U.S. DOE: Office of Energy Efficiency and Renewable Energy - Environmental Questionnaire

RECIPIENT: University of California, San Diego

PROJECT TITLE: High-Entropy Ceramic Coatings (HECC's): Transformative New Materials for Environmentally-Compatible Thin-Film Insulators against High-Temperature Molten Salts

Funding Opportunity Announcement Number: DE-FOA-0001840
Procurement Instrument Number: DE-EE0008529
NEPA Control Number: GFO-0008529-001
CID Number: GFO-0008529-001

Based on my review of the information concerning the proposed action, as NEPA Compliance Officer (authorized under DOE Policy 451.1), I have made the following determination:

CX, EA, EIS APPENDIX AND NUMBER:

Description:

A9 Information gathering, analysis, and dissemination
Information gathering (including, but not limited to, literature surveys, inventories, site visits, and audits), data analysis (including, but not limited to, computer modeling), document preparation (including, but not limited to, conceptual design, feasibility studies, and analytical energy supply and demand studies), and information dissemination (including, but not limited to, document publication and distribution, and classroom training and informational programs), but not including site characterization or environmental monitoring. (See also B3.1 of appendix B to this subpart.)

B3.6 Small-scale research and development, laboratory operations, and pilot projects
Siting, construction, modification, operation, and decommissioning of facilities for small-scale research and development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); and small-scale pilot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provided that construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible). Not included in this category are demonstration actions, meaning actions that are undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial deployment.

B3.15 Small-scale indoor research and development projects using nanoscale materials
Siting, construction, modification, operation, and decommissioning of facilities for indoor small-scale research and development projects and small-scale pilot projects using nanoscale materials in accordance with applicable requirements (such as engineering, worker safety, procedural, and administrative regulations) necessary to ensure the containment of any hazardous materials. Construction and modification activities would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible).

Rationale for determination:

The U.S. Department of Energy (DOE) is proposing to provide funding to University of California, San Diego (UCSD) to develop high-entropy ceramics (HECs) for concentrated solar thermal power (CSP) applications. HECs would be characterized for thermal insulation potential and their stability in CSP operations. The project would be completed over a single Budget Period.

Proposed project activities would include material characterization, fabrication of HECs via high energy ball mill and spark plasma sintering methods, optimization of the fabrication process, measurements of thermal conductivity at room temperature and high temperature (up to 1000°C), and performance/stability testing.

All project activities would be completed at existing, purpose-built laboratory facilities at UCSDs campus in San Diego, CA. No change in the use, mission, or operation of existing facilities would be required for any of the proposed project activities. Likewise, UCSD would not need to obtain any additional permits.

The project would involve the use and handling of ceramics and industrial chemicals. All such handling would occur indoors, in controlled laboratory environments. Any risks associated with the performance of project activities would be mitigated through adherence to established health and safety policies and procedures. Protocols would include employee training, enforcement of proper protective equipment, engineering controls, monitoring, and internal...
assessments. UCSD would observe all applicable Federal, state and local health, safety, and environmental laws and regulations.

Nanosized oxide powders would be used for material fabrication. Handling and disposal of these materials would adhere to UCSD's established safety and environmental regulations. Protocols are in place to mitigate against risks associated with inhalation, ingestion, accidental injection, or absorption through the skin. All staff is trained in the handling of these materials. Laboratory facilities in which nanomaterials would be handled are equipped with fume hoods and filters approved by the National Institute for Occupational Safety and Health.

NEPA PROVISION
DOE has made a final NEPA determination.

Notes:

Solar Energy Technologies Office
This NEPA determination does not require a tailored NEPA Provision.
NEPA review completed by Jonathan Hartman, 12/27/2018

FOR CATEGORICAL EXCLUSION DETERMINATIONS

The proposed action (or the part of the proposal defined in the Rationale above) fits within a class of actions that is listed in Appendix A or B to 10 CFR Part 1021, Subpart D. To fit within the classes of actions listed in 10 CFR Part 1021, Subpart D, Appendix B, a proposal must be one that would not: (1) threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, or similar requirements of DOE or Executive Orders; (2) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities (including incinerators), but the proposal may include categorically excluded waste storage, disposal, recovery, or treatment actions or facilities; (3) disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that preexist in the environment such that there would be uncontrolled or unpermitted releases; (4) have the potential to cause significant impacts on environmentally sensitive resources, including, but not limited to, those listed in paragraph B(4) of 10 CFR Part 1021, Subpart D, Appendix B; (5) involve genetically engineered organisms, synthetic biology, governmentally designated noxious weeds, or invasive species, unless the proposed activity would be contained or confined in a manner designed and operated to prevent unauthorized release into the environment and conducted in accordance with applicable requirements, such as those listed in paragraph B(5) of 10 CFR Part 1021, Subpart D, Appendix B.

There are no extraordinary circumstances related to the proposed action that may affect the significance of the environmental effects of the proposal.
The proposed action has not been segmented to meet the definition of a categorical exclusion. This proposal is not connected to other actions with potentially significant impacts (40 CFR 1508.25(a)(1)), is not related to other actions with individually insignificant but cumulatively significant impacts (40 CFR 1508.27(b)(7)), and is not precluded by 40 CFR 1506.1 or 10 CFR 1021.211 concerning limitations on actions during preparation of an environmental impact statement.
The proposed action is categorically excluded from further NEPA review.

SIGNATURE OF THIS MEMORANDUM CONSTITUTES A RECORD OF THIS DECISION.
