officials who were involved in the decision to deny Gardner's merit increase; and (3) any evidence that Rust takes similar actions against employees who are not whistleblowers but who are otherwise similarly situated. *See Carr v. Social Security Administration*, 185 F.3d 1318, 1323 (Fed. Cir. 1999) (quoting *Geyer v. Dep't of Justice*, 70 M.S.P.R. 682, 688 (1996), *aff'd*, 116 F.3d 1497 (Fed. Cir. 1997)).

III. Analysis

I have carefully reviewed the record in this proceeding, including the testimony of the witnesses at the hearing and the exhibits submitted into evidence by both parties. For the reasons set forth below, I find that although Gardner made a disclosure that is protected under 10 C.F.R. § 708.5(a)(1), and that disclosure was a contributing factor in an adverse personnel action taken against him, Rust Geotech has proven by clear and convincing evidence that it would have taken the same action absent the complainant's disclosure.

A. Gardner's Disclosures

In his complaint, Gardner alleges that he made protected disclosures to several DOE managers, to his employer, to the governor of Colorado, and to a Colorado congressman when he related his concerns that the restructuring of the GJPO workforce was not in compliance with Section 3161. IG 1 at 3. The IG found that these disclosures were protected. ROI at 4. During the hearing, counsel for Rust reiterated that Rust did not challenge the finding that Gardner's contact with Congressman McInnis and various DOE officials was a protected activity. Tr. at 203. I therefore find that Gardner has met his threshold showing under Part 708 that he engaged in an activity protected under Part 708.

B. Were Gardner's Disclosures a Contributing Factor in The Denial of His Merit Increase?

A finding of "temporal proximity," i.e., a finding that "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action," is sufficient to show that a protected disclosure was a contributing factor in a personnel action. *See Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993) *citing McDaid v. Dep't of Hous. And Urban Dev.*, 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989).

I find temporal proximity between Gardner's disclosures about DOE's alleged non-compliance with Section 3161 from the spring of 1994 through the summer of 1996, and the denial of his merit increase in 1996. Gardner's supervisor Van Leuven was aware of Gardner's concerns and communications with the DOE prior to his denial of Gardner's merit increase. IG 19; Tr. at 106. The disclosures occurred within six months of the denial of his merit increase. *See, e.g., Frank E. Isbill*, 27 DOE ¶87,513 (1999) (six months between disclosure and alleged retaliatory action); *Barbara Nabb*, 27 DOE ¶ 87,519 (1999) (eight months); *Russell Marler*, 27 DOE ¶ 87,506 (1998) (three months to four years).

Based on the above, I find that Gardner has established a prima facie case that his protected disclosures were a contributing factor to the alleged retaliatory action. The burden now shifts to Rust to prove by clear and convincing evidence that it would have denied Gardner's merit increase despite his protected disclosures.

C. Would Rust Have Taken The Same Action Against Gardner Absent His Protected Disclosures?

Rust argues that it would have denied Gardner his 1996 pay increase despite his disclosures to DOE employees, the governor, and a congressman. After reviewing the record, I find that Rust has shown by clear and convincing evidence that it would have denied Gardner's merit increase notwithstanding his disclosures.

(1) Evidence in Support of the Denial of Complainant's Merit Increase

Rust has presented credible evidence to support its argument that Gardner was denied a merit increase because he was at the maximum pay for his salary grade, and not because he made protected disclosures.

Rust employees are placed in salary grades for the purposes of compensation, and within each salary grade there is a salary range with upper and lower limits. IG 4 at 4. The Rust personnel manual states that "[m]aximum salary rate is the highest salary rate that may normally be paid to any individual within the salary range applicable to a given position. . . . The span between the minimum and maximum salary rates is available for granting individual salary increases, either merit or promotional." IG 4 at 4. The manual defines a merit increase as "a salary rate adjustment within the existing grade," and further states that "[m]erit increases will normally fall within the applicable salary range." Attachment A, Ex. 3. (2) According to Van Leuven and Roberto Archuleta (Archuleta), contractor human resources specialist at DOE's Albuquerque Operations Office, the purpose of these guidelines was to fairly compensate employees. Departures from the guidelines were rare and disfavored because they could result in problems for management if corporate compensation policy was perceived by employees as subjective. Tr. at 128. Archuleta testified that DOE's policy was not to compensate a contractor who paid an employee in excess of a predetermined salary range. Tr. at 25-26. The salary ranges were established after extensive surveys of other companies, and were viewed as the optimum way to compensate employees in a fair manner. Tr. at 24-25.

Archuleta had responsibility for the oversight of the Rust-DOE contract from 1992 until 1996. Tr. at 18-20. He testified that he knew of only three instances where a Rust employee was compensated at a salary higher than the upper limit of the range for his or her salary grade. Tr. at 27-28. One of those individuals was transferred from another Rust site with a salary at the first site that was already in excess of the range for the applicable salary grade at GJPO. Tr. at 26. The second individual was a well-know industry executive hired away from another DOE contractor to be a Rust vice president, and Rust made the decision to cover the difference in his salary because of his reputation, skills, and the complexity of the new position. Tr. at 106-107, 164. Both transactions occurred prior to Van Leuven becoming president, and both employees were at a very senior level. *Id*. The third individual was the complainant.

Gardner was a salary grade 22 manager earning an annual base salary of $86,520 ($7,210 monthly). Ex. A, Attachment B. The salary range for salary grade 22 was a minimum of $4,745 monthly and a maximum of $7,120. *Id.* Van Leuven and Archuleta testified that Gardner's salary of $7,210 per month was an error, probably in transposition, to the extent that it exceeded the maximum of $7,120. Tr. at 26, 107. Van Leuven testified that Rust did not correct the error because it was discovered some months after it occurred, and it would have been unfair to Gardner to change his salary at that late date. Tr. at 107-108.

Company policy was to require a promotion in order to move to the next salary grade, and promotions were only warranted if job responsibilities and duties changed. Tr. at 108. Rust's former personnel manager testified that he had suggested that Van Leuven promote Gardner to a salary grade 23 in order to increase Gardner's salary. Tr. at 151. However, even though Van Leuven appraised Gardner's performance as above average, Van Leuven did not think that Gardner deserved a promotion, because the "total breadth of [Gardner's] job was definitely on the decline." Tr. at 231. Van Leuven testified that Gardner was already fairly compensated for his work, and without an increase in responsibility that warranted a promotion, he would not promote Gardner merely to allow Gardner to get a raise. Tr. at 108, 231, 246.

There is no evidence in the record that any other Rust employee received a merit increase that would result in a salary over the maximum limit for his salary grade. I find that Rust has provided credible evidence that Gardner was denied a merit increase due to Rust's corporate policy of limiting merit increases to an established salary range as explained in Rust's personnel manual.

(2) Motive for Retaliation

Gardner contends that Van Leuven and Dabrowski wanted no controversy as they departed from GJPO to their next DOE-related contracts. He infers that both men wanted to stay in DOE's good graces, and so "offered him up" as a message to other Rust employees not to cause trouble for DOE. Tr. at 188. According to Van Leuven, it was a "well known fact" that DOE was unhappy with Gardner. Tr. at 105-106. Dabrowski also testified that certain DOE managers had expressed to him their disapproval of Gardner's activities. Tr. at 129.

Notwithstanding the above, I find little evidence that the Rust managers were motivated to retaliated against Gardner by denying his 1996 merit increase. Both men knew that Gardner was likely to lose his job anyway in the impending RIF. Both men knew that in 1995, DOE did not want to reimburse Rust for Gardner's job. Both men knew that Gardner was not popular with DOE management in Grand Junction or in Albuquerque. However, despite DOE's obvious displeasure with Gardner, it was Van Leuven who wrote a letter in July 1995 that resulted in Gardner's job being restored to reimbursement under the contract, with a merit increase, retroactive to February 1995. IG 30. I therefore find that although there was some evidence of motivation for Rust management to retaliate against Gardner, that evidence was weak.

(3) Rust's Actions Against Similarly Situated Employees

Finally, I find that Rust has presented evidence that it takes similar actions against employees who are not whistleblowers, but are otherwise similarly situated. In the instant case, a similarly situated employee

would be an employee who was compensated at the upper limit of his salary range. As stated above, the record contains ample evidence that Rust's policy was to deny merit increases that would result in an employee's salary exceeding the upper limit of the employee's salary grade. Attachment T of the Rust contract requires that an employee's salary "shall not exceed the maximum established for the employee's job classification unless prior written approval of the Contracting Officer is obtained." This is consistent with the Pay Practices and Policies section of the Rust Personnel Manual. Att. A, Ex. 3. The manual further states that "a merit increase . . . is a salary rate adjustment within the existing range." *Id*.

Gardner argues that other employees were given merit increases above their maximum allowable salary, and points to the IG's Report of Investigation as proof. ROI at 8. In the ROI, Archuleta is quoted in a telephone interview as stating that Rust requested merit increases for 21 Rust employees with salaries "over the cap," and Gardner was not on the list.(3) IG 41. The IG interpreted "cap" to mean the upper limit of a salary range. ROI at 9. Based on this interpretation, the IG then concluded that Rust had requested salary increases for 21 employees that would result in salaries in excess of the upper limit of the salary range associated with their salary grade. ROI at 8; IG 41. Because Gardner's name was not on that list, the IG concluded that Rust had not met its burden of proving that it would have denied Gardner's increase absent his protected disclosures. ROI at 9.

However, a review of the record shows that the IG investigator misunderstood Archuleta's use of the word "cap." Archuleta testified credibly and under oath at the hearing that he was referring to the Department of Energy Acquisition Regulation (DEAR) annual salary threshold, (4) and not the top of the salary range. Tr. at 35, 71. Rust submitted evidence that the merit increases for the 21 employees with salaries over $80,000 all resulted in new salaries that fell within the range for their respective salary grades. Ex. A, Attachment A. In other words, their new salaries, reflecting the merit increases, did not exceed the maximum salary rates for their positions. As Archuleta clarified at the hearing, the 21 employees were submitted for an increase "because they had room within their salary range to be granted those increases." Tr. at 111. Therefore, I find that Rust has presented evidence that it takes similar actions against employees who are not whistleblowers, but are otherwise similarly situated.

D. The Alleged Retaliatory Action of Interference with Complainant's Future Employment

Gardner alleged that Rust interfered with his future employment with successor contractors by demoting him, thus giving the appearance that DOE did not want Complainant employed by Rust or its successors. IG 1 at 5. According to Gardner, this destroyed his future employment prospects with any DOE contractor nationwide. *Id.*

Gardner alleges that his reassignment on June 17, 1996 was a demotion, and that Van Leuven's company-wide distribution of a memo about the reassignment was a deviation from standard company policy. Gardner maintains that Van Leuven announced the demotion publicly so as to alert successor contractors that Gardner was a problem employee. Tr. at 192-195. According to Gardner, this series of events destroyed his ability to obtain future employment at any DOE site. IG 1 at 5. It is not unreasonable to interpret Van Leuven's very public reassignment of Gardner as a demotion, given that only three months remained on the contract, and most of the GJPO employees already knew that he had been tasked with close-out activities. Gardner had reported to the president of the company for several years, but was abruptly reassigned to a manager, two levels below the president, who was not well-respected at Rust. Tr. at 154. Rust's former human resources manager testified that he viewed the reassignment as a demotion. *Id*. Nonetheless, I cannot interpret Van Leuven's actions as interference with Gardner's future employment opportunities.

Gardner points to the fact that he was not hired by the successor contractors as proof that Rust "seriously damaged his career." IG 1 at 5. The record does contain evidence that Gardner applied for jobs with the successor contractors and was not interviewed by either company. IG 11; IG 18. However, both companies stated that they did not have strategic planning jobs available. *Id*. One firm denied that anyone from DOE

or Rust passed along negative information about the complainant. IG 11. During the hearing, Van Leuven testified that Gardner did not request his assistance in a job search, and claims that he would have spoken to the new contractor on Gardner's behalf, if requested. Tr. at 101-102. Van Leuven testified that he would recommend Gardner today. Tr. at 114-115. Similarly, Tom Dabrowski (Dabrowski), president of Waste Management Nuclear Services, testified that in his opinion Gardner did a "good job" for Rust.(5) Tr. at 125-126. In fact, Dabrowski testified that he spoke to Gardner and offered to recommend Gardner to the successor contractor, but Gardner never requested his help. *Id*. Based on the foregoing, Gardner's lack of success in finding a job with the new contractor does not persuade me that Rust interfered with his future employment opportunities.

After a careful review of the record, I find no evidence that Rust interfered with Gardner's future employment. Gardner's managers both testified that although they were willing to recommend him for employment with the new contractors after the Rust contract ended, Gardner never requested their assistance. Neither Van Leuven nor Dabrowski ever received a written or oral request for a reference from any prospective employer. Tr at 114, 126. Gardner did not offer any explanation for not securing the assistance of his former managers, influential industry executives who may have been able to help him secure employment with the successor contractors. Therefore, I have no evidence that any Rust managers interfered with Gardner's future employment opportunities.

IV. Conclusion

As set forth above, I have determined that the complainant has failed to establish the existence of a violation on the part of Rust for which he may be accorded relief under DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708. The record shows that Gardner made protected disclosures to contractor management, DOE officials and public officials, and that Gardner's disclosures were a "contributing factor" in the denial of his merit increase for 1996. Nonetheless, I find that Rust has carried its burden to show by clear and convincing evidence that it would have denied Gardner's raise even in the absence of his disclosures. The record is clear that other events leading to the denial of his increase, including the demise of the Rust-DOE contract and the resulting elimination of Gardner's strategic planning duties, were not connected with Complainant's protected disclosures. I rejected Gardner's claims that Rust interfered with his prospects for future employment with other DOE contractors. There was no evidence in the record that the successor contractors had a suitable opening for Gardner, that Gardner applied to any other DOE contractors for a job, or that Gardner took advantage of career assistance offered by the president of Rust's parent company.

Accordingly, I will deny Gardner's request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Robert Gardner under 10 C.F.R. Part 708 is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed requesting review of the Initial Agency Decision by the Director of the Office of Hearings and Appeals with the Office of Hearings and Appeals, 1000 Independence Avenue, S.W., Washington, D.C. 20585-0107, telephone number (202) 426-1566, fax number (202) 426-1415.

Case No. VWA-0037

September 27, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Ann Johndro-Collins

Date of Filing: April 27, 1999

Case Number: VWA-0037

This Decision considers a complaint of retaliation and request for relief filed by Ann Johndro-Collins (the Complainant) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The Complainant alleged that her employer, Fluor Daniel Hanford (FDH), retaliated against her for making a protected disclosure as defined in the Part 708 regulations. As explained below, I have concluded that the Complainant's request for relief should be denied.

BACKGROUND

Procedural Background

The Complainant filed a complaint with the DOE's Office of Inspections, Office of the Inspector General, in July 1997. In the complaint, she alleged that FDH retaliated against her for disclosing "a conflict of interest, waste, fraud, and abuse" by her team leader at FDH. The Office of Inspections conducted an investigation and issued a report on March 30, 1999. In the report, the Office of Inspections found that the Complainant had established by a preponderance of evidence that she made protected disclosures to FDH management.

The Office of Inspections further found, however, that in six of seven alleged retaliatory acts, the Complainant failed to establish by a preponderance of the evidence either that the alleged retaliatory acts constituted adverse actions, or that her

protected disclosures were a contributing factor to the actions.(1) In regard to one alleged retaliatory act - the Complainant's transfer from the Strategic Planning team to the Reporting team - the Office of Inspections found that the Complainant's protected disclosures were a contributing factor, but that FDH had provided clear and convincing evidence that the reassignment would have taken place absent the disclosures. On April 20, 1999, the Complainant submitted a request for a hearing, which was received on April 27, 1999 by the Office of Hearings and Appeals. The hearing was held on July 13, 1999, at which the Complainant and six witnessess testified.

Before the hearing, the Complainant and FDH stipulated that the Complainant made a protected disclosure as defined at 10 C.F.R. § 708.5. As stipulated by the parties, the Complainant disclosed to the management of FDH alleged acts of abuse of authority by her team leader. *See* 10 C.F.R. § 708.5(a)(3). Although FDH did not concede that the Complainant's allegations were true, it did acknowledge that she made the

disclosures reasonably and in good faith.(2) *Id*.

The Complainant alleged that FDH committed retaliatory acts, as defined at 10 C.F.R. § 708.2, after her protected disclosure. Before the hearing, the parties stipulated that three acts alleged to have occurred by the Complainant could be remedied under the Part 708 regulations. These alleged acts are listed below.

1. In October 1997, the Complainant received an annual performance assessment that, she alleged, did not accurately reflect her performance. The complainant claims that the assessment evaluated her work at a lower level than it should have. As a result, the Complainant alleged that she was excluded from a cash bonus program that rewarded employees for high achievement.
2. The Complainant alleged that in January 1998, she received a promotion from Project Controls Associate Grade I (pay grade 14) to Project Controls Associate Grade II (pay grade 16) without a corresponding pay raise.
3. The Complainant also alleged that in January 1998, she was assigned to a position where she performed duties at a level expected of employees in pay grade 18, while she was compensated at pay grade 16.

The Complainant's work assignments

The Complainant began working for Westinghouse Hanford Company, a contractor at the Department's Richland Operations Office, in 1989. She was initially hired as a records management specialist. She attained the position of Project Control Analyst I in August 1994. On October 1, 1996, FDH took over Westinghouse Hanford's contract at the Richland Operations Office. The Complainant's duties and chain of supervisors remained essentially unchanged when FDH took over the contract.

At the time the Complainant made her protected disclosures, she worked on the Strategic Planning team. Her team leader in that group was XXXXX, the subject of her protected disclosures, and her supervisor was Larry Hafer. In July 1997, the Complainant was transferred to the Reporting team, where her team leader was Eileen Murphy-Fitch and her supervisor was Gordon McCleary. The transfer was made because Murphy-Fitch needed additional personnel and had requested the Complainant, and because management was aware that the Complainant and XXXXX, her team leader, were not getting along.

In January 1998, the Complainant was transferred back to the Strategic Planning team. The transfer was made because she had requested reassignment to the group and there was an opening caused by the departure of another employee, Dave Eder.(3) Her supervisor was again Larry Hafer, but her previous team leader had moved to another group. Her new team leader was Bill Ritter. In March 1998, McCleary was promoted to the position of Director of Reporting, where he had supervision over Hafer's Strategic Planning team.

FINDINGS AND ANALYSIS

The Part 708 regulations require that the employee who files a complaint must establish by a preponderance of the evidence that (1) he or she made a disclosure, and that (2) the disclosure was a contributing factor to one or more acts of retaliation. 10 C.F.R. § 708.29. The regulations define retaliation as "an action ... taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other *negative* action with respect to the employee's compensation, terms, conditions, or privileges of employment....)" 10 C.F.R. § 708.2 (emphasis added). Once a complainant has made this showing, the burden shifts to the contractor to show by clear and convincing evidence that it would have taken the same action without the complainant's protected disclosure. 10 C.F.R. § 708.29.

As discussed below, with respect to two of the alleged retaliatory acts, I find that the Complainant was unable to establish the acts had negative consequences with respect to her employment and that she has therefore failed to meet her burden of proof. With respect to the third alleged retaliatory act, I find that

FDH has provided clear and convincing evidence to show that it would have taken the steps it did absent the Complainant's protected disclosures. Consequently, I find that the Complainant's request for relief should be denied.

The Complainant's FY 1997 performance assessment

In October 1997, the Complainant received her performance assessment for Fiscal Year 1997 (FY 1997), which began on October 1, 1996. McCleary was the principal FDH official involved in the Complainant's FY 1997 performance assessment.(4) As noted above, the Complainant transferred to the Reporting team about nine months into FY 1997. The gist of her complaint is that the FY 1997 assessment takes insufficient account of her work on the Strategic Planning team. The Complainant states that:

On October 31, 1997, I received a performance appraisal that covered the Fiscal Year 1997 time period. However, I do not believe that this document is an accurate reflection of my performance. Specifically, the first nine months of the rating period was spent performing Integrated Site Baseline (ISB) functions, that included significant, complex deliverables, which my management at the time rated as an excellent effort. However, the majority of this performance evaluation was devoted to measuring my job performance for the tasks that I was reassigned to during the last three months of the rating period. Further, the evaluation did not give me credit for the many months that I performed as a Team Lead in support of ISB tasks. In summary, I believe that my overall FY 97 rating of "acceptable" is not reflective of my performance.(5)

The Complainant prepared a written response to her assessment, in which she contends that it:

significantly misses the mark on assessing my performance over the past year. Addresses less than three months of performance (fails to address performance from 10/1/96 through 7/9/97).

An indication of the quality of my performance from 10/1/96 through 7/9/97 is documented in a written response from my management team regarding the preparation and delivery of the Fiscal Year 1997 Site Summary Baseline ... a major deliverable to the customer:

Thanks for the excellent product. Puts us in a good position for the Integrated Site Baseline in July. L.R. Hafer - Manager - FDH Baseline Management.

Great job and many thanks . . . - XXXXX, Team Lead.(6)

The Complainant's written response also provides details of her work on the Integrated Site Baseline that she feels was excluded from the assessment. The response was placed in her personnel file.(7)

As a remedy, the Complainant asks that FDH "amend FY 1997 Performance Assessment to include appraisal for Integrated Site Baseline work completed during the first nine months of the rating period."

As an initial matter, the Complainant's assertion that the assessment does not accurately reflect her performance is highly speculative and unsupported by the evidence. In addition, it is not true that the assessment "fails to address performance" between October 1996 and July 1997, as the Complainant asserted. Both McCleary, who wrote and signed the assessment, and Hafer, who was the Complainant's supervisor for the first part of the fiscal year, deny that the assessment ignores the Complainant's work during the first nine months of FY 1997.(8)

An examination of the assessment corroborates the testimony of Hafer and McCleary. The Complainant's FY 1997 assessment consists of several parts. Part A of the assessment, titled "Culture Values," is the only part that contains general evaluations of performance. The part contains four generic sections, called "expectations" - "accountable," "client focused," "cost effective," and "empowering." The expectations are defined in such a way that they would refer equally well to either of the positions the Complainant held

during FY 1997. For each expectation, the employee can receive one of three ratings: "outstanding contribution," "acceptable contribution," and "needs improvement." The Complainant received a rating of "acceptable contribution" for each of these expectations.

Part B of the assessment, titled "Outcomes Expected," contains four boxes. In each box there is a brief, one-sentence description of a task that the Complainant performed, and a one- or two-sentence evaluation of her performance. As Hafer and McCleary pointed out at the hearing, and the Complainant herself acknowledged, one of the boxes deals with her work on the Integrated Site Baseline report while she worked on the Strategic Planning team.(9) Consequently, the Complainant's assertion that the assessment ignores her work during the first nine months of FY 1997 is clearly not accurate.

The Complainant has established, however, that the majority of the assessment addresses the last three months of FY 1997. Both Hafer and McCleary acknowledged this point.(10) McCleary explained why he wrote the assessment this way. He testified that the input he had received indicated that some of the people involved in supervising the Complainant thought her performance had been unsatisfactory, and he "wanted to give her a fresh start" and to "focus on the positive, not the negative aspects of the review."(11)

Evidence in the record supports McCleary's position. Although the Complainant says that management considered her performance during the first nine months an "outstanding effort," she has provided no corroboration for this assertion.

On the contrary, comments from two co-workers indicate that the Complainant's work was not considered generally outstanding. Murphy-Fitch testified that she received a comment from a person involved with the Integrated Site Baseline report suggesting that there had been problems with the report, and somebody had to "come to the rescue" of the Complainant to get the report out.(12) In addition, a comment submitted by E.A. Schultz, who worked in internal planning for FDH, stated that the Complainant had failed to participate in meetings and was uncooperative in communicating significant matters to FDH management. She said that she "could not rely on [the Complainant] to not 'drop the ball.'"

McCleary, discussing the two positive comments about the Complainant's work on the Integrated Site Baseline report, testified that "on balance with other comments I had, [the positive comments] would not have offset or changed the conclusion that I had already reached about acceptable performance."(13) In support of McCleary's view, Hafer, the Complainant's manager during the first nine months of the rating period, testified she worked at an acceptable level during that period.(14)

Furthermore, FDH provided evidence that the acceptable ratings received by the Complainant were typical for employees in her group. A chart of the ratings received by the eighteen employees on the Reporting team in October 1997 shows that they received a total of thirty-one "outstanding" ratings, thirty-eight "acceptable" ratings, and three "needs improvement" ratings.

I find the Complainant's previous performance assessment provides corroboration for McCleary's and Hafer's statements that her work is at an acceptable level. The previous assessment was completed in February 1995, before the Complainant made her protected disclosure. At the time the assessment was signed, the Complainant's employer was Westinghouse Hanford Company, and the manager who signed the form was R. B. Agee. The form, which differs from the FY 1997 form, contains blocks for rating the employee in fifteen areas. The possible ratings were "Exceeds," "Met," and "Not Met." In addition, there was a block provided for an overall rating. Of the fifteen areas in which the Complainant was rated, she received three ratings of "Exceeded," nine ratings of "Met," one rating of "Not Met," and two blocks indicated she was too new at the given task to be rated. The overall rating was "Met."(15) Thus, her ratings are essentially the same on the two assessments.

The Complainant alleged that her acceptable rating excluded her from a cash bonus program for employees. The program, called the "MVP" program, provides a cash payment for employees whose achievements and contributions "support the company's efforts in exceeding strategies, goals, and objectives." Documents submitted by FDH show that the MVP program was not based on performance

assessments, but on nominations submitted by the employee's manager, co-workers, or the employee himself.(16) An employee could receive an MVP bonus without having received an "Exceeds" rating in any area.(17) The Complainant's performance assessment thus had no bearing on whether she received an "MVP" bonus.

I find that FDH has given credible and convincing explanations for why the assessment emphasizes the last three months of the rating period, and that the assessment would have been written in this way absent the Complainant's protected disclosure. On the other hand, the Complainant's assertion that her work was outstanding is purely speculative and lacks any corroboration. In addition, she has not brought forth any rebuttal evidence to suggest that the decision to emphasize the last three months had any negative impact on her assessment. I therefore find that the Complainant's request for relief relating to her FY 1997 assessment should be denied.

The Complainant's promotion without a raise

The second item for which the Complainant requests relief is an alleged promotion that she received without a corresponding increase in her salary. In her complaint, the Complainant describes this incident as follows:

On February 3, 1998, I was summoned to Mr. Hafer's office where Mr. Hafer presented me with an Employee Status Change Authorization document dated January 21, 1998. Mr. Hafer explained that Mr. Brobst wanted me to have the document, and offered no additional discussion. After leaving the office, I reviewed the document and found that I had been promoted from a Grade 14 to a Grade 16, effective October 6, 1997. I also noted that this document was a correction to a previous Employee Status Change Authorization dated October 5, 1997, where a merit increase of 4% was awarded to me, but that the salary did not change between the merit increase amount and the promotion document.(18)

As a remedy for this alleged retaliatory act, the Complainant asks for "compensation equivalent to other team members."(19)

Before considering the merits of the Complainant's claim, reviewing some aspects of the FDH's pay scale will be helpful. The pay scale for non-union employees goes from grade 13 to 27.(20) Each grade represents a broad salary range. There is considerable overlap in the grades, so that an employee earning the maximum salary under grade 13 makes more than an employee earning the median salary under grade 15. In the Complainant's career field, the normal progression is from grade 13 to 14, 16, and then 18.(21)

The process by which an employee is advanced in pay grade while not simultaneously receiving an increase in salary is colloquially referred to as a "dry promotion." Becky Andersen, an FDH human resources specialist, estimated that are there about five dry promotions a year at FDH.(22)

Harold Lacher, the manager of Human Relations for FDH, testified that there were two benefits to receiving a dry promotion. First, the employee receives a potential for greater future pay increases. Second, the employee accumulates time in the new grade, which is a consideration when the employee is being considered for future promotions.(23) He explained that an employee typically remains in a pay grade for a minimum of two to three years before advancing to the next pay grade.(24) In addition, Lacher noted that he himself, as well as the attorney representing FDH at the hearing, had received dry promotions during their careers at the Hanford site.(25)

Shortly before receiving the dry promotion, the Complainant filed an EEO complaint, alleging gender discrimination.(26) According to both Hafer and McCleary, the EEO complaint elicited a review of the Complainant's work, which in turn led to the dry promotion. Both Hafer and McCleary stated that the Complainant did not receive the dry promotion merely because she filed an EEO complaint, but that the complaint caused management to review her performance and consider whether she was qualified for grade 16.(27) McCleary testified that the Complainant's EEO complaint resulted in "bringing forward

certain evidence that maybe we had overlooked her unfairly and should go back and take another look."(28)

Hafer testified that, after the Complainant filed her EEO complaint, "we went back and re-looked at the whole organization."(29) As a result of this review, one other female on the Strategic Planning team received the same dry promotion.(30) The Complainant and the other female who received a dry promotion were the only employees in the group at that time in grade 14.(31) After the two dry promotions, the group of approximately 40 employees consisted predominantly of grade 18's, with five grade 16's and no grade 14's.

Robert Gates was the Director of Planning for FDH at the time of the Complainant's promotion to grade 16. He stated in an interview with an investigator that a promotion from grade 14 to grade 16 would typically involve a raise of two to three percent, less than the Complainant received. He also stated that the promotion did not involve any additional duties for the Complainant.(32)

Although the Complainant has characterized her advancement to grade 16 as a promotion without a raise, this characterization is not accurate. The general procedure at FDH is for salary changes to occur once a year, in October. The ceiling for pay increases in FY 1997 was 5%. Approximately 80% of FDH employees received some increase, with most increases in the 3-4% range.(33) The Complainant received a 4% merit raise in October 1997. The following January, the merit raise was re-coded as a promotion, made retroactive to October 1997.(34) Consequently, it is accurate to say that the Complainant received a promotion to grade 16 with a 4% raise, effective in October 1997.

I find that the Complainant's dry promotion does not constitute a retaliatory act. The regulations define retaliation as "an action ... taken by a contractor against an employee with respect to employment (e.g., discharge, demotion, or other *negative* action with respect to the employee's compensation, terms, conditions, or privileges of employment...." 10 C.F.R. § 708.2 (emphasis added). The Complainant has not shown any negative aspects to the promotion. I therefore find that her request for relief with respect to the promotion should be denied.

The Complainant's assignment to a position formerly held by an employee in pay grade 18.

The Complainant described the situation in her complaint as follows.

On January 7, 1998, Mr. Brobst [Philip Brobst, at that time FDH Director of Planning] communicated with me via return e-mail, and stated that ... Mr. Dave Eder's position was now vacant in Strategic Planning, and was available at a Grade 16 level.... I felt that the position offered was an excellent opportunity given that all other opportunities no longer existed according to Mr. Brobst. I noted that there was a significant disparity between the job requirements, the grade level and rate of pay for this position. I went to Mr. Brobst's office and told him I would accept the position in Strategic Planning.(35)

In support of her claim that she should be paid at grade 18, the Complainant stated that Dave Eder was a grade 18 employee. She argues that she works on the same projects as Dave Eder and other grade 18 employees.(36)

Hafer, however, testified that the Complainant performed the same functions as Eder had. He stated that Eder had been a manager before this assignment, and while on the team had much more of a lead role than the Complainant. When the Complainant came to the team, they "re-scoped" the work they had to do. The Complainant had more of a liaison role.(37) Hafer testified he does not think that the Complainant, in her current assignment, has the same level of responsibility for projects as a grade 18.(38)

I do not find that the assignment of the Complainant to the Strategic Planning team at pay grade 16 was a retaliatory act. The position was offered to her at pay grade 16, and she accepted it on those terms. There

is no evidence that she is performing work at a pay grade 18 level. On the contrary, Hafer has credibly testified that she does not bear the responsibility that grade 18 employees do. I therefore conclude that her request for relief with respect to this claim should be denied.

CONCLUSION

The Complainant has not prevailed on any of the three allegations of retaliatory acts. With regard to the allegation that her FY 1997 performance assessment was inaccurate, FDH has shown by clear and convincing evidence that it would have prepared the assessment as it did absent the Complainant's protected disclosures. With respect to the allegations that the Complainant was given a promotion without a raise and given a work assignment above the level of her pay, the Complainant has failed to show that these acts occurred. I will therefore deny her request for relief under 10 C.F.R. Part 708.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Ann Johndro-Collins under 10 C.F.R. Part 708, Case No. VWA-0037, is hereby denied.

(2) This is an Initial Agency Decision, which shall become the Final Decision of the Department of Energy denying the complaint unless, within 15 days of its receipt, a Notice of Appeal is filed with the Director of the Office of Hearings and Appeals requesting review of the initial agency decision.

Warren M. Gray

Hearing Officer

Office of Hearings and Appeals

Date: September 27, 1999

(1) In view of the parties' stipulations, described below, some of these alleged retaliatory acts are no longer relevant.

(2) FDH conducted an internal investigation and cleared the team leader of the charge of wrongdoing that was the basis of the Complainant's disclosure.

Case No. VWA-0039

February 25, 2000

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Luis P. Silva

Date of Filing: April 27, 1999

Case Number: VWA-0039

This Initial Agency Decision concerns a whistleblower complaint filed by Luis P. Silva, a former employee of the Scientific Ecology Group (SEG) and its successor firm, GTS Duratek (GTS).(1) SEG, and then GTS, were subcontractors to Sandia Corporation at the Radioactive and Mixed Waste Management Facility (RMWMF) where Silva worked before he was laid off by GTS in August 1997. Sandia is a subsidiary of Lockheed Martin Company, the management and operating contractor at DOE's Sandia National Laboratories in Albuquerque, New Mexico. In March 1998, Roy F. Weston, Inc. replaced GTS as Sandia's subcontractor at the RMWMF. Silva alleges that he made protected disclosures concerning health and safety matters, and the contractors took retaliatory actions against him. For the reasons explained below, I have determined that Silva's request for relief should be granted in part because GTS has not met its burden in this case.

I. Background

A. The DOE Contractor Employee Protection Program

The Department of Energy (DOE) Contractor Employee Protection Program codified in 10 CFR Part 708 governs this matter. The DOE recently revised the regulations governing this "whistleblower" program. See 64 FR 12862 (March 15, 1999) (Interim Final Rule amending 10 CFR Part 708, effective April 14, 1999). The Interim Final Rule was amended in July 1999 to restore portions inadvertently omitted when the original version was rewritten in plain language.(2)

The whistleblower regulations prohibit a contractor from retaliating against a contractor employee who engages in certain protected conduct. Protected conduct includes disclosing information that the employee reasonably believes reveals a substantial violation of a law, rule, or regulation, or a substantial and specific danger to employees or to public health or safety. Protected conduct also includes refusing to participate in an activity that would result in a violation of law, rule or regulation, or cause an employee to have a reasonable fear of serious injury to himself, other employees, or members of the public. If an employee believes that a contractor retaliated against him for protected conduct, the employee can file a complaint. Under the current regulations, the DOE's Office of Hearings and Appeals (OHA) conducts investigations of whistleblower complaints, holds evidentiary hearings, issues initial agency decisions, and considers appeals. The employee must establish, by a preponderance of the evidence, that (1) the employee made a protected disclosure and (2) the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to prove, by clear and convincing evidence, that it would have taken the same action in the absence of the protected disclosure. If

the employee prevails, the OHA may order relief including reinstatement, back pay, legal expenses, and costs.

B. Procedural History

On October 2, 1997, Silva filed a Part 708 complaint with the DOE Albuquerque Operations Office. The complaint alleges that Silva made a series of protected disclosures to DOE and contractor officials about health and safety concerns, and that these disclosures were a contributing factor to retaliatory actions by GTS and Sandia that culminated in the issuance by GTS on August 5, 1997 of a "Layoff Notification" letter to Silva. The layoff letter indicated that August 4 was Silva's last day of work on site, and that the layoff was effective August 18, 1997. Ex. 1 to April 13, 1999 Report of Inquiry and Recommendations (IG Report).

Under the regulations then in force, Silva's complaint was referred to DOE's Office of the Inspector General (IG) for investigation under Part 708. The IG investigated the allegations in the complaint and the contractors' affirmative defenses. The IG Report found that Silva met his burden of showing by a preponderance of the evidence that he made protected disclosures, which were a contributing factor to the actions of GTS and Sandia which culminated in his layoff in August 1997. The IG further concluded that GTS and Sandia had failed to meet their burden of showing by clear and convincing evidence that they would have taken the same action against Silva in the absence of his protected disclosures. In addition, the IG Report found that a preponderance of the evidence indicates that Silva's employment termination and prior protected acts contributed to Weston not hiring him when it succeeded GTS as the RMWMF subcontractor, and that "evidence is not clear and convincing that the [employee] would not have been hired [by Weston] regardless of his protected disclosures...." IG Report at 26. Based on these findings, the IG Report recommended that: (1) Silva be reinstated as a Radiation Protection Technician at Sandia's RMWMF, subject to a final determination that equities support his reinstatement; (2) Silva be awarded back pay and benefits for the period between his employment termination and reinstatement, less any compensation, benefits or pay that he received for services during this period; and (3) Silva be awarded reasonable legal expenses and fees and other direct costs, incident to the complaint and incurred as a result of the termination of his employment. IG Report at 28. Copies of the IG Report were served on the three contractors.

In late April 1999, GTS and Sandia each filed requests for a hearing. On May 3, 1999, the OHA Director appointed Leonard M. Tao as the Hearing Officer. Sandia and Weston filed Motions to Dismiss the complaint, which were denied by Hearing Officer Tao on August 23, 1999. *Sandia Corp.; Roy F. Weston, Inc.*, 27 DOE ¶ 87,522 (1999). Tao subsequently withdrew, and the OHA Director appointed me to replace him. The hearing was held October 12, 13 and 14, 1999 in Albuquerque, New Mexico. Fourteen witnesses testified at the hearing, and I admitted 83 written exhibits into the record at the hearing, including the videotaped deposition of a GTS witness who declined to testify in person. I admitted five additional exhibits after the hearing, and closed the record. I permitted the parties to file post-hearing briefs, the last of which was received on December 21, 1999.

C. Factual Background

The following summary is based on the hearing testimony and exhibits, the investigation file and the submissions of the parties.

On December 19, 1994, Silva began working for SEG in a temporary job as a "Casual Field Technician." On March 13, 1995, Silva was promoted to the position of Radiation Protection Technician, a full-time permanent job. Silva received only one written performance evaluation while employed by SEG/GTS, an "Above Standard" rating, in March 1996. IG Report at 3.

The critical events in this case occurred during the period June 1996 through March 1998. The evidence in the record shows that from mid-1996 through the August 1997 layoff, two different series of events were

being played out. The first series of events involved Silva's disclosures to contractor managers and to DOE officials about legitimate health and safety concerns he had about operations at the RMWMF (and in some instances, Silva's refusal to work in conditions which he believed unsafe). These disclosures occurred in September 1996 (Silva reported hydrogen sulfide exposure to contractor management); January 1997 (Silva reported six concerns to Gene E. Runkle, Director of DOE/Albuquerque's Occupational Safety and Health Division: forklift ramp safety; inappropriate waste drum lifting techniques; hydrogen sulfide exposure; forklift tilted and dropped waste container when floor grate bent underneath it; lack of ramp tie- down safety chains; and curbs removed from platform used to provide forklift access to transportainers); and July 1997 (Silva reported three concerns to contractor management: radiation exposure; danger during modification of ramp; and lightning storm danger).(3) The contractors do not contest the fact that Silva made these and other disclosures, and that most of them raised legitimate safety concerns. In addition, the record shows that GTS and Sandia took appropriate corrective action in response to Silva's concerns.

The other series of events involved allegations that Silva was harassing a coworker, Vanessa Gasery. It began in June 1996, when Tim Forrester, the SEG and later GTS Project Manager at the Sandia site, accused Silva of making sexually offensive remarks to female coworkers. Joe Albenze, SEG's local Vice President for Human Resources (HR), relayed the accusations to Silva, who denied them. Forrester conducted an informal investigation and determined that no one had been offended. In July 1996, Silva filed an EEO charge, alleging that Forrester harassed him by unfairly accusing Silva of sexual harassment. SEG responded to Silva's EEO charge by telling the Equal Employment Opportunity Commission (EEOC) that Vanessa Gasery had filed a sexual harassment complaint against Silva. This was not true, since Gasery had repeatedly told SEG managers she would not charge Silva with sexual harassment. After several months, in late 1996 or early 1997, the EEOC told Silva about SEG's claim that Gasery had accused him of sexual harassment. Silva believed this information was true, and told some coworkers that Gasery had filed sexual harassment charges against him. Gasery felt that this harmed her reputation in the male-dominated work force at the RMWMF, and in February 1997, she complained to SEG managers that Silva was falsely accusing her of having filed sexual harassment charges against him. During the first quarter of calendar 1997, Westinghouse was engaged in the sale of SEG to GTS, and neither firm took any action to resolve the problem between Vanessa Gasery and Silva. In April 1997, after GTS took over, Gasery wrote a memo to Christine Seibel, the HR support person in the SEG/GTS Tennessee office, demanding that the firm set the record straight with Silva to quell the rumors circulating about her. GTS managers never took any action to address Gasery's problem. Instead of correcting the false impression the EEOC response had given Silva, and telling Silva that Gasery had not filed a sexual harassment complaint against him, GTS put off Silva and Gasery. Silva became angry at Gasery and made intimidating remarks to her. Forrester reported information about Gasery's accusations against Silva to Barbara Botsford (now Boyle), then Sandia's Radioactive and Mixed Waste Department Manager, and told her that GTS management was unlikely to take action to remedy the situation quickly. Gasery told Botsford that her work situation was stressful, and complained that she was frustrated with GTS's failure to resolve the problem with Silva. Ultimately, Botsford had Sandia order Silva's removal from the site, which led GTS to lay off Silva because they had no other work to offer him. Gasery herself quit one day after Silva was fired, and later filed her own EEO charge against GTS for failing to stop Silva from spreading false information about her. Further details about Silva's protected disclosures, where relevant, and details of the various harassment allegations are discussed below.

Silva and the contractors have advanced diametrically opposed interpretations of these events. Silva maintains that Forrester unfairly and falsely accused him of sexually harassing Vanessa Gasery, even though she never filed a sexual harassment complaint against him, in retaliation for his protected disclosures about safety concerns. According to Silva, Forrester reported the false harassment allegations against him, and made negative characterizations of his attitude toward safety, to Botsford. Forrester advised Sandia that GTS corporate management was unwilling to fire Silva because he was the only Hispanic on their staff at the RMWMF, and they feared Silva would file an EEO action against GTS. These reports led Botsford to invoke a clause in their contract with GTS that would allow Sandia to order the removal of a subcontractor employee from the site. Botsford wrote a memo (signed by Scott Shrader,

the authorized Sandia contract representative) to GTS requesting the immediate removal of Silva from the site as of August 4, 1997. GTS had no other work available for Silva on any of its other contracts, and laid him off, effective August 18, 1997.

The contractors contend the record is replete with evidence that shows they are serious about safety in the workplace and that they treated Silva's protected conduct with the appropriate degree of concern. The contractors argue that Silva was laid off because he did harass Gasery, thus creating a hostile work environment for her, and claim that this same action would have be taken against him even if he had not made any protected disclosures.

Silva also contends that after he was laid off in August 1997, and the RMWMF subcontract was awarded to Weston effective in March 1998, Jeff Jarry, a Sandia employee, retaliated against him by influencing Miles Smith, the Weston Project Manager, not to hire him because he had made protected disclosures to DOE rather than raising them at the contractor level. See IG Report at 26. Sandia and Weston maintain that the investigative record underlying these findings in the IG Report is factually inaccurate, and that Silva would not have been hired by Weston even if he had not made his protected disclosures while working for GTS.

II. Legal Standards Governing This Case

A. Silva's Burden

I will next consider whether Silva has met his burden under § 708.29 of establishing by a preponderance of the evidence that he made disclosures, as described in § 708.5, and that such disclosures were a contributing factor in one or more alleged acts of retaliation against Silva. *See* *Ronald Sorri,* 23 DOE ¶ 87,503 (1993). "Preponderance of the evidence" is proof sufficient to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. *See Hopkins v. Price Waterhouse,* 737 F. Supp. 1202, 1206 (D.D.C. 1990) (*Hopkins*); 2 McCormick on Evidence §§ 339 at 439 (4th Ed. 1992). Under this standard, the burden of persuasion is allocated roughly equally between both parties. *Grogan v. Garner*, 111 S. Ct. 654, 659 (1991) (holding that the preponderance standard is presumed applicable in disputes between private parties unless particularly important individual interests or rights are at stake). As a result, Silva has the burden of proving by evidence sufficient to "tilt the scales" in his favor that he made a protected disclosure under Part 708. 10 C.F.R. §§ 708.5(a). If Silva does not meet this threshold burden, he has failed to make a *prima facie* case and his claim must therefore be denied. If the complainant meets his burden, he must then prove that the disclosure was a "contributing factor" in the personnel actions taken against him. 10 C.F.R. § 708.9(d); *see* *Helen Gaidine Oglesbee*, 24 DOE¶ 87,507 (1994); *Universities Research Association, Inc.*, 23 DOE¶ 87,506 (1993). This standard of proof is similar to the standard adopted in the Whistleblower Protection Act of 1989 (WPA), 5 U.S.C. § 1221(e)(1), and the 1992 amendment to § 210 (now § 211) of the Energy Reorganization Act of 1974, 42 U.S.C. § 5851. In explaining the "contributing factor" test in the WPA, the Senate floor managers, with the approval/concurrence of the legislation's chief House sponsors, stated: "The words ?a contributing factor' . . . mean any factor which, alone or in connection with other factors, tends to affect in any way the outcome of the decision." 135 Cong. Rec. H747 (daily ed. March 21, 1989) (Explanatory Statement on Senate Amendment-S.20). *See Marano v. Dep't of Justice*, 2 F.3d 1137 (Fed. Cir. 1993) (applying "contributing factor" test).

Since the contractors do not contest Silva's claim that he made a series of protected disclosures about legitimate safety and health concerns to contractor managers and DOE officials, I find that he has met the first part of the test under § 708.29. A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action." *Ronald Sorri, 23 DOE at 89,010, citing McDaid v. Dept. of Hous. and Urban Dev.*, 90 FMSR ¶ 5551 (1990); *see also County v. Dole,* 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In

addition,"temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *See County*, 886 F. 2d 147, 148 (8th Cir. 1989).

Applying these standards to the present case, I find that the contractor officials taking the personnel actions involving Silva had actual knowledge of Silva's disclosures. I find that there was a temporal proximity between Silva's protected disclosures in January 1997 and July 1997 and the alleged retaliations occurring in 1997 by Forrester and Botsford, which culminated in August 1997, when Silva was ordered to be removed from the RMWMF by Sandia and laid off for "lack of work" by GTS. I also find that there is a temporal proximity between Silva's protected disclosures in July 1997 and Weston's refusal to hire him in early 1998.

I therefore find Silva has established a *prima facie* case that his protected disclosures were a contributing factor in the retaliations which he alleges. The burden now shifts to GTS, Sandia and Weston to prove by clear and convincing evidence that they would have taken the same actions absent his protected disclosures. 10 C.F.R.§ 708.29.

B. The Contractors' Burden

The regulations require GTS and Sandia to prove by "clear and convincing" evidence that they would have taken actions that ended Silva's job on the GTS-Sandia RMWMF subcontract in August 1997 even if he had not disclosed information about health and safety concerns and refused to work in conditions which he considered to be unsafe. In addition, they must prove by clear and convincing evidence that Weston would have refused to hire Silva when it took over the RMWMF subcontract in March 1998 even if he had not disclosed information about health and safety concerns and refused to work in conditions which he considered to be unsafe. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." *See Hopkins*, 737 F. Supp. at 1204 n.3. In evaluating whether the contractors have met their respective burdens, I will consider the strength of their evidence in support of their decision to take the actions that resulted in the termination of Silva's job in 1997 and Weston's refusal to hire him in 1998; the existence and strength of any motive to retaliate on the part of the officials who were involved in the decision to terminate Silva's job at the RMWMF under the GTS subcontract and not hire him under the Weston subcontract; and any evidence that the contractors take similar actions against employees who are not whistleblowers but who are otherwise similarly situated. For the reasons explained below, I find that GTS has not met its burden with respect to the actions it took that resulted in Silva's termination in August 1997. By contrast, I find that Sandia has met its burden with respect to its actions leading to Silva's layoff, and that Sandia and Weston have met their burden with respect to Weston's refusal to hire Silva after it was awarded the RMWMF subcontract in March 1998.

III. Analysis

A. Introduction

The contractors base their defense on two principal claims. First, GTS argues that Silva made inappropriate sexual remarks in the presence of females, harassed Gasery, and thus created a hostile and disruptive work environment at the RMWMF. Sandia argues that in view of Silva's negative impact on the work environment, and GTS management's failure to take corrective action against Silva, it acted properly to order Silva's removal from the site. Sandia also takes the position that since it did not lay off Silva, its action was not responsible for ending his job with GTS. GTS argues that since it had no other work available for Silva, it had no other choice but to lay him off after Sandia ordered his removal from the site. Thus, GTS also takes the position that its action was not solely responsible for ending Silva's job. Second, GTS and Sandia contend the record shows they emphasized safety in the workplace, treated Silva's protected conduct and that of other employees appropriately, and did not retaliate against otherwise

similarly situated employees who reported safety problems, but were not "whistleblowers." Based on these assertions, they maintain they have shown by clear and convincing evidence that they had no motive to retaliate against Silva for reporting safety concerns, and that the same action would have been taken against him even if he had not engaged in any protected conduct.

GTS submitted extensive evidence through Alex Feldman, its former RMWMF Safety Officer, showing that after Silva's safety complaints to the DOE in January 1997, and GTS's acquisition of SEG, it set up a Radioactive and Mixed Waste Safety Committee (RMWSC) and established a process for the reporting and resolution of safety concerns. GTS Exhibit 18. Silva was a charter member on the RMWSC, which also included Sandians, and employees of other contractors. Feldman gave several examples of GTS employees other than Silva who brought personnel safety concerns to the attention of the GTS Safety Committee, including Feldman himself, but were not subjected to retaliation by GTS. Unlike Silva, however, none of those other GTS employees had ever reported safety concerns directly to the DOE. I have considered this evidence, and in my view, while the contractors' general concern for safety, and their treatment of other similarly situated employees who were not whistleblowers is instructive, *Carlos M. Castillo*, 27 DOE ¶ 87,505 at 89,047 (1998), it does not explain away the specific acts of retaliation that GTS committed against Silva.

There is evidence that Forrester and other contractor employees were displeased with Silva's concerns about safety, including his refusal to work in unsafe conditions, the timing of his complaints, and his bypassing of the "preferred" contractor channels to go directly to DOE. In addition, the evidence shows that Forrester fomented the original sexual harassment allegations against Silva without a reasonable basis, and that SEG later gave false information to the EEOC that Vanessa Gasery had filed a sexual harassment complaint against Silva. These were the first acts of retaliation against Silva. Although GTS filed nearly 80 exhibits during the course of the hearing, it failed to produce, explain or even mention the response SEG filed with the EEOC to Silva's July 1996 EEO charge. GTS's failure to submit this document, given what the EEOC told Silva, leads me to presume that it would have been unfavorable to its defense in this case. Moreover, the evidence shows that when Silva learned from the EEOC of SEG's false claim that Gasery had filed a sexual harassment complaint against him, and told others of this supposed "fact," GTS failed to set the record straight. This was the second act of retaliation against Silva. Forrester and Christine Seibel, then the "human resources support person" in SEG's Tennessee office, and others in GTS knew Silva's belief that Gasery had filed a sexual harassment complaint against him was wrong, but they withheld this information from both Silva and Gasery. Instead, they ignored Gasery's complaint that Silva was spreading false information about her, allowed the conflict between the two to fester, and took advantage of the situation by using Gasery's complaints of "harassment" to influence Sandia's decision to order Silva off the site. This was the final act of retaliation. GTS has failed to show by clear and convincing evidence that these acts would have occurred in the absence of Silva's protected activity

B. Silva's Reputation Preceded the Acts of Retaliation

The evidence shows that the contractors were displeased with Silva's approach to safety before the alleged acts of retaliation occurred. At the hearing, Silva testified that he had raised safety concerns with his SEG supervisors and managers before filing the written concerns with the DOE in January 1997. Tr. at 57-59; 175-176; 233-236. According to Silva, his SEG superiors considered him to be a "whiner," a "trouble maker, not a team player." Tr. at 57. This was corroborated by David Schweitzer, a Radiological Control Technician who worked at the RMWMF, who testified that Jack Reust and Percy Gasery of SEG, and Bill Rhodes of Sandia were spreading rumors about Silva. Tr. at 255. Silva felt that the contractors were slow in taking appropriate remedial actions for his pre-January 1997 safety complaints about the ramp, forklifts, and hydrogen sulfide. Tr. at 73; 179-180; 186-187; 233-236. Silva testified that he began keeping a personal "log book" around May 1996, to protect himself from harassment and to avoid blame if coworkers were hurt because they engaged in unsafe practices. Tr. at 241. Thereafter, Silva always carried a small notebook in his pocket in which he noted safety concerns, and this practice was annoying to his coworkers and contractor managers who feared he was engaged in a "tit for tat" process of reporting them for every minor indiscretion. IG Report at 16; Tr. at 686; 901. As a result, some of the technicians asked

not to be assigned to work with Silva. Id.

There is also evidence that Silva's supervisors and coworkers were unhappy with him because he reported safety concerns after the events in question occurred. Tr. at 188; 688-689. In addition, Silva believed the contractor managers were displeased that he bypassed the chain of command by reporting safety concerns directly to DOE in January 1997, instead of going first through the contractors. Alex Feldman, the GTS Safety Officer, thought Silva believed he was talking to the customer and not the regulator when he raised safety issues with DOE, and therefore "may not have recognized that he had short-cycled the GTS and Sandia safety mechanisms" that were in place by going directly to DOE. IG Report at 7; Tr. at 454-455. However, Feldman confirmed that going directly to DOE was not the preferred way of handling safety issues. Tr. at 455.

C. The Original Sexual Harassment Accusations–The First Act of Retaliation

In June 1996, Joe Albenze, SEG's Vice President of Human Resources (the SEG VP) informed Silva about "a complaint . . . received by management regarding inappropriate comments made by [Silva], and received by a female employee of the Company." Ex. 33 to IG Report. It was Forrester who brought Silva's allegedly inappropriate remarks to Albenze's attention. Tr. at 591. Albenze was referring to two separate incidents, described below, where Silva made remarks that Forrester deemed to be inappropriate.

"The yogurt incident" occurred on June 11, 1996 when Silva was eating lunch with two women, Vanessa Gasery and Kathy Babilon. The women were discussing homeopathic remedies. Babilon described an article she had read about the use of yogurt to cure urinary tract infections, and responded to a question from Silva that it was also good for yeast infections. Tr. at 752. Silva made some "distasteful comments about yeast infections," at which point Babilon told him "that's disgusting," and according to her, "that was the end of it." Id.

The "tuna fish incident" supposedly occurred at a training session when someone passed a paper to Silva, and he said, "it smells like tuna fish." Forrester is unsure when it occurred, but he thought it happened in the Waste Assessing Facility. He "perceived a comment regarding tuna fish– the smell of tuna fish on paper–and it was passed through Vanessa's hands." Tr. at 583. Silva has a different and more distinct recollection of the incident. According to Silva, it took place "in a RCRA training class at the Coronado Club in the lower level. I think it was in–may have been in ?96." Tr. at 988. Silva recalls that Vanessa Gasery was sitting several rows back from him, and he was sitting in the front row with Forrester to his right. There was another man to Silva's left. "He was popping a can of –of tuna fish with crackers, and he handed me the roll sheet to sign in, and that's when I got it, and I handed it to Tim Forrester, and I may have said, ?oop, I smell like tuna fish', which was–I considered to be a joke." Tr. at 989. Silva claims there were no other women in that front row, and that Vanessa Gasery was sitting "at least five or six rows behind us." Id. Silva denies that he ever intended to make any kind of sexual innuendo with his remark, and denies ever looking back at Vanessa Gasery after he said it. Id.

Albenze told Silva that "they had several charges of sexual harassment against me," and that Kathleen Babilon had filed sexual harassment charges against him. Tr. at 78. In fact, this was not true, and when Babilon learned of the accusation attributed to her, she became upset. Christine Seibel testified that she received an angry telephone call from Babilon "demanding a letter from SEG/Westinghouse that she could have in writing on our letterhead, stating that she did not make any sexual harassment charge, complaint, call or anything to the Human Resources Department or to the Management of our company regarding Mr. Silva." Tr. at 484. Shortly thereafter, Babilon wrote a memo stating that she had nothing to do with filing sexual harassment charges against Silva. Silva Exhibit 2. Her memo explained that "the conversation in which I was supposedly offended occurred on 6/11/96 at lunch. The nature of the comment was to do with yeast infections. While that was probably not an appetizing topic of conversation, I certainly did not find it offensive. I did not find it particularly sexual either–certainly not a sexual harassment complaint." Id. In addition, this memo stated that sometime after June 11, 1996, Forrester approached Babilon and asked, "out of the blue. . . if I had any problems with any of his employees,

specifically pointing out sexual harassment. . . ." Id. The memo went on to state that she told Forrester she had no problems with any of his employees, and concluded by denying ever having made "any complaints formally or informally against [Silva]." Id.

Forrester claims he was motivated to make an example of Silva's remarks because they were making the transition from a remote facility (the Interim Storage Site) to an office environment (the RMWMF) where more women would be present, and he "was concerned that there was some sort of a cultural–if that's the right word –problem." Tr. at 584. According to Forrester, "the technicians and the professionals, whoever were very loose with those kinds of comments and . . . it was going on out there more than I could see." Tr. at 585. Later, Vanessa Gasery called Albenze from Forrester's office, Tr. at 546, and told Albenze "the comments were not offensive." GTS Exhibit 38; Tr. at 547. Albenze, who would have had actual knowledge of the events in question, was not called as a witness at the hearing. Instead, GTS called Christine Seibel, who then worked in SEG's Tennessee office. Seibel's testimony was based on long distance conversations about these events, since she was not present in Albuquerque when they occurred. Her testimony relied heavily on contemporaneous notes she and others in Tennessee made of telephone conversations with Albenze, Forrester, and Gasery. Thus, I cannot give her testimony the same weight as testimony from people who were actually present at the RMWMF. Everything Seibel heard from the SEG people in Albuquerque had been influenced by Forrester, who first characterized Silva's remarks as offensive, and led Gasery to contact Albenze.

Seibel testified that Gasery was adamant about the fact that she did not file a sexual harassment charge against anyone at that time. What she was doing, as she stated it to me, was she was trying to be a good citizen of the company, frankly. She had heard some things that could be considered inappropriate and with a raised consciousness of sexual harassment in the whole country, you know, I mean frankly everybody wants to keep their job, do a good job and have a good working environment. And it is the responsibility of employees, especially Supervisors and Managers to make sure that we maintain that.

Tr. at 473. It is significant that before Gasery called Seibel and said she was "trying to be a good citizen of the company," Forrester had conducted an "investigation" of the workers at the RMWMF to discern if anyone had been offended by any unnamed employee's remarks, and nobody (including Gasery) reported they had been offended. Silva Ex. 3. Even though nobody on the scene was offended, and nobody made any charges against Silva, Tr. at 481, Seibel testified that Silva's remarks were "perceived as inappropriate" by the SEG people in Tennessee and Pittsburgh [at Westinghouse's corporate office] and "a matter that needed to be dealt with." Tr. at 475.

On July 15, 1996, reacting to what he felt were false accusations from SEG, Silva filed a discrimination charge with the EEOC. Ex. 26 to IG Report. According to Silva, he later learned from the EEOC during its investigation of his first discrimination charge that SEG claimed "it was Vanessa Gasery who had filed sexual harassment charges against" him. Tr. at 86. That claim was false, since Gasery never filed a sexual harassment complaint against Silva. Tr. at 473. I infer from GTS's failure to produce the written response SEG filed with the EEOC that the document contained "inaccuracies." Forrester disclaims any knowledge of it, even though he was the SEG-GTS RMWMF Project Manager, and "already had been named in an EEOC thing." Tr. at 602. Seibel admitted having read the response. She stated that "I believe her [Vanessa Gasery's] name is in it, but I am not positive." Tr. at 736. I observed the demeanor of these witnesses at the hearing, and their professed ignorance of the written response to the EEOC is not credible. Each of them was personally involved in the events, and each had a motive to hide the truth at the hearing. Moreover, they each also had a pecuniary motive, since at the time of the hearing, Forrester was still a GTS employee, and Seibel had been laid off and was hoping to be rehired by GTS. The glaring absence of this critical document undermines the overall credibility of GTS's claim that it did not retaliate against Silva, and would have fired him regardless of his protected conduct.

D. GTS's Failure to Resolve the Conflict Between Silva and Gasery–The Second Act of Reprisal

Silva testified that after he was told that Gasery filed a complaint against him, he "did nothing. I carried on as usual. And just tried to keep my–keep from offending anyone there, especially Vanessa Gasery." Tr. at 76. He indicated that his relationship was good with Gasery before this point, but admitted that it changed after he learned from EEOC that she had filed charges against him. According to Silva, he "did not joke around as much because I feared of getting in trouble with her for anything I did or said might be taken or perceived the wrong way." Tr. at 88. Silva also admitted telling others about Gasery after he was told she had filed a complaint against him. Tr. at 88-89. However, Silva claims he never confronted Gasery because he feared it would "blow up in our face," and he didn't want to "be perceived as being aggressive" or "come off wrong." Tr. at 89.

Even though Silva claims he was careful to do nothing that would cause problems with Vanessa Gasery, it is clear that her reputation among some of her coworkers suffered when the false information circulated that she had filed a sexual harassment complaint against Silva. While Silva played a role in spreading this false information when he told coworkers about Gasery, he had learned it from the EEOC, and he believed it was true. In late February 1997, Gasery called Seibel to complain about Silva's accusations, and asked SEG management's help in stopping the false information circulating about her. Tr. at 517.

On March 21, 1997, Silva filed a second EEOC charge against SEG, claiming that he was harassed by management after having filed the earlier charge. Exhibit 29 to IG Report. This second EEOC charge made SEG management uncertain about how to handle the growing tension between Silva and Vanessa Gasery. Seibel testified that in March 1997, she called Nep Sanchez, the EEOC investigator and discussed the Silva case with him, seeking guidance from the EEOC about what would happen if SEG took disciplinary action against Silva. GTS Exhibit 48. According to Seibel's notes of that conversation, Sanchez advised SEG to have Gasery "put it in writing, talk to others [and] document," write a memo to Silva telling him to stop talking to others immediately, and warn Silva that he faced further disciplinary action up to termination. Id.

On April 5, 1997, approximately one month after she first complained to SEG management about Silva, Gasery faxed a "Written Statement Regarding False Accusations" to Seibel. GTS Exhibit 49. In this memo, which is quoted extensively below, Gasery gave a clear picture of the problem:

Background

Since January of 1997, S.E.G. employee Luis Silva, has been and may be continuing to make accusations about me. Luis is telling people at Sandia National Laboratories, New Mexico that I meaning Vanessa Gasery, filed Sexual Harassment charges against him. Furthermore, he has told people that he knows this for a "fact." Luis's accusations upset me because they are not true. Furthermore, I am puzzled by Luis confidence with regards to his statement. I do not understand how he could come to such a strong conclusion without *what he considers proof* (i.e., discussions with or documentation from an attorney, discussions with or documentation from S.E.G. etc.) I would hope that S.E.G. never stated or documented that I filed Sexual Harassment charges against Luis, because this would be a false statement. Moreover, this would disappoint me greatly, because during a phone conversation with Joe Albenze in the presence of Tim Forrester, in the summer of 1996, I stated several times that I was not filing Sexual Harassment against Luis. Additionally, as I made clear during my discussion with Joe Albenze, I was only providing information regarding Luis out of concern for S.E.G.'s credibility and the contract at Sandia National Laboratories. Listed below are names of individuals who have stated to me, that they were present during one of Luis's conversations where by he has made the statement:

Doug Perry

Eric Staab

Dave Schweitzer

Conclusion

I feel my reputation and character have been damaged by the accusations made by Luis Silva. I am stressed by this ordeal and I am working in what I consider to be an hostile environment.

I need to share my feelings regarding how S.E.G. is handling this matter. I truly do not believe that S.E.G. Human Resources has my interest at heart. I was told this matter must be handled carefully because I understand that Luis has filed charges with the US Equal Employment Opportunity Commission (EEOC).

Request for action

I feel closure of this matter would create a more pleasant work environment and relieve unwarranted stress. Keeping in mind that the matter is serious, I am requesting action for closure. The action shall included by is not limited to the following:

1. Sending a human resources representative to Sandia National Laboratories to investigate and address my situation.
2. Disciplining Luis in accordance with company procedures and policies, if it is proven he made the false accusations.
3. Investigating the handling process used when recording/reporting the Luis issue with Joe Albenze during the summer of 1996.
4. Dealing with S.E.G. employees in accordance with company procedure and policies, if it is proven they made false accusations or misrepresented issues. Keeping in mind Federal, State and Local Laws.
5. Providing me with documentation regarding the Sexual Harassment matter specific to Luis and myself. This includes any documentation of which my name is mentioned and documentation distributed internally or externally of S.E.G.

Finally, timely and proper closure is critical and would be greatly appreciated.

GTS Exhibit 49.

The record indicates that neither SEG nor GTS ever took action to resolve the matters described in Gasery's memo to Seibel. During the period February - March 1997, when Westinghouse was engaged in the sale of SEG's RMWMF business operation to GTS, neither firm focused any attention on the travails of Gasery and Silva. Tr. at 517-18. Although Seibel visited the Sandia site in April 1997, she did not talk to Silva on that trip, and she did not interview the three people named in Gasery's memo (Perry, Staab and Schweitzer). Tr. at 519; 801.

The ownership transition was complete by April 1997. Seibel, GTS Duratek's CEO Bob Prince, and Vice President Don Neely visited the RMWMF in early June 1997. One of the things they looked into was the apparent problem between Gasery and Silva. Seibel testified that Prince was "not comfortable with charging ahead on anything on this until we had an opportunity to talk with both parties." Tr. at 521-522. According to Seibel, this trio met with Vanessa Gasery, and heard her "going through some of the things that she had already expressed to me verbally over the phone on February 28th and then also writing in the Memo [GTS Exhibit 49]. . . ." Tr. at 522. Neely and Prince also met with Silva to "give him an opportunity to talk about his side of the story." Tr. at 523. They gave him a memo originally entitled "Disciplinary Action," which Neely changed to "Counseling Action." Exhibit 33 to IG Report. The memo states, in pertinent part, that:

Previously, a complaint was received by management regarding inappropriate comments made by you, and received by a female employee of the Company. On June 17, 1996 you were counseled by SEG's Vice President of Human Resources concerning the fact that any type of harassment, both direct and indirect, on the job site is unacceptable conduct and should cease immediately. This counseling was documented and you received a copy of that documentation.

Regretfully, SEG, now GTS Duratek management has received an additional complaint that continued harassment exists in the workplace. Please be advised of the severity of this type of misconduct as indicated by this formal written warning. Should there be any reported incidents in the future of this nature, disciplinary action, up to and including termination of employment may be imposed immediately.

Exhibit 33 to IG Report.

The June 1997 "Counseling Action" memo shows that Prince and Neely, the new GTS managers, viewed the "false accusations" harassment reported by Gasery in 1997 as a continuation of Silva's so-called sexual harassment alleged in June 1996. Seibel and Forrester both knew that was not true, but they did nothing to stop their new GTS managers from getting the wrong impression. Tr. at 736. Addressing the questions raised in Gasery's April 1997 memo, and giving her the help she demanded would have required SEG/GTS to admit they had told the EEOC that Gasery filed a sexual harassment complaint against Silva, when she had not done so and was adamant about not wanting to do it. Instead of resolving the conflict, GTS took advantage of it, and played Gasery and Silva off against each other. In the end, GTS's inaction drove Gasery to resign. GTS's failure to address Gasery's complaint created a situation that formed the basis for Forrester's telling Sandia's Botsford that Silva was "harassing Gasery," and led Botsford to order Silva off the site.

The timing of these events is further evidence of retaliation by GTS against Silva for his protected conduct. Forrester and Seibel certainly knew how easy it would have been to make peace between Gasery and Silva, simply by telling Silva that Gasery had not filed a complaint against him. Their critical failure to correct the misunderstanding between Silva and Gasery happened soon after January 1997, when Silva had reported safety concerns to Gene Runkle and touched off a full-blown DOE safety investigation. See Exhibit 31 to IG Report; GTS Exhibit 10. As noted above, Alex Feldman admitted that in his view, going directly to the DOE was not the preferred way of reporting safety concerns for GTS employees. IG Report at 7; Tr. at 454- 455.

GTS management's negative attitude toward Silva's safety practices and disclosures was also evident in June 1997, when Don Neely and Forrester met with Silva to discuss several concerns between him and management. Among other things, they criticized Silva for his judgment about the "level of detail" in safety matters, citing his wiping water off drums of radioactive waste as "being too meticulous." Tr. at 217; GTS Exhibit 53 (Forrester's notes of "6-3-97 Discussion with Luis"). They also cited Silva's complaints to Forrester about people wasting time forming a "lottery ticket group" as an example of Silva's continued inability to get along with co-workers. Id. In this same meeting, Silva also complained to Neely that Forrester lost his temper and "blew up" at him. Id.; Tr. at 85.

The evidence shows that GTS "sacrificed" Vanessa Gasery, ignoring the complaints that she articulated so clearly in her April 5, 1997 memo to Seibel, in order to get rid of Silva. Gasery's letter of resignation, GTS Exhibit 55, shows that she was unhappy with GTS because they ignored her complaint. Eventually, Gasery filed her own EEOC charge against GTS, alleging that the firm had done nothing in response to her complaints. Gasery Deposition Exhibit 1.(4)

Although the evidence shows that GTS retaliated against him for his protected conduct, Silva was not blameless. There is evidence that Silva made nasty remarks to Vanessa Gasery, after he was told she had accused him of sexual harassment. According to Gasery, Silva muttered the "n word" to her under his breath on at least one occasion, and also called her "stupid," and a "bitch" when others could not overhear. Gasery Deposition at 14. Silva denies making these remarks. One witness, Carla Rellergert, testified about seeing Gasery looking upset after she and Silva walked past each other at the RMWMF. Tr. at 765. I cannot condone Silva's hurtful comments to Gasery, if they did occur. But in my view, by refusing to end the misunderstanding that it created between Silva and Gasery, and letting it fester instead, GTS placed Silva in a position where he was bound to fail. This was an act of retaliation against Silva. *See* *Ronald Sorri*, 23 DOE at 89,014 (retaliation includes putting whistleblower in a position where he was bound to fail). GTS's actions fueled Silva's anger toward Gasery, who he believed had wrongly accused him of

sexual harassment. GTS must bear the consequences of its actions, which drove Silva to lose control of his temper and make hostile remarks to Vanessa Gasery. Even though Silva's words sound bad in the retelling, they were ancillary to the main thrust of Gasery's 1997 memo, her 1998 EEOC charge against GTS, and her 1999 deposition in connection with this case, which was her frustration with GTS's failure to do anything to stop Silva from "falsely accusing" her of filing a sexual harassment complaint.

E. Silva's Termination–The Final Reprisal

Silva's termination was the inevitable result of the conflict that GTS diabolically nurtured between Silva and Gasery. The dénouement played out in a series of meetings with Sandia program manager Barbara Botsford. One meeting took place in late July 1997 between Forrester and Botsford. GTS's corporate office in Maryland had given Gasery a few weeks' medical leave of absence to recover from stress, and she was due to return to work shortly. Forrester testified that he gave Botsford a report about the ongoing problems between Silva and Gasery, which he characterized as being based on "a non-substantiated set of accusations from Vanessa" that GTS was investigating. He told her of the pending EEOC charges filed by Silva, and opined that GTS's home office was unlikely to act quickly. Tr. at 607-610; IG Report at 17.

The second meeting took place in a chance encounter between Botsford and Vanessa Gasery after Gasery returned from medical leave. Botsford described Gasery as looking "visibly shaken. She was not her normal self." Tr. at 863. Gasery told Botsford that "it was Mr. Silva who was causing her the stress," and mentioned Silva's nasty remarks. Id. Botsford accepted Gasery's side of the story without hearing from Silva, based on training she had received that "if a person believes they are being harassed, they are being harassed." Tr. at 882. According to Botsford, Gasery did not tell her that what she perceived as harassment initially was the fact that it was being claimed that she filed a sexual harassment complaint against Silva. Tr. at 887. Botsford was also aware that Gasery was frustrated by the lack of action by GTS. Tr. at 896.

After her impromptu meeting with Gasery, Botsford summoned Forrester. Forrester gave her "a lot of detail that I had never had before, explained to me on a– both sides, you know, what was happening in the case, in the situation, and he explained to me that he felt his hands were tied because it was now a corporate issue for their corporation." Tr. at 866. Botsford demanded that Forrester do something to resolve the problem with his employees, but realized that "it was my right under the contract to take some steps to resolve the issue of a hostile work environment." Tr. at 867. Botsford next called Gary Romero in Sandia Purchasing, asked what her options were, and was told under the terms of the GTS contract she could remove any person. Id. Then, according to Botsford,

I walked over to Sandia Legal, and I asked them if there was anything I should consider and what would they advise me if I wanted to remove someone from the contract, and the Sandia attorney just said–she asked me do you have–and I told her–I was intending to remove Mr. Silva because in my estimation, he was the one that was creating a hostile work environment, and he–she asked me do you have reason to believe he's a whistle-blower, and I asked her in response, it's not nice to answer a question with a question, but I asked her how would I know because I did not–I do not understand–I have never read the Whistle-Blower Protection Act, and I did not at that time have an understanding of how this type of process occurs.

And she–so, I asked her on how could I know, and her answer to me was, well, you wouldn't, and, so, I thought okay. I mean I wouldn't know. This is really not real relevant to that anyway. Whistle-blower was not what I was worried about. I was worried about Ms. Gasery's work environment, and . . . safety is so important at that facility, if you've got people that are nervous around each other, you're very likely to have a safety incident. You'd have people making mistakes when they're over-stressed.

Tr. at 867-868. Botsford also testified that Sandia has never provided her with any training concerning whistleblower protection, and that she has never provided training to any of her employees or contractors concerning whistleblower protection. Tr. at 898.

After consulting with Sandia's lawyer, Botsford drafted the letter ordering GTS to remove Silva from the Sandia site. Exhibit 45 to IG Report. Sandia delivered it to Forrester on August 4, 1997. Botsford claims the letter did not ask GTS to terminate Silva. Tr. at 870. She testified that it was her impression that GTS "thought they had work. They had contracts elsewhere. So, I assumed that he would be transferred some place else, but that really wasn't my concern, either." Id. Botsford also denied that the fact Silva had raised safety concerns entered her mind when writing the letter. "I think when–it might have been something that I thought of when–when Ms. Gallegos [the Sandia attorney] mentioned something about whistle-blower, but that was not why I was taking this action." Tr. at 871.

Botsford knew Silva had raised safety concerns with the DOE, and she also knew he "had a tendency not to report safety concerns on the day that he observed them." Botsford attributed this to Silva's "comfort level. He preferred to do it after the fact." Tr. at 901. Botsford also acknowledged that Forrester told her Silva would not do work if he observed something he felt was unsafe. Tr. at 904; Exhibit 5 to IG Report.(5) Botsford also heard, from Forrester and others, "everyone was concerned that if they did anything, they would be reported for some minor indiscretion in a day or two by Mr. Silva." Tr. at 901.

When Forrester received Sandia's memo ordering Silva off the contract, he faxed it to Seibel. She and Diane Leviski, GTS's Vice President for Human Resources, made a search to see if GTS had any jobs available for him on any of its other contracts. No other work was available for Silva, and GTS corporate managers Neely and Prince agreed they had no other choice but to lay him off. Since Sandia had requested Silva's removal from their contract, and GTS had nothing else available, they decided to give "lack of work" as the reason for the layoff. Tr. at 526-535. The layoff letter was then faxed to Forrester.(6)

Based on the foregoing discussion, I find that GTS has failed to prove by clear and convincing evidence that it would have laid off Silva for his "harassment" of Vanessa Gasery, even if he had not engaged in conduct protected under Part 708. The evidence shows that Forrester was unhappy with Silva's attitude toward safety, and that he engineered the original sexual harassment allegations against Silva, even though Forrester's own investigation showed there was no reasonable basis for the allegations. Although GTS introduced extensive evidence showing that it took no retaliatory action against other employees who reported safety concerns through contractor chain of command, only Silva reported safety concerns directly to DOE, and only Silva was subjected to retaliation. GTS's entire defense is defeated by its failure to end the conflict between Silva and Gasery simply by telling them both that Gasery never filed a sexual harassment complaint against Silva, and its failure to explain why it subjected Silva (and Vanessa Gasery) to such callous treatment. GTS has not convinced me that its "harassment" allegation against Silva was not a mere pretext for getting rid of him. In the end, GTS's actions pushed both Silva and Gasery over the edge. By August 5, 1997, they both were gone from GTS.

With respect to Sandia, I find that the firm has met its burden of proving by clear and convincing evidence that it would have ordered Silva off the GTS RMWMF subcontract, even if he had not engaged in protected conduct. It is a close call, but Sandia convinced me that Botsford acted in reliance on the information she received from Forrester. Botsford worked ten miles away, and she was not intimately familiar with the day-to-day interactions among the workers at the RMWMF. Forrester, not Botsford, was the animating force who launched the series of events that led to Silva's dismissal. However, I am troubled by Botsford's testimony about her statement recounting her interaction with Sandia's lawyer who asked her whether Silva was a whistleblower. Botsford declaimed any and all knowledge of the law on whistleblower protection. Ignorance of the law is not a defense, and Botsford's conduct at that critical juncture in this case borders on the negligent, even if it was not retaliation. Assuming Botsford's statements are truthful, Sandia should take steps to remedy the situation by giving Botsford and the rest of its own employees and its subcontractor workforce training in the law on whistleblower protection. The Sandia lawyer who advised Botsford on the Silva matter should have explained the applicable Federal statutes and regulations to her, including Part 708, and insisted that Botsford look into the situation to make sure any retaliation issues were resolved before ordering Silva off the contract. Nevertheless, I am persuaded that even if she had made a reasonable effort to look further into the allegations against Silva, Botsford would not have been able to discover that Forrester's characterization of Silva's alleged

harassment of Gasery was not true. Sandia has therefore convinced me that it would have taken the same action against Silva in the absence of his protected conduct.

F. Weston's Failure to Hire Silva

In addition to the allegations in the original complaint, the IG Report also found that when Weston was preparing to take over the RMWMF subcontract from GTS, Jeff Jarry of Sandia influenced the new Weston project manager, Miles Smith, to stop Weston from hiring Silva, in retaliation for protected disclosures Silva made before being laid off by GTS. The IG Report also attributed a comment to Smith, that after questioning several of his then-current employees about Silva, and learning that Silva would raise safety concerns with the DOE instead of working with the contractor staff to resolve them, Smith told the investigator "I wouldn't want anyone on my team like that." IG Report at 24. Based on the hearing testimony of Jarry, Doug Perry and Smith, I am convinced the IG investigator misinterpreted the facts, and that there is no basis for these findings in the IG Report.

Silva submitted a resume to Weston for a job as a Radiological Control Technician before Weston took over the RMWMF subcontract from GTS in March 1998. According to Silva, his friend Doug Perry, who worked for Weston, called him on March 9, 1998, and said that Smith showed Silva's resume to Jarry, and Jarry "put the kibosh on your resume." Tr. at 97; IG Report at 23. At the hearing, Perry initially denied having said that Jarry told Smith not to hire Silva. Tr. at 286. However, Perry asked to be recalled to the witness stand the next day because after reflecting on the events of March 1998, he thought it was possible that he might have told Silva something about Jarry telling Smith not to hire Silva. Tr. at 636-637. When asked what the reason might have been for making the statement, Perry testified that if he did say something to Silva, "it was . . . as a friend to try to cheer him up, I guess." Tr. at 638. Perry conceded that no one ever told him that Jarry had told Smith not to hire Silva, and he had never witnessed any such interchange between Jarry and Smith. Tr. at 637. The IG investigator relied on Silva's recollection of the phone call from Perry, but he never interviewed Perry. I believed Perry's hearing testimony, especially in view of his willingness to come back to correct his possibly erroneous recollection of a telephone message he may have left for Silva.

Jarry also denied that he ever told Smith not to hire Silva for the RMWMF contract. Tr. at 914. The only time Silva's name ever came up between Jarry and Smith was when Smith was reviewing resumes for a different contract, after the RMWMF staffing was complete. Tr. at 925. On that occasion, Smith showed Jarry Silva's resume, and asked if he knew Silva. According to Jarry, he said "Yeah, he used to work at the site," and handed the resume back to Smith. Tr. at 913-914.

Moreover, Smith testified that Weston never would have hired Silva under any circumstances because Silva lacked the minimum qualification and level of experience which Smith had established for the job. Tr. at 954. Smith culled Silva's resume from a pile of resumes he had received in response to an ad for a technician job on the RMWMF contract because Silva did not have the requisite Radiological Control Technician certification or an equivalent certification. Tr. at 940. Smith also denied that Jarry had ever told him not to hire Silva, and denied having any knowledge at the time that Silva had made safety complaints to the DOE. Tr. at 941.

Finally, Smith explained that the statement attributed to him in the IG Report was taken out of context, and gave the wrong impression. According to Smith, after the interview was completed, the investigator asked him a hypothetical question about whether he would hire someone like Silva. Smith testified that the investigator told him during the course of the interview that Silva had safety issues, whistleblower complaints, and alluded "to other issues that I in all honesty took to be sexual harassment." Tr. at 965. Smith says that his answer was "if these things are true . . . particularly the sexual harassment . . . I wouldn't want somebody like that on my team." Tr. at 966. Smith maintained that he did not have any personal knowledge of whether any of those issues were true, he was not represented by counsel during the interview, and that he really had no capacity to be able to answer that hypothetical. Id.

Based on the foregoing discussion, I find that Sandia and Weston have met their burden of proving by clear and convincing evidence that they took no actions in retaliation against Silva for his protected conduct, and that Weston would not have hired him in any event.

IV. Remedy

Since I have found that (1) Silva has met his burden under § 708.29 of proving by a preponderance of the evidence that he engaged in protected conduct, (2) Silva's conduct was a contributing factor to acts of retaliation against him by GTS, and (3) GTS failed to meet its burden of proving by clear and convincing evidence that it would have taken the same actions against Silva even if he had not engaged in protected conduct, I will order appropriate relief. 10 CFR § 708.36. Having found that Silva's layoff effective August 18, 1997 was the result of retaliation by GTS, I will order GTS to treat Silva as if he were reinstated from August 18, 1997 through the end of the GTS contract in March 1998, and to give Silva back pay for that period, including salary and all lost benefits (and interest on that amount), less any money that Silva earned from other employment during that period. Since the evidence shows that Silva would not have been hired by Weston, he is not eligible for reinstatement, and the back pay will terminate on the date the contract ended. I will also order GTS to pay Silva his reasonable legal expenses, including attorney fees, and the costs of bringing this action.

Although there is some evidence of Silva's earnings after he was laid off by GTS, that evidence is incomplete. I will direct Silva's attorney to submit a report showing the amount of Silva's monthly earnings after the layoff, the amount of back pay and benefits claimed for each month in the period noted above, including the proper termination date for the GTS RMWMF contract, and the amount of attorney fees and costs claimed, including the basis and justification for those legal expenses. *See* *Sorri*, 23 DOE at 89,016-89,021 (back pay and interest); *Ronald A. Sorri*, 24 DOE ¶ 87,508 (1994) (supplemental order on costs and attorney fees). This report should be submitted no later than 30 days after Silva's attorney receives this decision, and a copy shall be served on GTS's attorney. GTS will have 10 days after receiving the report to submit its comments, if any. I will then issue a supplemental order setting forth the amount of back pay and lost benefits (including interest), costs, and legal expenses awarded to Silva. I also encourage the parties to enter into settlement negotiations to resolve all issues related to remedies and any other issues remaining in this case.

It Is Therefore Ordered That:

(1) The complaint for relief under 10 C.F.R. Part 708 submitted by Luis P. Silva, OHA Case No. VWA-0039, is hereby granted with respect to GTS Duratek, as set forth in paragraphs (2), (3) and (4) below. The complaint for relief against Sandia Corporation and Roy F. Weston, Inc. is denied.

(2) Silva's attorney shall submit a detailed report as described in the remedy section of this decision, showing the amount of Silva's back pay and lost benefits claimed for the period noted above, including the proper termination date for the GTS RMWMF contract, the amount of Silva's earnings from other sources during that period, and the amount of attorney fees and costs claimed, including the basis and justification for those legal expenses. The report shall be due 30 days after receipt of this decision, and shall be served on the attorney for GTS.

(3) GTS shall be permitted to submit its comments, if any, on the report described in paragraph (2) above. The comments shall be due 10 days after receipt of the report.

(4) This is an initial agency decision, which shall become the final decision of the Department of Energy granting the complaint in part unless, within 15 days of the issuance of a Supplemental Order with regard to remedy in this case, a notice of appeal is filed with the Office of Hearings and Appeals Director, requesting review of the initial agency decision.

Thomas O. Mann

Hearing Officer

Office of Hearings and Appeals

Date: February 25, 2000

(1) Westinghouse owned SEG before it was sold to GTS Duratek in March 1997.

(2) A Final Rule, which made a few minor changes from the interim version, was published on February 9, 2000. 65 FR 6314 (effective March 10, 2000). A technical correction was published on February 24, 2000. 65 FR 9201. Since the Final Rule is not yet effective, it has not played any role in this case.

(3) Silva raised additional safety concerns with DOE after he was laid off by GTS. Hearing Transcript (Tr.) at 172.

(4) Gasery's EEO claim against GTS was settled. Silva's counsel requested a copy of the settlement agreement during discovery to see if it paid Gasery a large sum of money in exchange for her agreement to testify against Silva in this proceeding. GTS's counsel claimed the document was confidential and privileged. After an *in camera* inspection of the document, I ruled that its terms were confidential and the document was therefore privileged. While I did not order production of the document, I informed Silva's counsel that the dollar amount of the settlement seemed appropriate, and that the agreement contained no mention whatsoever of Silva or this case.

(5) Silva's rebuttal testimony about the so-called "light bulb incident" Forrester related to Botsford as an example of Silva's refusal to work in unsafe conditions is further evidence of how Forrester distorted the facts in order to undermine Silva's reputation with Botsford. Tr. 980-982.

(6) After the letter had been sent, Jim Snoddy, the GTS Field Service Safety Officer, brought up the fact that Silva had raised safety concerns, but by that time, according to Seibel, it was too late to consider the implications because the decision had already been made. Tr. at 536-538.

Case No. VWA-0040

December 13, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Initial Agency Decision

Name of Case: Rosie L. Beckham

Date of Filing: April 27, 1999

Case Number: VWA-0040

Rosie L. Beckham (hereinafter the complainant) filed a complaint against her former employer, KENROB and Associates, Inc. (hereinafter the contractor) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The program prohibits a DOE contractor from retaliating against an employee for disclosing certain information (a protected disclosure). A DOE office investigated the complaint and issued a report, which concluded that the complainant was not entitled to relief. The complainant requested a hearing, and I was appointed to conduct the hearing and issue an initial agency decision. As explained below, this initial agency decision concludes that the complainant has not met her burden of demonstrating that she made a protected disclosure. Accordingly, the decision denies the complainant's request for relief.

I. Background

A. The DOE's Contractor Employee Protection Program

The DOE Contractor Employee Protection Program is set forth at 10 C.F.R. Part 708. The DOE recently revised the program. 64 Fed. Reg. 12,862 (March 15, 1999).

Part 708 prohibits contractors from retaliating against contractor employees who engage in protected conduct. Protected conduct includes disclosing information that the employee believes reveals a violation of a law, rule, or regulation. If a contractor retaliates against an employee for making a protected disclosure,

the employee can file a complaint. The employee must establish, by a preponderance of the evidence, that the employee made a protected disclosure and the disclosure was a contributing factor to an alleged retaliatory act. If the employee makes the required showings, the burden shifts to the contractor to establish by clear and convincing evidence that it would have taken the same action in the absence of the employee's disclosure. If the employee prevails, the OHA may order employment-related relief such as reinstatement and backpay.

B. Factual Background

The contractor provided technical support services to the DOE. Those services included (i) the procurement of computer hardware and software, as well as related servicing and training and (ii) the preparation of financial reports.

In May 1995, the contractor hired the complainant as a contract specialist. The complainant had interviewed for a financial analyst position, but was offered, and accepted, a contract specialist position.

As a contract specialist, the complainant processed computer- related requisitions. Because the contractor did not have a DOE- approved purchasing system, the DOE required that the contractor submit all proposed procurements over $50 to DOE for its review and consent. Accordingly, the complainant prepared, for submission to DOE, a "consent" package, documenting a proposed award. The complainant forwarded the package to her second level supervisor, who approved the package and sent it to the DOE for its consent. The DOE granted its consent in a letter to the complainant's third level supervisor, who then signed a purchase order.

In addition to processing requisitions, the complainant maintained a looseleaf service of the federal acquisition regulations. When the complainant received replacement pages, she inserted the replacement pages in the binder and discarded the replaced pages. Many (if not all) of the replacement pages contained new regulations that were promulgated pursuant to the Federal Acquisition Streamlining Act of 1994 (FASA). At some point, the complainant received a circular concerning FASA. The circular, Federal Acquisition Circular 90-32 (September 18, 1995), is an exhibit to the investigatory report. IR, Ex. 28. The circular noted some FASA changes (and the corresponding new regulations). The circular also contained a statement that FASA was applicable to solicitations issued on or after December 1, 1995, as well as a statement that the changes noted in the circular did not apply to micro-procurements, i.e., procurements under $2,500. Id. (circular at coversheet & 4).

As the result of DOE budget cuts, the contractor's procurements declined markedly beginning in October 1995. The contractor's log of maintenance items shows approximately 30 procurements totaling over $100,000 for the period July through September 1995 - the last fiscal quarter of 1995 - and approximately five procurements totaling $6,000 for the period October 1995 through December 1995 - the first quarter of fiscal 1996. Hrg. Ex. 2. As the result of anticipated and actual budget cuts, the contractor's staff fell from 93 to 78 people. IR, Ex. 15 at 1.

Also as a result of DOE budget cuts, the contractor's preparation of financial reports increased. IR, Ex. 15 at 1,2. The DOE requested that the contractor prepare reports projecting the impact of various funding reductions. Id.

As a result of the decline in procurements, the increase in financial reports, and the departure of the employee responsible for financial reports, the contractor tasked the complainant with preparing some of the financial reports. IR, Ex. 15 at 2. The complainant had difficulty preparing the reports but attributed those difficulties to the reports' complexity and computer problems, rather than any lack of skill or effort on her part. IR, Ex. 5 at 13-16.

During December 1995, the complainant, with the contractor's permission, registered for a February 1996, one-day FASA seminar. During the same month, the complainant's first level supervisor counseled the complainant on several occasions, citing unprofessional conduct toward other employees, including the first level supervisor, and inaccurate reporting of time. See, e.g., IR, Exs. 5, 8. On January 2, 1996, the complainant sent an e- mail to her second and third level supervisors, discussing her first level supervisor's "expressed hostility" toward her and requesting that they assign her a different supervisor. IR, Ex. 23 at 11-12.

On January 3, 1996, the contractor terminated the complainant. The January 3, 1996 termination letter cited "blatant insubordination and disregard for your supervisor." IR, Ex. 22 at 7. The letter cited three incidents. The letter stated that, on December 21, 1995, the first level supervisor told the complainant that co- workers had complained that the complainant was screaming at them and using profanity. The letter stated that the complainant became very loud and asked to speak with those co-workers. The letter further stated that, on December 22, 1995, the first level supervisor convened a second meeting with the

complainant and one of her co-workers. The letter stated that the complainant refused to discuss the problems that the co-worker raised. Finally, the letter stated that, on December 29, 1995, the first level supervisor questioned whether the complainant had accurately reported her time. The letter stated that the complainant began screaming at the supervisor.

The complainant appealed the termination to the president of the company. In a January 3, 1996 letter, IR Ex. 23 at 2-4, the complainant denied that she had behaved in an unprofessional manner; the complainant attributed her problems with her first level supervisor to a remark the complainant made in mid-December about the supervisor's weight loss. The complainant stated that she intended the remark as a compliment, but the supervisor took offense. The complainant stated that the supervisor "never forgave" her and began "doing things to cause [her] harm." Id. at 2-3. On January 4, 1996, three contractor officials (the president, vice-president, and human resources director) met with the complainant. The complainant provided them with a copy of her January 3, 1996 letter, as well as a copy of a December 28, 1995 letter that she wrote to her first level supervisor.(1)

On January 10, 1996, the contractor rehired the complainant on a probationary basis. IR, Ex. 24. The president and the complainant's third level supervisor signed the letter. They rehired the complainant over the objections of the complainant's first and second level supervisors. IR, Ex. 13 at 3.

The January 10, 1996 letter, rehiring the complainant, stated that the complainant must correct the matters set forth in the January 3, 1996 termination letter, as well as negative work performance issues that surfaced during the contractor's consideration of the complainant's request for reinstatement. The letter set forth a list of ten performance criteria, including one that noted the decline in procurements and the complainant's obligation to perform other duties. IR, Ex. 24 at 3 (performance criteria). The letter provided for a review of the complainant's progress in meeting the criteria in two months, or sooner if necessary. Id. at 1.

During the two-month period December 1995 to January 1996, the complainant processed three procurements. They were: 1) a $1,020 maintenance agreement for a workstation, 2) a $2,475 computer training course, and 3) a $148.05 copier service call. Contractor's July 19, 1999 letter (attachments).

During the same period, the complainant had difficulty performing her spreadsheet duties. IR, Ex. 5 at 13-16, Ex. 25. On January 26, 1996, and January 30, 1996, the complainant told her first level supervisor that she did not have sufficient time to perform the financial reporting tasks assigned her, because of an "overload on doing the FASA research and the maintenance inventory list." IR, Ex. 5 at 9, Exs. 26, 27. On January 31, 1996, the complainant's first level supervisor requested documentation concerning the new FASA regulations, and the complainant provided a copy of the circular. IR, Ex. 5 at 9.

On February 2, 1996, the complainant's first and second level supervisors met with her and expressed dissatisfaction with the complainant's preparation of financial reports, specifically the complainant's spreadsheet skills. IR, Ex. 5 at 9, Ex. 9 at 2-3, Ex. 17 at 6. The supervisors suggested that the complainant take additional spreadsheet training, but the complainant objected, stating that her skills were adequate and that she needed to concentrate her efforts on learning the new FASA regulations. The second level supervisor told the complainant to cancel the FASA seminar, citing the complainant's financial reporting responsibilities, the decline in procurement work, and the lack of training funds.

In the same meeting, and in response to the instruction to cancel the course, the complainant told her first and second level supervisors that she believed that FASA applied to the contractor's procurements, beginning December 1, 1995. The complainant provided the circular as the basis for her belief. The complainant expressed misgivings that, since December 1, 1995, she had proposed three purchase orders without knowing whether they complied with the FASA regulations and stated that she would not go to jail for her first level supervisor. The complainant stated that she needed to learn the FASA regulations for six upcoming maintenance renewals. The second level supervisor asked the complainant for a copy of the material upon which she based her statements about FASA.

As of February 9, 1996, the complainant had not canceled the FASA seminar. The complainant reiterated, to her first level supervisor, that she needed to take the course and learn the new FASA regulations. The complainant's first level supervisor reiterated that she should cancel the course but could buy the book, and the complainant took that course of action. IR, Ex. 31.

The same day, the complainant's first level supervisor raised the issue of FASA with the complainant's third level supervisor, who in turn sought guidance from the cognizant DOE procurement official. On February 13, 1996, the DOE procurement official advised the third level supervisor that the contractor did not need to be concerned about FASA and could continue processing requisitions as it had in the past. IR, Exs. 8, 29. The DOE advice was relayed to the complainant, IR, Ex. 29, and nothing further was said on the matter, IR, Ex. 5 at 12.

On February 23, 1996, the contractor terminated the complainant, citing poor performance of her financial reporting duties. IR, Ex. 22 at 5-6. The contractor did not hire a replacement for the complainant. IR, Ex. 13 at 3.

C. Procedural History

After her termination, the complainant filed her Part 708 complaint. In her complaint, she alleged that the contractor retaliated against her for disclosing that she believed that FASA applied to the three procurements and that she did not know enough about the FASA to know if the three purchase orders complied or if future purchase orders would comply.

The investigatory report found that the complainant had not met her burden under Part 708. The report reflects interviews with three DOE officials, all of whom indicated that the new FASA regulations did not affect the contractor's procurements. IR, Exs. 6-8. (2) Nonetheless, the report accepted the complainant's assertion that she made a protected disclosure, but then concluded that the disclosure was not a contributing factor to her termination. The investigatory report found that, once one of the DOE officials advised the contractor that FASA did not affect its procurements, the contractor gave no further thought to the issue. IR at 11-12.

The complainant requested a hearing, and the OHA Director appointed me as the hearing officer. In a July 2, 1999 letter, I notified the parties of my preliminary assessment that the complainant had not made a protected disclosure:

I question whether the content of Ms. Beckham's January 26 and February 9 statements rises to the level of a protected disclosure. DOE officials indicated in their interviews that the statute did not apply. Accordingly, Ms. Beckham must demonstrate that she had a good faith belief that the purchase orders violated the statute and implementing regulations. General concerns that the statute might apply and might require changes do not rise to the level of a protected disclosure. Finally, if Ms. Beckham establishes that she had a good faith belief that the purchase orders violated the statute and implementing regulations, there is an issue whether the violation is the type contemplated by Part 708.

July 2, 1999 letter at 2. Based on this preliminary assessment and other events,(3)I advised the parties that I would bifurcate the hearing and limit the first session to the issue whether the complainant made a protected disclosure. I stated that if I ruled that the complainant made a protected disclosure, I would schedule a follow-on hearing on the remaining issues. Neither party objected to this approach. On July 16, 1999, I held a pre-hearing conference.

During the pre-hearing conference, the complainant's attorney stated that the complainant would not try to establish that a violation of law occurred, but merely that she had a reasonable belief to that effect. The complainant's attorney stated that he had contacted one or more DOE officials, but that he did not wish to call them. In a July 19 follow-up letter, I stated my understanding of the complainant's position:

It is undisputed that Ms. Beckham's stated concern -- that the purchases orders violated the FASA -- was unfounded. It is undisputed that FASA did not apply to KENROB's purchase orders and that if DOE procurement officials were called to the hearing, they would testify to that effect.

July 19, 1999 hearing officer letter at 1.(4)Accordingly, I suggested that the complainant testify specifically concerning her beliefs about the legality of the three procurements. Prior to the hearing, the complainant's attorney did not dispute my understanding of the complainant's position.

I convened the hearing on July 22, 1999. The complainant was the only witness. During the hearing, the complainant's attorney disputed my understanding of the complainant's position. He stated that the complainant conceded that DOE officials waived compliance with FASA but not that DOE officials viewed the FASA as inapplicable. Tr. at 50-51. Following the hearing, the complainant's attorney requested the opportunity to file a post- hearing brief. On October 25, 1999, after the completion of post-hearing briefs, I closed the record.

II. The Hearing

A. The Exhibits

The complainant testified concerning a number of exhibits. Aside from the circular, most of the testimony related to the exhibits reflecting FASA-related changes to the regulations, Hrg. Exs. 5-14, 16-18, 21-22, as well as documentation for one of the procurements - the $1,020 maintenance agreement for a workstation, Hrg. Ex. 3. The maintenance agreement documentation consisted of (i) the contractor's December 8, 1995 request for consent package and (ii) the DOE's January 17, 1996 consent. The contractor's request for consent package consisted of a cover letter and enclosures. The cover letter, from the complainant's second level supervisor to the DOE, requested DOE consent. The cover letter referred to three enclosures: (i) Purchase Requisition, (ii) Source Selection Documentation, and (iii) Solicitation Abstract. The complainant was the sole signatory to the latter two documents, i.e., the Source Selection Documentation and the Solicitation Abstract.

B. The Complainant's Beliefs Concerning the Three Procurements

1. The complainant's beliefs about the applicability of the FASA

The complainant testified that she believed that FASA applied to the contractor's procurements based on the circular. Hrg. Tr. at 136. The complainant challenged the opinions of DOE procurement officials that FASA did not apply. Id. at 140.

Although the complainant testified that she believed that FASA applied based on the circular, the complainant was unable to explain why the procurements would not fall within the circular's exclusion for micro-procurements, i.e., procurements of $2,500 or less. First, the complainant testified that the micro-procurement exclusion did not apply to the contractor's procurements, but she did not cite any portion of the circular or FASA. Instead, the complainant cited the DOE requirement that the contractor obtain DOE consent for any procurement over $50. Hrg. Tr. at 64. I noted that that argument, if accepted, would mean that the contractor had to comply with a procurement regulation, even if the regulation was specifically limited to larger procurements. The complainant then conceded that the circular's exclusion for micro-procurements applied to the procurements, but she argued that her procurements had to comply with the regulations listed in the standardized language in the consent package. Hrg. Tr. at 128-31, 151, 160-61. The complainant did not, however, explain why a reference in standardized language in the consent package to a particular regulation made the regulation applicable to all procurements, regardless of the regulation's express inapplicability to procurements under a particular dollar threshold.

2. The Complainant's Beliefs Concerning the Legality of the Three Procurements

The complainant did not testify that any of the three procurements were illegal. Instead, the complainant testified that compliance with FASA would have changed the "process" for the three procurements. Hrg. Tr. at 52-54, 100-01, 179. The complainant also testified that she may have violated the law by signing the documentation for DOE consent. Id. She reasoned that her signature was a representation that she believed that the procurements were lawful, when she did not know whether that was true. Id. As explained below, her testimony on these points was not convincing.

The complainant testified that under the FASA regulations, she would have conducted "market research." The complainant cited a new provision requiring the agency to conduct market research to determine whether commercial items or nondevelopmental items are available that could meet the agency's requirements. Hrg. Ex. 6. In fact, all three procurements involved commercially available services - workstation maintenance, software training, and a service call - and, therefore, the goal of that provision was already met.

The complainant testified that under the FASA regulations, she might research the availability of commercial items with energy efficient features. Hr. Ex. 7. As just indicated, the three procurements involved services - not items. In any event, the provision cited by the complainant states that the extent of the agency's research would depend on a number of factors and, therefore, does not mandate particular research.

The complainant testified that the FASA regulations eliminated the preference for labor surplus area concerns. Hrg. Ex. 10. Again, it is not relevant because the complainant did not testify that she applied that preference in the three procurements.

The complainant testified that the FASA regulations provided an additional possible method of price analysis - one based on market research. Hrg. Ex. 12. The provision, however, retained other forms of price analysis, including the comparison of solicited offers - the form used by the complainant for the workstation maintenance agreement. Id. at 1 (¶ 15.805-2). Accordingly, the complainant did not demonstrate how that provision rendered any of the procurements illegal.

The complainant testified that the FASA regulations specified that lack of performance history, alone, should not exclude a firm from consideration. Hrg. Ex. 14. Although this provision would have allowed her to award the procurements to a contractor with no performance history, the complainant did not testify that she applied the provision - i.e., that she eliminated an offeror based on lack of performance history. The complainant only speculated that she could have solicited offers from unidentified firms with no performance history.

The complainant testified that if she had been familiar with the FASA regulations, which contemplated that five percent of awards would be made to women-owned businesses, she might have solicited a woman-owned business for one of the procurements. Hrg. Tr. at 100. The complainant did not, however, testify that her failure to do so would have violated the regulations and any such argument would be difficult to make since the set-aside refers to total procurements, not any individual procurement.

Finally, the complainant testified that, regardless of whether the procurements violated any laws, or whether the FASA would have changed the "process", she violated the contractor's ethics rules when she signed the Source Selection Documentation for the three procurements. The complainant testified that her signature was a certification that the procurements complied with the law, when in fact she did not know if that was correct.

In response to my questions, the complainant conceded that she accurately completed the Source Selection Documentation for the workstation maintenance agreement. See Hrg. Tr. at 175-83; Hrg. Ex. 3 at 4-7. The complainant completed the form by checking the following information: Type of purchase: fixed price;

Source of Supply: commercial sources; Business size: small disadvantaged business; Basis of Selection: checked debarment list; Competition, number of sources: more than one; Price Analysis: Comparison of proposed prices received.

Despite the foregoing, the complainant argued that the assertedly outdated consent documentation compromised her ability to evaluate the legality of the procurement. She was not at all clear on this point. The complainant's testimony did not indicate that her degree of familiarity with the new, FASA regulations was any less than her degree of familiarity with the prior regulations. The complainant told the contractor and the investigator that (i) she had spent a significant amount of time studying the new regulations and (ii) she did not know if the proposed procurements complied with the prior regulations because she had discarded her copy of those regulations. See, e.g., Hrg. Tr. at 114-23. The complainant's testimony about compliance with the prior and new, FASA regulations was so weak that I concluded that (i) she did not have the ability to judge the legality of a procurement under either set of regulations or (ii) she did not testify candidly.

D. The Complainant's Beliefs About the Legality of Future Procurements

In addition to her concerns about the three procurements, the complainant testified that she was concerned about future procurements. Again, the complainant testified that she not know enough about FASA to process future procurements. In addition, she claimed that if she signed outdated documentation she would be misrepresenting her knowledge about the legality of the procurements.

With respect to future procurements, the complainant mentioned six upcoming maintenance renewals. Although the complainant did not identify those procurements, the contractor's log of procurements indicates that four maintenance items were expiring in March 1996, one in June 1996, and a number later in 1996. Hrg. Ex. 2.

III. Analysis

The complainant argues that she made a protected disclosure. As explained below, I disagree.

It is undisputed that the complainant disclosed - (i) a circular discussing FASA changes and (ii) the complainant's belief that FASA applied to the contractor's procurements and that she lacked sufficient knowledge to know if past and future procurements complied. The complainant disclosed this information to her first and second level supervisors. Even if the complainant's beliefs were correct, she did not make a protected disclosure.

Part 708 does not protect disclosures of insignificant or de minimis violations. The current version of Part 708 specifies that the disclosure must reveal a "substantial" violation of law. 10 C.F.R. § 708.5(a)(1). That requirement tracks a FASA whistleblower protection provision, which protects contractor employees who disclose evidence of "substantial" violations. 64 Fed. Reg. at 12863 (preamble to Part 708, citing FASA § 6006, implemented in 48 C.F.R. Part 3, Subpart 3.9 (1999)). Although the prior version of Part 708 did not specify that the disclosure involve a "substantial" violation of law, that version contained an implicit requirement that the disclosures be significant. All of our grants of relief under Part 708 have involved significant disclosures. See, e.g., Barbara Nabb, 27 DOE ¶ 87,519 (1999) (mislabeling of hazardous waste); Daniel L. Holsinger, 27 DOE ¶ 87,503 (1998) (theft of government property); Am-Pro Protective Services, Inc., 26 DOE ¶ 87,511 (1997) (unsecured top secret safe); Lawrence C. Cornett, 26 DOE ¶ 87,507 (1996) (health risks concerning waste management); Howard W. Spaletta, 24 DOE ¶ 87,511 (1995) (safety of nuclear power plant); David Ramirez, 23 DOE ¶ 87,505 (1994) (asbestos exposure); Ronald Sorri, 23 DOE ¶ 87,503 (1993) (excessive pressure in toxic gas cylinders). The implicit requirement that a disclosure be significant is consistent with the WPA protection for federal employees. Frederick v. Dep't of Justice, 73 F.3d 349, 353 (Fed. Cir. 1996) ("violation of law" does not include a "minor transgression" or a "trivial lapse"). Accordingly, disclosures of insignificant or de minimis violations are simply not

protected under Part 708.

The complainant's disclosures involve, at most, insignificant or de minimis violations. It is undisputed that FASA streamlined procurement procedures and gave agencies more latitude to adopt commercial practices. The three procurements in this case all involved de minimis amounts. The complainant's disclosure that she did not know whether these de minimis procurements, or their documentation, complied with FASA is not the disclosure of a significant violation. Similarly, with respect to future procurements, given the uncertainty about whether the DOE would even request those procurements, or the manner in which such requests would be processed, the complainant's expressed concerns about future FASA violations are not disclosures of significant violations. Finally, the complainant's purported violation of the contractor's ethics policy, Hrg. Ex. 26, is not the violation of a law, rule, or regulation and, therefore, is outside the scope of Part 708. In any event, I fail to see how the complainant's asserted lack of knowledge in this context violated the ethics policy. Indeed, it is more likely that the complainant's allegedly inaccurate reporting of her time was a "falsification of timesheets" specifically prohibited by the ethics policy.

As just indicated, even if the new FASA regulations applied to the procurements, the complainant has not disclosed information evidencing a significant violation of law. Accordingly, she is not entitled to Part 708 relief. I do, however, wish to comment on the issue whether the complainant had a good faith, reasonable belief that FASA applied to the procurements.

As an initial matter, I note that cognizant DOE officials viewed FASA as inapplicable to the contractor's procurements. During the investigation, DOE officials opined that FASA did not apply because 1) FASA post-dated the DOE/KENROB contract, IR, Ex. 6, and 2) the DOE/KENROB contract did not contain federal acquisition regulation "flow down clauses," IR, Ex. 8. The complainant has argued that although DOE officials opined that FASA was inapplicable to the DOE/KENROB contract, they did not directly opine that FASA was inapplicable to the contractor's procurements. It is clear, however, from the context of their opinions, that they viewed FASA's inapplicability to the DOE/KENROB contract and the absence of "flow down clauses" as the reason why FASA did not apply to the contractor's procurements.

With respect to the three procurements, the complainant's reliance on the circular's reference to a December 1, 1995 effective date is clearly unreasonable. The circular, like the pre-existing regulations, contained an express exclusion for micro-procurements, i.e., procurements under $2,500. The complainant's asserted belief that the micro-procurement exclusion did not apply because DOE required its consent for procurements over $50 does not make sense; that would mean virtually all of the contractor's micro- procurements would have to comply with federal procurement regulations, regardless of their limitation to large dollar procurements. In any event, even if the complainant's reliance on the DOE requirement was reasonable, there is insufficient information about the requirement to conclude that it was a law, rule, or regulation. Indeed, it appears, at most, to have been a contractual matter, although even that it unclear.

Similarly, the complainant has not demonstrated that she reasonably believed that she violated, or might have violated, the law when she signed the purchasing documentation. At the hearing, the complainant conceded that the information that she provided accurately described the proposed procurement. At most, the complainant maintained that she did not understand the form because it had not been updated to refer to the new regulations.

Finally, I question whether the complainant had a good faith belief that the disclosures evidenced violations. The contractor's procurement work was declining, and the complainant was tasked with financial reporting responsibilities. The complainant made her February 2 disclosures in response to negative comments from her first and second level supervisors about her performance of her financial reporting duties. Although the complainant's attorney attributes her emotional demeanor during the hearing to her purported good faith, I viewed that testimony as evidencing an insubordinate attitude, i.e., an unwillingness to accept her supervisor's decision on a matter.(5) Supervisors and employees disagree

on matters; if the complainant held a good faith belief that the supervisor was requiring her to violate the law, she could have documented her belief in a memorandum or raised the matter with higher level contractor officials or the DOE. Given the facts and my analysis of them above, I believe that the complainant's failure to take such actions casts serious doubt on her alleged good faith.

IV. Conclusion

As indicated above, under Part 708, the employee has the burden of demonstrating that she made a protected disclosure that was a contributing factor to her termination. As also indicated above, the employee did not demonstrate that she made a protected disclosure. For that reason, the employee is not entitled to relief, and no further inquiry into her claim of retaliation, or the contractor's affirmative defense, is necessary.

It Is Therefore Ordered That:

(1) The request for relief under 10 C.F.R. Part 708 submitted by Rosie L. Beckham, OHA Case No. VWA-0040, is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless, by the 15th day after receiving the initial agency decision, a party files a notice of appeal with the Director of the Office of Hearings and Appeals.

Janet N. Freimuth

Hearing Officer

Office of Hearings and Appeals

Date: December 13, 1999

(1) IR, Ex. 23 at 1, 7-8. In the December 28 letter, the complainant stated that, as a friend, she hoped that the first level supervisor would take hold of the "evil spirit" within her before it destroyed her.

(2) The DOE officials opined that FASA did not apply because 1) FASA post-dated the DOE/KENROB contract, IR, Ex. 6, and 2) the DOE/KENROB contract did not contain federal acquisition regulation "flow down clauses," IR, Ex. 8.

(3) The complainant's counsel was either unresponsive or tardy in various pre-hearing matters, and this conduct precluded adequate preparation for a hearing on all of the issues in the case. See July 9, 1999, July 14, 1999, and October 6, 1999 hearing officer letters to the parties.

(4) The contractor's attorney had a similar understanding of the complainant's position:

From our telephone conference of July 16, 1999, it is my understanding that it is the position of Ms. Beckham that she will admit that KENROB was not in violation of FASA 1994, or any other law, during the time frame covered by her Complaint. If, for some reason, this is inaccurate, please contact me immediately.

July 19, 1999 contractor letter. Prior to the hearing, the complainant's attorney did not challenge the contractor's understanding of the complainant's position. In apparent reliance on this lack of challenge, the contractor's attorney abandoned his previously stated intention of calling the DOE officials as witnesses.

(5) Indeed, the complainant continues to reject the opinion of DOE officials that FASA did not affect the contractor's procurements. Hrg. Tr. at 127-28, 153-57.

Case No. VWA-0041

July 11, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Lucy B. Smith

Date of Filing: May 5, 1999

Case Number: VWA-0041

This Decision involves a whistleblower complaint filed by Lucy B. Smith (Smith) under the Department of Energy's (DOE) Contractor Employee Protection Program. From September 1973 to March 1997, Smith was employed as a chemist at the DOE's Savannah River Site (SRS) by various contractors, the most recent of which was Westinghouse Savannah River Company (WSRC). At the time of her termination, Smith worked at WSRC's Waste Management Laboratory. Smith alleges that in retaliation for making a number of health and safety disclosures WSRC terminated her pursuant to a January 1997 Reduction-in-Force (1/97 Rif) and subsequently failed to rehire her.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor- operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at Title 10 Part 708 of the Code of Federal Regulations.

B. Procedural History

On March 26, 1997, Smith filed a complaint with the DOE's Office of Inspector General (IG). After making a preliminary determination that the complaint fell within the jurisdiction of Part 708, IG then conducted an investigation into Smith's allegations and issued a report on April 13, 1999 entitled "Report of Inquiry and Recommendations" (Report). The Report concluded that Smith had made several protected disclosures but that WSRC had shown by clear and convincing evidence that Smith would have been selected for termination absent the protected disclosures. On May 12, 1999, the Director of the Office of Hearings and Appeals (OHA) appointed me to be the hearing officer in this matter. 10 C.F.R. § 708.23(a), 708.25(a). Subsequently, the hearing was held at Aiken, South Carolina on April 11-12, 2000.

II. Analysis

It is the burden of the complainant under Part 708 to establish "by a preponderance of the evidence that there was a disclosure, participation, or refusal described under § 708.5, and that such act was a contributing factor in a personnel action taken or intended to be taken against the complainant." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). If the complainant meets his burden of proof by a preponderance of the evidence that his protected activity was a "contributing factor" to the alleged adverse actions taken against him, "the burden shall shift to the contractor to prove by clear and convincing evidence that it would have taken the same personnel action absent the complainant's disclosure . . . ." 10 C.F.R. § 708.9(d). See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence, § 340 at 442 (4th ed. 1992)). Accordingly, in the present case if Smith establishes that a protected disclosure, participation, or refusal was a factor contributing to her termination or failure to be rehired, WSRC must convince me that it would have taken the action even if Smith had not engaged in any activity protected under Part 708. Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 at 89,034-35 (1994).

After considering the record established in the investigation by the Assistant Inspector General and OHA, the parties' submissions, and the testimony presented at the hearing, for the reasons stated below I have concluded that Smith has met her burden of proving by a preponderance of the evidence that she made protected disclosures concerning health or safety that contributed to her termination. I also find, however, that she has not met her burden to prove by a preponderance of the evidence that her disclosures were a contributing factor in her failure to be rehired. Lastly, I find that Smith's complaint must be denied because I conclude that WSRC has shown by clear and convincing evidence that it would have terminated Smith absent her disclosures.(1)

A. Whether Smith Engaged in Activities Protected Under 10 C.F.R. § 708.5 (2)

The Part 708 regulations prohibit discrimination by a DOE contractor "against any employee because the employee (or any person acting pursuant to a request of the employee) has,"

> (1) Disclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences--
>
> > (i) A violation of any law, rule, or regulation;
> >
> > (ii) A substantial and specific danger to employees or public health or safety; or
> >
> > (iii) Fraud, mismanagement, gross waste of funds, or abuse of authority;
>
> (2) Participated in a Congressional proceeding or in a proceeding conducted pursuant to this part; or
>
> (3) Refused to participate in an activity, policy, or practice when--
>
> > (i) Such participation--
> >
> > (A) Constitutes a violation of a Federal health or safety law; or
> >
> > (B) Causes the employee to have a reasonable apprehension of serious injury to the employee, other employees, or the public due to such participation, and the

> activity, policy, or practice causing the employee's apprehension of such injury--
>
> (1) Is of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude there is a bona fide danger of an accident, injury, or serious impairment of health or safety resulting from participation in the activity, policy, or practice; and
>
> (2) The employee is not required to participate in such dangerous activity, policy, or practice because of the nature of his or her employment responsibilities;
>
> (ii) The employee, before refusing to participate in an activity, policy, or practice has sought from the contractor and has been unable to obtain a correction of the violation or dangerous activity, policy, or practice; and
>
> (iii) The employee, within 30 days following such refusal, discloses to an official of DOE, a member of Congress, or the contractor, information regarding the violation or dangerous activity, policy, or practice, and explaining why he has refused to participate in the activity.

57 Fed. Reg. at 7542 (1992) (10 C.F.R. § 708.5(a)). Smith alleges that she engaged in a number of activities that are potentially protected under Part 708.

1. August 5, 1996 Report regarding unsanitary and unsafe conditions in the ladies restroom

First, Smith asserts that she conducted examinations of two ladies' restrooms (in Buildings 241-28H and 704-56H) that had been used to obtain bioassay samples and that had been previously identified as having potential problems. On August 5, 1996, Smith wrote a memorandum (August Memorandum) to her supervisor, Woodie Melton, pointing out that a required bioassay form was not available at the bioassay station in one of the restrooms and noting that both restrooms were unsanitary in some respects. See Report Exhibit B-1. Section 708.5(a) requires that for a disclosure to be protected the disclosure must reference a "substantial and specific danger to employees or public health or safety." 10 C.F.R. § 708.5(a)(1)(ii). Smith's August Memorandum primarily discusses the unsanitary nature of the restrooms. While one can say that the August Memorandum discusses public health in a general sense, it does not describe a substantial and specific danger to employees or the public. Thus, I do not find Smith's August 5, 1996 memorandum to be protected under Part 708.

2. October 10, 1996 Disclosure concerning proper monitoring procedures in the ITP facility

Second, Smith claims that sometime in October 1996, she noticed that the red alert lights were flashing in the Stripper Building, and signs were posted indicating an asphyxiation hazard in that building. See Report Exhibit A-2 at 2-3. (3) The Personnel Contamination Monitor (PCM) that Smith used was located in a building next to the Stripper Building. Id. at 3; Report Exhibit A-4 at 2. Consequently, Smith used a PCM in another building and tried to ask Melton if the building containing the PCM had a ventilation system separate from the Stripper Building. Smith states that she was trying to determine if it was safe for her and other employees to use the PCM when the asphyxiation hazard alarm was activated in the Stripper Building. Report Exhibit A-2 at 3; Report Exhibit A-4 at 2. She did not find Melton but asked Annie Bell (Bell), her shift supervisor, who did not know the answer. Report Exhibit A-2 at 3. Smith contacted Wyatt Clark (Clark), the assistant manager of the ITP facility, who also did not know but stated he would try to find out. Id.; Report Exhibit A-4 at 2. WSRC has stipulated that the October 10, 1996 communication is a protected disclosure under Part 708. See February 9, 2000 Letter from Michael L. Wamsted, Senior Counsel, Westinghouse Savannah River Company, to Richard A. Cronin, Jr., Hearing Officer.

3. December 9, 1996 Disclosure regarding Rad-Con Permits

In a monthly report dated December 9, 1996, Smith identified three potential safety concerns regarding the Rad-Con Permits posted outside a laboratory in the Stripper Building. See Hearing Exhibit W-13 (December 9, 1996 memorandum from Smith to Melton); Report Exhibit A-2 at 3; Report Exhibit B-3 at 1-2. A Rad-Con Permit is a notice posted outside radiological areas that employees are required to read prior to entering in order to ensure that they are aware of hazards and safety requirements. Report Exhibit A-2 at 3. Smith reported that one Rad-Con Permit incorrectly read: "Possible Hazards: Benzene and/or Oxygen Deficiency." Because the laboratory had a ventilation system separate from the Stripper Building, there might not be a possibility of oxygen deficiency. If oxygen deficiency were possible, Smith recommended that monitors and warning lights should be installed. Smith reported that another Rad-Con Permit should have stated that personnel are required to wear safety glasses. Smith also suggested that the probe holders for the beta/gamma radiation detection should be redesigned to allow the probe to be held sideways to prevent contaminate particles from falling on the probe while an employee's hands were monitored. See Report Exhibit A-2 at 3; Hearing Exhibit W-13. Melton recalls that Smith's report referenced two issues concerning the Rad-Con Permit: the "Benzene and/or Oxygen Deficiency" notice and the desirability of including a requirement that safety glasses be worn. Report Exhibit A-3 at 4-5. WSRC has also stipulated that Smith's December 9, 1996 Report is a protected disclosure under Part 708. See February 9, 2000 Letter from Michael L. Wamsted, Senior Counsel, Westinghouse Savannah River Company, to Richard A. Cronin, Jr., Hearing Officer.

4. Smith's submission of January 13, 1997 "One" Form

Smith believed that no action had been taken by her supervisor regarding the safety items in her December 9, 1996 Report. Report Exhibit A-2 at 3-4; Report Exhibit A-4 at 2. Consequently, she contacted Clark to ask about how to proceed. Report Exhibit A-4 at 2. Clark suggested that Smith file a "One" Form describing the items discussed in her December 9 Report. Report Exhibit A-4 at 2; Report Exhibit B-3. According to Clark, he assured Smith that SRS senior management would look into her concerns. Smith then completed and submitted a "One" Form detailing the concerns she had listed in her December 9 Report. Report Exhibit A-4 at 2; Report Exhibit B-3.

The "One" Form details Smith's concerns about inaccurate labeling of hazards for lack of oxygen and benzene contamination, her opinion that personnel should be required to wear safety glasses for protection, and Smith's concerns over accurate measurement of individual beta and gamma radiation exposure to individuals. I find that the concerns listed in the "One" Form reference a substantial and specific danger to employee safety and thus are protected by Part 708.

B. Whether Smith's Protected Disclosures Were a Factor Contributing to Her Termination or Failure to be Rehired (4)

In prior decisions of the Office of Hearings and Appeals, we have established that,

> A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action."

Charles Barry DeLoach, 26 DOE ¶ 87,509 at 89,053-54 (1997) (quoting Ronald Sorri, 23 DOE ¶ 87,503 at 89,010 (1993)); Ronny J. Escamilla, 26 DOE ¶ 87,508 at 89,046 (1996).

Of the protected disclosures at issue in this case, WSRC has stipulated that Smith's October 10 and December 9 disclosures were a contributing factor with regard to the WSRC decision to terminate her. See February 9, 2000 Letter from Michael L. Wamsted, Senior Counsel, Westinghouse Savannah River Company, to Richard A. Cronin, Jr., Hearing Officer. With regard to the remaining protected disclosure,

there is clear temporal proximity between Smith's submission of the "One" Form on January 13, 1997 and her receipt of notice of termination on January 20, 1997. However, there is a lack of evidence in the record as to whether the WSRC managers responsible for Smith's selection for termination had actual or constructive knowledge of the "One" Form when they made their decision. Of the four WSRC managers who made the decision in a January 10, 1997 meeting to select Smith for termination, two, Melton and Pat Padezanin (Padezanin), denied at the hearing ever having any knowledge of the existence of the "One" Form until after Smith's termination. Hearing Transcript (Tr.) at 103, 183. The other two managers were not asked if they had any knowledge of the "One" Form. Given the lack of affirmative evidence on the issue of whether any of the responsible WSRC management officials had actual or constructive knowledge of the form, I conclude that Smith has failed to prove by a preponderance of the evidence that her submission of a "One" Form was a contributing factor in her selection for termination.

Despite finding that several of Smith's disclosures were contributing factors in her termination from WSRC, I find that none of Smith's disclosures was a contributing factor in her not being rehired by WSRC. Smith claims that, in retaliation for her protected disclosures, three chemists were hired instead of her during the period August 1998 through March 1999 despite Smith's superior qualifications. See September 1, 1999 Letter from Herbert Louthian, Counsel for Smith, to Michael Wamsted, Counsel for WSRC; see WSRC Reply to Complainant's Response to Motion to Dismiss, Case No. VWZ-0020, Exhibits 1 and 2 (November 15, 1999) (Response).

Employees terminated at WSRC become eligible for possible rehire after the employee files a WSRC form ("Statement of Interest in Maintaining Section 3161 Employment Eligibility"). Upon receipt of this form an employee's name and qualifications are placed in a database which is used to contact former employees for job opportunities. (5) See Tr. at 512-13; Hearing Exhibit S-4; WSRC Motion to Dismiss, Case No. VWZ-0020, Exhibit A (October 14, 1999) (Motion). The form states that the employee is required to complete a new form within one year of signing the current form. Hearing Exhibit W-21 at 1. After Smith received notice that she was going to be terminated, she filed this form with WSRC on January 20, 1997. Hearing Exhibit W-21. The record indicates that Smith was removed from the rehiring database in March 17, 1998 because she had failed to complete another form within the required one year period. Tr. at 503-04; Hearing Exhibit W-22 at 2. Smith did file another form on March 29, 1999. Hearing Exhibit W-22 at 3; Tr. at 503-04.

Each of the three of the chemists who were hired allegedly instead of Smith were hired when Smith was out of the rehiring database.(6) See Tr. at 501-04, 510-13. In addition, there is no evidence that Smith ever applied for any of these positions. As a result, WSRC was unaware that Smith might have been interested in the positions, and the review of the database performed by the WSRC personnel department did not show Smith as a candidate for these positions. See Tr. at 504, 512; Hearing Exhibit W-17. Based on these facts, I find that Smith's disclosures could not have been a contributing factor in her non-selection for these positions.

Smith's argues that WSRC should be held responsible for her failure to file the form within the required one year period. Smith claims that she did not know she had been removed from the database, and that she did not notice until 1999 the portion of the form that required former employees to submit new forms within one year. See November 29, 1999 Letter from Herbert Louthian, Counsel for Smith, to Richard A. Cronin, Jr., Hearing Officer (Case No. VWZ-0020). Smith further asserts that after her termination, she talked with Carol McClure (McClure) of the WSRC Personnel Department, who informed her that all retired employees, such as Smith, would be removed from the rehiring database. Id.; Tr. at 437-38. Smith testified that after her termination she received a copy of the WSRC Section 3161 Preference in Hiring Policy and claims that it states that retirees such as herself are not eligible for preference in hiring. Tr. at 438. Following her conversation with McClure, Smith also asserts that she attempted to talk to Lamar Cherry (Cherry) of the WSRC personnel department to ask that she be considered for reinstatement, but never received a return call from him. Tr. at 437, 468; November 29, 1999 Letter from Herbert Louthian, Counsel for Smith, to Richard A. Cronin, Jr., Hearing Officer. Smith also suggests that the portion of the preference-in-hiring form which sets forth the requirement that the form be resubmitted within a year was

in “fine print” and that it contributed to her failure to realize that she was under a duty to complete another form within one year. Tr. at 437. In sum, Smith cites a number of reasons purportedly excusing her failure to submit the required preference-in-hiring database form.

None of the reasons Smith gives attempting to excuse her failure to complete the preference-in-hiring form leads me to conclude that WSRC sought to retaliate against Smith by contriving to have her not complete the required form to remain in the preference-in-hiring database. Two of the reasons suggested by Smith, the type size of the language of the form and the allegedly confusing language in the WSRC preference in hiring policy by themselves, if true, only indicate that inadvertent confusion or error rather than WSRC scheming produced Smith’s absence in the database. Further, I find Smith’s testimony as to her conversations with McClure and Cherry to be vague and not very compelling. McClure’s testimony regarding her conversation with Smith was much more detailed. McClure specifically testified that Smith did not ask her about preference in hiring. Tr. at 484. In sum, I found McClure’s testimony on this issue to be more convincing than Smith’s.

Cherry testified that he did receive a letter from Smith in June of 1997 asking that various other skills be entered to the database. Tr. at 507; Hearing Exhibit W-24. However, Cherry did not remember calling Smith concerning the letter and stated that he would not normally have initiated a telephone conversation in response to such a letter. Tr. at 508. Cherry did remember calling Smith on October 1, 1997 and leaving a message on her answering machine concerning a temporary position at the facility. Tr. at 509; Hearing Exhibit W-24 at 2. Smith, in turn, left a message on Cherry’s voice mail later that day indicating that she was not interested in that position. Tr. at 509; Hearing Exhibit W-24 at 2. WSRC has also submitted Smith’s notes concerning these interactions. See Hearing Exhibit W-24. Given the evidence before me, I can not find that Smith, in fact, verbally informed McClure that she wanted to be in the preference-in-hiring database. In sum, Smith has not convinced me her protected disclosures were a contributing factor to her failure to be in included in the preference-in-hiring database during the period the three chemists were hired. Consequently, I find that Smith’s failure to be rehired for the three chemist positions was not attributable to any of her protected disclosures. The only act of retaliation on which Smith has prevailed in demonstrating a connection to any of her protected disclosures is her selection to be terminated in the 1/97 Rif.

C. Whether WSRC Would Have Selected Smith for Termination in the 1/97 Rif Absent Her Protected Disclosures

For the reasons set forth below, I find there is clear and convincing evidence that WSRC would have selected Smith for termination in the 1/97 Rif absent the protected disclosures described in section II.A above. This conclusion is based on compelling evidence indicating that of the four chemists considered for termination, Smith was least able to support the laboratory functions of the two WSRC labs.

To facilitate this analysis, I will describe Smith’s workplace organization and position duties. When Smith accepted a position at WSRC’s Waste Management Laboratory (WML), WML was organized into two separate laboratory organizations, the Effluent Treatment Facility laboratory (ETF lab) and the In-Tank Precipitation Facility laboratory (ITP lab). See Hearing Exhibit W-11. Each laboratory was staffed with one supervisor, two chemists and several technicians. Id. At the time of the 1/97 Rif, Smith and Kenneth Cheeks were the chemists working at the ITP lab. Thelma Hill-Foster and Linda Youmans were chemists at the ETF lab. Tr. at 78.

At the ITP lab, Smith was a process control chemist who supported the lab technicians by performing such tasks as establishing methods of chemical analysis, writing procedures and training technicians. Tr. at 34-35. The job also entailed troubleshooting and repairing problems with the analytical equipment as well as being able to operate the equipment and perform various chemical analyses. Tr. at 35, 303, 331. Before coming to WML, Smith had spent a number of years in the quality assurance field and in risk assessment positions, none of which could be considered the equivalent of a process control chemist position. Hearing Exhibit W-15; Tr. at 259-60, 171-72, 271, 352; Report Exhibit B-6.

Early in January 1997, Melton, the Manager of the WML, was notified that WSRC's High Level Waste Division (HLWD) planned to reduce WML's personnel staffing because of a $100,000 cut in funding for each lab. Tr. at 74-77; Hearing Exhibits W-11, W-16 (December 30, 1996 Baseline Change Proposal outlining budget reduction and WSRC divisions to be affected). On January 8, 1997, Melton was asked about the impact on WML if 4 positions were eliminated (including chemists) from the labs. Hearing Exhibit W-11 at 1. The next day, Melton was informed that Dave Amermine, the HLWD deputy manager, decided to reduce WML by four positions - three lab technicians and one chemist. Id. at 2. On January 10, 1997, Melton, along with his supervisor, Jim Collins (Collins), Padezanin and Lori Chandler (Chandler), Melton's previous supervisor in December 1996, met to discuss the issue of personnel cuts. Tr. at 76-77, 178, 195. After some discussion with other officials, Padezanin concluded that only two employees, a chemist and a laboratory technician, would have to be laid off from WML to meet the budget constraints. Tr. at 175-76. This reduction contemplated three chemists providing support to both labs rather than two chemists supporting each lab. See Hearing Exhibit W-11 (Proposal A); Tr. at 237, 325-27.

In the January 10 meeting, the four participants then discussed what criteria would be used to select the one chemist for termination. Tr. at 178. The criteria selected were: performance, current contribution to the organization, potential contribution to the organization and time in position.Id. The four managers then considered Smith, Cheeks, Hill-Foster and Youmans. Based on the criteria, they selected Smith for termination. Tr. at 179-80. Padezanin then instructed Melton to prepare a Certification of Non-Discrimination (CND Form) form which outlined the reasons for Smith's selection. Tr. at 177; Hearing Exhibit W-12. The CND Form stated that Smith's "overall contributions to effectiveness of the WML" were not as significant as those of the other three chemists. Hearing Exhibit W-12 at 2. Further, Cheeks, Hill-Foster and Youmans each had more time in position than Smith. Id.

Melton testified that Smith ranked last among the chemists in each of the four criteria. Tr. at 88-92. With regard to performance, Melton testified that Smith's performance had been subpar compared to the other three chemists and Melton had met with Smith several times about her inability to complete her assigned tasks. Tr. at 88. As to current and potential ability to contribute to the organization, Melton testified that Smith ranked last because she had not completed the training on the operation of all the equipment in the ITP lab, and did not understand the analytical processes as well as Cheeks. Tr. at 88-90. Melton testified that Smith had the least amount of time as a process control chemist. Tr. at 92. (7) Padezanin and Chandler's testimony concurred in the evaluation of Smith in comparison with the other three chemists. Tr. at 179-80, 277-280. (8)

WSRC has presented evidence documenting Melton's dissatisfaction with Smith for her alleged failures to complete assigned tasks, for withholding information from Melton and for making unauthorized sample swaps with another organization. See, e.g., Hearing Exhibits W-3, W-5, W-7, W-8; Tr. at 42-43, 45-46, 50-51. Smith maintains that these alleged performance problems were related to her safety disclosures. See, e.g., Tr. at 395-96, 408-12, 448; Hearing Exhibit W-8 (January 7, 1997 memo from Smith to Melton). However, there is no evidence in the record concerning what, if any, similar problems that the other three chemists, Cheeks, Youmans or Hill-Foster, may have experienced. In the absence of such other evidence regarding the other chemists, Smith's alleged performance problems are not sufficient to convince me that WSRC would have selected her for termination in the 1/97 Rif in the absence of her protected disclosures. Nevertheless, there is other evidence in the record, as discussed below, which leads me to find that Smith, because of her incomplete training, was not as capable of fully supporting the ITP or ETF labs as were the other three chemists. In light of this evidence, I find that WSRC has presented clear and convincing evidence that it would have selected Smith for inclusion in the 1/97 Rif regardless of her protected disclosures.

Cheeks had supported the ITP lab for several months by himself before Smith was brought over to the ITP lab. Tr. at 92, 301. As of January 1977, Cheeks had over two years of experience supporting the ITP lab. Tr. at 300. Youmans and Hill-Foster were currently supporting the ETF lab and had approximately two years of experience in those positions. Tr. at 277. In contrast, Smith had not completed all of the training

for the ITP lab nor had performed training for the ETF lab. (9) Given Youmans' and Hill-Foster's current experience, their ability to support the ETF lab would have been demonstrably superior to Smith's. Cheeks has significant experience supporting the ITP lab and had even been tasked with training Smith for the ITP lab. His knowledge of the ITP analytical procedures was clearly greater than Smith's. In sum, I find that WSRC has shown clear and convincing evidence that it would have selected Smith for termination in the 1/97 Rif regardless of Smith protected disclosures.

Smith's arguments to the contrary are unavailing. Smith has submitted evidence that both Cheeks' and Hill-Foster' college degrees were in biology and not in chemistry. Tr. at 129-30, 200, 250, 463. However, regardless of their formal education, the fact remains that Cheeks and Hill-Foster both were currently supporting the ITP and ETF labs respectively. As described earlier, Smith had not completed training on all the instrument systems in the ITP lab and had no training in the systems in the ETF lab. Smith asserts that she could do the job in the ETF lab since she had previously used most of the instruments. Tr. at 473-74. However, the record indicates that Smith's previous positions had not required much work as a hands-on chemist. (10) I am convinced that Smith could not have immediately stepped in and adequately supported the ETF lab in a manner equal or superior to Youmans or Hill-Foster. Further, Cheeks testified that the equipment in the ETF lab was different from the ITP lab equipment, and that it would take someone a longer training period to be able to support the ETF lab. Tr. at 325. Smith also points out that her current performance rating of 3 - performance meets or exceeds all management expectations for position and grade -was the same as Hill-Foster's. Tr. at 123, 287. That is not a determinative factor. The key issue is the then-current state of Smith's training in the ITP lab and her ability versus the other three chemists' ability to support the ETF and ITP labs.

Smith also alleges that the reason that she did not complete her training was that Melton gave Cheeks priorities that conflicted with Smith's training. Tr. at 473. However, there is simply no evidence that Melton or anyone else at WSRC deliberately tried to delay Smith's training because of her disclosures. Smith's training program schedule had been developed by Cheeks who then obtained Melton's approval. Tr. at 303. However, Cheeks also testified that because of other lab duties, he could not devote his time exclusively to training.(11) Tr. at 321. Cheeks testified that in his opinion that a person should be able to complete the training in seven to eight months.(12) Tr. at 322. By the time of the decision to include Smith in the 1/97 Rif, Smith had been at the ITP lab for approximately nine months. (13) Smith herself has testified that because the training had to be scheduled, some delay was to be expected. Tr. at 390. Given the relatively short time Smith had been at the ITP lab, the amount of time needed to complete the training and the lack of any other evidence to the contrary, I conclude that Smith's failure to complete the training was not due to any type of retaliation by WSRC.

Lastly, Smith has presented three co-worker witnesses attesting to her commitment to safety and her job performance. See Tr. at 351-61, 361-374, 374-382. I have no reason to doubt their testimony. However, while their testimony supports Smith's concern about safety issues, two of the witnesses' observations dealt with Smith's performance in Quality Assessment. Tr. at 353-54, 363-64. The third witness, Tom Shaw, testified that he had worked with Smith while she supervised three lab technicians at the Heavy Water Lab. Tr. at 375. Shaw testified that Smith had experience as a hands- on chemist and was a hard worker and aggressive. Tr. at 376. However, the last time Shaw could have observed Smith was in 1986, the year of his retirement. Tr. at 374. Shaw's observations are too remote in time to be very relevant on the issue of Smith's competence as a process support chemist at the time of the 1/97 Rif. Consequently, this testimony does not change my conclusion that because of Smith's failure to complete her ITP training or to receive any training for the ETF lab, WSRC has shown by clear and convincing evidence that it would have selected her for termination regardless of her protected disclosures.

IV. Conclusion

As set forth above, I have found that Smith has met her burden of proof of establishing by a preponderance of the evidence that she made several disclosures protected under 10 C.F.R. Part 708. I also

have determined that several of Smith's disclosures were contributing factors in her termination. However, I also find that WSRC has proven by clear and convincing evidence that it would have terminated Smith absent her disclosures. Accordingly, I conclude that Smith has failed to establish the existence of any violations of the DOE's Contractor Employee Protection Program regulations for which relief is warranted.

It Is Therefore Ordered That:

(1) The request for relief filed by Lucy B. Smith under 10 C.F.R. Part 708 is hereby denied.

(2) This is an initial agency decision that becomes the final decision of the Department of Energy unless a party files a notice of appeal by the fifteenth day after receipt of the decision.

Richard A. Cronin, Jr.

Staff Attorney

Office of Hearings and Appeals

Date: July 11, 2000

(1)The Report references another retaliatory act Smith allegedly experienced - that Smith received negative comments on her October 1996 Individual Assessment and Development Plan (IADP) for having raised various safety concerns. Report at 1-2. The Report goes on to find that Smith's claim of retaliation regarding her IADP was barred because she did not file a complaint concerning this incident within the 60 day deadline in the regulations. See 10 C.F.R. § 708.6(d); Report Exhibit A-1 (March 26, 1997 Complaint); Report Exhibit B-4 (October 23, 1996 IADP). At the hearing, Smith did not challenge this finding and I adopt IG's finding that Smith's claim of retaliation regarding the IADP is barred by the 60 day deadline set forth in 10 C.F.R. § 708.6(d). My review of Smith's original IG complaint does not indicate that Smith was complaining that she had received negative comments on her IADP but instead was complaining that her supervisor had made her remove specific language regarding a specific safety concern. See Report Exhibit A-2 at 2; April 11-12, 2000 Hearing Transcript (Tr.) at 397-400.

(2)This decision applies section 708.5 as it existed prior to the revisions of April 15, 1999. Linda D. Gass, 27 DOE ¶ 87,525 at 89,141 (1999) ("drafters of the revisions to Part 708 did not intend to apply the expansion in scope of 10 C.F.R. § 708.5 to cases pending on April 15, 1999").

(3)Smith's supervisor, Melton, identifies the date of this incident as October 10, 1996. See Report Exhibit A-3.

(4)WSRC made a Motion during the Hearing requesting that I dismiss the failure to rehire claims by Smith. Tr. at 448. WSRC cites Smith's testimony indicating that she was offered preference in hiring for several positions. See Tr. at 440-42. However, there is no evidence that Smith was offered preference in hiring regarding the three specific chemist positions (ultimately filled by John Anton, Jesse Leon Melton and Patrice Oakmon) at issue in this case. The mere fact that Smith was offered preference in hiring for some positions says nothing as to the issue of whether Smith's disclosures were a contributing factor in her failure to receive a preference in hiring for those three specific positions. For this reason and the reasons stated in my decision denying an earlier WSRC Motion to dismiss Smith's failure to rehire claims, I dismiss WSRC's motion. See Lucy B. Smith, 27 DOE ¶ _____, Case No. VWZ-0020 (February 3, 2000).

(5)WSRC established a database (preferential hiring database) containing the names of employees who had been terminated in the 1/97 Rif and who wished to be rehired if future job opportunities arose at WSRC. WSRC used the database to contact these employees so that they could be rehired for future job opportunities at WSRC. Whenever WSRC sought to hire non-WSRC personnel for a particular job

position, WSRC would be required to check the preferential hiring database to give a preference in hiring to the person most qualified in the preferential hiring database for the position. Tr. at 512-13; see Hearing Exhibit S-4 (WSRC Contractor Preference in Hiring Procedure). WSRC's preference in hiring procedures were prompted by Section 3161 of the National Defense Authorization Act of 1993 which mandated that, to the extent possible, eligible terminated employees at various defense nuclear facilities should receive preference in filling all prime and subcontractor vacancies. See Hearing Exhibit S-4. Consequently, this preference in hiring is also referred to as Section 3161 employment eligibility.

(6)WSRC management's request for the hiring of these chemist was dated April 20, 1998, within the period Smith was out of the hiring database. See Response Exhibit 1; Hearing Exhibits W-17, W-26.

(7)Smith had been employed at WSRC for approximately 23 years but her most recent experience prior to taking the position at WML was in areas other than process control chemistry. See supra.

(8)Collins testified that he didn't provide much input into the discussion since he had recently taken over for Chandler and that he did not know the ITP and ETF lab personnel as well as Melton, Padezarin and Chandler. Tr. at 245, 256. He did testify that, if choosing between Smith and Cheeks, he thought it was obvious that Smith would be the one to go given Cheeks' better performance. Tr. at 241.

(9)Because Smith had not had recent experience as a process control chemist, Melton and Cheeks decided that to best prepare Smith for her duties they would have Smith complete laboratory technician On-the-Job training packages (OTJ) involving the use and operation of the major instrument systems used in the ITP lab. Tr. at 35, 303-04. Cheeks developed a schedule for the OTJ training packages. Tr. at 303. The OTJ training packages included "hands on" instruction that required Cheeks or another lab technician to perform some of the training to demonstrate skills using various instruments and Smith would have to demonstrate competency on the instrument. Tr. at 37, 303. By December 1996, Smith had completed approximately 70-80 percent of this required training. Tr. at 38, 306. Smith had not begun instruction on the filtrate assay system, which required extensive training. Tr. at 307, 320. This training had been scheduled last because of its complexity. Tr. at 307. Smith admits that as of the date of her termination in January 1997 she had not completed the training for the ITP lab. Tr. at 451. Further she concedes that as of that date she had not received any official training for the ETF lab. Tr. at 449, 474.

(10)Smith testified that in the summer of 1995 she participated in "Expedited Site Characterization" project in which "she was heavily involved in laboratory work in that area, being the project manager there." Tr. at 450. She went to say that "we had basic pH meters and things like that in trailers" and that "It was a 12 hour-a-day, 7-day-a-week job with laboratories." Id. This testimony does not lead me to believe that Smith's current laboratory skills were equal to the other three chemists at WML. Her testimony is vague as to the exact laboratory skills and instruments she actually used in the project.

(11)Cheeks testified that Smith was not very diligent about completing the training. Tr. at 305, 331, 337. Chandler also testified that Melton had contacted her sometime in July or August 1996 concerning his concerns with Smith's lack of focus on the training aspects of her job. Tr. at 263.

(12)Chandler testified that in her opinion eight months would have been sufficient for Smith to have completed her training. Tr. at 285.

(13)Melton testified that Smith's first three weeks at ITP were taken up with preliminary facility-specific training. Tr. at 36. Thus, Smith had approximately eight months at ITP in which to train on ITP OTJ training packages when she was notified of her inclusion in the 1/97 Rif.

May 22, 2002

DECISION AND ORDER
OF THE DEPARTMENT OF ENERGY

Initial Agency Decision

Name of Petitioner: Janet K. Benson

Date of Filing: June 2, 1999

Case Number: VWA-0044

This Initial Agency Decision concerns a whistleblower complaint filed in 1994 by Janet K. Benson (the Complainant) against Lawrence Livermore National Laboratory (LLNL) and the Regents of the University of California (UC) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708). At all times relevant to this proceeding, UC managed and operated LLNL for the United States government under a contract between the Regents of UC and the DOE. It is the Complainant's contention that during her employment with LLNL she engaged in activity protected by Part 708 and, as a consequence, suffered repeated reprisals by LLNL. (1) As discussed below, I have determined that the Complainant is not entitled to relief.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated (GOCO) facilities." 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708.(2) The regulations offer employees of DOE contractors and subcontractors a mechanism for resolution of whistleblower complaints by providing for independent fact-finding, a hearing before a Hearing Officer from the Office of Hearings and Appeals (OHA), and an opportunity for review of the Hearing Officer's Initial Agency Decision by the OHA Director. 10 C.F.R. §§ 708.21, 708.32.

The substantive regulations pertinent to this case provide, in relevant part, that a DOE contractor may not discharge or otherwise discriminate against an employee because that employee has disclosed to a DOE official or to a DOE contractor information that the employee in good faith believes evidences a violation of law, rule, or regulation; a substantial and specific danger to public health or safety; or fraud, mismanagement, gross waste of funds, or abuse of authority. 10 C.F.R. § 708.5(a)(1)(i)-(iii). In addition, the regulations prohibit DOE contractors from engaging in acts of reprisal against an employee who, among other things, refuses to participate in an activity, policy, or practice when such participation causes the employee to have a reasonable apprehension of serious injury or serious impairment of health and safety resulting from participation in the activity, policy, or practice. 10 C.F.R. § 708.5(a)(3)(i)(B)(1).

The original Part 708 regulations were not self-executing. Rather, the DOE stated that the provisions of

Part 708 would become operative after they were incorporated into each prime contract that the DOE maintained to operate its GOCO facilities. In the case of health and safety disclosures, incorporation into the GOCO contracts was immediate, since all existing contracts required contractors to adhere to health and safety requirements that the DOE promulgated. *See Richard W. Gallegos* (Case No. VWA-0004), 26 DOE ¶ 87,502 (1996). However, in situations where the disclosures concerned waste, fraud and abuse, the Part 708 protections became operative only after the Part was incorporated by reference into the specific contract. *Id.*

B. Overview

This case began almost eight years ago when the Complainant first raised concerns to the DOE about possible waste, fraud, and abuse by LLNL. As detailed more fully below, the record in this case is quite substantial. The DOE's Inspector General's Office conducted a three-year investigation into the Complainant's allegations after which it issued a comprehensive report and several hundred pages of exhibits. Then, a Hearing Officer from the DOE's Office of Hearings and Appeals conducted a five-day administrative hearing in the matter during which 14 witnesses testified, some of them several times. The hearing testimony is memorialized in a 1400-page transcript (hereinafter cited as "Tr."). During the pendency of the case, each party also filed six lengthy legal briefs and hundreds of pages of documentary evidence.

C. Procedural Chronology

On May 3, 1994, the Complainant filed a Part 708 complaint with the DOE's Office of Contractor Employee Protection (OCEP). At the time of the filing, however, the contract between UC and DOE that governed UC's management and operation of LLNL did not contain a clause requiring UC to be subject to the Part 708 regulations. In July 1994, the Director of OCEP asked UC if it would voluntarily agree to be bound by the provisions of Part 708 with regard to the complaint filed by the Complainant. UC refused. Soon thereafter, OCEP dismissed the Complainant's complaint for lack of jurisdiction.

On September 23, 1994, the contract between UC and the DOE was modified to provide that UC would comply with the provisions of Part 708 prospectively. Shortly thereafter in October 1994, the Complainant refiled her Part 708 complaint, reiterating the charges set forth in the complaint that OCEP had dismissed, and alleging new acts of reprisal by LLNL against her.

Almost one year later, in September 1995, the Complainant wrote a letter to the Secretary of Energy in which she restated the charges set forth in her pending Part 708 complaint and requested the Secretary's assistance in shielding her from future reprisals.

In July 1996 the OCEP Director informed the parties that her office would commence an investigation into the issues raised by the Complainant in her Part 708 complaint. OCEP conducted an exhaustive investigation, interviewing 24 witnesses and gathering documentary evidence over a three-year period. On April 13, 1999, the DOE's Office of Inspector General (3) issued a 40-page Report of Inquiry and Recommendations (Report of Inquiry or ROI) with 74 exhibits appended. The Report of Inquiry found that the Complainant had failed to meet her evidentiary burden and, for this reason, determined that her request for relief pursuant to Part 708 should be denied.

On June 2, 1999, the Complainant requested that the Office of Hearings and Appeals convene a hearing to adjudicate the issues that she had raised in her Part 708 Complaint. (4) On June 7, 1999, the OHA Director appointed Linda Lazarus as Hearing Officer in this matter. LLNL filed a pre- hearing statement in the case on January 7, 2000; the Complainant tendered her pre-hearing statement on January 11, 2000. Hearing Officer Lazarus conducted a three-day administrative hearing in the case on February 1, 2, and 3, 2000. She subsequently requested that the parties submit briefs. Accordingly, LLNL and the Complainant submitted their post-hearing briefs on April 12, 2000 and April 17, 2000, respectively. LLNL also tendered

a Reply Brief on May 15, 2000, and the Complainant submitted a Reply Brief on May 16, 2000.

On July 11, 2000, Hearing Officer Lazarus requested that the parties file briefs addressing three additional issues not previously raised in the case. Accordingly, the Complainant tendered a Supplemental Brief on August 1, 2000, and LLNL filed a Supplemental Brief on August 7, 2000. LLNL then filed a Reply Brief on August 11, 2000, and the Complainant filed a Reply Brief on August 14, 2000.

On November 1, 2000, Hearing Officer Lazarus issued an Interlocutory Order concerning two Motions to Dismiss that LLNL had incorporated into its briefs. In the Order, Hearing Officer Lazarus granted LLNL's Motion to Dismiss insofar as it related to the Complainant's claims of reprisal that allegedly occurred prior to the date LLNL had agreed contractually to comply with Part 708. However, Hearing Officer Lazarus denied other portions of LLNL's Motions to Dismiss. Specifically, she found that the Complainant was not barred by the doctrine of collateral estoppel from litigating her claims under Part 708 even though the United States District Court for the Northern District of California had entered summary judgment in favor of LLNL on claims based on the same facts filed under Title VII of the Civil Rights Act of 1964, 42 U.S.C. §§ 2000e *et seq.*, and the ADA. She also held that OHA has jurisdiction to decide whether LLNL terminated the Complainant on March 22, 1996 in retaliation for making disclosures before September 23, 1994. Finally, Hearing Officer Lazarus determined that OHA has jurisdiction to consider the Complainant's claims that she made protected disclosures about an LLNL building and engaged in protected activity under 10 C.F.R. § 708.5(a)(3) when she refused to enter that building. Because the Complainant never specifically articulated her allegations under 10 C.F.R. § 708.5(a)(3) until the administrative hearing in 2000, Hearing Officer Lazarus decided that LLNL should be allowed to present a defense to the claims being raised under 10 C.F.R. § 708.5(a)(3).

On November 24, 2000, LLNL filed an appeal to the OHA Director of that portion of the November 1, 2000 Interlocutory Order that held that the Complainant could proceed with a new claim of reprisal based on her refusal to enter the building in question, Building 415. The OHA Director rejected the appeal on December 11, 2000, finding that the legal arguments advanced by LLNL in its appeal must wait for review on their merits until the Hearing Officer issues her Initial Agency Decision in the case.

Subsequently, the parties conducted discovery on the issue of damages. On March 21 and 22, 2001, Hearing Officer Lazarus conducted a supplemental hearing in the case, after which she requested the submission of post-hearing briefs. Hearing Officer Lazarus received the transcripts of the two-day supplemental hearing on April 18 and 26, 2001. LLNL and the Complainant both filed legal briefs on May 18, 2001. (5)

On February 12, 2002, the OHA Director transferred this case from Hearing Officer Lazarus to me and delegated me the responsibility for rendering an Initial Agency Decision in the matter.

II. Legal Standards Governing This Case

The regulations set forth at 10 C.F.R. Part 708 specifically describe the respective burdens imposed on the Complainant and the contractor with regard to their allegations and defenses and prescribe the criteria for reviewing and analyzing the allegations and defenses advanced.

A. The Complainant's Burden

It is the burden of the Complainant under Part 708 to establish "by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate as described in § 708.5, and that such act was a contributing factor to one or more alleged acts of retaliation against the employee by the contractor." 10 C.F.R. § 708.29. See Ronald Sorri, 23 DOE ¶ 87,503 (1993) (citing McCormick on Evidence § 339 at 439 (4th ed. 1992)). The term "preponderance of the evidence" means proof sufficient

to persuade the finder of fact that a proposition is more likely true than not true when weighed against the evidence opposed to it. See Hopkins v. Price Waterhouse, 737 F. Supp. 1202, 1206 (D.D.C. 1990) (Hopkins); McCormick on Evidence § 339 at 439 (4th Ed. 1992).

B. The Contractor's Burden

If the Complainant meets her burden as set forth above, the burden then shifts to LLNL to prove by "clear and convincing" evidence that the company would have taken the same actions about which the Complainant is complaining even if she had not made protected disclosures and/or engaged in protected activity. 10 C.F.R. § 708.29. "Clear and convincing" evidence requires a degree of persuasion higher than mere preponderance of the evidence, but less than "beyond a reasonable doubt." See Hopkins, 737 F. Supp. at 1204 n.3.

III. Findings of Fact

The Complainant began her employment with LLNL as a Senior Human Resources Specialist in August 1986. Tr. at 69. According to the Complainant, her tenure at LLNL from 1987 to 1989 was a difficult one. During this time, she filed several internal grievances against her employer alleging race discrimination and contesting substandard performance evaluations. After the Complainant experienced problems working with one supervisor in 1987, LLNL transferred her to work for a second supervisor. *Id.* at 204. The second supervisor subsequently complained about the Complainant's performance, including her failure to meet deadlines. LLNL Ex. 3.

In September 1989, the Complainant was reassigned, at her own request, to work in LLNL's Education Program Division (Education Program) under the supervision of Dr. Manuel Perry, a biochemist who served as the Director of the Education Program. At the time, the Education Program was housed in a school building leased from the school district, commonly referred to as "The Almond School." During the first three to five months of the Complainant's tenure in the Education Program, Dr. Perry reports that the Complainant's performance was satisfactory. Tr. at 373. Because Dr. Perry had observed during that time that the Complainant's data analysis skills were weak, he sought other opportunities for her. *Id.* To this end, Dr. Perry appointed the Complainant as project coordinator for PROJECT STAR, a DOE summer education program that placed minority students from community colleges in research laboratories at LLNL. Ex. 10 to ROI. According to Dr. Perry, during the first year of PROJECT STAR, DOE personnel and a community college professor voiced their respective concerns regarding their difficulty working with the Complainant and her poor communication skills. Tr. at 374. Dr. Perry testified that during the second year of PROJECT STAR, tension mounted between the Complainant and the community college professor. *Id.* at 376. Dr. Perry finally resorted to counseling the Complainant about her poor performance on the project. *Id.* at 376. Ultimately, the community college decided not to continue its relationship with LLNL but found another laboratory in which to place its students. *Id.* at 379.

With the loss of PROJECT STAR to another laboratory, the Complainant had little work to do. In late 1990 or early 1991, Dr. Perry approved a proposal submitted by the Complainant to seek funding from the National Science Foundation (NSF) for a three-year program that would provide minority undergraduate students with the opportunity to work with laboratory researchers during the summer (The National Physics Education Program Collaboration (NPEPC)). Ex. 10 to the ROI at 2. Because restrictions prevented NSF from funding another federally funded, non-educational institution, such as LLNL, LLNL sought a collaborator. To this end, LLNL entered into a partnership with California State University, Hayward (CSU-H), an educational institution not affiliated with the federal government. Under the terms of the partnership, CSU-H was the recipient of NSF funds for NPEPC, and was responsible for the fiscal and logistical requirements of the program such as management, bookkeeping, student transportation, and dormitory facilities. For its part, LLNL handled all student activities, including the assignment of projects and mentors for each student, and the development of a system to evaluate the students. The Complainant

and Dr. Charlie Harper, the head of the Physics Department at CSU-H, were designated as the co-project investigators (co-PIs) for NPEPC.

In 1991, NSF approved funding for the first two years of NPEPC. Funding for the third year was conditional upon performance, and subject to review by NSF. Midway through the first year of the NPEPC, problems arose between the Complainant and Dr. Harper. Dr. Perry describes these problems between the co-PIs as "communication issues." Tr. at 303.

Sometime in early 1993, Dr. Harper suggested that the third year of NPEPC be modified to include a college course on laboratory research techniques because, in his opinion, some of the program participants lacked the requisite background or experience in scientific research or laboratory safety. *Id.* at 384. The Complainant objected to the modification, opining that the class was remedial in nature and demeaning to the students. The Complainant complained to Dr. Perry that Dr. Harper was trying "to steal her program." *Id.* at 388. She further claimed that she believed at the time that the suggested modification violated LLNL and NSF rules and regulations, and would result in the fraudulent diversion of funds to CSU-H. The Complainant first memorialized several concerns in this regard in a February 1993 memorandum to Dr. Perry. Ex. 58 to ROI. In her memorandum, the Complainant objected to the proposed changes on the basis that the changes would trigger the cancellation of NPEPC. *Id.* She further advised that she would not participate in something "unethical." *Id.*

As time went on, Dr. Perry stated that the problems between the Complainant and Dr. Harper escalated to such a level that the institutional relationship between LLNL and CSU-H was being jeopardized. Dr. Harper told Dr. Perry that he "can't work with that woman," referring to the Complainant. Ex. 10 to ROI at 4. Eventually Dr. Harper informed Dr. Perry that he would withdraw from participating further in NPEPC. Dr. Perry decided that he did not want to risk losing Dr. Harper as the program entered its third year, so he removed the Complainant as co-PI. Dr. Perry testified that the decision to remove the Complainant from NPEPC was his alone. He testified further that he based his decision solely on the fact that he perceived that NPEPC was at risk, in light of Dr. Harper's comments that he could not work with the Complainant and "wanted out of the program.(6)

On July 27, 1993, Perry replaced the Complainant with Eileen Vergino, a geophysicist. Tr. at 627. (7) LLNL had hired Ms. Vergino in early July 1993 as the Deputy Manager of LLNL's Education Program. According to Ms. Vergino, she did not know at the time of her appointment as co-PI that the Complainant had accused Dr. Perry of fraud, waste and abuse with regard to NPEPC. Tr. at 630. All Dr. Perry told her was that she was replacing the Complainant because of the "animus" between Dr. Harper and the Complainant.

In the early fall of 1993, Ms. Vergino essentially took over the Education Program because Dr. Perry announced his intention to retire. Perry retired in November 1993 at which time Vergino became Director of the Education Program.

In September 1993, the Complainant wrote to Ms. Vergino complaining about her removal as co-PI of NPEPC. Ex. 63 to the ROI. (8) Ms. Vergino responded by enumerating all the responsibilities the Complainant still had for many of the day-to-day administration of NPEPC. Ex. 64 to the ROI.

During the latter part of 1993, performance issues with the Complainant began to surface. According to Ms. Vergino, the Complainant was not completing her work on time, was only sporadically attending staff meetings, and was frequently not in the office during regular working hours. Tr. at 638-642.

On December 21, 1993, the Complainant wrote to the NSF complaining that she had been unjustly removed as co-PI from NPEPC, and that LLNL and CSU-H had engaged in fraud and mishandled federal funds. Ex. 1 to the ROI. NSF responded by informing the Complainant that her removal was proper and within CSU-H's discretion. Ex. 1 to ROI at 34. The Complainant continued to write to NSF in January and February 1994 requesting an investigation into her allegations. Finally, in February 1994, the Inspector General's (IG) Office at the NSF wrote to the Complainant reaffirming that her removal from NPEPC was

proper. With regard to the Complainant's allegations of fraud and mishandling of federal funds, the NSF's IG reminded the Complainant that she had told the IG that she "had no knowledge, or reason to believe, that actual fraud or criminal diversion of grant funds had occurred." *Id.* at 41-42.

In February 1994, Vergino asked the Complainant and another employee to account for time because of complaints that both were not working regular hours. Lab Ex. 11. In response, the Complainant could only account for 11 hours in a two month work period covering 160 hours. Tr. at 649; Lab Ex. 49.

In April 1994, Vergino hired Linda Dibble as Senior Administrator to handle all personnel issues in the Education Program. Tr. at 645-46. According to Dibble, within two weeks after she was hired, Vergino sought her assistance in dealing with personnel issues relating to the Complainant. *Id.* at 433. Specifically, Vergino was concerned that the Complainant seemed unproductive, appeared to be coming in late and leaving early, and was not participating in staff meetings. *Id.* at 650-51.

The next month, May 1994, the Complainant filed her first Part 708 complaint. As noted in Section I.C. above, the DOE subsequently dismissed the complaint for lack of jurisdiction.

From May through September 1994, personnel issues regarding the Complainant mounted. First, LLNL asked the Complainant to account for absenteeism not reflected on her time cards. Then, the Complainant's supervisor, Glenn Young, expressed dismay that the Complainant had failed to complete an assignment of finding mentors for students participating in NPEPC. In August 1994, Mr. Young provided a marginal performance appraisal for the Complainant. Mr. Young opined in a memorandum that the Complainant should be placed under a highly structured work environment with detailed tasking, reporting requirements, and frequent meetings. LLNL Ex. 23.

In the meantime, LLNL learned that the lease on The Almond School, the building that housed the Education Program, would be expiring. Accordingly, LLNL needed to find a new location for the program. A building outside LLNL's security perimeter, Building 415, was selected. However, the building required some remodeling and repainting.

In mid-September 1994, the Complainant was assigned to a new full-time position working for Mr. Young in LLNL's Apprentice Program, a program designed as an affirmative action outreach effort to train underprivileged youth, women, and minorities in the trades. Mr. Young provided a detailed job description to the Complainant. LLNL Ex. 26. Even though the responsibilities assigned to the Complainant appeared to be complementary to her previous experience in recruiting and placing students, and in affirmative action compliance, the Complainant objected to the assignment on the grounds that she was unfamiliar with these areas. Tr. at 268.

In late September 1994, the Complainant received her performance appraisal for the period 1993- 1994. It was "less than satisfactory." The appraisal cited the Complainant's failure to take initiative and the constant follow-up required by those who gave her assignments as reasons for her rating. Ex. 30 to the ROI.

On October 12, 1994, the Complainant filed her second Part 708 Complaint. In her complaint, she reiterated the allegations set forth in her first complaint and added that she has been demoted, reassigned and given unsatisfactory performance appraisals in retaliation for challenging the modification of the grant funding the NPEPC. Ex. 5 to the ROI.

By December 1994, plans were underway to move the Education Program to Building 415. Linda Dibble advised the staff in early December that carpet was being installed in the building on December 5, 1994, after which time the staff could visit their new offices. LLNL Ex. 28. The Complainant immediately responded that she would wait until after the holidays to see her office so that the fumes from the new carpeting could dissipate. *Id.* In late January 1995, the Complainant purportedly told Ms. Dibble that she had "life-threatening" reactions to "new carpet, paint fumes, windows painted close[d], and . . . asbestos." Complainant's Ex. 24. In early February, the Complainant spoke with Mr. Young about her concern

regarding the new carpet smell. *Id.* at 25. That concern was relayed from Mr. Young through his supervisor to Ms. Dibble. *Id.*

Immediately thereafter, Linda Dibble requested that LLNL's Hazards Control Department conduct an industrial hygiene "walk through" of Building 415 for guidance on addressing this issue. The Hazards Control Department instructed Dibble to "bake" the building by (1) closing all the windows and turning up the heat for two days and then (2) opening up all the windows to allow the new carpet smell to dissipate into the air. Dibble followed these instructions. Next, Dibble asked LLNL's Health Services Department (HSD) to evaluate the Complainant for purposes of determining whether she could occupy Building 415.

On February 14, 1995, Dr. Scott from LLNL's HSD evaluated the Complainant and determined that she could not work for the short term in Building 415 for health reasons. LLNL Ex. 42. Dr. Scott instructed the Complainant to consult her allergist, Dr. Kaufman, and bring a note from him stating how long it would be before she could enter Building 415. Also, Dr. Scott requested that Dr. Kaufman provide a list of chemicals to which the Complainant is sensitive so LLNL could test for them. Id. Dr. Scott also asked that the Complainant report to HSD on February 21, 1995, prior to going to work.

On February 21, 1995, the Education Program moved to Building 415. The Complainant was slated to occupy a second floor office in Building 415 with her colleagues from the Education Program. On that same day, the Complainant reported to HSD as previously instructed with a note from Dr. Kaufman stating that the Complainant was suffering from acute respiratory problems aggravated by "formaldehyde out-gassing" from the carpeting in her present area. LLNL Ex. 42.(9) At the time Dr. Kaufman wrote the note, he was unaware that the Complainant had never entered Building 415 where the new carpeting had been laid, and that no formaldehyde was used in the manufacture of the carpet installed in the offices in Building 415. *See* Tr. at 1169; LLNL Ex. 60. Dr. Scott then consulted with Ed Ochi of LLNL's Industrial Hazards Division about the Complainant's situation. Scott and Ochi decided that the Complainant could try to work in the first floor of Building 415 in an area that has not been repainted or carpeted. Dibble set up a temporary office for the Complainant on the first floor of Building 415 in furtherance of HSD's suggestion. Based on the information contained in Dr. Kaufman's February 16, 1995 letter, Dr. Scott issued a restriction barring the Complainant from working on the second floor only of Building 415 from February 21 to 28, 1995. Dr. Scott noted on the work restriction that he would re-evaluate the Complainant's situation in one week.

After the Complainant had presented Dr. Kaufman's note to Dr. Scott on February 21, 1995, she then proceeded to the first floor office in Building 415. After one hour, she felt ill and went home. She did not report to work the following two days, either. When the Complainant returned to work on February 24, she was placed in a Trailer 3156 which was located down the street from Building 415.

On February 28, 1995, the Complainant returned to HSD and told Dr. Scott that the previous day she had felt ill after entering another LLNL building, Building 571. Without explanation, Dr. Scott decided that the Complainant should not enter Building 415 for another four weeks but did not restrict the Complainant from entering Building 571. Accordingly, Dr. Scott executed a Work Assignment Restriction prohibiting the Complainant from entering Building 415 only from February 28 to March 28, 1995. LLNL Ex. 39.

On March 28, 1995, the Complainant met with Dr. Scott and reported that she was receiving weekly treatment from her allergist, and was experiencing no problems working in Trailer 3156. Dr. Scott extended the Complainant's work restriction in Building 415 another month, until April 25, 1995.

During this time, the Complainant was working with Glenn Young on the Apprentice Program. On March 31, 1995, Young requested that the Complainant relocate to Building 571 and assume the daily operation of the Apprentice Program. Complainant's Ex. 32. Three days later, the Complainant returned to HSD and asked Dr. Scott to revise her work restriction to include Building 571. Even though the Complainant had not entered Building 571 since she claimed that she felt ill when she entered that building in February 1995, Dr. Scott revised the Work Assignment Restriction to cover both Buildings 415 and 571.

Toward the end of March 1995, Dibble asked LLNL's Hazards Control department to perform an industrial hygiene evaluation of, among other places, Buildings 415 and 571. The evaluation concluded that any airborne contaminants present in the two buildings were at levels acceptable to the published workplace guidelines and standards. Ex. 60 to the ROI.

On April 12, 1995, Dr. Peter Lichty, M.D., examined the Complainant to determine whether her current health complaints arose out of, or were caused or aggravated by, her employment with LLNL. Dr. Lichty memorialized his findings in a Report dated April 28, 1995. In his Report, Dr. Lichty first pointed out that there are important environmental factors in the Complainant's home such as water damage, and mold and mushroom growth in the carpet of her home that might be contributing to the Complainant's symptoms. Dr. Lichty opined that the Complainant is beset with strong underlying anxiety and would benefit from anxiety medications on an empirical basis to see if anxiety is magnifying her underlying allergic symptoms.

On April 25, 1995, the Complainant visited HSD and expressed concern that if she were to enter Buildings 415 or 571, she would have problems. Dr. Scott agreed to extend her restrictions for another month until May 25, 1995 based only on the Complainant's articulated fears.

In the meantime, the Complainant's performance issues remained a concern for her supervisors. In April 1995, Mr. Young expressed dismay that the Complainant was having trouble completing her assignments without a step-by-step description of every task. LLNL Ex. 32. In May 1995, Young told Barry Goldman, the Team Leader of Student Programs in the Education Program, that the working relationship between the Complainant and him was not going well. Young told Goldman that part of the difficulty working with the Complainant was that she worked in an isolated location and he could not determine what she was doing. Because of performance issues, the Complainant was removed from Young's supervision and the Apprentice Program.(10) Tr. at 731. Goldman decided to assume direct supervision over the Complainant in May 1995.

On May 18, 1995, Goldman requested that the Complainant enter Building 415 for ten minutes to participate in a departmental review program. Complainant Ex. 40. Goldman claimed he could not move the location of the meeting because it involved the entire Education Program. Id. The Complainant refused to enter the building. Tr. at 786-87.

On May 25, 1995, the Complainant returned to HSD and told Dr. Scott that she was still reluctant to work in Buildings 415 and 571. This time, however, Dr. Scott decided that the Complainant could work in these two buildings "as tolerated" from May 25 to June 23, 1995. Scott stated that he had been in both buildings recently and knew from personal experience that the new carpet odor was gradually disappearing. He agreed to evaluate the Complainant again in one month.

The Complainant's work restrictions expired on June 23, 1995. At this point, Goldman determined that he could no longer accommodate the Complainant's desire to remain alone in the trailer because of programmatic needs. Goldman informed the Complainant that she must report to her office in Building 415 on June 26, 1995, unless she provided medical documentation outlining the restrictions LLNL needed to accommodate. LLNL Ex. 32. On June 26, 1995, the Complainant submitted a hand-written note from her allergist stating that the Complainant tests intolerant to petroleum products, paints, lacquers, varnishes, formaldehyde products, organic dusts, glue products, and fibers of many kinds, especially organic in origin. Ex. 33 to the ROI.

At this point, Goldman decided that LLNL could no longer accommodate the Complainant because of the universal nature of her restrictions. Goldman decided that LLNL would be liable if it required her to work in any environment at the facility. In addition, he decided he could no longer tolerate a situation in which an employee could not enter the building where all the program work was done. Tr. at 790-91. Goldman consulted with Vergino and a decision was made to send the Complainant home. *Id.* at 805-06. After she called LLNL's Affirmative Action Program and the DOE, the Complainant was subsequently placed on

paid administrative leave pending a review of her medical status and disability eligibility *Id.* at 679.

On August 3, 1995, the Complainant's allergist sent a medical note to LLNL stating that the Complainant "could function in an ordinary environment, [but] needed to avoid "a chamber heavily laden with vapors of formaldehyde coming from large yardage of new and never before aerated carpet." Ex. 38 to the ROI. The note further stated that all that the Complainant required was "clear, ambient room air." Id.

The Complainant returned to LLNL on August 9, 1995 after a six week hiatus. She and Dr. Scott went to Building 415 but the Complainant fell ill and went home. As a consequence, Dr. Scott issued another work restriction prohibiting the Complainant from working in Building 415 until September 17, 1995.

Following this incident, Gloria Kwei, the Manager of LLNL's Human Resources Department wrote the Complainant a letter informing her that she would be on unpaid leave until September 17. In the letter, Kwei stated that Trailer 3156 was no longer available to the Education Program and that the program no longer had assignments that could be performed outside Building 415. Kwei further stated that if the Complainant's work restrictions became permanent, a job search of other parts of LLNL would be performed and if no alternative assignment was found, the Complainant would be medically separated from her employment. Ex. 37 to the ROI.

On September 10, 1995, the Complainant wrote to the Secretary of Energy complaining that in July 22, 1993 she was fraudulently and illegally removed from her position as the Project Director for an education project funded by NSF. The Complainant further stated that LLNL had demanded that she work in an environment containing chemicals and toxins to which she is allergic. Ex. 7 to the ROI.

On September 17, 1995 the Complainant's work restriction expired again and she again entered Building 415 with Dr. Scott. The Complainant complained of not feeling well and she went home. Dr. Scott issued another work restriction for Building 415 until November 6, 1995. Ex. 39 to the ROI.

On November 20, 1995, LLNL decided to obtain an outside medical evaluation as to the Complainant's ability to work. The Complainant was subsequently evaluated by Dr. Abba Terr, an allergy and immunology specialist. Dr. Terr issued a report on December 27, 1995. Tr. at 294, Ex. 40 to the ROI. Dr. Terr did not find any objective evidence of a medical condition, but concluded that based on the Complainant's subjective beliefs, there was no reason to believe she could enter Building 415 without becoming "subjectively ill." Id.

Sometime in January 1996, Dr. Richard Watts, Dr. Scott's successor, met with the Complainant to discuss her return to work. Exs. 41 and 48 to the ROI. During this meeting the Complainant agreed that she should be permanently restricted from working in Building 415. Accordingly, Dr. Watts issued a permanent restriction prohibiting the Complainant from working in Building 415 and 571. *Id.* At this point, LLNL prepared the paperwork to medically separate the Complainant in view of her inability to perform the essential assigned functions of her position. Ex. 44 to the ROI.

Before separating the Complainant, Gene Dent, LLNL's Rehabilitation Representative, tried to contact the Complainant via certified mail and telephone in order to discuss vocational rehabilitation. Records show that the Complainant received the certified mail letter and signed for the same. Ex. 47 to the ROI. The Complainant never responded to the letter. At the hearing, the Complainant explained that she never contacted Mr. Dent because she "didn't feel [she] needed to be rehabilitated." Tr. at 1383.

On February 22, 1996, Robert Perko of LLNL's Staff Relations sent the Complainant a "Notice of Medical Separation" via certified mail. Ex. 48 to the ROI. In his letter to the Complainant, Perko stated that the Complainant had five calendar days to respond either orally or in writing to LLNL if she believed the action was improper. The Complainant did not respond.

On March 22, 1996, LLNL sent a second certified letter to the Complainant advising her that she was being medically terminated effective March 22, 1996. The letter informed the Complainant that her

separation was due to her inability to perform the essential functions of her job because of her health. The letter also advised that she could appeal the separation if she believed LLNL's policies or procedures had been improperly applied. The Complainant did not appeal.

IV. Analysis

A. The Complainant's Disclosures Regarding the NPEPC

The Part 708 regulations state in pertinent part that "a DOE contractor . . . may not discharge or in any manner demote, reduce in pay, coerce, restrain, threaten, intimidate, or otherwise discriminate against any employee because the employee . . has (1) [d]isclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences - (i) [a] violation of any law, rule, or regulation; (ii) [a] substantial and specific danger to employees or public health or safety; or (iii) [f]raud, mismanagement, gross waste of funds, of abuse or authority." 10 C.F.R. § 708.5(a)(1)(i),(ii),(iii).

As an initial matter, the disclosures that the Complainant made only to the NSF do not qualify as protected disclosures because NSF is not an official of the DOE, a member of Congress, or a DOE contractor. The other disclosures that the Complainant made regarding the NPEPC are the following: the Complainant's oral statements to Dr. Perry between January and July 1993; the Complainant's statements contained in a Memorandum dated February 1993 to Dr. Perry; the Complainant's statements contained in her May 1994 Whistleblower Complaint; the Complainant's statements contained in her October 1994 Whistleblower Complaint; and the Complainant's statements contained in her letter to the Secretary of Energy in September 1995.

The evidence in the record indicates that beginning in February 1994 the Complainant did not have a good faith belief that LLNL had engaged in fraud, waste, and abuse with regard to the NPEPC. In the letter from the NSF Inspector General to the Complainant explaining why that agency declined to take any action against LLNL based on the Complainant's allegations, the Inspector General recounted that the Complainant had told the NSF "she had no knowledge, or reason to believe, that actual fraud or criminal diversion of grant funds had occurred" with respect to NPEPC. *See* Ex. 1 to the ROI at 41-42. Hence, in view of the Complainant's admission to the NSF in February 1994, any disclosure that she made subsequent to that time regarding alleged fraud, waste, and abuse by LLNL with regard to the NPEPC will be rejected as having been made in bad faith. In addition, the Complainant admitted that as early as August 1993, she had knowledge that NSF had approved her removal as co-PI so her contention that LLNL was somehow violating NSF's rules or regulations because LLNL removed her from her position without NSF's permission is devoid of merit.

Accordingly, I find that the Complainant's statements about LLNL's alleged fraud, mismanagement and violation of rules as set forth in her Part 708 Complainants filed in May and October 1994, and in her 1995 letter to the Secretary of Energy are not protected disclosures because they were not made in good faith.

With respect to the Complainant's oral statements to Dr. Perry between January 1993 and July 1993 as well as the statements contained in her February 1993 memorandum, however, I find that these statements were protected under Part 708. At the time the Complainant made these statements, she had no knowledge that LLNL intended to seek NSF's approval to effectuate the changes about which the complainant expressed concern or that NSF would approve all the changes LLNL would request to the NPEPC. Therefore, the record indicates that between January and July 1993, the Complainant had a good faith belief that LLNL was (1) violating NSF and its own rules; (2) engaging in fraudulent activity; and (3) mismanaging the NPEPC grant money.

Having found that some of the Complainant's disclosures regarding the NPEPC were protected under Part 708, I will next examine whether any of the protected disclosures were a contributing factor to any of the alleged reprisals at issue in this case.

B. Contributing Factor

A protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personnel action.

Charles Barry DeLoach, 26 DOE ¶ 87,509 at 89,053-54 (1997), quoting *Ronald Sorri*, 23 DOE ¶ 87,503 at 89,010 (1993); *Ronny J. Escamilla*, 26 DOE ¶ 87,508 at 89,046 (1996). In addition, "temporal proximity" between a protected disclosure and an alleged act of reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989). In the present case, the Complainant claims that a series of retaliatory actions occurred to her, culminating with her medical termination in March 1996. The alleged retaliatory actions are analyzed below.(11)

1. Whether the Complainant's disclosures regarding the NPEPC Were a Contributing Factor to LLNL's Decision to Reassign the Complainant on September 23, 1994 to LLNL's Apprentice Program

The Complainant claims that LLNL's assignment of her to the Apprentice Program on September 23, 1994 was a demotion even though LLNL did not change her job classification or reduce her salary. Tr. at 156. It is the Complainant's contention that LLNL reassigned her to the Apprentice Program in retaliation for the disclosures that she had previously made regarding the NPEPC.

According to the record, it was Eileen Vergino who made the decision to assign the Complainant to the Apprentice Program. Tr. at 653. Ms. Vergino explained that Glenn Young had approached her with a request for assistance with the Apprentice Program. *Id.* At the time, Ms. Vergino was trying to create a situation where the Complainant could succeed because it was clear from the Complainant's previous work assignments that she was not succeeding in the workplace. *Id.*

After carefully reviewing the entire record, I find that there is no evidence showing that Ms. Vergino had either actual or constructive knowledge that the Complainant had made disclosures that LLNL had committed fraud, waste or mismanagement with regard to the NPEPC. Ms. Vergino testified that when she assumed her job at LLNL in July 1993, she had no knowledge of the reason why the Complainant had been removed as co-PI of the NPEPC, other than the "animus" that existed between Dr. Harper and her. Tr. at 630-631.(12) Further, Ms. Vergino testified that she had no knowledge that the Complainant had filed a Part 708 complaint until July 1995 when a DOE employee mentioned that fact during a meeting. Tr. at 681-683. Ms. Dibble was also present at the same July 1995 meeting. Ms. Dibble corroborated Ms. Vergino's statement that Ms. Vergino had expressed surprise at the meeting upon learning that the Complainant had previously filed a whistleblower complaint. Ms. Dibble testified that she, too, only acquired knowledge about the Complainant's disclosures at that July 1995 meeting. Tr. at 556. Finally, I note that in the memorandum that the Complainant wrote to Ms. Vergino on September 17, 1993 informing Ms. Vergino that she had been removed as the co-PI of NPEPC "without being given a valid reason," the Complainant did not mention her belief that her removal as co-PI constituted fraud and mismanagement. *See* Complainant's Ex. 63.

In the end, I find that the Complainant has not established the first element in a prima facie case that her disclosures regarding the NPEPC were a contributing factor to her reassignment to the Apprentice Programs.

Even assuming arguendo that the Complainant had met her evidentiary burden, I would have concluded that LLNL had provided clear and convincing evidence that it would have reassigned the Complainant in the absence of any of her disclosures. It is clear from the record that the Complainant was having difficulty meeting performance expectations and providing deliverables in her previous assignments. In an August 1994 performance appraisal, Glenn Young set forth concrete suggestions for assisting the Complainant in improving her performance, including his opinion that the Complainant should be placed under a highly structured work environment with detailing tasking, reporting requirements, and frequent meetings. LLNL Ex. 23. The memorandum that Mr. Young provided to the Complainant on September 13, 1994, appears to address the concerns he had articulated in the August 1994 performance appraisal. In addition to setting forth the Complainant's new job description, the September 13, 1994 memorandum also states:

> that "we will establish weekly communications and meet as often as necessary to maximize our effort and to maintain focus. Your timely input is important to my task of submitting a weekly status report of the LLNL Apprentice Program activities and projects. The overall goal for this assignment is to maximize the education effort in the LLNL Education Program, LLNL Apprenticeship Programs, and the AADPs to address duplication and to share resources. Attending staff meeting[s] of all three programs may be necessary."

LLNL Ex. 26. The clear and convincing evidence is that the Complainant's reassignment to the Apprentice Program was designed to provide her with an opportunity to utilize her extensive experience in recruiting and placing students and overseeing affirmative action compliance in a structured environment. It is also clear from the evidence that the Complainant was required to attend staff meetings and provide weekly reports on her assignments in an effort to improve the her performance, not as any retaliation for past disclosures she had made regarding the NPEPC.

2. Whether the Complainant's disclosures regarding the NPEPC Were a Contributing Factor to LLNL's Decision to the "less than satisfactory" Performance Appraisal that the Complainant Received on September 27, 1994

On or about September 27, 1994, the Complainant was given a performance appraisal for the prior year. Ex. 30 to the ROI. The appraisal indicated that the Complainant's performance was "less than satisfactory." *Id.* According to the Complainant, the performance appraisal was unfounded. Ex. 5 to ROI. The Complainant alleges that her performance rating was given in retaliation for her having made the disclosures about the NPEPC.

There is no evidence in the record to support the Complainant's contention. For the reasons set forth in Section IV.A. above, I find that the supervisor who completed the appraisal, Ms. Vergino, had neither constructive nor actual knowledge of the Complainant's previous disclosures regarding the NPEPC.(13) For this reason, I find that the Complainant has not met the first element of her prima facie case to establish the requisite nexus between any of her protected disclosures and the "less than satisfactory" performance appraisal that she received.

In addition, even had the Complainant met her burden of proving that her disclosures were a contributing factor to her September 1994 performance rating, the evidence in the record is overwhelming that LLNL would have provided the same rating to the Complainant in the absence of her disclosures. Between September 17, 1993, and May 3, 1994, Ms. Vergino and the Complainant exchanged seven memoranda regarding the Complainant's job description, poor job performance, and time and attendance problems. See Exs. 63, 64, 65, 66, 67, 68, and 69 to ROI. In addition, the performance appraisal in question highlighted the Complainant's performance problems, including her consistent failure to meet deadlines, her failure to complete assigned tasks, and the constant follow-up required after delegating assignments to her. By way of example, Vergino related that the Complainant had failed to complete her assignment of recruiting teachers for the Summer Research Internship Program. In this regard, the record shows that the

Complainant was informed at a meeting held on June 8, 1994, that she was to recruit mentors for the program in question. *See* LLNL Ex. 22. Notes from that meeting indicate that the Complainant resisted performing this assignment, insisting instead that it was not "her program" and that her supervisor should be responsible for completing the task. *Id.* The performance appraisal also reflects that the Complainant missed a deadline for the Internship Program for "Mission Valley ROP." In the appraisal, Vergino also recounts that the Complainant refused to cooperate, failed to demonstrate the initiative required by her position, and resisted suggestions to attend staff meetings until assigned to do so. At the hearing, Ms. Vergino reaffirmed under oath the litany of problems she had memorialized in the 1994 performance appraisal. Tr. at 637-651.

Moreover, the record reflects that Vergino and Dibble met with the Complainant on July 8, 1994 to discuss her work assignments and performance expectations. LLNL Ex. 18. During the meeting, the Complainant was informed that she was required to report about her work activities on a routine basis. The Complainant responded, "I will only report what I feel like." *Id.*

Finally, Glenn Young provided appraisal input into the Complainant's performance on August 18, 1994. LLNL Ex. 23. Young stated in a memorandum that he assumed that someone with the Complainant's length of service would be able to represent LLNL on most any assignment in the private sector. According to Young, the Complainant failed to meet LLNL's expectations in this regard. Young explained that the Complainant had previously made representations without checking first with an LLNL partner, thereby causing confusion and anxiety in the community organization and the LLNL partner. Young also related that the Complainant failed to inform him of her activities, as requested. In addition, Young stated that the Complainant tendered a summary of a particular program three months late. Moreover, according to Young, the summary in question did not even cover the topics the Complaint was to address. *Id.*

Given the facts outlined above, LLNL appears to have been completely justified in giving the Complainant a less-than-satisfactory performance evaluation in September 1994. In fact, in view of the circumstances, the Complainant should not have been surprised at her rating for the period in question.

3. Whether the Complainant's Disclosures about the NPEPC or her filing of a Part 708 Complaint in October 1994 Were Contributing Factors in LLNL's Decision to Assign the Complainant to Work in Building 415

In a letter September 10, 1995, the Complainant informed the Secretary of Energy that she was a whistleblower because she had made disclosures about the NPEPC. Ex. 7 to ROI. The Complainant alleged further that LLNL was demanding that she work in "environments containing chemicals and toxins to which she is allergic." The Complainant explained that she was being required to work in Building 415 "even if it kills me . . ." *Id.*

The facts surrounding the Education Program's move to Building 415 and LLNL's multiple attempts to accommodate the Complainant are set forth in detail in the Findings of Facts above. As previously stated, the entire Education Program moved to Building 415 in February 1995 because the lease on The Almond School expired. Upon learning of the Complainant's possible sensitivity to new carpet, LLNL consulted its Hazards Control Department which conducted an industrial hygiene walk- through of Building 415. Upon the recommendation of the Hazards Control Department, Linda Dibble "baked" Building 415 for two days to eradicate the new carpet odor. Beginning in February 1995, LLNL's HSD monitored the Complainant, issuing several temporary work restrictions preventing her from entering Building 415 and later Building 571. LLNL also placed the Complainant in a temporary alternate worksite, Trailer 3156, beginning in February 1995. In May 1995, LLNL's Hazards Control Department conducted an industrial hygiene evaluation of Building 415 and concluded that any airborne contaminants present in the building were at acceptable levels.

The record reflects that Barry Goldman requested that the Complainant enter Building 415 for ten minutes

on May 18, 1995 to participate in a departmental review. Goldman explained that he could not move the location of the meeting because everyone in the Education Programs were participants. The Complainant has presented no evidence that Goldman had actual or constructive knowledge of the disclosures that she made regarding the NPEPC. According to the record, in May 1995 Goldman did not know that the Complainant had filed a whistleblower complaint. He only learned about her complaint filing in July 1995. Accordingly, the Complainant has not met her burden of establishing a nexus between any of her disclosures about NPEPC and the request in question.

Goldman next requested that the Complainant move to Building 415 after her work restrictions expired on June 23, 1995. As noted immediately above, there is no evidence in the record that Goldman had any actual or constructive knowledge of the Complainant's disclosures concerning the NPEPC until July 1995. Finally, it is well documented that the Education Program's move to Building 415 occurred because LLNL lost its lease on The Almond School Building. Building 415 was selected because it met LLNL's specifications that the Education Program reside outside the security perimeter to ease the ingress and egress of students without security clearances. Given the facts of this case, I find that no reasonable person could conclude that LLNL decided to move its entire Education Program to Building 415 solely to retaliate against the Complainant for her past "protected activity." The record demonstrates conclusively that LLNL's move to Building 415 had absolutely nothing to do with the Complainant, her alleged disclosures, or any other Part 708 activity she may have engaged in.

For all the reasons set forth above, I find that the Complainant's disclosures were not a contributing factor to LLNL's decision to move the Education Program to Building 415, Goldman's May 1995 request that the Complainant enter Building 415 for ten minutes, or Goldman's June 1995 request that the Complainant move permanently to Building 415. (14)

4. Whether the Complainant's Disclosures about the NPEPC or her filing of a Part 708 Complaint in October 1994 or her September 1995 Letter to the Secretary of Energy Were Contributing Factors in LLNL's Decision to Medically Separate the Complainant in March 1996

The Complainant argues that LLNL's decision to medically separate her was a ruse. May 16, 2000 Reply Brief at 22. It is her contention that LLNL removed her from her position in retaliation for her having made disclosures about the NPEPC and having filed Part 708 Complaints with the DOE. *See* Ex. 9 to the ROI.

As previously stated, the circumstances surrounding the Complainant's medical separation date back to February 1995 when the Education Program moved from The Almond School to Building 415. Ex. 8 to the ROI. The Complainant asserts that, in spite of her attempts to work in Building 415, she could not do so because of her allergies. The Health Services Department (HSD) at LLNL medically restricted the Complainant from working in Building 415 several times between February 1995 and June 23, 1995. From June 26, 1995 to August 9, 1995, LLNL released the Complainant from her duties and placed her on administrative leave with pay. LLNL's HSD extended the Complainant's work restrictions in Building 415 until November 1995, although it appears she was placed on leave without pay beginning on August 9, 1995.

While the Complainant was on administrative leave, Ms. Kwei, LLNL's Human Resources Department Manager, wrote two letters to the Complainant regarding her employment status. In the first letter dated July 27, 1995, Ms. Kwei explained that the Complainant was sent home because her treating physician, Dr. Kaufman, had described her allergies as so extensive and comprehensive that there was nowhere at LLNL where she could be placed without concern that she would be exposed to something that would trigger an allergic reaction. Ms. Kwei then advised the Complainant that Dr. Kaufman should consult with LLNL's HSD to address with greater specificity the restrictions Dr. Kaufman has proposed for the Complainant. Ms. Kwei's wrote a second letter to the Complainant on August 25, 1995. Between the two letters, Dr.

Kaufman had authorized the Complainant to return to any assignment in "customary, standard environs, devoid of exposure to heavy volumes of odors and gasses from sources listed." When the Complainant returned to work on August 9, 1995, however, she became ill after entering Building 415. Therefore, HSD issued another temporary work restriction prohibiting the Complainant from entering the building. In her second letter to the Complainant, Ms. Kwei advised the Complainant that she will be on leave without pay until September 17, 1995, because Ms. Vergino had decided that there were no assignments that she can perform outside Building 415 and that Trailer 3156 was no longer available. Ms. Kwei further advised that the Complainant should return to HSD for an evaluation of whether the work restrictions could be removed or would be continued. If the latter is the opinion of HSD, advised Ms. Kwei, LLNL will conduct an "accommodation review," which will include an exploration of alternative assignments at LLNL, and possible medical separation.

The record suggests that Mr. Goldman, with the concurrence of Ms. Vergino and the HSD, was the one who decided that the Complainant could no longer perform work outside Building 415. Tr. at 805-806. Both Goldman and Vergino had knowledge of the Complainant's past disclosures by July 1995.

Ms. Dibble and Ms. Kwei were two others who were administratively involved in the decision to medically separate the Complainant. Ms. Kwei did not testify so it is not clear whether she had knowledge of the Complainant's past disclosures. Ms. Dibble, however, knew about the Complainants disclosures by July 1995.

Notwithstanding the fact that some of the individuals involved in the decision to medically separate the Complainant from her job had actual knowledge of the Complainant's Part 708 filing, I find that there is no credible evidence of any nexus between the Complainant's protected disclosures and her termination.

Even if the Complainant had established by a preponderance of evidence that a relationship existed between her medical separation and her disclosures, there is clear and convincing evidence that LLNL medically separated the Complainant because her inability to work in Building 415 prevented her from performing the essential functions of her job. The Education Program was a team-intensive effort that required face-to-face interaction between employees in the groups, and between the employees and students in staff meetings, training programs, student workshops and program reviews. The record shows that the Education Program had no employees who telecommuted and no employees who did not have offices in Building 415. (15) The evidence indicates that due to the nature of the Complainant's job, she needed to be in proximity to her work files and support staff and to participate in staff meetings. She also needed to collaborate with her coworkers. Tr. at 498. In addition, testimonial evidence indicates that even if the Complainant did not need to perform her duties in Building 415, she was not suited to work in an isolated environment because of her past performance issues and attendance problems. *Id.* at 664-665.

There is also clear and convincing evidence that LLNL made extensive efforts to accommodate the Complainant prior to her termination. LLNL's HSD monitored the Complainant's health and issued multiple work restrictions to her. LLNL consulted their Hazards Control Division on two occasions and evaluated the work environment in Building in question. LLNL arranged for the Complainant to be evaluated by Dr. Terr in November 1995. It was Dr. Terr's opinion that the Complainant could never work in Building 415 without becoming "subjectively ill." Ex. 40 to the ROI.

Sometime in January 1996, Dr. Watts of LLNL's HSD met with the Complainant to discuss her ability to return to work. *See* LLNL Ex. 54; Tr. at 294-296. According to Dr. Watts' testimony, he obtained the Complainant's agreement that a permanent work restriction was appropriate given her circumstances. Tr. at 953-955. On January 29, 1996, Dr. Watts issued a permanent work restriction prohibiting the Complainant from entering Buildings 415 and 571. Ex. 41 to ROI. The reason stated on the work restriction is the following:

> Exposure to any of the following odorant compounds: paints, lacquers, varnishes, formalin, formaldehyde, glue products, pesticides, is likely to produce subjective symptoms that may

> preclude this employee from continued function in the workplace and therefore are to be avoided.

Id. On January 31, Ms. Vergino sent a memorandum to Robert Perko recommending that the Complainant be medically separated from her employment because of her permanent exclusion from Building 415. Ex. 44 to ROI. In accordance with LLNL's policies, LLNL requested that Gene Dent conduct a vocational rehabilitation review of the Complainant. Ex. 45 to ROI. On February 8, 1996, Dent sent the Complainant a certified letter requesting that she contact him to discuss vocational rehabilitation. The Complainant did not respond to the letter. On February 22, 1996, Perko sent a second certified letter to the Complainant informing her that she was being medically separated effective March 22, 1996. Ex. 49 to ROI. The letter informed the Complainant that she could appeal her medical separation. The Complainant did not appeal.

Finally, the record demonstrates that LLNL followed its policy and procedures regarding Medical Separation when it medically terminated the Complainant. *See* Ex. 56 to the ROI. Section K.VI. of LLNL's Personnel and Policies and Procedures Manual provided that "employees that become unable to perform the essential assigned functions fully, due to handicaps or other medical conditions, may be separated from employment." *Id.* LLNL's Manual also describes the vocational rehabilitation services provided to employees who cannot provide the essential functions of their positions, and the special consideration these employees enjoy for other opportunities at LLNL.

In the end, I find that LLNL has presented clear and convincing evidence that it would have medically discharged the Complainant in 1996 even had she not made disclosures about NPEPC in 1994 and 1995 or sent her letter to the Secretary of Energy in 1995. LLNL clearly had a legitimate business reason for medically separating the Complainant when, after providing accommodations to the Complainant for many months, it became clear that the Complainant could not work in Building 415 for the foreseeable future. In addition, LLNL followed its policies and procedures for Medical Separation when it determined that the Complainant could no longer perform her essential, assigned functions fully. Moreover, LLNL extended the Complainant the opportunity to explore other employment options at LLNL before her medical termination but the Complainant rebuffed LLNL's overtures.

B. Alleged Reprisals Stemming from the Complainant's Alleged Refusal to Participate

In July 2000, Hearing Officer Lazarus decided that two other possible protected disclosures or activities should be considered in this case and requested that the parties submit legal briefs addressing these issues.(16) Hearing Officer Lazarus also conducted a two-day supplemental hearing in the case that focused on the following issues:

> Whether the Complainant engaged in protected activity under Section 708.5(a)(3) by refusing to work in Building 415, and whether the Laboratory retaliated against the Complainant for engaging in this activity;
>
> Whether the Complainant made disclosures that were protected under Section 708 (a)(1) when she informed several DOE officials and Laboratory employees that she believed it was unsafe for her to enter certain buildings at the Laboratory, and whether the Laboratory retaliated against the Complainant for making these statements

1.Whether the Complainant engaged in protected activity under Section 708.5(a)(3) by refusing to work in Building 415, and whether the Laboratory retaliated against the Complainant for engaging in this activity?

Section 708.5(a)(3) of the original Part 708 regulations provided in relevant part that :

> (a) A DOE contractor covered by this part may not discharge . . . any employee because the employee . . .
>
> (3) refused to participate in an activity, policy, or practice when -
>
> (i) such participation-
>
> (B) causes the employee to have a reasonable apprehension of serious injury to the employee, other employees, or the public due to such participation, and the activity, policy, or practice causing the employee's apprehension of such injury -
>
> (1) is of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude that there is a *bona fide* danger of an accident, injury or serious impairment of health or safety resulting from participating in the activity, policy or practice; and
>
> (2) The employee is not required to participate in such dangerous activity, policy, or practice because of the nature of his or her employment responsibilities;
>
> (3) The employee, before refusing to participate in an activity, policy, or practice has sought from the contractor and has been unable to obtain a correction of the violation or dangerous activity, policy, or practice; and
>
> (4) The employee, within 30 days following such refusal, disclosures to an official of DOE, a member of Congress, or the contractor, information regarding the violation or dangerous activity, policy or practice, and explaining why he has refused to participate in the activity.

a. Applicability of § 708.5(a)(3) to the Facts in this Case

As an initial matter, I find that the regulatory provision cited above is inapplicable to the facts of this case. There is nothing in the preamble or the regulatory history to Part 708 that suggests the regulations were designed to protect employees with pre-existing disabilities or medical conditions who refuse to perform the job for which they were hired when their disability or medical condition becomes incompatible with a work environment that is considered safe and healthy under workplace guidelines. Rather, the regulations were designed to protect employees who had a reasonable belief that there was a bona fide danger inherent in the work site itself that may cause an accident, injury, or serious impairment of health and safety. While the Complainant appears to argue that the "dangerous condition" in Building 415 was the remodeled building with new carpets and paint, the evidence demonstrates that there was nothing inherently dangerous in Building 415 from an environmental standpoint. LLNL's Hazards Control Department conducted an industrial hygiene evaluation of the subject building in May 1995, two months after the new carpet had been installed in that building. The evaluation revealed that any airborne contaminants present in the building in question were at acceptable levels according to the published workplace guidelines and standards. There is no evidence in the record that any other employees working in Building 415 experienced health problems, including Ms. Vergino who testified that she suffers from asthma.

Even assuming arguendo that Part 708 is construed broadly to encompass the Complainant's situation, I find the Complainant's allegations to be devoid of merit for the following reasons.

b. Reasonableness of the Complainant's Apprehension

There are conflicting medical opinions in the record whether the Complainant suffered from allergies, whether her perceived allergies constituted a condition or a disease, whether her condition or disease had a subjective or objective basis, or whether the root problem stemmed from a multiple chemical sensitivity.

For purposes of this Decision, I find that the Complainant thought she suffered from some allergic condition that made it difficult or impossible for her to work in Building 415 while that building was undergoing renovation and while there remained a residue of paint or new carpet smell in the air. In my opinion, there is some question whether the Complainant's concerns about the alleged danger Building 415 posed to her health and safety were reasonable, or even made in good faith.

First, the Complainant's concerns about the danger Building 415 allegedly posed to her health and safety were initially based on her self-reported past exposure to new carpeting and paint fumes not in Building 415, but elsewhere. The record indicates that the Complainant was not candid with her physician, Dr. Kaufman, in mid-February 1996 when she asked him to provide a written statement to LLNL about the health ramifications of her entering Building 415. On February 16, 1995, the Complainant's physician, Dr. Kaufman, wrote a letter stating as follows:

> [The Complainant] is suffering with some acute respiratory problems made worse by the formaldehyde out-gassing from the carpeting in her present area. Can you please accommodate her needs by moving her work place to an area devoid of such noxious fumes?

LLNL Ex. 43. At the time Dr. Kaufman wrote the letter, he did not know that the Complainant had never entered Building 415, or that the new carpet in Building 415 did not contain formaldehyde. Tr. at 1159. At the hearing, Dr. Kaufman testified that he erroneously assumed formaldehyde out- gassing was the source of the Complainant's problem because the Complainant had told him "she'd been exposed to a room that [sp] there was a lot of new carpeting being put down." Tr. at 1110-1111. According to Dr. Kaufman, had he known on February 16, 1995 that the Complainant had not been exposed to new carpet, he would have looked for another cause of her illness. *Id.* at 1113. Dr. Kaufman stated that there was no question that she was ill, however, because when he examined the Complainant prior to writing the February 16, 1995 letter, he noted that the Complainant was "having a lot of difficulty getting over her underlying physical respiratory troubles . . . some nasal congestion, throat irritation, nasal discharge" *Id.* at 1110-1111.

It is clear from the record that the Complainant's symptoms as described by Dr. Kaufman were totally unrelated to any environmental element in Building 415 because at the time Dr. Kaufman saw the Complainant in mid February 1995, she had never been in Building 415. It is also clear to me that the Complainant was acting in bad faith when she misrepresented to her physician that she had experienced allergic symptoms from inhaling paint and carpet fumes when she either stated or implied that she had entered Building 415. Based on the record, it appears that LLNL provided accommodations to the Complainant based on the misinformation that the Complainant had communicated to Dr. Kaufman.

To be sure, the Complainant entered Building 415 on three occasions, February 21, 1995, August 9, 1995, and September 17, 1995, and repeatedly felt ill on each of those occasions. After the Complainant's first reported illness on February 21, 1995, the Complainant contacted Dr. Kaufman's office and on the advice of an office nurse stayed off work the next two days. It is significant, in my opinion, that no one examined the Complainant to determine whether anything in the workplace was causing or contributing to her pre-existing medical condition.

Then, in April 1995, LLNL asked Dr. Lichty to evaluate the Complainant to determine whether her current health complaints arose out of, or were caused or aggravated by, her employment with LLNL. Dr. Litchy concluded that while the Complainant has a life-long history of allergies, and daily fluctuating symptoms, there is insufficient objective evidence to confirm that an industrial illness or injury has occurred. Dr. Lichty also suggested that the Complainant is beset with strong underlying anxiety and would benefit from anxiety medications on an empirical basis to see if anxiety is magnifying her underlying allergic symptoms. It appears from the record that there is no objective evidence to support the Complainant's belief that something "dangerous" in Building 415 was negatively impacting her health and safety.

Further, Dr. Scott issued many of the temporary work restrictions to the Complainant based solely on the strength of the fears that Complainant voiced about entering Building 415, not on the fact that any

dangerous situation existed.

In August 1995, Dr. Kaufman wrote to Dr. Scott in an attempt "to provide some guidance to the Laboratory in determining how best to proceed in arranging [the Complainant's] work environment." In that letter, Dr. Kaufman noted that "all it took for [the Complainant] to recover from the noxious out gassing of some new carpeting when she became ill last spring was simply to enable her to achieve cessation of exposure to the out gassing of the new carpet, for as your company is aware, she had no respiratory problems when transferred to a new locale, i.e,. Trailer 3156." There could have been no objective evidence that out gassing from the carpet caused the Complainant's symptoms because no formaldehyde had been used to manufacture the carpet. Moreover, Dr. Kaufman testified that he was never able to determine that the source of the Complainant's problems was Building 415. Tr. at 1094.

Dr. Terr examined the Complainant in November 1995. He testified that he believes the pattern of symptoms exhibited by the Complainant is consistent with what many people experience under a state of anxiety. *Id.* at 1018. Dr. Terr further opined that the fact the Complainant entered Building 415 more than nine months after the carpet had been aired out and she still had problems indicates that her subjective belief that the building was making her sick would never be shaken. *Id.* at 1034. Terr concluded that while the Complainant actually believed that Building 415 was making her sick, her belief was unreasonable. *Id.* at 1077. According to Dr. Terr, there was simply no way of correcting this "irrational" situation.

On the basis of the foregoing, I find that the Complainant has not convinced me that a reasonable person, under the circumstances then confronting the Complainant, would have concluded that there was a *bona fide* danger of serious impairment of her health or safety resulting from her entering Building 415.

c. The Complainant Was Hired to Work in an Ordinary Office Environment

Under Section 708.5(a)(3)(i)(B)(2), an employee cannot bring a claim under Part 708 if the employee is required to participate in such dangerous activity, policy, or practice because of the nature of his or her employment responsibilities. This provision was intended to apply to situations where an employee was hired for the very purpose of working in dangerous conditions, such as cleaning up hazardous waste. In this case, the Complainant was hired to work in an ordinary work environment. LLNL has demonstrated that the exposure to airborne contaminants in Building 415 was not reasonably anticipated to approach or exceed published workplace standards and guidelines. Ex. 60 to the ROI. Hence, Building 415 can be accurately characterized as an "ordinary" office environment devoid of any health or safety hazards. Even though the Complainant believes that an ordinary work environment is "dangerous to her health and safety" because she thinks she is allergic to something in the workplace, her job responsibilities require her to work in that environment.

The Complainant also questions whether she needed to work in Building 415 to fulfill her work responsibilities. As discussed earlier in this Decision, however, LLNL has proven that it was essential for the Complainant to work in Building 415 with all the other Education Program employees. She needed to attend staff meetings, program reviews, and student workshops in that building. Moreover, the support staff was located in Building 415. Finally, the Complainant's poor performance and time and attendance irregularities required that she be under close supervision in Building 415. In the end, it seems reasonable under the circumstances that LLNL has the prerogative to determine what constitutes an "essential function" of employment at LLNL. In this case, it was an essential function of the Complainant's job that she work in Building 415 in close proximity to her colleagues in the Education Program.

Finally, it is clear to me from the record that the Complainant's focus during the time she refused to enter Building 415 was not on exposing a dangerous work environment but on obtaining an accommodation from LLNL to work alone in a trailer or alone at home. While LLNL attempted to accommodate the complainant by allowing her to work in Trailer 3156 until that situation not longer was feasible, it now appears based on the U.S. District Court's Decision that LLNL did not even have a legal obligation to accommodate the Complainant. *See* Order from the United States District Court for the Northern District

of California dated October 14, 1997 in the matter of *Benson v. Lawrence Livermore National Laboratory*.

Based on all the foregoing considerations, I find that the Complainant has failed to meet her burden of proving a claim under 10 C.F.R. § 708.5(a)(3).

2. Whether the Complainant made disclosures that were protected under Section 708 (a)(1) when she informed several DOE officials and Laboratory employees that she believed it was unsafe for her to enter certain buildings at the Laboratory, and whether the Laboratory retaliated against the Complainant for making these statements

The Complainant did not specifically articulate in any of her pleadings which of her statements regarding the safety of Building 415 rise to the level of "protected disclosures" under Part 708. Based on my review of the record, there are possibly two instances when the Complainant appears to have made disclosures that rise to the level of protected disclosures under Part 708. The first occurred in late January 1995 when the Complainant purportedly told Ms. Dibble that she had "life-threatening" reactions to "new carpet, paint fumes, windows painted close[d], and . . . asbestos." These statements were made in response to Dibble's announcement that the Education Department would be moving to Building 415. The second time when the Complainant stated her belief(17) that her entry into Building 415 would constitute a substantial and specific danger to her as an employee occurred when the Complainant wrote a letter to the Secretary of Energy dated September 10, 1995. In the letter, the Complainant claimed that LLNL had demanded that she work in an environment containing chemicals and toxins to which she is allergic and that LLNL was insisting that she work in Building 415 "even if it kills me." Ex. 7 to ROI.

Even though the managers who made the decision to medically separate the Complainant had actual knowledge that the Complainant had written to the Energy Secretary at the time they terminated the Complainant, there is no temporal proximity between the letter to the Secretary of Energy and the Complainant's termination. Moreover, even if I were to consider the Complainant's termination as part of an ongoing serious of reprisals, I could not conclude that the Complainant had met her burden in this case. Under the facts of this case, it is simply unreasonable for me to infer a nexus between any of the Complainant's protected disclosures and any act of reprisal claimed by the Complainant. Hence, it is my determination that the Complainant's disclosures in January and September 1995 regarding her belief that Building 415 was unsafe for her to work in were not a contributing factor in LLNL's decision to medically separate her from her employment in March 1996.

Assuming arguendo that the Complainant had established the requisite nexus between her disclosures and her termination, I would have found, for the reasons discussed in other parts of this Decision, that LLNL has provided clear and convincing evidence that the Complainant would have medically separated her anyway. LLNL has demonstrated clearly and convincingly that the Complainant, an employee with a history of performance and time and attendance problems, needed to work in Building 415 with her colleagues, and could not be accommodated elsewhere on site. Moreover, the Complainant bears some responsibility for her medical termination. She never responded to efforts by LLNL's vocational rehabilitation counselor to assist her in finding another assignment at LLNL. Had she done so, she may not have been medically separated from her employment.

It should also be noted that the Complainant was medically restricted from working in Building 415 for over a year before she was terminated. While the Complainant would have preferred to work at home or in Trailer 3156, for the reasons discussed earlier in this Decision, neither of these options were viable.

V. Summary

In conclusion, after carefully considering the voluminous record before me, I find that the Complainant has failed to meet her evidentiary burden in this case. Specifically, she has not proven by a preponderance of evidence that any of her Part 708 disclosures or activities were contributing factors to any of the alleged reprisals taken by LLNL against her, including her termination. Accordingly, it is my determination that the Complainant is not entitled to any relief.

It Is Therefore Ordered That:

(1) The Request for Relief filed by Janet K. Benson under 10 C.F.R. Part 708, OHA Case No. VWA-0044, be and hereby is denied.

(2) This is an Initial Agency Decision that shall become the Final Decision of the Department of Energy denying the complaint, unless a party files a notice of appeal within fifteen days after receipt of this Initial Agency Decision.

Ann S. Augustyn
Hearing Officer
Office of Hearings and Appeals

Date: May 22, 2002

(1) For purposes of this Decision, all references to LLNL will include UC and UC Regents.

(2) The DOE amended 10 C.F.R. 708 in an Interim Final Rule effective April 14, 1999. 64 Fed. Reg. 12,862 (March 15, 1999). The revised regulations provide that the procedures in the new Part 708 apply prospectively in any complaint pending on the effective date of the revisions, *i.e*, April 14, 1999. However, the substantive changes reflected in the revised regulations will not be applied in this case because to do so would affect the substantive rights of the parties. Therefore, this case will be adjudicated in accordance with the substantive standards set forth in the original version of Part 708. *See Linda D. Gass*, 27 DOE ¶ 87,525 (1999).

(3) During the pendency of the investigation, OCEP was abolished and its functions transferred to the Office of Inspections in the DOE's Office of Inspector General.

(4) The Complainant also utilized other fora to voice her complaints against LLNL and her supervisors for their actions. She first filed an internal grievance against her LLNL supervisor on February 7, 1994, alleging race discrimination. Complaint's Ex. 51; Ex. 1 to the ROI at 9. LLNL's Staff Relations Office denied the grievance on February 11, 1994. *Id.*; Ex. 1 to the ROI at 15. The Complainant appealed the denial to UC on February 18, 1994. *Ex. 1 to ROI at 16.* UC denied the appeal on March 1, 1994. *Id. at 17.*

Within two weeks, the Complainant filed a race discrimination complaint against LLNL with the Equal Employment Opportunity Commission (EEOC). *Id.* Before the EEOC had ruled on the Complainant's complaint, the Complainant also filed internal complaints on May 5, 1994, September 21, 1994, and October 12, 1994. *Id.* On May 5, 1995, the EEOC issued a determination finding no merit to the Complainant's complaint. LLNL's April 12, 2000 Post-Hearing Brief at 28, Ex. 55 to the ROI.

On July 28, 1995, the Complainant filed a Complaint for Employment Discrimination with the United States District Court for the Northern District of California, alleging wrongful termination by LLNL, race discrimination, and failure to accommodate her disability. *Id.* On March 6, 1996, the Complainant filed a complaint in State Court alleging, *inter alia*, discrimination based on physical disability and unlawful discrimination in violation of the Americans with Disabilities Act (ADA). LLNL removed the State Court action to federal court. The two actions were subsequently consolidated in the United States District Court for the Northern District of California. The District Court awarded summary judgment in favor on LLNL on October 14, 1997, finding that the Complainant's "ADA claim fails as a matter of law because she does not have a ?disability' as defined by the statute." *See* Attachment 3 to LLNL's April 12, 2000 Post

Hearing Brief.

(5) On August 28, 2001, Hearing Officer Lazarus convened a telephone conference call with the parties at which she sought permission to appoint a technical advisor on the issue of multiple chemical sensitivity. See Record of Telephone Conversation among Hearing Officer Lazarus; Aileen Anderson, Counsel for Janet Benson, and Gabriella Odell, Counsel for LLNL (August 28, 2001). The Complainant raised no objection to Hearing Officer Lazarus' request but LLNL objected to any consultation between Hearing Officer Lazarus and the technical advisor identified by the Hearing Officer. See Letter from Aileen Anderson, Counsel for Janet Benson to the Hearing Officer (August 29, 2001); Letter from Gabriella Odell, Counsel for LLNL to Hearing Officer Lazarus (August 29, 2001). Hearing Officer Lazarus raised the matter again on September 21, 2001 in a transcribed telephone status call. See Transcript of September 21, 2001 Status Teleconference (September 2001 Tr.). Ultimately, Hearing Officer Lazarus decided to rest on the record without consulting with a technical advisor. September 2001 Tr. at 8-9.

(6) "In a Memorandum dated June 21, 1993, the NSF Program Director for the Research Careers for Minority Scholars Program, Dr. William E. McHenry, stated that the co-PIs of the NPEPC "have not coordinated their activities to the extent necessary to institutionalize the activities of this project." Ex. 54 to the ROI at 8. According to Dr. McHenry's Memorandum, because of the poor communications between the parties involved in the project, the co-PIs were told to address the issue of leadership in the project before NSF would consider funding for the third year of the program. *Id.* The Provost and Vice President for Academic Affairs at CSU-H and the LLNL Director of Education each recommended replacing the Complainant as co-PI. *Id.*

(7) On August 21, 1993, the NSF approved the modifications to the NPEPC that had been requested by the two institutions, including the replacement of the Complainant as co-PI with Ms. Vergino. Ex. 54 to the ROI at 6.

(8) The Complainant testified that she learned "four to six weeks after July 23, 1993," that NSF had approved the modification to the NPEPC. Tr. at 233.

(9) On the date that Dr. Kaufman wrote the letter, the Complainant was still working in The Almond School building, an old building that did not have new carpeting.

(10) When Young submitted input into the Complainant's performance appraisal for the period September 1994 to June 1995, he rated her as "marginal." Complainant's Ex. 45.

(11) In the Interlocutory Order issued on November 1, 2000 in this case, Hearing Officer Lazarus held that no acts of reprisal that allegedly occurred prior to September 23, 1994, would be adjudicated. The rationale for this ruling is that LLNL cannot be held retroactively liable for acts of reprisal occurring before September 23, 1994, the date it agreed to become contractually bound by Part 708. Since Hearing Officer Lazarus did not specifically enumerate the alleged acts of reprisal that cannot be considered as a matter of law in this case, I am setting them forth below to clarify the record. The purported acts of reprisals that will not be considered in this Decision are the following: (1) LLNL's removal of the Complainant as co-PI for the NPEPC; (2) LLNL's alleged denial of the Complainant's request for a transfer or reassignment sometime between 1993 and July 1993; (3) LLNL's alleged assignment of clerical duties to the Complainant at sometime prior to September 23, 1994; (4) LLNL's alleged harassment of the Complainant at any time prior to September 23, 1994; and (5) LLNL's alleged disparate treatment of the Complainant with regard to time and attendance records that allegedly occurred prior to September 23, 1994.

(12) The Complainant argues in one of her briefs that Ms. Vergino had knowledge of her past disclosures because she was in regular contact with two people in LLNL's Human Resources Department who knew about the Complainant's Part 708 filing. May 16, 2000 Brief at 17. Those two persons are identified as Mr. Smith and Mr. Cain. However, the Complainant did not produce either Mr. Smith or Mr. Cain to support her position on this matter. Nor did the Complainant elicit testimony at the hearing from Ms. Vergino indicating that she had acquired knowledge from Messrs. Smith or Cain about the disclosures at the time

she decided to reassign the Complainant to the Apprentice Program. Moreover, to the extent the Complainant implies in her brief that Mr. Young had knowledge of her past disclosures and somehow orchestrated her assignment to the Apprentice Program by suggesting the Complainant's reassignment to his program, I find that there is no evidence to support this implication. The Complainant did not call Mr. Young as a witness so there is no evidence on this matter.

(13) To the extent that either Ms. Dibble or Mr. Young had input into the performance appraisal in question, I find nothing in the record to suggest that either of them had actual or constructive knowledge of the disclosures in question.

(14) To the extent the Complainant is arguing that LLNL failed to accommodate her allergies because she had made disclosures about the NPEPC, I find no merit to this contention. The record documents the numerous attempts that LLNL took to provide accommodations for the Complainant in accordance with Section M.IV. of its Personnel Policies and Procedures Manual. *See* Ex. 56 to the ROI.

(15) The Complainant pointed out that Glenn Young had his office in Building 571. However, LLNL explained that Mr. Young was a full time employee who worked part-time for the Education Program and part time for another LLNL organization that housed his office.

(16) Hearing Officer Lazarus also asked the parties to address a third matter, i.e., whether the Complainant was time- barred from raising the two issues because she had failed to raise them in the preceding six years that her complaint had been pending. On November 1, 2000, the Hearing Officer, over the objections of LLNL, ruled that OHA could entertain the two new issues, finding that the Complainant was not time-barred from raising the issues at this late date.

(17) It is difficult for me to determine from the record whether the Complainant made these statements in good faith. Even though there appears to be no objective evidence to support the Complainant's fear that something in the environment in Building 415 would make her gravely ill, for purposes of this Decision I have concluded that the Complainant subjectively believed that she would become ill if she entered Building 415. I need not address whether the Complainant's subjective belief was reasonable under the circumstances. The original version of the Part 708 regulations only required that a disclosure be made in good faith.

Case Nos. VWC-0001 and VWC-0002

April 27, 1998

DECISION AND ORDER OF

THE DEPARTMENT OF ENERGY

Agency Decision

Names of Petitioners: Daniel L. Holsinger

K-Ray Security, Inc.

Date of Filing: January 13, 1997

Case Numbers: VWC-0001

VWC-0002

This case involves a complaint filed by Daniel Holsinger (Holsinger) under the Department of Energy (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. The matter comes before me pursuant to a decision by the Deputy Secretary of Energy. In a December 17, 1996 Decision Reversing and Remanding Initial Agency Decision, the Deputy Secretary instructed the Office of Hearings and Appeals (OHA) to conduct a full assessment of the equities involved concerning the reinstatement of Holsinger to a position of security guard at the DOE Federal Energy Technology Center (FETC), located in Morgantown, West Virginia. (1) Following that directive, I have held a hearing to take evidence and have considered the issues raised by the Deputy Secretary in light of that evidence. I am issuing a new Agency Decision set out below.

I. Background

The procedural and factual background of this case is fully set forth in Daniel L. Holsinger, 25 DOE ¶ 87,503 (1996)(Holsinger). I will not reiterate all the details of this case here. For purposes of this Decision, the relevant facts are as follows.

In January 1990, Mr. Holsinger began to work as a part time security officer for the security contractor at FETC. He was retained in that status when Watkins Security Agency (WSA) began

performance of the contract in March 1990.

On October 7, 1994, Holsinger filed a complaint pursuant to Part 708 with the Office of Contractor Employee Protection (OCEP). In the complaint Holsinger alleged that reprisals were taken against him by management officials of WSA as a consequence of his making disclosures concerning the possible theft of government property by a member of the WSA security force. According to Holsinger, the reprisals included suspensions and his ultimate dismissal by WSA.

After conducting an investigation into the matters raised by Holsinger, OCEP issued a proposed disposition, concluding that Holsinger had shown by a preponderance of evidence that he had written an anonymous letter to the Director of DOE-FETC stating that a member of the guard force had removed buckets covered with rags from the facility. OCEP found that this letter constituted a protected disclosure

under Part 708. OCEP also found that Holsinger had shown by a preponderance of evidence that a three-day suspension that he received and his eventual dismissal by WSA occurred as a result of the protected disclosure. Finally, OCEP concluded that WSA failed to establish by clear and convincing evidence that the adverse personnel actions would have occurred absent Holsinger's protected disclosure. The relief recommended by OCEP included a proposal that Holsinger be awarded back pay by WSA, and that K-Ray Security, Inc. (K-Ray), the current FETC security contractor, reinstate Holsinger.

A hearing on the Holsinger complaint, conducted by an OHA hearing officer, was convened at the request of Holsinger, WSA and K-Ray. However, at the hearing it was announced that Holsinger and WSA had settled all issues between them, and WSA was ultimately dismissed from the proceeding. Thus, at the hearing, the only issues raised concerned whether K-Ray should be required to reinstate Holsinger. In an Opinion issued on May 16, 1996, the OHA hearing officer determined that K-Ray should be required to do so. Holsinger, 25 DOE at 89,020.

K-Ray appealed that determination to the Deputy Secretary of Energy. In his opinion regarding that appeal, the Deputy Secretary considered K-Ray's position that reinstatement was not an appropriate remedy, since the firm was not involved in any of the WSA adverse personnel actions. The Deputy Secretary agreed with the OHA hearing officer that reinstatement, even by a successor employer, may be ordered if the circumstances warrant it. However, he found that the OHA hearing officer failed to conduct a full assessment of the equities involved in the reinstatement of Holsinger. Based on testimony at the hearing, the Deputy Secretary expressed a concern that reinstatement might cause substantial hardship to both K-Ray and K-Ray employees who might have to be terminated if Holsinger were reinstated. Accordingly, the Deputy Secretary remanded this matter to the OHA for a full assessment of the equities involved in connection with Holsinger's reinstatement.

II. Hearing of September 17, 1997

After reviewing the complete record in this matter, I determined that it would be useful to pursue the important issues raised by the Deputy Secretary's Opinion through further fact-finding, conducted by means of an evidentiary hearing. I therefore convened a hearing at the FETC facility on September 17, 1997. The purpose of the hearing was to take testimony on the issue of the impact on K-Ray's operations of reinstating Holsinger.

Eleven witnesses testified at the hearing. They included Randolph Cooper, the DOE contracting officer, whose responsibility it is to solicit, negotiate and administer the security contracts at FETC Morgantown. Deborah Purkey, the contracting officer's representative (COR), also testified. As liaison between the DOE and K-Ray, she is responsible for overseeing the technical aspects of the performance of the contract. Testimony was given by five K- Ray security guards: John Kisner, Linda Lawson, Robert Bryan, Scott Lowe and Kent Garvin, as well as by the K-Ray security guard captain, Fred Munz. Richard Panico gave testimony as Holsinger's supervisor in connection with Holsinger's full time position as a security guard at the University of West Virginia. Diane Lewis, contract administrator for K-Ray testified, as did Holsinger himself.

At the hearing K-Ray continued to oppose the reinstatement of Holsinger. In this regard, the firm has not altered the position it adopted before the prior Hearing Officer in this case. K-Ray maintained that since it had no role in any of the retaliatory actions taken by WSA, it is inequitable to require it to bear any responsibility in redressing the harm caused to Holsinger. It also asserted that reinstatement would cause a hardship to the firm and its FETC guards.

In his testimony at the hearing, Holsinger clarified his position regarding reinstatement. He indicated that he is available to work at FETC on the midnight shift every night of the week and fully available every third week on his days off, Friday, Saturday, Sunday and Monday. On the weeks that he did not have weekends off, he would be available on Tuesday and Wednesday. He stated that he would accept

reinstatement on an "as needed basis," such as in cases where other guards were sick, on vacation or for other reasons could not appear for their shifts. Transcript of September 17, 1997 Hearing (hereinafter Tr.) at 213. He further testified that he would be willing to accept a midnight shift on a regular basis for one or two nights a week. Tr. at 198.

III. Analysis

As an initial matter, I am not persuaded by K-Ray's legal position in this proceeding that it should be relieved of all obligations with respect to Holsinger because it had no relationship to WSA and because it merely assumed the security contract that was formerly performed by WSA. As the Deputy Secretary stated in his Opinion, reinstatement of a whistleblower, even by a successor employer, may be ordered if the circumstances warrant it. 10 C.F.R. § 708.10(c)(3). See Boeing Petroleum Services, Inc.; Dyn McDermot Petroleum Operations Co., 24 DOE ¶ 87,501 (1994)(Boeing). As I stated above, our endeavor here is to determine if the circumstances warrant such reinstatement in this case.

Moreover, as a general matter, K-Ray's overall position here does not withstand close scrutiny. The K-Ray contract currently in effect specifically provides at Part II, Section I.118 that K-Ray shall comply with the requirements of the DOE Contractor Employee Protection Program set forth at 10 C.F.R. Part 708. Thus, K-Ray was clearly on notice that pursuant to the terms of its agreement with the DOE, it would be subject to all of the requirements of Part 708. These regulations provide that the DOE may direct contractor firms to take actions necessary to restore to a prior position an employee who has been adversely affected by improper acts of reprisal. 10 C.F.R. § 708.11(c). Among such actions is the reinstatement by a subsequent contractor, if such reinstatement is necessary to restore the employee to the position he would otherwise have occupied absent the acts of reprisal by a former contractor. See Boeing, 24 DOE at 89,007.

It is true that a new DOE contractor may not have actual knowledge that the responsibilities it assumes by agreeing to be bound by the provisions of Part 708 include having to reinstate an employee of a previous contractor. However, the importance to the DOE of the goals of Part 708, and the protection to employees it provides, have been stated frequently, and reaffirmed recently. 63 Fed. Reg. 374 (January 5, 1998). Moreover, in the typical case, any possible unfairness to the new contractor can be mitigated by allowing it to charge the DOE for any additional costs associated with rehiring the employee.

The record indicates that it is highly probable that if Holsinger still had been employed by WSA at the time that K-Ray took over the contract, he would have been re-hired as a routine matter, along with all the other guards at that time. Transcript of February 28, 1996 Hearing at 76-77. I do not believe that it would be equitable to excuse K-Ray from its contractual duties under Part 708 simply because it had no connection with WSA. In fact, the unfairness runs the other way. If Holsinger were to miss out on the opportunity to continue to work as a guard at the FETC facility simply because the prohibited reprisals, including his dismissal, occurred while he worked for the previous contractor, this would be inequitable to him and substantially weaken the protections offered by the Part 708 Contractor Employee Protection Program. By entering into the contract with the DOE to provide security guard services, K-Ray implicitly and explicitly agreed to participate in that program. Absent some unusual inequity or other serious reason to excuse it from participation, I am not inclined to except it from the program in this case simply because it is the successor contractor.

In this regard, during the hearing, K-Ray appeared to argue that it is a small enterprise, with only 25 employees working in the security area. K-Ray drew our attention to what it believes would be inevitably unfair and disruptive effects if Holsinger were rehired even for as little as 16 hours per week. Tr. at 307-310. K-Ray seems to contend that in light of these factors, and as a small contractor operation, it should not be saddled with the burden of rehiring a whistleblower. See, e.g., Tr. at 315-317.

We cannot accept that position, since the Department has already rejected it. An option to include a small size exception, or a minimum threshold for subjecting contractors to the requirements of the Contractor

Employee Protection Program was available to the Department in 1992, when it promulgated the final rule. That rule, as set forth in Part 708, does not include a small size exception, and these regulations cover all DOE contractors, large and small.

K-Ray next argues that in this case it should be excepted from the rule, because it would be unfair to the firm to require it to reinstate Holsinger in this case. K-Ray cites the following specific inequities as a basis for such an exception: (i) it claims that reinstatement of Holsinger will place an undue hardship on K-Ray's employees at the FETC site; (ii) it contends that reinstatement would cause financial hardship to the firm; and (iii) it maintains that reinstatement will create undue burdens in scheduling work shifts for Holsinger. After fully exploring each of these claims at the hearing, I do not find them to be supported by the record in this case.

A. Hardship to K-Ray Employees

K-Ray claims that reinstating Holsinger will hurt its other employees in several ways. The firm contends that if Holsinger is reinstated, it will be forced to terminate another employee, or reduce the hours of other members of the guard force. This claim is not borne out by testimony at the hearing. Mr. Cooper, the senior DOE contracting officer, clearly indicated that there is no DOE requirement limiting the number of employees that K-Ray may use to fulfill its obligation to supply security services under its contract with the DOE. Tr. at 94-5. See also testimony of Deborah Purkey, Tr. at 32. Accordingly, K-Ray would not be automatically required to terminate another employee upon reinstating Holsinger.

K-Ray argues however, that in order to provide Holsinger with hours as a security guard, it would necessarily have to take those hours from another guard or guards and this would mean either termination of those guards or a reduction in their normal hours. Again, K- Ray's assumption is not supported by the record. At the hearing there was considerable testimony to the effect that schedules of security guards were regularly adjusted when other guards were on vacation, took sick leave or for personal reasons could not appear for their regularly scheduled shifts. Tr. at 109, 138-9, 145, 159, 162, 175, 185-189.

In this regard, K-Ray submitted work schedules for its second quarter of 1997. These schedules show a significant number of regularly occurring vacation hours, sick leave and other leave requiring adjustment of the preset guard schedules. The testimony and the schedules indicate that there are a number of hours of available time that Holsinger could be offered without affecting the preset work schedules of any guards. As indicated above, Holsinger testified that he is willing to work on an "as needed" basis. He is available on all midnight shifts. Further he has a number of full days each week that he is free to work at FETC. Tr. at 191. Thus, K-Ray could certainly offer Holsinger the opportunity to work shifts in place of employees who cannot work their scheduled hours. This would not adversely affect the regular schedules of other FETC security guards.

There was some testimony by Ms. Lewis, contract administrator of K- Ray, that there are two part time workers who are particularly willing to work extra hours to fill in for security guards on vacation or sick leave. Tr. at 292. Thus, it is possible that offering Holsinger the shifts of employees who are on vacation or sick leave could reduce the extra time now made available to these two part-time guards. I recognize that these two employees might appreciate this extra time and accompanying compensation. However, these two part-time employees were hired after K-Ray assumed the security contract in June of 1995. Tr. at 274-77. Therefore, any "right" to additional overtime that they may have is certainly subordinate to that of Holsinger, who had worked previously and should be viewed as a pre-existing employee.

Moreover, it does not appear that these two new employees were hired with any promise or expectation of receiving these extra shifts. They were given no guarantee as to the number of hours they would be assigned to work. Tr. at 276. On the other hand, Holsinger clearly has important interests under Part 708 that must be recognized and protected. The fact that two or more part-time employees might in some instances not receive all the extra shift duty that could conceivably become available does not in my opinion overcome Holsinger's interests.

K-Ray also argues that reinstating Holsinger would adversely affect the morale of other employees who would have to work with him. K- Ray believes that Holsinger was not well-liked or respected by other K-Ray employees, and that they would be unhappy if they had to work with him. Although there is some evidence supporting this argument, on balance, the record as a whole does not support this view.

At the hearing six security guards testified about their views of Holsinger. Captain Munz believed that improvement was needed in Mr. Holsinger's performance. Tr. at 170. He thought that Holsinger used the telephone excessively while on the job in 1994. Holsinger's inappropriate use of the telephone was the subject of earlier discipline. However, this issue is now well in the past and should certainly not create an overall problem for the entire work force.

Captain Munz also testified that Holsinger's overall reputation was that he did not "fulfill his duties." Tr. at 172. However, Captain Munz offered no specifics of why rehiring Holsinger would have a negative effect, or what duties he did not fulfill. This general testimony was not particularly convincing, and testimony by other guards did not bear out Captain Munz' view.

For example, Officer Kisner stated that for the most part Holsinger was liked by other guards. He had no opinion on the overall effect on morale if Holsinger were rehired. Tr. at 115. He also pointed out that only 9 out of the current work force of 12 have met Holsinger, since three employees have been hired after Holsinger's termination.

Officer Lawson stated that more than half of the other officers always liked Holsinger, and that she would not have any problem if he were reinstated. Tr. at 140. She indicated that "a couple" of other officers did not like him and that reinstatement could pose a problem for those individuals. Tr. at 141. She further testified that she did not have an opinion about the effect on general morale if Holsinger were reinstated. Tr. at 140. Officer Bryan stated that he had "never had any trouble" with Holsinger. Tr. at 144.

Officer Lowe's testimony was more hesitant and ambiguous. He testified that Holsinger got along with some people, and did not get along with others. He said that he had heard from other guards that Holsinger was "not performing up to standard." Tr. at 224. He did not indicate who these employees were or provide any details on this point. He stated that morale would not be as high if Holsinger were reinstated. However, when asked if Holsinger's reinstatement would "drive a wedge between the work force," Officer Lowe testified: "I can't really say. I'm not sure." Office Lowe did not indicate that he personally would have any problem working with Holsinger, and, in fact, had had very little contact with him. Tr. at 228. In his most straightforward statement on the issue, Officer Lowe indicated that he would be troubled by Holsinger's reinstatement if it adversely affected the number of hours he worked or caused a change in his own schedule. Tr. at 226.

Officer Garvin testified that Holsinger's reputation was that "he did his job as needed." Tr. at 232. He was not aware of any personal conflicts that Holsinger may have had. He stated that Holsinger's reinstatement would cause difficulty for him only if his own hours were reduced or his work days changed. Tr. at 233.

From this testimony it was evident to me that reinstatement of Holsinger in and of itself would not create any unusual or wide- spread morale problem for the current guard staff. Of the nine individuals in the guard force who know Holsinger, six testified at the hearing. Only one of those individuals, Captain Munz, stated that he personally thought Holsinger did not fulfill his responsibilities, although he did not state that he could not work with him. Officer Lowe could provide only vague evidence of a hearsay nature on this point. Although questioned on this point, neither Captain Munz nor Officer Lowe could indicate in any detail why or how Holsinger's reinstatement could cause a morale problem. Thus, I was not especially convinced by their testimony, particularly in light of the testimony of other members of the security force who indicated that they did not think that there would be a problem.

Apart from Captain Munz, the five security guards who testified were themselves either neutral with respect to working with Holsinger, or would not mind working with him. Thus, there are at most three

other guards, who did not testify, who might not wish to work with Holsinger. This does not seem to be a major obstacle, even assuming that their testimony on this issue would be adverse to Holsinger. Moreover, in any work force there will be some individuals who do not get along with each other. This, in and of itself, is not a basis for not reinstating Holsinger. In any event, there was no convincing testimony to the effect that a force-wide morale problem would be created if Holsinger were reinstated.

The only problem specifically raised by the guards and K-Ray's Ms. Lewis was a fear that Holsinger's reinstatement might cause significant changes in the guards' work schedules. Tr. at 259, 261, 263. This is a completely understandable concern. K-Ray is relatively small, employing about 25 security guards. Tr. at 248. Only twelve guards are assigned to the FETC facility. Tr. at 284. Accordingly, adding or reinstating an employee is not as straightforward or simple as it would be with a much larger entity. Nevertheless, I am able to ensure that no changes in regular work schedules occur. Given the factual setting, I can order a limited reinstatement that will alleviate their concerns. Such a reinstatement plan, in which Holsinger would be called to service on an as-needed basis, should not create any hardship on any current member of the guard force, since no guard's regularly- scheduled hours will be shifted or reduced. I therefore conclude that the record does not support K-Ray's claim that the reinstatement of Holsinger would necessarily cause any overall morale problem for the rest of the K-Ray guard force.

B. Financial Hardship to K-Ray

K-Ray further argues that if it were required to reinstate Holsinger it would be subjected to a financial hardship. The record in this case provides no support for this allegation. According to testimony at the hearing, there are two base pay rates for security guards at FETC. Newly hired guards receive $6.24 per hour. Those who were formerly guards with WSA, and are thus longer term employees, receive $10.92 per hour. K-Ray Hearing Exhibit 1 (hereinafter Exh. 1). Officers in the K-Ray guard force at FETC (e.g. a captain) are paid somewhat more. Tr. at 252. Overtime is paid at the rate of one and one half times a guard's regular rate. Tr. at 77.

According to Exh. 1, which was presented at the hearing, K-Ray would incur additional salary and other related expenses of approximately $4,500, if it were required to reinstate Holsinger.(2) However, this figure is based on several unsupported assumptions. First, K-Ray presumes that if it reinstated Holsinger at its long- term guard hourly rate of $10.92 per hour, it would necessarily be replacing a less costly short-term employee whose pay rate is $6.24 per hour. K-Ray therefore calculates that it would incur additional costs of $4.68 an hour by reinstating Holsinger.

As a general rule, in making substitutions for guards who are on vacation or sick leave, K-Ray usually turns to its part time employees. K-Ray currently has five such employees, only two of whom are paid at the lower rate. Thus, if Holsinger were reinstated and, for example, asked to substitute for an employee who was on vacation, had called in sick or for some other reason was unable to appear for his shift, it is not at all certain that he would be called instead of one of the two lower paid part-time guards. He might well take the place of one of the three higher- paid part-time guards, at no additional cost to K-Ray. (3)

Moreover, in reaching its $4,500 lost revenue figure, K-Ray has also assumed that Holsinger would be reinstated at the rate of 16 hours per week for 52 weeks per year. As discussed above, Holsinger is not necessarily requesting this level of re- employment. He has indicated that he would be satisfied with being called to serve on an as needed basis. Tr. at 198-99.

Further, K-Ray's current contract will expire on May 31, 1998. The firm would thus not be able to employ Holsinger for 52 weeks before the expiration of its current contract. According to the prior record in this case, K-Ray took over the WSA contract in June 1995. Report of Investigation and Proposed Disposition at 2. The contract has a one-year base and four one year options. Tr. at 51. Thus, there is only approximately one month remaining on the current K-Ray one year option. Provided there is sufficient time between the issuance of this Decision and the May 31 contract expiration date, K-Ray can certainly include in its next one year option proposal any increased costs attributable to reinstating Holsinger. Tr. at

128. In any event, at this time there is no evidence that the additional salary cost projections for reinstatement of Holsinger would approach $4,500.

I have calculated a more realistic projection of K-Ray's possible increased salary costs as follows. If K-Ray provided Holsinger with one eight-hour shift for four weeks, through the end of the current contract option of May 31, 1998, its total salary outlay for him would be $349.44 (4 weeks x 8 hours x $10.92 = $349.44).(4) The additional hourly cost to K-Ray of employing Holsinger, rather than a lower cost guard would be $4.68 ($10.92-$6.24 = $4.68). Even assuming that all of Holsinger's hours would have been performed by a guard at the lower salary rate, an assumption that, as discussed above, would in all likelihood overstate K-Ray's costs, the total additional salary attributable to reinstating Holsinger would be $149.76 (4 x 8 x $4.68 = $149.76).

Moreover, the actual percentage increase in its costs that K-Ray is likely to experience as a result of reinstating Holsinger is minimal. On July 31, 1997, K-Ray submitted sample rosters showing work schedules for its FETC guards for the second quarter of 1997. I have computed an approximate total K-Ray salary cost for a typical week using the roster for the week of June 22. The roster shows that there are three eight-hour shifts each day. In that week, there were between two and four guards on each shift, for a total of 48 guard shifts, or a total of 384 guard hours (48 x 8= 384). In that same week there was only one guard paid at the lower rate, and this guard worked a total of 40 hours. (5) In this week there were 344 hours paid at the higher rate (384-40), for a total of $3,756 (344 x $10.92), and 40 hours paid at the lower rate for a total of $250 (40 hours x $6.24) . Thus, in this week, K-Ray paid total wages of approximately $4,006 ($3,756 + $250 = $4,006). If K-Ray were to reinstate Holsinger for one shift per week, the additional cost in salary to pay Holsinger, rather than a lower cost guard, would be $37 ($4.68 x 8 = $37). This is less than one percent of its total salary cost in a week, and an amount that certainly appears to be a most minimal increase.

There has been no showing that this additional cost level would place an excessive burden on K-Ray. Nevertheless, if upon reviewing its salary outlays after reinstating Holsinger, K-Ray believes that it is experiencing an unmanageable level of increased labor costs due to that reinstatement, it has a remedy available to it. K-Ray may certainly request that Mr. Cooper and the DOE provide relief by adjusting the contract. Tr. at 132. Mr. Cooper, the DOE contracting officer, should consider that type of request in light of the fact that reinstatement of Holsinger furthers the goals of Part 708.

K-Ray also claims that it would experience additional costs of approximately $1,800 associated with reinstatement of Holsinger. These are costs attributable to uniform expenses, and additional training. These costs are not inconsiderable. Some of the costs, such as uniforms and training for newly hired employees, appear to be start-up costs that would be incurred with hiring any new employee. Other costs represent expenses for ongoing training that all K-Ray guards would have to undergo. According to Mr. Cooper, K-Ray could certainly include these extra costs in its option proposal for next year. Tr. at 128. Further, as Mr. Cooper testified, K-Ray's contract for the current year would in all likelihood already include reimbursement for items such as training for new employees. Tr. at 68-9. Thus, I cannot conclude that the $543 uniform cost and the $1300 in training costs could not ultimately be recouped by K-Ray, or that these amounts have not already been included in its current operating costs.

In this regard, I note that since Holsinger's termination, K-Ray has hired five new part-time guards. Tr. at 110. Several of those new guards were employed only briefly. Tr. at 110, 256. K-Ray certainly incurred training and uniform costs in connection with these hirings. Nevertheless, K-Ray has not appeared to contend that the training and uniform costs associated with hiring those additional personnel, even for brief periods, resulted in any hardship to it. However, if the up-front training and uniform costs prove to be an unusual burden on its operations, the firm could, as I indicated above, certainly apply to Mr. Cooper or to the DOE for relief.

C. Scheduling Burdens

K-Ray also maintains that trying to include Holsinger in its current guard operations would create unusual and significant scheduling difficulties. I do not believe that this concern is borne out by the testimony at the hearing. Holsinger's testimony is that he is regularly available only for a K-Ray nighttime shift, which runs from midnight to 8 a.m. K-Ray's assertion of unusual scheduling difficulty is based on its assumption that it would be required to provide Holsinger with a regular two-day a week nighttime shift.

I do not foresee imposing this requirement on K-Ray. As I stated above, the firm would be required only to offer Holsinger fill-in time on an as needed basis. Holsinger could present K-Ray each month with a schedule showing his hours and days of availability. K-Ray will be required to offer Holsinger a minimum of two shifts per week, which become available due to vacation, sick leave, or other employee leave, and which coincide with Holsinger's own available hours. (6) However, the firm will not be required to employ Holsinger for more than one shift per week. I see no reason that this procedure should present any unusual or significant difficulties to the firm. In fact, the availability of an additional part-time guard to fill in on an as-needed basis should provide additional flexibility to the firm, and lessen the possibility of expensive overtime pay.

D. Holsinger's Disclosure

In his remand determination, the Deputy Secretary also directed the Office of Hearings and Appeals to give consideration to an additional issue. That issue involves the underlying dispute between Holsinger and WSA. As the Deputy Secretary pointed out, due to the settlement between WSA and Holsinger, the OHA was prevented from reviewing the merits of that underlying dispute. However, the Deputy Secretary's Decision, citing Universities Research Association (LWZ-0023), 24 DOE ¶ 87,514 (1995), requested that the OHA make an "assessment as to whether the nature of the disagreement evidences the type of disclosure of mismanagement that the regulation was designed to protect,. . .granting appropriate deference to traditional management prerogatives needed to conduct an organization through teamwork." Id. at 89,065.

In the Universities Research Association case, the disclosure involved an allegation of mismanagement of a laboratory hypercube computer. The whistleblower was dissatisfied with the general procedures adopted by the group leader who controlled scheduling of hypercube users. Universities Research Association (LWA-0003), 23 DOE ¶ 87,506 (1994). Thus, the disclosure in this case involved a pure management issue.

The instant case is quite different. It encompasses two types of disclosures involved in a single incident. First, according to the record, Holsinger revealed in an anonymous letter to the DOE that stealing at a DOE facility had taken place. This constitutes a protected disclosure under 10 C.F.R. § 708.5(a)(1)(i). That provision protects employees who disclose a violation of any law, rule or regulation. Clearly, Holsinger's disclosure of what he reasonably believed to be theft of DOE property fell within the purview of that regulation. Tr. at 211. He testified that as a security guard whose job it was to enforce the law, he was required to report information regarding a theft, and it would be against the law for him not to do so. Tr. at 212. In this respect, then, Holsinger's disclosure was unlike that involved in the Universities Research Association case.

The other aspect of Holsinger's disclosure was in the nature of a disclosure of alleged mismanagement. Holsinger asserted that WSA, the contractor at FETC that employed him, had not acted upon the earlier revelations of theft made by WSA employees. With respect to this aspect of the Holsinger disclosure, I agree with the Deputy Secretary that this is a management issue. Differences of opinion may well have formed the basis for this disclosure, and WSA and DOE could well have decided that further pursuit of the matter was unwarranted. In this regard, as the testimony of Mr. Cooper indicated, the DOE may have determined that a certain level of theft at FETC is de minimus. Tr. at 91-92.

In the present case, the theft reported by Holsinger involved buckets covered with rags, so that he was unable to discern whether any objects of significant value were being removed from the DOE. I therefore

conclude that the disclosure of the possible theft itself was protected, since Holsinger reasonably believed that an employee may well have been removing items of value from the premises. (7) On the other hand, I find that alerting the DOE that WSA was failing to take any action regarding that thievery does not necessarily constitute a disclosure of mismanagement within the scope of Part 708, since WSA could properly have determined in this case that the incident was de minimus.

IV. Conclusion

As is evident from the above discussion, I have found that K-Ray will experience little detriment if it is required to reinstate Holsinger on an as-needed basis for one shift per week. The shifts offered to Mr. Holsinger should be those of other employees who are on vacation or sick leave, or who, for other reasons are unable to appear for their shifts. I recognize that this reinstatement may result in a reduction of hours to the current K-Ray employees who might otherwise be offered those hours. However, the imposition on them will be minor, and the effects should be spread among all part-time employees. The Holsinger reinstatement need not involve more than eight hours per week of shift time.

It Is Therefore Ordered That:

(1) K-Ray shall reinstate Daniel Holsinger to a position as part- time security guard on an “as-needed” basis at the FETC facility.

(2) Holsinger shall, on a monthly basis, provide K-Ray with a schedule of his available hours for security guard work at FETC.

(3) K-Ray shall offer Holsinger a minimum of two shifts per week, which become available due to vacation, sick leave or other employee leave, and which coincide with the schedule provided by Holsinger.

(4) K-Ray shall not be required to employ Holsinger for more than one shift per week.

(5) This decision shall become the Final Decision of the Department of Energy unless, within five days of its receipt, a written request for review of this Decision by the Secretary of Energy or his designee is filed with the Assistant Inspector General for Assessments, IG-44, Office of the Inspector General, Department of Energy, 1000 Independence Avenue, S.W. Washington, D.C. 20585-0102.

George B. Breznay

Director

Office of Hearings and Appeals

Date: April 27, 1998

(1)FETC was formerly known as the Morgantown Energy Technology Center (METC). For the sake of simplicity, in this Decision I will consistently refer to this facility as FETC.

(2)K-Ray has also included in this figure 16 percent, or $623, for indirect costs. Some of these are costs associated with items such as rent, telephone, and salary of the firm’s principals. However, it is clear that this item represents an allocation of pre-existing out-of-pocket expenses for K-Ray. K-Ray would not incur any additional indirect costs of this nature, simply by virtue of being required to reinstate Holsinger. Tr. at 102. Ms. Lewis indicated that this 16 percent figure covers employer taxes on wages. Tr. at 253. Costs of this nature would constitute additional expenses for K-Ray. However, as discussed below, I do not believe the $4,500 figure is realistic. I believe a more realistic amount at this time would be approximately $149.76. Even including the entire 16 percent on that lower amount would increase the total salary costs for reinstating Holsinger by only $24 for the one-month remaining in the current contractual

period. This de minimus amount should not impose a significant hardship on K-Ray's operations.

(3)It is also worth noting that any savings made by K-Ray by virtue of hiring a lower paid employee upon the departure of a higher-paid one, inure to the DOE and not to K-Ray. Tr. at 63, 96.

(4)As I indicated above, Holsinger testified that he would be satisfied with one or two regular midnight shifts per week. Tr. at 198. I therefore believe that it would be reasonable to expect K-Ray to employ Holsinger for a minimum of one shift per week, when hours that become available fall within his scheduled free time.

(5)I am aware that since the time that this roster was prepared, a new part time security guard was hired at the lower rate. Thus, K-Ray's total current salary outlay may be slightly less than during the week of June 22. On the other hand, I have not included in this calculation the fact that several officers, such as Captain Munz, also assume guard duty, and these officers earn somewhat more than ordinary guards.

(6)If K-Ray offers Holsinger a shift at a time when only one suitable shift is available, and Holsinger accepts that duty, the firm will not be required to offer Holsinger a second shift for that same week if one should subsequently become available.

(7)The record contains no clear evidence on what the items stolen may have been.

Case No. VWD-0002

May 21, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Discovery

Supplemental Order

Name of Petitioner:Frank E. Isbill

Date of Filing: May 4, 1999

Case Number: VWD-0002

This determination will consider two requests for discovery filed with the Office of Hearings and Appeals (OHA) on May 4, 1999, by Frank E. Isbill (the complainant). These requests (which have been grouped together as one Motion for Discovery, Case No. VWD-0002) concern the hearing requested by the complainant under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708). He requested this hearing on March 29, 1999 (Case No. VWA-0034) in connection with the Part 708 complaint he filed against NCI Communications, Inc. (the contractor). The DOE recently issued revised Part 708 regulations. The regulations were published in the Federal Register on March 15, 1999. See 64 Fed. Reg. 12,862 (March 15, 1999) and by their terms, apply to all cases which were pending as of the date they became effective, April 14, 1999, including the instant case. 10 C.F.R. § 708.8. I was appointed the Hearing Officer in this matter on March 30, 1999.

Requests for Discovery

The issuance of discovery orders in proceedings under Part 708 is within the discretion of the Hearing Officer. 10 C.F.R. § 708.28(b)(1). The newly revised regulations more specifically lay out the types of discovery that can be ordered. See 10 C.F.R. § 708.28(b). The regulations grant the Hearing Officer authority to arrange for the issuance of subpoenas for witnesses to attend the hearing

on behalf of either party, or for the production of specific documents or other physical evidence, provided a showing that the requested discovery is "designed to produce evidence regarding a matter, not privileged, that is relevant to the subject matter of the complaint." 10 C.F.R. § 708.28(b)(1).

It is within the spirit of the DOE Contractor Employee Protection Program regulations that arrangements for pre-hearing discovery be worked out between the parties, without the need of a formal discovery order from the OHA Hearing Officer. However, the OHA is prepared to issue a discovery order if necessary to ensure compliance with any reasonable discovery request. Since there are material disputes regarding the complainant's discovery requests, this Supplemental Order is necessary.

In email sent on April 30, 1999 and May 2, 1999, and received by OHA on May 4, 1999, the complainant requested twelve items of discovery, six in each email. The contractor responded to these requests on May 12, 1999 (contractor's response).

Factual Background

The complainant was an employee of the contractor's abstracting and indexing group. This group aided in the processing of various types of scientific reports for inputting into DOE databases. The complainant has made many allegations of protected disclosures, including that the contractor fraudulently reduced employees' sick and vacation leave and that cost-recovery monies were not allocated properly either to the contractor by DOE or the complainant's work group by the contractor. The contractor alleges that when a DOE office decided to no longer fund the contractor's abstracting and indexing task (and to contract that work to a different firm), the contractor had no choice but to lay off the three employees remaining in the work group, including the complainant.

A. Request sent April 30, 1999

Item 1. The complainant requested that a search be performed of one of the DOE databases he had worked on. Three separate contractors inputted reports into this database during the time period of the request, June 1996 through April 1997. The complainant wishes to know how many reports each of the three contractors inputted during that time period, and to have these totals broken down by subject matter category. The purpose of this discovery is to gather information regarding the DOE decision to shift the abstracting and indexing function to another contractor.

I find that the motivations of DOE actions are beyond the scope of this Part 708 complaint. Part 708 is designed to protect contractor employees against retaliation by their employers, not DOE. See 10 C.F.R. § 708.1. Assuming that the contractor can demonstrate that the layoffs occurred on the basis of DOE direction, the contractor will have met its burden. In that situation, the complainant may try to prove the contractor should have offered him another position within the company. I therefore will deny this particular item of the discovery request.

Item 2. The complainant requested information from the 1995 and 1998 versions of the contractor's employee handbook concerning the definition of a full-time employee, part-time employee and salaried and exempt employees, in order that he could determine how benefits were supposed to be granted to each of these groups. The contractor responded that the issue of benefits for each of these categories is irrelevant to the Part 708 complaint filed in the instant case since benefits in the private sector are not mandated by law and it treated all its employees the same with respect to benefits. Further, it says that the complainant has not alleged any reprisal regarding his benefits, making the request irrelevant.

I find that the request with respect to the 1995 handbook is relevant. The complainant is claiming as one of his protected disclosures that the contractor fraudulently reduced employees' vacation and sick leave. An allegation of fraud made in good faith and reasonably is a protected disclosure under 10 C.F.R. § 708.5(a)(3). Under Part 708, the complainant has a duty to show that he had a reasonable, good faith belief that he was revealing fraud, regardless of whether fraud actually occurred. The reasonableness portion of this test is objective, and I believe the way to define this portion is to ask whether a logical person with the characteristics of the complainant, including his knowledge and position, would have come to this conclusion regarding fraud. One way for the complainant to demonstrate his knowledge of the facts surrounding his disclosure is to review the 1995 handbook (which I assume all employees received unless demonstrated otherwise). However, I do not see that the 1998 handbook has any relevance to this case, as it was issued after the complainant's firing. I will therefore order the contractor to comply with this item of the discovery request with respect to the 1995 handbook but deny the portion of the request for the 1998 handbook.(1)

Item 3. The complainant requested an Inspector General (IG) report which he believes resulted from his complaints of mismanagement (separate from his Part 708 complaint), as well as other portions of that IG case file. However, Jackie Becker, counsel for the IG, informed me that no report was issued in this matter. In addition, the complainant already received all documents in the IG case file, with a few redactions, in

response to a Freedom of Information Act request that he filed. See Record of Telephone Conversation between Jackie Becker, Counsel, IG, and Dawn L. Goldstein, Hearing Officer, OHA (May 12, 1999). Therefore, no documents that he has not already received exist that are responsive to this request.

Item 4. The complainant requested a transmittal slip within that IG file mentioning Ken Williams, an employee of the DOE's Office of Scientific and Technical Information. Jackie Becker informed me that there was no such slip within the IG files, and moreover, the IG office never spoke with Mr. Williams in this matter. Id. Therefore, no documents exist which are responsive to this item of the request.

Item 5. The complainant sought information regarding a warning he received from his supervisor via email. His supervisor had received information from a DOE employee that the complainant had been seen in "non-productive conversations." See Ex. B-34. The complainant noted that he views this incident as an example of DOE management attempting to "build a case" for his termination.(2) I find this request to be irrelevant because the contractor is not alleging that complainant was discharged as a result of alleged "unproductive conversations" and further, any evidence going to DOE animus is beyond the scope of this proceeding, as explained above. Therefore, I will deny this item of the discovery request.

Item 6. The complainant sought information relating to when the contractor was made aware that the complainant had filed his Part 708 complaint. I find that this information is not relevant. The complainant filed his complaint in March 1997 and was laid off in May 1997. The closeness in time between the filing and the personnel action is sufficient to demonstrate that the filing was a contributing factor to the action. (I would most likely impute the DOE's knowledge of the filing to the contractor). I will therefore order this item of the discovery request to be denied.

B. Request sent May 2, 1999

Item 1. The complainant disagrees with the answer of one of the complainant's employees to one of his written interrogatories. The remedy for this issue is for the complainant to examine or cross- examine the employee on this point at the hearing (most likely by telephone since she is located in another state). I will therefore deny this item of the request.

Item 2. The complainant sought information regarding whether a survey taken by the contractor in August 1996 regarding whether employees would prefer reduced hours to layoffs was "binding." The contractor responded that this request is irrelevant. The complainant then explained that this survey was used to justify lower hours which then led to the allegedly fraudulent reduction of sick leave and vacation leave. Whether or not the survey was "binding," the issue in this instance is the reasonableness of the complainant's assertion of fraud. As explained above, he can only demonstrate reasonableness based on his knowledge at the time of the disclosure; information as to whether the survey was "binding" does not go to that issue. I will therefore deny this item of the request.

There is no dispute as to items 3 and 4.

Items 5 and 6. The complainant sought budget figures for his work group within the contractor broken down by normal support task work and cost-recovery monies. The complainant is seeking to support his disclosure that cost-recovery monies were not allocated properly either to the contractor by DOE or to his work group by the contractor. The contractor responded that it does not receive budget figures from DOE in this level of detail.

I will deny this request for discovery because it is seeking information concerning an issue which I consider irrelevant. The complainant is essentially seeking evidence regarding either a contract issue between the DOE and the contractor or an internal contractor management issue. I do not believe that this type of contract issue or management issue can be the subject of a protected disclosure under 10 C.F.R. § 708.5. I do not think that the potential breach of a contract is the type of substantial violation of a "law" referred to in Section 708.5(a)(1), or that a reasonable person could conclude that any of the items listed in

Section 708.5(a)(3) had occurred. I will therefore deny these items of the request.

In conclusion, I will order that the contractor produce the relevant pages of the 1995 handbook above no later than May 28, 1999.

It Is Therefore Ordered That:

(1) The Motion for Discovery filed by Frank E. Isbill Case No. VWD-0002, is hereby granted as set forth in Paragraph (2) below and denied in all other respects.

(2) NCI Communications, Inc. shall submit to Frank E. Isbill, no later than May 28, 1999, the information requested in Item 2 (with respect only to the 1995 handbook) of his April 30, 1999 discovery request.

Dawn L. Goldstein

Hearing Officer

Office of Hearings and Appeals

Date: May 21, 1999

(1)If the contractor were to concede that the complainant's disclosure of this alleged fraud was reasonable and in good faith, this discovery order would be rescinded.

(2)The complainant does not view this as a retaliatory personnel action since no reprimand was placed in his file. See email message from complainant to Hearing Officer (April 21, 1999).

Case Nos. VWD-0003 and VWD-0005

July 8, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Discovery

Supplemental Order

Name of Petitioner: David M. Turner

Date of Filings: June 8, 1999

Case Numbers: VWD-0003

VWD-0005

This decision will consider two Motions for Discovery filed by David M Turner with the Office of Hearings and Appeals (OHA) of the Department of Energy (DOE) on June 8, 1999, as amended on June 22, 1999. The discovery motions relate to a hearing requested by Mr. Turner under the DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708). The OHA has assigned Mr. Turner's hearing request Case No. VWA-0038, and the discovery requests under consideration Case Nos. VWD-0003 and VWD-0005.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor- operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The Part 708 regulations were revised effective April 14, 1999, and by their terms, apply to all cases which were pending as of the date they became effective, including Mr. Turner's case. See 64 Fed. Reg. 12,862 (March 15, 1999); 10 C.F.R. §§ 708.8, 708.22.

B. Factual Background

From 1991 to 1995, Mr. Turner was employed as a Tritium Shift Supervisor by GPC at Princeton University Plasma Physics Laboratory's (PPPL) Tokamak Fusion Test Reactor in Princeton, New

Jersey. At the time, GPC operated as a subcontractor to Princeton, the DOE Management and Operating Contractor at PPPL.

Mr. Turner claims that in April 1995, he disclosed to PPPL and GPC 24 serious inaccuracies in a Final Safety Analysis Report for PPPL's Tritium Regeneration System. Turner also alleges that during this same period, he was instructed to declare PPPL's Tritium Regeneration System operable, despite his having voiced safety concerns about the system. The next month, May 1995, GPC and Princeton removed Mr. Turner from his position, contending that Mr. Turner was no longer physically able to perform his duties as a Tritium Shift Supervisor due to a pre-existing medical condition, i.e., a spinal nerve injury. In June 1995, GPC terminated Turner from its employ.

C. Procedural Background

In August 1995, Mr. Turner filed a complaint under Part 708 with the DOE's Office of the Inspector General (IG) alleging that GPC and Princeton had fired him in retaliation for his having made safety and health disclosures relating to PPPL's Tritium Regeneration System. After making a preliminary determination that the complaint fell within the jurisdiction of Part 708, the IG referred the complaint to the DOE's Chicago Operations Office for informal resolution. After efforts at informal resolution failed, the IG began its investigation into the allegations set forth in Mr. Turner's complaint. (1) On May 26, 1999, the IG issued its Report of Inquiry and Recommendations on Turner's complaint in which it concluded that the available evidence indicated that GPC and PU would have terminated Turner's employment even if he had not made the disclosures about the Tritium Regeneration System.

Mr. Turner filed a timely request with the IG for an administrative hearing on his Part 708 complaint. Shortly after the IG transmitted Turner's hearing request to the OHA Director on April 26, 1999, I was appointed the hearing officer in this case. I have scheduled a hearing in this matter for July 27 and 28, 1999 in Princeton, New Jersey.

II. Motions for Discovery

The Hearing Officer determines, on a case-by-case basis, the necessity and appropriate scope of discovery under the recently revised Part 708 regulations. See 64 Fed. Reg. 12862, 12867 (March 15, 1999). According to the regulations, a Hearing Officer may order discovery at the request of a party if that party shows that the requested discovery is designed to produce evidence regarding a matter, not privileged, that is relevant to the subject matter of the whistleblower complaint. See 10 C.F.R. § 708.28(b)(1).

In some cases under Part 708, OHA Hearing Officers have requested that the parties work out discovery matters among themselves, only involving the Hearing Officer if a material dispute arises. See Frank E. Isbill, Case No. VWD-0002, 27 DOE ¶ ____(May 21, 1999); L&M Technologies, Inc., Case No. LWD-0009, 23 DOE ¶ 87,502 (1993). In this case, I decided after my first telephone conference with all the parties that a different course of action was warranted because Mr. Turner is not represented by legal counsel. It was evident to me that Mr. Turner could easily be overwhelmed with the discovery process due to his unfamiliarity and inexperience with this or any other court or administrative proceeding. In contrast, the contractors in this case are represented by two highly skilled litigators, one a partner in a major Washington, D.C. law firm and the other a lawyer in Princeton's Office of General Counsel. Both of the contractors' lawyers are well versed in all the nuances of civil litigation, including discovery, and are representing their respective clients with great zeal.

To ensure the integrity of the process, and prevent Mr. Turner from feeling intimidated by the opposing parties, I instructed all parties in writing on June 4, 1999 that any motions for discovery must be submitted to me for my evaluation and approval or denial. See Letter from Ann S. Augustyn, Hearing Officer, to David M. Turner, Charles Wayne, Esq. and Katherine Buttolph (June 4, 1999) (June 4 Letter). (2) I also advised the parties at that time that administrative proceedings under Part 708 are intended to be informal in nature and are not intended to emulate formal trial proceedings. 57 Fed. Reg. 7533, 7537-38 (March 3, 1992). Hence, I noted that the discovery requirements, notices, and procedures that are embodied in the Federal Rules of Civil Procedure do not govern discovery in Part 708 proceedings.

On June 8, 1999, I received the Motions for Discovery under consideration, one seeking discovery from Princeton and the other seeking discovery from GPC. Mr. Turner amended these discovery requests on July 22, 1999. I convened a conference call on July 1, 1999 to discuss, and rule on, the specific discovery requests of the motion. On the same date, I issued a discovery order regarding the joint discovery motion filed by Princeton and GPC. Princeton University/General Physics Corporation, Case No. VWD-0004, 27 DOE ¶ ____ (July 1, 1999). In that order, I memorialized my earlier oral decision to bifurcate this proceeding into two phases: a liability and remedial phase. Id. The significance of that ruling is that all discovery regarding damages in this case will not be entertained during the liability phase of this case.

A. Turner's Motion for Discovery from GPC (Case No. VWD-0003)

In his Amended Motion for Discovery, Case No. VWD-0003), Mr. Turner seeks 16 documents from GPC, and requests that GPC respond to four interrogatories. With the exception of Document Request No. 8 and Interrogatory No. 1, GPC objects to the remainder of Turner's discovery requests. GPC has agreed, however, in the spirit of cooperative discovery to produce non-privileged documents or affirmatively state there are no responsive documents with regard to Document Request Nos. 1, 2, 4, 5, 7, 9, 10, 11, 12, 13, 15 and a portion of 16. There is clearly no need for discussion of these discovery requests as there is now no material dispute about these matters. I will therefore grant all the requests where there is agreement between GPC and Mr. Turner.

The first discovery item about which there is a material dispute is Document Request No. 3. In this request, Turner seeks "[t]he GPC policies on handling ADA claims and short and long term disability claims that were in effect on May 25, 1996." Turner seeks this material to discern GPC's policy regarding its treatment of employees who were "not physically capable" of performing their jobs during the period of his employment with GPC at PPPL, 1990 until June 22, 1995. GPC objects to producing these documents on several grounds. First, GPC states that Turner did not raise in his Part 708 Complaint an allegation that GPC violated the Americans with Disabilities Act (ADA) or any other state or federal law. Further, argues GPC, OHA does not have jurisdiction over such claims even had Turner raised them. Lastly, GPC states that Turner has failed to allege that he requested and GPC refused to grant short or long term disability leave.

I find that GPC's policies regarding the manner in which it handles employees who are no longer physically able to perform their job is relevant to Turner's Part 708 Complaint. The record reflects that GPC and Princeton removed Turner from his position of Tritium Shift Supervisor because they apparently believed he could not physically perform his job duties. See Exhibits 4, 6, 8, 11 and 16. In other Part 708 cases, Hearing Officers have looked at the manner in which contractors have adhered to, or departed from, their own policies to determine whether the contractor has proven that it would have taken the same action absent the protected disclosure. E.g. Thomas T. Tiller, 27 DOE ¶ 87,504 (1998), aff'd, 27 DOE ¶ 87,509 (1999) (corporate policy followed regarding the handling of a management employee who borrowed money from a union representative during collective bargaining negotiations); Ronny J. Escamilla, 26 DOE ¶ 87,508 (1996), aff'd, 27 DOE ¶ 87,508 (1997) (contractor followed corporate policy regarding handling of employees who falsify documents); Charles Barry DeLoach, 26 DOE ¶ 87,509 (1997) (corporate policy followed in terminating employees in cases of proven theft); Helen Gaidine Oglesbee, 24 DOE ¶ 87,507 (1994)(contractor followed its personnel procedure of not making a promotion permanent until the job position is posted); Ronald Sorri, 23 DOE ¶ 87,503 (1993)(the contractor did not follow normal business practices or its internal procedural guidelines in laying off the whistleblower). For the foregoing reasons, I will grant Mr. Turner's request that GPC produce its corporate policy regarding the manner in which it routinely handles situations where an employee is no longer physically able to perform his/her functions. In this regard, if GPC does not have an Employee Handbook or specific policy pertaining to its operations at the PPPL, then it should produce its handbooks or other policy guidance that govern other DOE facilities where it operates in a contractor or subcontractor capacity.

The next contested discovery item is Document Request No. 6 in which Turner seeks the following: "[a]ll

job postings GPC had during the time period May 25, 1995 through September 1, 1996 and the contract numbers and names of the people who filled the positions." GPC responds that Turner never alleged that GPC refused to locate alternative employment for him in retaliation for his making a protected disclosure. Moreover, GPC states that Turner's request is overly broad and unduly burdensome. In addition, GPC claims that Turner was terminated in June 1995, implying that a search through September 1996 is not relevant. Finally, GPC maintains that Turner would not have been qualified to perform all jobs for which GPC had openings, noting also that Turner refused to consider positions that, in his opinion, did not pay a high enough salary.

The record reflects that GPC advised Mr. Turner that it had actively sought work for him, was unable to secure that work, and hence was forced to terminate him for lack of work. Exhibit 1, Attachment 4. The record also shows that on May 26, 1995, GPC sent an interoffice memorandum to its Tritium Shift Supervisors announcing that Mr. Turner would no longer be assigned to the PPPL and that GPC would be looking for a reassignment for Mr. Turner to a position which accommodates his needs and qualifications, should such a position become available. Exhibit 1, Attachment 6. Since Mr. Turner's removal from his Tritium Shift Supervisor position and his subsequent termination are central issues in this case, it is certainly relevant to explore GPC's representations that it attempted to locate other positions for Turner prior to its decision to terminate him. I find therefore that job postings within GPC for the period May 24, 1995, the date GPC removed Mr. Turner from his position, through June 22, 1995, the date GPC terminated Mr. Turner from their employ, are the proper subject of discovery. For the foregoing reasons, I will grant Document Request No. 6 in part, limiting the time period for which GPC must produce its job listings.

Document Request No. 14 that asks GPC to produce "[a]ll documents, memos, e-mail or other communications(s), whether written or oral, to or from any agency, commission, board, attorney, individual or other public body that relate to any claim asserted by any other party of claims including, but not limited to, those of any inappropriate action on the part of General Physics in their hiring and/or release of any employee or employee candidate from January 1, 1990 until the present day. I will deny this discovery request. Without question, GPC's hiring practices are not at issue in this proceeding. Moreover, I agree with GPC that unsubstantiated allegations of third parties concerning possible unlawful employment actions on GPC's part are unlikely to lead to any relevant or material information for purposes of this proceeding.

There are two parts to Document Request No. 16. GPC has agreed, in the spirit of cooperative discovery, to turn over all non-privileged documents that relate to that portion of Document Request No.16 that requests non-privileged documents prepared by certain enumerated GPC employees that relate in any way to Mr. Turner's employment with GPC, Mr. Turner's dismissal from PPPL, and Mr. Turner's termination from GPC's employ. The portion of the subject discovery request that GPC objects to asks GPC to describe the "day-to-day" relationship of several GPC employees with "General Physic's contract with Princeton." When I asked Mr. Turner during our telephone conference on July 1, 1999 to describe the relevancy of this portion of the request to an issue in the proceeding, he was unable to do so satisfactorily. I must therefore deny that portion of Mr. Turner's request for documents which asks for an enumeration of the day-to-day relationship of certain GPC employees to Princeton.

With respect to Document Request No. 17 and Interrogatory Nos. 2 and 3, all of which seeks information about and documentation from lay and expert witnesses that GPC intends to call at the hearing, I will require GPC to provide the requested information to me, Mr. Turner, and Princeton no later than July 16, 1999. I had previously requested all parties to furnish me with a number of items by July 12, 1999. See Letter from Ann S. Augustyn, Hearing Officer, to David Turner, Charles Wayne, and Katherine Buttolph (June 4, 1999). Those items included: (1) a list of witnesses each party intends to call at the hearing, together with a short summary of the testimony each expects to elicit from the witnesses, (2) all exhibits each party intends to refer to at the hearing, or intends to enter into the record of this proceeding, and (3) any requests for the issuance of subpoenas to secure the appearance of witnesses at the hearing. During the discovery status telephone conference on July 1, 1999, I informed the parties that the items enumerated

above will now be due on July 16, 1999. Since Document Request No. 17 and Interrogatory Nos. 2 and 3 duplicates the request I made of the parties in my June 4, 1999 letter, those discovery requests are granted. GPC will turn over responsive materials related to those three discovery requests no than July 16, 1999.

The final discovery request about which there is disagreement is Interrogatory No. 4 that asks the following question:

During the past 10 years, if you have been accused of any wrongful employment practices, violations of any disability laws, whether federal, state or local, list the date and the specifics of the complaint and the outcome of such complaint whether culminating in a court hearing or settled out of court or in any other way, shape or form.

I have carefully considered GPC's numerous objections to this discovery request (i.e. Turner did not allege he suffered unlawful retaliation (sic) with respect to any and all employment practices; Turner did not allege any unlawful employment practice by GPC; Turner did not allege GPC violated any state or federal disability law; OHA does not have jurisdiction over claims brought under state or federal disability laws) and the comments submitted by the parties at the July 1, 1999 status telephone conference. After due deliberation, I have decided to grant limited discovery on a discrete issue that is subsumed in Interrogatory No. 4.

OHA Hearing Officers have found it extremely helpful in evaluating Part 708 claims to examine how a company has treated employees similarly situated to the whistleblower. See Ronald Sorri, 23 DOE ¶ 87,503 (1993); Ronny J. Escamilla, 26 DOE ¶ 87,508 (1996), aff'd, 27 DOE ¶ 87,508 (1997). Courts have also examined the treatment of similarly situated employees in determining whether ostensibly legitimate bases for adverse personnel actions are pretexts for punishing or getting rid of a whistleblower. See e.g. Kansas Gas & Electric Co. V. Brock, 780 F.2d 1505 (10th Cir. 1985)(requiring whistleblower to document his educational requirements while not applying similar requirements to other employees). To this end, I will require GPC to respond to the following re- phrased interrogatory:

During the last five years, describe how GPC has handled situations at DOE-owned contractor-operated facilities when one of GPC's employees has become physically unable to perform his/her job responsibilities. For each situation, identify the employee, his/her location, the nature of the physical disability, the reason why the physical disability impeded the employee's job functioning; what efforts GPC undertook to accomodate the employee; whether the employee filed any state, federal or administrative action against GPC and the disposition of any such action.

For all the discovery I have granted in whole or in part, GPC will tender responsive documents or respond to the interrogatories no later than July 16, 1999.

B. Turner's Motion for Discovery from Princeton (Case No. VWD-0005)

In his Motion for Discovery, as amended, Case No. VWD-0005, Turner seeks 21 documents from Princeton and requests that Princeton respond to four interrogatories. There appears to be no material dispute about any of the document production requests at issue. Princeton has agreed to furnish Mr. Turner with documents responsive to Document Request Nos. 1, 5, 6, 7, and 8. While objecting to discovery with respect to Document Request Nos. 14 through 20, Princeton has agreed, in the spirit of cooperative discovery, to turn over non-privileged responsive documents. For Document Request Nos. 2 through 4, 9, and 10, Princeton has provided adequate responses to the document requests. As for Document Request Nos. 11-13 which seek the last known address and telephone number for three former PPPL employees, Counsel for Princeton has agreed to facilitate Mr. Turner's contact with the former employees. Finally, with respect to Document Request No. 21 which seeks documents relating to the findings or opinions of any expert who is expected to testify at the hearing, Princeton responds that the request is premature. On this matter, I will direct Princeton to furnish information responsive to Document Request No. 21 to Mr. Turner, me and GPC no later than July 16, 1999, the same date Princeton's witness

list and exhibits are due.

Princeton has adequately responded to Interrogatory No. 1 in its July 1, 1999 submission commenting on the subject discovery motion. Regarding Interrogatory No. 2, Princeton will advise me and all other parties by July 16, 1999 of the identity of all witnesses and experts who are expected to testify, and otherwise comply with the instructions contained in my June 4, 1999 letter.

Interrogatory No. 4 is identical in substance to Interrogatory No. 4 posed by Mr. Turner to GPC. In short, the interrogatory seeks information about accusations of wrongful employment practices against Princeton over the last ten years as well as accusations that Princeton violated state and federal disability laws over the last ten years.

Princeton objects to this discovery request, arguing it is overbroad and unduly burdensome. In my opinion, it is not relevant to this proceeding whether Princeton in the past violated state and federal disability laws or wrongfully terminated employees. It is relevant, however, to learn how Princeton dealt with its subcontractors whose employees became physically unable to perform their job responsibilites. As stated in Section II.A. above, the manner in which companies treat similarly situated employees or, in this case, oversee its subcontractors handling of this issue is relevant to a Part 708 analysis. Therefore, Princeton will respond to the Interrogatory No. 4, as rephrased below:

During the last five years, describe how Princeton has handled situations at PPPL when an employee of one of its subcontactors has become physically unable to perform his/her job responsibilities. For each situation, identify the subcontractor, the nature of the subcontractor employee's physical disability, the reason why the physical disability impeded the subcontractor employee's job functioning; and what ultimately happened to the employee, if known.

Princeton will furnish its response to the interrogatory set forth above no later than July 16, 1999.

It Is Therefore Ordered That:

(1) The Motion for Discovery filed by David M. Turner on June 8, 1999, as amended on June 22, 1999, Case No. VWD-0003, be and hereby is granted as set forth in paragraph (2) below, and denied as set forth in paragraph (3) below;

(2) General Physics Corporation shall submit to Mr. Turner no later than July 16, 1999 non- privileged documents responsive to Document Request Nos. 1, 2, 4, 5, 7, 8, 9, 10, 11, 12, 13, 15, and that portion of 16 that requests non-privileged documents prepared by certain enumerated employees of General Physics Corporation that relate in any way to Mr. Turner's employment with General Physics Corporation, Mr. Turner's dismissal from Princeton University, and Mr. Turner's termination from the employ of General Physics Corporation. General Physics Corporation shall also furnish Mr. Turner no later that July 16, 1999 with responses to Interrogatories Nos. 1, 2, and 3. No later than July 16, 1999, General Physics Corporation will also furnish Mr. Turner with documents responsive to revised Document Request Nos. 3 and 6, and a response to revised Interrogatory No. 4, only to the extent set forth in the foregoing Decision and Order.

(3) Mr. Turner's Request for Production of Document No. 14, and that portion of Document Request No. 16 which seeks the day-to-day relationship of certain employees of General Physics Corporation to Princeton University, are denied.

(4) The Motion for Discovery filed by David M. Turner on June 8, 1999, as amended on June 22, 1999, Case No. VWD-0005) be and hereby is granted as set forth in paragraph (5) below and denied in all other respects.

(5) No later than July 16, 1999, Princeton University shall furnish Mr. Turner, consistent with the terms of the foregoing Decision and Order, non-privileged documents responsive to Document Request Nos. 1

through 21. By that same date, Princeton University will respond to Interrogatory Nos. 1, 2, and 3. With respect to Interrogatory No. 4, Princeton University shall respond, no later than July 16, 1999, to the re-phrased interrogatory set forth in the foregoing Decision and Order.

(6) This is a final Order of the Department of Energy.

Ann S. Augustyn

Hearing Officer

Office of Hearings and Appeals

Date: July 8, 1999

(1)In the interim, the DOE's Office of Nuclear Safety Enforcement initiated a separate investigation into the safety issues raised by Turner as they related to the Tokamak Fusion Reactor project at PPPL. During its investigation, the Nuclear Safety Enforcement investigators conducted a five-hour deposition of Mr. Turner. In May 1996, the Office of Nuclear Safety advised the IG of its conclusion that Mr. Turner had some valid observations regarding the need for clarification and enhanced descriptive language in the Final Safety Analysis Report for the Tokamak Fusion Test Reactor. See Memorandum dated May 29, 1996 from R. Keith Christopher, Director, Enforcement and Investigation Staff, to James E. Sheldon, III, Investigation Team Leader, Office of Employee Protection.

(2)This situation exemplifies the wisdom of the DOE's decision not to mandate discovery in all situations as suggested by one of the commenters to the proposed interim final rule revising the Part 708 regulations. See 64 Fed. Reg. 12862 at 12867 (March 15, 1999). To do so in this case might have, in my opinion, unduly burdened the whistleblower, and delayed this proceeding beyond reason.

Case No. VWD-0004

July 1, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Discovery

Supplemental Order

Names of Petitioners:Princeton University

General Physics Corporation

Date of Filing: June 10, 1999

Case Number: VWD-0004

This decision will consider a Motion for Discovery filed jointly by Princeton University (Princeton) and General Physics Corporation (GPC) on June 10, 1999 with the Office of Hearings and Appeals (OHA) of the Department of Energy (DOE). The discovery motion relates to a hearing requested by David Turner under the DOE's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708). The OHA has assigned Mr. Turner's hearing request Case No. VWA-0038, and the discovery request under consideration Case No. VWD-0004.

I. Background

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor- operated facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purposes are to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices, and to protect those "whistleblowers" from consequential reprisals by their employers. The regulations governing the DOE's Contractor Employee Protection Program are set forth at 10 C.F.R. Part 708. The Part 708 regulations were revised effective April 14, 1999, and by their terms, apply to all cases which were pending as of the date they became effective, including Mr. Turner's case. See 64 Fed. Reg. 12,862 (March 15, 1999); 10 C.F.R. §§ 708.8, 708.22.

B. Factual Background

From 1991 to 1995, Mr. Turner was employed as a Tritium Shift Supervisor by GPC at Princeton University Plasma Physics Laboratory's (PPPL) Tokamak Fusion Test Reactor in Princeton, New Jersey. At the time, GPC operated as a subcontractor to Princeton, the DOE Management and Operating Contractor at PPPL.

Mr. Turner claims that in April 1995, he disclosed to PPPL and GPC 24 serious inaccuracies in a Final Safety Analysis Report for PPPL's Tritium Regeneration System. Turner also alleges that during this same period, he was instructed to declare PPPL's Tritium Regeneration System operable, despite his having voiced safety concerns about the system. The next month, May 1995, GPC and Princeton removed Mr. Turner from his position, contending that Mr. Turner was no longer physically able to perform his duties as a Tritium Shift Supervisor due to a pre-existing medical condition, i.e., a spinal nerve injury. In June 1995, GPC terminated Turner from its employ.

C. Procedural Background

In August 1995, Mr. Turner filed a complaint under Part 708 with the DOE's Office of the Inspector General (IG) alleging that GPC and Princeton had fired him in retaliation for his having made safety and health disclosures relating to PPPL's Tritium Regeneration System. After making a preliminary determination that the complaint fell within the jurisdiction of Part 708, the IG referred the complaint to the DOE's Chicago Operations Office for informal resolution. After efforts at informal resolution failed, the IG began its investigation into the allegations set forth in Mr. Turner's complaint. (1) On May 26, 1999, the IG issued its Report of Inquiry and Recommendations on Turner's complaint in which it concluded that the available evidence indicated that GPC and PU would have terminated Turner's employment even if he had not made the disclosures about the Tritium Regeneration System.

Mr. Turner filed a timely request with the IG for an administrative hearing on his Part 708 complaint. Shortly after the IG transmitted Turner's hearing request to the OHA Director on April 26, 1999, I was appointed the hearing officer in this case. I have scheduled a hearing in this matter for July 27 and 28, 1999 in Princeton, New Jersey.

II. Motion for Discovery

The Hearing Officer determines, on a case-by-case basis, the necessity and appropriate scope of discovery under the recently revised Part 708 regulations. See 64 Fed. Reg. 12862, 12867 (March 15, 1999). According to the regulations, a Hearing Officer may order discovery at the request of a party if that party shows that the requested discovery is designed to produce evidence regarding a matter, not privileged, that is relevant to the subject matter of the whistleblower complaint. See 10 C.F.R. § 708.28(b)(1).

In some cases under Part 708, OHA Hearing Officers have requested that the parties work out discovery matters among themselves, only involving the Hearing Officer if a material dispute arises. See Frank E. Isbill, Case No. VWD-0002, 27 DOE ¶ ____(May 21, 1999); L&M Technologies, Inc., Case No. LWD-0009, 23 DOE ¶ 87,502 (1993). In this case, I decided after my first telephone conference with all the parties that a different course of action was warranted because Mr. Turner is not represented by legal counsel. It was evident to me that Mr. Turner could easily be overwhelmed with the discovery process due to his unfamiliarity and inexperience with this or any other court or administrative proceeding. In contrast, the contractors in this case are represented by two highly skilled litigators, one a partner in a major Washington, D.C. law firm and the other a lawyer in Princeton's Office of General Counsel. Both of the contractors' lawyers are well versed in all the nuances of civil litigation, including discovery, and are representing their respective clients with great zeal.

To ensure the integrity of the process, and prevent Mr. Turner from feeling intimidated by the opposing parties, I instructed all parties in writing on June 4, 1999 that any motions for discovery must be submitted to me for my evaluation and approval or denial. See Letter from Ann S. Augustyn, Hearing Officer, to David M. Turner, Charles Wayne, Esq. and Katherine Buttolph (June 4, 1999) (June 4 Letter). (2) I also advised the parties at that time that administrative proceedings under Part 708 are intended to be informal in nature and are not intended to emulate formal trial proceedings. 57 Fed. Reg. 7533, 7537-38 (March 3, 1992). Hence, I noted that the discovery requirements, notices, and procedures that are embodied in the Federal Rules of Civil Procedure do not govern discovery in Part 708 proceedings.

On June 10, 1999, I received the Motion for Discovery under consideration consisting of 16 extensive requests for the production of documents, 11 multi-part interrogatories, and a request to depose Mr. Turner. I convened a conference call on June 11, 1999 to discuss, and rule on, the specific discovery requests of the motion. (3) During the conference, I first advised the parties of my decision to bifurcate this proceeding into two phases, a liability phase and a remedial phase. I then announced that all discovery regarding the issue of potential damages will be deferred, reasoning that Mr. Turner should not be burdened with extensive discovery requests regarding damages when it is unclear whether any liability will be found against the contractors in this case. If I issue an initial agency decision in favor of Mr. Turner, at that time I will determine the most appropriate mechanism to ascertain the extent of Mr. Turner's damages. For now, Mr. Turner has complied with my request that he furnish me and the contractors with an approximate amount of monetary damages he is seeking so the parties can add this factor to their assessment of potential exposure in this case, and decide whether to pursue mediation, settlement, or none of the aforementioned options.

A. Request for Production of Documents and Interrogatories

The following discovery requests, all of which relate to the remedial phase of this proceeding, are deferred in their entirety for the reasons set forth above:

- Document Request No. 7 requesting "[a]ll documents that relate to any suits, complaints, bankruptcy petitions, charges or claims, including but not limited to, any claim for loss of income, any workers' compensation claims, unemployment compensation claims, disability benefits claims and claims for monetary damages to which you have been a party or witness, including any such actions against Princeton and General Physics other than the instant case."
- Document Request No. 12 requesting "[p]ay stubs, payroll records, earnings records, and all other documents relating to any and all sources of income or earnings for the period from 1990 to the present, including, but not limited to, your state, federal, and local income tax returns, W-2 and 1099 forms, documents pertaining to retirement benefits and plans, health insurance, wage, salary and any other compensation from any source whatsoever."
- Document Request No. 16 requesting "[a]ll documents that support or otherwise relate to the amount of damages claimed to have been suffered by you and the method of computation used to determine that amount."
- Interrogatory No. 2 which asks Mr. Turner to "[i]dentify each person by whom you have been employed or performed services since the end of your employment with General Physics and describe the nature of your employment, including, but not limited to, the position(s) held, the dates each position was held, job duties and responsibilities in each position, the identity of your supervisor(s), and the compensation (including salary, bonuses and fringe benefits) received by you, including the date and amount of any raises."
- Interrogatory No. 6 which asks Mr. Turner to "[s]tate and itemize the precise amount of damages claimed to have been suffered by you, describe in detail the factual basis and method of computation used to determine that amount, and identify all documents that support, were relied on or otherwise relate to such computation."
- Interrogatory No. 7 which asks Mr. Turner to "[d]escribe in detail all income or other earnings, including, but not limited to, all salaries, bonuses, and fringe benefits, that you have received since your employment with General Physics ended and state the precise amount, nature and source of all such income or earnings."

Portions of other discovery requests are deferred in part to the extent they relate to the issue of damages. Those discovery items are the following:

- That portion of Request for Production of Documents No. 1 that seeks documents pertaining to Mr. Turner's claim for damages.
- That portion of Interrogatory No. 5 that seeks the identity of each person having personal knowledge

of any facts that support Mr. Turner's claim for damages.
- That portion of Interrogatory No. 10 that seeks the identity of health care providers who have knowledge about Mr. Turner's claim for damages.

In addition, I have decided that two of the contractors' discovery requests are too broad and must be limited in scope, i.e., Request for Production of Document No. 13 and Interrogatory No. 11. Request for Production of Document No. 13 relates, in general, to Mr. Turner's medical records. I am restricting discovery on this matter to the time period beginning when Mr. Turner commenced his employment with GPC in Princeton, New Jersey until June 11, 1999, the date of the telephone conference regarding discovery. In addition, I will limit the documents Mr. Turner must produce in response to Request for Production of Document No. 13 to those documents he has in his possession, or can reasonably obtain from his numerous health care providers. Mr. Turner has advised that he has had scores of doctors in four states during the last decade and may not be able to locate them all. In addition, Mr. Turner has expressed concern that he may not have the financial resources to pay for the photocopying of the relevant documents. I have instructed Mr. Turner to determine from his health care providers the cost of reproducing the subject documents. Mr. Turner will immediately notify me if he is unable to bear the financial cost associated with complying with this discovery request.

Interrogatory No. 11 seeks information regarding Mr. Turner's medical care. I will restrict discovery in this respect as follows: the first clause in of Interrogatory 11 which reads, "During the past ten (10) years" is deleted. Inserted in its place is the following language, "From the date of your employment with GPC in Princeton, New Jersey, until June 11, 1999."

The remaining interrogatories and production of document requests will be granted in their entirety. Those include Document Production Request Nos. 2, 3, 4, 5, 6, 8, 9, 10, 11, 14, 15; and Interrogatory Nos. 1, 3, 4, 8 and 9.

Summary

To summarize the disposition of all the discovery requests, except request deposition request, I make the following rulings:

Document Production Request No. 1 Granted in part; deferred as to damages.

Document Production Request No. 2 Granted

Document Production Request No. 3 Granted

Document Production Request No. 4Granted

Document Production Request No. 5 Granted

Document Production Request No. 6 Granted

Document Production Request No. 7 Deferred in its entirety

Document Production Request No. 8 Granted

Document Production Request No. 9 Granted

Document Production Request No. 10Granted

Document Production Request No. 11Granted

Document Production Request No. 12Deferred in its entirety

Document Production Request No. 13Granted in part

Document Production Request No. 14Granted

Document Production Request No. 15Granted

Document Production Request No. 16Deferred in its entirety

Interrogatory No. 1 Granted

Interrogatory No. 2 Deferred in its entirety

Interrogatory No. 3 Granted

Interrogatory No. 4 Granted

Interrogatory No. 5 Granted in part; deferred as to damages

Interrogatory No. 6 Deferred in its entirety

Interrogatory No. 7 Deferred in its entirety

Interrogatory No. 8 Granted

Interrogatory No. 9 Granted

Interrogatory No. 10 Granted in part; deferred as to damages

Interrogatory No. 11 Granted in part

Mr. Turner will respond to the interrogatories I have granted in whole or in part, and provide the documents responsive to the Document Production Requests I have granted in whole or in part no later than July 12, 1999.

B. Request for Deposition

GPC and Princeton also seek to depose Mr. Turner in this proceeding. Prior to the submission of the discovery request under consideration, I advised the parties of my concern that any deposition of Mr. Turner not yield cumulative or duplicative information. See June 4 Letter. I pointed out that Mr. Turner has already provided five hours of testimony to the DOE's Office of Nuclear Safety Enforcement and that a copy of the transcript containing Mr. Turner's sworn testimony is included as a part of the record in this case.

In their joint discovery request, GPC and Princeton claim that the earlier examination of Mr. Turner by the DOE's Office of Nuclear Safety Enforcement did not explore, or adequately explore, the following subject areas:

1. The exact nature of Mr. Turner's allegations of unlawful reprisal or retaliation by Princeton and General Physics respectively;
2. The factual basis for each claim of unlawful reprisal or retaliation made by Mr. Turner against Princeton and General Physics respectively;
3. The damages claimed by Mr. Turner, including, but not limited to, each item of damages, the amount of each item, the components of each item, the calculation of each item or component, and the causal connection between each items and the alleged unlawful actions of Princeton and General Physics;

4. The steps taken, if any, by Mr. Turner to mitigate damages following his removal from the position of Tritium Shift Supervisor at Princeton University Plasma Physics Laboratory.

As a preliminary matter, I will not permit Mr. Turner to be deposed regarding the issue of damages for the same reasons I articulated above. Unlike the Requests for Production of Documents and Interrogatories relating to damages, however, I am denying, not deferring, the request to depose Mr. Turner on the issue of damages. If a remedial phase of this case is necessary, I believe any information regarding Mr. Turner's damages can be documented in writing without the need for deposition testimony. I will, of course, permit GPC and Princeton to provide comments to me regarding any documentation Mr. Turner might submit to support his claim for damages during the remedial phase of this proceeding, if there is one.

As for GPC and Princeton's request to depose Mr. Turner regarding the factual underpinnings of Mr. Turner's alleged protected disclosures and the alleged unlawful reprisals and retaliation he experienced, I have carefully considered the request and have decided to deny it for several reasons. First, GPC and Princeton's assertion that they need the deposition to explore "other pertinent issues" not adequately examined by the DOE's Office of Nuclear Safety Enforcement is simply too broad a justification. That explanation does not satisfy my instruction to the parties that any discovery request "explain . . . how . . . information [sought] is germane to the issues raised in the Turner's whistleblower complaint." See June 4 Letter at 2. Second, Mr. Turner has already tendered a pre- hearing submission in response to my request in which he has clarified, among other things, what the protected disclosures at issue are, and to whom he made those disclosures. See Letter from David M. Turner to Ann S. Augustyn, Hearing Officer (June 1, 1999). Third, Mr. Turner is already providing GPC and Princeton with extensive materials pursuant to this discovery order. At a minimum, those materials should allow GPC and Princeton to isolate, gather evidence and develop the key factual issues in this proceeding. Lastly, I remind GPC and Princeton that Mr. Turner will be available for examination under oath at the hearing. At that time, the parties will have sufficient opportunity to direct any relevant questions to Mr. Turner.

It Is Therefore Ordered That:

(1) The Motion for Discovery filed jointly by General Physics Corporation and Princeton University on June 10, 1999, Case No. VWD-0004, be and hereby is granted as set forth in paragraph (2) below; be and hereby is deferred as set forth in paragraph (3) below; and be and hereby is denied as set forth in paragraph (4) below;

(2) David Turner shall submit to General Physics Corporation and Princeton University no later than July 12, 1999 documents responsive to the General Physics Corporation and Princeton University Request for Production of Documents Nos. 1 (except as to damages), 2, 3, 4, 5, 6, 8, 9, 10, 11, 13 (only for the time period set forth in the foregoing Decision), 14 and 15. Mr. Turner shall also respond to Interrogatories Nos. 1, 3, 4, 5 (except as to damages), 8, 9, 10 (except as to damages), and 11 (as amended in the foregoing Decision).

(3) Discovery is deferred with respect to that portion of Document Production Request No. 1 relating to damages; Document Production Requests Nos. 7, 12 and 16 in their entirety; Interrogatory Nos. 2, 6, and 7 in their entirety, and those portions of Interrogatories Nos. 5 and 10 that relate to damages.

(4) The Request to Depose Mr. Turner filed jointly by General Physics Corporation and Princeton University is denied.

(5) This is a final Order of the Department of Energy.

Ann S. Augustyn

Hearing Officer

Office of Hearings and Appeals

Date: July 1, 1999

(1)In the interim, the DOE's Office of Nuclear Safety Enforcement initiated a separate investigation into the safety issues raised by Turner as they related to the Tokamak Fusion Reactor project at PPPL. During its investigation, the Nuclear Safety Enforcement investigators conducted a five-hour deposition of Mr. Turner. In May 1996, the Office of Nuclear Safety advised the IG of its conclusion that Mr. Turner had some valid observations regarding the need for clarification and enhanced descriptive language in the Final Safety Analysis Report for the Tokamak Fusion Test Reactor. See Memorandum dated May 29, 1996 from R. Keith Christopher, Director, Enforcement and Investigation Staff, to James E. Sheldon, III, Investigation Team Leader, Office of Employee Protection.

(2)This situation exemplifies the wisdom of the DOE's decision not to mandate discovery in all situations as suggested by one of the commenters to the proposed interim final rule revising the Part 708 regulations. See 64 Fed. Reg. 12862 at 12867 (March 15, 1999). To do so in this case might have, in my opinion, unduly burdened the whistleblower, and delayed this proceeding beyond reason.

(3)The attorney for Princeton, Ms. Buttolph, did not participate in the conference call. Rather, she permitted GPC's attorney to act in her stead. I later informed Ms. Buttolph of all my rulings, as did Mr. Wayne, the attorney for GPC.

Case No. VWD-0006

August 10, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Discovery

Name of Petitioner:Lucy B. Smith

Date of Filing: August 2, 1999

Case Number: VWD-0006

This determination will consider a Motion for Discovery filed with the Office of Hearings and Appeals (OHA) by Lucy B. Smith. This Motion, dated July 20, 1999, concerns the hearing requested by Ms. Smith under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708). She requested this hearing on May 5, 1999 (Case No. VWA-0041) in connection with the Part 708 complaint she filed against Westinghouse Savannah River Company (WSRC).

I. Factual Background

Ms. Smith's Part 708 complaint arises from her employment as a chemist with WSRC at DOE's Savannah River Site. Ms. Smith alleges that she was selected for termination by a Reduction-in- Force (RIF) as a result of making three protected disclosures involving alleged health and safety concerns to WSRC officials during the last half of 1996. On March 26, 1997, Ms. Smith filed the present Part 708 complaint. On April 1, 1997, Ms. Smith retired from WSRC.

After conducting an investigation, the Department of Energy's Office of the Inspector General issued a document entitled Report of Inquiry and Recommendations (Report) regarding Ms. Smith's Part 708 complaint. The Report concluded that Ms. Smith had made protected disclosures to WSRC officials and makes the assumption that the disclosures contributed to Ms. Smith's selection for termination. However, the Report also concluded that WSRC had proved by clear and convincing evidence that Ms. Smith would have been selected for termination by RIF absent the protected disclosures.

II. Request for Discovery

In a letter dated July 8, 1999, Ms. Smith requested the following three items pursuant to discovery in the pending hearing on her Part 708 complaint:

1. A copy of the Westinghouse Savannah River Site Policy regarding rehire of personnel who have been selected for layoff, as the policy relates to salaried exempt employees.
2. Provide the names, positions, dates of hire, and summary of qualifications for each chemist hired at the Savannah River Site since January 1, 1997.
3. Identify by name, position, date of hire, date of layoff, and date of rehire of all chemists, at the Westinghouse Savannah River Site for the period January 1, 1995, to date.

July 8, 1999 Letter from Herbert W. Louthian, Esq., Counsel for Lucy B. Smith, to Michael L. Wamsted, Esq., Counsel, WSRC. In a letter dated July 14,1999, WSRC replied that it was formally objecting to this discovery request since the requested material was not relevant to the subject matter of the complaint. See July 14, 1999 letter from Michael Wamsted, Esq., Counsel, WSRC, to Herbert Louthian, Esq., Counsel for Lucy B. Smith.

Ms. Smith submitted a Motion for Discovery dated July 20, 1999. In her Motion, Ms. Smith argues that she was selected for layoff for raising safety related issues to her manager. Further, Ms. Smith contends that because she was the best qualified and most experienced chemist in her work area, she would be eligible for rehire. With regard to Item No. 1, Ms. Smith argues that since she was selected for layoff pursuant to this policy, it would be relevant to the hearing. The requested items would indicate if WSRC rehired lesser qualified chemists instead of Ms. Smith. Item Nos. 2 and 3 are needed so that Ms. Smith can compare the qualifications of any chemists rehired by WSRC with Ms. Smith's qualifications to see if chemists with lesser qualifications were rehired over Ms. Smith.

WSRC argues that none of the requested items are relevant to Ms. Smith's Part 708 hearing. Ms. Smith's complaint alleges that the sole reprisal she suffered for her disclosure was her termination by RIF. Nowhere in her Part 708 complaint does she allege retaliation stemming from "preference in hire" or "rehire" policies. WSRC argues that 10 C.F.R. § 708.6(c) of the rules in effect require that the complainant be specific as to the nature of the retaliatory act. WSRC also notes that Ms. Smith failed to raise the issue of failure to rehire when questioned by the Office of the Inspector General (OIG) or when she submitted her typewritten statement to the OIG. Finally, WSRC argues that to comply with the discovery request would unduly burdensome.

III. Analysis

The issuance of discovery orders in proceedings under Part 708 is within the discretion of the Hearing Officer. 10 C.F.R. § 708.28(b)(1). The newly revised regulations more specifically lay out the types of discovery that can be ordered. See 10 C.F.R. § 708.28(b). The regulations grant the Hearing Officer authority to arrange for the issuance of subpoenas for witnesses to attend the hearing

on behalf of either party, or for the production of specific documents or other physical evidence, provided a showing that the requested discovery is “designed to produce evidence regarding a matter, not privileged, that is relevant to the subject matter of the complaint.” 10 C.F.R. § 708.28(b)(1).

It is within the spirit of the DOE Contractor Employee Protection Program regulations that arrangements for pre-hearing discovery be worked out between the parties, without the need of a formal discovery order from the OHA Hearing Officer. However, the OHA is prepared to issue a discovery order if necessary to ensure compliance with any reasonable discovery request. Since there are material disputes regarding Ms. Smith’s discovery request, this Discovery Order is necessary.

The fundamental question raised by this Motion is whether discovery related to whether Ms. Smith was improperly not rehired by WSRC is relevant to the allegations contained in her Part 708 complaint. Each of the discovery items at issue here could lead to the discovery of information regarding rehiring policies or the identities of chemists who were rehired by WSRC. However, Ms. Smith's Part 708 complaint only alleges one retaliatory action - being selected for termination by RIF. There is no mention in her complaint or the Report alleging that Ms. Smith was not rehired in retaliation for her protected complaints. Thus, I do not find any of the three discovery items to be relevant to Ms. Smith's Part 708 complaint.

In the normal course, Ms. Smith's Motion for Discovery would be denied. However, I note that while Ms. Smith did not allege retaliation by virtue of not being rehired in her complaint, she could seek to amend her Part 708 complaint or file another complaint with DOE alleging this type of reprisal. See 10 C.F.R. §§ 708.10-708.14. At the time she filed her Part 708 complaint, Ms. Smith could not have known about future WSRC actions regarding a failure to rehire. To avoid piecemeal administrative litigation regarding Ms.

Smith's Part 708 complaint and to further the purpose of the Part 708 regulations to provide a venue to deal with allegations of retaliation against contractor employees, I have decided to grant Ms. Smith's Motion for Discovery so that the issue of whether Ms. Smith suffered a reprisal by not being rehired can be litigated in the current proceeding.(1) WSRC shall submit to Ms. Smith, no later than two weeks from the date of this Supplemental Order the information requested in Ms. Smith's July 8, 1999 discovery request. Within two weeks of receiving the requested discovery materials from WSRC, Ms. Smith shall submit a statement to WSRC and to OHA specifically alleging what, if any, reprisals Ms. Smith experienced by reason of not being rehired by WSRC. WSRC will then have an opportunity to respond to these allegations and to conduct discovery concerning these allegations. Additionally, since this order potentially expands the scope of the requested hearing on this matter, I will consider any request to delay the scheduled start of the hearing. In light of the above discussion, Ms. Smith's Motion for Discovery should be granted.

It Is Therefore Ordered That:

(1) The Motion for Discovery filed by Lucy B. Smith, Case No. VWD-0006, is hereby granted.

(2) Westinghouse Savannah River Company (WSRC) shall submit to Lucy B. Smith, no later than two weeks from the date of this Order, the information requested in Ms. Smith's July 8, 1999 discovery request.

(3) Within two weeks of receiving from WSRC the requested materials specified in Ms. Smith's July 8, 1999 discovery request, Ms. Smith shall submit to WSRC and OHA a statement specifically alleging what, if any, reprisals Ms. Smith experienced by reason of not being rehired by WSRC.

(4) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

Richard A. Cronin, Jr.

Hearing Officer

Office of Hearings and Appeals

Date: August 10, 1999

(1)While WSRC has stated that complying with this request would be unduly burdensome, it has not provided any facts where I could conclude that, in fact, complying with the discovery request would produce undue delay in this matter or otherwise prejudice WSRC.

Case No. VWD-0007

August 24, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Discovery

Name of Petitioner:Linda D. Gass

Date of Filing: August 11, 1999

Case Number: VWD-0007

This determination will consider a Motion for Discovery filed with the Office of Hearings and Appeals (OHA) by Linda D. Gass. This Motion, dated August 10, 1999, concerns the hearing requested by Ms. Gass under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Part 708). She requested this hearing on January 12, 1999 (Case No. VWA- 0041) in connection with the Part 708 complaint she filed against Lockheed Martin Energy Systems, Inc. (LMES).

I. Background

Ms. Gass began working for LMES in March 1982. In her Complaint, Ms. Gass alleged that in 1991 she raised health and safety concerns with the DOE and its contractors regarding the environmental site characterization of a proposed industrial park, and also made disclosures to LMES officials regarding alleged retaliation for activity protected under Part 708.(1) The Complainant alleged that she suffered retaliation as a result of her disclosures.

On December 16, 1998, the DOE Office of Inspector General (IG) issued a Report of Investigation on Ms. Gass' Complaint. The report found that the Complainant failed to establish by a preponderance of the evidence that she had made disclosures protected under Part 708 regarding the

proposed industrial park that are protected under Part 708. The report made no findings regarding the other disclosures included in Ms. Gass' Complaint.

In a letter dated June 22, 1999, Ms. Gass requested from LMES 39 items pursuant to discovery in the pending hearing on her Part 708 complaint. Ms. Gass requested an additional 7 items of discovery on July 9, 1999. LMES provided an initial response to Ms. Gass' discovery requests on July 26, 1999, and a second response on August 4, 1999. LMES responded at least in part to 8 of the 46 items requested by the Complainant, stated that it did not have in its possession of documents responsive to 12 of the items, responded to 15 of the 46 items with objections on various grounds, and stated that the remaining items would be forthcoming.

Based upon LMES's failure to fully respond to the Complainant's discovery requests, on August 9, 1999, the Complainant filed a Motion to Continue the present matter, a hearing in which had been scheduled to begin on August 24, 1999. On August 10, 1999, I informed the parties that I would withhold a ruling on the Motion for Continuance pending my receipt, no later than 5:30 p.m. on Thursday, August 12, 1999, of a Motion to Compel Discovery. The complainant filed a Motion for Discovery on August 11, 1999, to

which LMES responded, and I held telephone conferences on August 16 and 17, 1999, to discuss the complainant's two motions. Attached at Appendix A to this Decision and Order is a copy of the Complainant's two discovery requests.

II. Analysis

The Part 708 regulations state that the "Hearing Officer may order discovery at the request of a party, based on a showing that the requested discovery is designed to produce evidence regarding a matter, not privileged, that is relevant to the subject matter of the complaint." 10 C.F.R. § 708.28(b)(1). After considering the arguments of both parties on the present Motion for Discovery, I have decided to grant the Motion in part. With respect to most of the items of requested discovery, I find that the Complainant has made the showing required by the regulations and I will therefore order the Respondent to provide the Complainant the items listed at Appendix B to this Decision and Order.(2)

As an initial matter, I will address two specific grounds for objections raised by the Respondent. First, the Respondent objected to two items of discovery as protected by the attorney-client privilege. These items (numbers 8 and 9 on page 2 of Complaint's initial request) seek names and other information regarding individuals interviewed by the DOE Office of Inspector General in its investigation of the present matter. Names provided in response to these items would almost certainly include those of LMES officials, and the content of communications between counsel for LMES and company officials may be protected by the attorney-client privilege. Such privileged material would not be discoverable under the Part 708 regulations. See 10 C.F.R. § 708.28(b)(1) (allowing discovery of materials "not privileged"). However, to the extent that a response to these two items will only reveal the identity of a client of respondent, the information would not be privileged. See, e.g., Clarke v. American Commerce Nat'l Bank, 974 F.2d 127, 129-30 (9th Cir. 1992); United States v. Leventhal, 961 F.2d 936, 940 (11th Cir. 1992); United States v. Goldberger & Dubin, P.C., 935 F.2d 501, 505 (2d Cir. 1991); In re Grand Jury Subpoena, 913 F.2d 1118, 1123 (5th Cir. 1990); In re Grand Jury Subpoena, 906 F.2d 1485, 1488 (10th Cir. 1990); In re Grand Jury Subpoenas, 803 F.2d 493, 496-98 (9th Cir.1986); In re Shargel, 742 F.2d 61, 62 (2d Cir.1984); In re Grand Jury Investigation, 723 F.2d 447, 451 (6th Cir.1983).

Second, the Respondent objected to a number of items on the grounds that they were "so over- reaching as to not be capable of being answered." Other than certain items in Complainant's request that I find below to be overly broad, I disagree that it is beyond the capability of the Respondent to answer the Complainant's discovery requests. As of yet, the Respondent has not provided evidence that would lead me to conclude that "complying with the discovery request would produce undue delay in this matter or otherwise prejudice" the Respondent. Lucy B. Smith, Case No. VWD-0006 (August 10, 1999).

However, I find that certain of the items listed in the Complainant's discovery request are broad beyond the scope of that which would be "designed to produce" evidence relevant to the present matter. Thus,

(1) I have narrowed the scope of items 4 through 7 on pages 1 and 2 of Complainant's initial request and item 6 on page 2 of Complainant's second request to refer only to documents related to the specific environmental site characterization of a proposed industrial park relevant to the Complainant's alleged protected disclosures. See infra note 1.

(2) I have narrowed the scope of item 14 on page 4 of Complainant's initial request to exclude information requested on the age and sex of employees of the Respondent. While this item and others are designed to produce evidence regarding employees similarly situated to the Complainant, and are thus reasonable items of discovery,(3) I do not find that the age or sex of other employees of the Respondent is relevant in this proceeding, where alleged age or sex discrimination is not at issue. See 10 C.F.R. 708.4(a) (excluding from coverage claims "based on race, color, religion, sex, age, national origin, or other similar basis").

(3) I have narrowed the scope of items 18 through 24 on pages 4 and 5 of Complainant's initial request. These items reference the process used to review the Complainant's eligibility for a DOE security

clearance. Decisions as to eligibility for DOE security clearances are made by the DOE, not the Respondent. See 10 C.F.R. Part 710. I will nonetheless allow limited discovery on this subject, because it "is possible that retaliation as so defined [in the Part 708 regulations] could include actions by the contractor that cause the questioning, suspension, or termination of a security clearance." Criteria and Procedures for DOE Contractor Employee Protection Program, 64 Fed. Reg. 12,862 (March 15, 1999) (preamble to revision of Part 708 regulations).

(4) I have narrowed the scope of item 33 on page 7 of the Complainant's initial request to refer only to complaints or lawsuits alleging retaliation for protected activity.

(5) I have narrowed the scope of item 7 on page 2 of the Complainant's second request to include only communications that in any way refer to the Complainant.

Further, two items requested by the Complainant (items 4 and 5 on pages 1 and 2 of the second request) would be relevant to the issue of damages, should the Respondent be found liable for violations under Part 708. However, I have decided to bifurcate this matter into a liability phase and a remedy phase. Thus, discovery regarding the issue of potential damages will be deferred pending a decision on liability. If I issue an initial agency decision in favor of the Complainant, at that time I will determine the most appropriate mechanism to ascertain the extent of the Complainant's damages and the appropriate remedy. See Princeton University, Case No. VWD-0004 (July 1, 1999).

Finally, regarding those instances where the Respondent stated that it did not locate information responsive to the discovery requests, the Complainant has questioned whether the attorney for the Respondent has properly certified his response. The Federal Rules of Civil Procedure require the signature of an attorney on a discovery response. Fed. R. Civ. P. 26(g). This signature constitutes a certification by the attorney. Id. "The Advisory Committee's Notes to the 1983 amendments to Rule 26 spell out the obvious: a certifying lawyer must make 'a reasonable effort to assure that the client has provided all the information and documents available to him that are responsive to the discovery demand.'" Legault v. Zambarano, 105 F.3d 24, 27 (1st Cir. 1997). Because the Federal Rules of Civil Procedure do not apply to the present proceeding, but may be used as a guide, I will require that the attorney for the respondent submit a signed statement that he has made a reasonable effort to assure that his client has provided all the information and documents available that are responsive to the Complainant's discovery requests.

For the reasons stated above, I will order the Respondent to provide to the Complainant, no later than September 9, 1999, the items listed at Appendix B to this Decision and Order. In addition, I will order that discovery in this matter be completed by September 30, 1999, and that I receive all witness lists, exhibits, and pre-hearing statements from the parties no later than October 3, 1999. While the Complainant's Motion for Discovery requests that I additionally draw "adverse inferences against Respondent," I find no basis in the Part 708 regulations for doing so at this time. However, after the present order is issued, both parties should bear in mind that a Hearing Officer in a Part 708 proceeding "may, at the request of a party or on his or her own initiative, dismiss a claim, defense, or party and make adverse findings upon the failure of a party or the party's representative to comply with a lawful order of the Hearing Officer." 10 C.F.R. § 708.28(b)(5).

It Is Therefore Ordered That:

(1) The Motion for Discovery filed by Linda D. Gass, Case No. VWD-0007, is hereby granted as specified in Paragraph (2) below, and is denied in all other respects.

(2) Lockheed Martin Energy Systems, Inc., shall submit to Linda D. Gass, no later than September 9, 1990, the items of requested discovery set forth at Appendix B to this Decision and Order, along with a statement signed by an attorney for Lockheed Martin Energy Systems, Inc., that the attorney has made a reasonable effort to assure that his client has provided all the information and documents available that are responsive to the Complainant's discovery requests.

(3) Linda D. Gass and Lockheed Martin Energy Systems, Inc. shall complete discovery in the present proceeding no later than September 30, 1999.

(4) Linda D. Gass shall submit a list of witnesses that she intends to call to testify at the hearing in the present matter, the exhibits she intends to rely upon, and any pre-hearing statement, to be received by the Hearing Officer no later than October 3, 1999.

(5) Lockheed Martin Energy Systems, Inc. shall submit a list of witnesses that it intends to call to testify at the hearing in the present matter, the exhibits it intends to rely upon, and any pre- hearing statement, to be received by the Hearing Officer no later than October 3, 1999.

(6) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

Steven J. Goering

Hearing Officer

Office of Hearings and Appeals

Date: August 24, 1999

(Appendix A not available electronically)

Appendix B - Case No. VWD-0007

1. With respect to the interrogatory items below, provide the name, title, and length of time in current position of the individual answering these questions on behalf of the Respondent.
2. With respect to the interrogatory items below, identify all documents referred to by any individual in answering these requests. For each document listed, state:

a. Date each document was written;

b. Name and address of the author of the document;

c. Recipient of the document; and

d. Summary of contents of the document.

3. Name, title, and length of employment of all individuals with whom any employee of the Respondent has discussed the subject matter of this hearing. For each individual, state:

a. His or her name, residential address, and business address; and

b. His or her title or position with the Respondent.

4. Describe completely all policies or formalized procedures which the Respondent had or maintained between 1990 and 1997 with reference to:

a. Employee protections from retaliation for protected activity;

b. Layoff procedures, specifically, any policies regarding how layoff decisions are made.

For each policy or procedure, state when and where posted, and when and how otherwise disseminated to employees.

5. Provide copies of occurrence reports of the Respondent created between 1990 and 1997.

6. With respect to any geotechnical reports related to Elza Gate, please state the beginning and ending dates for said documents that are currently in the possession of the Respondent.

7. For any geotechnical reports related to Elza Gate not currently in the possession of the Respondent, please indicate:

a. The current location of these documents;

b. Date upon which these documents were last in the possession of the Respondent; and

c. Why the Respondent no longer has possession of these documents.

8. With respect to survey books related to Elza Gate containing coordinates of burial trenches, please state beginning and ending dates for said documents that are currently in the possession of the Respondent.

9. For any survey books related to Elza Gate containing coordinates of burial trenches, not currently in the possession of the Respondent, please indicate:

a. The current location of these documents;

b. Date upon which these documents were last in the possession of the Respondent; and

c. Why the Respondent no longer has possession of these documents.

10. Name, title, and dates of employment of any and all persons known to Respondent to have been interviewed by any person associated with the Inspector General's office in connection with the investigation of the complaint filed by the Complainant.

a. Specifically, were either Jill Freeman of Anthony Wylie interviewed?

11. Name, title and length of time in position of all individuals in Respondent's employ who provided signed or recorded statements concerning Complainant's complaint.

a. Attach hereto a copy of any such statement that was not included in the IG Report.

12. Provide a copy of all documents created between May 1, 1990 and November 30, 1996, related to layoffs, which documents contain the name of the Complainant, or otherwise make reference to the Complainant.

13. With respect to computer operations, please state:

a. How old e-mail files and/or records are stored since 1990; and

b. Name and position of person(s) responsible for handling the disposition and/or maintenance of such files.

14. Has the Respondent at any time employed an individual by the name of Mike Pung. If so, please state:

a. Dates of employment and position; and

b. Whether he at any time in the past dealt with the disposition and/or maintenance of employee E-mail files.

15. List all work assignments given to Complainant during Fiscal Years 1990 through 1992. For each

assignment, please state:

a. Name and position of person who assigned tasks;

b. Specific duties performed by Complainant in completing tasks;

c. Number of hours charged by Complainant on said task;

d. Whether Complainant was accountable for a specified number or percentage of billable hours per week, month, or project; if so, specify the terms of accountability; and

e. Name and position of individual who supervised Complainant's performance of said task.

16. Please provide the following information for all individuals employed by Respondent who performed duties under the direction of Bill Manrod between May 1990 and November 1996:

a. Name;

b. Job Title;

c. Salary Grade;

d. Job Function Skills;

e. Time in position(s);

f. Education level and field; and

g. Any certification and or specialized training.

17. For each individual listed in response to the preceding request, please list all assignments made and tasks performed while the individual worked under the direction of Bill Manrod. Please identify the assignments and/or tasks by:

a. Nature of task(s) assigned;

b. Name and position of person who assigned task(s);

c. Number of hours spent by each individual on said task(s);

d. Name and position of individual who supervised each individual's performance of said task; and

e. Overtime records, including:

1. Number of overtime hours worked;
2. Assignment(s) for which overtime was worked.

18. With regard to James Moore, Chris Rogers, Ronnie Brewer, and Kathy Lett, if not included as part of Respondent's response to the previous request, please state:

a. Dates of employment;

b. Positions held, including dates of each; and

c. Records of overtime.

19. List all persons either hired into Bill Manrod's department as direct employees, or employed as subcontractors performing work for his department, between May 1, 1990 and November 30, 1996. For each individual or subcontractor, please include:

a. Reason for hiring or employing as subcontractor; and

b. Projects/work assigned, including dates and number of hours worked on each.

20. Please provide a copy of any and all written policies and/or procedures of the Respondent regarding investigation for security clearance that were in effect between January 1985 and November 1996.

21. Please provide a copy of all forms utilized by the Respondent in security clearance review between January 1985 and November 1996.

22. Please provide any and all records in the possession of the Respondent pertaining to Complainant's security clearance and/or review between January 1985 and November 1996. Include all writings (memos, notes, letters, forms, etc.), as well as tape recordings.

23. Please list any and all individuals employed by Respondent who participated in the investigation of Complainant for security clearance purposes. For each individual, please include:

a. Name, position, and dates of employment; and

b. Nature of participation in the investigation

24. List any and all individuals employed by Respondent who were contacted by any person involved in the investigation of Complainant regarding her security clearance. For each individual, please state:

a. Name, position, and dates of employment of said individual; and

b. Information requested of and/or provided by said individual.

25. List the names of any and all individuals employed by Respondent from 1990 to the present that have filed a complaint (formal or informal) or lawsuit against the Respondent alleging retaliation for protected activity. For each such individual, state:

a. Nature of complaint or lawsuit, i.e. allegation(s) and relief sought;

b. Date filed; and

c. Disposition of complaint or lawsuit, i.e. settlement, judgment, pending, etc.

26. List all witnesses the Respondent proposes to call in this action. For each individual listed, please state:

a. Name, title or position, and address; and

b. Nature of the testimony anticipated from the witness.

27. Identify any person whom you intend to call as an expert witness at the time of hearing of this action, including in your answer with respect to each such person:

a. Subject matter upon which the expert is expected to testify;

b. Substance of the facts and opinions to which the expert is expected to testify; and

c. Summary of the grounds for each such opinion of the expert.

28. Explain how Gail Sewell calculated Complainant's attendance records in her (Sewell's) response to the Complainant's EEOC complaint;

29. List any position openings of the Respondent during the period May 1991 through November 1997, the existence of which position opening was not otherwise made known to all employees of the Respondent.

30. Any and all communication regarding Elza Gate between LMES (and/or predecessors) and any agency with environmental regulatory/oversight functions, including, but not limited to:

a. EPA, Region IV;

b. Tennessee Oversight Agreement;

c. Tennessee Department of Environment and Conservation (TDEC); and

d. Ohio EPA.

31. Any and all notes, documents or other communications regarding the departure of Anthony Wylie from employment with Respondent, if such communications in any way refer to the Complainant.

32. Name all persons, not heretofore mentioned, having personal knowledge of facts material to this case, and provide their current position held with Respondent, dates of employment with Respondent, and their last known residential address.

(1)Although the Complainant originally alleged that she made additional disclosures protected under Part 708, I found that these other disclosures were not so protected, and on March 12, 1999, ordered that the Complaint "be dismissed as to all but (1) the alleged disclosures to the DOE and its contractors regarding the environmental site characterization of a proposed industrial park and (2) the alleged disclosures to LMES officials regarding alleged retaliation for activity protected under Part 708." Lockheed Martin Energy Systems, 27 DOE ¶ 87,510 (1999).

(2)Several of the items of the Complainant's initial discovery request (item 10, page 2; item 13, page 3; item 15, page 4; item 16, page 4) have been modified as discussed in the August 16, 1999 telephone conference.

(3)See David M. Turner, Case No. VWD-0003 (July 8, 1999) (ruling on Motion for Discovery) ("OHA Hearing Officers have found it extremely helpful in evaluating Part 708 claims to examine how a company has treated employees similarly situated to the whistleblower. See Ronald Sorri, 23 DOE ¶ 87,503 (1993); Ronny J. Escamilla, 26 DOE ¶ 87,508 (1996), aff'd, 27 DOE ¶ 87,508 (1997). Courts have also examined the treatment of similarly situated employees in determining whether ostensibly legitimate bases for adverse personnel actions are pretexts for punishing or getting rid of a whistleblower. See, e.g., Kansas Gas & Electric Co. V. Brock, 780 F.2d 1505 (10th Cir. 1985) (requiring whistleblower to document his educational requirements while not applying similar requirements to other employees).")

Case No. VWJ-0001

June 29, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Protective Order

Name of Petitioner:Nicholas Dominguez

Date of Filing: June 25, 1999

Case Number:VWJ-0001

On April 20, 1999, Nicholas Dominguez filed a request for hearing under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708 (Case No. LWA- 0006). Dominguez alleges that his former employer, Lockheed Martin Energy Research Corporation (Lockheed Martin), retaliated against him for disclosing information concerning possible safety issues.

Dominguez seeks discovery of Lockheed Martin documents that the firm claims are confidential business documents. Lockheed Martin has agreed to provide these documents pursuant to the attached Protective Order that has been agreed to by counsel for Dominguez. The parties ask that the attached Agreed Protective Order be issued as an Order by the Department of Energy. The Agreed Protective Order states, inter alia, that counsel for Dominguez shall not make use of or disclose any information in the documents except for purposes related to the present proceeding, and that upon the termination of the proceeding shall destroy the documents.

I have reviewed the attached Agreed Protective Order and have concluded that it should be issued as an Order of the Department of Energy.

It Is Therefore Ordered That:

The attached Agreed Protective Order is hereby issued as an Order of the Department of Energy.

Case No. VWR-0003

September 20, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion for Reconsideration

Name of Petitioner: Linda D. Gass

Date of Filing: September 3, 1999

Case Number: VWR-0003

This decision will consider a “Motion to Revive Disclosures Dismissed Prior to the Enactment of Revisions to Part 708” Linda D. Gass filed on March 8, 1999. In her Motion, Ms. Gass requests that I reconsider an order issued on March 12, 1999, in which I dismissed in part her Complaint filed under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Lockheed Martin Energy Systems, 27 DOE ¶ 87,510 (1999).

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations provide “procedures for processing complaints by employees of DOE contractors alleging retaliation by their employers for disclosure of information concerning danger to public or worker health or safety, substantial violations of law, or gross mismanagement; for participation in Congressional proceedings; or for refusal to participate in dangerous activities.” 10 C.F.R. § 708.1.

Ms. Gass has worked for LMES since March 1982. In her Complaint, Ms. Gass alleged that in 1991 she raised concerns with the DOE and its contractors regarding the environmental site characterization of a proposed industrial park. The Complainant also alleged that she made additional disclosures to LMES officials and the DOE, as well as to other federal agencies, including the Department of Labor (DOL), the Equal Employment Opportunity Commission (EEOC), and the Office of Federal Contract Compliance Programs (OFCCP). Some of the disclosures concerned alleged gender discrimination and alleged violations of the Americans with Disabilities Act (ADA). The Complainant alleged that she suffered retaliation as a result of her disclosures.

At a telephone conference conducted on March 3, 1999, counsel for the Respondent LMES requested that the Complainant identify the specific disclosures that form the basis of her Complaint of reprisal. After a discussion, the Complainant agreed that her allegations were limited to the alleged disclosures regarding the proposed industrial park and five other disclosures. On March 8, 1999, the Respondent moved to strike from consideration the five other disclosures enumerated at the March 3, 1999 pre-hearing conference. I granted the motion in part on March 12, 1999, dismissing the complaint to the extent it was based upon (1)

alleged disclosures stemming from, or relating to, gender discrimination or discrimination in violation of the Americans with Disabilities Act; or (2) alleged disclosures not made to an official of DOE, to a member of Congress, or to the contractor. Lockheed Martin Energy Systems, 27 DOE at 89,078.

On September 3, 1999, Ms. Gass filed the present Motion, in which the Complainant requests that I reconsider the portion of her complaint dismissed on March 12, 1999, in light of revisions to the Part 708 regulations that took effect on April 15, 1999. The Complainant specifically points to the fact that the intervening revisions "expand[ed] coverage of disclosures to include those made to other government officials, . . ." Criteria and Procedures for DOE Contractor Employee Protection Program, 64 Fed. Reg. 12862, 12863 (March 15, 1999).

II. Analysis

Before the revisions of April 15, 1999, the Part 708 regulations prohibited "discrimination" by a DOE contractor against an employee, which the regulations defined as an action taken against an employee "as a result of" certain "protected" acts of the employee. 10 C.F.R. §§ 708.4, 708.5, revised by 64 Fed. Reg. 12862, 12870-71 (March 15, 1999). The revised Part 708 regulations, though calling the prohibited conduct "retaliation" instead of "discrimination," do essentially the same thing. 10 C.F.R. § 708.2. As noted by the Complainant, however, the scope of conduct prohibited by Part 708 was expanded by the recent revisions. Specifically, disclosures to "any other government official who has responsibility for the oversight of the conduct of operations at a DOE site" were added to the list of types of disclosures protected from retaliation. 10 C.F.R. § 708.5.

It is undisputed that the retaliatory conduct alleged by the Complainant occurred prior to April 15, 1999. The issue before me therefore is whether alleged conduct that occurred prior to the revisions to Part 708, and not prohibited prior to the revisions, may now be found to be "retaliatory" based upon the expanded scope of prohibited conduct found in the revised Part 708. The Complainant cites 10 C.F.R. § 708.8, which states that the "procedures in this regulation apply prospectively in any complaint proceeding pending on the effective date of this regulation," and there is no question that Ms. Gass' complaint was pending on April 15, 1999. The Respondent argues that section 708.8 applies only to "procedures," not "substantive law."

The Supreme Court has "frequently noted" that there is a "presumption against retroactive legislation [that] is deeply rooted in our jurisprudence," and the Court applies "this time-honored presumption against retroactive legislation unless Congress has clearly manifested its intent to the contrary." Hughes Aircraft Co. v. United States, 520 U.S. 939, 946 (1997) (citing Landgraf v. USI Film Products, 511 U.S. 244, 265, 268 (1994)). Applying this presumption by analogy to the present case requires an examination of the intent of the DOE, the author of the relevant revisions to Part 708. The regulatory preamble to the revisions is quite helpful in this regard.

It is well established in the law that an agency may apply new procedural rules in pending proceedings as long as their application does not impair the rights of, or otherwise cause injury or prejudice to, a party. DOE will apply the revised procedures to pending cases consistent with the case law.

64 Fed. Reg. 12862, 12865 (citing Landgraf, 511 U.S. at 275; Lindh v. Murphy, 117 S. Ct. 2059, 2063-64 (1997); Natural Resources Defense Council, Inc. v. NRC, 680 F.2d 810, 817 n.17 (D.C. Cir. 1982) (citing Pacific Molasses Co. v. FTC, 356 F.2d 386 (5th Cir. 1966))).

The preamble's reference to "procedural rules" supports the position of the Respondent that the procedural provisions of the revised Part 708 apply to pending cases, while the substantive provisions do not. The case law to which the preamble refers also supports the Respondent's position. The Supreme Court distinguishes between "rules of procedure," which "regulate secondary rather than primary conduct," Landgraf, 511 U.S. at 275, and rules that "speak[] not just to the power of a particular court but to the substantive rights of the parties as well," and which are "therefore subject to the presumption against

retroactivity." Hughes, 520 U.S. at 951.

In the present case, to the extent that 10 C.F.R. § 708.5 defines the scope of employee disclosures that are protected from contractor retaliation, Part 708 clearly regulates the "primary conduct" and affects the "substantive rights" of the parties, and is thus subject to the presumption against retroactivity under well-established case law. Prior to the April 15 revision, the Respondent could not have know that a disclosure to a non-DOE government official would later be protected under Part 708, and it would be unfair to impose adverse consequences on the Respondent based on conduct not then prohibited.

Thus, I find that the drafters of the revisions to Part 708 did not intend to apply the expansion in scope of 10 C.F.R. § 708.5 to cases pending on April 15, 1999. Other than the change in the scope of the regulations, the Complainant cites no other intervening change in the facts or law relevant to the present Complaint that would warrant reconsideration of my March 12, 1999 order. Accordingly, the Motion for Reconsideration will be denied.

It Is Therefore Ordered That:

(1) The Motion for Reconsideration filed by filed by Linda D. Gass, Case No. VWR-0003, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

David Ramirez

Case No. VWX-0001

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Supplemental Order

Name of Petitioner: David Ramirez

Date of Filing: January 17, 1995

Case Number: VWX-0001

On December 2, 1994, the Deputy Secretary of Energy issued a Final Decision and Order in a case involving a "whistleblower" complaint filed by David Ramirez ("Ramirez") under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. David Ramirez, 24 DOE 87,510 (1994). In that Decision, the Deputy Secretary affirmed, and adopted as a Final Agency Decision, an Initial Agency Decision and a Supplemental Order issued by the undersigned Hearing Officer in the Ramirez case. The present Supplemental Order is a final determination of the amount of attorney fees and disbursements awarded to Mr. Ramirez under 10 C.F.R. 708.11(c).

Background

In the Initial Agency Decision, dated March 17, 1994, I found that Brookhaven National Laboratory/Associated Universities, Inc. (BNL), a DOE contractor, had violated the provisions of 10 C.F.R. 708.5 by directing the termination of Ramirez' employment as a BNL subcontractor employee in reprisal for his making protected safety disclosures. David Ramirez, 23 DOE 87,505 (1994) ("the March 17 Decision"). The March 17 Decision further determined that Ramirez should be awarded back pay and reimbursement for all costs and expenses reasonably incurred by him in bringing his complaint.

In a Supplemental Order dated June 8, 1994, I determined that Ramirez was entitled to back pay of $96,463.41 1/ This included interest on the back pay of $9,278 as of June 30, 1994. As of December 31, 1994, the cumulative interest amount is $12,929. and reimbursement of (i) $24,740 for attorney fees,2/ The attorney's fee award was based on 140 hours of work by Ramirez' attorney at $175 per hour and 24 hours of work by the attorney's law clerk at $10 per hour. (ii) $87.35 for attorney disbursements, and (iii) $797.42 for other reasonable costs and expenses reasonably incurred by Ramirez in this proceeding. David

Ramirez, 24 DOE 87,504 (1994) ("the June 8 Decision"). I denied the request of Claire Tierney, Ramirez' attorney, for a specific amount of additional attorney fees for work that had not been documented. However, since BNL had requested that the Secretary of Energy or her designee review the March 17 Decision, I did approve an unspecified additional amount at the rate of $175 per hour for each hour in excess of the 140 hours reasonably spent by Ms. Tierney in representing Ramirez during the review phase of the proceeding. Id. at Ordering Paragraph (1)(e). I also approved an additional amount as reimbursement for documented, reasonable disbursements incurred by Ms. Tierney subsequent to April 15, 1994, the date that she had prepared her statement of costs and expenses in the proceeding which resulted in the Supplemental Order. Id. at Ordering Paragraph (1)(f).

The Deputy Secretary upheld the June 8 Decision in its entirety. In order to implement the Deputy

Secretary's determination in accordance with the provisions of 10 C.F.R. 708.11(c), the Director of the DOE Office of Contractor Employee Protection (OCEP) provided Ms. Tierney with an opportunity to submit a final accounting of allowable costs and attorney fees. In a submission to OCEP dated December 12, 1994 (December 12 Letter), Ms. Tierney stated that she had spent 80.5 hours representing Mr. Ramirez during the review phase of this proceeding and, on the basis of an hourly rate of $175, requested an additional award of $14,087.50. She also requested $27.90 as reimbursement for postage expenses that were incurred after April 15, 1994. When added to the initial attorney fee award of $24,740, the total amount of Ms. Tierney's revised fee request is $38,855.40.3/ This amount does not include the $87.35 for attorney disbursements approved in the June 8 Decision.

The December 12 Letter also included four exhibits which I have considered in evaluating Ms. Tierney's fee request: (i) a copy of Ms. Tierney's Attorney's Affirmation in support of her initial fee request ("Attorney's Affirmation"), (ii) a copy of a June 30, 1994 letter from Andrea S. Christensen, attorney for BNL, to OCEP ("June 30 Letter"), in which Ms. Christensen argued that an additional fee request made by Ms. Tierney should be denied in its entirety,4/ That request was made in a June 22, 1994 letter from Ms. Tierney to OCEP ("June 22 Letter"). A copy of that letter has been provided to me by OCEP and is a part of the record presently before me. In the letter, Ms. Tierney had requested additional legal fees to compensate her for the time she spent in connection with a reply brief that she submitted on June 9, 1994. No determination has previously been made on that request, and it is therefore included in the request made in the December 12 Letter.(iii) a copy of Ms. Tierney's July 28, 1994 letter in response to the June 30 Letter ("July 28 Letter"), and (iv) a statement of services rendered by Ms. Tierney on the Ramirez case from September 1993 through July 1994 ("Statement of Services").

Ms. Christensen was provided an opportunity to respond to the December 12 Letter, but declined to do so. See January 12, 1995 Memorandum from Sandra L. Schneider, OCEP Director, to Ted Hochstadt, Hearing Officer.

Discussion

The only issue before me is the reasonableness of the amount of hours that Ms. Tierney claims to have spent performing legal services during the review phase of this case. Ms. Tierney has documented that she spent 80.5 hours on office interviews, research, and the preparation of a reply brief and two legal issue letters during the two-month period from May 20, 1994 to July 29, 1994. This expenditure of time appears disproportionately high when compared to the approximately 140 hours that she spent during the seven months from September 14, 1993 through April 15, 1994, a period of time that included the preparation of three written submissions (a preliminary statement, a closing statement, and a statement of damages) and the preparation for, and appearance at, a two-day hearing.5/ The amount of hours claimed by Ms. Tierney is not, however, as disproportionately high as asserted by Ms. Christensen in her June 30 Letter. Ms. Christensen erroneously asserts that Ms. Tierney claimed that she spent 138 hours preparing her reply brief in the review stage of the proceeding and 81 hours in performing legal services in the hearing phase of the proceeding. In fact, in the June 22 Letter to which Ms. Christensen was responding, Ms. Tierney documents 138.5 hours spent on the hearing phase and only 64.5 hours spent in the preparation of the reply brief. For this reason, I have scrutinized very closely Ms. Tierney's description of the legal services that she performed during the review phase of this proceeding, the documents that she prepared during this period, and the BNL submissions that she was responding to. On the basis of that review, I have concluded that the award that she has requested is, for the most part, reasonable.

The bulk of the additional attorney fee claim requested by Ms. Tierney involves the 64.5 hours spent in connection with her June 9, 1994 reply brief to BNL's May 16, 1994 Appeal to the Secretary of Energy. Ms. Tierney claims that her time was spent as follows: office interviews, 5 hours; review of case, 9 hours; research, 9 hours; drafting and modifying the reply brief, 40 hours; copying, binding and mailing the brief, 1.5 hours.

In her June 30 Letter, Ms. Christensen argued that all of these time charges are excessive, particularly the

amount of time claimed for client interviews, research, and copying, binding and mailing the reply brief. Ms. Tierney disputed Ms. Christensen's contentions in her July 28 and December 12 Letters. With respect to the number of hours spent on research and in writing the reply brief, Ms. Tierney, who is a solo practitioner, stated that her law student law clerk, who had assisted her during the hearing phase of this proceeding, was not available to assist her with the reply brief.

With one exception, I accept as reasonable Ms. Tierney's claimed hours in connection with the reply brief. To understand the basis for this determination, it is necessary to review what transpired procedurally in this case subsequent to the March 17 Decision. The Part 708 regulations do not provide for the filing of a legal brief in connection with a request for review of an initial agency determination. However, in this case, Ms. Christensen requested permission to file a brief, and that request was granted by OCEP. See April 7, 1994 Letter from Sandra L. Schneider, OCEP Director, to Ms. Christensen. Accordingly, on May 16, 1994, Ms. Christensen filed a skillfully-drafted 35-page brief which contested the findings of fact and conclusions of law in the March 17 Decision. See Appeal to the Secretary of the Department of Energy of the Office of Hearings and Appeals Initial Agency Decision ("May 16 Appeal"). This document had numerous references to the 560-page transcript of the hearing held in December 1993, including the extensive testimony by Ramirez. There was also discussion of federal court and administrative decisions regarding the issues of retaliatory termination of employment in whistleblower and NLRB cases and damages.

In view of the arguments presented in the May 16 Appeal, it was essential for Ms. Tierney to confer with her client, Mr. Ramirez, and to perform legal research. For her to simply rely on the findings in the March 17 and June 8 Decisions would have been irresponsible, if not outright malpractice. Thus, Ms. Tierney responded to the May 16 Appeal with a generally cogent 38-page reply brief that also referred extensively to the hearing transcript and discussed judicial and administrative decisions. Granted, the research of the issues and preparation of the brief might have been performed more efficiently, as Ms. Tierney herself acknowledges in her July 28 Letter. I am unwilling, however, to find that the amount of time that she spent was unreasonably excessive, particularly since this is one of the first cases arising under the DOE's Contractor Employee Protection Program. I am also unwilling to find excessive the five hours Ms. Tierney spent in two office interviews with her client. From the record of this case it is clear that Mr. Ramirez was actively involved in assisting his attorney to understand and deal with the factual issues in this case.

I reject, however, Ms. Tierney's claim with respect to the 90 minutes spent copying, binding and mailing the reply brief. While I do not doubt that performing this work consumed the amount of time claimed, I find it unreasonable to compensate her for these clerical tasks at the rate of $175 per hour. That hourly rate was approved as reasonable since it appeared to be commensurate with the value of the legal services that she stated that she had spent or would spend on this case. In her initial request for attorney fees, Ms. Tierney described these legal services as "office interviews and telephone conferences ..., interviewing witnesses, research, preparing [legal documents], the Computation of Damages and reviewing the entire record...." Attorney's Affirmation at 2. Since she did not initially indicate that she was requesting compensation for clerical tasks at the rate of $175 per hour, and since such a request would not have been approved, I will not approve it at the present time. However, since time was actually spent on these necessary tasks, I will approve compensation at the rate of $10 per hour, the rate of payment of Ms. Tierney's law clerk.

Finally, I find reasonable Ms. Tierney's legal fee claim for 16 hours spent in July 1994 on research and drafting two substantive letters. In the June 8 Decision, I increased Ramirez' requested back pay award by $17,700, the amount of unemployment benefits that he had received and had deducted from his claim for lost wages. In opposition to that determination, Ms. Christensen submitted letters to OCEP on June 21 and June 22, 1994, raising various legal arguments and citing a number of federal court cases in support of her position. In her Statement of Services, Ms. Tierney documents that she spent ten hours researching this issue and four hours preparing a substantive letter to OCEP discussing relevant court decisions. A copy of this July 29, 1994 letter to OCEP has been furnished to me and is part of the record. Ms. Christensen has not objected to this portion of Ms. Tierney's fee claim. Since I raised this contentious issue sua sponte in

the June 8 Decision, it had not been briefed previously. I therefore find that the 14 hours of research and writing claimed by Ms. Tierney is reasonable. In support of this finding I also note that in his decision the Deputy Secretary expressly considered and affirmed this aspect of the June 8 Decision.

The final two hours of the revised fee claim pertain to the preparation of the July 28 Letter to OCEP. In that letter, Ms. Tierney supported her legal fee claim with respect to the preparation of the reply brief and responded to the objections raised in Ms. Christensen's June 30 Letter. As the present Supplemental Order demonstrates, that portion of the fee claim raised a number of issues. The July 28 Letter assisted me in my consideration of those issues. Accordingly, I find that the amount of time claimed for the preparation of that letter is reasonable.

In sum, I am approving reimbursement to Ms. Tierney of $13,825 for 79 additional hours of work at $175 per hour and $15 for an hour and a half of work at $10 per hour.6/ At the time the June 8 Decision was issued, not all of the approved 140 hours had been fully documented. However, the updated Statement of Services attached to the December 12 Letter satisfactorily accounts for the small amount of time not previously documented. Accordingly, the 80.5 hours approved in this Decision are over and above the initial 140 hours. Thus, the revised award for attorney fees is $38,580 ($24,740 granted in the June 8 Decision and $13,840 approved in this Decision). In addition, Ms. Tierney shall receive $115.25 for disbursements ($87.35 granted in the June 8 Decision plus $27.90 approved in this Decision.) Thus the total reimbursement amount approved in the present Decision is $38,695.25.

It Is Therefore Ordered That:

(1) Brookhaven National Laboratory/Associated Universities, Inc. shall pay Claire C. Tierney, Esq., $38,695.25 for legal services rendered and disbursements incurred in her representation of David Ramirez.

(2) This is a final Order of the Department of Energy.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date:

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Supplemental Order

Name of Petitioner:Howard W. Spaletta

Date of Filing: August 31, 1995

Case Number: VWX-0004

This Decision supplements an Initial Agency Decision involving a "whistleblower protection" complaint filed by Howard W. Spaletta (Spaletta) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. *See Howard W. Spaletta*, 24 DOE & 87,511 (1995) (*Spaletta* or "the January 4 Decision. <1> In that Decision, I found that EG&G Idaho, Inc. ("the Contractor") had violated the provisions of 10 C.F.R. ' 708.5 by referring fewer and less important work assignments to Spaletta and by lowering his annual merit pay increases in reprisal for his making protected safety disclosures. I further determined that Spaletta should be awarded back pay corresponding to the difference between the annual merit pay increases that he should have received for work performed during the years 1989 through 1991 and the annual merit pay increases that he actually did receive, plus interest, and reimbursement for all costs and expenses reasonably incurred by him in bringing his complaint. My Decision required both Mr. Spaletta and the Contractor to submit information to facilitate my computation of damages. Mr. Spaletta submitted his information on August 21, 1995. The Contractor submitted its response to the August 21 submission on September 11, 1995. This Supplemental Order awards Spaletta $12,321.05.

I. Back Pay

For the work performed during the years 1989, 1990 and 1991, the Contractor based percentage merit pay increases on the employee's evaluation and the salary quintile of his work group into which his base salary fell. During this time period, Spaletta's salary was in the second highest salary quintile of his work group. Utilizing information submitted by the Contractor, I have identified the name of each employee in Spaletta=s work group, his or her annual salary, and the annual merit pay increase received. I have then divided the salaries of the employees into quintiles. This has allowed me to identify the individuals who comprised the second salary quintile for each of the three years. Since it is safe to assume that within a salary quintile, those individuals who had received the best performance evaluations would have also received the highest merit pay increases, Spaletta should have received annual merit pay increases equal to the highest merit pay increases given to the other members of the second highest salary quintiles for each year. These increases would have become effective in March of the succeeding year.

Accordingly, I find that Spaletta should have received an annual merit pay increase of 5.7 percent in 1990 instead of the 3 percent increase that he actually received. In 1991, Spaletta should have received an annual merit increase of 7.99 percent instead of the 2.48 percent that he actually received. In 1992, Spaletta should have received an annual merit increase of 5.48 percent instead of the 2.87 percent increase he actually received. The total amount of back pay I will award Spaletta is $6,336.

In addition, Mr. Spaletta should receive pre-judgment interest on this back pay award. *David Ramirez*, 24 DOE ¶ 87,504 at 89,015, *affirmed*, 24 DOE ¶ 87,510 (1994). Interest in whistleblower protection cases is based upon the "overpayment rate," as established by the Secretary of the Treasury pursuant to 26 U.S.C. ' 6621. The appendix to this decision shows the quarterly overpayment rate, the quarterly interest amount, and the cumulative back pay and interest award. The total amount of interest that has accrued on the back pay award is $2,569. That amount will be added to the back pay award, provided that payment is made

within 30 days of the date of this order. Thus, the total amount of back pay, including interest, that I will award Mr. Spaletta is $8,905.

II. Attorneys' Fees

Spaletta requests legal fees for the services rendered by John M. Ohman, Esq. and Stephen A. Meikle, Esq. As I stated in the January 4 Decision, legal fees will be calculated by the use of the Alodestar@ approach described by the U.S. Supreme Court in *Blanchard v. Bergeron*, 489 U.S. 87 (1989), and generally applied by OHA Hearing Officers to proceedings under 10 C.F.R. Part 708. *See, e.g., Ronald A. Sorri*, 23 DOE & 87,503 (1993), *affirmed as modified*, 24 DOE ¶ 87,509 (1994). Under the lodestar approach, reasonable legal fees are calculated as the product of reasonable hours multiplied by reasonable rates. The fee applicant has the burden of producing satisfactory evidence that his requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation. *See Blum v. Stenson*, 465 U.S. 886, 888 (1984).

Spaletta seeks reimbursement of $473.60 for legal services rendered by John M. Ohman, Esq. According to the information submitted by Spaletta, Ohman provided 2.364 hours of legal services to Mr. Spaletta for which he charged $473.60. Spaletta is therefore effectively seeking reimbursement for fees at the rate of $200 per hour, a rate which the Contractor asserts is excessive. In support of this assertion, the Contractor has submitted the affidavit of Edward W. Pike, a local attorney, who states that under the customary attorney billing practices in Idaho Falls, the maximum hourly rate is $125 per hour. Even though Spaletta has submitted the affidavit of Steve Hart, Esq. who states that @the regular hourly billing rates . . . for John M. Ohman . . . are reasonable and comparable to the hourly billing rates prevailing in Idaho Falls . . .,@ I find that Spaletta has not met his burden of producing satisfactory evidence that his requested rates are comparable to those prevailing in the community for similar services by lawyers of reasonably comparable skill, experience, and reputation. The Hart Affidavit is ambiguous and does not squarely support Spaletta=s request for $200 per hour since it only states that the *regular* hourly billing rates for Ohman are reasonable. The billing statements submitted by Spaletta actually indicate that Ohman=s *regular* hourly rate is $120 per hour rather than the $200 per hour he charged Spaletta. In light of the affidavit submitted by the Contractor, the statement about Mr. Ohman's regular hourly rate, and the contrast between the hourly rate claimed for Ohman=s services and the hourly rate claimed by Spaletta for legal services provided by Meikle (at $100 per hour), I find that Spaletta has failed to meet his burden of showing that $200 per hour is a reasonable rate for John Ohman=s services. Accordingly, I will award Spaletta $295.50 for the services of Ohman, representing 2.364 hours multiplied by $125 per hour, the rate which I find to be the maximum reasonable hourly rate for the Idaho Falls community.

Stephen A. Meikle, Esq. also performed legal services for Mr. Spaletta. Spaletta seeks $2,350 in fees, representing 23.5 hours multiplied by an hourly rate of $100. Most of that time was associated with Mr. Meikle's presence at the two-day hearing that I held in this matter. The Contractor does not challenge the claimed hourly rate, but has challenged the reasonableness of the number of hours sought by Spaletta. Specifically, the Contractor contends:

(1) Since the January 4 Decision did not award any additional relief for Spaletta over that which was already awarded to him in the Office of Contractor Employee Protection=s Proposed Disposition, Spaletta should not be reimbursed for his prosecution of the case before the Office of Hearings and Appeals;

(2) Since Spaletta=s Appeal before the Deputy Secretary was unsuccessful, he should not be compensated for bringing it; and,

(3) Spaletta=s demands that a report be retracted have unduly prolonged the proceeding.

The position advanced by the Contractor is untenable. If adopted, it would make a person who seeks protection under the DOE whistleblower protection program assume the risk of success in challenging reprisals at each stage of the administrative process. If he were unsuccessful in obtaining additional relief at a particular stage of the process, the Contractor would have us refuse to reimburse fees and costs. This

policy would likely have a chilling effect on the pursuit of these remedies. The DOE program is clearly designed to reimburse someone who has been reprised against for all damages and expenses, including legal fees. "It is important as a matter of Departmental policy to recognize the public interest nature of representing an alleged whistleblower under Part 708, and to award a reasonable fee to encourage attorneys to take these cases." *Ronald A Sorri*, 24 DOE ¶ 87,508 at 89,045 (1994).

Moreover, the Contractor's contention that Spaletta did not obtain any additional relief at the hearing stage of this proceeding is incorrect. The proposed disposition found that Spaletta should receive back pay for work performed in 1990 and 1991. I expanded that proposed relief to include work performed in 1989. *Spaletta* at 89,058. Thus, the Initial Agency Determination increased the amount of lost wages to be awarded to Spaletta by lengthening the period for which Spaletta was found to have received unduly small annual merit pay increases from February 1991 through April 1992 to February 1990 through April 1992.

Similarly, the Contractor urges that Mr. Spaletta should not be compensated for legal fees spent in pursuing an appeal of my initial determination to then Deputy Secretary, William H. White. For the reasons stated above, I do not agree. Accordingly, I will award Mr. Spaletta the one hour of legal fees he claims for revision to his brief on appeal on February 27, 1995.

I now turn to the third of the Contractor=s contentions concerning the reasonableness of the number of hours claimed. While it may be true that Spaletta=s attempts to have a report retracted may have prolonged the present proceeding, Spaletta=s pursuit of this remedy does not warrant a reduction in the legal fees claimed by him. First I am unable to quantify the time by which these proceedings were unduly prolonged, if in fact that were the case. More importantly, I am concerned that reducing Spaletta=s fees for pursuing a remedy that ultimately proved to be outside the jurisdiction of this proceeding might have a chilling effect upon other whistleblower claimants= seeking novel relief. In view of the lack of precedents interpreting the Part 708 regulations, I will not exercise my discretion to reduce the number of hours awarded.

In summary, Spaletta seeks reimbursement for 23.5 hours of legal services at $100 per hour for Meikle=s services. I find that amount to be reasonable. I am therefore awarding Spaletta $2,350 of legal fees for the services of Stephen A. Meikle, Esq. To that I will add $295.50, the fees I will award for work performed by Mr. Ohman. Thus, the total legal fees I will award Spaletta are $2,645.50.

III. Other Expenses

Spaletta also requests reimbursement for a number of other miscellaneous expenses related to his whistleblower claim. These expenses include 13 hours of secretarial services provided by Meikle=s office staff at $50 per hour, $30.89 in postage costs, and $30.20 of other miscellaneous costs charged to him by Meikle=s office.

The Contractor contends that these expenses are excessive because (1) separate billings by attorneys in Idaho Falls for secretarial services are neither customary nor reasonable; (2) the number of hours charged for secretarial services used to complete two separate statements of Aattorney=s fees and client costs@ are excessive; (3) Spaletta was charged an excessive rate for photocopying services provided by Meikle=s Office; and, (4) Spaletta has not substantiated that all of the reproduction costs claimed by him were incurred in connection with his whistleblower claim.

The regulations governing the award of expenses provide for "reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses (including attorney and expert-witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision was issued." 10 C.F.R. § 708.10(c). This section, by its reference to "costs and expenses," is by its very terms broader than FRCP Rule 54(d), which refers only to "costs."2<1> Thus, Initial Agency Decisions under the DOE whistleblower regulations have interpreted the "costs and expenses" covered by § 708.10(c) more expansively than the way the word "costs" is generally interpreted under FRCP Rule 54(d). Compare

Ronald A. Sorri, 23 DOE & 87,503 at 89,016-89,018 (1993) (Sorri), with 10 C. Wright, A. Miller, & M. Kane, Federal Practice and Procedure ' 2677 at 370-372 (1983).

The Contractor first challenges Spaletta's request for reimbursement for secretarial services performed at his attorney's office. While I am convinced that the customary practice in the Idaho Falls legal community is to include secretarial services in the hourly fee charged by attorneys, it is also apparent that Spaletta had a unique arrangement with Meikle under which Spaletta actually drafted some of the letters and pleadings supporting his whistleblower claim and then had Meikle=s office staff prepare them. This practice resulted in smaller legal fees. However, I find that Spaletta has not met his burden of showing that $50 an hour is a reasonable fee for secretarial services. It seems unlikely that secretarial services would customarily command this hourly rate, which rate is half that of Mr. Meikle. Moreover, Spaletta has not supported his request for secretarial services with evidence indicating that $50 per hour is comparable to the prevailing rate in Idaho Falls for similar services. I will therefore reduce the hourly rate for secretarial services to $25 per hour.

After reviewing copies of statements of legal fees and client costs in the record, I also agree with the Contractor=s contention that two hours is an excessive amount of time to be awarded for the preparation of statements of Aattorney=s fees and client costs,@ especially in the case of the second statement for which a great deal of the preparation had already occurred when the first statement was prepared. Accordingly, I will reduce the number of hours of secretarial service for preparation of these statements by one hour. I will therefore award Spaletta a total of $300 in secretarial fees, representing 12 hours at $25 per hour.

Finally, the Contractor contends that Spaletta has failed to substantiate that all of the reproduction costs claimed by Spaletta were incurred in connection with his whistleblower claim. Having reviewed the numerous and voluminous documents submitted by Spaletta during the course of this proceeding, I am convinced that Spaletta incurred substantial photocopying costs in pursuing his whistleblower claim. I therefore find that his claim of $409.46 in reproduction costs is entirely reasonable.

For the reasons set forth above, I will award Spaletta the following expenses or costs:

Secretarial Services $300.00

Photocopying Services $409.46

Postage $ 30.89

Other Miscellaneous costs $ 30.20

Subtotal $770.55

IV. Conclusion

For the reasons set forth above, Spaletta shall be awarded the following amounts of back pay and reimbursement for costs and expenses in accordance with the provisions of 10 C.F.R. ' 708.10(c):

Back Pay, including interest $8,905.00

Legal Fees $2,645.50

Expenses and Costs $ 770.55

Total $12,321.05

It is Therefore Ordered That:

(1) Lockheed Idaho Technologies Company shall pay to Howard W. Spaletta $12,321.05 within 30 days of the date of this order.

(2) This is a final order of the Department of Energy.

Roger Klurfeld

Office of Hearings and Appeals

Date: April 19, 1996

Appendix - Case No. VWX-0004

Calculation of Back Pay and Interest

Quarter	Quarterly Back Pay	Interest Rate (per annum)	Interest	Cumulative Back Pay + Interest
1st Quarter 1990	$0	10%	$0	$0
2nd Quarter 1990	$363	10%	$5	$368
3rd Quarter 1990	$363	10%	$14	$745
4th Quarter 1990	$363	10%	$23	$1,131
1st Quarter 1991	$363	10%	$33	$1,527
2nd Quarter 1991	$795	9%	$43	$2,365
3rd Quarter 1991	$795	9%	$62	$3,222
4th Quarter 1991	$795	9%	$81	$4,098
1st Quarter 1992	$795	8%	$90	$4,983
2nd Quarter 1992	$426	7%	$91	$5,500
3rd Quarter 1992	$426	7%	$100	$6,026
4th Quarter 1992	$426	6%	$94	$6,546
1st Quarter 1993	$426	6%	$101	$7,073
2nd Quarter 1993	$0	6%	$106	$7,179
3rd Quarter 1993	$0	6%	$108	$7,287
4th Quarter 1993	$0	6%	$109	$7,396
1st Quarter 1994	$0	6%	$111	$7,507
2nd Quarter 1994	$0	6%	$113	$7,620
3rd Quarter 1994	$0	7%	$133	$7,753
4th Quarter 1994	$0	8%	$155	$7,908
1st Quarter 1995	$0	8%	$158	$8,066
2nd Quarter 1995	$0	9%	$181	$8,247
3rd Quarter 1995	$0	8%	$165	$8,412
4th Quarter 1995	$0	8%	$168	$8,580
1st Quarter 1996	$0	8%	$172	$8,752

2nd Quarter 1996	$0	7%	$153	$8,905
Total Back Pay Plus Interest				**$8,905**

<1>/ The OHA case number for the *Spaletta* Decision is LWA-0010. As indicated above, the OHA case number for this Supplemental Order is VWX-0004.

<1>/ In Crawford Fitting Co. v. J.J. Gibbons, Inc., 482 U.S. 437 (1987), the Supreme Court held that costs awarded under Rule 54(d) are limited to the items set forth in 28 U.S.C. ' 1920 and other related statutes.

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Order to Show Cause

Name of Petitioner: C. Lawrence Cornett

Date of Filing: June 10, 1996

Case Number: VWX-0009

This Order to Show Cause is issued with regard to a Motion to Dismiss filed by Maria Elena Torano Associates, Inc. (META) on May 21, 1996. In its Motion, META seeks the dismissal of the underlying complaint and hearing request filed by C. Lawrence Cornett (Cornett) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708.

I. Background

The Department of Energy's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[ ] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information which they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from reprisals by their employers.

In November 1992, Cornett was hired as a Senior Environmental Scientist by META. At the time of Cornett's hiring, META was under contract to the DOE to provide services regarding the development of a Programmatic Environmental Impact Statement (PEIS). <1> In October 1993, the University of Chicago (UC), the contractor which operates Argonne National Laboratory (ANL), a DOE facility, contracted with META to continue to provide technical support regarding the development of the PEIS. The ANL contract described three technical areas where META was to provide support: (1) reviewing and revising draft materials for the PEIS including the performance of data analysis; (2) assisting in the National Environmental Policy Act process to develop a Final PEIS; and (3) providing general administrative support relating to the development of the PEIS. See

ANL Contract No. 34006426 Article I, Section A and Appendix B at 2-3. The ANL contract's stated goal was for META to produce, under ANL direction and with input from other national laboratories, a highly refined, publicly and legally defensible document that clearly explained the policy and direction of the DOE Office of Environmental Restoration and Waste Management. Id. Appendix B at 2.

Cornett worked on the PEIS project until March 1994, when his employment with META was terminated. Cornett alleges that his employment was terminated by META due to his disclosures to management officials of META and its subcontractor, Louis A. Berger Associates (Berger), of his concerns about the PEIS's deficiencies in addressing potential human health risks as a result of inadequacies in its risk assessment methodologies. He further alleges that he made these and other disclosures throughout the period of his employment, and that beginning in the fall of 1993, he suffered from various acts of reprisal such as: (1) being excluded from various meetings; (2) having various work-related information withheld from him; (3) having his duties change to more marginal tasks and being threatened with reassignment; and, finally and most importantly, (4) being terminated from META and not being subsequently rehired when META later filled other positions.

On March 9, 1994, Cornett filed a complaint pursuant to 10 C.F.R. Part 708. The Office of Contractor Employee Protection (OCEP) conducted an investigation of Cornett's allegations and issued a Report of Investigation and Proposed Order (Report) on April 17, 1996. OCEP, in the Report, concluded that Cornett had made protected disclosures regarding health and safety issues and that it had jurisdiction over Cornett's complaint. Further, OCEP concluded that a preponderance of the evidence supported a finding that Cornett's protected disclosures contributed to his selection by META to be terminated and that META had failed to show by clear and convincing evidence that Cornett would have been terminated absent his protected disclosures.

In a submission to OCEP dated April 30, 1996, Cornett asked for a hearing under 10 C.F.R. § 708.9. On May 1, 1996, META also submitted a submission to OCEP requesting a hearing pursuant to Section 708.9. On May 9, 1996, OCEP transmitted these requests to the Office of Hearings and Appeals (OHA) together with the Report, the complaint file, and its request that a hearing officer be appointed. On May 13, 1996, I was appointed hearing officer in this matter.<2>

On May 21, 1996, META submitted a Motion to Dismiss the proceeding. In its Motion, META argues that neither OCEP nor OHA has jurisdiction to hear Cornett's complaint since Part 708 applies only to employees of DOE contractors who perform work at DOE-owned or DOE-leased facilities.<3> META asserts that it did not perform any work under the PEIS contract at a DOE site other than a relatively small number of employee visits regarding matters ancillary to the contract. Specifically, META asserts that almost all of the substantive work done on the PEIS was performed at its Gaithersburg, Maryland facility, a facility neither owned nor leased by the DOE. In support of its Motion, META has submitted an affidavit from Eric V. Tanner, a senior budget analyst at META's Gaithersburg facility, in which he states that META personnel traveled only sporadically to DOE facilities to perform work "ancillary" to the main object of the contract. Consequently, META argues that Part 708 does not apply to META and that OHA and OCEP lack jurisdiction over Cornett's complaint.

Cornett submitted a Reply to META's Motion on May 24, 1996, in which he argues that META is subject to Part 708 since META employees did in fact perform work at DOE sites. In support of this argument, Cornett draws our attention to the ANL contract provision which specifically authorizes META employees to travel to DOE sites to obtain information necessary to perform analysis and attend meetings. Further, Cornett asserts that while the ANL contract provision refers to only "occasional" travel by employees to DOE sites, META employees in fact traveled on a regular and frequent basis to those sites. Cornett also alleges that this travel was necessary to obtain information for analysis integral to the performance of the PEIS contract. In support of this assertion Cornett has submitted affidavits from himself and three Berger employees, Dr. Jane Rose, Dr. Thomas Hale and Susan Panzitta, stating that they and other META and Berger employees regularly traveled to evaluate DOE site conditions, participate in decision making meetings and determine the scope, substance and implementation of the PEIS at DOE sites. These employees assert that their visits were integral to the completion of the PEIS. Consequently, Cornett argues that META in fact performed work at DOE sites and thus is subject to Part 708.

On June 3, 1996, META filed a Reply to Cornett's May 24 Reply. In its submission, META asserts that the primary purpose of its contracts with DOE and ANL was to produce drafts of the PEIS and perform analysis on data provided by DOE, and that this was performed at META's Gaithersburg facility. Further, META asserts that its records indicate that over 99% of the "man-days" of work charged to the ANL contract took place at that facility, and that none of the Cornett Reply affiants traveled to a DOE site during the ANL contract period. META also asserts that any work which was performed on-site was only for the purposes of resolving data reporting/scheduling problems or to familiarize META employees with DOE sites. In support of these assertions, META submitted an affidavit from Albert N. Tardiff (Tardiff), the META Program Manager of the ANL contract.

Cornett filed a Response to META's Reply on June 4, 1996. In his response, Cornett asserts that, while he does not accept META's figures regarding the percentage of "man-days" performed by META employees at DOE sites, all of the META visits were essential to the ANL contract because the contract itself

required travel to DOE sites to obtain information and participate in meetings. Cornett also argues that META could not produce a complex four-volume draft environmental statement assessing the condition of DOE sites without ever sending staff members to those sites. Although he argues that Part 708 does not define a contractor's work on-site as "ancillary" by reference to any minimum time requirement, he also asserts that META's estimate of the amount of time spent by META employees at DOE sites is faulty since it is limited to the time period of the ANL contract and does not take into consideration that PEIS work was performed by META under two predecessor DOE contracts. Finally, Cornett requests that if I am unable to find jurisdiction based on the facts presented, discovery should be allowed on travel records, work orders and task orders for all META/Berger employees from 1991 to 1994, and that an evidentiary hearing be held.

II. Analysis

Section 708.9(j) states that in any case where a dismissal of a claim is sought, "the Hearing Officer shall issue an order to show cause why the dismissal should not be granted and afford all parties a reasonable time to respond to such order." 10 C.F.R. § 708.9(j). For the following reasons, I have determined that it is appropriate to issue an Order to Show Cause in this matter.

There is no indication in the record that the jurisdictional issue raised by META's Motion to Dismiss was presented by META to OCEP or was considered by OCEP when it determined that it had jurisdiction to consider Cornett's complaint. See Report at 2-3. Nor has this issue been considered before by an OHA Hearing Officer. Therefore, I must initially look to the purpose and scope of the DOE Contractor Employee Protection Program, as set forth in the Part 708 Regulations, to determine whether Cornett's complaint falls within the jurisdictional parameters of this Program. It is clear from the text of Part 708, as well as the preamble to these regulations, that the Contractor Employee Protection Program is intended to encourage employees of DOE contractors and subcontractors to disclose concerns about health, safety, mismanagement and unlawful or fraudulent practices without fear of employer reprisal, and that employees who believe that they are subject to a reprisal should feel that they are able to seek protection from the DOE. See Sandia National Laboratories, 23 DOE ¶ 87,501 at 89,003 (1993) (denying Motion to Dismiss) .

However, Part 708 does not cover all contractor employee disclosures. In order for OCEP and OHA properly to consider a complaint by a contractor employee, the contractor must be covered by the specific regulatory provisions of Part 708. See Mehta v. Universities Research Association, 24 DOE ¶ 87,514 (1995) (Final Agency Decision and Order dismissing complaint). Those regulations in four separate places indicate that the important protections afforded under Part 708 are limited to employees of contractors that perform work at DOE sites. See Sections 708.1 ("Purpose") ("complaints by employees of contractors performing work at sites owned or leased by the Department of Energy"), 708.2(b) ("Scope") (Part 708 is applicable to employees of contractors performing work on-site at DOE-owned or -leased facilities), 708.3 ("Policy") ("employees of contractors at DOE facilities"); 708.4 (Definition of "Contractor") (Part 708 applies to a non- Management and Operating Contractor "only with respect to work performed at a DOE-owned or -leased facility").

With respect to contractors, Section 708.4 defines "work performed on site" as:

work performed within the boundaries of a DOE-owned or -leased facility. However, work will not be considered to be performed "on-site" when pursuant to the contract it is the only work performed within the boundaries of a DOE-owned or -leased facility, and it is ancillary to the primary purpose of the contract (*e.g.*, on-site delivery of goods produced off-site).

10 C.F.R. § 708.4. An employee of a contractor covered by Part 708 does not, however, have to perform work on site in order to be protected by the prohibition against reprisals set forth in Section 708.5.<4>

META acknowledges that its employees performed some work within the physical boundaries of DOE sites. <5> Therefore, in order to be excluded from coverage under Part 708, META must show that this

work was "ancillary" to the primary purpose of the ANL contract.

The primary purposes of the ANL contract were for META to revise draft materials for the PEIS, perform needed data analyses for the Draft PEIS and ultimately to prepare under ANL direction the Final PEIS. META alleges that its employees visited DOE sites only for administrative purposes such as familiarizing themselves with DOE sites or resolving data reporting or scheduling problems. Such visits may have been ancillary to the primary purposes of the ANL contract. As indicated above, however, Cornett and his three affiants assert that META employees "regularly" and "consistently" travelled to DOE sites, where they evaluated site conditions and determined the scope, substance and implementation of the PEIS. These assertions, if accurate, would clearly bring META and its employees on the PEIS contracts within Part 708. However, these assertions are strongly disputed by Tardiff, who asserts that META employees did not conduct evaluation or inspection of site conditions. Based upon META's records and his personal knowledge of the firm's operations, Tardiff states that META employee visits to DOE sites constituted a very minimal portion of the total time spent on the ANL contract, and that the work done there was not related to the primary contractual purposes of data review and drafting of the PEIS.

Given the record before me, particularly the conflicting statements in the affidavits concerning the type of work done at DOE sites, I am unable to find that the work performed within the physical boundaries of DOE sites was ancillary to the primary purposes of the ANL contract. However, in view of the arguments presented by META and the provisions of Section 708.9(j), I am issuing this Order to Show Cause. In addition, because of the factual disputes concerning the nature of the work performed by META employees at DOE sites, I will convene a hearing on July 31, 1996 to afford both parties the opportunity to present evidence and oral argument relevant to the Motion to Dismiss.<6> Specifically, the parties may present testimony and other evidence relating the nature and extent of the work performed by META employees within the physical boundaries of DOE sites. <7>I agree with Cornett that activities should not be be declared ancillary to the primary purpose of a contract solely on the basis of time spent at a DOE site. However, time spent on work activities on DOE sites may provide some evidence as to whether the work activities do not qualify as ancillary to the primary purpose of a contract. Consequently, I will permit discovery of META/Berger employee travel records that pertain to the three contracts involving the PEIS as well as work orders and task orders related to the travel covered by those records.<8>

It Is Therefore Ordered That:

(1) The Office of Hearings and Appeals of the Department of Energy shall convene a hearing regarding the META Motion to Dismiss and to permit C. Lawrence Cornett to show cause why his Complaint to the Office of Contractor Employee Protection and Request for a Hearing pursuant to 10 C.F.R. Part 708 should not be dismissed. The hearing will be convened at 9 a.m. on July 31, 1996 at 1000 Independence Avenue, SW, Washington, DC, Room 1E-250. The views, statements and testimony shall relate to the nature and extent of META and Berger employee work performed within the boundaries of DOE-owned and -leased facilities under META's PEIS contracts.

(2) META shall submit to counsel for C. Lawrence Cornett by June 28, 1996, travel records for META and Berger employees pertaining to DOE Contracts No. DE-AC01-91EM4002, and DE- AC01-93EW40411 and ANL Contract No. 34006426 during the period from the onset of the first contract to the conclusion of the third contract as well as all work orders and travel orders related to the travel covered by those records.

(3) Cornett and META shall submit to the Office of Hearings and Appeals and to each other, no later than July 17, 1996, a numbered list, and one numbered set, of any exhibits that the party intends to submit at the hearing together with a list of witnesses.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date:

<1>The purpose of the PEIS was, *inter alia*, to evaluate alternatives for DOE environmental restoration and waste management activities and explain the policy of the DOE's Office of Environmental Restoration and Waste Management. See ANL Contract No. 34006426 Appendix B at 1-2.

<2>Cornett's hearing request was assigned OHA Case No. VWA-0007 and META's request was assigned Case No. VWA-0008.

<3>In this Decision, I will also refer to DOE-owned or -leased facilities as "DOE sites."

<4>The definition of "employee" in Section 708.4 states, in pertinent part, that "[t]he determination of whether a person has standing as an employee shall be made without regard to the on- or off-site locale of the person's work performance."

<5>References to META employees in this discussion include employees of META's subcontractor, Berger. From the record before me, it appears that Berger employees performed essentially the same types of work as META employees under the ANL and predecessor DOE contracts.

<6>Pursuant to a telephone conference call with the attorneys for the parties, procedures and a briefing schedule were set regarding the underlying hearing in this matter. See Letter from Ted Hochstadt, Assistant Director (Hearing Officer), OHA, to A. Alene Anderson, Counsel for C. Lawrence Cornett and Jose Otero, Counsel for META (May 22, 1996). I originally scheduled a hearing on the merits of Cornett's complaint for July 31, 1996. In light of this Order to Show Cause, I now postpone this hearing until the resolution of META's Motion to Dismiss.

<7> The affidavits submitted by Cornett, and Tardiff's response to them, indicate that there may have been differences in the nature or extent of the on-site work performed under the two predecessor DOE contracts and that performed under the ANL contract. Since the work performed under the ANL contract was a continuation of the work under the DOE contracts, see, e.g., META Motion to Dismiss at 2, the evidence to be submitted at the hearing may include the time period encompassed by the DOE contracts.

<8>The travel records subject to this discovery will be those records of trips taken under the ANL contract reviewed by Tardiff in connection with his affidavit and the same type of records under the predecessor DOE contracts.

April 24, 1997

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Supplemental Order

Name of Case:C. Lawrence Cornett

Date of Filing:February 3, 1997

Case Number: VWX-0010

This Decision supplements an Initial Agency Decision, dated December 19, 1996, issued by the undersigned Hearing Officer of the Office of Hearings and Appeals (OHA) of the Department of Energy in a case involving a "whistleblower" complaint. The complaint was filed by C. Lawrence Cornett (Cornett) under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. See C. Lawrence Cornett, 26 DOE ¶ 87,507 (1996) (Cornett). (1) In Cornett, I found that Maria Elena Torano Associates, Inc. (META), a DOE contractor, had violated the provisions of 10 C.F.R. § 708.5 by terminating Cornett's employment in reprisal for his making protected disclosures related to public health and safety. The Decision further determined that Cornett should be awarded back pay and reimbursement for all costs and expenses reasonably incurred by him in bringing his complaint. Cornett was directed to supplement the record by providing certain specified information regarding back pay and expenses. Cornett submitted this information on January 30, 1997, along with a sworn declaration by his lead attorney, Robert Seldon (the "Seldon Declaration"). META submitted a response to the January 30 submission on March 17, 1997 (Response). This Supplemental Order awards Cornett a total of $280,600 in back pay (including interest) and costs and expenses (including attorney fees). (2)

I. Cornett's Claim

A. Back Pay

Cornett calculates that his lost pay (including fringe benefits) during the period from the date his retaliatory discharge from META was effective, March 22, 1994, through December 31, 1995 (back pay period), the date he would have been terminated absent the retaliatory discharge, was $162,138.21. From this amount, Cornett subtracted $275 in earnings during the 4th quarter of 1994 to arrive at a net lost pay of $161,863.21. Cornett then calculated that the interest accrued on this amount through January 31, 1997 was $25,992.02. Thus, Cornett's claim through January 31, 1997 for back wages (including interest) totals $187,855.23. Moreover, Cornett asserts that contrary to the instructions in the Initial Agency Decision, META had not provided him with any information pertaining to firm-wide cost of living or merit increases during the back pay period. Consequently, Cornett requests that he be permitted to amend this claim for back pay upon the receipt of this information from META.

B. Attorney Fees

In this proceeding, Cornett is represented by attorneys from the Government Accountability Project (GAP), Robert Seldon (Seldon), A. Alene Anderson (Anderson) and Eric Nelson (Nelson). (3) The Seldon Declaration describes the legal experience of the three attorneys who participated in the representation of

Cornett. Seldon states in the Declaration that in calculating the attorney fees claim he used a rate of $265 per hour for his services, $150 per hour for Anderson's services and $75 per hour for Nelson's services. Seldon arrived at these rates after drawing upon his experience in both private and government practice and by referencing the Leffey matrix, a U.S. Attorney Office fee matrix which has been used by U.S. District Courts to determine the appropriateness of "lodestar" hourly rates for attorney fees requests in the District of Columbia. (4) In the Declaration, Seldon further states that Anderson worked 223.3 billable hours on the Cornett matter, Nelson worked 161.25 billable hours and that he worked 136.60 billable hours. Seldon calculated the total attorney fee claim by multiplying each attorney's per hour rate by the number of billable hours that attorney worked. Thus, for his services Seldon assessed $36,199 (136.60 hours x $265 per hour). For Anderson's services, Seldon assessed $33,480 (223.3 hours x $150 per hour) and for Nelson's services, Seldon assessed $12,093.75 (161.25 hours x $75 per hour). The total attorney fee claim for Cornett is $81,772.75.

C. Other Costs and Expenses

Cornett also requests that he be reimbursed for costs he and GAP incurred in bringing his whistleblower complaint. Cornett alleges that he incurred expenses of $6,350.48 and that GAP incurred $2,299.14 in expenses. Additionally, Cornett requests reimbursement for $435.67 of telephone calls which were charged to his home telephone account. In total, Cornett requests reimbursement of $9,085.29 of expenses that he alleges were incurred in bringing his whistleblower complaint.

II. META's Response and Cornett's Reply

In its Response, META asserts that the number of attorney hours billed is unreasonable in light of the relatively limited amount of back pay that is at issue in this case. META argues that no client would agree to pay such large fees to recover such a back pay award. META also asserts that given the vague descriptions of the time billing summaries provided by Cornett's attorneys, it is impossible to determine the reasonableness of the time expended in the case. META also argues that the number of billable hours claimed was unnecessarily increased by the inefficient use of three attorneys for Cornett.

META also challenges other components of Cornett's claim. Specifically, META argues that Cornett's unemployment benefits should be subtracted from his back pay claim. META also challenges the compound daily interest calculation employed by Cornett. META asserts that OHA has previously held that interest on back pay should be compounded on a quarterly basis. META also contests various costs listed by Cornett that it asserts are not directly related to the litigation in the present case. (5)

On March 14, 1997, Cornett submitted his reply (Reply) to the Response. In an attached declaration ("the Second Declaration"), Seldon asserts that the documentation in the Seldon Declaration is sufficient for an award of attorney fees since it detailed the billing practices used, the hourly rates employed, the time actually recorded and the method of billing judgement exercised. Seldon further argues that the total amount of attorney fees is not unreasonable since this litigation dealt with complex subject matter and involved two hearings, two dispositive motions for dismissal, and various depositions and written submissions. With regard to the utilization of personnel, Seldon asserts that Anderson and Nelson were used to the maximum extent possible to minimize costs and that the activities he personally performed were absolutely necessary for effective trial advocacy. In response to META's argument about the high attorney fees vis a vis the back pay award, Seldon points out that the proceeding was not just about back pay but was an attempt by Cornett to vindicate himself and to increase his chances of obtaining further employment in his field of expertise. (6)

In the Reply, Cornett also reasserts his request for information regarding merit increases awarded by META during the time period specified in the Initial Agency Decision. As evidence that such increases may have been granted, Cornett has submitted several pages from the META business proposal for the

Programmatic Environmental Impact Statement (PEIS) contract that contain references to various types of employee pay raises. Cornett asserts that since he would have received such an increase, it should be considered in the final determination of back pay. Alternatively, Cornett argues that his back pay award should be adjusted by the total of the increase in the Consumer Price Index (CPI) during the back pay period plus an additional 5% for experience and merit. Cornett also argues that unemployment insurance should not be considered in determining back pay and notes that the "collateral source rule" would bar such consideration. With regard to the challenge to his interest calculation, Cornett argues that the Initial Agency Decision directed that interest calculation be calculated pursuant to 5 C.F.R. § 550.806, and that provision specifies calculation of interest on a daily basis. Finally, Cornett asserts that the cost items challenged by META were in fact related to the litigation and are recoverable costs.

III. Discussion

I have considered the submissions of the parties in accordance with the provisions of 10 C.F.R. § 708.10(c). This section states that an Initial Agency Decision may include back pay and "reimbursement to the complainant up to the aggregate amount of all reasonable costs and expenses (including attorney and expert-witness fees) reasonably incurred by the complainant in bringing the complaint upon which the decision was issued." By its reference to "costs and expenses," this section is by its very terms broader than Rule 54(d) of the Federal Rules of Civil Procedure, which refers only to "costs."(7) Thus, the first Initial Agency Decision issued under the DOE whistleblower regulations properly interpreted the "costs and expenses" covered by section 708.10(c) more expansively than the way "costs" have been interpreted under Rule 54(d). Compare Ronald A. Sorri, 23 DOE ¶ 87,503 at 89,016-18 (1993) (Sorri), with 10 C. Wright, A. Miller & M. Kane, Federal Practice and Procedure § 2677 at 370-72 (1983). Consequently, I will follow the standards outlined in Sorri. With these considerations in mind, I now turn to the remedy requested by Cornett.

A. Back Pay

After considering the submissions by Cornett and META, I have decided to approve Cornett's request for back pay plus interest subject to the modification described below.

In Cornett, I noted that META had stated that Cornett earned $91,000 per year in salary and benefits. 26 DOE at 89,036. Cornett has calculated back wages for each quarter of the back pay period by prorating the $91,000 per year salary and benefit figure. As indicated above, the only amount Cornett has subtracted from these figures is $275 in earnings during the 4th quarter of 1994. Cornett has submitted income tax returns to substantiate that he did not earn more than this amount. Cornett asserts that, in accordance with the Initial Agency Decision, he calculated interest on the back pay using the method specified in 5 C.F.R. § 550.806(d) and (e). (8) Cornett also asserts that this award should be adjusted upward to reflect merit pay or cost of living increases given by META.

META does not challenge the methodology by which Cornett calculated his back pay. Therefore, I will accept Cornett's requested back pay amount. However, META asserts that Cornett improperly calculated the interest on the back pay by compounding it on a daily basis, and argues than Cornett's employment insurance benefits should be subtracted from the back pay award.

META's argument regarding the calculation of interest is well founded. In Cornett, only paragraph (d) of section 550.806 is cited, and it is cited for the purpose of determining the "overpayment rate" interest figure that will be used in calculating interest. Nowhere in the Initial Agency Decision did I refer to paragraph (e) of section 550.806 or adopt the daily compound interest calculation method specified in that paragraph. (9) Consequently, in the Appendix to this Order, I have recalculated the interest on Cornett's back pay using quarterly compounding as has been done in prior DOE cases under Part 708. See Sorri; David Ramirez, 24 DOE ¶ 87,504 (1994), aff'd, 24 DOE ¶ 87,510 (1994) (Ramirez); Howard W. Spaletta,

25 DOE ¶ 87,502 (1996). Compound interest was calculated by multiplying the aggregate net amount of lost wages and benefits by the quarterly "overpayment rate" for that quarter.(10) The "overpayment rate," as established by the Secretary of Treasury pursuant to 26 U.S.C. § 6621, is the Federal short-term rate, plus two percentage points. The Federal short- term rate for a particular quarter is the short term rate for the first month of the preceding calendar quarter, rounded to the nearest whole percent See Rev. Rul. 97-12, 1997-11 I.R.B. 5.

META's argument regarding unemployment insurance is unavailing. META argues that awarding back pay without subtracting the unemployment insurance he received would place Cornett in a better position than he would have been absent his termination from employment from META. However, under the generally accepted "collateral source rule," unemployment compensation is not deducted from back pay awards. See Sorri, 23 DOE at 89,016 (citing NRLB v. Gullet Gin Co., 340 U.S. 361 (1951)); see also Ramirez, 24 DOE at 89,015. META has brought forth no considerations which would mandate a change in these OHA precedents regarding this issue.

With regard to Cornett's request for an adjustment to his back pay award to reflect a merit pay or cost of living increases, I find that such an adjustment is not merited given the facts before me. META has certified that during the back pay period it did not give its employees any firm wide cost of living pay increases and Cornett has not produced any evidence to the contrary. With respect to merit pay, there is no evidence in the record that Cornett received such an increase during the time that he was employed by META. Nor did Cornett allege that he had been denied a merit pay increase as a reprisal for his disclosures. Accordingly, I find that it would be too speculative to adjust Cornett's back pay to reflect any merit pay increase.

Consequently, after considering the parties' submissions, I will award Cornett back pay of $161,864 plus $33,543 in interest through June 30, 1997. (11)

B. Attorney Fees

I have decided to approve Cornett's request for attorney fees subject to the reduction described below.

As described above, Cornett has submitted a claim for attorney fees totalling $83,190.25 together with supporting declarations. (12) META has not challenged the hourly rates charged for Cornett's attorneys. Therefore, I will accept these hourly rates and will utilize them to calculate the amount of attorney fees to be awarded. (13) However, META has vigorously disputed the number of billable hours claimed by Cornett. META argues that the total claim for attorney fees is excessive and unreasonable since it is equal to approximately one-half of the total back pay award. Further, META argues that the description given for the work performed is inadequate and that the number of hours claimed is inflated due to inefficient and duplicative use of counsel by Cornett.

META's argument regarding the relative amounts of the back pay claim and the attorney fee claim is unconvincing and unsupported by any cited authority. There is no basis for setting an attorney fee award in proportion to the amount of back pay awarded in a case. No provision of Part 708 requires this and I am aware of no case law supporting META's position. Cf. City of Riverside v. Rivera, 477 U.S. 561 (1986) (Supreme Court plurality refused to adopt a strict rule in a civil rights action under 42 U.S.C. § 1988 that attorney's fees must be proportional to damages). As Cornett has pointed out in his Reply, whistleblower actions typically seek more than just back pay. For example, attorneys for whistleblowers also seek vindication of reputations that have been impugned by employers. The actual value of having one's reputation restored goes beyond the actual monetary award in a whistleblower case. Consequently, I reject META's argument that attorney fees should be proportional to recovered back pay.

META's argument regarding the descriptions of Cornett's attorneys' activities is also unavailing. After reviewing the two declarations and the schedules of billable hours, I find that Cornett has provided sufficient detail to support an award of attorney fees. In addition, I do not find that the attorney fee claim

for Seldon's work is suspect merely because a significant portion of the claimed time spent is rounded off to the nearest hour. Seldon has asserted that he rounded off figures in an exercise of his billing judgement and that this rounding off actually reduced the number of hours claimed. I find this explanation to be sufficient. Counsel should be encouraged to reduce billable hour claims which he or she believes may not be commercially reasonable. Further, there is no other evidence before me indicating that the number of hours claimed by Seldon is otherwise irregular.

However, I find there is merit to META's argument regarding the number of hours billed. An examination of the billable hour schedules suggests that some duplication of effort and inefficiencies are reflected in Cornett's attorney fee claim. Cornett defends the claimed attorney fees by asserting that META's own litigation tactics increased the cost of the litigation by its initial challenge of jurisdiction before a hearing on the merits, thus forcing two hearings to be conducted with associated briefs. Cornett also asserts that costs were driven upward in this case by the recanting of statements made by a key witness and META's insistence on challenging the initial factual findings of the Office of Contractor Employee Protection (OCEP). With regard to the utilization of personnel, Seldon, in the Seldon Declaration, asserts that he reduced the claim for Nelson's billable hours by one-third and personally reviewed Anderson's billing on a item-by-item basis. Seldon also argues that the activities he personally performed were absolutely necessary for effective trial advocacy and that these functions could not have been delegated to anyone else. Some of these arguments are surely correct. Nevertheless, Seldon's arguments fail to convince me of the necessity of all of the billed hours. Even recognizing the nature of the litigation between the parties, the novel issues presented, and the fact that this hearing ultimately resulted in a record of approximately 5,000 pages, I find that the number of hours billed by Anderson and Seldon for services up to the issuance of the Initial Agency Decision are still somewhat excessive.

Consequently, I will reduce Anderson's and Seldon's pre-Initial Agency Decision billable hours by 10 percent. Thus, in calculating the attorney fee award I will reduce Seldon's billable hours to 127.4 hours (136.60 hours x .9 + 4.5 hours for the Reply) and Anderson's billable hours to 202.5 hours (223.30 x 0.9 + 1.5 hours for the Reply). I will award Cornett $33,761 (127.4 hours x $265 per hour) for Seldon's services, $30,375 (202.5 hours x $150 per hour) for Anderson's services and $12,094 (161.25 hours x $75 per hour) for Nelson's services. The total attorney fees awarded is $76,230.

C. Other Expenses

The bulk of the remaining costs and expenses for which Cornett requests reimbursement relate to various photocopying, telephone, postage and delivery, travel and deposition expenses incurred during the litigation of this case. With the exceptions noted below I will approve reimbursement of these expenses.

META claims that some of the telephone calls listed by Cornett do not appear to be eligible for reimbursement. Specifically, META refers to the telephone calls made to D. Hancock, "MPN" and T. Connor, who are not identified in Cornett's submission. Cornett argues that he made these calls prior to retaining counsel to seek advice as to how to proceed before OCEP. However, given the record before me, it is not apparent that the cost of those calls was reasonably incurred by Cornett in bringing his whistleblower complaint. Consequently, the $99.34 incurred in connection with those calls will not be reimbursed.

Similarly, I accept META's argument with respect to Cornett's requested reimbursement for $23.00 of costs associated with a meeting he had with then Secretary Hazel O'Leary. Cornett alleges that this meeting was in connection with his whistleblower complaint. However, he does not provide any specific information about the meeting from which I can find that the costs associated with it were reasonably incurred in bringing the whistleblower complaint. Consequently I will deny reimbursement for those costs.

META also challenges Cornett's request for $1,059.50 for the cost of purchasing a copy of the transcript of the hearing on the merits. META argues that Cornett's counsel does not need a copy of the transcript since he is located in Washington, DC and could have access to the transcript at DOE Headquarters. I find

this argument to be without merit. The obtaining of a hearing transcript clearly was reasonably incurred in bringing the complaint especially since counsel had to respond to META's appeal of the Initial Agency Decision. (14) The fact that a copy of the transcript is available to the public during specified hours at DOE Headquarters does not make the transcript an "unreasonable cost." Consequently, I will approve the $1,059.50 incurred to obtain a transcript of the hearing on the merits.

I will also approve the remainder of the costs submitted by Cornett. Consequently, Cornett will be awarded $8,963 in reimbursement for expenses incurred by him in bringing his complaint.

IV. Conclusion

For the reasons set forth above, Cornett shall be awarded the following amounts of back pay and reimbursement for costs and expenses in accordance with the provisions of 10 C.F.R. § 708.10(c):

Back Pay: $161,864

Interest on Back Pay $ 33,543

(through June 30, 1997)

Attorney Fees $ 76,230

Costs $ 8,963

It Is Therefore Ordered That:

(1) Maria Elena Torano Associates shall pay C. Lawrence Cornett the following amounts in compensation for actions taken against him in violation of 10 C.F.R. § 708.5:

(a) $161,864 for lost salary and fringe benefits for the period March 22, 1994, through December 31, 1995.

(b) $33,543 in interest on the lost salary and fringe benefits as of June 30, 1997 plus additional interest from July 1, 1997 until the date of payment calculated by multiplying the cumulative amount of unpaid back pay plus interest each calendar quarter by the quarterly "overpayment rate" for that quarter.

(c) $8,963 for reimbursement for expenses and costs incurred by C. Lawrence Cornett in bringing his complaint under 10 C.F.R. Part 708.

(d) $76,230 in attorney fees incurred in this proceeding with respect to his attorneys, Robert Seldon, Esq., A. Alene Anderson, Esq. and Eric Nelson of the Government Accountability Project.

(2) This is a Supplemental Order to the Initial Agency Decision issued on December 19, 1996, and shall be subject to review by the Secretary of Energy or his designee pursuant to the request for review that Maria Elena Torano Associates, Inc. submitted to the Assistant Inspector General for Assessments on January 3, 1997.

2nd Quarter, 1997$ 0 8% $3,832 $195,407

* Includes back pay for the period March 22, 1994 to March 31, 1994.

(1)The OHA case number for the Cornett Decision is VWA-0007. As indicated above, the OHA case number for this Supplemental Order is VWX-0010. I will also refer to the Cornett Decision as the Initial Agency Decision.

(2)On January 3, 1997, META submitted a request for review of the Cornett Decision pursuant to 10 C.F.R. § 708.10(c). That request is currently pending. This Supplemental Order will be transmitted to the Assistant Inspector General for Assessments with the expectation that it will be forwarded to the Secretary or his designee so that it may be reviewed together with the Initial Agency Decision. See David Ramirez, 24 DOE ¶ 87,504 (1994). Compare David Ramirez, 24 DOE ¶ 87,512 (1994) (Supplemental Order implementing Final Agency Decision issued as a final Order of the DOE).

(3)The Seldon Declaration describes the effort of a fourth attorney, Thomas Carpenter, who participated in representing Cornett but for whom no compensation is requested. During the pendency of this case, Nelson was a legal intern who performed some of his services as an attorney pursuant to Washington (State) Admission to Practice Rule 9. Nelson's participation in this case ended shortly before the hearing on the merits in this matter in late October 1996. For purposes of this Supplemental Order, I will refer to Nelson as an attorney.

(4)The Leffey matrix was developed in Leffey v. Northwest Air Lines, Inc., 572 F. Supp 354, 371-75 (D.D.C. 1983). An updated Leffey matrix is found in Brown v. Pro Football, Inc., 846 F. Supp 108, 120 (D.D.C. 1994). In Cornett, I stated that I would utilize the "lodestar approach" to determine the amount of attorney fees. 26 DOE at 89,037. Under this approach, a reasonable attorney fee is the product of reasonable hours times a reasonable rate.

(5)In a letter dated February 3, 1997, META responded to Cornett's assertions regarding the issue of firm-wide cost of living or merit increases. In the letter, META asserted that during the relevant period it did not give any firm-wide, cost of living increases and that any raises in salary it provided were merit-based and employee-specific. META further contended that the Initial Agency Decision does not provide for Cornett to recover back pay for speculative, merit-based salary increases.

(6)Seldon also states that he spent 4.5 hours and Anderson spent 1.5 hours in preparing the Reply. Using the "lodestar" rates utilized in the Seldon Declaration, Cornett claims an additional $1,417.50 in attorney fees for this work.

(7)In Crawford Fitting Co. v. J.J. Gibbons, Inc., 482 U.S. 437 (1987), the Supreme Court held that costs awarded under Rule 54(d) are limited to the items set forth in 28 U.S.C. § 1920 and other related statutes.

(8)Section 550.806(d) calculates the overpayment rate by rounding the federal short term rate for the first month of the "last quarter" and adding two percentage points. Cornett determined the federal short term interest rate (5.64%) for the first month (October 1996) of the quarter in which the Initial Agency Decision was issued. Rounding that figure up to 6% and adding 2% produces an interest rate of 8% which Cornett used for each quarter in calculating interest on the back pay amount through January 1997. In accordance with section 550.806(e), Cornett compounded the interest on a daily basis.

(9)Cornett's interest calculation was also flawed by his failure to calculate an interest rate for each quarter based on each quarter's specific overpayment rate as determined by the Secretary of the Treasury.

(10) In calculating the interest for each quarter of the back pay period, the back pay amount for each quarter was divided by two and added to the prior quarter's cumulative back pay and interest amount. This sum was then multiplied by the per annum "overpayment rate" and divided by four to determine that quarter's interest.

(11)All of the sums awarded in this Supplemental Order have been rounded to the next whole dollar.

(12)This total includes the claim for attorney fees for preparation of Cornett's Reply to META's Response.

(13)Since two of Cornett's attorneys practiced primarily in Seattle, Washington, I was initially concerned as to the reasonableness of basing their hourly rates on those applicable in the District of Columbia. However, since there is authority for determining rates by reference to the location of the litigation, my concern has been resolved. See Martin v. Mabus, 734 F. Supp. 1216 at 1226-27 (S.D. Miss. 1990) (relevant legal community for determining attorney fees is the judicial district where the litigation occurred, rather than the attorney's primary location of practice).

(14)OHA usually provides a free copy of the transcript to the parties in whistleblower cases. This was not done in this case. If a copy had been provided, Cornett would not have had to incur that cost.

Case No. VWX-0014

November 29, 1999

DEPARTMENT OF ENERGY

OFFICE OF HEARINGS AND APPEALS

Supplemental Order

Name of Case:Frank E. Isbill

Date of Filing:November 4, 1999

Case Number: VWX-0014

This Decision supplements an Initial Agency Decision, dated September 27, 1999, issued by the undersigned Hearing Officer of the Office of Hearings and Appeals (OHA) of the Department of Energy in a case involving a "whistleblower" complaint filed by Frank E. Isbill (the complainant) under 10 C.F.R. Part 708. See Frank E. Isbill, 27 DOE ¶ 87,529 (1999). In the Decision, I found that NCI Information Systems, Inc. (the contractor), a DOE contractor, had violated the provisions of 10 C.F.R. § 708.5 by removing the complainant's supervisory duties in reprisal for his making protected disclosures related to a possible abuse of authority. The Decision further determined that the complainant should be awarded reimbursement for all costs and expenses reasonably incurred by him in bringing his complaint. The complainant submitted a request for reimbursement of these costs and expenses on November 4, 1999. The contractor submitted a response to the November 4 submission on November 15, 1999. This Supplemental Order awards the complainant a total of $546 in costs and expenses.

In the complainant's request, he seeks reimbursement for the contractor for the work he did representing himself, totaling $6,061. I reject these charges because it is well-settled that a pro se litigant is not entitled to attorney's fees. See Kay v. Ehrler, 499 U.S. 432, 435 (1991) (civil rights case); Wolfel v. United States, 711 F.2d 66, 68 (6th Cir. 1983) (Freedom of Information Act case). The complainant also requests that he be reimbursed for telephone and fax charges, process service charges (since he had subpoenas served on two of the witnesses) and a consultation fee with an attorney, totaling $358. I have examined these expenses and in the context of this case, these charges seem reasonable and are specified in sufficient detail. I will therefore order the contractor to pay all of these charges. The complainant also requests reimbursement for mileage incurred in traveling both to the Office of the Inspector General (OIG) and to the hearing, at the rate of 30 cents a mile. Since Section 708.36 provides for reimbursement of essentially all reasonable costs and expenses, it is appropriate for the contractor to pay charges incurred in connection with the OIG investigation of the complaint filed under Part 708. However, the mileage rate used by the complainant was incorrect, as the government generally only permits mileage to be reimbursed at the rate of 23.5 cents a mile. See 41 C.F.R. § 301-10.310. I have therefore reduced the mileage reimbursement total from $240 to $188. For these reasons, the contractor must pay to the complainant $546 in reimbursement for costs and expenses in accordance with the provisions of 10 C.F.R. § 708.36.

It Is Therefore Ordered That:

(1) NCI Communications, Inc. shall pay Frank E. Isbill $546 in reimbursement for expenses and costs incurred by him in bringing his complaint under 10 C.F.R. Part 708, in compensation for actions taken against him in violation of 10 C.F.R. § 708.5.

(2) This is a Supplemental Order to the Initial Agency Decision issued on September 27, 1999, which shall become a Final Decision of the Department of Energy unless, within 15 days of its receipt, a Notice of Appeal is filed requesting review of this Supplemental Order by the Director of the Office of Hearings and Appeals with the Office of Hearings and Appeals, 1000 Independence Avenue, S.W., Washington, D.C. 20585-0107, telephone number (202) 426-1566, fax number (202) 426-1415.

Dawn L. Goldstein

Hearing Officer

Office of Hearings and Appeals

Date: November 29, 1999

Case No. VWZ-0006

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: META, Inc.

Date of Filing: May 21, 1996

Case Number: VWZ-0006

This Decision considers a Motion to Dismiss filed by Maria Elena Torano Associates, Inc. (META) on May 21, 1996. In its Motion, META seeks the dismissal on jurisdictional grounds of the underlying complaint and hearing request filed by its former employee C. Lawrence Cornett under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. <1>On July 31, 1996, I conducted a hearing to receive evidence regarding the jurisdictional issues raised by META's Motion to Dismiss.

META argues that DOE does not have jurisdiction to hear Mr. Cornett's complaint since Part 708 applies only to employees of DOE contractors who perform work at DOE-owned or DOE-leased facilities.<2> META asserts that, with the exception of a limited number of visits to perform work ancillary to the primary purposes of the PEIS contracts, it did not perform work at DOE sites.

It is undisputed that Part 708 protections are limited to employees of contractors and subcontractors that perform work at contractor-operated DOE sites. See 10 C.F.R. §§ 708.1-708.4. The issue before me is whether META performed work at DOE sites within the meaning of Part 708. Section 708.4 defines "work performed on site" as:

work performed within the boundaries of a DOE-owned or -leased facility. However, work will not be considered to be performed "on-site" when pursuant to the contract it is the only work performed within the boundaries of a DOE-owned or -leased facility, and it is ancillary to the primary purpose of the contract (*e.g.*, on-site delivery of goods produced off-site).

10 C.F.R. § 708.4. Consequently, if all of the work META performed at DOE sites was ancillary to the primary purposes of the PEIS contracts, then META would not be subject to 10 C.F.R. Part 708 and its Motion should be granted. Given the somewhat unclear regulatory language above, it is apparent that there is no "bright line" test that can be employed in making a determination as to whether performed work is ancillary to the primary purposes of a contract. The determination as to whether work is ancillary is a subjective judgement which relies on facts of each individual case. After considering all of the testimony and exhibits presented by both parties during this proceeding, I find that META has performed work at DOE sites within the meaning of Part 708.

META has failed to persuade me that all of the work performed at DOE sites by META employees was ancillary to the primary purposes of its PEIS contracts with DOE.<3> After examining the three contracts META and DOE entered into regarding the PEIS, it is apparent that the primary purposes of the PEIS contracts were for META to revise draft materials for the PEIS, perform needed data analyses for the Draft PEIS and ultimately to prepare under DOE direction the Final PEIS. None of the witnesses or exhibits presented by either META or Mr. Cornett indicates that META employees performed data analysis at a DOE site or prepared written materials in connection with the PEIS at a DOE site. However,

there is substantial evidence before me to indicate that there was important work performed by META employees at DOE sites and that it was directly related to the primary purposes of the PEIS contracts.<4>

Testimony before me establishes that site visits made by META employees accomplished important mission-related purposes. They resulted in the obtaining of data generated at DOE nuclear sites and facilitated the gathering of necessary data by establishing relationships with employees at those sites. Dr. Phil Sczerzenie, the META impacts team leader, testified that the primary purposes of the site visits were to set up lines of communication for data from individuals at various DOE sites and to discover what types of data were available. Transcript of July 31, 1996 Hearing (Tr.) at 113, 115-16, 124. Further, Dr. Sczerzenie testified that META personnel obtained information needed in PEIS analysis during their visits to DOE sites. Tr. at 113, 115-17, 148. Dr. Sczerzenie's testimony is corroborated by the testimony of Dr. Thomas Hale, an economist on the META impacts team, who testified that one of the purposes of the site visits was to establish personal relationships with individuals at DOE sites in order to facilitate the transfer of needed data for analysis, to discover what data was available and to bring back data from the sites. Tr. at 166, 168. Further, Dr. Jane Rose, a member of the META impacts team, testified that she gathered data at the DOE sites. Deposition of Dr. Jane Rose (Rose Deposition) at 15. This testimony is supported by several of the META employee trip reports which have been submitted into the record. See Exhibits 13, 19 and 21. In my opinion, these activities involving data gathering and the facilitation of data gathering cannot be considered ancillary to the primary purposes of the PEIS contracts since they were directly related the primary purposes of those contracts. I accept META's contention that most of the data that it obtained from the sites was not collected on site by META personnel. However, as indicated by the testimony referred to above, data collection was greatly facilitated by site visits by META personnel. I also agree that data that was collected on site by META employees could have been transmitted by mail or electronic media. However, this does not change the fact that important data collection activities occurred at DOE sites. Section 708.4 does not require that work performed at DOE sites be of a nature that it must always be physically performed at a DOE site.

Further, I find that META employee tours of DOE sites significantly assisted those on the trip and other META employees with whom they shared information in preparing the PEIS. Granted, the information META employees obtained from site tours does not appear to be "data" of the type that META was contracted to obtain or analyze under the PEIS contracts. <5> See Tr. at 117, 120, 126-27 (Dr. Sczerzenie). META personnel did not go to DOE sites to make physical measurements or conduct specific validation of the data they obtained. Nevertheless, the testimony of Drs. Hale and Rose shows that on the site tours they obtained information that they utilized in the analyses they performed for the PEIS.<6> Specifically, Dr. Hale testified that through site tours he was better able to understand the nature and scale of potential environmental hazards and that this assisted him in his analysis for the PEIS. Tr. at 170-71, 178. Dr. Rose testified that she was able to obtain information and make observations that were essential for her to properly perform her PEIS work. Rose Deposition at 7-8, 12-15, 22-23, 28-29. In addition, the testimony of Mr. Cornett and the trip report exhibits he has submitted support the conclusion that information and observations from the DOE site tours were communicated to META personnel at the firm's Gaithersburg facility, Tr. at 214-15, 224; Exhibits 13, 19, who used it in the analyses that they performed for the PEIS. Tr. at 218-20. This information sensitized those employees to site conditions that could require particular data analysis or provided some general verification of conditions at the site. As a result of the use

of this type of information in the PEIS analysis, I believe that the site tours were too important to be deemed ancillary to the primary purposes of the PEIS contracts.

I recognize that a very small percentage of the time spent by META employees on the PEIS project involved travel to DOE sites, and that only a small percentage of the firm's employees actually travelled to those sites. See Affidavit from Albert N. Tardiff at ¶ 6. I also recognize that not all of the time spent on the trips was spent on site. See Tr. at 72-74, 131, 270. Nevertheless, as indicated above, there were activities engaged in by META personnel on site that were not ancillary to the primary purposes of the PEIS contracts, but were intimately related to such primary purposes as revising draft materials for the

draft PEIS and performing needed data analysis. In view of the importance of the work performed at DOE sites, and the fact that the sites visited were some of the major nuclear facilities involved in the PEIS, the relatively little amount of time spent there, while a relevant factor, is not dispositive of the jurisdictional issue in this case.

Since the meaning of the expression "ancillary to the primary purpose of the contract" is not crystal clear, in reaching a determination on the jurisdictional issue raised by META, I have also taken into consideration the purpose of Part 708. The Part 708 preamble states that "a fundamental purpose of this rule is to encourage individuals to feel free to disclose to the DOE information relative to health and safety problems at DOE-owned or -leased facilities...." 57 Fed. Reg. 7533 at 7535 (March 3, 1992). The PEIS that META employees worked on was directly related to the issues of waste management and environmental restoration at DOE's government-owned, contractor-operated sites and Mr. Cornett has alleged that there were deficiencies in the PEIS analysis of human health risks. While META has correctly pointed out that its work is less directly involved with on-site work than that of the management and operating contractors and subcontractors involved in prior cases under Part 708, META's on-site contact was much more significant than that of the deliverer of goods referenced in the example in the Section 708.4 definition of "work performed on site." <7> Thus, META is one type of contractor or subcontractor that DOE intended to cover by the Part 708 regulations.

Because I find that META employees performed work at DOE sites that cannot be considered ancillary to the primary purpose of the PEIS contracts, I conclude that META is a contractor that performed work on site as defined in Section 708.4, and thus is subject to the Part 708 regulations.<8> Consequently, I shall deny META's Motion to Dismiss.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by META, Inc. on May 21, 1996 is denied.

(2) This is an Interlocutory Order of the Department of Energy.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date: August 22, 1996

<1>Beginning in 1991, DOE entered into the first of three contracts with META to obtain its services to help DOE produce a draft Programmatic Environmental Impact Statement (PEIS). Mr. Cornett's Part 708 complaint arises from his employment with META on the PEIS and alleges that because of disclosures he made regarding health and safety risks he experienced various forms of reprisal culminating with his termination from employment with META. For a procedural history of this matter, see C. Lawrence Cornett, 25 DOE ¶ 87,504 (1996) (Order to Show Cause) (Cornett).

<2>In this Decision, I will refer to DOE-owned or DOE-leased facilities as "DOE sites."

<3>As in my Order to Show Cause, references to META employees include employees of META's subcontractor, Louis A. Berger Associates (Berger). From the record before me Berger employees performed essentially the same types of work as META employees on the PEIS contracts. See Cornett, 25 DOE at 89,023 n.5.

<4>I reject, however, Cornett's argument that because META certified that its employees' DOE site visits were necessary, the work performed at the sites should be automatically deemed integral to the purposes of the PEIS contracts. Nevertheless, the fact that META chose to send its personnel to DOE sites provides

some evidence that it considered the visits important.

<5>The parties disagree on the definition of the word "data." Dr. Hale's testimony sums up this dispute: "Data sort of has lots of different meanings. In talking to people . . . .about high level waste and understanding, for instance, what vitrification is, and what processes are necessary. That's data, in my mind. . . . In other peoples minds it's rows and columns of numbers." Tr. at 178.

<6>During cross examination at her deposition, Dr. Rose took issue with the word "tour," referring instead to her activities on site as "field work." Rose Deposition at 51-52.

<7>There are many such contractors that deliver supplies and equipment for offices, building maintenance, cafeterias and vending machines. For this reason, I do not accept META's argument that finding Part 708 jurisdiction in this case would extend Part 708 jurisdiction to almost all DOE contractors and make the ancillary work exception meaningless.

<8>While META has correctly pointed out that Cornett did not work at any DOE site, the definition of "employee" in Section 708.4 clearly states that the determination of whether a person has standing as an employee shall be made without regard to the on- or off-site locale of the employee's work performance. 10 C.F.R. § 708.4 (definition of "employee").

Case No. VWZ-0007

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: META, Inc.

Date of Filing: October 4, 1996

Case Number: VWZ-0007

This determination will consider a Motion to Dismiss filed by Maria Elena Torano Associates, Inc. (META) on October 4, 1996. In its Motion, META seeks the dismissal of the underlying complaint and hearing request filed by C. Lawrence Cornett (Cornett) under the Department of Energy's Contractor Employment Program 10 C.F.R. Part 708.

Beginning in 1991, DOE entered into the first of three contracts with META to obtain its services to help DOE produce a Programmatic Environmental Impact Statement (PEIS). Mr. Cornett's Part 708 complaint arises from his employment with META on the PEIS and alleges that because of disclosures he made regarding the PEIS's deficiencies in risk assessment methodologies he experienced various forms of reprisal culminating with his termination from employment with META. On March 9, 1994, Cornett filed a complaint pursuant to 10 C.F.R. Part 708. The Office of Contractor Employee Protection (OCEP) conducted an investigation of Cornett's allegations and issued a Report of Investigation and Proposed Order (Report) on April 17, 1996. OCEP, in the Report, concluded that Cornett had made protected disclosures regarding health and safety issues and that it had jurisdiction over Cornett's complaint. Further, OCEP concluded that a preponderance of the evidence supported a finding that Cornett's protected disclosures contributed to his selection by META to be terminated and that META had failed to show by clear and convincing evidence that Cornett would have been terminated absent his protected disclosures.(1)

In its Motion, META asks that Cornett's complaint be dismissed for failure to state an actionable claim. Specifically, META argues that Cornett did not make a disclosure protected by Part 708. META asserts that the word "disclose[d]," as used in Part 708, implies that the information communicated must be of a type which is not known by the recipient. META goes on to claim that "[i]n many of his alleged 'protected disclosures,'" Cornett did not disclose anything that the DOE or its contractors did not already know. Consequently, META argues that Cornett failed to make a disclosure under Part 708.

In the Motion, META also argues that Cornett's alleged disclosures did not involve any substantial and specific threat to any person's health or safety as required by Part 708. META points out that Cornett's allegations regarding use of alternative risk assessment methodologies and data would not themselves have revealed dangerous physical conditions at DOE sites and that data regarding these sites were already generally available to the public. Further, META asserts that because of the nature of the methodological drafting concerns raised by Cornett they would have no direct impact on the health and safety of anyone. META notes that the draft versions of the PEIS were subject to peer and public review before the official Draft PEIS was published and that any alleged methodological weaknesses would have been fully reviewed. Further, according to META, the theoretical subject matter of Cornett's alleged disclosures, such as whether a particular risk assessment model should or should not be used in the official Draft PEIS,

does not implicate a substantial and specific risk to anyone as contemplated in Part 708.

After considering the arguments raised by META regarding its Motion, I deny it for the following reasons. Initially, I decline to adopt the META interpretation of the term "disclosed" in Part 708. (2) While Part 708 provides no definition of the word "disclosed," it is clear to me that the agency never intended the word to be construed as narrowly as that proposed by META. An examination of the preamble to the Part 708 regulations finds that the words "allege" and "report" are used synonymously with "disclose." See 57 Fed. Reg. 7533, 7534 (March 3, 1992). The use of the words "allege" and "report" indicates that the drafters of Part 708 never meant to require that the information disclosed had to be unknown to the recipient of the information. Further, the use of the general expression "provides information" in Section 708.3 argues against creating a requirement that a disclosure must contain unique information not known to the recipient.

Adoption of META's interpretation of the word "disclosed" would, in addition, not further the policies behind the Part 708 regulations. It is clear from the text of Part 708, as well as the preamble to these regulations, that the Contractor Employee Protection Program is intended to encourage employees of DOE contractors and subcontractors to make their employers or the DOE aware of concerns about health, safety, mismanagement and unlawful or fraudulent practices without fear of employer reprisal. See Sandia National Laboratories, 23 DOE ¶ 87,501 at 89,003 (1993) (denying Motion to Dismiss) (Sandia). Imposing the interpretation META suggests would require an employee to first ascertain whether his or her information is unknown to DOE or the contractor in order to assure his or her protected status and that process could be an elaborate and difficult one. In any case, it would tend to inhibit employees from freely coming forward with sensitive information and concerns. Consequently, META's interpretation of "disclosed" would be detrimental to employees being able to take advantage of the benefits to be obtained from Part 708. Part 708 is intended to encourage employee concerns regarding substantial and specific dangers to health and safety. Simply because someone employed by DOE or a contractor has knowledge of an employee's information does not in fact mean that the responsible officials involved in a project or at a site are aware of the information and are giving it appropriate consideration. Knowledge at one level in an organization may not translate into appropriate action at the right moment.

I also reject META's argument that, as a matter of law, Cornett's assertions do not involve substantial and specific dangers to public health and safety. In its Motion, META has misconstrued Section 708.5(a)(1). An employee need not establish that a disclosure in fact involved a substantial and specific danger; he or she is protected from reprisal if he or she in good faith believes the disclosure concerns a substantial and specific danger to employees or public health and safety. 10 C.F.R. § 708.5(a)(1)(ii). Thus, a determination as to whether Cornett's disclosures did in fact concern a substantial and specific danger is not dispositive of his Part 708 claim. Further, the question as to Cornett's beliefs regarding his disclosures is a factual issue which OCEP resolved in Cornett's favor in the Proposed Order it issued on April 17, 1996. In the absence of further inquiry and receipt of evidence on this factual issue, granting META's Motion would be inappropriate. See Sandia, 23 DOE at 89,003 ("A motion to dismiss is appropriate where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving issues of fact or law on a more complete record."). Consequently, META's Motion to Dismiss should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by META, Inc. on October 4, 1996, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

Ted Hochstadt

Hearing Officer

Office of Hearings and Appeals

Date:

(1) This is the second Motion to Dismiss that META has submitted with regard to Mr. Cornett's Part 708 complaint. I denied META's prior Motion to Dismiss. See C. Lawrence Cornett, 25 DOE ¶ 87,504 (1996) (Order to Show Cause); META, Inc., 26 DOE ¶ 87,501 (1996) (Motion to Dismiss).

(2)The pertinent portion of Part 708 cited by META, Section 708.5(a)(1)(ii), states that a contractor employer may not discharge or retaliate against an employee who has:

(1) Disclosed to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), information that the employee in good faith believes evidences

****

(ii) A substantial and specific danger to employees or public health or safety.

July 11, 1997

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: EG&G Rocky Flats, Inc.

Date of Filing: June 13, 1997

Case Number: VWZ-0008

This decision will consider a Motion for Partial Dismissal and Limitation on Scope of Complainant's Claims filed by EG&G Rocky Flats, Inc. (EG&G) on June 13, 1997. In its motion, EG&G seeks partial dismissal of the underlying complaint and hearing request filed by Arthur Murfin (Murfin) under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Murfin's request for a hearing under 10 C.F.R. § 708.9 was filed on January 27, 1997, and it has been assigned Office of Hearings and Appeals (OHA) Case No. VWA-0016.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

On September 27, 1982, Murfin was hired as a machinist by Rockwell Rocky Flats (Rockwell), then the management and operating (M&O) contractor at DOE's Rocky Flats Field Office. On November 20, 1987, while employed in the Future Systems Department, Murfin provided information to a Congressional investigator about possible misappropriation of government funds occurring in the Future Systems Department. In February 1988, Murfin was transferred from Future Systems to the Special Assembly Group. He initially agreed to the transfer, but then reconsidered because of the possibility of adverse physical consequences the new position would have on an existing medical condition, dermatitis. Despite this, he was reassigned and on February 29, 1988, he filed a complaint with Rockwell's Employee Relations Office stating that he was transferred against his will. He alleged

in his complaint that this transfer was an act of reprisal against him for disclosing information to the investigator in 1987.

Shortly after the February 1988 transfer, Murfin allegedly reported to his Special Assembly supervisor, Mr. Brown, that certain equipment was being improperly used or serviced. Murfin contends that this was an "employee health and safety" disclosure as set forth in the whistleblower regulations. In June 1988, Murfin experienced severe dermatitis on his hands and arms and on June 23, 1988, was temporarily reassigned to work for Mr. Reed Hodgin in Atmospheric Sciences. On September 15, 1988, the Rockwell staff physician wrote to Mr. Brown, instructing him that Murfin should not be assigned to work that would aggravate his medical condition.

On September 28, 1988, Murfin wrote to Congressman David E. Skaggs (R.-Colorado) and stated that he

felt his transfer to Special Assembly was punishment for his participation in the Congressional investigation the prior year. On October 8, 1988, Congressman Skaggs informed Murfin that he had requested that DOE review Murfin's case.

On November 14, 1988, Murfin received a performance rating of "needs improvement," the lowest rating in a three-tiered system. On November 21, 1988, Mr. Albert Whiteman, DOE Rocky Flats Area Manager, informed Congressman Skaggs that Murfin would be transferred from his current position, where he was dissatisfied, and would be provided training for a new position. The letter also stated that retaliation against Murfin would not be tolerated. On December 1, 1988, Murfin was reassigned to the position of Technical Writer, a position for which he maintains he did not have the proper skills, training, or background. On January 23, 1989, Murfin was reassigned within the Program Management department from Technical Writer to the W82 Program, a job that Rockwell management felt better suited his background. On October 12, 1989, Murfin's 1989 performance was evaluated at a "needs improvement" level. On December 31, 1989, Rockwell discontinued its management and operation of Rocky Flats and EG&G assumed operation of the facility on January 1, 1990. On May 31, 1990, Murfin was evaluated in an interim performance evaluation, and received an overall rating of "meets or exceeds job requirements." On August 24, 1990, the November 1988 letter from Whiteman to Congressman Skaggs was placed in Murfin's personnel file. In October 1990, Murfin was reassigned from the W82 Program to the 440/460 facilities. In February 1991, Murfin's 1990 performance was evaluated as "effective." This was his first full year appraisal under EG&G management. In January 1992, Murfin received his 1991 evaluation; this time he was rated as "highly effective."

On September 8, 1992, the EG&G General Counsel requested the cooperation of 26 employees, including Murfin, in searching for documents relevant to Rockwell's litigation relating to its prior operation of Future Systems at Rocky Flats. Murfin responded later that month, indicating that he had some documents in his possession and could locate others. On December 9, 1992, Murfin was evaluated as "effective" for 1992. On February 15, 1994, Murfin filed a complaint pursuant to Part 708 with DOE Rocky Flats Office. On April 5, 1994, Murfin was evaluated as "effective" for 1993. On December 10, 1994, Murfin amended his complaint to include additional allegations of reprisal including management's failure to consider him for promotion and allegedly marked differences in pay between Murfin and a named co-worker with similar responsibilities. On March 16, 1995, Murfin again amended his complaint to add allegations of reprisal consisting of the cancellation of a training course for which he had enrolled and his termination through a Reduction-in-Force (RIF) in March 1995. Later in 1995, Kaiser-Hill assumed management of the facility from EG&G, and continues to operate Rocky Flats today.

In summary, Murfin alleges six actions of reprisal by his employers: (1) an involuntary transfer in February 1988 from Future Systems Department to the Special Assembly Engineering Group, (2) unfavorable performance evaluations in 1988, 1989, and 1990, (3) non-selection by management for other positions within his department, (4) disparate salary enhancements compared to his co-workers, (5) denial of training, and (6) termination through a RIF in March 1995.

On January 3, 1997, the now-defunct DOE Office of Contractor Employee Protection (OCEP) finalized its Report of Investigation and Proposed Order (ROI). OCEP found, inter alia, that several of the alleged incidents of retaliation were not covered under Part 708, were not timely filed, or were not subject to relief. In general, OCEP concluded that a preponderance of the available evidence did not support a finding that Murfin's protected disclosures contributed to his limited salary enhancements, termination through a RIF, or failure to be promoted. OCEP found no prohibited retaliation. On January 21, 1997, Murfin submitted a request for a hearing to OCEP, and the OHA received that request on January 27, 1997.

On June 13, 1997, EG&G filed the motion under discussion. In its motion, EG&G argues that two of Murfin's claims of reprisal should be dismissed. These are the alleged reprisals based on Murfin's transfer in 1988 and on his 1988, 1989, and 1990 performance appraisals. Further, EG&G argues that two other claims should either be stated with more specificity or be dismissed. These are the alleged reprisals based

on Murfin's claim of "non-selection" for other positions and on his limited salary enhancements. On June 23, 1997, Murfin filed a response to EG&G's motion, and on June 26, 1997, EG&G filed a reply to Murfin's response. For the reasons stated below, I will grant EG&G's motion in part, and deny the motion in part.

II. Analysis

A. EG&G's Liability for Alleged Reprisals That Occurred in 1988, 1989 and 1990

EG&G argues that because it did not become the Rocky Flats M&O contractor until January 1, 1990, it has no liability for any alleged reprisals that occurred prior to that date. These alleged reprisals are the February 1988 involuntary transfer and the unfavorable 1988 and 1989 appraisals, which occurred while Rockwell was managing the site. It also argues that the 1990 performance appraisal of Murfin, though it was issued after EG&G had assumed management of Rocky Flats on January 1, 1990, creates no liability because it was in fact not a reprisal. For the reasons set forth below, I will dismiss Murfin's claims that are based on these alleged reprisals.

In its motion, EG&G submits, among other contentions, that the whistleblower regulations at 10 C.F.R. Part 708 do not apply to the alleged reprisals that occurred in 1988, 1989 and 1990. I agree with EG&G. 10 C.F.R. § 708.2 gives this proceeding jurisdiction over complaints of reprisal that were filed after the effective date of Part 708 (April 2, 1992), where the acts of reprisal occurred after that date, if the reprisal stems from health and safety matters. All other complaints, for example, those that stem from disclosures of fraud or mismanagement or participation in a congressional proceeding, must relate to acts of reprisal that occurred after both the effective date of the regulations and the date on which the underlying procurement contract contains a clause requiring compliance with the whistleblower regulations. 10 C.F.R. § 708.2(a). EG&G amended its contract to incorporate the provisions of 10 C.F.R. Part 708, effective April 2, 1992. Report of Investigation at 2. Under these circumstances, the whistleblower regulations apply to EG&G reprisals that occurred after April 2, 1992, regardless of the nature of the disclosure from which they stem. Conversely, the whistleblower regulations do not apply to any reprisals that Murfin has alleged to have occurred before April 2, 1992, which include the 1988 involuntary transfer and the performance appraisals issued in 1988, 1989 and 1990. See Mehta v. Universities Research Ass'n, 24 DOE ¶ 87,514 at 89,064 (1995) (Mehta) (Deputy Secretary decision); Richard W. Gallegos, 26 DOE ¶ 87,502 at 89,004 (1996) (application of regulations to reprisals stemming from non-health and safety matters limited to those that occurred after adoption of contractual provision). (1)

EG&G has argued that "no evidence related to this disclosure or purported act of retaliation should be permitted at the hearing in support of Complainant's claim." Motion at 3. With respect to timeliness, the regulations governing this proceeding consider the scope of coverage in terms of reprisals, not disclosures. 10 C.F.R. § 708.2(a). Therefore, although the whistleblower regulations are limited in their application to acts of reprisal that occur after April 2, 1992, those reprisals may stem from protected disclosures made before that date. Consequently, although I will exclude from this proceeding any evidence related to the alleged reprisals that occurred in 1988, 1989 and 1990, I will nevertheless accept evidence concerning the 1987 and 1988 disclosures themselves, provided it relates to an alleged act of reprisal that occurred after April 2, 1992.

B. The Sufficiency of Two Allegations of Reprisal

The balance of EG&G's Motion argues that two of Murfin's allegations of reprisal are stated so broadly and generally that they "should be stated with more particularity, or in the alternative, dismissed." Motion at 7-8. EG&G contends that in order to meet his burden, Murfin must set forth more details in order to provide EG&G the chance to focus its defense on specific transactions. In his complaint, Murfin alleges (1) that he was not selected for vacant positions within his department and (2) that he did not receive salary enhancements in line with colleagues of similar seniority and position. EG&G submits that without knowing, for example, which positions Murfin applied for and was denied, EG&G bears the heavy burden

of justifying each personnel decision made in every department that employed the complainant. Motion at 7. Further, EG&G argues that Murfin has provided only anecdotal evidence to support his view that he received lower raises than others in comparable positions at Rocky Flats, and even if this allegation were true, the complainant has not provided any evidence that his allegedly below average pay raises reflect a retaliatory act. Id.

A motion to dismiss is appropriate only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See M&M Minerals Corp., 10 DOE ¶ 84,021 (1982). The Office of Hearings and Appeals considers dismissal "the most severe sanction that we may apply," and has stated that it will be used sparingly. See Boeing, 24 DOE at 89,005. Based upon this standard, I am not persuaded that Murfin's claim should be dismissed at this point in the proceeding. Instead I will direct that Murfin be permitted to supplement the record concerning non-selection for specific positions and that EG&G provide compensation histories for employees who fall within the parameters described below.

In previous cases, the Office of Hearings and Appeals has found that in order to achieve the purpose of the whistleblower protection program, i.e., encouraging employees to come forth with protected disclosures, it is important not to hold these employees to the strictest standards of technical pleading. See Westinghouse Hanford Company, 24 DOE ¶ 87,502 at 89,011 (1994) (Westinghouse). As EG&G points out, however, the regulations state that a complaint must contain a "statement setting forth specifically the nature of the alleged discriminatory act." 10 C.F. R. § 708.6 (c) (emphasis added). Nevertheless, I note that the Director of OCEP accepted for processing all of the claims that Murfin raised in his complaint and his subsequent modifications.

Murfin argues in his response that general claims of reprisal are sufficient to meet his burden of establishing whistleblower retaliation, and relies on the Spaletta decision for support of that position. Spaletta, 24 DOE at 89,052. Contrary to Murfin's contention, the complainant in Spaletta did not make "general accusations of reprisal." In fact, the hearing officer consistently held the complainant to the standards of specificity established in previous cases. Spaletta's allegation that he received fewer work assignments after making protected disclosures was easily verifiable, and by no means a "general accusation of reprisal." He was assigned jobs by referral from other groups, and when these referrals declined it was not difficult to quantify the decreased demand for his particular services in the years following his disclosures. Id. at 89,052-54. As for the "general accusation" that Spaletta received minimal raises, Spaletta submitted uncontroverted evidence of a "precipitous decrease" in his pay raises in the years following his protected disclosures. Id. at 89,055. The hearing officer used this evidence to "meet [complainant's] burden of showing that his disclosures were a contributing factor in those merit increases." Id. The final alleged "general accusation" that Murfin describes in his response, Spaletta's constructive termination, was not accepted as an act of reprisal because Spaletta could not prove this claim. Id. at 89,057. Therefore, we will hold Murfin to the standards of specificity required of all whistleblower complainants.

The purpose of the requirement that a complaint be specific is to avoid unfairness to the contractor. Westinghouse at 89,011. In this case, EG&G has persuasively argued that two allegations contained in the current complaint, as they now stand, would unfairly cause EG&G to expend an inordinate amount of time trying to respond to very broad allegations.

With respect to the allegation of non-selection, Murfin should be able to provide information about specific positions for which his not being selected were acts of reprisal. In his May 18, 1997 submission and in a telephone conference on June 6, 1997, Murfin clarified that he wishes to limit his claim of reprisal concerning non-selection to those positions in the department in which he was employed. I will direct him to produce a list of all positions, not later than July 21, 1997, with approximate titles and dates, for which it is his contention that his non-selection was an act of reprisal. In the event Murfin fails to produce this list, I will dismiss this portion of his claim.

As for the allegation of inadequate pay raises, I agree with Murfin's contention that the data which would permit comparison of his compensation history with those of others similarly situated more likely lies within the control of EG&G than within his own. I also agree with EG&G that union wages, such as those Murfin earned as a machinist, are not easily compared to non-union wages, such as those Murfin earned after his 1988 transfer. As stated above, I find that the whistleblower protections provided in 10 C.F.R. Part 708 do not apply to that transfer or to any other alleged reprisal that occurred before April 2, 1992. Therefore, no remedy is available under these regulations for any adverse effects of those alleged reprisals. Any comparison of Murfin's compensation should be made to others who had positions similar to his immediately before the first act of alleged reprisal that is covered by the regulations. See Daniel L. Holsinger, 25 DOE ¶ 87,503 at 89,015 (1996); Spaletta, 24 DOE at 89,058. Because it appears that performance appraisals affected pay raises, I will direct EG&G to produce, not later than July 25, 1997, compensation histories (with personal identifiers deleted) for employees who held positions similar to that of Murfin as of April 2, 1992, beginning with the period for which such employees were rated in their first performance appraisal issued after that date and ending with the date of Murfin's termination from EG&G. I reiterate that EG&G will not be required to produce documents that do not exist, nor perform involved analysis to meet this demand. Because EG&G is the party more likely to be able to produce the data necessary to support this claim, I will not dismiss this claim at this time. I again encourage the parties to cooperate with each other to determine the type of information, readily available to EG&G, that would satisfy Murfin's needs yet not be a burden upon EG&G to produce.

D. Other Matters

In his response to EG&G's motion, Murfin raises two additional matters. First, based on the language of 10 C.F.R. § 708.2(c), Murfin argues that his complaint should be processed even if it extends beyond the scope of the regulations. Second, he contends that he need not produce all his evidence before the hearing itself, but rather may present it at that time. I will address each in this section.

Section 708.2(c) of the whistleblower protection regulations states

For complaints not covered by § 708.5(a) [which provides that DOE contractors may not take adverse action against employees who make specified disclosures], the Director, at his discretion and for good cause shown, may accept a complaint for processing under this part. . . . A determination by the Director not to accept a complaint pursuant to this subsection may be appealed to the Secretary or designee.

10 C.F.R. § 708.2(c). The regulations define "Director" as the Director of the Office of Contractor Employee Protection (OCEP), now a part of the Office of the Inspector General. 10 C.F.R. § 708.4. Murfin argues that even if parts of his complaint are not covered by section 708.5(a), the Director or the Secretary of Energy may, for good cause shown, process his complaint. He contends that good cause is established in a letter from the Rocky Flats Manager to Congressman Skaggs, in which the Manager states that Rockwell "will not tolerate retaliation or discrimination against Murfin or any other Rocky Flats employee." Letter from Albert E. Whiteman, Area Manager, to Representative David E. Skaggs, November 21, 1988. This provision confers discretion upon the Director of OCEP to accept complaints that are not strictly covered by section 708.5(a). In this case, OCEP accepted for processing, investigated and reached a proposed determination for each of the allegations of reprisal that Murfin raised in his complaint. That OCEP ultimately concluded that Murfin's complaint lacked merit does not alter the fact that OCEP accepted the entire complaint for processing, which is the subject of the provision under discussion here. Therefore, this provision will not be considered in this proceeding. Moreover, if Murfin desired to challenge OCEP's failure to exercise its discretion to accept his complaint, this section dictates that he raise that appeal to the Secretary of Energy, not to the OHA.

Murfin's remaining contention is that he may present documentary evidence at the time of the hearing even if he has not provided it to me and to EG&G in advance. This, of course, is generally true. (2) The reasons for exchanging information in advance of the hearing are many. First, it eliminates the element of surprise by allowing each party to prepare fully for the arguments that the other party or parties will present.

Second, it speeds and smooths the flow of the hearing by eliminating the need to establish the authenticity of evidence during the hearing itself. Third, it permits the parties to discuss the relevance and necessity of the evidence, which in turn may lead to stipulations or other forms of agreement regarding matters that are not in dispute. Finally, it eliminates the possibility that a document may be successfully challenged at the hearing and possibly excluded from the record and thus from my consideration. Therefore, although the parties may, if necessary, introduce documents at the hearing itself, I will continue to encourage them to prepare for full disclosure before the hearing of all documents and witnesses they intend to rely upon at the hearing.

It Is Therefore Ordered That:

(1) The Partial Motion to Dismiss and Limitation on Scope of Complainant's Claims filed by EG&G Rocky Flats, Inc. on June 13, 1997, is granted in part and denied in part as set forth in Paragraphs 2 through 5 below.

(2) The allegation of reprisal resulting from the alleged February 1988 involuntary transfer is dismissed with prejudice.

(3) The allegations of reprisal resulting from the 1988, 1989 and 1990 performance appraisals are dismissed with prejudice, insofar as the allegation is against EG&G Rocky Flats, Inc.

(4) Not later than July 21, 1997, the Complainant shall provide EG&G with additional documentation on any positions within his department for which it is his contention that his non- selection was an act of reprisal.

(5) Not later than July 25, 1997, EG&G shall produce compensation histories (with personal identifiers deleted) for employees who held positions similar to that of Murfin as of April 2, 1992, as set forth in the above Decision.

(6) This is an Interlocutory Order of the Department of Energy.

William Schwartz

Hearing Officer

Office of Hearings and Appeals

Date: July 11, 1997

(1)Murfin contends that the whistleblower regulations apply to reprisals that predate the April 2, 1992 effective date of the regulations, provided they stem from health and safety disclosures. See Howard W. Spaletta, 24 DOE ¶ 87,511 at 89,055 (1995) (Spaletta). Although Spaletta considered a claim that the contractor retaliated against the complainant by reducing his annual merit pay increases for the years 1989 through 1991, events have overtaken this decision. The agency's position now is that the whistleblower regulations do not apply to reprisals that occurred before their effective date, April 2, 1992. See Mehta.

(2)Nevertheless, the hearing officer may establish deadlines for the production and exchange of documentary evidence. If necessary to ensure justice and prevent unfairness to one or more of the parties, the hearing officer may exclude such evidence that is produced after the deadlines.

Case No. VWZ-0009

March 12, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: Lockheed Martin Energy Systems, Inc.

Date of Filing: March 8, 1999

Case Number: VWZ-0009

This decision will consider a “Motion to Strike Alleged Disclosures from Consideration” Lockheed Martin Energy Systems, Inc. (LMES) filed on March 8, 1999. In its Motion, LMES objects to the consideration of a number of alleged disclosures contained in a Complaint filed by Linda D. Gass under the Department of Energy's (DOE) Contractor Employee Protection Program, 10 C.F.R. Part 708. Ms. Gass requested a hearing on her Complaint under 10 C.F.R. § 708.9 on January 12, 1999, and it has been assigned Office of Hearings and Appeals (OHA) Case No. VWA-0028.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or -leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against its employee on the basis of certain activities by the employee, including certain disclosures by the “to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), . . .” 10 C.F.R. § 708.5(a)(1).

Ms. Gass has worked for LMES since March 1982. In her Complaint, Ms. Gass alleged that in 1991 she raised concerns with the DOE and its contractors regarding the environmental site characterization of a proposed industrial park. The Complainant also alleged that she made additional disclosures to LMES officials and the DOE, as well as to other federal agencies, including the Department of Labor (DOL), the Equal Employment Opportunity Commission (EEOC), and the Office of Federal Contract Compliance Programs (OFCCP). Some of the disclosures concerned alleged sexual discrimination and alleged violations of the Americans with Disabilities Act (ADA). The Complainant alleged that she suffered retaliation as a result of her disclosures.

On December 16, 1998, the DOE Office of Inspector General (IG) issued a Report of Investigation on Ms. Gass' Complaint. The report found that the Complainant failed to establish by a preponderance of the evidence that she had made disclosures protected under Part 708 regarding the proposed industrial park that are protected under Part 708. The report made no findings regarding the other disclosures included in Ms. Gass' Complaint. As stated above, Ms. Gass requested a hearing on her Complaint and a hearing in this matter is scheduled to start on March 23, 1999.

At a pre-hearing conference conducted on March 3, 1999, counsel for the Respondent LMES requested that the Complainant identify the specific disclosures that form the basis of her Complaint of reprisal. After a discussion, the Complainant agreed that her allegations were limited to the alleged disclosures regarding the proposed industrial park and five other disclosures. On March 8, 1999, the Respondent LMES submitted the present Motion. In it, the Respondent moves to strike from consideration the five other disclosures enumerated at the March 3, 1999 pre-hearing conference. In a March 8, 1999 pre-hearing conference, I informed the parties that I would allow arguments on the Motion to be submitted to me no later than March 10, 1999, and that I would issue a written ruling on the Motion no later than March 12, 1999.(1) I further informed the parties that I was also particularly interested in arguments on the applicability of two sections of the Part 708 regulations to the disclosures alleged by the Complainant. The first section, 10 C.F.R. § 708.2(b), states in part that "The procedures of this part 708 do not apply to . . . complaints of reprisal stemming from, or relating to, discrimination by contractors on a basis such as race, color, religion, sex, age, national origin, or other similar basis not specifically discussed herein." The second section, 10 C.F.R. § 708.5(a)(1), prohibits reprisals because of disclosures "to an official of DOE, to a member of Congress, or to the contractor (including any higher tier contractor), . . ." On March 10, 1999, the Complainant submitted arguments to me on the Motion and the specific issues I identified.

II. Analysis

A. Standard of Proof

Though the present Motion is styled as a "Motion to Strike Alleged Disclosures from Consideration," it is in effect a Motion to Dismiss the present Complaint in part. A Motion to Dismiss should only be granted where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See M&M Minerals Corp., 10 DOE ¶ 84,021 (1982). The OHA considers dismissal "the most severe sanction that we may apply," and has stated that it will be used sparingly. See Boeing Petroleum Services, 24 DOE ¶ 87,501 at 89,005 (1994).

B. Application of 10 C.F.R. § 708.2(b) to the Alleged Disclosures

In its Motion, the Respondent first contends that under 10 C.F.R. 708.2(b), "the EEOC Complaint disclosure, claimed to be on the basis of sex discrimination, may not be considered in a Part 708 proceeding; . . ." The Complainant responds that this section of the regulations "merely states that an employee cannot pursue an employment discrimination claim under Part 708." On this point, I agree with the Respondent. Section 708.2(b) clearly excludes from coverage not only claims of sexual discrimination, but also any "complaints of reprisal stemming from, or relating to" a sexual discrimination claim. Thus, if it is the Complainant's contention that she suffered reprisals because of her disclosure of allegations of sexual discrimination, these "complaints of reprisal" clearly "stem[] from, or relat[e] to," discrimination on the basis of sex, and thus are explicitly excluded from coverage by the plain language of Part 708. Additionally, to the extent the Complainant alleges that she suffered reprisals as a result of her disclosures of allegations of discrimination in violation of the Americans with Disabilities Act, these complaints of reprisals also fall outside the intended scope of Part 708, because such discrimination is on a "similar basis" to those specifically enumerated in Section 708.2(b). Accordingly, to the extent that the present Complaint is based upon alleged disclosures "stemming from, or relating to," sexual discrimination or discrimination in violation of the Americans with Disabilities Act, the Complaint will be dismissed.

C. Application of 10 C.F.R. § 708.5(a)(1) to the Alleged Disclosures

Regarding the application of Part 708 to disclosures made by the Complainant to other Federal agencies, the Complainant states,

We acknowledge that [10 C.F.R. § 708.5(a)(1)] requires disclosure to "an official of DOE, to a member of Congress, or to the contractor." We further acknowledge that in at least two disclosures, *e.g.*, the EEOC and Department of Labor ("DOL") complaints, there was not a direct disclosure by Ms. Gass to the contractor. However, the regulations are silent on this issue and to interpret Part 708 to require direct disclosure would be inappropriate.

I disagree. Section 708.5(a)(1) is unambiguous as to whom a disclosure must be made to be protected. If the intent of Part 708 was to include within its protection disclosures to other federal agencies, such intent could have be explicitly expressed. Indeed, recently issued revisions to Part 708, to take effect on April 15, 1999, "expand[] coverage of disclosures to include those made to other government officials," making it clear that Part 708, as currently in effect, does not cover such disclosures. Criteria and Procedures for DOE Contractor Employee Protection Program, 64 Fed. Reg. (1999). Thus, to the extent that the present Complaint is based upon alleged disclosures not made "to an official of DOE, to a member of Congress, or to the contractor," the Complaint will be dismissed.

D. Other Bases Cited in the Respondent's Motion

The Respondent argues further in its Motion that the five other disclosures may not be considered in the present proceeding because the Complaint as to these disclosures does not meet the procedural requirements of 10 C.F.R. § 708.6(c). "[S]pecifically, the claim is to be made under oath, and a statement is required that the remedy is not being pursued under other available law, as well as requiring a Complaint to contain such rudimentary items as facts and relief, neither of which has been advanced on these five (5) lately-raised claims; . . ." Finally, LMES contends that I may not consider the five disclosures because there has been no investigation or Report of Investigation issued on those disclosures. I do not agree.

The Respondent's characterization of any of the identified disclosures as "lately-raised" is inaccurate. Each of the disclosures was included in a letter from the Complainant's counsel to the DOE's Office of Contractor Employee Protection (OCEP) dated April 8, 1996. This letter, along with a March 26, 1996 affirmation signed by the Complainant, is referred to in the IG's Report of Investigation as the Complaint. See Report of Investigation at 8. I find, as apparently did OCEP and later the IG, that this letter and affirmation meet the procedural requirements of 10 C.F.R. 708.6(c).

Moreover, the Respondent is incorrect when it suggests that because the IG's Report of Investigation made no findings on some of these disclosures I am barred from considering them in the present proceeding. First, the Respondent incorrectly cites 10 C.F.R. 708.5(a)(5) as requiring that a Report of Investigation "be made on any claimed disclosure, . . ." In fact, this section of the regulations speaks only of an "investigation of the complaint[,]" and there is no dispute that the IG investigated Ms. Gass' Complaint. Second, while the Respondent is correct in pointing out that the Report of Investigation becomes a part of the record of this proceeding, the regulations are quite explicit that "the Hearing Officer may rely upon, but shall not be bound by, the findings contained in the Report of Investigation." 10 C.F.R. 708.10(b). Thus, I find no basis for narrowing the scope of the Complaint solely upon the contents of the IG's Report of Investigation.

III. Conclusion

Applying the above principles to the six alleged disclosures identified by the Complainant in the March 3, 1999 pre-hearing conference, the present Complaint will be dismissed as to all but (1) the alleged disclosures to the DOE and its contractors regarding the environmental site characterization of a proposed industrial park and (2) the alleged disclosures to LMES officials regarding alleged retaliation for activity protected under Part 708.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Lockheed Martin Energy Systems, Inc., on March 8, 1999, Case No. VWZ-0009, is granted in part and denied in part as set forth in Paragraphs 2 and 3 below. In all other respects, the Motion is denied.

(2) To the extent that the present Complaint, on which a hearing has been requested in Case No. VWA-0028, is based upon alleged disclosures stemming from, or relating to, sexual discrimination or discrimination in violation of the Americans with Disabilities Act, the Complaint is hereby dismissed.

(3) To the extent that the present Complaint, on which a hearing has been requested in Case No. VWA-0028, is based upon alleged disclosures not made to an official of DOE, to a member of Congress, or to the contractor, the Complaint is hereby dismissed.

(4) This is an Interlocutory Order of the Department of Energy.

Steven Goering

Staff Attorney

Office of Hearings and Appeals

Date: March 12, 1999

(1)These pre-hearing rulings are consistent with the Part 708 regulatory requirement that, “where a dismissal of a claim, defense, or party is sought,” I must provide all parties an opportunity to “show cause why the dismissal should not be granted and afford all parties a reasonable time to respond . . . .” 10 C.F.R. § 708.9(j).

Case No. VWZ-0010

May 12, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: West Valley Nuclear Services Co., Inc.

Date of Filing: April 27, 1999

Case Number: VWZ-0010

This decision considers a “Motion to Dismiss” filed by West Valley Nuclear Services, Inc. (West Valley) on April 27, 1999. In its Motion, West Valley seeks the dismissal of a Complaint filed by John L. Gretencord (Gretencord) under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. Mr. Gretencord requested a hearing on his Complaint under 10 C.F.R. Part 708 on March 19, 1999, and it has been assigned Office of Hearings and Appeals (OHA) Case No. VWA-0033. The present Motion has been assigned Case No. VWZ-0010.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The criteria and procedures for Part 708 were amended in an Interim Final Rule effective April 14, 1999. 64 F. R. 12862. The Interim Final Rule provides that its amended procedures will apply to any proceeding pending on April 14, 1999. Part 708's primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against an employee on the basis of certain activities by the employee, including certain disclosures by the employee to "a DOE official, a member of Congress, any other government official who has responsibility or oversight of the conduct of operations at a DOE site, [an] employer or any higher tier contractor, . . .” 10 C.F.R. § 708.5(a).

Gretencord was employed by West Valley as a Senior Quality Control/Quality Assurance Engineer from January 15, 1990 to March 18, 1997. On March 26, 1997, Gretencord filed a complaint under 10 C.F.R. Part 708 with the DOE Office of Inspector General's Office of Inspections (IG). In this complaint, Gretencord alleged that he was retaliated against for disclosures of possible safety violations, fraud and mismanagement.

After conducting an investigation of Gretencord's allegations, the IG issued a Report of Investigation (the Report) on February 11, 1999. The Report found that: "[A] preponderance of the available evidence supports a finding that during his employment and work in quality assurance, [Gretencord] disclosed various concerns to [West Valley] officials and to DOE about possible safety violations and incidents of possible rule infractions." Report at 5. However, the Report further found that: "[A] preponderance of the

available evidence does not indicate that the substance of [Gretencord's] 'good faith' concerns contributed to actions that were taken against him." *Id.* at 6. The Report further states: "It is the conclusion of this inquiry, based upon information obtained through interviews of [West Valley] employees and supporting documents, that the evidence is clear and convincing that [Gretencord] was terminated for reasons other than his protected disclosures." *Id.* at 8. On March 8, 1999, DOE received Gretencord's request for a hearing.

On April 1, 1999, I ordered Mr. Gretencord to submit a written statement specifically listing: (1) the protected disclosures that he is alleging resulted in retaliatory acts against him, (2) the retaliatory acts allegedly conducted against him, and (3) the remedies he is requesting. OHA received Gretencord's response to this order on April 16, 1999. On April 27, 1999, OHA received the present Motion to Dismiss. West Valley's Motion to Dismiss contends that Gretencord has failed to (1) state a claim for which relief can be granted, and (2) comply with my order. OHA received Gretencord's Rebuttal of West Valley's Motion to Dismiss on May 7, 1999.

II. Analysis

A. Whether Gretencord Failed to Comply with My Order of April 1, 1999

West Valley contends that Mr. Gretencord has refused to comply with my order because he has failed to specifically describe any protected disclosures or retaliatory actions. Attorney's Affidavit in Support of Motion to Dismiss at 2. West Valley correctly notes that 10 C.F.R. § 708.28(b)(5) allows the Hearing Officer to "dismiss a claim . . . and make adverse findings upon the failure of a party . . . to comply with a lawful order of the Hearing Officer." However, it is well settled that a Motion to Dismiss in a 10 C.F.R. Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. *Lockheed Martin Energy Systems, Inc.*, 27 DOE ¶ 87,510 (1999); *EG&G Rocky Flats*, 26 DOE ¶ 82,502 (1997)(*EG&G*). The OHA considers dismissal "the most severe sanction that we may apply," and will rarely use it. *Boeing Petroleum Services*, 24 DOE ¶ 87,501 at 89,005 (1994). Moreover, this Office has found that, in order to further the purposes of the whistleblower protection program, which include encouraging employees to come forth with protected disclosures, it is important not to hold parties to proceedings under 10 C.F.R. Part 708 to the strictest standards of technical pleading. *EG&G*, *supra*; *Westinghouse Hanford Company*, 24 DOE ¶ 87,502 at 89,011 (1994) (*Westinghouse*). Accordingly, in ruling on the motion before me, I must balance West Valley's right to have sufficient notice of and respond to Gretencord's whistleblower allegations against the necessity of providing Gretencord with a fair opportunity to make his case.

Gretencord's response to the first portion of my April 1, 1999 Order was vague, poorly organized and difficult to follow. Instead of specifically listing each and every protected disclosure, as I had expected when issuing the order, Gretencord attempts to incorporate his original complaint by reference. However, I had previously informed Gretencord that merely referring to his previous submission to the IG would not suffice to meet the requirements of my order. The 46 page hand- written Complaint that Gretencord had filed with the IG was too long and too general in scope for the purposes of the present proceeding. By failing to provide a sufficient response to my order, Gretencord has waived his opportunity to provide the trier of fact with his itemization of protected disclosures. Accordingly, I am granting, in part, West Valley's Motion to Dismiss. Specifically, I am dismissing all allegations of protected disclosure that are not among the 15 alleged protected disclosures that I found in my review of the Report of Investigation. Since many of these alleged protected disclosures are well documented and clearly articulated in the Report, they provide West Valley with sufficient notice of Gretencord's allegations of protected disclosures. Specifically, the Report and its accompanying documentation contain the following protected disclosure allegations:

Protected Disclosure Allegation No. 1

Mr. David Crouthamel indicates that Gretencord "wrote several requests for corrective action (RCA) and non-conformance reports (NR) . . . [i]ncluding one report 93-N-117, which involved the labeling of electrical junction boxes in the 'tank farm.'" Exhibit 5 to Report of Investigation. Several other references to this protected disclosure are contained in the Report and its accompanying documentation.

Protected Disclosure Allegation No. 2

Gretencord alleges to several West Valley employees that an engineer had "penciled" down electrical leads with a knife to get them to fit a small terminal. Exhibit 7 to Report of Investigation.

Protected Disclosure Allegation No. 3

Mr. Dave Dempster indicates that Gretencord made a disclosure involving a faulty fire hydrant and sprinkler system with an incorrectly installed valve. Exhibit 8 to Report of Investigation.

Protected Disclosure Allegation No. 4

Gretencord reports alleged violation of the National Electrical Code in the Natural Gas Treatment Building to Dave Dempster. *Id.*

Protected Disclosure Allegation No. 5

Gretencord expresses concerns about alleged vitrification training deficiencies. Exhibit 9 to Report of Investigation.

Protected Disclosure Allegation No. 6

Gretencord expresses concern about installation of a camera in the vitrification facility, as reported to Mr. Timothy Jackson on February 20, 1997. Exhibit 10 to Report of Investigation.

Protected Disclosure Allegation No. 7

Timothy Jackson indicates that during April 1993, Gretencord expressed a concern about the allegedly improper calibration of torque wrenches. *Id.*

Protected Disclosure Allegation No. 8

Timothy Jackson indicates that Gretencord filed a Quality Clarification Report on January 1, 1993. *Id.*

Protected Disclosure Allegation No. 9

Gretencord reports to Timothy Jackson his concern about the replacement of crane bolts with a different grade of bolt than required. *Id.*

Protected Disclosure Allegation No. 10

Timothy Jackson reports that Gretencord made a formal Employee Concerns Disclosure to him on July 25-26, 1995. *Id.*

Protected Disclosure Allegation No. 11

Gretencord files an Employee Concern about an engineer drinking alcohol at lunch. Exhibit 15 to Report of Investigation.

Protected Disclosure Allegation No. 12

Gretencord alleges time sheet fraud. *Id.*

Protected Disclosure Allegation No. 13

Mr. John Volpe reports that in 1995-96 Gretencord alleged that records pertaining to the purchase of defective punches had been falsified. Exhibit 16 to Report of Investigation.

Protected Disclosure Allegation No. 14

Mr. Volpe recalls that in late 1996, Gretencord disclosed a concern about radiation exposure recordings. *Id.*

Protected Disclosure Allegation No. 15

Memo to file from D.L. Dempster, dated 2-21-97, indicates that Gretencord planned to take an Employee Concern to DOE.

These factual disputes should be resolved through further development of the record. Therefore, Gretencord will be afforded an opportunity to develop these allegations during discovery. However, since Gretencord's other allegations of protected disclosures are too vague and not documented well enough to enable West Valley to formulate its defense they are dismissed with prejudice.

Gretencord's response to the second portion of my order, which required him to specifically list "the retaliatory acts allegedly conducted against him," is much clearer. Gretencord clearly alleges that he was threatened, slapped, screamed at, personally and professionally discredited, cursed, unfairly reviewed, denied appropriate pay raises, suspended and then fired in retaliation for his protected disclosures. Gretencord's Response at pages 1 and 2. These allegations provide a sufficient basis for further development during discovery. Accordingly, I reject West Valley's claim that Gretencord failed to respond to the second portion of my order.

Similarly, I conclude that Gretencord has provided an adequate response to the third portion of my order, which required him to specifically list "the remedies he is requesting." Gretencord's Response requests that all personally derogatory statements be removed from his personnel records, and further requests compensation for lost wages, compensation for lost benefits, compensation for lost earnings potential and compensation for relocation expenses. *Id.* at 2. Accordingly, I reject West Valley's claim that Gretencord failed to respond to the third portion of my order.

B. Whether Gretencord Has Failed to State a Claim for Which Relief Can Be Granted.

West Valley also contends that Gretencord has failed to state a claim for which relief can be granted. I disagree. Under the DOE's Whistleblower Protection Regulations:

The employee who files a complaint has the burden of establishing by a preponderance of the evidence that he or she made a disclosure, participated in a proceeding, or refused to participate, as described under § 708.5, and that such act was a contributing factor in one or more alleged acts of retaliation against the employee by the contractor. Once the employee has met this burden, the burden shifts to the contractor to prove by clear and convincing evidence that it would have taken the same action without the employee’s disclosure, participation, or refusal.

10 C.F.R. § 708.29. Gretencord claims and the IG found that he made a number of protected disclosures. The Report of Investigation cites more than enough evidence to create several disputed issues of fact concerning protected disclosures.

Moreover, Gretencord alleges numerous retaliatory acts. The record shows that a number of negative personal actions occurred during Gretencord's tenure with West Valley. These negative personal actions include several letters of remand, poor performance evaluations and a suspension and eventually an involuntary termination.

In most Whistleblower cases, it is difficult or impossible for a complainant to find a "smoking gun" that proves an employer's retaliatory intent. Therefore, Congress and the Courts, recognizing this difficulty, have found that a protected disclosure may be a contributing factor in a personnel action where "the official taking the action has actual or constructive knowledge of the disclosure and acted within such a period of time that a reasonable person could conclude that the disclosure was a factor in the personal action." *Ronald A. Sorri*, 23 DOE ¶ 87,503 (1993) *citing McDaid v. Department of Hous. and Urban Dev*., 90 FMSR ¶ 5551 (1990); *see also County v. Dole*, 886 F.2d 147, 148 (8th Cir. 1989) (*County*). In addition, the Courts have found that "temporal proximity" between a protected disclosure and an alleged reprisal is "sufficient as a matter of law to establish the final required element in a prima facie case for retaliatory discharge." *County*, 886 F. 2d at 148 (8th Cir. 1989).

Applying the above principles to the present case, I find that since the record contains evidence supporting an inference that Gretencord made numerous protected disclosures during his tenure at West Valley, and since a large number of negative personal actions also occurred during this time period, the closeness between the protected disclosures and the negative personnel actions is sufficient to establish a *prima facie* case. I therefore find that West Valley has not shown that Gretencord has failed to state a claim for which relief can be granted. Accordingly, this aspect of West Valley's motion shall be denied.

III. Conclusion

For the reasons set forth above, I have granted in part the Motion to Dismiss filed by West Valley Nuclear Services Co., Inc. on April 27, 1999. The Motion, is however, denied in all other aspects.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by West Valley Nuclear Services Co., Inc., on April 27, 1999, Case No. VWZ-0010, is granted in part as set forth in Paragraph 2 below. In all other respects, the Motion is denied.

(2) To the extent that the present Complaint, on which a hearing has been requested in Case No. VWA-0033, is based upon alleged protected disclosures that are not among the 15 alleged protected disclosures enumerated above, it is dismissed with prejudice.

(3) This is an Interlocutory Order of the Department of Energy.

Steven L. Fine

Date: May 12, 1999

Case No. VWZ-0011

May 19, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: West Valley Nuclear Services Co., Inc.

Date of Filing: May 18, 1999

Case Number: VWZ-0011

This decision considers a “Motion to Dismiss” filed by West Valley Nuclear Services, Inc. (West Valley) on May 18, 1999. In its Motion, West Valley seeks the partial dismissal of a Complaint filed by John L. Gretencord (Gretencord) under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. Mr. Gretencord requested a hearing on his Complaint under 10 C.F.R. Part 708 on March 19, 1999, and it has been assigned Office of Hearings and Appeals (OHA) Case No. VWA-0033. The present Motion has been assigned Case No. VWZ-0011.

I. Background

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The criteria and procedures for Part 708 were amended in an Interim Final Rule effective April 14, 1999. 64 F. R. 12862. The Interim Final Rule provides that its amended procedures will apply prospectively to any complaint pending on April 14, 1999. Part 708's primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent, or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers. The Part 708 regulations prohibit discrimination by a DOE contractor against an employee on the basis of certain activities by the employee, including certain disclosures by the employee to "a DOE official, a member of Congress, any other government official who has responsibility or oversight of the conduct of operations at a DOE site, [an] employer or any higher tier contractor, . . .” 10 C.F.R. § 708.5(a).

Gretencord was employed by West Valley as a Senior Quality Control/Quality Assurance Engineer from January 15, 1990 to March 18, 1997. On March 26, 1997, Gretencord filed a complaint under 10 C.F.R. Part 708 with the DOE Office of Inspector General's Office of Inspections (IG). In this complaint, Gretencord alleged that he was retaliated against for disclosures of possible safety violations, fraud and mismanagement.

After conducting an investigation of Gretencord's allegations, the IG issued a Report of Investigation (the Report) on February 11, 1999. The Report found that: "[A] preponderance of the available evidence supports a finding that during his employment and work in quality assurance, [Gretencord] disclosed various concerns to [West Valley] officials and to DOE about possible safety violations and incidents of possible rule infractions." Report at 5. However, the Report further found that: "[A] preponderance of the

available evidence does not indicate that the substance of [Gretencord's] 'good faith' concerns contributed to actions that were taken against him." *Id.* at 6. The Report further states: "It is the conclusion of this inquiry, based upon information obtained through interviews of [West Valley] employees and supporting documents, that the evidence is clear and convincing that [Gretencord] was terminated for reasons other than his protected disclosures." *Id.* at 8. On March 8, 1999, DOE received Gretencord's request for a hearing.

On May 18, 1999, OHA received the present Motion to Dismiss. If the motion were granted, Gretencord would be barred from asserting any claims based upon alleged retaliatory acts that occurred more than 90 days before filing the Complaint.

II. Analysis

10 C.F.R. § 708.14 currently provides that a complaint should be filed "by the 90th day after the date [that the employee] knew or reasonably should have known, of the alleged retaliation." 10 C.F.R. § 708.14(a). West Valley asserts that the portion of Gretencord's Complaint based upon retaliatory acts that allegedly occurred prior to December 17, 1996, which is 90 days before March 19, 1997, the date on which Gretencord filed his Part 708 Complaint with DOE's Office of Inspector General is time-barred because it was filed more that 90 days after the discriminatory acts alleged by the complainant. Affidavit in Support of Motion to Dismiss at 2.

The Report of Investigation (the Report) in this matter was issued on February 11, 1999, by the Assistant Inspector General for Inspections. DOE had not yet issued the Interim Final Rule when Gretencord filed his Complaint and when the IG issued the Report. (1) The regulations in place when the Report was issued provided that the IG could accept the Complaint, unless it determined that the Complaint was untimely. Former 10 C.F.R. § 708.8(a)(2). (2) While it is true that the former Section 708.6(d) stated that a complaint must be filed within 60 days after the alleged discriminatory act occurred, an appropriate DOE official, could extend "all time frames" set forth in the Former Part 708. (3) It is therefore clear that under the previous regulations, the decision to accept a complaint filed after the 60-day period in 708.6(d) was within the discretion of the IG. In the present case, the IG did not dismiss any portion of the complaint as untimely, and there is nothing in the record to suggest that it abused its discretion.

In its Motion to Dismiss, West Valley attempts to avoid this conclusion by characterizing the 60-day time period in 708.6(d) as jurisdictional. In *Sandia National Laboratories*, 23 DOE 87,501 (1993) (*Sandia*), we considered, and ultimately rejected, the same argument. There is nothing in the former Part 708 that would indicate that the 60-day period was meant to be jurisdictional in nature. (4)

West Valley tries to analogize the Part 708 proceedings to the employee protection schemes administered by the Department of Labor (DOL), where, West Valley correctly notes, the courts have strictly enforced a limitations period imposed by Statute. Affidavit in Support of Motion to Dismiss at 4. However, as pointed out by West Valley, the time limits imposed in DOL proceedings are expressly prescribed by statute. *See* Solid Waste Disposal Act, 42 U.S.C. 6971; Safe Drinking Water Act, 42 U.S.C. 300j-9(i); Comprehensive Environmental Response, Compensation and Liability Act of 1974, 42 U.S.C. 9610; Toxic Substances Control Act, 15 U.S.C. 2622; Energy Reorganization Act, 42 U.S.C. 5851; Federal Water Pollution Control Act, 33 U.S.C. 1367; Clean Air Act, 42 U.S.C. 7622. By contrast, the more flexible time frames governing this proceeding originated in the Part 708 regulations, which were not mandated by a specific statute, but were issued pursuant to the broad authority granted the DOE to manage the Government Operated- Company Owned facilities in its nuclear weapons complex by the Atomic Energy Act of 1954, as amended, 42 U.S.C. 2201, the Energy Reorganization Act of 1974, as amended, 42 U.S.C. 5814 and 5815, and the Department of Energy Organization Act, as amended, 42 U.S.C. 7251, 7254, 7255, and 7256. Indeed, there are a number of reasons why 708.6(d) should not be read as barring the investigation of a complaint that is filed more than 60 days after the alleged discriminatory act occurred or should reasonably have been discovered. *See Sandia*, 23 DOE at 89,002-03.

First, the DOE Contractor Employee Protection Program is intended to encourage contractor employees to come forward "with information that in good faith they believe evidences unsafe, unlawful, fraudulent, or wasteful practices." 57 Fed. Reg. at 7533 (March 3, 1992). Employees of DOE contractors and subcontractors should be able to disclose safety concerns without fear of reprisal, and employees who believe they have been subject to a reprisal should feel they are able to seek protection from the DOE. The regulations should be construed in a manner which furthers this policy. It is clear from the regulatory history of Part 708 that the 60-day time limitation for the submission of complaints was never intended as an ironclad technical requirement. *Id*.; *see also* *Sandia*, *supra*.

Second, the preamble to Part 708 states that the reason for adopting a time limit for the filing of a complaint of discrimination was to ensure the investigation of complaints would not be rendered "more difficult as memories grow dimmer with the passage of time." 57 Fed. Reg. at 7537 (March 3, 1992). That is surely a legitimate concern. However, West Valley's argument that fading memories may hamper its defense in this case, given its posture, is purely speculative at this time. At this stage in the proceeding there is no evidence that any delay in the filing of the complaint is hampering West Valley's ability to present its defense. Moreover, I fail to see how any delay conceivably worked to the detriment of West Valley, since the Report found in favor of the company with regard to the complainant's allegations.

III. Conclusion

It is well settled that a Motion to Dismiss in a 10 C.F.R. Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. *Lockheed Martin Energy Systems, Inc*., 27 DOE ¶ 87,510 (1999); *EG&G Rocky Flats*, 26 DOE ¶ 82,502 (1997)(*EG&G*). The OHA considers dismissal "the most severe sanction that we may apply," and we have rarely used it. *Boeing Petroleum Services*, 24 DOE ¶ 87,501 at 89,005 (1994). Moreover, this Office has found that, in order to further the purposes of the whistleblower protection program, which include encouraging employees to come forth with protected disclosures, it is important not to hold parties to proceedings under 10 C.F.R. Part 708 to the strictest standards of technical pleading. *EG&G*, *supra*; *Westinghouse Hanford Company*, 24 DOE ¶ 87,502 at 89,011 (1994) (*Westinghouse*). Accordingly, the Motion to Dismiss filed by West Valley Nuclear Services Co., Inc. on May 18, 1999 should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by West Valley Nuclear Services Co., Inc., on May 18, 1999, Case No. VWZ-0011, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

Steven L. Fine

Hearing Officer

Office of Hearings and Appeals

Date: May 19, 1999

(1)I have conducted my review of the IG's determination under the regulations in place at the time of the determination. However, the results and the reasoning would not be different under the Interim Final Rule.

(2)The Interim Final Rule moves the responsibility for initial jurisdictional determinations from the IG to the Head of Field Element or Employee Concerns Director (as applicable). 10 C.F.R. § 708.17.

(3)The Interim Final Rule clearly provides the Head of Field Element or Employee Concerns Director

with the discretion to accept a complaint filed after the 90 day period set forth in 10 C.F.R. § 708.14(a). 10 C.F.R. § 708.14(d).

(4)10 C.F.R. § 708.14(d) of the Interim Final Rule clearly indicates that the 90-day period set forth in 10 C.F.R. § 708.14(a) was not intended to be jurisdictional in nature

Case No. VWZ-0012

August 6, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Case: Lucy B. Smith

Date of Filing: June 30, 1999

Case Number: VWZ-0012

This determination will consider a Motion to Dismiss filed by Westinghouse Savannah River Company (WSRC) on June 30, 1999. WSRC seeks dismissal of the underlying complaint filed by Lucy B. Smith under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708.

I. Background

Ms. Smith's Part 708 complaint arises from her employment as a chemist with WSRC at DOE's Savannah River Site. Ms. Smith alleges that she made three protected disclosures involving health and safety concerns to WSRC officials during the last half of 1996. Subsequently, on January 20, 1997, Ms. Smith received a Reduction in Force notice from WSRC. Ms. Smith then filed a complaint with the United States Equal Opportunity Commission (EEOC) and the State of South Carolina Human Affairs Commission (SCHAC) on February 18, 1997. In these complaints Ms. Smith alleges that she was selected for termination by reason of her age and that her termination would violate the Age Discrimination in Employment Act of 1967 (ADEA), 29 U.S.C. § 621 et. seq. On March 26, 1997, Ms. Smith filed her Part 708 complaint. Ms. Smith retired from WSRC on April 1, 1997. On April 20, 1997, Ms. Smith again formally complained about her selection for termination to the EEOC and SCHAC. In these complaints, Ms. Smith asserted that she had been subject to age discrimination in her selection for termination.

In its Motion, WSRC asserts that Ms. Smith's Part 708 complaint should be dismissed on two grounds: First, Ms. Smith's Part 708 complaint was filed after the 60 day deadline specified in the provision of 10 C.F.R. Part 708 in effect at the time she filed her complaint, 10 C.F.R. § 708.6(d)(1)/ ; second, Ms. Smith pursued a remedy for her termination under "State or other applicable law"

and thus is barred from pursuing a complaint under Part 708 under 10 C.F.R. § 708.6(a) of the previous version of Part 708 or 10 C.F.R. §§ 708.4(c)(3) and 708.15(a) of the current version of Part 708.

In her response, Ms. Smith asserts that the 60 day deadline was tolled pursuant to section 708.14(b) of the current version of the regulations by her attempts to resolve her whistleblower complaint through an internal company grievance procedure. With respect to WSRC's argument regarding the filing of a complaint with the EEOC and SCHAC, Ms. Smith argues that the complaints filed with those agencies were two separate causes of action. The EEOC and SCHAC complaints were based on a cause of action for age discrimination. The Part 708 complaint is based on a cause of action for reprisals resulting from making protected disclosures. Additionally, Ms. Smith asserts that the bar in section 708.14(b) applies only if the "State or other applicable law" complaint is based upon the same facts. Ms. Smith argues that

the facts in her EEOC and SCHAC complaints are different from those in her Part 708 complaint. Specifically, Ms. Smith points out that the EEOC and SCHAC claims are based upon the fact that she was terminated as a result of her age whereas her Part 708 complaint is based on the fact that she was terminated due to her protected disclosures to WSRC officials.

II. Analysis

A. Timeliness of Ms. Smith's Part 708 Complaint

In its Motion, WSRC asserts that the controlling version of Part 708 with regard to the timeliness of the filing of Ms. Smith's Part 708 complaint is the version of Part 708 in effect at the time of the filing of her complaint. Ms. Smith cites only the current version of Part 708 in her response regarding this issue. I will assume, without deciding, that the previous version of the Part 708 regulations is controlling on this issue. (2)/

Section 708.6(d) of the previous version of Part 708 mandates that a complainant file a Part 708 complaint "within 60 days after the alleged discriminatory act occurred or within 60 days after the complainant knew or reasonably should have known, of the alleged discriminatory act, whichever is later." 10 C.F.R. § 708.6(d). This section also provides that the 60-day period for filing a complaint is tolled where the employee has attempted resolution through internal company grievance procedures. Id.

Ms. Smith's Part 708 complaint was filed 65 days after she received her reduction in force notice. However, the record indicates that Ms. Smith did try to avail herself of WSRC's Employee Concerns program by filing a WSRC "Notice of Employee Concern" form dated January 23, 1997, in which she complains that she had been terminated because of her identification of safety concerns. See "Notice of Employee Concern" (January 23, 1997). While it is not apparent from the record when WSRC responded to this concern, the record contains a February 19, 1997 WSRC memo from Ms. Smith's supervisor to a WSRC official responding to Ms. Smith's January 23 Notice of Employee Concern. I find that Ms. Smith's attempt to resolve her complaint through filing the Notice of Employee Concern would have tolled the 60-day filing period, at a minimum, from January 23 to February 19, 1997, or for a period of 27 days. Consequently, I find that Ms. Smith's complaint was filed in a timely manner.

B. Preclusive effect of Ms. Smith's EEOC and SCHAC Complaints

Both the previous and current versions of Part 708 contain similar prohibitions barring the filing of a Part 708 claim in the event a complainant files a complaint for a remedy under "State or other applicable law" based upon the same facts. Section 708.6(a) (previous version) states "An employee who believes that he or she has been discriminated against . . . and who has not, with respect to the same facts, pursued a remedy available under State or other applicable law, may file a complaint . . . ." 10 C.F.R. § 708.6(a) (previous version). See also 10 C.F.R § 708.15(a) (current regulation) ("You may not file a complaint under this part if, with respect to the same facts, you choose to pursue a remedy under State or other applicable law").

I will assume, for purposes of this analysis only, that a complaint under the ADEA may be considered as "other applicable law" under section 708.6(a) (previous version) or 708.15(a). (3)/ Under this assumption, section 708.6(a)(previous version) or 708.15(a) would require dismissal of Ms. Smith's Part 708 complaint if her ADEA complaints were based on the same facts. While both complaints cite Ms. Smith's termination as the adverse action she experienced, the complaints differ significantly as to the cause for the termination. In order to establish a prima facie case for age discrimination under the ADEA, a discharged employee must prove that: (1) he or she is within the protected class; (2) he or she was discharged; (3) he or she was qualified for the employment position; (4) he or she was replaced with someone outside the protected class; or (5) by someone younger; or (6) show otherwise that his or her discharge was because of age. Elliot v. Group Medical & Surgical Serv., 714 F.2d 556, 562 (5th Cir.

1983), reh'g denied, 721 F. 2d. 819 (5th Cir. 1983). The pleading and underlying facts that would support this type of claim are different from those that would underlie a complaint filed under Part 708, the DOE contractor employee whistleblower protection program. For Ms. Smith's Part 708 complaint to prevail, her termination must have been motivated by her disclosures to WSRC officials. See 10 C.F.R. § 708.5 (Part 708 complaint may be filed if individual has been "subject to retaliation for: (a) Disclosing to . . . your employer . . . information that you reasonably and in good faith believe reveals - . . . (3) Fraud, gross mismanagement, gross waste of funds, or abuse of authority"); 10 C.F.R. § 708.5(a) (previous rule). Because the necessary factual prerequisites differ in the Part 708 and ADEA complaints, I find the complaints are not based upon the "same facts" for section 708.6(a) (previous version) or 708.15(a) purposes. See Carl J. Blier, 27 DOE ¶ , Case No. VBZ-0003 (June 21, 1999) (Americans with Disabilities Act and Rehabilitation Act (ADA/RA) complaints do not bar Part 708 complaint since ADA/RA complaints require different factual motivation for employer's adverse personnel action). Consequently, WSRC's Motion to Dismiss should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Westinghouse Savannah River Corporation on June 30, 1999 is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

Richard A. Cronin, Jr.

Hearing Officer

Office of Hearings and Appeals

Date: August 6, 1999

(1) 1/ The DOE revised 10 C.F.R. Part 708 on March 15, 1999. The version of 10 C.F.R. Part 708 in effect prior to the March 15 revision will be referred to as the "previous version" of 10 C.F.R. Part 708.

(2)Ms. Smith's filing of her Part 708 complaint would be timely under the current Part 708 regulations, which gives a party 90 days to file a complaint. See 10 C.F.R. § 708.14.

(3)My belief is that the prohibitions contained in sections 708.6(a) (previous version) and 708.15(a) were meant to bar an individual from filing Part 708 complaints when the individual has already pursued a remedy under State or other applicable whistleblower law in order to prevent him or her from arguing whistleblower claims in multiple forums. The introduction to the current Part 708 regulations indicates that Part 708 was designed specifically "to deal with allegations or retaliation against contractor employees and to provide relief where appropriate." 64 Fed. Reg. 12,862 (March 15, 1999). This purpose would not be furthered by barring Part 708 actions which share similar facts with other non- whistleblower causes of actions. In its Motion, WSRC argues that an individual must make an election of remedies between Part 708 and other causes of action when both causes of action are based on similar facts. In support of its position, WSRC cites the comments to the previous rules: "when redress is available under State or other applicable law, the employee must make an exclusive election of remedies." WSRC Motion to Dismiss at 5 (quoting 57 Fed. Reg. 7,533 at 7,538). However, this quotation is contained in the section of the comments discussing the interaction of the proposed regulations with "'whistleblower' programs implemented pursuant to State or other applicable law." 57 Fed. Reg. at 7,538. The comments to the previous rule, in my opinion, provide additional support for the proposition that Sections 708.6(a) and 708.15(a) were not meant to bar non-whistleblower causes of action.

Case No. VWZ-0016

November 8, 1999

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: Charles Montaño

Date of Filing: October 4, 1999

Case Number: VWZ-0016

This decision considers a Motion to Dismiss filed by Charles Montaño (Montaño) on October 4, 1999. In his Motion, Montaño seeks dismissal of the hearing scheduled to begin on November 16, 1999 and judgment on the existing record for the Whistleblower Complaint that he filed against the University of California (the University) under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. His Complaint under 10 C.F.R. Part 708 has been assigned Office of Hearings and Appeals (OHA) Case No. VWA-0042. The present Motion has been assigned Case No. VWZ-0016.

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The DOE Contractor Employee Protection Program is intended to encourage contractor employees to come forward "with information that in good faith they believe evidences unsafe, unlawful, fraudulent, or wasteful practices." 57 Fed. Reg. at 7533 (March 3, 1992). Employees of DOE contractors and subcontractors should be able to disclose safety concerns without fear of reprisal, and employees who believe they have been subject to a reprisal should feel they are able to seek protection from the DOE. The regulations should be construed in a manner that furthers this policy.

Montaño has been employed by the University as a Senior Auditor from June 12, 1987 to the present. On February 14, 1996, Montaño filed a complaint under 10 C.F.R. Part 708 with the DOE's Albuquerque Operations Office (Albuquerque). In this complaint, Montaño alleged that he was retaliated against for disclosures of possible fraud and mismanagement. On April 4, 1996, Montaño filed a second complaint under 10 C.F.R. § 708 alleging further retaliation.

After conducting an investigation of Montaño's allegations, the DOE's Office of Inspector General (the IG) issued a Report of Investigation (the Report) on April 14, 1999. The Report found that: "The evidence in the record indicates that [Montaño] made protected disclosures to Los Alamos National Laboratory Management (LAND) at public forums, to members of Congress, the DOE, and [the IG] regarding possible violations of law, rule, or regulation related to non-compliance with the terms and conditions of the LANL contract." Report at 31. The Report further found that: "[Montaño] has established by a preponderance of the available evidence that his protected disclosures contributed to the alleged retaliatory actions taken against him." *Id.* The Report further states: "We also find that [the UC] has failed to show by clear and convincing evidence that the adverse actions taken against [Montaño] would have occurred absent his protected disclosures." *Id.*

In its present motion, Montaño claims that the University failed to file its request for a hearing in a timely manner. Specifically, Montaño, citing the former 10 C.F.R. § 708.9(a), claims that the University received a copy of the Report on April 19, 1999, but failed to file its request for a hearing until May 6, 1999, which in Montaño's view, is two days later than allowed by the former 10 C.F.R. § 708.9(a).

If Montaño's motion were granted, the University's Request for a Hearing would be dismissed and my decision would be based upon the existing record, which consists of the investigatory file compiled by the Office of Inspector General (the IG) in the course of its initial investigation of Montaño's Whistleblower complaints. In effect, the University would be deprived of an opportunity to conduct discovery and to present relevant testimony under oath at a hearing.

It is well settled that a Motion to Dismiss in a 10 C.F.R. Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. *Lockheed Martin Energy Systems, Inc.*, 27 DOE ¶ 87,510 (1999); *EG&G Rocky Flats*, 26 DOE ¶ 82,502 (1997) (*E.G.&G*). The OHA considers dismissal "the most severe sanction that we may apply," and we have rarely used it. *Boeing Petroleum Services*, 24 DOE ¶ 87,501 at 89,005 (1994).

Moreover, this Office has held that, in order to further the purposes of the Whistleblower protection program, which include encouraging employees to come forth with protected disclosures, it is important not to hold parties to proceedings under 10 C.F.R. Part 708 to the strictest standards of technical pleading. *EG&G*, *supra*; *Westinghouse Hanford Company*, 24 DOE ¶ 87,502 at 89,011 (1994) (*Westinghouse*).

Most importantly, the criteria and procedures for Part 708 were amended in an Interim Final Rule effective April 14, 1999. 64 Fed. Reg. 12862. The Interim Final Rule provides that its amended procedures will apply prospectively to any complaint pending on April 14, 1999. Accordingly, the purely procedural regulation cited by Montaño was superseded by the Interim Final Rule which took effect on the very same day that the IG issued the Report. Under the Interim Final Rule, the matter proceeds to a hearing automatically without any requirement for a party to file a request for a hearing. Since the University did not need to file a request for hearing under the controlling regulations, Montaño's contentions are without merit. Accordingly, the Motion to Dismiss filed by Charles Montaño on October 4, 1999, is denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Charles Montaño, on October 4, 1999, Case No. VWZ-0016, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Petitioner: University of California

Date of Filing: October 6, 1999

Case Number: VWZ-0017

This decision considers a Motion to Dismiss filed by the University of California (the University) on October 6, 1999. In its Motion, the University seeks dismissal of the complaint filed against it by Charles Montaño under the Department of Energy's (DOE) Contractor Employee Protection Program, which is codified at 10 C.F.R. Part 708. Montaño's complaint under Part 708 has been assigned Office of Hearings and Appeals (OHA) Case No. VWA-0042. The present Motion has been assigned Case No. VWZ-0017.

The Department of Energy established its Contractor Employee Protection Program to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste, and abuse" at DOE's Government-owned or leased facilities. 57 Fed. Reg. 7533 (March 3, 1992). The DOE Contractor Employee Protection Program is intended to encourage contractor employees to come forward "with information that in good faith they believe evidences unsafe, unlawful, fraudulent, or wasteful practices." 57 Fed. Reg. at 7533 (March 3, 1992). Employees of DOE contractors and subcontractors should be able to disclose safety concerns without fear of reprisal, and employees who believe they have been subject to a reprisal should feel they are able to seek protection from the DOE. The regulations should be construed in a manner that furthers this policy.

Montaño has been employed by the University as a Senior Auditor from June 12, 1987 to the present. On February 14, 1996, Montaño filed a complaint under Part 708 with the DOE's Albuquerque Operations Office (Albuquerque). In this complaint, Montaño alleged that he was retaliated against for disclosures of possible fraud and mismanagement. On April 4, 1996, Montaño filed a second complaint under Part 708 alleging further retaliation.

After conducting an investigation of Montaño's allegations, the DOE's Office of Inspector General (the IG) issued a Report of Investigation (the Report) on April 14, 1999. The Report found that: "The evidence in the record indicates that [Montaño] made protected disclosures to Los Alamos National Laboratory Management (LANL) at public forums, to members of Congress, the DOE, and [the IG] regarding possible violations of law, rule, or regulation related to non-compliance with the terms and conditions of the LANL contract." Report at 31. The Report further found that: "[Montaño] has established by a preponderance of the available evidence that his protected disclosures contributed to the alleged retaliatory actions taken against him." *Id.* The Report further states: "We also find that [the University] has failed to show by clear and convincing evidence that the adverse actions taken against [Montaño] would have occurred absent his protected disclosures." *Id.*

In its present motion, the University claims it has made Montaño a formal offer to provide him with remedies that are substantially equivalent to or exceed those set forth in the Report of Investigation (the

Report) issued by the DOE's Office of Inspector General (the IG).

On August 27, 1999, the University submitted a document captioned as an "Offer of Judgment." In an order dated August 31, 1999, I found:

This Offer of Judgment appears to be an attempt to moot the issues at bar in the present case by agreeing to provide the remedies requested by [Montaño]. If [the University's] Offer of Judgment provides each of the remedies requested in Mr. Montaño's complaint, the issued raised in the complaint are mooted. 10 C.F.R. § 708.17(c)(6).

* * *

Accordingly, [Montaño] is hereby directed to show cause as to why I should not dismiss the present case on the grounds of mootness.

August 31, 1999 Order. On September 7, 1999, I received Montaño's response to my order. On September 8, 1999, I wrote the parties stating in pertinent part:

After careful consideration of [Montaño's response to my order of August 31, 1999,] as well as the [University's] Offer of Judgment, it is apparent that substantial differences remain between the parties. Therefore, I am of the opinion that the present case should not be dismissed at this time.

September 8, 1999 letter from Hearing Officer Fine to Merit Bennett and Ellen Castille.

It is well settled that a Motion to Dismiss in a Part 708 proceeding is appropriately granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. *Lockheed Martin Energy Systems, Inc.*, 27 DOE ¶ 87,510 (1999); *EG&G Rocky Flats*, 26 DOE ¶ 82,502 (1997) (*EG&G*). The OHA considers dismissal "the most severe sanction that we may apply," and we have rarely used it. *Boeing Petroleum Services*, 24 DOE ¶ 87,501 at 89,005 (1994).

The University has not set forth any argument or evidence convincing me that my previous ruling was in error. (1) Accordingly, the Motion to Dismiss filed by the University of California on October 6, 1999, should be denied.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by the University of California on October 6, 1999, Case No. VWZ-0017, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy.

Steven L. Fine

Hearing Officer

Office of Hearings and Appeals

Date: November 10, 1999

(1)10 C.F.R. § 708.17(c)(6) states that : "Dismissal [of a complaint] for lack of jurisdiction or other good cause is appropriate if: . . . Your employer has made a formal offer to provide the remedy that you request in your complaint or a remedy that DOE considers to be the equivalent to what could be provided as a remedy under this part." My review of the record indicates that there are several legal and factual issues concerning remedies which remain to be resolved.

Case No. VWZ-0020

February 3, 2000

DECISION AND ORDER

OF THE DEPARTMENT OF ENERGY

Motion to Dismiss

Name of Case: Lucy B. Smith

Date of Filing: October 14, 1999

Case Number: VWZ-0020

This determination will consider a Motion to Dismiss filed by Westinghouse Savannah River Company (WSRC) on October 14, 1999. WSRC seeks dismissal of three allegations of retaliation by reason of failure to rehire submitted by Lucy B. Smith under the Department of Energy's Contractor Employee Protection Program, 10 C.F.R. Part 708. In a submission dated December 6, 1999, WSRC further requests dismissal of a discovery request made by Ms. Smith regarding hiring by subcontractors of WSRC.

I. Background

Ms. Smith's Part 708 complaint arises from her employment as a chemist with WSRC at DOE's Savannah River Site. Ms. Smith alleges that she made three protected disclosures involving health and safety concerns to WSRC officials during the last half of 1996. On January 20, 1997, Ms. Smith received a Reduction in Force notice from WSRC. Ms. Smith subsequently elected to retire from WSRC on April 1, 1997. In her complaint, Ms. Smith alleged that she was selected for termination because of her disclosures.

Pursuant to a Motion for Discovery, I permitted Ms. Smith to engage in discovery pertaining to potential WSRC retaliation by virtue of its failure to rehire Ms. Smith for various job openings. See Lucy B. Smith, 27 DOE ¶ 87,521 (1999). As part of this decision, I ordered that after discovery, Ms. Smith must submit to me and WSRC any specific formal allegation of WSRC retaliation by failure to rehire which she sought to have considered at the hearing in this matter. In a letter dated September 1, 1999, Ms. Smith seeks to amend her Part 708 complaint by alleging that WSRC retaliated against her by failing to hire her for two chemist positions filled in August and October of 1998 and one filled on March 23, 1999. Regarding these hirings, Ms. Smith asserts that she was "subject" to preferential hiring eligibility under Section 3161 of the Defense Authorization Act, 42 U.S.C. § 7274 (h), (j).

In its Motion, WSRC argues that any allegations regarding a failure to rehire should not be considered at the hearing. Specifically, WSRC argues that Section 3161 of the Defense Authorization Act confers no private cause of action to Ms. Smith for failure to be rehired by WSRC. Specifically, WSRC points out that Section 3161 requires that the Secretary of Energy prepare a "workforce restructuring plan" for each defense nuclear facility. Further, Section 3161 uses only permissive language ('to the extent practicable") in its directive to give rehiring preference to terminated employees at such facilities. WSRC cites Pawlick v. O'Leary, No. 1:95-3300-6 (D.S.C. Sept. 23, 1997), aff'd, Pawlick v. O'Leary. No. 97-2459 (4th Cir. June 26, 1988) (per curiam) (Pawlick), for the proposition that Section 3161 does not confer a private right of action upon an individual. WSRC also argues that neither the provisions of the DOE-WSRC contract nor the two forms entitled "Statement of Interest in Maintaining Section 3161 Employment Eligibility"

(described below) that Ms. Smith signed contain language which would mandate her rehiring by WSRC. Consequently, WSRC maintains that her failure to be rehired for any of the three positions described by Ms. Smith can not be considered retaliatory. Because WSRC believes that failure to rehire can not be a retaliation, WSRC requests that Ms. Smith's discovery request regarding hiring by WSRC subcontractors at the DOE Savannah River facilities be dismissed.

WSRC also argues that, as a practical matter, it did not retaliate against Ms. Smith because during the time the three chemists were hired, her name was not active in WSRC's Preferential Hiring Database. This database contains information on previously terminated employees who wish to be considered for future job positions. WSRC states that on January 20, 1997, Ms. Smith completed a form entitled "Statement of Interest in Maintaining Section 3161 Employment Eligibility" ("Statement of Interest" form). This form enables an individual to be placed on the Preferential Hiring Database for the Savannah River Site. The form also states that an individual must complete a new "Statement of Interest" form prior to one year from the date the individual signs the form. Because Ms. Smith had not submitted another "Statement of Interest" form within the one year period, Ms. Smith's name was moved from the active list to inactive status on March 17, 1998. WSRC asserts that Ms. Smith did not submit another "Statement of Interest" form until March 29, 1999. Thus, from March 17, 1998 to March 29, 1999, Ms. Smith's name was not active in the database, and consequently, she would not have been considered for any available position, including the three chemist positions at issue here, during that period.

In response, Ms. Smith argues that she is not asserting any rights under Section 3161. Instead, she states that her claim with regard to the allegations concerning her failure to be rehired is based upon 10 C.F.R. Part 708. Specifically, she asserts that the definition of "retaliation" in 10 C.F.R. § 708.2 refers to "an action . . .taken by a contractor against an employee with respect to employment . . . as a result of the employee's disclosure of information." Thus, Ms. Smith argues that this definition would encompass a failure to be rehired when the employee had a preference in rehiring.

II. Analysis

A. Allegations Concerning Failure to Rehire

WSRC asks that I dismiss Ms. Smith's request to amend her complaint regarding the allegation of failure to rehire her for one of the three chemist positions identified in her September 1 letter.

As an initial matter, I find that Section 3161 of the Defense Authorization Act, 42 U.S.C. § 7274 (h), (j), does not create for Ms. Smith any entitlement to one of the three chemist positions at issue here. I find the Court's reasoning in Pawlick persuasive. Section 3161 requires the Secretary of Energy to prepare a plan for the restructuring of Department of Energy nuclear weapons facilities which includes a provision that "[E]mployees whose employment . . . is terminated shall, to the extent practicable, receive preference in any hiring of the Department of Energy." 42 U.S.C. §7274(h). The Pawlick court held that there is no mention of a private cause of action in the statute nor legislative history to support the creation of such a cause of action. Pawlick, slip op. at 3. Further, the court held that the use of discretionary language ("shall, to the extent possible") in the section was inconsistent with a finding that the statute confers a right that can be enforced through private litigation. Consequently, the Court concluded that Congress did not intend to confer a privately enforceable federal right to sue pursuant to Section 3161. Id. Additionally, neither of the two "Statement of Interest" forms signed by Ms. Smith or the DOE-WSRC contract provisions submitted by WSRC include language that would mandate rehiring of Ms. Smith. However, even if Ms. Smith does not have an enforceable right under Section 3161, the DOE-WSRC contract or the "Statement of Interest" forms, I also find that if, as a result of a protected disclosure, she was denied reemployment, such action could be retaliation cognizable under Part 708.

Section 708.2 defines retaliation as "an action . . . .taken by a contractor against an employee with respect to employment (e.g. discharge, demotion, or other negative action with respect to the employee's

compensation, terms, conditions or privileges of employment) as a result of the employee's disclosure of information, participation in proceedings, or refusal to participate in activities described in § 708.5 of this subpart." 10 C.F.R. § 708.2. In the present case, I believe that Ms. Smith's eligibility for preference in hiring is a privilege of her former employment at WSRC. While Section 3161 does not in itself require that previously terminated employees be automatically rehired, the fact remains that WSRC established a database so that it could consider former employees for possible rehiring. Given these facts, I find that inclusion in the WSRC database and subsequent consideration for rehiring is a privilege of Ms. Smith's former employment at WSRC. Thus, if WSRC failed to rehire her as a result of her protected disclosures such action could be considered retaliation under Part 708.

In its Motion, WSRC has presented substantial evidence indicating that it would have not considered her for the three positions at issue notwithstanding her alleged disclosures because of her failure to complete another “Statement of Interest” form within the one year period specified on the form. Because of her failure to complete another "Statement of Interest" form, it appears that Ms. Smith's name was not active in the Preferential Hiring Database during the period when the three chemist positions were filled. The language in the "Statement of Interest" form Ms. Smith signed clearly states that a new form must be completed within one year of the date an individual completes the last form. Specifically, the form states "I also understand that to retain preference in hiring status, I am required to complete a new form prior to one (1) year from the date of my signature below." See Exhibit A to October 14, 1999 WSRC Motion to Dismiss. In response, Ms. Smith asserts that following the WSRC lay off, she had contacted a Ms. Carol McClure of the WSRC personnel department who informed her that all retired people would be removed from the database. Sometime after that conversation, Ms. Smith asserts that she tried to telephone a Mr. Lamar Cherry in the WSRC personnel department but that he did not return her telephone call. Several months later, Ms. Smith states she received a form letter asking whether she would want to be considered for rehire, to which she responded in the affirmative.

OHA has held that Motions to Dismiss should only be granted where there is clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact or law on a more complete record. See, e.g., Lockheed Martin Energy Systems, Inc., 27 DOE ¶ 87,510 (1999). Given Ms. Smith’s assertions in her response, which for the purposes of this motion I will assume are true, I will not dismiss Ms. Smith’s allegations of retaliation since it is conceivable that WSRC could have given Ms. Smith incorrect information about the “Statement of Interest” form in retaliation for her alleged disclosures. Additional material presented at the hearing might substantiate this allegation.

B. Discovery

WSRC also requests that I dismiss Ms. Smith's September 1, 1999 discovery request. In this request Ms. Smith asks for: a list of chemists, engineers, project managers and risk management personnel (both safety and human health) who were hired by Bechtel, Babcock and Wilcox, BNFL and other subcontractors at the Savannah River site. This request asks for material which is not relevant to the current proceeding. The current proceeding has at issue allegations that WSRC retaliated against Ms. Smith for alleged protected disclosures. From the record before me, it appears that Ms. Smith was not an employee of any contractor or subcontractor other than WSRC when she made her disclosures or was terminated from employment. Thus, I do not see how the information sought in this discovery request would shed any light on allegations that WSRC retaliated against Ms. Smith. WSRC need not respond to Ms. Smith’s September 1, 1999 discovery request.

In sum, I will grant WSRC's Motion in part. I will not dismiss Ms. Smith’s allegations as to her failure to be rehired described in her September 1, 1999 letter. However, I will deny Ms. Smith’s request for discovery contained in the September 1 letter.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Westinghouse Savannah River Corporation on October 14, 1999, Case

No. VWZ-0020, is hereby granted in part as described in the foregoing decision.

(2) This is an Interlocutory Order of the Department of Energy. This Order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

Protective Order

Steven J. Goering, Hearing Officer:

This Decision and Order involves a Complaint of Retaliation filed by John Robertson against KQ Services under the DOE's Contractor Employee Protection Program and its governing regulations set forth at 10 C.F.R. Part 708. I have scheduled a hearing in this matter to begin on September 19, 2012. The Part 708 regulations provide that the Hearing Officer "may permit parties to obtain discovery by any appropriate method, including . . . production of documents," and may "direct that documentary evidence be served upon other parties (under protective order if such evidence is deemed confidential)." 10 C.F.R. § 708.28(b).

During the process of pre-hearing discovery in this matter, counsel for KQ Services requested that the DOE Savannah River Operations Office (DOE-SR) Employee Concerns Program (ECP), produce certain documents in its possession. On September 12, 2012, DOE-SR submitted a Stipulated Protective Order, attached hereto, to which DOE-SR, Mr. Robertson, and counsel for KQ Services have agreed to be bound. The Order states, *inter alia*, that the names or any other identifying information of certain individuals named in the documents shall remain confidential.

I have reviewed the attached Stipulated Protective Order and have concluded that it should be issued as an Order of the Department of Energy.

It Is Therefore Ordered That:

The attached Stipulated Protective Order is hereby issued as a final Order of the Department of Energy.

		)	Case No.: WBZ-12-0005
		)	

Issued: October 2, 2012

Motion to Dismiss
Interlocutory Order

Richard A. Cronin, Jr., Hearing Officer:

This Decision will consider a Motion to Dismiss submitted by Shaw AREVA MOX Services, LLC (Shaw), regarding a complaint submitted by Jeffrey S. Derrick under the Department of Energy's (DOE) Contractor Employee Protection Program, set forth at 10 C.F.R. Part 708. For the reasons set forth below, I have determined that the Motion should be denied.

I. BACKGROUND

A. The DOE Contractor Employee Protection Program

The DOE's Contractor Employee Protection Program was established to safeguard "public and employee health and safety; ensur[e] compliance with applicable laws, rules, and regulations; and prevent[] fraud, mismanagement, waste and abuse" at DOE's government-owned, contractor-operated facilities. 57 Fed. Reg. 7533 (March 2, 1992). Its primary purpose is to encourage contractor employees to disclose information that they believe exhibits unsafe, illegal, fraudulent or wasteful practices and to protect those "whistleblowers" from consequential reprisals by their employers.

The Part 708 regulations prohibit retaliation by a DOE contractor against an employee because the employee has engaged in certain protected activity, including "disclosing to a DOE official … information that [the employee] reasonably believes reveals (1) a substantial violation of a law, rule, or regulation; (2) a substantial and specific danger to employees or to public health or safety; or (3) fraud, gross mismanagement, gross waste of funds, or abuse of authority." 10 C.F.R. § 708.5(a).

Part 708 sets forth the procedures for considering complaints of retaliation. The DOE's Office of Hearings and Appeals (OHA) is responsible for investigating complaints, holding hearings, and considering appeals. 10 C.F.R. Part 708, Subpart C. According to the Part 708 regulations, a complaint must include a "statement specifically describing the alleged retaliation" and "the disclosure, participation, or refusal that [the complainant believes] gave rise to the retaliation." 10 C.F.R. § 708.12.

B. Factual Background

Derrick was hired by Shaw in October 2011 as a Mechanical Site Superintendent as part of Shaw's effort in designing, licensing, building, and operating the Mixed-Oxide Fuel Fabrication Facility (MFFF) located at the DOE's Savannah River site. Complaint filed by Jeffrey S. Derrick (Complaint) with Michelle Rodriguez de Varela, Whistleblower Complaint Manager, National Nuclear Security Administration (NNSA), (April 12, 2012) at 1; Letter (enclosing Shaw's response to the Complaint) from Timothy P. Matthews, Counsel, Shaw, to Michelle Rodriguez de Varela, NNSA (June 4, 2012) at 1 n.1. Derrick's immediate supervisor was Tim W. Sheppard (Sheppard), Area Superintendent, Shaw. Shaw Response (Response) to Complaint (June 4, 2012) at 1.

Beginning in December 2011, Derrick sent E-mails to Sheppard and other Shaw officials complaining about the tolerances and installation of pipes and pipe supports in the MFFF. Derrick also alleges that he sent E-mails in March 2012 to DOE Officials and the Vice President for Construction at the MFFF outlining his concerns with "installation practice" regarding the installation of pipes at the MFFF. Derrick alleges that, because of his attempts to bring this issue to the attention of his superiors, other Shaw officials, and the DOE, he was terminated from his position on March 21, 2012. Complaint at 3; Response at 11.

C. Procedural Background

On April 12, 2012, Derrick filed a Part 708 complaint with the Whistleblower Complaint Manager. Upon receiving a copy of the Complaint, Shaw filed a response in which it argued that Derrick's complaint should be dismissed because the facts alleged in the Complaint would not support an action under Part 708. Response at 11. On June 22, 2012, the Whistleblower Complaint Manager forwarded Derrick's complaint for a hearing to OHA.[1] I was appointed by the OHA Director to be the Hearing Officer in this matter.

After reviewing the Complaint and Response, I requested briefs from both parties on the issue of the sufficiency of Derrick's complaint to support an action under Part 708. Letter from Richard A. Cronin, Jr., Hearing Officer, OHA to Jeffrey S. Derrick, Complainant, and Timothy P. Matthews, Counsel, Shaw (June 27, 2012). After both parties submitted briefs, Derrick requested permission to file an amended brief. Pursuant to an agreement by the parties, Derrick filed an

[1] In her transmittal letter OHA, the Whistleblower Complaint Manager did not respond to Shaw's request for dismissal as contained in its Response. The letter also contained a June 22, 2012, E-mail from Derrick requesting an OHA hearing without an investigation. Memorandum from Michelle Rodriguez de Varela, Whistleblower Complaint Manager, NNSA to Poli A. Marmolejos, Director, Office of Hearings and Appeals (June 22, 2012).

Amended Brief on July 25, 2012. Shaw submitted a response to the Amended Complaint on August 6, 2012.

II. ANALYSIS

A. The Applicable Legal Standards

Under Part 708, a contractor employee may not be subject to retaliation for disclosing to a DOE official, a member of Congress, any other government official who has responsibility for the oversight of the conduct of operations at a DOE site, the employee's employer, or any higher tier contractor, information that the employee *reasonably believes* reveals: (1) a substantial violation of a law, rule, or regulation; (2) a substantial and specific danger to employees or to public health or safety; or (3) fraud, gross mismanagement, gross waste of funds, or abuse of authority. 10 C.F.R. § 705(a).

The Part 708 regulations do not specify procedures or standards for motions to dismiss. Accordingly, we look to the Federal Rules of Civil Procedure, which, though they do not govern this proceeding, may be used as a guide. *See, e.g.*, *Hansford F. Johnson*, Case No. TBZ-0104 (November 24, 2010); *Billy Joe Baptist*, Case No. TBH-0080 (May 7, 2009); *Edward J. Seawalt*, Case No. VBZ-0047 (August 20, 2000) (applying standards of Fed. R. Civ. P. 56 to Motion for Summary Judgment).[2] At this preliminary point of the case, the Motions to Dismiss are most analogous to what would, under the Federal Rules, be a motion to dismiss for "failure to state a claim upon which relief can be granted . . . ." Fed. R. Civ. P. 12(b)(6). The Supreme Court has held that, to survive a Rule 12(b)(6) motion to dismiss, a complaint must plead "only enough facts to state a claim to relief that is plausible on its face." *Bell Atl. Corp. v. Twombly*, 550 U.S. 544, 570 (2007). While the complaint "does not need detailed factual allegations, . . . [f]actual allegations must be enough to raise a right to relief above the speculative level, on the assumption that all of the complaint's allegations are true (even if doubtful in fact)." *Id.* at 555 (citations omitted).

In addition, prior cases of this office instruct that such a motion should be granted only where there are clear and convincing grounds for dismissal, and no further purpose will be served by resolving disputed issues of fact on a more complete record. *Curtis Broaddus*, Case No. TBH-0030 (2006); *Henry T. Greene*, Case No. TBU-0010 (2003) (decision of OHA Director characterizing this standard as "well-settled"); *see also David K. Isham*, Case No. TBH-0046 (2007) (complaint may be dismissed where it fails to allege facts which, if established, would constitute a protected disclosure); *accord Ingram v. Dep't of the Army*, 114 M.S.P.R. 43, 47 (2010) (finding Merit Systems Protection Board jurisdiction under federal Whistleblower Protection Act where complaint makes non-frivolous allegation that he engaged in whistleblowing activity by making a protected disclosure, and the disclosure was a contributing factor in the agency's decision to take or fail to take a personnel action).

[2] Decisions issued by OHA are available on the OHA website located at http://www.oha.doe.gov. The text of a cited decision may be accessed by entering the case number of the decision in the search engine located at http://www.oha.doe.gov/search.htm.

Using the above standards, I find that Shaw's Motion to Dismiss should be denied.

B. Whether Derrick's Allegations Regarding his Disclosure Contained in the Complaint and Response are Sufficient to Support a Part 708 Complaint

In his complaint, Derrick alleges that he made protected disclosures in four E-mails: (1) December 21, 2011, E-mail message from Jeffrey Derrick to Timothy Sheppard, Derrick's supervisor; (2) February 22, 2012, E-mail from Derrick to Ed Najmola (Najmola), Vice President of Construction, Shaw; (3) March 15, 2012, E-mail from Derrick to Najmola (3/15 E-mail); and (4) March 19, 2012, E-mail from Derrick to Ed Najmola, Vice President of Construction, Shaw, copies of which were sent to Kevin Buchanon, DOE/NNSA Engineer, Timothy Sheppard, Derrick's supervisor, and Charles Schmidt, Sheppard's supervisor (3/19 E-mail). Derrick alleges that his disclosures concerned pipe "installation practice." July 25, 2012, Amended Brief at 1. Derrick asserts that his concerns with installation practice refer to conflicting "notes" and "specs" regarding pipe installation and the non-existence of piping tolerances. *Id.* He also alleges that his disclosures alleged gross mismanagement regarding Shaw's decision to continue to install piping notwithstanding the alleged problems in installation practice. *Id.*

1. Applicability of Kilmer and Huffman to Derrick's Part 708 Complaint

As the initial argument in its briefs, Shaw cites *Eugene M. Kilmer*, Case No. TBH-0111 (April 28, 2011) (*Kilmer*). In *Kilmer*, we cited *Huffman v. Office of Personnel Mgmt.*, 263 F.3d 1341, 1349-50 (Fed. Cir. 2001) for the proposition that where an individual reveals information that is already known to the wrongdoer, it cannot be a "disclosure" since the definition of "disclose" means to "reveal something that was hidden and not known." *Kilmer* at *9*. Consequently, Shaw argues that the complaint should be dismissed because Derrick's alleged disclosures concern pipe and pipe support location issues raised in a December 1, 2011, report entitled "MOX NNSA Construction and Startup Team Daily Activity Report" (NNSA Report), of which Shaw's management already had notice prior to Derrick's alleged disclosures. Response Attachment at 5.

After examining the NNSA Report and the alleged disclosures contained in the 3/19 E-mail (that also contains a copy of the 3/15 E-mail), I cannot find, based on the information currently before me, that Derrick's disclosures are identical to the issues raised in the NNSA Report. The 3/19 E-mail describes problems with "inaccurate" databases, tracking tables, packages, and "material and coordination." 3/15 E-mail (attached to 3/19 E-mail). None of these problems are explicitly mentioned in the NNSA Report nor, without additional information, can I conclude that Derrick's concerns are subsumed under the issues raised in the NNSA Report. For the sole purpose of deciding this Motion, I cannot find that Derrick's disclosures are identical to the issues raised in the NNSA Report and thus, *Huffman* and *Kilmer* do not operate as a bar to Derrick's complaint at this stage of the proceeding.[3]

[3] In making this finding, I limit my opinion to apply only in deciding the Motion before me. If this matter goes to a hearing, Shaw may offer additional evidence as to the issue of whether Derrick's alleged disclosures were already known to Shaw management and DOE and whether *Huffman* and *Kilmer* apply to Derrick's complaint.

2. Whether Derrick's Alleged Disclosures Adequately Describe a Gross Waste of Funds or Gross Mismanagement

Shaw also argues that the content of Derrick's alleged protected disclosures, as described in his complaint and briefs, do not meet the requirements of Part 708, i.e., they do not sufficiently describe gross mismanagement or a gross waste of funds. *See* 10 C.F.R. § 708.5. For Part 708 purposes, "gross mismanagement" means a management action or inaction that creates a substantial risk of significant adverse impact upon the agency's ability to accomplish its mission. Similarly, a "gross waste of funds" constitutes a more-than-debatable expenditure that is significantly out of proportion to the benefit reasonably expected to accrue to the government. *Fred Hua*, Case No. TBU-0078 at 2-3 (May 2, 2008) (*Hua*).

After reviewing the disclosures referenced by Derrick in his complaint and supporting briefs, I find that one alleged disclosure, Derrick's 3/19 E-mail, contains sufficient factual allegations, assuming that Derrick reasonably believed that the allegations in the 3/19 E-mail were true, to conclude that the message is complaining about a gross waste of funds and is thus potentially protected under Part 708. Specifically, the pertinent portion of the E-mail states:

> Beginning 26 March 2012, I will no longer direct installation of supports (unless directed by Ed or Kelly) in my area (BMP) without piping packages being a precursor to all support packages. At the direction of Tim and myself, last few weeks we have chosen to install with random and no U bolt location but this decision was ours without support from management. This will help with some of the issues but not all. We need constructive answers on how to proceed with issues we have described. This has not been formally addressed by Ed, Steve, or Charlie. This issue has been brought to everyone's attention including engineering. Design and Engineering have established installation guide lines based on piping location. I have sent numerous emails to the proper and qualified persons for an answer. I want an answer and I want that answer to be confirmed, and agreed with all involved. 90% of all packages are built, support packages, then piping packages, with a time lag time of weeks. This is making installation difficult, time consuming, inaccurate, and virtually impossible (check the data base. I have multiple copies). I have been trying to address this issue for months. We cannot continue to install without the proper and the correct way design has intended. Piping has to come first, and in such a way, it allows for the tolerance to be confirmed. To date, as I have advised, this is not happening. Your cooperation is needed to resolve the issue. I have contacted Kevin for his help in resolving this ongoing issue. Ed has emails of this concern. Estimated cut out of already installed conservatively is 50%.
>
> We all need to reach a resolution, and we need to reach it promptly.

3/19 E-mail. The 3/19 E-mail also contained a copy of Derrick's 3/15 E-mail. The 3/15 E-mail states in pertinent part:

> I have, on many occasions, tried to address the improper installations of supports. This will be costly and time consuming. You have to address this problem. This issue could result in 50% rework. This too, was addressed months ago in unanswered emails. We can not [sic] continue to ignore this issue.

3/15 E-mail.

Assuming that Derrick is correct, as required by an analysis of his complaint for the purposes of a Motion to Dismiss, with regard to his allegation about the pipe supports that would have to be replaced on a project such as the MFFF, I find that the message alleges sufficient information about waste (a 50 percent replacement of all pipe supports for 80 miles of pipe[4]) to be considered as a "gross" waste of funds as required under Part 708. Thus, I find that Derrick's March 19, 2012, E-mail, contains sufficient factual allegations, if true, that could refer to a gross waste of funds and thus support a Part 708 complaint. Consequently, I must reject Shaw's argument that none of Derrick's alleged disclosures alleges a cause of action, by law, under Part 708.[5]

3. Whether Shaw Would Have Terminated Derrick Notwithstanding his Disclosures

Shaw also argues that the weight of evidence clearly supports a finding that, even if Derrick made a protected disclosure, Shaw would have terminated him from his position notwithstanding his protected disclosure. Shaw's argument invites me to weigh the evidence to reach a factual finding regarding the sufficiency of the reasons for which Shaw terminated Derrick. However, I find such an evaluation inappropriate in the consideration of a Motion to Dismiss since the gravamen of such a motion is the legal sufficiency of Derrick's Part 708 complaint. *See supra.* Both parties assert that Derrick was terminated a few days after the March 19, 2012, E-mail. Consequently, I find that Derrick's complaint alleges sufficient temporal proximity between the alleged protected disclosure and Derrick's termination such that a *rebuttable* presumption can be made that the alleged disclosure was a substantial factor in the termination. *See, e.g., Curtis Hall*, Case No. TBA-0042 (February 13, 2008). Therefore, I conclude that Derrick has alleged sufficient facts to indicating a claim that his alleged protected disclosures were a factor in his termination.

In sum, after considering Derrick's complaint and all of the submitted briefs, I find that Derrick's Part 708 complaint, on its face, alleges sufficient facts to support a Part 708 complaint. Consequently, Shaw's Motion to Dismiss is denied.

---

[4] *See* Response at 1 (MFFF encompassing 80 miles of piping).

[5] In making this finding, I offer no opinion as to whether any of Derrick's alleged disclosures, including the 3/15 E-mail or the 3/19 E-mail, are sufficient with regard to the determination of the final merits of his Part 708 cause of action. To prevail in a Part 708 action, Derrick, at the hearing, must show by a preponderance of the evidence that he made a protected disclosure as described under 10 C.F.R. §708.5, and that the disclosure was a contributing factor in one or more alleged acts of retaliation against him by Shaw. If Derrick makes this showing, the burden shifts to the contractor, Shaw, to prove by clear and convincing evidence that it would have taken the same action without the Derrick's disclosure. See 10 C.F.R. § 708.29.

It Is Therefore Ordered That:

(1) The Motion to Dismiss filed by Shaw AREVA MOX Services, LLC, Case No. WBZ-12-0005, is hereby denied.

(2) This is an Interlocutory Order of the Department of Energy. This order may be appealed to the Director of OHA upon issuance of a decision by the Hearing Officer on the merits of the complaint.

Richard A. Cronin, Jr.
Hearing Officer
Office of Hearings and Appeals

Date: October 2, 2012
