

Project Title: Cascade Geothermal Heating and Cooling District Planning Project

Cascade, Idaho and partners, including **West Central Mountains Economic Development Council**, the **Idaho National Laboratory**, and **Sustainable Engineering**, will design a geothermal heating and cooling district to serve the entire city of Cascade.

The project could significantly reduce greenhouse gas emissions while providing a resilient, low-cost energy source across the community.

Cascade and its partners are also working with regional workforce development organizations including labor unions to ensure that the plan prioritizes the creation of high-quality jobs.
