General Comment

The Saguaro Project could seriously harm the Gulf of California's ecosystem.

- Large vessels threaten whales and vaquitas through collisions and noise.
- Fracked gas from Texas would produce harmful emissions, going against climate commitments.
- Coastal communities could lose up to 30% of their income, with no clear compensation plans.
- Legal issues and outdated environmental studies raise serious concerns.
- The main investor has withdrawn, casting doubt on the project's viability.
