Building More Than Beautiful Homes...

"The Difference is in the Details." The people at Mantell-Hecathorn Builders feel it is critical to provide close attention to all the details, both those that are visible in a home, and those that are unseen behind the finished walls. Building a home is the most significant investment that most people make in their lives. Mantell-Hecathorn Builders has always been committed to providing every client the highest quality with the best value from foundation through finish.

"Every material, technique and finish detail is well thought out and very intentional," Principal Hunter Mantell-Hecathorn explains. "That is also the true beauty of building a custom home; you are able to design and create the dream home that is perfect for your individual lifestyle - all with the confidence that you have a team of experts guiding you through every step of the process."

Mantell-Hecathorn Builders is a multi-generational design-build firm, and is the only Durango-based contractor to build, test and certify each of their custom homes, whether small or large, to the stringent standards of the Department of Energy Zero Energy Ready Program. These standards include and surpass the more widely known ENERGY STAR guidelines and are far beyond the codes required by the county and the city. The result is a whole new level of home performance that ensures outstanding levels of energy savings, comfort, health and durability.

"It's very personal. We are proud of what we do, and we run our business in a way that builds more than just beautiful homes—we also build great, long-lasting relationships with our clients. We always encourage our potential clients to reach out to our past clients to learn about their experience. The people we have worked with feel that the project is important to us and we work hard to let our clients know that we have their best interests at heart."

Building to a Higher Standard

www.m-hbuilders.com
Our house barely sips energy.
The bottom line for us is that our Durango house will cost us a tiny fraction of what our Texas house costs to operate. Factoring that into our cash flow calculations, these savings will have a material impact on my retirement plans.
In effect, selecting Mantell-Hecathorn Builders to build our house will likely allow me to retire 3 to 5 years earlier than I had planned. Pretty powerful stuff, for a fact. So thank you and Hunter and Tara for giving me those years - they will be priceless to me!
Cheers,
Doug M.
When we were exploring moving to and building in Durango, CO there was only one clear choice for a builder - Mantell-Hecathorn. The two deciding factors for me were: 1. Their level of sophistication on best building practices. As someone who designs and engineers things for a living every other builder was "different build, same process". They are using the lowest level of insulation and building materials possible. If your perspective builder shows you a project and they use OSB for sheathing you should run. 2. Accountability. MHB is one of the few builders that I have encountered that conducts third party, independent testing of all of their builds. It insure that as a homeowner you have objective metrics and ratings on the quality and efficiency of your build, and not just the contractor's word.

In short, I don't understand why anyone would build with any other builder. MHB is one of the best in the country. Durango is fortunate to have them based here.
