Join the FECM Carbon Management Day Webinar

DECEMBER 1, 2022 at 12:01 p.m. EST

Carbon management is an integral part of meeting the Biden-Harris Administration's goal of net-zero greenhouse gas emissions by 2050. Carbon Management Day celebrates the progress that has been made to date and recognizes the work that still needs to be done.

Did you know that the atomic mass of carbon is 12.01? That's why the U.S. Department of Energy's Office of Fossil Energy and Carbon Management (FECM) celebrated its **first-ever Carbon Management Day** on December 1st (**12.01**) last year.

FECM is excited to share that it will be celebrating Carbon Management Day again—so, be sure to save the date for a webinar you will not want to miss!

During the webinar, FECM will discuss updates on key initiatives, take a closer look into FECM-funded carbon management projects, and inform stakeholders on how to get involved.

Stay tuned for more information about the agenda, presenters, and the registration link. In the meantime, be sure to save the date!
