## General Comment

To whom it may concern,

The transport of methane gas from the US through the California Gulf in Mexico puts at risk the life of whales and thousands of other species that inhabit this Aquarium of the World and Humanity Patrimony. The noise caused by the methane transport megaships and their inevitable collisions with whales are incompatible with the life and presence of mammals in the California Gulf.

Furthermore, it threatens the life of communities on both sides of the border and contributes to the emission of more greenhouse effect gases; this project will turn the area into a sacrifice zone for the fossil industry, worsening the climate crisis and damaging the health of multiple communities. The citizens of Mexico and the US demand that this project is stopped: both the construction of the Sierra Madre gas duct and the liquefied "natural" gas Saguaro plant at Puerto Libertad. The world demands exiting the fossil fuel era and stop sacrificing territories and communities.
