**Re: SeaOne Gulfport, LLC
DOE/FE Order No. 3555
FE Docket No. 14-83-CGL
Semi-Annual Report, October 1, 2019**

Dear Sir or Madam:

As required by DOE/FE Order No. 3555, issued on December 2, 2014, SeaOne Gulfport, LLC ("SeaOne") hereby files its tenth semi-annual report.

Progress of the Facility:

SeaOne continues to make significant progress on completing its market development activities to support the commercialization of its Caribbean, Central and South American Fuels Supply Project with its recent success in Colombia. SeaOne was successful in winning several power tenders in the Pacific and Central regions in Colombia. Furthermore, SeaOne has acquired a government-sanctioned concession for the development of an energy port in Colombia that will allow the importation of as much as 1.9 Million barrels a day of fuels to the port of Puerto Solo in Buenaventura, Colombia. This project is the anchor for SeaOne's export activities in the Gulf Coast. These awards will enable project financing and construction of power plants in Colombia, which will eventually use fuel compositions found within solvated CGL products delivered by SeaOne to Colombia.

SeaOne has executed agreements with Gulf South Pipeline Company, who would own and operate the upstream pipelines delivering feedstock (gas and gas liquids) to the

Gulfport facility, to conduct routing, permitting and in connection with the development of those pipelines.

SeaOne has completed ship design and FEED for American Bureau of Shipping (ABS) classed neo-Panamax CGL carriers, and has selected an owner/operator for the vessels and a shipyard for vessel construction.

SeaOne's original lease with the State Port of Gulfport was set to expire by its terms on March 15, 2019. In light of SeaOne's consideration of alternative sites and the circumstances outlined in the following paragraphs, SeaOne did not elect to accept the Port of Gulfport's extension terms, and allowed the lease to expire. SeaOne has reengaged with the Mississippi State Port Authority to negotiate a new lease at the Port of Gulfport in parallel with its consideration of alternative sites.

SeaOne is exploring alternative or expansion sites on the Gulf Coast that offer superior pipeline connectivity and harbor depth to accommodate SeaOne's large CGL carriers, which, because of their draft, cannot enter the Port of Gulfport. These include several sites in Corpus Christi, Texas. SeaOne has several sites identified and is close to selecting a site there.

Demand for SeaOne's CGL has increased in South America markets, Colombia, where a SeaOne affiliate was awarded significant firm energy obligations under a national power tender.

Anticipated Start Date of Operations:

Due to the increase in project size and scope, SeaOne has moved the financial close to not earlier than the first half of 2020. Based on this decision, the projected date for commencement of full commercial operations has been adjusted to the second quarter of 2022. Prior to that date, SeaOne will service its Latin American and Caribbean customers with conventionally produced and sourced high heating value gas and will phase in other solvated formulations as feasible and cost effective.

Status of Long Term Export or Supply Contracts:

As noted above, SeaOne is developing a power generation project in Colombia. In connection with this, SeaOne is developing long-term contracts to produce, transport CGL and deliver fuel blends and products to support the Colombia power plants (Termo Solo 1 and Termo Solo 2). In addition, SeaOne is negotiating multiple long-term agreements for the delivery of CGL products to other customers in Colombia, as well as other markets including its own Puerto Solo Energy Port Development.

In addition to the contract with Termo Solo 1 and Termo Solo 2 mentioned above, SeaOne continues to finalize several long and medium-term fuel services agreements ("FSAs") with customers in the Caribbean Basin and the Gulf of Mexico, including having executed

Letters of Intent and Term Sheets with multiple power generation and commodity distribution customers in Columbia.

Sites have been selected, and geotechnical, permitting and other works for CGL Receiving Terminals, in the Dominican Republic Cartagena and Buenaventura, Colombia has begun. SeaOne, in conjunction with the Government of Puerto Rico, has selected a site in San Juan, Puerto Rico for a CGL Receiving Terminal and is finalizing lease arrangements with the landowner.

Please contact Gordon Arbuckle (gordona123@earthlink.net; 303.619.5123) or me with any questions regarding this filing.

Respectfully submitted,

Squire Patton Boggs (US) LLP
