

# Impact of Refrigerant Leaks From Zeotropic Refrigerant Based Refrigeration Systems

Oak Ridge National Laboratory

Vishal Sharma

sharmav@ornl.gov

# Project Summary

## Timeline:

Start date: 10/01/2020

Planned end date: 9/30/2023

## Key Milestones

1. Leak Characterization and 1<sup>st</sup> Gas Chromatograph Analysis: 09/30/2021
2. Laboratory Evaluation to determine impact of leakage of blend refrigerant on system performance: 09/30/2022
3. Life Cycle Performance tool development of account impact of refrigerant blend fractionation: 07/30/2023

## Budget:

| Budget               |            |                      |            |                     |            |
|----------------------|------------|----------------------|------------|---------------------|------------|
| FY 2021<br>(Current) |            | FY 2022<br>(Planned) |            | FY2023<br>(Planned) |            |
| DOE                  | Cost-Share | DOE                  | Cost-share | DOE                 | Cost-Share |
| 300K                 | *          | 300K                 | *          | 250K                | *          |

\* In-kind contribution from industrial partner- exact total is confidential information

## Key Partners:

|                |         |
|----------------|---------|
| NASRC          | CoolSys |
| Walmart        |         |
| HEB            |         |
| Raley's        |         |
| Grocery Outlet |         |

## Project Outcome:

This project focuses on determining impact of leakage of refrigerant blends on refrigeration system performance

At the end of this project:

1. Impact of refrigerant leakage
2. Guidelines for stakeholders/ OEMs/Regulatory bodies
3. Enhance ORNL LCCP tool

- Industrial Partners

# Challenges– Commercial Refrigeration Systems

- **38,000 supermarkets, 14,000 grocery stores, 154,000 convenience stores**
  - 14% of total energy consumption in Commercial Sector
  - High Leakage Rate: 25% (Globally highest)
  - No prior work
- **Current Low-GWP Solution**
  - HFO Blends:
    - Pros: Drop-in alternative
    - Lower GWP
    - Comparable system performance
  - Cons: Leaks result in composition changes after recharging
  - Top-up method does not maintain system performance

# Challenges: Refrigerant Evolution

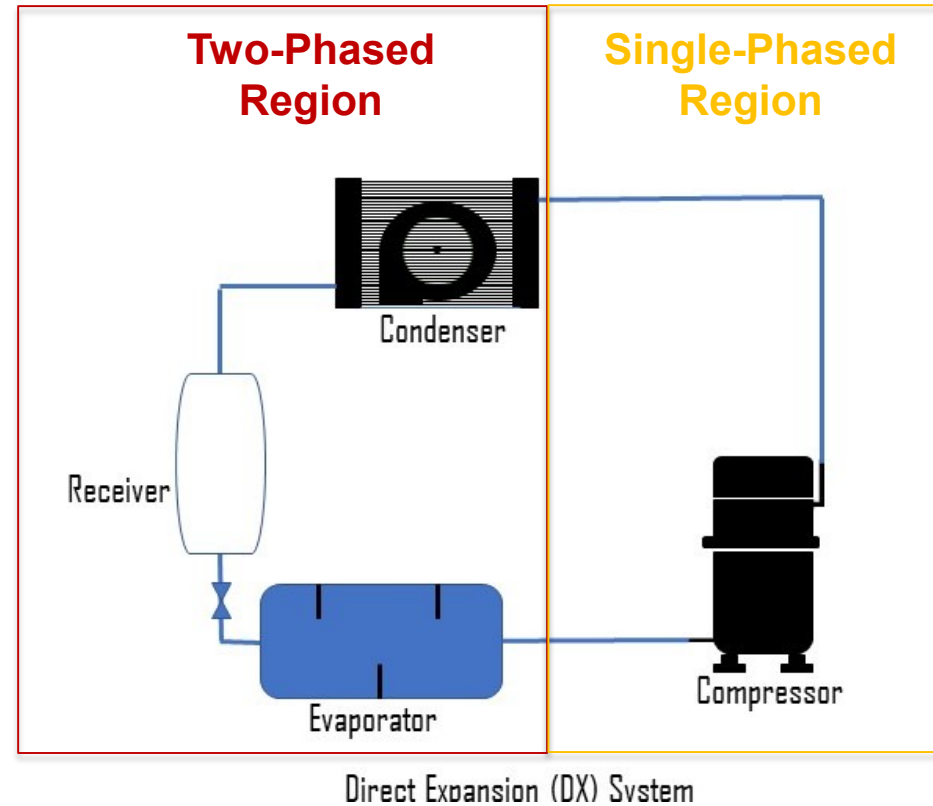

**R404A** : R125/R143a/R134a

**R448A** : R32/R125/R1234yf/R134a/R1234ze(E)

**R449A** : R32/R125/R1234yf/R134a

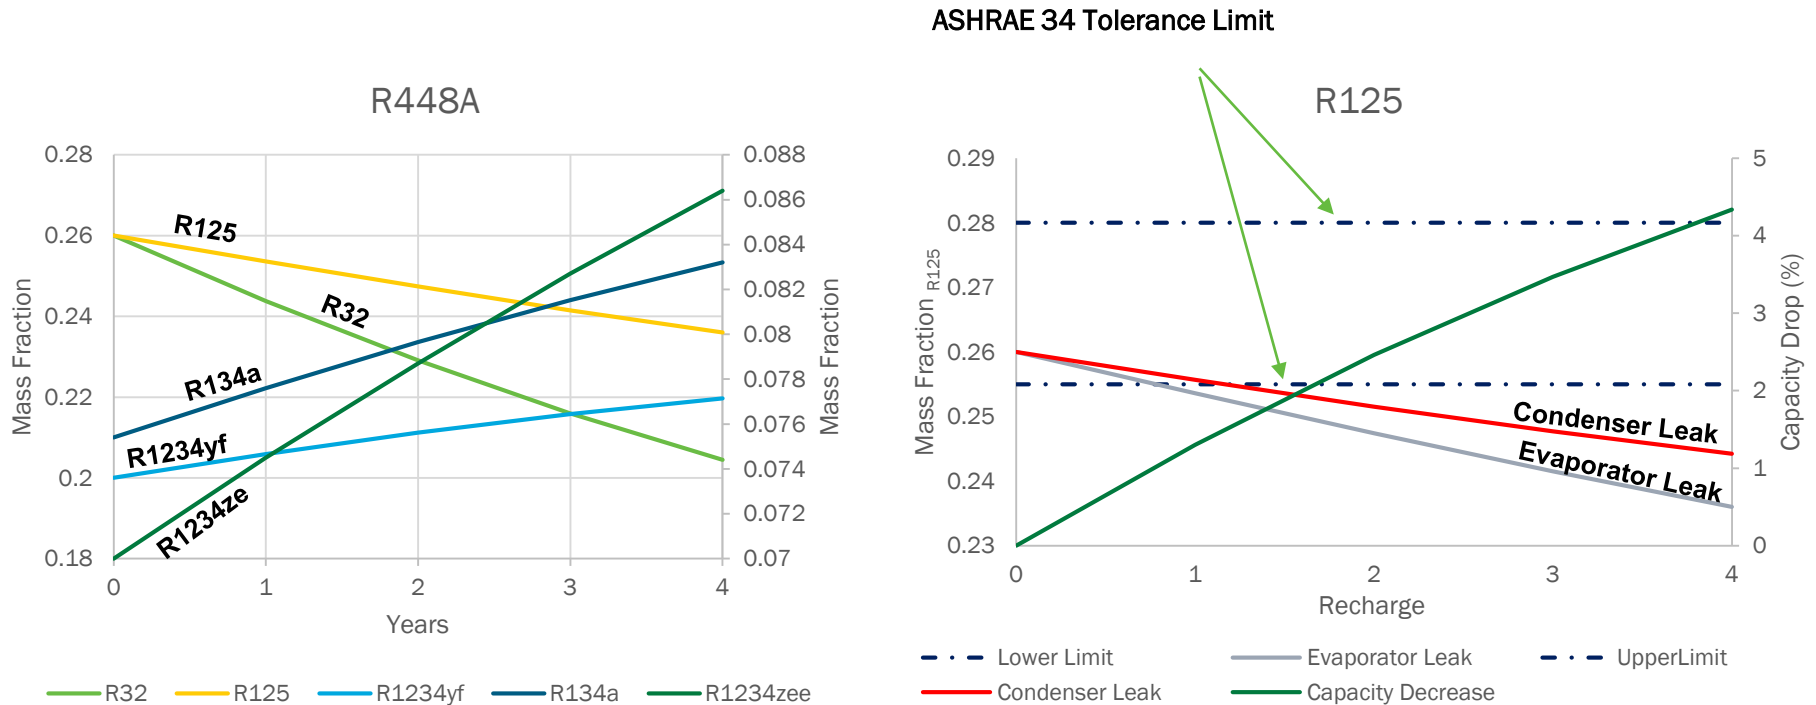

# Challenges: Zeotropic Refrigerant Leak

- R407A : R32/R125/R134a
  - Fractionation

# Challenges: Zeotropic Refrigerant Leak

Is it really a lower GWP solution?

# Approach

---

- **Characterize refrigerant leaks from commercial refrigeration equipment**
  - Historic refrigerant leak data provided by retailers (23,000 data points)
  - Improve our understanding of the likelihood of the location, frequency, and extent of leaks
  - Propose best practices to reduce refrigerant leaks
  - No prior work, anecdotal evidences only
- **Determine impact of zeotropic refrigerant leak on refrigerant composition and systemic performance degradation in commercial refrigeration systems**
- **Study Environmental impact of refrigerant composition change**

# Impact

- **Reduce Carbon Footprint of supermarkets**
  - Direct Emission<sub>R404A</sub> : 3.4 million pounds CO<sub>2</sub> eq /year
  - IndirectEmission<sub>R404A</sub>: 3 million pounds CO<sub>2</sub> eq/year)
- **Improve Servicing and Charging Methods**
- **Develop advanced leak detection methods**

\* Profile of an Average U.S. Supermarket's Greenhouse Gas Impacts from Refrigeration Leaks Compared to Electricity Consumption - EPA

# Progress

- **Year 1**
  - Literature and Regulatory Standard Review
    - ASHRAE Standard 34
    - ASHRAE SPC 177P Fractionation Apparatus Evaluation
    - AHRI Standard 700
  - Advisory Committee
    - Retailers, Service Industry and Regulatory bodies
  - Characterization of historic data
    - 2 years data
    - 5351 Retail Stores Nationwide
    - 23,000 leakage data points
    - 1,391,598 pounds of refrigerant added
  - 1<sup>st</sup> Sample Analysis
    - 12 supermarket sites across the country
    - Gas Chromatograph Calibration
    - Refrigerant Sample Analysis

# Stakeholder Engagement

---

- **Advisory Committee**

- Walmart
- HEB
- Raley's
- GroceryOutlet
- CoolSys
- NASRC

- **Regulatory Bodies**

- EPA
- CARB

# Remaining Project Work

---

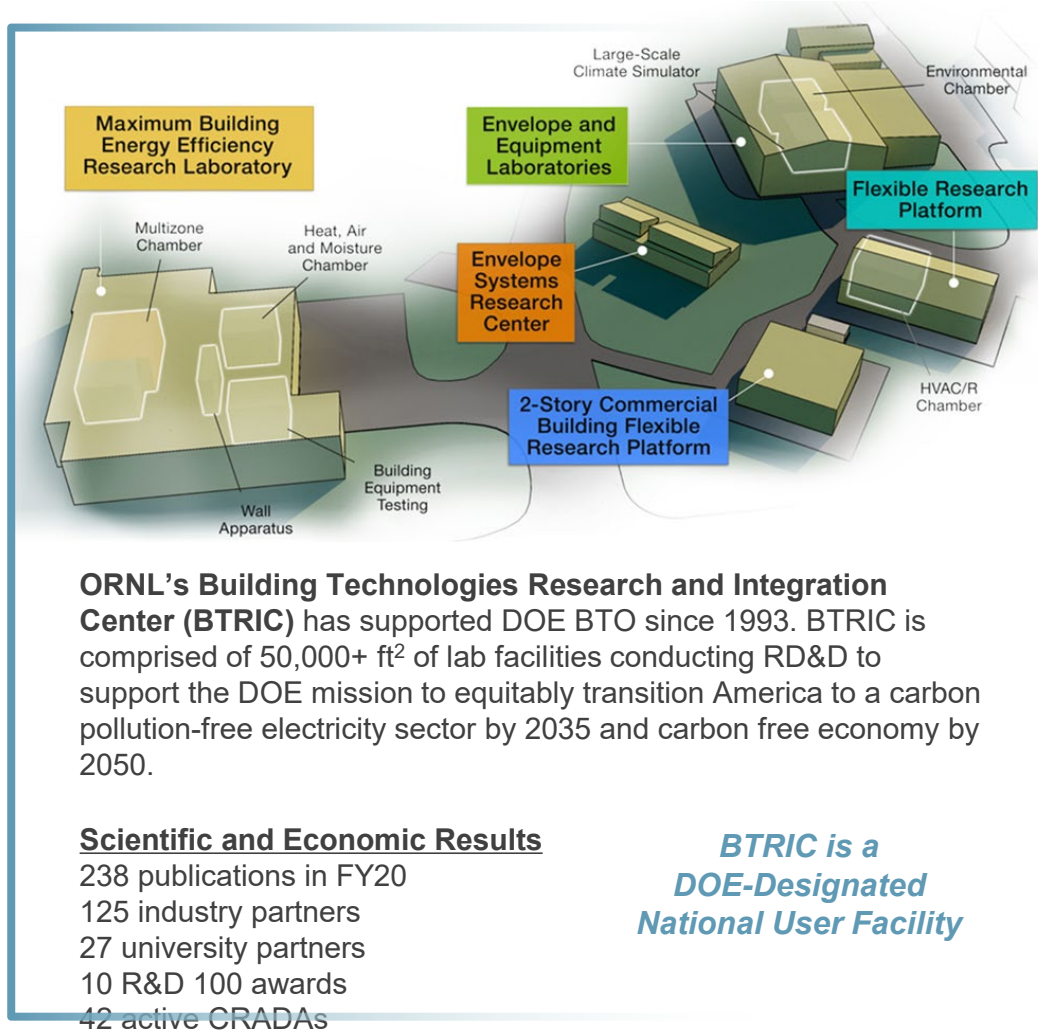

- **Year 2**
  - Laboratory evaluation of impact of fractionation
  - 2<sup>nd</sup> Sample Analysis
- **Year 3**
  - 3<sup>rd</sup> Sample Analysis
  - Life Cycle Climate Performance analysis of refrigerant fractionation

# Thank you
