1. Introduction

This paper provides the Department’s approach to evaluation and evidence-building to improve performance across the broad range of the Department’s program and functional offices. This documents the Department’s means for making available to the public the wide range of information concerning the Department’s broad range of programs. The implementation of evaluation and evidence-building actions (i.e., statistics, research, studies, and analysis) is imbedded as part of the planning and execution efforts of each of the program and functional offices. This paper also discusses the methodologies currently used across the Department for evaluation and evidence-building. These different methodologies reflect the broad diversity in programs’ missions and functional office responsibilities.

Given the variety of DOE activities the Department relies on Program Managers to accomplish program management objectives and related evaluation requirements. Program Managers tailor program strategies and oversight, including documentation of program information, program phases, the timing and scope of decision reviews and decision levels, to fit the particular conditions of that program, consistent with applicable laws and regulations and the time sensitivity of the capability need.1

DOE Portfolios and Programs utilize a tailored management approach based on program complexity2. This tailored approach to program management is based on risk and complexity of the program and, if needed, definition of different program categories to address risk and complexity. DOE programs cover a wide spectrum (ranging from nuclear security to research and development to building weatherization).

Based on this broad spectrum of programs, the broad range of players (DOE, other Federal agencies, national laboratories, universities, private sector, general public, international) and the myriad of interests, the Department invests significant emphasis and resources in making the Department’s activities available through an extensive network of publicly accessible websites, document archives, budget allocations, performance results, etc. The Department’s functional offices (CFO, Procurement, Project Assessment, Enterprise Assessment, etc.) also have extensive websites which make their activities available to the general public.

DOE’s goal is to establish Program Management guidance that addresses the following attributes:3

- Tailored and Flexible – Program management approaches are based on program

---

2 DOE Policy (P) 410.3, Program Management: https://www.directives.doe.gov/directives-documents/400-series/0410-3-apolicy

complexity and the particular conditions related to that program

- Streamlined and Effective Management – Program responsibility should be decentralized when practicable and use a streamlined management structure during program execution, characterized by short, clearly defined lines of responsibility, authority, and accountability.

- Responsive and Cost-Effective – Programs should utilize an approach that aligns capability with available technology and resources to satisfy operational needs, while recognizing fiscal constraints.

- Cross-program coordination where appropriate – in support of agency-wide improvement efforts, cross-agency goals and standards will be established when beneficial.

This paper is based on open-source research using information available on Department of Energy (DOE) websites as well as open-source platforms. Links to the websites of some of the key program and functional offices are provided.

Also provided in this paper is the FY 2023 Evaluation Plan for several specific Learning Agenda efforts the Department plans to pursue. For information concerning the more detailed evaluation and evidence building efforts by each of the program and functional offices for enhancement of their knowledge base and to inform decision makers, refer to the websites for each of the program offices and functional offices.

The following figure reflects the Department’s headquarters and field offices, as well as the national laboratories.
2. Strategic Plan

Each of the program and functional offices are engaged in supporting strategic goals. DOE is preparing a new Strategic Plan intended to cover FY 2022 – FY 2026. This Plan will include Goals and Objectives for the Department; Offices will then develop specific milestones to meet these. The requirements for this Plan are set in the Government Performance and Results Act Modernization Act (GPRA-MA).

2.1 Learning Agenda Activities for FY 2023

The U.S. Department of Energy and its predecessor organizations have supported evidence-building for the purpose of improving outcomes for more than 50 years. This work includes rigorous implementation, outcome, and impact evaluations; grants to researchers for basic science, applied research, and evidence synthesis; and data collection in support of official statistics and performance improvement.
OMB Memoranda M-19-23⁴ M-20-12⁵, and M-21-27⁶ discuss the process of developing and implementing a multi-year learning agenda that coincides with the four-year timeframe defined for agency strategic plans.⁷ An agency learning agenda addresses priority questions (i.e., questions relevant for programmatic, operational, regulatory, or policy decision-making) across the entire agency.⁸

For FY 22, DOE is focused on the following four areas:

- Optimizing Carry-Over Balances for DOE Program and Support Functions
- Development of a Statistical Methodology Improvement Plan (SMIP)
- Management of Procurement Systems to utilize DOE and NNSA Category Management
- Optimizing DOE Corporate Business Systems & Services for Cloud-Based Delivery

A detailed discussion of the learning agenda items is located at Appendix B: DOE Learning Agenda.

3. Program Evaluation Methodologies

Successful programs are essential to the effective accomplishment of the Department of Energy’s (DOE) strategic and operational goals. These programs are diverse and reflect the scope and breadth of the Department’s missions. These include (but are not limited to):

- Research and Development (R&D), including Laboratory Directed Research and Development⁹ (LDRD) Programs;
- Environmental Management Programs;
- Legacy Management Programs;
- Nuclear Power Research and Development (including naval reactors);
- Nuclear Weapons Research, Development, Production, and Oversight;
- Energy Information Administration;

⁹ DOE O 413.2C Laboratory Directed Research And Development: https://www.directives.doe.gov/directives-documents/0413.2-BOrder-c-chg1-minchg/@@images/file
• Staff offices (e.g., Office of the Chief Financial Officer (OCFO), Office of the Chief Information Officer (OCIO), etc.); and,
• Capital Asset Programs\(^\text{10}\).

Evaluation of programs is key for the DOE as it manages this myriad of dis-similar programs. Program evaluation is a systematic assessment using quantitative and/or qualitative data and analysis methods to answer specific questions about current or past programs, with the intent to assess their effectiveness and efficiency\(^\text{11}\). Often, the term “program evaluation” and “evaluation” are used synonymously. Evaluations include the following:

- A systematic method for collecting, analyzing, and using information to answer questions about projects, policies, and programs\(^\text{12}\), particularly about their effectiveness and efficiency.
- Systematic outcome and impact studies to assess whether a program is achieving its goals, and why (or why not).
- Periodic assessments of a program’s progress, including process implementation studies to determine where and how to make improvements, improve efficiencies, and ensure that the program is running as planned.

Evaluation means "an assessment using systematic data collection and analysis of one or more programs, policies, and organizations intended to assess their effectiveness and efficiency."\(^\text{13}\) Evaluation standards (from OMB M-20-13)\(^\text{14}\) include the following:

- **Relevance and Utility** - Evaluations must address questions of importance and serve the information needs of stakeholders to be useful resources.
- **Rigor** - Evaluations must produce findings that can be confidently relied upon, while providing clear explanations of limitations.
- **Independence and Objectivity** - Evaluations must be viewed as objective for stakeholders, experts, and the public to accept their findings.
- **Transparency** - Evaluations must be transparent in the planning, implementation, and reporting phases to enable accountability and help ensure that aspects of an evaluation are not tailored to generate specific findings.
- **Ethics** - Evaluations must be conducted to the highest ethical standards.

---

\(^\text{10}\) DOE O 413.3B, Program and Project Management for the Acquisition of Capital Assets: [https://www.directives.doe.gov/directives-documents/400-series/0413.3-border-b-chg6-minchg](https://www.directives.doe.gov/directives-documents/400-series/0413.3-border-b-chg6-minchg)

\(^\text{11}\) EERE Program Evaluation: [https://www.energy.gov/eere/analysis/eere-program-evaluation](https://www.energy.gov/eere/analysis/eere-program-evaluation)

As a tool to support good management practice, evaluation helps inform key planning and budget decisions and enables managers to determine if adjustments are needed in program design to improve the rate or quality of achievement relative to the committed resources. Evaluations also help programs quantify achieved impacts. While program evaluation first focuses on this definition, important considerations often include:

- Program costs;
- Potential program improvements;
- Determining whether it is worthwhile to continue with the program;
- Identifying better alternatives, if there are unintended outcomes; and,
- Verifying whether program goals are appropriate and useful.

Methodologies used at the Department to evaluate programs and program performance include examination of both objective and subjective information. These methodologies vary based on:

- Office Standards and Requirements;
- Organizational Mission/Requirements;
- Implementation methodology (including contract type, grant, etc.); and,
- Oversight requirements.

4. **Strategic Review**

All agencies are required to conduct frequent data-driven performance reviews and strategic reviews. All agencies must follow the public reporting guidelines defined for strategic plans, Annual Performance Plans and Annual Performance Reports which will include a progress update by strategic objective.  

The strategic review serves as the agency’s internal management process or set of processes which provide for an annual assessment of progress being made to improve program outcomes, assess whether the agency is using the best measures to identify progress on program outcomes, and look at opportunities for productivity gains using a variety of analytical, research, and evaluation methods to support the assessment. The results of these reviews should inform many of the decision-making processes at the agency, as well as decision-making by the agency’s stakeholders.

The strategic review process, facilitated by the Office of the CFO (CF) and overseen by the Department’s Performance Improvement Officer (PIO), concludes with DOE leveraging the data

---

collected (documented in the *Strategic Planning Budget Formulation Performance Management (BFEM) system*) and inputs provided by OMB to inform DOE’s Budget Formulation.

Figure 2: DOE Performance Management Strategic Review Process

---

**DOE Performance Management Strategic Review**

**OMB**

1. **START**
2. Requests input from Under Secretaries and Assistant Secretaries via Data Call. Input includes:
   - Status of performance measures supporting strategic objectives
   - Narrative of accomplishments
   - Discussion of challenges affecting strategic objective achievement
3. CF summarizes information and prepares Performance Dashboard for S-2 Review
4. OMB conducts review of Strategic Review inputs
5. BRAVO input for OMB DOE Strategic Review Meeting (June)
6. OMB conducts review of Strategic Review inputs

**CF**

7. Uses results of DOE Performance Management Strategic Review as input to Budget Formulation guidance and decision-making

**Program Offices**

2. Contributing Programs (CSP) respond to Data Call, provide inputs to CF
5. **Performance Evaluation Information**

This paper presents the methodologies currently used across the Department. These different methodologies reflect the broad diversity in programs and missions. This paper is based on open-source research using information available on Department of Energy (DOE) websites as well as some open-source platforms.

6. **National Nuclear Security Administration (NNSA)**

Major missions of the National Nuclear Security Administration include:

- **Maintaining the Stockpile** - NNSA ensures the United States maintains a safe, secure, and reliable nuclear stockpile through the application of unparalleled science, technology, engineering, and manufacturing.
- **Nonproliferation** - NNSA works to prevent nuclear weapon proliferation and reduce the threat of nuclear and radiological terrorism around the world. The agency endeavors to prevent the development of nuclear weapons and the spread of materials or knowledge needed to create them.
- **Counter-terrorism** and **Counter-proliferation** - NNSA plays a key role in preventing, countering, and responding to a terrorist or other adversary with a nuclear or radiological device.
- **Powering the Nuclear Navy** - NNSA provides militarily effective nuclear propulsion plants and ensures their safe, reliable, and long-lived operation.

In support of these missions, the NNSA has established procedures to ensure that the planning, programming, budgeting, and evaluation (PPBE) activities of the NNSA comply with sound financial management principles, specifically to assess and determine whether progress has been made toward achieving identified performance measures at multiple levels within the NNSA.

The Office of Cost Estimating and Program Evaluation (NA-1.3) provides the NNSA Administrator with independent, data-driven analysis on all aspects of the Nuclear Security Enterprise, leading to better mission planning and performance. Accurately estimating costs, assessing alternatives, and evaluating NNSA’s program performance are vital to national security and the responsible expenditure of taxpayer dollars.

The NNSA is responsible for eight (8) Government Owned, Contractor Operated (GOCO) facilities and laboratories, including three (3) FFRDC national laboratories; all supported by M&O Contracts:

- Kansas City National Security Complex (KCP)
- Lawrence Livermore National Laboratory (LLNL) (FFRDC)

---

18 NNSA Missions: [https://www.energy.gov/nnsa/missions](https://www.energy.gov/nnsa/missions)
Every fiscal year, the NNSA completes an assessment of their management and operating (M&O) partners’ effectiveness in meeting the performance expectations as established by NNSA in NNSA NAP 540-3. This assessment is based on an evaluation of the annual Performance Evaluation and Measurement Plans (PEMPs) linked to each NNSA site. NNSA performance assessments are documented annually in a Performance Evaluation Report (PER), and award fee amounts are documented in a Fee Determination Memorandum. This involves assessment against standardized strategic performance goals outlined in an annual PEMP for each M&O Contract. For the period including Fiscal Years 2015-2020, the NNSA uses 6 standardized performance evaluation goal areas as the basis for award fee determination, including the following performance goals for each site (for FY 2020):

1) Mission Execution: Nuclear Weapons
2) Mission Execution: Nuclear Security
3) DOE & Strategic Partnership Projects Mission Objectives
4) Science, Technology, & Engineering (STE)
5) Mission Enablement
6) Mission Leadership

These goals are refined annually in the PEMP for each location. Supplemental Award Fee Definitions for NNSA Performance Evaluation and Master Plans (PEMP) are contained in NAP 54.3, Appendix I as discussed in Table 1:

---

22 NNSA releases Performance Evaluation Summary for Consolidated Nuclear Security, June 23, 2020:
<table>
<thead>
<tr>
<th>Rating</th>
<th>%</th>
<th>Supplemental Award Fee Rating Definitions For NNSA Performance Evaluation and Measurement Plan (PEMP)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excellent</td>
<td>91-100%</td>
<td>Contractor has exceeded almost all the objectives and key outcomes under the goals in the PEMP and has met overall cost, schedule, and technical performance requirements of the contract in the aggregate for the evaluation period. This performance level is evidenced by at least one significant accomplishment, or a combination of accomplishments that significantly outweigh very minor issues, if any. No significant issues in performance exist.</td>
</tr>
<tr>
<td>Very Good</td>
<td>76-90%</td>
<td>Contractor has exceeded many of the objectives and key outcomes under the goals in the PEMP and has met overall cost, schedule, and technical performance requirements of the contract in the aggregate for the evaluation period. This performance level is evidenced by accomplishments that greatly outweigh issues. No significant issues in performance exist.</td>
</tr>
<tr>
<td>Good</td>
<td>51-75%</td>
<td>Contractor has exceeded some of the objectives and key outcomes under the goals in the PEMP and has met overall cost, schedule, and technical performance requirements of the contract in the aggregate for the evaluation period. This performance level is evidenced by accomplishments that slightly outweigh issues. No significant issues in performance exist.</td>
</tr>
<tr>
<td>Satisfactory</td>
<td>No Greater than 50%</td>
<td>Contractor has met overall cost, schedule, and technical performance requirements of the contract in the aggregate as defined and measured against the objectives and key outcomes under the goals in the PEMP for the evaluation period. This performance level is evidenced by issues that slightly outweigh accomplishments.</td>
</tr>
<tr>
<td>Unsatisfactory</td>
<td>0%</td>
<td>Contractor has failed to meet overall cost, schedule, and technical performance requirements of the contract in the aggregate as defined and measured against the objectives and key outcomes under the goals in the PEMP for the award-fee evaluation period. This performance level is evidenced by issues that significantly outweigh accomplishments, if any.</td>
</tr>
</tbody>
</table>

The NNSA provides summary documents that feature easy-to-read and transparent assessment scorecards for each lab and site assessment. The summaries include links to the corresponding contract and the Performance Evaluation and Measurement Plan (PEMP). Performance Evaluation Reports (PERs) provide a detailed summary report detailing the award fee (via a scorecard) and providing specific comments against each performance objective/goal. Fee determination memorandums including ratings earned in each of the Accomplishments and issues for the six performance evaluation goals, at-risk fees available for each, and the final fees awarded by goal are listed in each M&O summary.25

---

7. **Office of Science (SC)**

The **Office of Science (SC)** supports scientific research for energy and the physical sciences both by directly supporting such research, for example, through grants to and cooperative agreements with universities, and by supporting the development, construction, and operation of scientific user facilities. The Office builds and maintain an array of large-scale scientific facilities at the DOE national laboratories.\(^{26}\) This includes SC administering management and operating (M&O) contracts at 10 national laboratory sites:

Indicate their websites

- **Ames Laboratory** in Ames, Iowa ([https://www.ameslab.gov/](https://www.ameslab.gov/))
- **Fermi National Accelerator Laboratory** in Batavia, Illinois ([https://www.fnal.gov/](https://www.fnal.gov/))
- **Lawrence Berkeley National Laboratory** in Berkeley, California ([https://www.lbl.gov/](https://www.lbl.gov/))

The Office of Science is the nation’s largest federal sponsor of basic research in the physical sciences and has been a major supporter of research in such key scientific fields as physics, materials science, and chemistry. The Office is also the lead federal agency supporting fundamental scientific research related to energy and sponsors research at hundreds of universities, national laboratories, and other institutions across the country.

Various methodologies are used by the Office of Science to evaluate programs. This includes (but not limited to):

- **Office of Project Assessment**
- **Laboratory Appraisal Process**
- **Other SC Programs**

7.1 **Office of Project Assessment**

The Office of Project Assessment provides independent advice to the Director of the Office of Science (SC) relating to those activities essential to constructing and operating major research

\(^{26}\) Office of Science: [https://www.energy.gov/science/mission](https://www.energy.gov/science/mission)
facilities. In addition, this office provides professional management and staff support regarding these functions to SC program offices.

The primary responsibilities of the Office of Project Assessment are:27

- Conducting technical, cost, schedule, and management peer reviews ("Lehman" reviews) of SC construction projects and large experimental equipment;
- Directing and supervising the development, initiation, and implementation of policies, plans, and procedures for design, fabrication, construction, commissioning, operation and decommissioning of research/conventional facilities and devices required to support the SC program offices; and,
- Representing the Director of Science in meetings with DOE, Office of Management and Budget (OMB), Congress, and other oversight or investigatory bodies on all matters involving the planning, design, construction, and operation of research facilities.

7.2 Laboratory Appraisal Process

SC stewards 10 of the 17 DOE National Laboratories, ranging from single-purpose laboratories like Fermi lab to broad, multi-program laboratories such as Argonne.28 The laboratories are managed and operated by Management and Operating (M&O) contracts, which are characterized by their special purpose.29 The work performed under M&O contracts is intimately related to DOE’s mission, is of a long-term and continuing nature, and, among other things, includes special requirements for work direction, safety, security, cost controls, and site management.

The Office of Laboratory Policy coordinates the laboratory appraisal process30 on behalf of the Director of the Office of Science. The laboratory appraisal process uses a common structure and scoring system across all its Laboratories. Structured around eight Performance Goals, it emphasizes the importance of delivering the science and technology necessary to meet the missions of DOE; of operating the Laboratories in a safe, secure, responsible, and cost-effective way; and of recognizing the leadership, stewardship and value-added provided by contractor managing the Laboratory. The eight Performance Goals are31:

---

29 M&O contracts are agreements under which the government contracts for the operation, maintenance, or support, on its behalf, of a government-owned or -controlled research, development, special production, or testing establishment wholly or principally devoted to one or more of the major programs of the contracting agency. See 48 C.F.R. § 17.601.
1. Mission Accomplishment (Delivery of S&T)
2. Design, Construction and Operation of Research Facilities
3. Science and Technology Project/Program Management
4. Leadership and Stewardship of the Laboratory
5. Integrated Environment, Safety and Health Protection
6. Business Systems
7. Facilities Maintenance and Infrastructure
8. Security and Emergency Management

Each Performance Goal is comprised of a small number of Objectives. Within each Objective, Science Programs and Site Offices can further identify a small number of “Notable Outcomes” that illustrate or amplify important features of the laboratory’s performance for the coming year. The Performance Goals, Objectives, and Notable Outcomes are documented at the beginning of each year in a Performance Evaluation and Measurement Plan (PEMP) that is appended to the respective Laboratory contract. Information regarding an individual PEMP may be obtained by contacting the appropriate SC Site Office.

Each year, SC conducts an evaluation of the scientific, technological, managerial, and operational performance of the contractors who manage and operate its ten national laboratories. It was designed to improve the transparency of the process, raise the level of involvement by the SC leadership, increase consistency in the way the laboratories are evaluated, and more effectively incentivize contractor performance by tying performance to fee earned, contract length, and the public release of grades.

SC follows a Science and Energy Lab approach to evaluate its M&O contractors that uses broad, office-wide performance criteria that are mostly subjective. These evaluations provide the basis for determining annual performance fees and the possibility of winning additional years on the contract through an “Award Term” extension. They also serve to inform the decisions that DOE makes regarding whether to extend or to compete the management and operating contracts when they expire.

The current laboratory appraisal process used by the SC has been in place since Fiscal Year 2006. It was designed to improve the transparency of the process, raise the level of involvement of SC leadership, increase consistency as to how laboratories are evaluated, and more effectively incentivize contractor performance by tying performance to fee earned, contract length, and the public release of performance grades.32

At the conclusion of each Fiscal Year, the S&T (Goals 1-3) performance of the Laboratory is evaluated by the organizations that fund work at the Laboratory. In addition to the SC science programs, SC solicits input from all organizations that spend more than $1 million at the Laboratory. This S&T input is weighted according to the dollars spent at the Laboratory. Each Site Office evaluates the Laboratory’s performance against the M&O Objectives (Goals 5-8). Site Offices and Science Programs provide input regarding the contractor’s performance with

32 Office of Science Appraisal Process and Scoring System: https://science.osti.gov/lp/Laboratory-Appraisal-Process
respect to Goal 4 to the SC leadership who subsequently determine the Laboratory’s score in this area. In determining these grades, the SC Science Programs and Site Offices consider the laboratory’s performance against the Notable Outcomes, defined in the PEMP, as well as other sources of performance information that becomes available to DOE throughout the year. These include independent scientific program and project reviews, external operational reviews conducted by the Government Accountability Office (GAO), DOE Inspector General (IG), and other parts of DOE, and the results of SC’s own oversight activities. The evaluation process includes end-of-year normalization meetings for all the Goals, during which rating organizations report their proposed scores/grades and work to ensure a consistent and fair scoring/grading approach across all ten Laboratories.

The SC appraisal process uses a five-point (0-4.3) scoring system with corresponding grades for the Performance Goals and Objectives. A grade of “B+” is awarded for performance at the Objective level that meets SC’s expectations for performance. SC intentionally set its expectations associated with a B+ very high, and does not equate performance below a B+ as necessarily unsatisfactory, but as offering opportunity for improvement. The grade for each of the Performance Goals is based on a weighted computation of the scores of the individual Performance Objectives identified for each Goal, and SC uses the resultant Performance Goal grades to create annual “Report Cards” for each Laboratory that are publicly available on the SC website. The scale SC uses for assigning scores and letter grades is provided in the table below.

Table 2: SC Score/Letter Grade Scale

*SC defines a grade of “B+” as “Meets Expectations.”

7.3 **Other SC Programs**

SC also sponsors other programs, including basic research at over 300 institutions across the country, including universities, national laboratories, nonprofits, and private sector institutions. Funding is awarded on a competitive basis using peer review. Research efforts range from single-investigator grants to large team-based projects.

SC administers research through six major program offices, spanning a broad range of disciplines:

---

• Advanced Scientific Computing Research,
• Basic Energy Sciences,
• Biological and Environmental Research,
• Fusion Energy Sciences,
• High Energy Physics, and,
• Nuclear Physics.

The **Office of Energy Efficiency and Renewable Energy (EERE)** conducts program evaluations to assess whether programs are meeting planned goals and achieving commercialization and market results. Evaluations identify opportunities for efficient and effective management of public investments. Evaluations also identify opportunities to improve programs to more effectively and efficiently manage public investments.

Technology development programs in DOE extensively and successfully utilize peer review to evaluate research and development (R&D) activities at the project and program levels. In addition to peer review, R&D Program Managers are encouraged to use other evaluation methods to obtain information on program effectiveness and realized benefits that cannot be provided using the peer review method.34

The potential benefits of periodically doing systematic studies using other R&D evaluation methods are considerable. Programs could:

- Generate additional important information for use in continuous program improvement
- Document knowledge benefits that are often unaccounted for when communicating programs’ value to stakeholders
- Document realized market benefits associated with past research successes
- Better answer questions about cost-effectiveness of the longer-term research

**EERE programs use a variety of evaluation methods** to quantify impacts, assess progress, and promote improvement.35 These methods include:

- **Outcome Evaluations**
- **Impact Evaluations**
- **In-Progress Peer Reviews**

As noted in the **Strategic Evaluation Planning** section, the type of evaluations performed depend on the evidence needed and questions that need to be answered. This includes a consideration of

34Overview of Evaluation Methods for R&D Programs: https://www.energy.gov/sites/prod/files/2015/05/f22/evaluation_methods_r_and_d.pdf
35 EERE Types of Evaluations: https://www.energy.gov/eere/analysis/types-evaluations
questions that if answered are expected to help provide the organization or program with evidence it can use to improve how it does business.

Performance measures are derived from various sources including the Office of Energy Efficiency and Renewable Energy's (EERE) Strategic Plans, Annual Operating Plans, etc., aligned with the elements of the SOW, and that directly support EERE’s strategic goals and commitments.

Performance measures consist of critical outcomes, performance objectives, and performance indicators. Critical Outcomes - The M&O Contractor for the National Renewable Energy Laboratory (NREL) is assessed against all elements of the SOW. EERE provides a proposed grade and a score from the corresponding numerical range for each Goal (see Table 3 below) for Letter Grade Scale). Each evaluation will measure the degree of effectiveness and performance of the Contractor in meeting the corresponding Objectives.

Table 3: EERE Scoring/Letter Grade Scale

To further support evidence building and informed decision-making, NREL developed OpenEI, which is a free and open knowledge sharing platform created to facilitate access to energy-related data, models, tools, and information to make energy-related data and information searchable, accessible, useful to both people and machines. All users can search, edit, contribute, and access data in OpenEI, which contains a wide variety of topics ranging from renewable energy, to policy and regulations, to analyzed data and raw data.

In addition, EERE’s Strategic Analysis Team (SA) performs cross-cutting, gap-filling, and corporate analysis associated with the research, development, demonstration, and deployment of EERE technologies. SA develops tools and methods to enable consistent evaluation and analysis across EERE, and serves a leadership role in related analysis across DOE, other government

36 DE-AC36-08GO28308 Modification M1130: https://www.nrel.gov/extranet/primecontract/assets/pdfs/m1130_section_b.pdf

agencies, and external stakeholders. EERE evaluation publications can be found here: https://www.energy.gov/eere/analysis/eere-evaluation-publications.

9. **Office of Electricity (OE)**

The Office of Electricity (OE) provides leadership to ensure that the Nation’s energy delivery system is secure, resilient, and reliable. The office includes three divisions:

<table>
<thead>
<tr>
<th>Division</th>
<th>Priorities</th>
</tr>
</thead>
</table>
| Advanced Grid Research and Development      | • **Smart Grid Research and Development** supports activities to adapt and integrate the use of advanced digital technology to modernize the nation’s electric delivery network for enhanced operational intelligence and connectivity. The enhanced connectivity will allow different applications, systems, and devices to be interoperable with one another, through a combined use of open system architecture, as an integration platform, and commonly-shared technical standards and protocols for communications and information systems.  
• **Microgrid Research and Development** supports activities to improve microgrid functionality and operations, including development and improvement of key microgrid components. Microgrids are localized grids that can disconnect from the traditional grid to operate autonomously and help mitigate grid disturbances to strengthen grid resilience.  
• **Energy Storage** supports research in basic materials forming battery, electrolytic capacitor, and flywheel systems which need to be improved to improve energy storage and cycling capabilities and reduce costs. It also supports activities in advanced component development and field testing of storage systems in diverse applications to bring these technologies closer to market. This research will help lower life-cycle costs, improve performance, and reduce siting issues due to reduced size and environmental impact. |
| Electricity Delivery                        | Support the Energy Policy Act of 2005 authorities among other related energy authorities, transmission, Presidential permits, and technical assistance.                                                                                                                                                                                                                       |
| Electricity Delivery Cybersecurity Research | Strengthen electricity infrastructure against cyber-related threats and mitigate vulnerabilities aligned with OE’s R&D programs                                                                                                                                                                                                                                                      |
| and Development                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Through its Research, Development, and Deployment work, OE is pursuing technologies to improve grid reliability, efficiency, flexibility, functionality, and security; and making investments and sponsoring demonstrations aimed at bringing new and innovative technologies to maturity and helping them transition to market. Most of OE’s efforts today are being conducted through the Grid Modernization Initiative. OE is also laying the framework for a modern electricity system by contributing to the development and implementation of electricity policy at the Federal and State level.

Prior program valuations/peer reviews of OE programs include:

**TRANSFORMER RESILIENCE AND ADVANCED COMPONENTS**

- 2019 Transformer Resilience and Advanced Components Program Review, Knoxville, TN, August 13-14, 2019

**TRANSMISSION RELIABILITY**

- 2018 Reliability & Markets Program Peer Review, June 5, 2018
- 2018 Transmission Reliability Program Peer Review, June 6, 2018
- 2017 Reliability & Markets Agenda and Presentations, Washington, DC, June 14, 2017
- 2016 Transmission Reliability Program Peer Review, Washington, DC, June 7-8, 2016

**NOTE:** Evaluations conducted prior to 2015 can be found here: [https://www.energy.gov/oe/reviews-archived](https://www.energy.gov/oe/reviews-archived)

The Office of Cybersecurity, Energy Security, and Emergency Response (CESER) addresses the emerging threats of tomorrow while protecting the reliable flow of energy to Americans today by improving energy infrastructure security and supporting the Department of Energy’s (DOE) national security mission. CESER’s focus is preparedness and response activities to natural and man-made threats, ensuring a stronger, more prosperous, and secure future for the Nation. CESER’s cybersecurity priorities are:

- **Priority 1: Increase Cyber Visibility of Critical Energy Systems and Networks** – We are continuing to advance technologies and systems that increase the visibility of cyber threats targeting energy companies’ industrial controls systems across the nation. With enhanced cyber visibility, detection, monitoring capabilities, we can respond and curtail confront malicious cyberattacks before they compromise critical systems.
- **Priority 2: Build Security Into Future, Clean Energy Grid** – As we transition to a 100%
clean energy economy, it is critical to build effective cybersecurity measures into the evolving grid to ensure a reliable flow of energy across the nation. CESER and its stakeholders are ensuring renewable technologies – from wind to solar – will be able to deliver a high volume of energy while addressing grid vulnerabilities.

- **Priority 3: Manage Supply Chain Risks in Digital Components of Nation’s Critical Energy Infrastructure** – Digital components in our national critical infrastructure are increasingly becoming the strategic target for adversary nations. We’re partnering across the energy sector to identify high priority digital components prevalent in the nation’s critical energy systems, perform expert testing, and share information about vulnerabilities in the digital supply chain.

- **Priority 4: Strengthen the Current and Future Energy Cyber Workforce** – A highly skilled cybersecurity workforce across the energy sector is critical to protecting the nation’s energy systems. CESER is developing exercises, trainings, and resources that improve preparedness and coordination across governments and industry, while promoting a robust cybersecurity education for the next generation of cyber professionals. We are also utilizing Cyber-Informed Engineering – a methodology to ensure that cybersecurity is a core component in technologies from ideation to deployment.

- **Priority 5: Establish Policies, Procedures, and Capabilities to Enable Cyber Preparedness and Incident Response** – Through risk-based energy security planning and strategic partnerships across a broad range of stakeholders, CESER is establishing policies, procedures, and capabilities needed to improve energy sector cyber resilience, address new threats, conduct more efficient and effective response, and mitigate disruptions to energy infrastructure in case of a cyberattack.

These priorities – as well as DOE’s [Multiyear Plan for Energy Sector Cybersecurity](#) – drive the following CESER initiatives:

- **CESER Electromagnetic Pulse (EMP) Activities** – CESER accelerated efforts to address high-altitude electromagnetic pulse (HEMP) and geomagnetic disturbance (GMD) risks to the Nation’s energy system.

- **Cybersecurity for Energy Delivery Systems Research and Development** – CESER is investing in the ideas of partners in the Energy Sector, the cybersecurity community, academia, state and local governments, and the National Laboratories to reduce the risk of energy disruptions due to cyber events.

- **Cybersecurity Testing for Resilient Industrial Control Systems** – CESER works closely with energy sector owners and operators to better detect risks and mitigate them.

- **Cybersecurity for the Operational Technology Environment (CyOTE)** – Through CyOTE™, CESER looks to further its vision of secure and reliable energy delivery systems nationwide.

- **Department of Energy CyberForce Program** – The U.S. Department of Energy’s CyberForce Competition™ challenges the next generation of cyber professionals to actively secure critical control.

- **Clean Energy Cybersecurity Accelerator Program** – As DOE works towards a zero-
emissions future, CESER is also tackling the growing cyber threats to the U.S. energy sector.

11. **Office of Fossil Energy and Carbon Management (FEHM)**

The **Office of Fossil Energy and Carbon Management (FEHM)** manages the **Strategic Petroleum Reserve Office (SPRO) M&O Contract**. The **Strategic Petroleum Reserve (SPR)**, the world’s largest supply of emergency crude oil, consisting of salt caverns storing crude oil in Texas and Louisiana. This was established primarily to reduce the impact of disruptions in supplies of petroleum products and to carry out obligations of the United States under the international energy program. FEHM manages this support using an M&O Contract.

**FEHM follows a Site Specific approach to evaluate its M&O contractors** that uses detailed performance criteria. Under this approach, most performance criteria are objective criteria, and a few are broader, subjective criteria. FEHM’s objective performance criteria are defined based on quantifiable metrics and performance targets. The Available Award Fee shall be established considering the level of complexity, difficulty, cost effectiveness, and risk associated with specific objectives/incentives defined in the **Performance Evaluation and Measurement Plan (PEMP)**. The Performance Evaluation and Measurement Plan(s) sets out the criteria upon which the Contractor will be evaluated relating to any technical, schedule, management, and/or cost objectives selected for evaluation. These criteria are generally objective, but may also include subjective criteria.

12. **Office of Nuclear Energy (NE)**

The **Office of Nuclear Energy’s (NE)** primary mission is to advance nuclear power as a resource capable of making major contributions in meeting U.S. energy supply, environmental, and energy security needs.

NE manages the **Idaho National Laboratory (INL) M&O Contract**. INL is the nation’s leading center for nuclear energy research and development. INL works in each of the strategic goal areas of DOE: energy, national security, science, and environment. NE follows a Science and

40 Contract DE-FE0011020, Modification 0021, Page 3, Paragraph B.2.(b) Total Available Award Fee: https://www.spr.doe.gov/reports/FFPOContract/21/Attachment%20to%20Mod%200021.pdf
Energy Lab approach to evaluate its M&O contractor that uses broad, office-wide performance criteria that are mostly subjective.  

This performance evaluation provides a standard by which to determine whether the M&O contractor is acting in a managerially and operationally responsible manner and is meeting the mission requirement and performance expectations/objectives of the Department as stipulated within their contract.

In partnership with the Contractor, the DOE Office of Nuclear Energy (NE) and DOE-Idaho Operations Office (DOE-ID) define the measurement basis that serves as the Contractor’s performance-based evaluation. The Performance Goals, Performance Objectives and set of Notable Outcomes are developed in accordance with expectations set forth within the contract. The Notable Outcomes for meeting the Objectives set forth within this plan have been developed in coordination with NE program offices as appropriate.

This performance-based approach focuses the evaluation of performance against Performance Goals. Progress against these Goals is measured using a set of Objectives. The success of each Objective will be measured based on demonstrated performance by the INL, and on a set of Notable Outcomes that focus Laboratory leadership on the specific items that are the most important initiatives and highest risk issues the Laboratory must address during the year. These Notable Outcomes should be objective, measurable, and results-oriented to allow for a definitive determination of whether the specific Outcome was achieved at the end of the year.

The DOE policy for implementing performance-based management, as implemented at INL, are detailed in annual Performance Evaluation and Measurement Plans, and include the following guiding principles:

- Performance Objectives are established in partnership with affected organizations and are directly aligned to the DOE strategic goals;
- Resource decisions and budget requests are tied to results; and
- Results are used for management information, establishing accountability, and driving long-term improvements.

---

For FY 19 the following performance goals were established for the INL contract:

Table 5: FY 19 Performance Goals for INL

<table>
<thead>
<tr>
<th>Performance Goal</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>GOAL 1.0 Efficient and Effective Mission Accomplishment</td>
<td>70%</td>

For the most part, these performance criteria have remained unchanged from fiscal year 2007, GAO-19-5 Management and Operating Contracts, p. 99: [https://www.gao.gov/assets/700/697103.pdf](https://www.gao.gov/assets/700/697103.pdf)

In 2005, leaders from both parties in Congress asked the National Academies to “identify the most urgent challenges the U.S. faces in maintaining leadership in key areas of science and technology,” as well as specific steps policymakers could take to help the U.S. compete, prosper, and stay secure in the 21st Century. In its report for Congress, *Rising Above the Gathering Storm: Energizing and Employing America for a Brighter Economic Future*, the National Academies called for decisive action, warning policymakers that U.S. advantages in science and technology – which made the country a world leader for decade – had already begun to erode. The report recommended that Congress establish an Advanced Research Projects Agency within the U.S. Department of Energy (DOE) modeled after the successful Defense Advanced Research Projects Agency (DARPA) – the agency credited with such innovations as GPS, the stealth fighter, and computer networking.

Authorized via Public Law 110-69, *America Creating Opportunities to Meaningfully Promote Excellence in Technology, Education, and Science Act*, ARPA-E’s goals include:

- Enhancing the economic and energy security of the United States through the development of energy technologies that result in:
  - Reductions of imports of energy from foreign sources;
  - Reductions of energy-related emissions, including greenhouse gases; and
  - Improvements in the energy efficiency of all economic sectors; and
- Ensuring that the United States maintains a technological lead in developing and deploying advanced energy technologies.

ARPA-E funds a wide range of *individual technology projects* (1,149). Typically, these projects are organized into focused technology *programs* (69) that revolve around a common technical area. All ARPA-E programs and projects are created through a process of rigorous debate over the technical and scientific merits and challenges of potential research areas. ARPA-E Program Directors are constantly exploring potential topics for future program areas.

ARPA-E also issues periodic open funding solicitations\(^47\) for a broader range of projects that do not fall into a single technical area to address the full range of energy-related technologies, as well as targeted funding solicitations aimed at supporting America’s small business innovators. ARPA-E also funds projects on a rolling basis through "special projects" funding opportunities that are meant to inform potential new program areas for the future.

ARPA-E *Exploratory Topics* are developed through the FOAs, and include:

- **Exploratory Topic A: Extremely Durable Concretes and Cementitious Materials** –

\(^47\) OPEN Programs | arpa-e.energy.gov

---

\(^{13}\) DOE Program and Functional Offices Evaluation/Evidence-Building Activities, FY 2023 Evaluation Plan, Learning Agenda, and Capacity Assessment
Extremely durable concretes and cementitious materials to tackle technology challenges in the development of widely applicable concrete and cement.

- **Exploratory Topic B: Downhole Tools to Enable Enhanced Geothermal Systems** – Novel, low-cost sensor technologies that can help mitigate risks and lower costs for deep, extremely hot enhanced geothermal systems (EGS) by better characterizing rock formations and fluid enthalpy at depth.

- **Exploratory Topic C: Leveraging Innovations Supporting Nuclear Energy** – Advancements in nuclear facility sensors, tools, analytics, and controls.

- **Exploratory Topic D: Diagnostic Resource Teams to Support the Validation of Potentially Transformative Fusion-Energy Concepts** – State-of-the-art diagnostic measurements to be made on potentially transformative, ARPA-E-supported fusion-energy concepts to validate their performance, uncover problems, and guide research priorities.

- **Exploratory Topic F: High Value Methane Pyrolysis** – High value methane pyrolysis, including approaches that can economically convert natural gas to both fuel cell-grade hydrogen and higher value carbon materials (e.g., carbon fiber) with a low CO2 footprint.

- **Exploratory Topics G & T: Supporting Entrepreneurial Energy Discoveries** – An ongoing funding opportunity for a range of the most innovative and unconventional ideas across the energy technology spectrum, exploring high-risk R&D that could lead to the development of disruptive technologies.

- **Exploratory Topic H: Establishing Validation Sites for Field-Level Emissions Quantification of Agricultural Bioenergy Feedstock Production** – “Ground truth” solutions to establish measurements and protocols for emissions monitoring at the field level to create publicly available, open-source, high-resolution datasets to support testing and validation of emerging biofuel production monitoring technologies.

- **Exploratory Topic I: Electricity System Models for Carbon Capture Resources** – Electricity system models and associated analysis that can inform technology development for new grid resources.

- **Exploratory Topic J: Biotechnologies to Ensure a Robust Supply of Critical Materials for Clean Energy** – Novel approaches in microbiology, synthetic biology, and process engineering in support of addressing mining industry challenges to ensure a robust mineral supply chain for clean energy applications.

- **Exploratory Topic K: Recycle Underutilized Solids to Energy** – Processes to convert plastics, rubber, composites, and paper to create a high-energy content liquid that can be easily shipped to and stored at points of aggregation.

- **Exploratory Topic L: Insulating Nanofluids and Solids to Upgrade our Large Aging Transformer Equipment** – Vital insulating elements in large power transformers (LPTs) to increase their durability, reliability, and resilience.

- **Exploratory Topic M: Mining Incinerated Disposal Ash Streams** – Recovery and reclamation of critical materials (CMs) and other valuable elements from Municipal Solid Waste Incineration (MSWI) ashes.

- **Exploratory Topic N: Waste into X** – Improvement of the physical or chemical properties of Municipal Solid Waste Incineration (MWSI) ash into valuable products.

- **Exploratory Topic O: Direct Removal of Carbon Dioxide from Oceanwater** – Direct
removal of carbon dioxide from oceanwater and other natural waters by addressing challenges and opportunities specifically found in operation in an oceanic environment.

- **Exploratory Topic P: Direct Removal of Carbon Dioxide from Ambient Air** – Robust, energy efficient, and low-cost strategies for direct removal of carbon dioxide from ambient air.

- **Exploratory Topic Q: Connecting Aviation By Lighter Electric Systems** – Medium-voltage (>10 kV) power distribution cables, connectors, and circuit breakers for fully electric aviation applications.

- **Exploratory Topic R: Lowering CO₂: Models to Optimize Train Infrastructure, Vehicles, and Energy Storage** – Planning tools for identification, evaluation, and prioritization of energy storage-related technology developments whose deployment would significantly reduce GHG emissions from the rail freight sector.

- **Exploratory Topic S: Topology Optimization and Additive Manufacturing for Performance Enhancement of High Temperature and High Pressure Heat Exchangers** – Design and manufacture of high-temperature, high-pressure, and compact heat exchangers.

- **Exploratory Topic U: Sulfur Hexafluoride (SF₆)-Free Routes for Electrical Equipment** – Technologies aimed at reducing sulfur hexafluoride (SF6) emissions from the electric transmission and distribution sector.

The [Seeding Critical Advances for Leading Energy technologies with Untapped Potential (SCALEUP) program](#) builds on ARPA-E’s primary research and development focus to support the scaling of high-risk and potentially disruptive new technologies across the full spectrum of energy applications. The goal of the program is to support ARPA-E-funded technologies, past and present, transition from proof-of-concept prototypes to commercially scalable and deployable versions of the technology and be well-positioned for investment from the private sector.

The ARPA-E [Technology-to-Market program](#) provides practical training and business information to equip awardees with a clear understanding of market needs to guide technical development. [Technology-to-Market milestones](#) include:

- Secure IP on inventions
- Learning about markets & applications
- Product definition, refinement, and validation
- Cost-performance model
- Competitive analysis
- Identify & engage with potential customers / partners
- Knowledge of regulatory issues
- Knowledge of production processes
- Identify scalability risks
- Identify / engage suppliers
- Map out next stage goals and resource needs
- Identify appropriate next stage funding sources
• Engage with next stage funding sources
• Identify / engage resources for tech to market work

In addition, ARPA-E hosts the annual Energy Innovation Summit, which brings together leaders from academia, government, and business to discuss the foremost energy issues, showcases the latest technology innovations, and cultivates relationships to help advance cutting-edge technologies toward deployment. In 2019, the Summit hosted nearly 1,700 registered for the Summit, from 47 states and 16 countries, and featured nearly 300 transformational energy technologies and innovations. ARPA-E will host its twelfth Energy Innovation Summit in March 2022.

14. U.S. Energy Information Administration (EIA)

The U.S. Energy Information Administration (EIA) collects, analyzes, and disseminates independent and impartial energy information to promote sound policymaking, efficient markets, and public understanding of energy and its interaction with the economy and the environment. EIA provides a wide range of information and data products covering energy production, stocks, demand, imports, exports, and prices and prepares analyses and special reports on topics of current interest:

48 Annual Reports | arpa-e.energy.gov
The **Office of Energy Analysis** analyzes energy supply, demand, and prices including the impact of financial markets on energy markets; prepares reports on current and future energy use; analyzes the impact of energy policies; and develops advanced techniques for conducting energy information analyses. This office also oversees the planning and execution of EIA’s analysis and forecasting programs to ensure that EIA models, analyses, and projections meet the highest standards of relevance, reliability, and timeliness.

In addition, EIA is committed to enhancing the value of its free and open data by making it available through an **Application Programming Interface (API)** and open data tools to better serve our customers. The data in the API is also available in bulk file, in Excel via the add-in, in Google Sheets via an add-on, and via widgets that embed interactive data visualizations of EIA data on any website. By making EIA data available in machine-readable formats, the creativity in the private, the non-profit, and the public sectors can be harnessed to find new ways to innovate and create value-added services powered by public data.

Currently, EIA’s API contains the following main data sets:

• 132,331 coal series and associated categories
• 3,872 Short-Term Energy Outlook series and associated categories
• 368,466 Annual Energy Outlook series and associated categories
• 92,836 International energy series

The EIA API is offered as a free public service, although registration is required.

The EIA Administrator, as head of a principal statistical agency and DOE’s Statistical Official, is DOE/EIA’s principal representative on Interagency Council on Statistical Policy (ICSP), which is dedicated to dedicated to improving the quality of Federal statistics.

15. **Loan Programs Office (LPO)**

The [Loan Programs Office (LPO)](https://www.energy.gov) finances large-scale, all-of-the-above energy infrastructure projects in the United States. LPO administers three distinct loan programs, but each offers a similar value to borrowers:

1. Provide first-of-a-kind projects and other high-impact energy-related ventures with access to debt capital that private lenders cannot or will not provide.
2. Provide flexible, custom financing that helps to meet the specific needs of individual borrowers.
3. Encourages early engagement and is a valuable partner to applicants throughout the entire lifetime of a project.

Once LPO closes a loan or loan guarantee, projects are monitored and evaluated throughout project development, construction, commissioning, and operation until the loan has been repaid in full. LPO’s team of financial, technical, environmental, and legal professionals is dedicated to advancing an all-of-the-above energy strategy that avoids, reduces, or sequesters greenhouse gases.

After financial close or first funding, responsibility for managing a project transfers from the LPO Origination Division to the Portfolio Management Division (PMD). PMD provides ongoing monitoring and oversight to ensure that the construction and completion phase of a project is executed in accordance with the terms and conditions of the loan documents. PMD is also...

---

49 [DOE-LPO-Brochure-2020-AA](https://energy.gov)
responsible for maintaining compliance with the loan documents terms and conditions after project completion. Some of PMD’s responsibilities include, but are not limited to, monitoring borrower activities to ensure compliance with the loan documents; monitoring and analyzing project costs, schedule, and performance quality; and review borrowers requests for amendments, consents, or waivers to the loan documents.

Technical monitoring activities performed by LPO’s Technical and Project Management Division (TPMD) during construction and after project completion are focused on monitoring that the project is completed on budget, on schedule, and at a performance level that produces revenue sufficient to repay the loan.

An assigned project engineer provides technical monitoring support for specific projects. The federal project engineer retains the services of an independent engineer to perform detailed project monitoring activities, including validation of project status, evaluation of project risk, review and certification of milestone completion, evaluation of payment requests, and evaluation of change requests. The federal project engineer serves in a technical oversight capacity, directing and reviewing the activities of the independent engineer, summarizing, and interpreting borrower and independent engineer technical input for submission to PMD, and recommending responses to borrower requests.

LPO publishes an Annual Portfolio Status Report for each FY. The latest can be found here: [LPO21-002-APSR-2020-v11 (energy.gov)].

16. Office of Environmental Management (EM)

The DOE uses corporate performance measures to assess whether it is meeting its cleanup mission. The Office of Environmental Management (EM) assigns specific measures to each site that are tailored to the unique nature and scope of each area’s contamination and cleanup work. Progress against these measures at a specific site is a confirmable indication of progress towards EM’s cleanup goals and priorities Completion of all of the corporate performance measures result in completion of that site.\(^5\)

EM, Congress, and the public routinely monitor and evaluate cleanup progress using corporate performance measures throughout the year. These quantitative indicators focus on the effectiveness of risk-reducing actions that lead to completion of site cleanup. Each cleanup process must be consistent with each site’s individual baseline and milestones. The corporate measures (i.e., those relating to the entire DOE-EM complex) are tracked in the context of the total measure (life-cycle) necessary to complete cleanup of each site, as well as the EM program as a whole. EM annual performance results can be found in the Department of Energy Annual Performance Reports.

\(^5\) Office of Environmental Management, Budget and performance: [https://www.energy.gov/em/services/program-management/budget-performance#:~:text=The%20Office%20of%20Environmental%20Management%20Management%20Congress%20and%20the,a%20to%20completion%20of%20cleanup].
EM manages cleanup contracts at the following sites:\(^{51}\)

- [Brookhaven National Laboratory](https://www.bnl.gov/world/)
- [Energy Technology Engineering Center](https://www.etec.energy.gov/)
- [Hanford Office of River Protection](https://hanford.gov/page.cfm/orp)
- [Hanford Richland Operations Office](https://www.hanford.gov/page.cfm/RL)
- [Idaho Operations Office](https://www.energy.gov/ne/nuclear-facility-operations/idaho-operations-office)
- [Lawrence Livermore National Laboratory](https://www.llnl.gov/llnl_search/site/cleanup)
- [Los Alamos Field Office](https://www.energy.gov/em-la/environmental-management-los-alamos-field-office)
- [Moab UMTRA Project](https://www.gjem.energy.gov/)
- [Nevada National Security Site](https://www.nnss.gov/pages/about.html)
- [Oak Ridge](https://www.emcbe.doe.gov/seb/orrcc/)
- [Paducah](https://www.energy.gov/pppo/paducah-site)
- [Portsmouth](https://www.energy.gov/pppo/portsmouth-site)
- [Sandia National Laboratory](https://www.sandia.gov/)
- [Savannah River Site](https://www.srs.gov/general/srs-home.html)
- [Separations Process Research Unit (SPRU)](https://www.spru.energy.gov/)
- [West Valley Demonstration Project](https://www.wv.doe.gov/)

EM manages cleanup at the following two sites through M&O Contracts:

- [Savannah River Site](https://www.energy.gov/pppo/portsmouth-site) (EM Operated in conjunction with NNSA)
- [Waste Isolation Pilot Plant (WIPP)](https://www.emcbe.doe.gov/seb/orrcc/)

EM also manages a national laboratory through an M&O Contract:

- [Savannah River National Laboratory](https://www.srs.gov/general/srs-home.html)

Additionally, EM provides funding (including award fee for defined performance goals) for the [Los Alamos National Laboratory](https://www.lanl.gov/) (managed by NNSA).

The [Savannah River National Laboratory (SRNL)](https://www.srs.gov/general/srs-home.html) is the DOE Office of Environmental Management (EM) national laboratory, and its resources are used to assist in the cleanup of the Cold War legacy waste for which EM is accountable. SRNL works collaboratively with other DOE laboratories to deploy technologies critical to environmental remediation and risk

---

\(^{51}\) Cleanup Sites: [https://www.energy.gov/em/mission/cleanup-sites](https://www.energy.gov/em/mission/cleanup-sites)
reduction; nuclear materials processing and disposition; nuclear detection, characterization, and assessments; and gas processing, storage, and transfer systems.  

The Savannah River National Laboratory Policy Office (as known as the EM Laboratory Policy Office (EM LPO)) sponsors and coordinates the involvement of national laboratories in support of the EM mission activities, in accordance with the EM National Laboratory Governance Framework for the Savannah River National Laboratory (SRNL), which includes the charter for the EM National Laboratory Network (EMNLN). The EM LPO leads oversight and management of SRNL in partnership with the National Nuclear Security Agency (NNSA) Office of Policy with support from the EM and NNSA Savannah River Site/Field Offices.

The table below provides the evaluation approach for the award fee portion of the cleanup contracts. This is the same for all contracts and is out of the FAR.

Table 9: EM Award Fee Adjectival Ratings (based on FAR 16.401)

<table>
<thead>
<tr>
<th>Award Fee Adjectival Rating</th>
<th>Award-Fee Pool Available To Be Earned</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excellent</td>
<td>91-100%</td>
<td>Contractor has exceeded almost all the significant award-fee criteria and has met overall cost, schedule, and technical performance requirements of the contract in the aggregate as defined and measured against the criteria in the award-fee plan for the award-fee evaluation period.</td>
</tr>
<tr>
<td>Very Good</td>
<td>76-90%</td>
<td>Contractor has exceeded many of the significant award-fee criteria and has met overall cost, schedule, and technical performance requirements of the contract in the aggregate as defined and measured against the criteria in the award-fee plan for the award-fee evaluation period.</td>
</tr>
<tr>

The Office of the Inspector General (OIG) strengthens the integrity, economy and efficiency of the Department’s programs and operations by deterring and detecting fraud, waste, abuse, and mismanagement. OIG audit and inspection reports can be found here: [https://www.energy.gov/ig/calendar-year-reports](https://www.energy.gov/ig/calendar-year-reports).

18. **Power Marketing Administrations**

The federal government, through the Department of Energy, operates four regional Power Marketing Administrations (PMAs) including - Bonneville Power Administration (BPA), Western Area Power Administration (WAPA), Southeastern Power Administration (SEPA), and Southwestern Power Administration (SWPA) – which operate electric systems and sell the electrical output of federally owned and operated hydroelectric dams in 34 states.\(^5\)

Organizationally, the Power Marketing Administrations are aligned with the Office of Electricity (OE).\(^6\)

The PMAs are unique in that they primarily use power rates to pay annual expenditures, such as operating and maintenance costs, interest costs, and the cost of power purchased from other utilities for resale. Each PMA will prepare and publish annually a power repayment study for each power system. Each power repayment study consists of two parts, historical data, and future data (forecasts). The development of future data requires the forecast of revenues, expenses and investment as detailed in DOE Order RA 6120-2.\(^7\) Rates must also be sufficient to repay debt, including the appropriations that financed completed generation and transmission facilities.\(^8\)

---

\(^5\) The Power Marketing Administrations: Background and Current Issues, March 1, 2019, Congressional Research Service, R45548: [https://fas.org/sgp/crs/misc/R45548.pdf](https://fas.org/sgp/crs/misc/R45548.pdf)

\(^6\) Power Marketing Administrations: [https://www.energy.gov/ea/power-marketing-administrations](https://www.energy.gov/ea/power-marketing-administrations)

\(^7\) Office of Electricity: [https://www.energy.gov/oe/office-electricity](https://www.energy.gov/oe/office-electricity)

\(^8\) DOE O RA 6120-2, September 20, 1979: [https://www.swpa.gov/pdfs/ra6120-2.pdf](https://www.swpa.gov/pdfs/ra6120-2.pdf)

The PMAs determine the adequacy of rates by performing annual reviews of their projected costs and revenues, using processes and assumptions that are to identify and factor into rates, costs that are legally recoverable, while keeping rates as low as possible. Southwestern, Southeastern, and most Western projects make this determination through power repayment studies (PRS); Bonneville uses a revenue requirement study (RRS). These studies analyze historical data and project estimated future costs and revenues as a key part of rate setting. The primary goal of the review is to determine whether existing rates will generate sufficient revenue to recover identified costs over the period under review.63

18.1 **Bonneville Power Administration (BPA)**

BPA has created a [Strategic Plan](https://www.bpa.gov/StrategicPlan/Pages/Strategic-Plan.aspx) centered on what BPA intends to do – with input from the region – in the near term to deliver on their public responsibilities. This strategic plan is updated with a [Strategic Progress Update](https://www.bpa.gov/StrategicPlan/StrategicPlan/2020-Strategic-Update.pdf).65

BPA also conducts an [Integrated Program Review](https://www.bpa.gov/Finance/FinancialPublicProcesses/IPR/2020IPR/20200612-BP-22-IPR-Initial-Detailed-Publication.pdf) (IPR), which plays a significant role in BPA’s overall financial planning process. It provides the public an opportunity to review and comment on BPA’s spending levels for its capital and expense programs before establishing them in rate cases. This 2018 Financial Plan includes targets for expense program spending levels, which are described in the financial health objectives.67

The IPR occurs every 2 years, before each rate case, giving interested parties an opportunity to review and comment on BPA’s proposed spending levels. The IPR integrates both long-term capital forecasts and near-term program spending levels for the next rate period into one forum. The final spending levels will serve as a foundation for developing the power and transmission rates for the next rate period. BPA incorporates program plans in 4 areas:

- **Power**
- **Transmission**
- **Energy Efficiency**
- **Environment, Fish & Wildlife**

---

64 Bonneville Power Administration Strategic Plan, 2018-2022: [https://www.bpa.gov/StrategicPlan/Pages/Strategic-Plan.aspx](https://www.bpa.gov/StrategicPlan/Pages/Strategic-Plan.aspx)
65 Bonneville Power Administration, 2020 Strategic Update: [https://www.bpa.gov/StrategicPlan/StrategicPlan2020-Strategic-Update.pdf](https://www.bpa.gov/StrategicPlan/StrategicPlan2020-Strategic-Update.pdf)
BPA incorporates the program plan framework into the IPR. Operating plans and program plans provide a 2-year comprehensive and integrated view of the business, workforce, and financial performance of each program.  

18.2 **Southeastern Power Administration (SEPA)**

The Southeastern Power Administration (SEPA) constantly evaluates and works to improve execution of their program. This includes evaluation of the workforce, facilities and operating systems management that support their functions. This includes awareness of overhead expenses associated with program execution and management of those expenses and their impact on power rates. Program reporting is via annual reports, which discusses program status and financial performance.

18.3 **Southwestern Power Administration (SWPA)**

The Southwestern Power Administration’s (SWPA’s) mission is to market and reliably deliver Federal hydroelectric power with preference to public bodies and cooperatives. As one of four Power Marketing Administrations in the United States, SWPA markets hydroelectric power in Arkansas, Kansas, Louisiana, Missouri, Oklahoma, and Texas from 24 U.S. Army Corps of Engineers multipurpose dams with a combined generating capacity of approximately 2,193 MW.

The SWPA announced its new Strategic Plan in October 2020. This Strategic Plan, focused on their vision for SWPA both the short and long-term providing a pathway to future workforce development, operations, partnerships, and evolving services. This plan is coupled with an annual SWPA Performance Plan – including a Goal Overview. SWPA details performance in SWPA Annual Reports (with the 2018 Report cited here).

18.4 **Western Area Power Administration (WAPA)**

The Western Area Power Administration’s (WAPA) mission to market and deliver clean, renewable, reliable, cost-based federal hydroelectric power and related services. WAPA provides program status and reporting via annual reports. Status is based on objectives laid out

---

71 Southwest Power Administration, Strategic Plan, October 2020: [https://swpa.gov/StrategicPlan.aspx](https://swpa.gov/StrategicPlan.aspx)

in the WAPA Tactical Action Plan, WAPA has created a website (called The Source), which offers a one-stop shop for financial and operational information. With the latest expansion below, WAPA partnered with customers to determine data elements and information that would be most helpful to understand cost drivers and expenditures. Results are also released by quarter, providing performance data based on established goals. An example report is linked here.

19. Departmental Administration

19.1 Office of Congressional and Intergovernmental Affairs (CI)

The Office of Congressional and Intergovernmental Affairs (CI) is dedicated to its mission of providing guidance on legislative and policy issues, informing constituencies on energy matters, and serving as a liaison between the Department, Congress, State, local, and Tribal governments, as well as other Federal agencies and stakeholder groups.

19.1.1 Congressional Affairs

Serving as a central point of contact for interactions on congressional matters, the congressional affairs team offers expertise in coordinating and directing the legislative programs of the Department, as well as the significant relationships between Departmental officials and Members of Congress. Providing counsel, advice, and support to the Secretary of Energy and senior Departmental managers on all congressional initiatives, Congressional Affairs experts also manage the Senate confirmation process for the Department’s Presidential appointments, coordinate the appearances of Departmental witnesses at Congressional hearings, and ensure the efficient and timely notification of Departmental activities to congressional stakeholders.

19.1.2 Intergovernmental and External Affairs

The Office of Intergovernmental and External Affairs (IGEA) serves as the Departmental interface for state, tribal and local governments to ensure easy and timely access to relevant programs, technological assistance, funding opportunities and other DOE resources. The IGEA team seeks to proactively engage with elected leaders, their staff, related associations, and relevant stakeholders to ensure that their views are considered as part of the Department's decision-making process. These experts also provide oversight of the Department’s Indian Policy implementation, and monitor state, local and tribal energy trends and legislative developments which could impact the Department's activities with stakeholders.

---

75 WAPA Financial Transparency: https://www.wapa.gov/About/the-source/Pages/financial-transparency.aspx
76 WAPA Reports 4th Quarter Results: https://www.wapa.gov/newsroom/NewsFeatures/2020/Pages/fourth-quarter-performance.aspx
19.2 **Office of the Chief Financial Officer (OCFO)**

The **Office of the Chief Financial Officer (OCFO)** is responsible for management and financial integrity of DOE programs, activities, and resources through development, implementation, and governance of Department and government-wide policies and systems for budget administration, including development and execution; finance and accounting; internal controls; financial policy; corporate business systems; strategic planning; performance measurement; and, interface with the Office of Management and Budget (OMB), Government Accountability Office (GAO), DOE Inspector General (IG), and Congress.

Within the OCFO:

- **Chief Risk Officer (CRO):** Provides Departmental support to assess risk and propose mitigation strategies through integration of risk concepts into strategic planning, and risk identification and mitigation activities. The CRO works with DOE’s Programs, Field Offices and National Laboratories under the general supervision of the CFO.
- **Evaluation Officer:** Responsible for providing leadership over the agency’s evidence-building activities, including its evaluation activities, learning agenda, and capacity assessment.
- **Program Management Improvement Officer (PMIO):** Ensures effective implementation of DOE’s program management policies and develop strategies to enhance the role of program management and managers within the Department. The PMIO also participates on the Program Management Policy Council (PMPC) and shares DOE best practices and lessons learned for the benefit of the broader community of Federal program and project managers and staff.
- **Performance Improvement Officer (PIO):** Collates and assesses data to assist in recommending improvements for Department-wide programs, issues, and initiatives, and proposes systems and tools to track progress towards agency and Administration goals.

19.2.1 **Finance & Accounting**

The **Office of Finance and Accounting (CF-10)** is responsible for accounting, fiscal integrity, and financial management services in support the Department’s mission. Functions include:

- Maintains leadership in financial management by continuously innovating and improving services provided to the Department.
- Prepares the Department’s consolidated financial statements, Agency Financial Report, and other managerial reports.
- Conducts accounting operations including specialized financial management areas such as payroll, loans, environmental liabilities, pension and post-retirement benefits accounting, and investment activities for the Department.
- Leads the Department’s internal controls, fraud risk management, and payment integrity programs.
- Delivers timely and reliable financial management reporting and analysis.
19.2.2 Financial Policy and Audit Resolution

The Office of Financial Policy and Audit Resolution (CF-20) establishes and maintains financial, accounting, and budgetary policies that support the execution of the Department’s mission. Functions include:

- Establishes and maintains Department-wide policies and guidance for finance and accounting, budget, corporate business systems, and financial management at DOE sites and facilities.
- Leads coordination of Departmental policy changes with internal and external policy organizations.
- Leads DOE's resolution of audit findings and reporting on status of implementing audit recommendations.
- Coordinates audits of DOE's programs between the Department and the Inspector General (IG) and Government Accountability Office (GAO).
- Provides policy guidance and support to Departmental offices on audit resolution, coordination, and follow-up.

19.2.3 Budget Formulation & Execution

The Office of Budget (CF-30) plans, formulates, analyzes, executes, evaluates, and defends the Department of Energy’s (DOE) Budget. Functions include:

- Serves as the Departmental negotiator with the Office of Management and Budget (OMB) on the DOE Budget.
- Leads decision management and overall coordination for DOE’s Budget to include:
  - Overall planning and implementation for budget formulation, analysis, execution, and evaluation;
  - Supports development and management of the Department’s Agency Performance Report, Strategic Plan, and associated evaluation of progress of goals;
  - Specialized analysis and prioritization of Departmental resources for the Future-Years Energy Program (FYEP) and other strategic analysis of budget resources;
  - External engagement with Congressional Committees on Appropriations for matters related to the DOE Budget; and
  - Coordination with Office of Corporate Business Systems (CF-40) on budget-related financial management IT.

19.2.4 Corporate Business Systems

The Office of Corporate Business Systems (CF-40) is responsible for stewardship of DOE’s financial management, procurement, and human capital systems, as well as other application solutions necessary to execute the Department’s mission. Functions include:
• Plans and manages design, integration, implementation, and cyber security of the Department's corporate business systems.
• Operates and maintains corporate financial systems utilizing efficient, cost-effective, and appropriate technology to allow for delivery and dissemination of relevant information.
• Maintains compatibility among corporate business systems to facilitate electronic exchange of data with internal and external stakeholders. Interfaces with Headquarters Programs, Field Offices, and Management and Operating Contractors.
• Provides qualified Information Technology project management support.
• Develops and maintains systems documentation and training materials.
• Defines website standards for the CF organizations and manages CF web technical infrastructure to ensure compliance with laws, regulations, and recommended practices.
• Serves as CF liaison with the Chief Information Officer (CIO) for corporate DOE business system and CF Information Technology services.
• Oversees completion of internal and external CF Information Technology reporting.
• Serves as CF lead on internal and external Information Technology committees and working groups.

19.3 **Office of Economic Impact and Diversity (ED)**

The **Office of Economic Impact and Diversity (ED)** develops and executes Department-wide policies to implement applicable legislation and Executive Orders that strengthen diversity and inclusion goals affecting equal employment opportunities, small and disadvantaged businesses, minority educational institutions, and historically under-represented communities.

Key ED initiatives include:

• **Equity in Energy** – designed to expand the inclusion and participation of individuals in underserved communities, such as minorities, women, veterans, and formerly incarcerated persons, in all the programs of the Department of Energy and in the private energy sector. The Department’s 200-Day Equity Assessment completed in 2021 pursuant to EO 13985\(^{77}\) revealed a range of barriers underserved communities face when accessing DOE’s procurement, funding, R&D, and deployment processes and activities.
• **Promoting Energy Justice** – implementing Justice40 Initiative – a plan to deliver 40% of the overall benefits of climate investments to disadvantaged communities and inform equitable research, development, and deployment within the DOE. With the beta launch of the Energy Justice Dashboard (BETA), DOE is working to better understand how the Department’s funding and investments are distributed to overburdened and underserved communities that have been left behind and unheard for too long. The Energy Justice Dashboard (BETA) is a pilot data visualization tool that displays DOE-specific investments in communities across the country experiencing disproportionately high and adverse economic, human health, climate-related, environmental, and other cumulative

---

\(^{77}\) Executive Order (EO) 13985: Advancing Racial Equity and Support for Underserved Communities Through the Federal Government
impacts. The Dashboard displays DOE cost data — grants, cooperative agreements, and contracts — from more than twenty-five DOE program offices, for the fiscal years 2019 to present.

19.4 **Office of International Affairs (IA)**

The **Office of International Affairs** coordinates Department efforts to ensure a unified voice in DOE’s international energy policy. IA works closely with other Federal departments and agencies, and the private sector, to align DOE’s international energy objectives with national energy policies and activities. IA also coordinates and manages DOE cooperation with counterparts from other nations and international organizations.

Among other areas, IA experts maintain extensive knowledge of the following issues:

Table 10: IA Areas and Issues

<table>
<thead>
<tr>
<th>Area</th>
<th>Issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>International Energy Policy</td>
<td>• Regional and country-specific energy policies and practices, technology developments, and market conditions in Africa, the Americas, Asia, Europe, Eurasia, and the Middle East</td>

<td>· Technical and non-technical barriers to technology commercialization and deployment</td>
</tr>
</tbody>
</table>

**IA initiatives** include:

- **International Energy Commitments (IEC)**
- **Clean Energy Ministerial**
- **U.S.-Africa Cooperation**
- **U.S.-Saudi Arabia Energy Cooperation**
- **U.S.-UAE Energy Cooperation**
• Natural Gas and LNG Options
• Energy and Climate Partnership of the Americas
• International Energy Agency
• North American Energy Cooperation
• U.S.-China Energy Collaboration
• U.S.-Israel
• U.S.-India Energy Cooperation
• U.S.-EU Energy Council
• G-7 Energy Ministers Meeting
• U.S.-Kazakhstan Energy Partnership
• U.S.-Ukraine Energy Cooperation
• The Partnership for Transatlantic Energy Cooperation

19.5 **Artificial Intelligence & Technology Office (AITO)**

The Artificial Intelligence & Technology Office (AITO) mission is to accelerate AI/machine learning (ML)-enabled capabilities through strategic portfolio alignment, scaling department-wide use cases that advance the agency’s core missions, and advocating for program offices. In addition, AITO provides advice on AI/ML strategies and expanding public, private and international partnerships, policy, and innovations – all in support of National AI leadership and innovation. One of its two primary mission areas includes conducting strategic portfolio analysis and alignment of AI/ML investments\(^{78}\), ensuring alignment with national security priorities, and facilitate department-wide trustworthy AI by conducting ongoing advisory and advocacy services to the program offices.

In FY21 and FY22, AITO will conduct a comprehensive assessment of the AI/ML landscape (current, target, and future state) to optimize strategic portfolio alignment\(^{79}\). In addition, the strategy will formulate prioritized implementations and support answering common questions, including:

- **Mission**: How can we better apply AI investments to address the Department’s missions and policies (e.g., equity, energy justice, climate resilience, and cyber)?
- **Investments**: How do we optimize DOE AI investments for impact?
- **Cybersecurity**: How can we support the development and deployment of AI as a force multiplier for DOE cyber strategy?
- **Complex Problem Solving**: Are we strategically planning to use AI to mitigate risks and solve complex challenges – mainly where there are no data sets (e.g., explosives, cyber, and nuclear)?
- **Emerging AI**: What are next-generation AI practices, and where are gaps in current investments versus mission needs?

\(^{78}\) [AITO Program Plan 11-10-2021.pdf (energy.gov), page 3]

\(^{79}\) [AITO Program Plan 11-10-2021.pdf (energy.gov), page 4]
• **Leadership:** How do we better partner across communities to apply holistic synergies and international AI leadership?

19.6 **Office of the Chief Information Officer (OCIO)**

The **Office of the Chief Information Officer (OCIO)** leads the Department's IT reform initiatives. In an increasingly complex and hostile cyber landscape, the OCIO is fully committed to stewarding DOE information assets by:

- Leveraging existing information technology and expertise to maximize mission accomplishment and reduce costs
- Identifying and fostering new and emerging information technology to maximize mission accomplishment and reduce costs
- Providing Departmental IT governance, policy, and oversight processes to ensure secure, efficient, and cost-effective use of IT resources
- Ensuring acceptable risk-based cybersecurity by enhancing enterprise situational awareness, developing near real-time risk management, and combating advanced persistent threats

More specifically, the OCIO is responsible for the management of:

- Federal Information Technology Acquisition Reform Act (FITARA) program, including providing implementation and self-assessment guidance;
- DOE IT Governance (i.e., Cyber Council);
- Enterprise IT Project Management Office (ePMO);
- DOE Section 508 Program;
- DOE IT Budget and Capital Planning and Investment Control (CPIC);
- IT Policy;
- Data Governance, including roles and responsibilities of the Chief Data Officer (i.e., data management, privacy and confidentiality, and data access, and required to participate in the federal government-wide Chief Data Officers council);
- Paperwork Reduction Act; and,
- Government-wide IT initiatives.

In addition, the OCIO also establishes the Department’s Information Resource Management (IRM) Strategy, which places emphasis on IT performance reviews in the annual DOE Performance, Evaluations, and Measurement Plan (PEMP) process, providing greater oversight by formally including the DOE CIO and CIOs from across the enterprise in the review process.

---

80 U.S. Department of Energy Federal Information Technology Acquisition Reform Act (FITARA) Common Baseline Implementation Plan and Self-Assessment | Department of Energy

The OCIO also sets expectations via the Department’s Cyber Security Strategy\(^{82}\) pertaining to the evaluation of/establishing metrics for DOE’s Cybersecurity Posture.

### 19.7 Office of Management (MA)

The Office of Management (MA) is the Department of Energy’s central management organization providing leadership in such mission critical areas as project and acquisition management. In addition, MA manages the Department's Headquarters complex and provides administrative support to employees in the Washington, DC area. This includes:

**Table 11: MA Functions and Activities**

<table>
<thead>
<tr>
<th>Function</th>
<th>Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aviation Management</td>
<td>The Mission of Aviation Management is to provide the Department of Energy, including the National Nuclear Security Administration (NNSA), with aviation policies, guidance, and program management oversight that ensure the delivery of effective, efficient, and safe aviation services required to support accomplishment of all the DOE mission. In accordance with the methods as described in OMB Circular A-76, Performance of Commercial Activities, agencies must also establish the cost effectiveness of all their aircraft operations every five years. (41 CFR 102-33.200). The Comprehensive Aviation Program Study IV (CAPS IV) was DOE’s fourth report that fulfills the requirements. The next CAPS report will commence in FY2023.</td>
</tr>
</tbody>
</table>

- CAPS I, published in 1999, determined the extent of aviation activities needed to support DOE missions and validated the appropriateness of the type of aviation operations used to support those missions.
- CAPS II, published in 2001, determined whether the aviation assets used at each field element were the appropriate compliment of aircraft and if those assets were the most cost-effective aircraft to meet the field element’s mission requirements.
- CAPS III was different from its predecessors as it was a comprehensive data analysis of the costs, missions, and flight hours from the data DOE/NNSA aviation programs submitted

<tr>
<td>Executive Secretariat</td>
<td>The Executive Secretariat is organized into the following main areas:</td>
</tr>
<tr>
<td></td>
<td>1. <strong>Document Management.</strong> The Executive Secretariat receives, controls, and tracks correspondence and other written and electronic documents, including classified material. These documents are either addressed to the Secretary, Deputy Secretary, Under Secretaries, or members of the Office of the Secretary staff, or they are sent to the Department from the White House, the Congress, and Tribal leaders. In addition, The Executive Secretariat sets standards for document preparation through its Correspondence Guide. Information and guidance on the standards for document preparation, document handling and concurrence (or Collaborative Action Process [CAP]), are available to Departmental personnel under the Executive Secretariat on the Department’s Powerpedia. Using the draft DOE directives online review, comment, and approval system (RevCom), the Executive Secretariat manages and supports the collaborative development, review, approval, and dissemination of new and revised Departmental Directives.</td>
</tr>
<tr>
<td></td>
<td>2. <strong>Executive Commitments and Information Management.</strong> The Executive Secretariat is the focal point for the dissemination of information, particularly electronic information, throughout the Department. It provides information including executive messages, correspondence and executive commitments reports, and information about important events or development opportunities for Department and contractor staff.</td>
</tr>
<tr>
<td></td>
<td>3. <strong>Advisory Committee Management.</strong> The Executive Secretariat provides management support on the creation, direction, and termination of advisory committees, in accordance with the Federal Advisory Committee Act and</td>
</tr>
</tbody>
</table>
implementing regulations. This function includes identifying issues that require attention of Department officials and Office of the Secretary staff. The Deputy Director of the Office of the Executive Secretariat serves as the Advisory Committee Management Officer for the Department.

4. **Executive Records Management.** The Executive Secretariat serves as the central Department records repository for all official documents and departmental actions and decisions, including classified material, for the Secretary, Deputy Secretary, and Under Secretaries.

5. **Conference Approval Management.** The Executive Secretariat coordinates the DOE Conference Approval process for conferences exceeding $100k in DOE costs which require Under Secretarial or Deputy Secretary approval.

6. **Official History and Archives.** The Executive Secretariat prepares the official history of the Department and guides departmental staff on the collection and preservation of historical records of the Department and its predecessor agencies and serves as the Department's institutional memory. The Chief Historian serves as the Department's Federal Preservation Officer.

7. **Ad Hoc Support to the Office of the Secretary.** The Executive Secretariat regularly responds to special requests from the Office of the Secretary. Requests include preparation of briefing papers and talking points and coordinating particular Department-wide activities. The Secretariat coordinates information security as well as information technology for the Office of the Secretary.

---

**Sustainability Performance**

As a part of the **Office of Asset Management**, the Sustainability Performance Division (SPD), formerly known as the Sustainability Performance Office (SPO), provides support to the Department of Energy by guiding programs to achieve and maintain sustainability goals in accordance with statutory and executive order requirements. This is accomplished through data collection, analysis, reporting, outreach, and frequent communications with programs to share knowledge and best practices, furthering our mission across the Department.

SPD tracks performance for the Department, and reports progress towards sustainability goals to the Office of Management and

### 19.8 Office of Project Management

The **Office of Project Management (PM)** is was established as a new DOE element on July 12, 2015 to be the Department of Energy’s Enterprise Project Management Organization (EPMO), providing leadership and assistance in developing and implementing DOE-wide policies, procedures, programs, and management systems pertaining to project management, and independently monitors, assesses, and reports on project execution performance. The office validates project performance baselines—scope, cost, and schedule—of the Department’s largest construction and environmental clean-up projects prior to budget request to Congress—an active project portfolio totaling over $30 billion. The office also serves as Executive Secretariat for the Department’s Energy Systems Acquisition Advisory Board (ESAAB) and the Project Management Risk Committee (PMRC). In these capacities, the Director is accountable to the Deputy Secretary.

PM provides a monthly assessment of DOE’s portfolio of capital assets projects, which is summarized in the monthly **Project Dashboard report**. This report assesses all active projects with an established performance baseline, including scope, cost, and schedule. Based on current performance:

- **GREEN** projects are expected to meet their performance baseline
- **YELLOW** projects are at-risk of breaching their performance baselines
- **RED** projects are expected to breach their performance baselines
Other analysis/reports include:

- **Root Cause Analysis Report (RCA) 2008**: identifies the key elements necessary to make the meaningful changes required to consistently deliver projects within cost and schedule performance parameters.
- **Corrective Action Plan (CAP) 2008**: Ensures that the root causes identified in the Root Cause Analysis report (above) are addressed with meaningful and lasting solutions to improve contract and project management performance.
- **RCA/CAP Closure Report of 2011**: Presents a status of the Department’s initiatives to address the most significant issues and their corresponding root causes and officially closes out most of the issues and root causes.

### 19.9 Office of the Chief Human Capital Officer (OCHCO)

The **Office of the Chief Human Capital Officer (OCHCO)** is responsible for strategically aligning the agency’s workforce to its missions through effective management of human capital policies and programs. The Chief Human Capital Officer advises and assists the Secretary and Deputy Secretary of Energy, and other agency officials, in recruiting, developing, training, and managing a highly skilled, productive, and diverse workforce in accordance with merit system principles and all applicable statutory requirements.

The **Strategic Human Capital Plan (SHCP)** sets forth the framework for managing the Department of Energy’s (DOE) human capital system. This Plan aligns with DOE Strategic Plan and the cross-agency priority goals of the President’s Management Agenda.

OCHCO functions, all of which support implementation of the SHCP, include:

- Advancing and supporting DOE’s mission accomplishment by creating OCHCO management in the areas of recruitment, hiring and staffing, motivation and employee engagement, succession planning, learning and development, and retention; and provides the full range of operational human resources and management advisory services to DOE staff.
- Providing leadership and direction in dealings with the Office of Personnel Management (OPM), Government Accountability Office (GAO), the Merit Systems Protection Board (MSPB), Federal Labor Relations Authority (FLRA) and other Federal/non-Federal organizations relative to human capital programs and policies.
- Provides corporate oversight of the HR Shared Service Centers and subordinate offices ensuring consultative advice and solutions are offered to management officials and employees in all operational aspects of human capital management.

### 19.9.1 Office of Human Capital Assessments and Compliance (HC-1.2)

The **Office of Human Capital Assessments and Compliance (HC-1.2)** serves as the human capital compliance arm for the Department. It is responsible for managing and administering DOE's
Human Capital Management Assessment Program (HCMAP). The Office provides a system for monitoring and analyzing agency performance on all aspects of human capital management policies, programs, and activities. Ensures that all human capital activities function in support of DOE's mission accomplishment and that those activities and results are effective, efficient, and in compliance with merit system principles and associated human capital laws and regulations.

HC-1.2’s functions include:

- Conduct human capital assessment reviews of all servicing HR offices/Shared Service Centers across the Department to assess levels of effectiveness and efficiency and adherence to legal and regulatory requirements.
- Develop quantitative and qualitative measures to assess HR programs effectiveness, efficiency, and compliance.
- Conduct fact-finding inquiries and draft responses to third party offices regarding human capital complaints.
- Provide comprehensive analysis and metrics to determine overall efficiency and effectiveness of human capital programs and to identify trends.
- Conduct human capital program management evaluations to provide proactive support to servicing HR offices or DOE Elements, and develop improvement plans for HR offices that have HR authorities suspended and coordinate with other operational offices to assist in implementation.

19.9.2 Office of Employee and Labor Relations, Policy, and Oversight (HC-1.3)

The Office of Employee and Labor Relations, Policy, and Oversight (HC-1.3) provides Employee and Labor Relations services and counsel to management officials. These responsibilities include policy development and interpretation of employee and labor relations matters. HC-1.3 is staffed with specialists providing employee and labor relations products and advisory services including contract administration, leading negotiations, and addressing the dispute resolution needs of both HQ and assigned field sites.

HC-1.3 functions include:

- Providing guidance, consultation, advice and assistance to managers, supervisors, and employees on grievances, appeals, adverse actions, employee discipline, and other employee relations matters.
- Providing labor relations direction and counsel to management officials, including interpretation of content and intent of local bargaining agreement(s), relevant case law, and applicable precedent.
- Representing management in third-party labor relations disputes including unfair labor practice and representation hearings before the Federal Labor Relations Authority and in impasse proceedings before the Federal Services Impasses Panel.
- Formulating, interpreting, and executing agency-wide policy, plans and procedures related to employee relations and labor relations program areas.
## 19.9.3 HR Shared Service Centers

OCHCO’s Shared Service Centers provide a full range of HR services:

### Table 12: HR Shared Service Centers

19.9.4 Office of Corporate Services (HC-10)

The Office of Corporate Services (HC-10) supports the program objectives and missions of all Departmental components by:

1. Developing Department-level human capital management (HCM) policies and associated technical training, advice, and guidance on human capital policies;
2. Developing HCM legislative proposals;
3. Providing operational support and consultative advice on the acquisition, deployment, and maintenance of technology to support the strategic management of human capital in accomplishing Departmental goals and program objectives;
4. Supporting implementation of the Department’s human capital initiatives through the integration of human capital strategy and budget across the human resources line of business functions; and,
5. Offering innovative business solutions to complex Departmental HCM challenges. Human capital management strategies, policy, programs, and plans are developed and assessed for overall effectiveness and compliance with merit system principles, civil service laws and regulations, and Departmental HCM directives.

HC-10 is the primary representative body for the Department when coordinating on HCM policy compliance with the OPM, OMB, GAO, and other Federal and non-Federal customers and organizations in connection with Departmental human resources and human capital management areas of responsibility.

HC-10 functions include:

- Manage the development of HCM-related policies and strategies for agency-wide implementation and provide advice and guidance across the Department on these policies; seek out, influence, and translate legislative and regulatory direction into Departmental strategies, policies, and programs to address DOE human capital needs.
- Provide executive oversight of the acquisition, deployment, and maintenance of technology to support the strategic management of human capital. Manages HRIT systems and provides technology solutions for the Department’s HR operations.
- Provide oversight and guidance on the integration of human capital strategy and budget to ensure effective and efficient financial management of resources within the OCHCO and associated HR business lines. Oversee the procurement process for obtaining and implementing contract support within the OCHCO and the HR Shared Service Centers.
- Manage the administrative support functions for the OCHCO to include space, equipment, personnel security, transit subsidy, internal HC policy and front office executive support.
• Develop business intelligence, demographic and trends analyses in support of corporate workforce and succession planning and in response to requests from within DOE and from external oversight agencies.

• Develop, analyze, and communicate human capital metrics to determine the efficiency and effectiveness of human capital strategies and solutions.

19.9.5 Office of Talent Management (HC-20)

The Office of Talent Management (HC-20) is dedicated to recruiting, engaging, developing, retaining and advancing a diverse workforce of right-fit talent for the Department. As a steward and facilitator of the talent strategy, OTM provides employees and supervisors with a wide range of resources, including talent sourcing, professional development, leadership training and educational opportunities to cultivate individual and organizational excellence.

HC-20 functions include:

• Managing workforce development programs and evaluate their effectiveness to ensure that they improve performance and transfer knowledge and skills to DOE employees.

• Providing guidance and resources to define, assess, and close critical workforce competency skill gaps.

• Establishing and managing a centralized recruitment and outreach program in support of the goals and mission of DOE.

• Leading and directing the promotion of DOE as an employer of choice through targeted branding and communication.

• Establishing, supporting, and monitoring strategic approaches to achieving and sustaining continuous improvement in DOE workforce engagement and organizational effectiveness.

19.9.6 Office of Corporate Executive Management (HC-40)

The Office of Corporate Executive Management (HC-40) manages the human capital programs related to the employment lifecycle for the Department’s Senior Executive Service (SES), Senior Professional (Senior-Level and Scientific and Professional), Excepted Service (EJ, EK, ER, ET and EWQ) and political appointees.

HC-40 functions include:

• Developing, formulating, and administering policies and strategies for agency-wide implementation and providing advice and guidance across the Department on these policies.

• Assessing and improving customer service and human capital programs providing innovative and strategic solutions enabling the recruitment, development and retention of a premier executive workforce prepared to lead the Department and ensure America’s security and prosperity by addressing its energy, environmental, and nuclear challenges.
• Providing strategic and operational centralized HR services, including (but not limited to) staffing, recruitment, employee relations, compensation, benefits, position classification and allocation, executive development, talent management and performance management.
• Managing the Department’s allocations and coordinating the biennial allocation process.
• Providing support for Presidential, Non-Career SES and Schedule C appointees.
• Coordinating and managing the Executive Resources Board processes.

19.10 Office of Small and Disadvantaged Business Utilization (OSDBU)

The Office of Small and Disadvantaged Business Utilization (OSDBU) maximizes contract opportunities for small businesses while advancing the Agency’s missions. OSDBU's History dates back to when Public Law 95-507 (October 1978) amended the original Small Business Investment Act of 1958 (SBAct). Public Law 95-507 established the requirement for every Federal Agency to have an Office of Small and Disadvantaged Business Utilization (OSDBU) to make Federal procurements more readily accessible to all small businesses.

To execute and support its mission, the OSDBU has developed three Strategic Objectives:

• **Objective 1:** Making it easier for small businesses to do business with the DOE.
• **Objective 2:** Maximizing small business opportunities by cultivating more productive relationships with internal DOE stakeholders.
• **Objective 3:** Maximizing small business awards and improving socio-economic category performance.

The Strategic Objectives are achieved through use of the following Enabling Activities:

• OSDBU Staff and Cadre of Small Business Program Managers (SBPMs);
• Education and Resources;
• OSDBU Compliance Requirements; and
• Inreach/Outreach.

Every year, the Small Business Administration (SBA) works with each agency to set their prime and subcontracting goals and their grades are based on the agreed upon goals. Each federal agency has a different small business contracting goal, negotiated annually in consultation with the SBA. The SBA ensures that all the goals meet the 23 percent target for the federal government as well as the socio-economic goals established by statute. The latest SBA Scorecard can be found here: DOE FY 2020 Small Business Procurement Scorecard.

SBDU Annual Reports provide a comprehensive review of DOE performance in engaging small businesses. These reports contain a broad overview of small business prime contracts, first-tier Management and Operating (M&O) Subcontracts, and other subcontracts to small business.
19.11 Office of General Counsel (GC)

The Office of General Counsel (GC) is charged by the Secretary of Energy with the authority to determine the Department’s authoritative position on any question of law. GC provides legal advice, counsel, and support to the Secretary, the Deputy Secretary, and program offices throughout DOE to further the Department’s mission of advancing the national, economic, and energy security of the United States through scientific and technological innovation and the environmental cleanup of the national nuclear weapons complex.

GC services include:

Energy Policy (GC-70)

The Deputy General Counsel for Energy Policy directs, manages, supervises and coordinates the activities and functions assigned to the following Assistant General Counsels responsible for:

- Civilian Nuclear Programs
- Standard Contract Management
- Electricity and Fossil Energy

Office of the Chief Counsel for Loans Programs

The mission of the Loan Programs Office is to accelerate the domestic commercial deployment of innovative and advanced clean energy technologies at a scale sufficient to contribute meaningfully to the achievement of our national clean energy objectives—including job creation; reducing dependency on foreign oil; improving our environmental legacy; and enhancing American competitiveness in the global economy of the 21st century.

Office of the Chief Counsel for ARPA-E

The Advanced Projects Research Agency-Energy (ARPA-E) was established in 2007 to fund the development and deployment of transformational energy technologies in the United States.

Field Counsel Offices

The Department of Energy employs a complement of lawyers who work in each of the Department's Operations Offices and Field Offices under the leadership of a Chief Counsel.

19.12 Office of Policy (OP)

The Office of Policy (OP) provides expertise related to domestic energy and climate policy issues, including technology policy; deployment and infrastructure policy; state, local, and tribal policy; and energy jobs.

19.12.1 Technology Policy

The Office of Technology Policy leads U.S. Department of Energy (DOE) efforts to identify technology innovations and strategies that will help achieve national energy and climate priorities. It provides overall DOE strategic direction and centralized coordination of science,
energy, and technology research, development, and deployment—to advance dependable, affordable, and environmentally responsible production, delivery, and use of energy.

The Office of Technology Policy supports DOE policies, activities, and strategies, consistent with the national energy plan. These efforts aim to advance domestic collaboration on innovation, science, and technology research and demonstration to accelerate energy technology development to transform the energy sector in the long term.

Focus areas include:

- **Energy Innovation** – To meet national goals, the Office of Technology Policy is working to identify innovation opportunities that will address climate change and facilitate the nation’s transition to a cleaner, domestic, and more secure energy future.

- **Energy Earthshots Initiative** – Through the Energy Earthshots Initiative, DOE will accelerate breakthroughs of more abundant, affordable, and reliable clean energy solutions within the decade. Using an all-hands-on-deck approach, DOE will leverage diverse expertise and talent at American universities, businesses, and national laboratories to accelerate research and development and tackle the toughest remaining barriers to quickly deploy emerging clean energy technologies at scale.

- **National Climate Strategy** – Addressing the climate crisis requires immediate and sustained investment to eliminate net global greenhouse gas emissions by mid-century. Investing in the clean technologies, infrastructure, workforce, and systems of the future creates an unprecedented opportunity to improve quality of life and create vibrant, sustainable, resilient, and equitable economies.
  
  - FACT SHEET: President Biden Renews U.S. Leadership on World Stage at U.N. Climate Conference (COP26)

19.12.2 **Deployment and Infrastructure Policy**

The Office of Deployment and Infrastructure Policy serves as the focal point within the U.S. Department of Energy for the policy design and analysis of supply chains, domestic manufacturing, and other key topics. It supports the development of long-term strategies and integrated policies and programs to accelerate and scale clean energy deployment, including both energy supply and energy efficiency.

Focus areas include:

- **Supply Chains** – In response to the Supply Chain Executive Order, DOE is working to better understand the clean energy manufacturing supply chain. The analysis focuses on supply chain issues and opportunities with significant potential to enhance U.S.
competitiveness and generate high quality jobs to help meet national security, energy, and climate objectives.

- **100-Day Report on High-Capacity Electric Vehicle Batteries**
- **DOE Announces Actions to Bolster Domestic Supply Chain of Advanced Batteries**

- **Clean Energy Reliability** – Climate change and cyber threats are increasingly putting the reliability and resilience of our power system at risk. Investing in clean energy solutions will tackle climate change, grow our economy, and deliver affordable, reliable, and secure electricity to all Americans.

### 19.12.3 State, Local, and Tribal Policy

The Office of State, Local, and Tribal Policy guides the development and implementation of coordinated, comprehensive strategies to assist states, territories, local authorities, and tribes in analyzing, assessing, and implementing energy policies, programs, and related activities.

It also helps ensure that national energy policies, programs, and related activities are informed by the policies, programs, regulations, and practices of state, local, and tribal governments.

Focus areas include:

- **Communities LEAP** – The DOE Communities LEAP (Local Energy Action Program) Pilot seeks to help communities access the economic and environmental benefits of clean energy and clean energy manufacturing. Under this pilot initiative, DOE will provide supportive services valued at up to a total of $16 million to support 24-36 communities to develop their own community-driven clean energy transition approach. This opportunity is specifically open to low-income, energy-burdened communities that are experiencing either direct environmental justice impacts, or direct economic impacts from a shift away from historical reliance on fossil fuels.

- **Place-based Strategy** – Place-based approaches aim to strengthen communities (usually defined at a scale where measurable economic outcomes can be achieved—from a neighborhood up through a multi-county region), rather than provide direct assistance to individuals, companies, or technologies. DOE is focusing on place-based approaches through a variety of cross-agency initiatives, such as Justice40. DOE’s place-based approaches target specific energy- or technology-related challenges and opportunities of each community, with the goal of supporting each region’s transition to a more prosperous, sustainable, resilient, and inclusive future.

- **Cross-DOE Collaboration** – The Office of Policy coordinates with DOE programs and staff offices to lead strategic thinking, working to achieve U.S. energy goals. The Office of Policy also provides policy analysis support to DOE program and staff offices for Departmental mission objectives.
19.12.4 Energy Jobs

The Office of Energy Jobs focuses on supporting the creation of jobs in the energy sector, particularly jobs that guarantee high standards and the right to collective bargaining. Energy Jobs works collaboratively across the U.S. Department of Energy (DOE) and with other federal agencies and regulatory bodies to ensure the successful transition to a zero-emissions economy while creating meaningful job opportunities for all Americans.

A pivotal component of the successful transition of the American energy sector is ensuring that both job creation and job impacts are taken into consideration in DOE funding, initiatives, and priorities. The Office of Energy Jobs leads efforts to align energy workforce building and training programs and publish the annual U.S. Energy and Employment Report.

Focus areas include:

- **U.S. Energy and Employment Report** – The U.S. Energy and Employment Report (USEER) provides a comprehensive overview of the energy labor market. The USEER offers unique insights into the individuals who meet the nation’s energy needs, identifies important trends and skillsets for the 21st century energy workforce, and provides data on employment trends in five major energy sectors — Electric Power Generation; Transmission, Distribution, and Storage; Fuels; Energy Efficiency; and Motor Vehicles.
- **DOE Labor Working Group** – The DOE Labor Working Group is a forum for DOE and labor unions to engage on key energy topics.

19.13 Office of Public Affairs (PA)

The DOE Office of Public Affairs (PA) is responsible for counsel and support for:

- Articulating and disseminating enterprise-level messages for use by DOE leadership and stakeholders;
- Identifying opportunities to develop new content and share existing content about DOE’s portfolio;
- Helping media outlets understand and report DOE-sponsored research;
- Identifying DOE’s key stakeholders, and keeping them informed of DOE work; and,
- Monitoring media, legislative, and stakeholder communications to advise senior agency officials about emerging news and public affairs issues and concerns.

19.14 Office of Technology Transitions (OTT)

The Office of Technology Transitions (OTT) was established in 2015 to oversee and advance the mission of technology transfer by expanding the public impact of the department’s research and development (R&D) portfolio to advance the economic, energy and national security interests of the nation. OTT develops the Department’s policy and vision for expanding the commercial
impact of its research investments, and it streamlines information and access to DOE’s national labs and sites to foster partnerships to move innovations from the labs into the marketplace.

“Technology transitions” is a dynamic process, with numerous and varying handoffs between scientists, innovators, and entrepreneurs, that begins with an idea that ultimately becomes a technology commercialized by the private sector. Every technology follows its own unique path and requires a variety of exchanges and partnerships to advance it along the developmental spectrum. OTT provides support in each step of this process.

OTT conducts data management and analysis, evidence-based impact evaluations, and stakeholder engagement. The office also oversees two major DOE initiatives, the Technology Commercialization Fund (TCF) and the Lab Partnering Service. Additionally, OTT implements public laws passed by Congress. The office derives much of its mission, responsibilities, and oversight authority from the Bayh-Dole Act of 1980, Stevenson-Wydler Technology Innovation Act of 1980, and Energy Policy Act of 2005. These legislations require OTT to develop two reports to Congress annually—the “Technology Transitions Execution Plan” and the “Report on Technology Transfer and Related Technology Partnering Activities at the National Laboratories and Other Facilities.”

The Chief Commercialization Officer serves as Director of the Office of Technology Transitions, whose responsibilities include oversight of the TCF, Technology Transfer Working Group, and the coordination of technology transfer activities and best practices across the DOE complex.

In addition, OTT provides and fosters the following resources:

Table 14: OTT Resources and Analysis

<table>

</thead>
</table>
| Lab Partnering Service        | Lab Partnering Service (LPS) offers unprecedented access to the world’s most advanced scientific facilities and researchers across the Department’s National Lab complex. LPS provides investors—and other parties looking to advance energy innovation—a single online platform to connect with leading DOE National Laboratory technical experts to quickly answer innovation questions, as well as discover opportunities for building partnerships. Visitors can easily search hundreds of technologies, patents, experts, facilities, and success stories tailored to their individual needs, including:
  • Facility descriptions
  • Technical summaries
  • Visual Patent Search                                                                                     |
<p>| Solutions Exchange            | Solutions Exchange connects industry challenges with DOE-powered innovations. Businesses share their technical or scientific challenges and partnership interests with OTT and receive a menu of approaches to tackle these hurdles in collaboration with our National Labs. With the OTT team directly facilitating solutions development with the Labs, business are able |</p>

</tr>
</thead>
</table>
| **InnovationXLab** | InnovationXLab summits facilitate a two-way exchange of information and ideas between industry, universities, manufacturers, investors, and end-use customers with innovators and experts from across the National Labs and broader DOE R&D complex. InnovationXLab summits:  
- Catalyze public-private partnerships and commercial hand-offs utilizing DOE’s extensive assets: technology, intellectual property, facilities, and world-leading scientists and researchers.  
- Engage the private sector to ensure DOE understands industry’s technical needs, risk appetite, and investment criteria, thereby incorporating “market pull” into DOE’s portfolio planning.  
- Inform DOE R&D planning to increase commercialization possibilities.  
InnovationXLab Summits are not dense technical workshops, but enable connections and commercialization opportunities at the decision-maker level. They highlight promising technologies from across all 17 DOE National Labs. |
| **Spotlights** | OTT periodically releases reports highlighting the Department of Energy's work in emerging technology areas, including energy storage, grid optimization, and artificial intelligence. In addition, OTT compiles success stories from selected DOE-derived research projects that have resulted in commercial outcomes, celebrating the successful public-private relationships that seek to drive U.S. innovation and ensure the nation's continued competitiveness and security. |
| **Market Analysis** | The Market Analysis team at the OTT produces research in market analysis, including trend forecasts, supply chain, and technology maturation, to support OTT’s mission of accelerating advanced energy technologies from across the Department of Energy and National Lab complex. The goal is to provide research to better integrate understanding and analysis of market pull factors into the R&D process of novel technologies throughout the development and commercialization processes.  
The Market Analysis team leads the Market Analysis Community of Practice (MACOP) at the Department, which is made up from representatives from all 17 National Labs and meets monthly to share best practices in market analysis and hear from expert speakers with deep knowledge of various aspects of the commercialization process.  
OTT also compiles market analysis reports, technology roadmaps, and other analyses of technology-market fit and pathways to commercialization |

20. Other Defense Activities

20.1 Office of Environment, Health, Safety, and Security (AU)

The Office of Environment, Health, Safety, and Security (AU) is the DOE’s central organization responsible for health, safety, environment, and security; providing corporate-level leadership and strategic vision to coordinate and integrate these vital programs. AU is responsible for policy development and technical assistance; safety analysis; and corporate safety and security programs. The Associate Under Secretary for Environment, Health, Safety and Security advises DOE Senior Leadership on all matters related to environment, health, safety, and security across the complex. On May 5, 2014, the Office of the Associate Under Secretary for Environment, Health, Safety and Security (AU) was established within the Office of the Under Secretary for Management and Performance to strengthen the effectiveness and efficiency of primary mission-support organizations of the Department and institute enterprise-wide solutions to common challenges across the complex.

The Department synthesizes operational information to support continuous environment, health, safety, and security improvements. DOE’s corporate safety reporting and analysis programs and activities are established to manage several viable safety indicators applicable to most DOE contractor operations that provide Departmental leadership, line management, and stakeholders with timely information to gauge the success of Departmental safety program implementation. DOE operational and occurrence data are collected through various reporting mechanisms and provided through internet-based tools, one of which is databases:

- **Comprehensive Epidemiologic Data Resource (CEDR) System**: CEDR is a DOE public-use repository of data from occupational and environmental health studies of workers at DOE facilities and nearby community residents.
- **Computerized Accident/Incident Reporting System (CAIRS)**: This system collects and analyzes DOE and DOE-contractor reports of injuries, illnesses, and other accidents that occur during DOE operations.
- **DOE OPEXShare Lessons Learned database**: The DOE OPEXShare is the central, web-based collection point for corporate operating experience lessons learned and best
practices from across the DOE complex. DOE OPEXShare is a collaborative platform that is available to government and private users. By sharing lessons learned and best practices from work operations and project management, DOE OPEXShare subscribers could prevent adverse events and improve processes and performance. DOE OPEXShare replaces the DOE Corporate Lessons Learned database.

- **Fire Protection**: Data collection and a commitment has been made to the Defense Nuclear Facilities Safety Board to collect information and make it available utilizing a standard systematic approach. This approach is accomplished via a web-based system which will allow reporting organizations to enter or edit information. Use of the web interface requires registration. **DOE O-231.1B, Environment, Safety, And Health Reporting**, requires the submission of an Annual Fire Protection Summary.

- **Occurrence Reporting and Processing System (ORPS)**: This system provides timely notification to the DOE complex of events that could adversely affect public or DOE worker health and safety, the environment, national security, DOE’s safeguards and security interests, functioning of DOE facilities, or the Department's reputation.

- **Radiation Exposure Monitoring System (REMS)**: The REMS database tracks occupational radiation exposures for all monitored DOE employees, contractors, subcontractors, and members of the public. A password is not needed to access this database.

- **Radiological Source Registry and Tracking (RSRT)**: The RSRT is a DOE database that is maintained by the Office of Environment, Health, Safety and Security (EHSS), Office of Information Management (AU-72). The annual 10 CFR 835 Appendix E inventory data, and the transaction and verification information for Category 1 and 2 radioactive sealed sources will be reported to the RSRT Manager. Additional guidance for reporting transactions for Category 1 and 2 sources to the DOE RSRT is provided in the December 16, 2010 Chief Health, Safety and Security Officer memorandum, **Reporting for Radiological Sealed Sources Transactions**. The RSTS Manager is responsible for reporting the transaction to the NRC NSTS.

- **Safety Basis Information System (SBIS)**: The SBIS database contains safety information from DOE nuclear facilities. The SBIS website provides access to the following items: 1) the Public Access Safety Basis Report; 2) the SBIS database (restricted password protected access for DOE and DOE contractors only); and 3) the SBIS account request page.

- **Suspect/Counterfeit and Defective Items**: The Department of Energy is committed to ensuring that items and components installed in safety-related or mission-critical applications meet their intended function and operability requirements. Therefore, EHSS has established a process for identifying Suspect/Counterfeit (S/CI) or Defective Items
(DI) that are deemed safety-significant and broadly applicable to DOE facilities and for ensuring that action is taken.

20.2 **Office of Enterprise Assessments (EA)**

The Department of Energy’s (DOE) **Office of Enterprise Assessments (EA)** performs independent assessments for DOE senior leadership that report on whether national security material and information assets are appropriately protected and whether Departmental operations provide for the safety of its employees and the public. In addition, EA implements the Department’s congressionally-authorized contractor enforcement programs for security and safety on behalf of the Secretary of Energy and operates the DOE National Training Center (NTC).

Because EA reports directly to the Office of the Secretary, it is organizationally independent of the DOE entities that develop and implement security and safety policies and programs; therefore, EA can provide a “check and balance” function by objectively:

1. Observing and reporting on the performance of DOE federal and contractor organizations’ implementation of security and safety policies and programs,
2. Applying enforcement actions to contractor organizations for poor performance in adhering to legally enforceable security and safety requirements, and
3. Developing and delivering security and safety training programs that reflect best practices and lessons learned from EA independent assessments to enhance workforce performance.

The **Office of Environment, Safety and Health Assessments** conducts independent evaluations that provide objective information and constructive feedback on programs for and performance in protecting workers, the public and the environment from the nuclear and industrial hazards associated with DOE's past and present operations, with a particular focus on nuclear facility construction projects and high hazard nuclear operations.

The **Office of Safeguards and Security Assessments** conducts independent evaluations of the effectiveness of safeguards and security policies and programs throughout the Department, including those for protecting special nuclear material and classified and sensitive information, and makes extensive use of large- and small-scale performance testing to realistically evaluate site safeguards and security defense capabilities.

The **Office of Cyber Assessments** conducts independent evaluations of the effectiveness of classified and unclassified cybersecurity policies and programs throughout the Department that include performing detailed network penetration testing to detect vulnerabilities and risks that could be exploited by sophisticated adversaries or malicious insiders. The Office also analyzes cybersecurity trends and studies complex-wide issues to provide feedback on essential information assurance practices to DOE Headquarters and sites.
20.3 **Office of Legacy Management (LM)**

The **Office of Legacy Management (LM)** was established to fulfill the Department’s post-closure responsibilities and to ensure the protection of human health and the environment. LM’s responsibilities include long-term stewardship of 100 sites across the United States and Puerto Rico. This includes a variety of programs related to the country’s nuclear defense and energy legacy, ranging from oversight of the administration and management of legacy contractor benefits to assessing the condition of 2,500 defense-related uranium mines on federal public land.

LM publishes a quarterly Program Update to provide a status of activities. The Program Update documents and communicates the progress LM continues to make implementing the objectives and strategies for each of the six goals in the LM Strategic Plan.

The LM quarterly Program Updates highlight the key initiatives throughout the entire organization including the specific contributions and accomplishments of individuals responsible for LM’s continued success. LM advances in each of the six goals are represented.

In addition, LM oversees the Department’s Environmental Justice (EJ) program, as the agency continues to be committed to EJ. DOE’s EJ goals and objectives can be found in its latest EJ Implementation Plan: 2019 Environmental Justice Second Five-Year Implementation Plan (energy.gov).

20.3.1 **Office of Hearings and Appeals (OHA)**

The **Office of Hearings and Appeals (OHA)** is the central adjudicative forum for the Department of Energy. The Secretary of Energy has delegated to the OHA Director the authority to act in many different areas. The OHA Director’s decision typically serves as final agency action.

During its over 30-year history, OHA has had broad-ranging subject matter jurisdiction. Originally, OHA’s primary function was to consider exceptions and other petitions related to the economic oil regulations, as well as Freedom of Information Act (FOIA) and Privacy Act appeals, whistleblower matters, exceptions and special redress, and dispute resolutions. From that point onward, OHA’s jurisdiction has evolved to meet the needs of DOE's programs.

Over the years, OHA has heard appeals from a variety of DOE determinations, including those related to the Department’s Alternative Fuel Transportation Program, physician panel reviews of DOE worker occupational illness claims, payment-equal-to-taxes claims under the Nuclear Waste Policy Act of 1982, civil penalties imposed for violations of DOE's worker safety and

86 Office of Legacy Management Program Updates: https://www.energy.gov/lm/listings/program-updates
health rule, and the equity interests in production from Elk Hills Oil Field, formerly Naval Petroleum Reserve No. 1.

The procedures that OHA uses vary, depending on the type of case involved. OHA procedures are flexible and easily adaptable to new situations, allowing OHA to minimize “start-up” times and to produce high-quality work in new areas.

20.4 **Office of Intelligence and Counterintelligence (IN)**

The U.S. Department of Energy’s **Office of Intelligence and Counterintelligence (IN)** is responsible for all intelligence and counterintelligence activities throughout the DOE complex, including nearly thirty intelligence and counterintelligence offices nationwide.

IN protects vital national security information and technologies, representing intellectual property of incalculable value. IN’s contribution to national security is the ability to leverage the Department’s unmatched scientific and technological expertise in support of policymakers as well as national security missions in defense, homeland security, cyber security, intelligence, and energy security.

IN is a member of the [U.S. Intelligence Community](https://www.dni.gov/).

The **Office of Indian Energy Policy and Programs (IE)** is authorized to fund and implement a variety of programmatic activities that assist American Indian Tribes and Alaska Native villages with energy development, capacity building, energy cost reduction, and electrification of Indian lands and homes. IE works with American Indian Tribes and Alaska Natives to maximize the value of their energy resources through:

- Facilitation of energy development
- Education and training
- Technical assistance
- Funding

IE also leverages public-private partnerships, inter- and intra-governmental coordination, and government-to-government partnerships to maximize the return on investments in the future of Native American communities. ⁸⁷ and annual Program Review meetings to provide an opportunity for tribes and Alaska Native villages to share their successes and best practices. ⁸⁸

21.1 **Arctic Energy Office (AEO)**

The [Arctic Energy Office (AEO)](https://www.energy.gov) leads cross-cutting operations in the Arctic with a mission to tackle the energy, science, and national security challenges of the 21st Century. The office acts as a nexus for DOE activities and represent the Department in [engagements involving the Arctic](https://www.energy.gov). AEO, with the [Office of Technology Transitions (OTT)](https://www.energy.gov), co-hosts [ArcticX](https://www.energy.gov), an [InnovationXLab](https://www.energy.gov) series exploring the Arctic’s largely untapped potential to serve as a living laboratory of clean energy innovation, and includes discussions on [innovative solutions](https://www.energy.gov) and furthering [existing energy projects](https://www.energy.gov). DOE’s work in the Arctic is strengthened through partnerships with national labs, federal agency partners, academia, tribal organizations, and industry partners.

Appendix B. DOE Learning Agenda

The mission of the Energy Department is to ensure America’s security and prosperity by addressing its energy, environmental and nuclear challenges through transformative science and technology solutions. By law, the Department of Energy (DOE) is responsible for formulating and implementing a coordinated national energy policy to address energy production and use; advancing the energy and nuclear security of the United States; conducting scientific research and technological innovation in support of that mission; conducting basic research in the physical sciences; and advancing national nuclear waste management, including environmental cleanup.

The Department of Energy (DOE) recognizes the importance of evidence and evaluation to understand and improve the efficiency and effectiveness of its programs and operations in pursuit of the Department’s mission. To support evaluation planning, the DOE has established an Annual Evaluation Plan (AEP) in alignment with the Foundations for Evidence-Based Policymaking Act. The AEP identifies the research and evaluation questions the Agency plans to complete through the next fiscal year.

Program evaluations are conducted through consultations with DOE program leadership, review, and development by internal program evaluators. The evaluations are designed to meet DOE priorities, answer research questions in the Enterprise Learning Agenda, and build a suite of evidence to inform decision-making. Evaluations highlighted in this AEP reflect the most significant planned evaluations for FY 2023 in alignment with the DOE’s mission as reflected in the Agency’s FY 2022-2026 Strategic Plan, expected usefulness to support program improvement, and greatest impact on small businesses and other Agency stakeholders.

The energy, science, nuclear security, nuclear waste management, and cybersecurity goals in this evaluation plan are aligned with the DOE mission and goals from the strategic plan.

Energy – DOE is the lead agency for developing plans and programs to implement a coordinated national energy policy through analysis and cooperation with Federal, state, and local governments. DOE leads the Nation in cutting-edge research and development of an extensive range of technologies in support of an energy dominance strategy. DOE identifies, funds, and promotes technological advances to increase energy affordability, performance, and efficiency. DOE also leads national efforts to further research and develop technologies to modernize the electric grid and improve its reliability and resilience; enhance the security, reliability, and resilience of energy infrastructure; improve domestic fossil energy production and use; and expedite recovery from energy supply disruptions.

Science – DOE is the largest Federal sponsor of basic research in the physical sciences. DOE’s world-leading research in the physical, chemical, biological, and computational sciences advances fundamental scientific discoveries and technological solutions that support American

89 https://www.energy.gov/mission
pre-eminence in science and innovation. DOE also leads the national effort to maintain its global primacy in high-performance computing.

**Nuclear Security** – DOE enhances the security and safety of the Nation through its national security endeavors: maintaining a safe, secure, and effective nuclear weapons stockpile that will deter any adversary and guarantee the defense of the Nation and its allies; managing the research, development, and production activities and associated infrastructure needed to meet national nuclear security requirements; accelerating and expanding efforts to reduce the global threat posed by nuclear weapons, nuclear proliferation, and unsecured or excess nuclear and radiological materials; providing advance capabilities to respond to nuclear or radiological incidents and accidents worldwide; and providing safe and effective nuclear propulsion for the U.S. Navy.

**Nuclear Waste Management** – DOE leads the effort to address the Federal Government’s nuclear waste management responsibility; continue the largest cleanup effort in the world to remediate the environmental legacy of six decades of nuclear weapons development; and produce and sponsor nuclear energy research.

**Cybersecurity** – DOE supports the Government’s effort to assist energy infrastructure owners with cybersecurity and to ensure cyber/physical attacks do not have a catastrophic impact on the energy sector. DOE also ensures the cybersecurity and resilience of the DOE enterprise infrastructure.

**DOE Enterprise Management and Oversight** – As DOE carries out its mission through execution of its strategic goals, it will develop, manage, and support a talented and engaged workforce, provide a modern, secure physical and information technology infrastructure, and strengthen effective and cost-efficient management initiatives.

Achieving these goals requires sustained commitment to performance-based management. Program evaluations are tailored to the specific mission set and include a broad range of evaluation types. To ensure actionable results, the DOE’s evaluations follow the principles of ethics, independence, rigor, relevance, and transparency reflected in OMB Circular A-11, Section 290 and OMB Memoranda M-19-23, M-20-12, and M-21-27.

91 s290.pdf (whitehouse.gov)

92 MEMORANDUM FOR HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES M-19-23 (whitehouse.gov)

94 M-21-27 (whitehouse.gov)
1. **Optimize Carry-Over Balances for DOE Program and Support Functions**

**Lead DOE Program/Support Office:** Office of the Chief Financial Officer (OCFO)

**Description:** Most DOE programs and functions obligate appropriated budget authority in the current fiscal year and “carry-over” unused funds to the next fiscal year due to a variety of factors. There are circumstances that justify carrying over unused funds including maintaining reserves to manage risk and phased execution of long-term capital projects. At present, there is no Department-wide analysis to provide best practices to manage carry-over balances.

An evaluation will be conducted to determine appropriate tools and methods for managing carry-over balances, and whether certain best practices should be adopted on an agency-wide basis for program and functional activities.

**Enterprise Learning Agenda (ELA).** This evaluation supports the DOE’s understanding of the following ELA question:

- What factors most influence the Department’s ability to obligate appropriated budget authority in the current fiscal year and “carry-over” unused funds to the next fiscal year?

**Evaluation Questions.** The DOE seeks the answer the following evaluation questions and their sub-components in this study:

- How does the government review process serve as a tool to help agencies meet their goals obligated appropriated budget authority in the current fiscal year?
- How does the government review process serve as a tool to help agencies “carry-over” unused funds to the next fiscal year as appropriate?
- What are the appropriate tools and methods for managing carry-over balances?
- What best practices should be adopted on an agency-wide basis for program and functional activities?
  - What aspects of these tools and methods lead to improved outcomes?
  - What aspects of these processes could be made more effective or efficient?

**Activities:** The OCFO will conduct an evaluation that reviews appropriations and carry-over balances for select DOE program and function offices for the past 5 fiscal years. The study will:

- analyze appropriations and carry-over balances to determine if trends and outliers exist
- determine the nature of work conducted by program or support office and consider how this should affect carry over balances
- interview program managers for insight into how they manage carry-over balances
- review carry-over data for non-DOE programs and determine whether relevant comparisons to DOE can be made
- determine if best practices can be recommended to DOE programs and support functions for managing carry-over balances
- determine if corrective action for managing any DOE carry-over balances is advisable
Timeline: OCFO anticipates this study will take 6-9 months. Instituting recommendations produced by the study will take an additional 12-24 months.

Data: Data gathered for this evaluation may include:
- 5-years of appropriations and carry-over balances for select DOE programs & functions
- appropriations and carry-over balances of non-DOE programs
- interviews of DOE program and function managers
- interviews of non-DOE program and function managers

Evidence Use and Dissemination: DOE program staff would receive recommendations on activities that lead to greater goal achievement, as well as activities that could be adapted to improve the effectiveness and efficiency of surveillance reviews. Results will be presented to DOE program managers and senior leadership, published on the DOE website, and shared in the DOE’s Evidence and Evaluation Community of Practice.

Progress and Accomplishments: While a formal study has not yet been conducted to analyze and provide recommendations for optimization, CF-32 generates (and provides to programs) status updates pertaining to Time Limited Funds (TLF) and to remind programs of funding that will “expire” (unobligated) and “cancel” (uncosted) before the end of the fiscal year. This information is also accessible from the QTR Budget Execution Review dashboard, Daily Time Limited.

2. Statistical Methodology Improvement Plan (SMIP)

Lead DOE Program/Support Office: U.S. Energy Information Administration (EIA)

Description: As one of the 13 principal federal statistical agencies, EIA collects, analyzes, and disseminates large amounts of data to inform citizens, businesses, and lawmakers about energy production, transformation, and consumption. To perform this service, EIA adheres to both established professional statistical practices and complies with the Office of Management and Budget (OMB) statistical standards and oversight. EIA must receive approval from OMB every three years to conduct a particular survey. To receive this approval, EIA must show that it is actively monitoring, evaluating, and meeting data quality standards. To meet these requirements, EIA has developed a Statistical Methodology Improvement Plan (SMIP) that evaluates and improves the data quality of EIA surveys and products.

Impact: The SMIP’s explicit goal is to improve EIA’s statistical methodologies and data quality. To this end, the SMIP provides a structured five-year program that covers the processes to evaluate and improve surveys and products, an in-depth list of statistical methodologies with which to improve surveys and products, and the statistical roles and training that will improve current staff statistical capabilities and further the use of newer data science techniques.

Enterprise Learning Agenda. This evaluation supports the DOE’s understanding of the following ELA question:
• What factors most influence the Department’s ability to improve EIA’s statistical methodologies and data quality?

**Evaluation Questions.** The DOE seeks the answer the following evaluation questions and their sub-components in this study:

• How does EIA’s statistical methodologies serve to help EIA meet its goals to collect, analyze, and disseminate large amounts of data?
• How do EIA processes ensure its ability to actively monitor, evaluate, and meet data quality standards?
• How well does the SMIP support improvement EIA’s statistical methodologies and data quality?
• What best practices should be adopted from the SMIP on an agency-wide basis for program and functional activities?
  o What aspects of these tools and methods lead to improved outcomes?
  o What aspects of these processes could be made more effective or efficient?

**Data and Evaluation Method:** The following describes the three SMIP plan processes for evaluating data products.

• **Evaluation Process.** A process that evaluates the statistical methodologies used to conduct, process, and publish a data product. This process outlines possible methodological improvements or alternative approaches for surveys and products. The process also provides data validation and quality monitoring.

• **Targeted Methodology Improvement Process.** A process that implements improvements that are most readily identifiable and achievable for the statistical methodologies used to conduct, process, and publish a data product.

• **Full Methodology Improvement Process.** A process that completely reviews and updates, as necessary, all statistical methodologies currently used to conduct, process, and publish a data product.

**Evidence Use and Dissemination:** The initial term of the SMIP, used to implement and achieve the SMIP’s goal of improving EIA’s statistical methodologies and data quality, is for five years, after which time EIA will review and update it as needed to respond to lessons learned in its implementation. DOE program staff would receive recommendations on activities that lead to greater goal achievement, as well as activities that could be adapted to improve the effectiveness and efficiency of surveillance reviews. Results will be presented to DOE program managers and senior leadership, published on the DOE website, and shared in the DOE’s Evidence and Evaluation Community of Practice.

**Progress and Accomplishments:**

<tr>
<td>What factors most influence the Department’s ability to improve EIA’s statistical methodologies and data quality?</td>
<td>As a federal statistical agency, EIA must adhere to generally accepted statistical practices as developed in academia and in professional practice. As adopted, these practices inherently have requirements and standards to which EIA must adhere. These requirements and standards are further influenced by constraints of costs, personnel, and oversight regulations. Based on these combined conditions, the following points generally summarize the biggest influences on EIA’s ability to engage in statistical methodology and data quality improvement projects:</td>
</tr>
<tr>
<td>• Statistical limitations of data/availability of data:</td>
<td></td>
</tr>
<tr>
<td>o Improved methodologies are not always suited for existing collected data.</td>
<td></td>
</tr>
<tr>
<td>o Improved methodologies frequently rely on new and/or expanded data collection.</td>
<td></td>
</tr>
<tr>
<td>o Not all data are readily available to be collected.</td>
<td></td>
</tr>
<tr>
<td>• Mission/operational conditions:</td>
<td></td>
</tr>
<tr>
<td>o EIA must produce data products in a timely manner, which does not easily allow for changes in production.</td>
<td></td>
</tr>
<tr>
<td>o EIA staff primarily support existing products and not expanding products.</td>
<td></td>
</tr>
<tr>
<td>• Personnel availability:</td>
<td></td>
</tr>
<tr>
<td>o Limited personnel limits time available to research and implement new methodologies.</td>
<td></td>
</tr>
<tr>
<td>o EIA needs new/improved skill sets to develop and implement new methodologies.</td>
<td></td>
</tr>
<tr>
<td>• Budgets (Cost to run surveys &amp; products/Cost to change surveys &amp; products):</td>
<td></td>
</tr>
<tr>
<td>o Funds may not be available to run new/expanded surveys.</td>
<td></td>
</tr>
<tr>
<td>o Changes in surveys and products can incur costs for changes in production systems, retraining staff, educating stakeholders, etc.</td>
<td></td>
</tr>
<tr>
<td>• Office of Management and Budget (OMB) Survey Clearance review requirements and standards:</td>
<td></td>
</tr>
<tr>
<td>o OMB must review and approve changes for survey methodologies.</td>
<td></td>
</tr>
<tr>
<td>o Methodologies must comply with OMB standards.</td>
<td></td>
</tr>
<tr>
<td>How do EIA’s statistical methodologies serve to help EIA meet its goals to collect, analyze, and</td>
<td>EIA must follow generally accepted statistical practices. Statistical practices consist of the development and implementation of specific statistical methodologies. The following points summarize the purpose of statistical methodologies with respect to EIA data:</td>

| disseminate large amounts of data?                                           | • Statistical methodologies make up the overall process on how data are collected, analyzed, and disseminated.  
|                                                                               | • Statistical methodologies inherently require repeatability with contingencies to address issues and errors that affect production.  
|                                                                               | • Statistical methodologies establish specific standards to ensure minimum data quality thresholds are met.  
|                                                                               | • Statistical methodologies can be applied to quantify the precision of data and the level of variability in them.  
|                                                                               | • Statistical methodologies can be readily documented and disseminated for transparency and understanding by stakeholders.                                                                                                                                                                                                                                                |
| How do EIA processes ensure its ability to actively monitor, evaluate, and meet data quality standards? | The following points summarize EIA’s process in monitoring, evaluating, meeting data quality standards:  
|                                                                               | • As part of its OMB Survey Clearance approvals, EIA must establish minimum statistical data quality standards with which it must comply.  
|                                                                               | • EIA actively tracks survey and product data quality as part of the production process to ensure data quality standards are met.  
|                                                                               | • EIA applies certain statistical methodologies, such as edits and imputation, that help EIA meet data quality standards.  
|                                                                               | • EIA has a specific agency-wide Quality Assurance/Quality Control program with products tiered by size and impact.  
|                                                                               | • EIA utilizes the SMIP and its directives to evaluate the functionality and data quality of surveys and products and to implement projects to make both targeted and full methodological improvements to surveys and products that enhance data quality.                                                                                                                                 |
| How well does the SMIP support improvement of EIA’s statistical methodologies and data quality? | In terms of functionality, the SMIP supports improvement of EIA’s statistical methodologies and data quality in the following ways:  
|                                                                               | • SMIP works well to provide a means to engage staff in completing evaluations of survey/product methodologies and data quality.  
|                                                                               | • SMIP works well to help identify when and how to undertake improvement projects.  
<p>|                                                                               | • SMIP works well to provide the framework for EIA managers to plan and allocate personnel and resources for evaluation and improvement process projects.                                                                                                                                                                                                                 |</p>
<table>
<thead>

</table>
|                | • SMIP provided the initial identification for new skills and personnel needed to support statistical methodological improvements.  
|                | • SMIP works well to unify EIA staff on the need to improve methodologies and data quality.  
|                | • SMIP helps to continue and to catalyze other similar statistical practice projects, such as maintaining survey process documentation and adopting new statistical standards. |
| **As a specific example of how the SMIP affects methodological improvements and resulting data quality,** EIA staff conducted a full methodological improvement process for the EIA-877 Winter Heating Fuels Telephone Survey, which samples sellers of heating oil and propane to estimate heating fuel prices. EIA-877 produces valuable data for stakeholders, particularly state energy agencies, to understand the costs associated with home heating during winter months. EIA had operated the previous survey design for numerous years. In 2019, EIA statistical researchers and survey managers under the guidance of the SMIP developed a detailed project to improve each statistical aspect of the survey to improve the data collection process and the overall data quality. |
| **Ultimately, the project specifically:** | |
| | 1) Developed a new, more market-representative frame of outlets from which to sample (This new frame utilized various sources of third-party and administrative data, including U.S. Bureau of Labor Statistics Quarterly Census of Employment and Wages data.)  
| | 2) Created new price estimation and variance estimation programs to process data better and meet data quality standards  
| | 3) Created a new imputation program for unreported annual sales volumes utilized as part of the improved price estimation methodology  
<p>| | 4) Created a new weighted volume response rate program to be able to better evaluate how the survey was performing with respect to response rate standards and effects on data quality |
| What best practices should be adopted from the SMIP (on an agency-wide basis for For possibly applying to agency-wide practices, the SMIP’s most applicable successes would be: | |
| | • Developing a framework for projects that can be flexible and opportunistic |</p>

<tbody>
<tr>
<td>program and functional activities)?</td>
<td>• Aligning the improvement of methodologies and data quality with staff roles and skills</td>
</tr>
<tr>
<td></td>
<td>SMIP’s accomplishments come from completing projects that evaluate and improve statistical methodologies and resulting data quality. The SMIP is most effective as the framework for these projects and could serve as an example to help improve other agency activities. By providing a project framework, the SMIP provides staff with the reason to identify ways to engage in improving data quality, including through defining their own job roles and improving their skills, and it provides managers with the actionable accountability to require staff to engage in these projects. In simpler terms, it makes staff question how to do things better, and it produces the demand on managers to pursue actively ways to make things better. Correspondingly, the SMIP’s framework structure is flexible with scope and needs of projects defined by staff themselves to help improve their own work and allows staff to schedule projects to accommodate operational needs. With this flexibility, staff can continue data production while also seizing on improvement opportunities when they present themselves. Finding ways to implement similar flexible and staff-accountable frameworks across the agency could be beneficial to EIA.</td>
</tr>
<tr>
<td>What aspects of these tools and methods lead to improved outcomes?</td>
<td>The following are the aspects of the SMIP’s design that help result in its ongoing success:</td>
</tr>

</table>
|                                                                               | • Actually implementing the plan through the outlined processes  
• Continually referencing and using the plan  
• Incorporating flexible scoping of the processes and their schedules to adapt to EIA’s mission and staff responsibilities                                                                                                                                                                                                                                                                                                                   |
|                                                                               | The SMIP project framework structure is what provides it with tools that help its implementation to improve statistical methodologies and data quality.                                                                                                                                                                                                                                                                                                      |
| What aspects of these processes could be made more effective or efficient?   | The following are possible improvement areas to the SMIP that EIA might consider in the future:                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                                                                               | • Interconnecting better with plans developed for individual surveys and products  
• Expanding the types of processes governed by SMIP to include things such as more exploratory and/or research-oriented projects                                                                                                                                                                                                                                                                                                           |
3. **DOE Category Management**

**Lead DOE Program/Support Office:** Office of Acquisition Management (OAM) and NNSA Acquisition and Project Management (NA-APM)

**Description:** The Office of Acquisition Management (OAM) coordinates with NNSA’s Office of Acquisition and Project Management (NA-APM) to manage procurement systems and provide procurement policy & oversight for DOE Procurement Offices (POs). With respect to procurement transactions the POs enter into, approve, administer, modify, closeout, terminate, and execute other actions as necessary.

The Office and Management and Budget (OMB) has mandated that agencies utilize Category Management (CM) to buy common goods and services. To accomplish this, OAM will issue policy, establish annual goals, and lead a CM Working Group (CMWG) to identify opportunities resulting from analyzing spend data found in the Federal Procurement Data System, Strategic Integrated Procurement Enterprise System, purchase card database, Management and Operating Subcontract Reporting Capability, General Service Administration’s Data to Decisions, and PO forecasts.

**Enterprise Learning Agenda.** This evaluation supports the DOE’s understanding of the following ELA question:

- What factors most influence the Department and NNSA’s ability to manage procurement systems and provide procurement policy & oversight for DOE Procurement Offices (POs)?

**Evaluation Questions.** The DOE seeks the answer the following evaluation questions and their sub-components in this study:

- How does the Office of Acquisition Management (OAM) coordinate with NNSA’s Office of Acquisition and Project Management (NA-APM) to manage procurement systems and provide procurement policy & oversight?
- How does OAM coordinate with NA-APM to manage processes with respect to procurement transactions the POs enter into, approve, administer, modify, closeout, terminate, and execute other actions as necessary?
- How does OAM issue policy, establish annual goals, and lead a CM Working Group (CMWG) to identify opportunities resulting from analyzing spend data?
- How does OAM work with NA-APM to collect, analyze, and disseminate large amounts of spend data?
- How do OAM and NA-APM processes ensure the ability to actively monitor, evaluate, and meet data quality standards?
- What best practices should be adopted from OAM and NA-APM on an agency-wide basis for program and functional activities?
  - What aspects of these tools and methods lead to improved outcomes?
  - What aspects of these processes could be made more effective or efficient?
**Impact:** The potential effects of CM are:

- Eliminating redundancies, increasing efficiency, and delivering more value and savings from DOE’s acquisition program
- More effectively managed contract spending through a balance of Government-wide, agency-wide, and local contracts
- Continued achievement of small business goals and other socioeconomic requirements

**Data & Evaluation Methods:**

Step 1 – Each PO establishes an annual CM plan for the designated Fiscal Year(s).
Step 2 – POs identify a procurement strategy for each requirement in their plan.
Step 3 – POs establish their FY goals and submit to OAM.
Step 4 – OAM collects all plans, establishes Department plan with goals, and submits to OFPP.
Step 5 – POs work with the CMWG to identify opportunities to consolidate requirements across the department and/or across programs/offices.
Step 6 – Heads of Contracting Activity (HCA)/Procurement Directors provide status reports as needed to OAM. OAM tracks status and briefs OFPP as required.

**Evidence Use and Dissemination.** DOE program staff would receive recommendations on activities that lead to greater goal achievement, as well as activities that could be adapted to improve the effectiveness and efficiency of surveillance reviews. Results will be presented to DOE program managers and senior leadership, published on the DOE website, and shared in the DOE’s Evidence and Evaluation Community of Practice.

- The CMWG leads DOE’s CM implementation. Each HCA assigns dedicated staff to participate in the CMWG.
- The DOE Acquisition Council governs the CMWG.

**Progress and Accomplishments:**
The following are Category Management accomplishments over the last 3 years:

- Negotiated the establishment of DOE Facility Management Contracts as Tier 1 (FY19).
- Chartered the Category Management Working Group (CMWG) in to lead the implementation of Category Management (CM) and strategic acquisition management initiatives within DOE (July 2019).
- Established the DOE CM Process to build the annual DOE CM Plan for submission to OMB (FY19).
- Established data analytics process to provide a framework and data analysis in support Procurement Management Review (PMRs) (FY19).
- Published department CM policy in Acquisition Guide Chapter 8.3 (June 2020).
- Developed DOE CM training specific to DOE CM strategy. Trained 480 Contracting Officers and Contract Specialists to date. Also trained acquisition leadership on oversite expectations and techniques. (Ongoing).
• Emphasized data assurance via the CMWG and PMRs (Ongoing)
• Established a portion of the DOE Contract Inventory process to routinely designate competed, socioeconomic awards as Tier 1-SB and assist with efforts to increase equity in contracting (May 2021).
• Finalized a list of DOE Preferred Solutions (DPSs) which includes 6 contract solutions that will further DOE’s CM achievement (June 2021).
• Ongoing maturation of DOE data analytics efforts which will enhance our ability to create new, more efficient DOE CM opportunities and contract vehicles (Ongoing).
• Integrated CM oversite into the department’s PMR process (FY20).
• Achieved 97% ($19.9B) and 134% ($26.8B) of Spend Under Management goal in FY19 and FY20 respectively.
• Achieved 56% ($197M) and 87% ($171.4M) of Best-In-Class goal in FY19 and FY20 respectively.

4. Optimize DOE Corporate Business Systems & Services for Cloud-Based Delivery

Lead DOE Program/Support Office: Office of the Chief Financial Officer (OCFO)

Description: The Office of Chief Financial Officer manages over 30 IT systems and other tools that provide corporate business solutions to the Department of Energy (DOE). These systems support enterprise-level financial transactions, accounting, audit, budget, internal controls, business intelligence, procurement, human resources, travel, employee training and performance evaluations, and many other functions. Some of these systems are approaching end-of-life; others have support contracts that are either expiring or require exercising options to continue.

The Office and Management and Budget has mandated that agency-managed IT systems must be converted to cloud-based solutions by FY 2021. To meet this goal, OCFO will conduct an evaluation to determine the optimal mix of which DOE corporate business systems should be migrated to the cloud “as-is”, which should be upgraded during migration, and which systems can be consolidated and/or retired.

Enterprise Learning Agenda. This evaluation supports the DOE’s understanding of the following ELA question:
• What factors most influence the Department’s ability support conversion of OCFO-managed IT systems to cloud-based solutions by FY 2021?

Evaluation Questions. The DOE seeks the answer the following evaluation questions and their sub-components in this study:
• How does the Office of the Chief Financial Officer (OCFO) coordinate to determine the optimal mix of which DOE corporate business systems should be migrated to the cloud:
  o “As-is”,
  o Which should be upgraded during migration, and
  o Which systems can be consolidated and/or retired?
• How do OCFO processes ensure the ability to actively manage, monitor, evaluate, and meet IT support standards for both cloud applications and corporate business systems?
• How does OCFO the OCFO IT strategy ensure effective software and hardware solutions for corporate business services to current DOE capabilities?
• What best practices should be adopted from OCFO on an agency-wide basis for IT cloud migration program and functional activities?

Activities: The OCFO will engage a leading private sector provider of Federal IT services to conduct a comprehensive study of DOE’s corporate business system portfolio and to recommend an optimal strategy for cloud-based migration of its systems. The study will compare current leading software and hardware solutions for corporate business services to current DOE capabilities. The study will further examine the structure and terms of existing DOE IT contracts and determine an optimal mix of strategy to continue as-is, renew, or enter into new contracts.

Timeline: OCFO anticipates 6-9 months will be required to issue a contract for the study, conduct strategic analysis, and to issue recommendations. Implementation of the study’s recommendations is anticipated to occur in stages over the next 1-2 years as OCFO migrates some systems to the cloud, acquires new cloud-based solutions, and retires and/or consolidates other systems.

Data: Data gathered for this evaluation may include:
   • reviewing DOE’s current and anticipated corporate business process requirements
   • comparing current DOE IT system capabilities to meet business process requirements vs. other available IT system solutions
   • predicting total cost for migrating existing DOE systems to the cloud and associated operations & maintenance effort vs. acquiring new solutions
   • reviewing DOE’s existing contract terms with IT service providers to determine whether to upgrade DOE systems, consolidate and/or retire systems, or maintain current systems in a cloud-based environment

Evidence Use and Dissemination. DOE program staff would receive recommendations on activities that lead to greater goal achievement, as well as activities that could be adapted to improve the effectiveness and efficiency of surveillance reviews. Results will be presented to DOE program managers and senior leadership, published on the DOE website, and shared in the DOE’s Evidence and Evaluation Community of Practice.

Progress and Accomplishments: In 2020, an independent Business Systems Assessment was performed of OCFO’s business systems and system architecture. This included an assessment of:
   • Current OCFO offices and interconnection of functions
   • OCFO processes and supporting OCFO systems
   • Process automation opportunities
   • Process improvement opportunities based on pain points
The assessment resulted in recommendations to OCFO to implement as it pertains to staff, business processes, and associated technology:

<table>
<thead>
<tr>
<th>Area</th>
<th>Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Staff</td>
<td>1. Improve communications and enhance transparency for OCFO system users&lt;br&gt;2. Define training plan for OCFO systems, including Data Warehouse and OCFO system training plan&lt;br&gt;3. Prepare OCFO workforce for enhanced future systems portfolio, including development of an OCFO future work strategy and plan</td>
</tr>
<tr>
<td>Process</td>
<td>4. Define Data Strategy as an enhanced capability for the Department&lt;br&gt;5. Scale robotics process automation (RPA) operations for the Department&lt;br&gt;6. Refine governance and change management to increase the voice of the customer</td>
</tr>
<tr>
<td>Technology</td>
<td>7. Cloud Migration and Modernization, including to conduct the migration and modernize application portfolio in leveraging the cloud&lt;br&gt;8. Business System Transformation, to include financial operations and procurement, budget execution and formulation, and human resources and payroll systems&lt;br&gt;9. Establish innovation capability for emerging technology in coordination with OCIO&lt;br&gt;10. Data integration and modernization, including optimization of data warehouse performance for cloud infrastructure</td>
</tr>
</tbody>
</table>

OCFO has already taken steps to implement the recommendations listed above.
Appendix C. DOE Capacity Assessment of Statistics, Evaluation, Research, and Analysis

CAPACITY ASSESSMENT SUMMARY: In assessing the coverage, quality, methods, effectiveness, and independence of the Department of Energy’s (DOE) statistics, evaluation, research, and analysis personnel, agency infrastructure (i.e., DOE elements, and sub-elements), and current and planned evidence building activities, the DOE Evaluation Officer has determined the current personnel, agency infrastructure, and activities dedicated to statistics, evaluation, research, and analysis are commensurate with the DOE mission and programs – and in alignment with the Department’s Strategic Goals for FY2022-26.

The need for resources, agency infrastructure, and evidence building activities will be continuously monitored via DOE Strategic Human Capital Planning, as well as feedback received from the Office of Management and Budget (OMB) for future budget cycles and oversight of management initiatives (e.g., Strategic Planning).

In addition, the new Office of Clean Energy Demonstrations (OCED) will conduct analyses and evaluation of Clean Energy initiatives using a systematic approach that is informed by, and integrated with, existing clean energy innovation initiatives across DOE’s diverse program and functional offices, sites and associated National Laboratories, as well as serving as the Department’s hub for accelerating the maturation of near- and mid-term clean energy technologies and systems with the goal of quicker commercial adoption and increased availability.

| BPA         | 99 self-financed and receives no direct annual appropriations from Congress | 100 self-financed and receives no direct annual appropriations from Congress | 321          | 1. [Bonneville Power Administration (BPA)] has created a Strategic Plan centered on what BPA intends to do in the near term to deliver on their public responsibilities. This strategic plan with wide input from the region. This strategic plan is updated with a Strategic Progress Update.  
2. BPA also conducts an Integrated Program Review (IPR), which plays a significant role in BPA’s overall financial planning process. It provides the public an opportunity to review and comment on BPA’s spending levels for its capital and expense programs before establishing them in rate cases. | Goal 2, Strengthen the Nation’s Energy Security, Resiliency, Affordability, and Reliability |

BACKGROUND: BPA incorporates program plans in 4 areas:  
- Power  
- Transmission  
- Energy Efficiency  
- Environment, Fish & Wildlife  
The development of future data requires the forecast of revenues, expenses and investment as detailed in [DOE Order RA 6120-2](https://energy.gov).

• Goal 7, Operational Excellence |

1. **Equity in Energy** – designed to expand the inclusion and participation of individuals in underserved communities, such as minorities, women, veterans, and formerly incarcerated persons, in all the programs of the Department of Energy and in the private energy sector. The Department’s 200-Day Equity Assessment completed in 2021 pursuant to EO 13985 revealed a range of barriers underserved communities face when accessing DOE’s procurement, funding, R&D, and deployment processes and activities.

2. **Promoting Energy Justice** – implementing Justice40 Initiative – a plan to deliver 40% of the overall benefits of climate investments to disadvantaged communities and inform equitable research, development, and deployment within the DOE. With the beta launch of the Energy Justice Dashboard (BETA), DOE is working to better understand how the Department’s funding and investments are distributed to overburdened and underserved communities that have been left behind and unheard for too long. The Energy Justice Dashboard

Most of EERE's new investments directly support deployments or demonstrations of technologies that show viable pathways for achieving EERE’s five programmatic priorities:

- Decarbonizing the electricity sector.
- Decarbonizing transportation across all modes: air, sea, rail, and road.
- Decarbonizing the industrial sector.
- Reducing the carbon footprint of buildings.
- Decarbonizing the agriculture sector, specifically focused on the nexus between energy and water.

EERE consists of several offices that support EERE’s mission:

**BACKGROUND:** The U.S. Energy Information Administration (EIA) is committed
to enhancing the value of its free and open data by making it available through an Application Programming Interface (API) and open data tools to better serve our customers. The data in the API is also available in bulk file, in Excel via the add-in, in Google Sheets via an add-on, and via widgets that embed interactive data visualizations of EIA data on any website. By making EIA data available in machine-readable formats, the creativity in the private, the non-profit, and the public sectors can be harnessed to find new ways to innovate and create value-added services powered by public data.

Currently, EIA's API contains the following main data sets:

- Hourly electricity operating data, including actual and forecast demand, net generation, and the power flowing between electric systems
- 408,000 electricity series organized into 29,000 categories
- 30,000 State Energy Data System series organized into 600 categories
- 115,052 petroleum series and associated categories
- 34,790 U.S. crude imports series and associated categories

The Available Award Fee shall be established considering the level of complexity, difficulty, cost effectiveness, and risk associated with specific objectives/incentives defined in the Performance Evaluation and Measurement Plan (PEMP). The Performance Evaluation and Measurement Plan(s) sets out the criteria upon which the Contractor will be evaluated relating to any technical, schedule, management, and/or cost objectives selected for evaluation. These criteria are generally objective, but may also include subjective criteria. | • Goal 2, Strengthen the Nation’s Energy Security, Resiliency, Affordability, and Reliability  
• Goal 5, Promote Equity and Energy Justice |

BACKGROUND: The Office of Fossil Energy and Carbon Management (FECM) manages the Strategic Petroleum Reserve Office (SPRO) M&O Contract. The Strategic Petroleum Reserve (SPR), the world's largest supply of emergency crude oil, consisting of salt caverns storing crude oil in Texas and Louisiana. This was established primarily to reduce the impact of disruptions in supplies of petroleum products and to carry out obligations of the United States under the international energy program.

• Goal 6 – Engage the public, governments, and interested parties  
1. Once LPO closes a loan or loan guarantee, projects are monitored and evaluated throughout project development, construction, commissioning, and operation until the loan has been repaid in full. LPO’s team of financial, technical, environmental, and legal professionals is dedicated to advancing an all-of-the-above energy strategy that avoids, reduces, or sequesters greenhouse gases.  
2. After financial close or first funding, responsibility for managing a project transfers from the LPO Origination Division to the Portfolio Management Division (PMD). PMD provides ongoing monitoring and oversight to ensure that the construction and completion phase of a project is executed in accordance with the terms and conditions of the loan documents. PMD is also responsible for maintaining compliance with the loan documents terms and conditions after project completion. Some of PMD’s responsibilities include, but are not limited to, monitoring borrower activities to ensure compliance with the loan documents;

Every fiscal year, the NNSA completes an assessment of their management and operating (M&O) partners’ effectiveness in meeting the performance expectations as established by NNSA in NNSA NAP 540-3. This assessment is based on an evaluation of the annual Performance Evaluation and Measurement Plans (PEMPs) linked to each NNSA site. NNSA performance assessments are documented annually in a Performance Evaluation Report (PER), and award fee amounts are documented in a Fee Determination Memorandum.

In support of NNSA’s major mission areas, the NNSA has established procedures to ensure that the planning, programming, budgeting, and evaluation (PPBE) activities of the NNSA comply with sound financial management principles, specifically to assess and determine whether progress has been made toward achieving identified performance measures at multiple levels within the NNSA.

Goal 1, Drive U.S. Energy Innovation and Deployment on a Path to Net-Zero Emissions by 2050
Goal 3, Advance Science Discovery and National Laboratory Innovation
Goal 4, Ensure America’s Nuclear Security by Harnessing Unparalleled Science and Technology Capabilities

BACKGROUND: The development of future data requires the forecast of revenues, expenses and investment as detailed in DOE Order RA 6120-2.

The SWPA announced its new Strategic Plan in October 2020. This Strategic Plan, focused on their vision for SWPA both the short and long-term providing a pathway to future workforce development, operations, partnerships, and evolving services. This plan is coupled with an annual SWPA Performance Plan – including a Goal Overview. SWPA details performance in SWPA Annual Reports.

<td>BACKGROUND: The Southwestern Power Administration’s (SWPA’s) mission is to market and reliably deliver Federal hydroelectric power with preference to public bodies and cooperatives. As one of four Power Marketing Administrations in the United States, SWPA markets hydroelectric power in Arkansas, Kansas, Louisiana, Missouri, Oklahoma, and Texas from 24 U.S. Army Corps of Engineers multipurpose dams with a combined generating capacity of approximately 2,193 MW. The development of future data requires the forecast of revenues, expenses and investment as detailed in DOE Order RA 6120-2. 1. WAPA provides program status and reporting via <a href="#">annual reports</a>. Status is based on objectives laid out in the <a href="#">WAPA Tactical Action Plan</a>. WAPA has a created a website (called The Source), which offers a one-stop shop for financial and operational information. With the latest expansion below, WAPA partnered with customers to determine data elements and information that would be most helpful to understand cost drivers and expenditures. 2. Results are also released by quarter, providing performance data based on established goals. An example report is linked <a href="#">here</a>.</td>
