"Yes on SIS"

I.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Thank you for your support.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families 1.1

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

We welcome your testimony for the SIS at the SIS Hearings. Watch your local newspaper and listen to the radio for schedule and place.
We ask you to sign the petition only if you are 18 years of age, or older. Also, to prevent duplication, please sign only one petition.
Please return your signed petition as soon as possible to your petition coordinator, or mail to:

Dane Watkins
2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

"Yes on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

We ask you to sign the petition only if you are 18 years of age, or older. Also to prevent duplication, please sign only one petition. Also return your signed petition as soon as possible to your petition coordinator, or mail to:

Dane Watkins, Chairman, 2242 S. Boulevard, Idaho Falls, ID 83402
Wendell Miller, 628 Brentwood Circle, Idaho Falls, 83402
Frank Murdock, CPA, 232 Brookside Dr., Idaho Falls, ID 83404

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 29 1988

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

l.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

We welcome your testimony for the SIS at the SIS Hearings. Watch your local newspaper and listen to the radio for schedule and place.
We ask you to sign the petition only if you are 18 years of age, or older. Also, to prevent duplication, please sign only one petition.
Please return your signed petition as soon as possible to your petition coordinator, or mail to:

Dane Watkins
2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

1.1 We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

greater
IDAHO FALLS
chamber of commerce

242 N. EASTERN AVE. P. O. BOX 498 IDAHO FALLS, IDAHO 83405 (208) 523-1010

DATE: FEBRUARY 17, 1988

TO: GREATER IDAHO FALLS CHAMBER OF COMMERCE MEMBERSHIP

FROM: CON MAHONEY
PRESIDENT

RE: SIS HEARINGS

The I.N.E.L. has been designated as the preferred location to construct and operate the Special Isotope Separation Project (SIS). Three public hearings will be held in Idaho regarding the Draft Environmental Impact Statement (EIS). Below we have listed the hearing information:

March 9, 1988 2:00 and 7:00 p.m. Owyhee Plaza
1109 Main St.
Boise, Idaho

March 10, 1988 2:00 and 7:00 p.m. Holiday In
1350 N. Blue Lakes Blvd.
Twin Falls, Idaho

March 11, 1988 2:00 and 7:00 p.m. University Place
1776 Science Center Drive
Idaho Falls, Idaho

Anyone wishing to testify at any of these hearings should get in touch with Dr. Clay Nichols, Idaho Operations Office, U. S. Department of Energy, 785 DOE Place, Idaho Falls, ID 83402 - Telephone (208)526-0306. All interested persons are invited to participate in these hearings and/or submit written comments to Dr. Nichols by April 21, 1988. Envelopes should be marked "SPECIAL ISOTOPE SEPARATION EIS." Comments postmarked after April 21, 1988, will be considered to the extent practicable.

If you would like to review the Draft Environmental Impact Statement on the Special Isotope Separation Project, we have a copy of the document here at the Chamber that you are welcome to read. This is a very important project, and Idaho needs to speak out in favor of this project for our economic development.

SIS ECONOMIC CONSIDERATIONS

5.27.6.1 The Special Isotope Separation (SIS) Project proposed for the Idaho National Engineering Laboratory (INEL) would contribute strongly to the stability and growth of both regional and state economics. Of

5.27.1.2 the $937 million budget, the actual facility cost is projected at $505 million. Subject to a favorable decision from the current National Environmental Policy Act (NEPA) process, physical construction is scheduled to start in June 1989, with anticipated start of operations in December 1993. Peak construction manloading estimates yield 400 jobs, while plant operation is predicted at 410 direct and 340 indirect permanent positions. Extrapolating from previous site economic impact studies, it can be projected that these

5.27.7.9 750 primary positions are complemented by roughly 1050 supporting jobs within the community at large.

5.28.6 The SIS Project constitutes the most advanced production facility of its kind in the world and the only known facility to deploy the Atomic Vapor Laser Isotope Separation (AVLIS) process. With most elements separable using AVLIS technology, this initial production

5.27.9.3 plant application of lasers to material refining (in this instance plutonium) has the potential to generate significant national interest and regional opportunity. The INEL has funded an independent study of the educational, institutional, and entrepreneurial opportunities generated by the overall project. Some examples are coordination of the development of supporting university/vocational-technical programs and curriculums, fabrication

6.4.1 and refurbishment of laser modules, separator component fabrication and repair, consulting on various technologies such as robotics and expert systems, computer hardware and other procurements, software programming, modifications/additions by small local architect-engineering (A-E) and construction firms, and the like. Thus,

5.27.9.2 through its transfer of laser technology to Idaho, the SIS plant presents numerous challenges, developmental opportunities, and economic benefits. On December 20, 1951, the National Reactor Testing Station (predecessor to the INEL) produced the first light from atomic power—now 36 years later, light may again play a vital role in the development of technology and opportunity in Idaho.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families. 1.1

Thank you for your support.

"Yes on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Sponsored by the
Idaho Citizens for the SIS Committee
Please return petition by March 7, 1988

2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

1.1

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

We welcome your testimony for the SIS at the SIS Hearings. Watch your local newspaper and listen to the radio for schedule and place.
We ask you to sign the petition only if you are 18 years of age, or older. Also, to prevent duplication, please sign only one petition.
Please return your signed petition as soon as possible to your petition coordinator, or mail to:

Dane Watkins
2242 S. Boulevard
Idaho Falls, ID 83402

Return petition by March 7, 1988.
Thank you for your support.

"Yes on SIS"

1.1

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

Thank you for your support.

"Yes on SIS"

We citizens of Idaho support the construction and operation of the SIS Production Facility at the Idaho National Engineering Laboratory (INEL). We believe the SIS program will be most beneficial to the economy of communities surrounding INEL, to the State of Idaho, to the national defense programs supported by the President and the Congress of the United States of America, and most of all for our families.

EASTERN IDAHO CHAPTER HEALTH PHYSICS SOCIETY

P.O. BOX 2373 IDAHO FALLS, IDAHO 83401-0673

March 24,1988

Mr. Clay Nichols
SIS Project Manager
Idaho Operations Office
U. S. Dept. of Energy
785 DOE Place
Idaho Falls, Id 83402

Dear Mr. Nichols,

As President of the Eastern Idaho Chapter of the Health Physics Society (EICHPS) I am scheduled to testify on behalf of the society at the March 25, 1988 hearings. I am currently on leave from WINCO and unfortunately due to illness associated with my pregnancy I seriously regret that I am unable to present our statement at the hearings. However, because of the society's vital interest in support of the SIS project I have authorized John R. Horan, past President of the EICHPS to present the oral statement for the society. 1.1

We will be submitting formal written comments at a later date.

Sincerely,

Rochelle J. Honkus

E024

SIS TESTIMONY
A. Richard Conroy
March 25, 1988
Idaho Falls, Idaho

Mr. Chairman and Panel Members:

My name is Richard Conroy. I am a 15-year resident of the State of Idaho and currently live near McCammon. I am employed by FMC Corporation in Pocatello and have worked for FMC for 21 years. My present position is Technology Manager.

I am also the immediate past president of the Greater Pocatello Chamber of Commerce and I currently serve this organization as chairman of the Greater Pocatello Economic Growth Council.

I appear before you today wearing two hats: as a leader of the economic development effort in the Pocatello-Chubbuck-Bannock County area, and as an experienced research scientist and manager.

First, I'd like to address the Special Isotope Separation Project from a regional economic development point of view.

The SIS project would be an enormous shot in the arm for the southeast Idaho economy. Were it not for the INEL and a few major manufacturers whose operations have remained fairly stable during the 1980's, our region would have been economically devastated by the recent recession in the agricultural and other natural resource based elements of the economy. However, we believe that through recent dedication of significant resources toward economic planning, both at the local level in southeast Idaho and at the state level, and because of improving national and world economies, we are beginning to see light at the end of the tunnel. 5.27.6.1 5.27.12.4

This is an ideal time for the SIS project to be sited at INEL. Underutilized infrastructures in energy, public education, manufacturing sites and housing are readily available in southeast Idaho and especially in the Pocatello area. A strong transportation system already exists. An extremely well-trained work force for component manufacturing and contractor support functions is in place and is further enhanced by the outstanding training capabilities of Idaho State University. These facilities are fully capable of absorbing the demands of an increased construction and operating work force at INEL with minimal impact on local government and educational services. 5.27.11.1 5.27.12.2 5.27.15.1

Furthermore, I am impressed by the Draft Environmental Impact Statement analysis regarding operational and transportation risks inherent in location of the SIS facility at INEL. It is very clear from the report that the SIS poses risks to the environment, public 6.1.2

E025

Exhibit 25

Idaho Falls, Idaho

safety and health which are equivalent to or lower than those we have lived and worked with since the INEL was first built in the 1940's. In short, I believe that the economic benefits to the region which will flow from the SIS facility will far, far outweigh the minimal risks associated with the production technology and/or the transportation of its raw materials and products to and from the INEL site.

6.2

Now I'd like to discuss the AVLIS technology from the point of view of its future business spin-off potential and the long-term economic impact this implies. The technology has passed through the basic research and development stages and is now ready for commercialization. It has been my experience in 25 years of research activity that the ultimate spin-off benefits of new technology are seldom visualized in the early stages of research and development. Spin-off opportunities generally begin to appear after commercialization when the process and/or product applications scientists and engineers begin to tinker with the production system to reduce cost, increase efficiency, and modify product specifications to meet market demands.

5.27.9.1

I believe that enormous potential exists for spin-offs from the AVLIS technology. The ionization and separation of elemental or isotopic species in the vapor state with laser energy may be applicable to a wide variety of materials or metals and presents opportunities for concentration of high purity products from impure ores, concentrates or intermediate products. Location of this project in Idaho could significantly enhance this technology transfer process by virtue of our existing strengths in the minerals and materials sciences at the INEL, our universities, and our mineral industries.

5.28.6

In cloaing, The Greater Pocatello Economic Growth Council and I firmly support location of the SIS project at the INEL site because of the potential short and long-term economic benefits to the region and our conviction, based upon the draft EIS analysis, that the risks inherent in the SIS technology are minimal and manageable with existing and proven procedures.

720

Nuclear Energy Contractors Accountability
(NECA)

Ladies and Gentlemen; ~~Chairman~~.. M.R. MODERATOR

721

6.5.4 Let me begin with a few remarks to give you a little background concerning the testimony I will be giving today. The points I will bring up here are a very condensed version of an affidavit I gave to the Government Accountability Project about a year and a half ago. In correspondence with Thad Guyer, counsel for G.A.P., he states that D.O.E., for more than one year has refused to cooperate concerning the Freedom of Information Act.. I think you will have to agree this is rather strange considering all the news releases we have been hearing concerning how extremely safe the procedures and engineering practices are on the I.N.E.L. Site.. It raises this question-----If an organization like G.A.P. can't get pertinent information from the Government in areas of concern, would you, as individual citizens, be able to? Shouldn't we ask who they are accountable to and how do we secure this responsibility or accountability?

5.30.5.15 Now let me share some of my concerns with you about the practices that occurred on a structure that is to contain high level radioactive waste at the I.N.E.L. Site.

5.14.2 To begin with, reinforcing steel arrived on the project and was rejected. We have the documents to confirm this. At a later date, this rejected steel was approved for installation in the building. We have the document that verifies this. These documents also reveal that only a small portion of this heat number of steel was rejected, although A.S.T.M., short for American Society for Testing Materials and A.C.I. 359 Nuclear Code require the complete heat number be rejected. In other words only a small portion of steel was rejected from a heat number that should have been rejected in its entirety, then at a later date the rejected portion was installed in the building.

It has supposedly been a long standing policy not to substitute material or equipment specified in the job specifications unless that substitution is an approved equal or better material. The job specs specified A.S.T.M.. A 615, Grade 60 reinforcing steel, however, we have the shipping lists that show A 706 type of reinforcing steel totalling more than 70 tons was accepted and installed in the project. A 706 is rated at 10,000 lbs per square inch less tensile strength than A 615, or 22,500 lbs. less tensile strength per bar. There were nearly 1500 bars in that particular section.

The mechanical rebar splicing that occurred on the job, was to the A.C.I. 318 code, which requires 125% of the yield strength of the bar, in this case 135,000 lbs., however, the Nuclear codes require the bar also be tested to minimum tensile strength, which in this case, would have been 202,500 lbs. or a difference of 67,500 lbs. In case of a failure of the bar during a test, all splicing must stop until the cause of the failure is found, (nuclear code 359). We had three failures but did not stop ~~testing~~ splicing. We just never pulled the bars above the 125% of yield figure that the job specification called for. The job specs also required a class C tension splice as per A.C.I.. 318, but in many instances we find that the lap splices were from 33 inches to 70¾ inches short. Think of this.. Tolerances for length of splice in A.C.I. 117 allow you to be 1½ inches less than the required lap length, here we are almost 3 feet to 5 foot and 10 inches short of the required lap length. We believe that both the rebar placing drawings and nuclear structures safety code, 349-80, indicate that more than 200 mechanical splices were omitted from a portion of the project. It ~~is~~ obvious that testing of mechanical splices were not conducted to Nuclear Regulatory Guidelines.

Our research, in fact, indicates that many portions of the job specifications for the project do not satisfy even the 318 code, let alone the nuclear codes.

BEST AVAILABLE COPY

The depth of concrete layer, or lift requirements are specified in both the job specs and A.C.I. 309. We find that both specs and code were not only ignored, but permission was given to ignore the specification and the code. I have documentation to support what I am saying. Let me remind you that the 318 code I have been referring to, and that they say they designed the building to, is a code that might be specified for any ordinary building construction..

5.24.23 Now there are highly qualified conscientious people employed at the I.N.E.L. site BUT there are not enough of the highly qualified ones to go around. It bothers me considerably that well meaning individuals are singing the praises of safety features at the I.N.E.L., and they can't possibly know for certain that their statements are true. Now please remember, the statements I am making do not concern a hypothetical situation; They actually occurred and I would simply ask all of you to consider the facts I have presented.

Ted McKinley

NO. 9

EXXON NUCLEAR IDAHO COMPANY, Inc.
NONCONFORMANCE REPORT (NCR)

NCR No. 9500018

Inc. 6th Set of Bars — Date 2-2-83

P.O. Reference N/A — Previous NCR No. 9500016, 9500017

Specification Reference N/A — Drawing Reference 1570 CPP 791 s 29, Farwest Dwg 6098

Description An inspection of the remaining 43 #11 rebar dowels (Mark 0110's Farwest Dwg 6098) for the I.A. line shielding was performed. It was noted that 9 dowels have transverse linear indications on the inside radius of the bend, approximately 40 of the dowels exhibit linear indications, which appear to be open laminations traveling in the longitudinal axis.

Inspection By Source Contractor — Conformance M.E. (S 2031)

XX Construction ☐ Receiving Inspection ☐ Source Inspection — Certification ☐ Yes

QA Inspector — Date 2/2/83 — Continuation Attached Sheet No.

QA Supv. — Date 2-3-83

Recommended Disposition

The subcontractor shall replace all rebar in this heat number with new #11 bars which meet the specifications.

Note: all rebar from this Heat number was not replaced just the #11's that were replaced. T.M.

CB-2000 MATERIAL — CB-2250-CB-2332.1

CB-2250 MARKING AND IDENTIFICATION OF CONCRETE MATERIAL

CB-2251 Cement

Conveyances of bulk cement shall be sealed and tagged before leaving the place of manufacture, showing lot number, controlling specification, date of manufacture, and type. If bag cement is used, each shipment shall be tagged with the same identification as for bulk cement. All tags and markings shall be maintained with the material at site storage.

CB-2252 Aggregate

Aggregate shall be identified to show size, source, and controlling specification. The identification shall remain with the aggregate during production, transit, and concrete plant storage.

CB-2253 Admixtures

All containers of admixtures shall be clearly marked, showing storage requirements and controlling specification.

CB-2300 MATERIAL FOR REINFORCING SYSTEMS

CB-2310 INTRODUCTION

(a) The material to be used for reinforcing bars for concrete reactor vessels shall conform to ASTM A 615, Grades 40 or 60, and the special requirements described in CB-2330.

(b) The material to be used for bar-to-bar splice sleeves in reinforcing bars shall conform to ASTM A 513 or A 519.

(c) The material to be used for reinforcing bar splice sleeves attached to liner plates or structural steel shapes shall be carbon steel conforming to ASTM A 513 or A 519, Grades 1008 through 1030.

CB-2320 MATERIAL IDENTIFICATION

Reinforcing systems material shall be tagged or marked to ensure traceability to the Certified Material Test Report during production and while in transit and storage.

TABLE CB-2332-1

9,10,11 (Gr. 40)	5 bar diameters

CB-2330 SPECIAL MATERIAL TESTING

CB-2331 Tensile Tests

CB-2331.1 Number of Tests Required. One full-diameter tensile test bar from each bar size shall be tested for each 50 tons (45 360 kg) or fraction thereof of reinforcing bars produced from each heat of steel. The tensile test procedures shall be in accordance with SA-370.

CB-2331.2 Acceptance Standards. The acceptance standards shall be in conformance with the tensile requirements of Table 2 of ASTM A 615. If a test specimen fails to meet the tensile requirements of ASTM A 615, two additional specimens from the same heat and of the same bar size shall be tested. If either of the two additional specimens fails to meet the tensile requirements, the material represented by the tests shall not be accepted.

CB-2332 Bend Tests

CB-2332.1 Number of Tests Required and Test Procedures

(a) Bend tests on bar sizes Nos. 3 through 11 shall be performed in accordance with ASTM A 615, except that pin diameters shown in Table CB-2332-1 shall be used in bend tests.

(b) If bars of sizes Nos. 14 and 18 are to be bent, then full-size specimens shall be bend tested 90 deg. at ambient temperature, but in no case less than 60°F (16°C), around a nine bar diameter pin. However, if Nos. 14 and 18 bars as used in the reactor vessel are required to have bends exceeding 90 deg., specimens shall be bend tested 180 deg.; the other criteria shall be the same as for 90 deg. bend tests. One bend shall be made for each bar size from each heat.

17

quirements and are within 2000 psi of the required tensile strength, within 1000 psi of the required yield point, or within two percentage units of the required elongation, a retest shall be permitted on two random specimens for each original tension specimen failure from the lot. If all results of these retest specimens meet the specified requirements, the lot shall be accepted.

12.3 If a bend test fails for reasons other than mechanical reasons or flaws in the specimen as described in 12.4 and 12.5, a retest shall be permitted on two random specimens from the same lot. If the results of both test specimens meet the specified requirements, the lot shall be accepted. The retest shall be performed on test specimens that are at air temperature but not less than 60°F.

12.4 If any test specimen fails because of mechanical reasons such as failure of testing equipment or improper specimen preparation, it may be discarded and another specimen taken.

12.5 If any test specimen develops flaws, it may be discarded and another specimen of the same size bar from the same heat substituted.

13. Permissible Variation in Weight

13.1 The permissible variation shall not exceed 6% under nominal weight, except for bars smaller than ⅜ in. plain round, the permissible variation in weight shall be computed upon the basis of the permissible variation in diameter in Specification A 510. Reinforcing bars are evaluated on the basis of nominal weights. In no case shall the overweight of any bar be the cause for rejection.

13.2 The specified limit of variation shall be evaluated in accordance with Recommended Practice E 29 (rounding method).

14. Finish

14.1 The bars shall be free of detrimental surface imperfections.

14.2 Rust, seams, surface irregularities, or mill scale shall not be cause for rejection, provided the weight, dimensions, cross-sectional area, and tensile properties of a hand wire brushed test specimen are not less than the requirements of this specification.

14.3 Surface imperfections other than those specified in 14.2 shall be considered detrimental when specimens containing such imperfections fail to conform to either tensile or bending requirements.

15. Marking

15.1 When loaded for mill shipment, bars shall be properly separated and tagged with the manufacturer's heat or test identification number.

15.2 Each producer shall identify the symbols of his marking system.

15.3 All bars produced to this specification, except plain round bars which shall be tagged for grade, shall be identified by a distinguishing set of marks legibly rolled into the surface of one side of the bar to denote in the following order:

15.3.1 *Point of Origin*—Letter or symbol established as the producer's mill designation.

15.3.2 *Size Designation*—Arabic number corresponding to bar designation number of Table 1.

15.3.3 *Type of Steel*—Letter *N* indicating that the bar was produced to this specification.

15.3.4 *Minimum Yield Designation*—For Grade 60 bars, either the number *60* or a single continuous longitudinal line through at least 5 spaces offset from the center of the bar side. (No marking designation for Grade 40 bars.)

16. Packaging

16.1 When specified in the purchase order, packaging shall be in accordance with the procedures in Recommended Practices A 700.

16.2 *For Government Procurement Only*—When specified in the contract or order, and for direct procurement by or direct shipment to the U.S. government, material shall be preserved, packaged, and packed in accordance with the requirements of MIL-STD-163. The applicable levels shall be as specified in the contract. Marking for shipment of such material shall be in accordance with Fed. Std. No. 123 for civil agencies and MIL-STD-129 for military agencies.

17. Inspection

17.1 The inspector representing the purchaser shall have free entry, at all times while work on the contract of the purchaser is being performed, to all parts of the manufacturer's works that concern the manufacture of the

PRE-CONSTRUCTION MEETING

QUALITY ASSURANCE STATEMENT

Subcontract: S-2031 Sixth Set of Bins

THIS STATEMENT DOES NOT ALTER THE SUBCONTRACT

Each Subcontractor is responsible for quality of construction performed by his organization. Therefore he must familiarize himself with all requirements of the specifications, drawings and other subcontract documents, and must use the latest revisions to these documents as supplied by the construction manager. Further he must ensure that his craft personnel know and comply with the requirements, and he must notify the construction engineer if the work description is unclear or when he becomes aware of nonconforming material or work.

Inspection personnel will be on the job-site throughout the course of the project. Their primary function is to perform and document inspections of specific items. Each subcontractor should cooperate with inspectors by providing access to the work and factual information; in turn, inspectors are required to perform their functions with a minimum amount of disruption to ongoing work.

Audits may be performed on this subcontract; if so, the Subcontractor will be notified in advance by the Subcontract Administrator. Audits are inspections made in accordance with written planning and are intended to verify compliance to specific procedures or specifications incorporated in or required by the subcontract.

Nonconformance reports (NCR's) may be issued by inspection personnel to document discrepant materials or installation. The Construction Engineer will process these reports and provide direction to Subcontractors when corrective action is required.

Should a Subcontractor elect to substitute materials for those specified, prior approval is mandatory as described in the General Conditions of the subcontract.

GC-2 SHOP DRAWINGS, SUBCONTRACTOR'S DRAWINGS, AND VENDOR DATA REQUIREMENTS CONTINUED

vendor data shall then be resubmitted by the Subcontractor for approval. The required submittal and reaubmittal sequence shall be repeated until no further action is required.

H. The Contractor's permission to proceed does not constitute acceptance or approval of design details, calculations, analysis, test methods or material developed or selected by the supplier and does not relieve supplier from full compliance with contractual obligations.

I. Explanation of Example Construction Vendor Data Transmittal And Disposition (Enclosure 2):

Each item of vendor data required is to be submitted as an individual entry on the construction Vendor Data Transmittal and Disposition Form e.g., Item 19 pressure indicators on the Vendor Data Schedule lists five different pieces of data to be submitted. They are Item (1) Catalog Data, Item (7) Installation Instruction, Item (8) Operating/Maintenance The example form for Enclosure 2 shows three of the five items of data required being submitted on this form. They are 19-1, 19-7, and 19-9B. This is how data is to be submitted. Items 1 and 3 on the example Vendor Data Schedule call for catalog data to be submitted for information. The Subcontractor in the example shown on Enclosure 2 elected to use an item different than that specified; therefore, the submittal shows that he is submitting copies for "or equal" approval rather than for information. The Subcontractor shall check the mandatory approval block if the item is shown on the Vendor Data Schedule as requiring mandatory approval and the item being supplied is exactly as specified. If the item is not exactly as specified, the Subcontractor shall check the "or equal" approval block. The Subcontractor shall indicate whether the item is being resubmitted by checking the applicable block.

If one piece of data satisfies more than one submittal requirement, e.g., if an instruction book covers installation instruction, operating, maintenancce, assembly drawings, parts list, etc., each item number and vendor data required ID number/code shall be listed on the submittal form with the description of each type of data.

GC-3 APPROVAL OF "OR EQUAL" ITEMS

A. Throughout the Technical Specifications of this subcontract and on the subcontract drawings where certain manufacturers' trade names and model numbers are used to specify acceptable material and equipment for use on this subcontract, such manufacturer's name and dsta as specified shall represent the minimum standard of type, quality, and capacity acceptable for incorporation into the work covered by this subcontract. The products of other manufacturers will be considered as being acceptable, provided that such products fully meet or exceed all minimum structural, use, and operational features

1. Bars:

a. Reinforcing steel shall conform to ASTM A-615, Grade 60. Reinforcing steel shall be deformed bars, unless otherwise specified.

2. Welded Wire Fabric: Welded wire fabric reinforcement shall conform to ASTM A 185.

3. Tie Wire: Tie wire shall be black annealed iron wire, no lighter than No. 18 gauge.

4. Bar Supports: Wire sizes and number of supports shall conform to specifications for placing supports as stated in MSP-2, CRSI "Manual of Standard Practice."

5. Accessories: Accessories such as spacers and other required items shall be furnished and placed in accordance with MSP-2, CRSI "Manual of Standard Practice"; except that in all cases, regardless of member, type, or size, they shall be designed and provided by the Subcontractor. Supports and spacers used in concrete areas that will be exposed to view as at the bottom surface of suspended slabs shall be plastic dipped or stainless steel.

B. Shop Drawings: Shop drawings conforming to MSP-2, Chapter 6 and ACI-315, paragraph 2.7 and bar lists conforming to ACI-315, paragraph 2.10 which show pertinent details of required reinforcement including but not limited to location, size and length of each bar and unit, bar bending diagrams, and position of accessories shall be furnished by the Subcontractor for approval.

C. Fabrication:

1. Bar Bends: All bars shall be bent cold utilizing equipment that will accurately form the steel to dimensions as shown on

CC-4333.4.4 Tensile Testing Requirements. Splice samples shall be tensile tested using the loading rates set forth in SA-370. The following shall constitute the acceptance standards.

(a) The tensile strength of each sample shall equal or exceed 125% of the specified yield strength as shown in Table CC-4333-1.

(b) The average tensile strength of each group of 15 consecutive samples shall equal or exceed the specified minimum tensile strength as shown in Table CC-4333-1.

If any sample tested fails to meet the provisions of (a) or (b) above, the requirements of CC-4333.4.5 shall be followed.

CC-4333.4.5 Substandard Tensile Test Results

(a) If any splice used for testing fails to meet the strength requirement of Table CC-4333-1 and failure occurs in the bar, the cause of the bar break shall be investigated by the Constructor or Fabricator. Any necessary corrective action affecting splice samples shall be implemented prior to continuing the testing frequency of CC-4333.4.3.

(b) If any splice used for testing fails to meet the strength requirement of Table CC-4333-1 and failure does not occur in the bar, two additional splices shall be tested. If either of these retests fails to meet the strength requirement of Table CC-4333-1, splicing shall be halted. Splicing shall not be resumed until the cause of failures has been corrected and resolved.

(c) If the running average tensile strength of 15 consecutive samples fails to meet the tensile requirement of Table CC-4333-1, splicing shall be halted. The Constructor or Fabricator shall investigate the cause and make the necessary corrective action.

(d) When splicing is resumed, the testing frequency shall be started anew.

CC-4333.5 Recording of Tensile Test Results. The results of all tensile tests obtained from the tests prescribed by CC-4333.3 and CC-4333.4, along with all other pertinent data, shall be recorded.

CC-4333.6 Welding. Welding of splice sleeves to parts shall be performed using welding procedures and welders qualified in accordance with AWS D1.1-72 or Section IX.

CC-4334 Arc Welded Joints

CC-4334.1 Introduction. Arc welded joints are permissible provided a chemical analysis of the heat has been obtained in accordance with CC-2333. The carbon equivalent shall be established from the analysis and used to compute the necessary preheat in accordance with CC-4334.3.

CC-4334.2 Qualifications, Records, and Identifying Stamps

CC-4334.2.1 Required Qualifications. Each Constructor or Fabricator is responsible for the welding made by his organization and he shall conduct the tests required by this subparagraph in order to qualify both the welding procedures and the performance of welders who apply these procedures.

CC-4334.2.2 Maintenance and Certification of Records. The Constructor or Fabricator shall maintain a record of his qualified welding procedures and of the welders qualified and employed by him, showing the date and results of tests and the identification mark assigned to each welder. These records shall be reviewed, verified, and signed by the Constructor or Fabricator and shall be accessible to the Owner and to the Authorized Inspector.

CC-4334.2.3 Identification of Joints by Welder. The welder shall apply the identification mark assigned to him by the Constructor or Fabricator above or below each welded joint; or, as an alternative, the Constructor or Fabricator shall keep a record of the welded joints and of each of the welders making each of the joints.

CC-4334.2.4 Welding Prior to Qualification. No welding shall be undertaken until the welders have been qualified. All welders shall be qualified in accordance with CC-4334.

CC-4334.2.5 Transferring Qualifications. The performance qualification tests for welders conducted by one Constructor or Fabricator shall not qualify welders to weld for any other Constructor or Fabricator.

CC-4334.3 General Welding Requirements

CC-4334.3.1 Welding Process and Materials. Arc welding of reinforcing bar shall be restricted to the shielded metal arc process. Welding material shall conform to SFA-5.1 or SFA-5.5.

CC-4334.3.2 Weld Joint Design. The weld edge preparation shall be similar to one of those shown in Fig. CC-4334-1.

Dear Sirs,

Two rebar mechanical splice specimens were tensile tested today with the following results:

Splice Machine:	M1
Machine Operator:	Gary Bates
Material:	#14 Rebar; ASTM Grade 60
Splice Position:	Vertical
SPECIMEN #1	
Total Force:	174,000 lbs.
Tensile Strength:	72,300 psi
Break:	1" above sleeve--rebar failure.
SPECIMEN #2	
Total Force:	199,500 lbs.
Tensile Strength:	82,900 psi
Break:	1" above sleeve--rebar failure.

Respectfully submitted,

Howard Brown

Dear Sirs,

Fourteen rebar mechanical splice specimens which were delivered to our lab yesterday were tensile tested. In all cases, 125% of the rated yield strength for the rebar was exceeded. The rebar is #14, ASTM Grade 60.

SPECIMEN #1 -- Passed (rebar broke 1" above splice sleeve)

Machine:	M2
Operator:	Evan Tripp
Position:	Vertical
Total Force:	184,000 lbs.
Maximum Stress:	76,500 psi

SPECIMEN #2 -- Passed

Machine:	M2
Operator:	Evan Tripp
Position:	Vertical
Total Force:	181,000 lbs.
Maximum Stress:	75,250 psi

SPECIMEN #3 -- Passed

Machine:	M1
Operator:	Shane McKinley
Position:	Vertical
Total Force:	181,000 lbs.
Maximum Stress:	75,250 psi

SPECIMEN #4 -- Passed

Machine:	M1
Operator:	Shane McKinley
Position:	Vertical
Total Force:	181,000 lbs.
Maximum Stress:	75,250 psi

SPECIMEN #5 -- Passed

(continued next page)

12.15.3.6 — All welded splices and mechanical connections shall be visually examined by a qualified and experienced inspector to assure that they are properly installed at the place of construction. Where it is deemed necessary, the Engineer may require the destructive tests of production splices to assure the compliance with Sections 12.15.3.3 and 12.15.3.4.

12.15.3.7 — Mechanical connections shall be staggered at least 24 in. with connections of adjacent bars if the unit strain over the full length of splice at $0.9f_y$ of the bar exceeds 0.003 in per in. and if the maximum computed design load stress at the connection equals or exceeds $0.5f_y$.

12.16 — Splices of deformed bars and deformed wire in tension

12.16.1 – Minimum length of lap for tension lap splices shall be as required for Class A, B, or C splice, but not less than 12 in., where:

Class A splice . . . . . $1.0\ell_d$

Class B splice . . . . . $1.3\ell_d$

Class C splice . . . . . $1.7\ell_d$

where ℓ_d is the tensile development length for the specified yield strength f_y in accordance with Section 12.2.

12.16.2 – Lap splices of deformed bars and deformed wire in tension shall conform to Table 12.16.

TABLE 12.16 – TENSION LAP SPLICES

A_s provided* / A_s required	Maximum percent of A_s spliced within required lap length		
	50	75	100
Equal to or greater than 2	Class A	Class A	Class B
Less than 2	Class B	Class C	Class C

*Ratio of area of reinforcement provided to area of reinforcement required by analysis at splice location

12.16.3 – Welded splices or mechanical connections used where area of reinforcement provided is less than twice that required by analysis shall meet requirements of Section 12.15.3.3 or 12.15.3.4.

12.16.4 – Welded splices or mechanical connections used where area of reinforcement provided is at least twice that required by analysis shall meet the following:

12.16.4.1 – Splices shall be staggered at least 24 in., and in such manner as to develop at every section at least twice the calculated tensile force in that section but not less than 20,000 psi for the total area of reinforcement provided.

12.16.4.2 – In computing tensile force developed at each section, spliced reinforcement may be rated at the specified splice strength. Unspliced reinforcement shall be rated at that fraction of f_y defined by the ratio of the shorter actual development length to ℓ_d required to develop the specified yield strength f_y.

12.16.5 — Splices in "tension tie members" shall be made with a full welded splice or full mechanical connection in accordance with Section 12.15.3.3 or 12.15.3.4 and be staggered at least twice the thickness of the member but not less than 24 in.

12.16.6 — Welded splices or positive connections shall be used for splicing load-carrying (not crack-controlling) reinforcing bars located in a region with membrane tension normal to the splice. The average strength of these splices shall be equal to the minimum ultimate strength of the bar.

12.17 — Splices of deformed bars in compression

12.17.1 — Minimum length of lap for compression lap splices shall be the development length in compression computed in accordance with Section 12.3, but not less than $0.0005 f_y d_b$, nor 12 in. For f_y less than 3000 psi, length of lap shall be increased by 1/3.

12.17.2 – In tied reinforced compression members, where ties throughout the lap splice length have an effective area not less than $0.0015 hs$, lap splice length may be multiplied by 0.83, but lap length shall not be less than 12 in. Tie legs perpendicular to dimension h shall be used in determining effective area.

12.17.3 – In spirally reinforced compression members, lap splice length of bars within a spiral may be multiplied by 0.75, but lap length shall not be less than 12 in.

12.17.4 – Welded splices or mechanical connections used in compression shall meet requirements of Section 12.15.3.3 or 12.15.3.4.

12.17.5 – End bearing splices

12.17.5.1 – In bars required for compression only, compressive stress may be transmitted by bearing of square cut ends held in concentric contact by a suitable device.

12.17.5.2 — Bar ends shall termiate in flat surfaces within 1½ deg of a right angle to the axis of the bars and shall be fitted within 3 deg of full bearing after assembly.

12.17.5.3 – End bearing splices shall be used only in members containing closed ties, closed stirrups, or spirals.

12.18 – Special splice requirements for columns

12.18.1 – Where factored load stress in longitudinal bars in a column, calculated for

upon platforms, skids, or other supports. Material shall be kept free from dirt, grease, and other foreign matter and shall be protected from corrosion.

7. Testing:

a. Mechanical connectons shall be tested by a qualified lab provided for by the Subcontractor for tension to a minimum of 125 percent of the specified yield strength of the reinforcing bar. Production splices removed for testing shall be replaced by new splices.

b. For all T-series mechanical connector splices, except those on curved bars, test cycles for splices in horizontal, vertical, and diagonal bars, for each bar size, and for each splicing crew shall be as follows:

(1) If only production mechanical connector splices are tested, the sample frequency shall be:

One of the first ten (10) splices.

One of the next ninety (90) splices.

Two of the next and subsequent units of 100 splices.

(2) If production and sister splices are tested, the sample frequency shall be:

One production splice of the first ten (10) production splices.

U.S. NUCLEAR REGULATORY COMMISSION

Revision 2*
June 1981

REGULATORY GUIDE

OFFICE OF NUCLEAR REGULATORY RESEARCH

REGULATORY GUIDE 1.136
(Task SC 814-5)

MATERIALS, CONSTRUCTION, AND TESTING OF CONCRETE CONTAINMENTS (Articles CC-1000, -2000, and -4000 through -6000 of the "Code for Concrete Reactor Vessels and Containments"[1])

A. INTROODUCTION

General Design Criterion 1, "Quality Standards and Records," of Appendix A, "General Design Criteria for Nuclear Power Plants," to 10 CFR Part 50, "Domestic Licensing of Production and Utilization Facilities," requires, in part, that structures, systems, and components important to safety be designed, fabricated, erected, and tested to quality standards commensurate with the importance of the safety functions to be performed. Appendix B, "Quality Assurance Criteria for Nuclear Power Plants and Fuel Reprocessing Plants," to 10 CFR Part 50 requires, in part, that measures be established to ensure materials control and control of special processes, such as welding, and that proper testing be performed.

This guide describes bases acceptable to the NRC staff for implementing the above requirements with regard to the materials, construction, and testing of concrete containments.

The Advisory Committee on Reactor Safeguards has been consulted concerning this guide and has concurred in the regulatory position.

B. DISCUSSION

The American Society of Mechanical Engineers and the American Concrete Institute have jointly published the "Code for Concrete Reactor Vessels and Containments,"[1] which is referred to in this guide as the Code. The Code was formally issued for the first time in 1975, was reissued in 1977, and again in 1980. This revision to the guide endorses the following articles of the 1980 edition of the Code:

CC-1000, Introduction,
CC-2000, Material,
CC-4000, Fabrication and Construction,
CC-5000, Construction, Testing, and Examination, and
CC-6000, Structural Integrity Test of Concrete Containment Structures.

Consideration will be given to referencing the Code in the Code of Federal Regulations after sufficient experience has been accumulated with its use. In the interim, the NRC staff will set forth its position on the acceptability of the Code for licensing purposes in regulatory guides.

The NRC staff has evaluated the provisions contained in the articles listed above, but has made no attempt to coordinate all literature (standards, codes, guidelines, regulations, etc.) that may be relevant to the subject of this guide.

The referenced Code incorporates the recommendations of several regulatory guides in an acceptable manner. Hence, with the issuance of this revision to Regulatory Guide 1.136, the regulatory guides listed below will be withdrawn:

1.10 Mechanical (Cadweld) Splices in Reinforcing Bars of Category I Concrete Structures,

1.15 Testing of Reinforcing Bars for Category I Concrete Structures,

1.18 Structural Acceptance Test for Concrete Primary Reactor Containments,

1.19 Nondestructive Examination of Primary Containment Liner Welds,

1.55 Concrete Placement in Categoty I Structures, and

*The subtantial number of changes in this revision from the October 1978 issue has made it impractical to indicate the changes with lines in the margin.

[1]The "Code for Concrete Reactor Vessels and Containments" is also known either as the ASME Boiler and Pressure Vessel Code, Section III, Division 2, 1980 Edition, or as ACI Standard 359-80. Copies of the Code and addenda thereto may be obtained from the American Society of Mechanical Engineers, United Engineering Center, 345 E. 47th Street, New York, New York 10017, or the American Concrete Institute, Box 19150, Detroit, Michigan 48219.

USNRC REGULATORY GUIDES

Regulatory Guides are issued to describe and make available to the public methods acceptable to the NRC staff of implementing specific parts of the Commission's regulations, to delineate techniques used by the staff in evaluating specific problems or postulated accidents, or to provide guidance to applicants. Regulatory Guides are not substitutes for regulations, and compliance with them is not required. Methods and solutions different from those set out in the guides will be acceptable if they provide a basis for the findings requisite to the issuance or continuance of a permit or license by the Commission.

This guide was issued after consideration of comments received from the public. Comments and suggestions for improvements in these guides are encouraged at all times, and guides will be revised, as appropriate, to accommodate comments and to reflect new information or experience.

Comments should be sent to the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Docketing and Service Branch.

The guides are issued in the following ten broad divisions:

1. Power Reactors
2. Research and Test Reactors
3. Fuels and Materials Facilities
4. Environmental and Siting
5. Materials and Plant Protection
6. Products
7. Transportation
8. Occupational Health
9. Antitrust and Financial Review
10. General

Copies of issued guides may be purchased at the current Government Printing Office price. A subscription service for future guides in specific divisions is available through the Government Printing Office. Information on the subscription service and current GPO prices may be obtained by writing the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Publications Sales Manager.

1.103 Post-tensioned Prestressing Systems for Concrete Reactor Vessels and Containments.

Because the Code provisions continue to change, the NRC staff plans to periodically update this guide to accommodate new and revised provisions of the Code.

In those areas where the provisions of the referenced Code are insufficient for licensing purposes, the staff has provided supplementary guidelines it considers to be needed. These guidelines are contained in the regulatory position. Brief reasons for recommending them are given below.

1. CC-2232.2(a) - Strength Tests[2]

The average strength of a design mix based on mean rather than maximum allowable values of air content and slump is not conservative relative to standard building construction practice. The limits in Regulatory Position C.1 are taken from Section 4.4.2 of ACI Standard 318-77, "Building Code Requirements for Reinforced Concrete."[3]

2. CC-2243 - Cement Grout for Grouted Tendon Systems

Regulatory Position C.2 recommends using the guidance in Regulatory Guide 1.107, "Qualification for Cement Grouting for Prestressing Tendons in Containment Structures," rather than paragraph CC-2243 with respect to grouting of prestressing tendons. The staff believes that the guide recommendations provide needed assurance for the integrity of grouted tendons that cannot be directly inspected during the life of the containment.

3. CC-2433.2.3 - Acceptance Standards

Experience with the use of alloy steel materials for anchor blocks and wedge blocks (such as AISI 4140) indicates that a high degree of hardness of these materials is a factor in causing cracking (presumably stress-corrosion) under certain inevitable environments. Also it is necessary to control the uniformity of hardness of these materials. A thorough surface examination and proper protection before and after installation of these materials and a close control in the amount and uniformity of hardness in these materials may eliminate cracking.

4. Protection of Prestressing Materials from Low-Temperature Effects

The testing of prestressing materials to qualify them against loss in ductility during cold temperatures is needed; therefore, the guidance in Regulatory Position C.4 is recommended.

[2] This alphanumeric citing identifies the article, and paragraph if applicable, of the "Code for Concrete Reactor Vessels and Containments" being discussed.

[3] Copies may be obtained from the American Concrete Institute, Box 19150, Detroit, Michigan 48219.

5. CC-2441(g) - Tendon Ducts, Channels, Trumpets, and Transition Cones

Subparagraph CC-2441(g) addresses only the susceptibility of ducts to leakage under pressure. However, duct joints are more susceptible to leakage under pressure than the ducts. The recommended prequalification of ducts and duct joints in Regulatory Position C.5 would eliminate the potential for grease (or grout) leakage under maximum pressures.

6. CC-2463.1 - Static Tensile Test

Different systems of prestressing may require different numbers of tests for tendon systems to establish their adequacy for use. Variations within the tolerance limits of the construction specification in material properties and in geometry of anchorages and tendons must be realistically and adequately represented in the system testing. Therefore, Regulatory Position C.6 recommends that any system of prestressing be subjected to a sufficient number of tests to establish its adequacy before it is adopted for use.

7. CC-4240 - Curing

The 1980 version of the Code eliminates a specific requirement for curing concrete at temperatures higher than 40°F. The guide recommendation is in accordance with ACI 308-71, "Recommended Practice for Curing Concrete."[3]

8. CC-4333.4.2 - Splice Samples

The 1980 edition of the Code, in CC-4333.4.3, requires only a production-splice testing program, while the previous program permitted production- and sister-splice testing. As a result, CC-4333.4.2 now contradicts CC-4333.4.3. Regulatory Position C.8 provides guidance consistent with the requirements of CC-4333.4.3.

9. CC-4352 - Splices

Mechanical splices are considered to be weak links in the performance of reinforcing bars. Thus, staggering of mechanical splices in areas of high stress is being reemphasized in order to avoid a concentration of splices on one plane in such areas that may result in (1) unacceptable cracking and (2) increased steel congestion that has adverse effects on concrete placement. In addition, this recommendation is consistent with ACI 349-76, "Code Requirements for Nuclear Safety-Related Concrete Structures."[3]

10. CC-4464.1 - Procedure

The common practice in post-tensioning, as adopted by the American Concrete Institute (Section 18.18 of ACI 318-77), is to allow the discrepancy level of ±5% instead of the ±10% allowed by the Code. The guide recommendation is for ±5%.

8. CC-4333.4.2 - Splice Samples

Instead of the requirements in subparagraph CC-4333.4.2, the following guidance should be used:

"Splice samples shall be production splices (cut directly from in-place reinforcement)."

9. CC-4352 - Splices

In addition to the requirements in paragraph CC-4352, the following guidance should be used:

"Mechanical splices located in areas of high stresses (maximum computed tensile stress ≥ 0.5 F_y) should have alternate bars spliced or adjacent splices staggered. If tests for slip (or internal plastic deformation) of the splice demonstrate that the slip is low (i.e., not to exceed 50% of the elongation of the unspliced bar along the spliced length), at 0.9 F_y, the adjacent splices need not be staggered."

10. CC-4464.1 - Procedure

Discrepancies of elongation of tendons should not exceed "±5%" of the discrepancies calculated instead of the "±10%" as discussed in the last two sentences of subparagraph CC-4464.1.

11. CC-4522.1 - Tolerances for Liner Shells and Heads

The NRC staff will use the guidelines of the non-mandatory Appendix F to the Code for the purpose of review and inspection.

A maximum cumulative deviation of the liner shell plumbness of 6" or a 1 in 200 ratio, whichever is less, should be used.

12. CC-5210 - General

The requirements of CC-5210 should be supplemented by an inspection to ensure that only those embedments shown on the design drawings (except minor embedments such as rebar supports and form ties), or covered by documented field changes and later placed on the as-built drawings, remain in the form after the concrete is placed. Additionally, the inspection should ensure that hollow tubes and pipe sections used as support systems or for other construction convenience, if left embedded in the concrete, are filled with concrete or grout as appropriate.

13. CC-6214 - Retest

There are two options permitted by the Code in the phrase in the second sentence of CC-6214 "...remedial measures may be undertaken or a retest may be conducted..."; one should be selected if the requirements of CC-6213(c) and (d) are not met.

D. IMPLEMENTATION

The purpose of this section is to provide information to applicants regarding the NRC staff's plans for using this regulatory guide.

Except in those cases in which an applicant proposes an acceptable alternative method for complying with specified portions of the Commission's regulations, the method described herein will be used in the evaluation of the following applications that are docketed after May 1981.

1. Preliminary Design Approval (PDA) applications and Preliminary Duplicate Design Approval (PDDA) applications.
2. Final Design Approval, Type 2, (FDA-2) applications and Final Duplicate Design Approval, Type 2, (FDDA-2) applications.
3. Manufacturing License (ML) applications.
4. Construction Permit (CP) applications except for those portions of CP applications that reference standard designs (i.e., PDA, FDA-1, FDA-2, PDDA, FDDA-1, FDDA-2, or ML) or that reference qualified base plant designs under the replication option.

a. Placement of Layers - Concrete layers shall not exceed two feet in thickness. Each layer shall be thoroughly vibrated before the succeeding layer is placed. Timing of placement shall be such that each succeeding layer is placed before preceeding layer has reached its initial set.

b. Extent of Vibration - Vibration shall extend through entire depth of each new layer and several inches into preceding layer. Vibration shall be applied at point of deposit and application points no further apart than the radius over which application is visibly effective.

c. Duration of Vibration - Vibration shall continue sufficiently to accomplish thorough consolidation and complete embedment of reinforcement and embedded fixtures without segregation of mix.

d. Limitations:

1. Vibrators will not be used as a means of moving fresh concrete to a desired placement area. In no event shall the concrete be allowed or caused to flow a distance within the mass of more than 5 feet from point of placement. This action will be accomplished by the use of hand spading, rodding, and tamping. The vibrator shall be tested initially and periodically (once a month) in accordance with Chapter 15 of ACI-309 and shall meet the requirement as listed in Table 5.1.4. Vibrators shall be inserted and withdrawn at many points, from 18 to 30 inches apart. At each insertion, the duration shall be sufficient to consolidate the concrete, generally from 5 to 15 seconds duration, but not sufficient to cause segregation.

2. The Subcontractor shall provide a sufficient number of vibrators so that compaction can be started immediately after the concrete has been deposited in the forms, but in no

CHAPTER 9 – MASS CONCRETE

9.1 — Mix requirements

Mass concrete contains aggregate with a maximum size of 3 to 8 in. (8 to 20 cm). In order to minimize temperature differentials which cause cracking, cement content should be held at the lowest level that will produce the required strength and other essential properties. Least cement is required when:

(a) The mix contains aggregate graded to the largest practicable maximum size.

(b) The sand content is no more than that necessary for adequate workability.

(c) Low slumps, normally in the range of 1 to 2 in. (2.5 to 5 cm), are reliably maintained.

9.2 — Vibration equipment

Mass concrete presents a unique problem for vibration, but powerful equipment meeting the requirements of Group 5 in Table 5.1.4 is available which will readily consolidate it. Air vibrators are generally used in the United States. The air supply must be ample and the pressure adequate to get instantly the obvious response and effective results of which they are capable.

9.3 — Forms

For economy of forms and better control of temperature, mass concrete is placed in fairly shallow lifts — usually 5 to 7.5 ft (150 to 230 cm) thick. In addition to normal form requirements (see Chapter 6), it should be noted that forms for mass concrete are often dependent for their strength and security of position on anchors embedded in the concrete. Accordingly, special attention should be directed to seeing that these have ample depth and anchorage to withstand the impact created from fast-dumping of high line or gantry buckets as well as the ordinary concrete pressures during vibration.

9.4 — Vibration practices

Best practice dictates that the lifts be built up of layers 15 to 20 in. (40 to 50 cm) thick, a depth which can be reliably consolidated with some penetration of the vibrator into lower layers (after the first one). The lift thickness should be an integral multiple of the layer thickness.

Each layer is composed of adjacent rows of adjacent discharges from high line or gantry buckets carrying 4 to 12 cu yd (3 to 9 m³) of concrete. The forward edge of each upper layer should be held back to 4 to 5 ft (120 to 150 cm) from the edge of the one below it so that it will not move during vibration of the next row of batches placed along the edge of the lower layer. In this way the block is placed to full thickness and area with a minimum of surface exposure. This practice minimizes warming of precooled concrete and cold joint problems between layers in warm weather. It also makes the operation less vulnerable to, and easier to take care of in, wet weather. Detailed accounts of the manufacture and placement of mass concrete may be found elsewhere.[18,19]

For effective consolidation of the large volumes of mass concrete commonly placed it is necessary to have the vibrator crew follow a systematic procedure. The crew is most effective if the men work close together and move as a unit, rather than each man working separately with wider-spaced, random insertions. First, the vibrators should be inserted in a nearly vertical position at fairly uniform spacing near the top of the pile as left by the bucket, and should be held or moved as necessary to flatten the pile to the proper depth and spread it to the area it should occupy (see Fig. 9.4a). Then the new area should be systematically vibrated with the vibrator penetrating the full depth of the layer and into the preceding layer, but staying away from the two forward edges (see Fig. 9.4b). Particular attention should be paid to see that the edges in contact with the previous row and previous batch are very thoroughly knitted together. Each vibrator man should have his particular area of attention.

Vibration at each point should continue until entrapped air ceases to escape. Depending on mix and slump, this time will usually range from 10 to 15 sec. The insertions must be spaced and timed to leave no doubt as to the thoroughness of consolidation, not only near the surface but for the full depth of the layer and below it.

The completed top surface of the block should be left fairly even and free of footprints, to facilitate the subsequent joint cleanup. The final vibration should be done by a man on plywood "snowshoes" using a smaller vibrator if necessary. When consolidation is completed, the top of the coarse aggregate should be approximately at the level of the concrete surface.

The amount of concrete that can be handled by one vibrator will depend on the capability of the vibrator, the experience and diligence of the operator, and the response to vibration of the particular concrete mix being used. Under optimum conditions an efficient crew may handle as much as 50 cu yd (40 m³) per hr per vibrator. Around

Again the subcontractor was advised of the risk of damaging a thermocouple or lead. M-K requested that they review this procedure in more detail with the subcontractor before they proceed with any installation done in this manner.

F. The subcontractor requested that the A/E be present during the week of July 19, 1982, to determine if any problems will occur as rebar is cut because of interferences with the "A" bolts. The A/E agreed and the subcontractor will advise when the A/E will be needed.

G. The subcontractor was advised that the 6" x 3/8" SBR waterstop is approved.

H. The subcontractor has requested that the slump of the concrete for the base slab be increased to 4½". He will submit a mix design for this change.

I. [redacted]

J. The subcontractor said that he was receiving only one dispositioned copy of the vendor data back and requested that all returned copies be dispositioned. This should be corrected since the number of copies of vendor data required has been increased. M-K will check to see that all copies are dispositioned.

K. The subcontractor was advised that the shipping braces inside the bins are heavy and that a good sized piece of equipment will be required to remove them. The subcontractor should address this problem early.

L. There are some "A" bolt nuts which are seized on the bolts. The subcontractor has been directed to use a stainless steel lubricant and carefully remove with the wrench being careful not to gall the stainless steel. The subcontractor was also advised that the nuts are not interchangeable on the bolts. The subcontractor noted that the bolts were not vertical which will make raising or lowering of the leveling ring difficult. He also noted that the rings were fabricated ½" low which required that he readjust his elevations on the support assemblies.

Because the 1977 ACI Building Code is written as a legal document so that it may be adopted by reference in a general building code, it cannot present background details or suggestions for carrying out its requirements or intent. It is the function of this commentary to fill this need.

The commentary discusses some of the considerations of the committee in developing the code with emphasis given to the explanation of new or revised provisions that may be unfamiliar to code users.

References to much of the research data referred to in preparing the code are cited for the user desiring to study individual questions in greater detail. Other documents that provide suggestions for carrying out the requirements of the code are also cited.

The chapter and section numbering of the code are followed throughout.

Keywords: admixtures; aggregates; anchorage (structural); beam-column frame; beams (supports); **building codes**; cements; cold weather construction; columns (supports); combined stress; composite construction (concrete to concrete); composite construction (concrete and steel); compressive strength; **concrete construction**; **concretes**; concrete slabs; construction joints; continuity (structural); cover; curing; deep beams; deflections; drawings; earthquake resistant structures; embedded service ducts; flexural strength; floors; folded plates; footings; formwork (construction); frames; hot weather construction; inspection; joints (junctions); joists; lightweight concretes; loads (forces); load tests (structural); materials; mixing; mix proportioning; modulus of elasticity; moments; pipe columns; pipes (tubes); placing; precast concrete; prestressed concrete; prestressing steels; quality control; **reinforced concrete**; reinforcing steels; roofs; serviceability; shear strength; shearwalls; shells (structural forms); spans; specifications; splicing; strength; strength analysis; **structural analysis**; **structural design**; T-beams; torsion; walls; water; welded wire fabric.

INTRODUCTION

This commentary discusses some of the considerations of Committee 318 in developing the provisions contained in "Building Code Requirements for Reinforced Concrete (ACI 318-77)," hereinafter called the code or the 1977 code. Emphasis is given to the explanation of new or revised provisions that may be unfamiliar to code users. In addition, comments are included for some items contained in previous editions of the code to make the present commentary independent of the commentary for ACI 318-71. Comments on specific provisions are made under the corresponding chapter and section numbers of the code.

The commentary is not intended to provide a complete historical background concerning the development of the ACI Building Code,* nor is it intended to provide a detailed résumé of the studies and research data reviewed by the committee in formulating the provisions of the code. However, references to some of the research data are provided for those who wish to study the background material in depth.

As the name implies, "Building Code Requirements for Reinforced Concrete (ACI 318-77)" is meant to be used as part of a legally adopted building code and as such must differ in form and substance from documents that provide detailed specifications, recommended practice, complete design procedures, or design aids.

The code is intended to cover all buildings of the usual types, both large and small. Requirements more stringent than the code provisions may be desirable for unusual construction. The code and this commentary cannot replace sound engineering knowledge, experience and judgment.

A building code states only the minimum requirements necessary to provide for public health and safety. The ACI Building Code is based on this principle. For any structure, the owner or the structural designer may require the quality of materials and construction to be higher than the minimum requirements necessary to protect the public and stated in the code. However, lower standards are not permitted.

This commentary directs attention to other documents that provide suggestions for carrying out the requirements and intent of the code. However, neither those documents nor this commentary are intended as a part of the code.

The code has no legal status unless it is adopted by government bodies having the police power to regulate building design and construction. Where the code has not been adopted, it may serve as a reference to good practice even though it has no legal status.

The code provides a means of establishing minimum standards for acceptance of designs and construction by a legally appointed Building Official or his designated representatives. The code and commentary are not intended for use in

*For a history of the ACI Building Code see the papers by Kluge and Reid: Harold B. Jr., "Fifty Years of Development in Building Code Requirements for Reinforced Concrete," ACI Journal, *Proceedings* V. 50, No. 6, Feb. 1954, p. 441. For a discussion of code philosophy see Siess, Chester P., "Research, Building Codes, and Engineering Practice," ACI Journal, *Proceedings* V. 56, No. 5, May 1960, p. 1105.

PART 1 – GENERAL

CHAPTER 1 – GENERAL REQUIREMENTS

1.1 – Scope

The American Concrete Institute "**Building Code Requirements for Reinforced Concrete (ACI 318-77),**" hereinafter referred to as the code, provides minimum requirements for any reinforced concrete design or construction that is regulated by a general building code of which it forms a part. The code should supersede conflicting requirements on concrete design and construction in the general building code or in documents referenced by the code.

Prestressed concrete is included under the definition of reinforced concrete. Provisions of the code apply to prestressed concrete except for those which are statet to apply specifically to nonprestressed concrete.

Appendix A of the code contains provisions for design and detailing of special earthquake resistant structures.

Appendix B of the code contains provisons for an alternate method of design for nonprestressed reinforced concrete members using service loads (without load factors) and permissible service load stresses. The Alternate Design Method is intended to give results slightly more conservative than designs by the Strength Design Method of the code.

1.1.4 – Some special structures involve unique design and construction problems which are not covered by the code. However, many code provisions, such as the concrete quality and design principles, are applicable for these structures. Detailed recommendations for design and construction of some special structures are given in the following ACI publications:

"**Specification for the Design and Construction of Reinforced Concrete Chimneys**" reported by the ACI Committee 307.[11] (Gives material, design and construction requirements for reinforced concrete chimneys; including recommended loadings for design and methods for determining the stresses in the concrete and reinforcement.)

"**Recommended Practice for Design and Construction Bins, Silos, and Bunkers for Storing Granular Materials**" reported by ACI Committee 313.[12] (Gives material, design, and construction requirements for reinforced concrete, bins, silos, and bunkers and stave silos for storing granular materials. It includes recommended design and construction criteria based on experimental and analytical studies plus worldwide experience in silo design and construction.)

"**Building Code Requirements for Structural Plain Concrete**" reported by ACI Committee 322.[13] (Provides minimum requirements for design and construction of structural plain concrete members.)

"**Concrete Sanitary Engineering Structures**" reported by ACI Committee 350.[14] (Gives material, design and construction recommendations for concrete tanks, reservoirs, and other structures commonly used in water and waste treatment works where dense, impermeable concrete with high resistance to chemical attack is required. Special emphasis is placed on a structural design which minimizes the possiblility of cracking and accomodates vibrating equipment and other special loads. Proportioning of concrete, placement, curing and protection against chemicals are also described. Design and spacing of joints receive special attention.)

"**Code Requirements for Nuclear Safety Related Concrete Structures**" reported by ACI Committee 349.[15] (Provides minimum requirements for design and construction of concrete structures which form part of a nuclear power plant and which have nuclear safety related functions. The code does not cover concrete reactor vessels and concrete containment structures which are covered by ACI 359-74.)

"**Code for Concrete Reactor Vessels and Containments**" reported by ACI-ASME Committee 359.[16] (Provides requirements for the design, construction, and use of concrete reactor vessels and concrete containment structures for nuclear power plants.)

1.1.5 – The design and installation of piling fully embedded in the ground is regulated by the general building code. For portions of piling in air or water, or in soil not capable of providing adequate lateral restraint throughout the piling length to prevent buckling, the design provisions of this code govern where applicable.

Recommendations for concrete piles are given in detail in "**Recommendations for Design, Manufacture, and Installation of Concrete Piles**" reported by ACI Committee 543.[17] (Provides recommendations for the design and use of most

E026

TO: Hearing Officer for Public Comments on SIS Project

Comments on The Draft EIS of the proposed Special Isotope Separation Project

1.1 I support the "no action" alternative of the SIS Environmental Impact Statement. The following factors should be considered:

4.1 (1) The published document lacks hard information showing the need for the proposed plant. The purported need for redundancy in plutonium production does not make sense considering the immense amount available for weopons NOW. If there is enough weapons grade plutonium in the U.S. inventory to destroy

4.13 everyone on earth many times over then that is enough redundancy in fire power. The proposed plant should not be built based on this fact alone.

4.7.3

5.30.4.1 (2) Evidence also suggests that the past activities at the site have not followed practices to ensure the protection of the Eastern Snake River Plain Aquifer. In the past the officials at the site have argued that the the Aquifer has not been contaminated. That injection of toxic radioactive substances was not going to harm the public. That injection of carcinogenic organic chemicals was safe. Yet both of these activities have since been stopped because it has not been shown safe. The site is now under consideration as a Superfund site because

5.30.4.12 carcinogens have migrated off-site risking the drinking water of the public.

The Aquifer is the life blood of Southern Idaho. Over 227,000 people depend on the Aquifer as their sole source of drinking water. Most of these people are down gradient from the INEL site. A report by the Region X, EPA office has indicated that the aquifer is vulnerable to contamination. (Support document for For the EPA Designation of the Snake River Plain Aquifer as a Sole Source Aquifer, Wendie Marshall, 1984). Thus you have a situation where the past activities of the site are a risk to the public health.-- More potential pollution sources at the site would not be wise when a Superfund investigation is underway.

5.30.1.10 Correction On page 3-16 there is a wrong statement indicating that past practices have not contaminated the Aquifer. Wayne Peirre of EPA's Region X, RCRA Department reported last week that there has been a release which has entered the Aquifer. The chemicals include Trichloroethylene, and the heavy metal Chromium.

(3) The DEIS does not detail the existing health studies of nearby communities. Although the INEL is working with the Idaho Central Tumor Registry on data concerning cancer rates this data was <u>not</u> provided in the report. To use only estimated dosages as a measure of risk without including actual cancer rates is scientifically unsound. If cancer rates are elevated in the region, the proposed SIS should not be considered until this issue is resolved. 5.13.19 5.13.13

(4) The impact of having a high security facility should be addressed further. Will the increased security result in reducing the chances for non-defense contracts at the site? Will the SIS plant limit future contracts to those of high security only? Will security levels change at the facilities away from the proposed SIS plant? --These are important issues that should be addressed. 5.25.2

Thank-you for this opportunity to comment on this draft EIS.

Dr. Clay Nichols
SIS Project Manager
U. S. DOE - Idaho Operations Office
785 DOE Place
Idaho Falls, ID 83402

March 18, 1988

Dear Dr. Nichols,

I reviewed the Draft Environmental Impact Statement for the Department of Energy's Special Isotope Separation Project, and I would like the following comments:

2.1.1

1) I found the report to be well organized and informative. The persons who prepared the report should be commended.

2.7.8

2) As I understand it, the objective of the preparation of the Draft Environmental Impact Statement is to provide environmental input into a USDOE decision on the proposed construction and operation of a SIS project and on the selection of a site for such a project. I feel that an environmental consideration has been ignored which could significantly influence the decision on the selection of a site for the SIS. This consideration is the consequences of a nuclear war.

2.7.10

Currently, the INEL probably would not be a prime target in a nuclear exchange. What I would like to see in the EIS is the incremental probability the INEL would become a target in a nuclear war, compared with the other proposed sites. I would also like to know what the incremental human consequences of the INEL being a target is, versus the other proposed sites, given the current population distribution around the sites and the prevailing wind patterns. I suspect that the incremental probability the other sites would become targets is small - they are probably already targets. As a result of the smaller incremental probability, the human consequences of locating the SIS at these sites, given a nuclear war, could be significantly smaller than locating the SIS at INEL.

2.7.8

2.7.8

I feel that the probability of an all-out nuclear war occurring within the lifetime of the proposed project is significant. I feel this probability is much greater than other events considered in the Draft EIS, including seismic events, volcanic events, dam failures, tornados, etc. One of the reasons I choose to live in Idaho Falls is that I feel that the odds of surviving a nuclear exchange is greater in Idaho Falls than almost anywhere else in the United States. The SIS could change that. If the SIS were located at INEL, then Idaho Falls would be a much less desirable place for me to live.

6.1.9

5.27.12.8

3) The economic benefits to the local community of locating the SIS at INEL is probably less than the if the SIS were located elsewhere. The local DOE office, through its contractors, has historically avoiding doing business with local spin-off companies. This is not the case at other DOE sites. The local engineering companies do much more work for other DOE locations than for the local DOE office. It is interesting to note that the Draft EIS itself was done by NUS corporation, rather than by a local firm.

2.2.1

1.1

4) It is not made clear in the Draft EIS why the INEL is the preferred site. From an environmental standpoint, other sites offer less consequences. The community surrounding the Hanford site has recently undergone a severe economic downturn due to the shutdown of the N-Reactor and the cancellation of the BWIP project. The SIS project is needed more at the Hanford site than at INEL. I suggest that the report be modified to indicate the basis the INEL site was chosen over the other locations.

5.24.25

3.2.28

5) The DOE has operated the INEL in the past in a manner that has caused little environmental consequences. This has not been the case at other DOE installations, notably Rocky Flats and Hanford. What guarantees do we have that the INEL will continue to be operated in a prudent manner? If DOE had to comply with current NRC requirements, it would have long since lost its licence to operate nuclear facilities. I think an independent review agency should be designated to monitor DOE activities in the nuclear area prior to starting anything new. If citizens are required to obey NRC rules and regulations, why not another government agency?

2.6.3

6) Several reports were referenced in the Draft EIS which are not available for public review since they are classified documents. I feel that a report written for public review and comment should only reference publicly available documents. Traditionally, the DOE has cloaked its operations in secrecy. Referencing classified documents in the Draft SIS is not a good sign.

2.9

7) In the list of organizations receiving copies of the Draft EIS, many public libraries were included. These included three public libraries near the Hanford plant and four public libraries near the Savannah River Plant. No public libraries were included in the vicinity of the INEL. The Idaho Falls Public Library was not included, nor were any public libraries in Pocatello, Blackfoot, Rigby, Arco, Ririe, Shelley, Burley, Rupert, Twin Falls, or any community within 200 miles of the proposed location of the SIS. This looks very suspicious.

I would also like to have an opportunity to make a brief statement at the March 25, 1988 Idaho Falls hearings. Please let me know if there is any question concerning this material.

Yours truly,

James R. White
Consultant

E029

Testimony to the D.EIS
proposed SIS. project
Idaho Falls, Idaho 3/25/88

BEFORE I TELL YOU THE REASONS I AM AGAINST THE SIS PROJECT, 1.1
I WOULD LIKE TO TELL YOU WHO I AM AND WHAT I BELIEVE.

I AM ADA MIGEL RITCHIE. I LIVE IN IDAHO FALLS AND AM A FOURTH GENERATION IDAHOAN. I GRADUATED FROM SKYLINE HIGH SCHOOL IN 1968 AND ATTENDED THE COLLEGE OF IDAHO IN CALDWELL. I HAVE A BACHELOR OF ARTS DEGREE IN SOCIOLOGY AND A MASTERS DEGREE IN COMMUNICATIONS DISORDER SPECIALIST FROM ST. LOUIS UNIVERSITY.

I AM CURRENTLY TEACHING IN IDAHO FALLS SCHOOL DISTRICT #91 AND HAVE BEEN FOR THE PAST TWELVE YEARS. I AM the PARENT OF THREE SONS. JOSH, FRED AND JOHN. MY HUSBAND IS STEVE RITCHIE. I BELIEVE IN A STRONG NATIONAL DEFENSE AND I SUPPORT NUCLEAR ENERGY DEVELOPMENT FOR CIVIL ENERGIES.

TODAY I AM PLEASED TO PARTICIPATE IN THIS HEARING AND ASK THAT EVERYONE TRULY HEAR WHAT IS BEING SAID. I HAVE READ THE DEIS AND ITS SUMMARY. I ATTENDED THE SCOPING HEARINGS AND WILL CONTINUE TO BECOME MORE AND MORE OUTSPOKEN ON DISARMAMENT. THE SIS PROJECT REPRESENTS THE MILITARY INDUSTRIAL COMPLEX AND IT'S PURPOSE IS TO PROVIDE PLUTONIUM 4.14
FOR NUCLEAR WEAPONS. THEREFORE ESCALATING THE ARMS RACE.

THE AREA OF CONCERN TO ME IS RESPONSIBILITY IN GOVERNMENT. I HAVE HEARD IT SAID THAT PRESIDENT REAGAN HAS MANDATED THIS PROJECT. AS A CITIZEN I AM COMPELLED TO RESPOND. FROM A SCIENTIFIC POINT, AN INTELLECTUAL POINT, A SPIRITUAL,SOCIAL, AND ECONOMIC POINT OF VIEW. WHAT IS 2.7.2
LACKING FROM THIS PROPOSAL IS THE MORAL AND SOCIAL VIEWPOINT. PRODUCING PLUTONIUM FOR THE PURPOSE OF NUCLEAR

WAR HEADS BEGS AND REQUIRES A MORAL AND SOCIAL RESPONSE FOR WEATHER IT IS NEEDED OR NOT.

4.13 THERE ARE ONLY ABOUT 10 LARGE CITIES IN RUSSIA. 100 MEDIUM CITIES AND 700 SMALLER CITIES. THE UNITED STATES HAS ABOUT 24,000 NUCLEAR WEAPONS. ENOUGH FOR 2 BOMBS FOR EVERY CITY AND TOWN IN RUSSIA. BY IT'S OWN ADMISSION, DOE MR. 4.2.1 HARRINGTON STATED THAT WE ARE AWASH WITH PLUTONIUM. THE NEED FOR THIS PROJECT DOES NOT JUSTIFY THE COSTS NOR THE EFFECTS THAT BUILDING A PLUTONIUM PLANT WILL HAVE. LADIES AND GENTLEMEN, WE KNOW THE EFFECTS OF A BOMB THAT IS USED, FROM HIROSHIMA AND NAGASAKI. THE PURPOSE OF THE SIS IS TO PRODUCE THESE TYPES OF EXPLOSIVES. WE KNOW THAT TO USE THIS CAN CAUSE TOTAL DESTRUCTION THEREFORE WE HOPE NEVER TO USE THEM. BUT WE ARE SPENDING 500 MILLION DOLLARS TO BUILD THINGS THAT WE HOPE NEVER TO USE BECAUSE THE USE OF THESE WILL CAUSE TOTAL DESTRUCTION. THAT IS WHY I AM OPPOSED TO THE SIS!

THE US SPENDS OVER HALF OF OUR NATIONAL BUDGET ON MILITARY AND DEFENSE RELATED AREAS. BUTDEFENSE CONTRACTORS SUCH AS BOEING PAID ZERO TAXES FROM 1981 TO 1983 WHILE MAKING A PROFIT ON PENTAGON PROJECTS OF ONE AND A HALF BILLION DOLLARS. EVERY HOUSEHOLD WILL PAY AN AVERAGE OF $23,000 IN TAXES FOR THE ADMINISTRATIONS 5 YEAR DEFENSE PROGRAM. (STATISTICS TAKEN FROM "WOMEN -- FOR AMERICA. FOR THE WORLD. BEST 1987 SHORT DOCUMENTARY)

WHEN I TEACH MY CHILDREN ABOUT THE STRENGTHS OF THIS COUNTRY IT IS NOT THAT WE HAVE MORE WEAPONS THAT IS THE SECURITY. THE SECURITY IS FROM BECOMING ALL WE CAN BE. IT IS IN STANDING UP FOR WHAT WE BELIEVE AND PARTICIPATING IN THE PROCESS. PUTTING OUR PRIORITY INTO PLUTONIUM PRODUCTION 4.13 IN THIS TOWN IS NOT A HEALTHY MESSAGE NOR IS IT SATISFYING TO MANY PEOPLE OF THIS COUNTRY. FOR ME THE ELEMENTARY QUESTION 'WILL MORE NUCLEAR WEAPONS MAKE US MORE SECURE?' NEEDS TO BE ADRESSED. WE HAVE ENOUGH WEAPONS. WEAPONS WE HOPE TO NEVER USE. ENOUGH IS ENOUGH.

EXHIBIT

El am Fred McLain & my home is in Blackfoot. 771 Wildrose

From what El personley have been able to find out about the SIS Project, We would have to be some kind of a fool to let this opportunity to have the S.I.S. Project in Idaho, & then let it get away from us. 1.1

Just think of the worley 2000 jobs Selt would give to Idaho people, 5.27.7.16

This would not just mean jobs at the I.N.E.L. but would make moor jobs in the surrounding Communites

Not to mention supplys coming from local biss. people.

Elt is my understanding that the SIS Facility can do its job Safer, Cheaper & Cleaner than a reactor. 5.28.2

Not to mention the clean up of plutonium that we all ready have, in a safer & moor economically way than ever before. 2.2.15

The technology that the SIS will bring to Idaho will benafit not only our State Universitys, But also it will contribut to the Medical reserch hear in Idaho. 5.27.9.1

El also believe that this new technology from the SIS will not only benafit us hear todays & our children, But ther children also.

739

5.27.4.5

Just think maby some day our Childern want have to leave Idaho to get a good job & raise ther Children some where els besides hear in Idaho.

Ladies & Gentelmen, all Im trying to say hear today is that some one is going to get the SIS Project.

"So why not Idaho"

3.4

Every thing we do in todays world we have to take a cance just to survive & Im telling you all now, till the day comes, when the hole World is ready to lay down ther weapons that Kills & start loveing & careing for each other, The way our Lord ment for us to do. then we will have to depend on Project like SIS just to keep our Country safe & secure as possable.

740

Most of my life I have called Idaho Falls my home. My father, J.Bion Philipson headed the site selection committee sent by the Atomic Energy Commission in 1946 which selected Idaho Falls as the site for a national laboratory. He was in key manangement positions here until 1960 and later returned as a President for the chief contractor, Idaho Nuclear Corporation. I speak as someone with a commitment to Idaho Falls and to Nuclear Research.

Unlocking the mysteries of the atom has always been filled with great promise and great peril. When the laboratory was begun here there was a strong commitment to working to release the potential of atomic energy for the benefit of our people, for the purposes of peace. In 1947 the wise leaders of Idaho Falls shared that vision. They asked for and received from the A.E.C. and the Truman Administration written assurance that the laboratories here would not be used to produce atomic weapons. I still believe that research into the peaceful use of atomic power will bring real benefits to our children

If there is one community, one group of scientists, engineers, and leaders in this country who should remain faithful to the original vision it is this one. In the last decade, the defense industry has come to dominate nuclear research. We as a nation are being transformed from a people who dream and work for a quality future into a people consumed with the need to defend our shrinking treasure and influence. Who in America will speak out for basic research and say no to the defense monster if not us? 3.3.3

Where in the environmental impact statement does it speak to the cost we pay when we surrender the vision of the peaceful use of the atom? Where does it speak to the spiritual loss when we go from being scientists working for positive goals to being bomb makers and servants of destruction? It will be exspensive in the short run for us to say no to this project. But what this Site stands for has a future if we will wait for it. Making Idaho Falls one more extension of the Departmnet of Defense has a spiritual cost which can't be measured in dollars but is real none the less. 3.3.2

I have a second more earthy response to this S.I.S. proposal. We in Idaho Falls owe alot to the men and women who have managed the site over the years. With the exception of 1960 when the army was allowed to manage a reactor experiment, they have marvelous record of safety and care for the environment. That record is the result of constant vigilance and intelligent choice of procedures. Their care has allowed us to feel safe. However; The Department of Energy and its foerunner the A.E.C. don't have as fine a record with the sites on which they have done plutonium processing for weapons. The combination of the felt need for secrecy which limits regulation of these projects and a certain arrogance which places the importance of the work above consideration for the environment and even human lives leads the management of these projects to be lax. So accidents and unantcipated contamination have occurred and continue to occur in these defense related projects. This environmental impact statement does not warn us that it is this less regulated, less vigilant management which we shall inherit in Idaho Falls if S.I.S is approved. I think we will see contamination of our aquifer and possibly other accidents that will leave a mark on our state long after these managers have moved on. 5.24.23 3.2.19 3.2.16 5.12.1

I encourage you to see that the costs of this project are not all spelled out in this impact statement. I encourage you to look beyond the short term to consider the future of Idaho Falls, of our state and of nuclear science. I encourage you to join me in saying no to S.I.S. in Idaho Falls. 6.2 1.1

March 25, 1988

Dr. Clay Nichols, Acting Project Manager
SIS Project Office
Department of Energy
Idaho Operations Office
785 DOE Place
Idaho Falls, Idaho 83402

Dear Dr. Nichols,

My family has been in southeast Idaho for over 32 years. My children were born and raised in Idaho. We have a strong commitment to this state as well as a strong loyalty to see it survive and prosper in the future.

The INEL has been a part of southeast Idaho for as long as I can remember. The engineering programs that have taken place at this site are the cornerstones of the nuclear industry. The technology that has been learned from the prior experiments will by far out live all of us. The high levels of safety at the INEL in both the construction and operations, has produced safety statistics which are superior to the national averages for both construction and the nuclear industry. 5.24.23

The proposed SIS project will bring the newest of technology that will benefit industry, business, and educational institutions throughout the state. The SIS will be the most advanced laser facility of its kind in the world and has the potential to generate national interest as well as additional engineering projects for the future. The laser and fiber optics research relating to the SIS can become an important function for the state educational facilities. 5.27.9.2

Many communities will feel the effect of expanding businesses as well as a decrease in unemployment, because the Sis will bring federal tax dollars back to southeastern Idaho. 5.27.6.1

With the SIS project, the Idaho National Engineering Laboratory will again take the lead for an engineering program that may benefit many future generations. 3.3.1

As an Idahoan, I feel that the SIS program should be brought to the INEL and I strongly support it. 1.1

Very truly yours,

John J. Saucerman

COMMENT

of

TIM HOPKINS

DOE/EIS - 0136

Idaho Falls, Idaho, March 25, 1988

My name is Tim Hopkins. I was born and raised in Idaho Falls and have practiced law in that community for more than 20 years. I submit these comments as an individual, and as Chairman of the Greater Idaho Falls Chamber of Commerce I.N.E.L. Committee.

As a National Engineering Laboratory the I.N.E.L. has played many important roles, based on national priorities, throughout its more than 35 years of operation in Idaho. Idahoans recognize that those priorities change and that those changes have produced a rich variety of projects for the I.N.E.L., some of which are defense related, some are not. At this time we recognize that the nation, and our allies, have a critical need for redundancy, flexibility and new technology for development of weapons grade plutonium. This need is directly related to the effectiveness of our nuclear defense deterrent. The S.I.S. is essential, somewhere. The I.N.E.L. has been designated the preferred site by the Department of Energy, and Idahoans would be proud to play a role in our national defense by constructing and operating that facility in our state.

The President, the Department of Defense, the Department of Energy, the National Security Council and the Congress have concluded that we need such a facility. The draft Environmental Impact Statement concludes that the environmental impacts of locating the S.I.S. at the preferred site would be small and I know of nothing credible that would conclude the contrary. The I.N.E.L. has been an ideal neighbor to our eastern Idaho communities, and its safety record is truly enviable. We believe that our scientists, engineers and our work force in general can handle this sensitive project in the safest manner allowed by current technology.

The debate surrounding this project during the past months has often focused on what are declared to be moral, rather than environmental, issues. Certainly most Idahoans would agree that no reasonable effort should be spared in our search for world peace. While that search continues, however, we remain equally committed, as a nation, to a strong defense. A strong nuclear deterrent is the feature of that defense, and the SIS project is essential to its effectiveness. It will go forward somewhere. While we urge our leaders to leave no stone unturned in their search for peace, and while the horror of a holocaust haunts us all, nonetheless, this time requires us not to dither, but to do our conscientious best to maintain our defense--while we simultaneously seek the peace.

For the foregoing reasons, both environmental and moral, I join Idaho's governor and our entire congressional delegation in asking that the S.I.S. project go forward at the I.N.E.L. with the promptness that its national priority requires.

/

To whom it may concern. ①

Although currently a student at the University of Utah, I have been a lifelong resident of Idaho Falls. My whole family lives in I.F. This, I feel, gives me every right to voice my opinion and my point.

1.1 I AM AGAINST SIS !!!

Not only in Idaho but in any state or nation. You propose a weapons-fuel manufacturing
4.13 plant. Weapons! We (the U.S.) already has enough to destroy the earth entirely, alone. We don't
3.4 need anymore. In the immortal words of Albert Einstein, "You cannot simultaneously prevent and prepare for war."

But this is not nationwide, it is here, at home - in Idaho. Accidents are an issue that must be addressed. Not only 'what if' but also 'what after'. As an example of governmental
3.2.23 responsibility the Utah-Nevada down winders. People who live down wind of the Nevada government test site, & some dead, some dying of cancer that is a second-hand effect of the above-and/or under-ground nuclear tests. Not one ☠ has been granted any compensation for their pain and suffering.

Economy is the last issue I would like to comment on. A more fluid economy is needed in Idaho, in order to expand the

②

city, but consider the source. Nuclear weapons. The product will not be the stuff dreams are made of (!), but the stuff death is made of(☠). To me, S.I.S. stands for Sure Idaho Suicide. This is my earnest opinion, my piece of mind with peace in mind. Remember the only way to start stopping nuclear arm is to stop starting.

5.27.6.1

MY NAME IS REX CHERRY AND I LIVE AT RTE. 3 RIGBY, IDAHO.

I HAVE LIVED IN IDAHO ALL OF MY LIFE AND HAVE DERIVED MY LIVING IN PART FROM THE INEL. AS A CONSTRUCTION WORKER I HAVE WORKED AT THE INEL PERIODICALLY FOR 25 YEARS. MY FATHER WAS EMPLOYED AT THE SITE FOR THIRTY YEARS AND RETIRED FROM EMPLOYMENT THERE SOME YEARS AGO. 5.27.12.4 THE INEL PROVIDES THE STABILITY FOR THE ECONOMIC BASE IN SOUTHEAST IDAHO.

I CANNOT BELIEVE THAT ANYONE WHO WORKS, LIVES, AND ENJOYS THE STYLE OF LIFE IN IDAHO WOULD BE OPPOSED TO THE DEVELOPMENT AND PROGRESS THAT THE SIS PROJECT WOULD BRING TO OUR GREAT STATE AND AT THE SAME 3.4 TIME PROVIDE FOR A STRONG NATIONAL DEFENSE.

THERE ARE SOME OUTSIDE SPECIAL INTEREST GROUPS WHO FOR SOME REASON DO NOT SHARE OUR GOALS. THESE GROUPS SPEND A LOT OF TIME AND MONEY OPPOSING MANY OF THE THINGS THAT HAVE MADE OUR COUNTRY THE GREATEST COUNTRY ON EARTH. FOR THIS REASON I WOULD QUESTION THE LOYALTY OF THESE PEOPLE.

A SHORT TIME AGO, ANOTHER GROUP, (THE NATIONAL RIGHT TO WORK COMMITTE) BROUGHT PROFFESIONAL ACTORS INTO OUR STATE VIA THE NEWS MEDIA TO TELL US HOW TO VOTE. THE QUALITY OF ACTORS WAS SOMEWHAT BETTER THAN THOSE BEING USED BY THE SNAKE RIVER ALLIANCE AND MOSSES SEEMED TO HAVE CONSIDERABLE INFLUENCE OVER THE PEOPLE OF IDAHO.! WHAT HAS THIS GOTTEN US? LOWER WAGES, PARTTIME JOBS, AND SUFFERING FROM THOSE PEOPLE IN THE WORKFORCE WHO CAN LEAST AFFORD IT.

I WOULD HOPE THAT THE PEOPLE OF THIS GREAT STATE WILL SEE THROUGH THE SMOKE SCREEN BEING PUT UP BY THESE GROUPS WHO HAVE COME IN WITH THEIR UNLIMITED OUTSIDE OF THE STATE FUNDING AND THEIR PROFFESSIONAL ACTORS TO TELL US THAT THE PEOPLE OF IDAHO ARE NOT CAPEABLE OF CONTROLLING THE DESTINY OF THE GREATEST STATE IN THIS COUNTRY.

I WOULD URGE YOU, THE PEOPLE OF IDAHO TO TELL THESE GROUPS TO GO HOME 1.1 BYE SAYING YES TO S I S FOR IDAHO.

Rex Cherry

To whom it may concern:

1.1 I am writing you to let you know of my opposition to the DOE plan to build the SIS facility. As a resident of Teton County in Idaho, I am against not only building the SIS plant at the INEL Site; I am against building the facility at all.

4.15.5 First of all, I don't feel that the facility is necessary. The US has approximately 120 tons of weapon grade plutonium. plutonium has a shelf life of 20,000+ years, if the INF treaty, signed by President Reagan, is ratified an additional 2 tons of plutonium will be available to be

4.3 recycled into future weapon systems, and we now have enough nuclear warheads to destroy any potential enemy several times over. There is no justifiable need to build a new weapons plant.

The DOE promises economic benefits to the local economy if the SIS is built at INEL. The economic benefits will be

4.13 short lived and minor. The initial construction phase will undoubtedly be handled by a large firm from outside the local area; any jobs generated locally will be temporary and in all probability at the lower pay scales. The amount of legal

5.27.10 feed grade plutonium available for the finished plant dictates a 6-7 year operating life for the plant; thus any jobs generated by the SIS will be temporary, even the high level technological ones. The community services necessary to provide for these temporary workers will not be supported by a continuing tax base.

The DOE does not adequately address the economic

5.27.2 drawbacks of locating a weapons plant at INEL. Tourism and agriculture are the backbone of the local economy where I live, just downwind of the INEL site. How many jobs will be lost due to loss of tourists, who will avoid a area that is the site of large concentrations of plutonium and whose roads are travelled by vehicles carrying plutonium and its subsequent waste products? How many vacation homes will not be built due to fears of contamination of the air and water.

6.1.7 The economic disaster that would follow a minor accident at the SIS, not to mention the effect of widespread contamination of the Snake River Aquifer and Snake River Plain are not even considered by the DOE. Even the fear of

6.1.12 plutonium contamination would destroy Idaho's agricultural and tourist industries.

Finally there is the actual danger of contamination of

5.30.3.8 the environment. The INEL is already the site of several temporary nuclear waste dumps; it has been one for the last 25 years. There are genuine reasons to believe that most of

6.1.2 these sites, as well as the experimental facilities themselves are inadequately protected from earthquakes. INEL has a earthquake zone rating of 8, the same as San Francisco.

Contamination from the INEL has already leached 230 feet down into the ground. 2 million acres of farm land are irrigated from the Snake River Aquarier; if the contamination pollutes this water source the effects, to put it mildly will be disastrous! The DOE calculates the risk due to a transportation accident, while bringing materials into or out of the INEL, as insignificant. I for ons do not believe that accidents never happen, nor do I believe the DOE's assurances that the safety procedures and technologies they have are failsafe or that they are even adequate. The Department of Transportation recently refused to approve the TRUPACT I-II design that the DOE was planning on using to ship radioactive wastes. The DOE still hasn't come up with a acceptable design.

5.30.4.9

3.2.11

5.29.45

I feel that the SIS proposal is a short sighted, self motivated political issue. There is no real concern for the actual need for the plant, nor is there adequate concern for the local population or for the well-being of the nation at large. For far to long we have allowed the fear of the chevy to dictate our national defense and economic policies. Perhaps now is the time for America to stand up and to make decisions that are beneficial for its well-being and economy. The Federal Government is billions of dollars in debt; let us not throw away another billion on a ill conceived project that generates nothing but destruction and pollutants. If the money has to be spent let us spend it in a way that has positive long term effects, not only for us, but for our children. Thank you very much for your time.

6.3

Exhibit 39

TESTIMONY - SPECIAL ISOTOPE SEPARATION PROJECT
March 25, 1988

My name is Philip A. Anderson. I am a resident of Pocatello, Idaho, having lived there for nearly 23 years. Professionally, I am a chemist. Members of the news media here today may recognize me as a Senior Scientist at the INEL, the President-elect of the Idaho Academy of Science, past Chairman of the Idaho Section of the American Nuclear Society, and a member of the Church of the Nazarene. I want to make it clear that I am speaking only for myself today and am not representing any of those organizations.

Given that national defense needs justify the construction and operation of the SIS - and I'll have to accept that by faith, since I certainly don't have access to our nation's strategic defense plans to be able to make an intelligent judgment of that by myself - the facility should be built where the cost to the taxpayers and the environmental impacts are minimized. Given the need for the SIS, which I understand is not a topic of consideration at these hearings, there are several technical and environmental aspects of the SIS that I would like to discuss.

The proposed SIS will utilize new high technology of applied atomic vapor laser isotope separation (AVLIS) techniques. As with any new technology, we can expect spinoff applications. We didn't know in advance that the space race of the sixties and seventies would give us miniature calculators, personal computers, or a myriad of new materials of construction. Similarly, it is really difficult to predict the scope of spinoffs from AVLIS techniques. Certainly, we can expect new advances in obtaining isotopically pure radioisotopes for specialized medical and manufacturing applications. Others, which are more difficult to predict, will certainly follow. Personally, I welcome the opportunity for and the presence of the development of such technology right here in Idaho. 5.27.9.1

Any industrial activity generates waste. The additional volumes of radioactive wastes that will be generated by the SIS are very small compared to those of ongoing nuclear activities already in Idaho. I spend at least 40 hours per week in the immediate vicinity of existing high-level radioactive wastes and am completely comfortable with and confident of the safety of the management of such materials here using current technology. 5.30.5.7 3.2.2

As a chemist, I have worked extensively with alpha-emitting radionuclides, including Pu-238 and less radioactive Pu-239 which is a primary product of the proposed facility. The hazards, while real and significant, simply do not begin to approach the frightening conditions often described in the sensational reports that have recently appeared in our newspapers, especially in letters to editors. 5.24.27

I am familiar with the types of containers required for the shipment of radioactive materials and am very satisfied with levels of protection they provide for credible accident conditions. Recently, after a truck crashed into an Idaho river and released some of its toxic chemical cargo, several people made irresponsible statements that 5.29.41

were reported in the news media suggesting that if the truck had been carrying plutonium, the river would have been "poisoned" for tens or hundreds thousands of years. The fact is, had that truck been carrying plutonium or other nuclear materials, the consequences of the accident would not have been significant, because the containers for carrying such materials are designed to maintain their integrity under even much more severe accident conditions. I would much prefer to have such shipments of nuclear materials pass through my neighborhood in Pocatello daily than to have other common and more dangerous shipments, such as gasoline, pass through even monthly. This confidence is based on personal experience with such materials and a first-hand knowledge of their chemical, physical and radiological behavior. I can't help but notice that these frightening and incredible accident scenarios are proposed by people who, although intelligent and sincere, have not had first-hand experience with nuclear materials, but are simply repeating what they have heard or what they think is the nature of such materials.

5.29.41

2.12.4

I hope that the decision of whether or not to site the SIS in Idaho will be based on actual technical, economic, and environmental merit, and not on emotionally-based negative reports of sincere but technically inaccurate perceptions of the hazards associated with nuclear materials. If the people making the statements about the horrendous dangers of plutonium really have documentable data of such hazards, they should share them directly with the scientists and engineers of the technical community. Not only are we in the position to take corrective action, if they indeed are true, but we have a strong vested interest in our own health and safety. If the dangers are really as severe as they claim, we who work with such materials would be the first to suffer the consequences. The overwhelming conclusion, based on current scientific data and experience to date, is that nuclear materials, including plutonium, can indeed be handled and processed safely using current technology and established safety procedures. On that basis, I personally welcome the construction and operation of the SIS in southeast Idaho.

ROSS J. JONES
3410 HANDLY
IDAHO FALLS, IDAHO 83401

AS A CONTRACTOR AND A MEMBER OF THE IDAHO FALLS COMMUNITY, I AM HERE THIS AFTERNOON TO PUBICALLY SUPPORT THE "SIS" AT THE INEL. 1.1

IN BEING A CONTRACTOR HERE IN IDAHO OVER THE LAST ELEVEN YEARS AND BEING ACTIVELY INVOLVED AT THE INEL, I AM QUITE FAMILAR WITH THEIR POLICIES AND PROCEDURES.

I FEEL THAT THE RECORD OF THE INEL IN CONSTRUCTION, OPERATION, SAFETY AND SECURITY SPEAKS FOR THEMSELVES IN THE PROTECTION OF THE ENVIRONMENT AND HUMAN LIFE. [redacted], I CAN NOT SEE WHERE ANY OF THIS WILL BE EFFECTED OR CHANGED BASED ON THE PAST RECORD OF DOE AND THE INEL. 5.24.23

BY THE SIS,

I FEEL IT IS TIME THAT PEOPLE OUTSIDE OF IDAHO QUIT DECIDING WHAT IS BEST FOR IDAHO. THE PEOPLE WHICH MAKE IDAHO THEIR HOME HAVE BEEN IMPACTED HEAVILY BY OUTSIDE SPECIAL INTEREST GROUPS ON ISSUES SUCH AS THE "RIGHT TO WORK" AND THE "WILDERNESS ISSUE".

LET'S DON'T LET THIS HAPPEN TO THE SIS. IT IS NOT A MATTER ON THIS ISSUE IF THE SIS IS GOING TO BE BUILT, IT IS ONLY A MATTER OF WHERE. TO HELP ASSURE AN ECONMONIC BASIS FOR THE INEL AND SOUTH EASTERN IDAHO, THE PLUSES FAR OUT WEIGH THE MINUSES. THE SIS WILL HAVE A POSITIVE IMPACT ON THE AREA AND AGAIN I FULLY SUPPORT THE SIS BEING BUILT AT THE INEL. 6.2

THANK YOU

Ross Jones

785 DOE Place
Idaho Falls, Idaho 83402

To whom it may concern,

Regarding : Draft Environmental Impact Statement, Special Isotope Separation Project, Idaho National Engineering Laboratory, Idaho Falls, Idaho

4.1

4.10.2 There is no substantiation of presumed need for the additional plutonium and hense the SIS plant offered in this Draft Environmental Impact Statement. Without the access to information in the Nuclear Weapons Stockpile Memorandum its not possible to know if this represents a

4.7.3 needed "redundancy" or a "redundancy" of welfare for the military-Industrial complex. Other EIS's for national security projects have included a classified appendix that completely covers the need for a

4.11.1 given project for the evaluation by Congress, but, no such appendix is so provided with this one. If all the chestbeating and heavy statements

4.11.2 in favor of this project by the Idaho Congressional delegation has not been primed with hard information on clear need by way of the general NWSM and the specific classified appendix to this document can we dare claim that free and open democratic processes are at work here?

4.11.1 A classified appendix addressing the need for the SIS in a complete manner should be provided to Congress. Senator James McClure's claims of continuing need for weapons plutonium in his recent address to the

4.2.1 Idaho Falls Chamber of Commerce are strongly contradicted by statements recently given by DOE Secretary John Herrington (see the attached news articles from the Post Register). We obviously cannot have it both ways.

748

3 workers get dose of radiation

By ROCKY BARKER
Post-Register staff writer

Three workers were slightly contaminated Tuesday at the INEL's Idaho Chemical Processing Plant.

One worker suffered a slight internal contamination in the incident, which took place in the 601 Building. But Idaho National Engineering Laboratory officials said it resulted in contamination less than .02 percent of the allowable annual dose to an occupational worker.

Two maintenance men were disassembling a valve on a one-inch pipe that they believed to be depressurized and drained, Westinghouse Idaho Nuclear Co. officials said in a news release. About a liter of decontamination solution, which contained low levels of beta and gamma ray-emitting radionuclides, was released.

"We've had a leaky valve that was noted some months ago," said John Volpe, WINCO vice president and manager of nuclear and industrial safety. "We had it sealed up and were in a process to fix the leak."

The maintenance men were wearing protective clothing and respirators that protected them from contamination. But three other workers nearby were not wearing respirators and were contaminated.

"They were not associated with this job," Volpe said. "They were outside the work area doing other things."

The workers were successfully decontaminated, said WINCO officials.

The decontamination solution, which is primarily water, was released into the process makeup bay of the 601 building, contaminating about half the building. It is expected to take two days to decontaminate the building.

"The release is totally contained within the bay and will have no impact upon the environment or the public, nor will it affect normal operations," officials said in the press release.

The workers were taken to the INEL's whole body counter at the Central Facilities Area. One worker had internal contamination in the lung figured at less than 10 millirem over a life time. The annual DOE limit is a 5,000 millirem or 5 rem whole body dose annually.

Rem, which stands for Roentgen Equivalent Man, is the standard unit of radiation exposure.

Most ICPP operations continue be idle since Mar. 4 when operations were halted for a safety review. The review was ordered after two minor technical specification violations, which are requirements designed to ensure that safety procedures are met, were discovered.

Volpe said the incident was not connected to the review.

McClure contends plutonium still needed for nuclear weapons

By ROCKY BARKER
Post-Register staff writer

Despite arms control, the need for plutonium used in nuclear weapons continues, Sen. James McClure told the Idaho Falls Chamber of Commerce Tuesday.

"First Tuesday," the Special Isotope Separation project will receive priority of the Department of Energy, said McClure, R-Idaho, in a telephone conference call from Washington to the chamber's forum.

"The need for plutonium is real," he said. "There is absolutely no doubt in the minds of the Department of Defense and in the minds of the Department of Energy that the SIS is required."

The SIS, a proposed $1 billion laser-driven plant that would separate weapons-grade plutonium from fuel-grade plutonium, will be the subject of hearings March 25, 26 and 28 in Idaho Falls, Boise and Twin Falls. The Idaho National Engineering Laboratory has been chosen as the preferred site in an environmental impact statement on the project prepared by DOE.

The closing of the N Reactor at the Hanford Nuclear Reservation in Washington, a major plutonium producer, may also cause DOE to switch its L Reactor at the Savannah River Plant in South Carolina from tritium to plutonium production, said McClure.

That would place more importance on building the SIS to provide an alternative source of plutonium in the early 1990s, he said.

DOE officials have said that the SIS is not tied to a specific plutonium production need. Instead, it is meant to be flexible and continually increase plutonium production such as in a breakdown of arms control treaties.

Energy Secretary John Herrington [illegible] said today He rrington was referring to the declining need of plutonium in weapons, [illegible] switch its L Reactor at the Savannah River Plant in South Carolina from plutonium to tritium production, said McClure.

That would place more importance on building the SIS to provide an alternative source of plutonium in the early 1990s, he said.

DOE has no plans to switch the LR eactor to tritium production.

"All three Savannah River reactors have the ability to be converted to tritium production," he said. "If we have to change any of them we would have to look into the NEPA (National Environmental Policy Act) process."

McClure applauded the chamber's efforts to promote SIS support in the state. He said it was important for [illegible] against the proposed [illegible] the SIS is scheduled to refine plutonium for seven to eight years. But in addition to the economic benefits of the plutonium production, the SIS also has the potential for many spin-offs that could aid economic development in eastern Idaho for "I think there is a [illegible] support it for rational reasons and

"They must of taken that out of

4.7.1 Need for the SIS here based on "redundancy", "flexibility" and "technological diversity" in plutonium production is vague and not specific enough for appropriate evaluation. The DEIS needs to give a detailed look at these reasons with some reasonable scenarios to chart the working possibilities. Other options providing "redundancy" and "flexibility" which currently exist should be included: restarting the

4.7.4 N reactor (which is undergoing safety modifications and being placed in cold standby); processing SIS feed plutonium in the SIS prototype facility already under construction at the Lawrence Livermore Laboratory; blending the SIS feed plutonium with supergrade plutonium to make weapon-grade; and using SIS feed plutonium in its current form for weapons.

5.26.1 The legally available amount of feed plutonium available to a SIS plant (6 tons) would be processed completely in six to eight years of SIS operation and any "redundancy", "technological diversity" and "flexibility"

5.26.2 offered by the SIS would be over with unless part of the plans of the building of the SIS by the DOE and Department of Defense is to deliberately violate provisions of the Nuclear Non-proliferation Treaty by processing commercial fuel plutonium for military uses: a wreckless plan at minimum.

6.3 The country cannot afford the whole perrenially overestimated wish list of nuclear or non-nuclear weapons submitted by the pentagon and yes, the military-industrial complex can and, perhaps, will bankrupt and destroy this nation from within if not given appropriate oversight. If our

4.9.1 Congressional delegation is seeking to find some federally funded welfare work for the local building trades to continue to entertain them in the style to which they have become accustomed at the national expense and debt, it should be clearly and honestly noted so in this Draft Environmental Impact Statement. This is a critical socio-economic potential impact, indeed. This area has a fair number of fast-breeder reactionaries: at once overpopulating the world, cursing government and living high off the government work projects funded by taxes and debt.

5.30.1.4 This DEIS does not address the problem of disposing of the waste generated by this project in an adequate manner. It states all

5.30.2.1 transuranic wastes generated by the SIS project would be taken to the Waste Isolation Pilot Project (WIPP) in New Mexico which is still being constructed. The New York Times reported that WIPP has developed leaks that some scientists say will make it useless.

The DOE has asked the National Academy of Science to study the recent problems. No alternative to disposal at WIPP is offered in the DEIS. 5.30.2.1
The Department of Transportation would not approve the $100 million TRUPACT cask design that DOE was planning to use to contain the transuranic waste for shipment to WIPP and DOE has not come up with an 5.29.45
acceptable design. If the WIPP project fails to open will INEL become the "temporary" storage for the forseeable future? DOE has failed 5.30.3.1
continually to honor promices to remove TRU waste to a site that meets safety criteria. The DEIS does not address this problem. 5.30.2.5

I am a farmer in the New Sweden area south and west of Idaho Falls and I remain deeply concerned about the radioactive materials injected directly into the aquifer through waste water injection wells over many 5.17.2
past years, and also the considerable amounts of plutonium and other transuranic waste as well as several kinds of very toxic organic solvents 5.30.1.6
found two-thirds of the way to the aquifer through rock and soil overburden drawn there by gravity and runoff water and, most of all, some very 5.30.4.1
cavalier and stupid people operating at INEL over the past years, that was discovered by drilling just last summer. The official word from Mr. Barraclough and other INEL functionaries was don't worry about it, its not in the aquifer yet. No matter what sort of horrendous crimal action with radioactive substances or slobs dribble, we always get the same gentle reassurance of "not to worry", its only a small dose or it won't affect anyone in your lifetime. When the fallout cloud from Chernobel came over Idaho and dropped the largest amount of radioactive materials in the rainfall of any area of the United States, I called the INEL people and DOE people to find out exactly what elements and isotopes and prospective quantities had fallen into their monitors, they said it would take two or three months to find out what it was but that it was such a trivial amount as to be of no concern. No information about it has ever been publicly offered since. How can they know if the risk is great or small if they don't even know what elements and isotopes they speak of. I think perhaps they are reassured and reassuring more 3.2.5
out of desire than facts, atleast that is one sussplcion. Always long on reassurance and short on facts. These are not materials that offer much forgivenes for impreciswion of methods involved in the SIS project, need I remind anyone. I have heard from good sources that INEL will before 5.30.4.5
long be designated as a Superfund Toxic Waste Cleanup Site. What are they doing to recover these solvents and TRU's up to 230 ft. below grade?

5.29.1 5.29.67 5.29.31 2.1.1 5.28.8 2.7.8 2.7.10 3.2.1 3.2.18 3.2.5 3.2.6

The DEIS does not adequately address the problems of considerable transportation hazards in moving such a large amount of plutonium from place to place on the regular highway system. If shipped in a oxide powder it would pose a multitude of risks if leaked. The DEIS does not mention the type of emergency response required to deal with an accident involving a leak of plutonium. If the SIS project were built at Hanford, where the feed supply of plutonium presently resides and where it was originally planned to be sited, it would greatly reduce the transportation hazard. There is incomplete data presently to project satisfactorily the normal operating impacts as well as the accident impacts of the SIS. The SIS should not be constructed before the full scale demonstration facility is in operation at Lawrence Livermore Labs in California and has been tested and operated succesfully and a final design for the plant has been prepared and apppoved.

The DEIS must consider the environmental effects of nuclear war. The Third World War or even a limited nuclear exchange would have world-wide impacts and would not have the luxury of being waged wholy over foreign soil and airspace. INEL will likely assume a much more prime roll as a nuclear target in the event of a nuclear exchange if the SIS plant were to be constructed here.

The Department of Energy has an atrocius environmental and safety record at its nuclear defense facilities. Hanford, Savannah River, Rocky Flats, Fernald, Los Alamos, Oak Ridge and Livermore nuclear weapons design and construction facilities have, in many many places contaminated the environments on and off site of their facilities; in some cases in a big way. DOE operates without outside oversite and sets its own rules and policies that have led in many cases to grave environmental and health damage. INEL itself has released millions of curies of radiation into the air and environment and is not without fault or object for concern. Much of the contamination there remains contaminated and I've heard of no really comprehensive plans for cleanup articulated. WINCO has a seriously flawed reputation amoung many nuclear people and they are presuming to seek the contract wholesale. In their operation of the INEL Idaho Chemical Proceesing Plant there have been three criticality accidents.

I am quite well aquainted with a considerable number of people who work at INEL and related facilities and less well aquainted with many many more. A majority of them have adamantly affirmed their work to be for peaceful use of nuclear energy with a clear distinction from nuclear armaments. Many of them I've spoken with recently about this proposed SIS plant have expressed considerable fear and concern often saying they would like to speak out against it but fear job reprisal may result and that they may have to quit their jobs here and seek employment elsewhere to satisfy their own conscience about it. Some have said they would never have come here to work except that it was basically an atoms for peace facility. Its often the case that those who are the noisiest and entropic drive out the peacemakers. Is that what the SISies are trying to precipitate. There has been a lot of clamor and noise for it and many who have quiet conviction of disfavoring it fear job and business reprisals if they were to speak their mind. 2.7.12

I would far rather the one beating their chests and making a large comotion for the privilege of building fireworks for the second coming etc. might chose a different locale in which to reside where such work and activities are already well in progress. They would lend a great sigh of relelf to my sense of well being. These moral and psychological concerns are not addressed in this DEIS and it is essential that they be so addressed. 2.7.2

Essentially and simpley,

David [illegible]

E042

TESTIMONY AGAINST THE SPECIAL ISOTOPE SEPARATION PROJECT

April Hall Cutting
125 North Nineteenth Avenue
Pocatello, ID 83201

1.1 Set before us today are life and death, blessings and curse. I stand before you and ask you to choose life. I stand with those against the SIS. This project should not be built; not at INEL, not at Savannah River, not at Hanford, not anywhere. Our option must be for action of a different kind.

6.3 Instead of trying so hard to bring this project to Idaho because of its economic benefit, I challenge the DOE, the Chambers of Commerce, private businesses, and all the contractors at the INEL to work hard for life-enhancing projects. I challenge you to develop and invest in applications of engineering technology which save instead of threaten life. Look beyond the immediate gain of several hundred jobs to the unlimited possibilities to which the gifted people of our state can apply their skills and talents. Think creatively, devise new technologies, imagine...

Imagine a world where there is cooperative exploration instead of nuclear standoff. Imagine the day when we finally learn that any kind of stockpile deprives others. Imagine that if all of the human energy spent supporting and protesting this project and in getting to these hearings was being used to assist those in need or to work with our legislators for just laws. We might save the world instead of destroying it. We might learn to respect others instead of creating animosity.

Our environment cannot be valuated; the impact of such a project can never be weighed. Life is a fragile thing. My hope is that humanity accepts the responsibility for the future of this planet so that it may have as long a life as plutonium does. Just think what an amazing future the earth can have in the next twenty thousand years!

751

EXHIBIT #3

Special Isotope Separation Project
Idaho National Engineering Laboratory
Environmental Impact Statement Hearings
March 25, 1988

Testimony of Craig Hall Cutting
125 North 19th Avenue, Pocatello

1.1 It is a difficult thing to testify against the placing of the SIS at INEL because, like the boosters in the Chambers of Commerce, I am well aware of how much our area needs employment opportunities, and the potential "spin-offs" that the SIS might offer in the future. I do not want to testify against something that could give an immediate relief and a long-term boost to our economy.

2.7.2 However, I must offer a challenge to such thinking. I am opposed to the SIS because of the negative impact it will have on the mental and spiritual health of those who work there, and the moral destruction it will cause. I do not wish to see the lives of the talented and skilled, but presently unemployed persons I know used in service of the demonic and immoral proliferation of nuclear weapons and preparation for nuclear war.

3.4 An unemployed person will grab at nearly whatever job is offered. It is immoral that the only job our society is able to offer is one that serves the god of war and brings us closer to total global destruction. The building of nuclear weapons and refining of materials whose express purpose is for nuclear weaponry is an unconscionable act in today's world.

It is because of this destructive use of human potential, the moral abyss that a worker must face when he or she looks deep within onself at what is right and wrong, and my certainty that if we have the will, we as a nation can use our wealth to create jobs for the future that build peace instead of destruction that I can and must boldly oppose this project.

Public Hearing, March 25, 1988 Exhibit 44
Draft Environmental Impact Statement (D.E.I.S.)
Special Isotope Separation Project (S.I.S.)
Idaho Falls, Idaho

(Presenter: LANIE BENSON
P.O. Box 736 DRIGGS, IDAHO)

Testimony:

1.1 This statement is in support of the No Action alternative: not to construct the SIS. (and the issues addressed in DEIS)

THIS IS HOW I SEE THE SIS ISSUE:

To start with, the Department of Energy (D.O.E.) tells me they would like to build a plutonium factory in my backyard.

I think, "this must be my lucky day." I see my property value going up; who knows, I might even get a job.

But wait a minute, why has D.O.E. decided to "bless me" all of a sudden? I ask them, "why my backyard"? I get no answer.

I check around. I learn that nobody else wants this thing. I wonder why?

I make some telephone calls. I find out that wherever D.O.E. 3.2.4 has been -- Savannah River, Rocky Flats, Hanford -- the soil has been poisoned; the rivers, reservoirs, drinking water poisoned; the air poisoned.

But I'm "patriotic", right? I mean I want to do my part to "defend my country", right?

(PAGE 1) (cont.)

So I ask D.O.E., "why do they need to build this plutonium refinery?" I mean, I know they've been making plenty of bombs without it. They plead "secrecy" and "national defense". 4.7.3

I persist. They say they need "redundancy". I begin to wonder just how much "redundancy" they think they need? 5.2.1

I ask D.O.E. how much this plutonium factory is going to cost me? They say $500 million.

I ask them how many people they're going to hire? They say maybe 500.

I do a quick calculation. I mention that that's $1 million per job. They say, "yeh, defense jobs don't come cheap."

I tell D.O.E. that the trade unions around town really hope this project comes here. D.O.E. asks me if Idaho is a a "Right-to-Work" state?

I mention that the Chamber of Commerce says there will be a lot of "spin-off" businesses. D.O.E. says they can't think of any at the moment, but they're sure there will be some. 5.27.9.1

I ask about the "safety" of the plant; I mention the terrible record of D.O.E., to date. They say "we've changed" 3.2.1

I ask about the 200 tons per year of plutonium waste the plant will produce. D.O.E. says they're going to haul the stuff to a dump in New Mexico; they're going to use TRUPACT casks, they say. 5.29.41

(PAGE 2) (cont.)

Public Hearing: SIS/D.E.I.S., Idaho Falls
March 25, 1988 (Presenter: LANIE BENSON, Driggs, Id.)
(cont. from pg. 2)

I find out later, that the cask/ leak. D.O.E. says not to worry.

5.30.2.1 I tell D.O.E. that I've read that the dump in New Mexico is leaking. They tell me not to believe everything I read.

5.30.2.1 I ask what if the dump in New Mexico can't be used? They say the waste will have to be stored elsewhere. I ask them where, most likely? They say "at the plant." I say, you mean here, in my backyard? They say "that's right." I ask them for how long? They say a half million years. I say that I've changed my mind. I don't want to build this plutonium factory. D.O.E. says, they can't understand my "hostile" attitude.

Thank you,

LANIE J. BENSON
P.O. Box 936
DRIGGS, Id 83422

753

To the D.O.E.,

-I am definetly for the new SIS Project. 1.1
-As a contractor in the Snake River Valley I can see the economic depression of the communities and the need for some "new blood".
-The construction work force is here and ready to work. We have the required people to do the job and good skilled people at that. 5.27.11.3
-As the studies have shown, there will be a whole new list of jobs for the operating people. This means that my sons may find a job in the laser technology field and that my daughter may work or find a husband that will work there also. This means that my family can be around me and continue to enjoy those bonds that we've made. Also there families will enjoy growing up here. 5.27.7.3
-The SIS project will bring new technology to Idaho and let Idahoans show there technology and research skills. 5.27.9.2
-The "Buy Idaho" policy will bring manufactured products from our own state and will allow suppliers to bring materials in that will boost our economy. 5.27.9.6
-SIS will help bring some of the tax money that you and I expend each year back to the state with new jobs and opportunities.
-The INEL has made history in past years with its nuclear research and is very capable to handle the new SIS project in its various phases 3.2.2
-The INEL has the area for the site and is prepared to move on it immediatley. The enviromental impact just would not be there.
-The SIS will help to stabilize the economic forces which control our growth in education, economic development and tax revenue. 5.27.7.16

-I'm for it!

THANKS, JEFF WHEELER

E051

Exhibit 51

Testimony for the SIS Hearing
March 25, 1988

Prepared by Pat Feuerborn & Family
415 Randolph
Pocatello, Idaho 83201

I live, work, & am trying to raise my family in Idaho.

My husband is a union pipefitter and, like those clamoring "Yes, yes," to the SIS, we'd like to see new projects and new jobs at INEL.

The SIS could be used to reprocess existing plutonium to make it safer to handle. The advanced technology involved could be used to research and develop unknown benefits for humankind. But it has been made clear that none of this will happen. No, the only purpose of the SIS is to produce weapons-grade plutonium, which can only be used to produce death and destruction.

Sure, it'd be nice to get a piece of the pork-barrel pie and see our families prosper for a few years, but at what price, Idaho? Can we truly enjoy the financial benefits of the SIS with our families, knowing that other families may burn because of our actions? We are responsible for our choices. Is the SIS a financial benefit we can afford? 6.1.2

Take a look at Hanford. They hitched their wagon to a nuclear star. Apparently they thought a few years of prosperity would be worth the moral responsibility. But nuclear facilities have a limited lifetime. Now their area is more economically depressed than before and the citizens are crying, "Poul!" They think we are trying to take their jobs. 5.27.10

We might think we can make enough money in the 7 or 8 years the SIS is projected to last, but what is ever enough? If our community and union leaders are really interested in helping us all prosper, why don't they push for the construction of the replacement for the Idaho Chemical Processing Plant to treat nuclear waste that we've already created? That project appears to be forgotten in this regional push to participate in bomb making. 5.30.5.1

If we look beyond the end of our own noses, we'll realize that there are already approximately 120 tons of weapons-grade
4.13 plutonium stockpiled by the U.S. -- not to mention the tons of active warheads and bombs we have circulating around the globe.
4.3 In May we're hopefully signing a treaty to reduce our long-range nuclear missiles by 30 to 50 %. We don't need more weapons-grade plutonium.

There's, also, the matter of the national deficit that may never be paid off. How can we justify spending yet another billion dollars to help create more weapons-grade
6.3 plutonium that we don't need to kill and destroy our world and those who live here?

We are citizens of the world, Idaho -- a world that I and my family hope will continue to live and prosper. The choices we make will have effects that we can't foresee. We cannot afford to build the SIS here or anywhere. The price of death and
1.1 destruction is too high. Please join us in saying "Yes to Life" and "No to the SIS."

~~Idaho Falls~~ S
83402

Hello
My name is Joe Pehrson. Four generations of Pehrsons have lived in Eastern Idaho and I'm proud to call myself and Idahoan. ~~My friends and family support the SIS~~ I love this ~~area~~ State and hope to stay here ~~and~~, raise a family and live to a ripe old age. My leisure hours are spent in the great outdoors running rivers, fishing, camping and cross country skiing in the winter. I consider myself somewhat of an environmentalist. I've spent the last 8 years living in Idaho Falls and have come to know and trust

5.24.23 the saftey record of the hard working and dedicated people that run the INEL.

2.1.1 The Environmental Impact Statment answers all my questions about the SIS project. I have complete trust in our Federally elected officials both on the

4.9.4 Executive and legislative levels. When these duely elected people say we need this project to maintain nuclear parity with the Soviet Union I trust them and feel

1.1 it should be built and built in Idaho.

5.27.6.1 The economic benefits to the State of Idaho are obvious and the SIS would be a welcome addition to our economic base. ~~This debate also~~ has

I urge this process to focus on the environmental issues ~~and not to debate~~. ~~This is not a forum for debate on the~~ and not on the basic debate of maintaining our nuclear deterrent = 2.12.4

Thank you

STATEMENT

REGARDING THE SPECIAL ISOTOPE SEPARATION FACILITY

PROPOSED FOR CONSTRUCTION AND OPERATION

AT THE IDAHO NATIONAL ENGINEERING LABORATORY

Mr. Chairman -- ladies and Gentlemen:

I am Edson Fichter, Professor Emeritus of Zoology, retired from Idaho State University.

The Environmental Impact Statement regarding the SIS, with its focus on eastern Idaho, should be given serious attention. However, the concerns that I share with you here today are born of the conviction that we must be keenly aware of the larger picture which is composed of the far-reaching and inescapable interdependence of human beings. We must not lose sight of the fact that literally thousands of other people make up a part of each individual's environment.

I daresay that all of you in this gathering, as well as the great majority of mature and responsible people in our country, embrace the concept of civilization -- and that each of us believes that he or she is civilized. Our dictionaries tell us that civilization is "an ideal state of human culture characterized by complete absence of barbarism and nonrational behavior . . ." -- that civilization is "the progressive development of . . . the means of expressing the aspirations of the human spirit, as in arts and religion" -- that it is "the lifting up of (people) mentally, morally, and socially."

Does the Special Isotope Separation project fit into this cherished concept of civilization? As civilized persons, can you favor the SIS which is specifically intended for the refinement of plutonium to be used in nuclear weapons, the ultimate purpose of which is destruction and which, if employed, will kill countless numbers of people? It is estimated that in a large-scale nuclear exchange with the Soviet Union, about 250 million people would be killed in a short time, "millions more will die lingering deaths from cancer, and millions more may die of starvation caused by disruption of patterns of food supply, and millions more may die of starvation if the war provokes a 'nuclear winter'." If

these figures seem to be exaggerations, consider the devastation caused by one atomic bomb dropped by the United States on Hiroshima on August 6, 1945. In his book JAPAN: A Historical Survey, Mikiso Hane reports that "The victims of Hiroshima were some two hundred thousand dead, missing, and injured. . . . The city itself was turned into a wasteland; over 80 percent of the buildings were destroyed." According to another historian, R. F. Davis, "Some seven thousand buildings were instantly leveled" and many more destroyed by fire.

Twelve years ago, the Bulletin of the Atomic Scientists published an article titled "The Consequences of Nuclear War" by Bernard Feld in which he said: "If the quantitative arms race continues, and if at some future date 100 thousand megatons of nuclear weapons are exploded, then everyone in the world will die." If the threats of those levels of sudden death, human suffering, and environmental destruction are now considered sufficient for mutual deterrence of hostile attacks, why build more nuclear weapons? In his book "Moral Principles and Nuclear Weapons," published in 1984, Douglas P. Lackey has stated that the "logically proper moral accusation to make against nuclear deterrence is not that it is malevolent, but that it is morally irresponsible," and that ". . . a number of writers have suggested that the possible extinction of the human species is the most important factor in the moral analysis of nuclear war . . ." 2.7.8

What is morality? Again I quote from a dictionary: Morality is "a set of customs of a given society, class, or social group which regulate relationships and prescribe modes of behavior to enhance the group's survival."

Prominent members of our communities have banded together "to try to maximize the potential benefits of the INEL to Idaho, especially eastern Idaho" and to search out "the best way to support the SIS project." In short, we are hearing much about the "economic benefits" of the SIS for our state. In other words, we are being lured, if not bribed, by money -- enticed to turn from that which is considered morally right -- seduced into prostituting our commitment to rational behavior and "the morals of our civilization." Therefore, it is inevitable that the choices we have, as regards the SIS, confront us with the question of morality, if indeed we are civilized. 2.7.2

759

Exhibit 54

1.1 So, exercising the common sense of which we are all capable, please join the effort to prevent the construction of the proposed SIS plant, the immediate purpose of which is to further the proliferation of nuclear weapons. Remember that, of the four alternatives described and discussed in the Draft Environmental Impact Statement regarding the SIS project, "No Action" is the right one.

760

I am Willard R. Wood and I am speaking for myself and the Motel Group of Pocatello. We are strongly in favor of the S.I.S. at the I.N.E.L. The S.I.S. will be built; the question is whether it will be in Hanford, Wash,, South Carolina or Idaho...at the government's preferred site -- the I.N.E.L. The government knows we must remain strong militarily or the Communists will attempt to take our country over. My fears are if we do not remain strong with new weapons, the Communists will attempt to take over our country. I am not afraid of Russia if we remain militarily strong. 1.1 4.15.4

In the Sunday Boise Statesman newspaper 3/6/88 it was stated that Pocatello and Bannock County had lost 5,000 people in the last 10 years. Why did they leave? Jobs...there were no jobs in Pocatello. If the government should locate the S.I.S. at the I.N.E.L. it would mean many jobs for now and many more years for Idaho, especially Eastern Idaho. Some of these jobs would go to Pocatello residents. Surely everyone wants more jobs for Pocatello as well as for the entire state. Can you oppose this? 5.27.7.16

As to fears of dangers from the S.I.S., the government has assured this is mostly incorrect. I live here and I would have no fears for myself, my wife, my son's family and grandchildren. When all of Idaho, and especially Eastern Idaho, have enjoyed all the benefits from the I.N.E.L. for over 30 years, it would certainly be a slap in the face to our government to oppose the government's preferred site..the I.N.E.L. For years the State has enjoyed lots and lots of jobs at the I.N.E.L., about 10,000 now. That means lots and lots of tax money for the State of Idaho.All the laser technology gain from the S.I.S. could greatly benefit all of Idaho in the future. After all the benefits from the I.N.E.L., how can we oppose the S.I.S. at the government's preferred site? How can you? Millions of dollars come to the State, and especially Eastern Idaho, from the I.N.E.L. operations. 6.1.2

I am not afraid to have the S.I.S. built near where I live. Many, many deaths occur all the time from auto drivers not using seat belts and not locking the car doors. I see no large groups speaking out to stop these deaths from the auto drivers. Perhaps some of you who are opposed to and afraid of the S.I.S. should use your efforts to get people to use their seat belts and lock the car doors. I only hope the ones opposed to the S.I.S. will analyze the good and see all the benefits for the State, Idaho Falls, Pocatello and Eastern Idaho. Let's all be for the S.I.S. at the I.N.E.L. and see many more jobs for Idaho, especially Pocatello. My remaining days on this earth are growing short and I feel obligated to speak for the good of Idaho, and especially Eastern Idaho. 5.27.9.2

I don't know how anyone can oppose the S.I.S. if they know all the benefits that come to Idaho if it is built here. I hope all of you will voice your opinions for the S.I.S. at the government's preferred site...the I.N.E.L. YES, YES, S.I.S. Thank you.

S I S

TESTIMONY

SUBMITTED BY

Carolyn Molen
600-4 John Adams Ct.
Idaho Falls, ID 83401

Mr. Chairman, Ladies and Gentlemen:

It pleases me greatly to be given the opportunity to appear before you today in complete accord of the SIS Project and its proposed location at the INEL Site. 1.1

For five generations my family has lived and worked in the Idaho Falls Area. Certainly a lot of changes have occurred since my great, great grandmother settled in the Eagle Rock (now Idaho Falls) area and thank goodness for those changes.

In the past thirty nine years, the economy of southeastern Idaho and the activity at the INEL have definitely been intertwined. The effect the INEL has had on the employment, population, and related activities in southeastern Idaho and particularly the Idaho Falls area has been numerous and certainly diverse.

We in the Idaho Falls area would be extremely foolish to want anything but the best for our community and our families. After reading various studies compiled regarding the impact of the the INEL on this area, I have come to the conclusion without the continued growth at the INEL, Idaho Falls would be in grave trouble economically and our families would be forced to seek employment elsewhere out of the State of Idaho. 5.27.9.2

The SIS will have a very positive effect on our community and our State providing expanded business opportunities, better education, affording our children the opportunity to stay and work in Idaho and allowing we the people of Idaho the opportunity to be a part of the scientific technology and cultural awareness others in our nation now experience. 5.27.6.1

Some would say the SIS would be potentially dangerous to our area and the nation in general. I do not pretend to know all there is to know about the potential hazards...but I have studied the material available to me and in the past thirty nine years, fifty two reactors have been built at the INEL Site and we have certainly lived in a potentially dangerous environment for all of those thirty nine years. The high level of safety enforced at the INEL in both the construction and operation periods has produced safety statistics which are superior to the national averages for both the construction and nuclear industries and as I understand it, due to the efficiency and technology of SIS, nuclear waste generated by the plant would be a fraction of that produced by a conventional reactor and could be easily handled in a safe manner. The purpose of the SIS is to provide special nuclear materials safely, securely and economically and I for one would be proud to have Idaho put on the map as the site for such technology.

5.24.23

5.2.1

Perhaps you could say I have a selfish interest in seeing the SIS Project come to Idaho. I have enjoyed the many advantages presented Idaho Falls because of the activity at the INEL Site. In particular, the cultural aspects.

As a young girl growing up in Idaho Falls, I saw the influx of people, the growth in our economy and the cultural opportunities offered this otherwise largely agricultural community.

5.27.12.1

Without the continued interest and support of the INEL, we people of the Idaho Falls Area would not have the educational advantages available such as the University of Idaho, Idaho State University various Community Classes,etc.

Many of my friends and associates work at the INEL or for various contractors associated with the INEL. They have been given the opportunity to raise their families in a small town atmosphere but with many of the luxuries and opportunities normally only found in larger communities.

I am a member of the International Brotherhood of Electrical Workers and the potential construction jobs would give my brothers and sisters the opportunity to obtain work here in Idaho rather than having to travel out of the state for employment.

With the possibility of 750 permanent jobs at the SIS Facility, and perhaps over 1,050 supportive jobs resulting because of the SIS Facility, what a boost for our economy!

5.27.6.1

The SIS is just the beginning. It will pave the way for more technology and generate far-reaching national interest and opportunities for our generation and future generation Idahoans.

Laser Technology will bring many positive aspects to Idaho and I, for one, say "Welcome to Idaho, Welcome to the INEL Site". Not only am I proud to be afforded the opportunity to voice my opinion, but also, I am anxiously awaiting the beginning of what I believe will be a definite movement forward for Southeastern Idaho, the people who live and work here, and our great nation.

5.27.9.2

Exhibit 56

1.1 My name is K. Vaughn Wagoner. I am currently living in Idaho Falls at 373 Springwood, my home phone number is 524-0982 and I am employed at a local bank. I am here to testify in favor of the SIS project and its location at the INEL site (Idaho Falls). I feel there are many areas in which this

5.27.12.4 project would be a value to our community. First and most obvious would be the economic impact that it would have in Southeastern Idaho. Being involved in the banking industry, I have seen how important it is that a community have a diversified and broad base of economic resources. As a dollar turns in the community several times, it has a tremendous impact not only on retail sales but also the commercial, real estate and consumer areas. Since we already have a facility that has contributed immensely to the regional economy, it makes good sense to continue to enhance and keep viable our existing facility.

763

Along with the DOE, I was also born in Idaho Falls in 1950 and have resided primarily in Southeastern Idaho and recognize that there is a certain amount of inherant risk associated with any business. If we were considering the risk in driving to and from work, and were to let that alone influence our decision, we would probably all stay at home where it is supposedly safe.

5.24.23 Yes, I would want safety, health, and the environment to be an utmost concern for me, my wife and five children. I think that the safety record and environment at the INEL speaks very highly of their efforts. Other positive factors would be the expanding employment base and a larger and more stable tax base

5.27.9.2 plus the influence on our civic, education, and cultural climate in the community. In conclusion, I would summarize my support for the SIS on the factors previously mentioned and that Southeastern Idaho has in place the

5.27.11.1 facility (INEL), transportation, education (ISU), energy, support of local citizens and local government.

Anita V Wagoner

Exhibit 57

March 23, 1988

TO WHOM IT MAY CONCERN:

1.1 This letter is written in opposition to the proposed S.I.S. project at INEL.

5.27.7.4 In a proper evaluation it is only fair to consider both the advantages and disadvantages of having a project of this kind in southeast Idaho. I can understand the interest of some in bringing additional employment to the area, although it could be argued that most

5.27.11.6 of the new jobs will be filled by new people moving in from outside the area. This would end up placing additional burden on schools, streets, etc. In the end, not many local people will benefit from the additional employment.

6.2 The potential threat that the project will place on the region is enough to outweigh any small financial benefit. If everything was handled perfectly, the threat may be minimal, but when has the U.S. Government handled things perfectly (remember the Atomic tests in

2.7.2 Nevada). The threat to the the Snake River Aquafer and to the citizens of the region is a risk too great.

4.13 The project can also be rejected on moral grounds. Since we already have enough Plutonium to destroy the World several times over, I cannot support any project to produce more. If the preservation of life on Earth is of any concern, the project must be rejected.

Yours truly,
Gary W. Miller
Gary W. Miller

Pocatello, Idaho 83204

Exhibit 58

1.1 S.I.S. (yes (no))

I. Production of weapons grade plutonium.

4.13 A. Nuclear weapons arsenal more than necessary to destroy life on earth.

2.7.2 B. Seven hundred and fifty new jobs can not be balanced by the amoral production of nuclear weapons.

C. If the arms race must continue the improvement of delivery systems would make more sense than

5.12.6 more weapons.

D. Possible pollution of Snake River aquifer, could cause irreclaimable damage to water supply for South Idaho.

5.24.27 E. It would be difficult to find a more toxic substance than plutonium.

F. Nuclear war is a no win situation.

G. It has started and it is time to reduce the nuclear arsenal.

H. Four point four million cubic feet of waste at INEL is enough.

Gary L. Buchli
Gary L Buchli
10 Davis Dr.
Pocatello, Idaho

Exhibit 59

Statement: Kathleen M. Vitale, Pocatello. Mar 25, 1988.
SIS Public Hearing.

It seems that the proponents of the SIS project are stumbling toward a mirage of dollar signs shimmering above the Arco Desert floor. Supporters fail to realize the short-lived nature of the plant and its economic boost and disregard the moral and practical disadvantages of the project. 2.7.2

Under optimum conditions, the SIS plant can only operate for six to eight years. To prolong the operating life of the plant, feed plutonium would have to be obtained from commercial sources. This would require the U.S. to renege on the Nuclear Non-Proliferation Treaty. If that were to happen, the U.S. would indeed be a pathetic nation. We are always accusing the Soviets of such dastardly deeds. Are we to follow suit? 5.22.6

If, as predicted, the SIS only lasts six to eight years, what will become of the Southeastern Idaho economy when everything is put in mothballs? I can predict what will happen to business by traveling through downtown Pocatello, past the Pocatello Mall and through neighborhoods filled with "For Sale" signs. It is painfully obvious that over growth in a boom period will eventually be followed by vacant and decaying store fronts and houses. 5.27.10

Then there is the possibility that the SIS won't even last the proposed six to eight years. The SIS is a Congressionally-funded project. In a time of an increasing national deficit, how long will it take Congress to realize that: 1) there is already enough existing plutonium 4.15.2

to last for hundreds of years.

4.4.5 2) In the US, there are already plants that could produce more plutonium-239 should the need, God forbid, arise.

4.3 3) The weapons reductions of the INF and START Treaties will provide an additional two to fifteen tons of reuseable weapons grade plutonium.

3.4 How long before Congress decides to spend our tax money in a wiser, more positive way?

We cant put on blinders that only enable us to see ie dollar signs floating over the desert. Believe it r not, some things are more valuable and long lasting than these ephemeral dollars. We should be more concerned with working toward a nuclear weapons free world, upholding international agreements that strive for such reductions and protecting our environment not only for future

6.3 generations, but for the current generation as well. Keep in mind that the dollar signs hovering above the Arco desert are only mirages that will vanish in six to eight years after the plant is completed. Instead, we should use our energies

1.1 to find more positive, long lived alternatives for boosting Southeast Idaho's economy.

765

Exhibit 60 GEORGEANN MERRILL 3170 MERLIN

As a long term resident of 11 years and an Idaho Falls Business person, I own Georgeann's Fenwel Scene, I feel that the INEL is IDEALLY suited for this project and that the local business community is strongly supportive of the INEL site. 1.1

I believe in the SIS project, this project carriers enormous potential for Southeast Idaho. along with the economic growth will come important medical breakthroughs from SIS lazer technology. 5.27.9.2

RE: Special Isotope Separation (SIS) Project

Dear Mr. Nichols:

1.1 4.1 5.22.2 5.12.5 5.10.4 5.27.6.11

I am writing in opposition to the establishment of the Special Isotope Separator (SIS) at INEL. There are several factors that I have considered in my taking this position and I will mention a few of them. It appears that there is inadequate documentation to support the need for more plutonium. If there is a need for more plutonium, the need for the SIS appears to be uncertain. It is my understanding that it would only be operational for a period of about 8 years if it were created. If that is the case, one has to really question whether or not it is really needed at all. Of greater concern to me than the actual need for more plutonium or for the SIS to be built, is the very serious potential impact this could have on our environment. It appears that there has been inadequate research into the potential problems that could be encountered with the creation of a large amount of nuclear waste. If the Snake River Plain Aquifer is contaminated that would have a devastating effect on much of Southern Idaho. I would also question whether or not considerations have been taken into account locating a plant with this potential for toxicity on a geographically active area. Lastly, I find the expenditures that would be involved in SIS to produce only plutonium to be used only in nuclear weapons to be an incredible waste of money for a country already facing a critical budget deficit. The potential catastrophic effects on the environment do not justify the development of any further nuclear weapons.

6.1.1 6.2

While there has appeared to be much public support in Southeastern Idaho for SIS, as there is a need for additional jobs, I feel that the average citizen supporting SIS really does not understand what this means. The potential gain that could be noted by the development of SIS at INEL, is far outweighed by the risks associated with this project.

6.5.5

We can no longer think only of our day by day needs; we must realize that our current actions can and will have a major and often devastating effect on the future environment and mankind.

Thank you for your attention in this matter.

Sincerely yours,

June E. Heilman, M.D.

March 24, 1988

Mr. Clay Nichols
705 Doe Place
Idaho Falls, ID 83402

Dr. Nichols:

2.7.2 We are writing to request the no action alternative for the S.I.S. Neither the psychological or economic impacts of the S.I.S. are adduressed by the D.E.I.S.

5.27.10 We don't need a plutonium factory in our home state; our economy won't benefit from another short-term (7-8 year) industry. Over the past decade we Pocatello residents have had to experience the problems that a boom-bust syndrome leaves on a community. The morale of citizens and overall negative effect on our economy is immeasurable. Idaho won't benefit from the few

6.5.11 years the S.I.S. plans to use us. In addition to this problem, many of the professionals we are acquainted with who have moved here to live in healthy environments are looking to leave if the S.I.S. is housed so near home.

1.1 Since the Dept. of Energy and Congress have not yet given a final decision on this matter, we encourage them to not build the S.I.S., especially not in Idaho.

Thank you.

Sincerely,

Jacquie Cano

For Hearing Record
Exhibit 103

March 17, 1988

To the Department of Energy:

I would like to go on record as being strongly opposed to the construction of the Special Isotope Separation plant at the Idaho National Engineering Laboratory. 1.1

The DOE has not clearly shown how it plans to dispose of SIS waste. There are obvious problems with the WIPP facility in New Mexico where the waste supposedly is to be shipped. Will SIS waste therefore sit indefinitely at the INEL site? 5.30.2.1
It is frightening to think that this project might take place directly over the Snake River Plain aquifer and in an area where there has been earthquake activity in the recent past. 5.10.4

The DOE does not have a history of concern for human welfare or regard for environmental issues. We need look no further than the Hanford plant in Washington to know this is true. 3.2.8

Lastly, there cannot be shown a need for more plutonium. Surely this country has more than adequate nuclear weaponry at present and can recycle plutonium from old weapons so as to negate the need for the SIS project altogether. 4.15.2

I know how depressed our economy here in Idaho is at present. But can we afford to sell our souls to such a venture for the sake of a few hundred short-term jobs? Do we really want to threaten our lives and those of our children for short-lived economic gains? And do we really want to be known as a bomb-building state?

I urge the DOE not to go through with this project, and the people of Idaho to oppose it. Speak out against SIS!

Sincerely,

Beverly A. Klein

March 18, 1988

Mr. Clay Nichols
U.S. Dept. of Energy
785 D.O.E. Place
Idaho Falls, Idaho 83402

Dear Mr. Nichols:

1.1 As a citizen living in southeastern Idaho, I feel very strongly against the development of an SIS refining plant in southeast Idaho or anywhere else in the country.

4.13 At the present time, we have more than enough plutonium for nuclear weapons. The number of nuclear weapons currently on Planet Earth is more than enough to kill everything on Earth. In spite of the fact that the Department of Energy and the Nuclear Regulatory Commission has over and over assured us that there

3.2.12 will be no problems with the disposal or testing of radioactive materials, time has shown us over and over again that either they have been wrong or they have just deliberately misled the public. It is not that I don't trust the Department of Energy or the Nuclear Regulatory Commission, but they have consistently

3.2.23 misled us over the years. This part of the country was misled grossly regarding the atomic bomb testing in Nevada such that there was an increased number of cases of leukemia in southern Utah. I was a member of the investigating team who studied this back in the 1960's.

5.12.1 Furthermore, plans for the plutonium refining factories to be in the area of the Snake River Plain aquifer, near an area of high seismic activity, gives a high potential for contamination of the water supply. An accident or sloppy handling of nuclear wastes could certainly hurt generations to come in this part of the country. This would be a terrible price to pay for giving a limited number of people jobs for a limited number of years.

I am not someone who is particularly politically active; I write very few letters unless I feel very strongly that my future is at stake. I certainly hope you will consider this letter seriously.

Sincerely yours,

Noah W. Klein, M.D.

The Department of Energy
March 16 1988
Special Isotope Separation Project (SIS)

As a resident of Southeastern Idaho (Pocatello), 6.2
I realize this state needs more industry to promote more jobs and a larger tax base to provide for future growth. But at what cost to the environment. The SIS project could bring needed jobs and revenue to the State but there are to many ifs that could happen.

1. The danger of transportating the Plutonium from the Hanford N Reactor in Washington to INEL in Idaho for processing. 5.29.90

2. The INEL plant location - if some type of accident were occur and the ground water was contaminated. God only knows just how far it would reach 5.12.1

3. The U.S. has enough N Weapons what is what the processed plutonium is to be used for. 4.13

E066

4. The Hanford N Reactor must have been shut down for some good reason.

1.1 Thus, I join the effort of many others that oppose the construction of the proposed SIS plant in Idaho

Dr. Clay Nichols
U. S. Department of Energy
Idaho Operations Office
785 Doe Place
Idaho Falls, ID 83402-1133

Dear Dr. Nichols:

Attached is my written presentation in opposition to construction of a Special Isotope Separation (SIS) Facility at Idaho National Engineering Laboratory, or at either of the alternate sites. 1.1

There is and has been, since we began "playing God" by creating sub-atomic mutations of existing materials, a need to clean up our messes. Hence, my statement proposes an alternate research and development activity to be carried out by the Department of Energy.

Thank you for running the notice in the IDAHO STATE JOURNAL, which announced the hearings and the opportunity to respond in writing.

Sincerely yours,

Mary S Dunham

PLUTONIUM TECHNOLOGY NEEDS A 180 DEGREE TURN!

Politicization of science and technology in the U.S.A. has become our most dangerous threat to freedom and democracy. When Idaho's politicians, at all levels, push for the location of new Department of Defense facilities at Idaho National Engineering Laboratory (I.N.E.L.) in the name of economic development, and disregard potential hazards to our own citizens, we need to look beyond the rhetoric.

Pork barrel politics has led to transportation of radioactive materials across our country, in all directions. Weapon components, concentrated compounds, and contaminated materials from defense-related and domestic nuclear power facilities travel via our highways, railways, and airways. An example is the contaminated equipment from Three Mile Island's disabled reactor, which is shipped to I.N.E.L. for study.

5.30.3.1

Leak-proof containers and permanent, secure storage sites do not exist for either radioactive materials or for the tons of contaminated materials that have resulted from handling them. We are dealing with 20th Century science and technology that will affect life on Earth for many centuries beyond our generation's responsibility and juristiction. Scientists project that weapons-grade plutonium has a radioactive shelf life of over 20 centuries!

4.2.1

Despite the recent Department of Energy-White House announcement that "the government's plutonium stockpile is sufficient to meet the foreseeable demands for new weapons," the political pressure mounts to site new defense facilities at I.N.E.L. One would produce plutonium and "heavy water" and the other, the Special Isotope Separation (SIS) facility, would use laser technology to manufacture weapons-grade plutonium 239 from the plutonium oxide powder which was produced at the closed-down N-Reactor at Hanford, Washington.

The Draft Environmental Impact Statement says the SIS will generate 440 tons (7770 cubic feet) of plutonium contaminated materials annually. An operation time of 6 to 8 years is projected to process the approximately 6 tons of feed plutonium.

5.30.1.14

For 20 years, our state's officials have been trying to clear out the 4.4 million cubic feet of plutonium contaminated waste which is in "temporary" storage at I.N.E.L. These materials accumulated during 35 years of research, development and operation of breeder reactors in Idaho. Until a permanent storage place can be found, it will remain in Idaho. According to a recent report, the landform under the storage site indicates plutonium contamination has reached a depth of 230 feet. This should be remembered when considering priorities related to nuclear facilities.

5.30.4.9

Before any further funding for the SIS facility is passed by our U.S. Congress and Senate, we need to take a hard look at the current problem of creating permanent storage for existing radioactive materials, both the end products, and the wastes created in their manufacture.

5.30.2.5

Since the decision has been made to "mothball" the Hanford N-Reactor, the logical next step at Hanford is to deal with the plutonium oxide there, at the site of its location. Instead of developing a technology to up-grade plutonium, our scientific genius should be turned toward development of technology for safe containment of plutonium and its related waste materials, so that they can be stored indefinitely without hazard to the environment.

The appropriate alternative to the SIS is **No Action!**

Written testimony

3/25/88

Dear Sir;

1.1 I would like to thank you for the opportunity of presenting my views in favor of the S.I.S. project. I am Birney L. Phillips and am here representing the Veterans of Foreign Wars as well as an employee of the I.N.E.L. As a member of the Veterans of Foreign Wars, I represent over 7,400 members here in Idaho. This comming June, I will be the commander for the ensuing year, representing this organization for the state of Idaho. There are veterans in every town and city in Idaho, and they have expressed their support for the S.I.S.

I have read all of the literature sent to me on the S.I.S. project and there is only one issue that I am concerned with and that is the issue of safety. There are numerous pages of information on whether we should or shouldn't have Plutonium here in Idaho and whether or not it would be safe to allow it on the highway, but the biggest issue is will it be safe for the people that work around it or safe for the neighboring towns and cities. It is my contention and that of my colleagues that this answer is a definite yes.

5.24.23 I have worked at the I.N.E.L. since 1964 at NRF, ARA, PBF, CFA and CPP. I have never in all these years ever felt that my health was in danger, nor that of my family. There have been times when I felt that the Department of Energy was being too stringent and could have relaxed their rules a little so that the project we were working on could be easier, but I knew that it was for the safety of the people working on and around these projects that these rules were made. I respect the Department of Energy for their many years of safety and for their concern for me as an employee. I retired from the United States Navy with 22 years of service, many of these years were spent on Nuclear powered ships. The rules have always been the same, "Safety First".

3.2.2 I have not always had a desk job as I have now. I have spent many many hours inside steam generators in the reactor compartments as well as replacing hundreds of feet of piping inside these reactor spaces and never once have I exceeded the safety limits established by the Department of Energy. This project, now under consideration at the I.N.E.L. in no way affects the working environment at CPP where I work. I feel that if for one minute that it might, I would be on the side of the opposition. My family and my job are important to me as well as the National Defense of this Nation. I served this country in wartime during the Vietnam conflict, and I am a Vietnam Veteran. I feel that this is still my country to continue to serve to the best of my ability. I say yes to the S.I.S. project, for America and for whatever it takes to maintain my freedom to say so.

Thank you again. It has been an honor.

NO! TO SIS

In January, 1981, newly elected President Ronald Reagan spoke these words in his first State of the Union Address: " . . . the American public is not naive . . . " 1.1

With this premise in mind, it is not difficult to list several reasons why SIS finds no reception here. Some native farmers, business, and professional people have lived in the Snake River Valley for 80 or 90 years. They and their descendants defended the valley and surrounding deserts and mountains as places of beauty, livelihood, and spiritual nourishment. Within the last thirty years Idahoans have seen wildlife and fisheries habitat decline steadily in quantity and quality and they do not like what they see. 5.12.6

Many citizens who move to this area speak about the attractions of nature, and the mighty Snake River as being the life blood of Idaho. Let us be consistent and refrain from poisoning these unique gifts. We, in 1988, are having our turn to be stewards of the earth. We have a moral obligation to care for the land, the water, the air, and all therein. The Creator of the Universe does not give freedom to destroy it in parts or in totality, especially for a few hundred jobs. 5.29.85

The concerned persons in Idaho are not passive about the danger of plutonium; they are not passive about waste from Three Mile Island and Rocky Flats and other areas being transported and stored above the Snake River Aquifer; they are not passive about the INEL being located over one of the four largest High Risk Earthquake Zones in the U.S., as depicted on the maps in the U.S. News & World Report magazine, February 16, 1976 and February 22, 1982. No justice can be found in the horrendous outlay of taxes which feed the Weapons Monster in the United States. 5.10.21 6.3

Those who live a distance from us, even as far as the Columbia and beyond, have reason to be concerned. Anyone having toured the Craters of the Moon National Mounment and the surrounding miles of lava, has seen numerous caves and fissures. Lava beds are notoriously known for soaking, seeping and leaking. One example is that of the Lost River Sinks coming out again at Thousand Springs. 5.10.11

Hungarian scientist and Nobel prize winner, Edward Teller, also called the Father of the H bomb, visited the INEL two years ago, during a Star Wars meeting. In an interview with Rocky Barker of the Post-Register, June 13, 1986, Mr. Teller, now 80, said:

> "Space defense is not going to make the world completely secure. I'd like to have any sense of security. Right now, I'm not very choosy. I don't know who can give me more of a sense of security than SDI, which is not saying much."

We cannot permit paranoia about Communists to rule our actions toward destruction. In the letters to the Editor section of the Post-Register, Id. Falls, ID., March 23, 1988, one Idahoan wrote that Communists bleed red, too. One way to overcome fear is to build trust in the goodness of the Lord and in one another and not in gods of metal and fallible weakness. St. Augustine in the fourth century knew very little about Special Isotope Separation, but he had his finger on the right key when he wrote:

3.4

> "Love all (men) even your enemies, not because they are your brothers, but precisely that they may become such."

With these facts in mind, we, the Christians Praying for Peace and Justice in Idaho Falls and Rigby, believe that the American public is not naive. We are the concerned persons in Idaho and we choose to be active in making our voices heard. Idaho is an important part of America, and we value the splendor of its gifts and beauty. We, living in this age of 1988, are* the earth and universe. We have been charged with responsibility and accountability of handing on a future for the next generation. It is what we do today that will determine a tomorrow.

Christians Praying for Peace and Justice
Idaho Falls and Rigby, Idaho

Delivered by Sister Maris Bonnett

Idaho Falls, Idaho 83404

* the stewards of

772

Mr. Chairman, Ladies and Gentlemen.

My name is Larry Brollinger, I am business representative for Local 370 of the Operating Engineers. I represent nearly 300 people in the Southeastern Idaho area, who have asked me to speak Loud and Clear in Support of the S.I.S. Project to be built in Idaho at the I.N.E.L. site. 1.1 5.28.7

Most of these people, like myself have been born and raised in the Southeastern part of Idaho. I was born and raised on the very borders of the I.N.E.L. Site in the Osgood area. The technology that has given Idaho a place on the map was never a concern to most when it was used for Research and Development purposes. The technology that can be derived from the S.I.S. is probably more important to our Saftey, and can be one of the answers to solving the problem of Nuclear Waste. It will allow us to seperate the usable Platonium from the waste, thus condensing the waste to less than a fraction what we would ordinarily have.

The S.I.S. will bring our state long and short term employment, a larger and more stable tax base, and more important, provide our children the oppertunity to stay and work in Idaho. The I.N.E.L. policy of technology transfer, is of particular benefit to Idaho Industry, Business and Educational Institutions. The S.I.S. project will bring some of the best and latest Technology to Idaho. 5.27.6.1 5.27.9.2

Studies conducted by Idaho State University indicate that the 750 permanent jobs at the S.I.S. facility will generate an additional 1050 supportive jobs in the community, resulting in a total of 1800 permanent jobs, something Idaho needs desperatly. We already have the Labor force available here in this area, and it will not create an influx of people, consequently there will be no adverse impact on the school system, or other elements of the local communities. 5.27.11.3

The established policies of I.N.E.L. to "Buy Idaho", will give many large and small Businesses in the state an oppertunity to supply materials and manufactured products, and can only add to the stability of Idaho's economic future. 5.27.12.8

I.N.E.L. has an excellent safty record and the past records will prove Idaho can continue to be a Leader in all feilds of Technological Transfers and can meet all requirements for Safety, Productivity and Labor Management policies. Idaho should be comitted to continue to be Pioneers in all aspects of Nuclear Science. 5.24.23

I think it's time the full time residents of Idaho have an oppertunity to speak for a change. Are we going to be intimidated once again by Big time Movie stars and People who don't even live in Idaho or care about it's future?

E070

The S.I.S. project has been labeled a "Bomb Factory" by the likes of Charlton Heston and Muriel Hemmingway because it has a horrifying ring to it just as did "Right to Work" sound so Patriotic and Noble. The people of Idaho have just experienced one economic boom from outsiders. WE were promised Industry at our very Borders now we have the oppertunity make that happen.

3.4 The Dept. of Energy has assured us the Nation needs the Platonium, and no one has to tell us we need the jobs, I.N.E.Ls safety record speaks for Its self. The American people are enjoying many ,many luxuries today, as a result of Spin off technologies derived from Weapons related projects. It will be built, and we owe it to our children and ourselves to build it in Idaho. The Nuclear arms treaty will never happen if America loses strenth.

3.2.1 In listening to the News and watching the debates on Television last night, it appears to me many people, including Liz Paul, do not believe the Enviromental impact statement by D.O.E. I prefer to put all my trust into The United States Government and it's policies. I want all of these people from Colorado and Wash, or where-ever Comming here and accusing D.O.E and our Politicians of not being honest or lacking integrity, perhaps they would rather put their trust in the U.S.S.R. Surely they will tell us the truth if our own Government and D.O.E. Wont.

Testimony of

James E. Beard,
National Coordinator,
Fissile Material Cutoff Campaign

for

Greenpeace

Regarding the

Draft Environmental Impact Statement

for the

Special Isotope Separation Project

March 25, 1988

University Place,
1776 Science Center Drive,
Idaho Falls, Idaho

Good evening, and thank you very much for the opportunity to present testimony. My name is James E. Beard. I am the National Coordinator of the Fissile Material Cutoff Campaign for Greenpeace. This campaign, as the title suggests, is focused on ending, worldwide, the production of plutonium and high-enriched uranium for use in nuclear weapons.

4.2.1 Recently, Secretary of Energy Herrington testified before a U.S. House of Representatives Appropriatons sub-committee that the United States is "awash in plutonium," and that "we have more than we need." This was a rather striking occurrence, for several reasons.

774

4.10.5 First of all, Secretary Herrington is the head of an agency with a bureaucratic self-interest in the continued production of plutonium for nuclear weapons. In the past, the DOE has been very hesitant to discuss the issue of the need for continued plutonium production.

Second, Secretary of Herrington made these comments to Congress at a time when the DOE is making every effort to get Congress to appropriate funds for increased nuclear weapons material production, including money for the Special Isotope Separations Plant, the subject of discussion this evening.

4.2.1 Third, and perhaps most surprising of all, the Department of Energy had issued an official statement that happened to be correct: the United States does indeed have more plutonium than it needs. With over 100 metric tonnes of weapon-grade plutonium on hand, and no plans by Congress to expand the nuclear arsenal in such a way that demands could not be met using plutonium recycled from retired warheads, the United States is, as Secretary of Energy Herrington so succinctly put it, "awash in plutonium."

Now, let's consider the justifications given for construction of the SIS in the Draft Environmental Impact Statement. On page 1-2 of the DEIS, DOE addresses the issue of the need for the SIS. The document states:

> "DOE requires redundancy in production capability, technological diversity, and flexibility in its production complex. Currently, these are not sufficiently available."

The Draft EIS goes on to explain how the SIS Project will provide the needed redundancy, diversity, and flexibility in the plutonium production complex.

4.4.2 Now, let's examine these statements. On the one hand, the Department of Energy is saying that we have more plutonium than we need. The logical conclusion, of course, is that the production of plutonium could be ended, with no effect on national security.

4.7.1 On the other hand, the Department of Energy is claiming that a number of ways to produce plutonium must be developed and maintained, or the national security is threatened.

4.7.2 At first glance, this doesn't make any sense at all. After a lot of thought and consideration, it still makes no sense. If one has the capacity to produce a material (plutonium for instance), more of which is not needed, is it responsible and prudent to spend a billion dollars or so to find other, technologically different ways to produce that material? The answer is clearly 'no.' Why spend money on new production capability when you don't need to produce any more?

It is worth noting at this point that the DOE, though they apparently don't like to admit it, already has a significant amount of the redundancy and flexibility it is looking for. DOE has put several hundred million dollars into maintenance and upgrades of the N-Reactor at Hanford, to preserve it for future plutonium needs, if any. All told, DOE will spend nearly a half-billion dollars on this project.

4.7.4

Given the DOE's own admission that continued plutonium production is unnecessary, and the objective fact that there is redundancy and flexibility currently in the system adequate to meet the needs defined by DOE, the SIS is clearly an unjustified, and unjustifiable, project.

4.15.2

Besides being a waste of money, the SIS project has the potential to take a very real toll of pain and suffering in Idaho.

6.1.1

When the DOE shut the N-Reactor at Hanford down for maintenance and repairs in January 1987, they assured the workers that there was a continued need for plutonium production, and that the N-Reactor would certainly be reopened. DOE kept up this facade for a year and a half, even going so far as to claim that arms reductions such as those brought about by the Intermediate Nuclear Forces Treaty would have no effect on the need for plutonium. Suddenly, when DOE was asked to justify the closure of the N-Reactor in February, 1988, that urgent need for continued plutonium production simply vanished. The DOE admitted that there was no continued need for the plutonium from N-Reactor.

4.6

A similar story is being played out in Idaho. The DOE is working very hard to assure Idaho labor groups that the SIS will be built, and that it will provide secure, long-term jobs. This is not the case. Plutonium production will end, and probably sooner than you think. Six months, a year, or five years down the road, there is a good possibility that SIS employees will be out of work. Some may argue that an uncertain job is better than no job at all. That may or may not be true. In any case, it is certainly worth considering the financial, emotional, and other problems brought on by the sudden loss of a job, especially when the employer, like DOE, is willing to lie about the security of your job practically up to the time they hand you your pink slip and ask you to clean out your locker.

5.27.7.2

5.27.10

In conclusion, the Draft Environmental Impact Statement is deficient. The DEIS does not adequately address the issue of plutonium need, or the lack thereof, nor does it address the obvious redundancies in the DOE's current production system. Furthermore, the DEIS does not adequately address the socio-economic problems created by the economic dependence of SIS employees on the production of plutonium, which the DOE seems to falsely represent as certain to continue. The Final Environmental Impact Statement for the Special Isotope Separation Project must fully and adequately address these issues.

4.1

2.1.6

Thank you again for your time and consideration.

I am writing this in support of the S.I.S. project being located at the INEL. I strongly believe that the INEL is capable of handling this project with all due caution and with respect to the citizens of Idaho. The communities of southeastern Idaho will benefit greatly from this project, not only by increasing the job outlooks for the construction workers, but by the increased revenue brought in this and other projects here to come. I strongly feel that we need to send out the message that Idaho is a world leader in nuclear projects and experimentation. all our citizens should be behind this project and the INEL.

Dear Sirs

Concerning The S.I.S. Project at the INEL. 1.1

I Think the Idaho INEL needs This project Because it will put a lot of construction workers back to work. And it will also create 400 new Permanent Jobs. I think the INEL is capable of the safety of this project. and I think that Idaho needs this to help the economy. All Idahoans should be glad to expand any bussiness in this state before the state just dries up and blows away. If we do not accept this Project it will be placed in a different state. And that is my feelings Toward the S.I.S. project. 5.27.7.3

Dear Sirs,

This letter was written to express my support for the S.I.S.

1.1 I believe that it is vital that we continue to upgrade our defensive capabilities as a deterrent to foreign aggression. I feel that

3.4 this facility is necessary to keep us on the leading age of nuclear technology.

I am convinced that our state can provide

4.5 both the manpower and community support needed for a project of this importance to our country.

5.27.11.1 This project will also provide a much needed lift for the economy of Idaho. This will enable me and my family to continue

5.27.6.1 to live in this part of the country which is closest to our hearts.

Please allow us to show you and the world what Idaho is capable of. Building the S.I.S.

Thank you

Michael H. Armstrong
974 Poulson
Idaho Falls, Id. 83401

TO Whom it may concern;

I am totally in support of the S.I.S. Project being built at the INEL Site. 1.1

I believe this would be a great economical boost to Idaho as well as boosting higher Education. 5.27.6.1

I believe the people of Idaho will benefit greatly by this project.

In my experience, I have been impressed by the health and safety people at the site. The I.N.E.L 5.24.23
has one of the best safetly records in the Nuclear Industry.

SPECIAL ISOTOPE SEPARATION PROJECT
TESTIMONY
BY
SENATOR STEVE SYMMS

1.1 My name is Steve Symms. I'm Idaho's Junior United State Senator, and I'm here to testify in support of the Special Isotope Separation Project (SIS). I'm here because I am deeply concerned that this country have a strong national defense. Until acceptable arms control treaties are developed, our national security is dependent upon a nuclear deterrent equal to or greater than the 3.4 Soviets. I'm here tonight because I **know** the SIS is critically important for our nuclear deterrent.

I know this-- but not from guesstimated figures or extrapolation of general information generated by those who oppose our national defense. I have become convinced of the need for the 4.9.4 SIS through numerous CLASSIFIED briefings; briefings from those who must plan for, develop, maintain, and deploy our nuclear deterrent, those who must protect the United States--The National Security Council, the Department of Defense and the Department of Energy.

The heads of these agencies recognized the need for this facility several years ago, and in January of 1986, the then-Secretary of Defense, Caspar Weinberger, and the Secretary of Energy, John Herrington, wrote the Director of the Office of Management and Budget in support of the SIS. I'd like to quote from that letter,

"We feel it is essential to pursue a research and development program so that construction of a Special Isotope Separation facility can proceed promptly.... We can not allow [the Soviets] 5.29.9 greater special nuclear materials production and surge capacity to create an even greater asymmetry in nuclear capabilities. Therefore it is essential to preserve the option to initiate construction of a Special Isotope Separation Facility as soon as possible....The National Security Council supports this position."

In an enclosure in the letter, there's another quote of support from the two secretaries, "For reasons of **national** security, DOD and 4.15.4 DOE have now concluded that an SIS production facility should be deployed. This facility will provide a contingency against unanticipated interruptions to the existing plutonium production capability and provide a capability to counter a possible Soviet breakout."

I AM NOT THE SOLE SIS SUPPORTER IN CONGRESS. SINCE THE EARLY 1980s, CONGRESS HAS SUPPORTED AND FUNDED RESEARCH AND DEVELOPMENT ON THE AVLIS TECHNOLOGY FOR THE SIS. IN 1985, THE ARMED SERVICES AND APPROPRIATIONS COMMITTEES IN BOTH HOUSES OF CONGRESS HAVE PROVIDED LANGUAGE AND FUNDS DIRECTED TOWARDS THE CONSTRUCTION OF THE SIS, AND THIS WAS PASSED BY BOTH THE FULL HOUSE AND SENATE.

4.9.4

I'D LIKE TO QUOTE FROM THE SENATE REPORT FOR THE NATIONAL DEFENSE AUTHORIZATION ACT FOR FISCAL YEARS 1988 AND 1989, "IN ADDITION TO SUPPORTING THE EARLIEST AVAILABLILTY OF A NEW PRODUCTION REACTOR, THE COMMITTEE BELIEVES THAT TECHNOLOGIES THAT CONTRIBUTE TO THE AVAILABILITY OF PLUTONIUM SHOULD BE PURSUED AGGRESSIVELY. ACCORDINGLY THE COMMITTEE FULLY SUPPORTS THE DEPARTMENT'S REQUEST FOR THE SPECIAL ISOTOPE SEPARATOR (SIS)".

THE HOUSE AND SENATE APPROPRIATIONS COMMITTEES ADDED $45 MILLION TO THE DEPARTMENT'S REQUEST FOR THE SIS. IT SHOULD BE QUITE CLEAR FROM ACTIONS SUCH AS THESE THAT THE PROJECT HAS BEEN THOROUGHLY SCRUTINIZED ON THE HILL AND IN THE ADMINISTRATION. THE SIS IS **NOT** SOME FRIVOLOUS **UNDERTAKING ON THE PART OF TWO IDAHO SENATORS DESPERATELY SEEKING A PORK PROJECT FOR THEIR STATE!**

(Not with standing the Snake River alliances allegations)

Const Jobs- 650 for 50-65 MW $/yr
450

THE SIS WILL PROVIDE VITALLY-NEEDED FLEXIBILITY TO OUR MATERIAL PRODUCTION CAPABILITY. FORTUNATELY, RECENT STOCKPILE BRIEFINGS SEEM TO INDICATE THAT THE NEED FOR PLUTONIUM **NOW** IS NOT AS GREAT AS EARLIER FORECAST, FOR THE SIS WILL NOT BE COMPLETED UNTIL 1994-1995. BUT IT IS, AND ALWAYS HAS BEEN, NEEDED TO SATISFY LONG TERM MATERIAL REQUIREMENTS. THE SIS IS NEEDED BECAUSE **RIGHT NOW** WE ARE VULNERABLE TO BREAKDOWN OF OLD FACILITIES.

4.15.4

? →

TWO PRODUCTION REACTORS ARE SHUT DOWN--FOR GOOD OR ARE IN COLD-STANDBY, AND THE THREE OPERATING REACTORS ARE RESTRICTED TO OPERATING AT HALF POWER FOR SAFETY CONCERNS. ONLY ONE OF THESE REACTORS PRODUCES PLUTONIUM AND AND IT'S BECOMING OBVIOUS THAT ONE WILL SOON HAVE TO SWITCH TO PRODUCING TRITIUM. WHEN THAT HAPPENS, WE WILL HAVE ONLY THE SCRAP FACILITIES TO MEET OUR PLUTONIUM REQUIREMNTS--UNTIL THE SIS IS COMPLETED. IT IS IMPORTANT TO NOTE THAT THESE SCRAP PLUTONIUM FACILITIES ARE AS AGED AS THE REACTORS, AND GREATLY NEED REVAMPING OR REPLACING. THERE ARE NO EASY SOLUTIONS TO OUR NUCLEAR MATERIALS NEEDS, REGARDLESS OF WHAT THE SIS OPPONENTS SAY, ESPECIALLY THE ALTERNATIVE THEY SUGGEST OF RESTARTING THE N REACTOR IN THE CASE OF AN EMERGENCY. THESE ARE THE VERY PEOPLE WHO SUED TO SHUT THAT REACTOR DOWN!

5.2.14

4.4.5

4.6

WE HAVE ALL HEARD A LOT RECENTLY ABOUT THE LARGE NUMBER OF WEAPONS IN THE STOCKPILE. WE HAVE ALL HEARD THE QUESTION, "WHY DO WE NEED MORE BOMBS?" LET ME SAY THAT THE SIS WILL NOT ADD TO THIS STOCKPILE, IT WILL BE USED TO MODERNIZE AND RECYCLE THE WEAPONS STOCKPILE. AS NEW WARHEADS ARE PRODUCED, MANY OLD ONES ARE RETIRED AND DISMANTLED. THE NUMBER OF WEAPONS IN THE STOCKPILE WILL NOT

5.2.11

INCREASE AS A RESULT OF THE SIS. THE U.S. HAS REDUCED ITS NUCLEAR WARHEADS SOME 25% FROM ITS PEAK IN THE LATE 1960s, THE TOTAL YIELD HAS BEEN REDUCED 75% OVER THE SAME PERIOD OF TIME.

2.2.2 THE SIS WILL BE USED TO CLEAN UP DOE-OWNED PLUTONIUM FROM THE DEPARTMENT'S DEFENSE PROGRAM THAT IS NOT CURRENTLY USABLE FOR DEFENSE PROGRAMS APPLICATIONS. THIS MATERIAL IS WORTH OVER THREE TIMES THE MONEY THAT WILL BE INVESTED IN THE SIS. FURTHERMORE, THERE ARE NO SECRET PLANS TO USE FUEL FROM COMMERCIAL REACTORS. THE HART-SIMPSON AMENDMENT PROHIBITS SUCH USE.

5.26.2

2.1.1 IN SPITE OF THE NATIONAL NEED FOR THE SIS, I WANT YOU TO BE ASSURED THAT I WOULD NOT SUPPORT THIS PROJECT, IF I BELIEVED IT WOULD IN ANY WAY BE HARMFUL TO THE PEOPLE OF IDAHO. I THINK IT'S CLEAR FROM THE ENVIRONMENTAL IMPACT STATEMENT THAT DOE HAS CONSIDERED ALL POSSIBLE HAZARDS AND ENVIRONMENTAL IMPLICATIONS AND CONCERNS THAT WOULD RESULT FROM OPERATION OF THE SIS. THE AGENCY

5.1.40 HAS SIMULATED ALL POSSIBLE ACCIDENTS THAT COULD OCCUR; FOR EXAMPLE, EARTHQUAKES, FIRE, UNCONTROLLED CHEMICAL REACTIONS, AND CRITICALITIES AND HAS CALCULATED THE AMOUNT OF RADIATION THAT WOULD BE RELEASED. EVEN IN THE WORST HYPOTHETICAL ACCIDENT, THE AMOUNT IS

5.1.42 LESS THAN 10% OF NATURAL BACKGROUND RADIATION.

THE SNAKE RIVER AQUIFER, ALWAYS A MATTER OF GREAT CONCERN TO THE RESIDENTS OF THE AREA, WILL NOT BE AFFECTED IN ANY WAY BY THE SIS, BECAUSE THERE WILL BE NO LIQUID RADIACTVE WASTE. ALL LIQUID DISCHARGES FROM THE SIS FACILITEIS **MUST MEET EPA'S DRINKING WATER STANDARDS**.

5.18.4

TRANSPORTATION OF THE PLUTONIUM AND THE NUCLEAR WASTE ON THE STATE'S HIGHWAYS WILL BE CONDUCTED IN A RESPONSIBLE MANNER, AND THE MATERIAL CONFINED IN SEALED, AND CERTIFIED CASKS. THOSE DRIVERS OF THE PLUTONIUM SHIPMENTS HAVE BEEN RIGOROUSLY TRAINED AND ALWAYS TRAVEL IN PAIRS IN SAFE, SECURE TRANSPORTS. POSTULATED ACCIDENTS HAVE BEEN STUDIED TO DETERMINE THE EFFECTS, BUT THERE HAVE NEVER BEEN ANY DEATHS IN ANY ACCIDENT WITH A SAFE SECURE TRANSPORT, NOR, ANY DIVERSION OF NUCLEAR MATERIAL!

5.29.41

5.29.95

IT IS IMPORTANT TO REMEMBER THAT THE IDAHO NATIONAL ENGINEERING LABORATORY HAS AN OUTSTANDING SAFETY RECORD, AND EPA AND AN INDEPENDENT OVERSIGHT SAFETY BOARD WILL MONITOR ALL ACTIVITES TO ENSURE THE HIGHEST SAFETY STANDARDS ARE MAINTAINED. PLANS ARE BEING DEVELOPED FOR EMERGENCY PREPAREDNESS INVOLVING LOCAL AND STATE OFFICIALS AS WELL AS THE DOE-IDAHO OPERATIONS OFFICE.

5.24.15

5.7.9

AGAIN, I HAVE ALWAYS BEEN COMMMITED TO THE NATION'S DEFENSE AND SECURITY AS WELL AS THIS STATE'S WELL BEING. I WOULD NEVER JEAPORDIZE ONE FOR THE OTHER. IF I DID NOT BELIEVE THIS PROJECT WERE VITAL AND SAFE, I COULD NOT SUPPORT THE SIS.

ARMS CONTROL TALKS CONTINUE, AND WILL CONTINUE UNTIL SOME RESOLUTION IS MADE, EITHER IN THIS ADMINSTRATION OR THE NEXT. THE 3.4 SIS CONTRIBUTES TO A SENSE OF BALANCE IN THESE TALKS. WITH IT, THE UNITED STATES WILL NEVER BE FORCED TO NEGOTIATE WITH A GUN HELD AT OUR HEAD.

784

I'm D. A. PRESIDENT OF THE OIL, CHEMICAL + ATOMIC WORKERS LOCAL UNION. WE REPRESENT 1000 MEMBERS AT THE INEL WITH MORE THAN 10,000 YEARS OF CUMULATIVE EXPERIENCE. 5.27.12.6
plutonium ONE OF THE FOREMOST CONCERNS OF OUR UNION IS A SAFE AND HEALTHY WORK PLACE. THIS WE HAVE ATTAINED OVER THE YEARS WITH THE CO-OPERATIVE EFFORTS OF MANAGEMENT AND THE UNIONS. THE NATURAL SIDE-EFFECT OF A SAFE AND HEALTHY WORK PLACE IS A SAFE AND HEALTHY ENVIRONMENT.

MANY OF OUR MEMBERS ARE INVOLVED IN THE WILDERNESS AND CONSERVATION ISSUES WE HEAR ABOUT DAILY. MOST OF OUR MEMBERS ARE AVID OUTDOORSMEN AND WOMEN, RAISING THEIR FAMILIES TO BE LIKEWISE, AND LIKEWISE TO BE RATIONAL ENVIRONMENTALISTS.

MOST OPPONENTS OF THE NUCLEAR INDUSTRY DON'T UNDERSTAND OR CARE TO FIND OUT ABOUT THE FACTS. SCIENCE FICTION AND FANTASY MOVIES ARE THEIR MENTORS FOR THE MOST PART.

THERE ARE HUNDREDS OF ~~SKILLED~~ HIGHLY SKILLED CRAFTSMEN IN IDAHO WHO ARE SUPPORTING THE SIS PROJECT, AND THEY ARE MORE THAN QUALIFIED TO MEET THE STRINGENT REQUIREMENTS NEEDED TO CONSTRUCT A NEW NUCLEAR FACILITY. AFTER THE CONSTRUCTION PHASE IS COMPLETED 5.27.11.3
ON A NEW FACILITY THE OIL, CHEMICAL AND ATOMIC WORKERS MEMBERS AT THE INEL OPERATE AND MAINTAIN THE FACILITIES SAFELY AND EFFICIENTLY.

WE THE ~~CRAFTSMEN~~ WORKING PEOPLE WHO DO THE LABOR AND PERFORM THE HANDS ON FUNCTIONS AT THE INEL WOULD NOT SUPPORT ANY 5.24.23
PROJECT WE FELT TO BE UNSAFE. WE HAVE EVERY CONFIDENCE IN THE CONTRACTORS, ~~AND~~ THE MANAGEMENT AT THE INEL AND IN OUR UNIONS TO PROVIDE US A WORKPLACE FREE FROM HAZARDS TO OURSELVES 1.1
OR TO OUR WAY OF LIFE IN IDAHO.

[redacted]
WE SUPPORT THE SIS PROJECT.

IANS POSITION ON THE SPECIAL ISOTOPE SEPARATION (SIS) PROJECT)

The Idaho Section of the American Nuclear Society (IANS) is a scientific and technical organization of professional scientists and engineers. As such, it limits its interests to the peaceful uses of nuclear science and technology. In view of the well-known military weapons use of plutonium, we want to point out that plutonium is also important for meeting our long-term energy needs and this is an important aspect with which many members of the IANS are involved.

However, given our current defense needs for plutonium production, our concern is for the choice of the technology and location that offer the best advantages to safety and the environment. First, it appears that the proposed SIS technology does indeed offer significant advantages over other methods; these advantages should be well documented so that the technical community and the public can review and understand them. 5.28.2

An aspect of the laser technology associated with the SIS that is not well known is that isotope separation is not limited to defense applications. What interests us considerably is the potential for spin-off technology for commercial application. As the technology for laser isotope separation is fully developed, it appears to have the potential for considerable benefit; such spin-off should be considered as the project proceeds. 5.27.9.2

Regarding the INEL, one of our major benefits, in addition to the physical characteristics of the site, is the people resource. We have probably as broad a spectrum of technical talent as anywhere in the country for application of nuclear technology. Many of us are also Idaho natives. Our point is that the mix of talent that exists here is well suited to the SIS project and its potential spin-off to non-defense application. The INEL enjoys a proven capability to do things well and to do them safely. We support the SIS project as offering considerable potential benefit. 5.24.23

Adopted by the IANS Executive Committee, September 24, 1987. 1.1

DONN B LARSEN
584 E. 13TH
IDAHO FALLS
Id.
83404

MY NAME IS DONN LARSEN, I AM BUSINESS MANAGER FOR LOCAL #155, LABORERS INTERNATIONAL UNION OF NORTH AMERICA. LABORERS LOCAL 155 HAS MEMBERS IN ALL OF SOUTHERN IDAHO. INCLUDING SHOSHONE

[redacted] HAVE WORKED ON SITE FOR OVER 3 DECADES, 5.27.7.3
[redacted] HAVE WORKED ON EVERY PROJECT AT THE INEL. FROM STORAGE SHEDS TO
[redacted] REACTORS TO THE ROADS THAT LEAD TO THE INEL AND ITS FACILITIES.
1.1 [redacted] MEMBERS OF LOCAL 155 SUPPORT THE SIS PROJECT

ONE OF THE MANY REASONS WE SUPPORT THIS PROJECT IS OBVIOUS. IT WILL BRING 440 PLUS CONSTRUCTION JOBS TO THE SITE TO BUILD A LASER SUPPORT FACILITY AND PLUTONIUM PROCESSING FACILITY. WE HAVE THE QUALITY WORKFORCE TO GET THIS JOB DONE. OUR WORKERS ARE AVAILABLE AND READY TO 5.27.11.3
START NOW ON THIS PROJECT.

[redacted] CONSTRUCTION JOBS, THE SIS PROJECT WILL ALSO PROVIDE
APPROXIMATELY 750 PERMANENT JOBS. IDAHO WORKERS NEED THESE JOBS. 5.27.7.3

I BELIEVE THAT SAFETY IS ANOTHER GOOD REASON TO CHOOSE THE INEL FOR SIS. BECAUSE OF THE HIGH LEVEL OF SAFETY AT THE SITE, BOTH CONSTRUCTION AND OPERATIONS HAVE ESTABLISHED A SAFETY RECORD WHICH IS 5.24.23
FAR SUPERIOR TO THE NATIONAL AVERAGES FOR BOTH CONSTRUCTION AND THE NUCLEAR INDUSTRIES. WEEKLY SAFETY MEETINGS AND CONSTANT COMMUNICATIONS WITH D.O.E. AND CONTRACTORS' SAFETY PERSONNEL HAVE MADE THE INEL A LEADER IN CONSTRUCTION SAFETY.

[redacted] BELIEVE THAT THE TECHNOLOGY THAT THE SIS WOULD BRING TO THE SITE WOULD ONLY MAKE OUR CHANCES BETTER TO OBTAIN OTHER LASER RELATED 5.27.9.2
PROJECTS AT THE INEL.

I BELIEVE THAT LOCAL BUSINESS, IDAHO INDUSTRY, AND EDUCATIONAL INSTITUTIONS WOULD ALSO BENEFIT FROM THE TECHNOLOGY GAINED FROM THE SIS.

I KNOW THAT THE DEPARTMENT OF ENERGY HAS ALWAYS PLACED A GREAT [redacted] OF EMPHASIS ON THE ENVIORNMENT, AND I BELIEVE THAT IT WILL CONTINUE TO DO SO WITH THIS PROJECT, AS WELL AS ANY UPCOMING PROJECTS. 3.2.2

I KNOW THAT THE COMMUNITY WANTS THIS PROJECT. ANYONE WHO WITNESSED THE PARADE AND RALLY ON SATURDAY THE 19th, CAN BE SURE OF THE SUPPORT FROM IDAHO PEOPLE, IDAHO BUSINESS, CONTRACTORS, AND UNIONS.

WE SAY-YES! YES! S I S

LANE ALLGOOD

YES, YES S.I.S.

My name is Lane Allgood. I represent the Yes, Yes S.I.S. organization. 1.1

Our Organization was formed approximately 6 weeks ago for the sole purpose of voicing Eastern Idahoans support for the S.I.S .

Historically, only those opposing an issue organize themselves into a lobbying faction. However, because of the crucial nature of this project on the economic wellbeing of our State, we felt compelled to present the true feelings of the majority of citizens of Southeast Idaho, and not let outside pressure groups that do not have East Idaho's best interests in mind cloud the issue and dominate the proceedings.

Our group represents a cross section of all of Idaho, including City governments, Chambers of Commerce, large corporations, small business, the educational community, and local labor and trade organizations. As testimony to this statement, we submit as evidence the overwhelming participation and support of our pro-S.I.S. motorcade and rally held in Idaho Falls March 19, 1988.

As an example of our broad base of support, I would like to recognize the following as financial contributors to our cause:

787

ELECTRI CON

BOISE BUILDING TRADES

HANSEN MARKETING

In 1949, the federal government established the Idaho National Engineering Laboratory on the Arco DESERT ~~desert~~, west of Idaho Falls. For the past 39 years the economy of Southeast Idaho and the projects at the I.N.E.L. have been intertwined.

5.27.12.4

[redacted]

Currently more that 9700 persons are employed at the Site, and more than half reside in Idaho Falls. It is a recognized fact that for every job at the I.N.E.L. at least 2.3 jobs are created in the local economy to help, support, and service the families of the I.N.E.L. workers.

For the past 15 years I have been employed by two different firms, both locally owned. The primary source of business for each is in supplying electronic equipment to the I.N.E.L. site contractors. Without the I.N.E.L. neither of these businesses would be able to continue to operate in Idaho Falls.

Unfortunately, many of the major projects at the I.N.E.L. have been completed or are nearing completion. New projects such as the S.I.S. are vital to the economic survival of my business in Idaho Falls.

5.27.12.5

It has been nearly 5 years since the last major construction project was completed at the I.N.E.L. and many of the area construction workers have been forced to leave the area in search of work.

5.27.7.16

Declines in the agricultural, timber and mining sectors have contributed to the high rate of unemployment in the six counties surrounding the I.N.E.L. Without the S.I.S. project, the overall unemployment rates in these counties will continue to climb to an even more serious level.

I feel the S.I.S. will bring our area much needed long and short term employment, and will allow me to continue to work, live, and raise my family in the community where I was born and raised.

Telephone (208) 343-6405

TESTIMONY AT SIS HEARING

My name is Blake Hall, and I am the State Chairman of the Idaho Republican Party. I am here today to express our party's support for the construction of the Special Isotope Separation Project at the Idaho National Engineering Laboratory west of Idaho Falls. 1.1

Our decision to support the construction of the SIS in Idaho was made only after careful assessment of the purpose of the project and its effect on our community and state. This decision is based on our party's commitment to a strong national defense, and to the recognition that our nation has long had a policy of maintaining peace through our nuclear deterrent while pursuing verifiable and equitable arms control agreements with the Soviets. 3.4

The Administration through The National Security Council, The Department of Defense and the Department of Energy has made it quite clear that the SIS, which will provide a non-reactor source of special nuclear materials, is essential for maintaining that nuclear deterrent. Without the nuclear materials the SIS will provide, our Nation could be 4.9.4

4.9.4 In closing, we would like to emphasize our confidence in the Atomic Energy Act of 1954, the Department of Defense, the Department of Energy, the elected officials of Congress, and the President of the United States of America, and we accept their decisions, whatever they may be.

forced to accept arms control conditions that are harmful to this country.

It is not only the President and his staff that must make the determination as to the need for the SIS, but Congress, ALL of Congress, not just our two senators, must ratify those decisions by appropriating necessary funds to accomplish this project. Even with this year's severe budgetary constraints, the U.S. Congress has appropriated approximately $96 million for research and development of the SIS project. This represents a $40 million increase in President Reagan's own request

5.27.7.16

The Idaho Republican Party wants the SIS constructed at the Idaho National Engineering Laboratory. Construction of this project will provide work for more than 400 construction workers for four years. It comes at an opportune time when many of the potential construction workers are currently unemployed and Southeastern Idaho's unemployment rate exceeds the national average. During the construction phase alone, the SIS will put about $600 million into Idaho's economy. When it goes into operation, the SIS will employ over 650 people with an annual budget of $65 million. However, this economic development is just the tip of the iceberg. The SIS will bring to Idaho a new and exciting laser technology that is sure to have significant spin-offs.

5.27.9.1

At a time when Idaho is struggling to provide sufficient funding for our public schools, the SIS provides us with an opportunity to expand our tax base and thereby generate more money for our children's and grandchildren's education without polluting our environment. People from all over Idaho have recognized these benefits as is demonstrated by these petitions and cards in support of the SIS at the INEL. They come not just from southeastern Idaho but from Bonner, Boundary, Kootenai, Latah, Canyon, Ada and Twin Fal: Counties, as well as every other county in the state.

5.27.11.6

5.24.23

2.1.1

For almost forty years, the INEL has been an important part of Idaho's economy. During that time, it has been a good neighbor. Over these four decades, the INEL has compiled a safety record excelled by none. While some now sound alarms that the SIS will contaminate our state, the draft Environmental Impact Statement gives a very thorough assessment of the potential effect the SIS will have on our air, our water and our highways. Detailed as it is, it is easy to see that the aquifer cannot be contaminated because all liquids from the SIS will have to meet drinking water standards set by the Environmental Protection Agency. The amount of radiation emitted from the SIS to the general public is substantially less than that which we are exposed to from natural sources.

5.12.1

5.23.23

5.30.5.7 The additional nuclear waste generated from the SIS represents less than 10% of the hazardous radioactive waste currently handled at the INEL. This waste will be packaged and shipped to a waste storage facility in New Mexico. Both the plutonium and the waste will be shipped in government
5.29.41 certified casks, that when tested under extreme conditions,
5.29.95 showed no leaks. The drivers for these shipments must undergo rigorous training and travel in secure transports.

It is also significant to note that we are not
5.27.13.2 taking land out of productive use or that which could be used for some other purpose to construct the SIS. The land at the INEL is already available and segregated as a nuclear site.

5.24.30 But more important than the draft Environmental Impact Statement, it is the people who work at the INEL who convince us that this project will be safe. These employees are our neighbors---they are US---almost 11,000 of US! We all have to live here as well as work here. INEL workers drink the same water, and breath the same air as the rest of the residents. They, like us, will continue to protect our environment so that it will be safe for our children and grandchildren. For us, the alarms that are being sounded ring false.

There are those who say it is alarming and
3.3.1 frightening for the INEL to get involved in defense work, as though this were a shameful activity. But the truth is the

INEL has always been involved in defense work and the national security of this country. The nation's bulwark against the Soviets---the Nuclear Navy---was born out in the Idaho desert with the development of the prototype for the first nuclear submarine, the Nautilus. The development of nuclear propulsion for our submarines, as well as surface ships has continued to the present time, including the training of the Navy's nuclear crews. In addition, it is common knowledge that some facilities located at the INEL are involved in the reprocessing of spent nuclear fuel used on Navy vessels. Again this is defense related. Of course, most of us in this area are proud of our defense effort, rather than ashamed.

In closing, I would like to point out that 30 or 40 years ago, no one knew what the Experimental Breeder Reactor-1 (EBR-1) would mean to the State of Idaho---or the Nation when it was the first reactor to generate electricity in the world. Now close to 400 reactors around the world produce electricity---about 15% of the world's electrical needs. No one knew what the Nautilus prototype, and the Nuclear Navy that is trained here, would mean to the defense and protection of the Free World. Yet today we enjoy many freedoms as a result of our commitment to that adventurous opportunity.

Today, I encourage all Idahoans to join us in a new opportunity. Don't sell the SIS short. Its primary mission may only be for 7 or 8 years, but the opportunities for this

790

Exhibit 87

technology are just beginning to unfold. THE SIS IS AN IDAHO OPPORTUNITY WE MUST TAKE NOW.

A91/BGHD/slb

Written Testimony

by

James A. Harrington

in support of

S.I.S.

in Idaho

Department Of Energy
Concerning S.I.S. Project

Dear Ladies and Gentlemen,

With the expressed view of the government to propose this project, I have determined there is a need to utilize our plutonium stock piles in an effecient and productive manner. From the information and understanding I have of the proposed project I feel the S.I.S. facility will accomplish its purpose in a safer and less expensive way than would a reactor, since the process does not involve nuclear reaction. Nuclear waste generated by the plant would be a fraction of that produced by a conventional reactor.

5.28.2

I am a person who hates waste. The S.I.S. technology of recycling nuclear fuels will conserve our natural resources by allowing us to use the recycled nuclear fuel. The process would also reduce waste by not creating more nuclear waste.

5.2.1

There is another reason we need this project. If you stand tall and carry a big stick, no one will bother you. In this case the big stick is a nuclear deterrent larger than the nuclear threat. As a child dealing with the threats of schoolyard bullies, I learned that if one fights back hard enough or defends themselves well enough, the threat of attack stops. My feelings are we deter the threat of nuclear war by carrying a big stick. If the S.I.S. facility will help us defend ourselves in this manner then we should have it.

3.4

If D.O.E. intends to do this project, it might as well be done at the I.N.E.L. The anti-nuke factions will have gained nothing by pushing it to another state because it will still be built. The proposed site for the S.I.S. project would have no environmental impact on the I.N.E.L. or the state because the proposed site at I.C.P.P. is all ready for construction. It's hard to imagine that security could be any better than that maintained at the I.N.E.L., another plus for the S.I.S.

1.1

5.25.3

Being a construction electrician, I have seen the high standards of safety and quality in the performance of on-going work at the I.N.E.L. site. The strong work ethic found in construction and production employees at the I.N.E.L. site assures the S.I.S. project would be completed and operated in a productive and efficient manner.

5.24.23

When speaking of the economics as a result of this project, it's sure something to look forward to. The S.I.S. will bring our state long and short term employment, a larger and more stable tax base, and most importantly, provide our children the opportunity to stay and work in Idaho. The S.I.S. project will provide expanded business opportunities and will

5.27.6.1

enhance our educational system. For these reasons, I say YES to S.I.S.! YES!!

Yours Truly,
James A. Harrington
James A. Harrington,
a concerned citizen of Idaho

Exhibit 88

Yes. For the S.I.S. in Idaho. In Idaho we have 2 Basic Economies. The First is Farming the Second is the INEL. We need the S.I.S. For the Defence of our Country + the world. 1.1

I work in the electrical Field. the S.I.S. means, a Job for me + a home for my Family. Without the S.I.S, I may have to move out of state For employment. 3.4

this would be build with local people. and not a lot of in-migration of construction workers. the people of this area would Be Trained for the operiton of the plant, after it is ~~completed~~ 5.27.7.3

The 250 primary positions will help S.Eastern Idahos economics. the indirect job would be great in the area.

D.O.E. has + will operat at or below the radioactive or toxic standard all Ready set. the D.O.E. has operated in Idaho. with No major accident since it was started. We as Idahoans would be getting a better Return From the Federal Gouvenent. on the taxes we pay. This plant could be used For more than Weapon-grade plutonium. 5.24.23 5.28.6

The people that is say NO to S.I.S. are not in the work Force in Idaho. they Have Hire people to Fight the project.

The INEL. As been the home of the First Nuclar Power plant + will Hope Fully the First in a Laser Separation. We have done more the the Nuclar world so lets Keep up the good work.

794

The S.I.S. would need to construct 1- Laser Support Facility, consisting of a Laser Support Building a Dye Pump Building + a Load Center Building and 2- Processing Building, 1- administration.

5.18.4 Discharge of Service waste water would comply with all current draft Regulations. All solid waste generated annually as a Result of SIS. would Represent a small increment in Relation to the amount

5.30.5.7 of these wastes currently generated + managed at the INEL. All solid wastes would be handled as part of ongoing waste management.

We Need + want the SIS For Idaho.

Exhibit 89

Mr. Chairman, Ladies and Gentleman,

My name is Blair Carlson and I live, work and invest in the area 1.1
of Idaho Falls, Idaho. I want to give my testimony in support of building the Special Isotope Separation Project at the Idaho National Engineering Laboratory. I am a skilled, trained construction electrician as well as someone who is paying for my own home in the Idaho Falls area and rental property that I hope to be able to keep occupied and pay for. I believe in investing toward the future here, where my family lives.

My father is soon to retire as an electrician who made his living working at the INEL site and on the homes, schools, stores and all types of construction jobs that have come from a healthy and stable INEL community. All the time that Dad has worked at 5.24.23
the INEL and the time I've spent there have shown us the dedication to safety and concern for the workforce and their precious environment. We enjoy the state of Idaho and it's beutiful environment for recreation and would not support something if we thought it would spoil our state because we hope to be able to stay here. I know of other skilled craftsman who have left the area to find work - they don't spend their money here when they leave. I understand that the reactors that have 4.5
been used to supply our defense needs are reported on and attacked as aging to the point where they might need to be shut down, so I think that the SIS project is needed to fill the gap and will be built. I am asking that this INEL site and it's people be able to fill the need and be able to benefit at the

same time. I think that the benefits of this project will gain more support as understanding the benefits to be had come out into the open. Some of the benefits that I see are:

5.27.6.1 (1) needed jobs will be produced and maintained for a considerable period of time that will keep families at home and together,

5.27.17 (2) property owners property value will be protected by a continued strength in the community that has enjoyed one of the lowest unemployment factors in the state,

5.27.9.3 (3) state of the art technology will be developed and expanded work in medical and industrial applications are sure to grow fron this project,

5.27.15.1 (4) the education base will expand with the new technology, such as the Vo-tech school and our university extension in Idaho Falls and Pocatello - the list goes on.

It's interesting to me that the people that started the opposition to the SIS project in this area aren't from here, have admitted that they are mostly funded from out of Idaho and will probably move on to the next power facility or whatever else it is they decide to stonewall or roadblock to get attention and funds. I, on the other hand, am not a paid professional lobbyist like much of the oppositions coordinators are, and though I may have a personal stake in this project for my employment and the health and stability of our community I want to see progress in the future for myself, the area around Idaho Falls, Idaho as a state and the country as a whole. We need to protect and defend what we have and develop for the future.

In conclusion, I think that in all things in life there are benefits as well as risks to be found - walking will get you somewhere but even with a risk it may be better to take a plane or drive. If risk is understood and prepared for then the benefits can be seen and therefore appreciated. We need the jobs, technology, educational opportunity and defense capabilities to protect our way of life. We offer our commitment to safety, productivity and learning as we apply it to all the work we do at the INEL - give us a chance to again maintain our well deserved reputation by building this facility at our site.

Thank you for your cooperation and consideration.

BLAIR CARLSON

83221

Dear Mr. Nichols,

1.1 Please accept this written statement as a show of my support for going ahead with the construction of the SIS project at the INEL.

5.24.23 My family has lived in southeastern Idaho for 41 years and have been impressed very favorably with the safety at the INEL -

While I am a construction worker and a member of Pipefitter Local 648, I am quite frequently employed at the INEL, and have seen the cautious procedures and safety conscious attitude of the personnel who work at the site -

3.2.2 I am confident that the SIS project could/will be in both Roma or Location - Yes for SIS.

Sincerely,
Allen L. Stears
Linda C. Stears
Dana A. Stears

TESTIMONY OF SIDNEY LANGER FOR THE SIS/EIS HEARINGS
MARCH 25, 1988

1. I am taking vacation time from my employment in order to testify at these hearings. I am here on my own time and at my own expense.

2. I support the construction of the SIS at the INEL because I think it is a valuable addition to the DOE weapons complex and will result in a lowering of the population dose to workers and military personnel over the long term as a consequence of the capability of reducing the concentration of the Pu-241 and its radioactive daughters in all nuclear weapons. But I would agree that the DOE has failed to provide in the EIS, a convincing case for the essential need for the facility . 1.1 5.28.6

3. In my view, reinforced by the views of the last seven Secretaries of Defense (including present day "doves" such as Robert McNamara and Harold Brown), the total elimination of nuclear weapons will not be attained in the forseeable future, even though some reduction in the levels of warheads may be possible. Thus reduction of the occupational dose to workers in the DOE weapons complex and in the military custodians of the weapons is a worthwhile goal and in accord with the ALARA principle. 4.1

4. Opponents of the construction of the SIS have stated that this is a moral issue. Let us proceed on that basis and see whether the United States wears the moral white hat or the moral black hat that the opponents imply.

In 1977 this country delayed and then banned reprocessing of spent commercial nuclear fuels as a moral incentive to other nations to do the same. The objective was to reduce the chances for proliferation of plutonium commerce and hence, nuclear weapons. Look how successful our shining example has been! In Europe, France, the United Kingdom, the Federal Republic of Germany and Belgium reprocess their fuels and either recycle the Pu to their power reactors or use it for the manufacture of nuclear weapons. Japan has under construction a reprocessing plant and has developed plans for the recycle of Pu to its thermal reactors. Israel has a non-safeguarded operating reprocessing plant and is reported this morning to have a stockpile of 100 weapons. Pakistan is building an "atoms for peace" reprocessing plant, presumably to declare peace on India! China and India both have operating plants and it seems rather doubtful that our moral suasion will influence the South Africans or the Brazilians. The only nation that in the long-term will not gain the benefits of nuclear fuel recycle will be the United States. Once again, we have lost the technological leadership; in this instance by government intent. One cannot disinvent plutonium or nuclear weapons or nuclear power; anyone who thinks so can also unscramble an egg.

Exhibit 92

March 25,1988

SIS PROJECT

What the SIS is to me and the State of Idaho.

The SIS will mean jobs for me and many of the unemployed people in this state.

5.27.7.3 It means stability and economic growth for the state and the communties, it means much needed tax dollars for our Education System, and will secure our National Defense.

5.27.6.1 The President and the Congress have said that we need such a project, and our state Senator's and congressmen say the same. These are the people that we elect to make these type decisions for us, they know better than we about the need of such plants.

4.9.4 As for the safety of the INEL it has a excellent safety record, if was not so it would not be in operation nov.

5.24.23 It is time the working people of the state be heard. If the people that built the first airplane would have said we cannot build the airplane because if it fails it will kill people, we would not have airplanes today would we.

1.1 So I say yes to SIS, and I thank you for your support.

Exhibit 93

SIS SPEECH

IDAHO FALLS

I am Jim Reed.

I live at ~~[illegible]~~ 119 Idaho Falls, ~~Idaho~~ and I have lived in Idaho for the last 10 years.

I am proud to work with people at the site and I am proud to be an American. I am proud to have been given the opportunity to play whatever small part I do play in supporting the INEL and helping our country's national defense.

Quite the opposite from Snake River Alliance. Rather than being ashamed of participating in our great nation's defense capabilities, I am proud to be a part of that effort.

I can not imagine a citizen of these United States being opposed to a strong national defense. The only conceivable group that I can imagine being opposed to the strength of our nation is that political philosophy that would like to see us destroyed. 3.4

I therefore question the motives of the Snake River Alliance and their political affiliation.

Is their loyalty with our country or some other? -- But enough of who they are!!

It has always been a wonder of mine how the people of Idaho consistently say we are not influenced by outside forces. But at the same time, we seem to have a propensity to let ourselves be duped by these outside forces.

You will remember just a short time ago, we were duped by another national organization - the National Right-To-Work Committee. They brought actors into our community via our television and our news media to tell us how to vote. The quality of actors was somewhat better than those used by the Snake River Alliance, -- but Moses ~~seemed~~ to have quite a bit of influence over our judgement.

And what has it gotten us? ~~Many part-time~~ many lost jobs, lower wages and a lot of suffering from those people in the work force who can least afford it.

Now we have another National Organization trying to influence our judgement --- the Snake River Alliance. They have a professional person - hired full-time ~~at $4500 + mileage plus expenses~~ to do nothing but cause as many problems as possible for our INEL site.

You will remember that when questioned about her funding not long ago, Liz Paul as much as told us it was none of our business. Now she says some of her funding comes from outside foundations.

She has brought in actors too! And as I said before, while they are not the caliber of the National Right-to Work Committee's actors, they are still professional actors from Hollywood who seem to be able to convince us that what they say is true.

Snake River told us to let Idaho decide, but Monday in a TV interview, Liz Paul said that she probably could not muster the support she needed in the state of Idaho to defeat the SIS so she would have to go beyond Idaho to the Congress and lobby them to end funding.

What is the truth from these outsiders? They come here from various parts of the country - from the land of fruits and nuts - ~~the~~ the West Coast - Disney Land East - and ~~from New York City, which we all know is~~ ~~the end of the country~~ ~~literally, or at least~~ ~~quite often they~~ the garbage pail of the United ~~States~~.

These people come to Idaho and think that they have some influence over us since they are from the so-called more important sections of the country.

Well I have a message for these people --

~~We~~ we have heard enough from the land of fruits and nuts and we have ~~had~~ heard enough from the so-called experts of the ~~garbage~~ East ~~Coast~~

We do not need any more of their rhetoric and lies.

LET IDAHO DECIDE!!!

LET US DECIDE!!!

WE HAVE DECIDED!!!

WE HAVE DECIDED - YES! YES! FOR ~~THE~~ S.I.S.

1.1

E094

Exhibit 94

Comments on the Draft Environmental Impact Statement
Relative to the Special Isotope Separation Project (SIS)
Idaho Falls, Idaho, March 23, 1988

2955 E. 97th So
I.F., ID 83402

My name is J. Allen Jensen. I am a resident of Idaho Falls, having moved here from Salt Lake City in 1961. I hold a Bachelor of Science degree in History and a Juris Doctor degree in Law from the University of Utah.

Before my retirement in December, 1984, my occupation was that of President and General Manager of KID Broadcasting Corporation, operating radio stations KID and KID-FM and television station KID-TV. I was engaged in the communications business for some 45 years.

I have been associated with many civic organizations in Idaho Falls, including the United Way and Chamber of Commerce. I served on the Urban Redevelopment Commission and was a charter member of the Eastern Idaho Nuclear Industrial Council which later became the Eastern Idaho Council on Industry and Energy. For the State, I served on the Governor's Task Force on Local Government and for 16 years was on the Board of the Idaho Public Employees Retirement System. On a regional basis I served for nearly four years on the Citizens Advisory Committee for the Northwest Region of the National Park Service.

I recite this information only for the purpose of establishing that I have had a rather broad background on matters relating to community affairs, business and the environment. I am a member of the INEL Committee of the Idaho Falls Chamber of Commerce.

Having examined the Draft Environmental Impact Statement which was prepared in accordance with regulatory and statutory law I wish to go on record as one who emphatically supports the DEIS conclusions: namely, that the SIS Project is needed in order to fulfill the responsibilities of the Department of Energy concerning nuclear materials for the defense of this nation, that the INEL is the preferred site for the construction and operation of the SIS, and that this construction and operation can be accomplished within the health and safety standards required by law. 1.1 3.4 5.24.22

In making this endorsement I am mindful of the statements and the propaganda which the opponents of this project have been making in the media and before whatever groups they have been able to appear. I would note that they would oppose the SIS no matter where it was proposed to be built and would probably use the same inflammatory and far-fetched objections that they propound so far as Idaho is concerned, namely: 2.10

a. The opponents state that it is unsafe to construct and operate the SIS, that it would produce new and additional hazards with horrible consequences and would change the face of Idaho and pollute the aquifer.

We know those statements are not true. Even as we know their television ads are as phoney as can be. Except for some new buildings the face of Idaho would scarcely be changed.

b. Opponents of SIS state that it would be unsafe to transport the additional radio-active materials from

799

one site to another, whether that material be waste, feed-stock or finished product.

5.29.32 We know that is not true. Whether the SIS is constructed or not, transportation of radioactive matter will continue as it has ever since this nation became engaged in the nuclear business. Additional transport is minimal and additional risks of exposure are minimal. The DEIS makes that clear. Besides that, the safety record of the DOE with respect to the transportation of hazardous material is extremely good.

5.29.95

c. Opponents of the SIS express concern that its construction drastically changes the historic mission of the site from one of pursuit of peaceful uses of the atom to one of weapons material production, which is a horrible thing to contemplate.

To this, I think we need to remind ourselves that from the beginning, when the site was the National Reactor Testing Station, it was engaged in defense activities, from training Navy crews to operate nuclear reactors in warships to the testing of materials to be used in warships, to the disposal of wastes from nuclear weapons production.

3.3.1

I cannot see that there is a material change in the mission of the site by constructing a facility that would enrich Plutonium to weapons grade through a new

process that is better, less expensive, more efficient, safer, and produces less possibilities for radioactive contamination than former processes.

5.2.1

d. Opponents of the SIS project protest that to produce weapons grade Plutonium endangers the peace of the world, that we should be dismantling our nuclear weapons instead of making more of them.

It must be apparent that unilateral disarmament in the present state of the world would be the most stupid thing we could do. However, I want to emphasise that Nuclear War would be total insanity. But you don't get away from it by abandoning our nuclear weapons. Even though the United States and Russia might agree on a program of nuclear disarmament, they both know that there are other parties with the capability of inflicting nuclear blackmail upon us. It seems to me not wise to postpone or forego the construction of an SIS because we might have disarmament before it could fulfill its mission. Universal nuclear disarmament is a long way into the future, unfortunately.

3.4

As a proponent of the construction and operation of the SIS at INEL there are some things I would like to say about it:

a. The project would be a welcome long-term boost to the economy of Idaho.

5.27.6.1

b. With the new laser technology, the possibilities

800

801

5.27.9.2 that technology transfer would bring to private industrial opportunity in Idaho are monumental--opportunities that should not lightly be foreclosed.

c. The construction and operation of the SIS would help to implement additions to the tax base so that material assistance could be given to the quest for higher educational standards and achievements, particularly in our Vo-Tech schools and in our Universities.

5.27.6.1

In conclusion, may I restate my support for the implementation of the SIS Project at the Idaho National Engineering Laboratory by this observation:

Years ago, the people of Arco welcomed a new technology as their city was briefly illuminated by electricity from the Experimental Breeder Reactor.

We have another opportunity now at INEL for a new technology that could illuminate for years to come, the basic economic structure of this area.

May I quote a short verse from the first chapter of the book of Genesis, which deals with the very stuff from which our universe was made:

"LET THERE BE LIGHT!"

E095

March 25, 1988
Testimony for the SIS DEIS Hearings

My name is Linda S. Martin. I live at 1885 Monticello in Idaho Falls. I would like to thank you for this opportunity to speak here today. My reason for being here is to inform you that contrary to what our elected officials have said here today--not everyone in this community of Idaho Falls is displaying or wearing a sign Yes SIS. I am not and I do not want the SIS project located at the INEL. 1.1

In 1953 I was one of the many children who moved to Idaho Falls from other parts of the country. I came because my father was a nuclear engineer and nuclear research was underway at the facility built in the Arco desert. I grew up thinking my dad was apart of the very cutting edge of nuclear research. I ask D.O.E.--why not invite projects here that continue the original spirit of research--research which looks into peacetime use of nuclear energy rather than the conversion of portions of the facility into nuclear weapons production? 3.3.1

I have listened carefully to the arguments for the placement of the SIS here. I have read portions of the Environmental Impact Study and it has provided me no assurance that the United States government does need such a project. What the study does tell me is that the United States government does not address this issue. It is indeed a vital question which must be answered before we as residents of the state of Idaho, and specifically citizens of this community, put ourselves at risk. The study tells me our environment will be impacted by the presence of plutonium on our roads and by the nuclear waste products to be hidden in our soil. 4.1 5.30.4.3

I do not believe our community needs the SIS Project to economically survive. There are alternative industries in this country that could be invited to locate in Idaho Falls. I am aware that the Idaho Department of Commerce and our governor are looking to invite such industry to Idaho but our state is so uniquely different in many sections of the state that it is impossible to sell Idaho in broad, sweeping, generalized terms. Our community and southeast Idaho is truly the best place to live. To D.O.E.--we do not want nuclear weapons production here! To our community leaders I want to say--let us be creative with the information we have compiled--look for new, clean industry and show 5.27.5.2

them Idaho is the place to be! Why not encourage supporting industry to come to Idaho Falls to service the present projects at INEL? Let us convince our INEL neighbors that they should seek projects which are not weapons related.

I value my time of growing up here in this community. I left Idaho for a number of years after high school but when it came time to choose where I would raise a family--I chose Idaho Falls. I am proud of this community. I believe the contractors and their employees who have come and gone through the years have acted responsibly with the projects they were given to complete. But this SIS Project is not in harmony with our past here in this community and is not how I see us building the future for our children. I will continue to give my time and energy to activities which enhance the well-being of the citizens of this wonderful city. SIS will not help our well-being and I do not want the project in Idaho Falls.

802

6.5.2

E096

My name is John Porter, I am the mayor of the City of Rexburg, population 12,000. The city council has endorsed the Special Isotope Separation Project and has directed me to make a presentation today favoring the project and urging its early construction.

1.1

I also serve as secretary-treasurer of East Central Idaho Planning and Development Association, an organization of the nine counties of Idaho's 7th District, including the cities in the district. We have been responsible for bringing into the area over $50 million in economic development and we support those projects that will stimulate our economy and create new job opportunities. The SIS project fits this catagory.

I am native to east Idaho. I have, during my lifetime, seen many changes. I was publisher and editor of the Standard-Journal newspapers for many years and have been active in community development through Chamber of Commerce work. I recall the enthusiasm the announcement [redacted] received in east Idaho that the Atomic Energy Commission would establish the atomic reactor project at the Arco desert area. None of us realized the size of the project or the impact it would have but we welcomed it and gave our full support. We were unaware of any danger of nuclear contamination but had we been more aware I'm sure we would still have approved the project. History has proven us right. There have been no serious accidents or problems at the site and our economy has been greatly enhanced.

The record at INEL is a model of safety that is the envy of the nation. There has been no serious accidents and there is no reason to believe we have anything to fear if the SIS is constructed at the INEL site.

5.24.23

This safety record has been maintained despite some serious disasters in the area. We've experienced earthquakes. The most recent was in the Challis area. Before that there was one at Hebgon Lake and Yellowstone Park. No damage resulted at the INEL site although it was close to the epicenter. We survived the Teton Dam disaster. There have been a few malfunction accidents in equipment at the site but no serious life loss or contamination has resulted. The INEL management has been frank and forthright in reporting such accidents and have kept the public fully informed of any problem. This has given us confidence in the operation. We have

3.2.2

no reason to believe this attitude will change.

4.15.4 The primary purpose of the SIS Project is to enhance the security of our nation. It will use laser isotope separation technology to remove undesired isotopes from government owned plutonium to support defense applications. This is needed as a part of our national defense system. The process will take place someplace in the United States if not at the INEL. Denying construction here will not stop production.

5.27.9.1 But by having it at INEL we will gain the value of the side effects from the new laser technology. This will result in the development of satalite industries being established by private industry in this area.

Let's look at the immediate benefit to east Idaho and the State of Idaho. The plant and capital equipment will total $505 million. Development and operation

5.27.6.1 support will be $432 million. This is a total for the project reaching $937 million. That will give our economy a much needed shot in the arm at a time when our farm, timber and mining industries are suffering. Construction is also in the doldrums.

The operation costs, once the building is completed, will be $64 million annually and will employ over 700 people. This will stop the exodus of our population to other states where defense projects are in operation.

A few days ago there was an economic conference held in the Riverside-San

5.27.4.5 Bernadino area of California. A report from a survey given at the conference showed there were 3200 new jobs being created each month in that area. This employment increase was created from the huge defense industries located in the area along with the support jobs. I'm not advocating such a massive growth for east Idaho. I wouldn't want that to happen. But I want a modest growth to provide jobs and opportunity for the young people of Idaho who desire to remain here and enjoy the marvelous life style we all love. We want our area to be a place where young people can raise their families, own their own homes and enjoy life as it should be in America.

5.27.9.1 The establishment of the SIS will give us the opportunity to have in our area a laser technology process that is on the cutting edge of the scientific world. There is no question that when the SIS project is in place, other laser oportunities will follow. This is a new opportunity for the INEL. Spin-off industries are sure to result from the project, creating more and greater opportunities for Idaho people.

We are sincere in our desire to have the SIS project located in Idaho. Not only because the INEL site is particularly suited for the project but also it will give us an opportunity to participate in a project to strengthen the defense capability of our nation.

I thank you for the opportunity to testify today. I assure you that the City of Rexburg endorses the project to be constructed at the INEL site and our people look forward to when it is in opporation providing jobs for our people and a stimulant to our economy.

E097

Exhibit 97

COMMENTS ON THE DEIS FOR THE PROPOSED ISOTOPE SEPARATION UNIT DEVELOPMENT AT THE IDAHO NATIONAL ENGINEERING LABORATORY

As a resident of the State of Idaho for the past 19 years and as a person involved directly in laboratory & chemical safety, in addition to involvement in a Toxic Taskforce for Southeastern Idaho, I feel compelled for the first time in my life to speak out publicly on this issue, which is so critical to the future of Idaho. 4.7.3

In the DEIS, DOE states that there is a need for "redundancy" in production capacity. According to the dictionary redundancy is defined as exceeding what is natural, usual or necessary. I could not agree more. This whole project is redundant.

The economic impacts are projected to be many. What will happen to Southeastern Idaho's economy when all the existing plutonium stocks have been reprocessed? Will we then have a economic wasteland such as Hanford, Washington with high unemployment, empty homes, defunct businesses, and no one here to pay their taxes to support all of the increased loads which will be placed on all existing services. 5.27.10

Page S-16 of the DEIS states that there may be overcrowding of schools. Who pays for that impact, our children, our teachers, our already overcrowded schools? 5.27.11.5

According to the statements made at last years state Economic Summit, we, in Idaho, want to attract new businesses which will be a permanent part of Idaho. We have no guarantees that the SIS will be permanent, and even if it is are we willing to tie our economic future to the nuclear industry which is subject to the political whims of those at the center of our government. Furthermore, how can we attract new businesses and expect to expand our tourist industry when people know that we are dependent on the manufacture of materials for nuclear warfare in Idaho. Is this really consistent with our attempts to attract people to this part of the country for all its scenic beauty, its unhurried way of life and its wilderness? I think not! 6.5.2

East Idaho Business Magazine for Feb-Mar 88 page 25 states, "it has the potential to generate significant national interest & regional opportunity." I submit that it will certainly do that. People who truly care about their state, their country and the peace of the world will be most relieved that it is in Idaho, not in their backyard.

It seems inconceivable to me that more importance was not placed on shipments of feed material and the hazards which would be placed on our highways as a result of shipping from both Hanford and the Savannah River plant, while very little offsite shipment would occur at the Hanford site. 5.29.1 5.29.31

On page S-11 under "ALTERNATIVES CONSIDERED BUT NOT EVALUATED IN DETAIL" the fact that recovery & recycling of existing weapon-grade plutonium is not considered seems totally irresponsible, even if it does not replace the need for the SIS. 5.2.15

Another primary concern that I have is that the AVLIS by-products storage is not fully addressed in the DEIS. It seems that designing a 30 year storage vault for products that may never be used shows a lack of concern by the DOE for the future of the nuclear industry. Those of us who deal with chemicals on a day to day basis are aware that the EPA expects us to reduce not only the amounts of chemicals we use, but the costs of disposal **demand** that we are responsible for reducing our waste so that further generations do not have to deal with our irresponsibility. Are we to believe that future endeavors will be more responsible to the environment than past ones? 5.4.1

Since President Reagan and Secretary General Gorbachow have signed the INF Treaty, subject to Legislative approval, does it make sense to the taxpayers of this country to spend our money on plutonium production, when people in the US are homeless and hungry? Lastly, in a world already over burdoned with nuclear arms which have the capability of destroying our entire planet are we so childish as to believe that when the Soviets build bombs, so should we? 4.3 3.4

I strongly urge that the No Action Alternative be taken as the only responsible action of a free thinking, peace loving nation. 1.1

Thank you

Shirley Buchli
10 Davis Drive
Pocatello, ID

804

E098

Exhibit 98

Name- Verlow D. Haddon
Address- 3496 Whitman Dr.
City- Boise, Id.
Occupation- COPE Director, Idaho AFL-CIO

Previous to taking the job as the State COPE Director for the Idaho AFL-CIO. I was employed by Westinghouse Idaho Nuclear Company, at the Idaho National Engineering Laboratory. (18) years of that (20) year period, I worked at the Chemical Processing Plant, the proposed site of the Special Isotope Seperator. From 1979 until May of last year, I was the Vice President, and Presiding Officer for the (400) members of the Oil Chemical & Atomic Workers Union, that worked for Westinghouse Idaho Nuclear Company.

This is an interesting situation I find myself in today. That is, being on the same side of an issue with a Company, and not in an adversary role, but I would say it is not the first time. Safety of the workers, and maintaining the integrity of the overall operation, at the INEL, is an area where the company, and the union, have worked together as a team for many years to achieve perfection. A goal, ~~that both sides have worked very diligently towards~~, to create the safest working envirement in the Nuclear Industry. In doing this, the Union and the Contractor created not only one of the safest Nuclear Facilities in the world, but if you look at the record, it is a much safer place to work than Industry as a whole.

5.27.12.6

805

(2)

Accepting the Challenges that come with State of the Art, Highly Technical Projects such as the Special Isotope Separator, is not new to the INEL or its workers. Union workers at the INEL do not have a Fatalistic attitude. They adhere to the old American belief, that anything can be done, if they set there goals, and that means they ~~believe~~ know they can build this project, ~~and~~ build it safely, and operate it with High Little or no impact to the enviroment.

It has been said that the major reason the AFL-CIO and its affiliates endorse building the Special Isotope Separator, is a selfish reason, and for only that one reason, JOBS. Yes, Job's will be created, and Yes, there will be good paying Union Jobs involved. But, before we ever agreed to support building this proposed project, there were higher priorities to respond to. No. #1) The safety of those workers that would build, or construct the Project. No.#2) The safety of those workers that would operate, and maintain the facility, and No. #3) Would the risk to the enviroment, to the surrounding community, and its residence, including our members and their families be to ~~surmountable~~ dangerous hazardous to accept. I can assure you, we scrutinized this proposed project very carefully. Our decision to support the SIS project was based on the overall ~~track record~~ Safety Track record at the INEL, and experience of those people that work at the INEL., ~~not the potential employees~~.

5.27.7.3

5.24.23

Our members value the clean water of Idaho, it's pristine nature, and the tranquility of raising their families here. If there was any concern on their part, of this

project jeaprodizing this way of life. You could be sure, they would be heard. But, they know the safety precautions that go into building a plant like this, and they know the safety procedures utilized in operating experimental facilities, because they as Union Members were a part of the developmant of the safety guidlines. I think this is a prime example of how progressive, and effective Unions are to this country.

In closing I would like to say, that we are not opposed to peace, but we know that to achieve that goal, it will not happen by just one side refraining from building facilities like the Special Isotope Separator. If at a point and time, it can be agreed on by both countries to remove Nuclear Weapons from both arsenals. Then so be it. But it has not happened, and until it does. We feel very strongly that this project should be built. We also feel this facility can and will be operated, with the utmost of safety to the workers, the population, and the enviroment of this State.

We urge the Department of energy to choose Idaho as the site for the special Isotope Separator. We can build it, and Operate it with the Highly Skilled Union members of this state, as we have proven in the past.

Exhibit 99

Issues For Consideration in the EIS of the Special Isotope Separation Facility

Submitted by: Daniel Geery 842 N. 1000 E. Shelley, ID 83274 March 25, 1988

As a private citizen I want to voice my objection to the SIS. The time has come for us to do away with the archaic idea that, if you disagree with someone, you must kill them, which is the premise upon which the need for more weapons is based. Mankind has reached the point where cooperation, not competition, is not only to our advantage, but is necessary for our survival.

1.1

4.10.5

With the advent of nuclear weapons, the notion of warfare not only changed, but fell into the trash heap of things that don't work. The reason for this was simple enough: It became evident, to anyone who was looking, that after a nuclear conflict there would be no victors. Whether one approached the issue from a social, military, or environmental standpoint, the same conclusion was, and is, inevitably reached: Nuclear weapons must never be used if one is thinking of their own best interest. Perhaps this is what Albert Einstein meant when he said, after Hiroshima disappeared, "Everything has changed but the way people think."

4.13

I would like to point out that we are deep in the final hours when there is still time for our thinking to change. With over 25,000 nuclear weapons in our stockpiles already, the notion of overkill has reached meaningless proportions. Except perhaps for what it means to our youth, who on the whole have developed fatalistic outlooks as a result of the not unreasonable assumption that they will die in a nuclear war. The SIS would be one more factor in verifying that assumption. What method shall we use to measure the effect of this on the behavior of our youth? Though I mentioned this to you earlier, your draft environmental statement ignores the question.

2.7.2

When I ask myself, "What, really, is behind the insecurity of certain

politicians about never having enough weapons?" I am forced to conclude that their paranoia is a fanciful wrapping for personal ties to defense contractors, and a pathetic desire to bilk the taxpayers of a few more dollars. Whether this is true or not, the fact remains that the SIS would be one more component in a modern day Auschwitz, a vastly more effecient Auschwitz than the first one, and a doomsday machine that is profoundly at odds with the world peace which civilized people are interested in seeing.

I've been pleased to note that there are many civilized people in Idaho Falls and the surrounding area. I would like to read to you a short quote from one of those people:

"...we repeat our warnings against the terrifying arms race in which the nations of the earth are presently engaged. We deplore in particular the building of vast arsenals of nuclear weaponry. We are advised that there is already enough such weaponry to destroy in large measure our civilization, with consequent suffering and misery of incalculable extent."

There is more to the quote than that, but I trust it is clear how the SIS fits into this outlook, presented by a recent President of the LDS Church. In a word, it doesn't.

As as a taxpayer, my objections to the SIS are no less diminished. This piece of the global nuclear incinerator would parasitize the American taxpayer for close to a thousand million dollars. A sizeable portion of this would come from our own pockets, and the rest from the pockets of our neighbors and from children too young yet to vote. Legislators in Idaho are now quibbling over the details of a few million dollars in the state budget. How can anyone, if they profess to be sane, be anxious to dump this kind of money into the black hole of nuclear weapons, when we can not afford to clean up our land, water, and air, to house and feed our people, and to educate our young?

6.3

In my own third grade classroom, in Shelley, I have 8 and 9 year olds packed wall to wall because we can't afford to hire more teachers. We have asbestos in our building that we can't afford to get rid of; we have lead in the pipes that go the kids' drinking fountains; we have tiles falling off the ceiling because we can't afford to patch them back up. I have been wondering for some time, what exactly is it that the Emperor is wishing to defend? I had hoped the draft EIS would address this issue; but it hasn't, and so we are still loking at building a wonderful fortress with nothing in it.

6.3

The cost of the SIS part of the fortress, incidentally, would amount to about $10 million per Idaho school district, if that money were distributed sensibly, instead of to build bombs that may eventually exterminate the children whom some of us are trying to educate.

The personal conflicts generated by knowledge of a nuclear weapons factory, almost literally in my own backyard, are very great. How can I raise my own children, teaching them to prepare for the future, knowing full well that their future is inextricably chained to the instruments of destruction that may be used for political reasons utterly beyond their control? How do I teach science, math, reading, and writing to my third graders, day after day, knowing full well that my generation is leaving for them a legacy of social madness, a world short of resources, and a stockpile of weapons that could consume, on a moment's notice, the very ozone under which life on earth has evolved?

6.5.2

6.5.5

The planet Earth has been good to mankind. Over its 4.6 billion year history, it produced in its watery cauldron our own remarkable species, and countless forms of life to sustain us, and for us to learn from and enjoy. I do not wish to wave the knife blade of nuclear weapons at the ancient fabric of life here, nor do I wish to see my tax dollars do in it the form of the wasteful, irresponsible, and frightening project that some of you, unfortunately for mankind, seem dedicated to building.

Idaho Falls, Idaho 83402

Dear Dr. Nichols:

1.1
5.29.85
5.30.4.1
5.1.1
5.24.23
3.3.2
2.7.1
4.13

I would like to go on record as being vehemently opposed to the SIS project. I have three main environmental concerns. One is trucking plutonium over Idaho's highways from Hanford, Washington to INEL and then from INEL to Rocky Flats, Colorado. The second concern is stockpiling and/or transportation of waste and the third is the potential for an accident during the separation process.

I have lived in Idaho since 1974 and have come to feel the INEL is a responsible scientific community doing research. The INEL has an international reputation as a safe research facility. Why turn it into a ~~bomb factory~~ nuclear weapons production plant?

INEL public relations are always fragile at best. I think the SIS project would be the worst thing that could happen to the reputation and image of the site and of the state. However, reputation and image are minor compared to nuclear war.

If all the immediate environmental dangers aren't enough, when are we going to address the issue of the environmental impact after the plutonium has exploded?

We already have enough bombs to blow our earth up many times over and enough plutonium on hand to build many more bombs. The SIS project is wasteful, dangerous, and immoral. Please say NO to SIS.

Sincerely,

Kaye Turner

Exhibit 102

Dear Clay Nichols,

We feel mankind opened up "Pandora's Box" with the invention of the hydrogen bomb and all the nuclear weapons that followed. But, just like Pandora's Box, a little light of hope was at the bottom of all the destruction.

We have always felt a great deal of pride that Idaho has had INEL as that light of hope for the United States, only using the site for peaceful nuclear research.

Nuclear energy does not frighten us, how man chooses to use it, does.

3.3.2

Exhibit 103

To Clay Nichlos,

I am very opposed to the SIS Project. I feel there are too many bombs already. 1.1 4.13

Attention:
S.I.S Hearing
Idaho Falls, Idaho

1.1
3.3.2
4.13
6.3

Please put us down as opposed to the SIS project being taken on by the INEL. For one thing, we feel that the INEL is deserving of a contract more in keeping with their "peaceful pursuit of nuclear research" reputation which they have heretofore held. We cannot support any project with the long term result of more nuclear weapons being produced (which we certainly do not need).

We have full realization of the problems of the economic situation in southeastern Idaho. Our family has suffered directly from this situation. And we have always been Union supporters. However, there are without doubt, other projects which we can lure to our region, and to the INEL, than the SIS, which can ultimately contribute to the annihilation of life on our planet through the use of nuclear weapons.

Yours most sincerely,

Clarence O Davis
and
Grace R. Davis

March 23, 1988

Dear Mr. Nichols;

My husband and I are writing this letter on behalf of our three children ages 14, 11, and 5.

Apparently there are many who feel those people who oppose the SIS Project are also not in favor of rescuing our sagging economy. Nothing could be further from the truth. The issue here is not one of economics alone but rather it is a complex moral issue. There is no simple solution. 2.7.2

Today's children are not just concerned with the issue of nuclear destruction. Have you talked with your children or other children, but more importantly have you taken time to listen to them talk about their hopes, fears, and concerns? I can tell you this, children are more informed than we give them credit for. Their concerned about toxic waste, air and water pollution, the homeless, Aids, the Soviet Union, war, and the "bomb".

As parents, most of us teach our children to love and respect themselves, others, and our environment. What message our we sending them by supporting the SIS Project? Are we really that desperate in the name of economics that we're willing to sacrifice the trust and respect of our own children? In the long-term will the benefits (which are questionable) outweigh any risks or potential problems that my result be in the best interest of our state or our children?

We would encourage you to please reconsider this entire project. You have not convinced the majority of people that the need for this project exisis nor can you demonstrate the need for additional production of plutonium. Let's "Keep Idaho Green" and its image clean, strong, and peaceful. Please if not for ourselves, for our children and their children - they must have a voice!

JUST SAY NO!

1.1

Exhibit 106

Clay Nichols

Dear [illegible] March 21, 88

1.1 Here is my letter supporting the "NO" voice for the SIS. I am basically against nuclear production of any kind because I don't feel our technology

5.30.2.5 has been able to come up with adequate means to dispose of nuclear waste.

But this SIS is doubly trouble because

4.13 it's goal propose is for producing weapons and I am strongly opposed to more weapons of any kind.

Thank you for giving me this opportunity to voice my opinion, I probably would have remained silent otherwise.

Good luck to us!

Sincerely,
Kay Sampson
726 So 3rd
Pocatello, Id. 83201

P.S. I am also concerned for the future of my children & their children.

812

E107

3/31/88

Exhibit 107

Clay Nichols

To: [illegible]

I most definitely am opposed to the SIS being built at INEL, with a resounding "NO" to SIS.

1.1 I am very concerned about the Snake River Aquifer, as well as the terrain surrounding the site. INEL, has already been guilty of contaminating the Aquifer, somewhat, which is frightening. There has been cause after case of leukemia turning up in the areas below the site. Isn't this a bit strange?

5.30.4.1 We already have a tremendous amount of hazardous waste being trucked across our State, do we have to make more? What good are a few jobs, temporarily, if the workers health could be impaired in the future?

4.13 More bombs we do not need, or agricultural products tainted with contaminated water!

NO to SIS.

Sincerely yours, Faye

E108

This copy To Hearings in T.F.

March 20, 1988

Exhibit 108

Dear Editor, — To who it May Concern.

When an issue as vital as SIS confronts us, the future of our children and our state demand that we consider all sides of the issue intelligently. The supporters of the SIS offer two primary arguments for SIS: they say that it is necessary for the country's defense and that it will provide a "great" economic benefit. Both of these points are debatable.

1. Is the SIS needed for the nation's defense? "The Plutonium Factor" (Newsweek March 14) states that the U.S. "currently has 90 tons of plutonium stockpiled in weapons, 10 more tons in storage and an additional 10 tons in available scrap." U.S. plutonium production "more than doubled between 1980 and 1985 at a time when U.S. stockpiles of nuclear weapons actually decreased 3 %."

813

2. The SIS would indeed provide a boon to the economy -- for a short period of time. How much of a boon is unknown. Just ask Pocatello what happens when a boom economy is followed by a bust (such as what would occur after SIS ends). We have no guarantees that the DOE will hire only Idahoans to build and work at the plant. We have already seen a sample of the DOE disregard for local input when they refused to hold hearings in Pocatello or any of the numerous small towns which would be impacted. The majority of the people who now work at INEL live in Idaho Falls, yet the entire state is being asked to share in any potential dangers to the environment.

5.27.10

2.8.8

And what are those dangers that we will be subject to if the SIS is built in Idaho?

1. One of the most devasting problems could occur in the shipment of plutonium to and from the Site by train or truck. If a train derailed, hit another train or a vehicle, the entire area for many miles (and countless years) might be contaminated and rendered uninhabitable by one of the deadliest substances ever conceived of. What if the accident occured in a city, on a busy highway, or in a prime hunting and fishing area? Are you willing to risk not only your own life but the lives of every human and animal in the area on the safety records of the DOE, the railroads and every trucker? We are **not** willing to take that chance.

5.29.89

2. Another possible danger is contamination of the vast Snake River aquifer that we all drink from. The same Newsweek article states that radioactive waste and toxic chemicals at Savannah River plant are "leeching into the soil and groundwater" there. The estimated cleanup cost is $7 Billion. Is this what we want in Idaho?

5.30.4.14

Finally, consider the utter hypocrisy of voting for every tax cut and spending cut there is unless the money goes into our own pockets. How can we, as intelligent, moral people, condone spending our hard-earned tax dollars on a facility to manufacture bomb materials when our nation's schools, roads, cities and rural areas are desperately in need of constructive funding?

6.3

If you feel as we do, PLEASE speak up, write or protest the SIS! Our future depends on it.

1.1

Signed by Concerned Idaho residents,

Sandy C. Stone - Rt 3 Box 264-A, Blackfoot.

E109

Exhibit 109

777 Highland
Pocatello, Idaho 83204
March 20, 1986

To the legislators and citizens of Idaho:

1.1 I would like to express my opposition to the proposed construction of a Special Isotope Separator facility at the Idaho National Engineering Laboratory site.

2.7.2 I believe that it is time that we, as citizens, take a moral stand on an issue that is going to affect not only the people of Idaho but also those of the rest of the nation and the rest of the world. We have the responsibility to make very careful and considered decisions when the outcome of those decisions will become the legacy that we leave for future generations. Under such circumstances we cannot let economics, political posturing or disinformation stand in the way of seeing clearly what it is that we are being asked to sanction and support.

The purpose of the plutonium that would be produced at the INEL would be to make nuclear bombs. The function of those bombs is to kill people. Not just a few people in a small area but thousands upon thousands of people in a vast area. There can be no discrimination between combatants and noncombatants, no distinction between those who seek to rule and those who follow in good faith, and no way to protect the children who have not yet been indoctrinated into a political ideology. All within the expansive range of a nuclear explosion will die.

We must each consider very carefully the reality of what nuclear weapons do. It is far too easy to rationalize that we are creating a situation of strategic deterrence, that these weapons will never be used. A much less potent form of nuclear bomb has already been used with devastating results in a situation where retaliation was not a prospect. As long as the bombs exist the potential for destroying our "civilization" exists.

3.3.2 I cannot support the production of plutonium at the INEL or anywhere else as a matter of conscience. It is beyond reason to construct another plant to produce more nuclear weapons at a time when much of the world is beginning to realize that their use would mean an almost certain end to most of the life on the planet. I sincerely urge all Idahoans to consider carefully the consequences of endorsing such a project. 4.13

Sincerely,

Michael Hayden

Dr. Clay Nichols, SIS
Project Manager
Idaho Operations Office
U.S. Department of Energy
DOE Place
Idaho Falls, Id. 83402

Dear Dr. Nichols:

1.1 We wish to go on record as opposing the SIS project. We believe that there is no need for the project anywhere in the United States.

4.13 We believe that there are enough nuclear weapons now to destroy the world many times over. We are delighted that Mr. Reegan and Mr. Gorbachev have been talking about reductions of nuclear weapons, and that they plan to continue to do so. We would prefer to see the enormous amount of money it will take to build the plant and process the plutonium go into working for world peace.

6.3 There are other pressing human needs which could be helped by the amounts of money being discussed. While our country has homeless people, undereducated people, people with health problems they can't afford to treat, it is immoral, in our opinion, to be discussion producing more of a product whose sole use is destruction.

5.27.7.1 If the project is approved, certainly Idaho may as well benefit. However, we also believe that the SIS, even if it is finally funded and comes to Idaho, will be of only short-term economic advantage. There will be a lot of dislocations to overcome a few years down the road when the project is completed.

In sum, we do not approve of the project. We object to our tax dollars going for still more "defense." The best defense would be an honest and adequately supervised treaty. We want to work towards that.

Very truly yours,

Joan K. Downing

Glenn Ray Downing

817

E115

Exhibit 115

March 21, 1988

I have been reading the press and news about SIS for some time now. I can certainly understand the excitement of many new jobs opening for our people. I am concerned, however, for the long term effects of such a project. We have absolutely no need for added dangers that will be threatening if we go through with the plan. It frightens me now to think what could happen. If this is accepted, even a greater danger faces the people of our country.

I would like you to seriously consider before passing such a bill. I think our safety and security are much more important than the fleeting period of prosperity we may enjoy! 1.1

Thank you for your consideration.

Respectfully,

139 Ranch Drive

3/21/88
541 Packard
Pocatello, 83201

Dear SIRS,

I WOULD LIKE TO VOICE MY OPPOSITION TO THE PROPOSED S.I.S. PROJECT. 1.1

I DO NOT OPPOSE THE PEACEFUL USE OF NUCLEAR POWER. I DO OPPOSE A PROJECT WHOSE SOLE INTENT IS THE PRODUCTION OF PLUTONIUM, THE SOLE USE OF WHICH IS FOR USE IN WEAPONS. 4.15.2

I MOVED MY FAMILY TO POCATELLO FROM DENVER, COLO. ONE OF THE REASONS WE LEFT DENVER WAS THE MANY HAZARDOUS WASTE SITES IN THE AREA. WE ALSO FOUND THAT THE ROCKY FLATS NUCLEAR PLANT WAS BEING USED AS AN INCENERATOR FOR NUCLEAR PRODUCTS. THE SMOKE FROM THIS BURNER SPEWED RADIOACTIVE PARTICLES ON THE UNKNOWING PEOPLE AROUND THE PLANT. THE STATE OF COLO. COULD NOT REGULATE THIS BURNING, SO SAID THE FEDERAL AUTHORITIES.

THE TRANSPORTATION OF PLUTONIUM ON THE HIGHWAYS THRU POCATELLO CONCERNS MY FAMILY AND I. THE MIS INFORMATION FROM ROCKY FLATS ABOUT BURNING NUCLEAR MATERIAL MAKES ME WORRY ABOUT THE STORAGE AND MOVEMENT OF NUCLEAR MATERIALS IN THIS AREA.

MY FAMILY AND I WILL BE FORCED TO RE-EVALUATE THIS AREA FOR LIVING CONDITIONS IF THE S.I.S. IS APPROVED. 6.5.11

SINCERLY

Brad Pier

Statement of:

W. Brad DeBow
P.O. Box 3638
Idaho Falls, Idaho 83403-3638

Prepared for:

Special Isotope Separation Project
Draft Environmental Impact Statement
Public Hearing at Idaho Falls, Idaho

March 25, 1988

E122

Exhibit 122

2.1.1

My name is Brad DeBow. Although I am an INEL employee, I am here today representing myself, to present my views from a perspective of someone who has been a part of the extensive engineering force at INEL for 12 years now. I have reviewed the Draft Environmental Impact Statement to access its adequacy in addressing potential environmental impacts of the proposed project. I find it to be complete and thorough in this respect and commend the authors. Since I have heard much about the need for this project, I have reviewed some of the books and periodicals available to the public which discuss the nuclear deterrent defense policy of our country. I have reviewed much of the current literature concerning the nation's nuclear weapons production complex and the status of the production reactors. I believe the main issue here is national security, much more so than the economy of South East Idaho.

3.4

4.7.1

I have heard it said many times during the debate over this project that we already have enough nuclear weapons to destroy Russia 10 times over. This, I can agree, may be true. The real issue that should be discussed is Credible Deterrence. If the Soviets initiate a surprise first strike, and destroy the majority of our weapons before they can be used, do we still have enough weapons to destroy Russia 10 times over? Can we guarantee that after that Soviet first strike we at least still have enough weapons to destroy them once? If not, then we no longer have a Credible Deterrence, and I believe we actually invite that first strike by the Soviets. To base our weapons material production capability entirely on very old reactor technology without the contingency and flexibility that SIS would provide, leaves open the possibility of a disastrous Soviet breakout, which I believe would lead to a Soviet initiated nuclear war if we lose our credible deterrent capability. I accept the statement of need as presented in the Draft Environmental Impact Statement as accurate, and I believe the justification for this project is more than adequate.

5.2.6

If the Draft Environmental Impact Statement is lacking in any area it is in the section on the consequences of the selection of Option 4, No Action. I believe it understates the adverse effects and the risks to our national security. I believe our nuclear deterrent policy has successfully prevented a global conflict for over forty years now, and the SIS would be a valuable asset to strengthen and maintain this capability. I would like to see the severe adverse impacts of the selection of Option 4 more fully explained in the Final Environmental Impact Statement.

3.3.1

My final comment is addressed to the selection of option 1, Construct and operate the SIS Project at INEL. I have heard it said that SIS will convert the INEL from a research site to a weapons production site, and this is portrayed as sinister. I would like to point out that the Department of Energy has always been responsible by law for developing and producing all nuclear materials required for the defense programs of the United States. The INEL is an integral part of the Department of Energy complex and always has been. Why, then, is it so hard to accept that the INEL is an ideal location for SIS?

3.2.2

5.24.23

I have heard it said that DOE has a terrible track record at their production facilities. Hanford and Savannah River are often the main point of the opposing view. My experiences at INEL have often brought me into contact with policies, procedures, and practices relating to the safety and quality of nuclear operations. I have found that INEL Contractor and DOE-ID management has always put safety and quality work first. The track record of DOE at INEL is excellent, and this, after all, is the issue of importance to Idaho. I urge the Department to proceed in this same vein with the Final Environmental Impact Statement and to select Option 1. Is not peace through strength the answer?

821

Katherine R. Daly
1135 E. Bonneville
Pocatello, Id. 83201

Testimony at D.O.E. public hearing concerning the Special Isotope Separation Project Draft Environmental Impact Statement: Idaho Falls, Id. Friday, March 25, 1988.

4.13

I'd like to begin by thanking Department of Energy officials for holding these hearings, and listening to the testimony of Idaho residents.

4.15.1

I have a number of concerns about the D.O.E.'s proposed Special Isotope Separation Project. The S.I.S. will produce weapon grade plutonium which will in turn be used in the manufacture of nuclear warheads. I do not believe the U.S.A. needs more nuclear weapons. It seems to me the 25,000 we have on hand would do in any pinch. I suggest the Department of Energy, and Congress be prepared to address the issue of need for this project before we go any further. Our nations <u>need</u> for plutonium is glaringly untouched by the Draft E.I.S. One would think this question alone would be the justification of this project. Why else spend the kind of money we're talking about here?

5.29.31

Just as perplexing is the D.O.E.'s interest in building the S.I.S. at the I.N.E.L. It seems obvious to me that the Hanford site would be the preferred location since the plutonium feed is on hand there. Certainly that would reduce the transportation risks associated with this project.

6.2

It seems those in favor of building the S.I.S. here in Idaho have one thing to say for it... that the jobs associated with this project will be the boon our regional economy so desperately needs. Yes, we need jobs, but is this the price we're willing to pay? To make Idaho the "Bomb State" instead of the "Gem State"? It makes me very sad indeed to think we as Idahoans wouldn't have any more pride than that. Why not hold on to the 900 million dollars needed for the S.I.S. as one means of fighting the multi-billion dollar federal deficit... that's what is truly eroding the strength of this country. It appalls me to think that the people of the United States would fund the production of more plutonium before feeding and housing our nation's growing homeless population. Clearly there are great moral questions that we as a people need to address here.

6.3

1.1

As one enters Idaho from any of it's borders a proclamation signed by the Governor declares "Idaho is too great to litter". I agree with Governor Andrus on this point, and in that light I request the Department of Energy take the no action option in this E.I.S. process. Not only is Idaho too great to litter, our nation fits that bill as well.

E123

#1123

March 22.1988

To Whom It May Concern:

On Saturday, March 19, I had the joyous privilege of attending the wedding of my niece in Idaho Falls. It was a bright day carrying the irresistible promise of spring. My niece, a beautiful young woman raised in Clark County, married a fine young man who farms with his family in Camas County. The couple will live in Fairfield. Anyone who has seen the camas prairie in spring knows how beautiful the area is.

It just so happened that on that wedding day, there was an energetic parade in Idaho Falls supporting the SIS project. In fact some of the wedding party got caught on the wrong side of it and the caterer was a half hour late because of it. I saw the parade arching up over the highway on the overpass as I drove into town. There seemed to be an endless line of trucks bearing company logos representing both large and small business from the area. There were farm trucks, a hay wagon,and a caravan of private vehicles.

I thought about the people who drove the vehicles toting those "SIS yes" slogans. I thought about the wedding I was going to and the friends and neighbors who were also on their way to the celebration. Having lived in Idaho all my life, I know something about the people. Most are good citizens, men and women who want to support their families and enjoy a quality of life special to this state, parents, grandparents and children who want relief from hard economic times. They want jobs,food on the table, freedom from worry. They are mostly religious people who wouldn't hesitate to voice their convictions. They are honest and caring, ready to help a neighbor or even a stranger in need. On Saturday, some of these people banded together to drive a hard statement about economic need - "Yes," they said, "Yes to SIS."

At the wedding that afternoon,sun rainbowed through the stained glass windows; the organ played; the bride and groom kissed, parents, grandparents, relatives and friends smiled or wept for joy, as people do at weddings. The pastor said, "faith, hope, and love are eternal, and the greatest of these is love." The couple faced the congregation; the recessional rang a beginning that we all rejoiced in.

The contrast is a hard blow. As we rejoice in life symbolized by this wedding on a spring-like day in a state we all love, good people support death in the form of a project that will produce weapons grade plutonium that has only one purpose.

If we support the making of this material in our state, in our region, close to or in the counties where we've grown up, then we are responsible for the possible ramifications of the use of this material - death. If not instant death, children screaming in the blinding flash, then slow death, the earth wilting. With this project we invite fear into our homes of good faith, fear of accident, retaliation, or the slow seep of poisons into our environment by material that we can't put away and forget even if we change our minds later on.

We all want a good living for ourselves and our loved ones. Making weapons grade plutonium in not "a good living." It is the production of a substance that is made to kill people and devastate the land. Can a few years of economic boom justify this end? 2.7.2

How many people in that parade on Saturday, how many city mothers and fathers, are willing to take responsibility for the missiles and bombs that could possibly explode upon a scene much like the one in the church on Saturday where a young woman and man celebrate hope and union? It could be in any country, any custom of marriage destroyed by vehicles of death fueled by plutonium produced in Idaho; in our state. 3.3.2

I unequivocally support celebration of life in Idaho and add my voice to the resounding chorus that decries the SIS project in Idaho or anywhere. 1.1

Sincerely,

Leslie Leek Durham

March 25, 1988

To whom it may concern:

1.1 I am opposed to the building of a SIS plant in any part of the United States on these grounds:

1) It is a flagrant waste of taxpayers money.

6.3 2) The United States weapon technology supersedes anything the Soviet Union possesses. Their economic problems are so sever, they are in no postion to catch up let alone to get ahead.

4.13 3) The conflicting statements from different department in the government are a clear indication that such a plant does not have universal support at the highest levels of government.

Cordially,

Tom Whittaker

Statement on the Draft Environmental Impact Statement for the Special Isotope Seperation Project

March 25,1988

By Rick Price
944 West Clark
Pocatello, Idaho 83204

I am supporting the SIS alternative outlined in section 2.4 of the Draft Environmental Impact Statement. I agree with the statement in this section that says. "The no-action alternative would not result in changes to the utilization of DOE fuel-grade plutonium in producing weapon grade plutonium through blending." What this is saying is that the SIS is not needed. The SIS is in essence a boondoggle created for the sole purpose of creating jobs. The threats to the area's economy, lifestyle, and environment far outweigh any advantages this area, and the country as a whole would recieve from this facility. 5.27.6.9 4.15.2

The signing of the INF treaty will free up 2 tons of weapon-grade plutonium. There are those who say the SIS is to replace this stuff as it becomes inactive, but the SIS is only going to be around for seven years. The SIS is not long term solution. The DEIS does not address the impact of the shutdown of the SIS in seven to eight years on the areas economy. 4.3 5.27.10

I live on the Snake River Plain. The water I drink comes from the Snake River Aquifer. I am concerned with the storage of the waste from the SIS at the INEL and its effects on my drinking water. It is said that the nuclear waste will be stored at a site in New Mexico that is still under construction. Building the SIS now is the same as speeding down the freeway heading for an exit that has not been built yet. What will happen when we need to use the exit? 5.12.1 5.30.2.1

I repeat my earlier assertion that the SIS is a boondoggle. It is being built to provide a "redundancy" of plutonium production that is better supplied by restarting the N reactor, or using the SIS prototype facility, or using the plutonium in its present form. Not only should the SIS not be built in Idaho, but our tax dollars will be better spent if the SIS is not built at all. 4.7.4 1.1

E126

126

1.1 My name is Joan Tomsic. I am a 2nd Grade Teacher and I live in Idaho Falls. I am opposed to the SIS being built to refine plutonium for nuclear weapons.

As a teacher I am learning more and more everyday the great importance of being a consistent role model. I have found that consistency in my words and actions can mean the difference between success and chaos in my classroom. I feel that this same lesson applies to what we're speaking about tonight.

4.14 In light of the recent arms control agreements with the Soviets, I feel that building the SIS to refine plutonium for more nuclear weapons is sending a very inconsistent message to the whole world. On one hand we are reducing the number of nuclear weapons, yet we continue to plan for more proliferation. As individuals and as a nation, I feel we need to be consistent role models to our children and to the world, and show through our decisions and actions, not just our words, that we really are committed to reducing our nuclear arsenal to reasonable levels.

4.13 I do not feel that I have to see the classified Nuclear Weapons Stockpile Memorandum to know that we do not need more plutonium for nuclear weapons in order to be safe and secure as a nation. It is common knowledge that we have enough nuclear weapons to destroy Russia or any other adversary many times over. So, I ask the D.O.E.: Under what wartime scenario would we possibly need more plutonium for more nuclear weapons when we already have such a tremendous overkill capacity?

4.15.2 So, I submit to you that we obviously don't need any more refined plutonium for more nuclear weapons. Our military is strong and we are safe and secure. And we don't need to continue building up our over-kill capacity, which is such a waste of billions of our tax dollars and valuable human resources. For these reasons, I say that the SIS is unnecessary.

I feel that we as individuals right now in this community have the choice to look beyond our own self-serving motives. We can choose to SAY NO to the SIS and in so doing send a consistent message to our children and to the world. A message that says we are sincere in our desire to reduce the number of nuclear weapons to reasonable levels and begin redirecting some of our tax money and human resources into more necessary directions. 6.3

Yes, we need jobs in our community. But NO, we do not need the SIS to refine more plutonium for more nuclear weapons. We do not need any more nuclear weapons to be secure. Why not build the SIS for peaceful purposes? 4.15.4

I challenge the people at the Department of Energy and at the I.N.E.L. to come up with ways of spending our tax money that are more necessary and to create necessary jobs for the people in our nation and in our community. 5.27.7.17

March 23, 1988

To Whom It May Concern:

I am for the SIS project. It will definately improve the economy of Southeastern Idaho. It will employ several hundred people and stimulate the business development in this area. 1.1

The INEL is qualified to handle a project such as this. Southeastern Idaho has the craftsmen and the manpower to build the SIS. The INEL has a good safety record and has worked on several nuclear projects for many years. The INEL has proved to be the ideal location for this project. 5.27.6.1 5.27.11.1

The government has decided that the United States needs the SIS and I feel that Idaho is very deserving of this opportunity. 5.24.23 4.9.4

To Whom It May Concern:

1.1
5.27.7.3
5.27.6.1

I am for the SIS project to be built in Idaho for several different reasons. I beleive it will provide alot of work for the people who are presently unemployed and enable those who are now employed to stay working. I think it will help all the businesses in Idaho prosper as vacant rentals will more likely become filled and homes will sell more readily.

I beleive it will improve the overall economic situation in Southeastern Idaho.

Robin Howe
4385 N. 15th E.
Idaho Falls, ID 83401

829

E130

Honorable members of these S.I.S. hearings;

1.1

My name is Robert Bodell and I am a native of Idaho who would like to express my support for the S.I.S. project to be located in Idaho.

3.4

To be able to express our views in a forum like this makes me proud to live in a country like ours. In order to have this priviledge we must remember that it was not given freely, but fought for by courageous men and women through out the history of this nation. It would be nice to make believe that without a strong defense we could live in harmony with nations that wish to destroy that which we hold dear -- our freedom. We must come to the reality that, until the time comes when all peoples might live together in true peace, we as a nation have to take steps to protect our freedom.

5.24.23

The S.I.S. project is but one of the steps that is necessary in the protection of this country. I believe that it is necessary and needs to be built. With the I.N.E.L.'s expertise in the field of Laser Technology, the excellent safety record, the support of the community, and the avilibility of skilled labor, the S.I.S. project is justified in being located in Idaho.

5.27.11.1

It is my opinion that the S.I.S. project is compatible with Idaho and Idaho is compatible with the S.I.S. project. I hope that these hearings will support my opinion.

Thank you,

Robert Bodell
640 N.Eden
Idaho Falls, Idaho
83401

G & R Electric, Inc.

P. O. Box 1685 - Idaho Falls, Idaho 83403
(208) 522-7115

March 25, 1988

My name is Gary Triplett. I am the owner of G & R Electric, Inc. and also represent the Idaho Chapter of the National Electrical Contractors Association. I have worked at the I N E L site for five years as an electrical contractor and twenty-five years before that as an electrician. During that time, I have been able to watch the on-going construction work as it has happened for the last thirty years.

830

One myth that should be put to rest that the opponents of the SIS program have put forth is that this will create a great influx of people for this job. This could not be further from the truth. During the construction phase it would be done by local craftsmen. This has been proven in the last few years by the construction of the FAST Project and the new Waste Calciner and these jobs were done by local craftsmen.

5.27.7.3

The INEL has had defense-related projects since it's start and our legislators and the President and the Department of Energy has requested this facility so that we can maintain our defense capabilities.

3.3.1

The SIS Project will enable Idaho to get in on the ground floor with a leading edge of technology. We will be able to have a lot of local businesses off site who will be able to generate small manufacturing capabilities, support functions in testing and a capable construction force that is ready and willing to instantly respond to any needs or changes that are required to get this project on line and in a timely fashion. With the building of a pilot plant at the Livermore Labs, all of the construction problems will be resolved before we start so we should have a relatively smooth construction process.

4.5

5.27.9.1

5.27.11.3

Under the direction of former Site Manager, Troy Wade, the security was enhanced to the point now where the INEL site is second to none of all DOE sites and the SIS will have it's own security system over and above what is already in place.

5.25.3

Outside interests are trying to tell the people of Idaho to decide if they need this plant or not. The spokesperson for the opposition of this project has stated that if it was as safe as a bakery they would still oppose it. After working at the site for thirty years, I am confident that it is safer than a bakery.

5.24.33

Studies conducted by Idaho State University indicate that

5.27.7.16

the 750 permanent jobs at the SIS facility will generate an additional 1050 supportive jobs in the community, resulting in a total of 1800 permanent jobs - something Idaho needs desperately.

5.27.7.3

The SIS will bring our state a lot of employment that we do not have at this time, will return our hard-earned tax dollars and most importantly give our employees that were trained by our own apprenticeship programs and universities a chance to work at home and not have to leave the state.

Figures published by the State this week show that we have 67% more people leaving the state than are settling here because of the employment situation. This country's greatest asset is it's work force. The future strength and progress of this state depends upon our commitment to develop the skills and knowledge of this work force.

5.27.9.1

All crafts are presently using their apprenticeship training programs. Apprenticeship is a uniquely coordinated effort involving the individual, the employer, the labor unions, the federal government and the state educational system. The concept of apprenticeship seems uniquely suited to the training needs of the year 2000 and particularly to the increasing role of industry-based training. Apprenticeship is particularly suited to the small firms where most of the future job growth will take place. Technology will introduce change and turbulence into every industry and

5.27.6.13

every job. The need for constant learning and adaptation by workers will be certain. The SIS will have the opportunity of training people so that the work force will be knowledgable and ready to respond to anything that is required to either modify the process or in regular maintenance procedures.

I want to close by saying that the Idaho Chapter of the National Electrical Contractors Association and G & R Electric say YES to SIS.

1.1

Sincerely,

G & R ELECTRIC, INC.

Gary J. Triplett
President

E132

What have we heard here tonight. People here against SIS, people here for SIS. People; who in their own mine have real and just reason for their opinion. Each one is right and yet each one is wroung. ~~Yet you people are here to hear each and every one of us!~~ We have heard of the jobs SIS will bring to South East Idaho. Not just during the building of SIS but for the duration. We have heard of the spin off technology that will create more jobs and like the PBF reactor could be used for life saving purposeces. Lasers are being used for all types of surgery.The technalogy from this is not unlike the space program, where it may not be seen today but in a month or year or even 5 or 10 years; could bring new and exciting things to the lives of all American's and the world!

I was born, educated, have worked and lived in South East Idaho for all my 33 years. I started in Arco and then moved to Idaho Falls ten years ago and I have never feared the INEL. I have know a lot of people who have worked and who are working at INEL right now. The only complaint I have ever heard from these people is the extremes taken at INEL on safty. To the point that it is very tough at times; on certain jobs; to get anything done, and yet their has never been, to my knowledge, a life threatening or environmental unsafe incident at INEL.

As I said earlier I have worked in the region all of my life and yes, some of my lively hood comes from jobs at INEL. My biggest complaint about the INEL is also that they sometimes seem to stand either right in the way or in my tool pouch, making it very hard to do a job. Yet in ten years of off and on working on the INEL I have never been craped-up. I know that because in July 1987 I went to work for Electric Boat at NRF and was required to get a full body scan and nothing showed up. A1W at NRF on the INEL is a very hot plant. Yet Electric Boat's limit for exposure is 1000 mill rems/qt and 2000 mill rems/yr where the Navy's is 3000 mill rems/qt and 5000 mill rems/yr. This is just one reason the INEL does not have a problem with safty and has not had a accident.

One point that has been raised is that the INEL will become a weapons plant, a military base, well the INEL started as a Navel base many many years ago. It is now a training facitily for the Navy. The nuclear Navy! Well now the nation has said, "We need plutonium for our, that's your's and mine, national defence!

I would like to close with this. The people I know who want the SIS are people who need a job, for their families,their future and the future of this nation. These people are willing to work for our freedom and our safty. Everyone must help. To keep our freedom we must all at times swallow the bitter pill.

Reece W Burke

Testimony for public hearing on Special Isotope Separation Project , March 25, Idaho Falls, University Place. Speaker, Paula Jull

To the Hearings Officer:

4.1 I am here tonight, to question the need for the SIS Project as stated in the draft E.I.S.

6.3 As a citizen of this country, I question the use of our financial resources in this way. We have tremendous stockpiles of nuclear weaponry, more than we need

4.13 to deter threats to our security. Recycling of existing warheads can provide enough plutonium to maintain this absurd arsenal. The Strategic Arms Reduction

5.2.15 Talks promise to bring thousands more of those warheads to retirement, and use as fuel. I want my tax dollars spent more wisely. At a time when our country is in serious debt, when basic human needs are not being met, a billion dollars for such a project is wasteful.

5.24.22 As a citizen of Idaho, I question the safety, and prudence of such a project. Some experts will say that plutonium can be handled safely, but D.O.E.'s own record at Hanford, Savannah River and Rocky Flats proves that that is not always the case. I do not want to risk the reputation and future of Idaho to such predictions. I became a citizen of Idaho because of its reputation for unspoiled wilderness and clean living. This is a precious gift that few have. A shift toward weapons production at INEL seems incompatable with what Idaho stands for. Idaho deserves better. Our representatives in Washington should bring us better than this for our hard-earned tax dollars.

6.5.2 Finally, as a citizen of the world, I am morally opposed to this project because

1.1 it is involved with nuclear weapons production. This is material for warheads -

4.13 warheads that will kill, maim and poison us for decades. When I visited Japan, young Japanese would ask me, "Why did your country do this horrible thing to people?" All I could say was, "It wasn't me, it was my father's generation." Now it is my generation's turn to say "enough". It is time to encourage our leaders to reduce this horrible risk, to put our resources to building our nation, not destroying it.

Exhibit 134

March 25th, 1988

For the record —

Money could never replace the pure environment that exists here in Idaho. It's more important to leave our children a heritage that is clean, pure, and full of resources, 6.3 than to produce fuel for weapons of war. The SIS project risks the environment and threatens our 4.15.2 children's heritage. It puts money and energy into destructive forces. We have too much plutonium already. Surely, there 5.27.7.17 must be more constructive ways for Idaho to improve its

6.5.5

economy.

I strongly oppose this

1.1 proposed SIS project

FROM: SCOTT EVANS, ASSISTANT PROFESSOR OF ART, IDAHO STATE UNIVERSITY / 78 WILLOWOOD POCATELLO, I.D.

SUBJECT - TESTIMONY CONCERNING THE S.I.S. PROJECT

WE LIVE IN A TIME OF MANY WONDERFUL OPPORTUNITIES. TECHNOLOGY, IN MANY WAYS, HAS EASED OUR LIFE, MAKING IT LONGER AND HEALTHIER. STILL, IN THIS SAME DAY AND AGE THERE ARE SO MANY THREATS TO LIFE — THE AIDS EPIDEMIC HAS BROUGHT FEAR INTO MANY EVERYDAY LIVES, THE WORLD ITSELF IS PLAGUED WITH WARS AND SKIRMISHES AND CRIMES THAT SEEM TO SHOW NO REGARD FOR HUMAN LIFE AND WE HUMANS, THE ANIMALS WITH THE ABILITY TO REASON, FIND IT NECESSARY TO SEEK OUT WAYS, REASONS TO DESTROY LIFE — RAVAGING RAINFORESTS, FORCING SPECIES, SOME AS OF YET UNDISCOVERED, TO THE BRINK OF EXTINCTION. WHEN WILL WE STOP? WHEN WILL WE REALIZE THE VALUE OF LIFE, HOW PRECIOUS IT IS, HOW LASTING IT HAS BEEN. IT IS TIME TO MAKE A STAND, A RESPECTFUL STAND IF YOU WILL, A MORAL STAND IF YOU MUST. LETS STOP THINKING OF WAYS TO PUT AN END TO LIFE ON THIS PLANET AND BEGIN PUTTING OUR EFFORTS INTO THE CULTIVATION AND CONTINUANCE OF LIFE, THE PROTECTION AND PRESERVATION OF OUR HOME — NOT A HOUSE, NOT A HOMETOWN BUT OUR PLANET EARTH. JOBS ARE NOT THE ISSUE - IF THEY ARE THEN LETS STIMULATE JOBS THAT ARE CONSTRUCTIVE NOT DESTRUCTIVE. WHAT THE ISSUE REALLY IS IS THE SENSELESS AND WASTEFUL PROLIFERATION OF DISEASE AND DESTRUCTION. SOMEWHERE, SOMEHOW WE MUST START TO STOP THIS TREND THAT LEADS ONLY TO OUR END. LETS START HERE IN IDAHO, A STATE PROUD OF ITS WILDERNESS ENVIRONMENT, A STATE THAT ONCE AGAIN CAN ESTABLISH A NEW FRONTIER; ONE FILLED WITH SAFETY, SECURITY AND A PROSPERING NATURAL ENVIRONMENT. SAY NO TO THE S.I.S. PROJECT AND BY DOING SO CAST A YES VOTE FOR A SAFE AND SANE WORLD.

5.27.7.17

1.1

E136

SPECIAL ISOTOPE SEPARATION (SIS) PROJECT

My name is Tom Stoelting and I live in Pocatello, Idaho. I have lived there for 18 years, having moved to Idaho from North Dakota in 1970. I was drawn to this part of the country by its beautiful mountains and, at the time, its relatively fresh air and clean water. In the very short period of time, geologically speaking, since then, the mountains have risen in height and the water and air quality has fallen. The increased height of the mountains has occurred as a consequence of shifting substructures underlying southeastern Idaho, which, geologists will tell you, is very unstable. The lowered quality of water and air results mostly from reduced oxygen levels and increased pollutant levels in both elements. Regardless of the specific causes, the qualitative change has been notable and bodes ill for all life, human and otherwise.

835

1.1
5.1.37
5.24.27
6.3
5.27.7.17
4.14

My opposition to the siting of SIS here or anywhere is based on the inherent failability of humankind and its contraptions, the unavoidable destructiveness of the product "plutonium" and its by-products, and the irresponsible application of wealth and resources, monetary, natural, technological and human, for destructive purposes in the face of great poverty, massive malnutrition, disease, crumbling institutions and infrastructure, homelessness, and ignorance. I do not want SIS constructed anywhere. We need jobs, for sure, but we need jobs that will make the world a healthier, safer place. Producing more plutonium will not do either. It will create more instability in international relationships and in the environment. It certainly will produce much more very hazardous waste and risks to life itself through its production, transportation, storage and, horror of horrors, holocaustic use as intended finally. It is not needed in any sense of the word.

4.15.4

What is needed is a redefining of security on some basis other than military might. We need to regard literacy, equity, justice, cooperation, health, access to services and resources, and democratic participation as cornerstones of our security as a society. It is obvious the world over that military power brings neither security nor peace. I do not want my tax dollars (currently more than half of every dollar collected) to go for SIS projects, MX missiles, contra aid, nuclear subs, "escort service" in the Persian Gulf, or troops to invade and occupy foreign shores. I want my dollars spent on medical services, housing, food, education, rebuilding infrastructures, protecting the environment, improving our justice system, and helping nations of people achieve bonds of trust and cooperation. The same hundreds of millions of dollars proposed for the SIS project could be much more wisely spent in those ways, truly creating a safer, healthier world for everyone and many more jobs to boot.

3.4

6.3

Exhibit 137

Testimony for public hearing on Special Isotope Separation Project, March 25,
Idaho falls, University Place Speaker, Rachel Newton

As a small child, I was terrified of dying in a nuclear war. I always thought
that as I got older,(I was 8 at the time), my fear would dissipate - that I
6.2 would realize the irrationality of my feelings. But the older I get, the less
this seems to be the case. I really can't believe that you're letting this insanity
5.22.4 and it is insane - pervade the wholesome beauty of Idaho's landscape. The mountains,
the forests, the rivers, the wildlife - you're willing to throw all of that away
for a few quick bucks, completely disregarding the long term effects on the state.
This includes the state of the economy when the SIS's "mission" is done and everyone
working there becomes unemployed. The SIS's maximum lifespan, not taking into
effect the INF treaty and START talks, is 7 years. Then what?
4.3 Those agreements would bring back more than enough plutonium for whatever the DOE
has in mind, completely eliminating the need for the SIS. We already have enough
4.13 nuclear weapons to destroy the earth many times over. Isn't once enough?
What about an accident on the road? The powdered form the plutonium would be travel-
836 ing across Idaho in, would make it impossible to recover all of the product in the
event of an accident. And at the plant itself? The INEL's safety record may be
5.29.93 admirable, but the DOE's is not. The DOE has already contaminated many places,
5.24.22 a few of which are Los Alamos, Hanford, and Rocky Flats. Do you want to add Idaho
to the DOE's contaminated list?
Where would the waste be stored? They've been considering the WIPP, but it has
5.30.2.1 developed leaks that some scientiss believe will make it useless, and the draft
E.I.S. has not proposed an alternative site for the waste.
The nuclear weapons industry is constantly fluctuating, and with the downward
6.4.4 trend it's been showing, evidenced by the INF Treaty and START talks, wouldn't
it be a little foolish to base our state's economy on an industry that's decreasing
rather than something which would benefit Idaho in amore positive manner and better
pave the way toward Idaho's future?
2.7.2 Even after looking at all of these aspects of the proposed SIS; the questions
of need, the environmental ramifications, waste disposal, and economics, there's
one question not addressed - the question of morality. We are all taught as children
that it is wrong to kill, yet people will rally together for a chance at a project
whose sole purpose is to further the production of nuclear bombs. Aren't nuclear
bombs simply a method of murdering millions of people at the same time? What's
happening to our values? Have we degenerated to the point where human lives no
longer mean anything to us? If your answer is no, then why are you in support of
the SIS? The SIS is a death factory, and I hope that Idahoans will re-examine
1.1 their consciences and their priorities and make the right decision - there are far
too many ways in which Idaho would benefit more from the money they invest. It's our
choice, Idaho - we've got to take responsibility for our actions & say "NO" to the SIS.

To the Hearings Officer

I DON'T WANT THE S.I.S PROJECT IN IDAHO 1.1
WE NEED NO NUCLEAR ARMS! 3.4

Sean D. Judd

SEAN D. JUDD POCATELLO

E139

Exhibit 139

To the hearing officer:

I feel that the SIS is a very unsafe project. If an accident were to happen on either highway or at the SIS many people could be killed or hurt. Our farmers crops could also be hurt.

What about the waste, where is it going to be stored? At the WIPP but haven't it developed leaks that some scientists believe will make it useless?

It's my environment and I don't feel that this is safe. I don't want to be the one on the highway if there is a plutonium accident.

6.2

E141

To the hearings officer:

What is the purpose of building the S.I.S.? Is it because our country is in desperate need of plutonium to build more weapons? We already have enough weapons to terminate all known life and there is enough plutonium stockpiled for any conceivable future needs. The S.I.S. is a very short-term, high risk, economic bandaid and would do much more harm than good. The risks are too high and the benefits too low and the finished product unwanted and unneeded.

I was raised in Idaho, I am now ①
31 years old. I have fallen in love with
our landscape and with the wonderful people
that live here. It frightens me that
a substance that is highly toxic and remains so
for 20,000 years could be brought to Idaho
1.1 in large quantities. I'm frightened of
the large quantities that are already here
and of the fragile and active landscape
that it rest on. I am opposed to the
S.I.S. project for those reasons.

While I was growing up here in Idaho
I was taught that it was good to
work hard and make honest money.
I was also told that it was wrong
to make money by doing things that hurt
people or brought them misfortune.
It seems to me Immoral to work on
2.7.2 a project that produces a highly toxic
substance for the purpose of killing
other people, and that in the process of
killing people it lays waste to the land
and renders it unliviblefor thousands 143
of years.

I was taught that my body is a
temple and that I should take
care of it.

I was taught that the earth which
nourishes me [redacted] is to be cared for
and respected, not put into
jeapardy and contaminated for any
amount of money.

I am very proud to be [redacted] an Idaho
native,

I wish my testimony to be put on record
as being opposed to the S.I.S. project
in "confidence" [redacted] that Idaho can make
a wiser, safer and more respectable
decision to her economic problems.

144

March 23, 1988

1.1 I moved to Idaho after being born and raised in Ohio and West Virginia. I fell in love with this part of our country and chose to stay here to raise my sons.

I oppose the SIS project on environmental reasons grounded in my experience with living in highly industralized Ohio and environmentally ravaged West Virginia.

In Ohio, we lived with the danger of nuclear power plants and toxic waste disposal problems. Ohio has had decades of practice at dealing with these major problems and has not solved them satisfactorily. I don't believe that Idaho should take on the problems that more experienced states have not resolved.

2.7.2 In West Virginia, the people were promised that coal mining and it's by-products would not negatively impact their lives or destroy their land. History has proved this untrue. What will history prove in Idaho's case if we continue to expand our environmentally hazardous behavior at the INEL?

I oppose the SIS project for moral reasons. I don't believe we should build Idaho's economy based on a potentially catastrophic destructive force. The end -- more jobs in Idaho--- does not justify the means ---proliferation of nuclear products.

6.3 Our state has so many natural beautiful assets with which we could prosper by utilizing and promoting. Why not put our energies into preserving Idaho's environmental beauty and being a vacationland for America, and a preserve for a natural, unblemished lifestyle?

Thank you for your time and attention.

March 23, 1988

Department of Energy

1.1 I would like to state that I am against the SIS project being located in Idaho. I feel that it would not be a positive contribution for this area. I am very skeptical about the impact that it would not only have on the physical environment, but also on the people and their health.

5.24.30 It is time for EVERYONE to start re-evaluating the effects of such projects. Considering the waste which is produced, what would be the answer to its disposal? (If there is an answer!!) It appears that there has never been a concrete or logical solution that deals with this issue.

5.30.3.1 I hope to see Idaho develop and become a prosperous state because of its land, wilderness and beauty. I do not wish to see it known as a dumping ground for hazardous waste and unhealthy industries.

Please Do Not Sacrifice Health for Wealth!!

Sincerely,

Karen Johnson

FOR THE HEARING RECORD
March 25, 1988

A COMMENT ON THE "SPECIAL" ISOTOPE SEPERATION PROJECT
DRAFT ENVIRONMENTAL IMPACT STATEMENT:

Idaho falls

Ignorance is not only rampant
it is proud.

money and power
drive the parade of fools
self centered shortsighted
destructive & dangerous.

5.27.6.9 billion $ porkbarrel
eagerly pursued by
drooling arrogant
self righteous
SIS welfare junkies.

they're willing to take
6.1.1 enormous risks with our health,
the fragile earth & all its inhabitants
great and small.

they're not paying attention!
these mistakes have been made before
they're nothing new.

6.5.5 come to your senses!

some of us are very angry
shocked
disappointed.
fearful of what tomorrow will bring.

many generations
~~will~~ suffer the effects
of their plutonium fantasy.

1.1 SOS not SIS.

submitted by
Margo Prokse
5192 West Old Hwy. 91
Pocatello, Idaho 83204

Exhibit 147

Dear Margo - i didn't get a chance to do this over - so here it is - hope you can read it.

Exercising the right to voice an opinion is something I hope never to take for granted. The SIS issue seems to be especially critical to ~~[illegible]~~ respond to so that we all might be fortunate enough to continue to have a choice. Idaho has offered me a place to breathe fairly clear air & drink clean water. With this, I should have some ability to think clearly about wanting to maintain such benefits. And so I should have some opinion about the dangers of economic design. The idea that an industry, whose program has the obvious potential for danger ~~[illegible]~~ saying that it will boost the economy is the idea that seems to be the core danger. This idea that economic progress is the basis of SIS is too dangerous to be flattered with. It comes to me like a bent arrow to think we can boost the economy & (the quantity) of life while

6.2

Exhibit 147

2

putting the quality of life ~~on the line~~ ~~endangered~~. There is too much tension in this sort of politicking. Nature's thunderstorms can clear the air but not man's plutonium storms. Water washes everything clean but not contaminated water. This is the state where I live, & like any other spot on earth it is like a cog in the wheel of humanity to keep things turning. This spot has nourished me & I feel it is worth protecting & close consideration. How do I feel about this place I call home? Would I move if ~~great~~ tension continues over potentially hazardous programs ~~that were~~ ~~not allowed consideration~~ the ~~the~~ common man's consideration did not make any difference?

I feel good air & clean water already come at a high price. Good air & clean water keeps Idaho "green" in the natural sense, ~~so we~~ Would we rather keep Idaho "green" in the naive sense, by the flattery of economic progress represented by SIS?

March 22, 1988

Hearing Record
SIS Project

To Whom it may Concern:

We are writing to voice our strong opposition to the construction of the Special Isotope Seperation (SIS) Project at the Idaho National Engineering Laboratory. 1.1

In our view the construction of a plant in Idaho to produce weapons-grade plutonium poses grave consequences to the state's economic, environmental and psychological well being, risks that are not adequately addressed in the U.S. Department of Energy's Draft Enviromental Impact Statement (DEIS). 6.1.1

While supporters of SIS have consistently maintained that the project would provide a much needed boost to Idaho's economy, there remain some serious questions regarding the adverse impact the project poses for the broad base of Idaho's economy. Traditionally agriculture, wilderness resources and tourism have served as mainstays of Idaho's economy. The DEIS offers no analysis of how the construction of a plutonium production plant will affect these industries. In addition, the DEIS fails to address what the implications for Idaho's economy might be when SIS shuts down after its seven to eight year operating life. In view of this, the overall economic value of the project is uncertain. The promise of economic spinoffs and technology transfers (which are not touched upon in the DEIS) seem to us at best remote. From our perspective, SIS will not only *not* provide any lasting or comprehensive economic benefit to the state, but may, in fact, discourage individuals or business concerns from locating in Idaho. 5.27.1.12 5.27.1.11 5.27.10 5.27.9.1 5.27.5.3

Many environmental concerns surrounding SIS are not adequately addressed in the DEIS. The DOE, for instance, has yet to provide an 5.29.5

Exhibit 147

acceptable design for the waste casks that would be necessary to transport the 440 tons of TRU waste generated by SIS annually. INEL has long been a "temporary" storage site for nuclear waste. Repeatedly the DOE has failed to live up to its committment to move these wastes from INEL to safe storage sites. This being the case, it appears to us likely that waste generated by the SIS project will also be "temporarily" stored on-site indefinately, especially if the Waste Isolation Pilot Project (the site cited by the DEIS as the place of disposal for SIS wastes) is, as the National Academy of Science maintains, environmentally unsound. The possibly devastating effects of accidents that could result as wastes are transported over Idaho roads should, in our estimation, alone preclude SIS as a viable project. The DEIS omits a detailed emergency response plan (i.e. evacuation proceedures, how medical treatment would be delivered in advent of an accident, etc.). This lack of contingency plans suggests a rather overly optimistic attitude on the part of the DOE, and, it seems to us, a disregard for the safety of Idaho's citizens and environment.

5.7.10

Lastly, citizens of Idaho must remember that the purpose behind the SIS project is the fabrication of a material the sole value of which resides in its capacity to extinguish life. To embrace a project that has this aim as its only justification is to actively advocate for military policies that threaten all of civilization. As citizens of Idaho and the United States we feel that the prioritizing of the production of nuclear weaponry over meanful disarmament talks is abhorrent. Idaho must not become economically dependent on technologies that place the earth in further nuclear jeopardy.

3.4

4.3

We urge the state of Idaho to reject SIS and the DOE to adopt the No-Action alternative to the project.

Sincerely,

Robert Crews

Naomi Pless

843

Exhibit 147

3627 North Rapid Creek Rd
Inkom, Idaho 83245

24 March 1988

Mr. Clay Nichols
U.S. Department of Energy
785 DOE Place
Idaho Falls, ID 83402

SUBJECT: Proposed Special Isotope Separation Project

Dear Mr. Nichols:

I am a citizen of the United States and a registered voter in Bannock County, Idaho. I wish to express my personal view that plans for the Special Isotope Separation Project (SIS) should be abandoned because of the serious environmentsl consequences associated with the proposed project. Since the environmental costs of such a project far exceed any possible advantages, regardless of where the SIS might be situated, I urge the DOE to choose the alternative of No Action.

1.1

My reasons for opposing the SIS are many. The major points may be summarized as follows:

a) The United States' present inventory of plutonium provides for a more than adequate military defense of our country. Even if there is not yet unanimous agreement that nuclear weapons are an unacceptable means of solving world disputes, there is already sufficient plutonium on hand to adequately defend this country.

4.15.2

b) The environmental effects of nuclear war are not addressed in the "Draft Environmental Impact Statement" (DEIS) for the proposed SIS project. Since the product of the proposed SIS plant is the material used for nuclear warheads, for an Environmental Impact Statement to be complete, it must consider the potential impacts of the use of the warheads.

2.7.8

c) The environmental consequences of the generation of transuranic wastes associated with the proposed SIS project are incompletely addressed in the DEIS. The INEL site is not a proper and safe location for the permanent storage of transuranic wastes. A convincingly safe disposal and for these wastes has not been provided in the DEIS. An EIS for the proposed SIS project is unacceptable without a foolproof mechanism for disposal of the wastes which would be generated by such a production facility.

5.30.3.1

In summary, I feel that the DEIS for the proposed SIS project is seriously inadequate, and am strongly opposed to construction and operation of the SIS facility in Idaho, or at any of the other proposed sites. I appreciate the opportunity to voice my opinion on this matter.

2.1.1

Sincerely,

James T. Brock

For the Hearing Record Exhibit 147

TESTIMONY PRESENTED AT PUBLIC

HEARINGS ON PROPOSED SIS PROJECT

Idaho Falls, Idaho
March 25, 1988

My name is James A. Aho. I am Professor of Sociology at Idaho State University and author of articles and books on the subject of violence and related subjects. I therefore believe I can write with some authority concerning the socioeconomic impacts of the proposal to site the SIS project at the INEL.

1. It is remarkable and disturbing that given the intricate detail into which the DEIS goes regarding the logistic, biological, and geologic feasibility of locating the SIS at the INEL, there is only one page total (4-1 and 4-6) relating to the socioeconomic impacts of its construction and operation. The NEPA of 1969 requires a "detailed" assessment of all environmental effects of any major Federal action. It is absurd to believe that one page can address all the socioeconomic effects of such a project as the SIS on the communities surrounding the INEL. On the contrary, all indications are that the socioeconomic impact account has been produced haphazardly and informally with little thought given to the complexity of the social organism.

2.1.1

844

2. The only socioeconomic impacts mentioned in the DEIS are said to be either "beneficial" or "not major." This is on the face of it ridiculous. Any human project of scale must have not only socioeconomic benefits, but socioeconomic costs. Failure to even entertain the possibility of such costs casts considerable doubt on the credibility of the DEIS.

5.27.1.1

3. The only socioeconomic impacts mentioned in the DEIS concern job opportunities, housing units, hospital beds, and classroom availability. To be sure, these relate to important social institutions. But they are not the only social institutions potentially impacted by the SIS. Nor are the factors used to measure the impacts on these related institutions necessarily the most important. To wit: the family institution entails more than mere housing, education infinitely more than classroom availability, and work immeasurably more than a paying job, etc. etc.

5.27.8

4. Of the institutions overlooked in the DEIS, the most notable is religion. This lacuna is particularly glaring in light of the importance religion has in Southeast Idaho. One such religion is Mormonism. It is impossible without empirical research to precisely determine what the impact the SIS will have on the religious values (and hence, culture) of Southeast Idaho Mormons. DOE officials, however, should be apprised of the existence of a profound contradiction between Mormon orthodoxy and a project like the SIS, which is dedicated exclusively to producing material for military weaponry.

6.5.2

4.1. In The Pearl of Great Price, a sacred text in Mormonism, the story is related (Moses 5: 31) of Cain making a pact with Satan. In essence Satan gives Cain the "secret" in exchange for the latter's

Exhibit 147

compliance with his commands: ". . . that I may murder and get gain."

4.2. Impressionistic data gathered informally by this author show that a minority of Mormons associate the SIS project with preparations for mass murder motivated by a desire for economic gain. That is, they see the SIS project as a pact with Satan.

4.3. It is unclear at this point how this evident contradiction between Mormon scripture and the SIS project will effect people. On the basis of previous sociological research, however, we may hypothesize the following:

2.7.2

4.3.1. "Psychic numbing." Individual and collective repression of this contradiction by Mormons resulting in standard neurotic symptomology, including but not limited to:
- Depression and malaise
- Projection of repressed violence onto local minority groups and their subsequent attack as scapegoats
- Cynicism toward life and toward the use of violence

4.3.2. Increased resistance by Mormon radicals to the INEL and its "militarization," resulting in such things as:
- Nonviolent picketing at INEL gates
- Acts of sabotage against INEL facilities
- Violent confrontations between said radicals and INEL security guards

4.3.3. These will have indefinite ripple effects throughout Southeast Idaho. To repeat myself: Failure to even entertain these possibilities reveals serious analytical flaws in the DEIS.

5. The family is understood by sociologists to be the most important social institution. Certainly, in Mormonism it is the very heart of society. Reducing the family life impact of the SIS to considerations of housing evinces dangerous bureaucratic myopia. Among the factors encouraging family stability is employment security. Government projects like the SIS are understood to be short-run at best. We can predict serious disruptions in the lives of families when the SIS completes its work. Again, the ripple effect will go far beyond families the breadwinners of which are employed on the SIS. Employment insecurity (and hence, family instability) is known to be causally associated with countless social problems, including:

5.27.10

- Increased divorce rates
- Alcoholism and drug useage
- Domestic violence
- Juvenile delinquency

6. These comments do not exhaust all that can be said negatively concerning the DEIS and its socioeconomic impact statement.

Thank you for your consideration of these concerns.

Exhibit 147

For the Hearing Record

March 23, 1988

To Whom It ay Concern:

We, the undersigned, believe that if SIS were to be approved, it would be detrimental to our physical, mental and environmental health and well-being. Not only will it be harmful to our generation, but we believe it will also be harmful to our children and grandchildren's generation.

The long term effects of SIS haven't been completely studied and the potential impact on Idaho and its surrounding area could be devastating. Therefore, we are strongly opposed to SIS.

1.1

6.2

Sincerely,

Marsha A. DeSane

Stella Eyrd Sandquist

Exhibit 147

March 16, 1988

To whom it may concern.

I have been an Idaho citizen for 29 years, and have seen many of our successes and failures in the state. I have come to realize that one of our greatest assets is our untouched beauty, that hopefully will be around for many more years.

I am not against development nor am I perticularly against nuclear weapons. But I do disagree with having the SIS in this area for many reasons a few are:

1. The INEL site has become a temporary storage site for tru waste. Though it is not adequatly set up for this. With the SIS here our chances of storing more waste is to great.

2. The INEL site is one of the worst places to store waste. It sits on top of the Snake River Plain Aquifer, this is a source of fresh water for much of Southern Idaho, not to mention the irrigation used from this river by farmers, or the recreational sports enjoyed on this great river.

3. The INEL site seems to be an inadequate place for the SIS, being that the plutonium feed has to be transported form Hanford. Construction of the SIS at Hanford would greatly reduce the transportation risks associated with the SIS.

It seems to me we have not given this matter enough thought, perticularly considering the ill effects if something were to go wronge, which is a great possibility. Is our environment worth taking that risk? I do not believe so. I feel that in this case it would be better to sacrifice a small amount of income the SIS would bring and save what is most valuble to Idaho our beautiful surroundings.

Do not sacrifice Idaho for the limited years the SIS would operate. Lets keep the SIS out of Idaho.

For the Hearing Record Exhibit 147

To whom it may concern;

1.1 I would like to put myself on record as formally and firmly opposing construction of the S.I.S. facility in Idaho. This facility, in my view, would not only endanger the residents of Idaho, but it could also harm the economy of Idaho.

5.29.87 The shipment of plutonium across our state is a risk to both the shippers and the residents near the shipment routes. An accident could be disastrous, and the mere handling of the substance is dangerous in itself. A railroad car that is placarded as radioactive has this warning on it: DO NOT STAND NEAR THIS CAR. Apparently the proximity to a supposably shielded and secure railroad container could result in exposure to radiation, however slight that may be. The residents of Idaho do not need to be exposed to such danger.

5.27.3.3 The other danger I spoke of was to the economy of Idaho. Let's not be fooled by the short term financial benefits of this project. The future growth of Idaho's economy could be in jeopardy by this project. Continued tourism is vital to Idaho's economy. Tourism could be adversely effected by the S.I.S. The presence of such a dangerous and controversial project might make tourists avoid the area.

5.27.5.3 Also other businesses may hesitate to locate in an area where prospective clients may not want to go, because of the danger or controversy.

5.27.6.10 There is also the danger of the boom and bust cycle that this project could cause. Right now the United States government is pursuing an arms control policy aimed at curtailing nuclear weapons. There was progress last winter and there is promise of even greater reductions ahead. When 4.3 these treaties are ratified the need for more plutonium will diminish and so will the need for S.I.S. The resulting boom - bust cycle can injure economies. Steady growth based on non-controversial businesses will lead to a much greater degree of economic health.

5.30.4.14 The controversy surrounding the Savannah River plutonium plant illustrates the potential problems of S.I.S. The March 14, 1988 issue of Newsweek told of troubles there and described the surplus of plutonium in this country. That plant last month (Feb. 88) had to reduce operating power for the 3rd time in 15 months due to concern with the "ability of the emergency core cooling system to contain a catastrophic accident.", according to one government investigator. The Savannah River plant is operated for DOE by DuPont. During the 1st of March this year there was a release of radioactive tritium there. Envrionmental critics say there are radioactive wastes and toxic chemicals leeching into the soil and threatening the Tuscaloosa aquifer. This aquifer supplies drinking water for South Carolina and several other states. DOE says the danger of this is remote, yet they have

estimated that it will cost $7 billion to clean up the Savannnah River project. According to the article the production of plutonium has doubled from 1980 to 1985. This occurred in spite of congress not giving the administration near all the nuclear weapons they wanted. Also now the arms limitation agreement will decrease the demand for the expensive and dangerous stuff. Whats more, plutonium can be recycled from the weapons that are dismantled to comply with the arms treaties. We the citizens of Idaho do not need the problems of Savannah River, nor does the United States government need to spend more of our tax dollars unnecessarily.

5.2.15

Sincerely Yours;

William A. Patterson

For the Hearing Record Exhibit 147

To whom it may concern;

I am opposed to the S.I.S project being located in Idaho because: 1.1

1: I think that people are only thinking of their immediate futures, not the futures of their children. A project of this type could be dangerous enough to pose risks of physical injuries and injuries to the local economies because of the hazardous and controversial nature of S.I.S. 5.29.60

2: I live by the railroad tracks and it scares me to think of all the plutonium that will be passing by our house and the danger if we have a derailment.

3: I think it will hurt Idaho in the long run because other companies will not want to move into an area where plutonium production and nuclear waste disposal are two of the major industries. 5.27.5.3

4: It will hurt tourism for Idaho. Tourists will not want to visit places where such a dangerous and controversial industry is being pursued. Tourism is a much more important industry in the long run for Idaho and should not be driven off by such projects. 5.27.3.3

Thank you,

Kathy Patterson

5056 West Old Highway 91

Inkom, Idaho 83245

Exhibit 147

March 23, 1988

TO: Department of Energy Hearing Commission

1.1 I would like to add my voice to those opposing the proposed SIS Project for the following reasons:

1. The potential of a police state: Private security forces, which would be likely for the SIS Project, present the possibility of a serious threat to basic civil liberties. Intelligence gathering activities, the problem of professional paranoia, the militaristic attitude, and the total absence of concern about typical human behaviors and activities all pose as basic threats to the freedoms currently enjoyed by Idaho citizens. INEL security personnel have already developed a quite sinister reputation; an expanded force would do little to enhance the generally pleasant atmosphere of this state.

6.3 2. The one-billion dollar expense of providing jobs for 65 laser technicians for eight years is an unnecessary extravagance at a time when it is predicted that 2000 Idaho farmers will lose their farms this year, when budgets for education, medical care, and basic human services are woefully inadequate, and when the estimated numbers of the homeless population are revised upward each month, and when it is claimed that the entire national infrastructure is in disarray and disrepair.

5.29.95 3. To invest one billion dollars to manufacture parts of nuclear weapons is an investment with no returns. The nation of Japan produces cars, cameras, motorcycles, appliances and many useful goods which are purchased by Americans. In contrast, America has been producing bombs and bombers which can not be purchased and consumed by the average Japanese citizen.

6.3 4. Transportation of SIS-related products constitute a very dangerous enterprise. Seriously declining safety standards within the railroad industry are quite well known among those who still have jobs in this sector. The State Highway Safety Commission now estimates that 30% of all trucks going through Idaho are defective and that another 30% carries hazardous and toxic materials. Neither option offers much security to employees, citizens or to the environment.

The above reasons are simply but a few to be considered along with the many other undesirable effects. While it is quite easy to understand the reasons for the clamor for jobs among the "Yes SIS" proponents, it is much more essential to focus our national efforts upon a large number of sadly neglected social problems and to consider the quality of life which we shall leave for the next several generations of American citizens.

Sincerely,

Clifford Bryan
Box 142
Lava Hot Springs, ID 83246

Exhibit

The proposed SIS plant is dangerous 1.1
unnecessary and uneconomical.
Plutonium is one of the most hazardous
substances known. Having plutonium 5.2.1
trucked on Idaho's highways could easily
be disastrous.

Being an Emergency Medical Technician 5.29.95
for the recreational community of Lava
Hot Springs; I know that there is no high
level response available for truck accident
involving hazardous substances. A
recent hazardous spill on US 95 near
Riggins Idaho (December, 1987) dumped
thousands of gallons of fungicide into the
Salmon river destroying the Little Salmon
River Fishery. All fish eighteen miles downstream
were killed. With Plutonium, HUMAN
LIVES are the consideration fish are
incidental. The Riggins' accident was due
to driver error!

For the Hearing Record Exhibit 147

5.27.10 The SIS project ~~would not~~ benefit Idaho; Idaho does not need another shortlived (7-8 years) economic boom and bust syndrome.

One accident on an Idaho highway could drastically hurt Idaho's most important industries: Agriculture and tourism.

The SIS project must not happen,

March 31, 1988

Hearing Committee
SIS Project
DOE

Hearing Committee:

This letter is for the purpose of registering my strong objection to locating the SIS project in Idaho, or indeed to having an SIS project at all. The motivation for my objection has to do with what I perceive to be a dangerous and outmoded foreign policy of the United States, the notion that a peaceful world can only be achieved through the building and deployment of offensive weapons. 1.1

As the SIS project has only one goal, the production of weapons' grade plutonium, its implementation can only escalate international tension. No lasting solution to world problems, environmental, social, economic, and political, can be achieved by such a means. 3.4

My objection to the SIS project should not be taken as an objection to the INEL in general. The more traditional research goals of the site can be endorsed, while deploring the recent trends toward increased financing by the DOA for military purposes. 3.3.1

Sincerely,

Anthony Stocks

March 23, 1988

Hearing Committee
Department of Energy

To Whom It May Concern:

1.1 I would like to express my concerns over the proposed SIS project in Idaho. I oppose the project for the following reasons:

5.27.10 1. Few jobs would be created by the project. In fact, the project is a "short-term" one lasting approximately eight years.

4.2.1 2. The SIS would produce plutonium for nuclear weapons, which are not needed. In fact, the DOE itself has stated that the existing plutonium stockpiles are sufficient to meet our future needs. It would be foolish to tie our economy to weapons production.

3. The SIS project is dangerous in that it would needlessly create more nuclear waste, pollute the watertable, and other environmental problems. It would be foolish to invite these problems for a short-term project.

6.1.1 The above are but a few reasons why I oppose the SIS project in Idaho.

Sincerely,

Billee Fontana
3726 Dove Drive
Pocatello, Idaho 83201

For the Hearing Record Exhibit

A-1 McIntosh Manor
Pocatello, Idaho 83201

March 24, 1988

Department of Energy:

I would like to take this opportunity to express my opposition to the proposed S.I.S. coming to Idaho. 1.1

Morally, I am opposed to war and the production of the impliments of war. I cannot support the S.I.S. in any state, it is a purveyor of our destruction as well as an enormous drain on our national economy. 3.4

The INF treaty will free up 2 tons of weapon grade plutonium. If current negotiations on a 50% strategic force cutback are successful, plutonium equaling 8 times the amount to be produced by S.I.S. will be made available for new weapons production. S.I.S. is unnecessary. 4.3

Within seven to eight years of S.I.S. operation, the legally available quantity of feed plutonium will have been exhausted. This has the potencial to create a serious boom-bust economy in Pocatello. As we see daily the hardships individuals are experiencing as the railroad, FMC and other industries cut back, it seems extremely mean spirited to inflict more of this by bringing in industry with a foreseeably short economic life. 5.27.10

For the above reasons and more, I strongly urge that Idaho "Say No to S.I.S!"

Sincerely,

T.X. Karner

Comment on S.I.S.
Draft Environmental Impact Statement
By: John Wainwright
4533 Johnny Creek Rd
Pocatello, Idaho 83204

I have lived in Idaho for 37 years and take great pride in being a citizen of this beautiful state. I have worked as a guide and in outdoor recreation programs for eight years. I know first hand that Idaho's prime resource is its wilderness. The natural beauty of our state lends it self to tourism and consistent state wide income yearly. We should be looking for more non-polluting industry as well as improving our current tourism industry. I do not feel the S.I.S. project fits under the non-polluting or non potentially hazardous category of industry that I want to see in Idaho. The S.I.S. in Idaho would mean a considerable increase in the transportation of Plutonium-contaminated waste and Plutonium feed across our states highways. With more transport of nuclear material across our state I feel the probability for an accident affecting our environment will be increased. Look, we were led to believe that our Space program was as near perfection as you can get. But look at what was found after the shuttle disaster in terms of gross mis-management with regard to safety. We are being to the SIS is totally safe but I do not buy it. Economic I don't feel the short term benefit that many are looking at is worth having any more possibility of a nuclear accident in our beautiful State of any state for that matter. Plus we (USA) already have more than enough Plutonium, as we don't need to produce any more.

"No to the S.I.S."
Sincerely,
John Wainwright

For the Hearing Record

Exhibit 147

Department of Energy March 23, 1988

To Whom It May Concern:

I have several concerns regarding the construction of of the SIS project in the state of Idaho. I have resided in the state for the past several years and have considered this a place in which my wife and myself and our three children could have a "good" life. We moved here from Southern California so that environmental contaiminants would have been an issue with which we would no longer have to concern ourselves. This proposed project again raises the issue of environmental contamination. 6.1.4

The proposed project sits on top of the aquifer for the region. We are "assured" that only a small amount of radioactive waste would be buried on the proposed site. The experience with the present Savannah River Plant suggests that this disposal problem is a major problem and not a small one as the proponents of this project suggest. 5.12.1

The low level radioactive waste and toxic chemicals that were placed in basins in the area since the 1950's have been leeching into the soil and ground water. The DOE environmental safety manager says that this a remote possibility(similar to what is heard from the SIS proponents) but one that has severve economic and enviornmental costs. Your own estimates for the Savannah project clean up exceed $ 7 billion. 5.30.4.14

Beside the isue of environmental problems, the second issue is that of the need for plutonium. During the 1980's with the decrease in MX missiles and other nuclear weapons, it seems that the country is awash in plutonium. With its slow decay rate and the fact that it can be recycled from obsolete weapons it appears that the nations supply is adeaquate. The Nuclear Weapons Databook calculates that we have 90 tons in weapons, 10 tons in storage and another 10 tons in obsolete weapons. Under the INF agreement the United States would retire more weapons, this process would supply another 2 tons. If weapons become obsolete at this rate over the years the need for a production facility is questionable. 4.2.1 4.3

I agree with the sentiments of Senator John Glenn who said that it "will do precious little good to protect ourselves from the Soviets if, in the process, we poision or irradiate our own people". I am opposed to the construction of the SIS in Idaho or to any other site in the United States. The environemental considerations have not been adequately dealt with in the material. The data does not indicate the need for the expenditure of public funds for a project of this magnitude. 1.1

Sincerely,

Donald S. Pierson

D.S. Pierson
43 Temple Ave.

March 25, 1988 Exhibit 147

For the Hearing Record

Gentlemen:

1.1 I've been trying to plow through the morass of the EIS and the literature presented by the Snake River Alliance.

I've come to this conclusion. I must object on two grounds. The first is technical. I am not satisfied with the proposals for the process of waste

6.1.1 retrieval, processing, and storage.

The second reason is moral. I do not say this lightly. I served in Vietnam, with honor. I've been given some medals by our Army for bravery. I didn't go to get the medals but the Army gave them to me anyway. I also served with pride, for I was a medic treating both combatants and civilians alike.

2.7.2 I discovered that pain, like love, is a universal language. I found most of the injured wished they were somewhere else. The Army's attitude was, well, that's the way it goes in a "combat situation".

I think the attitude ought to go in another direction.

I know the purpose of this facility and I don't buy it. I don't even

4.13 like it, not even for reasons of "national security". We've already stockpiled enough damned reasons already.

And, in retrospect, I find one more reason. It has to do with Generals of the military. Any country's military. Having been around field-grade officers, I've been left with this indelible impression: you give these guys toys, and they'll have an irresistable impulse to play with them. "My toy is better than your toy".

I do not see the higher aims and objectives of the human species achieved in this project.

I protest.

Very Truly Yours,

C Brian Martin

March 24, 1988

To: Department of Energy
Re: Special Isotope Separation Project

I join many of Southeast Idaho's residents in urging you to consider the No Action alternative in making a decision about the SIS project. It does not belong in our state, and I do not believe it belongs anywhere. The sole reason for the projects existence would be to produce more nuclear weapons, and to bring us closer to destruction. I am aware that the issue of whether we need to produce more plutonium is not supposed to be considered at this hearing, That this decision is not ours to make. To me, however, it remains the major and perhaps the only issue; concern about the economy and even the safety of the project deflect attention from the issue of the projects reason for existence. I believe I must be opposed to anything that furthers the risk of nuclear war, and the SIS project certainly fits in that category.

Inkom, ID
(208) 775-4465 83245

Dear Sirs,

After reading through several articles, and watching several shows on the SIS project, I think people really need to think about this, the SIS.

Yes, there are plus and minuses, there will be jobs for the unemployed, some continuous jobs, our economy 5.27.10 that is strengthened (short term); nuclear waste, the natural aquifer can be further polluted and more plutonium can be upgraded for use in bombs.

The unemployment situation is a real problem in southeast Idaho, but as I understand it, the SIS will only be in use for six to eight years! It will take several years to construct, and then these people will be unemployed again. While the SIS is 5.27.7.4 functioning there will be jobs, but can we honestly believe most or all of the jobs will be filled by local people.

As far as the economy is concerned, yes it will be improved during the time the SIS is functioning, but what about after it is shut down? If the people think there are alot of empty buildings now, wait ten or eleven years!. Everybody should drive through Grand Junction Colorado and see what happened to a community that depended on one project to save their economy. They ended up with alot of empty buildings and an economy that is not any better than it was.

Once the SIS is functioning what is to be done with the waste? Keep burying it in the ground at the INEL? There has been no one place designated as an official waste site yet. Several have been mentioned, but none confirmed. It seems a little backwards to have the waste first, and decide where to dump it later. Maybe we should decide if we really need this plutonium upgraded. 5.30.3.8

It has already been found that the aquifer is contaminated, do we want to increase the risk even more? By placing more waste at the INEL, there will be a greater chance of contaminating the aquifer even more! 4.13

Then there is the question of why do we need more plutonium upgraded for bombs? I for one believe there are plenty of warheads/bombs already, we really don't need any more. I can't see where too many bombs can really help our nation.

Obviously Southeast Idaho is experiencing an economic problem currently, I really think we need to think more about solutions. If we do the SIS and our concern, what will we do in ten or eleven years when we are faced with a similar economic problem? 4.15.3

5.30.2.5

E148

I'm Ric Cantrell, a Political science major at Ricks College in Rexburg.!

I've been thinking about 'Atoms for Peace' and remembering a dream, a dream I share with everyone who has a spark of humanity in them.

I know my truth may not be yours, but please listen openly and let's find an answer.

First of all, let's cut through the noisy hype surrounding this thing and see S.I.S. for what it is, a plant producing deadly Plutonium for atomic weapons.

I'm probably younger than most of you here but, like you, I'm going to have a family someday. And they will grow up in whatever kind of world we choose to give them.

2.7.9 I don't want my sons and daughters growing up with a fear of the earth, in all it's beauty, being destroyed by these unimaginably horrible weapons. Do you realize that every arms buildup in the history of Earth has culminated in war? Do you understand that we are our children's only hope for the future?

It's time, today, for every community, every person, to say, "Enough." to this madness. Stop — Look around and see the end of the road we're being led down — and get off it. It's time for all of us, including southeast Idaho to do our own small part to make our dream of a better world a reality. A world free of terror. A world that we will leave better than we found it.

We don't need more Plutonium. 4.15.2

You will have a hard time holding on to this dream, this work if a Plutonium plant is an important pillar to the economy. With it, will come changes in your thinking.

I lived in the Tri-Cities Washington 2.7.12 for 8 years — right by the Hanford Reservation. The people there have a hard time seeing clearly on issues of foreign and domestic policy. They've developed paranoias seeing many good & peaceful things as a threat to job security, because their money is coming from Nuclear weapons production. I don't want that to happen here. Your thinking will become twisted when you're clutching at the purse strings of the arms race.

It's caused a lot of contention in the Tri-Cities. A build up of paranoia, fears and hostile feelings. (You've already seen the beginning of it here.) And now 5.27.10 the N-reactor has been shut down. People are losing their jobs. The economy is dying. What will happen after S.I.S.'s 8 years are over?

Don't put blinders on and see only the jobs brought here to southeastern Idaho and the economic shot in the arm. That is superficial. See too your dreams of a peaceful happier Earth sold out. — And look years into the future and see the blood

ON YOUR HANDS — THE BLOOD OF THE CRYING MILLIONS YOU WILL HAVE UNTHINKINGLY AND WHOLE HEARTEDLY HELPED TO DESTROY

YOU DON'T WANT TO LOOK BACK AFTER IT'S ALL OVER AND SAY, "YES, I HELPED CAUSE THIS."

BRINGING THE S.I.S. PROJECT MAY HELP THE ECONOMY FOR A WHILE — BUT IN DOING SO YOU WILL BECOME AN INTEGRAL PART OF THIS LUNACY WHICH HOLDS HUMANITY IN TERROR. IN DOING SO YOU WILL BE DOING YOUR OWN SMALL PART IN SELLING OUT THE HOPE, IN BETRAYING ALL PEOPLE'S DREAM OF A BETTER WORLD, A LESS HOSTILE WORLD FOR OUR CHILDREN.

THERE'S NO QUESTION, YOU'LL GET THE MONEY - - - BUT - - - EVEN JUDAS ISCARIOT GOT HIS 30 PIECES OF SILVER.

YOU KNOW MONEY'S - NOT THE IMPORTANT THING.

I'D LIKE TO QUOTE THE WORDS OF DWIGHT D. EISENHOWER

> "THIS WORLD IN ARMS IS NOT SPENDING MONEY ALONE. IT IS SPENDING THE SWEAT OF IT'S LABORERS, THE GENIUS OF IT'S SCIENTISTS, THE HOPES OF IT'S CHILDREN. THIS IS NOT A WAY OF LIFE AT ALL IN ANY TRUE SENSE. UNDER THE CLOUD OF THREATENING WAR IT IS HUMANITY HANGING FROM A CROSS OF IRON."

DO YOU SEE YET - WHEN YOU LOOK S.I.S. IN THE EYE THAT IT'S NOT SUCH A GOOD THING. INEL IS RESPECTED FOR — IT'S TECHNOLOGICAL ADVANCES, SAFETY RECORD, AND 'ATOMS FOR PEACE' DON'T TAINT IT WITH S.I.S. 3.3.1

LETS SAY YOU LIKE NUCLEAR WEAPONS — OR, YOU FEEL THE GOVERNMENTS NEED THEM TO KEEP THE PEACE. EVEN IF WE KEPT ON BUILDING NEW + MORE STRATEGIC WEAPONS, WE DON'T NEED S.I.S. IT'S BEYOND A QUESTION OF NATIONAL DEFENSE - I'm AS PATRIOTIC AS YOU — I LOVE AMERICA AND THE FREEDOM SHE STANDS FOR. I'm 18. IF THAT FREEDOM IS THREATENED, I'LL BE ONE OF THE BOYS FIGHTING, BLEEDING AND DYING. NO. ONE IS SAYING, "DISARM AND LEAVE OUR NATION WEAK AND VULNERABLE TO THE EVIL SOVIETS OR WHOEVER." HOW MANY MORE TIMES DO WE NEED TO BE ABLE TO DESTROY OUR WORLD? 3.4 4.13

WE HAVE ENOUGH PLUTONIUM - OUR NATION IS AWASH IN THE STUFF. THOMAS COCHRAN, CO-AUTHOR OF THE NUCLEAR WEAPONS DATABOOK TALKS OF PLUTONIUMS EXTREMELY SLOW DECAY AND HOW IT CAN BE RECYCLED FROM OBSOLETE WEAPONS - (THE THING THAT HAS TO BE REPLACED EVERY FEW YEARS IS TRITIUM — AND S.I.S. WILL HAVE NO PART IN MAKING THAT.) AS IT STANDS, WE HAVE 90 TONS OF PLUTONIUM IN EXISTING NUCLEAR WEAPONS, 10 TONS IN STOCKPILE, AND 10 TONS IN AVAILABLE SCRAP. BECAUSE OF THE INF TREATY, WE'LL DISMANTLE ABOUT 500 OF OUR WEAPONS IN EUROPE GIVING US 2 MORE TONS. AND IF THE START AGREEMENT IS SIGNED IT COULD YIELD US 15 MORE TONS OF 4.2.1 4.15.3 4.4.7 4.3

ADDITIONAL PLUTONIUM. IN CONTRAST, THE SAVANNAH NUCLEAR REACTOR ONLY PRODUCES ABOUT 1/4 TON ANNUALLY. YOU CAN READ ABOUT THIS FOR YOURSELF IN THE MARCH 14TH ISSUE OF NEWSWEEK. AN ARTICLE CALLED 'THE PLUTONIUM FACTOR'

FRIENDS — BELIEVE IN THE DREAM! FOR WITHOUT IT, WHAT HOPE DO WE HAVE IN THE FUTURE? BELIEVE IN 'ATOMS FOR PEACE!' REJECT THE "ANYTHING FOR A BUCK" RATIONALE — THE MEANS DO NOT JUSTIFY THE ENDS. LOOK HONESTLY — S.I.S. IS THE SEED OF A MUSHROOM CLOUD. 1.1 IT'S A CRYING WASTE AND SHOULD HAVE NO PART IN OUR WORLD.—

THANKS.

Exhibit 148

RE CANTRELL — MARCH 25TH, 1988

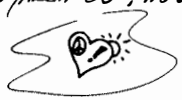

Exhibit 149 Sam Kunz

I support the efforts of DOE to construct the SIS at INEL.

1. The construction of SIS in Idaho will enrich Idaho's education. 5.27.15.1

A. The past year a team of professionals from ISU have worked on a project funded by WINCO to explore the economic impact that the construction of SIS would have on Idaho's economy.

B. DOE is working in conjunction with ISU to assure ISU Vo-Tech training is compatible with DOE applications.

C. SIS will stimulate Idaho's economy which will provide more funding for education. This in turn will help Idaho compete for better teachers and help keep the excellent teachers Idaho already has. 5.27.6.1

1. Any long term help for Idaho economy must come through the elevation of Idaho's education.

2. Peak hiring of operational personnel will effect school capacities. But then, so would any economic recovery that Idaho might experience. 5.27.11.6

TRANSITION - The construction of SIS will be a plus for all of Idaho's schools.

II. The construction of SIS would have a huge positive effect on Idaho's economy. 5.27.6.1

2

A. The team I mentioned from ISU is proposing the Institut for Technology Diversification Studies.

1. This will perform facilitative tasks not currently within the preview of other agencies.

5.27.9.4 2. Help in technology transfer to rural economies.

3. This would put Idaho in the arena of world technology.

B. DOE has begun to encourage an increase in local buying of parts for construction.

5.27.9.6 1. This project will require $120 million in parts and subassemblies, and a continuing need for $10 million per year in replacement parts during operation.

5.27.12.8 2. Cooperation of DOE and INEL contractors in breaking up purchases into small sizes will be required so Idaho businesses can compete.

5.27.7.16 C. The construction trades in Idaho are in dire need of work. 40-55% divorce, alcoholism, suicide are the only relief avaliable at this time.

5.27.7.11 TRANSITION - The potential for growth, prosperity and relief is there with construction of SIS. Management and labor are working together today better than ever before. They can and will meet these demands.

I hear the argument that SIS will endure Idaho as a target 3 in the case of nuclear wars

A. Being concerned, I contacted military personnel at ISU. 2.7.10

1. The immediate strategic sites being considered in a nuclear war would be command sites and launch sites. and air bases,

2. The first strike would possibly occur at Hill AFB in Utah, Mountain Home AFB in Idaho or Malmstrom AFB in Montana.

B. If the war was a long war then other sites might be considered for attack.

1. Bomb sites could be attacked.

2. SIS would not be a bomb site.

a. The plutomium must be fitted with a trigger and placed in bomb. This takes months to accomplish.

b. Rocky Flats in Colorado is where this is done.

C. After destruction of the above sites is completes the enemy might consider the INEL, but ask yourself, would anyone be around to notice?

Exhibit 150

P.O. Box 230
Victor, ID 83455
March 23, 1988

5.30.5.7 III. We constantly hear the argument of environmental contamination.

A. The waste from SIS is a small increment in relation to the amount of waste currently generated and managed at the INEL.

5.30.3.8 1. Opponents of the SIS would have use believe that if the SIS isn't built this would alleviate the problem of radioactive waste in Idaho.

2. The problem does exist, but to run away is not the solution and it is not Idaho's way of dealing with a problem. We cannot stop technology and hope to remedy these problems. It is through technology that these problems will be solved.

5.30.2.1 3. The technology to deal withis these wastes has been available for 20 years. We can store these wastes in geologically stable areas of the United States in underground salt packs which have been present for thousands of years and undisturbed by water. This is a safe alternative and practiced today in Europe. This technology is stopped because of political bickering and fighting. As for SIS ruining Idaho's environment; this just isn't true.

CONCLUSION: The past several weeks I have spent studying I have found Idaho is a majority yes, yes, SIS.

III. ~~We hear the argument that GIS will ensure Idaho as a target in the case of a nuclear war.~~

SIS HEARING. TESTIMONY FOLLOWED BY COMMENTS
Idaho Falls, March 25, 1988

Once upon a time, a magician arrived in a small village. The people gathered around him, ~~out of an small~~ old sack, the magician produced a wonderful selections of things--such as a toenail which grew into an elephant; an old can which grew into a giant tin man. But almost as suddenly as they appeared, the illusions vanished again.

The mayor of the village spoke out, "These illusions are fine, but don't you have something of <u>real</u> value, something to make us rich?"

"Yes! Yes!" shouted the merchants.

The magician's face grew sad, and he said, "The King has entrusted me with a special Thing, a Thing which I must leave in a remote place, such as this. It is a fearsome Thing; it was created to produce death and it brings death to all it touches. It is, however, contained with a magic force, so perhaps Death will not find you in <u>this</u> village, but I make no promises. And yes, it may bring you some wealth, but then again, this wealth may be of no more "value" than the toenail ~~and can~~. The thing, however, will remain here for almost forever, and your descendants may have to clothe themselves like tin-men, afraid to touch the earth. But yes, before that, there will be riches to spread amongst you. What is your choice?"

"Yes, Yes! Riches first!" shouted the mayor and the merchants.

"Wait!" cried a farmer, but his question and the magician's answer were drowned out by the chant, "Yes! Yes! Riches First!"

6.2

As someone who lives near this "village", I want to say how profoundly ashamed I am of our leaders and merchants who welcome an industry which makes a deadly substance into a tool of destruction.

5.30.4.12

Do you know where the name Plutonium comes from? From Pluto, God of Death to the Romans before their Empire fell and their gods were abandoned.

INEL has recently been selected by EPA for possible addition to the Superfund list of hazardous waste sites; estimated at 30 years and $30 million dollars to clean up. Maybe we can make ~~some bucks off that, too.~~ Contamination of the aquifer is not a possibility, it is a reality.

I have read the draft EIS and have made an effort to learn about SIS. The more I learned, the more alarmed I grew. I am opposed totally to the SIS, here or anywhere. My specific comments follow.

5.30.4.14

~~I have also brought with me petitions signed by people in Teton Valley opposed to the GIS.~~

Debra Patla

Comments on S.I.S project

1.1 I support the No-action alternative of the Draft EIS. I have the following concerns and questions:

5.30.2.1 1. Waste disposal. The DEIS proposes a stand-along storage vault to temporarily hold TRU wastes. The eventual storage site, the WIPP in New Mexico, has developed leaks, necessitating a reduction of 3/4 of the planned storage space. Does this mean that INEL will become a permanent storage site? What are the risks and what will they be in 25, 50, 100 years, etc?

5.12.1 2. What threats to the Snake River Aquifer are posed by storage and disposal of plutonium and other wastes? What would be the impact on Idaho and the West if the aquifer is contaminated?

5.30.4.12 3. Does the Environmental Protection Agency agree with Clay Nichols that SIS will not add to the $30 million and 30 years estimated to clean up INEL as a Superfund site?

5.29.81 4. The DEIS does not provide adequate safety measures for transport, nor does it project the costs of a possible transportation accident.

5.29.67 Will communities along the transport routes be given directives on how to deal with accidents? Will trucks and trains be marked so that people will understand the risks if there is an accident?

5.1.35 5. There is not enough actual data on which to base the environmental assessment--too much is based on extrapolation and untested procedures. Major nuclear accidents in the past decade have shown us that the 'unlikely' and 'impossible' can occur.

5.10.16 6. What magnitude is a "design-based earthquake"? How does it compare with geologists' estimates of possible earthquake magnitudes here? What would be the effects of such an earthquake at

5.1.40 each step of loading/unloading, processing, storage, etc of hazardous materials?

5.22.2 7. Project need. How does DOE justify the SIS in view of the limited available supply of fuel-grade plutonium and the short operating life of the facility based on this supply? Does DOE

5.22.6 plan to eventually use commercial plutonium for the SIS, a use which in now illegal?

4.14 8. As our national leaders strive for peace and the reduction of nuclear weapons, the nation should strive to support their efforts by reducing weapons production, not expanding it. The more we involve local economies in weapons construction, the more difficult it will become to slow down the arms race.

4.7.1 "Redundancy" and "flexibility" are not convincing reasons for SIS.

3.5.1 9. SIS will add to global nuclear weapons proliferation. More weapons-grade plutonium in the world means a greater likelihood that it will fall into the hands of terrorists and countries who desire nuclear weapons. Why is this not addressed by the DEIS?

5.27.6.5 10. Economics. The SIS will not bring real prosperity to Idaho or anywhere. On the contrary, eventual closure of the facility and the clean-up costs will bring hardship to local economies. Also, the small number of jobs generated by the $500 million spent in Idaho is hardly a rational economic venture. The truth is that we all pay for this boondoggle through taxes and the ill effects of the Federal deficit.

5.27.6.11 We, as a nation, can't afford SIS! The $900 million should be spent on cleaning up hazardous waste sites caused by the nuclear industry, the cost of which is increasing each year at an alarming rate.

5.30.5.11 11. Personally, I do not want to live anywhere near a nuclear weapons production plant. For we who live in the region outside of Idaho Falls, there is no economic advantage, yet we must also endure the risk and mental anguish.

2.7.2 In summary, I urge you to abandon the SIS project, now, before we sink any more resources into this wasteful and dangerous venture.

23 March 1988

Gentlemen:

I am thankful for the opportunity to speak my mind on this very important question. #151

2.7.9 I read in the paper and hear on the radio of enthusiastic support for the SIS here in Idaho Falls. I hear citizens speak of a new community spirit because of it, of a feeling of shared vision and purpose, of parades celebrating the possibility that their city will soon be the site of bomb-trigger production. This terrifies me.

This is not the communal experience of a barn-raising. This is not the pride of harvest goods exhibited at a State Fair. The core and kernel, the solid metal button around which this community has linked hands, is Plutonium 239, is a bomb-trigger whose purpose is destruction, is murder, is death.

2.7.2 We don't want to hear this. We want to hear words like jobs, prosperity, a swelling economy, rising property values, progress. We don't want to think about the end of our actions. We are like children: cock-sure that the earth is our toy, the land is our playground, the elements are ours for the tinkering without thought of the consequences for all of humanity's children.

Though I am not a Mormon, there is, to me, a profound passage in The Pearl of Great Price, specifically, The Book of Moses, in which Cain sells his soul and enters in a pact with Evil, a pact in which he is given access to the secret of destruction, and can now say, "Truly I am the master of this secret: that I may murder and get gain."

I think the words "murder and get gain" are truly a trajectory of destruction we are caught up in and refuse to recognize, believing we see no evil. I fear the words "murder and get gain" are the age-old whisperings of a death drive we are all hell-bent on, though we insist we hear no evil. I worry that the words "murder and get gain" are those unspeakables we choose to secret from ourselves, thinking therefore that we speak no evil.

I urge us to carefully consider and examine with our conscience all that is proposed here today.

Thank you,

Margaret Aho

The Special Isotope Seperation Project

1.1 The SIS project should not be constructed at the INEL site or any location. The best alternative for this proposed project is to take no action, and not construct the SIS plant at all.

4.13 The SIS plant is not needed for national defense. The United States presently maintains an arsenal of approximately 25,000 nuclear weapons. This huge number of nuclear weapons is sufficient to destroy any adversary, or the entire world as we know it, many, many, times over. According to the FY 1988 Military Posture statement prepared by the Joint Chiefs of Staff, the highest ranking military officers in the United States, the U.S. presently has significantly more nuclear warheads than does the Soviet Union.

4.2.1 The United States maintains a stockpile of approximately 100 metric tons of plutonium. A quantity of plutonium equal to .5 metric tons is sufficient to produce 125 average sized nuclear weapons. According to Energy Secretary John Herrington in his Feb. 23, 1988 testimony before congress, "We're a wash in plutonium, we have more plutonium than we need".

4.4.6 In addition to this stockpile the United States already maintains an extensive network of plutonium production and processing facilities including 3 reactors at Savannah River in S. Carolina. These facilities along with already existing sources such as plutonium recovery from retired weapons, blending processes, scrap recovery, etc. provide a continuing source of weapons plutonium.

2.7.8 Considering that studies conducted on the effects of nuclear winter concluded that the detonation of as few as 100 hydrogen bombs could result in the death of all life on earth the current arsenal of 25,000 nuclear weapons appears sufficient. Just the handling and security of this many weapons includes the danger of an accidental or unauthorized launch.

5.28.2 According to the Reagan Administration's Office of Management and Budget the "SIS has the highest cost of the various methods of increasing productivity (of plutonium)."

5.2.10 Already existing technologies such as blending could save taxpayers millions of dollars.

BEST AVAILABLE COPY

4.10.1 Although plutonium requirements are listed in the N.W.S.M. (Nuclear Weapons Stockpile Memorandum which is a classified document, Senators such as Mark Hatfield who have access to the document state that it has been overestimated and the SIS is not needed. The EIS prepared by the DOE

4.3 states outright the SIS project provides, "redundancy in production capacity."

With the recent signing of the INF treaty by the Reagan Administration the emphasis of international relations has shifted toward the negotiated reduction of nuclear weapons, not increased production. The INF treaty alone will provide a quantity of available plutonium equal to one third the output of the SIS plant. The proposed START treaty would free up a quantity of plutonium equal to 8 times the total amount which could be produced at the SIS facility. Another arms control proposal which is being discussed is a moratorium on the production of plutonium. It makes little sense to spend millions of taxpayers dollars on a facility

5.2.14 which is un-necessary, un-needed for national security, and which may soon be illegal under this proposed agreement. The INF and START treaties will result in a large plutonium glut. Other stategies such as restarting the Hanford reactor or utilizing higher out put cores would meet any

5.27.10 conceivable increase in plutonium needs.

The SIS plant would have a negative impact on the economy of Idaho. The facility will only operate for 5-8 years (approximately from 1994 to 2002). This will result in a boom and bust cycle which has been so destabilizing in other states such as Alaska.

5.27.7.4 From one half to one third of the 750 people projected to work at the SIS already have jobs at the INEL. Many of the remaining positions will be filled by hiring highly skilled technicians from out of state, providing no jobs for unemployed Idahoans.

The SIS plant will be a production facility - not a

5.27.9.5 research program designed to develop a new technology from scratch. The SIS technology is being developed at the Livermore Laboratory in California. This means there will be few in any technology spinoffs to benefit firms in Idaho. Also firms in California already are producing SIS parts and so have a substantial advantage over any manufacturer in Idaho to provide ongoing supply of parts and equipment.

The EIS does not take into account the loss of income

5.27.3.3 which will result from the transformation of the INEL site into a nuclear weapon facility. Many tourists, and people considering relocating to Idaho will consider the SIS an undesirable feature in our area.

The EIS does not take into account the tremendous potential damage a large scale accident would inflict upon Idaho's economy. The INEL site lies directly over the Snake River Aquifer which provides water for Idaho's two largest sources of revenue, agriculture and tourism. Contamination of this aquifer would disrupt or destroy water uses for irrigation, drinking and domestic uses by 40 communities, recreation, etc.

5.1.38

DOE officials acknowledge it could cost $100 billion or more to clean up damage and contamination at former facilities such as the weapons/reactor complex at Hanford, Washington. (Mistakes were made) acknowledges DOE Undersecretary Joseph Salgado in the Dec. 5, 1987 issue of the National Journal.

3.2.1

DOE weapons programs have worn out their welcome at other locations such as Hanford. Many people there feel they have been adversely impacted by weapons facilities, both in economic losses and in environmental damage stemming from the contamination of soil and water. Frankly, the DOE is trying to sucker the people of Idaho into being the next victims of this contaminate and move on strategy.

Even a small scale accident could have adverse economic

5.1.45 effects beyond the harm done to workers or those living nearby. The publicity from a radiation release could result in a public relations disaster in national media to those marketing Idaho products such as potatoes. One could see this after the Chernobyl disaster where vegetables from this region were shunned for fear of rad-active contamination or Three Mile Island where milk was dumped and cattle were destroyed.

The SIS facility is un-necessary. It is being pushed

5.27.6.9 primarily as a pork-barrel project by Idaho's Senator, James McClure. Like other pork-barrel projects such as the famed $6 million gondola taxpayers are being forced to build at Kellog Idaho- over all effect on the state as well as the nation's economy will be negative. Tying Idaho or the economy of the United States on large scale public works, pork-barrel projects is a grave error. A far better course is to tie hopes on the free enterprize, market system. The

5.31.16 SIS is an unnecessary interference in this free enterprize system. While a minimum level of government expenditure and regulation is necessary for national security and well being, the SIS project does not qualify as a necessary public expenditure.

Pork-barrel projects such as the SIS contribute to large

5.27.6.11 federal deficits. During the last 8 years the national debt has more than doubled. Budget deficits have hit new records under the Reagan Administration reaching $220 billion in

BEST AVAILABLE COPY

1986. The U.S. has gone from being the greatest creditor nation on earth down to the world's worst debtor during this Administration. These huge debts are a clear and present threat to national security. The unnecessary expenditure of $1 billion dollars on the SIS facility will contribute to this danger, weakening our national defense posture. The damage done by the contribution the SIS makes to our national debt far outweighs any conceivable danger presented by not constructing the facility.

5.27.6.9 In the end the SIS will damage, not help, Idaho's economy. The entire premise that the government should tax Americans and then give back a portion of this hard-earned money in the form of unnecessary pork-barrel projects such as the SIS is ridiculous. According to the 1988 World Almanac the present population of the entire state of Idaho is 1,003,000. This means that the $1 billion being wasted on SIS could instead provide a check for nearly $1,000 to every man, woman, and child in the state! I certainly want to go on record as saying that I would far prefer $1,000 cash in my hand than this dangerous, un-necessary SIS bondoggle in the Idaho desert.

2.7.2 The effects of the SIS weapons facility cannot be measured in dollars alone. The moral implications of building and working in a plant manufacturing materials for nuclear weapons which are not needed for national defense and will contribute to the arms race are immense.

The SIS is not just another project at INEL. It involves directly the production of materials for nuclear weapons. A single nuclear weapon has the capability of killing and maiming millions of human beings. The consequences of the use of these weapons is so incredibly horrible it constitutes nothing less than a holocaust.

3.3.2 Workers at the INEL should consider the moral implications of transforming the site from a facility which conducts primarily peaceful and beneficial functions into a part of the manufacturing network of nuclear weapons. Is it worth the risk? Someday at the pearly gates of heaven do SIS supporters want to admit to having been involved in the support or production of nuclear weapons?

2.7.2 The SIS deserves a deeper examination than the knee-jerk support it has received from some as just another project at the site. The SIS is different. There is more at stake here than jobs. There is the question of moral, beneficial work versus immoral, destructive work. If all that is desired is an increase in jobs, Idaho could create a rush of new jobs by legalizing prostitution or decreasing drug enforcement and allowing Idaho to become a haven for drug dealers. Is this the kind of society we want for our children, materially richer but morally bankrupted? Laying up riches must not be the only goal. There is such a thing as immoral jobs.

5.27.7.17 Idahoans want good, beneficial, long-term jobs with security, not a few short-term jobs which will be over in a few years doing immoral, dirty work that others refuse to do. There are other, better projects for the INEL, including research into the safe disposal of radioactive waste, the decommissioning of reactors, medical applications of nuclear technology which help heal cancer victims, etc. The list of positive projects which can be conducted at the INEL is long and varied. All of these constructive projects would also provide jobs- jobs doing something beneficial for society and the world.

6.1.4 We must ask ourselves- what kind of world do we want to build for the children who will make up the next generation. A large scale accident at the SIS could spread plutonium over a large area. Plutonium is one of the most toxic substances known to man. Plutonium causes cancer, genetic damage, and birth defects. Plutonium has a half life of 24,300 years and remains dangerous for up to 10 half lives. This means that an area contaminated by plutonium might have to be sealed off for up to 240,000 years.

5.24.27

5.29.87 The recent accident involving a truck which dumped fungicide into the Little Salmon River is a clear warning of the dangers presented by transporting toxic materials over our highways. Yet if the SIS plant is built trucks carrying plutonium will routinely drive through cities on Idaho's interstate system. An accident or fire could result in thousands of deaths, in cities and homes boarded up, abandoned, and permanently sealed off by the government.

History shows human beings have a tendency to wait until after an accident happens to become aroused and take action. The dangers presented by the SIS are too great to allow delay. This project should be stopped now. I will not wait for a knock on the door by a law enforcement officer, or announcement on the radio that I must evacuate my residence, leaving behind cars, belongings, etc. to flee a spreading cloud of radiation released during an accident on a nearby interstate. Many might die or develop cancer, and no one would be compensated adequately for what would be left behind. The SIS plant should not be constructed anywhere, but at least the Hanford site reduces this danger of transporting plutonium feedstock. If the SIS facility is constructed at the INEL site I will move from Idaho. I think this is a reasonable and prudent action considering the dangers posed as well as my personal moral convictions against unnecessarily advancing the arms race.

5.29.31

6.5.11

BEST AVAILABLE COPY

3.2.8 The record of the DOE has not been good enough to warrant unquestioned faith. At the Hanford facility more than 700 sites have been contaminated with radiation. The people living around the Hanford site have naturally reacted negatively to this contamination. The recent election of a Senator in Washington who is strongly opposing safety violations at the Hanford site probably is a result of this public reaction. The negative public reaction to DOE safety violations and the resulting change in political climate are likely what caused the SIS to be proposed for the INEL instead of the Hanford site.

5.24.22 Although the safety record at INEL has been far better than that at Hanford there have been some problems. Millions of cubic feet of TRU waste are being stored at INEL. Studies show this waste has contaminated soil to a
5.30.4.9 depth of 230' below the INEL complex.

The SIS could seriously aggravate this problem. Wastes from the SIS are planned to be sent to the Waste Isolation Pilot Project (WIPP) in New Mexico. But the WIPP facility
5.30.2.1 is experiencing serious leakage problems which some scientists contend will make it useless.

In the event that the WIPP is unable to take waste products from the SIS, this waste must then be stored at the INEL. The INEL site is one of the worst possible locations to store high level waste being situated directly over the Snake River Aquifer.

5.12.1 Contamination of the aquifer would result in severe environmental and economic damage. Because the Snake River Aquifer feeds into the Snake River, contamination would spread all the way along the river to the Pacific Ocean.

The negative aspects of transforming the INEL, which has thus far had a positive reputation for peaceful atomic research, into a participant in building unnecessary nuclear weapons which will further the arms race is substantial.
3.3.1 These negative aspects far outweigh any benefits which could be realized from the SIS.

The SIS is not a finalized plan. The SIS project is not inevitable- it can be stopped. The Congress of the United States has not made a final decision on funding of this SIS
4.9.2 proposal. The 1989 DOE budget contains no money for the SIS weapons facility.

What is inevitable is the continued strong opposition to the project from SIS opponents in Idaho. The DOE can expect continuing protest from SIS opponents. We will continue to utilize all possible peaceful means of opposing this weapons facility. If the SIS is built at INEL we can guarantee the DOE we will continue doing everything legally and constitutional possible to provide the maximum discouragement of continued operations at the plant.

It is regretable that the SIS proposal has so deeply divided the people of Idaho. It is time to say No to the SIS 5.27.7.17
nuclear weapons facility. It is time to search for economic alternatives to the SIS which can bring good, constructive jobs to Idaho- jobs with long-term security that all Idahoans can be proud of.
