DEPARTMENT OF ENERGY
COVID-19 Workplace Safety and Reentry Framework

Purpose

The health and safety of the DOE workforce and the public is the Administration’s highest priority. The Federal Government and the Department of Energy (Department or DOE) are committed to addressing essential work requirements and reentering employees safely to the workplace consistent with best public health practices. The Department’s paramount concern is the health and safety of all Federal employees, contractors, and individuals interacting with the Federal workforce.

This Framework outlines the requirements to protect the health and safety of the workforce for a safe reentry to DOE Federal facilities as well as the reentry schedule for the safe accomplishment of the DOE mission in a COVID-19 environment. The Framework is a living document that will be updated as needed to account for changing COVID-19 conditions, Safer Federal Workforce Task Force guidance, and CDC guidelines.

Scope and Applicability

This Framework replaces the DOE COVID-19 Workplace Safety Framework, revised on December 15, 2021, and provides overall DOE requirements and guidance for the development of necessary site/facility plans. DOE will update site/facility plans as appropriate to ensure compliance with this overarching COVID-19 Workplace Safety and Reentry Framework.

The safety principles in this Framework document apply to Federal employees, contractors, and any others entering or working at DOE sites/facilities. The principles presented here establish a minimum level for workplace safety and are developed from current CDC guidance and established public health best practices, based on evolving understanding of the pandemic. These principles will be reassessed over time, as conditions warrant. This document is not meant to be exhaustive, and additional program or site/facility controls will be developed as needed. Site/Facility safety and reentry plans will build upon these principles and be tailored as appropriate for mission requirements and facility status and will be reviewed by the cognizant DOE Departmental Element.
The reentry principles and timeframes in this Framework document apply to the Federal workforce and anyone at a DOE site as stipulated in this document. Departmental Elements are expected to satisfy applicable Federal collective-bargaining and labor-management relations obligations before finalizing site/facility reentry plans. Site/Facility safety and reentry plans will discuss the specific protocols for reentry and will be reviewed by the cognizant DOE Departmental Element.

DOE will conduct an orderly reentry to the workplace where employees will return in waves to the physical workplace. During this process, Federal employees will continue to work under their current work schedules until directed to return to the physical workplace aligned with the timeframe for their position’s work category as set forth in this document. Departmental Elements will use the guidelines in this document to refine their plans and prepare sites for the workforce who will return onsite.

For DOE Headquarters, the Office of Management and the Office of the Chief Human Capital Officer are responsible for reviewing and updating the plan for the National Capitol Region (NCR). For DOE sites that have Management and Operating (M&O) or prime contractors that have previously developed and implemented site/facility plans, these plans will be updated accordingly and each cognizant DOE Departmental Element will review these plans, as appropriate. For DOE sites/facilities outside of the NCR that are not co-located with M&O or other prime contractors, each site/facility will either review and update its existing plan or develop a site-specific plan if one does not exist. The cognizant DOE Departmental Element will review these plans.

COVID-19 Coordination Team

On January 20, 2021, DOE established a COVID-19 Coordination Team that reports directly to the Secretary of Energy through the DOE Chief of Staff. This executive leadership team represents the complex-wide components of DOE and keeps Heads of Departmental Elements (HDEs) and other DOE leadership apprised of issues. Departmental Elements maintain line management authority and are responsible for monitoring site/facility plans and considering potential changes to site/facility plans to remain in compliance with any revisions to this Framework or other new guidance.

The COVID-19 Coordination Team is responsible for establishing, implementing, and monitoring compliance with the health and safety requirements specified in this Framework as well as coordinating with appropriate agency programmatic and acquisition staff regarding the application of safety protocols to contractor employees. The team meets regularly to review this Framework and to consider potential revisions and updates based on emerging guidance and any other operational needs. Decisions are coordinated with cognizant site security officials, as appropriate. For privately owned facilities leased by the Federal Government, the team coordinates with the General Services Administration (GSA), where appropriate, and the lessor’s designated representative.

Principles

- The health and safety of DOE Federal and contractor employees are of paramount importance and guides all actions for employees to reenter DOE facilities.
- A structured, orderly process will be used for employees to safely reenter DOE facilities, based on the needs of the Department and the health and safety of the workforce. The Department
will utilize telework and flexible work schedules consistent with the principles set forth in OMB Memorandum M-21-25 and agency plans for reentry and post-reentry.

- This Framework aligns with the Safer Federal Workforce Task Force’s model safety principles and will be revised, as necessary, to account for any superseding or additional guidance.
- CDC-recommended practices, including enhanced entrance screening, social distancing, and workplace protocols as outlined on Workplaces and Businesses | COVID-19 | CDC, will be used, as practical and appropriate, to lower risk.
- Where a locality has imposed additional pandemic-related requirements more protective than those set forth in this Framework, those requirements should be followed in DOE buildings, in DOE-controlled indoor worksites, and on DOE land in that locality.
- Plans and protocols will consider contingencies to prepare for potential new developments. The Department will use CDC guidelines and monitor the CDC COVID Data Tracker to reassess and inform decisions as conditions warrant.
- Executive Order 14043 requires Federal employees to be fully vaccinated against COVID-19 regardless of the employee’s duty location or work arrangement (e.g., telework, remote work), subject to such exceptions as required by law. At this time, Executive Order 14043 is subject to a preliminary nationwide injunction. Although this injunction may ultimately be supplemented, modified, or vacated, depending on the course of ongoing litigation, the Federal Government will take no action at this time to implement or enforce Executive Order 14043’s requirement that employees must be fully vaccinated against COVID-19.

Operating Status

DOE continues to maximize the use of telework until the reentry of each work category. During this period, those individuals whose key duties or work activities are required to be performed onsite will be allowed physical access to DOE sites and facilities. Individuals who are in work categories not yet directed to return to the physical workplace should continue to telework until they are notified of their work category and the date by which their work category is to return.

Approach to Reentry

In addition to ensuring the health and safety of DOE Federal and contractor employees, DOE’s approach to reentry and the post-reentry work environment is focused on mission accomplishment and sustainability. The approach incorporates values to shape a future workplace that achieves a reduced carbon footprint, improves recruitment and retention, reduces facility costs, and creates a better work-life balance without negatively impacting mission delivery. DOE is committed to creating a flexible and agile workforce that is better able to respond to local and world events and that highlights DOE’s core values and principles of diversity, equity, inclusion, and accessibility. DOE site decisions will consider the impact on local communities.

Taking into account the evolving future work environment, DOE will conduct an orderly reentry to the workplace through a phased return to the physical workplace by Federal employees. To facilitate this process, this Framework outlines the timeframes for Federal employees to reenter the physical workplace based on the work category and key duties of an employee’s position as defined below. Site/Facility contractors will coordinate with local DOE offices in the development of their specific reentry plans, which are to be aligned with the principles and requirements of this Framework.

The COVID-19 pandemic forced changes to our workplace. Many DOE employees and contractors have
learned how to perform the functions of their job in a new way during a difficult time, meeting the
challenges head-on. DOE has demonstrated that we have been able to carry out our missions effectively.
Accordingly, we now have an opportunity to revisit how we were operating prior to the pandemic and
leverage lessons learned during the pandemic to integrate telework and remote work into our workforce
plans. As we look to the future, DOE is encouraging programs to strategically leverage workplace
flexibilities such as telework, remote work, and alternative/flexible work schedules as tools to help
attract, recruit, and retain the best possible workforce.

Reentry and Position Work Categories
This Framework is informed by the feedback gathered from our workforce through varied means,
including a Department-wide Federal employee survey, listening sessions, COVID-19 Coordination Team
Office Hours, and input and collaboration with our union partners. Our approach allows DOE supervisors
to determine the right mix of onsite and telework work for their offices based on their mission needs and
in accordance with DOE’s values. While this plan focuses on reentry to the workplace, DOE recognizes
that many employees may be authorized to telework a greater percentage of their time post-reentry than
they did before the COVID-19 outbreak based on the experience gained during this pandemic.

At this time, Federal positions at DOE are divided into three main work categories:

- **Site Critical**: Most or all key duties must be performed onsite (e.g., regular access to classified
  information, site safety and security activities), including onsite mission essential scientific
  research and national security activities (e.g., Primary Mission Essential Function activities).

- **Site Flexible**: Some key duties or work activities are required to be performed onsite (e.g.,
  intermittent access to classified information, project oversight, onsite inspections, improved
  efficiency of mission essential work).

- **Site Optional**: Most or all key duties can be performed effectively and efficiently from a remote
  location.

These work categories have been further refined and expanded for purposes of reentry planning and
timelines, as explained below.

Voluntary Reentry Criteria for DOE Sites
Upon release of this Framework and subsequent approval of associated safety and reentry plans at DOE
sites/facilities, and a reduction in the local COVID-19 transmission level from “substantial” or “high” to
“moderate” or “low” for a period of two consecutive weeks combined with a minimum 90 percent
vaccination rate, a voluntary reentry process may begin for onsite work for Federal and contractor
employees at specific sites regardless of designated work categories. Employees will be notified by
Federal site leadership when the conditions have changed to begin the voluntary reentry and the site-
specific end of DOE’s maximum telework posture. Each DOE site/facility will continue to monitor
community transmission rates subsequent to meeting voluntary reentry conditions. Utilizing the CDC
COVID Data Tracker to assess conditions, a return to “high” transmission level will result in a site-specific
return to maximum telework during such a period.
Reentry Timeline for Federal Employees

In accordance with the process set forth in the December 15, 2021, Framework, the Department has completed the 30 calendar days advance notice to Federal employees before they are directed to return to the physical workplace. On or before an employee’s directed return date, Federal employees must resume a pre-COVID-19 work schedule or establish a new work schedule that has been reviewed and approved by their supervisor.

An updated timeline specific to Federal employee reentry is outlined below. On each return date, in-person work for that work category is no longer restricted to mission essential. To ensure an orderly reentry process, Federal employees cannot return onsite earlier than the date established for their work category unless the site conditions warrant voluntary reentry.

Federal employees with requests for additional flexibility related to the return date may use the Reasonable Accommodations process, as appropriate, to address individual situations. Extenuating circumstances that may prevent an employee from returning onsite will be handled on a case-by-case basis. To assist, consistent with the U.S. Office of Personnel Management’s determination that the COVID-19 pandemic continues to qualify for an exigency of public service HDEs or their designee may temporarily exempt the requirement for telework employees to report onsite twice-in-a-pay-period, if such a schedule can be supported by mission operations. This temporary suspension applies for employees whose position has been designated as telework eligible and who will be expected to return to the DOE Official worksite on a regular and recurring basis absent the COVID-19 pandemic. If the employee’s position is identified as remote and the employee does not plan to report back onsite twice-in-a-pay-period absent the COVID-19 pandemic, the employee must enter into a remote agreement, which may have locality pay implications. HDEs will be notified when this authority ends.

On February 28, 2022, Weather and Safety Leave for non-telework eligible positions (i.e., Site Critical and Site Flexible work categories) will no longer be in effect for COVID-19 purposes. On that date, evacuation orders will be rescinded, and excused absence for caregiving will no longer apply for employees in those work categories. For the Site Optional work category, these flexibilities end on March 14, 2022, when the final wave of DOE’s workplace reentry will have been completed.

See the updated Federal Reentry Timeline Table below; these dates may vary at sites due to collective bargaining requirements. Additionally, certain members of the Department’s senior leadership team are onsite to prepare for reentry.

<table>
<thead>
<tr>
<th>Position Category</th>
<th>Return Date</th>
<th>Category Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site Critical</td>
<td>Most already working onsite. Re-entry by Monday, February 28, 2022.</td>
<td>Includes all employees who are in positions designated as site critical. In addition, HDEs may identify other individuals who need to return onsite for significant mission reasons.</td>
</tr>
<tr>
<td>Site Flexible</td>
<td>Monday, February 28, 2022</td>
<td>Includes employees who are in positions designated as Site Flexible.</td>
</tr>
</tbody>
</table>
DOE will formally assess the effectiveness of its workplace flexibilities, including telework and remote work, within one year after reentry is complete to inform DOE’s Future of Work planning.

**Vaccinations**

Vaccinations are the most effective tool we possess to protect public health, the health of our workforce, and DOE’s ability to accomplish its critical work during this pandemic. To promote the safety of the workforce, in accordance with applicable law and collective bargaining obligations, Federal employees are strongly encouraged to be fully vaccinated to conduct work or business at a Federal site. In implementing Executive Orders 14042 and 14043, the Department will comply with all relevant court orders, including following relevant OMB and Safer Federal Workforce Task Force guidance.

**Federal Employees**

In connection with recent court orders that have been entered concerning EO 14043, *Requiring Coronavirus Disease 2019 Vaccination for Federal Employees*, signed on September 9, 2021, the Department will continue to strongly encourage all Federal employees to be vaccinated and to provide documentation of their status, but are not enforcing a requirement for vaccines. However, as Federal agencies are permitted to request vaccination status for the purposes of implementing other workplace safety protocols, such as masking, physical distancing, testing, travel, and quarantine, DOE Federal employees are required to identify their vaccination status.

Employees must provide proof of vaccination. Employees may provide proof of vaccination through a variety of means: a copy of the record of immunization from a health care provider or pharmacy; a copy of the COVID-19 Vaccination Record Card; a copy of medical records documenting the vaccination; a copy of immunization records from a public health or state immunization information system; or a copy of any other official documentation containing required data points. The official documentation must include the type of vaccine administered, date(s) of administration, the name of the health care professional(s) or clinic site(s) administering the vaccine(s), and the number of doses received. A recent antibody test cannot be used to prove vaccination status.

Federal employees must certify under penalty of perjury that the documentation being submitted is true and correct. All documentation will be submitted or recorded through the Department’s MyEnergy system. In obtaining and storing vaccination information, the Department will: (1) comply with any applicable Federal laws, including requirements under the Privacy Act and the Paperwork Reduction Act, and any applicable collective bargaining obligations; (2) take steps to promote privacy and IT security; (3) consult with the Department’s Agency Records Officer, Chief Information Officer, and Senior Agency Official for Privacy to determine the best means to maintain this information to meet the Department’s needs; and (4) only disseminate this vaccination information to the appropriate agency officials who have a need to know to ensure effective implementation of the safety protocols, which, in many cases, includes the supervisor level. Vaccination status information is not maintained in the Official Personnel Folder and employees receive a Privacy Act statement at the point of collection of employee information (MyEnergy).

**Covered Contractor and Subcontractor Employees**

In connection with court orders that have been entered concerning Executive Order 14042, *Ensuring Adequate COVID Safety Protocols for Federal Contractors*, DOE may not attempt to add a clause implementing requirements of the Executive Order into newly awarded (awarded, option exercised, renewed) contracts and contract-like instruments if the work under such a contract is performed entirely in a U.S. state or outlying area subject to the court order. For existing contractors or contract-like instruments that contain the clause, DOE shall notify the contractor that it will take no action to enforce the clause implementing requirements of Executive Order 14042, absent further written notice from DOE, where the place of performance identified in the contract is in a U.S state or outlying area subject to a court order prohibiting the application of requirements pursuant to the Executive Order. These requirements may be subject to future change depending on the outcome of ongoing litigation and the receipt of updated guidance from the Office of Management and Budget. There is no change to the Safer Federal Task Force’s guidance for COVID-19 workplace safety protocols for Federal agencies and contractor employees working onsite in those facilities must still follow those Federal agency workplace safety protocols.

In implementing Executive Order 14042, the Department will comply with all relevant court orders, including following relevant OMB and Safer Federal Workforce Task Force guidance.

**Vaccination Status**

In accordance with Safer Federal Workforce Task Force guidance, the Department considers Federal employees, contractor employees, and visitors fully vaccinated for COVID-19 two weeks after they have received the requisite number of doses of a COVID-19 vaccine approved or authorized for emergency use by the U.S. Food and Drug Administration or that has been listed for emergency use by the World Health Organization. For Pfizer-BioNTech, Moderna, or AstraZeneca/Oxford, Novavax fully vaccinated is 2 weeks after an employee has received the second dose in a 2-dose series. For Johnson and Johnson (J&J)/Janssen, fully vaccinated is 2 weeks after an employee has received a single dose. The CDC recommends that employees stay “up to date” with vaccinations which includes booster shots. Should the Safer Federal Workforce Taskforce update their definition of fully vaccinated, DOE will follow their recommendation.

When a Federal employee discloses that they are not fully vaccinated, or until DOE knows the vaccination status of an employee, DOE will have the employee follow the protocols for an individual who is not fully vaccinated and comply with the testing procedures outlined in the Framework. When an onsite contractor employee or visitor (see Visitors section below) discloses that they are unvaccinated or declines to provide their vaccination information, DOE will treat that individual as not fully vaccinated for purposes of implementing safety measures, including with respect to mask wearing, physical distancing, testing, travel, and quarantine.

Please note that CDC updated their vaccination guidance to include those who are “up to date” with the vaccine requirements and includes a booster shot. DOE will follow CDC’s definition of “up to date” for applicable safety protocols. Federal employees are strongly encouraged to update their record in the [MyEnergy Vaccination Certification](#) to ensure accurate guidance is provided regarding appropriate safety protocols. If MyEnergy is not updated, management may inquire about booster vaccination status to determine appropriate safety protocols.

**Vaccine-Related Leave**

**Fully Vaccinated**

Federal employees are strongly encouraged to be fully vaccinated. However, due to the injunction, the
time an employee spends obtaining any COVID-19 vaccination doses (including travel time) is covered under administrative leave, not duty time. In most circumstances, DOE authorizes employees to take up to four hours to travel to the vaccination site, complete any required vaccination dose, and return to work—for example, up to eight hours of duty time for employees receiving two doses. If an employee needs to spend less time getting the vaccine, only the needed amount of duty time should be granted.

DOE requires employees taking longer than four hours to document the reasons for the additional time (e.g., they may need to travel long distances to get the vaccine). If, due to unforeseen circumstances, the employee is unable to obtain the vaccine during basic tour of duty hours, the normal overtime hours of work rules apply.

**Booster Shots**

Federal employees will be granted up to four hours of administrative leave to receive any authorized COVID-19 vaccine booster shot, if they are eligible to receive such a booster shot, or any authorized additional dose of COVID-19 vaccine. The administrative leave will cover the time it takes to travel to the vaccination site, receive the vaccination dose, and return to work. Because there is currently no requirement for Federal employees to receive a vaccine booster shot or additional dose, the use of duty time is not allowable in these instances.

**Recovery from Vaccine**

Federal employees will be granted up to 2 workdays of administrative leave if an employee has an adverse reaction to any COVID-19 vaccination dose, including a booster shot, that prevents the employee from working (i.e., no more than 2 workdays for reactions associated with a single dose). If an employee requests more than 2 workdays to recover, the employee may take other appropriate leave (e.g., sick leave) to cover any additional absence.

**Accompanying a Family Member**

Federal employees will be granted up to 4 hours of administrative leave per dose to accompany a family member (as defined in OPM’s leave regulations, see 5 CFR 630.201) who is receiving any COVID-19 vaccination dose.

- DOE grants leave-eligible employees up to four hours of administrative leave per dose—for example, up to a total of twelve hours of leave for a family member receiving three doses—for each family member the employee accompanies.
- If an employee needs to spend less time accompanying a family member who is receiving the COVID-19 vaccine, DOE grants only the needed amount of administrative leave.
- Employees should obtain advance approval from their supervisor before being permitted to use administrative leave for COVID-19 vaccination purposes.
- Employees are not credited with administrative leave or overtime work for time spent outside their tour of duty helping a family member get vaccinated.
- This policy applies to covered vaccinations received after July 29, 2021.

**Additional Health and Safety Requirements**

The Department follows CDC guidance and will implement updated guidance as it becomes available.

Taking into account the diversity of DOE’s mission objectives and operations, the following requirements set the minimum threshold for health and safety and must be included in all site/facility plans. Where DOE has sites/facilities in the same geographic region but are managed by different DOE Departmental
Elements, Federal officials shall coordinate as practicable. In the event the health and safety information in the Framework conflicts with CDC guidance, the CDC guidance will always supersede the Departmental guidance and apply automatically without the need for changes in the Framework.

Levels of Community Transmission at DOE Sites

In applying COVID-19 workplace safety protocols connected to levels of community transmission in a given area, DOE sites should reference the [CDC COVID-19 Data Tracker County View](https://www.cdc.gov/coronavirus/2019-ncov/community/county-data.html). Sites may use discretion in determining the counties relevant to the determination of the level of community transmission in a given area for a DOE facility (e.g., consider the county in which a DOE site is located, the transmission levels of surrounding local counties from which DOE employees and visitors travel to the site, and transmission levels in counties through which DOE employees regularly travel over the course of their work in the field and between various work sites). For Headquarters facilities, the counties that make up the National Capital Area will be used.

DOE sites should assess transmission rates in a given area at least weekly to determine proper mask-wearing requirements. When the level of transmission related to a DOE site increases from “low” or “moderate” to “substantial” or “high”, DOE sites should put in place more protective safety protocols (described below), which are consistent with CDC guidelines and guidance from the Safer Federal Workforce Task Force as soon as operationally feasible. However, when the level of transmission related to a DOE site is reduced from high or substantial to moderate or low, the level of transmission must remain at that lower level for at least two consecutive weeks before the DOE site utilizes those protocols recommended for areas of moderate or low transmission by CDC guidelines and guidance from the Safer Federal Workforce Task Force. As previously stipulated, prior to the scheduled initial wave for directed reentry at DOE sites where the specific criteria previously outlined has been met, a site may initiate the voluntary reentry process for onsite work.

Where a locality imposes more protective pandemic-related safety requirements, those requirements are followed by DOE employees and onsite contractor employees, in DOE buildings, in DOE controlled indoor worksites, and on DOE lands within that locality.

Face Masks

In areas where the CDC has classified the COVID-19 transmission as “substantial” or “high”, all Federal workers, contractors, and visitors, regardless of vaccination status, will be required to wear a face mask indoors.

In areas where the CDC has classified the COVID-19 transmission as “low” or “moderate” and in accordance with the CDC’s [Interim Public Health Recommendations for Fully Vaccinated People](https://www.cdc.gov/coronavirus/2019-ncov/vaccines/after-two-doses.html), and consistent with guidance from the Safer Federal Workforce Task Force and Executive Order 13991 “Protecting the Federal Workforce and Requiring Mask-Wearing,” fully vaccinated Federal employees, contractors, and visitors entering or working inside or on the grounds of a DOE site/facility are not required to wear masks, except where called for by Federal, State, local, Tribal, or territorial laws, rules, and regulations.

Regardless of the transmission levels, any individual entering or working at a DOE site/facility who is not fully vaccinated (i.e., who are not at least 2 weeks past their final dose) or who declines to provide vaccination information when requested is required to wear a mask while in DOE buildings and in leased space, including all public and work areas within a building (e.g., garages, hallways, snack bars, cafeterias, elevators, and restrooms). The policy also applies to facilities leased or owned by DOE contractors and in which DOE Federal or contractor employees work. To ensure compliance, signage will be posted throughout all sites, especially entrances, to remind individuals of the requirement.
All individuals at a DOE site or facility who are required to wear a mask must wear a mask that covers the nose and mouth. As of January 13, 2022, to help keep our onsite workforce safe, unfiltered cloth masks are no longer acceptable unless the cloth mask is worn over a surgical-type mask for any individual working in a DOE building or offsite. Additionally, individuals are strongly urged to use an N-95 or KN-95 (or similar) mask. These masks provide greater protection than other masks and will help prevent transmission of the Omicron variant. N-95 (or similar) masks with ventilation valves or face shields are not considered an acceptable substitute for masks. DOE will work to make N-95 (or similar) masks and/or surgical-type masks available to staff and visitors.

When an individual is required to wear a mask, masks must be worn in any common areas or shared workspaces (e.g., open floorplan office space, cubicle embankments, hallways, garages, conference rooms, or other workspaces) even when physically distant. Masks must also be worn outdoors in crowded settings or during outdoor activities that involve sustained close contact with other people who are not fully vaccinated. When required to be worn, masks must be worn in all in-person meetings and are required at staffed security checkpoints. Security Officers may direct individuals to lower or temporarily remove their masks to verify identity. Masks, when required, must be worn inside government-owned vehicles.

When required, exceptions to wearing a mask include:

1) When alone in an office with floor-to-ceiling walls and the door is shut;
2) When the sole occupant in a government-owned vehicle;
3) Intermittent removal when eating/drinking -- masks may be removed for a limited time if one is at least six feet from another individual;
4) Conducting work utilizing controls and/or personal protective equipment identified in a job hazards analysis or similar evaluation as long as the COVID-19 risk is factored into the analysis and the controls identified as part of that analysis are implemented;
5) Conducting work where the hazards associated with wearing the mask (e.g., straps getting caught in machinery, heat stroke, etc.) are greater than the risks with not wearing a mask as long as the COVID-19 risk is factored into the job hazards analysis and the controls identified as part of that analysis are implemented; and,
6) Individuals who have a medical or religious reason why they cannot wear masks. Exemptions to the face mask policy will be considered in accordance with existing Equal Employment Opportunity Commission (EEOC) guidance. Federal employees will be required to go through the Department’s Reasonable Accommodation process in order to seek an exemption.

The HDE or the Field/Site Manager or their designee will approve exemptions for visitors. For the contractor workforce, approval will be provided consistent with the terms and conditions of the contract. If appropriate, DOE has developed alternative procedures that allow for persons denied access to a Federal facility or otherwise unable to access a DOE workspace due to DOE safety protocols to continue to obtain any Federal government benefits or services to which the individual is entitled, such as monetary benefit payments or required adjudicative appointments or hearings.

Testing

In accordance with Safer Federal Workforce Task Force guidance, a mandatory COVID-19 testing program is required for DOE Federal employees who are not fully vaccinated. All Federal employees who are not fully vaccinated will be tested at least once a week during any week they work onsite or interact with the public as part of their duties. DOE may test Federal employees who are not fully vaccinated more frequently depending on their job functions and work environment. All tests will be proctored. In limited
circumstances, DOE may also determine that fully vaccinated DOE employees and onsite support service contract employees who serve in certain roles, functions, or work environments, must participate in screening testing.

**Contact Tracing**

Sites must continue contact tracing in accordance with CDC guidelines to help identify, track, and manage work-related close contacts of COVID-19 cases. Site contact tracing must be done in collaboration with, and in support of the contact tracing programs of local health departments, as applicable. Site/Facility Workplace Safety plans should include site procedures and protocols to implement infection control and workplace safety efforts once informed of a case of COVID-19. Disclosures of COVID-19 cases should be made to local public health officials as required or necessary to provide for the public health and safety of DOE employees and contractors in accordance with local public health mandates. Where a site does not have the capability to perform contact tracing or needs additional assistance, the DOE COVID-19 Hotline Response Team will perform the contact tracing or assist as needed.

If COVID-19 cases occur within a specific building or work setting, DOE’s COVID-19 Coordination Hotline Response Team (or a field office or agency component designee) determines—in consultation with local public health officials—appropriate next steps. The team will conduct infection control and workplace safety efforts once informed of a known or suspected case of COVID-19 (due either to specific symptoms or a positive test).

Programs and sites will continue to follow established protocols for reporting the status of COVID cases to the [DOE COVID-19 Hotline](#). The numbers of confirmed cases (including individuals working onsite or on telework), including total confirmed cases (since March 2020), active confirmed cases, and deaths shall be reported every Monday. All deaths associated with COVID-19 must be reported to the DOE COVID-19 Hotline within one business day. An anonymized summary narrative will be requested for each death associated with COVID-19. Sites may use the COVID-19 Hotline’s application to track cases at their site.

To promote transparency and safety, sites will notify their workforce about confirmed COVID cases, as relevant and appropriate, consistent with local and Federal privacy and confidentiality regulations and laws. Depending on the circumstances and such factors as the size of the site, notifications will be made by contacting individuals or by issuing broader messages. In addition, anonymized data on the DOE-wide total number of confirmed cases as well as the number of confirmed cases at each site is available to the workforce on the Department’s COVID-19 Powerpedia Portal.

**Travel**

Federal and contractor employees should adhere strictly to CDC, state, and local guidelines before, during, and after travel, regardless of whether the travel is personal or for official business. The CDC has provided [guidance on travel for fully vaccinated people](#). The Safer Federal Workforce Task Force has also issued [FAQs on Travel](#).

There are no government-wide restrictions on official travel for Federal employees who are fully vaccinated. Therefore, fully vaccinated Federal employees may resume regular, pre-pandemic travel when their position work category is directed to reenter the workplace or where necessary to accomplish mission essential work or when a voluntary return is initiated per the protocols outlined above. In addition, contractor employees who are fully vaccinated may resume regular, pre-pandemic travel when their position work category is directed to reenter the workplace by their organization or where necessary to accomplish mission essential work.

Regardless of when an employee’s position work category is directed to reenter the workplace, official
domestic and international travel for Federal and contractor employees who are not fully vaccinated is limited to only mission critical trips and will be conducted in accordance with applicable CDC guidance and the January 21, 2021, Executive Order Promoting COVID-19 Safety in Domestic and International Travel. Domestic and international travel for unvaccinated Federal and contractor employees must be approved by the HDE or their designee.

For domestic travel, Federal employees follow CDC guidance in addition to other Federal, state, Tribal, and local requirements during travel. They must also monitor their symptoms and if symptoms develop, they must isolate themselves, notify their physician, and follow their site requirements for notification. For international travel, prior to arrival in the United States, all air passengers coming to the United States, including U.S. citizens and fully vaccinated people, are required to follow CDC guidance before they board a flight to the United States.

Official Government travelers may use their travel card for payment of COVID-19 tests required for travel. The travel costs for required COVID tests may be reimbursed as a miscellaneous travel expense. If a traveler cannot use the travel card, due to a blockage on the card, the traveler can be reimbursed via the travel voucher, with a receipt for the test.

Federal employees who are not fully vaccinated or considered “up to date” with vaccinations in accordance CDC guidance will be required to telework upon return from official travel and may be required to telework after personal travel for the duration of the CDC quarantine period before they are allowed to return to the workplace, as well as follow any applicable testing guidance. Employees returning from official travel who are not telework eligible must work with their management on an appropriate work status to mitigate impacts to the mission of their office to the greatest extent possible; otherwise, WSL is provided.

If quarantine is required because of personal travel, and the employee is otherwise expected to be present onsite, the employee may take personal leave while quarantining. If an employee refuses to quarantine or refuses to take personal leave while under mandatory quarantine after personal travel, DOE may elect to bar the employee from the workplace for the safety of others. If DOE bars the employee from the workplace, the employee must be placed on administrative leave until the agency determines what status the employee should be placed in while on quarantine.

**Symptom Monitoring**

If Federal employees, contractors, or visitors are not feeling well, they are not to enter the Federal workplace. Site/Facility plans must ensure procedures and processes are in place requiring Federal and contractor employees working on site to complete screening for symptoms (e.g., a symptom questionnaire, a temperature check, self-verification of entry requirements) and other exposure history factors (e.g., recent travel, exposure to a person with COVID-19) upon entry to the workplace. Visitors may also be asked to complete symptom screening and exposure history before entering a DOE facility. Entry screening may be self-screening or administered in-person by the site contractor or DOE office. Individuals are encouraged to monitor themselves for the development of symptoms. Any individual who develops any symptoms consistent with COVID-19 during the workday, even if fully vaccinated, must immediately isolate, notify their supervisor, and promptly leave the workplace.

**Quarantine and Isolation**

Effective January 2022, CDC updated its quarantine and isolation guidance based on a person being “up to date” with their COVID-19 vaccines; CDC defines this as receiving all recommended COVID-19 vaccines, including any booster dose(s) when eligible. Personnel should refer to the latest CDC guidance on quarantine and isolation for additional information and details.
Any individual with a suspected or confirmed COVID-19 case, or who has tested positive for COVID-19 without experiencing symptoms, will not be allowed onsite and will be advised to isolate or quarantine, pursuant to CDC guidelines, and in compliance with local laws and regulations. Individuals will also need to follow CDC guidelines with respect to travel. Individuals should contact their health care provider and follow their instructions, if different than the CDC guidelines. Unless advised otherwise by a health care provider, health department official, or site occupational medical official, a person with suspected or confirmed COVID-19 may return to work in accordance with the CDC guidelines.

If an employee is subject to isolation due to having COVID-19 and is too sick to telework, weather and safety leave cannot be used. Employees may use sick leave or may also request accrued annual leave and other forms of paid or unpaid leave in this situation as appropriate.

Personnel who have had close contact with someone who is confirmed to have COVID-19 must follow CDC guidelines and local guidance. Recommendations for close contacts to quarantine, get tested, and wear well-fitting masks after exposure to COVID-19 will vary depending on vaccination and booster status and history of prior COVID-19 diagnosis within the past 90 days. People who have come into close contact with someone diagnosed with COVID-19 should follow the recommendations outlined on the COVID-19 Quarantine and Isolation webpage.

Confidentiality

When providing information to the workforce on confirmed COVID-19 cases, the Department must balance the privacy rights of the individual diagnosed with COVID-19 with the need to openly communicate with the workforce. All medical information collected from personnel, including vaccination information, test results, and any other information obtained as a result of testing and symptom monitoring, will be treated confidentially in accordance with applicable law, and accessible only by those with a need to know in order to protect the health and safety of personnel. The DOE COVID-19 Hotline Response Team will direct all questions relating to personal medical data to an appropriate point of contact.

Generally, in accordance with the Rehabilitation Act of 1973, Americans with Disabilities Act, and with privacy laws, managers and supervisors may not specifically disclose the identity of an individual who has or may have COVID-19 or provide information, such as the specific location of the individual’s workstation, which will allow other employees to identify the individual. Supervisors may ask the individual for consent to share their identity information with those whom they have been in close contact. Even if an individual consents to such disclosure, identifying information is only to be provided to those who have a need to know.

The COVID-19 Hotline Response Team or the site individuals who are performing contact tracing will work with managers and supervisors to verbally (vice email) notify coworkers who may have been in close contact with an individual diagnosed with COVID-19 to provide these employees more information to help when monitoring themselves for signs or symptoms and quarantining themselves, if appropriate. Again, the information provided about any individual’s health should be minimized as much as possible.

Workplace Operations

Planning and Preparation

During the reentry process, the Department will continue to follow CDC, OSHA, and the Safer Federal Workforce Task Force guidelines applicable to the Federal workplace. The principles presented here establish a minimum level for workplace safety and are aligned to current CDC guidance and established public health best practices, based on evolving understanding of the pandemic. Principles will be reassessed over time, as conditions warrant, and as new guidance is issued. This document is not meant
to be exhaustive, and additional program or site/facility controls will be developed as needed.

Site/Facility plans should align with these principles to the extent possible but may be adjusted as appropriate for mission requirements and changing CDC or public health guidance. In addition, sites should incorporate location specific plans to appropriately reorient returning workers to site operations considering items such as:

- Emergency procedures and responsibilities
- Facility orientation to include COVID controls
- General employee training and specific safety and health training (e.g., HAZWOPR, Radiological Training, Respiratory Protection)
- Job specific proficiency needs and training
- Office information technology readiness

**Physical Distancing**

In accordance with the CDC’s [Interim Public Health Recommendations for Fully Vaccinated People](https://www.cdc.gov/coronavirus/2019-ncov/pe
tients/vaccinated-people.html), and consistent with guidance from the Safer Federal Workforce Task Force, fully vaccinated Federal employees, contractors, and visitors entering or working inside or on the grounds of a DOE site/facility are not required to maintain a physical distance of at least six feet in DOE buildings or in DOE leased spaces, except where called for by Federal, State, local, Tribal, or territorial laws, rules, and regulations.

Federal employees, contractors, and visitors entering or working at a DOE site/facility who are not fully vaccinated or who decline to provide their vaccination information when requested are required to maintain a physical distance of at least six feet from others, consistent with CDC guidelines, including in offices, conference rooms, and all other indoor communal areas and workspaces. This is in addition to wearing a mask, where required.

Floor markings, one-way walkways, reconfiguration of workspaces or office assignments, and other mitigation strategies may be implemented to minimize interactions. If work is being conducted outside, personnel can be closer than six feet if all personnel required to wear masks are wearing masks or if personnel are in respiratory protection equipment (e.g., respirator, air-feed hood).

Where physical distances are required, but cannot be maintained, such as in tight working quarters or in situations where some individuals are not fully vaccinated, guidance should be obtained from safety and health officials. It may be necessary in these situations for all personnel to wear a mask regardless of vaccination status. DOE may, at its discretion, establish occupancy limits for specific workplaces as a means of facilitating physical distancing.

**Environmental Cleaning**

Enhanced cleaning in common use/high touch/high density spaces, such as lobbies, restrooms, elevators, and stairwells will continue to be performed. Office space that is in regular use will be cleaned regularly, and in accordance with CDC guidelines. Wipes, gloves, and EPA-approved disinfectants will continue to be made available for individuals to wipe down their workstation and related personal property. Physical barriers such as plexiglass shields may continue to be used where appropriate.

In accordance with [CDC](https://www.cdc.gov) and [GSA](https://www.gsa.gov) guidelines, if a person who has tested positive for COVID-19 has been in a facility within the last 24 hours, the spaces occupied by that person should be cleaned and disinfected. If more than 24 hours has passed since the person has been in the space, cleaning is sufficient. If more than 3 days have passed since the person was in the space, no additional cleaning is necessary. Judgement should be used in identifying the appropriate scope of the cleaning and in cleaning industrial and
radiological work areas.

Site/Facility plans must ensure procedures and process are in place that determine the scope of any workplace or area closures related to cleaning and disinfecting requirements.

**Hygiene**

Hand sanitizer stations will continue to be available at building entrances and throughout workspaces, and must contain hand sanitizer, with at least 60 percent alcohol and be manufactured in accordance with the requirements of the US Food and Drug Administration (FDA). DOE sites should ensure that the hand sanitizer is not on the [FDA’s do not use list](#).

Personnel are encouraged to wash their hands with soap and water or use hand sanitizer or alcohol-based hand rubs frequently. To reinforce the importance of hygiene, signage is required at all DOE sites/facilities if not already posted.

Each Site/Facility plan must have procedures and processes for disinfecting shared tools, equipment, and common work surfaces (e.g., workbenches, laboratory spaces, desks). Disinfectant wipes will continue to be provided by the DOE or the contractor, as appropriate.

**Ventilation and Air Filtration**

To the maximum extent feasible, and with consideration of current [guidance from the CDC](#), indoor ventilation will be optimized to increase the proportion of outdoor ventilation, improve filtration, and reduce or eliminate recirculation. Where technically practicable, and depending on the availability of funds, continued action will be taken to improve engineering controls such as improving Minimum Efficiency Reporting Value (MERV) filter efficiency ratings and sealing of filters. Space heaters, desk fans and other devices that provide air movement inside a space are to be eliminated to the extent practicable. If needed, work should be relocated to room/buildings with better ventilation characteristics.

**Visitors**

The number of visitors to DOE may increase during each reentry wave. Efforts should still be made to conduct visits virtually until the directed return of Site Optional personnel. Visitors to DOE buildings will be directed to complete the [Certification of Vaccination](#) form when they enter a Federal building or Federally controlled indoor worksite and keep the form with them during their time on Federal premises. In requesting this information, DOE will comply with any applicable Federal laws, including requirements under the Privacy Act and the Paperwork Reduction Act. Visitors who are not fully vaccinated or who decline to provide information about their vaccination status must provide proof of a negative COVID-19 test from no later than the previous 3 days prior to entry to a DOE building.

These requirements related to the provision of information about vaccination status and provision of proof of a recent negative COVID-19 test do not apply to members of the public entering a DOE building or DOE land to obtain a public service or benefit. Areas open to the general public must post signs indicating the requirements for wearing masks and maintaining a social distance when in the area. If they are not fully vaccinated, these visitors must comply with all relevant CDC guidance, including wearing a mask and physically distancing from other people. In areas of “high” or “substantial” COVID transmission, all visitors must wear masks.

Sites should ensure procedures and processes are in place to implement any required visitor controls, including screening and wearing a mask, if required.
Meetings, Events, and Conferences

Should any Departmental element intend to host an in-person meeting, conference, or event that will be attended by more than 50 participants—regardless of whether participants include members of the public—they must seek approval of the Secretary of Energy, in consultation with the DOE COVID-19 Coordination Team.

In-person attendees at any meetings, conferences, or events hosted by DOE, regardless of size, must be asked to provide information about vaccination status. In requesting this information, DOE will comply with any applicable Federal laws, including requirements under the Privacy Act and the Paperwork Reduction Act. In-person attendees in areas of “high” or “substantial” transmission must wear a mask in public indoor settings regardless of vaccination status.

Those attendees at DOE hosted meetings, events, and conferences (regardless of event size) who are not fully vaccinated or who decline to provide their vaccination information must provide proof of a negative COVID-19 test completed no later than the previous 3 days and comply with masking and physical distancing requirements for individuals who are not fully vaccinated consistent with the requirements for visitors in the Face Masks and Physical Distancing section of the Agency Model Safety Principles. In-person attendees in areas of high or substantial transmission must wear a mask in public indoor settings regardless of vaccination status.

Elevators

Assessments will continue to be performed to determine the safe occupancy level of elevators to ensure social distancing, and signage detailing the requirements will be posted near the entrances. Individuals who are not fully vaccinated are required to wear masks in elevators and in elevator lobbies and maintain a physical distance in accordance with posted signage. The use of stairs by those who are physically able is strongly encouraged. Signage has been posted to explain current procedures.

Shared Spaces

Assessments will continue to be performed to determine the safe occupancy level of shared spaces such as elevators, conference rooms, auditoriums, and cafeterias and the requirements will be posted near the entrances. Other visual markers will be installed to promote physical distancing within common spaces, and furniture should be removed.

DOE COVID-19 Hotline Response Team

The DOE COVID-19 Hotline Response Team protocols will be used across the DOE complex for handling reports of COVID-like symptoms and confirmed cases. Field sites will be responsible for following established DOE-wide protocols, and where applicable, managing the site/facility cases, and providing recommendations to site staff. Field sites will report the status of their confirmed cases, vaccinations, and occupancy to the DOE COVID-19 Hotline Response Team in weekly status updates every Monday. Information may be entered directly into the COVID System Metrics (CSM) application.

For DOE HQ, the COVID-19 Hotline Response Team will triage potential cases and follow up on cases. The COVID-19 Hotline is available for reporting cases as well as for answering questions. The COVID-19 Hotline can be reached by calling 202-586-2683 (202-586-COVD) or by emailing the COVID-19 mailbox at COVID-19inquiries@hq.doe.gov. Emails with personal information should be sent using Entrust.
