

# Cerro CHILE Pachón

Hi again, we're on the road with the DOE Office of Science visiting our science projects across the globe - and universe! Today, we're in Chile taking pictures high in the Andes. We're at the site of a new telescope on the mountain El Penon that will produce the deepest, widest images of the universe ever! Our puny 12-megapixel camera phone's gonna be dwarfed by the camera that our SLAC lab is building for the National Science Foundation telescope: 3200 megapixels that will photograph 37 billion stars and galaxies in its 10-year survey of the sky. It will be the largest camera ever built - too big for us to take on our next science vacation.

Wish you were here!
