**Subject:** [EXTERNAL] Carib Energy Application  
**Date:** Friday, December 3, 2021 6:23:41 PM

---

DoE,

I want to file a motion to oppose this application due to the lack of environmental impact studies moving the LNG from Puerto Rico to the destination. Additionally I did not see an impact statement on the territory of Puerto Rico, and the residents who most likely rely on LNG for many things such as heating, cooking, boiling, industry work such as smelting operations, heat treatment applications etc.

Further Carib Energy and it's parent company Crowley are based out of Florida and do not reside in Puerto Rico. It is not possible in my opinion for them to understand the impacts to an island in which they do not live. Also I do not see any total profit information that would enable somebody to weigh the pros and cons when making a decision on an application like this. There also seems to be a trend of us relying more and more on green energy leaning towards the future, which indicates that there may be adequate grounding to deny this application in order to limit the overall impact of the transition from fossil fuels to green energy for the citizens who reside in Puerto Rico.

I would also like to know the price per unit they are purchasing or have purchased this LNG for, and what the citizens of Puerto Rico pay for the same unit of LNG. The citizens of Puerto Rico deserve to pay the same price per unit in the case of just selling the energy store to different countries.

Very Respectfully,

Matthew Deinhardt
