Appendix A:
State Level Clean Energy Jobs

Due to data limitations, the state-level definition of clean energy jobs differs from the national definition. At the state level, fossil and non-fossil jobs cannot be split at the for energy efficiency and traditional transmission and distribution due to the statistical significance of data at these more detailed geographies. At the national level in 2022, 54% of energy efficiency jobs were considered clean under the formal definition and 69% of traditional transmission and distribution jobs — those involving electricity — were considered clean under the same definition.¹

State-level clean energy jobs refer to a more expansive set of jobs than the national clean job definition. If the state-level definitions were applied nationally, national clean job estimates would total 4,320,739 (including electrical and non-electrical traditional transmission and distribution) and 3,352,450 (including only the efficiency jobs without traditional transmission and distribution). This means that the new-zero aligned definition which totals 3,075,857 jobs, is 71% of the fully expansive state-level definition (with T&D) and 92% of the state-level definition including all energy efficiency.

Since states have very distributions of energy efficiency and transmission and distribution jobs, we caution against applying an across-the-board discount to clean energy jobs to approximate those aligned with a net-zero future. To facilitate independent state-level clean energy jobs figures, the definition used in this report includes:

- All renewable electric power generation technologies, including traditional hydropower
- Nuclear electric power generation and fuel
- Microgrids and grid modernization
- Non-fossil storage
- All biofuels, including corn ethanol
- Plug in hybrid vehicles, battery electric vehicles, and hydrogen fuel cell vehicles
- All energy efficiency*  
- Traditional transmission and distribution (including that associated with fossil fuels)*

*Note difference with national clean energy jobs definition, which includes only a subset of this category

Because nationally, 31% of traditional transmission and distribution jobs are associated with fossil fuels, Table 1 presents state-level clean energy job numbers with and without traditional transmission and distribution. While both energy efficiency and traditional transmission and distribution are only partially included at the national level, all energy efficiency jobs are involved in reducing energy use and included in the state-level clean energy jobs data in the tables below.

¹ Other forms of transmission and distribution are petroleum, natural gas, coal, and other fuels.
Without including traditional transmission and distribution, California had the highest number of clean energy jobs with 527,696, followed by Texas (248,891) and New York (171,377). Including traditional transmission and distribution, the top three states were still California, Texas, and New York.

</tbody>
</table>
From 2021 to 2022, clean jobs grew in all states and the District of Columbia regardless of whether traditional transmission and distribution was included. As shown in Table 2, excluding traditional transmission and distribution, New Mexico had the fastest clean energy job growth, increasing 6.3% (749 jobs), followed by Kentucky (+6.1%; 1,956) and Oklahoma (+6.1%; 1,298). If traditional transmission and distribution is included, West Virginia grew the fastest, expanding 19.3% (6,975) and followed by New Mexico (+9.1%; 2,130) and Oklahoma (+9.1%; 4,190).

Appendix B: Discussion of USEER Methodology

I. Survey Overview

The 2023 USEER methodology relies on the most recently available data from the BLS QCEW (QCEW, third quarter 2022), the BLS Unemployment Situation Table B-1 monthly reports, together with a detailed supplemental survey of business establishments across the U.S. designed and conducted by BW Research Partnership in partnership with the DOE. During a time of rapid change in energy technology and business employment structure, supplemental surveys are an important tool to capture developing trends. Taken together, the BLS and survey data provide the most comprehensive calculation of energy-related employment available. The methodology has been used for local, state, and federal energy-related data collection and analysis for a decade, including the Interstate Renewable Energy Council’s National Solar Jobs Census series, traditional and clean energy reports for state agencies in the Commonwealths of Massachusetts, and Pennsylvania, New York State, and the States of California, Connecticut, Maryland, Minnesota, New Hampshire, Rhode Island, and Vermont, and numerous nonprofit agencies across the U.S.

The 2023 USEER survey uses a stratified sampling plan that is representative by industry code (NAICS or ANAICS), establishment size and geography to determine the proportion of establishments that work with specific energy-related technologies, as well as the proportion of workers in such establishments that use the same. These data are then analyzed and applied to existing public data published by the BLS, effectively constraining the potential universe of energy establishments and employment. For more detail, see Section III, USEER Sampling Plan.

The 2023 USEER survey was administered by telephone (more than 274,000 outbound calls) and by web, with more than 327,700 emails sent to participants throughout the U.S. The phone survey was conducted by ReconMR. The web instrument was programmed internally, and each respondent was required to use a unique ID to prevent duplication.

The sample was split into two categories, referred to as the known and unknown universes. The known universe includes establishments that have previously been identified as energy related, either in prior research or in some other manner, such as membership in an industry association or participation in government programs. These establishments were surveyed census-style, and their associated establishment and employment totals were removed from the unknown universe for both sampling and for resulting employment calculations and estimates.

The unknown universe included tens of thousands of businesses in potentially energy-related NAICS codes, across agriculture, mining and extraction, utilities, construction, manufacturing, wholesale trade, distribution (including pipeline

2 ANAICS is a term used by BLS, which means Allocation NAICS, and refers to the industries included in the aggregation of industries likely to participate in said activities (https://www.bls.gov/ggs/ggs_technote_extended.pdf)
distribution), professional services, and repair and maintenance. Each of these segments and their total reported establishments (within the BLS QCEW) were carefully analyzed by size (employment) and state to develop representative clusters for sampling. In total, approximately 34,200 business establishments participated in the survey effort, with approximately 7,200 providing full responses to the survey. These responses were used to develop incidence rates among industries (by state) as well as to apportion employment across various industry categories in ways currently not provided by state and federal labor market information agencies. The margin of error for incidence in the USEER is ±0.53% at a 95% confidence interval. The margin of error for all energy firms that answered questions related to energy employment in the survey is ±1.15% at a 95% confidence interval. The margin of error increases for each subgroup of respondents that participated in the survey. For example, the margin of error for questions answered by all firms that identified as solar photovoltaic (PV) is ±3.49% at a 95% confidence interval.

For several industries, particularly transportation of goods, the USEER uses the methodology developed by DOE, BW Research, the National Renewable Energy Laboratory, and the National Energy Technology Laboratory for the first installment of the USEER. The proportion of employment, referred to as “commodity flows,” was calculated by dividing the value of commodity shipments (in millions of dollars) for coal, fuel oil, gas, motor vehicles, petroleum and other coal and petroleum products by total commodity value at the state level by truck, rail, air and water transport. This proportion was applied to NAICS employment for truck transportation (NAICS 484), water transportation (NAICS 483), air transportation (NAICS 481) and Railroad Retirement Board employment for rail transportation at the state level. With this analysis, truck transportation represents the majority of energy-related transportation employment (69%), followed by rail (22%), water (8%) and air (1%).

Of important note, the USEER expressly excludes any employment in retail trade NAICS codes except for Fuel Dealers (NAICS 454310). This excludes motor vehicle dealerships, gas stations, appliance and hardware stores and other retail establishments.

All data in the USEER rely on the BLS QCEW data for the end of the third quarter of 2022, and the BLS Unemployment Situation Table B-1 monthly reports through December 2022. Employment extrapolations are based off BLS QCEW and survey data, resulting in totals that carry precise decimal values. As a result, some employment totals for tables in the report will sum differently due to rounding. The USEER survey was administered between January 31, 2023, and March 30, 2023, and averaged 17 minutes in length.

II. Methodology Discussion

Employment data collected by the BLS provide information on many, but not all, energy-related job categories. Most notably, BLS does not collect data on employment levels by energy technology across business segments. For instance, residential solar installation establishments are typically labeled as electrical contractors (together with all other traditional electrical businesses) without being

---

3 Gas station employment had been reported in previous years up to the 2021 USEER. The 2023 USEER excludes mention of employment in this industry.
identified specifically as solar companies. Petroleum engineering firms are included in engineering services, with civil, mechanical, and other engineers, while electric vehicle prototype manufacturers are combined with gasoline- and diesel-fueled vehicle manufacturing. As a result, BLS employment data do not capture the full scope of energy employment trends.

Given the complex relationship between energy and the overall economy, the 2023 USEER investigates, with a special supplemental survey, the three traditional energy sectors — electric power generation, fuels, and transmission, distribution, and storage — followed by individual analyses of employment in two important energy end-use sectors — energy efficiency and motor vehicles. The spread of business activities in each of the five analyzed sectors presents additional taxonomic challenges, as early-stage research and development, repair, and maintenance or professional and technical services vary across energy, energy efficiency, and manufacturing. Natural gas business activities, for instance, differ from business activities relating to advanced building materials and solar photovoltaic materials.

Historically, the BLS has conducted supplemental surveys to acquire more complete information on new industries, specific demographic profiles within the workforce or new labor force trends such as the role of contingent workers. In this way, significant modification to the current BLS structure of industry and occupational classifications is avoided by capturing the required energy employment data using a supplemental survey tool based on existing BLS data and classifications.

The 2023 USEER relies on such a comprehensive survey of 34,200 business representatives across the U.S., conducted by BW Research. The survey data were used to filter and analyze the concentration, intensity and distribution of various energy technologies and activities throughout traditional industry sectors, using third quarter 2022 employment data from the BLS QCEW and the BLS Unemployment Situation Table B-1 monthly reports through December 2022. USEER data also provide an additional layer of information to track sector-specific growth potential, obstacles, and opportunities. The data presented in the USEER are not intended to remove, replace, or replicate existing data from the BLS QCEW, but instead to reorganize categories and provide insight for policymakers and the public regarding trends in energy employment, energy production and energy consumption across the U.S.

The USEER provides data for direct employment only and does not attempt to estimate indirect employment or induced employment related to the analyzed sectors. Many employment studies generate employment estimates that rely on input/output modeling. These studies typically define an activity based on reported expenditures or expenditures and associated levels of employment reported by a defined industry or activity, such as U.S. solar PV installation. In this example, solar PV installation firm employment would be the “direct” jobs. Most studies go at least one step further, identifying “indirect” employment, which includes the supply chain or other support services to the industry. In the solar example, these would include U.S. manufacturing jobs related to producing PV equipment used in domestic installations (and their suppliers and vendors) as well as consulting, tax, legal, and other professional services to support domestic PV installation companies. Another typical calculation is “induced” jobs, which includes jobs created or supported by wages paid and other benefits provided by employers of direct and indirect employees.
In the USEER, by comparison, the direct job category of interest is defined as the solar industry generally, including utility-scale solar, residential, and commercial installations, as well as the manufacturing, professional services, and wholesale trade that make up the sector. However, the indirect jobs that support this industry are not included, such as polysilicon production (the raw material used in solar panels), aluminum production and extrusion activities for frame manufacturing or other aspects of the solar energy value chain. Induced jobs — those created economy-wide as a result of the spending of wages by the employees whose income derives, in whole or part, from this industry — are also not included.

Employment numbers in the text, charts, and tables of the USEER are reported at all place values to follow QCEW reporting. In other words, the number of significant digits given for each number in this report matches that given in QCEW reporting for the same type of numbers. For information on margin of error, refer to the first paragraph on page A-2 of the methodology.

For this survey, a qualifying firm is

An organization with employees in the United States that is directly involved with researching, developing, producing, manufacturing, distributing, selling, implementing, installing, or repairing components, goods or services related to Electric Power Generation; Electric Power Transmission, Distribution, and Storage; Energy Efficiency, including Heating, Cooling and Building Envelope; Fuels, including Extraction, Processing, Production, and Distribution; and Transportation, including Motor Vehicles. This also includes supporting services such as consulting, finance, tax, and legal services related to energy, fuels, energy efficiency, or motor vehicles.

Qualifying workers are

Employees of a qualifying firm that spend some portion of their time supporting the qualifying energy, energy-efficiency, or motor vehicle portion of the business.\(^4\)

This report provides detail into levels of employment activity that include both “a portion of their time” and “a majority of their time” when referencing qualifying workers. This is especially true in the energy efficiency sector where the employing

---

\(^4\) Data presented in this report exclude retail employees. Qualifying workers in energy will be referenced as energy-related jobs. Where “portion of their time” includes employees whose relevant activities are less than 50% of their time, specific reference is made of that fact.
construction or repair firms frequently are engaged in both traditional energy-related construction or installation as well as high-efficiency activities that qualify for ENERGY STAR designation.

Primary energy consumption\(^5\) in the U.S. is divided among four sectors: electric power sector (37.6\%), residential and commercial buildings (12\%), industrial (23.1\%) and transportation (27.4\%). This distribution of energy consumption by sector is based on total 2022 estimates published by the EIA.\(^6\)

End-use electricity consumption, in turn, is divided with 74.1\% consumed by residential and commercial buildings, 25.8\% by industrial and 0.1\% by transportation.\(^7\) Thus, residential and commercial buildings consumed 39.8\% of all energy (an amount consisting of their direct energy end use, their electricity end use and the electrical system energy losses allocated to the sector by EIA).\(^8\)

As with the 2022 report, the 2023 USEER identifies jobs that manufacture ENERGY STAR appliances and other ENERGY STAR labeled products, as well as employment in building design and contracting services that provide insulation, improve natural lighting, and reduce overall energy consumption across homes and businesses.\(^9\) As with the 2022 report, the 2023 USEER includes a section that disaggregates ENERGY STAR technologies more thoroughly, further highlighting the employment impacts of the program.

Motor vehicles are included in this report primarily because of their intensive use of energy and contribution to carbon emissions.\(^10\) This report delineates employment between traditional gas and diesel motor vehicles, hybrid and plug-in hybrid, all-electric, natural gas, hydrogen, and fuel cell technologies, as well as motor vehicle component parts for such vehicles. USEER does not, however, cover all sectors of transportation, such as aviation and maritime transportation. According to the EIA, the transportation sector accounted for 27.4\% of U.S. primary energy consumption in 2022;\(^11\) 67.2\% of overall U.S. petroleum consumption was attributable to the transportation sector.\(^12\)

Motor vehicles employment reported at the state level includes overall value chain (manufacturing, wholesale trade, commodity flows or freight transport of motor vehicles, professional and business services and repair and maintenance) and employment by detailed technology (gas and diesel, hybrid, plug-in hybrid, electric, hydrogen and fuel cell, natural gas and other). Employment at the state level is not reported by value chain within detailed technology.

---

\(^{5}\) Primary energy consumption is the direct consumption of energy at its first point of use. Importantly, this does not include consumption of electricity, so that primary energy consumption in the residential and commercial building sector includes direct use of fuels like natural gas for heating, but not electricity used for lighting and cooling.

\(^{6}\) EIA, *Monthly Energy Review*, Table 2.1 and Table 2.6. Percentages are based on primary energy consumption in 2022 and do not add up to 100.0\% due to rounding.

\(^{8}\) EIA, *Monthly Energy Review*, Table 2.1. Percentage based on total energy consumption in 2022.

\(^{9}\) Estimates do not include retail employment.

\(^{10}\) The USEER covers motor vehicle employment across vehicle parts manufacturing, automotive repair and maintenance, as well as vehicle, parts and supplies wholesalers, including air, rail, water, and truck transportation of motor vehicle parts and supplies. It does not capture jobs associated with the final assembly of some transportation equipment such as forklifts and golf carts.

\(^{11}\) EIA, *Monthly Energy Review*, Table 2.1.

\(^{12}\) EIA, *Monthly Energy Review*, Table 3.7c. Percentage calculated using the sum of sector totals in Tables 3.7a through 3.7c.
BW Research, an independent research organization, collected and analyzed the data. The data set includes technology, value chain, and energy employment data in all 50 U.S. states and the District of Columbia. In a time of rapid change in energy technologies across the board, continued refinement of supplemental surveys will remain an important tool in analyzing existing BLS data sets.

Another benefit of using the QCEW framework and a supplemental survey is the ability to understand and report the concentration of energy-related activities in traditional industries, such as construction, manufacturing, and utilities. This helps illustrate the significant impact that energy and energy-related activities have on the overall economy. The impacts to the various selected industries are illustrated briefly below.13

**Demographic Data Collection Update**

The 2023 USEER includes updated demographic estimates for “Black or African Americans” and “two or more races,” and an additional category (“unknown race”) for employers to place workers if they are unable to identify race. “Black or African American” is a combined category that was split between “Black or African American, Not Indigenous” and “Black, Indigenous” for the 2022 USEER. The “two or more races” category was not included in the questionnaire due to employers incorrectly categorizing workers of unknown race into “two or more races.” The “two or more races” category was extrapolated in 2023 from multiple response overage to the USEER race question in this year’s survey. This methodology was instituted with the help of the U.S. Census Bureau. Finally, “unknown race” was included in this year’s questionnaire for employers to place workers they were unable to categorize. This addition also limited incorrect placement of workers in the “two or more races” category as a default response.

**III. USEER Sampling Plan**

1a. Universe

Geographic coverage included the 50 states, the District of Columbia, and the U.S. territories. Private establishments and government units were included, but units with average employment of zero over the last 12 months were excluded. Data were collected for establishments in 266 detailed industries identified to be of specific interest for the USEER survey. The industries were defined using the six-digit detail of the NAICS (which includes 1,099 six-digit industries).

The sampling frame is a representative sample of employers drawn from establishment totals from the QCEW Longitudinal Database (LDB) maintained by the BLS, stratified by employment size categories developed by the Census Bureau County Business Patterns data set. The actual contact information and business names were drawn from a private data set, Data Axle USA, because the QCEW is confidential. About 2.9 million establishments with employment of 26 million were in the 266 in-scope industries.

---

13 Because the USEER uses modeling to estimate fuel-stock employment in agriculture and forestry, and because these industry codes are not effectively captured by QCEW, no estimate is made as to the percent of the total industry captured by the USEER.
For the purposes of USEER sample allocation, we aggregated 266 detailed industries into seven groups or “allocation” NAICS (ANAICS). For most in-scope industries, the ANAICS is the two-digit NAICS and includes all in-scope NAICS-defined industries in the two-digit code. In some two-digit industries, ANAICS splits out specific five- and six-digit NAICS industries that have historically had a higher incidence of energy activity. ANAICS two- and three-digit coding is the same as for NAICS, though restricted to USEER-eligible industries.

Industry sectors are also defined for use in allocation. Industry sectors are two-digit ANAICS with two exceptions. The manufacturing sector combines three two-digit codes. The trade sector combines retail trade and wholesale trade.

About 16,500 in-scope known universe establishments with 1 million employees were pre-identified as having energy activity. A database of known universe establishments was developed internally by BW Research by collecting industry association databases, approved utility contractor lists, and other public and private sources, as well as prior indication in a USEER survey collection. By comparing the information obtained through these sources and comparing the NAICS codes of these establishments in the QCEW, Known Universe establishments were matched to the QCEW/Data Axle USA data set and a “known” indicator was used to assist in oversampling known establishments.

1b. Sample

BW Research contacts between 30,000 and 35,000 establishments per year. The total survey completion targets were based on a sample selected using the QCEW/Data Axle USA frame for the second quarter of 2022. Quotas were established for each NAICS or ANAICS code by size and state.

The USEER is stratified by six-digit NAICS and size class (1-9, 10-19, 20-49, 50-99 and 100+ employees) and systematic samples selected in the noncertainty strata. Known establishments can be of any ownership, are processed separately and are excluded from the other portions of the frame. Federal and state government stratification are both at the state level by industry sector. Local government stratification is at the state level by industry sector for these sectors: utilities; transportation and warehousing; professional, scientific, and technical services; remediation services; educational services; arts, entertainment, and recreation; and public administration, with all other sectors combined to a residual category. For private establishments (excluding the known universe), three levels of stratification are examined during sample allocation: (1) at the state level by industry sector, (2) national ANAICS, and (3) national six-digit NAICS. Further stratification by establishment size did not prove to be practical for similar studies.

2. Sample Design

USEER panels have a probability-based sample aimed at satisfying data needs at both the state by industry sector level and the national ANAICS level. The basic sampling unit is an establishment. Response quotas are set based on the representation of total establishments by six-digit NAICS, times the proportion of establishments in each size category as identified in the most recent available data from the Census Bureau County Business Patterns.
Restricted to in-scope industries, establishments on the QCEW frame are separated into five mutually exclusive parts that are separately sampled. Approximate sample counts refer to a sample selected from the QCEW frame for the second quarter of 2022.

- Known universe; census, with up to six attempts; stratification industry by size class (can have any ownership code)
- Federal government; sample size of 50; stratification at the state level by industry sector
- State government; sample size of 50; stratification at the state level by industry sector
- Private; sample size of 29,900; complex stratification using state and industry

Known sampling: All establishments in the known universe will be contacted up to six times. The responses will be treated separately, and the overall employment from the known universe sample will be de-duplicated from the appropriate panel of ANAICS, based on the known universe respondent NAICS code.

The allocation for private establishments and government (excluding known universe) has four basic steps:

1. Determine establishments by state — relying on the most recent data available from QCEW, the proportion of establishments in each selected NAICS is determined as a percentage of the total establishments in all selected NAICS.
2. Determine NAICS establishments by size — relying on the most recent data available in the Census Bureau County Business Patterns, the proportion of establishments within each size category in each six-digit NAICS is determined. The total NAICS quota is allocated by the size proportions to develop the percentage of total state-level sample.
3. De-duplicate known universe establishments from the sampling universe — verifying by name, NAICS, contact name, address, phone, and other identifying information, known universe establishments are removed from the private, state and federal government sampling universes.
4. Establish quotas — state-level quotas are established by multiplying the total number of proposed survey completions per state by the percentage determined in Steps 1 and 2.
Appendix C: 
USEER 2023 Employer Survey

OMB No. 1910-5179 Expiration 2024

Introduction:

Hello, my name is ________ and I am calling on behalf of the United States Department of Energy. We are conducting a national survey about the energy, energy-related, and advanced manufacturing industries. May I please speak to the person most knowledgeable about staffing at [organization]?

Is now a convenient time?

This survey uses specific terms to describe various technologies and activities. If you require any definitions for clarification, please ask me at any time.

The survey is voluntary and can take up to 45 minutes of your time.

(If needed): This important survey addresses businesses that research, develop, manufacture, install or work with products that generate, distribute or save energy.

(If needed): This includes organizations involved in fossil and renewable energy production, energy efficiency products and services, motor vehicles, solar, wind, fossil and other energy sources, and other energy related products and services.

(If needed): Your individual responses will not be published; only aggregated information will be used in reporting the survey results.

(If needed): Your participation will help determine how investments of time and money should be made to support the industry and prepare the present and future labor pool.

(If needed): If you have any questions about DOE’s involvement in this survey, please contact David Keyser at [insert phone]
Paperwork Reduction Act Burden Disclosure Statement

This data is being collected to allow energy-related employment to be assigned by primary value chain activity, including: research and development; manufacturing; sales and distribution; installation, repair and maintenance; and professional services. It will also provide insight on workforce demographics and employers’ ability to recruit qualified workers.

The data you supply will be used by industry, training organizations, community colleges, job seekers, federal agencies and other stakeholders, to better inform the workforce development system by highlighting changes in the industry that are driving demand for workers. The data will also inform energy economic development planning activities at the local, state and regional levels by providing a more detailed assessment of energy jobs, as well as the changing energy landscape and how such changes influence labor markets.

Public reporting burden for this collection of information is estimated to up to 45 minutes, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Office of the Chief Information Officer, Enterprise Policy Development & Implementation Office, IM-22, Paperwork Reduction Project OMB Control Number 1910-5179, U.S. Department of Energy, 1000 Independence Ave SW, Washington, DC, 20585-1290; and to the Office of Management and Budget (OMB), OIRA, Paperwork Reduction Project OMB Control Number 1910-5179, Washington, DC 20503.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB control number.

Submission of this data is voluntary.

A. Does your organization have at least one location with employees in the United States, including territories? (Please count yourself as an employee if you are an owner-operated business or sole proprietor).

1 Yes [CONTINUE]
2 No [TERMINATE]

For this survey, please only answer for your current business location. If your organization has other U.S. locations, please do not include their data. What is the zip code of your current location? [SHOW ADDRESS FROM SAMPLE FILE]

____________________ (Accept all five-digit responses)

(DON’T READ) Have check box for Refused (Terminate if Refused)
B. Is your organization involved, in whole or part, with an activity related to energy? (PAUSE, IF UNSURE OR NO READ REMAINDER OF QUESTION, IF YES GO TO SC) We define this as being directly involved with researching, developing, producing, manufacturing, distributing, selling, implementing, installing, or repairing components, goods or services related to Electric Power Generation; Electric Power Transmission, Distribution, and Storage; Energy Efficiency, Including Heating, Cooling and Building Envelope; Fuels, including Extraction, Processing, Production, and Distribution; and Transportation, including Motor Vehicles. This also includes supporting services such as consulting, finance, tax, and legal services related to energy.

1. Yes [CONTINUE]
2. No [TERMINATE]
3. Not sure [TERMINATE]

C. What is your role in your organization?
   1. Human resources
   2. Owner, manager, or proprietor
   3. Other [Specify]

D. Which of the following industries describes your organization’s work?

[ALLOW MULTIPLE RESPONSES] [IF NEEDED: If your organization is involved in energy research or professional services for the industry, please select the options that are most relevant to your organization.]

1. Electric Power Generation
2. Electric Power Transmission and Distribution, including electric vehicle charging stations
3. Storage, including electric vehicle batteries
4. Energy Efficiency, Including Heating, Cooling and Building Envelope (IF NEEDED THIS INCLUDES THERMAL OR HOT WATER SOLAR)
5. Fuels
6. Transportation Vehicles, including Motor Vehicles (IF NEEDED: Including industrial and agricultural vehicles, such as forklifts, tractors, and recreational vehicles, such as golf carts)
7. Component Parts for Transportation Vehicles
8. Carbon Capture and Storage
9. Other (Specify _______) TERMINATE
10. DK/NA TERMINATE

[ASK SCREENER D IF SC COUNT>1]
F. Which do you consider your organization's **primary** industry, based on the majority of labor hours performed at your location? [PIPE IN SC CATEGORIES, ACCEPT ONE]

1. Electric Power Generation
2. Electric Power Transmission and Distribution, including electric vehicle charging stations
3. Storage, including electric vehicle batteries
4. Energy Efficiency, Including Heating, Cooling and Building Envelope (IF NEEDED THIS INCLUDES THERMAL OR HOT WATER SOLAR)
5. Fuels
6. Transportation, including Motor Vehicles (IF NEEDED: Including industrial and agricultural vehicles, such as forklifts, tractors, and recreational vehicles, such as golf carts)
7. Component Parts for Transportation Vehicles
8. Carbon Capture and Storage

CREATE **SDPRIME** FROM SC IF SC COUNT=1, OR SD IF SC COUNT>1

G. [ASK FOR EACH SC] Which of the following [INSERT SC RESPONSE] technologies is your organization directly engaged with? [READ LIST, ALLOW MULTIPLE RESPONSES]

**A. Electric Power Generation (IF SC=1) [RANDOMIZE]**
1. Solar Electric Generation [SET SOLAR=1]
2. Land-based Wind Generation
3. Offshore Wind Generation
4. Geothermal Generation
5. Bioenergy/Biomass Generation
6. Low-Impact Hydroelectric Generation such as run of river
7. Traditional Hydroelectric Generation
8. Marine and Hydrokinetic Generation
9. Advanced/Low Emission Natural Gas
10. Nuclear Generation
11. Coal Generation
12. Oil and other Petroleum Generation
13. Natural Gas Generation
14. Combined Heat and Power
15. Other Generation (Specify)

**B. Electric Power Transmission and Distribution (IF SC=2) [RANDOMIZE]**
1. Traditional Transmission and Distribution
2. Electric Vehicle Charging Stations
3. Smart Grid
4. Micro Grids
5. Other Grid Modernization
6. Other (Specify)
C. Storage (IF SC=3) [RANDOMIZE] [IF SEA=1, “(including battery storage for solar generation)”]
   1. Pumped hydro-power storage
   2. Battery storage, including electric vehicle batteries [IF SEA=1, “(including battery storage for solar generation)”]
   3. Mechanical storage (flywheels, compressed air energy storage, etc.)
   4. Thermal storage
   5. Liquefied natural gas
   6. Compressed natural gas
   7. Crude oil
   8. Refined petroleum fuels (liquid)
   9. Refined petroleum fuels (gas)
   10. Coal storage (piles, domes, etc.)
   11. Biofuels, including ethanol and biodiesel
   12. Nuclear fuel
   13. Other gas fuel (Specify)
   14. Other liquid fuel (Specify)
   15. Other Storage
   16. Other (Specify)

IF SEC=2, ASK C_2 AND C_3

C_2. What type of Battery Storage do you work with? [READ LIST, ALLOW MULTIPLE RESPONSES] [RANDOMIZE]
   1. Lithium batteries
   2. Lead-based batteries
   3. Other solid-electrode batteries (Specify)
   4. Vanadium redox flow batteries
   5. Other flow batteries (Specify)

C_3. What is the application of your battery storage work? [READ LIST, ALLOW MULTIPLE RESPONSES] [RANDOMIZE]
   1. Consumer devices
   2. Vehicles or other transportation (including electric vehicles)
   3. Behind-the-meter (buildings or industrial facilities)
   4. Front-of-meter (electric grid)
   5. Other (Specify)
D. Energy Efficiency, Including Heating, Cooling and Building Envelope (IF SC=4) [RANDOMIZE]
1. ENERGY STAR® Certified Appliances (not including HVAC)
2. ENERGY STAR Certified Heating, Ventilation, and Cooling (HVAC), except air-source and ground-source heat pumps
3. ENERGY STAR Air-Source Heat Pumps
4. ENERGY STAR Ground-source or geothermal heat pumps
5. Other high efficiency HVAC that are out of scope for ENERGY STAR certification (e.g. indirect evaporative coolers, air to water heat pumps, energy recovery systems, etc.)
6. Traditional HVAC goods, control systems, and services
7. ENERGY STAR certified water heaters
8. ENERGY STAR Certified Electronics (TVs, Telephones, Audio/Video, etc.)
9. ENERGY STAR Certified Windows, Doors and Skylights
10. ENERGY STAR Certified Roofing
11. ENERGY STAR Certified Insulation
12. Air sealing
13. ENERGY STAR Certified Commercial Food Service Equipment
14. ENERGY STAR Certified Data Center Equipment
15. ENERGY STAR Certified LED lighting
16. Other LED, CFL, and efficient lighting
17. Solar thermal water heating and cooling [SET SOLAR=1]
18. Other renewable heating and cooling (biomass, etc.)
19. Advanced building materials/insulation
20. Recycled building materials
21. Reduced water consumption products and appliances
22. Energy auditing services
23. Other (Specify)

E. Fuels (IF SC=5) [RANDOMIZE]
1. Coal
2. Onshore petroleum, including gasoline and diesel
3. Offshore petroleum, including gasoline and diesel
4. Onshore natural gas
5. Offshore natural gas
6. Other Fossil Fuel
7. Corn Ethanol
8. Renewable Diesel
9. Biodiesel
10. Other Ethanol/Non-Woody Biomass
11. Woody Biomass/Cellulosic Biofuel
12. Waste Fuels
13. Other Biofuels
14. Nuclear Fuel
15. Other (Specify)

ASK EA IF SEE = 2 & 3
EA. Do you primarily work with onshore or offshore petroleum?

1. Onshore petroleum
2. Offshore petroleum
3. Don’t know/ Refused

ASK EB IF SEE = 4 & 5

EB. Do you primarily work with onshore or offshore natural gas?

1. Onshore natural gas
2. Offshore natural gas
3. Don’t know/ Refused

F. Transportation Vehicles, Including Motor Vehicles (IF SC=6) [RANDOMIZE]
1. Gasoline and Diesel Motor Vehicles (excluding freight transport)
2. Hybrid Electric Vehicles
3. Plug-In Hybrid Vehicles
4. Electric Vehicles
5. Natural Gas Vehicles
6. Hydrogen Vehicles
7. Fuel Cell Vehicles
8. Other (Specify ________)

G. Component Parts for Transportation Vehicles (IF SC=7) [RANDOMIZE]
1. Transportation Vehicle Engine & Drive Parts
2. Transportation Vehicle Exhaust System Parts
3. Transportation Vehicle Body Parts
4. Other Transportation Vehicle Parts (Specify ______)

SET SOLAR=1 IF SEA=1 OR 2, OR TSF=1, AND SED=5

IF SE TOTAL>1, ASK SEPRIME, IF NOT, SKIP

SEPRIME. Which of the following technologies is your organization PRIMARILY engaged with?

[PIPE-IN RESPONSES FROM SEA-SEG]

[IF RESPONDENT ONLY IDENTIFIES WITH ONE INDUSTRY AT SCREENER E (QC), USE THAT INDUSTRY FOR THE REMAINDER OF THE SURVEY IN PLACE OF “ENERGY” / IF MORE THAN ONE, CONTINUE TO USE “ENERGY.” EXCEPTIION - IF THE ONLY SELECTION AT SCREENER C IS “OTHER” OR “DK/NA,” USE “ENERGY”]
H. Which of the following industry descriptions describe your organization’s focus as it relates to the [energy/ SC] industry? [ALLOW MULTIPLE RESPONSES]

1. An organization involved in agricultural goods and services
2. An organization involved in mining and extraction
3. An organization that manufactures and/or assembles [energy/ SC] goods or produces components that go into energy products
4. An organization that conducts research and development and related services for [energy/ SC]
5. An organization involved in the wholesale trade and distribution of [energy/ SC] products and services
6. An organization that installs [energy/ SC] systems or provides services for installation of [energy/ SC] systems
7. A public or private utility
8. An organization that provides consulting, engineering, finance, legal, or other professional services related to energy
9. An organization that conducts operations and maintenance (O&M) for [energy/ SC] systems
10. An organization primarily involved in education and training
11. Other support services (Specify: ______)
12. Other (Specify: ______)
13. (DON’T READ) Not sure

[ASK SCREENER G IF MORE THAN ONE SELECTED AT SCREENER F]

G. Which do you consider your organization’s primary focus as it relates to the [energy/ SC] industry, based on the labor hours performed at your location

1. An organization involved in agricultural goods and services
2. An organization involved in mining and extraction
3. An organization that manufactures and/or assembles [energy/ SC] goods or produces components that go into energy products
4. An organization that conducts research and development and related services for [energy/ SC]
5. An organization involved in the wholesale trade and distribution of [energy/ SC] products and services
6. An organization that installs [energy/ SC] systems or provides services for installation of [energy/ SC] systems
7. A public or private utility
8. An organization that provides consulting, engineering, finance, legal, or other professional services related to energy
9. An organization that conducts operations and maintenance (O&M) for [energy/ SC] systems
10. An organization primarily involved in education and training
11. Other support services (Specify: ______)
12. Other (Specify: ______)
13. (DON’T READ) Not sure
SET SGPRIME BASED ON SCREENER G RESPONSE OR SCREENER F RESPONSE IF SCREENER F COUNT=1

ASK SFA IF SEA=14 OR SEB=6 OR SEC = 13, 14, 15, OR 16 OR SEE = 15, AND SF = 4, 8, OR 10

SFA. Does your organization work with hydrogen fuel in any capacity?

1. Yes (Please specify)_____
2. No
3. Don’t know/ Refused

ASK SGA IF SC=4, OR IF SF = 4, 6, 8, OR 9

SGA. Is your organization considered an Energy Service Company (ESCO)?

1. Yes
2. No
3. Don’t know/ Refused

IF SGPRIME=6, ASK SCREENER H, OTHERWISE SKIP

H. Does your organization work on ENERGY STAR certified new home construction?

1. Yes
2. No
3. DK/NA

I. Does your organization work on ENERGY STAR certified buildings and plants (commercial and industrial)?

a. Yes
b. No
c. DK/NA

J. Does your organization have an energy manager or director responsible for energy management at one or more facilities?

a. Yes
b. No
c. DK/NA

IF SGPRIME=7, ASK SCREENER K

K. Does your organization employ workers that are in charge of administering, managing, evaluating, or otherwise working on utility-led energy efficiency programs, rebates, and other activities?

a. Yes
b. No
c. DK/NA
For this survey, we will just be asking about the employees that work from or directly report to your current location.

1. Including all full-time and part-time employees, how many permanent employees work at or from your current location?

   Record # of employees ___________

   (DON’T READ) Have check box for Refused

2. Based on [Take Q1 #] full-time and part-time permanent employees at your location, how many employees do you expect to have at your location 12 months from now?

   1. More [record #_______]
   2. Fewer [record #_______]
   3. (DON’T READ) Same number
   4. (DON’T READ) Refused

   [If amount differs by 10% or more in either direction, ask: ]

   Just to confirm, you currently have ____ permanent employees at your current location and you expect to have ____ (more/fewer) employees, for a total of ____ permanent employees 12 months from now.

3. Of the [Take Q1 #] full time and part-time permanent employees at your current location, how many of these workers support the [energy/ SC] portion of your business? Please note that your response should include administrative staff supporting the energy portion of your business.

   Record # of employees ___________

   (DON’T READ) Have check box for Refused

   [IF NEEDED: SUPPORT WORKERS ARE DEFINED AS THOSE INDIVIDUALS THAT SPEND ANY AMOUNT OF TIME, DIRECTLY WORKING ON ENERGY RELATED PROJECTS INCLUDING ADMINISTRATIVE SUPPORT WORKERS]

   [Q3 SHOULD BE LESS THAN OR EQUAL TO Q1 - BUILD IN CHECK]

4. Of your [Take Q3 #] energy staff at your location (office staff and in the field), please classify them into the area where they spent most of their time over the last 12 months. Please count each employee only once.

   a. In-state within your region/metropolitan area [Record #]_______
   b. In-state outside your region/metropolitan area [Record #]_______
   c. Out-of-state [Record #]_______
5. How many full-time and part-time permanent employees did you have working at your current location 12 months ago that supported the [energy/SC] portion of your business?

   Record # of employees ___________

   (DON'T READ) Have check box for Refused

6. Based on [Take Q3 #] full-time and part-time permanent employees at your location that support the [energy/SC] portion of your business, how many employees do you expect to have at your location 12 months from now?

   1. More [record #_______]
   2. Fewer [record #_______]
   3. (DON'T READ) Same number
   4. (DON'T READ) Refused

   Just to confirm, you currently have ____ permanent employees supporting the energy portion of your business and you expect that number to be ____ (more/fewer) 12 months from now, for a total of ____

7. Thinking of your [INSERT Q3] energy employees, how many spend at least 50% of their time supporting the energy portion of your business?

8. Thinking of your [Q3 ANSWER] energy employees, how many spend all of their time supporting the energy portion of your business?

SECTION 2 – Workforce Profile Questions

If SC COUNT > 1 response, ASK Q9

9. Thinking of your [Take Q3] [energy/SC] workers at your location, please classify them in the following categories. Please count each employee only once and categorize them in the area where they spend the most time.

   PIPE IN SCREENER C RESPONSES

   If SC COUNT > 1 response and Q7>0, ASK Q10

10. Thinking of your [Take Q7] [energy/SC] workers that spend at least 50% of their time supporting the energy portion of your business, please classify them in the following categories. Please count each employee only once and categorize them in the area where they spend the most time.

   PIPE IN SCREENER C RESPONSES AND EMPLOYMENT FROM Q8

   Record # of employees ___________

   BUILD CHECK SO TOTAL MUST = Q7
IF SC = 1 and Screener E.A > 1 response, ASK Q11 OTHERWISE SKIP

USE Q3 IN PLACE OF Q9 IF SELECTED COUNT AT SCREENER C WAS ONE (ONE CHOICE)

11. Thinking of your [PIPE IN Q9/Q3 GENERATION ANSWER] energy generation workers at your location, please classify them in the following categories. Please count each employee only once and categorize them in the technology area where they spend the most time.

PIPE IN SCREENER E.A RESPONSES
Record # of employees __________

IF SC = 2 and Screener E.B > 1 response, ASK Q12 OTHERWISE SKIP

12. Thinking of your [PIPE IN Q8/Q3 ELECTRIC POWER TRANSMISSION AND DISTRIBUTION ANSWER] energy transmission, distribution, and storage workers at your location, please classify them in the following categories. Please count each employee only once and categorize them in the technology area where they spend the most time.

PIPE IN SCREENER E.B RESPONSES
Record # of employees __________

IF SC = 3 and Screener E.C > 1 response, ASK Q12 OTHERWISE SKIP

13. Thinking of your [PIPE IN Q9/Q3 STORAGE ANSWER] storage workers at your location, please classify them in the following categories. Please count each employee only once and categorize them in the technology area where they spend the most time.

PIPE IN SCREENER E.C RESPONSES
Record # of employees __________

IF Q13_2(BATTERY STORAGE)>0, ASK Q14

14. Thinking of your [PIPE IN Q13_2 #] battery storage workers at your location, please classify them in the following categories. Please count each employee only once and categorize them in the battery storage application category where they spend the most time.
   1. Consumer devices [Record # of employees]
   2. Vehicles or other transportation [Record # of employees]
   3. Buildings or industrial facilities [Record # of employees]
   4. Electric Grid [Record # of employees]
   5. Other (Specify) [Record # of employees]

SECTION 3 – Workforce Development & Training Needs

24. How many energy workers have you hired over the last 12 months, either for new positions or to replace former workers?

   Record __________

IF Q24>0, ask Q25-28 otherwise SKIP

25. Thinking of the [Insert Q24] energy workers that you have hired at your location over the last 12 months, please indicate your level of difficulty finding qualified applicants to fill the positions.
   1. Very difficult
   2. Somewhat difficult
   3. Not at all difficult
   4. DK/NA

IF Q25 = 1 or 2 ask Q26 and Q27, otherwise SKIP

26. What are the two most significant reasons for the reported difficulty?

27. Please provide the two most difficult positions for your organization to fill at your location.

28. You reported [insert Q24] additional workers at your organization over the last 12 months. Of these [insert Q24] positions, how many:

   a. Were newly created positions?
      
      Record # of employees __________

   b. Were existing employees that added energy responsibilities?
      
      Record # of employees __________

   c. Were hired to replace workers due to turnover or retirement?
      
      Record # of employees __________

   d. Were positions that required previous work experience related to the position?
      
      Record # of employees __________

   e. Required a bachelors degree or beyond: __________
      
      Record # of employees __________

   f. Required an associate degree or academic certificate from an accredited college, but not a bachelors degree: _________________
      
      Record # of employees __________
g. Required a vocational or technical postsecondary certificate or credential: ____________________
   Record # of employees __________

h. Are represented by a union, collective bargaining agreement, or a project labor agreement: ____________________
   Record # of employees __________

29. Does your firm have a formal or informal mentorship/sponsorship program?
   1. Yes
   2. No
   3. DK/NA

30. Briefly describe the mentorship/sponsorship program?

31. Has your firm adopted any specific strategies, policies, or programs to increase the number of female hires?
   1. Yes
   2. No
   3. DK/NA

IF Q31 = 1, ASK Q32

32. Briefly describe the strategies, policies, or programs to increase female hires?

33. Has your firm adopted any specific strategies, policies, or programs to increase the number of ethnic or racial minority hires?
   1. Yes
   2. No
   3. DK/NA

IF Q33 = 1, ASK Q34

34. Briefly describe the strategies, policies, or programs to increase minority hires?

35. Has your firm adopted any specific strategies, policies, or programs to increase the number of LGBTQ+ hires?
   1. Yes
   2. No
   3. DK/NA

IF Q35 = 1, ASK Q36

36. Briefly describe the strategies, policies, or programs to increase LGBTQ+ hires?
37. Does your firm offer or require a diversity and/or inclusion training program aimed at advocating workplace diversity and inclusion?

1. Yes  
2. No  
3. DK/NA

SECTION 4 – Business Questions

38. The following is a list of factors that may contribute to difficulty growing a profitable business. Please rate the significance of each factor. [READ ITEM, THEN SAY] is it very significant, somewhat significant, or not at all significant. [RANDOMIZE]
   a. Lack of capital  
   b. Lack of qualified talent  
   c. Poor demand  
   d. Cost or supply of materials  
   e. Permitting delays  
   f. Interconnection delays  
   g. Policy challenges

39. Thinking about your organization’s energy related suppliers and vendors, what percent of your supply chain purchases (in dollars/value), are:

   a. In-state (Enter %)_____  
   b. Out of state but in the United States (Enter %)_____  
   c. Outside of the United States (Enter %)_____ (WEB ONLY SPECIFY COUNTRIES_____)
   d. DK/NA

40. Thinking about your organization’s energy related customers, what percent are located:

   1. In-State (Enter %)_____  
   2. In a bordering state but out of state (Enter %)_____  
   3. In the United States, but outside of a bordering state (Enter %)_____  
   4. Outside of the United States (Enter %)_____ (WEB ONLY SPECIFY COUNTRIES_____)
   5. DK/NA
SECTION 5 – Revenue Questions

Ask Q41 if SGPRIME = 5 or 6

41. Can you name any specific rebates or incentives that can reduce the cost of selling, distributing or installing energy for your customers? [Record up to 3]

Record: ___

42. Approximately how much of your organization’s work at your current location, in terms of total gross revenue, is related to energy?

Record $:_____________________________

ASK Q43 if SE has multiple responses, otherwise SKIP

43. Approximately how much of your organization’s work at your current location, in terms of total gross revenue, is related to each of the following products or services? (Use numbers to indicate percentages, for instance 20=20%)

1. INSERT SE RESPONSE 1 ____%
2. INSERT SE RESPONSE 2 ____%
3. INSERT SE RESPONSE 3 ____%
4. …
5. All other revenue not related to energy ____%

Q43 total must equal 100%

SECTION 6 – Motor Vehicles & Component Parts

ASK Q44 if SC = 6, otherwise SKIP

44. With which of the following types of transportation vehicles does your firm primarily design, manufacture, sell, repair, or otherwise work with? [SELECT ONE]

1. Automobiles
2. Light- or Medium- Duty Vehicles
3. Heavy Duty Vehicles
4. Industrial Vehicles, such as forklifts
5. Recreational Vehicles, such as golf carts
6. Rail
7. Other (specify ________)

ASK Q45-Q47 if SC = 7, otherwise SKIP

45. Does your firm manufacture, design, sell, and/or distribute parts solely used for alternative vehicles, or vehicles with a fuel source other than gasoline or diesel?

1. Yes, electric vehicles
2. Yes, hydrogen fuel cell vehicles
3. Yes, other (Specify)____
4. No
5. Don’t know/ Refused
ASK Q46 IF Q45=1, otherwise SKIP

46. How much of your firm’s work, as a percentage of your total revenue, is attributed to parts solely used for alternative vehicles, or vehicles with a fuel source other than gasoline or diesel?
   1. All of it (100%)
   2. Half to most of it (50% to 99%)
   3. A quarter to almost half of it (25% to 49%)
   4. Less than a quarter (1% to 24%)
   5. (DON’T READ) DK/NA

47. Thinking of the type of fuel used, does your organization offer parts or products for any of the following types of transportation vehicles? [ALLOW MULTIPLE]
   1. Gasoline and Diesel Motor Vehicles (excluding freight transport)
   2. Hybrid Electric Vehicles
   3. Plug-In Hybrid Vehicles
   4. Electric Vehicles
   5. Natural Gas Vehicles
   6. Hydrogen Vehicles
   7. Fuel Cell Vehicles
   8. Other (Specify _________)

   [If Q47 = 2,3, or 4, ask Q48, otherwise SKIP]

48. Which systems for electric and hybrid vehicles does your firm primarily work with?
   a. Body design or structure
   b. Batteries
   c. Charging components
   d. Electric propulsion (i.e. converter, controller, transmission, etc.)
   e. Auxiliaries (i.e. brakes, steering, climate control, etc.)
   f. Other (Specify___________)

SECTION 7 – Energy Efficiency

IF SCREENER H=1, ASK Q49

49. How many of your [Take Q3#] energy employees work on ENERGY STAR certified new home construction?

Record # of employees: ______________

IF SCREENER I=1, ASK Q50

50. How many of your [Take Q3#] energy employees work on ENERGY STAR certified buildings and plants (commercial and industrial)?

Record # of employees: ______________
IF SCREENER K=1, ASK Q51

51. How many of your [Take Q3#] energy employees work on administering, managing, evaluating, or otherwise working on utility-led energy efficiency programs, rebates, and other activities?

Record # of employees: ______________

Thank you for completing the survey. Since it sometimes becomes necessary for the project manager to confirm responses to certain questions, please verify your contact information.

da. First and Last Name (Interview note enter 99 for REF)

1 COMPLETED INTERVIEW
2 SURVEY SAID THEY DID NOT QUALIFY
3 CALLBACK NEEDED, PARTIAL
4 REFUSAL
5 SOMETHING ELSE

PLEASE DISPOSITION CALL CORRECTLY.

Thank you for your time!
Appendix D: Summary of Energy-Related Employment in Existing Industries by NAICS Code

NAICS 21: Mining, Quarrying and Oil and Gas Extraction (Mining and Extraction)

The 2023 USEER survey found that 429,916 workers (100% in fuels) were associated with the mining and extraction of oil, gas, coal, and nuclear fuel stock in 2022. This represents 76% of the total mining and extraction jobs (569,335) in the U.S. in that year, including support activities for mining (NAICS 213) (Figure 1).

Figure 1. Energy-Related Employment in NAICS 21

![Graph showing energy-related employment in NAICS 21.]

NAICS 22: Utilities

According to the standard industry definitions used by the Census Bureau, the utilities sector comprises establishments engaged in the provision of the following utility services: electric power, natural gas, steam supply, water supply and sewage removal. In this sector, the specific activities associated with the utility services provided vary by utility — electric power includes generation, transmission and distribution; natural gas includes distribution; steam supply includes provision and/or distribution (natural gas transmission lines, however, are included under NAICS 486, Pipeline Transportation); water supply includes treatment and distribution; and sewage removal includes collection, treatment and disposal of waste through sewer systems and sewage treatment facilities. This includes generating plants, but excludes waste management services.

---

Across the U.S., utilities employed 813,264 workers in 2022, with nearly three-quarters working in energy generation, transmission, or distribution (Figure 2).

**Figure 2. Energy-Related Employment in NAICS 22**

![Total Utilities industry employment](813,264)

![Transmission, Distribution, and Storage employment in Utilities](419,926)

![Generation employment in Utilities](176,927)

---

**NAICS 23: Construction**

Energy-related activities account for a significant amount of employment in the construction industry. In 2022, electric power generation and fuels, and transmission, distribution and storage represented nearly 10% of total construction employment in the U.S., while energy efficiency activities accounted for an additional 15% of the construction workforce (Figure 3).

**Figure 3. Energy-Related Employment in NAICS 23**

NAICS 31-33: Manufacturing

Manufacturing is an important component of the energy economy, and includes petroleum refining, nuclear enrichment and component and finished product assembly of solar panels, wind and gas turbines and mining equipment. In addition to the totals reported in USEER, many manufacturing jobs are affected by energy efficiency in their processes but are not tracked herein. Traditional energy sectors (electric power generation and fuels and transmission, distribution, and storage) accounted for about 3.2% of all manufacturing jobs in the U.S. in 2022. Energy efficiency product manufacturing (composed of ENERGY STAR products and energy-related building materials, such as insulation, windows, and doors) added 2.3% and motor vehicle and parts manufacturers added a further 7.9% (Figure 4).

Figure 4. Energy-Related Employment in NAICS 31-33

NAICS 42, 486, and Commodity Flow Data: Wholesale Trade, Distribution and Transport (Wholesale Trade)

Wholesale trade, distribution and transport includes wholesale equipment and supplies merchant wholesalers of goods that are linked to the energy industry (including motor vehicles and motor vehicle parts and building materials). Also included in this NAICS category is all employment related to the pipeline transportation of fuels and the transport (via truck, rail, air, and water) of energy commodities such as coal, fuel oil, gas, motor vehicles and petroleum.

NAICS 51, 52, 53, 54, 55 and 56: Information (Software, etc.), Finance, Insurance, Professional and Business Services (Professional and Business Services)

Professional and business services provide support for energy-related activity in the U.S. Firms from this sector are primarily involved in software development and other
information services; finance and insurance; real estate and rental and leasing; professional, scientific, and technical services; management of companies and enterprises and administrative support; and waste management and remediation services.

**NAICS 81: Other Services (Repair and Maintenance/Other)**

Other services are important to the energy economy, including repair and maintenance and nonprofit activity. Motor vehicles accounted for over one-fifth (22.4%) of the workforce in the larger industry in 2022, driven by employment in automotive repair and maintenance. Generation and fuels combined for 1% of the overall workforce in other services.
Appendix E: Electric Power Generation and Fuels Employment by Industry

Agriculture and Forestry

The QCEW does not capture a significant portion of agricultural labor. The BLS estimates that its methodologies exclude the majority of agricultural workers (52%) due to the nature of the industry. In addition, forestry and logging employment is highly seasonal and relies heavily on unreported subcontractors. The 2023 USEER estimates employment in these segments using a customized model based on inputs on fuel stocks generated by the U.S. Department of Agriculture Economic Research Service (ERS). Based on these inputs, an estimated 36,922 agriculture and forestry employees worked in 2022 to support fuel production.

Mining, Extraction and Utility Generation

About 76% of all mining and extraction employment in the U.S. in 2022 was for fuels used in energy production; this translates to nearly 430,000 workers in 2022. These workers support the fuels industry through crude petroleum and natural gas extraction, as well as surface and underground coal mining (Figure 5).

Figure 5. Mining and Extraction Employment

Electric utility generation (in which the generating equipment is operated by the utility) employed a total of 176,927 workers across hydroelectric, fossil fuel, nuclear,

---

16 Energy- and fuel-related agricultural employment was derived using three different calculations for fuelwood, corn ethanol and biodiesel. The BLS QCEW cover exclusions were used to develop a factor for agricultural worker exclusions and this factor was applied to employment for the NAICS codes specific to each of the three fuel types. Additionally, a technology-specific percentage was derived from ERS estimates for the percentage of total wood, corn and biodiesel produced that is used for fuel. This percentage was applied together with the exclusion factor to the second quarter of 2020 QCEW employment data for fuelwood NAICS (113110, 113310, 115310), corn ethanol (11115) and biodiesel (11111) to determine the number of workers supporting agricultural fuel production.
17 Petroleum is a liquid mixture of hydrocarbons that is present in certain rock strata and can be extracted and refined to produce fuels including gasoline, kerosene and diesel oil.
18 These support workers are specific to fuel mining and extraction, and do not include support for other mining and extraction activities.
solar, wind, geothermal, biomass, steam, and air-conditioning supply (including CHP) and other electric power generation. It is important to note that utility generation employment excludes any utilities that support water supply and irrigation systems or sewage treatment. It also excludes non-utility-owned or -operated generation from wind, solar, CHP, biomass, nuclear or fossil fuels (Figure 6).

**Figure 6. Utilities Employment**

<table>
<thead>
<tr>
<th>Total Utilities industry employment</th>

</tr>
</thead>
<tbody>
<tr>
<td>813,264</td>
<td>176,927</td>
</tr>
</tbody>
</table>
Construction

For the 8.1 million construction workers in the U.S., roughly 91% of employment in 2022 was in construction subsectors with workers that support energy generation technologies. In these subsectors, 312,022 construction workers supported both electric generation and fuels production technologies. Ninety-four percent of these employees were engaged in the construction and installation of new electric generation technologies (Figure 7).

Figure 7. Construction Employment
Manufacturing

The national manufacturing industry employed more than 12.8 million workers in 2022. About 23.5% of that overall manufacturing employment comprised subsectors that could support electric power generation and fuels technologies, including petrochemical, turbine, and generator manufacturing. These detailed industries accounted for nearly 3,029,000 workers in 2022, more than 7% of which supported fuels. Electric power generation and fuels manufacturers include those firms working on PV arrays, turbine generators, oil and gas field machinery and other motor or generator manufacturing (Figure 8).

Figure 8. Manufacturing Employment
Wholesale Trade

Of the more than 8.2 million wholesale trade, distribution, and transport workers in the U.S., about 51% were working in detailed industries that could support electric power generation and fuel activities, including electric equipment, chemical and petroleum merchant wholesalers. In these wholesale trade, distribution, and transport industries, about 76,797 and 139,735 workers spent some amount of their time in 2022 supporting electric power generation and fuels applications, respectively.19

Figure 9. Wholesale Trade, Distribution, and Transport Employment

---

19 Transmission and trade of fuels are included in the Transmission, Distribution, and Storage chapter of the report.
Professional and Business Services

The professional and business services industry in the U.S. employed more than 32 million workers in 2022. In this aggregate industry, several detailed industries supported generation and fuel operations with software, legal services, biotechnology research, architecture, and engineering. Of the nearly 13 million jobs in these energy-related professional service industries in 2022, about 191,000 and 174,000 respectively supported electric power generation and fuels technologies (Figure 10).

Figure 10. Professional and Business Services Employment
Appendix F: Transmission, Distribution and Storage Employment by Industry

As noted in the report, transmission, distribution and storage employed 1,373,585 workers in 2022.

Using survey data, the following sections illustrate a breakdown of sector-wide employment in five broad high-level industry classifications, including construction and manufacturing.

Utilities

Utility companies that employ transmission and distribution workers are captured entirely by their respective detailed NAICS classifications by BLS. Electric power transmission, control and distribution and natural gas distribution employed 419,926 transmission, distribution, and storage workers across U.S. utility firms in 2022, a slight increase from 2021. This number represents just over half of energy utility employment nationwide (Figure 11).

Figure 11. Utilities Employment

813,264

419,926

Utilities

 Transmission, Distribution, and Storage employment in Utilities

Total Utilities industry employment

20 As with all other industries in this report, this section relies on NAICS definitions. Utility-scale power generators, for example, are classified as utilities regardless of ownership or regulation.
Construction

Construction firms contributed the most employment to transmission, distribution, and storage activities in 2022, with 479,202 jobs. This work included pipeline and electric transmission and distribution activity, as well as the development of smart grids and microgrids (Figure 12).

Figure 12. Construction Employment
Manufacturing

The manufacturing jobs in transmission, distribution and storage are found in several energy-related detailed manufacturing industries. These include bulk manufacturing firms that assemble storage batteries, current-carrying wiring devices, air and gas compressors, sheet metal and other electrical and nonelectrical equipment or components. Of the nation's nearly 12.9 million total manufacturing jobs in 2022, almost 24% or more than 3 million were in energy-related industries that may support transmission-related infrastructure, and 2.7% of those, or approximately 81,283 workers, produced products for transmission, distribution, and storage in 2022 (Figure 13).

**Figure 13. Manufacturing Employment**

![Diagram showing manufacturing employment](image-url)
Wholesale Trade

Several industry codes used by BLS capture employment entirely dedicated to the transport of crude oil, natural gas and other refined petroleum products. About 140,800 jobs were included for 2022 by identifying proportional employment from energy-related commodity data for truck, rail, air and water transport using the methodology from the first USEER.\textsuperscript{21,22} An additional 49,843 jobs identified by the survey are in detailed wholesale industries such as electrical equipment, wiring, appliance and electronics merchant wholesalers. Together, fossil fuels transport and electrical equipment wholesalers employed more than 242,000 transmission, distribution and storage workers in 2022 (Figure 14).\textsuperscript{23}

Figure 14. Wholesale Trade

\begin{figure}
\centering
\includegraphics[width=0.8\textwidth]{wholesale_trade.png}
\caption{Wholesale Trade}
\end{figure}

\textsuperscript{21} For the methodology, see this report’s Appendix B: Discussion of USEER Methodology.
\textsuperscript{22} See \url{U.S. Energy and Employment Report 2016 | Department of Energy}.
\textsuperscript{23} This employment figure excludes raw material and component manufacturers; the limitations of a survey-based approach prevent accurate data collection for suppliers that are significantly upstream.
Professional and Business Services

A very small proportion (1.1%) of energy-related professional and business services support transmission, distribution and storage infrastructure and technology. Of the 32.4 million workers in these detailed industry codes, the USEER identified about 136,418 who spent some of their time supporting these technologies in 2022 (Figure 25).

Figure 15. Professional and Business Services Employment
Appendix G: Energy Efficiency Employment by Industry

Construction

The majority of energy efficiency employment (53.9%) identified with USEER data was in construction firms (1.193 million). Of the 8.01 million construction workers in the U.S., about 14.8% worked in 2022 to support the construction or installation of energy-efficient technologies (Figure 16).

Figure 16. Construction Employment

![Construction Employment Diagram]

- Total Construction industry employment
- Construction Sub-Sectors with Energy-related employment
- Energy Efficiency employment in Construction
Manufacturing

Manufacturing activity is a sizable portion of the U.S. energy efficiency sector (Figure 17). The jobs included in this section refer only to the manufacture of ENERGY STAR rated appliances or other products such as energy-efficient building and lighting services. They do not include process efficiency (e.g., manufacturers that produce goods using energy-efficient equipment, machinery or processes). Of the 3,028,974 jobs found in relevant energy manufacturing subsectors in 2022 — such as lighting, household appliances or HVAC equipment manufacturing — about 302,318 workers manufactured energy-efficient products as defined in these appendices.

Figure 17. Manufacturing Employment
Wholesale Trade

Approximately 51% of the more than 8.2 million wholesale trade, distribution and transport jobs across the nation were in trade subsectors that support energy-related employment. Of these 4.22 million jobs, USEER survey data identified that about 4.6% of workers were engaged in efficiency-related work in 2022 (Figure 18).

Figure 18. Wholesale Trade Employment
Professional and Business Services

Forty percent of professional and business services jobs may support the energy industry through activities including software development, finance, management and legal services. Of these detailed subsectors, USEER survey data identified 3.8% of employees, or 486,043, who worked to support energy-efficient products and services in 2022 (Figure 19).

Figure 19. Professional and Business Services Employment

- Total = 36.7 quadrillion Btu

End-use sector:
- Transportation: 26.6 (37%)
- Industrial: 26.0 (35%)
- Residential: 11.6 (16%)
- Commercial: 6.1 (12%)

Total = 73.5 quadrillion Btu

Appendix J: ENERGY STAR Unit Shipment and Market Penetration Report Calendar Year 2021 Summary

ENERGY STAR® Unit Shipment and Market Penetration Report
Calendar Year 2021 Summary

This is the 20th year in which EPA has collected unit shipment data for the ENERGY STAR Program from program partners and/or their representative associations and used it to project the market penetration of ENERGY STAR certified products.

Data:

For 2021, data was collected for the following ENERGY STAR certified products:

- Audio/Video Products
- Boilers
- Ceiling Fans
- Central Air Conditioners and Air-Source Heat Pumps
- Clothes Dryers
- Clothes Washers
- Commercial Boilers
- Commercial Coffee Brewers
- Commercial Dishwashers
- Commercial Fryers
- Commercial Griddles
- Commercial Hot Food Holding Cabinets
- Commercial Ice Makers
- Commercial Ovens
- Commercial Refrigerators and Freezers
- Commercial Steam Cookers
- Commercial Water Heaters
- Computers
- Connected Thermostats
- Data Center Storage
- Decorative Light Strings
- Dehumidifiers
- Dishwashers
- Displays
- Electric Vehicle Supply Equipment
- Enterprise Servers
- Freezers
- Furnaces
- Geothermal Heat Pumps
- Imaging Equipment
- Laboratory Grade Refrigerators and Freezers
- Lamps
- Light Commercial HVAC
- Luminaires
- Pool Pumps
- Refrigerators
- Room Air Cleaners
- Room Air Conditioners
- Storm Windows
- Telephony
- Televisions
- Uninterruptible Power Supplies
- Vending Machines
- Ventilating Fans
- Water Coolers
- Water Heaters

For more details:
Appendix K: Energy Technology Definitions

Pursuant to OMB Control Number 1910-5179, the United States Department of Energy is conducting a national Energy and Jobs Survey about the energy, energy-related, and advanced manufacturing industries. This important survey addresses businesses that research, develop, manufacture, install or work with products that generate, distribute, or save energy. This includes organizations involved in fossil and renewable energy production, energy efficiency products and services, motor vehicles, solar, wind, fossil and other energy sources, and other energy related products and services.

SC & SD - Which of the following industries best describes your organization’s work? [ALLOW MULTIPLE RESPONSES] [IF NEEDED: If your organization is involved in energy research or professional services for the industry, please select the options that are most relevant to your organization.]

1. Electric Power Generation - the process of generating electric power from other sources of primary energy whether connected to a distribution grid or not
2. Electric Power Transmission, Distribution, and Storage – stores electricity or carries electricity from suppliers to demand sites
3. Energy Efficiency, Including Heating, Cooling and Building Envelope (IF NEEDED THIS INCLUDES THERMAL OR HOT WATER SOLAR) - Goods and services that reduce electricity demand pursuant to EPA’s Energy Star Standards or Department of Energy Efficiency Standards or refers to establishments that are involved with heating, ventilation and air conditioning (HVAC) from Renewable Energy sources or work that increases the Energy Efficiency of HVAC systems
4. Fuel Production, including Fossil, Nuclear, and Renewable - substances that produces useful energy when they undergo a chemical or nuclear reaction
5. Transportation Vehicles, including Motor Vehicles - includes fossil and non-fossil fuel related rail, aircraft, vessels, and vehicles
6. Component Parts for Transportation Vehicles – parts for fossil and non-fossil fuel related rail, aircraft, vessels, and vehicles
7. Carbon Capture and Storage - the process of trapping carbon dioxide from industrial sources and storing it in such a way that it is unable to affect the atmosphere
8. Other (Specify _______) TERMINATE
9. DK/NA TERMINATE

SE - [ASK FOR EACH SCREENER C RESPONSE, EXCEPT SCREENER C = 7] Which of the following [INSERT SCREENER C RESPONSE] technologies is your organization directly engaged with?? [READ LIST, ALLOW MULTIPLE RESPONSES]
A. Electric Power Generation

1. Solar Photovoltaic Electric Generation - generating electrical power by converting solar radiation into direct current electricity using semiconductors that exhibit the photovoltaic effect.
2. Concentrated Solar Electric Generation - generating solar power by using mirrors or lenses to concentrate a large area of sunlight, or solar thermal energy, onto a small area.
3. Wind Generation - converting the wind's kinetic energy into electrical power
4. Geothermal Generation - using steam produced from reservoirs of hot water found a few miles or more below the Earth's surface to produce electricity.
5. Bioenergy/Biomass Generation - generating electricity from materials derived from biological sources or any organic material which has stored sunlight in the form of chemical energy.
6. Low-Impact Hydroelectric Generation including Wave/Kinetic Generation – similar to traditional, but certification criteria are aimed at ensuring that the certified dam adequately protects or mitigates its impacts in eight key resource areas: river flows, water quality, fish passage and protection, watersheds, threatened and endangered species, cultural resources, and public access and recreation opportunities. The eighth criterion requires that the dam not have been recommended for removal (LIHI – Low Impact Hydropower Institute).
7. Traditional Hydroelectric Generation - electricity generated by hydropower; the production of electrical power through the use of the gravitational force of falling or flowing water.
8. Marine and Hydrokinetic Generation - harnessing power from the natural movement of water, including waves, tides, and river and ocean currents
10. Nuclear Generation - converting atomic energy into usable power.
11. Coal Generation – the burning of thermal coal to create electricity.
12. Oil and other Petroleum Generation - the burning of oil or other petroleum to create electricity.
13. Natural Gas Generation, other than Advanced Natural Gas Generation - the burning of natural gas to create electricity.
14. Combined Heat and Power - generating electricity and useful thermal energy in a single, integrated system. Heat that is normally wasted in conventional power generation is recovered as useful energy.
15. Other Generation (specify) – any generation that is not captured in the categories listed previously or a category that is used when unable to split employment into a single category where employees spend “more of their time.”
B. Electric Power Transmission, Distribution, and Storage

1. Traditional Transmission and Distribution - allow electricity to move across the country through infrastructure commonly referred to as “poles and wires.”
2. Electric Vehicle Charging Stations - Stations that charge vehicles which use one or more electric motors for propulsion with no onboard generator or non-electric motor.
3. Pumped Hydro Storage - hydroelectric energy storage used by electric power systems for load balancing. The method stores energy in the form of gravitational potential energy of water, pumped from a lower elevation reservoir to a higher elevation.
4. Battery Storage – using a cell or connected group of cells to convert chemical energy into electrical energy by reversible chemical reactions and that may be recharged by passing a current through it in the direction opposite to that of its discharge.
5. Mechanical storage (flywheels, compressed air energy storage, etc.) - storing inputted energy through kinetic or gravitational forces.
6. Thermal storage - heating or cooling a medium to store thermal energy.
9. Crude oil storage - storing crude oil in tanks.
10. Refined petroleum fuels (liquid) - storing refined petroleum fuels in liquid form.
11. Refined petroleum fuels (liquid) - storing refined petroleum fuels in gas form.
12. Coal storage (piles, domes, etc.) - storing coal awaiting use or transportation.
13. Biofuels - storing biofuels including ethanol and biodiesel.
15. Smart Grid - an electricity supply network that uses digital communications technology to detect and react to local changes in usage.
16. Micro Grids - a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid.
17. Other Grid Modernization – other modernization of the Nation’s electricity transmission and distribution system to maintain a reliable and secure electricity infrastructure that can meet future demand growth.
18. Other (Specify)- any transmission, distribution, and storage that is not captured in the categories listed previously or a category that is used when unable to split employment into a single transmission, distribution, and storage category where employees spend “more of their time.”
C. Energy Efficiency, Including Heating, Cooling and Building Envelope

1. Energy Star Appliances – appliances that meet the international Energy Star standard for energy efficient consumer products originated in the United States.
2. LED, CFL and Other Efficient Lighting – energy efficient lighting sources.
3. Traditional HVAC goods, control systems, and services - heating, ventilation, and air conditioning systems (HVAC), including building retro-commissioning and retrofits connected to heating and cooling.
4. Energy Star/ High AFUE HVAC - HVAC that meets the international Energy Star standard for energy efficient consumer products originated in the United States or has high Average Fuel Utilization Efficiency (AFUE) rating of 90 or greater or 15 SEER or greater.
5. ENERGY STAR Air-Source Heat Pumps - air-source heat pumps that meet the international Energy Star standard for energy efficient consumer products originated in the United States.
6. ENERGY STAR Ground-source or geothermal heat pumps - heat pumps that use the earth's natural heat to provide heating and cooling, and meet the international Energy Star standard for energy efficient consumer products originated in the United States.
7. Other high efficiency HVAC that are out of scope for ENERGY STAR certification (e.g. indirect evaporative coolers, air to water heat pumps, energy recovery systems, etc.)
8. Traditional HVAC goods, control systems, and services - include wall units, furnaces
9. ENERGY STAR certified water heaters - water heaters, which can come with gas, solar, or electric heat pump technology, that meet the international Energy Star standard for energy efficient consumer products originated in the United States.
10. ENERGY STAR Certified Electronics - electronic appliances such as TVs, Telephones, and Audio/Video devices that meet the international Energy Star standard for energy efficient consumer products originated in the United States.
11. ENERGY STAR Certified Windows, Doors and Skylights - windows, doors, and skylights which meet the international Energy Star standard for energy efficient consumer products originated in the United States.
12. ENERGY STAR Certified Roofing - Energy Star certified roof products which reflect more of the sun’s rays and decrease the amount of heat transferred into a building.
13. ENERGY STAR Certified Insulation - insulation products, including blankets, foam boards, and loose fill, which meet the international Energy Star standard for energy efficient consumer products originated in the United States.
14. Air sealing - products that reduce the amount of air that leaks in and out of a building by sealing cracks and openings.
15. ENERGY STAR Certified Commercial Food Service Equipment - Commercial kitchen equipment, including refrigerators, dishwashers, and ovens, which meet the international Energy Star standard for energy efficient consumer products originated in the United States.
16. ENERGY STAR Certified Data Center Equipment - IT equipment, such as servers, uninterruptible power supplies, data storage, and network...
equipment, which meets the international Energy Star standard for energy efficient consumer products originated in the United States.

17. ENERGY STAR Certified LED lighting - LED light bulbs which meet the international Energy Star standard for energy efficient consumer products originated in the United States.

18. Other LED, CFL, and efficient lighting

19. Renewable Heating and Cooling (including Solar Thermal) - refers to establishments that are involved with heating, ventilation and air conditioning (HVAC) from Renewable Energy sources or work that increases the Energy Efficiency of HVAC systems (solar thermal - uses the sun’s energy to generate thermal energy).

20. Advanced Building Materials/Insulation - all materials that represent advances in efficiency over the traditional materials.

21. Recycled building materials

22. Reduced water consumption products and appliances high efficiency (HE) washing machines, faucet aerators, low flow shower heads, etc.

23. Energy auditing services

24. Other (Specify) - any energy efficiency that is not captured in the categories listed previously or a category that is used when unable to split employment into a single energy efficiency category where employees spend “more of their time.”

D. Fuels

1. Coal - a combustible black or dark brown rock consisting mainly of carbonized plant matter, found mainly in underground deposits and widely used as fuel.

2. Petroleum - a liquid mixture of hydrocarbons that is present in certain rock strata and can be extracted and refined to produce fuels including gasoline, kerosene, and diesel oil; oil.

3. Natural Gas - flammable gas, consisting largely of methane and other hydrocarbons, occurring naturally underground (often in association with petroleum) and used as fuel.

4. Other Fossil Fuel - a natural fuel such as coal or gas, formed in the geological past from the remains of living organisms.

5. Corn Ethanol - ethanol produced from corn that is used as a biomass.

6. Renewable diesel - a fuel made from fats and oils, such as soybean oil or canola oil, that is processed to be chemically the same as petroleum diesel.

7. Biodiesel - a renewable fuel that can be manufactured from vegetable oils, animal fats, or recycled restaurant grease for use in diesel vehicles or any equipment that operates on diesel fuel.

8. Other Ethanol/Non-Woody Biomass Fuel, including Biodiesel – fuel made from other materials such as straw, manure, vegetable oil, animal fats, etc.

9. Woody Biomass/Cellulosic Biofuel – fuel developed from the by-product of management, restoration, and hazardous fuel reduction treatments, as well as the product of natural disasters, including trees and woody plants (limbs, tops, needles, leaves, and other woody parts, grown in a forest, woodland, or rangeland environment)
10. Other Biofuels – other fuel derived directly from living matter.
11. Nuclear Fuel - a substance that will sustain a fission chain reaction so that it can be used as a source of nuclear energy.
12. Other (Specify) - any fuel that is not captured in the categories listed previously or a category that is used when unable to split employment into a single fuel category where employees spend “more of their time.”

E. Transportation Vehicles, Including Motor Vehicles

1. Gasoline and Diesel Motor Vehicles (excluding freight transport) – vehicles that run on gasoline and diesel internal combustion engines.
2. Hybrid Electric Vehicles - use two or more distinct types of power, such as internal combustion engine + electric motor.
3. Plug-In Hybrid Vehicles - a hybrid electric vehicle that uses two or more distinct types of power, such as internal combustion engine and an electric motor that is powered by rechargeable batteries, or another energy storage device, that can be recharged by plugging it in to an external source of electric power.
4. Electric Vehicles - a vehicle which uses one or more electric motors for propulsion with no onboard generator or non-electric motor.
5. Natural Gas Vehicles - an alternative fuel vehicle that uses compressed natural gas (CNG) or liquefied natural gas (LNG) as a cleaner alternative to other fossil fuels.
6. Hydrogen Vehicles - uses hydrogen as its onboard fuel for motive power.
7. Fuel Cell Vehicles - a type of hybrid vehicle which uses a fuel cell, instead of an engine, in combination with a storage device, such as a battery, to power its on-board electric motor.
8. Other - any motor vehicle technology that is not captured in the categories listed previously or a category that is used when unable to split employment into a single motor vehicle category where employees spend “more of their time.”
