

NREL's Grid Integration Hardware Capabilities

Murali Baggu, Laboratory Program Manager – Grid Integration, NREL Advanced Research on Integrated Energy Systems (ARIES) is a research platform that can match the complexity of the modern energy system and conduct integrated research to support the development of groundbreaking new energy technologies.

ARIES

ARIES research platform pillars

Supporting the transition to a decarbonized energy system:

a safe environment to prove things out, to avoid introducing significant risk, vulnerability, and expense to the providers, customers, and other stakeholders.

System Configuration & Scenarios

Five ARIES Research Areas for Solutions

Energy storage to balance variable renewable generation and demand

Power electronics to control and integrate rapidly increasing electronics-based technologies

Hybridization to achieve enhanced coordinated capabilities beyond isolated technologies

Infrastructure to adapt existing energy infrastructure for safety, monitoring, and controls

Cybersecurity to secure operations to prevent disruption, damage, and loss of functionality.

Flatirons Campus Connections

Energy System Integration Facility

Virtual Emulation

Lab-to-Lab Demonstration

- In FY22, for the first time, ESnet-OSCARS was used to integrate energy systems across geographies (PNNL & NREL).
- INL/NREL Jan 31 demo integrates nuclear assets at INL and renewable assets at NREL into one experiment. Will explore the complementary interactions between energy storage, nuclear, and various renewable energy technologies.
- Low latency data exchange accelerates grid research by allowing geographically separated assets and scientists to work like they are side-by-side.
- Goal is "SuperLab 2.0." with 7 connected national laboratories.
 - NETL, ORNL, LBNL (2023)
 - Sandia (TBD)

NREL-ARIES Integrated Grid Assets

Mission:

Increasing variability in the physical size of new energy technologies

Controlling large numbers of interconnected devices

Integrating diverse technologies that have not previously worked together

Enhanced Collaboration to innovate faster

+ Assets across all DOE National Labs

ARIES

Differentiating Characteristics

- Infrastructure at scale, coupled with the R&D expertise (hardware, analysis, and modeling), to remove barriers and introduce new ideas to the market
- Flexibility to investigate many, complex system configurations integrating real devices and protocols
- An entire system (generation, demand, and storage) perspective in a realworld context for future energy systems
- Partnerships to increase impact and accelerate innovation
