

Advanced RTU Campaign

2017 Building Technologies Office Peer Review

Advanced Rooftop Unit Campaign

U.S. Department of Energy's Better Buildings Initiative

Energy Efficiency &
Renewable Energy

Michael Deru, michael.deru@nrel.gov
National Renewable Energy Laboratory

Project Summary

Timeline:

Start date: 10/1/2012

Planned end date: 9/30/2018

Key Milestones

1. Impact Characterization > 1% of market; 5/15/16
2. RTU management pilot report; 7/16/16

Budget:

Total Project \$ to Date: \$960,000

- DOE: \$960,000
- Cost Share: \$0 (in-kind support from partners)

Total Project \$: \$1,160,000

- DOE: \$1,160,000
- Cost Share: \$0

Key Partners:

| | |
|--|----------------------------------|
| Waypoint Building Group | |
| ASHRAE | 77 Building owners |
| RILA | 9 Trade alliances |
| FEMP | 4 Suppliers |
| 7 RTU OEMs | 20 Component mnfs |
| 45 Utilities, REEOs, & Efficiency programs | 127 Contractor/Service providers |

Project Outcome:

Accelerate the market adoption of high-efficiency RTU practices through demonstration of results and development of decision support resources. Partner with market leaders and market drivers to share best practices with a broad section of the RTU market.

Purpose and Objectives

Problem Statement: RTUs condition over 60% of U.S. commercial building floor area and have a typical life of 15 to 20 years and replacement is often only after failure with a new version of the old unit. High-efficiency RTUs are 20%-50% more efficient than standard efficiency RTUs, and this cycle leads to tremendous missed opportunities for energy and cost savings.

Target Market and Audience: Commercial buildings with unitary HVAC, which represents over half the commercial building market and 2.6 quads of energy consumption for cooling and ventilation. 3 to 4 million commercial unitary HVAC units are sold each year.

Source: AHRI

Purpose and Objectives

Impact of Project:

- Accelerate market adoption of high-efficiency RTU practices:
 - Proactive replacement with right-sized, high-efficiency RTUs
 - Advanced RTU control retrofits on constant speed RTUs
 - Persistence of performance with Quality Installation, Quality Maintenance, and automated fault detection and diagnostics
- Engage with partners across all fields affecting RTUs and develop technical and business resources to support informed decisions.
- Progress is measured by the number of RTUs impacted by Campaign partners, energy savings, the number and type of Campaign partners, and the number of resources developed.

Approach

Approach:

- Demonstrate performance
- Recognize and promote best practices
- Develop technical and business decision resources
- Provide technical support and duplicate lessons for other users
- Coordinate across all levels of the market
- Leverage resources with large partner base

Partner Case Study on Retrofit Best Practices

| | |
|--|----------------|
| Number of stores (big box retail) | 40 |
| Average RTU cooling capacity reduction | 69 tons (25%) |
| Highest RTU cooling capacity reduction | 175 tons (41%) |
| Annual energy savings | 13 million kWh |
| Annual energy cost savings | \$1.3 million |

Approach

Key Issues:

- Market inertia
- Several economic, technical, and practical barriers

Partial List of Barriers and Solutions

| Barrier | Solution |
|---|--|
| High initial cost | Guidance on LCC, Incentives |
| Split incentives between owners and tenants | Energy-aligned leases and owner/tenant negotiated upgrades |
| Risk of the unknown with new technologies | Education and successful demonstrations |
| Uncertainty/mistrust about savings claims | Demonstrations and case studies |
| Lack of expertise with advanced equipment/what to buy | Sample procurement specifications, standard load calculations and proper sizing, training of contractors |
| Difficult to quantify performance of variable speed/capacity RTUs | Improved performance calculators |

Approach

Distinctive Characteristics:

- Part of a larger DOE effort to raise the efficiency of RTUs
RTU Challenge → Demonstrations → Advanced RTU Campaign →
Raise minimum equipment efficiencies
- Integration of advanced controls for improved performance and untapped savings
- Broad market outreach beyond market leaders

| Organization Type | Number of Partners |
|-------------------------------------|--------------------|
| Building owners | 77 |
| Trade and Industry Organization | 9 |
| Utility and Efficiency Program | 36 |
| RTU Original Equipment Manufacturer | 7 |
| RTU Component Manufacturer | 11 |
| RTU Retrofit Controls Manufacturer | 9 |
| RTU Supplier | 4 |
| RTU Contractor/Service Provider | 127 |
| RTU Performance | 9 |
| Total | 289 |

Progress and Accomplishments

Accomplishments:

- Campaign awards presented at the PRSM National conference
- Published Business Guide and Green Lease Language
- The Campaign website hosts over 33 technical and business resources. Future goals of the Campaign are to affect over 200,000 RTUs by 2020 and achieve annual savings of over 2 billion kWh.

ADVANCED RTU CAMPAIGN

HOME ABOUT JOIN TECHNICAL ASSISTANCE AWARDS & RESULTS FOR FEDERAL USERS CONTACT US

TECHNICAL RESOURCES

The Advanced RTU Campaign provides a variety of technical assistance options to help commercial building owners/managers in their RTU decision process. An RTU Evaluation Methodology helps determine whether an RTU needs retrofit or replacement. Links to products are available that meet the Advanced RTU Campaign's efficiency requirements. Case studies and other guidance documents are provided with lessons learned of RTU replacements and retrofits. Information is available for Participants to obtain discounts on ASHRAE standards. Past webinar recordings and slides are available for download. Many financial calculators and resources are available to support the business case for an advanced RTU.

Retrofit or Replace?

An eight-step RTU Evaluation Methodology from initial inventory through procurement, through monitoring and verification to help building owners/managers evaluate and maintain their RTU portfolio.

Find a Product

Links to products that fit your RTU needs, whether it be a high-efficiency RTU replacement or an RTU retrofit with advanced controls.

Case Studies & Guidance

Lessons learned for high-efficiency RTU replacements or advanced controller RTU retrofits, including RTU-specific approaches and holistic building approaches from private and public commercial buildings.

Past Webinars

Slides and recordings of past Advanced RTU Campaign webinars to provide review of new technical resources and success stories for Participants and Supporters.

Financial Resources

The Advanced RTU Campaign offers financial calculators and savings tools, as well as rebate and incentive information.

U.S. DEPARTMENT OF
ENERGY

Energy Efficiency &
Renewable Energy

Progress and Accomplishments

Market Impact:

- Over 280 partners
- Almost 77,000 high-efficiency RTUs
- 6604 million kWh, \$66 million, and 7 trillion Btus saved annually
- Met deployment goals every year
- Working with utilities to reach a broader market segment
 - RTU management model pilot with DNV GL and NYSERDA
 - Provided input to CEE and NYSERDA planning for RTU programs

| Advanced RTU Campaign Impact Summary | | |
|---------------------------------------|-----------------------|---------------------------|
| | Annual (2013-2016) | Cumulative (2013-2016) |
| High-Efficiency RTU Installations | | 43,556 |
| Advanced RTU Control Retrofits | | 33,388 |
| Total RTUs | | 76,944 |
| Electricity savings (million kWh) | 660 | 1,663 |
| Energy cost savings (\$million) | \$66 | \$166 |
| Primary energy savings (Trillion Btu) | 7.0 | 17.8 |
| GHG reductions (million lb CO2e) | 456 | 1,156 |

Progress and Accomplishments

Awards/Recognition:

- Featured in over 65 industry news letters and blog posts
- Four journal articles about the Campaign

Lessons Learned:

- Market transformation requires a broad approach to support the diversity of market challenges, interests, and abilities.
- Challenging to get partners to share RTU numbers
- Estimating performance of variable speed systems is challenging
- Comprehensive utility RTU programs require more effort but are the most effective

Project Integration and Collaboration

Project Integration:

The Campaign team identifies and works with key industry partners and stakeholders to promote best practices and recruit more participants

- DOE oversees the Campaign and approves work items
- Campaign team (NREL and Waypoint Building Group) run the Campaign
- Organizing partners advise, promote, and contribute content
- Supporting partners promote, support participants, and recruit
- Participating partners install and maintain high-efficiency RTUs

Partners, Subcontractors, and Collaborators:

Waypoint Building Group – subcontractor and project communications lead

ASHRAE, RILA, and FEMP – Organizing partners and advisors

212 Supporting partners – Promote best practices and recruit new partners

77 Participating partners – Install and maintain high-efficiency RTUs

Project Integration and Collaboration

Communications:

Objectives: Education, engage industry, communicate successes

- Multiple DOE Blogs, tweets, and posts
- 2016 DOE Awards notice was reposted 9 by different media outlets
- 2 stories in industry journals in 2016
- 2016 & 2017 PRSM National Conference Awards and technical session
- Presented at three national conferences
- 13 webinars with partners (since 2013) with over 1,000 viewers

EERE News

APRIL 26, 2016

Energy Department Recognizes Organizations for Leadership in Rooftop Unit Efficiency

As part of the Administration's strategy to increase energy productivity and cut energy waste in our nation's buildings, today the U.S. Department of Energy recognized six organizations for their leadership in replacing and upgrading rooftop units as part of the Better Buildings Alliance Rooftop Unit Campaign (ARC). Combined, these organizations in a single year have saved an estimated 1 trillion British thermal units (Btu) or more than \$11 million on utility costs with efficient rooftop unit (RTU) replacements, retrofits, and quality management and operations. Since 2013, 250 ARC partners have upgraded 59,500 RTUs for a total energy savings of 10 trillion Btu, or \$93 million in cost savings.

Next Steps and Future Plans

Next Steps and Future Plans:

- Study and document how RTU AFDD promotes persistence of savings
- Promote broad implementation of RTU AFDD
- Continue to develop and promote RTU calculations with OpenStudio
- Support comprehensive utility RTU programs
- Transition resources to the market

REFERENCE SLIDES

Project Budget

Project Budget: \$200,000 with \$55,000 subcontract

Variances: None

Cost to Date: \$92,000

Additional Funding: No direct funding, but partners contribute time and resources. The partner contributions are not tracked.

Budget History

| FY 2013– FY 2016 (past) | | FY 2017 (current) | | FY 2018 (planned) | |
|----------------------------|------------|----------------------|------------|----------------------|------------|
| DOE | Cost-share | DOE | Cost-share | DOE | Cost-share |
| \$760,000 | \$0 | \$200,000 | \$0 | \$200,000 | \$0 |
