Re: ***Mexico Pacific Limited LLC, Docket No. 22-167-LNG***
Clarification to November 9, 2023 Responses to Informational Questions

Dear Mr. Skone:

On November 9, 2023, Mexico Pacific Limited LLC (“MPL”) submitted responses (“November 9 Responses”) to correspondence from the Department of Energy (“DOE”) seeking certain information related to the Environmental Assessment¹ the DOE’s Office of Fossil Energy and Carbon Management (“DOE/FECM”) is preparing with respect to MPL’s pending request for authorization to re-export U.S.-sourced natural gas in the form of liquefied natural gas (“LNG”) from the proposed MPL Facility in Mexico to Non-Free Trade Agreement nations.²

¹ *Mexico Pacific Limited LLC, Notice of Environmental Assessment, Docket No. 22-167-LNG (Oct. 23, 2023).*

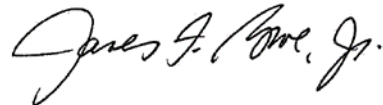

² Application of Mexico Pacific Limited LLC for Additional Long-Term, Multi-Contract Authorization to Export Natural Gas to Mexico and to Re-Export Liquefied Natural Gas to Free Trade Agreement and Non-Free Trade Agreement Nations, Docket No. 22-267-LNG (Dec. 28, 2022) (“Application”). On April 28, 2023, DOE/FECM issued an order authorizing MPL to export U.S.-sourced natural gas by pipeline to Mexico and to re-export quantities of that natural gas not consumed in Mexico in the form of LNG to Free Trade

After submitting the November 9 Responses and further considering them, MPL has determined that it should provide some additional clarification to the November 9 Responses. Specifically, MPL notes that LNG plants with gas turbine drivers as a primary power source, such as the MPL Facility, are subject to variability in their production of LNG due to ambient temperature changes and seasonality. This is because the gas turbines consume less fuel gas when the ambient temperature is colder and vice versa.

The emissions table MPL provided in the November 9 Responses corresponds to the anticipated fuel use over an entire year after averaging out fuel consumption over summer and winter months. The corresponding annual average fuel use number for the MPL Facility is 86.09 Bcf/year (and the corresponding CO₂ emissions are 4,580,763 tons/year). The other fuel use number provided in the November 9 Responses of 108.63 Bcf/year corresponds to the maximum potential fuel use at the MPL Facility consistent with the Application to export additional quantities of natural gas to Mexico.

Please contact me if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "James F. Bowe, Jr.", written in a cursive style.
