TRAC Program Strategy Enabling Research to Application

TRAC Portfolio

TRAC Technology Areas							
Component Design and Development	Market and System Analysis	Advanced Materials					
 + Advanced Low voltage & Medium voltage DC/DC Intelligent Power Stage (IPS) + Modular Solid-State Switch (MS3) + High Voltage, High Power WBG Module Development + SSPS 1.0 Hardware Prototype Development + LPT FOA GA Tech + LPT FOA University of Texas Austin + LPT FOA Nextwatt 	 SuperFACTS Multiport HUB: GMLC SSPS Hardware in the loop (HIL) validation SSPS 1.0 node Use case Validation with Smart Universal Power Electronics Regulators (SUPERs) Solid State Power Substation (SSPS) 1.0 Controller SSPS Field Demonstration Scalable Hybrid Large-Scale dc-ac Grid Analysis Methods MVDC Use Case Transmission Optimization with Grid Enhancing Technologies (TOGETs) 	 + Optical Fiber Sensors for Acetylene Detection + Al/Ca Composite Conductor + Soft Magnetics for Power Conversion Applications 					

What is PACE?

PACE is a U.S. Department of Energy cross-cut initiative, currently supported by the DOE Office of Electricity's Transformer Resilience and Advanced Components (TRAC) program.

PACE is a coalition of partner research institutions, utilities, and industry manufacturers working to take innovative research in power electronics to grid-level pilot demonstration.

Vision: Accelerate the development and demonstration of integrated grid systems with power electronics technologies for electrification

Focus: Solve power electronics and grid hardware barriers of cost, integration, and reliability

Impact: Increase in adoption of power electronics technologies, create domestic manufacturing, and enable new market opportunities

Increasing role and Opportunities for power electronics

+ Interfacing Power conditioning and grid integration: DER and energy storage

+ Delivery

Long distance power transfer: Off-shore wind, utility-scale solar

Management and conversion Megawatt-scale charging infrastructure, industrial processes and equipment

PACE Framework and Collaboration

	PACE Technology Areas					
TRAC Applications	Advanced Components & Power Stages	Advanced Converter Systems	Resource Integration & Management Systems	Grid Integration & Demonstrations		
Advanced Power Electronics	Materials & Components, Intelligent power stages Embedded Controllers	Converter, Inverter, controls and protection, prototypes, Diagnostics, prognostics, Cyber security	Mutli-stage converters, Software Platforms, Algorithms, Grid systems Architecture & Modelling	Grid Integration , Demonstration Use Cases		
High Voltage Direct Current (HVDC) Advanced Transformers Grid Enhancing Technologies (GETs)	VALLEY OF CHALLENGES COMPONENT MANUFACTURERS	VALLEY OF CHALLENGES UNIVERSITIES	VALLEY OF CHALLENGES NATIONAL LABORATORIES	VALLEY OF CHALLENGES SYSTEM MANUFACTURERS UTILITIES		
	TRL 2–7	TRL 3–7	TRL 4–7	TRL 5–7		
Accelerated Power Electronics Technologies						

TRAC Portfolio and PACE

	PACE Technology Areas								
	Advanced Components & Power Stages	Advanced Converter Systems	Resource Integration & Management Systems	Grid Integration & Demonstrations					
	Materials & Components, Intelligent power stages Embedded Controllers	Converter, Inverter, controls and protection, prototypes, Diagnostics, prognostics, Cyber security	Mutli-stage converters, Software Platforms, Algorithms, Grid systems Architecture & Modelling	Grid Integration , Demonstration Use Cases					
+ + + + +	Advanced Low voltage & Medium voltage DC/DC Intelligent Power Stage (IPS) Modular Solid-State Switch (MS3) High Voltage, High Power WBG Module Development Optical Fiber Sensors for Acetylene Detection Al/Ca Composite Conductor Soft Magnetics for Power Conversion Applications	 + SSPS 1.0 Hardware Prototype Development + SuperFACTS + LPT FOA GA Tech + LPT FOA University of Texas Austin + LPT FOA Nextwatt 	 + Multiport HUB: GMLC + SSPS Hardware in the loop (HIL) validation + SSPS 1.0 node Use case Validation with Smart Universal Power Electronics Regulators (SUPERs) + Solid State Power Substation (SSPS) 1.0 Controller 	 + SSPS Field Demonstration + Scalable Hybrid Large- Scale dc-ac Grid Analysis Methods + MVDC Use Case + Transmission Optimization with Grid Enhancing Technologies (TOGETs) 					

PACE Execution Framework

PACE Engagement & Funding Opportunities: DOE Initiatives

DOE TRAC Initiatives: Transformers

Funding Opportunity Announcement (FOA): FY18 \$7.5M FOA focused on the development of LPT prototypes that are more flexible and adaptable

RFI Issued – April 2023: A Request for Information (RFI) for Innovative Advanced Transformers to obtain public input regarding a potential future Funding Opportunity Announcement seeking the research, development, and demonstration of innovative advanced transformers that can be readily utilized across a range of distribution to transmission scale applications

OE Transformer Technologies Workshop – May 2023:

The goal of the workshop was to identify research, development, and demonstration (RD&D) opportunities for both distribution and power transformers

DOE TRAC Initiatives: HVDC

National Labs R&D, Annual Operating Funds

Models and methods for HVDC Technologies 2016-2019

Scalable Hybrid Large-Scale dc-ac Grid Analysis Methods: 2021-2024

Activities

- + HVDC Workshop (2022 : TRAC+WETO)
 - + ORNL,PNNL,NREL,EPRI

+ HVDC Technology Roadmap

- + ORNL,PNNL,NREL,EPRI
- + Anticipated Release December 2023

+ HVDC Prize Competition

+ Winner Announcement – August 26th

+ HVDC Moonshot (TRAC+WETO)

- + Focus : HVDC Stations, HVDC Systems
- + ORNL,PNNL,NREL,EPRI
- + Currently working on drafting metrics
 - + Cost: BOS \$/MVA
 - + System reliability
 - + System Ratings
 - + Standardization

DOE TRAC Initiatives: Advanced Power Electronics and SSPS

Solid State Power Substation Technology Roadmap

U.S. DOE Office of Electricity Transformer Resilience and Advanced Components (TRAC) Program June 2020

Workshop 2018

Roadmap 2020

National Labs R&D, Annual Operating Funds

SSPS 1.0 Architecture Development-2020-2021

SSPS 1.0 Hardware Prototype Development – 2021-2023

Total. no. of publications ~ 20 Total. No. of. Patents - 5

DOE Initiatives: GMLC

PACE Lab Call: Medium Voltage subsystem development Supporting Offices: EERE, OE Funding: \$13.75 M

The focus is on addressing gaps in 'smart' mediumvoltage (MV, 4.16kV-34.5kV) electrical interfaces critical to a modernized grid through development of a medium voltage power and control electronics sub-system approach that is modular, scalable, and cost effective.

National Labs R&D Partners: Industry and Academia

DOE Initiatives: GETs

+ GETs FOA: Increasing Utilization and Reliability of Electric Infrastructure with Grid-enhancing technologies (GETs) (Feb 2023)

Supporting Offices: EERE, OE. Funding: \$6.5 M

The FOA aims to fill gaps in information on the real-world benefits and usage of GETs through at-scale field demonstrations. The FOA is focused on Power Flow Controllers (PFCs) and Dynamic Line Rating (DLR)

- + Grid-Enhancing Technologies: A Case Study in Ratepayer Impact (March 2022)
- Transmission Optimization with Grid
 Enhancing Technologies (TOGETs) Project
- + Advanced Transmission Technologies Report (December 2020)

Questions?

Contact Information:

Andre Pereira Program Manager Office of Electricity U.S. Department of Energy (202) 586-9010 andre.pereira@hq.doe.gov

Why a Consortium?

Benefits to DOE

- + Provides single point of contact for all aspects of the technical focus
- + Provides one stream of accountability
- + Provides streamlined reporting

Benefits to Utilities/Vendors/Labs/Universities

- + Single blended funding stream
- + Less administrative burden, more focus on delivery
- + Reduced need to interact with DOE by individual project owners
- + Results are owned and shared among consortium
- + Risk is reduced through extensive collaborations.
