

Project Title: *Enhanced Efficiency Through Electrification and Load Flexibility*

Littleton, Massachusetts will partner with **five other community-owned electric utilities**, the **Beneficial Electrification League**, and the **Northeast Public Power Association**, to launch an electrification and load management program that will reduce energy burdens for low-income residents. They will build an electrification framework that specifically targets utility customers in Massachusetts’ disadvantaged communities as project beneficiaries of electrification.

This will support the transformation of six Massachusetts municipal utilities to 100% clean energy and bring their communities closer to their shared goal of carbon-free by 2050.
