General Comment

I recommend we do not permit exportation of fossil fuels. A town in Louis Isle de Jean Charles was forced to flee rising waters. The sea continues to rise because of fossil fuel production and consumption. Coastal towns are building futile sea walls and other devices to try and keep the sea out, but it wont work.

We first have to Nationalize the fossil fuel industry and seize all their assets and use those assets to transition faster to renewables and keep the global temperature from rising. Save Louisiana from going under and stop using fossil fuels.
