

Project Title: *Targeted Gas Line Decommissioning for Equitable Electrification*

Albany, California will partner with **StopWaste** to launch a pilot program that aims to electrify all buildings on a city block. This will enable the decommissioning of the natural gas pipeline.

The team will conduct targeted education and community-based outreach, building assessments, and site selection for electrification. At the end of their pilot, they will report out best practices and lessons learned. They will communicate these findings through the **BayREN Network**.
