

APPENDIX A

Searchable Offsite Program Report Document Database (Electronic)

APPENDIX A

Offsite Source Report Document Database Readme File

This Readme file contains information and instructions regarding the use of electronic documents included in Appendix A of the *Offsite Data Evaluation Report, Santa Susana Field Laboratory* December 2007, and are provided electronically in Adobe Acrobat Portable Document Format (PDF). These files are read only.

This appendix contains electronic copies of all source documents for the offsite sampling data compiled for this report, as well as any work plans, health and safety plans, and quality assurance plans associated with the source documents. These copies are stored and provided on an external hard drive. Table A-1 describes the contents of the document database, organized by offsite program (as presented in Section 2 of this report), and listing the title, author, date, and document reference number of each document.

The reference numbers indicated in Table A-1 are associated with the “document reference number” column in the offsite data tables provided in Appendix B. Although multiple source documents may exist for a given sample result, each sample result in the offsite database has been associated with a single document (typically the earliest or most complete reference). In the case of a source document consisting of multiple volumes, the sample result is associated with the first volume of the document.

Some documents provided in this document database are not associated with sample results (e.g. work plans). All work plans referenced in source documents have been included regardless of whether or not the work plans themselves are associated with offsite sampling. Planning documents listed under “ORAU / ORISE Studies” as “not available at time of production” were included in the references section of the ORISE and ORAU reports, but copies of these documents could not be located by the time this offsite report was produced. They are listed on TABLE A-1 for completeness.

APPENDIX B
Part I
Electronic Copy of Offsite Sampling Results
Readme File

This Readme file contains information and instructions regarding the use of electronic data tables included in Appendix B of the *Offsite Data Evaluation Report, Santa Susana Field Laboratory* December 2007, and are provided electronically in Adobe Acrobat Portable Document Format (PDF). These files are read only.

This appendix contains 4 tables (PDF files):

The first 3 are analytical result data tables;

- 1) "Master Dataset"
- 2) "Averaged Radionuclide Data"
- 3) "Corehole Data "

The fourth is an object look-up table to support them:

- 4) "Location/Object Table"

B.1.1 Master Dataset

The "Master Dataset" table is a compilation of offsite analytical data collected by Boeing, NASA, or DOE and contains sampling and analytical information for those samples. This dataset is the data used to produce figures and tables used for the evaluation in this report. This multimedia dataset includes primary, field duplicate and confirmation laboratory split samples.

The table structure is consistent with the Averaged Radionuclide Data analytical result data table and is described below in Section 2.

B.1.2. Averaged Radionuclide Data

The ASER average table contains radiological data collected that represents an average result from multiple sampling locations. Because the data represents averaged results, no coordinate information is available.

The table structure is consistent with the Master Data Set analytical result data table. This table structure is described below:

Column Header (Field Name)	Field Description
Object Name	Identification assigned in the database to each unique sample location.
Sample Name	Unique Sample Identification. It was necessary to augment some of the sample names within this dataset in order to create a unique ID.

Sample Name Alias	Identifier for sample tracking. Used to associate Sample Names with a location/object
Collection Date	Sample collection date.
Media Type	Sample matrices grouped by media, including: soil/sediment (including sediment, mud, and leachates) soil vapor surface water Spring/seep groundwater solid (including debris, concrete, scrap metal, etc) bedrock vegetation
Sample Matrix Type	General sample matrix assigned by analytical laboratory (i.e. soil, solid, water, etc).
Sample Type	Describes the sample status as Primary Sample, Split Sample, Field Duplicate or Lab Duplicate.
Analysis Group	Assigns a generic analytical title to a group of specific analytical methods. For example, VOCs (Volatile Organic Compounds) would include multiple USEPA SW846 methods such as 8010, 8240 and 8260.
Analysis Method	Actual analytical method performed by laboratories, when not available, generic names were applied (e.g. RadChem)
Constituent/Analyte	Name of chemical compound or radionuclide standardized for comparison purposes of this report.
Result Value	Analytical result concentration. Aquatic Toxicity is reported as "0" or "1"; this is a mechanism to capture these results in a database structure the result is represented by a "0" for true (Passed (LC50 > 750 mg/l)) or by "-1" for false (Failed (LC50 < 750 mg/l)). Additionally some Gross Alpha and Gross Beta results are reported as detected or not detected. For these results the same true/false rule applies with "0" representing detected and "-1" representing not detected.
Result Units	Standardized where needed for comparison purposes.
Result Data Qualifier	Represents a result qualifier assigned by the analytical laboratory or during data validation process. A null value in this field indicates a detected result concentration, a "J" qualifier indicates an estimated result, "U" qualifier indicates not detected and a "UJ" qualifier indicates Constituent/Analyte not detected with an estimated result
Detection Limit	The concentration that can be reliably measured within specified limits during routine laboratory operating conditions using approved methods.
Error/Deviation	Indicates the activity deviation of the target in radionuclide analysis. The error/deviation is reported for radiochemistry results only.

Result Type	Describes the result status as Primary Results, Alternate Results or Lab Repeat Analysis. Also identifies any sample results which have been calculated (Calculated Result) such as Toxic Equivalents (TEQ) for Dioxin/Furan analyses or Tritium results back calculated to Dry Units (pCi/g) from the Primary Results reported in Wet Units (pCi/L) based on % Moisture. In the case of calculated Tritium both the Primary and the Calculated Result are presented in the table.
Document Reference Number	Indicates the report where these results were published; a table connecting the publication name to the document reference is included in Appendix A. All source documents are provided in Appendix A. Although multiple source documents may exist for a given sample result, each sample result in the database has been connected to a single source document (typically the earliest or more complete reference). In the case of a document consisting of multiple volumes, the sample result has been connected to the first volume of the document.
Coverage	Indicates whether sample is presented on data figures. “View” indicates sample location within view presented on data figures. “Full” indicates outside of view but considered for evaluation in this report. All samples are shown on Sample Location Map (Figure 2-1)

B.1.3. Corehole Data

The Corehole Data table contains Volatile Organic Compound (VOC) results collected at C16 & C17 (previously known as RD-39C). Data is presented as the original data summary table collected and provided by the University of Waterloo, Ontario, Canada.

Corehole VOC list:

1,1-Dichloroethene
1,1,1-Trichloroethane
cis-1,2-Dichloroethene
Chloroform
Freon-113
Tetrachloroethene
Trichloroethene
trans-1,2-Dichloroethene

B.1.4. Location/Object Table

The “Location/Object Table” is a look-up for coordinates associated with all unique locations (objects) contained in the Master Dataset. It also allows listing of the various media types at that specific location. Actual location coordinates are not provided in this database for samples collected from private residences to honor resident’s request to maintain confidentiality. Placeholder coordinates provided in table were used in producing report figures on which sample data is described.

Table structure is:

Column Header (Field Name)	Field Description
Object Name	Identification assigned to each unique sample location as described in Section 2.
Media Type	Sample matrices grouped by media as described in Section 2.
X_Coordinate	California State Plane North American Datum of 1927 (NAD 27), Zone 5, Feet
Y_Coordinate	California State Plane North American Datum of 1927 (NAD 27), Zone 5, Feet
