## UNITED STATES DEPARTMENT OF ENERGY

ELECTRICITY ADVISORY COMMITTEE MEETING

Arlington, Virginia
Wednesday, June 5, 2013

1	PARTICIPANTS:
2	BILLY BALL Southern Company
3	
4	LINDA BLAIR Executive Vice President, ITC Holdings
5	RICK BOWEN Alcoa
6	
7	MERWYN BROWN California Institute for Energy & Environment
8	PAUL CENTOLELLA Vice President, President Analysis Group
9	TA CON CURTORIER
10	JASON CHRISTOPHER Department of Energy
11	DR. ROBERT COLES National Grid
12	
13	RICHARD COWART EAC Chair
14	BOB CURRY Commissioner Emeritus, NY; Charles River
15	Associates
16	CLARK GELLINGS Electric Power Research Institute
17	DIAN CREWING
18	DIAN GREUNICH Dian Greunich Consulting
19	HONORABLE PATRICIA HOFFMAN Assistant Secretary for Office of Electricity
20	
21	PAUL HUDSON Stratus Energy Group, Austin
22	SUE KELLY

American Public Power Association

1	PARTICIPANTS (CONT'D):
2	CHERYL LA FLEUR FERC Commissioner
3	
4	DAVID MARCHESA Haddington Ventures
5	RALPH MASIELLO DNV KEMA
6	
7	DAVID MEYER Office of Electricity
8	RICK MILLER
9	Consultant HDR Engineering
10	CLAIR MOELLER MISO
11	SAMARA MOORE White House National Security Staff
12	
13	GRANGER MORGAN Carnegie Mellon, Engineering & Public Policy
14	JAY MORRISON National Rural Electric Cooperative Association
15	
16	ERIC OLSEN Office of Electricity
17	CHRIS PETERS
18	EAC Member, Moderator
19	SONNY POPOWSKY EAC Vice Chair
20	WANDA REDER S&C Electric Company; IEEE
21	
22	PHYLLIS REHA Commissioner Emeritus, Phyllis Reha Consulting

1	PARTICIPANTS (CONT'D):
2	BRAD ROBERTS Electricity Storage Association
3	
4	MATT ROSENBAUM Office of Electricity
5	JUDITH SCHWARTZ To the Point, Consultant Consumer Engagement
6	TOM SLOAN State Representative, Kansas
7	_
8	MARIANNE SWANSON NIST
9	DAVID TILL
10	Tennessee Valley Authority
11	GORDON VAN WELIE ISO New England
12	REBECCA WAGNER Nevada Public Utilities Commission
13	
14	MIKE WEEDALL Bonneville Energy Administration
15	JON WORTHINGTON Department of Energy
16	
17	* * * *

_	FROCEEDINGS
2	MR. POPOWSKY: Okay. Thanks, everyone,
3	for getting here so promptly, we have a full day.
4	Can everybody hear me okay, is this too loud or
5	too much echo? Are you okay? Good. Anyway, my
6	name is Sonny Popowsky, I am the retired Consumer
7	Advocate of Pennsylvania, and I'm also the Vice
8	Chair of this committee, and I'm sitting in today
9	for Rich Cowart, who is our Chair, who is
LO	currently addressing an audience in France at the
L1	European Commission on some important energy
L2	issues. And Rich regrets that he couldn't be
L3	here, but he send his regards, I just talked to
L4	him this morning, and he thanks everyone for all
L5	the work they've done in the last few months to
L6	get ready for this meeting.
L7	Why don't we start just by going around
L8	the table, because I think there are a few people
L9	here who may not be known to everyone, and then
20	we'll hear from David Meyer and then Pat Hoffman.
21	So let's start with the folks at the table and

then I'll also ask the folks in the audience to

- identify themselves. So, Pat, you want to start?
- MS. HOFFMAN: Sure. I'm Pat Hoffman,
- 3 Assistant Secretary for OE, going into the second
- 4 round.
- 5 MR. WORTHINGTON: Jon Worthington,
- 6 Department of Energy, I work with Pat as the
- 7 Deputy Assistant Secretary Office of Electricity
- 8 for National Electricity Delivery Division.
- 9 MR. MEYER: David Meyer with the Office
- 10 of Electricity.
- MR. ROSENBAUM: Matt Rosenbaum, same
- 12 office.
- 13 MR. MILLER: Rick Miller, Consultant
- 14 with HDR Engineering and participating in the
- panel tomorrow, I bring an energy storage and a
- 16 renewable energy integration focus to this.
- 17 MR. MOELLER: Clair Moeller from MISO.
- 18 MS. BLAIR: Good afternoon, Linda Blair,
- 19 Executive Vice President at ITC Holdings.
- 20 MR. CENTOLELLA: Paul Centolella, Vice
- 21 President Analysis Group.
- 22 MR. VAN WELIE: Gordon Van Welie, ISO

- 1 New England.
- MS. GRUENEICH: Dian Grueneich, Dian
- 3 Grueneich Consulting.
- 4 MS. REHA: Hi, Phyllis Reha,
- 5 Commissioner Emeritus, I guess, and now with
- 6 Phyllis Reha Consulting.
- 7 MS. WAGNER: Rebecca Wagner, Nevada
- 8 Publish Utilities Commission.
- 9 MS. SCHWARTZ: Judith Schwartz, To the
- 10 Point, I am a Consultant in Consumer Engagement.
- 11 MR. WEEDALL: Mike Weedall, I'm not
- 12 quite sure what to refer to myself as --
- MR. CURRY: I have a suggestion
- (laughter).
- MR. WEEDALL: Yeah, yeah, yeah. Control
- 16 yourself, Bob.
- MR. MORGAN: I'm Granger Morgan, I'm
- 18 head of a department at Carnegie Mellon called
- 19 Engineering and Public Policy.
- 20 MR. GELLINGS: I'm Clark Gellings, I'm a
- 21 Fellow with the Electric Power Research Institute.
- 22 MR. MASIELLO: Ralph Masiello, DNV KEMA.

- 1 MR. SLOAN: Tom Sloan, State
- 2 Representative of Kansas.
- 3 MR. BROWN: Merwin Brown with the
- 4 California Institute for Energy and Environment,
- 5 which is in the University of California, a co
- 6 director of electric grid research.
- 7 MS. REDER: Wanda Reder, S&C Electric
- 8 Company and IEEE.
- 9 MR. ROBERTS: Brad Roberts, Electricity
- 10 Storage Association.
- MR. BALL: Billy Ball, Southern Company.
- MR. CURRY: Bob Curry at Emeritus from
- 13 New York, and I'm now with Charles River
- 14 Associates.
- 15 MR. HUDSON: I'm Paul Hudson with
- 16 Stratus Energy Group in Austin.
- 17 MR. MORRISON: Jay Morrison, National
- 18 Rural Electric Cooperative Association.
- 19 MS. KELLY: Sue Kelly with The American
- 20 Public Power Association.
- 21 MR. TILL: David Till, Tennessee Valley
- 22 Authority.

```
2
       Haddington Ventures on the corner of David.
 3
                 MR. BOWEN: Rick Bowen with Alcoa.
 4
                 SPEAKER: I'm Don (inaudible).
 5
                 SPEAKER: Good afternoon, (inaudible).
                 SPEAKER: Elliott Roseman (inaudible)
 б
 7
       International.
 8
                 SPEAKER: (Inaudible) Electricity.
 9
                 MR. OLSEN: Eric Olsen, Office of
10
       Electricity.
11
                 SPEAKER: Good afternoon, (inaudible).
                 MS. COLE: Erin Cole (inaudible).
12
13
                 MR. POPOWSKY: Thanks to Jay Morrison
14
       for hosting us here this afternoon and tomorrow
       and our ECA. And I also wanted to thank a couple
15
       of our members who will be termed out after this
16
17
       and will be living; Dian Grueneich -- you don't
18
       have to leave yet (laughter) -- and Brad Roberts,
19
       thank you for your great service for these many
20
       years on this committee. And also Ralph Cavanaugh
       will also be leaving at the end of this session.
21
```

We are, DoE is in the process of replenishing our

MR. MARCHESA: David Marchesa with

1

- 1 ranks and we hope to have some new members
- 2 appointed by the new Secretary, hopefully in time
- 3 for our next meeting in October.
- I did want to, just preliminarily, get
- 5 started, thank the subcommittees, the working
- 6 groups, your chairs and members for all the work
- 7 you've done to prepare for this meeting. We have
- 8 a lot of really good material to go over today,
- 9 and that's all thanks to the work of the people in
- 10 this room. I also want to thank the members of
- 11 the DoE staff who have really worked with this
- group and worked with the subcommittees, I'd say
- more than ever before, in sort of a two-way
- process where they've been able to answer our
- 15 questions and provide us with input and provide,
- let us know what they think of our recommendations
- 17 and vice versa.
- 18 So I really want to thank to DoE staff,
- 19 and I really look forward to their continued
- 20 participation in our work. We do, obviously, have
- a new Secretary of Energy, and we're hoping, at
- least, that we will get a chance to talk to him

- 1 sometime in one of our meetings in the near
- future. I'm sure he's very interested in our
- 3 work, and I know he's already been talking about
- 4 some of the issues that we're going to be talking
- 5 about today. Also thanks to ICF, Samir Elliott,
- 6 Sherry, and also we would thank Paula Kline for
- 7 all of her work, she's off to graduate school, I
- 8 think. Thanks to all of the work that she did for
- 9 the committee when she was with ICF.
- 10 So, with that, let me turn to David
- 11 Meyer and then to Pat Hoffman.
- MR. MEYER: Well, thank you. I don't
- have a whole lot to add, here. We continue to
- learn how to make this a fruitful relationship,
- 15 how to fine tune it and improve it. And I think
- 16 we've made significant progress in the past year
- 17 or so, and we will continue. We are in the midst
- of a transition of sorts at DoE, we, I'm sure we
- 19 have not yet had all of the meetings with the new
- 20 Secretary that we're going to need in order to get
- 21 a clear understanding of what his priorities are
- 22 and how we can most effectively step up and meet

- 1 some of those priorities.
- 2 But we will keep you posted and hope to
- 3 have some arrangement for you with the Secretary
- 4 for this coming meeting in October.
- 5 MS. HOFFMAN: So I also want to express
- 6 my welcome and thanks, thanks for the members that
- 7 have been here for a very long time and watching
- 8 us grow and evolve as an advisory committee, but I
- 9 also want to welcome the new members and the new
- 10 faces, some of the folks that haven't been to a
- 11 whole lot of meetings, and let you know that this
- is always a lively group, we have very engaging
- discussions. I want to make sure that what we're
- 14 focused on is very important and relevant to where
- the industry is heading and where our programs
- 16 could head to support the industry, as well as any
- 17 dialogue or efforts that the Department can do in
- interacting with other agencies and other
- 19 activities.
- I know you guys are aware that we did do
- 21 a little bit of reorganizing in our office, and we
- 22 created a modeling and analysis group which Alice

- is temporarily leading right now, acting in this
- 2 role. And one of the things that we wanted to do
- 3 was actually strengthen the depth of discussions
- 4 that the Department is having on various topics,
- 5 and be able to pull together a group of experts
- 6 that really could get into the analysis and
- 7 benefits around some of the strategic thoughts and
- 8 directions that we're having. And so that's very
- 9 important to me, I know it is important to the new
- 10 Secretary, Ernest Moniz, came in, the one thing he
- 11 said is he wanted us to be stronger in our
- 12 analysis and how we look at issues.
- So I think that's very important. When
- I had a little bit of time to spend with Dr.
- Moniz, we talked a little bit of some of my
- priorities, and I guess I'll just share with you
- 17 what I shared with him. And then he'll probably,
- 18 I think he'll continue to, as he understands more
- of the issues involved in the discussions and the
- 20 importance of some of the different topics. We
- 21 did talk a little bit about the synchrophaser
- 22 activities that the Department has and the

- 1 importance of that activity in laying a data
- 2 platform, or a platform for real time data across
- 3 the United States, recognizing that's very
- 4 complementary to some of the modeling that happens
- 5 in the utility sector, especially at the
- 6 transmission level, and want to make sure that we
- 7 develop tools that are actionable by operators,
- 8 but also get more into maybe some predictive
- 9 capabilities, modeling capabilities to partnership
- 10 with the university. So we talked about that a
- 11 little bit.
- 12 We did talk about the importance of
- 13 cyber security, so the discussion today on cyber
- security is going to be very important as we
- 15 continue to mature in this area. We talked about
- the issues, we recognized some of the strategic
- 17 directions, and I'll give you some of my thoughts
- during that conversation, and where I see some
- 19 priorities are and some of the directions. Energy
- 20 storage, of course, that was the one thing that he
- got talons on, and his confirmation hearing was
- 22 energy storage, so we are diligently working on

- 1 the time line and the schedule for energy storage.
- 2 And I look forward to continuing to work with the
- 3 subcommittee on energy storage, making sure that
- 4 we include the relevant topics in the outline for
- 5 Senator Wyden on energy storage, but have very
- 6 productive and constructive discussions thus far
- 7 on it, so we can talk about that a little bit
- 8 later on.
- 9 Some of the other things that I talked
- 10 to him about was, he actually brought up the
- 11 natural gas and electricity interdependency issue
- 12 that was very much, I know, on Burke's radar, as
- 13 well as on Congress's radar, and I know there were
- 14 several hearings on the topic. I did go to the
- 15 MIT Natural Gas Electricity Interdependency
- 16 meeting, and I know that Allison and some of her
- team went to several other meetings on the issue,
- 18 so we're continuing to look at that and try to be
- 19 more corporate in how we think about that topic
- and where we need to go. Some of the other things
- 21 that we talked about that I think are still
- 22 evolving concepts, at least in my mind, and

- 1 probably could use your help.
- We talked a little bit of, is there any
- 3 need to continue to push integration AC/DC, I
- 4 think IEEE did a magazine article on AC/DC, both
- 5 at the transmission and at the distribution
- 6 levels, and one of the things that piqued his
- 7 interest is DC integrating with buildings, also
- 8 the use of transactive loads and how do we
- 9 continue to evolve the electric system with
- 10 investment in that area. So that was another
- thing that we discussed. And I'm sure there's
- other things, I can't remember them all, but I
- think those were at least the initial topics
- 14 across the table.
- And then, as he is able to come to this
- 16 meeting as we talk further on some of these
- issues, I'll continue to give you guys an update
- on what the Department is thinking, where we're
- 19 heading, what are some of the major issues. But I
- think we're still, based on the guidance in the
- 21 past EAC meetings, I think the discussions and the
- 22 directions and the things that we're talking about

- 1 are very relevant to where the industry is
- 2 heading. I know that we're still at the
- 3 Department supporting some of the Hurricane Sandy
- 4 recovery effort and been asked to continue to look
- 5 is there an opportunity for utilities to continue
- 6 to think about microgrids from a utility
- 7 perspective and how they operate the system. And
- 8 so we'll work with some of the utilities and
- 9 different folks in looking at that, looking at
- 10 that opportunity as a result of Hurricane Sandy.
- 11 So that's what I have, at least as my
- initial update, and I look forward to the
- discussion, and as I remember more things during
- 14 the meeting, I'll probably interject them at that
- 15 time. Thank you.
- MR. POPOWSKY: Thanks, Pat. And a
- 17 couple more folks have joined us. Introduce
- 18 yourself, Commissioner.
- 19 MS. LA FLEUR: Yes. I'm Cheryl La Fleur
- from FERC, sorry to be a couple minutes late, but
- 21 I'm here for the rest of the day.
- MR. POPOWSKY: And Chris?

```
1 MR. PETERS: I'm Chris Peters from
```

- 2 Entergy.
- 3 MR. POPOWSKY: Okay. Anybody have any
- 4 questions or suggestions for Pat and the folks at
- 5 DoE? Dian?
- 6 MS. GRUENEICH: We know that Secretary
- 7 Chu was very committed to energy efficiency, and I
- 8 know we are going to talk about Race to the Top.
- 9 Secretary Moniz mentioned energy efficiency, but
- 10 did the topic come up, do you have a sense whether
- 11 there will be any diminishment or continuation or
- any thought, specifically in the world of energy
- 13 efficiency?
- MS. HOFFMAN: Actually, I think
- 15 continuation there, if I remember correctly, his
- 16 first event that he did was an energy efficiency
- event, and expressed his commitment to VEDA, an
- 18 opportunity that we shouldn't waste in looking at
- 19 continuing to drive energy efficiency activities.
- 20 So I don't see a change in that topic at all, from
- 21 my perspective or my opinion.
- 22 MR. POPOWSKY: Okay. Anybody have any

- other questions or -- Granger? And, by the way,
- if you just put your card up, I'll be able to
- 3 recognize you. Thanks.
- 4 MR. MORGAN: So maybe just a comment for
- 5 the interest of some of you. Clark and I were
- 6 both just last week at a meeting at the National
- 7 Academy that brought up 20-some odd very senior
- 8 folks from China in the electric power area, some
- 9 of the stuff they're doing is utterly amazing.
- 10 And the web, the talks will all be on the Academy
- of Engineering's website shortly, I believe. And
- so they're worth a look. I mean, just to give you
- two illustrations, we talk about experimental
- studies in microgrids, they have 20 of them going
- on across the country. We talk about moving to
- 16 higher holdages in DC, they're building many
- 17 thousands of kilometers of very high voltage DC
- 18 lines, it's quite --
- MR. POPOWSKY: Projects?
- MR. MORGAN: Say again?
- 21 MR. POPOWSKY: 20 projects?
- 22 MR. MORGAN: Yeah. So it's just

- 1 incredible.
- 2 MR. POPOWSKY: Okay.
- 3 MS. HOFFMAN: I was just going to say
- 4 we're going to make sure that everybody gets the
- 5 link for the National Academy so they can look at
- 6 that.
- 7 MR. POPOWSKY: Okay. Paul?
- 8 MR. CENTOLELLA: This may be too early
- 9 to tell, Pat, but Secretary Chu came in with an
- 10 idea about how the Department should structure its
- 11 research agenda with new kinds of organizational
- 12 approaches to doing that. Do you have a sense of
- 13 whether the new Secretary is similarly inclined,
- 14 wants to take that further, any idea coming from
- 15 his background about how he sees energy R&D as
- something that the Department can efficiently
- 17 organize and pursue?
- MS. HOFFMAN: So I think he has a
- 19 similar approach, but it's probably going to take
- 20 a little bit of difference with what's on it, and
- 21 I'm going to say it this way, in looking at the
- 22 effectiveness of those groups and say how to get

```
1 the best things done with the right set of
```

- 2 partnerships. I'm not sure that there's a one
- 3 size fits all, and as the Department continues to
- 4 evolve, we try different partnership models and
- 5 ways of doing business. But, ultimately, at the
- 6 end of the day, we have to take a hard look in
- 7 saying are we achieving the goals that we hoped to
- 8 achieve through this partnership.
- 9 I perceive him to take a hard look at
- 10 what we're trying to achieve and the ones that are
- 11 very effective in the partnerships that are doing
- to move things forward, I think they're going to
- 13 be fantastic, and he may tweak some of the other
- ones that aren't getting us to that results
- direction that we're going after. I mean, he's
- 16 very much on the point of how do we demonstrate
- some successes in the activities that we're
- 18 working on.
- MR. POPOWSKY: Okay. We have a caller
- 20 from -- (laughter) -- Merwin?
- MR. BROWN: Yes. Pat, as I understand
- 22 it, your conversation with Ernie was focused more

- on your explaining to him what your priorities
- 2 have been and probably will be. Did he give you
- 3 any indication of what his top three priorities
- 4 are, issues for the grid research? You mentioned
- 5 an analysis capability is one of them.
- 6 MS. HOFFMAN: I can't say that he gave
- 7 me, you know, these are absolutely my three top
- 8 priorities. I mean, the thing that he recognizes
- 9 is investment in the grid is paramount. I mean,
- 10 he said that several times that he recognized the
- importance of investing in our infrastructure as a
- support network for the economy, but we need to
- 13 continue to evolve and grow our infrastructure.
- 14 He recognizes the complexity. So the other thing
- that he brought up is he understands this is a
- 16 very, very complex, difficult issue, area, and
- 17 really no silver bullet, you can't find a silver
- 18 bullet, you're going to have to work through some
- 19 very tough issues, and that there are regional
- 20 differences across the United States, different
- 21 market structures, different things that we have
- 22 to keep, pay attention to.

```
So he recognizes the complexity. So,
 2
       from my perspective, I got the sense he really
 3
       feels the electricity area is an important area,
       and he wants to continue to support the research
 5
       and the discussions in this area, but recognizing
       that it's complex and there's no silver bullet.
                 MR. CURRY: When you mentioned the
 7
       various things that you were focused on, one of
 8
       them was working with utilities on -- did I get it
 9
       right -- distributive generation? And how does
10
11
       that, would these be utilities like our favorite
12
       in New York, the Long Island Power Authority,
13
       which is a public authority. Otherwise, how do
14
       you get access to utilities under the current
15
       framework of the Sandy legislation?
                 MS. HOFFMAN: So, some of the activities
16
       that are done are allowed under the CDBG fund, and
17
       some of them are allowed under existing FEMA
18
19
       funds, but those are limited in scope. So the
20
       other areas that we can do is just provide
       technical assistance with the labs to help analyze
21
22
       what one would look at if, you know, in
```

- 1 partnership with the utilities on microgrids and
- 2 how they would look at the opportunities there.
- 3 Granted, that utility structure is different, so
- 4 it's more from our perspective that we're looking
- for a couple, to work with a couple communities on
- 6 some pilots that would help with the analysis.
- 7 We wouldn't do the infrastructure
- 8 investment or anything along those lines, because
- 9 that would go through the traditional mechanism,
- 10 but what we're hoping to do is help people ask the
- 11 right questions and analyze the issues and say, if
- 12 you go down this path, here are some things that
- 13 you need to think about. And what we're looking
- 14 at is taking some of the lessons learned what we
- 15 did with the OG in looking at how do you optimize.
- I mean, I'd like to say it's more of an
- optimization discussion, but also resiliency
- 18 discussion.
- 19 Internal to the Department, we had, I'd
- 20 say, a fairly long discussion on what does it mean
- 21 to be resilient, and I think everybody has a
- 22 different definition for resiliency and their

```
1 expectations, and so one of the things that we
```

- 2 wanted to do was help facilitate that discussion
- 3 on what does resiliency mean, how does that
- 4 translate to infrastructure, and thus how does
- 5 that translate to customer expectations,
- 6 restoration expectations. So those are the type
- 7 of things that we're trying to just aid and
- 8 facilitate the discussions on, we're not looking
- 9 at the hardware investment, because there's
- 10 traditional mechanisms and limitations.
- 11 Limitations under the Stafford Act, I
- think the states are probably going to consider
- what they can do from the codes and standards
- 14 point of view, and if you can change some of the
- 15 codes and standards, then you can affect the
- 16 infrastructure investment from a hardening point
- 17 of view. I mean, I look at what Florida has done
- and the southeast has done, and how they've,
- 19 slowly, over the years, changed some of their
- 20 codes and standards and some of their practices.
- I mean, it took some time, but they evolved to
- 22 harden their system. And, once again, this is not

- going to be an overnight transformation, but I
- 2 think there's ways that we can start thinking
- 3 about what some of those best practices were,
- 4 especially what was done in the southeast and say
- 5 what can the northeast pick up from that.
- 6 MR. CURRY: Just an observation of, Con
- 7 Ed has a rate case pending in New York state now,
- 8 asking for roughly a billion dollars over the next
- 9 four years for storm hardening. And the city of
- 10 New York filed 400 pages of comments on Friday
- 11 taking issue with almost every single point that
- 12 Con Ed put in their rate case, so if anyone on
- 13 your staff is interested in an entertaining trip
- through, this is what we really mean, it's
- 15 available. And I can also connect them with the
- 16 city people who put the 400 pages in, and they
- were very proud of those 400 pages.
- 18 MR. BROWN: Thank you. Since we've
- 19 gotten to this topic about resiliency, it's been,
- 20 obviously, a hot topic with regard to storms that
- 21 blow a lot and rain a lot. But I would hope that,
- in that conversation, unstated, his concerns about

```
1 wildfires and earthquakes and things like that,
```

- which is a bigger problem in the west.
- MS. HOFFMAN: I don't disagree with
- 4 that, and by all means, we're looking at all
- 5 hazards. But I think it goes back to the regional
- 6 risk equation of what are the risks most likely
- 7 for different regions of the country, how they
- 8 want to define their resiliency, what do they want
- 9 to build towards, how do we start a procedure for
- or a process for engaging in that conversation so
- 11 that we're not kind of thinking about it after the
- event occurs, but trying to get really more
- 13 proactive in looking at resiliency for the United
- 14 States.
- But I still go back to, I'm not sure
- 16 everybody's on the same page, what resiliency
- 17 means and what do they want to build towards, and
- 18 a matrix or a definition for resiliency.
- 19 MR. POPOWSKY: Okay, great. Thanks,
- 20 Pat, I assume you'll be here for the next two
- 21 days?
- MS. HOFFMAN: I'll be here.

- 1 MR. POPOWSKY: If anything else comes up
- that you want to hear from Pat on, I'm sure she'll
- 3 be glad to chip in. I just want to say,
- 4 Commissioner La Fleur, it's up to you, if you
- 5 would like to go next, we could shift the program,
- 6 or -- depends on what your schedule is.
- 7 MS. LA FLEUR: Well, I'm here for the
- 8 afternoon, so I'll do whatever you want. I'll go
- 9 next, or you can go next, or --
- MS. HOFFMAN: Go ahead.
- 11 MS. LA FLEUR: Okay, all right. Well,
- thank you very much for having me, Sonny, and
- 13 Elliott had asked me to do an update on some of
- the goings on at FERC where it's been very, very
- 15 quiet and not newsworthy for the last couple of
- 16 weeks. First, I want to introduce somebody I have
- 17 with me who is a summer intern who started in my
- office at FERC just this week, I'll ask him to
- 19 stand, Daniel Jang.
- 20 Daniel is a sophomore at Princeton and
- 21 comes to us underwritten by the Princeton --
- 22 whatever it is -- Princeton in Civic Service

- 1 Intern Program, and he's in Operations Research
- and has done work, among other things, with the
- 3 Princeton Co-Gen and their own microgrid. Not as
- 4 many as China, but they do have one that stayed up
- 5 during Sandy. And so we're really, I didn't plan
- to hire a freshman when we went out to interview,
- 7 but he was the smartest kid we saw, so he'll
- 8 probably be running FERC by the summer.
- 9 (Laughter)
- 10 Okay. What I thought I'd do today is, I
- 11 was asked to talk about Order 1000 compliance,
- which is actually the first time I've tried to
- 13 weave together what we've put out so far into a
- 14 summary, so we'll see how I do. Talk a little bit
- about cyber security, which I know we have later
- on in the agenda, and just some other newsworthy
- things that we've either recently voted out or
- 18 have coming up that you might want to have on your
- 19 radar screens. I always say this, but it seems
- 20 particularly important right now, with all the
- 21 dissent and all flying around on some of our
- orders, I only speak for myself, not for the

- 1 Commission, and I will try very hard not to
- 2 comment on pending open dockets, to be a historian
- of what we voted out, not a predictor of all the
- 4 rehearings, appeals, and compliance dockets and so
- 5 forth, on into the future.
- 6 So, so far, we have voted out, I should
- 7 know, maybe six compliance orders under Order
- 8 1000, we have at least four big ones still ahead
- 9 of us. And we've tried, as I think you can
- 10 probably see, each month to do ones from different
- 11 regions of the country to kind of equalize the
- 12 staff work, and we've tried to be taking on both
- the regional transition organizations and ISOs and
- 14 the bilateral market regions of the country so we
- 15 can be voting those out in tandem. Just sort of
- try to summarize a few of the trends that we're
- seeing so far, dividing it into the big elements
- of the Order in the first place, starting with
- 19 transmission planning, Order 1000 at basis
- 20 required that each public utility transmission
- 21 planner had to participate in a regional
- 22 transmission planning process that satisfied the

- 1 principles of Order 8-9 in the transparency,
- fairness, and so forth, and produced a regional
- 3 transmission plan.
- 4 And so every single order starts with a
- 5 sometimes perhaps laborious review of the
- 6 transmission planning process submitted. And, for
- 7 the most part, the orders have largely confirmed
- 8 the regional processes already in place in the
- 9 organized market areas of the country. In many
- 10 cases, we've pushed back asking for more detail on
- 11 certain elements of the process and how they were
- going to select the projects that were best for
- 13 the region for regional cost allocation. In the
- 14 bilateral regions of the country, we've pushed
- back somewhat more on asking the regional
- 16 planners, which we recognize are sometimes just a
- few jurisdictional utilities with a lot of non
- 18 jurisdictional in between them, to come back with
- 19 how they, as a planning body, are going to select
- their projects rather than, I call them the staple
- 21 plan, just kind of putting to the everything
- 22 everyone was doing already and calling it a

- 1 regional plan.
- And so, really, in all cases, we've had
- 3 compliance requirements imposed that they have 120
- 4 days to meet. The biggest thing changing in
- 5 planning was the public policy requirement, Order
- 6 1000 required that both local and regional
- 7 transition planning processes, in addition to
- 8 looking at reliability projects and economic
- 9 projects, had to consider transmission needs
- 10 driven by public policy requirements that are
- 11 established by federal and state laws and
- 12 regulations and have procedures to identify the
- transmission needs driven by public policy
- 14 requirements and evaluate proposed solutions. And
- this is where most of the action has been,
- 16 particularly in the RTO regions on planning, since
- they already had planning processes.
- Most of the compliance requirements that
- 19 are still out there have been tied to the issue of
- 20 the role of the states in determining what are the
- 21 -- I think Order 1000 clearly suggested that the
- 22 states would come forth with a compendium of what

```
1 the public policy requirements are, because
```

- 2 they're in large measure drawn from state law and
- 3 regulation. But we have said thus far most of the
- 4 compliance orders that is the planning region, the
- 5 ISO, or the planning body that had the
- 6 responsibility to come up with a proposal to
- 7 select the projects that meet those public policy
- 8 requirements, rather than delegating the selection
- 9 to the states.
- 10 There's been some nuances, PJM had a
- 11 proposal, has a proposal for a state compact where
- 12 states could get together and voluntarily sign up.
- 13 ISO New England had one that was somewhat quite
- 14 similar. In the PJM case, we said you already
- 15 have public policy requirements based into your
- 16 planning some other place, so that meets Order
- 17 1000, so the state compact can go forward as a
- 18 complimentary element, even though it, because it
- 19 didn't meet Order 1000 all by itself, but because
- 20 you have this other thing, and I think we said
- 21 something somewhat similar in ISO New England that
- 22 we were not in any way prohibiting the state

- 1 proposal, but that there had to also be a
- 2 complimentary effort at the regional level. And
- 3 so those are still pending.
- Big action as anticipated, and most of
- 5 the dissents, and public commentary on this have
- 6 come along around the element of Order 1000 on the
- 7 rights of first refusal. Basically, Order 1000
- 8 requires that public utility transmission
- 9 providers had to remove from commission
- jurisdictional tariffs and agreements, a federal
- 11 right of first refusal and exclusive right to
- 12 build transmission facilities in a particular
- incumbent's footprint for projects that were going
- to have regional cost allocation, subject to
- 15 certain limitations that incumbents could still
- build what they needed to for reliability and pay
- for it themselves, that we wouldn't affect state
- laws that gave people exclusive rights, wouldn't
- 19 affect rights of way and property rights, and
- there's a back shop that something is being done
- 21 regionally and it's not coming on in time to meet
- 22 a local need, and I forget if there's a fourth

- 1 requirement, I just lost it, but there are some
- 2 exceptions already in the rule.
- 3 This is what most of the thorny
- 4 compliance issues have come around. The first
- 5 threshold issue we deferred until compliance some
- 6 legal questions about what were the standards of
- 7 review that would govern the Commission's look at
- 8 the rights of first refusal proposals, and there
- 9 was a suggestion that the Transmission Owners
- 10 Agreements in ISO New England, PJM, MISO and SPP.
- 11 And SPP is still pending, but the other three I
- can discuss were voted out. The question of
- 13 whether the Transmission Owners Agreements were
- 14 themselves contracts entitled to Mobile-Sierra
- protection, so they could only be amended if it
- 16 was a violation of the public interest. And we
- 17 decided in the first round of cases in PJM and
- MISO, I think were the first two we voted out,
- 19 that they did not get an automatic public interest
- 20 protection because they weren't developed in the
- 21 kind of arm's length commercial; I'm selling power
- 22 to you, what are you going to pay for it, what are

- 1 the terms, because they were developed by people
- with common interest with respect to the right of
- 3 first refusal.
- 4 So having reached that conclusion, in
- 5 the New England case, there was a follow-on legal
- 6 issue that there is a 2004 FERC order approving
- 7 the New England Transmission Owners Agreement that
- 8 specifically approved some terms that gave public
- 9 interest protection to certain components of the
- 10 Transmission Owners Agreement. And we recognized
- in the order that that meant that those elements
- 12 of the Transmission Owners Agreement could only be
- 13 changed if there was an actual public interest
- 14 need rather than just because they were no longer
- 15 deemed to be just and reasonable. And we spent a
- 16 considerable amount of -- I spent, actually, a
- 17 considerable amount of time reading all the
- 18 Mobile-Sierra cases back to Order 888 and Order
- 19 636, a little walk down memory lane.
- 20 Actually, considerably off memory lane,
- 21 since I didn't remember most of it, of what did it
- 22 mean to have a public interest standard and how

- would we parse that, and trying to really figure
  out was there a space where something could be not
- just unreasonable, but we could say to the people
- 4 in new England or someone else, don't worry, you
- 5 can pay non just and reasonable rates because it's
- 6 not against the public interest, and what is that
- 7 space in this area. And I think what ended up
- 8 coming out was the recognition that the taking
- 9 away the rights of, we ultimately ruled that there
- 10 was a public interest requirement to remove the
- 11 rights of first refusal, because the introduction
- 12 of transmission competition was important to make
- sure that the rates were fair and the right things
- 14 were built.
- 15 And that ended up, I think, being an
- 16 acknowledgment of the significance of what we were
- 17 doing. I mean, I've actually been making speeches
- 18 for a couple of years comparing this to generation
- 19 competition, but I think there's been a -- a lot
- of it was writ out more clearly in some of the
- orders we just put out than had been before.
- 22 Probably all I can say about that. There were

- 1 also some issues about -- some considerable issues
- 2 about what kind of reference could be made to
- 3 state's statutes and federal tariffs, and so far,
- I guess summarize the orders we've put out to say,
- 5 the state's statutes are what they are, as far as
- 6 -- I've never indicated that they were preempted
- 7 in any way, or that's never been said in the
- 8 order, but they can't be codified in the federal
- 9 tariff, because they would give them a new federal
- 10 right of first refusal, and we can talk about that
- offline, but that's another, that's a very
- 12 detailed part of the order.
- 13 Finally, the last part, cost allocation,
- 14 we asked all the transmission planning regions to
- 15 come forward with a cost allocation proposal that
- had to satisfy a bunch of principles, of which the
- 17 most important was that cost had to follow
- 18 benefit. We said we would accord regional
- 19 flexibility, and I think we have, particularly in
- this area, given, shown quite a bit of regional
- 21 flexibility. PJM, I think, was of the RTO's made
- the most change, or one of the ones that made the

- 1 most change in their cost allocation proposal,
- 2 came forward with a hybrid approach for projects
- 3 over 500 KV, we approved that. MISO made some
- 4 changes in the definition between local and
- 5 regional, and what they would cost allocate, that
- 6 was approved. There's some others still pending
- 7 and some that have been pushed back for more
- 8 detail on certain things, and, as I said, we have
- 9 four more of these coming.
- In terms of next steps, we voted out 120
- 11 -- in all cases, the next step is coming up in 120
- days, so that's imminent, that is 120 days, and
- 13 Clair probably knows from the first ones. Right
- around the corner in July, the interregional
- 15 compliance filings are due, some are already in, I
- haven't really looked at them well enough to make
- a speech about what they say, but we will be
- digging into those, obviously. And, not to be
- 19 forgotten, I guess it's not surprising, given
- 20 what's afoot, here, that there have been
- 21 considerable legal challenges already to Order
- 22 1000, and I am sure there will be more, as the

- 1 compliance issues get worked through.
- 2 So those have been assigned to the
- 3 circuit court in the District of Columbia. There
- 4 was some question of which circuit it was going to
- 5 go to. And the court has worked out, I don't have
- 6 it at the top of my head, but a very detailed
- 7 briefing schedule on issue by issue that I think
- 8 will go into the summer and fall, so we'll be
- 9 working through the legal side while we're
- 10 simultaneously working through compliance side.
- Do you want me to keep going? That's
- 12 all I was going to say on Order 1000. I think --
- all right. So that's it on Order 1000, I'm sure
- 14 I've answered all your questions, all is clear
- 15 (laughter). Just turning to cyber security, a
- 16 little bit more. While the Hill continues to
- 17 debate various legislative proposals, at least
- within the electric system of the electric grid,
- 19 FERC does have the responsibility on the Section
- 20 215 reliability standards require that we approve
- 21 standards to prevent cyber security incidents, and
- I have said it's kind of like the iPhone, with

- iPhonel and iPhone2, and you go buy a new one,
- they tell you a new one's coming, don't buy that
- 3 one.
- Well, we're on iPhone 5. Five was
- 5 approved in May, and -- I've said this is just
- 6 like, my daughter broke her phone, and they said
- 7 don't buy a new one because six is coming, like,
- 8 in two weeks, just cobble together the old one.
- 9 The industry came and said we don't even want to
- 10 bother with SIP 4, let's just go right from SIP 3
- to SIP 5, because it costs so much money every
- 12 time you do something new. And we approved that,
- we largely approved SIP 5, asked some questions
- 14 about the implementation schedule and a few other
- 15 things.
- Basically, in a nutshell, SIP 1 through
- 17 4 were about designating what was a critical cyber
- 18 asset, who designates what the critical cyber
- 19 asset, how critical. Now SIP 5 is a different
- 20 approach, it says everything gets some level of
- 21 cyber protection, but just the most important
- things get the most and the things that impose the

- least vulnerability in the system gets the least,
- which was one of the things we asked is what they
- 3 do get, a nerve to come back on. So it still will
- 4 not get us out of the characterization, but it
- 5 reduces the all-or-nothing characterization.
- 6 In the meantime, President Obama, as you
- 7 all know, put out an Executive Order, I believe it
- 8 was in February, on cyber security, calling for
- 9 more information sharing, as well as the
- 10 development of a voluntary cyber framework. FERC,
- 11 because it's an independent agency, isn't actually
- 12 covered, whatever that means, but we've announced
- 13 that we're voluntarily doing it. I think I've
- 14 talked about it in this room before, that FERC has
- set up an Office of Energy Information Security,
- and Joe McCohen's group has been meeting with
- folks in past groups, the states, NARUC,
- 18 Department of Homeland Security, and really anyone
- 19 that wants to meet with us to try to do things
- 20 together, and I think that process is subject to
- 21 anyone else's thinking of developing that
- voluntary framework is making progress.

```
1
                 Other reliability orders, in May, we --
       I've been, I talked about geomagnetic disturbances
 2
 3
       at this table before. In May, we voted out a
 4
       final rule on geomagnetic disturbances, I'm sure
 5
       people might disagree, but I think we were
       somewhat quite responsive to some of the comments
 6
 7
       we got, not just in changing the timeline, but
       also in getting more flexibility in compliance.
 8
 9
       It basically requires the development of a
10
       standard on procedural response, what you would do
11
       if there were a massive solar storm in terms of
12
       operating procedures, kind of like a storm plan
13
       that you have for hurricanes or tornadoes. Six
14
       months for that standard, 18 months for a bigger
15
       standard.
16
                 That would include an assessment of
       vulnerability and a plan which would vary by
17
       equipment, location, geography and so forth, or
18
19
       how to mitigate those vulnerabilities. This is
20
       something where, as a standard gets developed,
       we're also learning more about what we're
21
22
       protecting against, but it's going to be such a
```

- long-term, multi-phase effort, I've been a big
- 2 advocate of we should get started, and I think
- 3 this is an important step.
- 4 A couple others, just wrapping up, July
- 5 9th, we're having a technical conference on
- 6 reliability, because who wouldn't want to come to
- 7 Washington in mid July for a reliability
- 8 conference? We previously, I think, have done
- 9 this in, like, the early part of the year, and
- Jerry Cully and the folks at NARUC asked if we
- 11 could do it after their annual reliability report
- 12 came out, which seemed to make, actually, quite a
- lot of sense, so we're doing it after the report
- 14 came out in May.
- And, so, we'll look at the annual state
- of reliability, probably -- the agenda is not out
- 17 yet, but certainly priority, what NARUC is working
- 18 on, and I think we'll ask NARUC to talk about some
- of their major efforts on the reliability
- 20 assurance initiative, which is their compliance
- 21 restructuring, and the standards, and maybe some
- other things. Gas Electric, we had the last tech

- 1 conference in April, we are working on next steps
- on the communications, Gas Electric
- 3 communications, whether we need to clarify
- 4 anything there. So watch this space for something
- on communications, following up on the tech
- 6 conference in February. In the meantime, I see
- 7 Gordon and Clair and others are working within the
- 8 regions on proposals for this winter and beyond,
- 9 and we're closely following those efforts, but I
- 10 think communication is, in terms of something to
- 11 expect from us, the next thing we'll think about.
- 12 And, finally, some of you might know,
- 13 I've been clamoring -- well, maybe clamoring is a
- 14 strong -- gently agitating for a technical
- 15 conference on capacity markets, and it looks like
- we're getting some traction, so we hope to have
- one in the fall at some point, to be announced.
- 18 Really looking, and I guess my reason for calling
- 19 for this is, since I've been on the Commission,
- we've probably done 30 or 40 cases on capacity
- 21 markets, and many of them are extremely specific.
- New York City taxes and cone, fuel cells and PJMs,

- 1 zones. Very, very narrow. And the things, the
- 2 big picture of, like, how far out in time should
- 3 you look, what should be covered, how should
- 4 exemptions work, we can never talk about because
- 5 it's always ex parte because we always have cases
- 6 pending.
- 7 So the idea was to kind of take a step
- 8 back and take a look at some of the big
- 9 philosophical issues, are they working, how
- 10 they're supposed to work, which things different
- 11 people do it differently, how is it working, what
- might change in the future with things like gas,
- 13 electric coming down the pike, and the state
- renewable requirements and how they fit in,
- different places with demand curve and not with
- demand curve, and so forth. So it's a tall order
- 17 to even put together an agenda, but there's plenty
- 18 to talk about, and I think the concept is, at a
- minimum, maybe we'd learn something that would
- 20 inform us as we went back to looking at the narrow
- 21 cases, or inform the stakeholder processes, dare
- we hope people learn from each other, it's a dream

- 1 that we can all share.
- 2 Or -- and I'm being sarcastic -- I know
- 3 people do learn from each other, but these are all
- 4 so well developed in different structures, it's
- 5 hard sometimes to even talk about them together.
- 6 Or perhaps there will be something affirmatively
- 7 that comes out in Commission policy, but that's by
- 8 no means preordained. It just seems there's
- 9 plenty of talk about, so that will be something
- 10 to, we'll be looking for, I'm sure, broad
- 11 participation from folks who run capacity markets,
- 12 are thinking of it, don't run it and you do just
- 13 fine, et cetera.
- 14 So that was what I wanted to say, Sonny,
- or maybe not what I wanted to say, what you wanted
- me to say, hopefully, and I'll be happy to take
- 17 questions.
- MR. POPOWSKY: Okay, thanks. Before I
- 19 ask questions, let me make sure that we all thank
- 20 Commissioner La Fleur, who is our official
- 21 liaison, FERC liaison to this committee --
- 22 MS. LA FLEUR: I actually added it to my

- 1 bio, so that's about as official as you get
- 2 (laughter).
- 3 MR. POPOWSKY: And has really done
- 4 (applause), we really owe her a great -- thank you
- 5 for taking the time at each of these meetings, and
- 6 reporting to us, hearing from us. So thank you
- 7 very much, Commissioner La Fleur.
- 8 MS. LA FLEUR: Printing from what you're
- 9 all doing on storage and transmission, and some of
- 10 the things you work on.
- MR. POPOWSKY: Great, thanks. I'm
- 12 sorry, Pat, did you want to go first before we --
- MS. HOFFMAN: I can take my turn, like
- 14 everybody else. Just a couple comments. One
- thing I forgot to bring up that, Commissioner, you
- should keep in mind is, I know that Dr. Moniz is
- doing a quadrennial energy review, and that
- 18 something that even the states should think about,
- 19 because I know the states are doing their energy
- 20 plans, and how we can see if we can pull some of
- 21 those threads together in looking at the energy
- 22 strategy, the infrastructure requirements. So

- 1 just something to keep in mind.
- 2 I know it's a little bit one-off from
- 3 some of the things you're working with, but I
- 4 think it's something that we could, hopefully, if
- done right, could probably bring some parallel
- 6 pieces together. The second thing is, I know I
- 7 was in a meeting with some of the industry folks,
- 8 Chairman Molenhof and Joe, and I know that Joe
- 9 McClellan's doing his own kind of maturity model
- 10 Q&A questionnaire for utilities, and there was a
- 11 strong ask that the federal government get
- 12 together and -- how should I say -- gain some
- 13 consensus from different assessment pools that are
- 14 out there, because we have our maturity model and
- Joe's developing a questionnaire type format, and
- 16 there was a request to make sure that we try to
- 17 pull that stuff together. So I just wanted to put
- 18 that on your radar.
- 19 MS. LA FLEUR: Well, first of all, on
- the quadrennial energy review, whether we have any
- 21 direct role, which we'd probably welcome, but it's
- definitely, what comes out of that then indirectly

- informs things that people then subsequently file
- with us, so I'm very happy it's happening. I've
- 3 heard somewhat similar things on the different
- 4 tracks in government, so maybe we can take it
- offline. It certainly makes sense to work
- 6 together.
- 7 MR. MILLER: Thank you. Again, Rick
- 8 Miller with HDR Engineering. I offer this comment
- 9 and question with a little bit of trepidation, my
- 10 first time here at EAC. My background is over 35
- 11 years in grid operations, energy storage, and I'm
- 12 past president of national hydropower association.
- We, as an association in the hydropower industry
- have done a bit of work with FERC, with Arnie
- Quinn, Mason Emmitt, and the team on markets and
- 16 recognizing strategic flexibility.
- 17 What, from a Commissioner's perspective,
- 18 what guidance or insights could you provide to us
- or to the industry with regards to how do we help
- 20 create linkage of the Office of Electricity and
- 21 DoE and FERC to help present the most, what's
- 22 happening out there in the grid and create that

- 1 linkage? Maybe some consensus from that, back
- 2 again to the federal government to more of a
- 3 stronger voice. Some insights from you,
- 4 Commissioner, would be helpful.
- 5 MS. LA FLEUR: Well, thank you, Rick.
- 6 I'm not sure I have a lot of insights about how
- 7 you help us work better together, but it seems
- 8 like groups like this, other things that we do
- 9 with Pat's office and Bill Brian, and people like
- that are important to understand what we're each
- doing. In terms of hydro, I had made a comment
- 12 when I spoke at the National Hydro Association, I
- think, in 2012, that I think it's important that
- 14 we hear from the hydro industry. Most of the
- 15 hydro work that we see at the Commissioner level
- is very micro, appeal from some license suspension
- or, you know, it doesn't get that policy-ish.
- 18 I mean, it's policy of how you move the
- 19 hydro licensing around and what gets an exemption
- and all, but in terms of increasing the profile of
- 21 hydro in shaping the markets, that's not going to
- 22 happen in the individual hydro dockets. And I

- 1 think I've made the comment that hydro can be a
- 2 little bit of a taken for granted resource,
- 3 because with some unique exceptions up in Alaska
- 4 and so forth, we're not seeing a lot of big hydro
- 5 development anymore, it's more small hydro
- 6 development and increasing output along the edges.
- 7 But I think the hydro folks need to get in the
- 8 conversation on what they can help do in the
- 9 places where you can still run your hydro this
- 10 way, to help balance other renewables, and as kind
- of a storage resource.
- 12 Storage is very sexy, hydro is not sexy,
- 13 but hydro is storage, in a way. So I think it's
- 14 communicating what you can do in the same way that
- the flywheel people and the battery people, I
- think, have been effective in getting their voices
- 17 heard on frequency regulation, teaching us what we
- 18 didn't know. Hydro, I think, maybe could have a
- 19 bigger role there.
- MR. MILLER: Follow up. Is that most
- 21 effective through dealing with FERC and Office of
- 22 Markets, or the Commission staff or through the

- 1 Office of Electricity? Give us some insights
- 2 there.
- 3 MS. LA FLEUR: In the Office of
- 4 Electricity at DoE?
- 5 MR. MILLER: Yes.
- 6 MS. LA FLEUR: Well, I can't -- I mean,
- 7 that sounds to me to be a good thing to deal with
- 8 them, also. In terms of FERC, I think, I usually
- 9 tell people to really know the staff that
- 10 regulates you, so, in your case, it's probably
- 11 most likely Projects. On some of these more
- forward-looking things, the Office of Energy
- 13 Policy Innovation, and if it's, when you have the
- 14 time and opportunity to go to the five
- 15 Commissioner's offices -- I know that the Stations
- of the Cross can be slow, but it's good for us to
- 17 hear it. But never skip staff, always go to staff
- and the five Commissioner's offices.
- 19 MS. GRUENEICH: One question and then
- one comment on the upcoming fall conference. Is
- 21 there any place where FERC hosts like an annual
- 22 meeting of all of the ISOs and the RTOs? At the

```
1 last NARUC Sunday collaborative, there was an
```

- 2 informal presentation by each of the ISOs and RTOs
- 3 that I felt was tremendously useful just because,
- 4 in one room, you heard different aspects. And, to
- 5 me, it was so interesting to understand the
- 6 governance of each of them is quite different. So
- 7 that was my question. Is there any hosting like
- 8 that done by FERC?
- 9 MS. LA FLEUR: To the best of any
- 10 knowledge, it's not something we've done, like, on
- 11 a regular basis. And perhaps we should. And I
- 12 was at that NARUC meeting and would agree, it was
- 13 excellent. In, I think, early 2012, but maybe it
- was early 2011, because my years are running
- together, we had all of the RTO/ISO presidents
- 16 come in and talk about the matrix report at a
- 17 regular open meeting, which was actually one of
- our best open meetings, I think. Maybe that's
- damning with faint praise, some of them are very
- short, but that was really meaty, and I thought,
- 21 very good.
- Now, recently, we've established much

- 1 more targeted having all of the RTOs come in and
- 2 talk twice a year about what they're doing on
- 3 gas/electric, and we did that most recently just
- 4 in May in a special session. But it wasn't all
- 5 the CEOs necessarily, as the first one was. It's
- 6 something to think about. I don't want to make a
- 7 trend where a trend doesn't exist, but the last
- 8 couple of open meetings, we've tried to put
- 9 things, the chairman had tried to put things on
- 10 the docket like the gas/electric, and then we have
- 11 the capacity portability kind of a report at open
- 12 meetings.
- 13 There's certainly scope to use that
- 14 forum more than we do, because we do get a little
- 15 bit of tech conference overload, where you can
- only have so many tech conferences.
- 17 MS. GRUENEICH: And I wasn't suggesting
- it, I just think it's interesting to think about
- 19 maybe on a periodic basis. So my comment, then,
- 20 is, I think that the upcoming technical conference
- 21 on capacity markets is going to be excellent. As
- 22 I'm sure you know, in California, there is a huge

- debate going on, and to the extent that there's
- 2 any sort of a briefing book that would be made
- 3 available beforehand electronically that, again,
- 4 would be sort of here's approaches of the
- 5 different ISOs and RTOs, here's our experience, I
- 6 think that would be extremely helpful, since,
- obviously, not everyone's going to get to D.C., or
- 8 wherever it is.
- 9 And I would just put in a plug for some
- of the issues, at least, of concern, I think, are
- 11 what is really the relationship between state
- 12 public policies and the capacity markets. I've
- 13 heard both ways that there are ways that it can be
- 14 written into tariffs such that there's sort of a
- 15 federalization of a state policy, I've heard the
- opposite that it can't be done. Another area, I
- 17 think, of great interest is on the demand
- 18 response. And not just what do we know about it,
- is it just least cost demand response, is it able
- 20 to be coming in over different times.
- 21 And then my third area is energy
- 22 efficiency. In the research that I've done, I've

```
1 not seen capacity markets really pick it up, it
```

- 2 pretty much seems to be demand response, and
- 3 especially where states are looking at
- 4 comprehensive, more complex types of approaches on
- 5 energy efficiency, is the capacity market another
- 6 tool, how does it work out? So I think those
- 7 would be useful.
- 8 MS. LA FLEUR: Well, those are great
- 9 suggestions. I agree with you on some kind of a
- 10 staff briefing book or something would be really
- 11 helpful, and I also agree you've raised really
- interesting issues. I think, on energy
- 13 efficiency, the PJM press releases that came out
- within the last couple weeks on the most recent,
- their most recent RPM option saw an increase of
- 16 energy efficiency in that market, and you're
- 17 talking next to the, sitting next to the right man
- for how they model it in New England. I should
- 19 also say, in addition, I'm talking about a kind of
- 20 a think-y piece capacity market conference.
- 21 We did say in an order that we were
- going to have a joint tech conference with the

- 1 CPUC on -- and I think, I honestly don't know if
- it's been publicly announced, but it's sooner than
- 3 the other one.
- 4 MS. GRUENEICH: I think --
- 5 MS. LA FLEUR: Yeah, I think it's June
- 6 31st, I think it's the end of July, July 29th or
- 7 30th, or something like that. But that one's
- 8 already announced, I think, yeah. I'll be around,
- 9 so we can talk offline, if people have questions,
- or I can ask you questions. Thank you.
- MR. POPOWSKY: Thanks, again,
- 12 Commissioner. I'm going call on myself next to
- lead the discussion of Race to the Top. So I'm
- 14 going to go there, if you could pull the slide up.
- 15 Thanks. One of the tasks that Rich asked me to do
- 16 before he left for Europe was to head up this
- working group on the Race to the Top initiative.
- This is a working group, as opposed to a full
- 19 blown standing subcommittee.
- So we're here to the a couple of tasks,
- 21 and we may or may not continue after today, but in
- 22 any case, one of the things we wanted to do was to

- get some recommendations to the Secretary, to DoE
- 2 in a timely manner so that they would be useful in
- 3 the upcoming consideration of the Race to the Top
- 4 proposal, which hopefully many of you are familiar
- with. But just to start out, the working group,
- 6 I'm the chair, Bob Curry is the Vice Chair, we
- 7 have a good cross section of members from this
- 8 group on the working group; Ralph Cavanaugh, Sue
- 9 Kelly, Paul Centolella, Dian Grueneich, Val
- 10 Jensen, Paul Hudson, Phyllis Reha, Ralph Masiello
- 11 and Mike Weedall.
- Janine Migden-Ostrander from Wrap Staff
- has been assisting us, and also Holmes Hummell
- from DoE, who has really been the leader, I'd say,
- on the DoE side of the DoE staff, and really
- developing this whole idea and this project, has
- been able to attend most of our meetings and has
- 18 really been extremely helpful in all of our
- 19 discussions.
- Just to go back, actually, most of you
- 21 remember, we actually had a couple of telephone
- 22 conversations on this issue, informally, among

- 1 this group, not acting as the Energy -- as the
- 2 Electricity Advisory Committee, but just among the
- 3 members, some initial conversations that Rich set
- 4 up to talk to DoE staff about the concept of Race
- 5 to the Top, even before it was publicly announced.
- 6 And I think that those conversations were helpful,
- 7 each of us as individuals had a chance to make
- 8 some comments to the DoE staff in developing this
- 9 proposal, and I think a lot of us were very
- 10 pleased to see that, lo and behold, the
- 11 President's State of the Union address came out,
- 12 this issue was included.
- Now, the actual language that the
- 14 President used in the State of the Union on
- 15 February 12th, he talked about a new goal for
- 16 America, cutting in half the energy wasted by our
- 17 homes and businesses other the next 20 years, and
- 18 said we'll work with the states to do it. Those
- 19 states with the best ideas to create jobs and
- 20 lower energy bills by constructing more efficient
- 21 buildings will receive federal support to make
- 22 that happen. Now, he didn't use the term Race to

- 1 the Top, but if you look at the State of the Union
- 2 blueprint, which was a written document that came
- 3 out simultaneously, the same day as the State of
- 4 the Union, there was a little bit more meat put on
- 5 the bones of the President's proposal.
- 6 And, in that blueprint, they
- 7 specifically talk about an effort to double
- 8 American energy productivity by 2030, starting
- 9 with a new, an energy efficiency race to the top
- 10 for the states. The idea was that, using as a
- 11 model the Race to the Top in the Department of
- 12 Education to try to give states the incentives,
- the ability and rewards for stepping forward,
- 14 particularly in the area of energy efficiency and
- productivity, and reducing waste. And there's a
- 16 point there, the last sentence, which I think is
- important that, while the focus is on energy
- 18 efficiency and productivity, it was recognized
- 19 right from the start that not only will these
- 20 programs save consumers money, but that resulting
- 21 reforms will drive investments that enhance
- 22 manufacturing competitiveness, improve grid

- 1 resiliency, and cut carbon pollution.
- 2 The DoE budget proposal came out in
- 3 April, the President's budget included a program
- for fiscal year 2014, it was actually a two-step
- or a two-phase program. Phase one is a qualifying
- 6 phase, that is qualifying criteria are
- 7 established, will be established by DoE that would
- 8 include policies that states -- and, by the way,
- 9 when I use the word states, and we'll get to this
- a little bit more, but we're referring also to
- 11 public power, co-ops, tribal utilities. But the
- idea was that states and these entities would
- implement policies to encourage cost effective
- investments in efficiency, including combined heat
- 15 and power and demand response, clean distributive
- 16 generation, enhance customer access to data,
- 17 investments to improve reliability, security and
- resiliency, and enhance sharing of information
- 19 regarding grid conditions.
- 20 Those are the general criteria that
- 21 would go into the qualifying phase of the Race to
- 22 the Top. Then phase two, those entities, those

- 1 applicants that qualified, that met the DoE's
- 2 qualifying criteria would then have the
- 3 opportunity to compete for cash awards based on,
- 4 and I quote here, "The most progress toward
- 5 improving energy efficiency and energy
- 6 productivity." The proposal is for a \$200 million
- 7 appropriation that would be in fiscal year 2014,
- 8 but I believe the money could be spent anytime
- 9 between 2014 through 2018, as proposed by DoE.
- 10 \$15 million would be used by DoE to oversee the
- 11 program, \$25 million for phase one would be put to
- 12 provide technical assistance to assist the
- 13 applicants in meeting the qualifying criteria, and
- then \$160 million for phase two awards.
- We had a number of meetings, we met on a
- 16 biweekly basis, the working group, recognizing
- 17 that our primary job here was to get something to
- 18 DoE reflecting the views of this committee
- 19 regarding the Race to the Top proposal, in a way
- 20 that would be useful to DoE in these upcoming
- 21 discussions over the next several months. And our
- overriding conclusion, I think, certainly the

- 1 unanimous conclusion of the working group, is
- found here, which is that the DoE, at least from
- 3 the working group perspective, we have reviewed
- 4 the Race to the Top proposal and fully support
- 5 this important initiative.
- 6 What we recognize is that many of the
- 7 most critical, and what I think the President
- 8 recognized, actually, was that many of the most
- 9 critical factors, policies that can support energy
- 10 efficiency and energy productivity do occur at the
- 11 state level and at the utility level, and that by
- 12 supporting this Race to the Top concept, there's
- 13 really two benefits: First, it rewards those
- 14 states that make the most progress in meeting the
- energy goals established by the President and by
- DoE, considering their individual circumstances;
- and second, it identifies successful models that
- 18 other states can follow in the future in their own
- 19 efforts to achieve these goals.
- 20 We did have some very lengthy active
- 21 discussions among the members about some of the
- 22 specific recommendations that we wanted to make to

2. through them with you. There are five, and, by 3 the way, hopefully, all of you have with you the 4 draft document that we are proposing to send to 5 DoE, if it's approved by the committee today. It looks a little bit like this, it's essentially a 7 letter from Rich Cowart to Pat Hoffman, setting forth the EAC's views on the Race to the Top 8 9 proposal. So these principles, like I said, we 10 came up with five principles that I think we had 11 universal support for among the working group 12 members, but not everybody got to attend every 13 meeting, so, certainly, we can hear from folks 14 today whether you were on the working group or 15 not. 16 The first principle is that the Race to the Top should allow participation by states and 17

DoE in pursuing this initiative, and I'll just go

1

18

19

20 being here that we know that not all of us are
21 served by, or work with or work for investor-owned
22 or state-regulated utilities. We also have,

other eligible applicants with all types of

utility ownership and business models. The point

- obviously, public power, co-ops, tribal utilities,
- 2 all of whom we think, or at least the working
- 3 group thinks should be eligible to participate in
- 4 this program, to fully participate. Even in the
- 5 investor-owned utility arena, we have different
- 6 types of utilities. We have some states that are
- 7 with vertically integrated utilities, some with
- 8 restructured utilities where only a portion of
- 9 their service is actually regulated by the state
- 10 regulatory authorities. So, as we develop this
- 11 Race to the Top, we wanted it to be all inclusive,
- to include all types of utility ownership and
- 13 business models.
- 14 The next principle is in phase one. The
- 15 qualifying criteria should be descriptive rather
- 16 than prescriptive. That is, allowing the states
- 17 and other applicants flexibility to innovate. And
- when we, once DoE determines what the overall
- 19 general criteria should be, that should be done,
- in our view, in a descriptive manner rather than
- 21 prescribing specific, very specific programs or
- 22 policies that absolutely have to be met by each

- 1 applicant, as long as those policies are designed
- 2 to achieve the overall goal of energy efficiency
- 3 and productivity.
- 4 The next principle, which is the third
- one on this slide, is that, in phase two,
- 6 remember, that's the reward phase, the ultimate
- 7 phase. Race to the Top applicants should be
- 8 judged and rewarded based on their own improved
- 9 performance. This arises from the concern that we
- 10 know that all these states, or many of these
- 11 states and many of these other applicants are
- 12 starting from a different place. You have to
- think of this, it's hard to not use supports
- analogies when you think of this process, but we
- 15 know that some states are starting off on the
- opponent's ten yard line, they don't have that far
- 17 to go. We know that other states are probably on
- their own, practically on their own goal line,
- 19 that's where they're starting from.
- 20 And we want to make sure that those
- 21 states that get from their own goal line to maybe
- 22 mid field or maybe to the opposing 40 yard line

```
gets, has the ability to get some of these
```

- 2 rewards, rather than limit the ward to those
- 3 states or those entities that finish across some
- 4 magical finish line first. Because the concern is
- 5 that, if there is just this one finish line, we
- 6 sort of know from the start, or we have a good
- 7 idea from the start which entities might win,
- 8 whereas what we really want to do is, at least in
- 9 our view, from the working group's view, is to
- 10 reward those states and applicants who make the
- 11 most progress in achieving these goals. So it's
- 12 based on their own improved performance.
- 13 Having said that, remember, though,
- these states have to have met the initial
- qualifications established by DoE to participate
- in the programs. So there are some minimum
- 17 qualifications, but within that group of
- applicants, we want folks to be judged on their
- 19 own performance rather than the first across a
- 20 finish line. The last two recommendations,
- 21 basically, we support the two-phase program; phase
- one funds should be used to support the

- development of innovations, programs, policies,
- 2 regulations and/or laws that advance energy
- 3 efficiency and energy productivity. Whereas phase
- 4 two awards should be made based on the achievement
- of improvements in energy efficiency and energy
- 6 productivity.
- 7 The first phase is basically designed to
- 8 encourage the development of policies that will
- 9 get us to, that will help the states get to where
- we all hope that they will go, the second phase,
- the rewards are based on performance, actually
- implementing some of these proposal and who make
- 13 the most, who achieve the most improvements in
- terms of energy efficiency and energy
- 15 productivity. The final principle is just that
- the RTT awards should be focused on achieving
- improvements in energy efficiency and
- 18 productivity.
- 19 What we're saying there is that those
- are the goals; energy efficiency and productivity.
- Now, I think, at least I believe that energy
- 22 productivity is a broader concept than energy

```
1 efficiency. Typically, I think energy efficiency,
```

- 2 what we're talking, I think most folks are talking
- 3 about end-use efficiency. Whereas energy
- 4 productivity is a broader term, it includes
- 5 basically any way to get your economic output to
- 6 be provided with the fewest or the smallest
- 7 possible energy input. I think that's right,
- 8 Paul, what do you say?
- 9 Anyway, and that can involve any number
- of programs that go beyond the classic or
- 11 traditional end-use energy efficiency. So we want
- to focus on a broad view of energy efficiency and
- productivity, but that is the goal; greater energy
- 14 efficiency and productivity. And, as was pointed
- out in one of the earlier slides, the State of the
- 16 Union blueprint points out that those factors,
- 17 that those policies that improve energy efficiency
- and productivity have also benefit the grid in
- 19 terms of greater reliability and greater
- 20 resiliency, they provide benefits in terms of
- 21 reduced carbon pollution and other factors.
- So, hopefully, you've all had a chance

- 1 to take a look at this. Let me call on Bob and
- 2 Holmes first to see if you have anything to add.
- 3 As I said, Holmes Hummell from the DoE staff was
- 4 instrumental, maybe the prime architect of this
- 5 idea, and whatever, if you'd like to add
- 6 something, you and Bob, and we could hear from
- 7 other members of the working group, and then all
- 8 the members of the committee.
- 9 MR. HUMMELL: Good afternoon, everyone.
- 10 I want to thank the subcommittee for giving
- 11 attention to the concept, I cannot claim to be its
- 12 architect, so it would seem flattering for all the
- 13 attention the proposal has received. In fact, the
- 14 Race to the Top is borrowed directly from the
- 15 success the administration had achieved in other
- 16 parts of the policy portfolio, including health
- 17 and human services and education. We understand
- 18 the distinct differences between energy and those
- 19 other parts of the portfolio.
- 20 What you're seeing in this proposal is
- 21 an approach that is innovative in terms of federal
- 22 relationships with states, that reserves to the

1

22

states the full flexibility of achieving

```
2.
       objectives that still serve national interests and
 3
       the goals of many state leaders. The material
       that's in the public domain about the proposal is
 5
       fairly limited, only three pages, so I think it's
       impressive that the subcommittee members have
       cultivated their views on the concept, with real
 7
       deliberate thought to the detail and its
 8
 9
       potential, while knowing that there's still very
10
       much about the program that's yet to be designed.
11
                 The Department is operating under a
12
       continuing resolution that actually says in black
13
       and white text that we are forbidden from even
14
       issuing a request for information to invite
15
       stakeholder input on this proposal until it is
16
       appropriate rated. For that reason, members of
17
       the FACA here, and the FACA that serves the State
       Energy Advisory Board members are the two places
18
19
       that we can go to seek policy input in a public
20
       setting that would allow us to continue to
       cultivate and develop the idea. And the
21
```

contributions on the weekly telephone calls

- 1 chaired by Sonny Popowsky and others that have
- 2 participated have been highly useful and very
- 3 informative already.
- 4 So, with that, I'd like to thank the
- 5 group, and, of course, attend, as I have the
- 6 previous calls carefully to the comments of the
- 7 committee. Thank you all.
- 8 MR. POPOWSKY: Thanks, Holmes. Bob?
- 9 MR. CURRY: I have very little to add to
- 10 what you've put together. I think the idea of the
- 11 descriptive, not prescriptive is terribly
- important because I don't think the goal of this
- committee or of the Department to try to line up
- sort of litmus tests or saliva tests for getting
- into this whole mix. That's one point. The
- 16 second point, I would note that, in his
- 17 confirmation testimony, Secretary Moniz has made
- this a significant ingredient in the way he sees
- 19 things playing out going forward. And the fact
- 20 that it was mentioned in his response to questions
- 21 from -- I still have trouble thinking about
- 22 Franken as a Senator, but that's my personal

- 1 problem -- in response to a question from Senator
- 2 Franken, this was a significant part of his
- answer.
- 4 So having a lot of confidence in him and
- 5 his perspective on our industry, as well as his
- 6 comprehension of the political ingredients that go
- 7 into moving things forward, I think that this
- 8 deserving of the committee's full attention.
- 9 MR. POPOWSKY: Okay. Thanks, Bob.
- 10 Granger, you had your card up first, and then Sue.
- 11 MR. MORGAN: Yeah. My apologies if, I
- 12 should have gotten this to you earlier, but I
- would like to suggest one additional sentence in
- 14 section 4. This is a very nice document, I agree
- 15 with it in its entirety. I would like to suggest
- 16 we maybe add a sentence that reads, Because the
- 17 successful adoption of many energy efficiency
- 18 measures depends on human preferences and
- 19 behaviors, the EAC believes the DoE would be well
- 20 advised to place particular focus on the inclusion
- of high quality behavioral social science in the
- 22 design, execution and evaluation of at least --

- 1 well, of RTT projects.
- 2 There is an enormous amount of lousy
- 3 evaluation and social science that's been done in
- 4 this phase, I can say that because I have a lot of
- 5 colleagues who have looked at it, and I think some
- 6 modest nudge to include some serious social
- 7 science behavioral design in these projects, not
- 8 all of them, but at least in some of them, would
- 9 be appropriate.
- 10 MR. POPOWSKY: Okay. Before I move on
- 11 to other folks, does anybody have any comments on
- 12 Granger's suggestion, either members of the sub
- working group or anybody else?
- MS. GRUENEICH: Could you repeat again
- what the proposed addition, and I guess where it
- would go?
- MR. MORGAN: Sure. And you're welcome
- 18 to edit it. Because the successful adoption of
- 19 many energy efficiency measures depends on human
- 20 preferences and behaviors, the EAC believes the
- 21 DoE would be well advised to place particular
- 22 focus on the inclusion of high quality behavioral

- 1 social science in the design, exclusion and
- 2 evaluation of our RTT projects.
- 3 MS. GRUENEICH: I, maybe eliminate the
- 4 word particular emphasis. I mean, my only concern
- 5 --
- 6 MR. MORGAN: That's fine, happy to do
- 7 that.
- 8 MS. GRUENEICH: Yeah, because especially
- 9 for states first starting off --
- 10 MR. MORGAN: I can simply say consider.
- 11 MS. GRUENEICH: -- confusing what it
- 12 means to have behavioral sciences included. I
- don't have -- I mean, I'm all for having better
- 14 EMND, especially for consistency things like that.
- MR. MORGAN: Do you prefer well advised
- 16 to consider the inclusion, do you like that
- 17 better? Fine.
- 18 MR. POPOWSKY: Okay. Any other comments
- on -- Merwin, talking about Granger's proposal.
- 20 Okay, Merwin.
- 21 MR. BROWN: Yes. I'm just going to add
- 22 a vote with Dian, which is, our institution has

- 1 also been involved in the human behavior science
- 2 question, and it is pretty early to make that a
- 3 hard criteria for something like this. But I do
- 4 think anything that would encourage that to be
- 5 brought into the picture would be a good start in
- 6 the right direction. So, again, I just want to
- 7 add more weight to what Dian said.
- 8 MR. POPOWSKY: Okay. And just to be
- 9 clear, Granger, you're talking about this, the
- 10 last page of the document that was handed out
- 11 under the paragraph numbered four?
- MR. MORGAN: I put it at the end of the
- first of the two paragraphs in section 4, phase --
- the paragraph that starts, Under this principle in
- 15 phase one --
- MR. POPOWSKY: Right.
- MR. MORGAN: Yadda, yadda, yadda. And
- 18 then the sentence there. And I'll, I can hand you
- 19 this.
- 20 MR. POPOWSKY: Okay. Are there any
- 21 other comments or objections or concerns to
- 22 Granger's -- sure. I think Paul was next, Paul

- 1 first -- yeah. I'm sorry, Paul was --
- 2 MR. CENTOLELLA: Granger, I appreciate
- 3 the idea, because I think it's very important that
- 4 we figure out how to design nudges into the
- 5 regulatory system, and --
- 6 MR. MORGAN: It needn't be nudges, I
- 7 mean --
- 8 MR. CENTOLELLA: I understand that.
- 9 But, in general, to pay attention to the
- 10 behavioral economic side of what we do, because we
- 11 have not paid enough attention to that, and I'm
- 12 not done seeking you out. I'm a little bit
- 13 cautious about not also suggesting that, to the
- 14 extent that there are ways in which this can be
- done through automation or oh approaches that
- don't require human behavioral change, that we may
- 17 be missing an important component, here, and I'm
- 18 not sure if there's a clear way to integrate that
- into your sentence.
- 20 MR. MORGAN: I'm simply going to add the
- 21 word often depends on human preferences and
- behaviors. That's certainly the case. But you're

- 1 absolutely right, there are ways to automate or to
- 2 take people out of the loop, the problem is, in
- 3 many cases, people are in the loop.
- 4 MR. CENTOLELLA: And I guess what I'm
- 5 suggesting is that it may be appropriate for, if
- 6 we're going make this suggestion, that we also
- 7 suggestion that the Department look at ways in
- 8 which people don't have to be in the loop, or
- 9 people can be in the loop once and, you know, make
- 10 a decision that carries forward.
- MR. POPOWSKY: Okay. Judith, I think
- 12 you had a comment?
- MS. SCHWARTZ: That actually relates to
- my question, because when you look at the
- 15 segmentation and what people care about, and there
- is a lot of evidence to support that it is really
- 17 effective, some of the people choose automation.
- 18 But the idea of choosing to purchase automation
- is, in fact, a consumer decision. So I guess one
- of the questions that I have for you, in terms of
- 21 the scope, that isn't obvious to me as someone new
- 22 to it is, are you talking about also, are you

```
1 including in your energy efficiency and energy
```

- 2 productivity talking about price signals, which
- 3 would be very motivating for some people, and
- 4 other things related to Smart Grid, which enable
- 5 the automation to be easily implemented?
- 6 Because I think one of the things that's
- 7 causing a problem today in terms of customer
- 8 acceptance is this bifurcation that somehow energy
- 9 efficiency is somehow separate and independent of
- 10 Smart Grid and dynamic pricing and other kinds of
- 11 DR.
- MR. POPOWSKY: Well, I think the
- answers, we were trying to be more generic and
- tried to avoid the pitfalls, I guess, of trying to
- 15 be too specific on that. I thought that Granger's
- 16 addition, my own view, it was general enough, and
- 17 I think what you're saying it was, especially the
- 18 way you've agreed to modify it, that it would make
- 19 sense. I have no problem with it, but let me hear
- from other folks. Sue, did you want to comment on
- 21 this, too?
- 22 MS. KELLY: I would just say that the

```
decision to automate or the decision to not make a
```

- decision is part of human behavior. So that, if
- 3 you're considering human behavior in constructing
- 4 these, that's, not participation as well as
- 5 participation is part of that calculus. So I
- 6 think it's like Prego, it's already in there.
- 7 (Laughter) But that would be my comment on that.
- 8 I appreciate the edits that you've made to address
- 9 concerns expressed by the group, and I think it is
- important to try and make sure that the measures
- 11 that we push forward and try to get states and
- 12 co-ops and public power systems and tribal
- 13 utilities to adopt actually are ones that will be
- accepted by people. That's a great idea.
- In addition to that, I would just speak
- 16 to the overall question that our committee worked
- 17 very hard on this entire piece, took into account
- 18 a lot of different viewpoints, we had some nuanced
- 19 and important discussions among the committee, and
- I would just urge us to avoid having those all
- 21 over again here.
- MR. POPOWSKY: Okay. Billy?

MR. BALL: Yes. My questions have 2 really less to do with the recommendations in the 3 report, because I don't really have an issue with 4 those. I'm not really going to speak to Granger's 5 comment, I think it's already been talked about. My concern is more of an overall concern in that, 6 as a committee, we're about to officially respond 7 to something that we know very little about. And 8 9 I just personally don't buy into the account vote 10 for it and then read it. And so I guess my 11 concern is more with the start-off wording where 12 we say that this committee, as a whole, have 13 reviewed the proposal. Well, maybe we've reviewed what's 14 15 public, but there's no secret that there's no, 16 there's not sufficient detail to review. And that 17 we fully support this initiative when we don't know the details of the initiative. And I think 18 19 this is, regardless of the topic, whether it's 20 this issue or any other issue, I just think that's a very strange place for this committee to go to 21 22 provide verbal input, that's wonderful, to provide

- 1 a less formal input is great, I don't have a
- 2 problem with the input at all. I do have a
- 3 problem with, at least the way I interpret the
- 4 opening paragraph, it just seems like a full
- 5 endorsement of a program that we don't even know
- 6 the program.
- 7 That's really my fundamental question,
- 8 Sonny, is what, as a committee, are we signing up
- 9 behind when I don't know details?
- 10 MR. POPOWSKY: Okay. If I could just
- 11 respond. I appreciate that. We did have, we
- 12 certainly had to rely on the public documents, and
- 13 there are -- and perhaps the words, you know,
- reviewed the proposal and fully supports, there
- may be tweaks to that, but what we support is
- 16 certainly -- well, I shouldn't say certainly, but
- 17 I think the idea is that we had, like I said, many
- 18 meetings over the last few months with input from
- 19 DoE providing us information that they could.
- 20 Although, again, we have to rely on the public
- 21 information. So that we went around the horn
- several times in our group to say do we generally

```
1 support this in principle, and among the working
```

- group at least, there was unanimous support in
- 3 principle.
- 4 If it would help to change the language
- 5 a little bit there to say we've reviewed the
- 6 public documents related that have been made
- 7 available so far, and we support this initiative
- 8 in principle, something like that. I suppose we
- 9 could do that. Again, I'll look to the other
- 10 members of the --
- MR. BALL: Or to the --
- MR. POPOWSKY: -- work group --
- MR. BALL: -- we've reviewed, you've
- 14 reviewed the publicly available information, and
- 15 you have the following recommendations. I find it
- 16 hard to fully support something, again, I can,
- 17 maybe we can get behind and fully support the few
- 18 paragraphs that are out there, but I just -- I
- think you're really providing recommendations on
- the publicly available information is what you're
- 21 doing.
- MR. POPOWSKY: Okay. What about, does

```
1 anybody else have any comments on Billy's point --
```

- 2 I'm sorry, were you about to -- did you have a
- 3 comment?
- 4 MR. HUMMELL: I'd like to engage Mr.
- 5 Ball for just one moment, because, of course, I
- 6 take incoming from stakeholders all over our
- field, and have now for months on this proposal.
- 8 The committee has an opportunity to express to a
- 9 larger audience that, based on the depth of your
- 10 expertise and your own interest in the electric
- 11 power sector, varied as they are around this
- table, that there is some merit to the federal
- 13 government giving states an opportunity to be
- 14 rewarded for superior performance against their
- own aspirations in areas that are aligned with
- 16 national interests.
- This proposal will not be any further
- 18 developed unless it is appropriated. It will not
- 19 be appropriated unless people, in the sector that
- 20 would have its policies affected by it, find it to
- 21 be desirable. I cannot be more clear about our
- 22 constraints and restrictions about further

- developing the proposal in the absence of
- 2 appropriations. I hope that's helpful.
- MR. POPOWSKY: Sue, is your card still
- 4 up? Okay. Wanda?
- 5 MS. REDER: Yeah, I support Billy's
- 6 comments. I don't know if we really concluded on
- 7 that, but I think the document is well done, and I
- 8 think with those minor edits, I support.
- 9 MR. POPOWSKY: Okay. Bob?
- 10 MR. CURRY: Perhaps the way we could
- 11 present this is, that the committee has reviewed
- the information that is publicly available
- 13 regarding the Race to the Top proposal and fully
- 14 supports the concept as described therein, and has
- 15 the following recommendations.
- MR. POPOWSKY: Billy -- could you try
- 17 that again, Bob?
- 18 MR. CURRY: No. (Laughter) The
- 19 Electricity Advisory Committee has reviewed the
- 20 publicly available information regarding the Race
- 21 to the Top proposal and fully supports this
- 22 important initiative as described therein. It has

- 1 the following recommendations. I'd have to add
- 2 more words than that, but that's the concept.
- 3 MR. POPOWSKY: I'm sorry --
- 4 MR. CURRY: Race to the Top concept
- 5 (inaudible).
- 6 MR. POPOWSKY: We can work on the final
- 7 language during a break, but is that generally
- 8 where you want to be, is that okay Billy and
- 9 Wanda?
- MR. CURRY: Yep.
- MR. BALL: You got it.
- MR. CURRY: I hate to agree with Billy
- on anything, but (laughter) --
- MR. POPOWSKY: Whose turn is it? Jay?
- MR. MORRISON: Thank you. I also wanted
- to add support for the idea of the initial
- 17 sentence going from we have reviewed to have
- 18 recommendations. There are some things that are
- in the public documents that it's not clear to me
- 20 are necessarily exactly consistent with where the
- 21 recommendations come out. Particularly, I liked
- 22 very much how Holmes just described this as

- 1 encouraging performance, as opposed to encouraging
- 2 specific policies. I think the lack of clarity of
- 3 that difference in the public documents is why
- 4 recommendation to is so good and so important.
- And so, because it's not entirely clear
- 6 to me that the public documents are today
- 7 consistent with what the committee is
- 8 recommending, I'm more comfortable with going
- 9 directly from we have reviewed and have
- 10 recommendations than we have reviewed and agree
- 11 and we have recommendations. There's also one
- other concept that I would love to have seen in
- 13 the documents, partly just because it's the mantra
- of our membership, and that's cost effectiveness.
- 15 We would be uncomfortable if what winds up being
- some of the proposals that are supported is the
- 17 replacement of 8-cent power with 12-cent something
- 18 else. And so, since the President has made a
- 19 point that Race to the Top should save consumers
- 20 money, I'd like to see that boiled into the nature
- of the recommendations, that this is support for
- 22 cost effective improvements and energy efficiency

- and energy productivity, as opposed to leaving
- 2 that important term out.
- 3 MR. POPOWSKY: Did you happen to find a
- 4 place where you could get that in there, did you,
- 5 Jay?
- 6 MR. MORGAN: Well, you could do it in
- 7 that first paragraph in section four under the
- 8 principle in phase one, the Department would
- 9 provide tools and technical assistance to states
- 10 and other applicants to help develop cost
- 11 effective approaches, or their cost effective
- 12 approaches to advanced energy efficiency, and
- 13 blah, blah, blah.
- MR. POPOWSKY: Okay. That's a good
- 15 place to put it.
- MR. CENTOLELLA: I guess I'm going to
- voice a different opinion, which is Prego, it's
- 18 already there. When we say energy efficiency, we
- 19 say energy productivity, it implies cost
- 20 effectiveness, we don't need to be adding
- 21 additional concepts at this point. The commit the
- 22 worked long and hard to get this language, and I

- guess I'm of the opinion we should limit the
- 2 amount of edits here, because I think it's already
- 3 there.
- 4 MR. POPOWSKY: Good point. I mean, the
- 5 sentence that Granger just referenced said
- 6 approaches to advanced energy efficiency and
- 7 productivity. Is there a subset of energy
- 8 efficiency that's not cost effective?
- 9 MS. GRUENEICH: Yes.
- 10 MR. CENTOLELLA: Yeah. I mean, from --
- 11 MS. GRUENEICH: Most energy efficiency
- 12 going forward won't be.
- MR. CENTOLELLA: -- LED -- you're really
- 14 talking about efficiency, and you're talking about
- 15 productivity, you are inherently making a decision
- that the value that is being received is in excess
- of the costs that are being used to create it. If
- 18 that's not the case, then you're not talking about
- 19 efficiency and you're not talking about
- 20 productivity. So I guess I think we're getting
- 21 caught up in sort of traditional regulatory lingo
- 22 that I think the approach here was to try to

- 1 encourage a broad thinking about how do we move
- forward on a national energy agenda, and I don't
- 3 want it to be captured in what has necessarily
- 4 been the least cost lingo of the past.
- 5 MR. POPOWSKY: Jay or Rob? Bob, you
- 6 still have your cards up.
- 7 MR. MORRISON: If the committee believes
- 8 it's there, and certainly DoE has heard the
- 9 discussion, then I'm not obviously going to
- 10 insist. I would like to make the point that I do
- 11 believe that there is a category of efficiency
- 12 that is not cost effective, there is certainly a
- 13 tremendous amount of cost effective efficiency out
- there to be obtained. But what particularly
- 15 caught my attention is that the concept of
- 16 customer-owned generation and efficiency seemed to
- 17 have been conjoined in some of the materials.
- 18 And, given that, my concern about cost
- 19 effectiveness is that much greater.
- MR. POPOWSKY: Okay. Well, it seems to
- 21 me we don't -- okay, anybody else have any, want
- 22 to put anything else out on the table? It seems

```
1 to me that, with some modest edits over the
```

- 2 upcoming breaks, we ought to be able to come up
- 3 with something that we can load on today or
- 4 tomorrow morning. Hopefully today. Because, like
- 5 I said, I think it's really important that we put
- 6 this out there at this meeting rather than wait
- 7 until October when everything is already decided.
- 8 So I guess I would encourage a few folks
- 9 -- I'm sorry, Pat, did you --
- 10 MS. HOFFMAN: One thing I guess I'll
- just point out to the committee is, I know in past
- 12 documents, in order to keep things moving and move
- forward, we recognize that if there was an issue,
- 14 it was either debated or characterized that we
- just stick a point note that this was discussed in
- 16 the meeting, and then leave the document as is.
- 17 Put a note in the document recognizing, you know,
- 18 that issue that was brought up so we can just keep
- 19 moving things forward. We've done that in the
- 20 past where we've had kind of issues that were kind
- of debated and discussed.
- MR. POPOWSKY: Okay. Granger?

- 1 MR. MORGAN: I'm perfectly happy to have
- 2 the document stay as it is in this respect, but I
- 3 would point out that a number of folks, ourselves
- 4 included, in a recent piece in issues in Science &
- 5 Technology have produced energy efficiency supply
- 6 curves, and if you go far enough out on those
- 7 supply curves, it's no longer cost effective. And
- 8 so that's why I agreed with the comment, but I'm
- 9 also perfectly happy to accept the language just
- 10 as it is.
- MR. POPOWSKY: Okay. Could I get a few
- 12 volunteers to meet over the break, Bob, Sue, Paul?
- Okay. Merwin? Okay. Oh, do you have another
- 14 comment, I'm sorry.
- MR. BROWN: Yeah, I'm sorry. I guess
- 16 all the comments have got me into a nitpicky mode
- 17 (laughter). But one thing that does bother me a
- bit is the statement lifted from the blueprint,
- 19 it's in number five, recommendation five, as noted
- in the State of the Union blueprint, the energy
- 21 efficiency and productivity achievements resulting
- from the Race to the Top program will not only

- 1 save consumers money, but will drive investments
- 2 that enhance manufacturing competitiveness and
- 3 improve grid resiliency and cut carbon pollution.
- 4 Did the committee actually question that, whether
- 5 those were completely true statements? I mean,
- 6 I'm not convinced they are. I mean, yeah, I can
- 7 see instances where this does happen, but I don't
- 8 see it all following that that will happen.
- 9 And I'll just say I feel more
- 10 comfortable if the subcommittee could suggest that
- 11 you look at this and were comfortable with those
- words, and that's okay. If not, maybe just take
- them out, because it doesn't really add much to
- the recommendation, per se, as I can see, and
- 15 neither challenge nor accept that particular
- 16 statement. But just wanted to raise whether or
- 17 not you raised the question.
- 18 MR. POPOWSKY: Any comments from members
- of the working group on that? Paul?
- 20 MR. HUDSON: Just real quickly. I mean,
- 21 the reason I didn't raise any objection to that
- language is because the assumption I was making

- 1 going in is that the Department would implement
- 2 the program in such a fashion as to carry forth
- 3 those goals. I mean, it certainly all depends on
- 4 implementation.
- 5 MR. POPOWSKY: We could even say, if
- 6 implemented properly, it would have those results,
- 7 or we could take it out. I mean, like I said,
- 8 it's true, the point in that paragraph, like I
- 9 say, we're focusing on energy efficiency and
- 10 productivity, but if you really do energy
- 11 efficiency and productivity, it should have these
- 12 additional, we agree it should have these
- 13 additional results. But I have to admit, we
- 14 certainly didn't do a study of that.
- MR. HUDSON: But you see them as
- 16 criteria as opposed to natural results that would
- 17 result from any of these activities.
- MR. POPOWSKY: Okay. Sue?
- 19 MS. KELLY: One possible way to finesse
- 20 that point would be to move that statement back
- into the section that describes the Race to the
- 22 Top section. That way, it's there as a statement

- of what was in the blueprint as opposed to
- 2 something that we all, you know, to a man and
- 3 woman, all agree 100 percent with. And, that way,
- 4 it will be in there, but it will be in there in
- 5 perhaps a less controversial way.
- 6 MR. POPOWSKY: Okay. Well --
- 7 MS. KELLY: Maybe you could leave this
- 8 to the drafting group to look at over the break.
- 9 MR. POPOWSKY: Yeah. Who have we got on
- 10 this committee now? Sue --
- 11 MS. KELLY: Sue, Paul, Bob, I think, was
- 12 the --
- 13 MR. POPOWSKY: Bob. Okay. Janine, I
- 14 guess, did you --
- MS. MIGDEN-OSTRANDER: I'll help.
- MR. POPOWSKY: You'll help too, okay.
- 17 Janine -- great. Okay. We are just about at the
- 18 time for our break, is there anything else on this
- 19 -- I'm sorry, Holmes?
- MR. HUMMELL: Before the break, I simply
- 21 want to express my appreciation to the hard
- 22 working members of the subcommittee. I first

1

21

22

```
brought to this FACA a proposal in December of
 2.
       2012, that was the glimmer in the eye of a budget
 3
       process that was under tremendous pressure. For
       the administration to have come forward with a
 5
       $200 million-plus up to the Department of Energy
       means that we withstood all comers from all
 7
       agencies for all time between December and March.
 8
                 That was an incredible melting,
       withering assault on our idea, and it was the
 9
10
       support of the members of this committee who
11
       recognized that there was some innovative
       potential to refresh the kinds of relations and
12
13
       activities that can take place between the
14
       Department of Energy and states and co-ops and
15
       public power authorities that gave this proposal
16
       the winning status in what is really a
17
       fiercely-fought sweepstakes.
18
                 To come out of the budget request with
       this intact is a remarkable tribute to the kind of
19
       support that members of the subcommittee have
20
```

provided in terms of very careful edits, very

attentive criticisms, constructive criticisms that

- 1 have helped us improve and be more responsive to
- 2 those in the field that would ultimately benefit
- from a program if it were appropriated. I won't
- 4 be here when you reconvene, so I couldn't help but
- 5 seize the opportunity to express my appreciation
- 6 and also reflect back to you the effects of your
- 7 handiwork. Thank you very, very much.
- 8 MR. POPOWSKY: Thanks, Holmes, and
- 9 thanks again to you for all your great work on
- 10 this, we really appreciate it. Samir, did you
- 11 have an announcement?
- 12 MR. SUCCAR: Just a logistical note.
- 13 For the break, there is a deli in the building
- 14 through the double doors and sort of over to your
- right, you'll see a sign for the cafe, so you
- don't have to leave the building. For those
- 17 registered for dinner, we'll have an announcement
- 18 about that. Dinner will take place at 5:01 North
- 19 Randolph on the other side of the mall, and we'll
- 20 have a meet up, we'll announce a time for folks to
- 21 walk over together, if you so choose.
- 22 And, with that, I'll follow up that, the

- 1 note about dinner later in the day, but I just
- wanted to give you those heads up, thanks.
- 3 MR. POPOWSKY: Thanks. So shall we
- 4 shoot for 10 after 3:00, give people 15 minutes
- 5 rather than just 10. Is that okay, Chris? We'll
- 6 start promptly at 3:10. We've got a full
- 7 afternoon ahead of us in terms of the cyber
- 8 security issues, and then some important
- 9 transmission issues at the end of the day. So
- 10 thanks a lot for your attention, and see you at
- 11 3:10.
- 12 (Recess)
- MR. POPOWSKY: Thank you very much. I'm
- sorry, we're a few minutes behind schedule, but
- 15 let's get started. Chris, any time you're ready
- 16 to get started.
- 17 MR. PETERS: Sure. Thank you, Sonny.
- 18 As the agenda indicates, we have what I think is
- 19 an outstanding panel, with some very distinguished
- 20 panelists with unique backgrounds here, I think
- 21 are very germane to the cyber debate that we read
- 22 about every day in the papers, and hear from the

```
1 President and Congress on quite frequently. The
```

- 2 title of the panel is Key Federal Roles to Enhance
- 3 Cyber in the Power Sector. And I can't think of a
- 4 more appropriate topic, given where we are with
- 5 NERC-SIP, version 5, and the executive order.
- 6 So on my left here, our panelists: We
- 7 have Marianne Swanson, who is the Senior Adviser
- 8 for Information Technology Security Management at
- 9 the Computer Security division at NIST; we have
- 10 Dr. Robert Coles, who is the Chief Information
- 11 Security Officer and head of Digital Security and
- 12 Risk at the National Grid; we have Samara Moore,
- 13 Director on National Security staff for Cyber
- 14 Security Critical Infrastructure Protection; and
- Jason Christopher, with the Department of Energy,
- 16 who is the technical lead for Cyber Security
- 17 Capabilities and Risk Management. And Jason, from
- what I understand, will be taking over the C2M2
- 19 model.
- 20 So, without any further ado, we're going
- 21 to kick off this panel with Marianne Swanson, and
- she's going to give us a couple thoughts on her

- 1 role at NIST and where some of her focus is on the
- 2 cyber debate.
- MS. SWANSON: Good afternoon, everyone.
- 4 I decided I better bring these, just in case, but
- 5 it looks pretty big at the moment, so I think I'm
- 6 good. So let's talk about cyber security and what
- 7 the National Institute of Standards and Technology
- 8 is doing. So we've been involved in the
- 9 electricity sector for about the last four years,
- 10 now. Actually, NIST is also very much, our
- 11 mandate is to provide guidance to the federal
- 12 agencies, cyber security guidance to federal
- agencies. And then, under SSSA, we became
- involved, then, with the electricity sector.
- So, back in about three, no, about four
- 16 years ago, we started a group called, back then,
- 17 it was the Cyber Security Working Group, and that
- 18 was something we put together. Gosh, we had about
- 19 800 members that ultimately joined this group.
- 20 When we formed, when NIST formed and Department of
- 21 Energy, we formed the Smart Grid operability
- 22 panel, this committee was brought in under that,

- or this working group was brought in under that.
- 2 So, at this stage, now, the committee, or this
- 3 Smart Grid operability panel, which is what I
- 4 chair under the Cyber Security committee, under
- 5 this Smart Grid interoperability panel has been
- 6 changed from a member, from a public/private
- 7 partnership.
- 8 So this was a NIST-funded deal, and then
- 9 the public coming together, we now are a
- 10 membership based organization. So the SGIP is a
- 11 membership based organization that started in
- January. So now we are the Cyber Security
- 13 Committee under, within the SGIP. So I'd have to
- say we're having a little bit of, what would you
- call it, birthing pains, we're coming together,
- and hopefully, a lot of you are, have heard of the
- 17 SGIP. And we are now up to about 200 paid
- members, so we are moving along quite well.
- 19 The cyber security committee is doing
- quite a bit of work, we're continuing on, we're
- 21 now at about 75 members, instead of the 800 that
- actually, in all reality, we had probably about 50

- that really did work. So now I have 75 that I'm
- 2 really going to make them work, and they've signed
- on, so we're going along. So we've been doing a
- 4 lot. For the last four years, the committee has
- been quite active, and I thought, well, I'd give
- 6 you just a few highlights of some of the work
- 7 we've done.
- 8 We put together a NIST interagency
- 9 report, Guidelines for Smart Grid Cyber Security,
- in August 2010, and now we're updating it. So
- this guideline is actually being used throughout,
- it's global, we've got China, who actually
- translated it, they're using it, we have the
- 14 European union, who has taken the recommendations.
- We have requirements, and they're high level
- security requirements on the kinds of things you
- 17 should be doing from a cyber security perspective
- for securing your information systems, your
- industrial control systems that are related to
- 20 Smart Grid. So these requirements are being used
- in many documents throughout the world, so we
- 22 really have a success on our hands with this NIST

- 1 IR.
- 2 Something else that we're working on
- 3 right now is a user's guide. So we have these
- 4 requirements and how you should be applying them,
- 5 but what we really need is a step-by-step very
- 6 simplistic approach on how you would go about
- 7 applying the requirements to your system, and walk
- 8 you through a risk management approach on how to
- 9 do this. So we're working on that right now.
- 10 Another document, which I actually didn't list on
- 11 here that goes with this, is an assessment guide,
- and it's actually taking those high level security
- 13 requirements, and how you would assess them,
- things you would need to look at to see if those
- 15 high level security requirements were being
- implemented, thing you should review, people you
- 17 should discuss, who you should interview, that
- 18 kind of thing.
- 19 So the NIST IR will be updated, it is
- 20 being updated, we'll be putting it out for public
- 21 comment, because it is a NIST document, that's the
- 22 way we do things, probably within the next month

- or so. So it's coming out pretty quickly, and
- 2 that would come out for about a 60-day review
- 3 cycle. Something else that we're doing under the
- 4 Smart Grid interoperability panel is reviewing
- 5 standards. So we have standards, and part of SSSA
- is to facilitate the development of interoperable
- 7 secure standards for Smart Grid. So one of the
- 8 things that we're doing in our committee is
- 9 reviewing these standards, standards that are
- 10 being worked on within the Smart Grid
- interoperability panel, other standards that were
- 12 deemed key standards that are in our NIST
- interagency framework document.
- So we've already done, in the last four
- 15 years, about reviews. So we've taken these
- documents, these standards, reviewed whether they
- have addressed cyber security appropriately, or,
- and then make recommendations where we feel that
- 19 the standard may be lacking, maybe not
- 20 facilitating the functionality for a secure
- 21 interoperability. So we have quite a few reviews
- 22 that have been completed, and these reports are

- out there right now on the NIST Wiki site that you
- 2 can review. So if you're looking at something
- 3 like IEC's -- gosh, any of them, practically.
- 4 Pull it up, you can take a look and read it. SEP
- 5 2.1 is one we're reviewing right now. I think
- 6 Open ADR was another one we just reviewed.
- 7 So we've got a lot that we've done. And
- 8 you can then look and see what are some of the
- 9 security recommendations that we've made and that
- 10 the standards bodies are now taking back and
- 11 trying to implement. We've also worked on taking
- 12 a NIST document, a NIST Special Pub 839, which is
- 13 risk management, and working with Department of
- 14 Energy and on NERC to develop a guide for the
- 15 electricity sector using that NIST document,
- 16 taking it apart and turning it into something that
- would be unique to the electricity sector. So
- 18 we're taking away all that federalese, the normal
- 19 federal terminology that you get on the NIST Pubs
- and making it something that's more for the
- 21 electricity sector.
- We're also working on a case study where

```
1 we actually are taking that user, that risk
```

- 2 management guide and applying it to a fictitious
- 3 electricity company. So I think it's Papaya
- 4 Power, and it's quite good, so we're hoping to get
- that published very soon, because that's a real
- 6 world kind of implementation of how you would go
- 7 about addressing risk in your utility. We've also
- done some white papers, we've taken a look, we
- 9 actually collaborated with DoE's NESCOR SEP 1.0
- 10 and 1.1 mitigation strategy. That protocol had
- some cyber security related issues and so we came
- 12 up with ways that you could mitigate some of those
- 13 cyber security vulnerabilities.
- And then, lastly, and there are more,
- but I'm only going to go on a few, was a white
- 16 paper on automating Smart Grid security, and this
- is all about the Smart -- or a Secure Content
- 18 Automation Protocol, and it's something that we're
- doing at NIST called SCAP. And SCAP is really the
- 20 way that we, within the federal government are
- 21 facilitating continuous monitoring, or situational
- 22 awareness of all our IT systems. So it's a

- 1 protocol where the different tools can talk
- 2 together using a standard protocol, something that
- 3 we're very interested in from a Smart Grid
- 4 perspective. And so we wrote a white paper on
- 5 that.
- 6 And that's just a few. We've done
- 7 things in privacy that are numerous, as well. So
- 8 some NIST Smart Grid related projects, so those
- 9 were the SGIP where NIST is playing a key role as
- 10 the chair of that committee, but we've also got a
- lot of, we are doing some things within NIST. So
- one of them, right now, is we're partnering with
- the Department of Energy and their Oak Ridge
- 14 National Laboratory. What we've done is we've
- taken the NEMA upgradability, AMI upgradability
- standard, so we've taken that standard and written
- a NIST IR on how you would test to it. So we've
- 18 taken the standard and written test cases on how
- 19 you would test a meter implementation, so an AIM
- implementation, and how you would test to see if
- it is meeting that NEMA standard.
- 22 And what we've done is, we're now

```
1 working with Oak Ridge on implementing that test
```

- 2 suite on an actual AIM implementation to see,
- 3 then, if they, the NIST IR is written accurately
- 4 from a test criteria perspective. But then, more
- 5 importantly, to go back to the C 12, the ANCC 12
- 6 standards group, who are ultimately going to be
- 7 revisiting that NEMA standard, to ensure that,
- 8 when we were testing this standard, what was
- 9 missing, what needed more work. It would have
- 10 been nice if we would have tested security in this
- 11 area, or it would have been great for the standard
- 12 actually had these things in addition.
- So this is a great way of informing the
- standards body, who is going to be revising the
- standard, of the additional things that the
- 16 standard should really obtain. So it's a great
- 17 project, and it's going along quite well. Another
- thing we're doing is we're putting to the a test
- 19 bed at NIST on cyber security. It's a cyber
- 20 security telecommunications test bed, so that's
- 21 just getting started. In fact, they're still
- taking out the walls, so we're not anywhere near

- 1 there. And then one other item that you may or
- 2 may not be aware of is the executive order.
- 3 So, back in February, and I know, Samir,
- 4 you're going to talk about it a little bit more,
- 5 but back in February, the President issued an
- 6 executive order on securing the critical
- 7 infrastructure, the cyber security of the critical
- 8 infrastructure, and tasked NIST to develop a
- 9 framework, and we had something like 240 days to
- do it in. So we have been going, working quite
- diligently, we've held a workshop just last week
- 12 -- well, I'll backtrack. We actually, in
- 13 February, put out a request for information to the
- 14 public asking, we had about 30 questions on what
- you're doing, what's important from a critical
- 16 infrastructure perspective and cyber security, and
- 17 we received over 260 responses back. Some a
- couple pages, many in the 20, 30, 40 pages, and
- some in the 100 pages of responses back to these
- 20 questions.
- So we've taken those, analyzed those,
- 22 came up with some themes, and then had a workshop

```
1 just last week where we had over 420 critical
```

- 2 infrastructure participants or stakeholders attend
- 3 where we went through our analysis of our, of
- 4 those requests for information responses, and came
- 5 up with four tracks that we had. And we split
- 6 everybody up in working groups and came up with
- 7 the business of cyber risk, the threat management
- 8 track, a dependency and resiliency track, and then
- 9 progressive cyber security, or what we like to
- 10 call it is the basic hygiene and maturity.
- 11 Anyway, those four tracks were what we were
- meeting on and delving deep with the members, or
- 13 with the participants. So now we're going to be
- having, powwowing tomorrow, actually, and we're
- 15 going to be developing this framework, an outline,
- and it will be a fleshed-out outline of what this
- 17 framework we believe should look like based on the
- 18 workshop that we had last week.
- 19 These themes will come up with best
- 20 practices and standards, so we'll see. The next
- 21 workshop is going to be held, and with this
- 22 executive order, it actually said that NIST, you

- 1 must work with the private sector, this isn't for
- 2 you to go off and do all by yourself. So we're
- 3 having to convene with the private sector, so
- 4 we'll be having our next workshop to go over this
- 5 outline in San Diego July 10th, 11th and 12th. So
- 6 that will be the next one, and then in September
- 7 we'll hold the final where we'll have the actual
- 8 document, the straw man. And, again, everybody
- 9 will come together, and anybody is invited to look
- 10 at this straw man and help us finalize it at the
- 11 very end. So that's kind of the path forward for
- 12 that.
- 13 And then some potential future work.
- 14 SCAP, as I mentioned a minute ago, is something
- that we're really wanting to pursue, so I suspect
- that that will be one of the areas that you'll see
- 17 NIST delving into. We, the whole lightweight, low
- power crypto is another one that we feel very
- 19 strongly that is needed, especially like in the
- 20 metering, where you want to have encryption, but
- 21 the devices themselves can't really support that.
- We also are working with Brazil's Inmetro, which

- is sort of a sister agency to NIST, on developing
- 2 additional AMI security failure scenarios, and
- 3 then, now, the actual mitigation and how you would
- 4 mitigate these scenarios, from a cyber security
- 5 perspective.
- 6 And then another one, probably not until
- 7 the beginning of the fiscal year, but another one
- 8 we'd like to work with the Department of Energy on
- 9 would be on supply chain. So I think that's going
- 10 to come out from this executive order, and all the
- work we're doing, but this will probably be a gap
- 12 that we're going to see that we need more guidance
- in supply chain. So this might be a natural fall
- out for us to work together on that.
- And I think that's it for me, and I
- guess we're going to do questions at the end, yes?
- 17 Okay. Very good, thank you.
- MR. PETERS: Marianne, thank you.
- 19 (Applause) And thank you for the outstanding work
- you've done at NIST and the support you've given
- 21 the private sector, it's much appreciated. Our
- 22 next panel list will be Jason Christopher from the

- 1 Department of Energy.
- 2 MR. CHRISTOPHER: I didn't bring my
- 3 glasses, but I brought water, which is equally as
- 4 important for me. My name is Jason Christopher,
- 5 thank you very much very having me today. I'm not
- 6 going to be speaking about all of the things that
- 7 OE does in cyber security, there are a lot, but I
- 8 will be speaking about the one piece that Chris
- 9 already alluded that I'll be taking over, which is
- 10 the Electricity Subsector Capability, Cyber
- 11 Security Capability Maturity Model, which is a
- mouthful, so just say ES-C2-M2, makes life a lot
- easier.
- So, to give a little bit of background,
- this is an administrative-led, this is led by DoE
- with collaboration from both private and public
- 17 sector. The challenge was to develop capabilities
- and manage dynamic threats, to understand the
- 19 cyber security posture of the grid. The approach
- 20 that was taken was to actually develop a maturity
- 21 model in order to measure these capabilities. The
- results were a very useful tool, and I'll go

```
1 through exactly what that looks like, to be able
```

- 2 to let a utility sit down, have the discussions
- 3 and the dialogue, go through and look at metrics
- 4 to see where you are in terms of maturity for your
- 5 cyber security capabilities.
- 6 The project was kicked off in January of
- 7 2012, and by April of 2012, there were 17 pilots,
- 8 and by May of 2012, the document was released.
- 9 So, in terms of actually producing something in a
- 10 quick time span, the team did a fantastic job of
- 11 giving something that was both timely and useful
- 12 for industry. The future objectives that we'll be
- looking at is strengthening the cyber security
- 14 capabilities. One of the things that I'm
- 15 emphasize is lot is that we are talking about
- 16 maturity of the capabilities, and one of the
- 17 things we're looking at in the future is where is
- 18 the adequacy and the strengthening, the weaknesses
- and the prioritization that comes with that.
- In order to do that, we need
- 21 benchmarking. That's one thing that utilities
- have been asking for, they've been saying, well,

- okay, now that I've been doing this facilitation,
- where do I lie, how do I compare? Those are some
- of the things we're going to be looking at in the
- 4 future. And also, with that, comes sharing the
- 5 knowledge of if people are at a higher maturity,
- 6 well, would they be able to provide insight and
- 7 input to somebody who may not be as mature in a
- 8 certain capability. So, I'm putting some screen,
- 9 I don't want people to have their eyes glaze over
- or get overwhelmed because there's ten things on
- 11 the board. There's a lot.
- 12 However, what I will tell you is that,
- when you do facilitation, we cover all of this in
- 14 one day. This is very different than other cyber
- 15 security test audits that are out there which
- 16 could take on the period of weeks. So, in terms
- of sort of the bang for your buck, the gut check
- 18 of where you are, to be able to set aside the time
- 19 and capabilities for one day and the resources to
- do this, you're covering these ten different
- 21 domains. If you talk to your cyber security
- 22 staff, this isn't going to be anything that is

- 1 mind blowing, that seems like a curve ball. It's
- 2 things like risk management, things that we
- 3 actually just started, Marianne discussed, that
- 4 they were talking about for Smart Grid cyber
- 5 security.
- 6 We baked in everything that has been
- 7 learned from other standards, but also threats and
- 8 vulnerabilities that we're aware of during the
- 9 creation of this project. So I'm not going to go
- through, necessarily, and list all these things,
- 11 but this is really kind of the basic where you're
- 12 looking at when you're developing your models and
- where you want to be for cyber security. So,
- really quickly, now that you've seen the ten
- things that we're going to be looking at in terms
- of domains, where do we rank people. And it's
- 17 this thing of looking at your maturity levels, the
- 18 maturity indicating levels, MILs, you have three
- 19 levels. Technically four, because there's a zero
- level when you're not doing anything.
- 21 In these cases, what you're looking for
- is whether or not practices have actually been

```
initiated, meaning that they're on an ad hoc
```

- 2 basis. If they are on an ad hoc basis, that would
- 3 be kind of determined by your resources, who's
- 4 doing the initiation. So it may vary from person
- 5 to person if you don't really have a set up,
- 6 documented practice. So the next part is
- 7 performed, you're documenting that practice,
- 8 you've actually done something more than doing the
- 9 ad hoc, you've had adequate resources applied to
- them. And, finally, we're talking about actually
- 11 managing the practices. So you have the
- documented procedures in place, now you have a
- 13 policy in place that you can compare to, and maybe
- 14 you're doing a review cycle on that.
- So when we're talking about the
- 16 different metrics across those ten domains, there
- are 312 metrics that you're actually looking at.
- 18 This is what we're ending up trying to find out
- 19 from what your maturity level looks like. Another
- 20 thing where -- don't let your eyes glaze over,
- it's really fun. These are donuts. Everybody
- loves donuts. The green donuts -- and, I

- 1 apologize, I'm color blind, so going forward in
- 2 the future, I may work on the green shading a
- 3 little bit. If you're green, whether you've got
- 4 light green or dark green, it means that you've
- 5 achieved that MIL. If you see any red or light
- for red, it means that you're not there yet.
- 7 And the way that you can see it is in
- 8 the key right there, on the bottom there; it is
- 9 fully implemented, largely implemented, partially,
- or not implemented. This isn't a binary test,
- there's no pass/fail, if you're going through this
- and you are, you've got a practice in place, but
- 13 you have some gaps, okay, well, maybe you're
- 14 partially implemented. If you've got some things
- 15 to strive to improve upon, then we could say that
- 16 you'd be largely implemented. And, likewise, if
- 17 you've met everything that's in that metric, then
- 18 fully implemented.
- 19 What I want to capture here is something
- 20 very important, this isn't a one-off test. As you
- 21 hear, whenever you talk to somebody from cyber
- 22 security, there's no silver bullet. This is not a

- 1 silver bullet, but it incorporates into the
- 2 practices, it helps you with your defensive
- 3 posture, it helps you evaluate that. So when you
- 4 perform an evaluation for the ES-C2-M2, you're
- 5 going to see where your gaps are, you're going to
- 6 go back to that wonderful donut diagram, you're
- 7 going to see where your red pieces are, you're
- 8 going to analyze those gaps, and then you're going
- 9 to prioritize.
- 10 So if I go back over here and I look at
- 11 this fictional utility summary score that we would
- give out at the end of the facilitation, you can
- see that, for risk, they're at a MIL one, because
- that donut is all green. But they've got two
- 15 practices that are not implemented that would get
- them to a MIL 2. Should they prioritize that,
- 17 compared to things that are MIL 0, which they're
- 18 at asset in their cyber security program. Maybe
- 19 that's where they should be focusing on,
- 20 especially since you see it's a lightly shaded
- 21 red, they may be closer to doing that. So it
- 22 helps with the dialogue to actually figure out

- where you're going to prioritize next.
- 2 And I also emphasize that, it may not
- 3 make sense for every single utility to be MIL 3
- 4 across the board, this is really something that
- 5 you tailor to yourselves based on your own
- 6 internal discussions and on your own resources.
- 7 So we're not talking about when we say
- 8 benchmarking, comparing a smaller mini co-op to a
- 9 larger customer footprint such as a Con Edison,
- 10 you don't want to necessarily, they're not going
- 11 to have the same resources at play. So in terms
- of what your evaluation will look like, it will
- vary from utility to utility.
- 14 Once you prioritize and plan out how
- 15 you're going to implement something, you can then
- implement to fill those gaps, and then, finally,
- 17 really encourage everybody to go back and perform
- 18 the evaluation again. It doesn't necessarily have
- 19 to be an annual basis, once again, this is
- 20 tailored to what you would want to do, but it
- 21 would be shorter or longer than that to find out
- where it is that you're tracking along and how

```
1 you're getting there. One of the things that we
```

- 2 encourage people to do before facilitation takes
- 3 place is actually figure out where do you want to
- be, or where do you think you are right now.
- 5 The dialogue of where you think you are,
- 6 and then you do an evaluation and you find out
- 7 where you actually are, could spur a lot more
- 8 internal dialogue about where you want to be
- 9 later. A lot of that's an educational for
- 10 utilities that have participated. I'll get back
- 11 to that in one second. So one of the things I
- want to talk about also is kind of the usefulness
- that utilities have seen in this. So far, since
- the pilot programs, we have had roughly a dozen or
- so self-facilitations where we actually go out to
- 16 the utilities and help them with facilitations at
- 17 no cost. We've had over 200 people request the
- 18 tool to use for their own purposes, so it has
- 19 gained traction, we are looking at more people who
- 20 want to do this kind of life cycle analysis of
- 21 where their cyber security capabilities are.
- 22 Lastly, what I'll leave with -- and I

realize that there's a lot of information, so I

1

19

```
2.
       will be here and entertain as many questions as
 3
       people can throw at me. I want to give you a real
 4
       life scenario of when the team had put together
 5
       why you'd have these different ten logical
       domains, what they were there to address. They
 6
 7
       are to address real threats. There was an APT, an
       Advanced Persistent Threat, discovered by McAfee
 8
 9
       in 2011 called Night Dragon. So Night Dragon used
       social engineering techniques, combined with
10
11
       well-coordinated targeted attacks with Trojan
       horses and other malware, so when you look at how
12
13
       that is being reacted to, you can then see where
       you'd want to be with this model, and why the
14
       model would end up helping that. So social
15
16
       engineering.
17
                 And one of the things that the practice
       in the ES-C2-M2, one of the metrics is having the
18
```

with that being said, if you're getting a phone
call that says that I'm from IT and I need to know
your password so that I can update your account,

awareness based off your own threat profile. So,

```
1 maybe one of the things you bake into your
```

- 2 situational awareness is that IT will never ask
- 3 you for your password. It's things like that that
- 4 kind of start the dialogue, and so that's captured
- 5 in the work force domain. Likewise, you have very
- 6 simple things like known vulnerabilities and lack
- of awareness, information sharing, being a part of
- 8 the ESI set, getting their alerts, ICS or US-CERT.
- 9 So all of this is kind of baked into the
- 10 model, is what I'm trying to get at, and it's
- 11 based off of real life things, it's not sort of an
- 12 esoteric or existential exercise, there is
- tangible results that can be played, here. With
- that, the model is online, it's really available.
- 15 If you e-mail ES-C2-M2@DoE.gov, the e-mail goes to
- me and my team, we will happily answer any
- 17 questions you have on it. Likewise, we provide
- 18 the tool kit, which is more than just a model that
- 19 you see online. The tool kit itself will give you
- 20 the lovely donuts when you fill out all the
- 21 questions, so you can find out how much green or
- 22 red you have in your donuts.

```
1 We provide that so you can go off and do
```

- 2 your own facilitations, do your own life cycle
- 3 analysis, but, again, we offer these free
- facilitations, we'll go out and we'll help you do
- 5 the exercise itself. Thank you very much.
- 6 (Applause)
- 7 MR. PETERS: Thank you, Jason, and I'm
- 8 sure all of us will never eat Dunkin' Donuts again
- 9 without thinking about cyber, so thank you. Our
- 10 next panelist is Dr. Coles from National Grid.
- 11 I've had the privilege of working with Dr. Coles
- for two years, he is the founder of the North
- 13 American Chief Information Security Officer Forum
- that he founded two years ago, and marshaled
- industry leaders across the utility sector to talk
- 16 about subjects such as cyber threats, risk, NERC
- 17 CIP, and he's done an outstanding job at leading
- this forum and helping us.
- 19 He has brought some of his best
- 20 practices from the U.K. over to the U.S., and I
- 21 find it ironic that somebody from the U.K. had to
- form a North American alliance to get us all

- 1 moving in the right direction.
- So, with that said, welcome, Dr. Coles.
- 3 DR. COLES: Thank you, Chris. Chris
- 4 asked me to talk about a real life case study of
- 5 (inaudible). So, just a little bit of context for
- 6 those that don't know, National Grid operates in
- 7 the U.S. and the U.K. In the U.S., in the
- 8 Northeast, we deliver and transmit gas and
- 9 electricity for quite a big chunk of the
- 10 Northeast, and all the generation for Long Island.
- In the U.S., we're the monopoly transmission
- 12 system operator for electricity, and we transmit
- and distribute gas to about a fifth of the
- 14 country, about 8 million customers in the
- northeast of the U.S., and about 18 thousand
- 16 staff, so I think we're the second, I think we're
- 17 still the second biggest investor and utility in
- 18 the U.S.
- 19 So that's the context. So, in terms of
- 20 enterprise security management, everything we do
- 21 is driven by risk. My team is dedicated to risk
- 22 management, so we have a systematic process of

- looking at threats, looking at incidents,
- 2 understanding the business and how it's changing,
- 3 which may introduce risk or it may mitigate risk
- 4 in its own right. Similarly, technology and
- 5 technology changes, which, again, new technologies
- 6 may introduce risk or may, indeed, mitigate risk.
- 7 And then compliance, which is driven by
- 8 legislation and regulation.
- 9 So those are all the things that we look
- 10 at when trying to understand risk, internal and
- 11 external, or they provide us with an independent
- view of all of that as well, which goes into the
- formula. And then the outcome of that formula is
- our understanding of risk, and if we think that
- 15 the risk is too high, given our risk appetite, and
- 16 that drives the program for the things that we do
- 17 to reduce risk. Otherwise, then, we're happy to
- 18 look at the risk and accept it, put it on the risk
- 19 register and regularly review it.
- 20 So that's what my team does, in the
- 21 bottom left hand corner. I joined the
- 22 organization three years ago from the financial

2. for Meryl Lynch before this job. And I guess the 3 trigger for change for us was that my boss joined 4 the organization, he's the CIO about six months 5 before me, he was expecting to see -- he came from finance, Thompson Reuters, and I think CIO for the 7 Royal Bank of Scotland before this, and various 8 other bank jobs. He was expecting to find a big, 9 complex cyber security team with the senior person 10 having it out, and he just didn't find that, he found a very small team, half a dozen people, low 11 level, very buried, very far down within the IT 12 13 organization. 14 So his challenge to me was to build a 15 team, which we've done over the last three years, to getting on for 14, my team now. We cover 16 governance, risk and security within IT within IS, 17 investigations and threat management, I've got a 18 19 group that are specialists, security subject 20 matter experts which get involved in all the

systems change and systems development we

undertake, making sure that when we buy or when we

sector, I was Chief Information Security Officer

1

21

- 1 build systems, we ask for security and we get what
- we ask for. I've got a group responsible for
- 3 strategy, architecture and policy, a group to face
- 4 off against the businesses so that we can
- 5 articulate technology risks to the businesses in
- 6 such a way that they fund, where appropriate, the
- 7 changes we need to reduce the risks, and then a
- 8 very small privacy team.
- 9 We built a risk management and reporting
- 10 structure around the activities that we undertake,
- 11 so we have committees in the U.S. and the U.K.
- because our businesses are quite separate, they
- 13 are run semi autonomously. We have regional
- security resilience committees which look at all
- 15 the risks and make the decisions about the
- 16 appetite for risk, and then they report up into a
- 17 global risk and business risk. And a resilience
- 18 committee that reports through to the exec and
- 19 through to the board. So I get to address the
- 20 board roughly about twice a year, the full
- 21 executive committee roughly three or four times a
- year, and on a monthly basis the U.K. and the U.S.

- 1 resilience and security committees.
- 2 So that's the overall structure. When I
- joined the organization, the challenge from my
- 4 boss was to answer the question, how secure are
- 5 we. Very large, very complex organization, very
- 6 difficult question to answer, actually. The way
- 7 that I chose to do it was initially through a
- 8 whole series of workshops, so I ran 33 workshops
- 9 covering all business areas, all asset types by
- 10 getting together business people with IT people,
- 11 with risk people, with audit people, and we
- 12 brainstormed the threats, we brainstormed the
- vulnerability of those assets to those threats, we
- 14 brainstormed the current level of control, and
- then we looked to see if there were any gaps and
- what we could do to close those gaps.
- 17 That was actually quite a cathartic
- 18 process for the National Grid, nobody ever got
- some of these groups together before, and we found
- that individual people had worries and concerns
- 21 that they've never been able to tell to get on the
- 22 table. We found that individuals had part of the

- 1 picture, but actually had never spoken to some of
- 2 their counterparts that had the other part of the
- 3 picture. So actually getting people together was
- 4 quite a good sort of cathartic process, and doing
- 5 it in a bottom-up way also got the buy in for the
- 6 things that we needed to do and the momentum to
- 7 really carry the program forward.
- 8 We looked at the threats to the National
- 9 Grid, we conceptualized the threats in two ways;
- 10 we conceptualized it in terms of causes and
- 11 effects. So causes or the threats, we look at
- malicious actors, and we look at benign factors
- which could give rise to threats. So the
- 14 malicious actors, we look at foreign nation states
- looking to steal intelligence for espionage, the
- gain or benefits of companies operating in foreign
- 17 countries. We look at rogue actors, rogue nation
- 18 states looking to cause damage, we look at
- 19 criminals, criminals looking to steal data
- 20 information that could give them financial
- 21 advantage.
- 22 We look at terrorists and radicalized

- 1 insiders that could look to cause damage
- 2 internally with their national grid, people who we
- 3 employ, or contractors or third parties. And then
- 4 -- so that's the threats. If you look at the
- 5 outcomes or the impacts, then we track the two
- 6 main risks that we have, which is a catastrophic
- 7 cyber security breach of critical national
- 8 infrastructure systems. So that's really the
- 9 systems that run electricity and gas, essentially.
- 10 And we look at the (inaudible) sub security breach
- of business systems and data. So, without the
- 12 National Grid business systems, it's going to be
- very difficult to operate the critical national
- infrastructure systems, because there's a
- 15 dependency there.
- And then a new risk that we haven't
- 17 really fully got our heads around at the moment,
- which is IT embedded in operational technology.
- 19 So this is something that's really crept up on us
- 20 over the last, sort of 10, 20 years, really. And
- 21 the equipment that we use out in the field 100
- years ago would have been all mechanical, 50 years

- 1 ago it was electromechanical that would serve as
- 2 motors and analog systems controlling that. And,
- 3 slowly, over the last 10 or 12 years, it's slowly
- 4 being converted to essentially PCs and servers.
- 5 So you buy a substation these days, and,
- 6 essentially, you're buying a data center, a fully
- 7 fledged, fully equipped IT data center with modern
- 8 technology in it.
- 9 We've got a lot of legacy equipment in
- 10 National Grid that's been built up over that
- 11 period when we weren't really sure, I think
- 12 historically, what we were buying. And, to be
- frank, we didn't ask for any security because we
- didn't realize that it needed it all those years.
- 15 So this is something that sort of crept up on us
- that we're giving quite a lot of attention to at
- the moment, just to try and understand what that
- 18 risk is and what the size of that risk is. That's
- 19 led to the overall program of investment. So the
- 20 improvements that we've made over the last couple
- of years, and we continue to make, we're investing
- in end point security, shared information, network

```
1 security, access control and some specific
```

- 2 improvements in those systems that run the
- 3 electricity and the gas networks.
- 4 And that was spread over a number of
- 5 programs and foundational things that we just
- 6 needed to get on with and do quickly, make some
- 7 improvements in, and tactical things which were
- 8 short term, but which really gave us a measure of
- 9 protection while we were building a bigger
- 10 strategic, long-term remediation program. That
- 11 program is about half way through at this point.
- We're tracking the risk production, we got the joy
- of doing the workshops, so that very granular
- level, of course, is where a huge amount of data,
- so we can very finely track the risk reduction
- that we get through the entire program.
- 17 We recognize that we are not an island
- 18 -- clearly we're an island, the U.K., within the
- 19 U.S. We recognize that we work with other
- organizations, as Chris kindly mentioned, I've
- 21 been trying to convene my peers and get some of my
- 22 peers together to work cooperatively together. I

- 1 find that very useful as a check and balance on
- what I'm doing, and hopefully, others find the
- 3 same. So we share information amongst ourselves
- 4 about threats, about our programs, about what
- 5 we're doing.
- I think we do need better intelligence
- 7 and coordination from the intelligence
- 8 communities, we're quite good at sharing
- 9 information ourselves, but we don't have access to
- 10 that intelligence community readily. It's a
- 11 little ironic, my English accent, so clearly, I'm
- 12 a foreigner. My boss is a CIO who is a foreigner,
- 13 his boss is the CEO, he's a foreigner, so the
- 14 three people that could actually spend money based
- on intelligence given to us, we're not allowed to
- know, because we're foreigners. So I have to have
- 17 my staff security cleared in the U.S., and they're
- 18 not allowed to tell me some things, but, you know,
- it's not an ideal situation, but we get by.
- 20 We need disruptive capabilities, we, as
- 21 a commercial, as a private organization, we can't
- 22 disrupt criminals, we can't go out and attack

- 1 people, it's against the law, for one thing. So
- if we're being attacked, we can defend ourselves,
- 3 but we can't respond or retaliate. We do need a
- 4 regulatory environment that allows us to invest
- 5 nimbly in security, the threat is changing very
- 6 rapidly in cyber security. So when I joined the
- 7 organization, there were very, very rare the
- 8 reported incidents, very, very few cyber security
- 9 incidents. We're now finding that we are
- 10 regularly under attack, as are our peers, and
- 11 that's regularly being reported in the press, as
- 12 I'm sure you all see.
- We need, we do need a regulatory
- 14 environment that allows us to very quickly react
- and direct our investment dollars to defending
- ourselves, which we don't have at the moment, I
- don't think. And we do need facilitated
- 18 coordination of incident response across
- 19 government and business. And that exists to a
- 20 certain extent, and I think the Obama Executive
- 21 Order will certainly help to improve that. What
- we don't need, we don't need forced disclosure of

- 1 incidents, because that in and of itself can lead
- 2 to us disclosing vulnerabilities that other people
- 3 can take advantage of.
- 4 We don't need more standards, audits and
- 5 compliance-based rules, we've got plenty of those
- 6 through NERC CIP. Ironically, historically with
- 7 the National Grid, that's actually led to us
- 8 holding back investment in some areas because
- 9 where NERC CIP defines that we must do certain
- 10 things to protect the bulk electric system, then
- 11 historically, management have said, well, if
- 12 that's what FERC and NERC requires, then that's
- 13 the minimum, then that's also the maximum, that's
- the only thing we'll do. So, historically, those
- 15 standards have actually held back investment for
- 16 us.
- 17 And, finally, sanctions for infringement
- of the rules don't help, either, so where you're
- 19 forced to disclose incidents and there's sanctions
- 20 for not doing so, you tend to find that lawyers
- 21 crawl all over everything before anything can be
- 22 released, because it must be declared by a lawyer

- 1 incident. So, again, ironically, where you're
- 2 forced to disclose incidents, actually, in some
- 3 respects, it limits the amount of information
- 4 that's disclosed and actually reduces information
- 5 sharing rather than increasing it, in some
- 6 respects.
- 7 So that concludes the thoughts I have.
- 8 Chris?
- 9 (Applause)
- 10 MR. PETERS: Thank you, Dr. Coles. And,
- lastly, we have Samara Moore from the National
- 12 Security Staff.
- MS. MOORE: Thank you. Good afternoon,
- 14 all of you. So I am the one at the end, and the
- one with no slides, so I hope to keep you engaged.
- 16 So I appreciate the opportunity to talk with you a
- 17 little bit this afternoon about the White House's
- 18 efforts related to critical infrastructure cyber
- 19 security. At the White House National Security
- 20 Staff, I'm on detail for two years, or a year and
- 21 some time, and my role is Director of Critical
- 22 Infrastructure Protection, and given the activity

```
1 that we have going on right now, my main role is
```

- 2 the White House lead for implementation of the
- 3 executive order. So I am living and breathing it
- 4 right now.
- 5 So I wanted to talk to you a little bit
- 6 about that, and really, the combined approach
- 7 that's being taken to address the cyber threats
- 8 that are faced by the critical infrastructure,
- 9 really focusing on the combination of information
- 10 sharing and adoption of cyber security practices.
- 11 So, first, to start out, a little bit about the
- 12 cyber security challenge that we are faced with.
- 13 As organizations realize the efficiencies from
- information technology, we're seeing increased
- reliance on information systems and the internet
- 16 to accomplish core business functions or to
- 17 achieve mission objectives.
- 18 A good example of this is grid
- 19 modernization, that's definitely leveraging
- technology, but we're also seeing that it is
- 21 opening up to new threats that, really, we haven't
- 22 had to focus on or deal with before, and these are

```
1
       threats that need to be managed. So the trend
 2.
       that we're seeing is, and you guys, I'm sure, have
 3
       seen articles in the paper on this, or even heard
 4
       speeches and presentations on this, but we're
 5
       seeing that threats are continuing to increase in
       intensity, and increasing in complexity, but also
 7
       the skill set required to be able to carry out
       such attacks is not as high as it used to be.
 8
 9
       We're seeing that the accessibility of tools and
       resources to carry out some of these attacks is
10
11
       much more open and available than it used to be.
12
                 Also, we're seeing that the impact of
13
       the cyber threats is on, could be potentially on
14
       your reliability, right. So there may be concern
15
       of impacting productivity and performance, but
16
       we're also seeing an impact that may not be
       immediately apparent, and that's a concern that
17
       we're very much aware of, related to economic
18
19
       impact, and that's on our intellectual property.
20
       So, as we're working on innovative technology and
21
       ways, we're really concerned about our
```

intellectual property, theft of business-sensitive

```
1 or proprietary information, as well.
```

- 2 So, to address these concerns, one of
- 3 the activities that the President is focused on is
- 4 the Executive Order. And, as Marianne mentioned,
- 5 in February, Executive Order 13636 was signed, and
- 6 the intent, the goal was to help strengthen cyber
- 7 security protections for critical infrastructure.
- 8 The Executive Order is designed to increase the
- 9 level of core capabilities that our critical
- 10 infrastructure has in place to be able to manage
- 11 these cyber threats that are faced, that we're
- 12 faced with. And it does so by focusing, really,
- on three key areas; the first of which is
- information sharing, the second is adoption of
- 15 core cyber security practices, and then the third
- is insuring that all of the actions done in this
- 17 space are done with strong consideration and
- 18 protections of privacy and civil liberties.
- 19 So we see a clear role for government in
- 20 increasing cyber protections by sharing and
- 21 leveraging those unique resources that the
- 22 government has to partner with critical

- infrastructure owners and operators in managing
- 2 cyber threats. And we're doing that now, there
- 3 are existing programs in place to do that now, but
- 4 we want to do more of it. In particular, if we
- 5 talk about information sharing, over the years,
- 6 there are several programs, we take for example
- 7 both within DoE and within DHS in sharing
- 8 information, we've shared lots of technical
- 9 information, threat information. What we want to
- do, though, is do more of that, we want to do a
- 11 better job of that.
- 12 And so, we are working with the
- information, the intelligence providers to make
- 14 sure that we're getting information out to
- 15 critical infrastructure stakeholders in a timely
- 16 manner and in a manner or a way that's useful to
- 17 you, and to the degree that we can provide
- 18 information at an unclassified level, we're trying
- 19 to do much more of that in a useful way. Not to
- 20 state that we don't recognize the need for
- 21 clearances, and so expediting the provision of
- 22 clearances is part of the activities within the

- 1 Executive Order, as well, and DoE and DHS specific
- 2 to the electricity or the natural gas sectors are
- 3 currently working on processes for that.
- We also, as I mentioned, are committed
- 5 to making sure that we address privacy and civil
- 6 liberty concerns, in particular as it relates to
- 7 information sharing, privacy and civil liberties
- 8 is an area that represents a challenge that has to
- 9 be addressed for us to be able to share
- information to the degree that we should, that we
- 11 really need to, to impact this problem. And so
- 12 DHS has the lead in working and coordinating with
- 13 the agencies to make sure that privacy is
- 14 addressed. And then, finally, we're working with
- 15 the private sector to develop a framework of core
- 16 practices to really, again, work to develop these
- 17 capabilities, those core set of practices that all
- 18 organizations should have in place to some degree
- 19 to manage cyber risk.
- 20 Underscoring this framework, and it was
- 21 mentioned in the remarks earlier, is really a
- 22 recognition of the need for cost effectiveness,

```
1 and making sure that, in this framework, it's
```

- 2 considering cost and the impact on owners and
- 3 operators, and also looking at practices that are
- 4 flexible and scaleable and can be applied to
- 5 different organizations based on their
- 6 organizational context and their risk profile. So
- 7 Marianne gave us a description of the framework
- 8 and the process that NIST is going through to
- 9 develop it, from our perspective, and NIST is
- 10 working really hard to do this, the framework
- 11 really should leverage existing industry best
- 12 practices and guidelines in this area, where
- appropriate, and incorporate those core security
- measures.
- What I'm referring to are these common
- industry practices that many firms are doing
- already, either in whole or in part across the
- 18 organization. A great example of this is the
- 19 ES-C2-M2, the capability maturity model that Jason
- just briefed us on, which really, I look at this
- 21 body, it really leverages a lot of work that
- 22 several organizations here participated and

```
1 engaged in and helped us to develop. In
```

- 2 particular, the framework, you know, there's
- 3 concern on how does this impact existing
- 4 requirements and regulations. The framework is
- 5 not focused on compliance, however, we're working
- 6 really hard to make sure it doesn't undermine
- 7 existing requirements that are in place.
- 8 Also, as we go through the development
- 9 process, we recognize we may identify gaps where
- 10 further work is needed, and we may have
- 11 recommendations for standards bodies to develop
- 12 either standards or guidance in these areas. We
- 13 also understand that, with the framework, so what
- 14 we're focused on is addressing a significant part
- of where we're being impacted by cyber threats.
- 16 We realize that the advanced attack or the
- 17 persistent attacker or the well resourced and well
- 18 funded attacker may still be able to get through.
- 19 Because, again, what we're talking about is cost
- 20 effective flexible core practices.
- 21 However, what we want to do is reduce
- the noise, we want to address those core areas

- that all organizations should be, again, in a cost
- 2 effective and risk based way. That way, we can
- 3 focus our efforts on the more sophisticated
- 4 threats, but then also it causes the attacker to
- 5 have to focus their efforts and work harder. The
- 6 last point that I want to make related to this is,
- 7 is that we're well aware of the interdependencies
- 8 across sectors, and we're looking across the
- 9 critical infrastructure community to have a
- 10 consistent risk based application of cyber
- 11 security risk management.
- We see that this is particularly
- important, you know, coming from DoE, my focus has
- really been on the energy sector. Now that I'm
- 15 looking at all 16 critical infrastructure sectors,
- I constantly hear and I constantly see the
- 17 significance and importance of interdependencies.
- 18 So this is something we're also paying
- 19 particularly important too (sic). So, the impact
- on this body of all the activity I just described,
- 21 I'll sum it up in a couple of bullets. One,
- information sharing. There's sharing going on, we

```
1 already have examples of where we're starting to
```

- 2 improve and increase those processes for this
- 3 body, and I encourage this sector to continue to
- 4 be engaged and take advantage of that.
- 5 There's information sharing forums such
- 6 as the ESISAT, ISC-CERT, the DHS in-kit, those are
- 7 all resources that are available now, that the
- 8 sector should be leveraging. And hopefully, what
- 9 you'll see is continued improvement and refinement
- in information sharing there. And then the second
- area for this group is adoption of practices.
- 12 Many of you are doing some really great things in
- 13 this space, I've worked with you guys or with
- 14 folks in your company, I really encourage you guys
- 15 to continue to partner with us as we develop this
- 16 framework. We really want to get it to something
- 17 that is usable and implementable and could really
- achieve the objectives that I stated earlier.
- 19 So moving away from the EO just a bit, I
- 20 want to talk just a second on legislation. We
- 21 recognize that the Executive Order is not enough,
- there are some real challenges that we have.

Particularly, we mentioned information sharing,

1

22

```
2.
       that could only be addressed through legislation,
 3
       so we're continuing to actively work in this area.
 4
       As it relates to information sharing legislation,
 5
       there are three fundamental priorities that we're
       focused on. The first is carefully safeguarding
 6
       privacy and civil liberties, insuring that we
 7
       preserve the long-standing and respective roles of
 8
 9
       mission, and missions of civilian and intelligence
10
       agencies, and then provide for targeted liability
11
       protections to help enable information sharing.
12
                 It's important to note that, on the
13
       legislative front, information sharing is not the
14
       only part of what's needed, there are other areas
       that we're also looking for to be addressed in
15
16
       cyber security legislation. So, again, continuing
       on with the theme of promoting adoption of cyber
17
       security best practices, updating the laws that
18
19
       relate to federal agency networks, and then giving
20
       law enforcement the tools that they need to fight
       crime in the current age, and creating a national
21
```

data breach reporting requirement.

```
1 So, in conclusion, you know, I'd like to
```

- 2 reiterate that we're really focused on partnering
- 3 with critical infrastructure stake holders with
- 4 owners and operators to work together to manage
- 5 the cyber risk. It's really about risk
- 6 management. And we continue to promote an
- 7 understanding of the threats that are out there,
- 8 but not just the fact that there are threats, but
- 9 really making that link between the business and
- 10 mission functions, the organization's objectives
- in the cyber threats, and making sure that we
- 12 understand what those impacts are so we can make
- informed risk management decisions and investments
- in cyber security.
- So, thank you, and I look forward to
- 16 additional questions. (Applause)
- 17 MR. PETERS: Thank you, Samara. What
- 18 we'd like to do now is open up the floor for the
- 19 committee members to ask any questions that you
- 20 may have based on our panelists' briefings this
- 21 afternoon.
- 22 MR. POPOWSKY: Chris, I think Pat wanted

- 1 to make a couple comments.
- 2 MR. PETERS: Okay.
- 3 MS. HOFFMAN: You guys are going to have
- 4 to indulge me on this one, because I'm passionate
- 5 about this subject. First of all, one of the
- 6 things that we've been driving for and towards is
- 7 a risk based process, and so we had did a risk
- 8 management plan with the electric sector, really
- 9 looking at the governance structure, which goes
- 10 back to how does a utility look at their
- 11 enterprise system and evaluate risk. Because the
- first thing you're going to do is really
- understand the risks, or your perceived risks.
- Now, in my conversations with folks is,
- 15 not everybody interprets risk the same way, or has
- 16 a high or low tolerance for risk. So if you don't
- 17 start at the right level of what do you perceive
- 18 the risks are and your acceptance level of risk, I
- 19 think, especially with the conversation with the
- 20 regulators, you've got to get on the same page of
- 21 -- because you're not going to be 100 percent
- 22 secure. I mean, the investment that's required

- 1 can, you know, get exponential as you get less and
- less risk tolerance, and so we're going to have to
- 3 figure out how to work that conversation, at least
- 4 to get folks on the same page on the risk
- 5 analysis, at least a governance structure.
- I was very appreciative of the
- 7 conversation of having somebody in charge of cyber
- 8 security, from National Grid's perspective, but
- 9 that's one thing to look at as we move forward.
- 10 The second thing is, when we -- so once you go
- from the risk process, then it's going down to
- evaluating your maturity level. And the reason
- that we pushed really hard on maturity level, went
- back to the question of how secure are we. And,
- in my mind, when we were having this conversation,
- it was like, what capabilities do we need to have
- in the industry to demonstrate that we have our
- 18 arms around cyber security. And it was a way to
- 19 say, okay, confidence level, if we're secure, we
- 20 have a good understanding of maturity around cyber
- 21 security, we have good situational awareness, we
- 22 have a strong idea of what the threats are, we

- 1 have role based access, these are all confidence,
- 2 but maturity level in which we hope to guide the
- 3 conversation.
- 4 So one of the things that, when we
- 5 looked at the maturity model was a way for
- 6 everybody to focus how they would represent how
- 7 secure are we. Because I get that question all
- 8 the time, and it would be nice of the community to
- 9 figure out or think about how do we all answer
- 10 that question in the same way, and what are some
- of the metrics. I have situational awareness
- 12 tools, I can have, I have visibility over my
- 13 system, different things, I have role based
- access, so we can kind of go through the process
- of at least representing how secure we are the
- 16 same way. I mean, I'm interested in National
- 17 Grid's perspective on that.
- 18 The other question or the think that we
- 19 looked at with respect to capabilities, and I know
- 20 it's not ideal, but we looked at kind of the
- 21 physical maturity model that some people will have
- developed, and it was done under DHS, but when the

1 conversation becomes more sophisticated, the security experts are able to sit down and say I 2. 3 know the cost effectiveness of a camera versus a 4 fence versus a guard dog, and they can put a 5 weighted kind of assessment of cost effectiveness around those different tools. And one of the 7 things is, we've got to get to that level in the cyber area where we can kind of compare capability 8 A versus capability B, and say, okay, the security 9 10 guys feel that having this type tool is a little 11 bit stronger than having B, and it helps us with 12 that overall long-term investment strategy. 13 So, as I look to develop, or as the 14 industry looks to develop best practices, one of 15 the things that I'm keeping in the back of my head 16 is, really, a little bit of a weighted evaluation on some of those different best practices for cost 17 effectiveness and performance, so that as people 18 19 go forward and say, okay, how do we invest in it, 20 we can have a little bit of a baseline. Supply 21 chain, gosh, that's a big issue, and these guys

can comment, but the frustration thing there is,

```
1 there's a lot of vulnerabilities out there, how do
```

- 2 you prioritize it. The cyber community, if a
- 3 vulnerability isn't fixed because they perceive
- 4 it's a higher risk than the supply chain
- 5 developer, then they disclose the vulnerability
- 6 and they write an exploit on it, and they put it
- 7 on the internet. And, God, we need some better
- 8 kind of, how do I say it, morals or something in
- 9 the R&D community, supply chain community.
- 10 And the question that I have, is there
- some need for disclosure roles within the supply
- chain community and the users, even if it is
- directly between those to disclose any
- 14 vulnerabilities as they're discovered so that the
- 15 utility or the users can better assess their risk.
- 16 Because it's hard for a utility entity to assess a
- 17 risk if they're waiting for some third party R&D
- 18 organization or cyber organization to disclose it
- on the internet, and then have to back it up into
- 20 their processes. So something to think about, I
- 21 wouldn't mind your thoughts on that. But
- determine practices really come into play, there.

```
1 So I guess the last thing that is, I met with
```

- 2 several CEOs, with the Deputy Secretary, senior
- 3 leadership of DHS and DoE, and we've been talking
- 4 around this subject for a while on priority, and I
- 5 guess we put a little bit of a stake in the ground
- 6 saying, okay, out of all the domains of the
- 7 maturity models, what would be the three top
- 8 things that I would want the industry to focus on
- 9 in the near term. And the first one was
- 10 situational awareness and the development of
- 11 situational awareness tools. Because what we
- don't know is hard enough as an industry, and so
- we need to, there's publicly available,
- 14 commercially available tools out there that
- provide great insight, so as a community, as an
- industry, it's how do you want to have the tools
- and who needs to have higher sophistication in
- 18 tools versus some of the basic tools that are out
- 19 there to gain more situational awareness.
- 20 So situational awareness, some people
- 21 call it continuous monitoring. I use those terms
- interchangeably and I probably shouldn't, but so

- 1 that's priority one. Priority two goes back to
- what Samara talked about Merwin's talked about it,
- 3 is information sharing, making sure that the
- 4 information is shared between like entities, so
- 5 IOU to IOU, and regionally sharing of information
- 6 because something may be seen in one utility in
- 7 the Washington, D.C. area may be seen by others.
- 8 So how do you create a forum where you can share
- 9 information. But also between the federal
- 10 government and industry, back to what Samara said,
- 11 and making sure it's actionable, and how do you do
- 12 care lines and the architecture to make sure that
- it's actionable.
- 14 The third thing is actually running
- through incident management, but really going
- 16 through and taking a look at the exercises that
- are out there and making sure that we have some
- 18 procedures in place to manage incidents. The
- thing that we're going to have to get sharp on
- 20 real quick is how much, how many resources do we
- 21 need in looking at forensics analysis or looking
- 22 at other support infrastructure to manage a cyber

- 1 incident. So that's another thing that I've asked
- 2 the community to take a hard look at, and relate
- 3 that to exercises. So I just wanted to put that
- 4 on the table of what some of what's being remarked
- on. And I guess the last point is our high factor
- 6 R&D activities.
- 7 What should we be working on that, I'll
- 8 say disrupt them, but I don't think it's, for
- 9 cyber security, everything's armor plating it. If
- 10 it's anything, it's what type of approach should
- 11 we look at with how we're operating the system,
- 12 what insights can we gain from sensors and
- 13 separate data measurements, characteristics on the
- 14 system to have redundancy and have the ability to
- 15 represent the security of the industry.
- So I'll leave it at that, but I just
- wanted to add that to the conversation.
- 18 MR. PETERS: Thank you, Pat. Robert,
- any thoughts on a couple of themes Pat touched on?
- DR. COLES: Is that good, okay. Yes,
- 21 you mentioned processes of risk assessment, risk
- 22 management, I completely fully agree with that. I

- find the current regulatory structures we have
- 2 around NERC CIP really pull directly against that.
- 3 It's, within National Grid historically, it's held
- 4 us back from looking at the risks, it's given us a
- false sense of reliance that if it's mandated by
- 6 NERC, if it's within the set standards, then
- 7 that's both the minimum and the maximum that we
- 8 must do. And if that's mandated, then that must
- 9 be good for us, therefore, we'll not bother to do
- 10 anything else.
- 11 So you talked about minimum standards
- and what everybody's doing, that's really on the
- 13 control space. What we kind is that you can't
- 14 benchmark risks because the risks are completely
- unique to National Grid. The impacts to us if
- National Grid goes down, the threats to us, there
- may be some commonality in the threat, but
- 18 certainly, the impacts and the probability of
- 19 attack are completely unique to us, you can't
- 20 benchmark risk. And, therefore, I really quite
- 21 strongly agree, I strongly would like to suggest
- 22 that the role of the regulator should be around

```
1 assessing the proficiency of the organization
```

- 2 around understanding its risks, and then managing
- 3 those risks, and then challenging the controls
- 4 decisions. And then as they go around lots of
- 5 different organizations in the country,
- 6 normalizing and saying, well, if your peers are
- 7 doing that, why are you doing that.
- 8 And then you can have a grown up
- 9 discussion with the regulator and you can say
- 10 we're not doing that because we're managing our
- 11 risks, and that risk, we don't need to do that
- because we're managing that risk in a different
- 13 way. And I think the current regulatory
- 14 structures that we have don't facilitate that
- 15 conversation. They're very black and white, and
- it's very much down to if it's mandated in NERC
- 17 CIP, you must do it, and if it's not, then nobody
- 18 does it in the industry.
- 19 MR. PETERS: Thank you, Robert. Bob?
- 20 MR. CURRY: Who's running this meeting?
- MR. POPOWSKY: Yeah, right. Chris, do
- 22 --

```
1
                 MR. CURRY: Robert --
 2.
                 MR. POPOWSKY: -- you want to take the
 3
       questions and --
                 MR. PETERS: Yeah, go ahead, Mr. Curry.
 4
 5
                 MR. CURRY: This is Bob Curry, former
       regulator in New York and I'm quite familiar with
 6
       your activities both in that state as well as New
 7
 8
       England. And I look at the New York staff, which
 9
       is good sized, 565 or 70 people, but the folks who
10
       are assigned this task are nowhere near as, how
11
       shall I put it, up the learning curve as you all
12
       are. So when you're relating on the distribution
13
       networks, you're dealing with the states as
14
       opposed to the transmission that you deal with in
15
       the U.K. and the transmission you deal with here.
16
                 Do you think there's adequate education
17
       at the regulator level, is that something that the
       DoE might be able to enhance and give you folks
18
19
       that you can have the all the conversation you
       alluded to with, because they have matured a great
20
       deal in a short period of time thanks to
21
```

22

education?

```
DR. COLES: Yes, I do, and I'm doing the
```

- best I can to educate, certainly, the state level,
- 3 I'm seeing Masti Eudora Friday, actually. And
- 4 your PSA do have got a good understanding at the
- 5 state level of cyber security, and they've
- 6 recently conducted an exercise to look at
- 7 strategy, cyber security strategy, which was a
- 8 very thorough review. So I think it's patchy.
- 9 Yes, absolutely, I think there's a need to
- 10 increase the level of skill within those
- 11 organizations.
- The difficulty, I guess, would be how do
- 13 you recruit senior expensive experts into an
- organization like that, how do you keep them busy,
- how do you give them a career path, how do you
- 16 keep them. So I guess, realistically, they could
- 17 be brought in from consultancies and from external
- organizations, I guess, is the issue with that.
- 19 MR. CURRY: Or, maybe in New England, we
- 20 could get Gordon to socialize the cost. He's not
- 21 paying attention, but -- (laughter)
- MR. PETERS: Yeah. We've got a question

- 1 from Granger.
- 2 MR. MORGAN: Yeah, actually a comment
- 3 and then three points. I mean, my principle
- 4 concern in this space is the reliability of the
- 5 bulk power system. And the problem is, of course,
- 6 we have to take the problem, think things apart.
- 7 I mean, cyber security also applies to smart
- 8 meters. I don't much care, personally, although I
- 9 understand that, if you're trying to collect
- 10 bills, you do care about hacking smart meters,
- their reliability of the financial and billing
- 12 systems.
- 13 And unless they're interconnected to the
- 14 SCADA in some way that they shouldn't be, that's
- not likely to cause problems with the bulk power
- 16 system, that's going to be similar to the sorts of
- 17 problems that all major firms face. So let's stay
- 18 focused for a moment on the bulk power system.
- 19 And so my first comment is, we need to be really
- 20 careful not to get overly fixated on cyber attacks
- on the bulk power system at the expense of
- 22 physical attacks. I mean, I don't know how to

- 1 bring the power system down for weeks and weeks or
- 2 months with a cyber attack, I know how to do it
- 3 easily with a physical attack, and so one does
- 4 need to keep some since of balance.
- 5 The second comment is that, I understand
- 6 all the reasons one needs to put more and more
- 7 intelligence into the bulk power system, that is
- 8 more control, more real time automation, more
- 9 autonomous agents, and so on. But every time I do
- 10 more of that, I presumably also introduce
- 11 additional vulnerability in terms of places where
- 12 a smart attacker can get access. And I have not
- 13 been able to figure out how to do a balancing
- 14 analysis. I mean, I've been trying to figure out
- 15 how to do this, because I train doctoral students
- in this sort of space, and we just produced a
- 17 lovely PhD, for example, looking at the question
- if I could cycle hundreds and hundreds of smart
- 19 meters that are frequency, that is critical as a
- 20 resident frequency of the bulk power system, could
- I do any serious damage. You can't prove a
- negative, but we don't think the answer is yes, we

- 1 think probably you can't.
- 2 But I don't know how to work that broad
- of a problem, so if any of the four you have any
- 4 insight about that, I'd sure like to hear it. And
- 5 then the last thing I wanted to ask about is red
- 6 teaming. Who is actually trying to figure out how
- 7 to make attacks that will bring down the bulk
- 8 power system, get to the point of just not quite
- 9 pulling the trigger, and what empirical evidence
- 10 is there that a higher maturity score actually
- 11 provides greater protection against that?
- I mean, I understand that maturity
- scores are lovely, but can I have confidence that,
- 14 because I have a high maturity score, the effort
- 15 level for a red team attack on my bulk power
- 16 system will be much, much greater than if I have a
- lower maturity score? It's not clear to me.
- MS. SWANSON: I can talk a little bit
- 19 about maturity and then I'll definitely hand --
- 20 little bit about the maturity and then you can, by
- 21 all means, since that was a document that I wrote
- 22 many, many years ago under NIST, was a maturity

- 1 model using, actually, Carnegie Mellon's, the CMM
- 2 maturity model, so it's kind of interesting. I
- 3 think what it does show is a basic level of
- 4 improvement over time, so you shouldn't be taking
- 5 just one snapshot when you're looking at the
- 6 maturity level, you should be looking at it again
- 7 to see if you're improving.
- 8 MR. MORGAN: And we're talking just
- 9 about bulk power here?
- 10 MS. SWANSON: Well --
- 11 MR. MORGAN: I understand about billing
- 12 systems and all the other things, but we're
- 13 talking just about bulk power?
- 14 MS. SWANSON: Right. Well, I don't
- think that's just about bulk power, I think it's
- about your whole organization, because ultimately,
- that does affect power, is your organization's
- 18 view on cyber security, as well. So there's a lot
- of program management pieces to cyber security
- 20 that need to get deployed, and that starts with
- 21 work force and goes on from there. That,
- 22 ultimately, will affect bulk power, from a cyber

- 1 security perspective, so I think it's a lot of
- things, it's not just the technical, and we get
- it, ICS and SCADA is very not, in a lot of cases,
- 4 not IT. But there are a lot of pieces to it that
- 5 are not just technical, so you've got your
- 6 operational and you've got your program management
- 7 pieces. So I would say yes.
- 8 MR. CHRISTOPHER: So, as I said before,
- 9 it's not a silver bullet, I don't want somebody to
- take the ES-C2-M2, or any maturity model, period,
- and think that if they applied this, they're going
- 12 to have the answer. What it does do is it gives
- 13 you indicators. So, one example, I'll take the
- 14 risk of naming an example really quickly. Just
- 15 the risk domain, so -- is mine on? Hello? Am I
- 16 closer? There, we go, I'll just put it right
- there.
- 18 So, the risk domain is an example. One
- of the things it asks about is whether or not you
- 20 do risk assessments, whether or not you have risk
- 21 models. There are a lot of risk models out there,
- you can find, you can just Google right now,

```
anybody that's got a computer, risk models, you're
```

- going to find hundreds of them. There's no way in
- 3 the model, there's no, it's agnostic as to which
- 4 one you would pick. So I want to go on a
- 5 facilitation and attack what risk model you ended
- 6 up choosing and saying that, well, you shouldn't
- 7 be doing that, you should be looking at this other
- 8 one.
- 9 It's not about the adequacy as much as
- 10 it is are you having the conversations, are you
- doing ad hoc risk management process or are you
- 12 actually having documented procedures in place, do
- 13 you have a policy, even, doing an annual review
- of, do you have the resources kind of dedicated
- 15 towards that? It's the first step of the
- 16 conversation, so it's not the time end-all,
- be-all, this will get you to security, it's the
- 18 evaluation of whether or not you're having those
- 19 types of conversations.
- So, to -- and I've got the four other
- 21 things, here, I took notes during your questions,
- 22 so I can get to all --

```
1
                 MR. MORGAN: I was asking, are we
 2
       running closed loop? That is, are question doing
 3
       red team attacks on the bulk power system --
                 MS.
                       MOORE: I can talk to that --
 5
                 MR. MORGAN: -- confirming that higher,
       you know, scores on maturity lead to a greater
 6
 7
       effort at attack.
 8
                 MS. MOORE: So, I can talk to that, as
 9
       well, as part of the team in the development. And
       one of the key, a couple of the key inputs into
10
11
       the development was leveraging some analysis and
12
       work that had been done over the years, very
13
       similar to what you were referring to. So there's
14
       a program that does, I believe it would be
       considered red teaming, for selected entities and
15
16
       where very skilled professionals perform analysis
17
       of an environment ahead of time, and then they go
       in and try it again and see what they can do.
18
19
                 And that had been done over a period of
20
       time, and we leveraged the recommendations that
       came from those types of exercises and
21
22
       incorporated that into the practices, as well as
```

- 1 some vulnerability testing and work that had been
- done by the National Laboratories, and then the
- 3 common recommendations that had come from years of
- 4 doing vulnerability testing on industrial control
- 5 systems. So consideration for that was a
- 6 significant input, along with some analysis of
- 7 threats and vulnerabilities in that space. And
- 8 so, as Jason said, it gives you indicators, but
- 9 what we found from both the results of the red
- teaming and some of the common vulnerability
- analysis work were there were similar capabilities
- that would address those cyber threats, and that's
- what has been incorporated into the model.
- MR. MORGAN: Okay. So I'll shut up, but
- I think I've just heard the answer, we're running
- open loop in this space.
- 17 MR. PETERS: Thank you. I think next
- 18 question, Phyllis, thank you, you had your hand
- 19 up.
- 20 MS. REHA: Yeah, thank you. I'm looking
- 21 at this from the state regulator's perspective,
- 22 and Dr. Coles mentioned as one of the needs is a

```
1 regulatory environment to allow investment in
```

- 2 security infrastructure to address changing risks,
- and you have to be nimble and be able to do that
- 4 quickly, and that we don't need more standards or
- 5 compliance-based rules. So I'm thinking about
- 6 that from a regulator's perspective that has to
- 7 review those infrastructure costs, or cost
- 8 recovery, and we have to do an analysis of cost
- 9 effectiveness and cost benefit analysis for that
- 10 cost recovery, and if we don't have standards to
- 11 guide that analysis, how do we judge the cost
- 12 recovery?
- So I was just wondering if you would
- address this kind of broader policy kind of issue,
- as opposed to some of the technology issues that
- were raised.
- 17 DR. COLES: Yeah, sure. So, I think the
- 18 way you address it is by evaluating an
- 19 organization's processes for understanding its
- 20 risks and challenging its decision making
- 21 processes, and then doing exercises like the New
- 22 York PSC has done recently, which is to go and

- 1 review every single utility in the state to look
- 2 at all their practices, and then to normalize and
- 3 say, well, if all of your peers are doing this,
- 4 why aren't you doing it, and then you can have a
- 5 grown up asking with your regulator and you can
- 6 justify not doing that, because you're doing
- 7 something different that's better or because the
- 8 threat isn't the same.
- 9 And I think you do it through evaluating
- 10 those processes of risk assessment and risk
- 11 management, challenging those processes, and then
- 12 by doing that lots and lots of times across the
- whole geographical area and getting an
- 14 understanding of what everyone else is doing, you
- 15 can act as a normalization agent.
- MR. PETERS: I think Paul had the next
- 17 question.
- 18 MR. CENTOLELLA: I guess I want to, I'm
- 19 troubled by something that I've been troubled
- about for a long time, and I'm troubled a little
- 21 bit by some of the comments in this discussion.
- There were a couple of comments about, well, we

```
can't expect every organization (inaudible) to be
```

- doing the same, have the same capabilities, be
- 3 making the same investments. But that strikes me
- 4 as something that is not a risk based criterion.
- 5 I could imagine a small utility that, if it was
- 6 vulnerable, could potentially do real damage to
- 7 the interconnected power system.
- 8 I'm interested in your PhD thesis,
- 9 Granger, about whether or not those sites can do
- damage to the power system. I am concerned, when
- I look at the NERC CIP standards that there are,
- that even in CIP five that smaller generating
- 13 plants are at the lowest level of requirements.
- 14 I'm concerned that, you know, only aspects of the
- distribution system are even included within the
- bulk power system's definition, and therefore
- 17 covered.
- 18 And I'm wondering has anyone really done
- 19 an analysis to ensure that what we're looking at
- in the area of cyber security, that what we're
- 21 evaluating governance on including all of the
- 22 right things that actually represent potential

- 1 vulnerability to the bulk power system.
- 2 MR. CHRISTOPHER: I guess I'll lead off
- 3 with, when -- and I made a similar comment
- 4 regarding the capability and maturity model, that
- 5 maybe not everyone would want to be at a certain
- 6 level. You're right with regards to the
- 7 vulnerabilities, but when you're talking about the
- 8 risk, you're talking about the vulnerabilities and
- 9 the impacts. So it's more than just the
- vulnerabilities by themselves, the risk equation
- itself is vulnerabilities, impact and threat.
- So, depending on the utility's risk
- profile, they'll have to internalize that
- themselves, find out, okay, what are our
- vulnerabilities. And some of them will be common,
- 16 you're actually right, their control systems have
- 17 commonalities and they have common
- vulnerabilities, same thing with IT systems. But
- 19 they also may have a different threat profile and
- they also may have different consequences.
- 21 To your point regarding the size thing
- and whether or not you're looking at different

```
loads, again, with risk, what you would be looking
```

- 2 at is communications and how, in a cyber
- 3 environment, everything connects. So it wouldn't
- 4 necessarily be, well, I have this much load and
- 5 therefore, if I lose this, it will have this much
- 6 impact. It's more about, if I lose the system, if
- 7 I lose the communications between the systems,
- 8 what is that consequence. Because that's more of
- 9 what the cyber security attacker would be going
- 10 for, is to cripple those -- and I know that
- 11 systems, I'm not talking about distribution or
- 12 transmission, I'm talking about, for example, like
- 13 your e-mail system or your communication system
- 14 that you rely upon.
- 15 So when we talk about different risk
- 16 profiles, you're really looking at a broader
- 17 picture than maybe just your generation facilities
- or your customer load or what type of fuel type.
- 19 It's not really based off of that for the cyber
- 20 security elements of the risk part. Does that
- 21 make sense?
- MR. CENTOLELLA: I'm not --

```
1
                 MR. CHRISTOPHER: I see your face --
 2.
                 MR. CENTOLELLA: No, maybe I haven't
 3
       been clear about my point. So if I'm talking
 4
       about critical national infrastructure, here, I'm
 5
      not talking about the billing system. I could
       imagine a small utility with a critical facility
 7
       in a critical location that, if it came down,
       would not just affect that utility, but would
 8
 9
       affect the interconnected grid, as a whole.
10
                 MR. CHRISTOPHER: Right.
                 MR. CENTOLELLA: And, so, I am wondering
11
       whether or not we are setting up criteria in how
12
13
       we think about this that does not reflect the risk
14
       to the system as a whole, and how do we insure
15
       that there's not a gap in our governance in an
16
       organization that maybe is a small utility that
17
      maybe doesn't have a lot of resources, but if we
       looked at it from a national perspective, might be
18
19
       critical to the maintenance of the power system.
                 MS. MOORE: Yeah, so I can talk to that
20
       point. So one of the activities that we do have
21
```

underway, DHS is leading in partnership with the

- 1 sector-specific agencies is looking at each of the
- 2 sectors, so electricity is part of that, and
- 3 understanding what are the critical functions
- 4 within the sector, then understanding for each
- 5 critical function what's the value chain, and then
- 6 what are the systems that underpin that, so then
- 7 we can identify and understand what organizations
- 8 own and operate those assets so that they are
- 9 aware, or their impact nationally.
- So, at the start, so that's what we're
- 11 calling it, it's a sector-level risk assessment
- 12 process that we're going through for all 16
- 13 sectors. So, at the start, we're focusing on
- 14 catastrophic impacts, catastrophic national
- 15 regional impact to public health, public safety,
- 16 national security and economic security. That
- will be completed by July, that is a very high
- 18 threshold when you say catastrophic. From there,
- 19 we'll look for further analysis, but we started
- 20 with the highest threshold and we're continuing to
- 21 work through that.
- 22 So there's some sectors that are further

- along than others, but we are at least doing that
- 2 initial catastrophic assessment, and then focusing
- 3 -- we're not limiting our efforts to only those,
- 4 but we want to have awareness and make sure that
- 5 they are aware, so that we can manage that risk.
- 6 It doesn't mean that they're not already managing
- 7 the risk, but just making sure that we understand
- 8 where that lies. So that is something that's
- 9 currently underway.
- 10 MS. SWANSON: I guess I'd like to add to
- 11 that. So, part of that piece that they're
- 12 talking, that she's just talking about is going to
- 13 be put into the framework, as well. So it will be
- something we're calling a filter. So as we come
- across and start to develop this framework
- document on best practices and providing guidance
- 17 on how the sectors should be securing their IT and
- 18 their OT, we'll be using that as guidance as to
- 19 how we put that together. So that's a piece of
- it, as well.
- 21 MR. PETERS: Thank you. Let's go to
- 22 Commissioner La Fleur.

```
1
                 MS. LA FLEUR: Thank you. I have two
 2
       questions, if you will indulge me. My first is
 3
       for Robert and your comments on regulatory
 4
       standards. I do understand your point about the
 5
       compliance overhang and the concern about
       compliance-based standards and the need to have a
 7
       risk-based process. But I'm interested in your
 8
       explaining the point that any standard that sets a
 9
       minimum will automatically become the maximum.
10
       Because, under the scheme in the Federal Power Act
11
       that we're required to implement with these
       consensus-based standards that are drawn from
12
13
       registered entities, large and small, across
14
       multiple sectors and regions, you're necessarily
15
       going to get a consensus-based standard.
16
                 And it's certainly not the intent, for
17
       example, in a tree trimming standard that whatever
       the envelope defined in the standard is the
18
19
       maximum, and you could never trim your trees more,
       and will go on and say no, you must trim to only
20
       that. And I'm interested in why the minimum
21
```

22

becomes the maximum.

```
1
                 MR. COLES: It becomes the maximum
 2
       because, if you don't have an educated set of
 3
       management that really understand the risks, then
 4
       they don't engage in that deep thinking about what
 5
       they're protecting themselves against, and
       therefore, they assume that if this is the
       consensus of the industry, well, that must be good
 7
 8
       enough for us. And, therefore, the actual
 9
       tendency for uneducated management is to say that
10
       is the maximum that we will do because that's what
11
       the industry has opined on.
12
                 Now, it works really well for tree
13
       cutting, because the risk, the threat for tree
14
       cutting, the threat for overhanging branches on
15
       the power lines hasn't changed in the last hundred
16
       years, we've got some really good statistics on
17
       it, we know really finely what the threat is, we
       know clearly how, if you cut back to a certain
18
19
       degree, then the probability that some damage will
20
       be caused to a line is reduced by a very precise
21
       amount. In this area where the threats changed
```

since I've been in the industry, three years,

- 1 significantly, you can't afford to wait three to
- 2 five years to gain industry consensus because the
- 3 threat you're addressing is three to five years
- 4 old.
- 5 And, therefore, the money that you're
- 6 spending on that three to five year old threat
- 7 isn't the current threat, and it's diverting
- 8 resources away from what is the current threat and
- 9 defending yourselves against the state of the
- 10 nation today.
- 11 MS. LA FLEUR: Well, that's, obviously,
- really an argument against using the whole
- 13 NERC-based consensus standards for cyber security,
- which this is probably a segue to my next
- question, but some of the Congressional things
- 16 we've seen would have a whole different way of
- 17 determining cyber security standards and so forth,
- but if, in fact, as -- I know you're right, that
- 19 the risks change quickly, that makes it even more
- 20 unfortunate if a standard that might be a couple
- 21 years old becomes the maximum. I would that
- 22 management would think, well, there might be

```
1 places we need to go beyond because the risks have
```

- 2 changed.
- 3 My second question is for Samara, and I
- 4 completely understand if you can't answer it,
- 5 because I say that all the time when people ask me
- 6 questions. But I share your hope for legislation
- 7 that helps address the information sharing even
- 8 more than the Executive Order already did, because
- 9 we need to get the information in the hands of
- 10 people who can act on it. And I'm curious
- 11 whether, as you look at, we've seen so many pieces
- of legislation kind of bubble up by committee, get
- passed by one branch and not the other; is it
- 14 your, do you only accept multi sector legislation
- 15 that takes a comprehensive look at this, or is
- there any openness to energy-focused cyber
- 17 security legislation?
- 18 Assuming that all the other privacy and
- 19 civil liberties -- and I realize I'm not asking
- 20 you to endorse any specific bill, I'm just
- 21 curious, because we've seen a lot of
- 22 energy-specific pieces of legislation sort of seem

- 1 to start to move, and I don't know if that's a
- 2 nonstarter, if you can say.
- 3 MS. MOORE: So, it's not something that
- I can really speak to. I do know that we're open
- 5 to discussion on different areas, but it's not
- 6 something that I can speak specifically to.
- 7 MS. LA FLEUR: I understand. Then I'll
- 8 take that as a comment rather than a question,
- 9 thank you very much.
- 10 DR. COLES: Could I come back just on
- 11 the point I made earlier? Sorry, just one further
- 12 point. I think there probably is a medium ground,
- 13 here. If you look, if you compare other
- 14 regulatory regimes, if you look in the banking
- 15 sector, particularly at Basel II, for example,
- there's a two-tier regulation. If you have a very
- 17 simplistic understanding of your risks, if you're
- 18 not sophisticated, if you're a small organization,
- 19 then it allows you to follow a standard, just
- apply the rule, apply the standard and that's good
- enough.
- 22 If you can demonstrate that you've met

- them all, that you've had a challenge over your
- thinking about how you understand risks, you've
- got a sophisticated risk management process, and
- 4 you can prove that to your regulator, then you get
- 5 into a different sort of regulatory regime, you
- 6 get into a different conversation. So I think
- 7 there's probably a medium ground looking at a
- 8 different sector, which seems to be, seems to have
- 9 worked reasonably well. Certainly last to lead,
- if not from three, four years ago.
- 11 MR. CURRY: Could I just jump in for a
- 12 second? Going back to Commissioner La Fleur's
- 13 comment, one of the concerns that I had is for
- state regulatory agencies who are charged with
- 15 looking at the prudence of expenditures, often the
- 16 minimum can become the maximum if they are --
- that's why I asked the educational question
- 18 earlier, if they're not far enough up the learning
- 19 curve, the accountants will come in and say, hey,
- you exceeded the minimum, that's on your
- 21 shareholder's equity side, it's not on the rate
- 22 payer's side. Have you run into that at all?

```
DR. COLES: I have, and I've overcome
```

- 2 that through talking about the risks and through
- 3 educating management about the risks. And the
- 4 risk of not recovering that money that we're
- 5 spending is a risk that they're prepared to take,
- 6 because they think it's important enough to manage
- 7 the risks.
- 8 MR. PETERS: We'll go to Ralph.
- 9 MR. MASIELLO: A little discomfort, I'll
- 10 raise this question. Samir, you had supply chain,
- I think, and I think you also did on the DoE
- donuts. The dominant scape vendors are global
- 13 firms that develop software around the world.
- 14 Most of the other places that develop software are
- in the European union, therefore, plausibly no
- worse than domestic, but historically, they've had
- 17 software developed in places like Moscow and
- 18 Singapore.
- So, and then, second, it's common
- 20 business practice in that industry to deliver the
- 21 source code with the system. It's usually a
- 22 contractual requirement. And even if the U.S.

```
Operation is not selling systems into Libya or Jordan, European businesses are. So here we've
```

- got critical infrastructure, and chances are good
- 4 the source code for a lot of it is sitting in
- 5 places that you wouldn't let a U.S. supplier sell
- 6 the stuff to. And this has been a rant of mine
- 7 for some time, that we focus on intrusion and
- 8 external threats, but the threat of something
- 9 buried in three or four million lines of source
- 10 code, sitting there for five years, is probably
- 11 the greatest threat, and certainly the place where
- the damage potential is the highest.
- So, and it's also the case, if I, as a
- 14 contractor, want to work for Gordon and get into
- 15 Gordon's facility outside visitor quarters, I'd
- 16 probably have to go through a background check,
- 17 but I can get a job writing software for a scape
- 18 vendor without that. So, to me, there's a supply
- 19 chain problem, here. Now, maybe this has been
- 20 addressed in the past couple of years, and I'm on
- 21 a rant, but I don't think so, I think the risks in
- 22 the supply chain are much greater in many ways

- 1 than we realize.
- MS. SWANSON: I guess I'll attempt.
- 3 Yes, it's scary, there's a lot of potential places
- 4 where bad things can happen to your products. It
- 5 can happen from the software, it can happen from
- 6 being sitting in a warehouse after the product has
- 7 been put together and something getting put in
- 8 there, there are a lot of places where the
- 9 integrity of your product is vulnerable. And
- 10 we're aware of that. So NIST has written a
- 11 special publication on supply chain that talks
- about the kinds of things you, as a procurer of
- 13 products, should be thinking about and what you
- 14 can put into your procurement language.
- And, yes, and I'll tell you, with the
- vendors, we've had an uphill battle trying to get
- this, the first draft even through because the
- 18 vendors are saying it's impossible for them to do
- 19 these things, that they have vendors themselves or
- 20 product suppliers and they could not do these
- 21 things, and request this. And I think we have to
- 22 change that mentality, we have to start to demand

- 1 that we want good source, we want good, secure
- 2 code.
- We have ways to write it, we know this,
- 4 there's a whole software assurance group in DHS
- 5 that is part of this, there's another group out
- 6 there that does this for Microsoft, so there are
- 7 places where we're starting to do this, but it's
- 8 not an easy one, I'll guarantee it.
- 9 MR. MASIELLO: I think I have to join
- 10 Granger's company, then, in assessment. A second
- 11 question that's related to it, and I'm not going
- 12 to describe the way I would modify a scapetive
- 13 system because irreparable physical damage, but
- we're not, to my knowledge, doing anything on
- 15 resiliency where another piece of the
- interconnected IT systems can detect that
- 17 something that shouldn't ever happen is happening,
- and stop the process.
- 19 We're worried about the security and the
- 20 intrusion and validate the data exchange from a
- 21 protocol standpoint, but not from a realized that
- you're being told to do something you shouldn't.

- 1 I mean --
- 2 MR. PETERS: Okay. Samara, I'm going to
- 3 have to keep this on track, so this will be the
- 4 last response.
- 5 MS. MOORE: Okay. I'll keep it brief.
- 6 So, there definitely has been some discussion
- 7 specific to that, both considering cyber physical
- 8 and not looking at each in a vacuum, but
- 9 considering cyber physical as well as what you
- 10 just discussed. So one of the approaches that
- 11 both the Executive Order and the Presidential
- 12 policy directive that was issued at the same time
- does, is we transition to take looking at things
- 14 from a cyber physical perspective, as well as not
- 15 focusing on critical infrastructure protection.
- 16 But now you hear us saying critical infrastructure
- 17 security and resilience.
- 18 And so one of my key partners in crime
- 19 at the White House is my peer on the resilience
- side, and so now we're working rather closely
- 21 together to look both at security and resilience,
- 22 and really trying to have the appropriate balance

```
of protective measures, detective measures so that
```

- 2 we can identify when things go wrong, and it may
- 3 be identifying something on the physical side that
- 4 doesn't quite look right that might be an
- 5 indicator of a cyber or vice versa, and also
- 6 response and recovery capabilities.
- 7 So we're starting to approach this
- 8 challenge from a different perspective to take
- 9 into account what you've addressed, which has come
- 10 up a lot in our discussions.
- 11 MR. PETERS: Okay. Again, a round for
- the panelists, thank you. (Applause)
- MR. POPOWSKY: Thanks, Chris, and thanks
- 14 for the excellent panel, we really appreciate your
- 15 time and thoughtfulness. Why don't we move right
- into the last subset of our agenda today. Gordon
- van Welie is going to pinch hit for Mike Heyeck,
- 18 who was unable to be here today on behalf of the
- 19 Transmission Subcommittee, and they have a couple
- 20 orders of business to take care of before we
- 21 finish today.
- MR. VAN WELIE: Thanks. Yeah, I was

```
1 kind of hoping to run on another 15 minutes. And
```

- let me say up front that if there's any glory to
- 3 be had today, I'll take it, and if there are any
- 4 complaints, we'll send them to Mike, how about
- 5 that? So I'm hoping this will be reasonably
- 6 brief, there are two decisional items and two
- 7 updates for the committee. The two decisional
- 8 items, the first is a paper with a recommendation
- 9 on the future of interconnection wide planning.
- 10 And I think the best way of teeing this
- 11 up is to quickly read to you two paragraphs that
- 12 are at the beginning of the document, which both
- 13 summarize -- well, it's a summary and a
- 14 recommendation. The EAC commends the
- interconnection-wide planning efforts to date
- 16 funded by the DoE. This funding provided the
- first of its kind interconnection-wide planning
- 18 efforts in the eastern interconnection, and both
- of the existing interconnection-wide efforts in
- 20 the west and Texas. The process allows for
- 21 greater stakeholder input across governmental and
- 22 private sectors.

```
1
                 The EAC recommends that DoE work with
 2
       each group to facilitate their continued efforts
 3
       with clear objectives and governance and assist
 4
       the groups in arranging their own funding
 5
       mechanisms either through established mechanisms,
       by proposal to the DoE, or by other means. To the
 6
       extent that other funding is more forthcoming, we
 7
       encourage DoE to protect the rates of substantial
 8
 9
       return on its initial investment by responding
       positively to well grounded proposals from the
10
11
       interconnection-wide planning groups.
12
                 So I'm not going to go through the rest
13
       of it, I'm hoping everybody's had a chance to read
14
       through this, but it's a fairly simple
       recommendation and I invite discussion. And,
15
16
       Sonny, when you're ready, to take control of it.
17
                 MR. BALL: I'm actually fine with what
       the paper says, participated in that group. I
18
19
       guess my only additional comment, Pat's here, and
       other folks, I think one of the key items here is,
20
       as we move forward, all of these processes and
21
22
       groups, we need to, our long term focus needs to
```

1 be moved into an area where these good efforts are

- 2 sustainable on their own.
- 3 And I do fully agree with the
- 4 recommendation of the paper, but I would just
- 5 encourage DoE, if you do continue to fund certain
- 6 aspects, always ask the question, do you have a
- 7 plan -- you know, this doesn't go on forever, the
- 8 authorities asking do you have a plan to where you
- 9 can get yourself to where your efforts, your
- involvement are self-sustainable in some way.
- 11 Because I believe they can be, and I believe in
- 12 these efforts.
- MS. HOFFMAN: Billy, I would agree with
- 14 that. I also recognize that we tried models that
- had success, and, you know, there's areas of
- 16 improvement. And one of those things is, you look
- 17 at sustainability as we continue to find ways that
- 18 really makes it effective in how these sort of
- 19 interactions occur. So, from that perspective, I
- agree wholeheartedly.
- 21 MR. POPOWSKY: Any other comments?
- We've got a motion to support the recommendation

- from the Transmission subcommittee. Wanda moves,
- is there a second? Becca? Great. All in favor,
- 3 say aye.
- 4 MULTIPLE SPEAKERS: Aye.
- 5 MR. POPOWSKY: Any opposed? Great.
- 6 That wasn't so hard, Gordon. (Laughter).
- 7 MR. VAN WELIE: Great.
- 8 SPEAKER: Excellent, Gordon.
- 9 MR. VAN WELIE: Okay. I'll take the
- 10 glory on this one, thank you. So, the next one, I
- might be deferring to Mike, we'll see how this one
- goes. (Laughter) So this is a recommendation on
- 13 the CSG interstate transmission signing compact,
- 14 and I've had occasion at the break to have some
- offline conversation with Dian and Tom, and so
- 16 I've got some words missing that I would like to
- 17 propose to the Committee. Let me just explain the
- 18 context before I jump into some of the details,
- 19 here.
- It seems like there are some concerns
- 21 about the details of the interstate electric
- 22 transmission line signing compact, and there was

- also references in the paper that NARUC had
- 2 considered this, and apparently, they have not
- 3 yet. So we need to correct that. Clearly,
- 4 Congress contemplated their states could enter
- 5 into interstate signing compacts in order to deal
- 6 with transmission. So the thing I've attempted to
- 7 do in my wordsmithing is separate that source, the
- 8 fact that Congress encourages states to consider
- 9 interstate signing compacts, and still retain what
- 10 Tom would like to see the committee do, which is
- 11 to provide some level of support to the specific
- 12 interstate signing compacts that's attached as an
- example to this particular proposal.
- And, so, really, the recommendation is
- then framed as asking the Department to engage in
- 16 supportive efforts as are reasonable, including
- 17 but not limited to communicating to state
- governors and legislatures the DoE's support for
- 19 the state's adoption of interstate compacts in
- 20 general, sort of interstate, small I, small C, but
- 21 including as appropriate the specific interstate
- 22 compact that is referenced in this document. And

- 1 then, furthermore, to advocate for the adoption of
- 2 compacts, and that would be compacts in general in
- 3 regularly scheduled DoE NARUC's discussion and
- 4 DoE's technical conferences.
- 5 So, really, just to repeat sort of two
- 6 thoughts, separate answers thought that we'd like
- 7 the DoE to be supportive of compacts in general,
- 8 and that, where appropriate, in other words, in
- 9 the right forums or the right space discussing
- 10 this specific proposal, be supportive of this
- 11 proposal, as well. And so, if you accept those
- two basic thoughts, there are probably a couple of
- dozen edits that have to be made to this document
- in order to conform the document with those two
- 15 thoughts.
- I can walk you through them in detail,
- or you can just leave it up to me to do it, and
- 18 I'll take some direction from you on that.
- MR. POPOWSKY: Tom, you want to --
- 20 MR. SLOAN: While I obviously would like
- 21 a strong a statement as possible, because I do
- 22 think that it does help the Department and the

- 1 FERC meet some of the objections raised to what's
- 2 in EPAC 05 in terms of backstop, signing authority
- 3 and transmission quarter designations, and all. I
- 4 also recognize that there are concerns from the
- 5 regulatory perspective, even though this is
- 6 voluntary, states don't have to participate and
- 7 utilities don't have to participate, but Gordon
- 8 showed me the conceptual language and would be
- 9 caveat that I would like to see the final version
- 10 from Samir, I can support the proposed changes.
- MR. POPOWSKY: Okay. And I know, Dian,
- 12 you had some questions about this.
- MS. GRUENEICH: Yes. I want to thank
- 14 Gordon and Tom working with me on it. I'm
- 15 comfortable with the changes. I mean, my
- 16 particular concerns are having been involved in
- 17 the area of both state regulation and transmission
- for 20 years, now, very detailed. When I think
- 19 about the role of DoE -- first of all, the role of
- 20 this advisory committee to DoE, and then the role
- of DoE going forward, I become very worried that
- 22 it backfires for DoE to be going to states saying,

```
1 okay, this is how to solve your transmission
```

- 2 problem, here's the compact that has been
- developed, and now go ahead and use it.
- 4 So this approach, I think, is a little
- 5 more nuanced, more falls in line directly from
- 6 Congress saying we endorse the use of the concept
- of the compacts, so I think it's appropriate,
- 8 then, for DoE, in the various forums, to say, we
- 9 agree with that, as well. But, again, it's a
- 10 little more nuanced by saying in a particular
- 11 situation, it may be where the states themselves
- 12 sort out the specific compact approach, which this
- one could well work, but maybe there's some
- 14 different approaches. So that's sort of what I
- think would overall be a better role for DoE to be
- 16 taking with regard to the states and why. I think
- 17 it's been for us giving advice to DoE what I tried
- 18 to add to the discussion.
- MR. POPOWSKY: Rebecca?
- 20 MS. WAGNER: Thank you. First I wanted
- 21 to -- I've been back and forth on this issue, and
- 22 before the language change, I wouldn't have been

```
able to support it, not because I don't support
```

- 2 the concept of it, and this is why I wanted to,
- 3 why I'm making a comment now. I like the idea of
- 4 state compacts, California and Nevada have a state
- 5 compact on Lake Tahoe, it's survived over many
- 6 years, so I like the idea of it. What I've been
- 7 concerned about with this compact is, one, I'm not
- 8 sure I agree with the interpretation with respect
- 9 to EPAC 2005, to me, that went more to the
- 10 national interest court orders designated by DoE
- 11 as congested areas, and would only those states be
- part of a compact. So that was unclear to me.
- 13 It also suggested, not that every state
- is not doing enough for transmission, and I would
- 15 argue that states in the west have been. States
- in the west probably wouldn't use it because they
- 17 probably wouldn't be able to figure out how to get
- along with California (laughter). So I didn't
- 19 want a one-size-fits-all approach, but, to me,
- it's a great tool for the tool chest. So, with
- these language modifications, I can support it.
- 22 And I love the concept, I don't think it

- can apply everywhere, but I think that certain
- 2 states, it could be very valuable.
- 3 MS. KELLY: I'm just raising a point of
- 4 procedure. You all are talking about language
- 5 changes, but we haven't seen them, so are you
- 6 going to give them to us before we vote on this?
- 7 MR. VAN WELIE: We keep this
- 8 deliberately away from you so that -- I'd be happy
- 9 to sort of just walk you through my proposed
- 10 changes. I wanted to first have some discussion
- on the general concept, otherwise, the discussion
- on those specifics is kind of pointless.
- MS. KELLY: Okay. That makes sense to
- me, I just thought I was going to hear all of a
- 15 sudden, and now let's vote, and I'm, you know -- I
- 16 wanted to make sure that I'd like to see some
- 17 words before we do that.
- MR. VAN WELIE: Okay. Sue, you're
- 19 holding my feet to the fire. So --
- 20 MR. CURRY: Point of order, Mr.
- 21 Chairman. Would it be more propitious to try to
- do a turnaround over night and take a look at the

- 1 exact language in the morning?
- 2 MR. POPOWSKY: Yeah --
- 3 MR. VAN WELIE: Because, Gordon, I've
- 4 seen him type with two fingers, I know he can do
- 5 it.
- 6 MR. POPOWSKY: Yeah, and hopefully, our
- 7 -- Samir and the --
- 8 MR. VAN WELIE: Yes, that's exactly what
- 9 I was thinking.
- 10 MR. POPOWSKY: But I think you gave us
- 11 -- hopefully, I haven't seen them either, I think
- we've all got the concept, and then when we turn
- it around, we can, we have a lighter agenda
- 14 tomorrow, so I think we should be okay tomorrow to
- do that, as well as the Race to the Top changes,
- which we made a lot of progress on today, as well.
- 17 But we can talk about that in a few minutes. But
- is that okay, Gordon, can you work with Samir and
- 19 get that --
- 20 MR. VAN WELIE: Yeah, because I think it
- 21 would be good to, if we can, distribute it
- 22 electronically so everybody can get to see it

- 1 before we, rather than listening to me read it
- 2 out.
- 3 MR. POPOWSKY: Right. Do you want to --
- 4 so we'll hold off on any vote until tomorrow.
- 5 Gordon, you had a couple of other transmission
- 6 subcommittee things you want to report on.
- 7 MR. VAN WELIE: Yes. There were two on
- pace, one's really brief, it says here status in
- 9 the paper of the transmission technologies. My
- 10 understanding there is that that's on hold until
- we hear back from the DoE grid tech team, so we'll
- 12 come back to that during the course of the year.
- 13 And then I was going to ask David Till to give us
- 14 an update on the status of work on grid resiliency
- and ageing transmission assets. So, over to you,
- 16 David.
- 17 MR. MARCHESE: We have two major
- 18 sections that have been drafted, one on the ageing
- 19 assets of the grid, Clark Gellings, and the other
- 20 reasonable solutions by me. We'll be combining
- 21 those, making sure that we're consistent, and then
- the rest of the paper, we'll build from there.

- 1 And we're planning on coming back, I believe, at
- 2 the next -- I may be mistaken, but I think it's
- 3 the next EAC meeting that we'll be presenting
- 4 that.
- 5 MR. POPOWSKY: And at that next EAC
- 6 meeting, I believe is when Mike has planned, Mike
- 7 Heyeck has planned to put on that panel and some
- 8 of the post-Sandy related issues.
- 9 MR. MARCHESE: Yes, that's correct.
- 10 MR. POPOWSKY: Are there any questions
- or comments for Gordon and David or Clark for the
- transmission subcommittee issues? Okay, good.
- 13 Thanks Gordon. So tomorrow, then, we will have a
- 14 revised draft of the transmission compact letter.
- We've taken care of, now, the interconnection-wide
- planning, and hopefully, by tomorrow, we will also
- 17 have a revised draft of the Race to the Top
- 18 letter. We made some progress on our short
- 19 meeting this afternoon at the break, I think we
- 20 just have a couple more issues to iron down. If I
- 21 could just get those little subcommittee members
- 22 together at the end.

```
1 Not the little members, but the little
```

- 2 subcommittee (laughter). And, otherwise, thank
- 3 you very much, and I think Samir will now tell us
- 4 when and where we're having the members -- I'm
- 5 sorry, one other point. And for those of you who
- 6 are still in the audience, if you, the comments
- from the public are to be made at the end of the
- 8 day tomorrow. And if you do have any comments,
- 9 any issues you want to raise with the committee,
- 10 please register them with Sherry or Samir so we
- 11 know that you want to speak tomorrow, and I'll ask
- 12 again tomorrow to see if there are any public
- 13 comments at the end of the session.
- 14 So, Samir?
- MR. SUCCAR: Okay, great. So, on
- dinner, for those that are registered for dinner,
- 17 the restaurant is call ed Tutto Bene, it's at 501
- 18 N. Randolph, and if you have any further questions
- 19 about dinner or the location, you can ask Sherry
- 20 -- Sherry, raise your hand -- and she can help.
- 21 We're going to walk over with a group at 5:40, the
- dinner is at 5:45, and starts with some

2	So, if you have any questions either on
3	what entree you ordered, walking directions, or
4	any other specifics, please see Sherry. Thanks a
5	lot.
6	MR. POPOWSKY: And where is the group
7	leaving from at 5:40?
8	MR. SUCCAR: Right here in the lobby,
9	right by the front doors.
10	MR. POPOWSKY: Okay. So if anyone wants
11	to join the group, that's fine, or you can head on
12	over there on your own. Does anybody have
13	anything else before we adjourn for today? Okay,
14	good. I hope many of you can join us for dinner.
15	Thank you very much.
