

Project Title: *Building Retrofit and Electrification in the Monadnock Region of New Hampshire*

Peterborough and **Harrisville, New Hampshire** will partner with **BlocPower** to retrofit 250 buildings to replace fossil-fueled heating with cold-climate heat pumps. 100 of those buildings are home to low-income residents who will see energy savings.

The project will also increase the number of well-qualified energy auditors and heat pump installers in the region. In collaboration with **Lakes Region Community College** and the **MAXT Makerspace**, working adults and high school students will be trained to become energy auditors, weatherization specialists, and heat pump installers.
