

United States Department of Energy

Secretary's Award of Excellence

Presented to

***The National Nuclear Security Administration's
Chemistry & Metallurgy Research Building
Replacement (CMRR) Project/Radiological Lab
Utility Office Building Equipment Installation
(REI)***

The CMRR/REI project is a critical component of the Nation's ability to maintain a safe, secure, and effective nuclear deterrent. Through extraordinary efforts in planning, contract and project management, communications and coordination, the project team successfully completed this \$199 million, first of a kind nuclear facility under budget and ahead of schedule; a first for the NNSA. The CMRR/REI project represents a major milestone in NNSA's efforts to improve contract and project management and demonstrates what can be achieved by aligning contract incentives with operational requirements and taxpayer interests, and focusing on collaboration, scope management and change control, and accountability. The Project Team is commended for their outstanding accomplishment.

Ernest J. Moniz
Secretary of Energy
