

# Chicago South, Illinois, Site

## SITE CERTIFICATION SUMMARY

This Site Certification Summary provides information about the **Chicago South, Illinois, Site**. The U.S. Department of Energy Office of Legacy Management is responsible for long-term stewardship of the site under the **Formerly Utilized Sites Remedial Action Program**.

### Site Description and History

The Chicago South, Illinois, Site is located on the campus of the University of Chicago. The University of Chicago is a private university located in the Hyde Park-Kenwood area of the city of Chicago, Illinois. It is about 7 miles south of the Chicago downtown business district. The existing campus buildings that were associated with Manhattan Engineer District (MED) work are Ryerson Physical Laboratory, Eckhart Hall, Kent Chemistry Laboratory, and George Herbert Jones Chemical Laboratory. At the time of publication of the Certification Docket, these buildings were in use as offices, laboratories, and classrooms. The New Chemistry Laboratory and Annex, West Stands, and Ricketts Laboratory, which were also associated with MED activities, have been torn down. On-site MED activities included producing and purifying plutonium that was later used to develop the first atomic bomb. The first contract with the University of Chicago was established in January 1942. Research sponsored by the U.S. Atomic Energy Commission (AEC) continued at the site until 1952. The Chicago South site was remediated to criteria in *Guidelines for Residual Radioactive Material at Formerly Utilized Sites Remedial Action Program and Surplus Facilities Management Program Sites*.

### Site Remediation Timeline

**January 1942 through 1952** — MED/AEC activities took place at the University of Chicago site.

**September 1976 through September 1977** — Radiological surveys of the site were performed.

**1982 through 1984** — Argonne National Laboratory (ANL) and university personnel conducted separate decontamination activities in all four buildings.

**1983** — The U.S. Department of Energy (DOE) determined that the Chicago South site was eligible for the Formerly Utilized Sites Remedial Action Program (FUSRAP).

**July through October 1987** — Bechtel National Inc. (BNI) decontaminated the exhaust ducts in the Jones Chemical Laboratory.

**September 22 through October 9, 1987** — Oak Ridge National Laboratory conducted independent verification surveys.

**May 17, 1990** — DOE published the site's cleanup certification in the Federal Register.

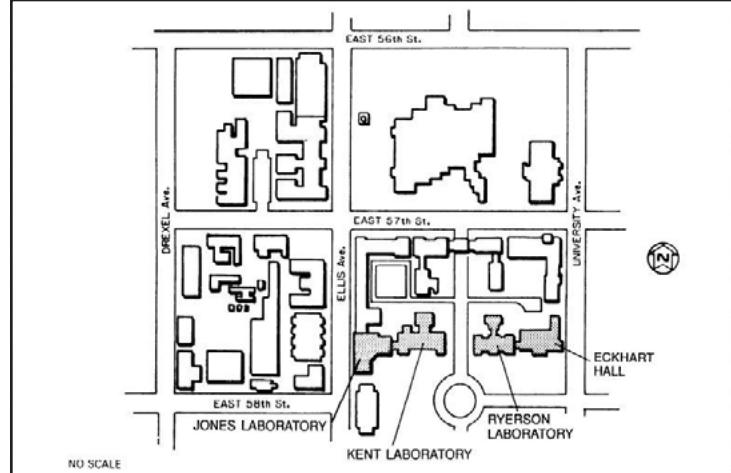

Figure 1. Plan view of the University of Chicago site.

### Certification Docket Contents

The **Certification Docket** documents the successful decontamination of the Chicago South site. The docket consists of documents supporting DOE certification that conditions at the Chicago South site are in compliance with radiological guidelines and standards determined to apply to the site. The use of this property will not result in any measurable radiological hazard to the general public.

## Remedial Action

Under the direction of DOE, decontamination activities at the University of Chicago were conducted by ANL in 1982 and 1983, by university personnel in 1982 and 1983, and by BNI in 1987 as part of FUSRAP. See the [Fact Sheet](#) for details.

FUSRAP objectives for the site were to:

- Identify and assess sites formerly utilized to support early MED/AEC nuclear work to determine whether further decontamination and/or control is needed.
- Decontaminate and/or apply controls to the sites to permit conformance with currently applicable guidelines.
- Dispose of and/or stabilize all generated residues in an environmentally acceptable manner.
- Accomplish all work in accordance with appropriate landowner agreements and local and state environmental and land use requirements to the extent specified by federal law and applicable DOE orders, regulations, standards, policies, and procedures.
- Certify, at the completion of the remedial action, that the radiological conditions at the site comply with guidelines and that the site is appropriate for future use.

## Post-Remediation Sampling

### Decontamination Activities: 1982 through 1984

From 1982 to 1984, ANL and University of Chicago conducted separate decontamination efforts. Remedial activities took place in all four contaminated buildings: Eckhart Hall, Ryerson Physical Laboratory, Jones Chemical Laboratory, and Kent Chemical Laboratory.

In the Kent Chemical Laboratory, surface surveys, soil samples, and sewer sludge samples were taken. Surface surveys indicated that surface contamination had been cleaned to levels that were as low as reasonably achievable and met the criteria specified for unrestricted use.

The concentrations of radium-226 in soil samples, when averaged over a 100-square-meter area, were well below the 15 picocuries per gram (pCi/g) standard. The concentrations of uranium-238 and uranium-234 were also below the recommended limit (40 pCi/g). However, the sewers remaining under the building were still contaminated in excess of the criteria.

Surface surveys, soil samples, and sewer sludge samples were also taken in the other three buildings. Upon completion of decontamination activities, all contaminated areas in the interiors of Eckhart Hall, Ryerson Physical Laboratory, and Jones Chemical Laboratory, which were identified in the 1976-1977 radiological surveys, had been cleaned to the level that contamination could no longer be detected.

The three structures were certified free from significant contamination and released for unrestricted use.

The sewer systems and drains beneath and exiting the three buildings are still considered contaminated. This contamination, however, did not pose an immediate hazard. Appropriate safeguards should be taken into consideration whenever the sewers are intruded upon or removed.

The duct work in the interior walls of the Jones Chemical Laboratory remained suspect and was considered contaminated until the university renovates and removes the walls.

### Decontamination Activities: 1987

Remediation of the duct work in the Jones Chemical Laboratory was conducted by BNI in 1987 during building renovations. Measurements taken following decontamination procedures indicated that four of the 63 ducts in the building were still contaminated above guidelines. These four ducts were removed. All contaminated air vents, floors, and blowers were either removed or further decontaminated to meet radiological criteria. All post-remedial action measurements indicated that applicable remedial action guidelines had been met.

For more detailed results of the post-remediation sampling, see the [Site Certification Data Summary Worksheet](#) on pages 4-12. For a detailed map of the site and sampling locations, see the [Site Overview Map](#) on page 13.

## Current Site Conditions

In 1987, DOE certified that the site complied with applicable DOE standards and criteria developed to protect health, safety, and the environment. Since 1989, DOE has been responsible for the long-term stewardship of the Chicago South site. The stewardship requirements and protocols are captured in the Long-Term Stewardship Plan for Completed FUSRAP Sites, which is available on the DOE Office of Legacy Management website ([www.energy.gov/lm/chicago-south-illinois-site](http://www.energy.gov/lm/chicago-south-illinois-site)).

## ADDITIONAL INFORMATION

Documents related to FUSRAP activities at the Chicago South, Illinois, Site are available on the LM website at [Impublicsearch.lm.doe.gov/SitePages/default.aspx?sitename=Chicago\\_South](http://Impublicsearch.lm.doe.gov/SitePages/default.aspx?sitename=Chicago_South).

For other information on site history or current long-term stewardship activities, please contact us at:

# Chicago South, Illinois, Site Certification Data Summary Worksheet

Twenty tables referenced in the Chicago South Certification Docket provide the evidence used to certify the site as clean.

When the tables refer to the "Report of Decontamination," that is the "Report of the Decontamination of Jones Chemical Laboratory, Ryerson Physical Laboratory, and Eckhart Hall, the University of Chicago, Chicago, Illinois" (dated August 1984).

When the tables refer to the "PRAR of Kent Lab," that is the "Post-Remedial Action Radiological Survey of Kent Chemical Laboratory, the University of Chicago, Chicago, Illinois" (dated May 1983).

When the tables refer to the "PRAR of Jones Lab," that is the "Post-Remedial Action Report for the George Herbert Jones Chemical Laboratory at the University of Chicago Site, Chicago, Illinois" (dated January 1989).

Ryerson Physical Laboratory - Contamination Locations						
Table 2 in Report of Decontamination						
Room Number	Location Number	Estimated Area of Contamination (cm <sup>2</sup> )	Maximum PAC Reading (dis/min-100 cm <sup>2</sup> )	Beta/Gamma	Alpha	Final Status

<sup>a</sup>One standard deviation due to counting statistics.<sup>b</sup>ANL conversion factor from Appendix 5.

\*EH-SS identifies Eckhart Hall-Sewer Sample.

\*DS identifies dissolved solids in a water sample - (units pCi/l).

\*SS identifies suspended solids in a water sample - (units pCi/g solids).

\*RL-SS identifies Ryerson Physical Laboratory-Sewer Sample.

\*JC-SS identifies Jones Chemical Laboratory-Sewer Sample.

Contaminated	0.05 $\pm$ 0.03	0.5 $\pm$ 0.3	0.9 $\pm$ 0.4		
Control <sup>c</sup>	0.1 $\pm$ 0.05	1.1 $\pm$ 0.5	0.8 $\pm$ 0.4		
Etch Solution <sup>d</sup>				16	11

<sup>a</sup>One standard deviation due to counting statistics<sup>b</sup>ANL conversion from Appendix 5<sup>c</sup>Control sample (27.3 g) was chiseled from the unetched side of ventilation pipe.<sup>d</sup>Sample KC-PIPE-14, tile, was treated with 8M HNO<sub>3</sub> on its inside surface to remove uranium by dissolution.**Comments**

The ventilation pipe was broken into four pieces so that counting could be done at meaningful geometries. Conclusions are that some of the activity was dissolved during the chemical etch; however, the bulk of the activity still remains embedded in the tile matrix.

\*Areas subsequently cleaned to levels below detectable limits with portable survey instruments during post remedial action survey activities.
