Natick Public Schools (Natick, MA)

Natick Public Schools plans to improve energy efficiency, health, education, equity, and environmental outcomes at Bennett-Hemenway Elementary School. Staff and students have suffered heat stroke and other heat-related illness due to the lack of centralized air-conditioning during high degree days. As part of the Renew America's Schools program, Natick will fully electrify the elementary school. They are pairing deferred maintenance repairs and upgrades with forward-thinking investments in building infrastructure, specifically, the addition of an air-to-water heat pump system, heat exchanger, and the replacement of aging rooftop units, air handling units and building automation system (BAS) with state-of-the-art equipment. Community partners will join Natick and DOE in accomplishing the project's goals and supporting job training and building decarbonization planning among disadvantaged communities.

Team Members	
• BLW Engineers, Inc. • Keefe Regional Technical School • University of Massachusetts Amherst • UndauntedK12	
Total Funds Requested	$ 2,037,131
Proposed Cost Share (%)	$ 626,795 (24%)
Number of Buildings	1
