[MOTION TO INTERVENE]

The Lake Charles LNG export extension should not be allowed due to the fact of violations of regulations for decades and the potential for further violations.

The non-FTA exports that are not being monitored and addressed by the EPA is not a good idea for the state. The loss of the controls of energy production and the lack of oversight is more serious than reported by the EPA. The state is losing valuable energy production revenue by not limiting the use of natural gas and other energy resources that be utilized for the benefit of our country. Why allow this type of authority when we could benefit ourselves from the sources? For far too long, the state has been taken advantage of by his type of regulatory powers and it needs to stop. It is sharing resources that may provide the upper hand to other countries and the government should not allow this to happen. We have to care of our own natural gas supply and reserve in the event that we have a downfall. The DOE should not have the power to regulate this issue and it needs to be addressed by a legal panel to ensure the laws are enforced and regulated.
